As regards the other sections of the Company's business, the production of spirit at the old distillery continued throughout the year. The old distillery has, subsequently, been replaced by a completely new plant and this commenced production in October, 1954. Trading in carbonic acid gas was difficult throughout the year under review and prices fell substantially. The management has, however, taken steps to modernise the purification plant, as a result of which production costs will be reduced. The chemical section continued to meet the increasing demand for acids and heavy chemicals. The sulphuric acid chamber plant, which had been completely modernised, resumed production during the year and the production of sulphuric acid increased by more than 50 per cent. over the previous year's to 11,274 tons. The year under review was one of expansion and reorganisation for the pottery section of the Company. The increasing demand for sanitaryware necessitated a major change in the manufacturing programme and several of the less profitable lines were discontinued to make way for mass production of sanitaryware.

The decline in turnover is reflected in the drop in manufacturing, selling and administrative expenses from £2.49 million to £1.86 million. Out of the gross profit of £274,082, the directors have set aside £73,943 for depreciation, for which £84,401 had been provided last year. The provision for taxation has been reduced from £103,784 to £90,086. The net profit of £110,053 has been supplemented by a sum of £17,047, being the result of the revaluation of the opening stocks. The basis of determining the cost of finished stocks as at the end of the year under review was changed so as to include certain production costs not taken into account for this purpose in previous years. Accordingly, the opening stocks were also revalued on this basis. The directors also changed the old practice of converting the rupee value of the Company's fixed assets in India to sterling at 1s. 6d. to the rupee and of its other Indian assets and liabilities at 1s. 4d. to the rupee to one converting all assets and liabilities at the uniform rate of 1s. 6d. The application of the new basis of conversion resulted in an exceptional credit of £68,416 and this has been transferred to the capital reserve of the Company. The Company also derived a surplus of £24,996 out of the realisation of its confectionery assets and this also has been added to the capital reserve.

The directors have strengthened the general reserve by the addition of £25,000 (as against £75,000 added last year) out of the profit. The dividends on the preference and ordinary (A and B) shares absorb £217,916, leaving to be carried forward £57,290, as against £59,690 brought in.

The following synopsis of the Company's balance-sheet as on 30th September, 1954, gives an idea of its financial position:

Liabilities	£	Assets	£
Capital ...	580,000	Gross block	1,263,446
Reserves and surplus ...	953,568	Less—Depreciation ...	513,606
Provision for taxation ...	119,900	Net block ...	749,840
Liabilities ...	445,606	Stocks ...	772,190
		Cane crop	15,382
		Book debts	528,317
		Investments	25,399
		Cash ...	7,946
	£2,099,074		£2,099,074

The gross block includes a sum of £37,905 representing expenditure up to the end of the year under review on buildings, plants and machinery in course of construction. The total commitments in respect of capital expenditure amount to £111,000, of which £37,500 is in respect of subscription for shares in Parrys Confectionery Ltd. Additions to the gross block during the year aggregate £183,070. A notable feature of the balance-sheet is the substantial decline in cash balances from £225,152 to £7,946. Notwithstanding this, the financial position of the Company is quite good, the current assets exceeding current liabilities and provision for taxation by a large margin.

The "B" ordinary shares (£1 paid-up) of the Company are being currently quoted on the Madras Stock Exchange at Rs. 29-8 *cum-div.* on an *ex-div.* basis, the shares give a yield of 9.7 per cent. per annum, free of tax, assuming that the dividend for the current year will be at 20 per cent. per annum.

SECTION 23A OF THE INCOME-TAX ACT

EFFECT OF PROPOSED AMENDMENT

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

THE Taxation Enquiry Commission's Report has just been released. Its main recommendations, so far as section 23A of the Income-tax Act is concerned, have already been incorporated in the Finance Bill 1955, along with a few other recommendations of the Commission. Section 23A is proposed to be amended as per recommendations of the Enquiry Commission, more or less drastically, affecting, not only private companies, but also some public companies whose shareholding is not widely dispersed among the public. Some of the most important changes are summarised below:

The period during which such a company is bound to distribute the requisite 60 per cent. of its total income less taxes is increased from six months to twelve months immediately following the expiry of the previous year.

In computing total income for the purpose of the above distribution, super-tax levied under the provisions of this section for distributing profits less than 60 per cent. is not to be deducted.

However, besides income-tax and super-tax, if there is any other tax levied under any law by Government or local authority in excess of the amount which has been allowed in computing the total income, it may be deducted.

Banking Company

In the case of a banking company, however, the amount transferred to reserve account under section 17 of the Banking Companies Act will be deducted.

The conditions under which the section will not operate are the same at present, namely, (*a*) losses incurred by the company in earlier years, or (*b*) the smallness of profits made in the previous year.

The aforesaid 60 per cent. is raised to higher percentage in the following cases:

(*a*) in the case of investment company or company dealing in investments, it is 90 per cent.; (*b*) in the case of a company, the reserves of which exceed the paid-up capital, exclusive of capital created out of profits by capitalising reserves in the shape of bonus shares and any loan capital which is the property of the shareholders or the actual cost of fixed assets, it is 100 per cent.

Locus pœnitentiæ is given to make up the deficiency of such distribution if—

(i) the company has already distributed 55 per cent., or

(ii) the company has distributed not less than 60 per cent. of its book profits

and the difference between the total income and book profit does not arise by reason of the application of the proviso to section 13 or section 23(4), or omission by the company to disclose its total income fully or truly.

In the aforesaid circumstances, the Income-tax Officer may allow the company concerned to make up the deficiency by further distribution.

There is a new provision to the effect that, if, in any one or more of the three previous years, the company has already distributed more than 60 per cent., the excess will be taken into account in determining the distribution in the year under question. This provision will not come into effect retrospectively.

Substantial Interest Explained

The next important change introduced is in regard to the explanation as to the company in which the public are not substantially interested.

A company is a company in which the public are not substantially interested if—

(i) its ordinary shares carrying not less than 50 per cent. of the voting power have been allotted unconditionally to or acquired unconditionally by and held beneficially by the public throughout the previous year. Thus, the present limit of 25 per cent. has been raised to 50 per cent. and voting power is to be determined by a reference not to the end of the year, but throughout the year;

(ii) the said shares were at any time the subject of dealings in any stock exchange in India or were freely transferable by the holder to other members of the public; and

(iii) the affairs of the company or the shares carrying more than 50 per cent. of the total voting power were at no time controlled or held by less than six persons. Any relation such as husband, wife, lineal descendant, brother or sister, as the case may be, will be treated as one person. So also nominees of such persons.

In short, the effect of this tightening up of the provision will be that public companies with not widely dispersed holding will get caught in the net of this new section, unless they—

(i) have the holding widely spread—not among relatives, but among the public;

(ii) get the shares of the company quoted on the stock exchange;

(iii) alter the close control of the affairs by more than six persons.

Under Section 23A, by virtue of the amendment to Section 2(6)A, it is provided that any sum by way of advance or loan to a shareholder or any payment by such company on behalf of or for the individual benefit of the shareholder to the extent to which the company possesses accumulated profits shall be regarded as dividend.

The Taxation Enquiry Commission has admitted that there is some force in the contention that some time limit may be prescribed for initiating and completing proceedings under section 23A. They have, however, come to the conclusion that the delay is inherent and that it would be difficult to prescribe a statutory time limit. The Commission has, therefore, suggested that the Central Board of Revenue should issue strict instructions that action should be initiated and completed with the least possible delay.

The business community clamoured for some loosening of the provisions of this section. In reply, they have got more tightening up of the screws, making the provisions still more drastic and difficult of smooth working and ignoring the legitimate grievances of the taxpaying public.—*All Rights Reserved.*

MATTHAI COMMISSION ON SALES TAX

(*Concluded from page 474*)

lets on procedures were issued by the State Governments for the information of those concerned.

State Governments tacitly accept the practice whereby registered dealers purport to charge the customers separate amounts of sale tax. This is, undesirable, because it leads to customers bargaining for their not having to pay the tax and to dealers offering to forgo the tax if vouchers are not insisted upon. Issue of vouchers and cash memos should be made compulsory but the mention of the sales tax separately in the vouchers should be discouraged.

For prevention of evasion and tax avoidance, there is great need and considerable scope for simplifying administrative requirements, including accounts, forms of returns, etc. More attention should also be paid to supervision and surprise checks by higher officers of the Department and test audits of assessments made by lower officers. Experience has shown that the more complicated the tax system, the more the prevalence of evasion and greater the scope for corruption.

For the maintenance of proper liaison with trade and industry, a small committee representing important sections of trade and industry and the consumer should be set up in each State. Matters discussed by these Sales Tax Advisory Committees should be those of general interest to the State and not individual disputes and grievances.

There should be an independent authority in each State to decide final appeals on sales tax disputes between the Department and the dealer. In most States, appeals lie to the higher executive authorities. This does not create the same confidence in the minds of the dealers as an independent appellate authority. Sales Tax Tribunals exist in certain States and are working satisfactorily. Such tribunals should be established in all States.

In the administration of sales tax, there is constant need for exchange of information between one State and another. There are occasions, when it is necessary to have consultation with the Sales Tax Department of other States in matters of common interest. It is desirable to have meetings of the Heads of Sales Tax Departments of all States at least once a year. Such annual conferences should be held under the auspices of the Inter-State Taxation Council.

COMPANY MEETINGS AND DIVIDENDS

NORTH-WEST COAL CO., LTD. Half-yearly General Meeting, Calcutta, 17th March, 1955. Dividend: *Nil.* Transfer books remain closed from 9th to 17th March, 1955, both days inclusive.

iii. Dividend warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

DEMAND FOR MONEY KEEN

(*From Our Own Correspondent*)

BOMBAY, 8th *March*

Conditions in the short-term money market continued to be stringent during the week under review also. Notwithstanding the reported lending of its idle funds by the Industrial Credit and Finance Corporation to banks, the requirements of funds by banks remained unsatisfied. The demand was so keen that any offering of funds was readily absorbed. In the result, the short-term money rates were firmly held at the previous week's levels.

Inter-bank call money was bid at the self-same rate of 3 per cent. among all sections of banks. House money at call was placed at 3 per cent. and short-term deposits for one to six months also at 3 per cent.

The foregoing conditions in the market is duly reflected in the results of the Government of India Treasury Bill sales this week. The amount offered, against the usual invitation for Rs. 1 crore, dwindled substantially from Rs. 2.76 crores last week to Rs. 1.40 crores. This is the second week in succession in which the offerings show a marked decline, the decline in the previous week having been from Rs. 3.72 crores to Rs. 2.76 crores. The average rate of accepted tenders, which had dropped from Rs. 2-8 per cent. to Rs. 2-7-8 per cent. per annum in the previous week, rose once again to Rs. 2-8. Tenders for Rs. 1 crore have been invited for next week also.

A marked rise of Rs. 23.57 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 4th March, 1955, as compared with that for the previous week. Notes held in the Banking Departments are lower by Rs. 5.23 crores, so that the rise in total notes issued is of the order of Rs. 18.34 crores. This is offset by a rise of Rs. 10 crores in foreign securities, a similar increase in rupee securities and a reduction of Rs. 1.66 crores in rupee coin. In the Banking Department, Central Government's deposits have risen by no more than Rs. 74 lakhs, while those of other Governments and banks have gone down by Rs. 4.04 crores and Rs. 2.22 crores, respectively. A decline of Rs. 12.24 crores is noted in deposits of others also. The Bank's cash balances have shrunk by Rs. 5.36 crores to a low of Rs. 7.48 crores and balances held abroad by Rs. 7.25 crores. There has been an increase of only Rs. 29 lakhs in loans and advances to Governments, whereas other loans and advances have gone up by Rs. 4.42 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.82 crores. Investments have dropped by Rs. 11.24 crores, while Government Treasury Bills purchased and discounted are up by Rs. 2.91 crores.

The consolidated statement of position of Scheduled banks for the week ended 25th February, 1955, as compared with that for the previous week, reflects the effects of the rising demand for funds on banks. Thus, in contrast to the rise of Rs. 9.59 crores noted in the previous week, there has been a decline of Rs. 2.47 crores in demand deposits of the banks during the week under review. Time deposits are also lower by Rs. 83 lakhs and borrowings from banks by Rs. 28 lakhs. Borrowings from the Reserve Bank have gone up by Rs. 3.79 crores and those from the Imperial Bank by Rs. 94 lakhs. There has been an expansion of Rs. 4.14 crores in advances and of Rs. 3.40 crores in inland bills purchased and discounted. Foreign bills purchased and discounted are, however, lower by Rs. 38 lakhs. Investments have declined by Rs. 2.01 crores. Cash on hand and balances with the Reserve Bank have together shrunk by Rs. 1.70 crores, balances with other banks in current account by Rs. 38 lakhs and money at call and short notice by Rs. 1.97 crores.

The Gilt-edged market ruled dull, with no semblance of activity whatever. Prices of select securities lost a fraction for want of support. Though there were sellers in some counters, business done was very meagre. The apathy of institutions is evidently due to the growing stringency in the money market. 2½ per cent. 1960, which had been in favour in the previous weeks, lacked further support, but held its ground at Rs. 94-14. 3 per cent. 1957 had buyers at Rs. 99-4 and some small business was done. 3 per cent. 1958 was neglected at Rs. 99-3. 3 per cent. 1959-61 was unchanged at Rs. 97-5. 3 per cent. 1963-65 and 3 per cent. 1964 had sellers at Rs. 93-10½, but no business was reported. 3 per cent. 1966-68 was maintained at Rs. 90-9 and 3 per cent. 1970-75 at Rs. 86-15. 3 per cent. 1986 Conversion Loan was marked down by As. 3 to Rs. 80-15. 3½ per cent. 1961 National Plan Bond dropped an anna to Rs. 99-8 and had sellers at that level. 3½ per cent. 1964 National Plan Loan shaded off by an anna to Rs. 98-7.

There was a hardening of the rupee in terms of the U.S. dollar during the week under review, consequent on the further strengthening of the pound sterling. Thus, banks' selling rate of the U.S. dollar declined from Rs. 480¾ to Rs. 480 per $100 and buying rate from Rs. 476¼ to Rs. 475¾ per $100. In New York, spot sterling improved from $2.78¼-2.78½ to $2.78 15/16-2.79 1/16, forward sterling (three months) from $2.77¾-2.77⅞ to $2.78-2.78⅛ and transferable sterling from $2.75¾-2.75⅞ to $2.75½-2.75¾.

LINSEED QUIET

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 7th *March*

Quieter conditions have prevailed during the week and prices have declined further, whilst activity has been reported on a small scale. Sellers have shown fairly keen interest, owing to quieter conditions ruling in upcountry and keener offerings of new crop supplies. Crushers have been purchasing their requirements on a small scale, and have shown some interest in new crop seeds also. The oil market is dull but steady; the local demand is small and buyers are indicating lower prices. The latest quotations are as follows:

March Rs. 16-6 and April-May Rs. 16 per maund.

BULLS STRONG IN BULLION

(*From Our Own Correspondent*)

BOMBAY, 8th *March*

The week under review was a short one for the bullion market, because the market remained closed yesterday as a mark of respect to Dr. B. V. Narayanaswami Naidu, Chairman of the Forward Markets Commission, who died on Saturday last at Rajkot, and because we have to go to press a day earlier than usual on account of the holiday tomorrow for *Holi*.

During the earlier part of the week, both silver and gold disclosed a somewhat irregular trend in prices, but the movements were confined to a narrow range. The undertone, however, remained fully steady on account of the bull grip over the market, as witness the high carry forward charges for the next settlement in their favour in both the metals. Towards the close, that is today, however, prices flared up on heavy short covering as the carry forward charges in favour of bulls touched a high of Rs. 3-2 in silver and Re. 1 in gold. At higher levels, some profit-taking set in and erased a fraction of the gains. Nonetheless, forward silver disclosed a rise of Rs. 2-3 over the week and gold Re. 1-4.

After advancing, from Rs. 165-11 to Rs. 166-1 on the opening day, forward silver (10th March settlement) reacted to Rs. 165-9 on scattered realising and arrivals of unrefined metal. On short-covering and revival of bull support, it hardened to Rs. 166-9 on Saturday, but reports of persistent arrivals of and lack of sufficient offtake pushed back the price to Rs. 166 on the same day. As already stated, there was a flare up today in prices and forward silver touched a high of Rs. 168-5 before closing at Rs. 167-14.

The carry forward charge for the next settlement which had stood in favour of buyers at the close of the previous week, continued to be in their favour during the week under review. After narrowing down from Rs. 2-6 to Rs. 2-7 to Rs. 2, it widened to Rs. 3-2 today before finishing lower at Rs. 2-12 to Rs. 2-13.

Ready silver (.996 Mint) had commanded a premium of As. 8 over the forward in the previous week, but this premium narrowed to As. 4 during the week under review, due to continued arrivals and poor offtake. The opening and closing prices of the ready metal were Rs. 166-3 and Rs. 168-2, respectively. The floating stocks of silver are estimated at 1,800 bars. The daily average arrivals were 25 bars, while the offtake was no more than 10 bars.

Forward gold (8th March settlement) hardened early in the week from Rs. 91-13 to Rs. 92-8, on increased offtake *vis-a-vis* the arrivals and persistent support from Calcutta operators. It, however, reacted to Rs. 91-15 an Saturday, before advancing today to Rs. 93-3. The closing was done at Rs. 93-1. The carry forward charges in favour of buyers widened from As. 7 to As. 11, and, after a drop to As. 7½, rose further to Re. 1 today.

Ready gold opened at Rs. 92-12 and touched a high of Rs. 93-10 before winding up at Rs. 93-8. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals and offtake were even at 3,500 tolas.

In London, silver prices were unchanged at 74¼d. for spot and at 74d. for forward, while gold continued its weak trend, declining from £12 11s. 11¼d. to £12 11s. 3¼d. per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	8-3-55	Highest	Lowest	2-3-55
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

TRADING IN KIPS PATCHY

(*From Our Own Correspondent*)

MADRAS, 7th *March*

Kip trading with U.K. has been patchy, due to importers' resistance to price. Good marks have been selling comparatively freely at a penny less than February levels, while ordinary qualities have been difficult to place. Unless sellers reduce their prices by 2d. to 3d., it is gathered that there is no likelihood of free flow of business in F.A.Q. types. E.I. Tanners are not keen to follow U.K. levels at present, as they are in a well-sold position, but are likely to accept orders at a penny less by the middle of the month, if no buying support is forthcoming from U.K. dressers. There were moderate arrivals of tanned buff calf, buffs and cow calf and clearance was slow.

Arrivals of tanned goat and sheep skins in the local market have been as usual, and prices have been unchanged for sheep and slightly firmer for goat skins due to several enquiries for goat skins from the Continent.

In the March London tanned skins auctions, which commence on the 14th instant, 410,000 goat skins and 650,000 sheep skins will be offered for sale.

Shipments of hides and skins during February in bales were:—2,203 tanned cow hides, 188 cow calf, 66 buff hides, 188 buff calf, 605 tanned goat and 438 tanned sheep skins to U.K. ports; 2 cow calf, 460 tanned goat and 97 tanned sheep to Continental ports; 40 buff hides, 5 buff calf, 19 tanned goat and 13 dry salted goat skins to U.S. ports and 113 tanned sheep skins to Japan.

NARROW MOVEMENTS IN COTTON

(*From Our Own Correspondent*)

BOMBAY, 8th *March*

Narrow fluctuations marked the trading in the cotton market during the week under review. The operators seemed hesitant to enter into large fresh commitments either way. Although little is known about the Government's reaction to the strong demand by the mills for a revision of the new excise duties on cloth announced by the Union Finance Minister, Mr. C. D. Desmukh, as part of his budget proposals, there are many operators who expect to see a helpful downward adjustment in these duties.

There is now little doubt that the new scale of excise duties on cloth will bear heavily on the mills and thereby affect adversely their purchases of cotton. The Committee of the Millowners' Association, Bombay, feels that the effect of the duty will be far greater than that expected by the Finance Minister. As the width of the cloth produced by the Indian textile industry is much larger than 36", the expected yield of Rs. 9 crores from the new excise duty is stated to be an underestimate. It emphasises that the increase in excise is of a two-fold character in the case of coarse and medium cloths—an increase of 6 pies per yard and an alteration in the basis of calculation from linear yard to square yard. The Association says: "If the duty is passed on to the consumer, it will mean hardship, particularly to the agriculturists and the lower class community who constitute 80 per cent. of the population. On the other hand, if the mill industry is unable to increase its price proportionately, many mills will find it extremely difficult to keep going. The result of any reduction in the offtake of cloth is bound to hit the farmer again in the shape of reduced prices and offtake of cotton and may even result in unemployment in the textile industry."

The local cotton market remained closed after 2-30 p.m. on the 7th inst. as a mark of respect to the late Dr. B. V. Narayanaswami Naidu, Chairman of the Forward Markets Commission. It remained closed on 9th inst. on account of *Holi*. In the forward section, I.C.C. May opened the week at Rs. 566½, as against the previous close of Rs. 565½ and moved up on option application and replacement purchases to touch a high of Rs. 569½ on 4th inst. An additional factor for this trend was the expectation that the Government would take a favourable view of the need for a downward revision of the excise duty on cloth. At higher levels, however, there was some profit-taking which, together with reports of weakness in other commodity markets and of absence of mill demand, depressed prices. I.C.C. May declined to touch a low of Rs. 557 on 8th inst., finishing the day's session slightly higher at Rs. 559.

The following is the trend of prices in the forward section during the week under review:

	Opening	High	Low	Closing
I.C.C. May ...	Rs. 566½	569½	557	559

Steady conditions were witnessed in the spot section. Mills evinced interest in Khandesh, Morvi, Wagad, Surtis and Vijay among other varieties. The following are the latest available quotations from the Sewri market.

Bengal *deshi* Rs. 570; Berar Jarillas Rs. 625; Khandesh Rs. 640; Vijay Rs. 730; Oomra *deshi* Rs. 590; Moglai Rs. 580.

A moderate decline in prices has been reported from the Karachi cotton market, thanks to absence of any large-scale foreign interest in Pakiston cotton. The latest available quotations from the Karachi market are:

Sind *deshi* Rs. 65-4; Punjab *deshi* Rs. 58-4; 4F Punjab R.G. Rs. 62-6; S.G. Rs. 67-14 to Rs. 69-14; L.S.S. Punjab R.G. Rs. 67-10; S.G. Rs. 72-2; N.T.R.G. Rs. 68-7; S.G. Rs. 72-11; 289F Punjab R.G. Rs. 71-3; S.G. Rs. 75-3.

Foreign demand for Egyptian cotton continues to be restricted. The Cotton Commission has altered the New York basis of its daily selling prices from March to May. The recent weakness of the position and the declining spot premium, it is stated, brought about reductions in the running offers made by shippers. This does not, however, mean any great advantage to the sterling area buyers since there has been a lowering in the discount given to them following a fall in the entitlement premium for sterling.

In response to easiness in the New York cotton market, the Liverpool cotton market has declined steadily over the week. The latest available quotations are: March-April 31.48d., May-June 31.45d., July-August 31.20d. and October-November 30.88d.

The absence of any active foreign demand for cotton, the slow off-take of textiles and the possibility of a 3 per cent. increase in acreage allotments for new crop were the principal factors which caused a downward movement in the New York cotton market. No sustained support was forthcoming.

An optimistic view of the export outlook for U.S. cotton was expressed by Mr. Walter Randolph, Vice-President of the American Farm Bureau. He told a Senate Agriculture Sub-Committee that with a "vigorous sales promotion programme" the U.S. should be able to export five million bales in the 1955-56 season. He thought the U.S. would be able to export 4.5 million bales this year (1954-55). It may be mentioned here that the U.S. exported 3.71 million bales in 1953-54 and 3.0 million bales in 1952-53. Mr. Randolph said: "We have available for our customers throughout the world the best quality cotton and generally, it is competitively priced." Significantly enough, he warned that continued high exports meant that the U.S. must permit foreign products to come into the country so that its "customers will have an opportunity to pay."

The following are the latest available quotations from the New York market, as compared with those a week and fortnight before:

(In cents per lb.)

	7-3-55	28-2-55	21-2-55
Spot	34.00	35.00	35.10
May	33.51	34.57	34.73
July	33.76	34.82	34.97
October	34.12	34.77	35.08
December	34.20	—	—

STAPLE FIBRE YARN BETTER

(From Our Own Correspondent)

BOMBAY, *8th March*

Except for some enquiry in the staple fibre yarn section, the yarn market ruled virtually listless during the week under review. The staple fibre yarn section put on a firm trend early in the week on covering by shorts at low level touched at the close of last week. Subsequently, however, the values tended to decline. In spite of this small setback, quotation at close revealed sizable gains. Thus 40×2, March delivery, was enquired at Rs. 584-4 as against Rs. 581-12. After improving to Rs. 587-8 on the 4th inst., it gradually declined to close at Rs. 584. On balance, there was a gain of Rs. 2-4 over the week. April delivery fluctuated between Rs. 590-8 and Rs. 587. Among foreign yarns, Suicos put on an anna to Rs. 4-3-6, while Auroras were quiet at Rs. 3-14. Among 40×2 yarns, produced in the country, Sitarams put on 3 pies to Rs. 3-0-9. Pankajas were slightly better at Rs. 2-14-10. Phœnix rallied 3 pies to Rs. 2-15.

There was very little activity worth mentioning in the art silk yarn section. 150D was nominally quoted at Rs. 731. Among spots, 120D Japan eased from Rs. 3-14 to Rs. 3-13, and 150D Japan from Rs. 4-8 to Rs. 4-6. 120D Italy was lower by half an anna at Rs. 4-1-6, while 150D Italy was quiet at Rs. 3-14.

The cotton yarn market was also wanting in support. In spite of the permission to allow export of cotton yarn, there was no sign of perceptible improvement in demand, because the quantity allowed for export was considered to be limited. The aggregate export that will be allowed from April onwards is estimated at no more than 25,000 bales. As a result, there was very little movement in prices. Among 80s, Finlays were quiet at Rs. 72, Moderns at Rs. 62-8, Elphinstones at Rs. 58-12 and Seksarias at Rs. 54. Among 60s, Moderns declined from Rs. 59-12 to Rs. 59-8 and Raghuvamshis Rs. 54-12 to Rs. 54-10. Elphinstones were lower by As. 2 at Rs. 54-10. Srirams, however, gained As. 2 to Rs. 55-12. Transactions in 40s were reported in Seksarias, with prices easing from Rs. 23-8 to Rs. 22-14, while Moderns were unchanged at Rs. 25-4, Gokaks at Rs. 25. and Vasantas at Rs. 24-4. Among 30s, Simplex rallied from Rs. 20-10 to Rs. 21-6, whereas Maduras were dull at Rs. 22. Among 20s, Maduras were lower by an anna at Rs. 17-7. Centurys were quiet at Rs. 16-4 and Moderns at Rs. 17. Business in 10s was done in Moderns an anna better at Rs. 13-8. But Podars were unchanged at Rs. 13-7 and Elphinstones at Rs. 13-7.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	8-3-1955	2-3-1955
	Rs. a.	Rs. a.
Art silk yarn—		
120 Japan (per lb.)	3 13	3 14
150 Japan (per lb.)	4 6	4 8
120 Italy (per lb.)	4 1½	4 2
150 Italy (per lb.)	3 14	3 14
Staple fibre yarn—		
40 × 2 March	584 0	581 12
Suico (per lb.)	4 2½	4 2½
New Great (per lb.)	3 1½	3 2½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 8	13 7
20s Seksaria	16 4	16 4
30s Madura	22 0	22 0
40s Gokak	25 0	25 0
60s Modern	59 8	59 12
80s Finlay	72 0	72 0

MIXED TREND IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, *8th March*

The oilseeds market presented a mixed trend during the week under review. The groundnut section ruled somewhat steady. This was due to short covering at the low levels reached last week-end. Although overseas advices for groundnut oil were not good enough at £93 per ton, they were not discouraging. The linseed section, which put on an encouraging performance in the first few sessions, tended later to drop. There were only sporadic enquiries for linseed oil from the Continent at £92 per ton. The castorseed section continued to present an easy trend for lack of support either from domestic or from overseas traders. The *kardi* section ruled quietly steady, while *niger* seeds were dull. Arrivals of seeds were fairly good and they were expected to increase after the *Holi* festival.

The market remained closed today on account of *Holi*.

In the groundnut section, sentiment was aided by the reported issue of fresh export quotas for H.P.S. groundnut. It was stated that the export authorities had issued allotments at the rate of 20 per cent. of the exports effected by a shipper in any one of the three years, 1952, 1953 or 1954. This decision was expected to result in fresh quotas of about 6,000 tons. Shippers envisaged fairly satisfactory prospects for the commodity with Canada promising to be the main buyer.

Marketwise, Bold F.A.Q. improved from Rs. 20-4 to Rs. 20-12. April-May delivery gathered As. 4 to Rs. 21. Khandesh quality advanced from Rs. 20-10 to Rs. 20-14. *Groundnut oil rallied As. 4 to Rs. 11-6. March and April deliveries were higher by As. 3 each at Rs. 11-5 and Rs. 11-4, respectively.*

In the linseed section, Bold ready opened the week at Rs. 22, as against Rs. 21-8. After ruling steady for some time at this level, it declined to Rs. 20-12, before recovering to close at Rs. 21-4. April-May delivery disclosed a loss of As. 14 at Rs. 20-12. Linseed oil eased from Rs. 12-12 to Rs. 12-8.

May futures, in the castorseed section, were enquired at Rs. 73-4 as against Rs. 72-10. After fluctuating between Rs. 74-2 and Rs. 70-4, it closed at Rs. 71, thereby disclosing a loss of As. 10 over the week. Madras quality declined from Rs. 14-4 to Rs. 13-12 and F.A.Q. from Rs. 14 to Rs. 13-8. Castor oil Commercial changed hands at Rs. 9-1 as against Rs. 9-2 and First Pressure at Rs. 9-8 as against Rs. 9-10.

Among others, *kardi* Bold rallied As. 2 to Rs. 11-4, while *niger* Madras lost As. 12 to Rs. 17-12.

The Board of the Bombay Oilseeds Exchange Ltd. has, in a telegram, urged the Government of India that exports of *kardi* and *niger* seeds should be allowed free till at least June-end. The telegram adds that movement of these crops has recently started and the season is getting into full swing. Prices of *kardi* and *niger* seeds have declined appreciably during the last 2 to 3 weeks, the decline being more than 25 per cent. in the case of *kardi* seed.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	8-3-55	2-3-1955	23-2-1955
	Rs. a.	Rs. a.	Rs. a.

SUGAR RETREATS

(From Our Own Correspondent)

BOMBAY, *8th March*

The increase in sugar prices noted last week proved a short-lived affair this week, as the market presented signs of distinct weakness. This was, in the main, due to slackness of demand from dealers in internal markets. These centres were fairly stocked with different varieties of sugar purchased at cheaper rates. And, therefore, they were not willing to take sugar at the post-budget prices which were about Rs. 2 to Rs. 3 a bag higher than those on the eve of the budget. On the contrary, these dealers were actually inclined to lighten their holdings in expectation of a decline in sugar prices, thanks to the impending release of damaged sugar by the Government in the next two or three days. As a result of these developments, panicky conditions prevailed for some time in the Bombay Deccan area where millers became aggressive sellers even at prices below the cost of imported sugar. Prices, therefore, slumped to pre-budget levels at which they stood towards the close. Imported sugars, however, remained steady with quotations revealing fractional gains on balance.

In the forward section, *Fagan* delivery dropped from Rs. 84-9 to Rs. 84, before finishing the week at Rs. 84-4. This settlement is expected to be squared up this evening at about this level. *Chaitra* delivery which had gone up to Rs. 84-13 staged a retreat to Rs. 84, but closed at Rs. 84-4.

In the spot section, among indigenous sugars, medium grains receded from Rs. 89-91 to Rs. 88-89 per bag. Similarly, bold grains gave way from Rs. 93-104 per bag to Rs. 90-102 per bag. Among foreign sugars, British refined was freely offered at Rs. 83-8, as against Rs. 83-12 per bag of 224 lbs. last week. Cuban sugars were, however, steady at Rs. 91-12 per bag of 250 lbs. German sugar, on the other hand, was done As. 4 higher at Rs. 82 per bag of 220 lbs. French sugar had business at Rs. 82-84 as against Rs. 81-12 to Rs. 84 per bag of 220 lbs. Czech sugar was quoted at Rs. 85-88 per bag of 220 lbs. as against Rs. 85-8 to Rs. 88 last week.

Kanpur markets reported some substantial business in Hargaon and Gola sugars at Rs. 30-4 a maund, ex-mill 'C' grade. Bombay-Deccan area, however, did not show the strength of the mills in the North, as factories in the Deccan were keen sellers. The undertone of the Bombay market was uncertain at the close.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER IN DOLDRUMS

(Messrs. Parekh & Co.)

BOMBAY, *8th March*

New York having shown little interest in Malabar black pepper except afloat, the market at all primary centres in the country remained in the doldrums. Prices ruled steady to quiet with the exception of a temporary rise, subsequent to a sizable purchase by one of the important Alleppey exporters. Such large and rather aggressive purchase gave rise to a rumour that the purchase may be a covering operation against sales to China. But so far definite confirmation as to the purchase of Malabar Black by China is lacking. New York is reported to have made some purchases of afloat from India at $0.42.

Alleppey after touching Rs. 950 improved to Rs. 1,025 but the rise was not maintained as there was no following up. At the time of writing, Alleppey is reported sellers at Rs. 1,000 without buyers. It is also reported that the important exporter who bought last week is now a seller of garbled at Cochin, which, as a result, after touching Rs. 180, came down to Rs. 175. Bombay exporters are reported making slow but steady purchases in Tellicherry areas. That is one of the reasons why the markets in North Malabar are fairly steady.

Business in the A.S.T.A. and also in delivery sections has very much slowed down as market is shorn of any fluctuations. Such lethargic conditions in the local market are reported due to unexpected stopping of payment by one of the oldest important firms dealing in pepper and other Malabar produce.

With the advance of the harvesting season, there appears some relief in the selling pressure from growers. Yet, there are no signs of any notable improvement in prices as the majority of the local exporters are bearishly inclined. They are off and on in the market to liquidate their holdings whenever their offers are refused by overseas. New York buyers are reported marking time. There are chances of their placing orders for a sizable quantity, as soon as they feel that the Indian market is firmly held and that there is no pressure of sales from growers.

Following are today's nominal quotations:—Ready delivery Rs. 120 per Bengal maund, and March Rs. 875-85 and April Rs. 900/910 per candy of 5¼ cwts.

TEA PRICES RECEDE FURTHER

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, *3rd March*

There was approximately 1,250,000 lbs. on offer in sale No. 5 which was held on Tuesday, 1st March, 1955. Quality showed a slight decline and some of the offerings had poor leaf appearance. There was only a fair demand, possibly due to uncertainty amongst buyers as to the implications of the new slab system of duty. Common and low medium brokens and fannings were As. 5 to As. 6 easier. Mediums and good mediums were irregular, but must be quoted at As. 2 to As. 3 lower. Best liquoring teas were well supported at rates which were As. 2 to As. 3 lower. There was rome competition for high grown Pekoes and Flowery Pekoes and these were occasionally dearer. Middle East types were slightly easier, but sold fairly well. There were heavy withdrawals.

Quotations	1955 Rs.	a.	p.	1954 Rs.	a.	p.
Low grown Travancore B.O.P.	2	15	0	2	8	0
Medium Travancore B.O.P.	3	0	0	2	9	6
Anaimallais B.O.P.	3	5	6	2	12	6
Best liquoring Nilgiri B.O.P. ...	4	0	0	3	13	0
Well made black leaf O.P. ...	3	6	0	2	8	6

London Market—Sale of 28th February, 1955.—Mostly 2d. lower.

Sale of 1st March, 1955.—Best qualities 1d. lower. Others 3d. to 5d. lower.

Colombo Market.—Good demand. Best quality slightly lower rates. Mediums fair demand 10 to 15 cents lower. Gulf types declined 80 cents. Stalk neglected. Fannings weak.

Calcutta Market—Export.—19,600 packages. Less demand except leaf grades and Middle East types which were well competed for. Market As. 1 to As. 2 down for sweet liquoring, As. 2 to As. 4 for fibrous. End of season sorts not possible to quote.

Dust.—18,300 packages. Good general demand at lower rates. Black exportable types weakest feature. Medium Assams commons and dooars generally half to one anna easier. Good liquoring Assam and C.T.C. firm to occasionally dearer. Darjeelings irregular. Leaf 9,570. Market generally As. 2 to As. 3 easier.

Export Duty.—It has been announced that the slab system of duty will be operated as follows:—When the price of tea is less than Rs. 2-8 the duty will be As. 4; Rs. 2-8 and above, but less than Rs. 3-4 duty As. 6; Rs. 3-4 and above, but less than Rs. 4 duty As. 8; Rs. 4 and above, but less than Rs. 4-12 duty As. 10; and Rs. 4-12 and above, duty As. 12.

The announcement continues by saying "The price of tea means the price which the Central Government may, having regard to the world prices of tea, fix for this purpose from time to time by notification in the official *Gazette*." It is understood that the price fixed at the moment is Rs. 4-3 and hence the duty remains at As. 10.

Export Quota.—There has been a slightly easier tendency and business has been done freely at 126 pies.

Forthcoming Auctions.—Sale No. 6 will be held on Tuuesday, 15th March.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:

"*Dust Sale E.*—Almost 250,000 lbs. Good general demand. Prices irregularly As. 1½ easier. Middle East types about steady."

KANPUR HIDES STEADY

(From Our Own Correspondent)

KANPUR, *5th March*

Conditions in the Kanpur hides and skins market remained steady all round during the week under review. The fresh weekly arrivals were considerable except in the case of goat and sheep. The main purchasers were the local tanners headed by Messrs. Cooper Allen. The latest quotations are as follows:

Wet salted cow 1st grade Rs. 430 to Rs. 440, 2nd grade Rs. 300, 3rd grade medium superior Rs. 340 to Rs. 360, and 4th grade Rs. 160 to Rs. 180 per score. Wet salted buff 1st grade 1 lb. 7 ozs. and 2nd grade 1 lb. 10 ozs. to 2 lbs. per rupee; goat 1st grade Rs. 325 to Rs. 350 and 2nd grade Rs. 275 to Rs. 300 per 100 pieces; and sheep Rs. 200 to Rs. 250 per 100 pieces.

SACKINGS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *8th March*

The feature during the week under review in the jute goods market was the good business put through in heavy cees and B. twills for export to foreign countries. Prices also rose, and during this month further business of a heavy nature is expected with South-East Asian countries. Stocks are, therefore, expected to show a sizable decline. Prices of hessians were easy and almost unchanged throughout the week. The lack of adequate orders for hessians from foreign countries, especially from the United States, is attributed to the cheapness of substitutes. If the slackness continues, mills may have to transfer a portion of their hessian looms for heavy goods. The stock position of goods held by mills as at the end of February shows a rise both in hessians and sackings. The total rise was a substantial quantity of 6,700 tons, as a result of hessian, sacking and miscellaneous constructions at 26,700 tons, 55,100 tons and 1,300 tons showing an increase of 2,700, 3,900 and 100 tons respectively. If only prices come down, there would be encouraging sales. But this week, the heavy purchases by foreign countries have raised the prices of heavy goods.

It is, of course, a good sign that raw jute prices are not moving up, but are being maintained at the lower levels of a week ago. This is the outcome of the cautious handling of the market by mills. The stocks with them are believed to vary from requirements of 2½ months to 5 months among the various mills. Mills believe that raw jute prices are bound to fall and will soon touch a level which will have a relationship with prices of goods. In the mofussil centres, ample supplies, mostly of the inferior varieties, are believed to be held up. The more prosperous among the cultivators have also indulged in this "pastime." As far as the superior types fit for the production of hessians are concerned, adequate supplies are expected to be received from East Bengal. All things considered, the belief that mills would be able to carry on without a cut in working hours is strengthening.

During the week under review, ready B. twills opened lower at Rs. 128 as a result of speculative manipulations in consideration of the due date. In the meantime, the news that Australia was not likely to lift more quantity in the near future came in, and this saw the rate recede to Rs. 126-12. At lower levels, short covering and the call for tenders for heavy cees by Burma pushed ready B. twills to Rs. 129, April-June goods recovering to Rs. 128-8 from Rs. 126-4. The rate for the ready position was further pushed to Rs. 130 on Thursday and April-June to Rs. 129-8. This followed transactions with West Africa for March shipment. A steamer full of B. twills is now expected to sail to West Africa. Siamese buyers gave considerable support to the market at this stage, as they accepted offers for a heavy quantity of heavy cees. Burma also showed interest in heavy cees, and the Middle East and Indonesia are also expected to buy moderate quantities. Considerable speculative interest followed in heavy cees and B. twills. By the week-end, B. twills ready reached a high of Rs. 132-8 and April-June goods were quoted at Rs. 131. Yesterday, a slightly lower tendency was in evidence, following the publication of an increase in stocks held by mills. The ready position gave way by As. 2 to Rs. 132-6, at which rate the week's gain was Rs. 4-6. The April-June goods were quoted at Rs. 131 yesterday, which was Rs. 3-8 higher on balance for the week under review.

Ready hessians 40" 10 oz. opened at Rs. 46-1 and, although only poor interest was shown by buyers, moved to Rs. 46-8, mainly in sympathy with heavy goods. On Friday, however, there was a move down to Rs. 46-6, the closure for the week-end being higher at Rs. 46-10 and for yesterday further fractionally higher at Rs. 46-11. Forward rates were either in parity with the ready goods or As. 1 to As. 2 lower.

Notice

THE METAL BOX COMPANY OF INDIA LIMITED

THE BOARD OF DIRECTORS OF THIS COMPANY have declared a dividend on the 6 per cent. (taxable) Redeemable Cumulative Preference Shares for the half-year ending 31st March, 1955, at the rate of 6 per cent. per annum less tax. Payment will be made on or after 31st March, 1955, to those Shareholders whose names appear in the Company's Registers on that date.

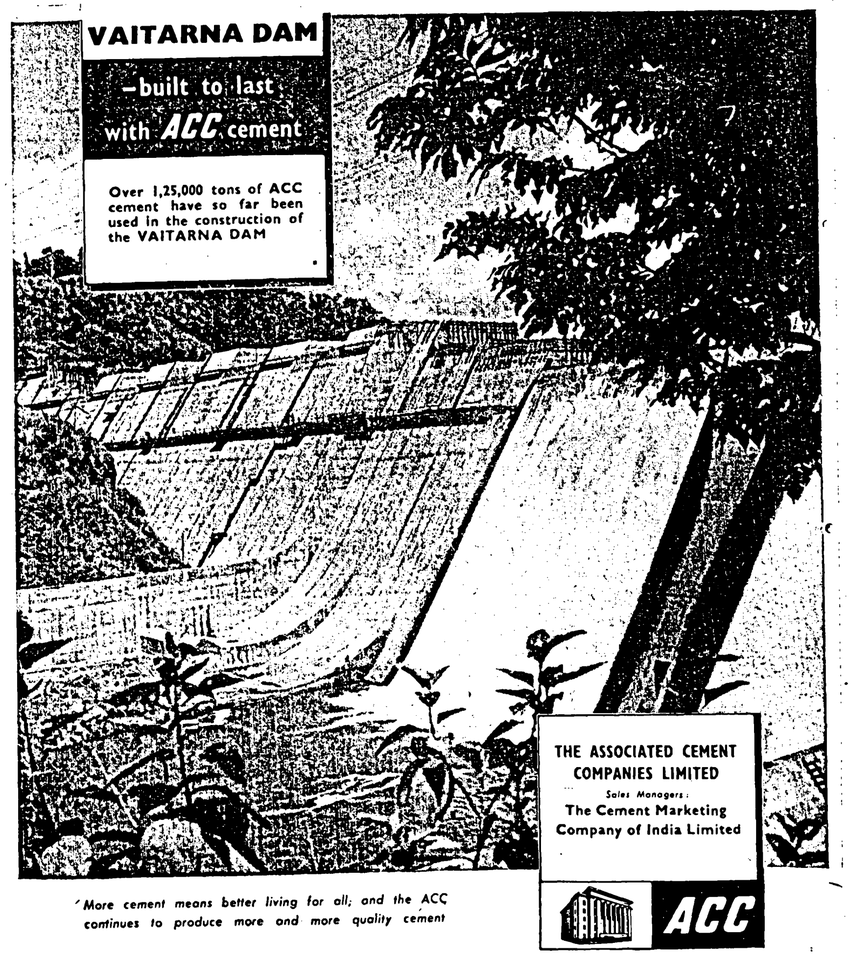
NOTICE is hereby given that the Preference Share Transfer Books of the Company will be closed from the 29th to 31st March, 1955, both days inclusive.

By Order of the Board,

F. P. GILBERT,

Secretary.

CALCUTTA, *5th March*, 1955.



'More cement means better living for all; and the ACC continues to produce more and more quality cement

STOCK & SHARE QUOTATIONS

Abbreviations.—D=Deferred shares. P.C.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. Ex-quotation. Ex.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares.—If a new party has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the subtitle "Paid-up Ordinary Capital" and "Paid-up pa

Accounts.—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, resp. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, all other items on which depreciation is allowed, less sales, if any, and assets for the green figures except where otherwise indicated.

Dividends.—Dividends for or expired years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which clos their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

CALCUTTA, *10th March, 1955.*

PLANTING

(Concluded from page 462)

export duty on tea is a good illustration of a duty which has been levied primarily for revenue reasons. The revenue yield shows a slight upward trend, but not of the same magnitude as the value of exports, since the duties have not been adjusted to take account of trade variations. In 1950-51, 1951-52 and 1953-54, which have been good years for tea, the duty as a percentage of value has been slightly less than in the other years. The Official Team on the tea industry examined the export duty on tea and came to the conclusion that the duty was primarily paid by foreign buyers and that the position of the Indian industry was not adversely affected. It was of the view that Indian tea had special features in regard to flavour, appearance, cut quality, etc., and there was little direct competition between tea of various countries. Quantities exported would not, in its opinion, vary significantly as a result of price changes. On the basis of the Team's conclusions, the export duty on tea may be regarded as an instance of a revenue duty the burden of which falls primarily on foreign buyers. In these circumstances, the duty may be held to ensure revenue without detriment to the trade."

The trend of prices, as already stated, had been downward but it remains to be seen whether this trend will continue. Meanwhile, the retail price of tea in London is being cut by blenders. Early this month, Typhod Tea Ltd., a leading British firm, announced a cut of 8d. per lb., that is, from 8s. 4d. to 7s. 8d. in the price of its blend; this is said to be the first major retail price reduction since the high price of tea turned into a national issue. The reduction was made as a gesture to the public, on account of the fall in the market prices of tea. According to the firm's Chairman, there has been a slight recession in sales. "Expecting a fall in tea prices," he said, "people have been holding off from the market and the cut in price by Typhod Tea may induce consumers to resume their purchases." Anyway, this firm's action was followed by a reduction of 4d. per lb. by 2,000 chain grocery stores. Some days later, two more firms, Messrs. Brooke Bond and J. Lyons and Company announced a cut in price. These two firms have plans to introduce a new tea at 6s. 4d. per lb. which is cheaper by 4d. per lb. than their present lowest priced packet. It is reported that there has been a substantial fall in prices at London tea auctions and a steady development of consumer resistance.

INDIAN RAILWAYS' REQUIREMENTS OF ROLLING STOCK & EQUIPMENT AGAINST SUPPLEMENTARY GLOBAL PROCUREMENT PROGRAMME, 1955-56.

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to obtain from established and reliable manufacturers rolling stock and other Railway equipment shown in the list below. Manufacturers in Europe, United Kingdom and North America can obtain copies of the Indian Railways Supplementary Global Procurement Programme of Rolling Stock 1955-56 giving the particulars of items required and explaining the procedure for submission of quotations, from the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W. 3. Manufacturers in other countries and authorised agents in India of all foreign manufacturers can obtain such copies from the Chief Design Engineer, Central Standards Office, Raisina Road, New Delhi, at a cost of rupees two per copy.

LIST OF ROLLING STOCK AND RAILWAY EQUIPMENT

Railway Board.

MARKET REPORTS

TEAS FOR EXPORT EASY

(From Our Own Correspondent)

CALCUTTA, *8th March*

Offerings during yesterday's export sale of tea aggregated 15,200 packages. Although there was good general demand, prices were fully easy. The market opened As. 3 to As. 4 lower, but a good part of the losses were erased as the sale progressed, so that the closing rates stood lower by 1 to 2 annas only. In view of the unrepresentative character of the offerings, there are no quotations for this week also. The feature of this week's sale was provided by teas with black leaf and clean appearance, which realised firm prices comparable to those of a week ago. Leaf grades declined by As. 2 below valuations and fannings received poor attention. Stylish whole leaf grades were in good demand, but prices did not move up.

Dusts amounted to 18,721 packages during last week's internal sale. Conditions were mixed. For, while the best liquoring Assam C.T.C. teas and the smaller medium Assams were fractionally dearer, the price of the black leafy exportable teas declined by As. 2 below brokers' valuations and medium Assams and common Dooars eased by As. 1 to As. 1½. Darjeel

MARKET GOSSIP

(Concluded from page 447)

or merchandise sold by him; (b) a contract in respect of stocks and shares entered into by a dealer or investor therein to guard against loss in his holdings of stocks and shares through price fluctuations; and (c) a contract entered into by a member of a forward market or a stock exchange in the course of any transactions in the nature of jobbing or arbitrage to guard against loss which may arise in the ordinary course of his business as such member. Thus, genuine hedge transactions, which are undertaken in the normal course of business, have been excluded from the scope of this legislation. It would further appear that departmental instructions have been issued to the effect that, in respect of hedging in raw materials, the Income-tax officers should not be too particular about the quantities and timing so long as the transactions constitute genuine hedging.

* * *

The Commission has examined the lines of criticism in respect of the prevailing method of treatment of speculation losses for tax purposes. The critics claim that the law is not effective inasmuch as it is even now possible to "buy up" losses under the guise of hedges and that it is inequitable as all the genuine hedging transactions are not excluded. It is also argued that it is not possible for the law to circumscribe speculative business within a legal definition and that the best remedy for the situation confronting the Income-tax Department is to examine the accounts more diligently than at present. Referring to these criticisms, the Commission says: "We are of the view that transactions of the nature of 'buying up' of losses or of keeping speculative profits out of books cannot be located merely through the examination of accounts as these are not maintained, according to the Income-tax Investigation Commission which examined this matter in a satisfactory manner. We are, therefore, unable to agree that there is no justification for some provision to prevent the adverse effect on revenue of such transactions escaping taxation. It appears to us that the present provision in the law is the only way in which it can be done, namely, to define speculative transactions and then to exclude genuine hedging from its scope."

* * * *

What is surprising about this week's British House of Commons debate on Indian textile imports into the U.K. is not so much the defeat of the Labour Party's censure motion or the passage of the Government-sponsored amended version of the motion as the fact that the debate took place at all. For, purely from the economic angle, the situation is by no means so serious as to receive so much importance. It is clearly an evidence of the extent to which political considerations give a boost to events which would have otherwise gone unnoticed. No unemployment on any significant scale is reported from Lancashire. Yet the Labour Party motion which was defeated, noted "with concern the serious situation which is developing in the cotton industry and regrets the failure of H. M. Government to take effective action to remedy the position." The Government-sponsored motion, which was carried without division, supported the Government's action in making representation to the Government of India and approved the Government's declared intention to take "such safeguarding action on imports as may prove to be essential and appropriate, having regard to the position of the U.K. as a world-wide trading nation." It also welcomed the steps which the Government had taken to obtain the "Cotton Board's detailed views on the problem and their specific proposals for action."

* * * *

The Government motion probably throws some light on Britain's intentions to stem the flow of Indian textile imports into the U.K. Some "safeguarding action" seems to be definitely contemplated. It is of course difficult to say what that action is likely to be. The whole situation is complicated because there are the Indian agreement, the General Agreement on Trade and Tariffs (G.A.T.T.) and Britain's own general trade policy to be considered. Tariff restrictions are ruled out, because under the Indian trade agreement of 1939 (which replaced the Ottawa agreement) the British Government specifically undertakes "that goods grown, produced or manufactured in India and consigned from any part of the British Empire which are now free of duty shall continue to enjoy entry free of customs duty into the U.K." Also, it is against the spirit of the G.A.T.T. to make changes in tariffs. But a non-discriminatory import quota for textiles would not be repugnant to the G.A.T.T. nor to the Indian agreement. Quantitative restrictions are possible as "emergency action" under Article 19 of the G.A.T.T. under which the Government might suspend its obligations if imports increased so much as to "cause or threaten serious injury to domestic producers." The U.K., it is believed, may take action under this clause. Although Britain's concern over the textile imports is understandable, it seems odd that that country should seek to make out that these imports "cause or threaten serious injury to domestic producers" at a time when, on the Government's own admission, production and profits sustain a high level of employment and wages have increased. Whether or not the Government adopts this line of action—prescription of non-discriminatory quotas on textile imports—will, of course, depend on the Cotton Board's advice to the Government. After emphasising that such action would prejudice British attempts to persuade other countries to abolish quotas, the Financial Times says: "It will, however, only be adopted if the Government becomes convinced that it is unavoidably necessary to save the situation, and that time has not come yet."

TAXATION COMMISSION ON TRENDS IN PUBLIC EXPENDITURE

PUBLIC expenditure, whether it is expenditure by the Central Government or State Governments or local bodies, is increasing at a rapid pace. Such increase reflects the growing complexity of governmental functions as well as their expansion. So long as these functions remained restricted to those of a police and civic State, public expenditure could be held within reasonable bounds. But the war brought with it many new responsibilities. With the return of peace, some of these functions, the economic controls, for example, did not end with the war, which occasioned them. The Central and State Governments were confronted with the urgent task of economic development, which, in terms of ingenuity and cost, is proving to be more difficult than winning the last war. Nor is India alone in experiencing a vast increase in public expenditure. This is true of nearly all countries in the world.

To the extent that the increase in public expenditure reflects a welcome change in the concept of Government from one of a mere spectator of economic trends to that of an active creator of desirable changes in national economy, the mere fact that the Government spends more than it did formerly need never cause any regret. Rather, it is a trend that must be encouraged and supported by all sections of the public. But the people have a right to demand that public expenditure is beneficent and that reasonable prudence is exercised at all stages of that expenditure. The many instances of extravagant, irregular and infructuous expenditure in the public sector, which the Public Accounts and the Estimates Committees and the Audit Reports have brought to light, do make one wonder whether the community is deriving full value for the money spent. Obviously, the size of expenditure need not necessarily provide an index of achievement. For, if there is—as, indeed, there has been in this country, rather frequently—wastage in the use of public money, there will be no correspondence between money spent and benefits derived. It is gratifying to find that this aspect of the problem received adequate attention at the hands of the Taxation Enquiry Commission. While agreeing that "public expenditure in India has been moving increasingly towards beneficent expenditure, the Commission has been candid enough to remark that "it cannot be said with equal certainty that it is moving also towards economy and efficiency." That this is the verdict of an independent and impartial expert body is a point which requires to be specially noted.

The Commission's analysis of trends in public expenditure makes stimulating reading. Between 1938-39 and 1954-55, the revenue expenditure by the Central Government increased from Rs. 82.03 crores to Rs. 418.35 crores, and of Part A States from Rs. 80.53 crores to Rs. 400.89 crores. Even in Part B States, such expenditure registered a perceptible increase. Between 1950-51 and 1954-55, revenue expenditure in these States increased from Rs. 91.53 crores to Rs. 127.65 crores. The table below shows how a rupee of the total revenue expenditure of all Governments in India (Central as well as State Governments) was spent in 1953-54:

Revenue Expenditure of all Governments
(1953-54)

(In terms of per rupee of total costs)

1. *Non-development:*
   Direct demands on revenue 0-0-9; interest on debt and other obligations 0-0-10; debt retirement 0-0-3; national defence 0-3-5; General Government—external affairs 0-0-1; general administration 0-1-0; administration of justice 0-0-2; jails and convict settlements 0-0-2; police 0-1-0; others 0-0-9; miscellaneous 0-1-2—Total 0-9-6.
2. *Social Services:*
   Education 0-1-5; public health 0-0-3; medical 0-0-6; others 0-0-11—Total 0-3-2.
3. *Economic Development:*
   Agriculture 0-0-6; veterinary 0-0-1; co-operation 0-0-1; community development projects 0-0-2; irrigation and forests 0-0-5; industries and supplies 0-0-5; civil works 0-1-5; others 0-0-2—Total 0-3-4.

It will be seen from the aforesaid particulars that non-development expenditure forms the bulk of the total revenue expenditure and that the largest item of non-development expenditure is national defence (As. 3-5). The expenditure on social services and economic development is roughly equal, being As. 3-2 and As. 3-4, respectively. The Central Government would perhaps be well advised to have a similar table prepared year after year, so that it could serve as a rough index of the trends in public expenditure. At this stage, it seems necessary to emphasise the very obvious consideration that, in an underdeveloped country like India, non-development expenditure should be kept at a minimum, and that there should be a progressive increase in expenditure on economic development, followed by social services. Accordingly, it is important to think of the ways and means of reducing non-development revenue expenditure. Is it necessary to have as many States as we have at present? Is it necessary to have as many Ministers, Deputy Ministers, Parliamentary Secretaries, etc., as we have in each State at present? Can we not manage with a smaller police force than the one at present? These are some typical questions that occur to us when we come to think of it. There must doubtless be many more of this type which an expert body should easily be able to discern.

There has been a significant increase in capital expenditure too. In 1938-39, such expenditure by the Central and State Governments (in pre-Partition India) was no more than Rs. 13.44 crores, of which non-development expenditure was Rs. 0.18 crore and development expenditure Rs. 13.26 crores. Since then, capital expenditure has increased from year to year until in 1953-54, it was as much as Rs. 241.76 crores. Over the three-year period ended 1953-54, capital expenditure was Rs. 656.70 crores, made up of development expenditure of Rs. 503 crores and non-development expenditure of Rs. 153.70 crores. This non-development expenditure included State Trading Schemes (Rs. 63 crores) and subsidy on sale of American loan wheat (Rs. 73.6 crores). The main items in development expenditure were: multi-purpose river schemes Rs. 148 crores; irrigation Rs. 94 crores; electricity schemes Rs. 63 crores; railways Rs. 48 crores, civil works Rs. 77 crores and industrial development works Rs. 31 crores. This pattern, encouraging as far as it goes, is not sufficiently reassuring. It is a little disconcerting that industrial development should claim a mere Rs. 31 crores, whereas civil works should claim Rs. 77 crores. It is interesting to note that, of the total expenditure of Rs. 77 crores on civil works, the Centre spent Rs. 38 crores (mainly Bombay on development scheme and new capital at New Delhi) and the States Rs. 39 crores. Clearly, in any order of priorities for expenditure in a developing economy, civil works ought to come far down in the scale and industrial development should be somewhat high up.

An important objective of public expenditure is to redress the economic inequalities of the different regions within a country. A wise spreading of development expenditure can do much to promote the economic improvement of the backward sections of the community and of backward regions. To the first class of expenditure—redressal of inequalities among different sections of the community—belongs food subsidies, expenditure connected with relief and rehabilitation of displaced persons, industrial housing, and amelioration of the hard conditions of living of scheduled and backward classes. But this expenditure does not form a significant part of total expenditure. That is only as it should be, for though public expenditure has increased greatly in recent years, it forms only a small proportion of national income. The Commission has calculated that, in 1953-54, the combined expenditure (on revenue and capital account) of the Central Government, States and local authorities, was Rs. 1,170 crores or only 11 per cent. of the probable level of national income of the Indian Union.

The other objective of public expenditure is the redressal of regional or territorial inequalities. An attempt at achieving this objective, according to the Commission, is a "conspicuous feature of Indian public expenditure as also of the entire system of public finance." This redistributive process, the Commission points out, takes place both directly through the redistribution of Central expenditure regionally or indirectly through the division of shared taxes on the basis of population and by way of larger grants-in-aid to the more backward or financially weaker States. National considerations enter into the raising of revenues and the pattern of public expenditure. Thus, Central revenues are raised under uniform tax laws without regard to their higher tax incidence on larger regional incomes, while the distribution of Central expenditure is determined in terms of broad national requirements. Thus, river valley projects, which will raise the productive capacity of backward regions are financed out of Central resources which are raised by taxation and borrowing from the more prosperous parts and affluent sections of the community. The Commission says: "Important again are the grants-in-aid to 'backward' States and the high place accorded to population in the scheme of distribution of the divisible revenues collected by the Central Government." Summing up its study of this aspect of public expenditure, the Commission observes:

"The composition of Indian public expenditure as also the trends there in recent years serve to bring about a moderate reduction in inequalities, both economic and social, in the country; and, to this extent, should reconcile the people to an increase in the total burden of taxation. It must be emphasised, however, that, for an effective advance in these directions, the objective of the widest possible distribution of benefits, both regionally and by income groups, needs to be pursued

vigorously. Finally, we may add that the redistributive effects of public finance operations in India cannot attain really significant dimensions as long as the ratios of public revenues and public expenditure to national income remain as small as they are at present."

So much for what may be termed the "equalising effect" of public expenditure in India. It must, however, be emphasised that even this objective would be frustrated through the absence of efficiency and economy in public expenditure. It is not enough if public money is spent on socially desirable projects. It should be spent economically, so that the community, as stated at the outset, derives full value for the money spent. This implies that the administration, as a whole, is imbued with a sense of economy. It also implies correct choice of personnel. Further, there should be close co-operation between the Central and the State Governments, the latter readily submitting themselves to the former for a scrutiny of their expenditure. There should also be close co-operation between audit and administration, the former playing the role of an alert but not cantankerous mentor and the latter displaying a healthy awareness of the need for efficient and economic conduct of public enterprises committed to its charge.

The need for a check on expenditure arises from two considerations. In the first place, the non-development expenditure should be reduced to a minimum. Secondly, the Central and State Governments should ensure that there is no wastage whether in developmental or non-developmental expenditure. Particular care should be taken in regard to developmental expenditure, because not only is its magnitude large but also wastage in this sphere will be a burden on the community for several years to come. The Commission has, therefore, rightly emphasised the importance of expert scrutiny of public expenditure. It says: "We are ourselves impressed with the need for a thorough and careful enquiry both in the Central Government and the States into the whole question of public expenditure and suggest that such enquiries should be undertaken and entrusted to sufficiently high-powered bodies." The need for such an enquiry can be supported on two more grounds. First, the success or otherwise of the Five-year Plan is being measured more in terms of the extent of financial outlay rather than in those of achievements. This encourages expenditure by the States without adequate regard for return. Secondly, people are being asked to bear more and more taxes. Enough has been said by Mr. Deshmukh during the last few days to show that more taxation is in store for taxpayers in the coming years, notwithstanding the fact that the level of taxation in India is already the highest in the free world, next only to the U.K. If they are to accept this burden, on top of a large dose of deficit financing now contemplated, it must be proved to their satisfaction that there is no waste in Government expenditure.

In the course of the budget debate in the Rajya Sabha, some members drew the attention of the Finance Minister to this question. Mr. Deshmukh felt that, since the Economy Unit and the Organisation and Methods Division in the Central Government were seized of the problem of efficiency and economy in administration, any *ad hoc* committee to enquire into this problem may be "found to be redundant." As regards the States, he said that it was a matter for them to decide. Referring to the demand for scrutiny by the Central Government of expenditure incurred by the States out of funds and grants made available to them by the Centre, Mr. Deshmukh stated that the question had been examined as far back as in 1946. He stated, in effect, that there was no need for any special scrutiny since the Comptroller and Auditor-General was dealing with such accounts also.

This explanation does not carry conviction. Indeed, he has dismissed the whole question lightly. The grants and loans that are being given to the States are by no means so small, as Mr. Deshmukh wants us to believe. They are growing in size and will grow in the coming years, especially as the Centre has taken the responsibility for borrowing from the public on behalf of the States. As is pointed out by our New Delhi Correspondent in his despatch this week, even the World Bank exercises supervision and check over the projects financed through its loans which in many cases are smaller than those given by the Centre to the States, notwithstanding the fact that such loans are guaranteed by the Government. There is then no reason why the Centre should not have a check of the type recommended by the Taxation Enquiry Commission. Be that as it may, it remains to be seen whether the Economy Unit and the Organisation and Methods Division would be an effective substitute for the kind of high-powered body suggested by the Commission. So far as the States are concerned, there is, perhaps, an urgent need to set up units on the lines of the Economy Unit and the O. and M. Division. It must be remembered that the States' share in the revenue and capital expenditure is very large. In 1953-54, for instance, their share of revenue expenditure was as much as Rs. 506 crores, as against the Centre's Rs. 389 crores. Over the three-year period ended 1953-54, their share of capital expenditure was Rs. 435 crores, as against the Centre's Rs. 221 crores. In view of the fact that the States' share of the revenue and of the capital expenditure is larger than the Centre's and that there is no effective organisation for scrutiny of expenditure by the States, it seems essential that some attention should be devoted to remove this lacuna.

OUTLOOK FOR TEA INDUSTRY

THE speech delivered by Mr. Mackay Tallack at the seventy-fourth annual meeting of the Indian Tea Association, in his capacity as its outgoing Chairman, is notable for its sobriety. Whether it was the Government's policy, or the attitude of labour or the outlook for the industry, his comment was so sober, well-reasoned and tactful that neither the Government nor the worker nor even the consumer can take any exception to it. His explanation for the spectacular rise in prices of tea places the present state of affairs of the industry in its proper perspective. His speech clearly shows that the industry is as much worried over the unduly high prices for tea as are the consumers, for it realises that a boom in tea brings with it burdens which stay even after the boom is gone. The planters are enlightened enough to realise that stable prices at reasonable levels are preferable any day to fleeting prosperity.

In the last week of January, 1955, the price of tea for export touched a peak of Rs. 3-12-8 a lb., as against Rs. 2-7-7 a year before, on the auctions in Calcutta. Since then, there has been a fall to Rs. 3-0-1 a lb., but even this rate is about As. 11 higher than that in the first week of March, 1954. Similarly, the price realised on sale for internal consumption is standing at about Rs. 2-7½ per lb., as against Rs. 2-2½ at this time last year, after touching a high of Rs. 2-12-11 a lb. early this year. The increase in the price of tea in the U.K., the largest consumer of tea in the world, has been higher still and it nearly brought about a political storm, ending in a considerable amount of consumer resistance.

The high prices for tea are generally attributed to shortage of supplies. That is true enough. But what brought about the scarcity? Was it increase in consumption or the inability of the industry to produce more to meet the increased consumption? Mr. Tallack's explanation, in this connection, is interesting and must be carefully borne in mind by those who want to assess the industry's future. There has been a definite increase in demand for tea in many parts of the world. In Great Britain, more tea is being consumed now than before the war, the *per capita* consumption having risen by three-quarters of a pound a year, so that it is, according to Mr. Tallack, 10 lbs. a head now. Thanks to the high price of coffee and the efforts of the Tea Council, absorption of tea in the U.S. has registered a considerable increase. The settlement of the Iranian oil dispute and the general prosperity of other Middle East oil-producing countries have led to a welcome revival of exports to these areas. In India itself, consumption has been steadily expanding. As a result of all these, consumption of tea in 1954 is estimated to have exceeded the 1953 level by 65 million lbs. But, at the same time, production, too, went up in that year, a fact which many people do not seem to be aware of. The world's tea producers, said Mr. Tallack, had manufactured 80 million more pounds of tea in 1954 than in 1953, a quantity of 15 million lbs. more than the expansion in consumption. Of the increase in world production, India accounted for about 29 million lbs. and Ceylon for 23 million lbs.

If production had thus kept pace with consumption, why did prices shoot up as they did? The answer is that there was an enormous time-lag between the manufacture of a pound of tea and its arrival in the grocer's shop. The retiring Chairman of the I.T.A. disclosed that "much of the tea which has been produced on member gardens is still either in Calcutta or in ships bound for consuming countries or in the process of being distributed to retailers." There is always a certain amount of delay and it does not make itself felt on prices if demand is static, but becomes a live factor when demand is rising and stocks stand at low levels, as was the case last year. Further, in the year under reference, the time-lag was longer than usual, because of the dislocation caused by heavy rains, floods and landslides in North-East India and of the dock strikes in London and Calcutta. Again, the disadvantage arising from this time-lag was aggravated by the cautious release of export quotas by the Government of India, which was understandably anxious to ensure adequate tea supply for domestic consumption. The limited export quota released in the initial months of the season induced hectic buying by dealers who felt that supplies of tea during the season might not be adequate. Although export quota was subsequently raised by stages almost to the maximum limit permitted under the International Agreement, it did not have much effect, as the mischief had already been done. Buyers for export were so frantic that the price of right to export went up at one time to as much as Rs. 2 a lb., as against the price of As. 4½ now and As. 2½ in the beginning of the season. While not minimising the undue anxiety shown by buyers, Mr. Tallack was constrained to remark that the earliest possible release of the greatest possible quantity of quota would have a salutary effect on prices and upon the market's stability.

It will be noted from the aforesaid explanation that the rise in prices was partly due to circumstances of an extraneous nature and that some of these circumstances were unconnected with the tea industry as such. In short, as Mr. Tallack significantly put it, a good part of the prosperity of the Indian tea industry has been due to labour disturbances, as, for instance, the London dock strike, and the recurrence of natural calamities. Surely, such a prosperity cannot last long. Indeed, already prices have come down and, as more and more tea reaches consuming countries, prices will fall further, "though the statistical position," to quote Mr. Tallack, "does not warrant any serious collapse." The meaning of this qualification of the I.T.A. Chairman is that, while there will be no difficulty to sell at reasonable prices, whatever tea is produced in India, especially if the quality is well maintained, there is no reason to expect the high prices seen towards the close of 1954 and early this year to repeat themselves.

The better days through which the tea industry has been passing for well-nigh two years have enabled it to keep its labour contented. Mr. Tallack's account of what the tea planters have done for labour makes pleasant reading, for it shows that they have become progressive in their outlook and are moving with the times. The cuts made in wages in 1952 have been restored. Besides, the losses suffered by workers as a result of this cut have been made good in a majority of cases. Realising that cost of living will not fall to pre-war levels, large portions of workers' dearness allowance have been amalgamated with the basic wage, thereby ending the unrealistic position of dearness allowance being often greater than the basic wage. In regard to clerical and medical staff, they have consolidated in full the varied and clumsy allowances with the salary. In effecting this reform in wages, the planters have given a healthy lead to employers in Western India who are still chary of conceding the workers' demand for a reasonable adjustment of dearness allowance with the basic wage. The planters have also reconciled themselves to the inevitability of having to implement the Plantation Labour Code, under which the provision of a number of amenities to labour, such as housing of a high standard, education of workers' children, medical facilities, etc., is compulsory, though the cost of all this is heavy and will mean a severe strain on their resources, if the wheel of fortune turns against them.

While all these measures have helped keep down industrial disputes and strikes to very low levels, and led to happier employer-employee relations, it is distressing to note from Mr. Tallack's speech that workers' productivity has shown no perceptible improvement and that a good part of the increase in wages is being dissipated through larger consumption of liquor. These defects can be overcome only through enlightened labour leadership and increased supply of a large variety of consumer goods, the latter of which will be possible only if transport facilities to Assam and other tea garden areas are improved and expanded. Accordingly, both labour leaders and the authorities concerned should pay greater attention to these problems. Lest the protagonists of prohibition should make capital out of what Mr. Tallack said about the increasing drunkenness in tea gardens, we must hasten to add that he took care to add that prohibition would be no solution at all to the problem, as illicit distillation was so easy. He based this remark from experience, for even now, under the stimulus of increased demand for liquor, illicit distillation is going on merrily.

PROSPECTS FOR JUTE SHARES

REFORM OF COTTON HEDGE CONTRACT BEING ACTIVELY PURSUED

THURSDAY, 5 P.M.

THE Share Markets are slightly steadier, but turnover has shrunk. Values show a modest improvement, due mainly to bear covering. The substantial reduction in the excise duty on coarse and medium counts cloth, announced by the Finance Minister on Monday, has imparted considerable strength to popular textile counters such as Bombay Dyeings, Kohinoors and Centuries. The operators were expecting a reduction of only three pies, but the Finance Minister reduced the duty by six pies. His announcement, therefore, took the market by surprise. His hint, in the course of his reply to the general debate on the Budget, that he might consider some more modifications in his proposals when the Finance Bill comes up for discussion has given rise to fresh hopes among them. It is generally expected that, besides the abolition of the excise duty on sewing machines and sewing machine parts already announced, there may be further reliefs in some of the new excise duties, that the amendment to section 23A of the Income-tax Act may be made less stringent and that some concession may be shown in regard to taxation of perquisites. The enormous powers that are sought to be assumed by the Government by amending Article 31 of the Constitution and the provocative speeches made by Government spokesmen in Parliament last week, when this amendment Bill was moved for reference to a Joint Select Committee, have been ignored by the market.

MARKET GOSSIP

• • • •

There has been, for some days past, a revival of enquiry for jute shares on the Calcutta Stock Exchange. This is due mainly to the expectation that the financial results of companies, closing their half-yearly accounts in March, for the six months ended March, 1955, will make encouraging reading. The decline in the price of raw jute during the past few days and the growing belief that the mills will not experience any shortage of jute in the coming months, as was feared at one time early in the year, have strengthened the confidence of operators in the shares of jute companies. Another factor responsible for this is the introduction of the 25 per cent. development rebate in the place of 20 per cent. initial depreciation allowance. This measure is expected to assist the mills to implement their modernisation programme. The support to jute shares has been selective, being confined to those scrips the yield on which is fairly high.

• • • •

In view of the return of jute scrips to the fore, it will be relevent to make a brief reference to the speech of the retiring Chairman of the Indian Jute Mills Association, Mr. G. J. Gardner, delivered at the annual meeting of the Association held at Calcutta last week, just to see to what extent the present optimism of the market is justified. Mr. Gardner's assessment of the outlook for jute industry is a very cautious one. Here is what he said in the opening para of his speech:

"Although I am admittedly today able to talk against a more cheerful and less confused background, it would, in my view, be a brave man who could find grounds for real optimism in the present situation. I would go so far as to say that no one who has any appreciation of the basic economic facts of the Indian jute mills industry can expect, in present world conditions, any radical or sudden improvement in its fortunes. We can, I think, at the most, hope for a gradual consolidation of the ground that the industry has re-won after the disastrous reverses which have occurred at intervals during the last five years, and, viewed from this angle, the year 1954 has not been unsatisfactory, for it witnessed a most valuable expansion in world demand which enabled the mills to sell steadily and to reduce the heavy burden of stocks which had proved so embarrassing in previous years. So much so that, as 1954 proceeded, it became apparent that, for the first time in several years, a point was being reached when a moderate increase in production to meet world demand would be merited. It is, indeed, a matter for gratification that those hopes, so long deferred, were at last realised and successive increases in working hours made in July and October raised them to 48 hours per week for the first time since March, 1952. Towards the end of the year, an ominous note was sounded by increasing doubts as to the adequacy of the raw jute supply position and there was a serious inflation in price and deterioration in deliveries to mills at the end of the year. The worst of this danger now appears to have been surmounted but it has served as an ominous reminder of problems awaiting solution which, if not dealt with, will endanger the whole competitive position of our industry."

The sum and substance of the above quotation from Mr. Gardner's speech is that, though the present position of the industry is much better than what it was until recently and though there are grounds for feeling that this improvement will be maintained for a short term, there are no reasons to feel that there has been any fundamental improvement in its fortunes. On the contrary, there are several factors to show that the long-term prospects for the industry are still highly uncertain. There may be some who may feel that this view is rather exaggerated. Let those who feel thus compare the prospects for this industry with those for other industries, such, for instance, as steel, cement, paper, various branches of engineering, chemicals, aluminium, ceramics and glass. It can be confidently stated that every one of these industries will and must expand, for, unless they do, India cannot become a highly developed country. Can anyone say with such confidence that the jute industry in India will expand or regain its former glory?

• • • •

What are the factors that cloud the long-term outlook for jute industry? To put them in a nutshell:

(1) Raw material position is still quite uncertain; the industry had a taste of it only two months ago. Nothing effective is being done to reduce India's dependence on Pakistan to the barest minimum. The recommendations of the Expert Committee, which went into this question, remain unimplemented. So long as India is dependent upon Pakistan for as much as 30 per cent. of its needs of raw jute, the Indian jute industry will be under the influence of that unpredictable factor, namely, politics.

(2) The crop and prices of raw jute fluctuate widely. Between March, 1954, and mid-February, 1955, raw jute prices rose by 61 per cent. (that is, from Rs. 24-8 to Rs. 39-8 per maund—the highest touched at one time was Rs. 41 per maund), while the prices of jute goods could go up by no more than 15 to 25 per cent. During the past four or five weeks, the price of jute has fallen by Rs. 7 from the peak to Rs. 34 per maund. As regards crops, since the last war, the total jute crops of India and Pakistan have varied between 7 and 11 million bales.

(3) The number of competitors for jute is steadily increasing, thereby making the position of Indian jute mills more and more difficult. Japan, with its characteristic thoroughness and efficiency, is emerging as a serious competitor to India in the U.S. Pakistan is the most dangerous competitor of all. With their modern machinery and all the advantages in regard to raw material, Pakistan jute mills can easily undercut their confreres in India. Just as the cotton mills of this country have the advantage of low-priced domestic cotton, the Pakistan jute mills, too, can have it in regard to raw jute whenever it is found necessary.

(4) Precious little is being done to expedite the modernisation of Indian jute mills, though the authorities recognised the need for it in principle several months ago. Meanwhile, not only are the jute mills in other parts of the world being modernised but also the factories which produce substitutes for jute bags. In this connection, the following quotation from Mr. Gardner's speech will bring out the enormity of the situation that is developing:

"Our very existence is dependent on the degree to which we can compete in an international market in which competition is merciless and in which we are often at a severe disadvantage. Other jute manufacturing countries in most cases have a protected market in which they can sell the bulk of their products. Only a comparatively small amount is sold abroad and even then, often at subsidised rates. In our case, 90 per cent. of our production goes overseas. Our main competitor in the open market, the paper bag industry, is an example of a producer equipped with the most modern machinery so highly mechanised that the productive capacity per head of the workers employed is many times greater than it can ever be in the jute industry. We cannot afford, nor in the long run is it in the interests of our employees, that increasing labour costs should force us gradually and continually to lose important markets to competitive manufacturing countries and to substitute packaging materials."

It will thus be seen that the handicaps facing the industry are formidable and that their elimination requires sympathetic co-operation from labour and determined action by the Central and State Governments. At the moment, there is no evidence that these will be forthcoming in adequate measure. Accordingly, given the choice of investment in a first class company belonging to the group of industries mentioned at the outset or in a similar company in the jute industry, a wise investor, who is interested in getting a steady yield and a modest capital appreciation over a period and not quick speculative profits, will prefer the former to the latter.

• • • •

It has been recognised for some time now that the present structure of the hedge contract for cotton is unrealistic, in the sense that the prices registered by the contract are hopelessly at variance with the prices registered by the spot market. The prices of spot cotton, as is well known, have invariably been at a high premium over the contract. It is not, therefore, without reason that the contract has been criticised for being needlessly bearish. From this point of view, the East India Cotton Association (E.I.C.A.) may well be congratulated on its decision to invite the views of its member-firms on the question of modifying the present structure of the hedge contract for cotton. For the Association, it is learned, has received many well-thought-out proposals, all backed by the mature experience of the sponsors concerned. Indeed, the difficulty would seem to be one of choosing from the many alternative schemes for revision of the contract, which have been submitted to the Association, or one of selecting or reconciling the points which have been made. This task has fallen to the Hedge Contract Sub-committee (Chairman: Mr. Chimanlal B. Parekh) of the Association. Among the issues which have engaged the attention of this Sub-committee, mention must be made of the question as to whether there should be one hedge contract or more than one. It would appear that the mills are generally in favour of only one contract with 13/16" Jarilla as the basis (with a tolerance of 1/32"). The Millowners' Association, it is stated, attaches considerable importance to an effective scheme of arbitration and revision of existing standards for classification of cotton. It has suggested the setting up of an expert panel of 30 members. Each party to a dispute should select one member from the panel and the two arbitrators should select one umpire from the panel members. An appeal against the decision of these three persons will lie with a 10-member Appeal Committee. A heavy scale of fees for appeals, it is suggested, should be prescribed, in order to discourage frivolous appeals. As regards standards, it is pointed out that the existing standards are too low, and that the present superfine classification should be designated "fine."

• • • •

An important section of the cotton traders holds the view that, if the existing contract tends to be bearish, it is because the entire crop, ranging from ¾" to 1", is made tenderable against the contract. Accordingly, some members of the Hedge Contract Sub-committee would seem to favour two contracts—one ¾" to 13/16" and the other 13/16" to 1". It is admitted that the presence of two contracts might encourage straddle operations. But it is pointed out that, in pre-war years, there were as many as five contracts, of which three were actually functioning. It is felt that the only alternative to a system of two hedge contracts is a scheme under which the range of tenderable varieties would be limited to 13/16"-15/16". The consensus of opinion seems to be that the present contract is vitiated by the fact that there is a wide range of tenderable varieties. In this connection, it is pointed out that the question of exclusion of certain varieties might become politically difficult, for, if any variety grown in a particular State were excluded from the range of tenderable varieties, there would be widespread protest from the State concerned.

• • • •

Although the larger problem of evolving a satisfactory structure for the hedge contract has not yet been solved, it is gratifying to note that the Board of the E.I.C.A. has been able to arrive at an agreed decision in regard to amendment of by-law 55 which refers to tendering differences. This has been a thorny issue for some time now. The amended by-law envisages the setting up of a seven-member special committee consisting of persons actively connected with the spot market and representative of all panels. This committee will be charged with the responsibility of fixing (a) the differences between basic cotton and other descriptions of tenderable cotton and for class or grade, (b) "on" allowances for staples 1/32", 2/32", 3/32" and 4/32" above the staple lengths specified in the Hedge Schedule (subject to 13/16" for Punjab-American, 4F R.G. S.G., 27/32" for Kalyan, 29/32" for basic Jarilla, H.420, Vijay, Punjab-American, L.S.S. R.G. and S.G., 15/16" for Westerns, Coomptahs, Karunganni, Parbhani-America, Gaorani 6 and 12, 31/32" for Jayadhar and 1" for Surti, Cambodia, Laxmi, Buri-American and 216F Punjab-American, (R.G. and S.G.) and (c) "off" allowance for staple 1/32" and 2/32" under staple lengths specified in Hedge Schedule. The tendering differences, it is provided, should be fixed on or about 25th of the month preceding the commencement of a delivery period, and would be subject to a right of appeal to the Board on payment of an appeal fee of Rs. 100. These differences, fixed by the Committee, subject to modifications by the Board, should remain in force throughout the delivery period to which they apply. The amended by-law further provides that the Special Committee and the Board should fix the tendering differences on the "basis of the prices at which the basic and other descriptions of cotton are tenderable are sold in the Bombay spot market, taking nevertheless into account the spot prices of the respective descriptions of cotton in the interior markets and the ruling rates, if any, of succeeding deliveries of the hedge contract and any other factors which the Special Committee or the Board may in their absolute discretion consider relevant." The amended by-law, after it is approved by the Forward Markets Commission and the Government, will be gazetted. It is to be hoped that the new by-law will help evolve sound traditions in fixing tendering differences.

• • • •

The New York and London silver markets, which had witnessed a remarkably steady trend in prices, have registered a slight rise. On 15th March, the price of silver (spot) in London rose sharply to 75¼d. per ounce, from 74¾d. on the previous day. Since then, there has been a further increase, so that it now stands at 77¼d. At this level, it is at a premium over the parity with the New York price. Demand is stated to be fairly widespread. This change follows the rise in the New York silver market. In New York, the white metal which had remained unaltered at 85¼ cents an ounce since January, 1953, moved up to 89¾ cents on 16th March. Since then, unlike in the London market, there has been a slight decline to 88¼ cents. The increase in the New York price is attributed to the withdrawal of silver supplies from Mexico. As was pointed out in the article on silver last week (*vide* page 540), the New York market depends on Mexico for its supply. It would appear that Mexico has recently concluded a large contract to supply silver coinage to Saudi Arabia. But what seems to have provoked Mexico to suspend its sales in New York is the large enquiry from West Germany for industrial purposes which could not be fully satisfied in London. Evidently, Mexico must have decided to strike a hard bargain, taking advantage of this demand. There is, however, a limit up to which Mexico can boost the price of silver, for, under the existing legislation, the U.S. Treasury

STEADY UNDERTONE IN SHARES

TATA STEELS TOUCH NEW HIGH

(From Our Own Correspondent)

BOMBAY, *24th March*

THE Stock Exchange witnessed a somewhat irregular trend during the week under review. Earlier in the week, trading was thin and movements were confined to a narrow range, on end-of-account considerations, as also the approach of a holiday on Monday. The new account, which commenced on Tuesday, however, struck a buoyant note, on news of the reduction in excise duty on coarse and medium cloth. Hopes of offers of a few more concessions by the Finance Minister on a fuller consideration of representations made by the public about tax proposals and expectations of an early increase in retention prices of steel contributed to the strength of the market. Consequently, there was an all-round improvement in values on Tuesday. But the higher levels attracted profit-taking, which coupled with scattered liquidation in active textile shares weakened sentiment a little. Further, the market at this stage came under the influence of conflicting rumours regarding retention prices of steel. One section denied the prospect of any increase in the case of Tata Steel. Another, on the other hand, held out the possibility of a cut in the retention prices to be allowed to Indian Iron to the level of Tata Steel. These rumours also aided to weaken the sentiment in the absence of any confirmation from reliable sources. But towards the close again, equities staged sizable recovery on heavy short-covering and professional support induced by reports that a new deal to the steel industry would be given by the Government to undertake the large expansion programme. The undertone of the market was, therefore, steady.

In the steel section, Tata Ordinaries dropped early in the week from Rs. 243-8 to Rs. 242, but revived to Rs. 244-8 on Tuesday. Profit-taking realisations brought the shares again down to Rs. 242 yesterday, before bear covering hoisted them up to a new high level of Rs. 245-4 at the close. Indian Irons ruled weak almost throughout the week dropping from Rs. 35-15½ to Rs. 35-4½ yesterday, but made a fair sized recovery, closing today at Rs. 35-12.

Buying activity in textiles was again confined to select counters which recorded smart gains over the week, following the announcement of a cut in excise duty on cloth. Bombay Dyeings advanced sharply from Rs. 470 to Rs. 478-12. After a sudden dip to Rs. 471-4 yesterday, the shares hardened to Rs. 474-6 at the close. Kohinoors closed today at Rs. 319 *ex-div.*, as against Rs. 323 *cum-div.* a week ago. On the *cum-div.* basis, the gain over the week was Rs. 8-8. Centurys came up to Rs. 386-4 from last week's closing of Rs. 383, but finished at Rs. 384-12. Central Indias gained a rupee to Rs. 129-8. Finlays were better by Rs. 5-8 at Rs. 258-8. Simplex was steady at Rs. 147 and Standards at Rs. 364-6. Svadeshis shed Rs. 3-12 to Rs. 192 on rumours of lower dividend. Tata Mills dropped Re. 1-4 to Rs. 60-12. Khataus declined by Rs. 4-6 to Rs. 166-4 and Laxmis by Rs. 7-8 to Rs. 497-8.

Further small rise in Imperials was the main feature in the banks section. The Fully Paids improved by Rs. 15 to Rs. 1,595 and Partly Paids by Re. 1-4 to Rs. 393-12. Central Banks were quiet at Rs. 50-4, their New shares at Rs. 52-8 and Bank of Indias at Rs. 143-8 *ex-div.* Punjab Nationals appreciated by Rs. 2 to Rs. 43 and United Commercials gained As. 8 to Rs. 46-8.

Select scrips in the electricity group manifested a hardening tendency on revival of enquiries. Ahmedabad Electrics gained Re. 1-4 to Rs. 111-14, as also Surat Electrics to Rs. 126-4. Poona Electrics were taken Re. 1 better at Rs. 151. Bombay Suburbans ruled a little quiet, shedding As. 10 to Rs. 126-14. Tata Hydros lost Re. 1 to Rs. 146-8, while Tata Powers disclosed no change at Rs. 1,507-8. Andhra Valleys reacted from Rs. 1,402-8 to Rs. 1,392-8, but recovered to Rs. 1,402-8.

In the miscellaneous section, sugar shares ruled quiet. After a small advance from Rs. 318-8 to Rs. 320-8, Belapurs finished at Rs. 318. Phaltans showed no change over the week at Rs. 118-8. Despite better corporate news, Walchandnagars were marked down by Re. 1-4 at Rs. 226-4. Among cement shares, Associated Cements were dull, but steady, at Rs. 182-8, while Digvijays looked up by Re. 1-8 to Rs. 179-8. In the engineering and mining groups, Alcocks moved down by Rs. 2-8 to Rs. 286-4. Premier Constructions were quiet at Rs. 160, despite the increase in dividend from Rs. 6 to Rs. 7 per share for the year 1954. Shivrajpurs were done Re. 1-8 better at Rs. 82-8. B.B. Petrols were steady at Rs. 3-15 and Indian Coppers at Rs. 3-9½ on reports of firmness in virgin copper prices. Shipping shares showed divergent trends. Scindias recorded small gains, moving up from Rs. 15-7 to Rs. 15-9½. India Steamships lost As. 2 to Rs. 7-12, while Great Eastern Shippings were maintained at Rs. 16-10. In the miscellaneous group, Bombay Burmahs were a firm feature with a smart rise from Rs. 463-12 to Rs. 478-12. B.I.Cs ruled quiet at Rs. 7-14½. Killick Industries declined by Rs. 8-8 to Rs. 158-8 on lack of enquiries and selling pressure. National Rayons moved between Rs. 203-8 and Rs. 199-12, before closing at Rs. 202-4 with a fractional gain. Tata Chemicals were done As. 2½ lower at Rs. 16-1½ and Tata Oils As. 4 down at Rs. 41-4. On rumours of lower profit and cut in dividend, Wimcos were on offer and fell from Rs. 204-6 to Rs. 197-8.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *23rd March*

Tea shares were in the lead on the Calcutta Stock Exchange during the week under review, as the lower levels, which were touched a week ago, were considered attractive by buyers, notwithstanding the dull conditions in tea auctions. Generally also, a steady trend was in evidence, although price movements were narrow. The excise duty concessions which the Finance Minister announced in Parliament on Monday were noted with relief, inasmuch as they were considered an indication of Government's willingness to give way in genuine cases. Although some misgivings have been caused by the proposed amendment to the Constitution, which will make Parliament supreme in the matter of deciding compensation for any property taken over by the Government, there is appreciation of the Prime Minister's forthright views in the matter which would clearly indicate that the responsibility is being shifted to Parliament only as a matter of administrative convenience.

Jutes continued to evince interest, as there was a further decline in raw jute prices, and plenty of jat jute is arriving from East Bengal. Engineering shares were steady, although speculative Indian Irons were subjected to nervous selling earlier.

Sectionwise in Jutes, Howrahs opened at Rs. 30-5 and rose to Rs. 30-8 but subsequently were brought down to Rs. 30-2 and in transactions of small lots today realised only Rs. 29-8. Kamarhatties continued to advance further and touched a high of Rs. 222 at which rate the gain during this week amounted to Rs. 16. Champdanys hardened to Rs. 186 from Rs. 180, Northbrooks to Rs. 26-10 from Rs. 26, and Budge Budges to Rs. 197 from Rs. 195, while Bally gave way to Rs. 200 from Rs. 204 and Ganges to Rs. 99 from Rs. 109. Nationals were supported at Rs. 34-6, as against Rs. 33-7 a week ago, Unions hardening to Rs. 206 from Rs. 202-8.

Teas claimed a good portion of the funds in the market, and recorded gains. Thus, Teesta Valley gained to Rs. 44 from Rs. 38-2, and at Rs. 26-12 Namburnadis added Re. 1-10. A large number of transactions took place in Sonai Rivers which recovered to Rs. 27-9 from Rs. 23-8. Another feature was Bokahats which at Rs. 25 picked up Rs. 4-12. Moheemas were accorded moderate support and advanced to Rs. 22-12 from Rs. 20-2.

In the engineering section, Indian Irons opened at Rs. 36-2 and were immediately hammered down to Rs. 35-7. Since then, fluctuations had been narrow either side and the rate was between Rs. 35-15 and Rs. 35-5, the latter being today's lowest closing quotation. Texmacos featured with a rise of As. 14 to Rs. 17, and Indian Standard Wagons gained to Rs. 132 from Rs. 129.

Among shippings, Fraser & Cos. were supported by interested quarters and rose impressively to Rs. 17-14 from Rs. 14-4, each stage of the rise showing stabilisation. India Steamships changed hands at Rs. 7-14 which was higher by As. 3. Port Shippings were also better at Rs. 13-5 as against Rs. 12-8 previously.

Not much interest was shown in coal shares, which were mostly unaltered. Thus Burrakurs were held at Rs. 12-6 and equitables at Rs. 31-2. New Beerbhooms, on the other hand, moved to Rs. 18-12 from Rs. 17-13. East Indians were steady at Rs. 28-8.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *23rd March*

Equities on the Madras Stock Exchange came in for some enquiry during the week under review. Favourites, among textiles, pushed ahead, following the reduction in excise duty on cloth, announced by the Finance Minister in the Lok Sabha on Monday last. The performance of tea scrips, among plantings, was, however, not encouraging. It appeared as if the recent upward trend in tea prices had exhausted itself, and that the time had come when prices had to be stabilised at a reasonable level. Consequently, tea shares were a shade quiet. But rubbers and coffees ruled somewhat better, while the miscellaneous scrips lacked strength. On balance, business done was limited. There was a sprinkling of both losses and gains. The undertone was quiet.

In the textile section, Bangalore Woollens put on Rs. 32-8 to Rs. 480 *cum-div.* and Buckinghams Rs. 2-8 to Rs. 160-8 *cum-div.* Coimbatore Pioneers rallied Rs. 14 to Rs. 220. Lakshmi, Rs. 50 paid-up, gathered Rs. 4-8 to Rs. 148 and 'A', Rs. 25 paid-up, Re. 1 to Rs. 73-8. Metturs shot up from Rs. 295 to Rs. 310. Vasantas disclosed a gain of Rs. 10 at Rs. 230 and Rajapalayams of Rs. 2 at Rs. 80. Radhakrishnas (Rs. 100 paid-up), however, lost Re. 1 to Rs. 218 and 'B' (Rs. 50 paid-up) As. 8 to Rs. 108.

Among teas, Coonoor Teas put on As. 14 to Rs. 33-10 *cum-div.* and Mlamallays As. 4 to Rs. 65-8. Peermades improved from Rs. 44-12 to Rs. 45. But for these, most of the rest were either easy or quiet. Thus, Halleyburlas lost As. 2 to Rs. 27-4. Emerald Valleys were quiet at Rs. 7-11½ and Devons at Rs. 17-12.

In the rubber section, Be Bes hardened by an anna to Rs. 4-7 and Cochin Malabars As. 2½ to Rs. 7-9. Malankaras shot up from Rs. 23-2 to Rs. 24. Vaikundams improved by As. 2 to Rs. 23-6 and Rajagiris by As. 5 to Rs. 16-5.

Among coffees, Coffee Lands put on As. 3 to Rs. 17-2 and Consolidated Coffees As. 5 to Rs. 18-15. Puthutotams were better by As. 2 at Rs. 4-12.

TRAVANCORE BANK RAISES DIVIDEND

Following the payment of a modest maiden dividend of 2½ per cent. for the year ended 31st December, 1953, the Directors of the Travancore Bank Ltd. (Managing Director: Mr. R. F. Wishart, Trivandrum) have stepped up the distribution to the shareholders for the year 1954 to 3 per cent. Though this enhancement of the dividend rate is not in consonance with the trend of its profit—the profit has dwindled slightly from the previous year's record—it is only a fraction and the Directors have been able to do so without any difficulty and without any serious cut in the essential allocations.

The profit for the year under review has dropped from the record of Rs. 8.05 lakhs earned for 1953 to Rs. 7.36 lakhs, thus reversing slightly the upward curve in profit noted during the past few years. Nevertheless, it represents a small increase over that of Rs. 6.88 lakhs for 1952 and constitutes the second highest in the history of the Bank. The provision for taxation has been reduced from Rs. 2 lakhs to Rs. 1.25 lakhs. The allocation to the general reserve has been maintained at Rs. 1.75 lakhs, but the contingency reserve, which had received Rs. 50,000 last year, is provided with only Rs. 25,000. The provision for depreciation on investments is kept at Rs. 50,000, while that for payment of bonus has been raised from Rs. 25,000 to Rs. 35,000. A sum of Rs. 25,000 has been provided for gratuity fund. The dividend distribution requires Rs. 3 lakhs, that is Rs. 50,000 more than last year.

The following comparative table provides an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount earned ..	21.16	19.11	18.41	15.81
Commission and exchange ..	3.92	3.78	3.55	3.47
Interest paid	8.76	6.20	6.79	6.20
Expenses	6.63	5.29	7.87	7.05
Depreciation	0.35	0.36	0.23	0.24
Profit	7.36	8.05	6.88	5.76
To taxation	1.25	2.00	1.00	0.60
,, reserves	2.00	2.25	2.00	4.25
,, depreciation on investments	0.50	0.50	5.00	..
,, bonus to staff and gratuity fund	0.60	0.25	..	..
Dividend	3.00	2.50	..	..
	(3%)	(2.5%)		
Carry forward	0.94	0.93	0.38	1.50
	As on 31st December			
	1954	1953	1952	1951
Capital	100.00	100.00	100.00	100.00
Reserves	21.75	19.75	17.50	15.50
Deposits	439.09	377.35	350.62	402.85
Borrowings from other banks ..	..	..	..	1.50
Advances and money at call ..	263.57	220.03	212.11	238.10
Investments	255.50†	233.56†	236.80†	246.96
Cash	58.90	54.55	62.42	50.24
Balance-sheet total	732.20	569.16	577.62	615.04
Ratio to deposits of—	%	%	%	%
Advances	60.0	58.4	56.7	57.9
Investments	58.2	61.9	62.8	60.9‡
Cash	13.0	14.4	16.4	12.5

† After deducting the reserve for depreciation.
‡ Ratio arrived at after taking into account investments earmarked against borrowings from other banks.

It will be observed that the rise in interest and discount earned during 1954 is more marked than in 1953 and is accounted for by the sharp rise in advances and money at call. Receipts under commission and exchange are also better, reflecting the increase in bills portfolio. The increase under these two items has been more than offset by the rise in outgo by way of interest paid, which is obviously due to a substantial increase in fixed deposits with the Bank, and expenses.

Of the deposits at the close of the year, fixed and thrift deposits account for Rs. 223.81 lakhs, an increase of Rs. 58.55 lakhs over the year. A part of these deposits is secured by investments of the face value of Rs. 50.63 lakhs. Savings bank deposits are also up from Rs. 17.50 lakhs to Rs. 22.70 lakhs, while current and contingency accounts are unchanged at Rs. 192.58 lakhs. As against the increase of Rs. 61.74 lakhs in total deposits, the rise in advances (including bills purchased and discounted) and money at call and short notice is as much as Rs. 43.54 lakhs, so that the advances ratio has gone up from 58.4 per cent. to 60 per cent. Investments (at or below cost), the whole of which are in Central and State Government securities and Trustee securities, have been written down by Rs. 6 lakhs to Rs. 255.50 lakhs, at which level they show an increase of about Rs. 22 lakhs over the figure a year before. Cash balances are also higher by Rs. 2.35 lakhs. Though the total liquidity ratio has declined slightly, it is still at the very comfortable level of 81.2 per cent. Bills for collection have gone up from Rs. 22.08 lakhs to Rs. 26.78 lakhs and acceptances and endorsements from Rs. 29.33 lakhs to Rs. 118.75 lakhs, indicating the extent to which the Bank has participated in financing the trade in the State and outside.

NEWS IN BRIEF

PRODUCTION of steel in India during 1954 amounted to 1.24 million tons. The total quantity of steel imported during 1954 was 387,401 tons.

The President has assented to three separate Bills for the States of Saurashtra, Madhya Bharat and the Punjab, which aim at regulating the working of cotton ginning and pressing factories and checking malpractices in the cotton trade.

The U.P. Government is reported to be considering revision of the enhanced irrigation rates through the evolution of a formula whereby these rates will be automatically adjusted in terms of the prevailing prices of foodgrains and other agricultural produce.

Railways throughout the country have been asked to plan from now on for carrying increased goods traffic which may materialise during the next busy season, as a result of accelerated economic activity. The busy season is expected to commence from November, 1955. The zonal railway administrations are preparing themselves to carry anything upto 20 per cent. more traffic than they did during the current year.

The German consultants, with whose technical assistance the Rourkela steel plant would be set up, have been asked by the Government of India to revise their project report for doubling the capacity of the plant from half a million tons to one million tons steel ingots. It is understood that the revised project report would reach the Government in two or three months' time. It is gathered that the doubling will be in steel flats.

The Labour Appellate Tribunal has rejected the plea of nine textile mills in Bombay City to extend the date for payment of increased dearness allowance with retrospective effect from May, 1953. Friday, the 18th inst., was the last date to pay increased dearness allowance to over 200,000 textile workers. The total amount involved was Rs. 2.5 crores. The managements of the nine mills pleaded inability to make the payment immediately, owing to financial difficulties, and asked for two to six months time.

The Government of India has decided to liberalise with immediate effect the scheme for the grant of rebate on sales of handloom cloth containing art-silk yarn in the body. Hitherto, rebate was allowed on such cloth, provided the price of it did not exceed Rs. 2 per yard. The Government of India's latest orders provide that handloom cotton cloth having art-silk yarn in the body will be eligible for a rebate on sales, provided the price of such cloth does not exceed Rs. 2-8 per yard, instead of Rs. 2.

Under the U.S. aid programme, it is proposed to import about $12 million worth of cotton—about 75,000 bales—of staple length 1-1/16 inch and above during the current year. Further imports may be permitted later, if necessary. Disclosing this, the Deputy Minister for Commerce and Industry said in Parliament this week that the import would be through normal trade channels under licences issued by the Government of India. The U.S. Government would pay the suppliers in the U.S. in dollars and the Indian importers would deposit the rupee equivalent in a Government account.

The Central Silk Board has received the first consignment of 200,000 pounds of Chinese raw silk imported from China under a barter agreement between the Governments of India and China. Chinese raw silk will be sold by the Board at Rs. 34-11 a pound for 'A' grade and Rs. 34-6 for 'B' grade. The prices of raw silk in India during the last two years ranged between Rs. 50 and Rs. 55 a pound, which was considered very high. With a view to stabilising the prices of raw silk, the Government of India announced in its import trade control policy for January-June 1955 that all imports of raw silk will be canalised through the Central Silk Board.

India has 1.6 million tons of foodgrains in reserve for any emergency, according to the Union Deputy Minister for Agriculture. This has been a major contributory factor in the lowering of the market price of foodgrains. Of this stock, 800,000 tons is Burma rice purchased in 1954. The Burma rice stocks includes about 40 per cent. of "broken" rice, which, however, is of internationally accepted standard. The grain was graded before docking and is periodically examined, so that it can be sold before deterioration. The present capacity of 200,000 tons of Government godowns is intended to be increased to 1.3 million tons. The additional godowns are planned to be built in two years at a cost of Rs. 10 crores.

From Abroad

The World Bank has granted a new loan of $54.5 million to Australia for capital expansion.

A new coal deposit of about 200 million tons has been discovered near the Regari coal mine, about 35 miles south-east of Quetta, it was officially announced in Karachi this week.

The Pakistan Industrial Development Corporation has drawn up a plan to set up five sugar mills in the area commanded by the newly opened Kotri Barrage in Lower Sind. Preparations are being made for large-scale mechanised cultivation of sugarcane on 50,000 acres of land.

Pakistan will be producing 200,000 tons of jute goods by the end of the year. Announcing this in London last week, the Pakistan High Commissioner in London said that, before 1956, more than 6,750 looms would be working in East Pakistan jute mills. Their total production would enable Pakistan to export about 160,000 tons of jute goods.

The New Zealand Government has appointed a six-man Royal Commission to investigate New Zealand's monetary affairs. The Commission will enquire into any monetary, banking and credit proposals that might be suggested as suitable for application in New Zealand and report on the advisability of any changes in the present system.

The total value of exports by the U.K. to India during January, 1955 amounted to £9.25 million, as against £10.99 million in the corresponding month of 1954 and £114.91 million during the whole of 1954. Imports of Indian goods into the U.K. aggregated £17.94 million, as against £17.16 million in January, 1954 and £148.59 million in the whole of 1954.

An investment and finance corporation may shortly be set up in Pakistan to provide loans to private enterprise. Exploratory talks on setting up of the corporation are reported to have been held between the officials of the Pakistan Government, the State Bank and the Managing Director of the International Monetary Fund, Mr. Ivar Rooth, during his stay in Pakistan.

Sweden is still the only country in the world to have introduced 380,000 volts for long-distance power transmission, according to a spokesman of the Swedish State Power Board. When the trunk-line scheme is completed in 1958, it will total no less than 7,500 kilometres (4,660 miles). It is probable that Sweden will have to reckon upon a still higher voltage in the future, perhaps up to 650,000 volts.

More than 100 British firms are now working on contracts for the Atomic Energy Authority in connection with the recently announced programme of developing atomic energy for peaceful purposes. The contracts undertaken include building, supply of generating apparatus adapted to the new process of producing electricity from atomic power, manufacturing nuclear instruments for industrial radiography, electrical equipment, steel work and boiler-making. The firms have started designing reactors for the new atomic power stations envisaged in the White Paper published last month.

The Industrial Development Corporation of Pakistan is stated to have completed plans for the establishment of an iron and steel works costing Rs. 60 crores. Tenders will be invited in the first week of April for the import of mining equipment and plant for a steel works with a capacity of 100,000 tons per annum. The Corporation is making arrangements for financing the project. In addition to approaching the World Bank for a loan, the Corporation will invite foreign private enterprise to participate. The works will be built according to designs and recommendations of Krupp's, the German consultants of the Corporation.

PERSONAL

MR. K. P. S. Menon, India's Ambassador in Moscow, has left for Russia after the completion of his holiday in India.

Mr. K. G. Saiyidain, Additional Secretary, Ministry of Education, Government of India, has rejoined the Ministry on his return from Sudan.

Mr. A. S. Dick, Managing Director, and Mr. W. J. R. Warren, Director of Export Sales, Standard Motor Co., Ltd., Coventry, have arrived in India.

Mr. A. K. Mukarji, Secretary, Central Board of Revenue, Government of India, has returned to India after a visit to the United Kingdom and Switzerland.

Mr. M. P. Birla has been elected Chairman of the Indian Jute Mills Association for the year 1955. Mr. D. P. Goenka and Mr. J. I. Jamieson have been elected Deputy Chairman and Vice-Chairman, respectively. The other members of the Committee are: Mr. G. D. Butchart, Mr. A. T. Doig, Mr. N. K. Jalan, Mr. R. K. More. Mr. A. I. Murison, Mr. J. M. Parsons, Mr. W. Prophet and Mr. K. E. Tosh.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *29th March*

World's Trade and the Empire

The economic section of the League of Nations estimates that the total world trade in 1927, recalculated at 1913 values, was 20 per cent. greater than in 1913. On this estimate, the trade of the British Empire, taken as the aggregate of the imports and exports of its several parts and corrected for changes in price levels, had increased between 1913 and 1927 by about 27.5 per cent. In the two years 1927 and 1928 the rate of expansion was, however, somewhat slower than for the rest of the world. The aggregate of the imports and exports of the various parts of the British Empire represented nearly 30 per cent. of the world trade in 1927. It exceeded the aggregate of the foreign trades of the countries in Continental Europe west of the Balkans and of the former Austrian and Russian Empires, excluding the Netherlands. If the statistics relating to imports and exports in 1927 be separated, the Empire in that year was on balance an importer of merchandise. Since 1913 direct trade between Empire countries and foreign countries has expanded somewhat more rapidly than inter-Imperial trade. In 1927, the value of the merchandise passing between Empire and foreign countries was about three times that passing between Empire countries. If inter-Imperial trade were treated as domestic and the statistics relating to it were excluded from the total of world trade, and if the inter-State trade between the various countries of Continental Europe were similarly dealt with, then the trade between the Empire as a whole and the rest of the world was in 1927 about the same as that between the Continent of Europe and the rest of the world.

SECTION 23A COMPANIES

A STRIKING feature of the report of the Taxation Enquiry Commission is the light it throws on the concentration of voting power in respect of private limited companies. It is true that the evidence it has gathered is by no means full or complete. Even so, it shows that, in the case of many companies, the majority of voting power is held by very few individuals. An analysis of the dispersal of voting power in respect of a group of 3,005 "private limited companies," as is described by the Commission, shows that as many as 2,589 (or 86 per cent.) are controlled by four or five persons. Out of these, there are 944 companies (31.4 per cent. of the total) in each of which the majority of shares is owned by one shareholder, and 937 companies (31.2 per cent.) in each of which the majority of shares is held by two shareholders. If the analysis is confined to the 257 companies with a paid-up capital of more than Rs. 5 lakhs, as many as 224 (or over 87 per cent.) are under the control of not more than four persons; out of these, 103 are under the control of one person and 66 under the control of two persons. An analysis of 25 companies with a paid-up capital of Rs. 50 lakhs and above, showed that the controlling shares are held by one single person in as many as 21 companies. It is this evidence that has led the Commission to conclude that "private companies are, by and large, of the nature of closely held corporations." This surely is not a discovery, for a private limited company is meant to be closely held.

But this concentration of voting power in a few individuals has a direct bearing on the problem of taxation of the companies concerned. This is because the taxation of the distributed profits of a company is linked, under the Indian Income-tax Act, to the personal assessment of the shareholder. In this context, it is easy for those in charge of the management of these closely-held companies to use their discretion in the matter of postponing or reducing the distribution of the company's profits and thereby reduce their own tax liability. All tax systems contain a provision to prevent such evasion. In India, section 23A of the Income-tax Act is intended to prevent tax evasion by the management of private companies.

Briefly, this section, as it now stands, applies to companies in which the public are not substantially interested. Specifically, it will not apply to companies in which at least 25 per cent. of the voting power is held by the public. The companies, to which this section applies, are required to distribute 60 per cent. of their income (as reduced by income-tax and super-tax payable) as dividends. Since it found that the provisions are not stringent enough the Commission had recommended some amendments. Thus, it recommended that a tax should be levied on the section 23A companies in respect of the undistributed portion of the "distributable" profits, in addition to the income-tax and corporation tax already payable by them. Further, it suggested that the definition of "public interest" should be enlarged so as to mean the holding of a minimum of 50 per cent. of voting power by the public.

As readers are aware, the Finance Bill now before Parliament accepts these suggestions. Indeed, in respect of the first suggestion, it has gone, as Mr. G. P. Kapadia has pointed out (*vide Commerce*, 19th inst.), beyond the Commission's recommendation. Thus, whereas the Commission recommended the levy of an additional corporation tax, at a flat rate, on the undistributed portion of the distributable profits, the Bill seeks to levy a flat rate of As. 4 per rupee on the entire surplus. The Bill also incorporates the second important suggestion, namely, the enlargement of the definition of public interest. The Bill steps up the requirements for outside holding from 25 per cent. to 50 per cent. It also stipulates that if the shares of a company carrying more than 50 per cent. of the total voting power were *at any time* during the previous year controlled by less than six persons (near relatives and nominees being counted as a single person), the company would cease to be recognised as a company in which the public are substantially interested. It is now feared that the contemplated change will bring within the scope of section 23A many companies which have enjoyed the status of public limited companies. In other words, the tax law is being used as a lever for wider dispersal of voting power.

No wonder, then, that many protests have been lodged against the amendment to section 23A. The authorities of the Bombay Stock Exchange, in a closely reasoned memorandum which they have submitted to the Central Government, have drawn attention to the difficulties that would arise in the wake of the amendment. In the first place, the memorandum points out that some managements prefer to keep 50 per cent. of the issued capital with themselves in order to retain control over the company and reap the profits of their enterprise and pioneering effort. Secondly, some managements are compelled to take up 50 per cent. or more of the capital as the issue fails to evoke sufficient public response. Thus, the large holding may be due to causes beyond the control of the managements concerned. Thirdly, some managements hold less than 50 per cent. of the capital, but some six persons nevertheless may be found to control more than 50 per cent. of the voting power either because it considers the shares to be sound investment or fancy them for capital appreciation. In this case, the holding is accidental and is the result of investment confidence. Fourthly, some managements may own less than 50 per cent. of the capital but some six persons may come to own 50 per cent. when there is aggressive buying by a small group intent on capturing control of the company. Finally, a small group may want to acquire more than 50 per cent. of voting power, in order to enforce 100 per cent. distribution of profits; if it succeeds it will then be able to cash in on the increase in share values that would take place as a result of higher dividend prospects. In these last two instances, the six persons involved, far from being joint collaborators, are rivals. If a company is thus compelled to distribute 100 per cent. of profits as dividends, it would put an end to ploughing back of profits, "so essential for capital formation and self-financing of development and expansion schemes." Also, the Directors would forfeit discretionary control over dividend distribution and the shares of the company would begin to fluctuate widely. It would also be noted from the instances mentioned here that a number of genuine public companies will fall within the definition of a closely held company, though the circumstances in which they happen to be in that position may not have been designed to cheat the Government of its due. Explaining this point clearly, Mr. K. R. P. Shroff, President of the Stock Exchange, says:

"The main object of section 23A, as explained in the notes on clauses, is to tighten up the provisions for preventing avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of profits in proper time. It has been contended that section 23A, even in the form in which it stands today, is oppressive and interferes with the process of capital formation. The argument is not without substance, for the steep rates of income-tax and super-tax on the current scale inflict grievous hardship on the middle class which is an important saving group and reduce the margin of savings of all classes almost to the point of extinction. Without pressing the argument any further in the present context, the Exchange is only concerned with pointing out the repercussions of the new section 23A on companies whose shares are admitted to dealing in the market and in which there is substantial public interest according to all reasonable considerations. Because of the legal fiction contained in the explanation to the section, such companies are likely to be treated as private companies in certain conceivable circumstances in spite of the fact that avoidance of super-tax is not even remotely contemplated."

It should be clear now that the proposed amendment will, apart from putting a number of genuine public companies to severe hardship, increase unhealthy speculation and expose honest managements of companies to the caprices of speculators whose only object is to get rich quick and who care twopence for the industrial development of the country. It should also be clear then that, in its attempt to control one evil, the Government is opening the gate for more evils.

The remedy suggested by the Stock Exchange President is that the words "twenty-five per cent." should be substituted for the words "fifty per cent." wherever they occur in clause (i) of the explanation to the proposed amendment, and the words "seventy-five per cent." should be substituted for "fifty per cent." in clause (3) of the explanation. In other words, he wants the requirement of outside holding to be reduced to 25 per cent. from 50 per cent. now proposed, and the penal limit for holdings by six persons should be raised from the 50 per cent. level, now envisaged, to 75 per cent. This is undoubtedly a fair and reasonable suggestion. In a country where good managements are few, and some wealthy speculators are more interested in dislodging good managements than in running the concerns efficiently, it seems unwise to adopt any measure that would make it difficult for the managements to be in continued possession of the concerns under their control.

CALCUTTA DOCK LABOUR

The three-day suspension of loading and unloading of cargo ships in Calcutta last week by the shipowners and stevedores is yet another reminder of the worsening of the dock labour situation. The suspension (which started on the 14th inst. and was called off on the 17th, arose over a dispute relating to the registration of tally clerks employed by stevedores under the Dock Workers (Regulation on Employment) Scheme. Under this scheme, tally clerks employed by the stevedores alone are entitled to registration. The Dock Labour Board, however, felt that, as tally clerks were also employed by the shipping companies, registration of the tally clerks employed by the stevedores alone would be fraught with complications. The Board, therefore, requested the Government to amend the scheme so as to include tally clerks employed by shipping companies also within it. As the whole question of the working of the scheme in Calcutta and other ports is under enquiry by a committee specially appointed for the purpose, it was decided to wait for the conclusion of the work of this committee before making any changes in the scheme which, in the light of experience, appears to require modification in various respects. The tally clerks, however, insisted on immediate registration and attempted to enforce their demand by adopting go-slow tactics. Thereupon, the steamer agents decided to dispense with the use of tally clerks until go-slow tactics were given up.

According to the employers, the other staff of the stevedores and steamer companies, who work on vessels supervising loading and unloading operations, were unable to carry on their work owing to acts of intimidation by workers belonging to a particular union of which the majority of the tally clerks are members. In this context, the Port authorities, after unsuccessfully trying to settle the dispute, sought the assistance of the Chief Minister of West Bengal, who, after giving a hearing to all the parties concerned, took steps to increase the police protection necessary to prevent interference with dock working and offered to look into the matter of decasualisation of tally clerks in consultation with the Chairman of the Calcutta Port Commissioners and the Central Government. As a result of the Chief Minister's intervention, the situation has improved and work has returned to normal.

Thus, quiet has been restored. But there is no gainsaying the fact that it is the calm before the storm. The dock labour troubles go back to October 1953, when the decasualisation scheme was introduced in Calcutta. Some aver that it dates back even earlier when the stevedores were forced to recognise the Dock *Mazdoor* Union, a Bolshevik organisation. The Union is alleged to have taken advantage of the difficulties in the implementation of the Dock Labour Board scheme for decasualisation of labour. It is said that the first mistake of the scheme was its liberality in registration, which has resulted in large surplus labour in the registered pool. Of about 10,000 workers registered, it is claimed that as many as 4,000 are surplus. Apart from this being a large liability on employers, the surplus labour has become a distinct threat to law and order. It is, therefore, pointed out that, without a drastic reduction in the number of registered labourers, it would not be possible to arrive at a correct solution to the problem of dock labour at Calcutta Port.

It is contended that the composition of the Dock Labour Board itself is defective. It consists of two Port Commissioners (including the Chairman), two representatives of the Government, two representatives of steamer agents, two of stevedores and four of labour unions. As a result of this composition, the labour unions are able to adopt any resolution they want, thanks to the strength of the combined vote of the representatives of labour unions and the Government. Consequently, nothing short of a reorganisation of the membership of the Board with an independent chairman will, it is claimed, help restore peaceful labour relations.

The need for such happy relations is certainly very urgent. Go-slow tactics have become a common feature. The actual outturn in the case of exports has been as low as 25 tons per gang shift of eight hours, as against a reasonable estimate

of 48 tons. The actual handling of exports has been about 27 tons per gang per shift of eight hours, as compared with the datum line of 54 tons. Consequently, the average cost per ton of cargo lifted has increased from Rs. 4.7 in 1953 to Rs. 8.2 today. If the situation lasts longer—it has lasted pretty long already—it would certainly inflict more serious damage on the country's foreign trade.

CONFECTIONERY INDUSTRY

Despite the valuable role which the confectionery industry plays as a subsidiary to the sugar industry, the pace of its progress has not been very striking. Indeed, in recent years, there has been a setback to the industry's progress. The production of confectionery products during 1954 was as low as 536 tons, as against 700 tons in 1953 and 700 tons in 1952. What is worse, the output represents not more than 13.4 per cent. of the annual rated capacity of 4,000 tons. What is this wide gap between capacity and production due to? This question was ably and impressively answered by Mr. Brahmaswarup, President of the Indian Confectionery Manufacturers' Association, in the course of his address at the ninth annual general meeting held at New Delhi on Sunday last. Confectionery products in India, Mr. Brahmaswarup observed, were not yet popular as an item of food and, therefore, any slight disturbance in the economic conditions was reflected more particularly in the sales of these products than in those of other more conventional food articles. Referring to the lack of adequate demand, he said that, while industrial consumption of sugar in the U.K. accounted for as much as 45 per cent. of the total annual consumption of sugar, that in India was negligible.

In the considered opinion of Mr. Brahmaswarup, industrial consumption of sugar could be stepped up in India, if confectionery goods were popularised among the masses. He referred, in this connection, to the high cost of production consequent on high prices for sugar—the basic raw material—which accounted for about 40 per cent. of the total cost. If, therefore, confectionery products had to be manufactured at lower cost, the Government of India should, he urged, refund the Central excise duty on sugar consumed by confectionery factories which, with the recent increase, amounted to Rs. 4-2-2 per maund of sugar. He also urged the State Governments concerned to refund the cane cess. With these concessions, it would be possible, he thought, to effect some reduction in the prices which, in turn, would result in greater consumption of confectionery products. Since sugar is a basic raw material in the manufacture of confectionery products, the plea for exempting it from payment of excise duty sounds convincing.

It is, however, difficult to agree with Mr. Brahmaswarup when he says that the Government should not allow imports of foreign confectionery. It is true that the Indian confectionery industry has the equipment and technical knowledge to produce superior quality products. But, on that score alone, the plea for a complete ban on imports cannot be justified. For the quality of the majority of indigenous products still leaves much to be desired. And no improvement in quality can be expected under conditions of monopoly created by a total ban on imports. As has been repeatedly emphasised in this journal, in the absence of competition from quality goods manufacturers, there will be little incentive among the indigenous industry to produce high quality confectionery at competitive prices which is necessary for encouraging consumption of sweets. In any case, imports of confectionery are subject to heavy customs duties which give all the protection necessary against unfair competition.

Be that as it may, Mr. Brahmaswarup alluded to the question of exports. He felt that there would be good demand for Indian confectionery in some of the neighbouring countries, provided the prices could be reduced to competitive levels. He urged the Government to adopt two measures in order to support the export drive on the part of the industry. These are (1) simplification of the existing procedure for refund of Central excise duty on sugar-content of confectionery exported abroad, and (2) the grant of facility for drawback of import duty, on essential raw materials as provided

(*Continued in third column*)

OFF THE RECORD

By "Rover"

FOR quite a while, I had been afraid that a thunderstorm of some intensity had been brewing. The atmosphere was still and heavy. The air was sullen and sultry and oppressively suffocating. It was charged with suspicions and uncertainties and unpleasant forebodings. The world of commerce and industry appeared to be calm—almost ominously calm, in spite of very radical changes being suggested and effected in the very basis of the country's economy. It was a calm which suggested gloomy broodings rather than a world at peace with itself and with the authorities.

I thought for a time that the storm would burst at New Delhi, at the time of the annual meeting of the Federation of Indian Chambers of Commerce and Industry. But there was not enough fire underneath and the pot did not boil over. All that it produced were a few outspoken words, a few mild protests as usual and a wholly unnecessary declaration that business men had no interest in politics and no ambitions in this direction. I do not know why they should fight shy of shouldering their rights and responsibilities as citizens of the country and go out of their way to disclaim any interest in the way it is run and in its future.

Neither agriculturists, nor industrial workers, nor teachers, nor writers, nor artisans, as a class, have indulged in such voluntary and weak-kneed abdication of their political rights. Perhaps, they thought they could placate the professional politicians by this gesture and win a truce of some duration. If so, I am afraid they are vastly mistaken. If they have not the guts to stand up for themselves and the foresight to win suitable allies from amongst those who work for them and those whom they (the business men) serve by their labours, if they do not seek and gain support of public opinion for a reasonably free and unfettered enterprise, they will go under. All that the politicians would do is "to provide a halter gratis."

But this is neither here nor there. I am not a business man and the theme must wait its turn. To return to my subject, the storm did not break at the Federation meeting. They were too busy there, saving what they could from the wreck and to hug it for as long as they were allowed to, to think of anything beyond registering a polite protest about the moves which they were convinced were mistaken. The storm, which I had sensed some time ago in the air, broke unexpectedly last week at the annual meeting of the Bombay Chamber of Commerce.

I know that some such outpouring was inevitable. Too many things had been happening in too quick a succession, to leave any hope that they would be absorbed without some such upheaval. All the same, I am not quite sure whether to be glad or sorry at the manner in which the inevitable reaction came. First, coming as it did from an unexpected direction and only from a small section of the business community in the country, it is bound to lose some of its force. I wish this outspoken expression of opinion about several of the official economic policies had been voiced from a more representative platform of business men in India.

As a rule, the European business community in this country has wisely kept aloof from the political life of the country. In any case, so far as I could see, it had made it a strict rule not to get mixed up in international affairs and not to express any opinion on the foreign policy of the Government. Beyond expressing a natural preference for free enterprise, it had also studiously and scrupulously avoided any reference to the basic socio-economic structure that was slowly emerging in the country, as a result of diverse pull from a number of forces.

While, therefore, a good many things which, Mr. R. G. Coghlan and Mr. K. G. Milne, the outgoing and the incoming Presidents of the Chamber, said, wanted saying with as much emphasis as they put on them, I cannot help wishing that they had not referred at the same time to the things which were regarded as taboo so far. Apart from distracting attention from the vital points, their open and covert references to the country's foreign policy went to discount a part of the value of their perfectly pertinent criticism of the purely unwise economic measures, which obstruct the economic and industrial growth of India. I do not question the propriety of their doing so in their capacity as world citizens. All that I doubt is the wisdom of their doing so on this occasion and more particularly the manner in which things were mixed up by Mr. Coghlan.

For instance, not only was Mr. Coghlan justified but perfectly within his rights in pointing out that the prosperous economy was the capital-intensive economy, the economy in which the efforts of each individual worker had the largest backing of capital equipment and that any attempt artificially to boost labour-intensity was dangerous and retrogressive. He was equally correct in pointing to the U.S.A., as the country which had successfully demonstrated the truth underlying this principle by virtually banishing poverty from within its frontiers. There could be nothing wrong even in his saying that the Indian community—the Government, employers and labour—had much to learn from America in this respect.

But assuredly, it was not necessary for Mr. Coghlan, to make his point, to say that there was a tendency here to decry American methods and American achievement, partly because American foreign policy did not always have Indian approval. Unfortunately, by thus side-tracking himself from the purely objective and economic realm, Mr. Coghlan not only side-tracked the principle under discussion, but gave an opening to Mr. Morarji Desai for his political counter-thrust that "it is not we who do not like the foreign policy of America, but America which does not like India's foreign policy."

It is my impression that Mr. Milne was on the whole objective and restrained in his criticism of the economic policies of the Government, but I wonder if it was absolutely necessary to ask, as he is reported to have done, in the presence of so inflammable a leader as the Chief Minister of Bombay, the members of the Chamber whether it would be worth while for non-nationals to continue to strive in India, "if you have to suffer prolonged separation from your families as the direct result of sudden and far-reaching new taxation having rendered your financial position such as to make this inevitable"? This enabled Mr. Morarji Desai to retort that he did not believe that foreigners were here only to help in the development of the country, but that they had come for business and to further their own interests. I do feel that, even if these far-from-pleasant exchanges had to happen, they could have been wrapped up in velvet.

That is why I turn with greater pleasure and more satisfaction to what happened on that very evening at Trombay, at the formal opening of the Burmah-Shell Refinery by Dr. S. Radhakrishnan, the Vice-President of India. There was as much thrust and parry there, as at the Bombay Chamber of Commerce meeting earlier in the day. An equally sharp conflict of views and basic policies underlay all that was said at Trombay also, but it was on a smoother and a more philosophic plane.

Of course, I should not lose sight of the difference between the atmosphere of the market-place and that which prevails at a purely social and ceremonial occasion. Besides, the cool evening, with its softer shades and promise of pleasure and repose, puts one in a more accommodating mood than that engineered by the din and heat and hustle of midday right in the centre of a busy city. Perhaps, all these combined to take away the edge from the spoken words and to lend them a softer and more silky note.

At Trombay, one could see quite easily that Mr. J. F. Sinclair, Chairman of the Board of Directors of the Burmah-Shell Refineries, is a strong advocate of, and believer in, private enterprise. He left no doubt about it in the minds of his listeners. He was firm in pointing out its creative values—capital formation on a grand scale, new skills, technical and administrative, the possibility of new ancillary industries and opportunities of employment. In a sweeping gesture, describing the other (Stanvac) giant refinery, the Butcher Island Marine Oil Terminal and the thermal station under construction by Tatas, not forgetting even Dr. Homi Bhabha's modest factory for development of atomic energy for constructive purposes, all as fruits of private enterprise, Mr. Sinclair exalted it to the dignity of a basic principle of social organisation. He even threw out a warning that it was a principle which any country could reject only at its peril.

But before doing this, Mr. Sinclair had been clever and crafty enough to associate both the Prime Minister and the Union Government with this very principle. He did this simply by describing his refinery "as a real contribution to what our Prime Minister has described as 'the exciting adventure of building the New India,'" and, again calling it, "an outstanding example of what enterprise, backed and encouraged by an enlightened Government, can achieve." He thus disarmed all criticism by slyly foisting part parenthood of the refinery on the Government, which, Dr. Radhakrishnan, who represented it, was in no position to repudiate. The sweet burden of Mr. Sinclair's lyric was that "we, the business men and the State, have complementary—not conflicting—roles to play in the development of the country." He next threw out a gentle hint that "the more this is recognised, the quicker will be the inspiring type of progress we see around us today." A perfect example of diplomacy and statesmanship at their best!

The Vice-President was equally suave, perhaps, more so. But, simultaneously, he was equally firm in presenting his own point of view regarding the country's economic policy and that of his Government. There were, however, no harsh notes in his delineation of it. He lifted the implied controversy on a high plane of impersonal and dispassionate reasoning. After pointing out all the blots and blemishes and weaknesses of uncontrolled private enterprise, Dr. Radhakrishnan conveyed an assurance that, in speaking of a socialistic pattern of society, there was no intention of uprooting every enterprise that existed and of re-creating the world anew. It is for the business community to draw what meaning and consolation it can from his perfectly elastic but, at the same time, unexceptionable statement that "so long as private enterprise functions with honesty of purpose and a sense of social justice and contributes to a rapid improvement of the living conditions of the common man and larger employment, it will have full scope."—*All Rights Reserved.*

(*"Rover" will be on a long holiday, in search of health, for the next three months.*—ED.)

(Concluded from first column)

under the Sea Customs (Amendment) Act, 1953, and simplification of the procedure for obtaining this drawback. It is to be hoped that these demands will receive the Government's consideration, in view of the fact that an increase in exports of confectionery products, for which there is some scope, will enable the industry to utilise a larger proportion of its idle capacity and thereby bring down its production costs.

NEED FOR CENTRAL CONTROL OF STATES' EXPENDITURE

MR. KILACHAND'S NOTABLE SUGGESTION

From A Special Correspondent

NEW DELHI, 22nd March

THE fact that there has been a delay of more than two weeks between the presentation of the Central Budget and the commencement of the general debate on it in the *Lok Sabha* has stolen much of the thunder of the leading members of the Lower House against some of the Budget proposals. This does not mean that their observations and suggestions are not without interest. Treasury benches doubtless heard these criticisms with considerable attention and it is likely that Government will modify its policies and actions in the coming months in the light of the discussions during the last one or two weeks.

DELHI LETTER

Generally speaking, the criticisms levelled against the Budget followed a broad pattern. Some members attacked the proposals saying that they lacked the basic socialistic philosophy that, despite improvement in industrial production, the seriousness of the unemployment problem in the country did not show any noticeable abatement, that Government must pay greater attention on small-scale and village industries, demarcating at the same time clearly their respective spheres, that agricultural prices had been falling gradually, that sufficient attention was not being paid to stablise them at a certain level which would be beneficial to the village folk and that Government was not bringing about any radical measures to increase the tempo of the economic activity in the country. Some other Members of Parliament also dealt with the inadequacy of help that the Centre had been giving in respect of their States. They also urged for the inclusion of a particular project or scheme in the second Five-year Plan.

Among those who had made a distinct contribution to the debate, mention may be made of Messrs. Tulsidas Kilachand, Bansal and Asoka Mehta. Mr. Kilachand suggested the appointment of a committee to go into the working of public enterprises. There was, he said, great need to examine their balance-sheets, which were not available even to interested members. He further desired that Government should appoint another committee, in order to examine the manner in which the State Governments had spent the loans and grants given by the Centre during the last few years. These two suggestions are eminently very sensible and opportune.

Now that the Government of India has committed itself to the establishment of a socialistic pattern of society and has vociferously been declaring from time to time that it will be gradually extending the public sector in the industrial sphere, the general taxpayers and students of public finance and economics are doubtless interested in the profitable working of state-owned enterprises. Some of the public undertakings such as the Sindri Fertiliser Factory, Chittaranjan Locomotive Factory, etc., have become household words, but a clear balance-sheet should be drawn in respect of all of them indicating as to how far they have been able or hope to pay dividends to the general exchequer. It may be mentioned here that the Finance Ministry, under the direction of Mr. Chintaman Deshmukh, has been able to get a 4 per cent. dividend from the railways. If this is the case in respect of a public utility concern, the return from commercial undertakings should at least be on a 6 to 8 per cent. basis.

The Ministry of Production is now in charge of the Sindri Fertiliser Factory, the Hindustan Steel Factory, the Shipyard at Vizag, the Machine Tool Factory at Bangalore, the Cable, Antibiotics, Insecticides and Housing Factories, the National Instrument Factory, Nahan Foundry, etc. The Ministry proposes to establish two more steel factories one heavy electrical equipment project and one synthetic oil factory. The spokesman of this Ministry should, instead of merely recounting pompously the progress of these industries, also indicate in his speeches and reports the total capital invested in all these undertakings and state as to how far these concerns have been in arrears in respect of depreciation, dividend, etc. The dividend should be calculated on the basis of 6 per cent., which is about the rate at which the Industrial Finance Corporation lends money to private industrialists. If a committee is appointed to go into this problem, it might even suggest the desirability of including or associating private capital in some proportion in these enterprises so as to facilitate the working of these concerns more economically.

Another suggestion of Mr. Kilachand for examining the manner in which State Governments have been spending the loans and grants received by them from the Central Government deserves close attention by the Government of India. This problem has come to the forefront during recent months in view of the unhelpful attitude displayed by some of the State Governments. For instance, when it came to the notice of the Centre that the Punjab Government did not exercise proper supervision over the money spent on the construction of the Bhakra-Nangal Dam and that there was considerable waste, the Central Government expressed its desire to investigate the whole matter. But the Punjab Government, according to a section of the Press, would appear to have questioned the jurisdiction of the Centre in the matter, pointing out that the former was responsible to the Centre only for the regular payment of loans in due course. Now that colossal sums are being spent by the States for purposes of development, the public have a right to know that the money advanced by the Centre is spent wisely and economically by the States. Even the World Bank, which advances loans to India or other Governments in the world, sends its representatives from time to time abroad in order to see for itself weather the money advanced by it is being well spent.

It is, however, regrettable that the Finance Minister, Mr. C. D. Deshmukh, was not able to appreciate in full the arguments advanced by Mr. Tulsidas Kilachand and merely gave a routine reply to the effect that the Comptroller and Auditor-General, who deals with the accounts of the States, would see how the loans and grants from the Centre were being disbursed. He added that the Government went into this matter in 1946 and came to the conclusion that, as the Centre had not very much of a surplus to distribute to the States, the particular mechanism suggested was not of much great concern to them. But this line of argument is not convincing, for, although the amount of loans disbursed to the States in 1946 might have been negligible, the advances to the States during the last one or two years have been increasing. And, what is more, during the second Five-year Plan, there will be a further increase in loans and grants to State Governments. Accordingly, Mr. Kilachand's suggestion for a committee to go into this question merits greater attention by the Government of India than it has received at the hands of the Finance Minister now. In regard to the other point raised by Mr. Kilachand, namely, the public accountability of State undertakings, Mr. Deshmukh said that the Government was examining the question of including a provision in the Bill to amend the Indian Companies Law for the audit of these undertakings by or on behalf of the Comptroller and Auditor General of India. How far this will be effective can be known only when the Select Committee report on the Company Law Bill is published.

Mr. Asoka Mehta suggested that the Finance Minister should consult the consultative committee and explore the possibilities of recasting the form of Government accounting so as to enable its integration with what he called social accounting and consider how far they could make use of the new idea of budgetting that had become popular in some of the countries of the world. He sounded a pertinent note of warning when he said that the Government was committing the same mistake in regard to expanded steel production as in the case of river valley projects. The dams were ready but the water stored was being wasted as, for instance, the Tungabhadra Project. He wanted to know as to what were the industries that were proposed to be set up to utilise the expanded steel production.

Mr. Deshmukh pointed out that an improvement in Budget techniques on the lines suggested by Mr. Mehta was not feasible in the present stage of Indian economy. In advanced countries, nearly 30 to 40 per cent. of the national income was being taken over in the budget, whereas, in India, Government revenues barely accounted for 7 to 8 per cent. Hence, the system of social accounting in India was not desirable, in his opinion. The main weakness of Indian economy at present was insufficiency of investment. The unemployment and underemployment prevalent in this country were, he went on to say, in a way symptoms of this insufficient investment. Taken as a whole, his reply to the general debate did not contain any new enunciation of Government's policy, apart from his announcement of a few concessions in the matter of excise taxes. Sewing machines and spare parts of sewing machines have been exempted from the levy, while the duty on coarse and medium cloth has been reduced from one to half anna per *square yard*, exclusive of the special cess of three pies per *linear yard* for the benefit of the handloom industry.

LANCASHIRE'S DILEMMA

WHAT IS THE WAY OUT?

(From Our Own Correspondent)

LONDON, 19th March

THE fears which the Lancashire spinners and weavers have over Indian imports of grey cloth are about the future rather than the present. The industry is still under-manned, but there is the curious spectacle of some mills shutting down or going on short time and others unable to get all the labour they need. The industry, of course, cannot reconcile itself to its low level of production and exports, as compared with pre-war, and sees in the entry of Indian piecegoods—which, in any case, after allowance for re-exports, only amount to a fortnight's Lancashire production—a menace to their existing trade. In addition, they have got the very recent memory of the slump year of 1952. But employment today is 10 per cent. higher than it was three years ago and the production of yarn is more than 30 per cent. higher and only some 5 per cent. less than in prosperous 1951 when more than 20 million lbs. a week was produced. Yet that figure was only three-quarters of the pre-war average. On the weaving side, the position is worse, cloth production is 20 per cent. higher than it was in 1952 but 10 per cent. less than in 1951 when 42½ million yards were produced weekly. However, output is a little over half the pre-war level and, Indian net imports, jumping from the equivalent of 2 days' to that of 2 weeks' production of the industry, fills them with foreboding.

LONDON LETTER

These fears would not be anywhere near as strong as they are if the export trade was healthy. But the export of yarn, although more than 10 per cent. above the depression year 1952, is going down, while, in the woven piecegoods market, exports have actually dropped to 10 per cent. *below* the 1952 level. Admittedly, even if they fall still further to some 600 million sq. yards per annum, they will be nearly five times as high as India's exports into the United Kingdom, but that is not a standard of comparison which Lancashire can easily accept. The industry's total exports have been moving in the opposite way to that of British industry generally. In 1952, they totalled some £130 million and they have been going steadily down to £112 million last year. The comparison on the fourth quarter is even more depressing and 1954 shows a drop of 20 per cent. on the previous year.

Mr. Wilson's Effort

In these circumstances, Mr. Harold Wilson, one of the Lancashire M.P.'s and a former President of the Board of Trade, has been trying on behalf of the spinning and weaving sections of the industry (but needless to say in opposition to the merchanting interests which are all out for more Indian cloth), to get the Government to set up a monopoly import commission—a device to avoid the odium of controls and tariffs by having a statutory body with monopoly powers to buy only such goods as it deemed fit. There is no doubt that such a device would effectively protect the Lancashire industry from Indian competition but the proposal got short shrift from the Government whose President of the Board of Trade declared that, if assistance was to be given to the industry, it would be given openly and not through a monopoly importer. They are now consulting with the Cotton Board as to whether any steps ought to be taken to help the industry.

The basis for the Government's readiness to consider intervention is the fact that the Indian mills get cheaper cotton than the Lancashire mills can get and, if the effective price of cotton going into exports from India was the same as that going into Lancashire production, then the Government would tell the industry to look after its own salvation.

Such salvation lies both in the home market and in the export market. At home, the industry considers it is penalised by the purchase tax on the better-quality textiles and there is a constant lobbying of Ministers going on to have this tax removed. So far, the Government has taken the line that the cotton industry must bear its share of the purchase tax imposition as any other industry must, and that, once it begins to discriminate in favour of one industry, it will find itself besieged by a host of worthy claimants for similar treatment. A 10 per cent. increase in exports would make all the difference to the outlook of the industry and the Government has

(Continued in previous column)

(Concluded from next column)

yet to be convinced that this is not possible through the industry's own efforts. On the other hand, the industry points to the collapse of its export trade to India which has now become an insignificant market, whereas once it was the premier outlet. But this is not a new development and the enterprising sections of the industry have been building up their trade in high quality textiles and have even found it possible to export well-designed goods which are cheap enough to avoid purchase tax in this country and can therefore be made in the substantial quantities necessary for economy. There is a feeling here that Lancashire has a good case on being deprived of access to cheap raw material but, although the spotlight has been focussed on this problem, it is not the basic reason for Lancashire's difficulties.—*All Rights Reserved.*

IMPLICATIONS OF REVISED G.A.T.T. RULES TO INDIA

PROTECTION TO INDUSTRIES

ELSEWHERE in this issue, we have published the major results of the review of the General Agreement on Tariffs and Trade—the G.A.T.T.—undertaken at the Geneva session recently. The implications of those results to India are explained in the following note:

Generally speaking, the G.A.T.T. has had three objectives: (a) To eliminate discrimination of all kinds in international trade; (b) to provide a code of fair trading rules to be observed by each country in its trade with others; and (c) to reduce, as far as possible, the barriers to international trade.

With its large stake in international trade, with its need to import machinery and raw materials for its industrial development and to export things like jute goods, tea and cotton textiles to pay for them, India obviously has a keen interest in these objectives. The principle of non-discrimination is one that has a ready appeal in this country. India is not anxious to grant or receive new preferences in the field of tariffs. Its import licences also do not discriminate between country and country but are valid for all countries in particular currency areas. Likewise, unfair trading practices such as dumping have never had any supporters in this country.

If there has been any difference of opinion, it has been in regard to those provisions of the G.A.T.T. which deal with barriers to trade. While there has been general support to the objective of expanding international trade, the fear has been expressed that the acceptance by the Government of India of the principles of liberal trading embodied in the G.A.T.T. might interfere with the economic development of the country and prevent the Government of India from giving adequate protection to Indian industries.

Assistance to Economic Development

The Government of India had given the most careful consideration to this question before the Review Session of the G.A.T.T. in consultation with the Planning Commission, the Tariff Commission, the representative bodies of Indian trade and Industry as well as economists of repute. They had instructed the delegation which went to the conference to press for certain special provisions being made in the articles of the G.A.T.T. so as to give sufficient latitude to countries like India to fulfil their programmes of economic development. Delegations from other countries similarly placed, particularly those of South-East Asia and South America, made common cause with the Indian delegation in pressing for such changes. As a result, a new article has been drafted to deal with "Governmental assistance to economic development" with special regard to the problems of "countries whose economy can only support low standards of living and is in the early stages of development." This article would enable the countries concerned to deviate temporarily from the other provisions of the G.A.T.T. in the interests of their economic development and to help the establishment of particular industries. The Government of India is now examining the proposed changes in the G.A.T.T. In the following paragraphs, a brief summary is given of the more important amendments proposed in the G.A.T.T. which have a special bearing on the problems of economic development and protection to industries.

Reduction of Tariffs

The most important and widely used method of protecting industries is, of course, tariffs. While it is one of the objectives of the G.A.T.T. to achieve a lowering of tariffs generally, countries belonging to it have no obligation, by virtue of their membership, to reduce tariffs either in general or on particular items. The method for effecting a reduction in tariffs which has so far been followed by the G.A.T.T. is to sponsor negotiations between member countries in which a country may agree to keep its tariffs on any particular items bound against increase above a certain level in return for a corresponding concession similarly received from another. India has participated in such tariff negotiations held at Geneva, Torquay and Annecy in which it has given such tariff concessions on a number of items which it imports, in return for corresponding concessions received on items which it exports, as, for example, jute manufactures, cotton textiles, oils and oilseeds, cashewnuts, tea, coir, etc.

The changes proposed in the new G.A.T.T. affecting tariffs are two. First, a new article has been proposed for inclusion in the Agreement the purpose of which is to recognise the value of tariff negotiations directed to "the substantial reduction of the general level of tariffs ... and, in particular, the reduction of such high tariffs as discourage the importation even of minimum quantities." In order to meet the point of view of countries like India, which, for reasons of economic development as well as budgetary or other considerations, may not be in a position to participate in such negotiations, it has been made clear in the article that each country will have the right to decide whether or not to engage in such negotiations. The proposed article, therefore, will impose no new obligations.

Withdrawal of Concessions

Secondly, in regard to the items on which concessions have already been given, a new set of rules of procedure have been evolved to enable countries to withdraw particular items from their Schedules of the concessions. Special facilities have for this purpose been provided to the underdeveloped countries. As a result, a country like India may, at any time, re-negotiate with the countries which have been the principal suppliers of the commodity in question for raising the bound rate of duty on it or for making it wholly free from the binding, so that the duty can be changed in the future without reference to the G.A.T.T. In such negotiations, the country wanting the change will normally be expected to give concessions on other items which are substantially equivalent to the concession which is being withdrawn.

In exceptional cases, it would also be possible for countries to withdraw an item without offering new concessions in its place, though, in such an event, the countries whose exports are affected by the withdrawal would be at liberty to withdraw equivalent concessions from among those which they had given to the country concerned under the G.A.T.T. In all such negotiations, there would be the greatest emphasis on reaching speedy decisions, and the good offices of the G.A.T.T. Organisation —and in the case of applications from underdeveloped countries even an arbitration machinery —will, in appropriate circumstances, be available to secure an expeditious and equitable settlement.

Quantitative Restrictions

Turning from tariffs to quantitative restrictions on imports, it will be recalled that, under the original provisions of the G.A.T.T., quantitative restrictions on imports were to be abolished altogether. The only major exception to this general rule was that a country in balance of payments difficulties could use quantitative restrictions on imports with a view to avoiding a serious decline in its reserves of foreign exchange. In this country, import restrictions have not been officially recognised as a method of granting protection to industries. Nevertheless, it has been necessary to control the volume of imports on balance of payments considerations, and the restrictions imposed have, in fact, provided a good deal of incidental protection to practically all industries.

In the review of the G.A.T.T., one of the main factors which was taken into account was the possibility that, in the not distant future, the major-European currencies would become convertible. When a country becomes convertible, there arises the risk that other countries may try to build up a favourable balance with it to augment their holdings of convertible foreign exchange. While in this altered context the general rules of the G.A.T.T. on the subject had to become somewhat tighter, the fact that countries in the early stages of development which are engaged, as India is, in a programme of industrialisation would continue to be in balance of payments difficulties for a much longer period and would, therefore, have to take special steps to conserve their foreign exchange over a period of time has been clearly recognised.

It has also been accepted that such countries should, through the use of import restrictions, be allowed to maintain reserves which are adequate in relation to their programme of economic development. Suitable changes in the text have been proposed to bring out these ideas clearly. After convertibility, however, there will be periodic consultations between the countries applying restrictions and the other members—annually for the developed countries and biennially for the underdeveloped countries—to ensure that these provisions are not being abused and that damage to the interests of other countries is reduced to a minimum.

Use of Import Restrictions

In addition, the new G.A.T.T., when the proposed amendments come into effect, will also recognise that there may be conditions in which a country in the early stages of development may need to use import restrictions to help the establishment of particular industries where other methods of protection are not practicable. It has, therefore, been provided that the underdeveloped countries may, with the concurrence of the organisation, have recourse to such restrictions for the establishment of particular industries. The expression "establishment of particular industries"

BUSINESS ACTIVITY IN ASIA AND EAST

VIEWS OF EXCHANGE BANKS' CHAIRMEN

THIS year's annual statements by Chairmen of the various British Exchange banks operating in India and the Far East Asian region will be read with more than ordinary interest by the business community not only in this country but also in the countries of the West. Usually, these statements cover the economic conditions prevailing in the regions where the banks operate through their branches or subsidiaries. By reason of their participation in the economic activities of the region, the banks gain firsthand knowledge and their reading of the situation is taken as a fair representation of the conditions prevailing there. In India these statements will evoke considerable attention for two reasons. For one thing, the increase in industrial production in recent years has prompted industries in the country to look to Far East Asian markets for their goods in a greater measure than in the past, and they can expect guidance in these statements. For another, in view of a shift of emphasis towards establishing a socialistic pattern of society in the economic policy of the Government, business men in India are anxious to know the reactions of foreigners to this new policy and some idea of their reactions can be had in these statements.

The statements give prominence to the various developments in the Indian economy in 1954. Thus, the improvement in India's food position, increase in industrial production, the establishment of the Industrial Credit and Investment Corporation, the progress of the Five-year Plan and the Government's policy of establishing the socialistic pattern of society, are all commented upon by the chairmen of the various exchange banks. The remarks of Mr. J. K. Michie, Chairman, the National Bank of India, Ltd., on the last mentioned subject, are worth recalling here. The economic policy of the Government, he says, is balanced somewhat precariously between reassurances to the "private sector" based, no doubt, on the need for the development of industry with the help of foreign loans and investment and a trend towards socialist thinking in the form of industrial development and ownership by the State. Welcoming, in this context, the establishment of the I.C.I.C., Mr. Michie refers to the current move for amending Article 31 of the Constitution and the comprehensive revision of the Indian Company Law. "The former," he says, "will remove the rights of individuals, whose property is compulsorily acquired by the State, to have recourse to the courts over questions of compensation. The second proposes the progressive elimination of the managing agency system which goes far beyond any previous suggestion. Both proposals are a cause for anxiety to business men in general, but particularly to foreign capital, which is mainly British. So I hope, sincerely, the protagonists of these measures will think again."

Sir Kenneth W. Mealing, Chairman, the Mercantile Bank of India Ltd., too, views with some reservation, the limitations imposed on private enterprise in India. Sir Kenneth points out that some of the plans such as those for irrigation, hydro-electric power, heavy industrial production, fertiliser plants, etc., can only be adequately solved "by vast measures which private capital and enterprise in India are not capable of undertaking." But he seems to note with a certain amount of dismay "that private enterprise is only to be allowed to exist on the fringe of these developments and more or less on sufferance, instead of being encouraged to contribute as an active and welcome partner."

Sir Kenneth does not, however, appear to view the increasing participation of the State in building industrial ownership in India with as much concern as he does the spread of communism in India. His observations on the latter aspect are worth recalling here. He said: "The implications of communism do not appear to be appreciated at any level in India, and there appears to be little or no restriction on the spread of communist propaganda. Whether and to what extent this licence is having undue effect will not become clear until the General Election due to be held in 1956."

It is true that, since Sir Kenneth's statement was prepared and circulated, the Communist Party in Andhra State, believed to be one of its strongholds in India, has suffered a serious reverse in the latest elections to the State Legislature. But it is too early to state with confidence that communists are no longer a menace to democracy in India. Much will depend upon the ability of the Government to find gainful employment to the educated unemployed youths who fall ready victims to the doctrine of communism.

The statement by Mr. V. A. Grantham, Chairman, the Chartered Bank of India, Australia and China, is a notable one for its comprehensive review of the economic conditions in the countries of the Far East. In 1954, most of the primary products of the East, according to him, enjoyed steady markets and tea and rubber prices, in particular, showed substantial increases towards the end of the year. Rice was in a special position, for although its price had fallen to the disadvantage of producing countries like Burma and Thailand, the vast populations elsewhere in South-East Asia who depend upon it as a vital foodstuff had benefited. Besides, with export earnings more assured, the economic outlook in the East showed corresponding improvement. The various development schemes launched in Asian countries to raise the standard of living continued to make good progress and the economic prospect for the East during 1955 do not appear to Mr. Grantham to be unfavourable.

In the opinion of Mr. Grantham, India has made encouraging progress in the first three years of the Five-year Plan. Two favourable monsoons, extension of irrigation works and improvement in peasant techniques have contributed to substantial improvement in agricultural production. Although the Government investment in industry during the first three years of the Plan has been well below schedule, Indian industrial output has, he says, increased by more than a third, thereby indicating the effective part played by the private sector of industry in the country's economic expansion, Mr. Grantham says that the Plan may not be completed within the stipulated period, although the various projects in progress are expected to gather impetus in the next two years. This will to some extent, he observes, save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure and incidentally render necessary a lesser degree of deficit financing. He further notes with interest the proposal to establish a State Bank of India for providing rural banking facilities throughout the country. Welcoming the establishment of the I.C.I.C., he says that his Bank's participation in it reflects its keen interest in India's economic development.

After a perusal of the aforesaid statements one will get a fairly clear idea of the position regarding certain commodities such as rice, tea, cotton and rubber. Mr. Michie's views on prospects for tea are worth noting. According to him, with Indonesia exporting 80 million pounds less than in pre-war days, tea production just cannot keep pace with the steadily increasing consumption induced by increased purchasing power. In the U.K. alone, he says, consumption has gone up by 20 per cent., since de-rationing, while in India it has expanded by 70 per cent. as compared with pre-war, and Mr. Michie expects that this trend will continue. Income from coffee, especially in Uganda and Tanganyika, promises to be much reduced this year, as a result of the heavy fall in prices caused by the action of the Government of Brazil in creating a special exchange rate for its coffee exports.

Speaking of the Malayan economy, Mr. Granthan discusses the prospects for Malayan rubber. Rubber production in Malaya rose by 10,000 tons to 584,434 tons. But a rise in world purchases of natural rubber having taken place, prices were better. He feels, however, that during the coming year, the prosperity of Malaya may be affected by the production of (GRS) synthetic rubber which is cheaper than the natural product.

Fall in rice exports, according to Mr. Grantham, has affected adversely the economies of Burma and Thailand. The policy of attempting to maintain high prices in Burma has only led to accumulation of stocks of rice, which are subject to considerable risk of deterioration while in store. Thailand also is in a similar situation. The exportable surplus of the 1954-55 crop at 750,000 tons, together with a carry-over of about 500,000 tons from 1953-54, is causing concern to the authorities in the country.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

Commenting on Japan's economic position, Sir Kenneth observes that Japan's economic position continues to cause great anxiety. The balance of international payments has improved mainly as a result of a drastic cut in imports, though exports have increased to some extent. A policy of disinflation has been followed which has checked the upward spiral of prices but has also extinguished large numbers of small businesses and considerably increased unemployment. The population of Japan is rising at the rate of over a million a year. Although it has a large industrial potential, much of it is 20 years out of date and costs of production are nearly 20 per cent. higher than in the U.S. or the U.K. These observations should not escape the attention of the industrialists in this country who are contemplating purchases of plant and machinery from Japan for starting industries.

Although Pakistan is having political instability, the country's internal financial position is stated to be sound. The Industrial Development Corporation has in hand 24 projects costing Rs. 77 crores including shipbuilding, heavy chemicals, paper, cement, sugar, heavy engineering, textile, jute, pharmaceuticals, petroleum and natural gas. Shortage of foreign exchange is stated to be a serious problem at present, but the position is expected to improve with the flow of American aid.

Thanks to the high prices of tea and rubber and record tea crop, Ceylon's balance of payments position is stated to have shown considerable improvement. But Sir Kenneth says that prospects of flow of foreign capital have been handicapped by the reluctance with which even temporary residence permits are granted to citizens of other Commonwealth countries, as a result of the policy of Ceylonisation. He seems to have no doubt that if this policy were to be continued, it would result in the disinvestment of the existing overseas capital in Ceylon and the prevention of new overseas investments in the Island.

WORLD BANK LOAN TO I.C.I.C.

One of the sources of finance for the newly formed Industrial Credit and Investment Corporation of India Ltd. is the World Bank. As readers are aware, this Bank had agreed to give a credit of $10 million to the Corporation even when the latter was under formation. Now this informal understanding has been translated into a formal agreement between the two organisations; the agreement was signed on the 14th inst. at Washington.

The ten million dollar loan is for a period of 15 years and guaranteed by the Government of India. The rate of interest is at 4½ per cent. The proceeds of the loan will be utilised for purchases of imported equipment, materials and services needed to carry out projects financed by the Corporation.

The Press note released by the World Bank on this agreement gives a brief account of the objects and the history of the Corporation. It says:

"The Corporation will make long- and medium-term loans to industrial enterprises; purchase shares of industrial enterprises; underwrite new issues of securities; guarantee loans by other investors; and help industry to obtain managerial, technical and administrative advive and assistance. As rapidly as is prudent, the Corporation will sell its loans and shareholdings to other investors, thereby expanding the capital market and recovering its own capital for further investment.

"The Corporation is the outgrowth of discussions conducted in India last year by Mr. George D. Woods, Chairman of The First Boston Corporation, and Mr. Robert H. Craft, Executive Vice-President of the American Securities Corporation, at the instance of the World Bank. Mr. Woods and Mr. Craft, accompanied by a member of the Bank's staff, visited India in February, 1954, to explore with Indian Industrial leaders and with the Government the possibility of establishing such an institution.

"During their visit, the main outlines of the Corporation were agreed upon and a steering committee of prominent Indian Industrialists was established to draw up detailed plans. Subsequently, British and American investors became interested in joining with Indian investors to provide equity capital for the new institution. In December, 1954, the Bank announced that it would make a loan of $10 million as soon as the Corporation had come into being. The Corporation was established under Indian law on 5th January, 1955, and was given authority to commence business on 2nd March of this year.

"The Corporation's initial share capital amounts to Rs. 5 crores (equivalent to $10.5 million), of which Indian investors hold Rs. 3.5 crores. Of the Indian subscription, Rs. 2 crores was privately placed; the remainder was sold in the first half of February through a public offering which was oversubscribed.

It may be added here that the Corporation has already received the interest-free loan of Rs. 7.5 crores from the Government of India. With this receipt and the conclusion of the agreement with the World Bank, the Corporation now commands resources of the order of Rs. 17.5 crores. Its resources thus assured, the Corporation is ready to begin its operations. Several projects are getting ready for its consideration. The proposal for putting up a rayon plant near Surat and another for establishing a soda ash plant in Saurashtra are likely to be the first of these. The Corporation has been receiving several enquiries for financial assistance from persons who can command the initial capital, as well as from those who have technical knowledge and ideas but no money.

CHARTERED BANK MAKES GOOD PROGRESS

PROFIT HIGHEST IN TWENTY-SEVEN YEARS

ADDRESSING the shareholders of the Chartered Bank of India, Australia and China (Chief General Manager: Mr. H. F. Morford, London), last year, Mr. V. A. Grantham, Chairman of the Bank, said that the painful readjustment imposed on the economies of most Eastern countries by the collapse of the Korean war boom having on the whole been completed, the future could be regarded with more hope, because of the better economic outlook. He had, however, struck a note of caution that they all had to work harder for less profit. A study of the Bank's profit and loss account for the year ended 31st December, 1954, and the balance-sheet as on that date discloses that the Bank's performance for the year has turned out to be better than the Chairman's expectation.

The accounts show that the Bank has been able to enjoy a more favourable year of working than in the previous one, consequent on the distinct improvement in the economic position of the countries where the Bank operates. Thus, the Bank has been able to enlarge its resources, cater more to the increased requirements of trade and, at the same time, strengthen its liquid assets. These are duly reflected in the rise of £16.7 million in the balance-sheet total to £203.7 million. The net profit (after providing for taxation and after making allocations to contingency accounts, out of which accounts full provision has been made for diminution in value of assets) has gone up by £29,349 to £723,147, in refreshing contrast to the small contraction of £4,984 noted a year ago.

With the aforesaid increase in profit, the Bank's profit curve, which had been upward since 1942, but had suffered a fall last year, has looked up again. What is more, the net profit for the year under review is a fresh record for the Bank since 1927. Together with the undistributed surplus of £403,513 brought in from 1953, the distributable profit amounts to £1,126,660, an increase of £33,647 over the previous year. The Directors do not propose to transfer anything from the profit to the published reserve, as in the previous year. They have decided to apply again a sum of £200,000 to write off Bank premises and repeat the allocations made in each of the previous four years to the officers' pension fund and widows' and orphans' fund, namely, £125,000 and £20,000, respectively. The allocation to the contingencies account has, however, been raised from £75,000 to £100,000. The distribution to shareholders has been stepped up by 1 per cent. to 15 per cent. This absorbs £288,750, as against £269,500 taken up last year, leaving a slightly reduced surplus of £392,910 (as against £403,513) to be carried forward.

The following synopsis of the Bank's balance-sheet, as on 31st December, 1954, as compared with those at the close of the previous three years, provides an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
	1954	1953	1952	1951
LIABILITIES (MAIN)				
Capital	3,500	3,500	3,000	3,000
Reserve fund	5,000	5,000	5,000	4,000
Undistributed surplus	393	403	399	397
Current and other accounts	159,651	147,925	160,509	169,145
Fixed deposits	20,483	17,112	19,480	18,606
Notes in circulation	2,902	2,765	2,564	2,550
Bills payable	1,230	926	1,372	2,531
Acceptances	10,391	9,185	15,935	11,884
Loans payable	..	..	..	1,401
ASSETS (MAIN)				
Cash	33,616	31,495	31,788	33,804
Investments—Government and other securities	62,609	58,787	66,800	62,108
Securities against note issue	2,889	2,679	2,670	2,929
Advances	74,737	67,249	69,248	88,779
Bills of exchange	14,446	11,235	15,110	12,667
Bank premises, etc.	2,166	1,961	1,845	1,913
Remittances in transit	2,148	3,587	4,833	548
Balance-sheet total	203,686	188,963	208,515	213,633

Though the increase in the latest balance-sheet total has not fully offset the decline noted a year ago, it has helped the total exceed the £200-million mark and thus reverse the downward trend noted in the previous two years. The rise in the balance-sheet total is, according to the Chairman, due in part to rises in world prices of tea, rubber, tin and other staple commodities indigenous to the countries in which the Bank operates. It is also considered as a heartening indication that the Bank is "more than holding its own in the face of competition and despite the protective trading and exchange restrictions, particularly in the field of import control and licensing, which the Governments of the countries concerned have had occasion to impose or maintain." On the liabilities side of the balance-sheet will be noted a rise of £11.73 million in current and other accounts, thus reversing the declining trend noted in the previous two years. The increase of £3.37 million in fixed deposits compares favourably with the drop of £2.37 million noted a year ago. After two years of successive recession, bills payable have risen by a substantial extent of about £300,000. The rise of £1.21 million in acceptances largely reflects the rise in the value of commodities, in financing the export of which the Bank plays a leading part.

On the assets side, notable expansions are noted in advances, bills of exchange, investments in Government and other securities (other than those held against note issue) and cash. Nearly three-fourths of the increase in current accounts and fixed deposits has been employed in the granting of larger advances and in the purchase of more bills of exchange, which show a rise of £7.49 million and £3.41 million, respectively. In consonance with the rise in current accounts and fixed deposits, the cash balances and investments (other than those against note issue) have been strengthened by £2.12 million and £3.52 million, respectively. The liquidity of the overall position has also been well maintained. Thus, the ratio of cash and call money to demand and time liabilities, excluding notes in circulation against which security has been lodged, stands at 18.54 per cent. which is only fractionally lower than that of 18.98 per cent. at the close of 1953, and is well above that of 17.6 per cent. two years ago.

(Concluded from next column)

consequent on the reconstruction of the capital structure in April, 1954. The 182,500 shares of £25 each, of which £12 10*s.* was paid-up per share, were sub-divided into 4,562,500 shares of £1 each, of which 10*s.* was paid-up per share. The 10*s.* paid-up shares were then made into 12*s.* 6*d.* per share by capitalising a sum of £570,313 out of the reserve funds. Following this step, the reserve funds stand reduced at £3.10 million. The current and other accounts and deposits show a sharp rise of £24.76 million to £128.32 million, a record in the history of the Bank, exceeding the previous highest of £110.93 million seen at the close of 1952.

On the assets side, after two years of successive decline, advances and loans have recorded a sizable increase of £17.76 million, thus making good a large part of the drop in the previous two years. With this rise, the ratio of advances and loans to deposits has gone up from 44.3 per cent. to 49.6 per cent. The upward trend in bills of exchange noted for the few years past has been fully maintained during the year under review also, with a rise of £4.21 million. Investments (at under market value) have been strengthened again by £1.96 million, mainly accounted for by the increase of £2.56 million in the holdings of Indian, Pakistan, Ceylon and East African Government securities and other securities quoted on overseas stock exchanges. British Government and other securities quoted on the London Stock Exchange have also gone up. Unquoted investments have been reduced from £1.07 million to £0.21 million. Cash balances have shrunk by £1.02 million for the second year in succession, but the decline is much lower than that of £3.56 million noted at the close of 1953. The combined total of "investments" and cash balances provide a liquidity ratio of 32 per cent. as against 38.8 per cent. a year ago.

The International Bank for Reconstruction and Development has granted a loan of $24 million to the territories in East Africa administered by the U.K. The territories are Kenya, Uganda and Tanganyika where the loan is to be spent on expansion of railways, harbours and road transport. The loan is for a period of 20 years and bears interest at 4¾ per cent. including the one per cent. statutory commission. Amortisation will begin on 15th January, 1958.

NATIONAL BANK REPORTS SATISFACTORY RESULTS

DEPOSITS AT RECORD LEVEL

A SUBSTANTIAL improvement in turnover, without any increase in profit, is the main feature of the results of the National Bank of India Ltd. (General Manager: Mr. N. W. Chisholm, London) for the year ended 31st December, 1954. Reflecting the increase in business turnover is the rise of £23.70 million to £139.84 million in the Bank's balance-sheet total. This total constitutes a new record exceeding the previous highest of £125.30 million seen at the close of 1951 by £14.54 million. Though such a growth is the result of steady economic progress noted in the particular geographical field of operations of the Bank, the pattern of events is said to have been distinctly more chequered and the circumstances in which the Bank had to operate would appear to have been somewhat difficult. These evidently account for the fractional decline of £1,721 in the consolidated profit of the Bank (including its subsidiaries).

The consolidated profit for the year under review amounts to £385,923 (after making provision for taxation and transfers to staff pension funds and to contingencies reserves, out of which reserves provision has been made for diminution in value of assets) and compares with the corresponding figure of £387,644. Thus, the downward trend in profit noted in the previous two years, during which period the aggregate drop in profit was as much as £53,813, that is, from £441,457 for 1951 to £387,644 for 1953, has continued, albeit very slightly. Out of the above profit, the Directors propose to allocate, as in the previous two years, a sum of £75,000 to the premises account and it is the intention of the Directors that this account should continue to grow until the Bank's major building and rebuilding operations are completed. Contingency reserve account gets £70,000, the allocation having been cut from £115,000 provided last year and £140,000 two years ago. The dividend has been reduced from 16 per cent. to 15 per cent., but it is on an increased capital raised by the capitalisation of £570,314 out of the reserves. The cut in dividend has been effected by reducing the first interim dividend from 8 per cent. to 7 per cent., while the second interim dividend is maintained at 8 per cent., both being on the higher capital. The net cost to the Bank, after deduction of income-tax amounts to £235,254, as against £200,750 for 1953. In this connection, it will be pertinent to recall the observations of the Chairman in his annual statement last year on the future dividend, in view of the proposal to raise the capital then before the shareholders. He said: ".... in putting before you these proposals in regard to our capital, we do it in the hope that there will be some increase in the amount to be distributed to the shareholders. I do not, however, encourage any expectation of the same rate being maintained on the increased capital." Adverting to these remarks, while referring to the dividend for 1954, the Chairman says in his latest statement: "I think, this return is a liberal interpretation of the implied promise I made last year and a standard we have every hope of maintaining." After payment of the dividend, the surplus left to be carried forward is slightly higher at £326,266 (as compared with £320,597 brought in), of which the share of the National Bank of India alone is £273,404 (as against £275,496).

The following synopses of the Bank's balance-sheets as at the close of the past four years show the Bank's progress:

(In thousands of £ sterling)

	As on 31st December			
	1954	1953	1952	1951
LIABILITIES (MAIN)				
Capital	2,859	2,281	2,281	2,281
Reserve fund	3,105	3,675	3,675	3,675
Unappropriated surplus	273	275	..	..
Current and other accounts and deposits	128,324	103,663	110,992	109,960
Bills payable	1,722	1,985	1,584	1,780
Loans payable	..	871	741	4,000
Acceptances for customers	1,032	938	1,010	1,963

There has been an increase of £571,000 in the paid-up capital of the Bank to £2.85 million,

(Continued in previous column)

ARTIFICIAL BOOST TO HANDLOOMS

WILL IT YIELD SUSTAINED MARKETS?

WITH vigorous publicity and propaganda, the All-India Handloom Board has organised the second Handloom Week. As in the previous year, the Week commenced (on Sunday last) with a fervent appeal by the Board to the public that the latter should co-operate with the Board's efforts at placing the handloom sector of the Indian cotton textile industry on a sound and stable footing. All the State Governments have been celebrating the Week in an elaborate manner, spending large sums of money. A wide variety of functions is being held. Apart from the programmes conducted by the officials of State Governments, a notable feature is the voluntary co-operation coming from the weavers themselves.

The object of organising the Handloom Week is to focus public attention on the problems of the handloom industry and to give an impetus to the sale of the industry's products. Another important objective is to bring home to weavers the fact that there is no salvation for them, unless they organise themselves properly, a point rightly stressed by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, in the course of his message on this occasion. He says that the future of handloom weavers can be ensured only by their own efforts and by actively co-operating with the Government in its endeavours to stabilise, strengthen and improve their industry.

The handloom industry plays a valuable part in the economy of the country. It is the biggest cottage industry and provides a living for as many as 1.5 million persons, the number of active handlooms being about 1.2 million. The industry meets about 25 per cent. of the clothing needs of the country. It is also providing a sizable quantity of cloth for export, valued at Rs. 5 to Rs. 7 crores per annum. Indian handloom cloth is finding expanding markets in East and West Africa, Middle East and South-East Asian countries. The important handloom products exported include *kailies, lungis,* sarongs and handkerchiefs.

Development Schemes

The foregoing brief account indicates that the handloom industry and the persons who work in it have a definite place in the nation's economy. Recognising this aspect, the Governments—Central and State—have decided to take energetic action to organise the industry and place it on a sound footing. During the last eighteen months, the All-India Handloom Board has recommended to the Central Government several development schemes requiring an aggregate outlay of Rs. 9 crores. The Government has so far sanctioned to the various States grants and loans to the tune of Rs. 6.24 crores for the implementation of these schemes. It has, at present, under consideration schemes of the value of over Rs. 1 crore which are likely to be approved and sanctioned. A large number of the schemes already implemented relates to the organisation of weavers on co-operative lines. So far, Rs. 2.90 crores have been provided as assistance in the form of share capital and working capital of weavers' co-operative societies. It is expected that, by the end of this month, about 265,000 weavers will have been brought within the co-operative fold, bringing the total of such weavers to nearly 950,000. The number of looms in such co-operative societies as will convert themselves into production units before March, 1955, is expected to be 131,000.

Considerable attention has also been paid to the marketing of handloom fabrics. The Central Government has placed at the disposal of the States Rs. 65.5 lakhs for the purpose of advancing loans to apex weavers' co-operative societies for marketing the fabrics manufactured in their respective areas. More than Rs. 50 lakhs have been given for starting 1,000 sales depots all over the country and Rs. 12.15 lakhs for the purchase of 35 mobile vans. Over Rs. 95 lakhs have been sanctioned to State Governments for implementing the scheme of giving rebate to consumers on sales of handloom cloth. Nearly Rs. 30 lakhs, it is said, have been spent in giving rebate. On this basis, it can be estimated that handloom cloth worth over Rs. 3.5 crores has been sold by the various co-operative, multi-purpose and consumer societies, fair price shops, etc.

The Government of India has sanctioned schemes for converting 33,294 throw-shuttle looms into fly-shuttle looms during the years 1953-54 and 1954-55 at a cost of Rs. 8.74 lakhs and for providing take-up motion attachments for 29,681 looms at a cost of Rs. 15.57 lakhs. Schemes costing varying amounts have also been sanctioned for providing slays, reeds, jacquards, dobbies, yarn testing machine, warping machines and drums, varnished healds, pedal and semi-automatic looms, and for the setting up of pattern-making factories. Schemes for the setting up of 6 bleaching, furnishing and calendering plants at a cost of Rs. 5.21 lakhs and 219 dye-houses (Rs. 17.53 lakhs) have also been sanctioned. The Board is very anxious to encourage establishment of co-operative spinning mills. Financial assistance for two such mills has already been given. The Government is at present considering schemes for erecting two more mills. The Government of India has set up a Central Marketing Organisation at Madras with branches at Bombay, Calcutta, Nagpur Banaras and Gwalior. This Organisation has been doing useful work in advising the State Governments on any practical difficulties encountered by them in regard to the implementation of the development schemes, getting information regarding the market conditions for handloom cloth as compared with those for mill cloth, carrying out publicity and propaganda programmes, supervising the export drive undertaken by the Madras State Handloom Weavers' Co-operative Societies, and other multifarious duties assigned to it. Active steps are under way to establish an All-India Handloom Fabrics Co-operative Society to handle both internal and external marketing schemes of handloom cloth.

Pending finalisation of this scheme, four handloom cloth marketing officers have been appointed—one each at Singapore, Rangoon, Colombo and Baghdad—and three emporia have been opened—one each at Colombo, Aden and Singapore. Arrangements for opening sales emporia at Bangkok and Kuala Lumpur are well under way. It is also proposed to exhibit handloom fabrics in New York in a trade centre to be opened there. The Central Government has also chalked out a heavy programme of propaganda and publicity through participation in most of the major exhibitions, by means of cinema slides and neon signs, kiosks at railway stations and airports, hoardings, display advertisements in newspapers, printing of posters and leaflets, publication of journals, etc. A showroom has been attached to the Regional Office in Bombay and proposals are afoot to open similar rooms in all the other regional Offices.

As a result of the foregoing measures, there are, the All-India Handloom Board claims, definite signs that the conditions of the weavers

PATENT No. 43669 OF 1950

... your shop faces west, exposed to the elements
... you have a terrace which you would like roofed
... you have a car and no garage
... direct sunlight makes your room an oven.

The AJAX Awning is "the only retractable awning in the world". It is made of strong aluminium alloy panels fitted to pantographic arms which enables easy retractability. With no fabrics to tear, no dyes to fade, the AJAX Awning is an attractive addition to the facade of any building. Easily mounted to a wall, the AJAX Awning quickly makes a garage for your car; over a door or a window, cuts out glare, rain the sun, adding to comfort; installed over a terrace creates an additional room; in front of a shop attracts attention by its beauty — and the front drop panel serves as a sign board as well.

The magic regulator enables the adjustment of inclination as desired. The angle can be varied between 90° and 45°

Ajax Awnings can be installed on show windows, terraces, hotel promenades, cinema entrances, tram and bus stands, railway stations, beaches, lawns, of clubs and hotels, gardens, school and gymnasium compounds, and at hundred other places where protection against sun or rain is required without the aid of costly permanent constructions.

THE AJAX AWNING is a Brazilian invention. It is manufactured in India by

U.K.'S MOVE TO SEND TEXTILE DELEGATION TO INDIA

LABOUR WASTAGE IN MILL INDUSTRY

By A Special Correspondent

MANCHESTER, 15th March

MANCHESTER LETTER

LEADERS of the Lancashire cotton industry will meet prominent members of the Government on 24th March to discuss the implications of the growing imports of cotton goods into Britain. Last week the final touches were put to the case which the industry is presenting to the Government and Sir Raymond Streat, Chairman of the Cotton Board, indicated that unanimous agreement had been reached on the matter. Sir Winston Churchill, the Prime Minister, is to preside over the discussions in London.

Speaking after a meeting of the Cotton Board Standing Conference on Overseas Trade Policy, representing all sections of the industry, Sir Raymond Streat said the nature of the recommendations which the Board would be making could not be disclosed. "Very intensive discussions have taken place between all the different sections of the industry throughout the week, and we are quite unanimous," he added. "I don't remember more informative and responsible discussions in all my time at the Cotton Board."

The Cotton Board had accepted in principle a proposal that representatives of the Lancashire cotton industry should visit India for trade talks. Efforts were being made to organise a mission and it was hoped they would be successful, but it was a matter of the availability of people qualified to join in such a visit. The main purpose of a visit to India by a Lancashire delegation would be to discuss matters affecting exports of British cotton textiles to the Indian market.

Production Falling

Cotton, rayon and mixture yarn output from Lancashire spinning mills fell to 18,900,300 lb. in the final week of February, according to figures given by the Cotton Board. This represents a decrease of 520,000 lb. on production in the previous week and 1,470,000 lb. on the corresponding week of 1954.

Some mill spokesmen point to the deterioration in production as an indication of the extent to which order books are shortening. A close watch is also being kept on the margin between recruitment and labour wastage. In the spinning section alone the labour force has been depleted by a loss of 1,100 full and part-time operatives in a sequence of recruitment reverses lasting five weeks.

Cotton Board figures for the last week of February show that the spinning mills had a net loss of 279 full-time and 60 part-time workers. The latest published Cotton Board survey of manpower in the spinning, doubling, waste spinning and weaving sections of the industry gives the labour force as 286,490 compared with 289,960 twelve months ago.

Details of unemployment in the Lancashire cotton industry, given by the Ministry of Labour, indicate that when the last count was taken by the Ministry in mid-February nearly 2,000 cotton operatives were temporarily idle. This represents an increase of 460 on the total recorded a month earlier.

Mill employers point out, however, that the figures do not give a true reflection of the extent of underemployment in the industry. "Many employers are not playing off their operatives even though there is not enough work to keep them fully occupied," said an industry spokesman. "If they did they would very quickly lose them."

Australian Campaign

Exporters of British cotton textiles to the Australian market have been urged by Sir Raymond Streat, Chairman of the Cotton Board, to co-operate in a campaign to bring Lancashire's selling drive to Australia to "a maximum pitch of effort and ingenuity" for the season 1955-56.

Opening an exhibition, "Cotton in Australia" at the Board's Colour, Design and Style Centre in Manchester, Sir Raymond said Australia was now the most important overseas market for British cottons but it had developed into "an arena of hot competition" in styling, novelty, quality and price of fabrics. "Those who put some zest into their selling effort in Australia can have good business there and this exhibition is designed to help the Lancashire community as a whole to tackle the market in that way," he added.

The exhibition is in two parts. The first part surveys the progress of the first "Always Buy British Cottons" campaign carried out in Australia last year, which is to be followed up by further promotional efforts later this year.

The second part provides Lancashire firms with an opportunity to see at first-hand fabrics produced by overseas competitors—including European and Japanese mills—which have been successful in Australia. The exhibition discloses that the Japanese are selling textiles to Australia which are direct copies of American fabrics, an arrangement apparently arrived at with the Americans because of Australia's dollar exchange problems.

U.S. Firms in Lancashire

Mr. G. S. F. Ritson, Director of the Lancashire and Merseyside Industrial Development Association, is flying out to the United States this week in a renewed effort to persuade American firms to open branch factories in Lancashire. He will spend nearly a month in the United States, meeting heads of firms in big industrial centres, including New York, Cleveland, Detroit, Chicago, Pittsburg, Philadelphia and Boston.

"We believe there are about 12 firms interested in the idea of coming to Lancashire," Mr. Ritson said. The Association is anxious to attract new industries to Lancashire to relieve an over-dependence on single industries—such as cotton and shipbuilding—in certain areas of the county.

Mill Apprenticeship Plan

The cotton spinning industry's first apprenticeship scheme for staff appointments is now awaiting approval of Sir Walter Monckton, Minister of Labour, for the National Service deferment of apprentices until completion of their training. This was disclosed by a spokesman of the Federation of Master Cotton Spinners' Associations in Manchester after the apprentice scheme had been warmly welcomed by the Textile Officials' Association.

Mill officials throughout Lancashire have been told by the T.O.A.—which recently urged the employers to introduce an apprenticeship scheme to ensure the industry's future supply of key men—that the Federation's scheme will encourage the recruitment of young people to the mills.

Describing it as "a properly graded ladder of opportunity which will enable youngsters to rise to whatever level their talents fit them for," Mr. S. T. Marron, Association General Secretary, said: "It is suggested that trainees should usually enter the scheme at the age of 16 and 18 years. On entering, a staff trainee would in the initial stages take a short general induction course following which he would receive practical training in all departments of the mill. He would also acquire a knowledge of practical machine fitting." He added: "It is suggested that every trainee should be required to undertake each job performed by an operative and not just watch or merely assist in the task. In addition to practical training the trainee would be required to attend the technical college to take technical training courses which will normally be the new National Certificate courses in cotton spinning."—*All Rights Reserved.*

EXPORT OF COTTON YARN

The Central Government has announced that, for purposes of giving quotas for export of cotton yarn, the actual quantity of yarn in various counts delivered by the mills during the relevant period will be split up as counts upto and including 36s (including double yarn) and counts of F.R.O. 37s to 78s (including double yarn). The mills will be permitted to export any count of yarn falling under either of the two groups. The allotment will, however, bear strict relation to the actual quantity of yarn falling under one or other of the groups delivered by mills during the relevant periods. The chief consideration which has weighed with the Government in taking this decision is to obviate the possible inconveniences to mills and to make it easier for them to qualify for an export quota.

EXPORTS OF INDIAN TEXTILES TO U.K.

The U.K. imported 125.19 million yards of cotton textiles from India during 1954, as against 20.35 million yards in 1953. Giving this figure in the course of his reply to a question in the Lok Sabha the other day, Mr. Nityanand Kanungo, Union Deputy Minister for Commerce and Industry, said that the coarse type of textiles imported by the U.K. from India consisted of grey sheeting, grey drill, longcloth and grey furnishing fabrics. The medium type was made up of grey sheeting, longcloth, grey drill, furnishing fabrics, and printed chintz, while the fine type consisted of grey poplin and longcloth. The percentage of the total imports of Indian textiles meant for consumption in the U.K. and for re-export was not available.

PRIVATE SECTOR AND THE PLAN

PERFORMANCE QUITE SATISFACTORY

By The Federation of Indian Chambers of Commerce and Industry

THERE is nowadays a great deal of discussion about the performance of the private sector in the context of the first Five-year Plan. It has been argued that the private sector has lagged behind in the expansion expected of it in the first Five-year Plan and that its performance in the last four years has been unsatisfactory. These and similar criticisms have been levelled against the private sector and, as they often emanate from responsible quarters, it is desirable that an objective assessment be made of the performance so far. An attempt is made in this article to make such an assessment. For purposes of convenience, the article is divided into two sections. The first section analyses the performance in the private sector in respect of increases in installed capacity; the second section makes an attempt to compare the performance with the targets in terms of industrial investments.

Before coming to the analysis of the performance of the private sector, a few general observations may be made. Any judgment regarding the achievement of industry must necessarily assume some sort of a norm against which the achievement is assessed. For purposes of this article, the targets laid down in the Five-year Plan are taken as the norm. It needs, however, to be remembered that the way in which the programmes of development of industries in the private sector were formulated makes the targets themselves very tentative. It is common knowledge that, in most cases, the targets were based on the expansion plans of the industry already in hand at the beginning of the Plan. In general, the expansion plans assumed that appropriate fiscal and monetary policies will be pursued by the Government and that the developments in other sectors, such as agriculture, transport, communications, etc., would be such as to be favourable to the realisation of those expansion plans. To the extent that the context of circumstances has altered, the norm itself would have to be different. There is thus no wholly satisfactory measuring yard with which to judge the performance of the various industries for which targets were laid down. However, bearing this limitation in mind, an analysis can nonetheless be made of the performance of the various industries as against the targets laid down for them.

Expansion of Capacity

In the "Programmes of Industrial Development" (1951-56), expansion plans for 42 industries were laid down.* Of these, shipbuilding is now entirely in the public sector and hence excluded from the present study. Tanning and footwear are also excluded as satisfactory figures are not available. The remaining 40 industries have been included in the analysis. Some of the industries, however, manufacture more than one item, so that the total number of manufactured items is 58. Of these, 10 have been excluded* either because satisfactory figures are not available or no expansion of capacity was envisaged. One more item, namely, ammonium sulphate, is also excluded, as it falls very substantially in the public sector. Thus, the analysis covers 47 items.

Some explanation has to be given about the terms "achieved or exceeded targets" and "behind target." The latest available figures about the annual rated capacity relate to the end of 1953-54, that is to say, the third year of the Plan. It has been assumed that, if 60 per cent. of the increase in capacity envisaged in the Plan had already been achieved by the end of 1953-54, the industry has achieved the target. This is not an unjustifiable procedure, because, in the case of capacity, the expansion plans of the various industries would proceed more or less at an even rate. It may be mentioned here that the Progress Report on the Five-year Plan for 1953-54 considers progress in the public sector to be satisfactory when 50 per cent. or more of the planned expenditures have been incurred in the first three years. It would, therefore, seem that the criterion of 60 per cent. is, if anything, on the rigorous side, for, in some cases, the target would be achieved only in the last year of the Plan when the cumulative efforts to increase capacity would bear fruit.

*The following items have been excluded: Pig iron, locomotives, wagons, coaches, machine-tools, carding engines, jute, woollen manufactures, salt and vegetable oils.

Table I gives the distribution of 47 items of manufacture, according to their performance with respect to increase in installed capacity. It should be noted, however, that the table gives the position as on 31st March, 1954, that is, it does not take into account either new capacity which was under installation on that date or of licences for expansion of capacity which have been granted since that date and are likely to result in addition to installed capacity before the end of the Plan period. Even on this limited basis, the table reveals that, in more than 50 per cent. of the items covered, the target has been fulfilled in the sense defined above, and further there are four cases where the performance is between 40 and 60 per cent. of the planned increase. In order to have a clearer picture of the progress in regard to increases in installed capacity, it is desirable to take account of licences granted since March, 1954. If this is done, the picture turns out to be even more satisfactory.

TABLE I

Annual Rated Capacity as on 31st March, 1954

Percentage performance	*No.*	*Items of manufacture*
Below 10 ..	9	Spinning ring frames, ball bearings, sewing machines, electric transformers, ready-mixed paints, glass-blownware and pressed-ware, petroleum, match, plywood and tea-chest.
10-20	1	Looms.
20-30	7	Finished steel, aluminium, electric fans, radio receivers, soda ash, power alcohol and vanaspati.
	17	
30-40	2	Diesel engines and grinding wheels.
	19	
40-50	3	Electric motors, cement and rayon filament.
	1	Paper and paper-board.
	4	
60-70	3	Electric lamps, sulphuric acid, aluminium paste and powder.
70-80	8	Power-driven pumps, bicycles and sheet-glass.
90-100	1	Storage batteries.
100 and above ..	17	Hurricane lanterns, dry batteries, electric cables ACSR conductors, superphosphate, caustic soda, benzene mexachloride, sulpha drugs, calcium lactate, titanium dioxide, nitrocellulose lacquers, soap, strawboard and other boards, cotton yarn, cotton cloth, staple fibre, sugar and automobiles.
	24	
Total ..	47	

Table II summarises the available information on the licences granted between March and September, 1954. It will be noticed that, in the case of 11 items (italicised) the capacity target will be achieved by 1955-56, although upto the end of 1953-54, progress on installation of additional capacity fell below the critical level of 60 per cent. It should also be noted that these items include important industries like petroleum, rayon, electric transformers, etc.

TABLE II

Annual Rated Capacity as Expected in 1955-56

Below 100 per cent.	*100 per cent. and above*
Power-driven pumps.* Diesel engines.	*Spinning ring-frames, sewing machines,* electric cables—ACSR conductors, *electric fans, electric motors, electric transformers, radio receiver sets,* superphosphate, sulphuric acid, *soda ash,* caustic soda, *paper and paper-board, cement, petroleum, rayon filament,* staple fibre and sugar.

* However, 60 per cent. of the expansion envisaged has already come about by 1953-54.

If the results of Tables I and II are taken together, there remain only 12 items for which the information summarised above indicates shortfall. This, however, is not the total picture. For instance, in the case of five, the numerical shortfall is either statistical or conceals the progress that has been made towards the fulfilment of the target. They are considered below:

Finished Steel: Although the capacity reported at the end of 1953-54 represents only 22 per cent. of the increase envisaged over the Plan period, it appears, from such figures as are available about the investment programme of the two main producers in the private sector, that the target will be more than fulfilled. Steel is again an exceptional case in the sense that expansion of capacity, by the very nature of the case, takes time and the "Programmes of Industrial Development" recognised this fact in indicating that the expansion programmes were expected to be completed only by 1957-58.

Looms: Here, the statistics given in the Progress Report seem to underestimate the progress. While the Progress Report gives the figure of 4,320 as annual capacity at the end of March 1954, the capacity of five manufacturers has, according to the Tariff Commission (December 1954), already reached more than 6,000 looms on a single-shift basis.

Ball Bearings: The factory at Jaipur is already working double shift as scheduled. The figures given in the Progress Report relate to capacity only on a single-shift basis.

Ready-mixed Paints: The Progress Report says on page 197 that "the schemes on the basis of which additional capacity was visualised ... have all been implemented." Thus, it may be assumed that the expansion by 5,000 tons in regard to ready-mixed paints has already been achieved.

Aluminium: As the Progress Report points out, the shortfall is on account of the fact that the expansion scheme of one of the two units fell behind schedule owing to the difficulty in getting the requisite supply of electricity which was dependent on the completion of the first phase of a multi-purpose project.

It should also be noted that, in case of diesel engines, the capacity is expected, on present indications, to reach above 60 per cent. of the target by 1955-56. Government policy of not granting further licences for expansion of the *vanaspati* industry explains the shortfall there.

On the whole it can, therefore, be concluded that, so far as installed capacity is concerned, in almost all cases, the expansion plans embodied in the "Programmes of Industrial Development" have been completed or are on their way to completion and that, in the few cases where there is a shortfall, it is due to factors beyond the control of industry.

Industrial Investment

Such information as is available about private industrial investment shows that the performance of the private sector in terms of the targets indicated in the first Five-year Plan has been satisfactory. This is but natural, for performance in terms of investment is only the obverse of what has been achieved by way of expansion of installed capacity. It was shown earlier that expansion of installed capacity has been proceeding according to targets. So there is a *prima facie* evidence to believe that similar must have been the position in the case of investments. The following paragraphs attempt to substantiate with figures this *prima facie* case;

The total investment envisaged by the Planning Commission in the private sector during the Plan period was about Rs. 613 crores, made up as follows:

	Rs. crores
Investment in the private sector on expansion, modernisation and replacement	383
Investment in working capital	150
Current depreciation expenditure not covered by normal income-tax allowances.	80
Total	613

In other words, industrial investment, including working capital, in the private sector was expected to be on an average about Rs. 120 crores annually. It deserves to be borne in mind, however, that provisions for additional working capital and for depreciation expenditure not covered by normal income tax allowances were tentative figures. To the extent that prices of raw materials and machinery have fallen, the need for additional investment under these heads will also tend to be less. No exact figures regarding the rate of investment in the private sector in the last four years are available. However, calculations made on the basis of imports of machinery, together with the production of indigenous capital goods, seem to indicate that the average rate of investment (including working capital) in the private sector has been about Rs. 105 to Rs. 110 crores every year during the first three years of the Plan. This conclusion is substantiated by the recent Report of the Taxation Enquiry Commission which has estimated that, for the corporate industrial sector, the gross capital formation was of the order of Rs. 671 crores during the period 1946-51, of which Rs. 317 crores was in the form of fixed assets. In so far as increase in industrial investment during the last two or three years is concerned, it would appear that the average rate of investment of about Rs. 105 to Rs. 110 crores annually would be a slight underestimate, if anything. Thus, the total investment in the first three years of the Plan would amount to at least about Rs. 325 crores, that is to say, more than 50 per cent. of the total indicated as necessary investment in the private sector in the first Five-year Plan.

With regard to the progress of investment on expansion which was estimated to amount to Rs. 233 crores over the Plan period, some indications have been given by the Finance Minister in his speech during the course of the debate on Economic Policy in December, 1954. According to him, about Rs. 96 crores were spent in the first three years of the Plan and investment in the fourth year is expected to be of the order of Rs. 63 crores. On the basis of this trend, it appears quite likely that the balance of Rs. 74 crores would be incurred in the fifth year of the Plan so that the target for expansion set in the Plan would be realised. These estimates are in keeping with the progress on increase in installed capacity which has been outlined in section I.

On the whole, therefore, the performance of the private sector, in terms of investment, is quite satisfactory.

Apart from increases in installed capacity and the satisfactory progress in terms of investment in industry, there is one more feature which deserves mention and that is the increase in industrial production. The index of industrial production moved up from 105 in 1950 to 135.3 in 1953 and about 144 in 1954. To the extent that

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LTD.

We have audited the Balance Sheet of the Travancore Bank, Ltd., as at 31st December, 1954, and the Profit and Loss Account for the year ended that date as above set forth, with the Books of Account at the Head Office and the certified returns received from the Branches of the Bank and have obtained all the information and explanations we have required, which were found to be satisfactory.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank as at 31st December, 1954, and the Profit and Loss Account shows a true balance of profit for the period covered by such account according to the best of our information and the explanations given to us and as shown by the books at the Head Office and the certified returns from the Branches.

We are further of the opinion that the Bank has maintained the Books of Account as required by Section 180 of the Indian Companies Act, 1913, the transactions of the Bank which have come to our notice are, in our opinion, within the powers of the Bank and the certified returns received from the Branch Offices of the Bank have been found adequate for the purpose of this audit.

GOVERNMENT POSTPONES DECISION ON SUGAR REFINERIES

SUGAR MILLOWNERS' ANNUAL MEETING

THE Government of India has, for the time being, postponed the decision of setting up sugar refineries, in view of the uncertainties about the consumption and production trends of sugar in the country. This was one of the most important pronouncements made by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his inaugural address at the twenty-second annual meeting of the Indian Sugar Mills' Association held at New Delhi on the 19th inst. Though welcome, this pronouncement of Mr. Jain will not lay at rest the controversy over sugar refineries. There can be no two opinions on the theoretical proposition that, in preference to imports of refined sugar, it would be more profitable to import raw sugar and refine it inside the country. But the point is whether refineries are at all necessary. Posing this very question, Mr. Gulabchand Hirachand, President of the Association, ably sought to prove that the establishment of refineries was fraught with serious consequences. In the considered opinion of Mr. Gulabchand, the present disparity between the production and consumption of sugar was purely temporary and there was absolutely no reason to get panicky about the situation which had necessitated imports of a large quantity of sugar. To quote him: "I have it on no less an authority than that of our Food Minister that the overall consumption of sugar—that is, sugar, *khandsari* and *gur*—in the country has not increased. I can show that the sudden jump in the consumption of factory sugar by 50 per cent., from 12 lakh tons a year to 18 lakh tons, during 1953-54 was a freak phenomenon caused by a sudden fall of an equal quantity in the production of *gur* during this period." Substantiating his contention further, Mr. Gulabchand said:

"It is not difficult to understand this heavy shift from *gur* to sugar during the previous two years. *Gur* production had fallen low, due to an overall shortage in the production of cane, which also affected the production of sugar. There was, therefore, only a small margin between the price of *gur* and that of sugar and consumers naturally showed an emphatic preference for sugar. During the current season, when the cane production has increased considerably, the production of both sugar and *gur* has been rising and the supplies, augmented by large-scale imports, have created a position when *gur* prices have been falling steeply, showing that there is an over-all surplus in the country. This surplus is reflected significantly in the decline both in the demand for and the price of *gur*. With the restoration of the normal production of cane in the country, the demand is being more satisfactorily met from indigenous production and, though the pattern of relative consumption of *gur* and sugar might not be the same as in the past, there is bound to be, during the year, a noticeable swing from sugar to *gur*, which would narrow the gap between the total demand and the indigenous supply."

A New Headache

On the basis of the aforesaid facts, Mr. Gulabchand ventured to predict that, with the expected increase of nearly 35 to 40 per cent. in sugar in the current (1954-55) season and a similar or greater rise in *gur* output, requirements of imported sugar would shrink considerably as the season advanced. Indeed, he said that "we are now faced with a new headache of a big carry-over, if we stick to our original programme of imports." Expecting abundance of cane supply, he appealed to all to imagine the distress which would descend on producers of sugarcane and *gur* in the country, if an irrevocable step of establishing refineries were taken. Refineries, he thought, would perpetuate imports in the form of raw sugar and, to that extent, reduce the demand for cane as well as *gur*. Mr. Gulabchand also dismissed as impracticable the idea of developing an export market for the produce of refineries on the score that the refineries could not stand in competition with such giant organisations as Messrs. Tate and Lyle. Emphasising that a decision to establish sugar refineries should not be based on short-term considerations, he said:

"...I would urge the authorities to view this question not in the light of the present short-term difficulties but from the point of view of the tremendous changes, which all our schemes for improvement in cane cultivation and establishment of a number of additional factories, to consume the increased production which will result from it, will bring about when they are fully implemented. There is no reason to believe that what has happened in the case of other agricultural crops, such as foodgrains and oilseeds, will not be repeated in regard to sugarcane. In the end, it would prove more prudent to spend a little more in foreign exchange for temporary imports of sugar than to burden ourselves permanently with refineries. In this connection, we should not lose sight also of the fact that, even if it be found necessary as a temporary measure to import raw sugar and refine it during the short interval between now and self-sufficiency, this work could very well be undertaken by the existing sugar factories during their off-season. So far, only 10 or 15 factories out of about 150 have undertaken this work. When more of them come forward for this purpose, they would be in a position to refine a larger quantity of raw sugar than the two proposed refineries."

The reply given by Mr. Jain to Mr. Gulabchand's plea is non-committal, in that it means that the Government has not given up the idea of permitting refineries to be established in India. Indeed, he made it clear that, if it were ultimately decided to issue licences to refineries, they would function as "shock-absorbers" in the event of production in the country falling short of consumption. This remark implies that the Government is not quite confident that India can achieve self-sufficiency in sugar in the foreseeable future. Such an attitude reflects its defeatist mentality which is not conducive, psychologically at any rate, to the success of the grow-more-sugarcane and produce-more-white-sugar drives. Be that as it may, it is gratifying that Mr. Jain readily gave an unqualified assurance that in no case would the sugar produced by the refineries be allowed to compete with the indigenous sugar.

Price Structure of Sugar

Mr. Jain then went on to reiterate the assurance which had been given on the floor of Parliament that he would soon appoint a Committee of Experts to go carefully into the price structure of sugar and fix a fair price for sugarcane in relation to the selling price of sugar. The Committee, according to him, would also suggest a method for linking sugarcane price with its available sugar-content which alone can provide the necessary incentive for the growers to improve quality of cane. The appointment of the proposed Committee of Experts will be welcomed by sugar millowners, considering that the "Kidwai formula" for profit-sharing between canegrowers and crushers is extremely complicated, its application threatening to lead to friction between the two parties. Alluding to this subject, Mr. Gulabchand rightly pointed out that there would be great difficulty in following the Kidwai formula throughout India, such being greatest in States like Bombay when factories grow their own cane and buy only a small percentage of their total crushing from private cultivators. Explaining this point further, he said: "There, it is obligatory neither on the factories to buy the cane offered to them nor on the cultivators to offer their crop to the factories. There is also an appreciable difference between the sugar-content of the factories' own cane and that supplied by cultivators, and these factors have contributed to make the application of this formula to all areas on a uniform basis not only difficult but impracticable. For instance, in Bombay, it has created difficulties for the cultivators to dispose of their crop."

In view of all these, it was impossible, Mr. Gulabchand declared, to prescribe a uniform price formula for sugarcane to all parts of the country. The obvious course was, therefore, to protect the cultivator by guaranteeing him a minimum price and allowing free play of private negotiations for any excess to be paid over and above the prescribed minimum, according to the varying conditions prevailing round each factory. Prices higher than the minimum were, in fact, being paid by the factories wherever this was justified by local economic factors. This, indeed, is the solution which this journal has been advocating ever since the problem raised its head some 13 or 14 months ago. We feel that the Expert Committee proposed by Mr. Jain is unnecessary, if he is prepared to face the problem squarely, instead of dodging it. That the Expert Committee is doomed to failure is obvious from the proposed terms of reference to it. The Committee, it seems, will concern itself not with finding a solution to the problem of fixing a reasonable price for cane but with the impossible task of relating the price of sugarcane to the selling price of sugar. For over a year now, experts have racked their brains to solve this puzzle and failed. What reasons are there to believe that the new Committee will succeed where others have failed, unless it is asked to suggest a solution to the problem and not ways and means of implementing a solution which the Government thinks is the right one?

The President of the Indian Sugar Mills Association had a few interesting observations to make on the development programme for the sugar industry. He feared that the production target for sugar—fixed at 2.25 million tons under the second Five-year Plan—was a little too high. For he said: "It is customary to compare our consumption of sugar with that of other countries. It is to be remembered that the sugar requirements of our people are lower than those in the West, because our normal diet consists mainly of wheat, rice and *jowar* which contain carbohydrates in a great proportion." Nevertheless, the President had no quarrel with the target, since it would, he averred, help intensify efforts at augmenting indigenous sugar output. In this connection, Mr. Gulabchand alluded to the efforts of the Development Council for Sugar in establishing new factories in areas where cane supply was likely to be available and warned that the great emphasis placed on co-operative sugar mills would tend to delay the programme of development at a time when the greatest need of the hour was to increase production and prevent the heavy drain on our foreign exchange resources. Elucidating his reasons for not being confident about the application of the co-operative principle to large-scale production of white sugar, Mr. Gulabchand very pertinently remarked:

"There are obvious difficulties in organising producers of cane on a scale or magnitude which would make the establishment of an economic unit possible. Highly technical processing by producers of raw material has so far not proved a successful field for the application of a co-operative principle, at least in this country of small cultivators. Even in the case of an industry like the cotton textiles, which has been established for a much longer period, there has been no record of a successful effort at organising production of cloth on a co-operative basis. Though what I say might sound frightfully conservative, I believe that the co-operative method is good and fruitful only so far as it spontaneously grows from within. It has a poor chance of success when forced from above on comparatively ignorant people not equipped for running complicated technical organisations."

There is considerable force in these observations and we fully share Mr. Gulabchand's misgivings. We are afraid that co-operative societies of the type proposed by the Bombay Government will, in actual practice, amount to State-owned factories enjoying privileges and facilities unavailable to the factories in the private sector. The whole move is a clever subterfuge, for it will ultimately turn out to be an entry of the all-powerful States into the sugar industry through the back-door.

Price Differentials

An important aspect of the control over the sugar industry, to which Mr. Gulabchand drew the attention of the authorities, was the prevailing price differentials for different grades of sugar. Characterising these differentials as out-of-date and unreal, he pointed out that, as nearly a quarter of the production of the industry was acquired by the Government, the factories were subjected to unnecessary loss. The loss would be all the greater under the proposed system of linking the price of cane with that of sugar. In such an eventuality, the prices realised by the factories, Mr. Gulabchand opined, would have to be reduced to the standard grade and unrealistic price differentials would affect the factories

BURMAH-SHELL REFINERY FORMALLY OPENED

ANOTHER CONTRIBUTION OF FOREIGN CAPITAL TO INDIA'S INDUSTRIAL PROGRESS

THE two-million-ton Burmah-Shell refinery, which was formally declared open on the 17th inst. by Dr. S. Radhakrishnan, Vice-President, is another instance of what foreign investment can do for the industrial progress of an underdeveloped country like India. To quote the words of Mr. J. F. Sinclair, Chairman of the Board of Directors, Burmah-Shell Refineries, the refinery is a real contribution to what Mr. Jawaharlal Nehru, Prime Minister, has described as "the exciting adventure of building the new India." It is indeed "an outstanding example of what private enterprise, backed and encouraged by an enlightened democratic Government, can achieve."

In the course of his address Mr. Sinclair pertinently remarked that "the business men and the State have complementary—not conflicting—roles to play in the development of the country. And the more of this is recognised, the quicker will be the inspiring type of progress we see around us today." It is indeed gratifying to note that Dr. Radhakrishnan assured that "when we speak of a socialistic pattern of society, we do not wish to uproot every enterprise that exists and recreate every thing anew. We wish to lay stress on the social vision, the social approach." Equally significant are his remarks that "all those connected with the oil industry in its production, as well as distribution, form one great fellowship. This is the meaning of democracy in industry. The British are well known for their art of making the best of what is inevitable. I do hope that here also they will co-operate with the spirit of the times."

Oil refining is not new to India. For, as far back as in 1920, the first oil refinery was built by the Assam Oil Company, a subsidiary of Burmah Oil Company, at Digboi, in Assam, to refine crude oil from the Assam oilfields discovered at the close of last century. Since then, it has put in the market well over 100 different grades of petroleum products. Today, thirty-five years later, two more refineries have come up and a third is under construction. Of the three, the Burmah-Shell refinery is the largest. Built at a cost of approximately Rs. 30 crores, it is designed to process 2,000,000 tons of crude oil per annum. The quantum of various products processed by this refinery will be as follows:

	(*In million gallons per annum*)
(1) Gasoline	156
(2) Kerosene	72
(3) High-speed diesel oil	37
(4) Gas oil	33
(5) Fuel oil	160

In addition, it will be the sole producer of one million drums of bitumen per year in India. According to the refinery Agreement of 1951, crude petroleum, the principal raw material for the refineries, will be imported mostly from the Persian Gulf area and will be carried in tankers up to 30,000 tons capacity. These tankers will use the new marine oil terminal, which is being built at Butcher Island, off Bombay. Seven submarine pipelines have been laid to link the new marine terminal with the refinery. Aviation spirit, solvent oil, mineral turpentine, lubricating oil and jute batching oil will, however, continue to be imported to the full extent of the requirements, as these products will not be refined in India.

A specialised industry like oil refining needs specialised men to man its complicated plants. Consequently, as the construction was going on, Burmah-Shell selected about 29 Indians for training in Shell refineries in Europe and the U.K. It also trained another 29 men, during the construction work, on the site. In addition, a total of about 200 operators have been given a period of training to learn the detailed "know-how" of modern refinery plan processes on the site.

The Company has provided residential quarters near the site for the key operating personnel. Apart from this, it has contributed Rs. 40 lakhs to the Bombay State treasury to provide housing for about 500 refinery workers and their families at Nehru Nagar in Ghatkopar.

When the third refinery at Visakhapatnam also goes into production, which will be by 1957, it is expected that at least 80 per cent. of India's requirements of petroleum products will be met from these refineries. The Caltex refinery at Visakhapatnam, which is under construction, will refine 0.5 million tons of crude oil per year. The Stanvac refinery has a capacity of 1.2 million tons of crude oil per year. Thus, together with Burmah-Shell, the total quantity of crude oil that will be refined will be 3.7 million tons per year. India's requirements of various petroleum products are estimated at about 4 million tons per year by 1957.

The benefits resulting from the expansion of the refining industry in India are several. First, the investment of between Rs. 50 and Rs. 60 crores by the oil industry will most likely attract further large-scale overseas investments in India's basic industries. Secondly, there will be considerable savings in foreign exchange, particularly in India's limited dollar resources. Thirdly, the refineries afford employment opportunities to Indians in all branches connected with petroleum refining and thereby help in the gradual establishment of a corps of technical personnel in petroleum refining. Finally, the refineries will aid the development of Indian industries by the purchase of indigenous chemicals, engineering materials, etc., and by providing raw materials for producing a number of by-products.

COLLAPSIBLE "AJAX" AWNING

Messrs. Jayanand Khira & Co., Ltd., Kothare Building, Sandhurst Bridge, Bombay, 7, have introduced collapsible "Ajax" awnings and will shortly introduce "Ajax" folding roofs. The Ajax awnings and folding roofs embody the inventions of Dr. Salvador Mathews Zveibil of Brazil and are covered by patent rights in India, Burma and Ceylon. The collapsible Ajax awning is a marvel of modern engineering achievement. It has many improvements over the best existing awnings, principally in its easy operation, simple and elegant design and facility of manufacture and installation, besides its low cost. The protecting profile panels are made from strong aluminium alloy of high resistance value in 22 G. thickness and ¾ hardness. The pantograph arms supporting the aluminium panels are made from steel. The panels fold one under the other and form a protective cornice of 24" when in four panels. The arms can support three, four, five or six panels and have three different inclinations called minimum, medium or maximum, offering the client the required protection in each case. The Ajax awning is unique in its projection and its adjustable inclinations have great advantages over all existing awnings. All the awnings have, in addition to the panels, a part which is called flashing, covering the gap or void between the wall and the panel. The flashing can also be provided on the open sides to keep out the sun and rain and to impart a more symmetrical appearance. The side protection plates are hooked on to the pantograph arms and can be unhooked and put aside when not in use. The normal panel in an Ajax awning requires a support at a distance of over 10 feet and permits an overhang of 20 inches on each side. Larger distances, particularly in big showroom windows, require special reinforcements on the panel curves to prevent sagging. The Ajax awning, which adds to the advantages and eliminates the disadvantages of all the existing awnings, is ideal in that it is attrative, practical and economical. It ensures lasting beauty combined with maximum protection. Considering all these exclusive and unique characteristics and its quick and easy installation, it is definitely a progressive step in the field of appliances.

MADRAS STATE'S POWER POLICY

CENTRE'S DIRECTIVE IGNORED

IT is, indeed, unfortunate that the Government of Madras should still persist in opposing the constitution of an Electricity Board as envisaged under the Electricity (Supply) Act, 1948. In the course of a three-hour discussion on the electricity policy of the State on the 16th inst., the Raja of Ramnad, Minister for Public Works, even went to the extent of declaring that the main objects underlying the constitution of the Board, namely, improvement, co-ordination, and rationalisation of production, bulk transmission and distribution of power, had already been achieved. For, according to him, over 99 per cent. of power now consumed in the State was generated and transmitted as well as owned and operated by the State. Besides, the electricity system of the State was now being operated as one grid under a unified and co-ordinated control and management. He further remarked:

"It is a matter for doubt whether the Board, if one had been in existence in this State, could have achieved so much of progress as has been achieved by the Government during the period of the first Five-year Plan. Electricity supply in bulk and distribution of power, which is a public utility, must necessarily be a State monopoly if a large grid is to be operated. An Electricity Board with such a monopoly is likely to show profits by pushing up rates and be generally non-responsible to public opinion and needs. The Board, which will not have the same authority and resources as the State Government, may not be able to raise funds for development any better than the State Government. This State Government has built up a well-knit organisation in their Electricity Department and it would be very difficult to hand it over to the Board at this stage without sacrificing its efficiency and prejudicing the interests of the public at large. The interests of electrical development in this State are bound up with those of irrigation, e.g., in the case of Mettur, Papanasam and Periyar Schemes, and the setting up of an Electricity Board in this State will amount to indirectly placing the control on irrigation also with the Board."

Thus, the Public Works Minister of Madras has set at naught all prospects of an Electricity Board coming into existence in his State. This is regrettable, especially when it is generally accepted that Government departmental management is unsuited to the requirements of a large-scale industry. Even Mr. Gulzarilal Nanda, Union Minister for Irrigation, Power and Planning, is of the same view. To quote him: "The pattern of management of industries in the public sector, through an organisation outside the departmental set-up of administration, has been found to yield the best results and I, therefore, attach great importance to the development of electricity being entrusted to autonomous boards, as envisaged in the Electricity (Supply) Act, 1948."

The Madras Government's decision thus runs counter to the settled policy of the Union Government. The Raja of Ramnad's arguments in favour of his Government's stand sound plausible but are not entirely flawless. It is true that, in Madras, State ownership of electric power is virtually complete and that, therefore, co-ordination of production, distribution, etc., can be secured as effectively as through an Electricity Board. This, however, is not the only object envisaged in the formation of the Board. Another equally important object is that production and distribution of power should be run on a commercial basis and that any profit made by the Corporation should be subject to income-tax and corporation tax in the same manner as are the profits of electricity concerns in the private sector. The idea of bringing in the commercial motive is not to fleece the consumer but to ensure efficiency and economy in the working of undertakings. This object cannot be achieved so long as the industry is run on departmental lines. The Madras Government knows, as well as we do, that if an autonomous Electricity Board is formed, it will manage the show better and disclose a profit on which the State will have to pay tax to the Centre. Its refusal to form the Board is evidently born of its desire to hide its inefficiency and to deprive the Central Government of its share in the profit. The contention that the formation of the Board may indirectly result in irrigation too being brought under its control is a naive one. Nobody has ever said that the Board will be in a position to override the Government. On the contrary, the Board will always have to work within the broad policies laid down by the State. Further, it should not be difficult to arrive at a certain amount of understanding between the Board and the Government in regard to the use of impounded water for irrigation and power purposes whenever it is found that there is not enough water for unrestricted use for both the purposes.

The Raja of Ramnad, however, reiterated the State Government's determination to push ahead with its plans for acquisition of private undertakings, under the Madras Electricity Undertakings (Acquisition) Act, 1954. He said that only those undertakings which were not working efficiently or which had to be acquired immediately to help the Government's programme of extension of rural electrification would be taken up first. The others would be acquired gradually in batches after drawing up a programme for the purpose, so that the licensees might not be kept in suspense. Pending such acquisition, the Government had sanctioned to the licensees a loan of Rs. 10 lakhs during the current year and would sanction a further sum of Rs. 15 lakhs in the next year for rural extension schemes in licensees areas. This financial assistance would be further increased, if the Government of India were to grant a loan for distribution to licensees. Thus, the State Government has virtually put an end to all private investment activities in this sector. All that the private undertakings have to do is to wait, just as private road transport operators in many of the States are doing, for the day of the acquisition of their undertakings.

The Minister also referred to the financial aspects of the Electricity Undertakings of the State. The revised estimate under capital outlay on electricity scheme is Rs. 7.13 crores and the budget estimates for next year Rs. 11.40 crores. These large provisions have been made possible on account of the loan amounts granted or promised by the Centre. The Government of India, he said, had offered a total loan of Rs. 6.97 crores for financing rural electrification schemes and for expansion of power facilities, with a view to increasing employment opportunities. The programme of rural electrification in the first Five-year Plan was to extend electricity supply to 250 villages and connect 3,000 pump sets annually. Due to financial stringency in the earlier years of the Plan, this programme could not be kept up.

The Public Works Minister pointed out, in this connection, that the State of Madras led all others in India in the matter of rural electrification. The number of villages electrified so far is over 2,200 and the number of pump sets worked on electricity is about 22,000. The connected irrigation and agricultural load is 91,000 kw., which is more than double that in 1946-47. The industrial load is 226,000 kw. The installed capacity of power plants is 247,300 kw. and mileage of transmission and distribution lines 10,600. The power demand is 173,000 kw. The power units generated in 1954 were 894 million.

BOMBAY-AGRA HIGHWAY BRIDGE

What its designers believe will be the world's longest submersible bridge is to be built by a British firm to carry the Bombay-Agra highway over the River Chambal. The 2,434-ft. bridge is to be built by the John C. Gammon Organisation, construction work being carried out by John C. Gammon Ltd., of Bombay, with special materials and plant supplied by its associate company, Colcrete Ltd. The bridge will have spans as large as 143 ft., and its builders will have to contend with a 700-ft. stretch on deep water. Intricate foundations of many types will be used at depths of 60 ft. below low-water level. The bridge is designed to withstand stresses experienced during submersion under 27 ft. of flood water during the monsoons. Floods of such magnitude being unusual and of only a few hours' duration, the new bridge will be open to traffic almost continuously. The same firm has already begun work on a 3,300-ft. bridge over the River Sone in Mirzapur district, U.P. This will be the longest pre-stressed concrete road bridge in Asia or Europe. Its spans will extend 150 ft., with foundations 75 ft. below low-water mark. Secured in the face of world competition, the contract for this bridge stipulates completion in 15 working months to serve the Rihand Dam project.

DEVELOPING MINERAL WEALTH ON SCIENTIFIC LINES

The Government of India has framed a new set of rules under Section 6 of the Mines and Minerals (Regulation and Development) Act, 1948, for conserving the country's mineral resources and ensuring their development on systematic and scientific lines. Under the rules, every owner of a mine shall have to employ a whole-time or a part-time geologist or a mining engineer, for bringing prospecting and mining operations into line with approved practices. These rules will come into force on 1st April, 1955. The Director, Indian Bureau of Mines, has been empowered under the rules to enforce adoption of scientific methods of working at the mines. A manual of instructions has also been prepared, the study of which will enable the less knowledgeable units of the industry to familiarize themselves with the latest methods and techniques of mining. The rules do not apply either to coal or petroleum.

SHOULD INSURANCE BE NATIONALISED?

DANGERS OF STATE OWNERSHIP

THERE has been widespread concern in insurance circles over the recent revelation that the Central Government is studying the question of partial or full nationalisation of insurance or the entry of the State into the field. Replying to a question on the subject in the Rajya Sabha, Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, stated that the question of nationalising the insurance industry in India had come up for departmental examination on several occasions in the past. The pros and cons of it, together with its variations such as partial nationalisation and State entry into the field, he said, continued to be under study. He also stated that the Controller of Insurance, who had recently proceeded to Australia and New Zealand under the facilities provided by the Colombo Plan, had been asked to utilise the opportunity to observe the working of State-run insurance schemes there.

The first thing that will strike an impartial observer is the air of casualness with which the revelation of Government's intentions was made. In any other democratic country, the question of nationalisation of insurance would be deemed an issue fit to be made the subject of an electoral campaign. It would be considered an offence against all canons of democracy for a Government to consider the question of nationalising insurance without getting a clear mandate from the electorate. The question raises far-reaching political and economic issues, so that it deserves, at the least, a thorough examination by an impartial commission. And yet the Government has chosen to accord no more than a departmental treatment to the subject as if it were a mere question of revising some service regulations or some procedural code or a matter of revision of rules framed under an Act placed on the Statute. It would be nothing short of a travesty of democracy to introduce partial or full nationalisation of insurance without giving an opportunity to the public and the interests concerned to have a say in the subject.

It is not clear what considerations have prompted the Government to have the subject examined at departmental level. Nationalisation of an existing industry or service could be justified only on two grounds. First, private enterprise is unwilling to undertake the task of expansion. Secondly, it should be proved beyond any shadow of doubt that the industry is being managed in a most incompetent manner or in a manner that is detrimental to public interest. Now, neither of these two charges would be levelled against the insurance industry. The first charge would be false. In fact, the charge is that there are far too many insurers for the available business in this country. This means that private capital, far from being "shy," is a little too bold. As regards the second ground, namely, mismanagement, it is true that there have been isolated instances of wrong handling of insurance funds by certain unscrupulous insurers. But this is now a thing of the past, thanks to the stringent provisions of the Insurance Act.

Limited Experience

A far more important question is: What is the urgency about the issue of nationalisation of insurance? It is not as if the insurance damsel is in deep distress, so that the Government is faced with the choice of either saving her or allowing her to perish. Insurance is doing pretty well indeed, judging from the trends in new business. In any case, the Government has far too many urgent tasks in hand—a whole Five-year Plan, and a second Plan, not to speak of education and public health—to burden itself with the management of insurance. Further, its limited experience in the working of Postal Insurance is not so eminently successful as to entitle it to claim any special privilege for the management of insurance. Also, insurance is one of the easiest businesses in which to trade uneconomically because the cost of faulty judgment may not become apparent until long afterwards. The Government is by no means specially equipped to run insurance. Finally, insurance is primarily a personal service. It has to be sold from door to door. It is never sold across the counter. Thus, it is a service that is totally unsuited for administration by the Government.

An equally important question is: What does the Government hope to gain by nationalisation of insurance? No industry is subject to greater control by the Government than insurance. Actually, the Government is in a happy position of being able to control insurers' activities and yet disclaim all responsibility for their welfare. Already, a major portion of the insurers' assets is invested in Government securities. Thus, insurers are indirectly participating in the nation-building activities which the Government finances. It is unlikely—apart from the consideration that it is undesirable—that this proportion would increase significantly even if insurance were taken over by the State. Again, it is not as if the insurance industry is earning large or excessive profits. Indeed, it should be remembered that the shareholders' share of the surplus is limited by statute, so that there is no scope for earning excessive profits. Since similar considerations would have to apply to the Government, too, it is inconceivable that the Government will derive any large profits through its ownership of insurance industry.

In view of these considerations, we would strongly urge the Government to abandon all thoughts of nationalisation of insurance. Such a measure would be the saddest, costliest and a singularly deplorable blunder. At the same time, we would urge the insurers to put their house in order and to give no room for Governmental interference. Finally, we lay the blame for this unhappy development in the sphere of insurance squarely at the doors of the insurers. What have they done to convince the lay public that their services are the best, and that they are better than what the Government could possibly render? What have they done to publicise their activities? Surely, they ought to know that, in the altered political status of this country, it is not enough for an industry to render efficient service. It must, of course, do that. But it is equally important to let the public know that such a service is being rendered. In this country, public ignorance of the insurers' services is colossal. It is a pity that, excepting one or two insurers, others are doing little to educate the public. This neglect of an essential aspect of the insurers' responsibility towards society is bound to cost the industry dear.

INSURANCE SCHEME FOR TEACHERS

Of the many schemes which have been suggested from time to time to improve the admittedly low status of teachers in this country, a compulsory insurance scheme is one. In Madras, the State Government has been considering various suggestions for improving the lot of the teachers in the State. The Finance Minister, Mr. C. Subramaniam, revealed, in the course of a statement in the State Assembly, that the Government had under consideration a scheme for insuring teachers employed in aided elementary schools in the State. He said that, even now, teachers both in the service of aided schools and local bodies had the option to take insurance policies and pay the premiums from the provident fund standing to their credit. It would appear that teachers do not generally avail themselves of this facility.

Mr. Subramaniam said that this was presumably due to the fact that "if the insurance premiums are paid out of their provident fund accumulations, they may be left with very little balance from which they can draw advances for meeting inevitable personal commitments, for which they may not have other sources to draw upon." He added: "It is also found that a compulsory insurance scheme may not give them much monetary advantage by extra accumulations at the time of retirement." Besides, there was the risk of the policy lapsing if the premium on it is not paid during the break of service of teachers. The Minister, however, recognised that the fact that insurance would cover the risk of death was a "great advantage to the families of the unfortunate teachers who may die in harness."

Accordingly, the Government, it is stated, is considering the possibility of a compulsory insurance scheme to be financed out of the provident fund accumulations without detriment to the availability of funds for temporary advances. Teachers within the age of 30, who have five years of service, will come within the purview of the scheme. The five-year limit is being prescribed because the accumulation in the teachers' provident fund accounts by this time will help pay insurance premium, if teachers are without employment for short spells of time. The Minister said that the scheme was under the consideration of the Government and that if, after proper scrutiny and examination, it was found feasible and acceptable to the teachers, it would be implemented.

The Minister announced that, in addition to the existing facilities under the provident fund scheme, there would be a pension scheme for teachers in aided schools and in schools under local bodies. Under this scheme, which will come into effect after 1st April, 1955, teachers would be given pension equivalent to one-fourth of their salaries. The rules applicable to pensionable service under the Government would be made applicable to teachers too. In 1955-56, this scheme would entail an expenditure of Rs. 1.18 lakhs for the State. In 1976, it would entail an expenditure of Rs. 8.57 lakhs.

INSURANCE IN JAPAN

The contracts concluded by all the twenty member-companies of the Life Insurance Association of Japan during the six-month period ended September, 1954, aggregated Y.268,700 millions as against Y.204,100 millions in the corresponding period in 1953. The increase in new business is attributed to the fact that more people have been induced to become interested in life insurance as the nation's economy approaches normalcy. It would appear that great interest is shown by the people in "monthly instalment" insurance.

60 YEARS

IN THE SERVICE OF THE MOTHERLAND

The Punjab National Bank, the oldest name in Indian *national* banking, celebrates its Diamond Jubilee on 13th April this year.

The establishment of a *swadeshi* Bank in 1895 was nothing short of an adventure. It was an uphill task, for in addition to foreign competition, our countrymen, too, had to be convinced that Indians could run a modern Joint Stock Bank.

The history of the Bank during the past sixty years is a glorious record of teamwork, determination and selfless devotion on the part of the Directors, officers and members of the staff and continued confidence and goodwill of its vast clientele, who have always preferred to patronise this *swadeshi* Bank. The story also depicts how the Bank, starting in a very humble way with a paid up capital of Rs. 20,000/- has come to occupy second position amongst the Joint Stock Banks of the country.

The close of 1954 saw the Bank reach the record working figures of over Rs. 91 crores and Deposits of over Rs. 75 crores. Serving the country through a network of 314 offices, it has plans for expansion in India and abroad to serve the expanding economy of the country.

First to be established, first in the service of the Motherland—the Punjab National is *the Nation's* own Bank.

KOHINOOR MILLS COMPANY, LIMITED

SIXTIETH ANNUAL GENERAL MEETING

MR. E. D. SHEPPARD PLEADS FOR SOME INCENTIVES TO HONEST INDUSTRIALISTS

ADDRESSING the shareholders of the Kohinoor Mills Company, Ltd., at their Sixtieth Annual General Meeting held in Bombay on 17th March, 1955, Mr. E. D. Sheppard, Chairman of the Company, characterised the recent Budget proposals of Mr. C. D. Deshmukh as of unusual severity, especially in regard to direct personal taxation. They had, he said, brought about a feeling of hopelessness among business executives. He referred, in particular, to the increased excise duty on the textile industry which was very serious. He, however, expressed the hope that the Financial Bill would emerge from the Select Committee, with at least some incentive restored to honest industrialists to develop and expand their undertakings, so that India might enjoy the benefits of increased production and employment.

The following are extracts from Mr. Sheppard's speech:

"GENTLEMEN,

"I expressed the hope when I last addressed you that wiser counsels would prevail all over the world and some lasting agreement would be reached among nations for the preservation of world peace. During the course of the year, we saw the end of the war in Indo-China and, once again, India was in the forefront of those who were attempting to bring about an armistice in this war-torn area. When finally an armistice was signed, a three-nation committee was set up under the chairmanship of India to undertake the onerous task of partitioning of the country, evacuation of contending forces, repatriation of prisoners-of-war and general rehabilitation. Once again it has been proved that the Indian army is second to none in its impartially, its discipline and its efficiency in dealing with difficult situations. It would seem, however, that we are not yet free from the attentions of the many-headed hydra of war, as no sooner was Indo-China reprieved, than trouble started between the two Chinese Governments, and the People's Army has started its offensive against the Nationalist Chinese Government in Formosa. The world situation is again explosive, and it is to be fervently hoped that this issue will be localised and will not evolve into a wider conflict. The Prime Minister of India along with others is sparing no effort to bring about a peaceful solution of this vexed problem.

Situation Nearer Home

"Nearer home, I am afraid the situation remains a stalemate. Despite meetings between the Prime Ministers of India and Pakistan, the setting up of Joint Commissions, etc., the problem of an understanding between these two neighbours eludes solution. There is little improvement in trade between the two countries, and they still go their several ways, with a consequent strain on both their economies.

"At home, during the course of the year, there was a definite improvement in economic conditions and, after many years, India achieved self-sufficiency in food with the consequent abolition of rationing all over the country. There has been a progressive fall in the prices of foodstuffs, but, unfortunately, this fall has not been reflected in the cost of living index compiled by the Government of Bombay. This is difficult to understand.

"A plentiful monsoon saw the end of the bogey of electric power rationing. Furthermore, after years of deliberation, the Government of Bombay at last gave the green light to Tatas for the erection of the second half of their thermal power station of 100 M.Ws. at Trombay. The commissioning of further sets in the Government/Railway Power House at Kalyan, has further eased the situation and, at the present time, power is fairly freely available for all normal expansion of industry. Early this year, the Government also started work on its Koyna Hydro-electric Scheme, and it would now seem that, for some years to come, at least Bombay will not again be handicapped, as it has been in the recent past, by a shortage of that essential for economic growth and expansion—the watt. In the wider context, the first Five-year Plan is nearing completion and the second is getting under way. With the setting up of major industries like steel and chemical works, oil refineries and the development of river projects, India is making a start towards its goal of economic and industrial self-sufficiency.

Textile Industry

"Turning now to the mill industry, conditions during the year under review were not quite so good as in the previous year. Although a fairly satisfactory demand for cloth and yarn continued, there was a definite downward tendency in prices and this became more marked towards the end of the year. The offtake from your mills was as good as could be expected in the circumstances, and they also had their fair share of the export trade where the demand continued to be good. The export duty on coarse counts continued throughout the year, but has recently, under the new Budget, been reduced to 6¼ from 10 per cent. This should improve the demand for export, but the Government has seen fit to enhance the excise duties for local consumption. Whereas, before there were four categories, superfine, fine, medium and coarse, these have been reclassified into two, superfine and others. The duty on superfine remains at 2½ annas, fine goes down from 1½ annas to 1 anna, coarse and medium are enhanced from 6 pies to 1 anna. The duties previously leviable on the linear yard will henceforth be applicable to the square yard. The effect of these changes is very serious, they would cost your Company Rs. 8 lakhs per annum, and the Millowners' Association is sparing no effort to persuade the Government to revise its policy and reduce this extra impost levied on your industry. The additional excise of 3 pies per yard for the development of the handloom industry continues. It would also seem that the policy of Government is to ban or, in any case, to restrict the installation of extra loomage, although it is prepared to sanction increases in spindleage.

Budget Proposals Are Severe

"Apart from the additional levies on the textile industry, the Budget proposals are of unusual severity especially in regard to direct personal taxation. I recall that two years ago, Mr. Butler, the Chancellor of the Exchequer, in presenting his Budget to the House of Commons, after referring to the 'numbing effect of excessive direct taxation,' said, 'We must banish the hopeless feeling that extra effort is not worthwhile.' He then proceeded to reduce the rate of income-tax. The progress made by the United Kingdom since then is a clear vindication of the policy of alleviating direct taxation and the concessions then given have most certainly paid good dividends.

"Unfortunately in India, the recent proposals of the Finance Minister have brought 'the hopeless feeling' to business executives all over the country, and indeed many may be excused for wondering whether *any* effort is now worthwhile.

"You all know the story of the man who killed the goose that laid the golden egg. In the context of those embarking on new ventures it now seems that the Government of India is proposing to strangle the gosling before it can reach the stage of laying an egg at all!

"Let us hope that the Finance Bill will emerge from the Select Committee with at least some incentive restored to honest industrialists to develop and expand their undertakings, so that India may enjoy the benefits of increased production and employment.

Anomaly About Cost of Living Index

"I would like to mention one point of very great interest to you all. Very recently, the Appellate Tribunal of the Industrial Court awarded an extra 5 per cent. to mill labour on the bonus paid to them in respect of the year 1952. This has cost the industry a sum approximating Rs. 50 lakhs. Furthermore, the Tribunal has also enhanced the rate of dearness allowance payable in the following manner:

			Per cent.
C.L.I.	between	325-335	 5
"	"	336-350	... ... 7½
"	above	350	 10

This measure will cost your Company Rs. 8 lakhs and the industry approximately Rs. 2 crores per annum, as long as the index figure remains above 350.

"In this connection, I would refer you to the remarks I made earlier in the speech. Although the rates of most commodities have declined sharply, the Bombay City cost of living index has even at times increased. To take a comparison, until recently the D.F.A. in Ahmedabad was about Rs. 20 higher than in Bombay, but in the last few months it has gone considerably below the Bombay level. I for one cannot see any reason for this increase in Bombay City alone and hope that the Government will institute a searching enquiry into the method of compiling this index figure.

"As regards prospects for the future, I do not look for any marked change as far as your Company's affairs are concerned. The new excise rates and the increased dearness allowance will, of course, reduce the potential profits to some extent. On the other hand, your mills remain in a strong financial position and with the programme of modernisation and rehabilitation nearing completion, the benefits which it is hoped will be derived therefrom should soon become apparent. I would mention here that the limit of development has now been reached in the present mill premises and if it is decided that further expansion is desirable in the interests of your Company, then additional property will have to be acquired.

"This will require careful consideration and one cannot escape the feeling that should the level of profit rise, then the lion's share will fall to the predations of Industrial Courts and that excise enthusiast, the Finance Minister.

"Before I conclude, I know you would wish me, on behalf of you all, to thank all the staff both at the mills and in the head office for their hard work throughout the year. That so much erection and rearrangement of machinery could have been carried out without loss of production indeed calls for congratulations.

"Our selling agents have served us well in a difficult year and deserve our gratitude."

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

The 4-wheel drive Willys

'Jeep'

The world's biggest little vehicle

THE Jeep—the all-purpose vehicle. It works the year round to perform any and every task—on the farm, in industry and as a passenger vehicle on and off the road.

As a tractor, it can operate any standard farm implement—as a tow-truck it carries upto half a ton...and pulls loads of 5,500 lbs. on and off the roads. The Jeep which proved its efficiency on the battle fields of war, is now greatly improved to meet civilian needs.

The 4-cylinder 72 *H. P. Hurricane* engine, with larger connecting rods, reduces leverage pressure against cylinder walls, pistons and wristpins—features which lengthen engine life.

There is no other vehicle that does so many different jobs or goes so many places as the *4-wheel drive* Universal 'Jeep'.

THE NATIONAL BANK OF INDIA, LIMITED

SATISFACTORY RESULTS ACHIEVED DESPITE DIFFICULT CIRCUMSTANCES

MR. J. K. MICHIE COUNSELS CAUTION

THE Annual General Meeting of the National Bank of India Ltd. will be held in London on 5th April, 1955. As usual, the Chairman, Mr. J. K. Michie's statement, circulated to the stockholders along with the Directors' Report and Accounts for the year ended 31st December, 1954, provides an analysis of the important events which took place in the various countries where the Bank operates. Commenting on the economic policy of the Government of India, Mr. Michie says that it is balanced precariously between the reassurances to the private sector and the trend towards socialist thinking. One hope for private industry, according to him, lies in the formation of the Industrial Credit and Investment Corporation, which will be of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies. He also expresses the concern of business men, in general, and foreign capital, in particular, over the projected legislations for amending Article 31 of the Constitution and the Indian Companies Act. He, however, hopes sincerely that the protagonists of these measures will think again.

The following is the full text of Mr. Michie's statement:

"First I wish to refer to changes during the year in the Directorate.

"To our great sorrow Sir George Morton, O.B.E., M.C., who joined the Board in 1947, died a few days after our last annual general meeting. Sir George had a distinguished career in commerce in India and we greatly miss his wide knowledge and mature wisdom.

"In April last, Sir Henry Guy Cooper, M.C., D.C.M., was elected to the Board and his appointment now comes up for confirmation. Sir Guy has had a long and intimate experience of Indian affairs and of the oil industry and I confidently recommend him to you.

"While, at home, 1954 was a year of steady economic progress, the pattern of events in our various fields of operations was distinctly more chequered. Nevertheless, the figures in our balance-sheet reflect continued growth and we are satisfied with the results achieved in circumstances of some difficulty.

Record Balance-sheet Total

"Our deposits have risen very substantially and the total of our consolidated balance-sheet at £162,031,432, not only tops last year by £25,578,458 but considerably exceeds the highest previous figure of £147,283,674 shown at 31st December, 1951. This expansion, I am glad to say, is spread over the whole area of our operations. The figure for the National Bank of India, Ltd., alone shows an increase of £23,704,466.

"We propose again to allot £75,000 to premises account and, as I have previously told you, this account will continue to grow until our major building and rebuilding operations are overtaken. The two large offices still under way are at Dar-es-salaam and Aden, but, as we expand, it must be accepted that further investment in bricks and mortar is inevitable.

"After full provisions for taxation, bad and doubtful debts and other necessary reservations, our consolidated net profits are £385,923, against £387,644 for the previous year.

"As you are aware, a second interim dividend of 8 per cent. has been declared, making 15 per cent. for the year on the increased capital. I think this return is a liberal interpretation of the implied promise I made last year and a standard we have every hope of maintaining.

"The resultant balance enables us to transfer £70,000 to contingencies and to carry forward the slightly increased figure of £326,266.

India

"For the second year in succession, helped by a good monsoon but also a result of long-term agricultural planning, India has succeeded in increasing considerably her production of foodstuffs—she is even exporting a little—an achievement which is saving a large expenditure of foreign currency and, I trust, will also be reflected in a rise in the standard of living.

"The economic policy of the Government is balanced somewhat precariously between reassurances to the 'private sector' based no doubt on the need for the development of industry with the help of foreign loans and investment and a trend towards socialist thinking in the form of industrial development and ownership by the State. One hope for private industry lies in the formation of the Industrial Credit and Investment Corporation of India Ltd., shares in which are now being offered to the Indian public. Along with other Exchange banks we have made a substantial subscription to the capital of the Corporation and I am quite certain it can and will be of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies.

"Mr. P. S. Beale, until recently Chief Cashier of the Bank of England, has arrived in India to assume the General Managership of the Corporation.

"An ambitious 'second Five-year Plan' is being launched by the Government, a primary object of which is to create twenty-four million additional jobs in industry by 1967, thereby absorbing the existing unemployment and the inevitable increase in population. Simultaneously, it is hoped to raise the general standard of living.

Anxiety to Business Men

"Other features of official thinking are reflected in projected legislation which includes amendments to Article 31 of the Constitution and the Indian Companies' Act. The former will remove the right of individuals whose property is compulsorily acquired by the State to recourse to the Courts over questions of compensation. The second proposes the progressive elimination of the Managing Agency system—which goes far beyond any previous suggestion.

"Both proposals are a cause of anxiety to business men in general but particularly to foreign capital which is mainly British; so I hope sincerely the protagonists of these measures will think again.

"Mr. Deshmukh's budget statement is a mixture of encouragement to industry and disappointment to individuals.

"The overriding proposal is deficit financing to the extent of Rs. 340 crores out of Rs. 578 crores required for capital purposes—and this sum will be obtained by the issue of Treasury Bills.

"He reports a notable fall in wholesale prices during 1954 and a drop in the cost of living index of 7 per cent.

"Customs duties on cotton cloth are to be reduced from 10 per cent. to 6¼ per cent. and a slab system will replace the present flat rate export duty on tea. A development rebate of 25 per cent. on the cost of new machinery is proposed.

"Super-tax will be levied on individual incomes over Rs. 20,000 (instead of over Rs. 25,000) and taxes are to be introduced on company directors' entertainment allowances and perquisites. Compensation for loss of employment or for the loss of a managing agency will also be taxed. The *Manchester Guardian* considers these provisions will have a very adverse effect on the morale of the British serving firms in India.

"A few months ago it was announced that the Imperial Bank of India and several other indigenous banks operating mainly in what were the Princely States are to be amalgamated and the major ownership acquired conjointly by the Government of India and the Reserve Bank of India. Details are awaited, but it has been stated that no departure from traditional banking principles and practice is contemplated.

Pakistan

"Pakistan had an uneasy year politically and economically. She has opted to become a Republic within the Commonwealth on the same lines as India and has also decided to have only two States or Provinces, East and West Pakistan.

"The new Constitution is being drafted and it will be interesting to see what form it takes.

"A few months ago the Governor-General dismissed the Constituent Assembly. This action has been held by the Sind Court to be unconstitutional and the result of an appeal to the Federal Court must now be awaited.

"The food situation is at present satisfactory and there is even a considerable quantity of rice available for export, while the programme of industrialisation has made steady progress. One result of this is a large reduction in the export of cotton from Karachi, a crop which previously almost wholly went abroad, but 50 per cent. of which is now to be consumed locally.

"In East Pakistan, the jute mill industry continues to expand.

"The jute export trade of East Pakistan which is a vital part of its economy was recently somewhat disturbed by the cancellation of the licences of 13 important shippers, on the grounds that they had contravened Government regulations. The situation is slowly being clarified, but temporarily Pakistan suffered a loss of foreign currency through the delay in getting shipments effected.

"A major development during the year is the formation of the Sui Gas Transmission Company, which is to produce and market the large reserves of gas discovered by the Burmah Oil Company, Ltd. at Sui in Baluchistan. Along with other Exchange banks operating in Pakistan we are subscribing to the loan capital. This gas supply will be an invaluable addition to Pakistan's fuel resources.

Ceylon

"Ceylon has been the fortunate Isle for prices of tea and rubber have been buoyant, while the cost of her rice imports of over 400,000 tons per annum, has fallen materially during the year—so her revenues and her balance of trade both have benefited. Altogether the picture is a complete change from that of two years ago, and, in consequence, prospects for 1955 are favourable.

"A Development Finance Corporation is to be formed in Ceylon on the same lines and with the same objects as the Indian Corporation, I have already referred to, and it is expected that the Exchange banks will be invited to provide some of the capital.

"The modernisation of Colombo harbour is not now expected to be completed until 1957 so is somewhat behind schedule.

"On the retirement of Lord Soulbury from the Governor Generalship, this position was filled by the appointment of Ceylon's veteran statesman, Sir Oliver Goonetilleke, who makes history by being the first native of Ceylon to occupy this high position.

Tea

"Two years ago, the tea-growing industry in India and Ceylon had just emerged from a crisis caused by prices falling so low that in some cases they hardly met the cost of shipping and marketing—a situation which naturally was of no concern to consumers. Today, owing to an all-round increase in consumption, the position is radically different and over the past year prices have risen considerably, particularly in overseas markets which have to bear the oncost of export duties.

"Recently a great deal has been said and written in this country about tea and tea prices, much of it ill-informed.

"At the moment of writing prices have had a sharp fall and time will show whether this is or is not temporary, but I am quite sure that nothing would better please producers, shippers, merchants and retailers alike than to see a more stable market at a less high level of price than we recently saw. But the simple fact is that, particularly with Indonesia exporting 80 million pounds less than in pre-war days, production just cannot keep pace with the steadily increasing consumption induced by larger world populations and by increased purchasing power. In the United Kingdom alone consumption has risen by 20 per cent. since de-rationing, while it is estimated that in India it has expanded by around 70 per cent. compared with pre-war and it must be expected that this trend will continue.

"The suggestion that in this country a re-imposition of rationing combined with a regression to bulk purchase would be a satisfactory or acceptable answer to the present level of prices is purely political wishful thinking and takes account neither of the statistical position nor of the fact that prices in this and other im-

porting countries bear export taxes of 1s. 11½d. per lb. in Ceylon and 11d. per lb. in India. I trust these taxes will not be perpetuated at the present levels for I continue to believe that export duties almost invariably in the last event have a boomerang effect on the countries imposing them and are, therefore, an unsound fiscal weapon.

"Within the next two years, that is when adequate and suitable storage accommodation has been provided, it is expected that a much larger percentage of Northern Indian teas will be auctioned in Calcutta.

Burma

"The economic position of Burma continues to be governed largely by the trends and policies I remarked on last year. Falling rice prices, quite apart from the very low rates she has been forced to accept for large stocks carried over from 1952-53 and a continuance of large capital expenditure on harbours, railways, inland water transport and many major projects of an industrial nature, necessarily mean a drain on balances previously built up when rice prices were high.

"Without question the really urgent needs are to recondition ports and improve all forms of transport as rapidly as possible, so that increasing quantities of rice can be promptly marketed and exported, otherwise the cultivator will be discouraged and Burma's main source of income will be a declining one.

"To some extent the rice trade has been 'liberalised', in that, while the State Agricultural and Marketing Board is the sole 'entrepreneur,' any one can now buy rice from it for shipment abroad. This is a step in the right direction and will, I hope, enable Burma to begin to recapture some part of her traditional markets, but it is still a long way from free marketing.

"The Colombo Plan continues to develop its financial and technical assistance to the great benefit of the countries concerned.

East Africa

"In the early summer of 1954, after an interval of five years, I revisited East Africa and was able to see a large number of our branches, many of which were non-existent in 1949. It was an encouraging experience, and one noticeable feature was the steadily increasing awareness of the African population of the advantages of banking facilities.

"I was particularly pleased to be able to attend the official openings of our new premises at Kampala, Nakuru and Moshi. As you will see from the photograph reproduced in the report, Kampala office is a particularly fine one and His Excellency the Governor of Uganda, Sir Andrew Cohen, did us the honour of performing the opening ceremony.

Kenya

"Mau Mau, I regret, is still with us and, although real progress has been and is being made, no sign is yet evident of an early cessation of its activities. The attitude of the up-country Kikuyu, however, is much more encouraging, in that they are showing far less fear of co-operating with the authorities and their employers and this is all-important. An announcement has just been made that, subject to the approval of Parliament, Her Majesty's Government will make a grant of £10,000,000 and an interest-free loan of £4,000,000 to the Government of Kenya to help finance 'emergency' expenditure.

"During 1954, Kenya was remarkably prosperous in the circumstances, helped by reasonable rains and high coffee prices. Local industries continue to expand, and given political peace and adequate transport facilities, there is little doubt but that Kenya would have a steadily expanding economy.

"Income from coffee—and this applies equally to Uganda and Tanganyika—promises to be much reduced this year, as a result of the heavy fall in prices caused by the action of the Government of Brazil in creating a special exchange rate for her coffee exports.

Uganda

"The difficult political situation in Buganda of a year ago was followed by a buying boycott which affected trade considerably for some months.

"Fortunately, the settlement proposed by the Hancock Commission seems to be generally acceptable and, in due course, the Kabaka will return to Kampala.

"Uganda had a good cotton crop and, as coffee is her other main product, her agriculture had a profitable year. Cultivators benefited by the higher guaranteed prices fixed by Government for both commodities.

"Over the past ten years or so Government have accumulated about £30 millions out of the export prices, received for cotton and coffee through the two controls and it now proposes that this sum should be spent over a period of five years in the general development of the Protectorate. Roads, waterways, irrigation, agricultural and industrial development all come into the plan which should ensure a great increase in the productivity and so of the prosperity of the whole country. There is a great deal of most excellent agricultural land in Uganda which only awaits clearance, population and the elimination of the tsetse fly. As it is known that the best means of driving out the tsetse is to introduce people and cut down the jungle, the Government plan has great possibilities.

Tanganyika

"Although sharing with her two neighbours a certain prosperity from coffee and cotton—in fact her cotton crop was a record one—her large interests in sisal had a less fortunate experience and prices fell as low as £70 from £103 in January, 1954. At the moment values have revived to about £80 and the prospects of at least holding this level seem to be reasonably good.

"A few months ago, we opened a branch at Bukoba, one of the main coffee-growing centres in the territory.

"Last year, Tanganyika enjoyed the dubious advantage of a visit from a team of inspection nominated by the United Nations Organisation and this mission recently issued a report which has caused both controversy and concern. It seems a pity that the mission did not allow itself time to make an adequate survey of such a large territory and a correspondingly large subject. In these days, it is almost fashionable to attack or decry Colonies and Colonial Governments, however enlightened, although there is no immediate alternative except chaos.

East African High Commission

"Railways and ports in the three territories come under the control of the Commission and real progress has recently been made in improving these facilities which are absolutely vital to the development of production and industry.

"A three-year plan is now in operation and it has been announced that the World Bank will provide 20,000,000 dollars of the funds required.

Zanzibar

"During 1954, the price of cloves remained fairly steady, but this 1954-55 crop was a very poor one, following a bumper yield the previous

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

LONDON, *8th March*, 1955.

COOPER BROTHERS & CO., W. A. BROWNE & CO., } *Chartered Accountants.*

year from which fortunately there was a large carry-over.

Aden

"The event of the year was the putting into operation of the B.P. (Aden) Ltd. new refinery at a cost estimated at £45 millions. It has a yearly refining capacity of five million tons and will, *inter alia*, provide bunker oil for the 4,500 ships which annually visit the port.

"Another development is the growing of cotton in the Abyan district which will provide a valuable cash crop for the territory.

Somaliland Protectorate

"The volume of trade is still small in this area and the habit of banking slow to be acquired, but some progress is being made and we must be patient in the knowledge that we are supplying a necessary service.

Subsidiaries

"The profit shown by Grindlays Bank Ltd. is again lower, but branching out into new territories is inevitably initially expensive and it will take some time before operations in the Rhodesias show favourable returns. Prospects, however, are encouraging.

"The operations of the Finance and Development Corporation continue to grow and to be profitable.

General

"Until it is brought about and possibly even after that event, convertibility of the pound sterling, by which I mean free or absolute convertibility, will be a much debated question, but I am glad to see Mr. Butler recently made a pronouncement that 'the conditions for convertibility have not yet been fulfilled' and this view he has since reinforced by the recent drastic increases in the Bank rate from 3 per cent. to 4½ per cent. Indeed, one has to look no further than the discount at which 'convertible' sterling stood until the Chancellor took remedial measures, or the slow tempo of our accumulation of gold and dollar reserves to see the justification for Mr. Butler's statement. Sterling has to show a much stronger front before it can safely be declared convertible and that means an all-round strengthening of the economy and currencies of the whole sterling area. We know that last year production in this country increased by around 5 per cent., but much of that increase seems to have been consumed internally which reflects an inflationary trend and does not improve our all-important external budget. In fact, to plagiarise Lewis Carroll, 'it takes all the running we can do to keep in the same place.' A great deal has been accomplished, but until our balance of trade has been considerably bettered it will be difficult to justify more than mild satisfaction, especially when we remember that never before in times of peace has such full employment been enjoyed. In these circumstances, while there are good general grounds for optimism, I fear the Chancellor of the Exchequer will still find it necessary to skim off the froth of inflation in our economy by taxation of one kind or another. Money is now dearer in the United Kingdom than it is in India, Pakistan, Burma or Ceylon.

"October 1954 saw the appearance of the first issue of the *N.B.I. Review*, a quarterly which is to be devoted to the consideration of the specialised problems of Eastern banking. In this respect, it breaks new ground and the first two issues have had a favourable reception.

"We hope to maintain the standard that has been set in the belief that the *Review* will be of practical use as well as of interest to our constituents and correspondents at home and overseas.

Staff

"We are again beholden to our staff throughout our business for their vital contributions to the achievement of the results we show and our thanks are sincere. We believe that the best service to our customers can only be provided by a staff with a true *esprit de corps* and this it is our continuous aim to cultivate.

"Barring major imponderables I can see no reason why the business of the Bank should not prosper in 1955."

Notice

HUMAYAN PROPERTIES, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors at their Meeting held on the 11th March, 1955, have declared a dividend on the Preference Shares at the rate of 6 per cent. per annum, free of Income-tax, for the year ending 31st March, 1955, payable on the 21st April, 1955, to those Shareholders whose names will appear on the Register of Members on the 11th April, 1955.

By Order of the Board,
S. A. BASIL,
Managing Director.

INDUSTRIAL DEVELOPMENT OF INDIA

CHARTERED BANK TAKES KEEN INTEREST

MR. V. A. GRANTHAM SURVEYS PROGRESS IN THE ECONOMY OF THE EAST

THE One Hundred and First Annual General Meeting of the stockholders of the Chartered Bank of India, Australia and China will be held in London on 30th March, 1955. In the course of his customary statement accompanying the Directors' report and audited accounts for the year ended 31st December, 1954, Mr. Vincent Alpe Grantham, Chairman of the Court of Directors, draws the attention of the stockholders to the improvement in the economic outlook in the East. The various development schemes which are intended to raise the Asian living standards continue to make good progress and, according to Mr. Grantham, the economic prospects in the East for the current year are not unfavourable. Referring to the Five-year Plan of India, he says that, in practice, it is improbable that the Plan will be completed within the stipulated period, although the various projects in progress are likely to gather impetus in the next two years. "This will," he adds, "to some extent save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure and incidentally render necessary a lesser degree of deficit financing." He also points out that an indication of the Chartered Bank's interest in Indian economic progress is provided by its participation in the share capital of the Industrial Credit and Investment Corporation of India which, according to him, should be able to make a considerable contribution to the financing of private industrial development in India.

The following is the full text of Mr. Grantham's statement:

Introductory

"Last year, when I addressed you, it appeared that the painful readjustment imposed on most Eastern economies by the collapse of the Korean war boom had, on the whole, been completed and that the future could be regarded with rather more hope. During the past year, most of the primary products of the East have enjoyed steady markets and tea and rubber prices, in particular, showed substantial increases towards the end of the year. Rice is in a special position, for, although its price has fallen to the disadvantage of producing countries like Burma and Thailand, the vast populations elsewhere in South-East Asia who depend upon it as a vital foodstuff have benefited.

"With export earnings more assured, the economic outlook in the East has shown corresponding improvement. Japan, whose position a year ago was causing anxiety, has succeeded in restoring some measure of stability, and the Indian economy has made substantial progress. On the other hand, the situation in Indonesia continues to cause grave concern and, although the fighting in Indo-China is mercifully at an end, the task of rehabilitating the Vietnamese economy after so many years of war remains considerable.

"The various development schemes which are intended to raise Asian living standards continue to make good progress and economic prospects in the East during the present year do not appear unfavourable.

"During the year under review, there were signs that tension between the Atlantic countries and the Communist bloc was relaxing and that conditions were becoming more favourable to an expansion of international trade. The fighting in Vietnam was brought to an end almost at the moment when an extension of the conflict had become inevitable. The volcanic situation in Korea remained quiescent during the year and the People's Government of China displayed more willingness to restore normal diplomatic relations with the United Kingdom. The conference at Geneva, although it propounded no settlement of the clash of ideologies in Asia, did at least demonstrate that diplomacy can be better conducted by plenipotentiaries than by comminatory broadcasters. The most significant, if most menacing, development during 1954 has been the shifting of the centre of gravity in world affairs from the Elbe to the Formosa Straits.

"Later in this statement, I shall review the trend of economic affairs in the Asian territories in which this Bank operates, but it must be said at once that there can be no enduring progress anywhere until the antithesis in world politics has been moderated. The hope of a *modus vivendi* between the two major power groups in the modern world depends too much upon states of mind in high places.

"In some of the Eastern countries there persist political, social and economic problems which appear to be increasingly difficult to solve, but in every land to which its establishment extends the Bank is still able to make important contributions to the prosperity of its hosts by facilitating the international exchange of goods and services. Because the Bank is peculiarly fitted and particularly well equipped to discharge this function, it may be less exposed to nationalistic prejudice than other foreign enterprises engaged in purely domestic trade and industry in countries newly emancipated and overconscious of their independence.

Nationals Encouraged

"Since nationalism was awakened in Asia, and this occurred quite a long time ago, the oversea organisation of the Bank has undergone a protracted process of adjustment and adaptation. This process has been accelerated since 1945 and we can now begin to discern what will be the ultimate form of the Bank's relations with the Governments and peoples of the Eastern countries. During the year, the Court of Directors took a decision which, from the Bank's point of view, was historic. For many years past Asian officers of the Bank have been promoted in increasing number to posts of higher responsibility, but it has now been decided to admit Asians to the rank of sub-accountant in the service, a rank hitherto restricted to Europeans. Over a wide sector of the oversea establishment, there has been brought about equality of status between British and Asian officers of the Bank. There are still problems connected with recruitment and training to solve, but I believe that the step we have taken will secure for the Bank in years to come a service to which young men of courage, attainments and character drawn from the United Kingdom and from the new national States of the East, will be proud to belong and in which they will serve happily side by side.

"It has never been possible for the Bank to rest upon its laurels since any failure to adapt itself to mutable world conditions and changes in the direction of international trade would have led to stagnation. Although the Bank may again be able to participate in the financing of the external trade of China, the conditions under which it can be accomplished will bear no resemblance to those which obtained when our branches conducted a thriving general banking business in the former treaty ports. Almost a generation has passed since we were engaged in what was the most interesting and fascinating of all banking business, the operation of the Chinese silver exchanges, but, in taking advantage of new opportunities for development presented to us since the end of the Second World War, we have not forgotten how important was the China field of operations. It was important not only on account of its profitability but because it constituted a vital part of the international organisation of the Bank as a whole. The consequences of our withdrawal from China will have been obscured from the stockholders by the expanding scope of the Bank's activities in Southern and South-Eastern Asia, but your Directors are persuaded that there must now be expansion in other directions and a start has been made by the opening of two branches in Aden, a development to which reference was made in my last statement.

Court of Directors and General Managers

"Two years ago, I intimated that Lord Colgrain, because of his advancing age, had found it necessary to retire from the Court. Lord Colgrain died after a short illness in November last and it is fitting that I should again pay tribute to his character and to the statesmanship and qualities of leadership he displayed while presiding over the British Bankers' Association and the Committee of London Clearing Bankers during the war. Lord Colgrain was a member of the Court for thirty years and we shall always hold his memory in honour and affection.

"In previous statements and at the annual general meetings of the stockholders I have referred with gratitude and admiration to the services rendered to the Bank by its Chief General Manager. Early in January of this year, the Court of Directors recorded their pride and satisfaction upon learning that Her Majesty the Queen had graciously signified her intention of conferring upon Mr. Cockburn the Order of Knighthood. On 15th January, Mr. Cockburn retired from the chief executive post to which he was appointed in 1940 and my colleagues and I were very happy to elect him to membership of the Court. The stockholders will be invited to confirm his election at the annual general meeting. Your Directors have caused to be inscribed in their minutes a resolution recording their appreciation of the highly distinguished and professionally competent services rendered by Mr. Cockburn during his tenure of the office of Chief General Manager, which coincided with a period of unparalleled difficulty and danger for our country and the Bank.

"Mr. H. F. Morford, until recently Deputy Chief General Manager, has been appointed Chief General Manager and your Directors have every confidence in him as a worthy successor to Mr. Cockburn.

"Mr. David Beath and Mr. Stafford C. R. Northcote, who have served with distinction in the East and have lately undertaken extensive tours of inspection, have been appointed Assistant General Managers.

"I should like to place on record our grateful thanks to the staff wherever they may be, and whatever their rank, for their skill and loyal devotion to duty which so grately helped us in the achievement once again of satisfactory results.

The Bank's Balance-sheet

"As the result of an increase of approximately, £17,000,000 over last year's figure, the total of the Bank's balance-sheet has once again exceeded £200,000,000. The increase, due in part to rises in world prices of tea, rubber, tin and other staple commodities indigenous to the countries in which the Bank operates, is also a heartening indication that we are more than holding our own in the face of competition and, despite the protective trading and exchange restrictions, particularly in the field of import control and licensing, which the Governments of the countries concerned have had occasion to impose or maintain.

"On the left hand, or liabilities side of the balance-sheet, current and other accounts, fixed deposits, bills payable and acceptances on account of customers show increases of £11,726,018, £3,370,412, £293,796, and £1,206,195, respectively.

"It will be seen from the assets side of the balance-sheet that nearly three-quarters of the increase in current accounts and fixed deposits has been employed in the purchase of bills of exchange and the granting of advances, which figures show rises of £3,411,530 and £7,488,627, respectively. Our holdings of cash in hand, at call and at bankers and our investments in Government and other securities (other than those lodged against our note issue) have also increased by £2,120,729 and £3,521,933, respectively.

"It is, of course, essential that we should maintain the liquidity of our over-all position and in this there has been no material change, the ratio between cash and call money to our 'demand and time' liabilities, excluding notes in circulation against which security has been lodged, being only fractionally lower at 18.54 per cent., against 18.98 per cent. last year.

"The completion of a new office building in Singapore, to which I make further reference later in my statement, coupled with the continued implementation of our programme for the provision of houses for our Eastern staff officers and the expansion and renovation of our bank premises generally, has given rise to an increase in the net figure for bank premises and furniture, after allowing for a further £200,000 written off, of £204,887.

"The net profits for the year amount to £723,147, an increase over those of last year of £29,349.

"Difficult working conditions have persisted, but our balance-sheet testifies to rather better conditions generally, in addition to which working costs which have been rising each year are at long last showing signs of greater stability.

"I trust that the results will be regarded as satisfactory.

"We paid an interim dividend in October last of 7½ per cent. less income-tax, absorbing £144,375, an increase of ½ per cent. over the interim dividend of the previous year, and it is now proposed that, out of the balance now available, a final dividend of 7½ per cent. less income-tax, should be paid, costing £144,375, making the total distribution for 1954 15 per cent., as compared with 14 per cent. in 1953.

"We propose to repeat the allocations made in each of the past four years to the pension fund and widows' and orphans' fund of £125,000 and £20,000, respectively.

"We have again applied £200,000 towards writing down bank premises and furniture account.

"It is proposed to transfer £100,000 to contingencies account, as compared with £75,000 last year, and to carry forward the slightly decreased balance of £392,910.

"I trust the stockholders will approve of all our proposals.

Aden

"In my last report, I mentioned that the Bank had opened its first branch in Aden in February, 1954, in the Crater district. A second office was opened at Steamer Point in June and it is pleasing to record that both our branches have been steadily expanding their business and extending their connections with the commercial community.

"Over the past few years, Aden has gained both in population and prosperity and, now that the new oil refinery at Little Aden has been completed, it is likely that other new industries will be established in the Colony. Our branches are well fitted to provide the banking services necessary to sustain an expanding economy and they already fulfil a useful function in the Bank's international organisation by transacting a considerable volume of business initiated with Aden by our branches elsewhere in the East.

India

"It is encouraging to review the progress that has been made during the first three years of India's Five-year Development Plan.

"Already there has been a substantial improvement in India's agricultural production and, although estimates vary, it is likely that production of foodgrains has increased by as much as 20 per cent. Two favourable monsoons have contributed substantially to this encouraging increment, but the extension of irrigation works and the improvement of peasant technique have already shown considerable effect and give ground for optimism in future years.

"Although Government investment in industry during the first three years of the Plan has been well below schedule, Indian industrial output has increased by more than a third, an indication that the private sector of industry is playing an effective part in the country's economic expansion. The increased purchasing power available in the rural areas following two good monsoons, doubtless, led to a part of the rise in mill production of cotton cloth, which has already exceeded the output planned for 1956. On the other hand, steel production is well below what the planners had hoped and it is, doubtless, because of this that the Government is considering establishing more steel plants. A shortage of steel would seriously hamper the more extensive development of industry that is to be a feature of the second Five-year Plan, which the Government will soon be considering.

"The financing of such a vast investment as that envisaged by the Planning Commission presents considerable problems. So far capital expenditure has been much lower than was estimated by the planners and now has to be stepped up sharply. There are good reasons for this low rate of investment, since in the second year of the Plan the Government was compelled by a recession in the economy to concentrate on stabilising the situation, instead of pressing on with development projects. That capital expenditure was lagging was already recognised last year and it has always been apparent that to complete its plan the Government would have to resort to a measure of deficit financing.

"If the Plan is to be fully implemented within the time prescribed, it will be necessary to spend during the final two years 60 per cent. of the total outlay envisaged for the whole five-year programme. The Planning Commission is confident that deficit financing will not be harmful to the country's economy. Exchange reserves remain at a satisfactory level and it is, therefore, considered that imports can safely be increased to meet the rise in internal demand for goods and services, which would ensue from an expansion of the money supply. It is, doubtless, this consideration that caused the Government to pursue a rather more liberal import policy during the second half of the year.

"In practice, it is improbable that the Plan will be completed within the stipulated period, although the various projects in progress are likely to gather impetus in the next two years. This will to some extent save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure and incidentally render necessary a lesser degree of deficit financing. In any case, deficit financing was only intended to supply a proportion of the necessary funds and this emphasises the importance of mobilising all possible domestic savings.

Banks' Role

"In this particular sphere, of course, the banking system can perform a useful function and it is interesting to note the proposal which has been accepted in principle by the Government, to establish a State Bank of India, the main object of which is to set up a nation-wide system of branches and thus increase rural banking facilities. This step was recommended by a committee appointed by the Reserve Bank to survey existing rural credit facilities and envisages the absorption by the proposed State Bank of the Imperial Bank of India and a number of other banks associated in varying degrees with State Governments. Undoubtedly, the scheme envisages not only the provision of better rural credit facilities but also the easier collection of rural savings. As I suggested last year, it is important to encourage the Indian people to deposit their savings in the banks and to wean them from the traditional habit of keeping their money lying unproductively at home. The note circulation in India is higher than aggregate bank deposits, whereas in Great Britain, where people effect payment by means of cheques rather than cash, total bank deposits are four times larger than the note circulation.

"Much attention has been devoted during the past year to the question of finance for development in the private sector of the economy and a committee appointed by the Reserve Bank and presided over by Mr. A. D. Shroff, reported on the subject. Amongst its recommendations the Committee suggested that banks might endeavour to provide a measure of indirect long-term finance by subscribing to special institutions such as the Industrial Finance Corporation, and it is now interesting to record the birth of the Industrial Credit and Investment Corporation of India. I am happy to say that Mr. Cockburn has been appointed to the Board of Directors of that Corporation and would add that this Bank, in common with the other Eastern Exchange banks and in association with the Commonwealth Development Finance Company Ltd., and a number of insurance companies, has subscribed part of the capital of the new institution. The Corporation should be able to make a considerable contribution to the financing of private industrial development in India and this Bank's participation is an indication of our interest in Indian economic progress.

"The progress of private investment in industry in India must depend on the faith of private enterprise in the ultimate intentions of the Government. Moreover, a steady increase in private enterprise is as necessary to India as to other countries and, as that progress can be directly encouraged or stopped by the actions or pronouncements of Government, it is to be hoped that nothing will be said or done which would have the effect of discouraging individual effort or frightening away potential investors.

"The Indian tea industry has benefited considerably from the rise in tea prices which has received so much publicity in the British Press in recent months. It is important to understand that basically the high price of tea is due to an increase in demand. Although world production of tea is rising, at present supplies are insufficient to meet demand and an increase in prices has been inevitable. Two years ago, I reported to you that conditions in the Indian tea industry had deteriorated to such an extent that many tea estates had been closed. It is surely all to the good that India and the other Eastern producers of tea should now derive much needed finance for their schemes of economic betterment by obtaining remunerative prices for their products in the international market.

"The Indian jute industry has embarked on a five-year modernisation plan in order to keep itself fully competitive in the international market in which the bulk of its output is sold. India has long been the largest supplier of jute goods to North America, but the development of new jute industries elsewhere, and particularly in Pakistan, has caused the Indian share of that market to decline.

"There has been a considerable rise, as I have already said, in the production of the Indian cotton industry and good progress has been made in the export of manufactured goods. This industry also is faced with the problem of modernisation in order to lower production costs. Although it has the benefit of cheap raw material, it will in the end have to rely on being truly competitive in the world's markets.

Pakistan

"The past year has again been one of difficulty for Pakistan. In the early months, the defeat of the Moslem League in the first provincial elections held in East Pakistan since Partition was followed by labour unrest and rioting in that area, which seriously affected the jute and paper industries. Later, East Bengal suffered disastrous floods which caused extensive damage to the jute crop and, in September, exceptionally heavy rain was followed by further floods in the Punjab. Political instability and the strain on the country's exchange reserves imposed by the industrial development programme tended to cause anxiety, but the strengthening of the Government in October and the announcement that United States economic aid to Pakistan would be substantially increased, went far to restore confidence.

"It is the Government's aim to change the basis of the country's mainly agricultural economy by pressing forward with a policy of industrial development and this presupposes investment from abroad. That the Government is fully alive to the importance of attracting capital from overseas is indicated by the new regulations governing foreign investment which took effect in September. Foreign investors are now permitted to hold a controlling interest in enterprises in approved industries, whereas formerly they were only allowed a maximum holding of 49 per cent. of the total capital. The more liberal facilities afforded, notably in respect of remittance of profits and repatriation of capital, do not, however, apply to capital invested before September, 1954.

"More than four-fifths of Pakistan's earnings of foreign exchange are derived from jute and cotton. In spite of flood damage to the jute crop, sufficient jute has been available to meet world demand. Prices have been firm and exports have been running at a satisfactory level, so that it is likely that there will be little or no carry-over at the end of the 1954-55 season. I mentioned last year that Pakistan already manufactured sufficient jute goods for the country's own requirements and with six mills already in operation the newly developed industry has been shipping an increasing tonnage to overseas markets.

"The cotton textile industry is expanding production rapidly and at present almost half the country's production of raw cotton is being consumed in its own mills. It is the Government's intention to develop the textile industry at least to the extent necessary to cover the requirements of the domestic market. At the same time, raw cotton production is to be increased so as to maintain exports of this commodity at a high level and thus obtain much-needed foreign exchange.

"Owing to a considerable fall in the quantity of cotton sold for export last year, export earnings contracted at a time when it was necessary to import substantial quantities of equipment, machinery and raw materials for the country's new industries. With exchange reserves already seriously depleted by the economic crisis through which Pakistan passed in 1953, it was only possible to preserve equilibrium by imposing stringent restrictions on the import of consumer goods and by reducing imported raw materials to a bare minimum. It was as a consequence of these measures that prices in the domestic market mounted sharply and the cost of living increased in proportion.

"Towards the end of the year, shortages of raw materials and spare parts began to show their effect on the country's newly established industries and on plans for further economic expansion. However, the situation has now been eased by a considerable increase in United States economic aid to Pakistan, which has been raised to $110 million for the year ending 30th June, 1955. This sum includes grants for techni-

cal assistance and flood relief, but the greater part of the appropriation will be absorbed by the import of industrial raw materials, essential commodities and United States agricultural surpluses. Rather more than half the total aid allocated is an outright gift to Pakistan and, of the rest, part is in the form of a forty-year loan and part is in respect of agricultural products which are to be sold against payment in Pakistan rupees. These rupees will be deposited in a counterpart fund to be used in connection with Pakistan's economic development programme.

"This assistance has made it possible for the Government to ease import restrictions during the first half of 1955 and more foreign exchange is to be allocated to importers than in any period since the cancellation of the open general licence in 1952. The requirements of the new industries will continue to take precedence over less essential imports, but, to arrest the rise in the cost of living, provision is being made for the import of the more essential consumer goods which are not manufactured in sufficient quantities in Pakistan itself.

"Last year, in reminding you that Pakistan has no coal, I suggested that the natural gas which had then been recently discovered might provide an important source of industrial power. This Bank and five other Eastern Exchange banks have now joined with the World Bank in granting a loan to the Sui Gas Transmission Company, a transaction which is particularly notable as the first World Bank loan in which the British exchange banks have participated. The project has been jointly sponsored by the Pakistan Industrial Development Corporation and the Burmah Oil Company (Pakistan Trading) Ltd., and it is pleasing to report, that progress has already been made in laying the 350-mile pipeline from Sui to Karachi. Already plans are being made to lay a similar pipeline from Sui to the southern Punjab.

"During the past two years, Pakistan has been confronted with grave economic problems at a time when an ambitious industrial development programme was in full progress. Much remains to be done, but the Prime Minister's statement in January that the country had now turned the corner in what he described as 'the bitter economic struggle' is encouraging. It remains to be seen whether following the Governor-General's recent visit to Delhi progress will be made towards a settlement of the various questions which ever since Partition have clouded relations between India and Pakistan.

Burma

"Last year, I drew your attention to the fundamental change that had taken place in the international rice trade, in which for the first time since the war rice producers no longer enjoyed the benefits of a seller's market. The world shortage of this important foodstuff, which had enabled countries such as Burma and Thailand with surpluses available for export, to exact high prices from neighbouring territories in South-East Asia in the years immediately after the war, had stimulated increased production both in the East and elsewhere. Furthermore, the disproportionate rise in the cost of rice encouraged the consumption of cheaper cereals, such as wheat, in countries like India and Japan, which normally import large quantities of rice.

"In Burma, as in Thailand the Government organisation which had been entrusted with a monopoly of rice sales abroad, was slow to react to the changed conditions in overseas markets. The policy of attempting to maintain high prices has only led to the accumulation of substantial unsold stocks, which are subject to considerable risk of deterioration while in store. While this surplus remains unsold, the country must forgo much-needed earnings of foreign currency, while the exchange reserves are being reduced at a rapid rate in order to finance Government purchases abroad of capital goods and equipment required in connection with economic development schemes.

"Last year, rice producers were favoured by two factors, which are not likely to be present in 1955; the poor rice crop in Japan and increased imports by India, where the Government was building up food stocks. It became apparent by the middle of the year that, although Burma's exportable surplus was lower than had been originally estimated owing to late rains and late harvesting, markets for approximately 500,000 tons had still to be found. The authorities made determined efforts throughout the second half of the year to dispose of their surplus stocks and marketing missions led by ministers were sent to Malaya, Japan and the People's Government of China. In October, it was announced that a substantial tonnage had been sold to China, but except for a small payment in sterling, settlement is to be made by means of barter, Burma receiving goods from China, Russia and the Soviet satellites in Eastern Europe.

"Although, as a result of these efforts, Burma exported more rice last year than in 1953, the authorities were embarrassed by a tendency for inter-Governmental sales under bulk contracts to decrease. Poor quality has caused the loss of markets abroad; under the State marketing system the millers, have had no inducement to mill high-quality rice. The Government, therefore, after consulting the commercial interests concerned, decided to permit private traders to ship rice to overseas markets other than those with which the State Agricultural Marketing Board has negotiated bulk contracts. Although shippers will still need to procure their rice requirements from the Board, which will continue to fix prices, there will be no restriction as to the quality or quantity which can be exported. It is to be hoped that this new arrangement will expand rice exports and so help to arrest the fall in the country's exchange reserves.

"The financing of the Government's economic and social development plans presents some problems, inasmuch as the profits earned by the Government Boards are no longer sufficient to maintain the various projects. In introducing the budget for 1954-55, the Finance Minister, therefore, announced the Government's intention of initiating a drive to encourage public investment in Government securities. The Government has already resorted to deficit financing and is now seeking assistance from the Work Bank, which has recently sent a mission to Burma to consider the possibility of granting a loan. The Japanese Peace Treaty which was signed in November not only settled the vexed question of reparations but also provided for Japanese participation in joint enterprises to develop Burmese industries over a period of ten years. Japan already occupies the position of chief supplier of Burma's textile imports and the reparations agreement will substantially increase the Japanese stake in the Burmese economy.

Ceylon

"It is pleasing to report a progressive improvement in Ceylon's economic position during the past year. In 1953 the essential problem continued to be the adjustment of the country's economy to the new conditions prevailing after the collapse of the Korean war boom and the reduction of the trade deficit from the high level it had reached in 1952. Last year, except for a negligible deficit in June, the balance of trade was in Ceylon's favour month by month, and the external reserves, which in November, 1953, had fallen to their lowest level for a decade, rose throughout the year.

"The main cause of this favourable trend was the advance in price of the island's main export, tea, and Ceylon tea producers have been fortunate, in that higher prices have coincided in their particular case with a record crop. The strength of the tea market has enabled the Ceylon Government to raise the export duty three times in four months. At its present level, this levy has been almost trebled since last May.

"The only setback in an otherwise favourable year for the tea industry was the Egyptian ban, imposed in May, on imports of Ceylon tea. Following the trade agreement negotiated by India and Egypt in June, 1953, Indian purchases of Egyptian cotton had exceeded in value Egyptian imports of Indian tea and the Egyptian authorities accordingly found it necessary to close their domestic market to Ceylon tea. Subsequently, it was agreed that Egypt would freely license imports from Ceylon and in return Ceylon would buy sufficient Egyptian goods and commodities, such as cotton, cotton yarn, cement and phosphates, to keep its favourable trade balance with Egypt within reasonable limits. Shipments of Ceylon tea to the Egyptian market have since benefited from a more liberal release of Egypt's sterling balances.

"Terms for the current year's rice-rubber contract with the People's Government of China were settled in October. The volume of shipments either way remains unchanged at 50,000 tons of rubber and 270,000 tons of rice, but the price structure has been altered. Ceylon will receive a slightly lower price for its rubber, but will pay a substantially reduced price for Chinese rice. In consequence, the trade balance between the two countries will be in Ceylon's favour and, while any residual balance will be settled in sterling, Ceylon has agreed to import other Chinese goods to reduce this balance. Hitherto, the Chinese have paid a price higher than the world level for their purchases of sheet rubber from Ceylon, but as a result of the rise in rubber prices in the international markets towards the end of the year this is no longer the case. Now shippers are to be permitted to export about 20,000 tons of sheet rubber to countries other than China, and, if present prices are maintained, Ceylon for the first time will be faced with the problem of shipping rubber under its contract with China at a price lower than world prices.

"While the outlook for Ceylon's exports may be considered favourable, the Island's economy is based on a dangerously narrow range of products at a time when substantial imports of food are still necessary to feed the rapidly expanding population. The Government is fully alive to the fact that general economic development is dependent upon attracting foreign capital and in February, 1954, an Act was passed, authorising the raising of development loans totalling Rs. 60 crores, both locally and in the United Kingdom and from the World Bank. The following month Ceylon entered the London money market for the first time since 1939, when a 4 per cent. loan of £5 million, redeemable 1973-75, was successfully issued at 97. In June, a 3½ per cent. loan of Rs. 7 crores, repayable in 1964, was offered locally by the Central Bank on the Government's behalf and oversubscribed. The same month the World Bank agreed to finance by means of a loan the second stage of the Lakspana Hydro-electric Scheme. The success of these loan operations should assist the progress of economic development, but the prospects of investment in Ceylon by foreign enterprise are not being helped by the difficulties of securing any but temporary residence permits for skilled foreign personnel. If enterprises are to be developed which will provide extended opportunities of employment for the Ceylonese people, it is to be hoped that the authorities will see fit to ease their restrictions on the entry of essential personnel from abroad.

Malaya

"The year 1954, against the background of two particularly difficult years which preceded it, presents a happier picture for Malaya, for the country and its economy have benefited by an improvement in the security position and by a considerable increase in the price of rubber.

"The sound basis laid down for dealing with the terrorists in Malaya continued to show better results during the year. Incidents are now fewer and, as Government has progressively gained control of the situation, a number of new areas have been declared as 'white' where the population live free of emergency restrictions. Though there are still terrorists at large, the success of the Government's counter-measures appears to have forced them to retreat into the more inaccessible areas of the jungle and the Government, in framing the federal budget for 1955, felt sufficiently confident of the situation to reduce the appropriation for expenditure on the Emergency by 18 per cent. from its level during the past year.

"A weak rubber market in the early months of the year saw the price fall to 16-3/16d. per pound in March and thereafter rise to a peak of 30⅞d. on the last day of the year. Rubber production rose by some 10,000 tons to 584,434 tons and, contrary to the expectation of many producers a year or so ago that there would be a substantial surplus production, world purchases of natural rubber have actually increased and more than set off the increase in production.

"Final details of Malaya's overseas trade are not yet available, but on the basis of the figures for the first eleven months of 1954, and, taking into consideration the substantial rise in the price of rubber at the end of the year, it is reasonable to assume that the trade deficit for the full year will be smaller than the figure of M$209 millions by which imports exceeded exports in 1953. This is an encouraging result particularly when it is remembered that the last year in which Malaya enjoyed a trade surplus was in 1951 at the height of the Korean war boom.

"Further efforts to resuscitate the entrepôt trade have met with little success, but secondary industries are slowly growing.

"During this coming year the prosperity of Malaya may be affected to a greater degree than hitherto by the production of the synthetic rubber industry, since GRS synthetic rubber is at present cheaper than the comparable grade of the natural product. The importance of this consideration was emphasised by the publication in October of the report of a mission, presided over by Sir Francis Mudie, which conducted an investigation into various aspects of the competitive position of the Malayan rubber industry. As it is generally agreed that, in the long run, research and improved technique are likely to lower the price of synthetic rubber, the Mission concluded that, in order to lower production costs and so increase the competitiveness of the Malayan industry, replanting with high-yielding stock must be accelerated.

"The Mission's recommendations have aroused considerable controversy within Malaya and the Rubber Growers' Association have submitted alternative proposals to the Malayan Government. For the time being, the Government has taken no decision on either scheme and is awaiting the report of the World Bank mission, which as I mentioned in my last report, visited Malaya early in 1954.

"Interest in the tin industry during the year has centred upon the proposed control scheme, which provides for the establishment of a buffer stock. Though world tin production has tended to fall and consumption to rise, Malayan producers favour the scheme, in the expectation that it will give the industry the benefit of price stability. The Malayan Government has published its arrangements for controlling production if and when the scheme comes into operation, but, at present, the agreement has not been ratified by sufficient of the signatory countries to enable it to be brought into force.

"Tin prices, after a sharp rise in April to £820 per ton, quickly relapsed to settle around £740 until the year-end when they declined to £697 10s. The prospect of the introduction of the international tin control scheme kept the price reasonably firm at a level rather higher than the price to which it had declined in January, 1954, and may be expected to continue as a broadly stabilising factor.

"Production in Malaya of tin, at 60,691 tons, was the highest annual output recorded since the war and exports rose by some 9,000 tons to 70,277 tons.

"The note issue remained stable until December when it rose sharply, reflecting the increased purchasing power stimulated by the rise in rubber prices. This was the first real expansion of the currency since the Korean war boom and the note circulation on 1st January, 1955, was M$778,958,620, as compared with M$740,923,669 a year earlier.

"This expansion will, doubtless, help the import trade, but it is to be hoped that importers will be cautious in entering into future commitments, so that there may be no repetition of the overtrading that occurred a few years ago. United Kingdom exporters to the territory have to encounter increasing competition from Australia, Germany and Japan.

"In his Budget speech in November last, the Federal Financial Secretary was able to disclose a welcome revision in the Federation's original budget figures for 1954. With increased receipts from the export duty on tin and from income-tax, partially offset by a reduction in receipts from tobacco duty, revised revenue is set at M$541 millions and chiefly owing to the inability of departments to spend the whole of their appropriations revised expenditure amounts to M$715 millions making a revised deficit for the year of M$174 millions or about the equivalent of the year's expenditure on the Emergency. In 1955, it is estimated that there will be a deficit of M$148 millions.

"The wide measures of self-government which are to be given to both the Federation and Singapore have aroused some controversy. The changes must be sweeping in order to satisfy the political aspirations of the highly intelligent population of the peninsula, but safeguards will be provided by the reservation of certain powers to the Governor and High Commissioner.

"The confidence this Bank has in the future in Malaya is well exemplified by the opening of a second branch in Singapore, housed in a six-storey building recently completed in the Shenton Way development area.

North Borneo

"North Borneo has benefited from the rise in rubber prices during the latter part of last year, but increased prices have not so far led to a marked increase in exports, which have been running at much the same level as in 1953. This emphasises the fundamental problem that confronts the North Borneo industry, namely, the necessity for extensive replanting and new planting with high-yielding stock, which, as the report of the Mudie Mission in Malaya pointed out, should lead to a substantial reduction in costs. That the Government is fully alive to the importance of the problem is indicated by the introduction of the Rubber Industry Replanting Bill, under which, in order to assist replanting, a reduction is being made in the export duty at a time when the colony can ill afford to forgo even in part one of its customary sources of revenue.

"Copra exports last year have been rather higher in volume than in 1953 and, as usual, a good deal of the copra shipped from North Borneo has come from the southern islands of the Philippine Republic. Timber exports have greatly increased and prices have been firm. Most of the timber shipped has gone to Australia, Japan, South Africa and the United States and those companies which have introduced mechanical methods of logging should eventually reap the benefit of their enterprise. The Colony's industries have been handicapped by a grave shortage of labour ever since the war and in an endeavour to solve the problem the Government has now approached the Philippine authorities with a view to introducing Filipino labour into North Borneo. While the proposal has been accepted in principle by the Philippine Government, formal negotiations have not yet begun.

"It was encouraging to learn from the Financial Secretary's Budget speech that the Colony's revenue was not only sufficient to cover recurrent commitments and the normal replacements that are necessary each year but that it also allows for a surplus which can be applied to financing new development. The British Government have promised assistance in 1955 to the extent of over M$3½ millions, which is more than the Colony received from this source in the four years 1950-53 put together, but nevertheless it has proved necessary to raise the rate of tax on company profits from 30 per cent. to 40 per cent. Apart from the rubber replanting programme, a scheme to finance shophouse rebuilding is to commence this year and a Loans Commission, which will receive its funds in the first place from enemy assets, is to be set up to finance light industrial and agricultural development.

"These developments, the rise in the price of rubber and the energetic policy pursued by the Government, encourage me to take an optimistic view of the Colony's prospects during the coming year. It is satisfactory that the supply of rice, both at home and abroad, has increased sufficiently for the Government to return the purchase and distribution of this staple foodstuff to private traders, subject to the maintenance of a stockpile and the disposal of excess Government stocks.

Sarawak

"Trade statistics for the whole of last year are not yet available, but it seems that they will not differ significantly from the figures for 1953, when there was a favourable balance.

"Weakness in the price of rubber in the early months of 1954 caused a decline in shipments of this commodity from Sarawak and, although the subsequent rise in price has brought about an improvement in exports, they were lower in volume over the whole of last year than in 1953. The pepper crop was a record one and shipments have increased substantially in volume, although prices have been lower. Following an excellent crop of illipe nuts, a considerable tonnage was exported, but sago shipments are likely to be lower in volume than in 1953. Timber exports tended to increase slightly during the year and towards the end lumber prices showed a welcome improvement.

"Thanks to an unexpectedly large yield from the export duty on the illipe nut crop and the receipt of over M$2 millions from the realisation of Japanese assets, the Colony's estimated Budgetary surplus for 1954 will be over M$4 millions. In 1955, customs revenue is expected to be M$3½ millions lower than last year and the Government's problem, in view of the need to increase its budgetary expenditure, has been to find ways and means of finding this anticipated deficiency elsewhere. It was decided, in order to balance the Budget, to increase trades licence fees, a procedure justified by the Financial Secretary on the ground that a limited company paying tax on its chargeable profits at the rate of 30 per cent. per annum, had been subjected in the past to a disproportionate tax burden in comparison with firms not registered as limited companies, which, although their turnover might be substantial, had been paying only a small trade licence fee. The new fees aroused considerable opposition among the Chinese community in Sarawak, and the Government has now agreed to set up a committee to investigate cases of hardship arising from their application.

"During the course of the year, the Government published its economic development plan for the period 1955-60, an extension of the plan now in progress. The main objectives of the plan are increased rice production, the development of alternative exports so as to render the economy less dependent on rubber, the improvement of communications and an expansion of social services. Just over half the aggregate expenditure envisaged under the plan is to be devoted to the construction of roads and airfields, port development and telecommunications, and one quarter to social services. It is estimated that during 1955 over M$26 millions will be spent on development schemes, of which M$23 millions will be found from the Colony's funds and the balance will be met from Colonial development and welfare grants. Provision has been made in the plan this year for a loan to the Co-operative Central Bank to enable it to grant facilities to rural credit societies for short-term agricultural loans. I mentioned this new credit institution last year and paddy growers, in particular, should derive considerable assistance from its operations.

Republic of Indonesia

"Observations upon the trend of affairs in Indonesia tend to become repetitive. I am not to be numbered among those who predict an early break up of the Republic, but I have again to report a further deterioration in its economy.

"The deterioration during 1954 was probably greater and was certainly more obvious than in any of the preceding years and almost the only reassuring factor is that the balance of trade has turned in Indonesia's favour and foreign exchange holdings were appreciably higher at the end of the year than at the beginning. This is not to say that the holdings, even at the increased figure of Rp. 2,853 millions, give grounds for complacency for this improvement has only been effected by the most drastic import cuts and even now it is doubtful whether the country can trade without an adverse balance of payments. High world prices for rubber and tea inevitably lead to illicit tapping and plucking, with resultant smuggling and loss of exchange, whilst, on the other side of the book, the lack of essential consumer goods must eventually be remedied.

"Moreover, the severity of the import cuts, particularly in essential consumer goods, has not been wholly due to policy, inasmuch as one effect of the system of preferential allotment of licences to national importers is that not all of those with authority to import have either the financial standing or the business experience to carry out the transactions. Even more disturbing is the growth of the 'Istimewa Contract System' which may have cost the country as much as Rp. 1,000 millions in foreign exchange during 1954. This system involves the granting of export licences at prices considerably below world market prices and allowing the resultant surplus of foreign exchange to be utilised to import goods of a luxury or semi-luxury nature selling for exorbitant prices in the local market. As a result, large sums are being lost which would otherwise be available for essential imports.

"These uneconomic practices and other devices such as 'parallel transactions' and 'barter' cannot be in the interests of Indonesia. It is a matter for regret that a frugal, hard-working population should be finding it more and more difficult to adjust their earnings to a rapid inflation that might be checked by the use of more orthodox methods.

"The factors I have mentioned combine to make the future of our branches in Indonesia far less promising than was expected when we, in the infancy of the Republic, so wholeheartedly and deliberately accepted risks we should hesitate to take in a more mature country in order to help Indonesia's new merchant class and administrators. It is to be hoped that the Government will endeavour to come to grips with the many problems and abuses that now exist before it is too late.

Thailand

"Thailand has passed through an uneasy year and, notwithstanding the introduction of various expedients to halt the adverse trend in its balance of payments, imports exceeded exports by over 800 million ticals. The main reason for this disappointing result was that rice exports, which account for approximately half the country's foreign exchange earnings, have fallen year by year and, in 1954, were, at 1 million tons (plus 200,000 tons of rice flour), lower by about one-third than during the post-war peak year of 1951.

"Little comfort can be taken from early estimates which placed the exportable surplus on the 1954-55 crop at 750,000 tons only, to which, of course, must be added a carry-over from previous crops of 400-500,000 tons.

"The real trouble has been a Government policy which was gradually pricing the country's rice out of world markets and it has yet to be seen whether the terms on which the rice trade is now being returned to private dealers

will prove sufficient inducement for merchants to shoulder the burdens imposed and yet work to increase sales in the highly competitive markets that exist today. As, however, the Government has to take a realistic attitude towards its rice exports, no doubt, the recent regulations will be amended where necessary to ensure that their objective of increasing overseas earnings will be achieved. In any case, further reductions in the quantity exported in the near future might result in a serious deterioration in the quality of existing stocks and a serious monetary loss.

"Of Thailand's other main exports, tin production has been lower over the year, but an encouraging sign was that rubber shipments tended to increase in volume during the latter part of the year, at a time when the price of that commodity was staging an appreciable and sustained rise.

"The Government made repeated attempts during the year to impose further restrictions upon imports and, although this added to the existing inflationary pressure, it did not succeed in stemming the adverse flood of trade. It was doubtless realisation of this position that caused the Bank of Thailand to introduce, in December, regulations for closer control of imports by the compulsory use of letters of credit and a closer control on the recovery of the foreign currency proceeds of exports.

"Notwithstanding Thailand's inability to come to grips with some of its major problems, the country has great natural resources and a history of mature nationalism which should prevent the dissipation of its wealth and one can, I think, take an attitude of qualified optimism towards its future. I view with some misgivings its continued deficit budgeting, for experience last year shows that it is going to be extremely difficult to bridge the deficit of Ticals 1,236 millions in the 1955 Budget by the raising of loans as envisaged by the National Assembly. On the other hand, American aid is now being received in many forms and in substantial amounts. An outright grant for U.S.$28.2 millions was made for economic projects during the United States Government's fiscal year 1954-55 and, in addition to this, the Mutual Defence Aid is operative and investment funds are being received through non-Government channels.

"It is strange, in view of the unfavourable trend in the country's trade, that the value of its currency should have appreciated over the last three months of the year. As welcome as it is to see a strong tical, there must be doubt as to whether this strength is not to some extent artificial, but, whatever the reason, the effect of the Government's monetary policy in general has been to produce a stringency of cash in the Bangkok market which has created very difficult conditions for the banks and tended to restrict legitimate trade.

Vietnam

"Dramatic changes have occurred in Vietnam following the military collapse and decisions at the Geneva Conference in July have led to the evacuation of Tonkin and the relinquishment to the Viet-Minh of the country north of the 17th Parallel, while, in the south, the French have completed the granting of full sovereignty to Vietnam by handing over the Central Bank, the Exchange Control and the port of Saigon.

"The coming of peace, based as it was on the unfortunate partition of the country, did not ease this Bank's problems and, as indications to date suggest that there is unlikely to be any future for Europeans under the Viet-Minh regime, we have had to follow the example of others and close our Haiphong office. In any case, with the approach of the fighting towards Hanoi earlier in the year, we had already run down our commitments. At one time it was thought that Tourane, close to the 17th Parallel and with a good natural harbour, might become an important centre of trade between the north and the south but an on-the-spot examination convinced us that potential developments did not justify our opening a branch there.

"Our future in Saigon, although difficult to assess, may be more secure and promising than it seemed to be a short time ago. There are signs that Vietnam may achieve social and political stability, notwithstanding the necessity for its economy to be based henceforward mainly upon agriculture.

"The steps taken by the Prime Minister to close the gambling halls in Saigon and to clean up the administration should help considerably in swaying the vital election of 1956, till now treated in many circles as certain to bring victory to the communists.

"Mr. Diem's Government has the full support of the United States and this support, backed as it is by considerable monetary aid—U.S.$300 millions is mentioned—should be a deciding factor in ensuring the peaceful and prosperous existence necessary to restore the country's morale and to show its people that the democratic way of life is still preferable to the alternative that faces them. An important factor to this end must be the establishment of a stable and acceptable unit of currency.

"The successful resettling of the refugees from the north could be a further important step in ensuring stability, and here again direct aid by the United States is likely to be an important factor. Of even more importance, however, is the aid to be given in the rehabilitation of the rice industry, for a substantial increase in rice exports would possibly be the most effective contribution of all towards achieving stability in Southern Vietnam.

Cambodia

"Not the least important result of the withdrawal of the French from Indo-China has been the coming of national independence to the States of Cambodia and Laos. It was in anticipation of Cambodia having a separate Government and becoming an important State in S.-E. Asia that we took steps more than a year ago to establish an office at Phnom-Penh and I am pleased to announce that our branch there is now conducting full banking business.

"The country's exchange control and the Currency Commission is now in the hands of the local Government and there are signs that the Cambodians are determined that independence for them also means secession, not only from France, but from the associated States, including Vietnam. This raises difficulties, as there are no harbour facilities on the Cambodian coast line. The building of a deep-water port, with road and rail connections with Phnom-Penh will prove an expensive if necessary project.

"As the political and economic influence of France declines (her cultural influence will long endure) that of the United States increases and there is clear evidence that no effort is to be spared in building up the country and giving it an economic strength sufficient to enable it to retain its independence and to provide a bulwark against further aggression. It has always had a separate viable economy.

The Republic of the Philippines

"For the last few years, the Finance Department and the Central Bank have, by drastic control over imports, succeeded in maintaining the Republic's foreign balances at a figure of U.S.$300 millions which is roughly equivalent to the note issue and it was very surprising to find a departure from this policy in the last two months of 1954, during which period the reserves were run down to U.S.$270 millions, mainly by ex-quota allocations for textiles. These are the lowest published figures since the crisis year of 1949 and would cause more concern were the position not overshadowed by the favourable terms agreed upon for the renewal of the Bell Act, which should ensure such benefit to the Philippine economy that the future can be viewed with quiet optimism.

"These terms should ensure a maintenance of exports at present levels and, provided no drastic falls occur in the world prices of sugar, copra and hemp, the United States' spending in the country will, no doubt, bridge the gap caused by excess imports. At the moment, prospects for all three primary products appear to be good and sugar, which now vies with copra as the foremost dollar earner, is favourably treated under the revised terms of the Bell Act which allow the full quota of 950,000 tons and a slower increase in the duty imposed by the United States than was expected. Then too the present crop estimate at 1,400,000 short tons is in excess of last year's crop, which was itself a post-war record. Exports above the United States' quota will probably go to Japan.

"For copra too there are encouraging signs as the authorities are making determined efforts to improve the quality and the effect of this, which should be felt from 1955 onwards, may be an expansion of trade with Europe. A recent concession by the Bank of England allowing British dealers to sell dollar copra to foreign buyers for sterling or local currency may result in more Philippine copra being traded through London.

"On the import side there is still an encouraging swing from consumer to producer goods and from non-essential to essential goods and the banks assist by continuing their onerous licensing duties, although this work on behalf of the Central Bank is inadequately recompensed.

"Our relations with the Central Bank are, as always, on a most proper and friendly footing and during the year it has been encouraging to find more latitude given by the central institution in carrying out its avowed policy of providing loans to commercial banks when necessary for refinancing purposes of an essential nature. Perhaps the greatest handicap bankers and merchants suffer in the Philippines is their inability to obtain forward exchange cover and the danger of this situation becomes more apparent during periods of lack of confidence in the peso. No doubt, the reappointment of Mr. Cuaderno as Governor of the Central Bank for another five years will, in view of his declared opposition to devaluation, stop the rumours that have been so rife since it became known that the right of veto of the United States President to currency changes was to be removed.

"Of particular interest is the replacement of the 17 per cent. exchange tax, which was a deterrent to foreign investment, by a special import levy to be progressively reduced over a period of years and finally eliminated by 1966. In some circles there is considerable reservation regarding the ability of the customs authorities to obtain the full amount of customs dues which should be payable. It is hoped too that these impositions will not affect the cost of living which has remained constant, for of all the countries in South-East Asia the Republic of the Philippines is unique in that its note issue has not increased over the last five years and inflation has been successfully halted. This is an important factor in producing stability in an area where economic and political stability is badly needed, and I hope that the extensive public works schemes upon which the Government is embarking, and for which sufficient funds would not appear to be available either from taxation or from public investment in Government bonds, will not be allowed in any way to undermine the results of sound economic policy.

Hongkong

"The mainstay of Hongkong's economy has always been its entrepôt trade, which was hard hit by the United Nations' embargo on the export to China of what are defined as strategic goods and commodities. Despite the relaxation by the United States Government of a number of restrictions on trade with Hongkong, the Colony's total external trade in 1954 fell in value by 11 per cent. from its level in the previous year. Trade with the China mainland decreased by approximately a quarter during the same period and it has apparently suited the Chinese authorities to conduct the bulk of their trade with the free world direct with the countries concerned rather than to use the entrepôt facilities of Hongkong.

"Last year, I mentioned that for imports into China terms of payment were imposed which did not conform to normal banking and commercial practice. It is satisfactory that, as a result of negotiations conducted by the British trade delegation which, led by one of our General Managers, Mr. W. G. Pullen, visited Peking towards the end of the year, trade transactions will now, for the most part, be settled in a more normal manner. It is to be hoped that Hongkong will derive benefit from these negotiations in the shape of increased trade with China, but possibilities for expansion must be limited as 80 per cent. of China's external trade is still conducted with the Soviet bloc. Meanwhile, the discontinuance from January, 1955, of special export licensing of British exports destined for Hongkong is a timely recognition by the authorities of the adequacy of the Colony's security controls over trade with China.

"An encouraging feature of Hongkong's economy is the continued development of local industry for, luckily for the Colony, this offsets to some extent the fall of entrepôt trade and the serious social problem posed by the great increase in population. Exports of locally manufactured goods now form 28 per cent. of total shipments and the most important of the local industries, cotton spinning and weaving, has maintained a satisfactory level of sales abroad, despite difficulties in markets such as Indonesia and Pakistan where shortage of foreign exchange has curtailed orders. The local weavers are absorbing an increasing proportion of the yarn produced in the Colony and it is indicative of the quality of the woven product that shipments are being made to Lancashire for finishing and processing there. However, notwithstanding the considerable progress that has been made in the local industrial field, the future of the cotton and of the other new industries is dependent upon their ability to gain and retain a firm foothold in sound overseas markets.

"As adequate supplies of rice are now freely available in the world markets the Hongkong

Government has transferred trading to private hands and it is hoped that the lower prices that can now be expected will bring about some reduction in the high cost of living which is proving a heavy burden to the population.

"Our own faith in Hongkong is witnessed by the fact that we have completed our plans to rebuild completely our old office building there which has outlived its usefulness. Our new building should be one of the most imposing structures in Hongkong.

China

"During the year, we have made good progress in winding-up our affairs in China. It is quite clear that the People's Government of China will not permit the re-entry of European enterprise into China but, on the other hand, we have been given an indication that China will welcome the participation of British banks in the finance of their external trade, and our future policy will be aligned to meet these changed conditions.

Japan

"I mentioned last year that, in order to curb the dangerous inflationary trend that was threatening the Japanese economy, the Bank of Japan had introduced a tight money policy. As was to be expected, this and other deflationary measures did not take effect for some months, but a pursuance of the policy, notwithstanding a change of Government, has resulted in a healthier state in the country's affairs. Month by month, in the second half of the year, exports exceeded imports and Japan closed the year with a favourable balance of approximately U.S.$100 millions; a great improvement and in marked contrast to the deficit of U.S.$200 millions during 1953.

"This successful reversal of the adverse trend of the previous year is, however, on close examination, not so encouraging as one would hope; for it has been achieved only by running down stocks and by resorting to various export-promotion devices and special trade systems such as link and barter. There is an obvious limitation to the use of artificial stimulants and any system such as that of bonus imports which necessitates producers charging high prices in domestic markets to recoup losses on overseas sales cannot fail to accentuate inflationary pressure. It may be these unorthodox methods that have caused a serious increase in unemployment at a time when the ostensibly more prosperous conditions would be expected to induce fuller employment.

"Japan, therefore, is by no means out of the wood and, with the many unsettled problems that beset her, there was never a greater need for political stability than there is now. Austerity measures have been introduced by the new Government which have been well received, and, provided retrenchment continues and the country manages to work within its estimated foreign currency budget for the next twelve months, there seems no reason why Japan's post-war recovery should not continue. To accomplish the substantial decrease in imports called for, and at the same time to curb inflation, is going to be a task of the first magnitude. Nor is the estimated export total likely to be exceeded; for Japan is finding it difficult to make much headway in overseas markets. Numerous bilateral trade agreements have been signed over recent months, but what they all achieve in genuine trade is hard to fathom.

"Equally difficult to assess is the financial benefit that will accrue from Japan's attempts to foster trade in South-East Asia by providing services by way of war reparations, but the agreement on reparations with Burma creates a precedent and must at least be helpful to Japan's employment figures.

"Sino-Japanese trade, once thought to have tremendous potentialities, has been disappointing, but the figures may increase from now on. This trade is not, however, going to be Japan's salvation and, in fact, mainland China could become a dangerous rival to Japan in world textile markets. For another year at least the continued stability of the country must depend upon United States payments for goods and services to American forces in Japan and Korea.

"The Japanese banks, although still under strain and perhaps carrying within Japan commitments greater than they themselves like to see, have with the assistance of the Japanese authorities made considerable headway in overseas business. The post-war era, in which the British banks underwrote the sterling trade of Japan, is practically at an end and from now on exchange banks in Japan, like ourselves, are going to find it more and more difficult to obtain lucrative business without undue risks.

United States

"Our New York office continues to play a most important role in our branch system, particularly as many of the primary products of the Indian sub-continent and of the South-East Asian countries are now exported in increasing quantities to the United States. The buoyancy of the economy has thus a direct influence on the volume of the business handled by our agency. Moreover, many important connections are made through our New York office and our relationships with the American banks are always most harmonious and mutually helpful.

"One aspect of the United States' economy, to which this Bank has to pay particular attention, is the question of the disposal of surplus farm products, because, in assessing propositions from the countries in which we are interested, we have to consider the trading risks to our customers which can arise from the effect on world prices of the release of such surpluses.

Hamburg

"Our Hamburg agency continues to perform an essential function in our organisation by providing banking facilities in connection with West Germany's trade with the East. Now that the Republic's economy is gaining strength, competition from German banks is growing, but in view of the efficient service our agency offers, we are confident that we are in a position to meet it.

Conclusion

"I am encouraged to conclude upon a note of restrained optimism, bearing in mind that periods of economic stability in the East have been relatively few during the past hundred years. For a long time the Bank was beset by recurring crises of confidence and unpredictable fluctuations in the world price of silver, but nowadays most of our difficulties arise from attempts to put into operation untried political and economic theories. Notwithstanding the fragmentation of what were formerly unified trading areas of great extent into self-regarding national States, our branch organisation has been able to cross the new frontiers and, by facilitating international trade, to foster international understanding and goodwill."

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

BALANCE SHEET, 31st DECEMBER, 1954.

	£	£	1953 £
Capital—			
Stock authorised and issued	3,500,000		3,500,000
(There is under the Charter a reserve liability of the Stockholders equal to the amount of Stock issued)			
Reserve Fund		5,000,000	5,000,000
Profit and Loss Account		892,910	403,513

Notes:—
(1) The aggregate emoluments received by the Directors for their services amounted to £12,503 (1953, £19,456). In addition pensions aggregating £1,152 (1953, £1,250) were paid to former Directors.
(2) The nominee subsidiaries do not trade and their accounts show neither profit nor loss.

REPORT OF THE AUDITORS TO THE STOCKHOLDERS OF THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the bank so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from the branches, which have not been visited, by us. We have examined the annexed balance sheet and profit and loss account of The Chartered Bank of India, Australia and China, which are in agreement with the books of account and returns as aforesaid. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner so required for banking companies, and, on the basis indicated in Note (4) on the balance sheet, such balance sheet gives a true and fair view of the state of the bank's affairs as at 31st December, 1954, and the profit and loss account gives a true and fair view of the profit for the year ended on that date.

We have also examined the annexed accounts of the subsidiaries, Allahabad Bank, Limited, and The Chartered Bank (Malaya) Trustee Limited, which have not been audited by us. Subject thereto in our opinion such accounts have been properly prepared in accordance with the provisions of the Companies Act, 1948, so as, in conjunction with the accounts of the bank as audited by us (which include particulars regarding Nominee Companies), to give on the basis mentioned above a true and fair view of the state of affairs as at 31st December, 1954, and of the profit for the year ended on that date of the bank and its subsidiaries so far as concerns stockholders of The Chartered Bank of India, Australia and China.

W. A. BROWNE & CO.,

Agents.

BOMBAY, 10*th March*, 1955.

Note:—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 27th April, 1955, to those Shareholders whose names stand on the Register on 29th March, 1955, to whom Dividend Warrants will be posted.

THE FINLAY MILLS, LIMITED

NOTICE

THE FIFTIETH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Wednesday the 27th April, 1955, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1954.

(2) To sanction the declaration of a Dividend.

(3) To elect two Directors in place of those who retire by rotation under Article 114 of the Company's Articles of Association, but who are eligible for re-election under the same Article and offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 29th March to 27th April, 1955, both days inclusive.

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,

Agents.

BOMBAY, 10*th March*, 1955.

Note:—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 28th April, 1955, to those Shareholders whose names stand on the Register on 29th March, 1955, to whom Dividend Warrants will be posted.

RICHARDSON & CRUDDAS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has sanctioned for payment an Interim Dividend for the year to end on the 30th of June, 1955, at As. 8 per Ordinary share and at Rs. 2-12 per Preference share without any deduction of Income-tax paid or payable by the Company.

The Share Registers of the Members of the Company for both Ordinary and Preference Shares will be closed from the 31st of March, 1955, to the 11th of April, 1955, both days inclusive, for payment on the latter date of the Interim Dividends declared by the Directors.

By Order of the Board,

RICHARDSON & CRUDDAS LTD.,

S.B. INDUSTRIAL DEVELOPMENT CO., LTD.,

Managing Agents.

12, OLD COURT HOUSE STREET,
CALCUTTA, 21*st March*, 1955.

THE DHUNSERI TEA COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE half-yearly dividend due on 31st March, 1955, on 39,930 7 per cent. Cumulative Preference Shares has been declared payable on 7th April, 1955.

Dividend Warrants will be issued to the shareholders whose names appear in the Register on 7th April, 1955, or to their mandatees. The Preference Share Transfer Books of the Company will be closed from 1st April to 7th April, 1955, both days inclusive.

By Order of the Board,

JAMES FINLAY & CO., LIMITED,

Secretaries and Agents.

Ni-Hard concrete mixer trough blades. By courtesy of Sheepbridge Stokes Centrifugal Castings Co. Ltd.

It's a hard life—

—and too frequently a short one for parts of equipment handling highly abrasive materials like sand, ash, concrete, coke, coal, ores and other mineral products or used in the production of cement. Wear and tear of plant is often so severe that the life of some materials can be measured only in days before replacement is necessary. For a job like this, Ni-Hard has been the means of saving much lost time and expense by reducing the frequency of replacement. Ni-Hard is a hard, martensitic cast iron containing nickel. The composition can be adjusted to give the best combination of properties for the service required.

CENTRAL GOVERNMENT'S INDUSTRIAL ENTERPRISES

PROGRESS IN 1954-55 REVIEWED

THE official report on the activities of the Ministry of Production during 1954-55 just released, gives an insight into the work done by the Ministry in the year under review. This Ministry, it may be noted, is in charge of all the industrial undertakings owned by the Centre, with the exception of Railways and Posts and Telegraphs. A change which is likely to take place in its portfolio, according to Press reports, is the transfer of control of the State steel units to the Ministry of Commerce and Industry—a question over which the Cabinet is yet to take a decision. Be that as it may, the industrial enterprises launched by the Ministry, as disclosed by the official report, are quite a large number. There is, however, one notable omission in the report and that is that the data regarding the capital invested, the number of workers employed, the value of gross output turned out and the profits earned are not provided in it and where given they are inadequate. Consequently, it is not possible for us to ascertain the pace of progress of these industries or the economics of their working.

Nevertheless, there are certain features in the official report which are worthy of notice here. An event of major importance during the year was the success of the Sindri Fertilisers and Chemicals Ltd. on the production front. The output of ammonium sulphate in 1954 amounted to 275,529 tons, as compared with 265,704 tons in the preceding year. The rated capacity of 960 tons per day was reached in October, last year, and the level has been more or less maintained ever since. The construction of a coke oven plant was completed during the year, and it went into production on 1st September, 1954. Production upto the end of 1954 amounted to 66,582 tons of coke. The benzol plant is to be put into commission shortly. The A.C.C.'s work connected with the erection of the cement plant with an initial rated capacity of 1 lakh tons of cement per annum is progressing well and the plant is expected to be commissioned by the middle of this year.

Pursuant to the recommendations of the Indian Fertiliser Mission, it has been decided to produce two new nitrogenous fertilisers at Sindri, namely, urea and double-salt (ammonium sulphate nitrate) by utilising the entire quantity of 10 million c.ft. of gas from the coke oven plant. The projected scheme costing Rs. 10 crores is expected to be completed in about three years. It will result in the production of 70 tons of urea and 400 tons of double-salt per day.

It has been decided to establish a heavy water-cum-fertiliser plant in the Bhakra-Nangal area. Further, additional units will be set up later on after the final report of the Fertiliser Production Committee is submitted to the Government. They are considered to be necessary in order to meet the growing demand for nitrogenous fertilisers which is expected to be about 2.5 lakh tons in terms of nitrogen by 1961.

In the Hindustan Shipyard, two ships of 8,000 d.w.t. each have been completed and delivered to Indian shipping companies. Two further ships of 7,000 d.w.t. each were launched and are being fitted out. The shipyard has in hand orders to keep busy till 1957. The shipyard now employs about 2,986 workers and 576 officers and staff. Out of the total issued capital of Rs. 372.25 lakhs, the Government holds shares valued at Rs. 268.50 lakhs in the Hindustan Shipyard Ltd. Arrangements are in progress to construct a dry dock at the Visakhapatnam Port.

The Hindustan Machine Tool Factory Ltd. in Bangalore, commenced production in October, 1954, with production of component parts of 8½" centre high speed lathe (422). In addition, 12 lathes were assembled from rough imported parts. This will be helpful in giving necessary training to the staff before the parts are all manufactured in the factory. The peak production, namely, about 400 lathes annually, is expected to be attained in the third year, that is, by the end of 1957.

On 1st September, 1954, the Hindustan Cables factory went into production. The output by the end of the year was 48 miles of cables. It is expected to produce 104 miles of cables in 1954-55. Action was taken to expand the armouring capacity of the plant for subscriber telephone cables.

Preliminary experiments in seeding of penicillin were started at the factory of the Hindustan Antibiotics Ltd. on 14th December last. The factory will start production of penicillin on a large scale by the middle of this year. It is understood that the output will be about 20 million mega units of penicillin per year. Provision has been made for the manufacture of other antibiotics, such as streptomycin and chloromycetin. Attempts are also being made to substitute indigenous raw materials for imported ones in the production of these antibiotics.

The factory of the Hindustan Insecticides Ltd. has virtually been completed and is expected to yield the first quantity of D.D.T. by the end of this month. It is proposed to double the capacity of the plant and to set up another plant somewhere in India.

The implementation of the short-term scheme for the reorganisation of the National Instruments Factory at a total cost of about Rs. 80 lakhs is under way. Production of instruments in 1953-54 was valued at Rs. 17.54 lakhs. In the first nine months of 1954-55 the value of output was Rs. 15.86 lakhs, which was 31 per cent. higher than that for the corresponding period of the previous year.

The woodwork department of the Hindustan Housing Factory was in full production. Orders worth Rs. 6 lakhs were executed and further orders for Rs. 17 lakhs were under execution. The prestressed concrete department went into production during April, 1954, and orders for Rs. 1 lakh were executed and orders worth Rs. 14.5 lakhs were on the order books. Some of the products are new and need publicity for getting orders for them.

The Nahan Foundry, Nahan, Himachal Pradesh, switched on to the production of new items such as centrifugal pumps, paddy thrashers, corn shellers and bullock-driven pumps. Improvements have also been made in the quality of products.

In September, 1954, the Malaviya Committee submitted its report on a scheme to produce synthetic oil in India. It recommended the establishment of an oil plant capable of producing about 300,000 tons of synthetic fuel per annum. It advised the Government to obtain fresh project reports from specialist firms abroad. Accordingly, three firms were asked to submit their reports and these will be examined when received.

The production of salt during the year registered a slight drop due to adverse weather conditions and to the large stocks carried over from the output of 1953. The production is, however, much more than the requirements of the country, leaving an appreciable surplus for export. The main exports are to Japan and amounted to 600,000 maunds in the year under review. A development programme for salt for the next five-year period has been drawn up.

With regard to Hindustan Steel Ltd., the German Combine submitted its final project report in January, 1955. Actual construction work on the foundations and superstructure for the plant will be started after examination of the report by the Government. Meanwhile, progress is being maintained in respect of survey of the site, soil tests, planning of township and training of Indian personnel in Germany for designing, operation and maintenance of steel plant. An agreement was signed with Russia on 3rd February, 1955, for setting up a steel plant of 1 million tons capacity for rolling ingots into 750,000 tons of end-products. The plant will be located at Bilhai in Madhya Pradesh.

PHOTOGRAPHIC CHEMICALS

At the public enquiry held by the Tariff Commission on the 10th inst. with the Chairman, Mr. M. D. Bhat, presiding, the question of continuance of protection to the three photographic chemicals —sodium thiosulphate, sodium sulphite and sodium bisulphite—came up for discussion. This was, in fact, the fourth enquiry into the affairs of the concerns engaged in the manufacture of these photographic chemicals. The three previous enquiries into this industry were successively held in 1946, 1949 and 1951. Tariff protection having continued as a result of these enquiries up to the end of 1955, the industry has thus come to enjoy protection for nearly nine years. This fairly long period of protection emphasises all the more the need for a very careful examination into the various aspects of the industry.

When the last enquiry was held in 1951, there were four units in the industry. Since then, according to Mr. Bhat, two new units have come into existence. Of the six units, five are engaged in the manufacture of sodium thiosulphate, four in the production of sodium sulphite and four of sodium bisulphite. The production of these chemicals forms the principal activity in the case of two units, Kesar Sugar Works Ltd. and the Liberty Chemicals. Sodium thiosulphate is undertaken by Atul Products Ltd., Bulsar, as a by-product in their manufacture of sulphur black. Licences have been given for the manufacture of sodium hydrosulphite to two firms, namely,

SWISS INDUSTRIES FAIR
BASLE

The only Industries Fair and the most important annually recurring economic event in Switzerland takes place from **16TH TO 26TH APRIL 1955** for the 39th time.

For information apply to:

Swiss Legation, P. O. B. 392 .. .. .. NEW DELHI
Swiss Consulate General .. .. BOMBAY 1
Swiss Consulate, P. O. B. 47 .. .. .. CALCUTTA
Swiss Trade Commissioner, P. O. B. 102 .. .. BOMBAY 1.

Eastern Chemicals Ltd. and Indian Electro Chemicals Ltd. Both are located in Bombay. These firms propose to produce sodium sulphite, sodium thiosulphate and sodium bisulphite from waste sulphur dioxide which they would obtain as a by-product in the manufacture of sodium hydrosulphite.

The rated capacity for sodium thiosulphate of the firms manufacturing the products comes to 1,450 tons, while the actual production was 687 tons in 1952, 830 tons in 1953 and 640 tons in 1954. In the case of sodium sulphite, the total rated capacity claimed by the producers is 535 tons, as against the actual output of 242 tons, 234 tons and 127 tons, respectively, in the three years mentioned above. The total rated capacity in sodium bisulphite, according to the manufacturers, is 587 tons, while the actual production in those years was 334 tons, 391 tons and 434 tons, respectively. The installed capacity in the case of the three chemicals according to the Development Wing of the Ministry of Commerce and Industry, is 2,119 tons for sodium thiosulphate, 707 tons sodium sulphite and 809 tons sodium bisulphite. The disparity in estimates underlines the need for further scrutiny by the Commission. Similar are the estimates of domestic demand for these three chemicals. The Development Wing estimates the current demand at 700 tons for sodium thiosulphate, 200 tons for sodium sulphite and 400 tons for sodium bisulphite. The producers, however, suggest that, as imports were confined to negligible quantities in 1952, 1953 and 1954, the current demand should be estimated on the basis of average annual production during the three-year period. Such works out to 722 tons of sodium thiosulphate, 222 tons of sodium sulphite and 387 tons of sodium bisulphite.

One general conclusion which emerges from the figures relating to rated capacity, output and demand, as stated above, is that, when the Commission completes its enquiry, it is likely to find that the rated capacity of the industry will be more than the actual demand in the country. In other words, the problem before it will be to find a solution to the proper utilisation of the idle capacity.

Some of the units in the industry have not only demanded continuance of protection but also strict control over imports. They have also stated that small units producing these chemicals in small quantities should be asked to discontinue production and that new units should not be allowed to enter this line. Financial assistance from the Government has also been requested by one of the firms, for building up stocks of sulphur. Alternatively, it has suggested maintenance of stocks by the Government itself for supply to the units in times of emergency.

Of course, these demands will be carefully examined by the Commission. It is needless to say that some of them are neither in the interests of the consumer nor of the producers themselves. Nevertheless, the industry's case deserves careful study, for its products are needed, among others, by the film industry in the country which ranks next only to its confrere in the U.S. in the production of films. The quality of the chemicals also should be taken into consideration while deciding protection. According to Mr. Bhat, some of the chemicals are below the requisite standard and in certain cases crystals lack uniformity.

The rates of protective duty, excluding the surcharge of 5 per cent. now in existence, are as follows:

Chemical	*Standard* Per cwt. Rs. a.	*Preferential* Per. cwt. Rs. a.
Sodium sulphite	26 0	23 0
Sodium thiosulphate ...	15 8	13 0
Sodium bisulphite ...	21 8	19 0

Whether these tariff rates are inadequate or not depend on the landed costs of the imported chemicals. But, as there have been no imports during the last three years, the Commission has to obtain the cost of the chemicals abroad and arrive at the landed costs on the basis of these prices. It is to be hoped that, while deciding the quantum of protection, the Commission will insist on the adoption of efficient methods of production, in order to reduce costs of manufacture.

PROTECTION TO U.S. CYCLE MANUFACTURERS

The American bicycle manufacturers' demand for higher tariff protection had been pending before the Tariff Commission for some time now. According to reports from Washington, the Commission has now recommended to the Eisenhower Administration that the domestic manufacturers of cycles should be given increased protection against imports of foreign-made bicycles. The Tariff Commission has not disclosed its findings beyond letting it be known that its report has gone to the White House.

The President is required by statute to accept, modify or reject the Commission's findings within 60 days of the receipt of the report. It will be difficult, it is stated, for the President to rebuff domestic manufactures, if the Reciprocal Trade Act Extension Bill—now before the Congress—remains without congressional action at the end of the 60-day period. In the past, the Tariff Commission's recommendations for increased protection have invariably been turned down by the White House.

The U.S. Secretary of State, Mr. John Foster Dulles, stated last week, before the Senate Finance Committee—now considering the question of extending by three years the term of the Reciprocal Trade Agreements Act—that "if U.S. abandoned a policy, the international repercussions and their consequences would

NEW PUBLICATIONS

Documentary Credits. By D. Freeman, B.A. (Oxon.) Published by the Canara Bank Ltd., Warden House, Sir Pherozeshah Mehta Road, Bombay, 1. Price: Rs. 5.

VERY few banks in India, if any, have gone beyond doing the customary banking business and undertaken the task of educating not only their staff but also the general banking students and the public on the technical details of the various aspects of banking business. The need for this is particularly necessary in respect of foreign exchange and documentary credit business, which is of a complicated nature on account of restrictions on international trade. That the Canara Bank Ltd. should have come to the forefront in this respect by publishing the book under review points to the progressive nature of the management.

The author of the publication is the manager of the Bank's foreign department and is an expert in the line with over 33 years' experience in one of the "Big Five" London banks. His services, along with those of another foreign exchange expert of the U.K., were secured by the Bank in 1953 to organise its foreign exchange department. In addition to organising this side of the business, the services of Mr. Freeman were availed of by the management in publishing the first edition of the publication under review for a special purpose, evidently to serve the needs of the Bank only. Mr. Freeman also undertook a tour of South India and gave talks to the Bank staff and customers on the subject.

The publication under review is the second edition, and has been largely rewritten and points that apply specifically to the Canara Bank only, referred to in the first edition, have been omitted. It consists of three parts; the first one deals with import credits, the second with export credits and the third provides miscellaneous information on import licences for documentary credits, exchange control and foreign exchange and documentary credits, which will be found useful to both importers and exporters. Besides giving a clear and lucid exposition of the problem, the author has provided a fund of information on the intricate subject. Definitions of the various terms used, the different meaning of the terms in different contexts, the procedure followed from the time a credit is established till the time it is honoured and goods cleared, the several precautions to be taken before establishing a credit and the care with which the licences have to be scrutinised, have all been explained in a clear manner. The publication is not an exhaustive treatise on the subject, but it contains enough useful information for the day-to-day use of the trader or banker interested in foreign trade.

As Mr. R. G. Saraiya points out in his foreword to the book, with India's agricultural and industrial development, the volume of India's foreign trade is bound to increase. He says: "The nature and direction of trade may alter. But there is no doubt that India will have an increasingly important part to play in the sphere of international trade. It may also be predicted safely that a larger number of traders will take interest in the foreign trade of India with the economic development which is expected as a result of the working of the Five-year Plan." Mr. Saraiya, therefore, has rightly emphasised that "banks should undertake educative efforts of the kind made in this publication."

Soil Conservation in Bombay State. Issued by the Directorate of Publicity, Government of Bombay, Bombay.

There is everywhere an endeavour to increase food production today and several schemes have been put forth towards that end. Among measures which make for bigger harvests, soil conservation must take a prominent place. Provision has been made for the purpose in the first Five-year Plan relating to Bombay.

The publication of a brocure on soil conservation by the Government of Bombay at the present moment is quite opportune. It throws light on the importance of soil conservation measures and gives useful information in regard to that problem. It also contains maps showing soil types and areas where bunding works are in progress in the State. The Government proposes to complete bunding works in about 100,000 acres during the current fiscal year, the figures for the next two years being 200,000 acres and 400,000 acres, respectively, subject to the proviso that help from the Centre is forthcoming.

PRIVATE SECTOR AND THE PLAN

(*Concluded from page* 562)

certain items are heavily weighted in the compilation of this index, the movement of the index underestimates (*a*) the increases in production in industries which have been given relatively smaller weights, and (*b*) the diversification of the industrial structure. For instance, cotton textiles has a weightage of 43.49 per cent. in the construction of our production index and this is based upon the value added by that industry in 1946 as a proportion of the total value added by the 20 industries which are included in the production index. To the extent that important industries not included in these 20 have grown in the last eight years and to the extent that the rate of growth of industries other than textiles is faster than that of textiles, the overall index of production with 1946 as the base will tend to underestimate the rate of industrial growth. That new industries, such as textile machinery automobiles, miscellaneous chemicals and dyestuffs, petroleum refining, wagons and coaches, etc., have either come to be newly established or expanded considerably is well known. But they do not find any place in our present index of production. Similarly, the rate of growth in textiles has been much smaller than in other industries. While the textile index (1946=100) moved from 101.3 in 1951 to 122.7 in 1954, the upward movement in the case of certain other commodities which have a much smaller weightage is very much greater. For instance, the index for cement has moved from 207.2 in 1951 to 282.7 in 1954. In the case of chemicals during the same period, the rise was from 260.2 to 595.5 and in the case of general and electrical engineering goods from 265.7 to 317.5. It is necessary, therefore, to bear these qualifications in mind in considering the movement in the index of industrial production.

The experience of the last few years has shown that, in addition to programmes of expansion envisaged in the Plan, there have been other important developments in the field of industry. While these do not figure in any assessment of the performance of the private sector in the context of the Plan, they are nevertheless of considerable importance from the point of view of our industrial development. For instance, TISCO have nearly completed their scheme for the establishment of a steel foundry (which will meet the requirements of steel castings in the manufacture of locomotives) and a steel tube mill in collaboration with a foreign concern. A number of licences has been given for the manufacture of mixed fertilisers. In the field of engineering also, the range of production has widened and several new items are being manufactured for the first time in the country. These include industrial boilers, mathematical instruments, industrial sewing machines and several other items. There has been a steady development of the synthetic organic chemicals industry comprising coal-tar distillation, dyestuffs, solvents and intermediates. All these developments (which fall outside the Plan) reinforce the achievements of private industry under the Plan.

for and on behalf of the President of India.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare an Interim Dividend on the 28th March, 1955 in respect of the Company's financial year ending 31st March, 1955, of 4 per cent. free of income-tax payable on or after 30th April, 1955 to registered shareholders whose names appear in the Register on the 28th March, 1955, or to their mandatees.

Transfers received at the Company's Registered Office before 1 p.m. on the 26th March, 1955, will, if in order, be registered in time for the transferees to receive the Dividend.

On the information at present available to them the Directors are satisfied that the amount of the Final Dividend which will be recommended to the Annual General Meeting for the year ending 31st March, 1955, will not be less than 2 per cent. free of income-tax thus making a total distribution of not less than 6 per cent. free of income-tax for the year.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

CENTURY MILL REPORTS GOOD RESULTS

IMPRESSIVE FINANCIAL POSITION

A DECLINE of Rs. 8.93 lakhs or 9.2 per cent. in gross profit, that is, from Rs. 96.82 lakhs to Rs. 87.89 lakhs, is disclosed by the results of the Century Spinning and Manufacturing Company, Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Bombay) for the year ended 31st December, 1954. Such a small shrinkage in earnings compares well with the experience of many other mills in Bombay whose profits for the past year dwindled considerably as compared with those for 1953. After providing Rs. 3.80 lakhs, as against *nil* in the previous year for managing agency commission, and after lowering the provisions for depreciation from Rs. 12.50 lakhs to Rs. 12 lakhs and that for taxation from Rs. 32.50 lakhs to Rs. 29.50 lakhs, the net profit amounts to Rs. 42.59 lakhs, a fall of Rs. 9.23 lakhs from that for 1953.

Out of the aforesaid net profit, the Directors have not added anything to the reserves which had received as much as Rs. 20.24 lakhs, that is, Rs. 10.48 lakhs to general reserve and Rs. 9.76 lakhs to dividend equalisation fund. The dividend has, however, been maintained at 22 per cent. (made up of an interim distribution of 8 per cent. and a final one of 14 per cent.), to which level it had been raised last year from 20 per cent. paid for 1952 and 1951. After payment of the dividend, which requires Rs. 24.07 lakhs, the surplus left to be carried forward is as much as Rs. 31.33 lakhs, as against Rs. 12.81 lakhs brought in. No explanation is to be found from the Directors' report as to why such a huge surplus is being carried forward without making any addition to the reserves.

The following comparative table giving the salient features of the profit and loss account for the past four years provides an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	788.06	725.40	724.56	732.65
Stocks	224.09	188.92	188.42	281.74
Expenses	704.81	634.78	676.81	649.21
Gross profit	87.89	96.82	51.17	92.55
Managing Agents' commission..	3.80	..	..	0.18
Provision for—				
Depreciation	12.00	12.50	11.00	11.00
Taxation	29.50	32.50	15.00	33.00
Net profit	42.59	51.82	25.17	48.87
Post-war refund of E.P.T. (net).	..	..	18.24	..
To reserves	..	20.24	18.24	22.00
To provision for compensation to ex-Managing Agents ..	..	..	..	3.00
Dividend	24.07 (22%)	24.07 (22%)	21.89 (20%)	21.89 (20%)
Carry forward	31.33	12.81	5.81	2.02

The sale proceeds of cloth for the year under review represent the highest on record of the Company and show an increase of Rs. 62.66 lakhs over those for 1953, despite the fall in prices. Evidently, the output must have been on a very much higher scale. This is also reflected in the rise in stocks. Expenses disclose an increase of Rs. 70.03 lakhs, thus more than offsetting the fall of Rs. 42.03 lakhs noted in 1953. Of the expenses, consumption of cotton account for Rs. 325.91 lakhs, an increase of Rs. 49.17 lakhs over the previous year, and that of chemicals, stores, fuel, etc., for Rs. 114.39 lakhs, a rise of Rs. 9.33 lakhs over 1953. Of the other expenses, wages show a decline of Rs. 1.80 lakhs, while dear food allowance has risen by Rs. 6.85 lakhs. Unlike in the case of other mills, the Directors of the Century have not indicated how much the additional bonus for 1952 and extra dearness allowance in respect of the period from May, 1953, to December, 1954, under the L.A.T. award have cost their mill.

The balance-sheet of the Company as on 31st December, 1954, discloses an impressive financial position. The paid-up capital of the Company stands at Rs. 109.43 lakhs, of which only Rs. 27.36 lakhs represents shares issued for cash and the balance of Rs. 82.07 lakhs is accounted for by the capitalisation of reserves, once in 1947 when a sum of Rs. 27.36 lakhs was thus capitalised by issuing 27,357 shares of Rs. 100 each as capital bonus in the ratio of one share for one share and again in 1948 when Rs. 54.71 lakhs were capitalised. This time also 54,714 shares were issued as free bonus in the ratio of one share for one share. Even after these issues, the reserves and surplus stand at a high level of Rs. 258.87 lakhs. The reserves include a general reserve of Rs. 69.65 lakhs, a repairs fund of Rs. 64.30 lakhs, a dividend equalisation fund of Rs. 65 lakhs and insurance fund of Rs. 22.61 lakhs. The provision for taxation stands at Rs. 31.79 lakhs and current liabilities aggregate Rs. 143.90 lakhs. The gross block stands at Rs. 283.17 lakhs. This represents an addition of Rs. 27.45 lakhs on new machinery and plant brought into use during the year, including Rs 9.94 lakhs on machinery, Rs. 6.91 lakhs on mill workers' chawls and Rs. 5.71 lakhs on the new rayon unit under construction. As against this gross block, the depreciation fund built up amounts to Rs. 185 lakhs. The current assets aggregating Rs. 445.95 lakhs are represented by stock-in-trade at Rs. 211.44 lakhs, stores and spares at Rs. 15.82 lakhs, book debts and advances at Rs. 58.96 lakhs, investments at Rs. 10.90 lakhs and cash balances at Rs. 150.82 lakhs. The current assets thus exceed the current liabilities and provision for taxation by a margin of Rs. 270.26 lakhs.

The Company has secured land at Kalyan for the erection of the rayon factory which the Directors decided to put up in May, 1954. The Directors say that the first instalment of plant and machinery has already arrived and the work on the building of the factory is progressing satisfactorily.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 383-8 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 5.9 per cent. per annum, free of tax.

BOMBAY DYEING'S RESULTS SATISFACTORY

The dip in the shares of Bombay Dyeing and Manufacturing Company, Ltd. (Agents: Messrs. Nowrosjee Wadia and Sons, Ltd., Bombay) on the Bombay Stock Exchange from Rs. 463-12 to Rs. 459-6 on Tuesday last week reflected the market's initial disappointment over the results of the Company for the year ended 31st December, 1954, published in the daily Press. Though the shares have since recovered sizably, albeit for other causes there is no reason to feel disappointed over the Company's results for the past year. A close study of the audited accounts reveals that the decline in earnings is relatively smaller than that generally made out. For the gross profit, at Rs. 74.04 lakhs, falls short of that for the previous year by only Rs. 8.39 lakhs.

The net profit (after making provisions for Agents' remuneration, depreciation and taxation, but before writing off the loss due to the collapse of the Company's head office building), no doubt, shows a larger decline, from Rs. 36.78 lakhs to Rs. 22.81 lakhs, but this is mainly due to the stepping up of the provision for depreciation by Rs. 10.91 lakhs to Rs. 24.98 lakhs, consequent on the substantial addition to the fixed capital expenditure during the year. The allocation for taxation has been reduced from Rs. 23 lakhs to Rs. 18.50 lakhs. Out of the net profit of Rs. 22.81 lakhs, the Directors have written off Rs. 4.21 lakhs being the net loss, after making allowance for depreciation, on "Neville House," the Company's head office building which collapsed in October last. After writing off this loss, the net profit available is hardly sufficient to pay a dividend of 8 per cent., or Rs. 20 per share, and the Directors have had to draw on the previous year's surplus for the same. In the circumstances, it has not been possible to strengthen the reserves, which had received Rs. 14 lakhs in the previous year by way of addition to the dividend equalisation fund. In maintaining the dividend at 8 per cent., the Directors have adhered to their policy of ensuring to shareholders a steady return, for which purpose they had carried last year Rs. 14 lakhs to the dividend equalisation fund. If the special cash bonus paid for 1953 is excluded, the dividend, at 8 per cent., is being maintained for the fourth year in succession on the present capital after it had been doubled in December, 1950, by the capitalisation of reserves.

The following table gives the salient features of the results of working for the year under review against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	726.42	664.61	670.99	693.17
Other income	7.65	8.96	7.94	5.59
Closing stocks	223.45	198.89	158.98	205.69

Carry forward	0.52	2.00	1.81	2.50

* Only approximate.

The sharp rise of Rs. 61.81 lakhs in sale proceeds has been more than offset by the increase of Rs. 69 lakhs in expenses, thus accounting for the decline in gross profit. Even this drop in profit could have been avoided and a higher profit would have resulted but for the payment of Rs. 16.22 lakhs by way of additional bonus for 1952 and increase in dearness allowance, together with the Company's contribution to provident fund, as well as the Employees' State Insurance Scheme thereon, from 1st May, 1953, to 31st December, 1954 as per award of the L.A.T.

Studied against the background of the trading conditions which prevailed during the past year, namely, (1) the continuation of control on production of cloth and yarn throughout the year, (2) the increase in excise duty by six pies per yard on superfine cloth and three pies per yard on other varieties, (3) the subdued demand for cloth, (4) the decline in domestic prices of cloth, and (5) the cut in export prices on account of competition, the results of the Company should be considered satisfactory.

The balance-sheet as on 31st December, 1954, shows that the reserves and surplus aggregate Rs. 234.52 lakhs, as against a paid-up capital of Rs. 250.98 lakhs. The provision for taxation amounts to Rs. 20.10 lakhs and current liabilities stand at Rs. 147.92 lakhs. In pursuance of the heavy programme of rehabilitation, the Company installed, during the year under review, new machinery worth Rs. 41.43 lakhs. This, along with other small additions, has brought the value of the gross block to Rs. 425.76 lakhs, on which the depreciation fund built up so far amounts to Rs. 354.21 lakhs. The current assets aggregate Rs. 582.23 lakhs, of which cash balances alone, amounting to Rs. 198.82 lakhs, more than adequately cover the current liabilities and provision for taxation.

In pursuance of the Company's modernisation programme, new warp ring spinning frames for the Spring Mills and high speed automatic spoolers and warpers for the Spring and Textile Mills are being erected and installed. The Directors observe that some of the old ring frames will be retained and utilised for producing yarn for sale. The total number of spindles will ultimately amount to 215,936, thus strengthening the productive capacity of the Mills.

The factory for the National Peroxide Ltd., a company formed and registered during the year under review for the manufacture of hydrogen peroxide, a heavy chemical used in the process of bleaching, and in which the Bombay Dyeing holds 15,000 shares of Rs. 100 each, is in course of erection and is expected to go into production in August, 1955.

The Rs. 250 paid-up shares of the Company are being currently quoted at Rs. 473-2 *cum-div.* On an *ex-div.* basis, the dividend for the past year gives a yield of 4.3 per cent. per annum, free of tax.

BANGALORE WOOLLEN EARNS RECORD PROFIT

For the second year in succession, the Bangalore Woollen, Cotton and Silk Mills Co., Ltd. (Agents, Secretaries and Treasurers: Messrs. Binny and Co. (Madras) Ltd., Bangalore) has shown a marked rise in earnings, the latest year for which it has recorded such a performance being the one ended 31st December, 1954. The gross profit of the Company, which had jumped up from Rs. 37.40 lakhs for 1952 to Rs. 63.16 lakhs for the following year, has shot up to Rs. 94.25 lakhs for the year under review. Thus, in the course of two years, the Company's profit has risen by Rs. 56.85 lakhs or over 150 per cent. to set up a fresh record in the history of the Company, exceeding even the previous best of Rs. 88.90 lakhs earned in 1948.

After larger allocations to depreciation and taxation, as shown in the table published below, the net profit is up by Rs. 15.38 lakhs at Rs. 45.50 lakhs. This has enabled the management to strengthen the reserves further. The provision for bonus to employees has been raised and the dividend on the ordinary shares has been stepped up to 30 per cent. from 25 per cent., to which level it had been raised last year from 15 per cent. paid for 1952. Not only the rate of dividend for the year under review is a record one but the quantum of distribution also is the highest, at Rs. 12.15 lakhs.

Such an excellent performance as the one shown above is undoubtedly due to the working of the Mills to full capacity and the increased demand for the Company's specialised products and substantial exports. Referring to the Company's working during the year, the Directors observe as follows:

"The Company contrived to keep its whole installation working practically to continuous full capacity, although, for a time, this involved carrying rather heavy stocks, particularly of those goods for which demand is seasonal, that is 'cotswol' and woollens. The continuity of full production in all sections largely accounts for the increase in sales value over the previous year and a very useful contribution to this result was made by increased productions and offtake of 'cotswol' fabrics. Although at the Company's woollen goods seemed uncertain, the turnover was finally satisfactory, but the trading result of this section made no contribution to the profits of the year. In spite of keen competition by other manufacturing countries in overseas markets, the Company's exports are still substantial and vigorous efforts to maintain them continue to be made."

The foregoing remarks of the Directors are fully reflected in the salient features of the Company's profit and loss account for 1954, presented in the following table against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	472.25	432.20	450.20	431.77
Closing stocks	59.84	23.43	18.80	31.89
Expenses	411.75	375.45	401.05	304.91
Gross profit	94.25	63.16	37.40	60.98
Agents' commission	7.19	4.62	2.26	4.38
Provision for—				
Depreciation	16.80	12.92	12.71	12.80
Taxation	25.25	15.50	7.00	15.17
Net profit	45.50	30.12	15.48	28.69
To reserves and other funds ..	20.45	9.62	2.86	10.50
" bonus to employees ..	12.50	10.10	6.10	9.19
Dividends—				
6% cum. preference	0.36	0.36	0.36	0.36
Ordinary	12.15 (30%)	10.12 (25%)	6.07 (15%)	8.10 (20%)
Carry forward	2.45	2.40	2.50	2.47

The Directors' proposal, made last year, to capitalise Rs. 61 lakhs out of the general reserve (it now stands at Rs. 96 lakhs), by the issue of two ordinary shares for each ordinary share held, has not yet been sanctioned by the Government. The Government's sanction was kept in abeyance pending the publication of the Taxation Enquiry Commission's report. Now that the report has been published, the Directors await developments in this regard.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 460 *cum-div.*, having shot up from Rs. 420 two weeks ago. Such a rise is not surprising, in view of the splendid results and the prospects of a bonus issue. On an *ex-div.* basis, the yield on the share works out to 6.8 per cent. p[illegible] of tax.

SUGAR

(*Concluded from page 564*)

unjustly. He commended the revised chart of price differentials recently adopted by the Development Council and urged the Government to bring it into operation at an early date. At the same time, he warned that the sugar industry would suffer unduly if the basic grade were changed, as suggested by the Council, from E-27 to D-28. That Mr. Gulabchand had very good reasons for sounding this warning will be evident from the following quotation:

"Perhaps, the reason for taking D-28 as the basic grade is that it is the most common grade of sugar manufactured in the country. While this is true and it is a matter of credit to the industry that it has been prompt in improving the quality of sugar, there is no justification for raising the basic grade from E-27 to D-28. This change will put the industry to a net loss of Re. 0-11-0 per maund of sugar under the differentials. This would amount to the industry being penalised for improving the quality of sugar, which I am confident, could not be the Government's intention. It will be appreciated that the production of higher quality of sugar by the factories has been possible because of the efforts made by the industry in putting up better and more modern machinery and by improving the efficiency of the present plants at great cost. If the legitimate benefit due to the industry from the production of improved quality of sugar is now taken away from it, as would be the case if the basic grade is raised to D-28, the industry would be put to considerable disadvantage and left practically with no incentive to make any further improvement in the quality. I, therefore, urge that the new price differentials recommended by the Development Council for Sugar be brought into operation as early as possible after they are adjusted to the basic grade E-27."

Mr. Gulabchand put forward a fervent plea for the adoption by the Government of a more liberal policy with regard to depreciation allowances. He contended that, since most of the plant and machinery installed in the sugar industry were several years old, there was urgent need for replacement and rehabilitation. But the funds available with the industry were not sufficient. The prices of new machinery were at present three to four times the pre-war levels and the depreciation which the sugar mills had been able to put by was not commensurate with the actual requirements. He minced no words when he said that such had been due mostly to the unrealistic price policy followed by the Government during the period of control. The controlled rate made allowance for a gross profit of only 10 per cent. on the block, which also was artificially fixed at Rs. 18 lakhs for an average factory. There might have been some justification for allowing this profit margin when taxation absorbed only 20 per cent. of the gross profits of the factories and the balance left provided some scope for adequate reserve. But this basis was grossly inadequate now when taxation took away about 40 per cent. of the gross profits of the factories and when the ever-increasing drafts for bonus to workers had further depleted the resources of the industry for the purpose of rehabilitation. The result was that most of the units in the sugar industry had failed to effect improvements in their plants to keep them in line with the development in technology. There is no exaggeration whatever in these observations of Mr. Gulabchand and the Government will do well to concede, while fixing the profit-margin for the industry, the necessity to build up a larger depreciation fund.

SUGARCANE PRICE IN BOMBAY

The sugar mills in Bombay State are now made to pay for cane purchased from cultivators 10 per cent. more than the minimum price of Re. 1-7 per maund fixed by the Central Government. This is the result of the agreement reached between the Government of Bombay and the sugar factories. The revised minimum price works out to about Rs. 43 per ton. This, it is said, is the final price for the current season and the factories will not be asked to pay additional amounts for the cane purchased, as is being done under the Union Government's formula. The factories may, however, pay more in accordance with the terms of their previous contracts or their requirements.

Announcing the above decision, a Bombay Government Press Note says: "Hitherto the Government of India has been fixing the price of sugarcane to be purchased by factories for the manufacture of sugar. It has been the policy of that Government to fix the minimum price and, after the season's working is over and the profits are known, to request the factory-owners to pay additional amounts for the sugarcane purchased. Whilst this system may succeed elsewhere, it does not suit the conditions peculiar to the factories in Bombay State. Most of these factories own extensive farms of sugarcane, which are their main sources of supply. Such factories are dissuaded from purchasing sugarcane from the cultivators due to the fact that they do not know what additional prices they may have to pay in future. Instead of having this uncertainty they prefer not to buy and to rely on their own resources. The formula for giving the extra payment is based on the average sucrose content of the sugarcane. The factories believe that, by such a formula, cane from the private cultivator would get the benefit of the superior cane raised by them which also dissuades them from purchasing this sugarcane. The Bombay Government has, therefore, discussed this question with the Deccan Sugar Factories Association and has come to the conclusion that it would be more advisable for this State to fix a higher minimum price now, which would be final for this season and to assure the sugar manufacturers that there would be no further increases, if this decision is respected."

TEXTILES

(*Concluded from page 560*)

have improved considerably. To quote the Board: "Their (weavers') earnings have increased, the number of active looms has shown a definite upward trend, sale of handloom cloth has gone up and one does not hear of accumulations of handloom fabrics in any place in the country." A similar view is also expressed by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. He says:

"A year has passed since we commenced celebrating the Handloom Week. It was on the whole a good year for handlooms. Production in many parts of India has increased considerably. The offtake has been reasonably good. Yarn prices have been stable and the co-operative movement among handloom weavers is gaining ground slowly but steadily. All this has given us courage to take a big step forward. The Government of India intend to put more heart into the matter and strengthen the co-operative movement amongst the handloom weavers. Government have decided to extend the facilities now given to handloom weavers in cotton cloth in the co-operative field to weavers of silk. Plans are under way for starting industrial co-operatives for those handloom weavers who cannot work on a self-employed basis."

These observations of Mr. T. T. Krishnamachari certainly sound reassuring. But how has this so-called "prosperity" for handloom weavers been brought about? All by artificial means and at a heavy cost to the taxpayer. In order to find a market for the products of the handloom industry, the Government has placed a severe restriction on the manufacture of *dhotis, saris* and a few other popular varieties. As though this were not enough, the Government has reserved for handlooms all future expansion in the demand for cloth by placing a ceiling on the weaving capacity of mills. This is not all. Mill cloth is subjected to heavy taxation, whereas the handloom products are not, thereby greatly reducing the competitive capacity of the former *vis-a-vis* the latter. All these artificial props are being given to handloom weavers even at a time when the total quantity of cloth produced in the country is not adequate to give a *per capita* supply of 16 yards—a very modest target indeed—after excluding exports. The public is thus paying through its nose for keeping alive an uneconomic method of cloth production. And, in spite of all this sacrifice, what does the handloom weaver get? Can Mr. T. T. Krishnamachari and the protagonists of cottage industries honestly claim that the weaver is now able to earn a living wage? After all, the success or failure of the present policy can be measured only in terms of this yard-stick.

The fact is that the handloom weaver is not getting a living wage. And he will not be able to get it even if the entire weaving section of the mill industry is closed down, so long as his productive equipment continues to be what it is and where it is. The Union Commerce and Industry Minister and his tribe are fighting a losing battle, whatever may be their claims to the contrary.

There is no hope for handlooms, unless they are converted into small powerlooms and at least four or five such powerlooms are operated by one weaver. If such a thing were to happen—it may not happen, because the Government is not working in that direction—it would mean that such a large number of people as at present cannot be employed by the handloom sector. They will have to be found other sources of employment. It is any day better to tell the weavers this truth rather than mislead them by giving false hopes. The authorities should at least be honest enough to see that more people do not drift into this industry for a living. But the propaganda of the type now being done may easily lead to this unfortunate result.

A sustained market for handloom cloth cannot be found by appealing to people's sentiments and by taking out processions, however eminently led. It can be found only through hard work and efficient marketing arrangements. The time and money that are being expended on the celebration of "Handloom Weeks" are, therefore, a waste. Publicity, of course, pays but only if the products sought to be publicised are of good quality and competitive in price. But propaganda, and that too, political propaganda, does not create markets on a commercial scale.

SHIVRAJPUR REPORTS SATISFACTORY MINING OPERATIONS

GOKAK MILL'S PROFIT SHRINKS SLIGHTLY

Shivrajpur Syndicate Ltd.

THE directors of the above Company (Managing Agents: Messrs. Killick Industries, Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th November, 1954.

Output.—Satisfactory progress was made in mining operations. Production was maintained at a high level, actual outputs during the year being 96,405 tons as against 100,347 tons in 1952-53.

Shipments.—The year was mainly one of depression in the manganese market which, however, did not materially affect the Syndicate owing to its established policy of selling well forward. Shipments, mainly to the U.S.A., at 74,477 tons were considerably lower as compared with 101,350 tons shipped during the previous year. This was largely occasioned by the delays and difficulties experienced by Shipping Companies due to labour unrest in the Bombay Docks. The reduced shipments represented higher priced contracts so that the financial results were not proportionately affected.

Sales and abolition of export duty.—The Government of India, as a result of the slump in the manganese trade, abolished the export duty with effect from 17th August, 1954. The market improved during the latter half of the year under review. Fresh sales for forward delivery upto 1955-56 have been made bringing the total outstanding commitments to 132,823 tons at the close of the year.

The Income-tax authorities have completed the assessment on the Company's profits for the year ended 30th November, 1950, but the assessments on the profits for the years ended 30th November, 1951, 1952 and 1953 have still to be completed. The abnormally large increase in the stock figure at the close of this year is mainly due to the adoption of a revised basis of valuation as agreed with the Income-tax officer.

The trading profits for the year amounted to Rs. 34,37,532 (Rs. 33,47,279) after deducting depreciation of Rs. 3,10,464 (Rs. 2,32,341). To this has been added Rs. 32,364 (Rs. 13,913) being the balance brought forward from last year's accounts which includes an adjustment of Rs. 6 (Rs. 16) in respect of over provision of dividend and bonus last year. After providing Rs. 10,75,000 (Rs. 11,26,000) for income-tax and super tax, writing off Rs. 3,138 (*nil*) being loss on sale of assets, setting aside Rs. 1,665 (Rs. 3,665) to workmen's compensation reserve, Rs. 7,69,890 (Rs. 7,02,522) to staff welfare reserve, Rs. 4,00,000 (Rs. 5,92,000) to mine development and prospecting reserve, Rs. 5,00,000 (Rs. 50,000) to general reserve, and Rs. 1,46,822 (Rs. 1,00,000) to retiring gratuities reserve, the balance available for distribution is Rs. 5,73,381 (Rs. 5,92,118) which it is proposed to appropriate as follows:—

To payment of a dividend for the year ended 30th November, 1954, at the rate of Rs. 5 (Rs. 5) per share, free of income-tax Rs. 3,50,000 (Rs. 3,49,850) and to payment of a bonus to shareholders for the year ended 30th November, 1954, at the rate of Rs. 3 (Rs. 3) per share, free of income-tax Rs. 2,10,000 (Rs. 2,09,910), leaving to be carried forward Rs. 13,381 (Rs. 32,358).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	20,14,275
Reserves ...	47,85,000	Work-in-progress ...	3,74,881

Gokak Mills, Ltd.

The directors of the above Company (Agents: Messrs. Forbes Forbes Campbell and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1954.

The accounts show a profit of Rs. 14,63,081 (Rs. 16,35,523) to which is to be added the net carry forward from 1953 of Rs. 85,195 (Rs. 1,03,575) which produces a total of Rs. 15,48,276 (Rs. 17,60,340 including Rs. 21,242 being post-war refund of E.P.T.). The following transfers have been made:—

To reserve account Rs. 50,715 (Rs. 22,947), depreciation Rs. 3,15,000 (Rs. 3,50,000), taxation reserve Rs. 5,00,000 (Rs. 6,25,000) and staff gratuity fund Rs. 10,862 (Rs. 13,399), leaving available the sum of Rs. 6,71,699 (Rs. 7,48,994). From this balance the directors recommend the declaration of a dividend of Rs. 13 (Rs. 17 including interim dividend of Rs. 5) per share, free of income-tax which will absorb Rs. 6,34,530 (Rs. 6,63,799), leaving a balance to be carried forward of Rs. 37,169 (Rs. 85,195).

Prior to the holding of the extraordinary general meeting, the directors of the Company had issued one ordinary share of Rs. 100 for cash at a premium of Rs. 175 thus increasing the paid-up share capital from Rs. 39,04,700 to Rs. 39,04,800. In accordance with the resolutions passed at the extraordinary general meeting of the shareholders held on the 10th September, 1954.

(a) The authorised capital of the Company was increased from Rs. 48,00,000 to Rs. 50,00,000 divided in 50,000 shares of Rs. 100 each. (b) A sum of Rs. 9,76,200 being part of reserve fund of Rs. 13,26,175 was capitalised and distributed as capital among the shareholders by the issue of 9,762 ordinary shares of Rs. 100 each in the proportion of one ordinary share for every four ordinary shares held by the shareholders as on the 14th October, 1954. (c) The paid-up share capital of the Company was thus increased from Rs. 39,04,800 divided into 39,048 shares of Rs. 100 each to Rs. 48,81,000 divided into 48,810 shares of Rs. 100 each.

The mill buildings, machinery, stocks and stock-in-trade are insured against fire, riot and civil commotion risks for Rs. 3,54,32,050 and the profits and fixed charges have been insured for Rs. 59,60,950 with 24 months' indemnity.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,81,000	Block ...	88,91,779
Reserves ...	33,91,175	Stock-in-trade ...	55,46,469

Provision for taxation ...	5,21,991	Debts, deposits and advances ...	12,30,205
Liabilities ...	14,62,105	Investments	4,87,598
Profit and loss account ...	6,71,699	Cash ...	7,66,079
Rs.	1,74,52,040	Rs.	1,74,52,040

Orissa Minerals Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the company for the half-year ended 30th June, 1954.

Iron ore.—Raisings were 2,34,549 (1,96,606) tons compared with 1,83,845 tons during the previous half-year. Despatches also increased by 62,110 tons and were 2,42,031 (1,69,176) tons. This was mainly due to the steel works increasing their order to 40,000 tons per month during the current period. Only 27,010 (34,362) tons were exported to Japan which was 16,660 tons less than the previous half-year when better wagon facilities as well as more ships were available.

Manganese ore.—Raisings showed a decrease of 2,753 tons and were 27,564 (46,778) tons. Sales decreased considerably from 28,442 tons to 8,628 (30,842) tons during the current half-year. This decrease was in part due to poor wagon supplies and in part to certain buyers delaying shipments against contracts made in 1953 at prices considerably higher than those ruling in the period covered by this report.

Manganese dioxide.—Raisings showed a slight increase at 2,297 tons. Sales increased by 1,244 tons to 2,488 tons during the current period.

Market.—The downward trend which was mentioned in the previous half-year's report continued and the price of manganese fell to such an extent that prices offered were below the cost of raising and despatching the ore. Prices have improved towards the end of the year and the demand for higher grades is again good but this improvement is not likely to be reflected in the company's accounts until 1955. However, the company's outstanding orders will carry it through the period of depression.

Transport.—The Company's ability to maintain its shipments is controlled by the wagon position. The wagon position, although poor throughout the half-year, was exceptionally bad during the first three months due to the Kumbh Mela. As a result of this, although export quotas were increased during the half-year under review, the wagon supply was inadequate for their completion.

Share capital.—Since the closing of these accounts reserves have been capitalised to the extent of Rs. 10,00,000 and 1,00,000 bonus shares issued in the ratio of one share for each ordinary share held in accordance with the resolution passed at the extraordinary general meeting held on 8th September, 1954, when it was also resolved that these bonus shares should rank *pari passu* with the then existing issued ordinary share capital in any distribution of profits in respect of accounting periods subsequent to 31st December, 1953.

In accordance with the above resolution the dividend distribution proposed will be on the present capital of the Company as increased by the bonus issue and not on the capital shown in the balance sheet.

The profit and loss account after providing Rs. 83,975 (Rs. 1,61,537) for depreciation, Rs. 1,00,000 (Rs. 8,00,000) for taxation and taking Rs. 1,00,000 (Rs. 2,25,000) to mechanisation reserve, and Rs. 15,937 (Rs. 12,117) to workmen's compensation reserve and including Rs. 1,47,081 (Rs. 1,22,922) brought forward from the previous half-year shows a credit balance of Rs. 3,39,969 (Rs. 3,38,544 which the directors propose to dispose of as follows:—

In paying a dividend on 2,00,000 (1,00,000) ordinary shares at the rate of 20 (40) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,00,000 (Rs. 2,00,000) and in carrying forward Rs. 1,39,969 (Rs. 1,38,544).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	18,69,183
Reserves ...	41,83,383	Work-in-progress ...	87,535
Provision for taxation ...	25,58,184	Stock-in-trade ...	11,08,338
Liabilities	28,01,319	Stores and spare gear	6,48,772
Profit and loss account ...	1,39,969	Debts, deposits and advances ...	28,38,295
		Investments	39,50,961
		Cash ...	1,79,771
Rs.	1,06,82,855	Rs.	1,06,82,855

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1954.

After providing Rs. 2,30,000 (Rs. 1,75,000) for taxation, there is a balance of Rs. 3,27,308 (Rs. 3,57,157) at the credit of profit and loss account from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 2-8 (Rs. 2-8) per share Rs. 12,500 (Rs. 12,500), and on ordinary shares at Rs. 6 (Rs. 10) per share Rs. 1,68,000 (Rs. 2,80,000), leaving Rs. 1,46,508 (Rs. 64,657) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 42½ hours per week up to 10th July, 1954. From 12th July, 1954, working hours were increased from 42½ hours to 45 hours and again from 45 hours to 48 hours per week from 18th October, 1954. Throughout the period under review 12½ per cent. of the total looms remained sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block ...	28,15,446
Reserves ...	44,74,179	Stock of jute	17,85,453

		Cash ...	9,86,778
Rs.	90,91,286	Rs.	90,91,286

Lothian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1954.

After making necessary adjustments for taxation, transferring Rs. 3,00,000 (Rs. 1,00,000) to general reserve, there is a balance of Rs. 2,38,755 (Rs. 2,31,684) at the credit of profit and loss account, from which the directors recommend payment as follows:—

Dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 15 (Rs. 15) per share Rs. 1,50,000 (Rs. 1,50,000), leaving Rs. 53,755 (Rs. 46,684) to be carried forward.

During the whole of this accounting period the mills continued to be worked by Albion Jute Mills Co., Ltd.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	14,92,881
Reserves ...	41,51,301	Debts and advances ...	9,04,990

N.B.—Figures within brackets relate to the corresponding period of the previous year.

RYAM SUGAR CO., LTD.

An extraordinary general meeting of the shareholders of the Ryam Sugar Company, Ltd., has been convened for 31st March, 1955, to consider the request of the majority of the ordinary shareholders of the Company, represented by General Fibre Dealers Ltd., for the resignation of the present Managing Agents of the Company, Messrs. Begg Sutherland & Co., Ltd.

The present managing agency agreement is not due to expire until 30th November, 1963, but the Managing Agents have agreed to relinquish their office, subject to two conditions: (1) a sum of Rs. 2.5 lakhs should be paid to the Managing Agents by way of compensation, and (2) General Fibre Dealers Ltd. should purchase from the parent company, the British India Corporation Ltd., its holdings of 5,450 ordinary shares and 5,450 preference shares in the Ryam Sugar Company at a price of Rs. 20 per ordinary share and Rs. 10 per preference share (inclusive of any dividend which may be declared on such shares in respect of the period ending 30th June, 1955), and should offer to purchase the shares of all other shareholders at the same prices. General Fibre Dealers Ltd. have agreed to these conditions. If the resolution is passed at the aforesaid meeting, the Company will thereafter be controlled by the Directors.

TREASURY BILL RATE HARDENS FURTHER

(From Our Own Correspondent)

BOMBAY, 23rd *March*

The short-term money market continued to display stringent conditions during the week under review also. With seasonal demand gathering momentum, floating funds were found to be very much in short supply, with the result that almost every bank was a heavy borrower with the Reserve Bank or the Imperial Bank. The disbursement of half-yearly interest on 16th March on some of the Government securities did not have any effect on the market, as whatever funds that flowed in were quickly absorbed. Inter-bank call money continued to be bid at 3 per cent., as also the short-term deposits for one to six months. House money was placed at the self same rate of 3 per cent.

There was a further small decline in the offerings to the Government of India Treasury Bills this week from a little over Rs. 1.06 crores to Rs. 1.02 crores. For the third week in succession, the average rate of accepted tenders hardened, the latest increase being from Rs. 2-8-6 to Rs. 2-9 per cent. per annum; this is As. 2 per cent. less than the highest level recorded in March, 1954. Tenders for a further sum of Rs. 1 crore have been invited for the next week also.

After registering sharp increases for two weeks in succession, the notes in circulation have shrunk by Rs. 4.02 crores during the week ended 18th March, 1955. Revealing this, the Reserve Bank's statement for the latest week records a rise of Rs. 4.55 crores in notes held in the Banking Department. The consequent small increase in total notes issued is covered by a corresponding rise in rupee coin. A decline of Rs. 34.78 crores is noted in foreign securities, with a corresponding rise in rupee securities. In the Banking Department, deposits of the Central Government have gone up by Rs. 12.73 crores, probably reflecting tax receipts. Deposits of other Governments have swelled by Rs. 34.92 crores, evidently due to the disbursements by the Centre to the States of their share of tax collections. Deposits of banks are lower by Rs. 75 lakhs. Cash balances have gone up by Rs. 4.58 crores and balances held abroad by as much as Rs. 36.04 crores. A small decline of Rs. 68 lakhs is noted in loans and advances to Governments, while other loans and advances are higher by Rs. 8.89 crores, of which advances to Scheduled banks against usance bills account for Rs. 5.81 crores. Investments have declined by Rs. 1.19 crores.

A further fall of Rs. 1.09 crores in demand deposits is disclosed by the consolidated statement of position of the Scheduled banks for the week ended 11th March, 1955. Time deposits, on the other hand, have risen by Rs. 5.53 crores and inter-bank borrowings by Rs. 52 lakhs. Borrowings from the Reserve Bank have gone up by Rs. 9.11 crores, while those from the Imperial Bank are lower by Rs. 43 lakhs. An increase of Rs. 1.48 crores is seen in advances and of Rs. 5.79 crores in inland bills purchased and discounted. Foreign bills are also up by Rs. 27 lakhs. Investments are almost unchanged. Cash on hand and balances with Reserve Bank disclose a rise of Rs. 1.72 crores. Balances with other banks and money at call and short notice show fractional changes.

For yet another week, the Gilt-edged market displayed listless conditions. The undertone, however, remained steady, with very few variations in prices. The volume of business was very thin. 2¾ per cent. 1960 found sellers at Rs. 94-14, at which the Reserve Bank was a purchaser against an exchange of 3 per cent. 1966-68 or 3 per cent. 1970-75. 3 per cent. 1957 was done at the self-same rate of Rs. 99-4. 3 per cent. 1958 was unchanged at Rs. 99-3. 3 per cent. 1959-61 had buyers at Rs. 97-5¼. 3 per cent. 1963-65 and 3 per cent. 1964 were wanted at Rs. 93-10. The Reserve Bank continued to be a seller of 3 per cent. 1966-68 and 3 per cent. 1970-75, at Rs. 90-9 and Rs. 86-15, respectively. 3 per cent. 1986 Conversion Loan changed hands at Rs. 83-11, As. 2 lower than last week. 3½ per cent. 1961 National Plan Bond had buyers at Rs. 99-8½ and 3½ per cent. 1964 National Plan Loan at Rs. 98-3. Among State Loans, 4 per cent. 1964 and 4 per cent. 1963 Madras were in demand and were done at Rs. 100-9. 4 per cent. 1964 U.P. had buyers at Rs. 100-3½. 4 per cent. 1964 Saurashtra had transactions at Rs. 99-7.

In the foreign exchange section, the rupee held its ground in terms of the U.S. dollar, banks' selling rate remaining unchanged at Rs. 479½ per $100 and the buying rate at Rs. 475½ per $100. In New York, sterling continued to harden in terms of the dollar, though the pace of advance was less marked. Thus, spot sterling gained from $2.79-3/16—2.79⅜ a week ago to $2.79½—2.79¾ and three months' forward from $2.78½—2.78¾ to $2.78-5/16—2.78-7/16. Transferable sterling, however, shaded off a little from $2.76¾—2.76¾ to $2.76¼—2.76-7/16.

HIDES PRICES RECEDE

(From Our Own Correspondent)

KANPUR, 20th *March*

The remarkably upward trend in prices witnessed in the hides and skins market in the past week was halted during the week under review. This was due to the lessening of tension in the Far East. The downward trend was plainly visible in wet salted cow, goat and sheep. Prices of wet salted buff, however, were pegged high.

The latest available quotations are: Wet salted cow 1st grade Rs. 360; 2nd grade Rs. 280 and 3rd grade Rs. 140 to Rs. 160 per score; wet salted buff 1st grade 1 lb. 10 ozs. to 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 290 to Rs. 300 and 2nd grade Rs. 260 to Rs. 275 per 100 pieces; sheep Rs. 225 per 100 pieces.

TRADING IN BULLION RESUMED

(From Our Own Correspondent)

BOMBAY, 23rd *March*

After remaining suspended unofficially for nine days, forward trading on the Bullion Exchange was resumed this afternoon, after the demands of the protesting traders were conceded. Their demands were: (1) the members who had not paid margins in the last settlement should be penalised; (2) by-law 33A, providing for the special margin, should be applied to the current settlement also; and (3) by-law 33D, which had been passed by the General Body of the Association on 15th October last, must be sanctioned by the Government of Bombay.

At a meeting of the members held yesterday afternoon, the Government Director on the Bullion Board said that strict action would be taken against the parties who had evaded the payment of margin. It would appear that some of them have already been served with notice for non-payment of margin. He also assured them that the by-law 33D would be sanctioned as soon as legal opinion was obtained. The Board has since decided to enforce the special margin under by-law 33A in the current settlement, with a slight modification, namely, that the first 50 bars of silver and 2,500 tolas of gold of the purchases of a member would be exempt from payment of margin.

The Government of Bombay has sanctioned the enforcement of graded margin under by-law 33D in the current settlement. The Government's sanction will be gazetted tomorrow. A meeting of the Bullion Board was held this evening to consider what action should be taken against the members who had evaded margin in the last settlement. It is also reported that the Government of Bombay desires to have the by-laws regarding margins enforced automatically, as and when the situations described in the by-laws arise, without awaiting the sanction of the Board on every occasion.

At today's trading, forward silver (9th April settlement) opened at Rs. 164, as against the previous official closing of Rs. 166-6, but reacted to Rs. 163-12, before closing higher at Rs. 164-7. The drop from the previous official closing is due to the poor demand in the ready section.

Ready silver (.996 Mint) moved between Rs. 165-10 and Rs. 164-10, but closed at Rs. 165-9, as against Rs. 167-12, the last official closing before the deadlock set in. The floating stocks are reported to be 2,000 bars.

Gold for forward delivery (8th April settlement) fluctuated within a small range, after opening at Rs. 92, and finished at Rs. 92-2, a decline of As. 5 from the last official closing.

Ready gold commanded a premium of Re. 1-8 over the forward at the opening, but the premium narrowed to Re. 1-6 at the close of the session. The floating stocks of gold are estimated at 15,000 tolas.

In London, silver gained further strength during the week, the spot metal rising from 75¼d. to 77¼d. per fine ounce, before closing yesterday at 77¼d. Forward silver moved up from 75¼d. to 77¼d., but was a shade lower yesterday at 76¾d. per fine ounce. Gold advanced from £12 11s. to £12 11s. 1d., but closed lower at £12 11s. ¼d. After the sharp rise last week, to 89¾c. silver in New York shed 1¼c. to close at 88¼c. per fine ounce.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 21st *March*

Firm conditions have prevailed during the week and prices are somewhat better, whilst activity has been scarce. Sellers have been very reserved, owing to poor arrivals and scanty new-crop offerings from the centres. There have been good enquiries from crushers for both ready and forward delivery, but the daily turnover has been small. The oil market is firm and activity has been slightly better with good enquiries from shippers; sellers have been rather reserved. The latest quotations are as follows:—

March Rs. 16-4 and April-May Rs. 15-10 per maund.

BUSINESS IN KIPS PATCHY

(From Our Own Correspondent)

MADRAS, 21st *March*

Business in kips with the U.K. has been patchy. Both shippers and importers are disappointed at the inability to meet each others' ideas of prices. Tanners require prices ruling in February to see them without loss on their raw hides stocks on hand, while U.K. dressers are reported to show definite reluctance to extend their buying operations at February levels and to follow a hand-to-mouth policy. U.K. buying has, therefore, been selective. Top marks continue to attract buyers, while F.A.Qs. have been difficult to move except at very low prices. For fifths and inferior fifths selections, demand has been insistent. There have been some enquiries for lightweight cow calf and buff calf. Arrivals of buff heavies are small and prices have advanced slightly.

Market for tanned goat and sheep skins is steady and clearance in the local market is good.

In the London public sales, prices of goat skins declined by 6d. in the beginning and finished steady towards the close for good tannages, while commons declined by 6d. per lb. on January levels. Over 100,000 goat skins remained unsold. Results of sheep skins sales will follow next week.

FORWARD COTTON REACTS AT CLOSE

(From Our Own Correspondent)

BOMBAY, 23rd *March*

The feeling of nervous apprehension, which had held the cotton market in its grip during the last few weeks, abated somewhat during the major part of the week under review, though the market once again developed some weakness today. The initial improved sentiment in the market was the result of three favourable factors. First, there was the expectation that the reduction in the excise duties on coarse and medium categories of cloth, announced by the Union Finance Minister, would raise cloth offtake, which meant that mill demand for cotton would broaden. Secondly, the Government of India extended the validity period of licences issued to exporters of cotton in the last season—1953-54—up to the end of June next; the extension of time limit applies to exports of Mathias, Kalagins, Dholleras, C.P. I and II, Central India *deshi* and Oomra *deshi*. Thirdly, cotton circles expected that the Government would soon release a substantial quantity of staple cotton for export. All these factors induced considerable support to the cotton market and values staged a recovery. But the recovery was checked today when the market turned easy, following paucity of mill demand for spot cotton. Not only were the earlier gains completely erased but today's closing rates stood lower than those a week before.

The forward section of the cotton market began the week on a quiet note and picked up strength as the week drew to a close. Under the impetus of short-covering and call fixing by mills, cotton futures staged a modest recovery yesterday. Today, however, there was again a relapse. I.C.C. May opened at Rs. 559-8, as against Rs. 557-12 last week-end. After receding to Rs. 553 on the 19th inst., the contract recovered to Rs. 663 today but reacted to Rs. 556 at close.

The following is the trend of prices in the forward cotton over the week under review:

	Opening	High	Low	Closing
I.C.C. May ...	Rs 559½	563½	555	556½

The spot market presented a steady trend, although the volume of transactions put through was not heavy. Vijay cotton met with good mill demand. There was also some business in Khandesh Jarilla, Wagad and Kalyan. In the export section, Zoda cotton evoked enquiries. Bengals and other *deshi* varieties received moderate demand from Continental and Japanese interests. Enquiries for foreign cotton continued to be poor. Small lots of East Africans, Sudans and Egyptians changed hands at unattractive prices.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 560; Berar Jarillas Rs. 630; Khandesh Rs. 630; Vijay Rs. 720; Oomra *deshi* Rs. 540; Moglai Rs. 540.

The Central Government has, as already stated, extended the validity period of licences granted in respect of exports of 1953-54 short-staple cotton by three months. Such an extension of time limit is, however, believed to be of no practical importance. For it is stated that the short-staple Indian cottons are at present not in demand in overseas countries. The stocks of 1953-54 cotton still lying unshipped are estimated at 25,000 to 30,000 bales.

Of some interest to the cotton market is the report that India will get 15,000 bales of U.S. cotton consisting of stapling 1.1/16" and better valued at $3 million. This is the result of the procurement authorisation under section 402 of Public Law 665 announced by the U.S. Foreign Operations Administration on Wednesday last week. The contracting period is from the 22nd inst. to 15th May next. Shipments are required to be completed by 15th June, 1955. Exports under this Law, it is stated, do not require replacement from loan or C.C.C. stocks, but they can be made out of free supplies. These exports will be reimbursed in rupees.

The Karachi cotton market was devoid of any notable development during the week under review. There was absence of adequate trade demand which induced some selling and cotton prices tended to look down. The latest available quotations from the Karachi market are:

Sind *deshi* Rs. 65-8; Punjab *deshi* Rs. 58-4; 4F Punjab roller Rs. 66-3; S.G. Rs. 69-3 to Rs. 71-3; L.S.S. Punjab R.G. Rs. 68-7; S.G. Rs. 73-3; N.T. R.G. Rs. 69-3; S.G. Rs. 73-11 to Rs. 74-3; 289F Punjab R.G. Rs. 71-11; S.G. Rs. 75-11; May futures Rs. 68-14.

In the Alexandra cotton market, there were large purchases of Ashmouni and Giza 30 by French interests which followed the price concession granted by the Egyptian Government to buyers in France. Enquiries from other foreign consumers continued to be poor. Karnak fully good, fully good extra, and Giza 30 medium and higher grades met with moderate demand. Thanks to sustained support for entitlement currencies, premiums were well maintained, that for spot sterling being 7½ per cent.

At the auction held at Khartoum on the 16th inst., 2,698 bales of Sudan cotton were bought. The purchases were at reserve prices, except 299 bales of G2S which fetched 63 Liverpool points more.

The Liverpool cotton futures market depicted an easy note this week. This was due to improvement in sterling-dollar rate of exchange. There was, besides, the fear of some form of export subsidy being granted by the U.S. Government to market surplus cotton. Buyers were, therefore, not inclined towards entering into forward commitments, with the result that cotton values drifted lower. The fall would have been more marked but for small trade and local buying absorbing hedges in near positions and commission house replacement buying in distant deliveries. The latest available quotations from the market are: March-April 31.25d; May-June 31.25d; July-August 30.58d; October-November 30.35d.

The New York cotton market ruled bearish this week too. Trade support continued to be limited, while offerings were encouraged by easy conditions inside markets. In view of the continued slow demand for textiles, the fear is expressed that cotton consumption in the coming months may not be maintained at the estimated levels. Whether this fear will prove correct or not will, of course, depend on the U.S. Government's policy with regard to the disposal of surplus cotton and the final acreage for new crop.

An agreement has been reached between the U.S. and Pakistan, under which the former will sell to Pakistan $29.4 million worth of agricultural commodities. Of this $20.4 million will cover sales of raw cotton which Pakistan has been allowed to exchange with any country of its choice for cotton yarn and cloth.

The following are the latest available quotations from the New York market, as compared with those a week and fortnight before:

(In cents per lb.)

	22-3-55	15-3-55	8-3-55
Spot	34.20	34.35	34.10
May	33.61	33.65	33.48
July	33.89	33.93	33.68
October	33.91	34.15	33.94
December	34.02	34.28	34.07

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 23rd March

The sugar market presented a distinctly easy trend towards the close of the week under review. The easiness was due mainly to the release for sale in the free market of more than 100,000 tons of sugar, representing 50 per cent. of the production of all factories during the period 16th February to 7th March, 1955, announced by the Central Government yesterday. There were, besides, reports of heavy accumulations of sugar stocks—estimated at 70,000 tons—in Government godowns. Another unhelpful factor was the expectation of further imports of sugar. All these induced some selling and prices of sugar tended to look down.

In the spot section, large grain indigenous sugar was quoted at Rs. 92-103, as against Rs. 93-103 last week. Medium grain was quiet at Rs. 88-89. Among foreign sugars, British refined sugar receded by As. 4 to Rs. 83 per bag of 224 lbs. Czechoslovakian sugar was done at Rs. 85-88, as against Rs. 85½-88. German and Cuban varieties were unaltered at Rs. 82-4 and Rs. 91-12, respectively, per bag of 250 lbs. French sugar, however, met with special buying support and improved from Rs. 82½-82¾ to Rs. 83-84.

In the forward section, *Chaitra* delivery which had advanced from Rs. 84-4 to Rs. 84-12 early in the week fell to Rs. 84-7 today. Vizag delivery lost As. 8 to Rs. 84-4. The ex-mill quotations in the U.P. and Bombay-Deccan areas were a shade easy.

Arrivals of indigenous sugar into the Bombay market during the week under review amounted to 2,900 bags, as against 3,900 bags in the previous week.

Sugar millowners, it is reported, are greatly worried about the transport bottleneck, accumulations of stocks and consumer resistance to high prices of sugar, following the upward revision in excise duty. It appears that millers are now willing to share with consumers upto 50 per cent. of the increase in excise duty.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

COTTON YARN BEARISH

(From Our Own Correspondent)

BOMBAY, 23rd March

The cotton yarn market ruled bearish this week too on poor offtake in consuming centres and in sympathy with renewed weakness of raw cotton. There was pressure of sales of yarn by several upcountry and South Indian mills on reports that some spinning mills switched over from staple fibre to cotton. Even the reduction in excise duty on cloth, announced by the Union Finance Minister, failed to influence the market. Cotton yarn values, therefore, continued to march downwards. Yarns of 80 counts were the worst to suffer. Thus, Finlays dropped Rs. 2 to Rs. 70. Moderns fell by Re. 1-8 to Rs. 62. Among 60s, Raghuvamshis receded by As. 8 to Rs. 54. Finlays were quiet at Rs. 59, Srirams at Rs. 55-10 and Elphinstones at Rs. 51. Deals in 40 counts yarns were done at lower levels, Gokaks and Vasantas declining by As. 2 each to Rs. 24-10 and Rs. 24-4, respectively. Yarns of 20 counts, too, fetched lower prices. Centurys eased by As. 2 to Rs. 16-2. Seksarias lost an anna to Rs. 16-2. Among 10s, Moderns and Podars each decreased by an anna to Rs. 13-5. Among 30s, Maduras were neglected at Rs. 22 and Simplex at Rs. 21-4.

Thanks to absence of any inspiring influences, listless conditions prevailed in the rayon yarn market during the week under review. Turnover was greatly restricted and values moved irregularly. In the spot section, 120 Italy lost an anna to Rs. 4, while 150 Italy put on an anna to Rs. 3-13 and 120 Japan improved by half an anna to Rs. 3-12-6. As compared with ready goods, the quotations for 150A Daifuki bright Japanese yarn were lower to the extent of As. 6 per lb. abroad the incoming steamers. Rayon yarn (150D) for March contract, after advancing by Rs. 2 to Rs. 732 on Saturday, reacted to Rs. 730 on selling pressure.

Conditions in the staple fibre yarn section also were uninspiring. Owing to lack of demand, forward yarn suffered a decline. Staple fibre yarn (40×2) for March delivery drifted lower from Rs. 584 to Rs. 581-12. April contract eased by Rs. 3 to Rs. 585. Prices of spot yarns, however, tended to look up, due to reports that, owing to high prices of raw staple fibre, several South Indian mills were shifting to spinning of cotton yarns. Among 40×2 yarns, Hirjis picked up half an anna to Rs. 2-15. New Greats and Kohinoors finished three pies higher, the former at Rs. 3-1-3 and the latter at Rs. 3-5-9. Pankajas were fully maintained at Rs. 2-15 and Phoenix at Rs. 2-15. Among foreign yarns (40×2), Aurora hardened by an anna to Rs. 4. Suicos were steady at Rs. 4-3-6 and Fujis at Rs. 3-14.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	23-3-1955	16-3-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D.	730 0	730 0
120 Japan (per lb.)	3 12½	3 12
150 Japan (per lb.)	4 1	4 6
120 Italy (per lb.)	4 0	4 1
150 Italy (per lb.)	3 12	3 12
Staple fibre yarn—		
40×2 March	581 12	584 0
40×2 April	585 0	588 0
Bulco (per lb.)	4 8½	4 3½
New Great (per lb.)	3 1½	3 1
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 5	13 6
20s Seksaria	16 2	16 3
30s Madura	22 0	22 0
40s Gokak	24 10	24 12
60s Raghuvamshi	54 0	54 8
80s Finlay	70 0	72 0

OILSEEDS QUIET

(From Our Own Correspondent)

BOMBAY, 23rd March

The notable feature of the week under review was the announcement, on the 19th inst., by the Commerce and Industry Ministry of a further quota of groundnut oil for export by established shippers for shipment up to the end of June, 1955. It has also earmarked a quota for export by shippers. The details, however, are yet to be announced. Besides, the Ministry has decided to extend the period of shipment for export of groundnut oilcake (expeller variety) and deoiled groundnut meal (solvent extraction variety having less than 1 per cent. content) till 15th May. Neither this announcement nor the relatively better overseas enquiries had any appreciable effect on the market. This was presumably due to lack of shipping space and enlarged arrivals of oil and oilseeds. On balance, however, quotations were only a shade better with undertone remaining slightly steady.

Khandesh quality, which opened at Rs. 20-10, improved to Rs. 21-12 on the 20th inst. Thereafter, it declined to close at Rs. 21. Bold F.A.Q. gathered As. 2 to Rs. 20-10. April-May delivery was enquired at Rs. 20-10, as against Rs. 20-4 and June-July at Rs. 21-7, as compared with Rs. 21. Groundnut oil ready advanced by As. 5 to Rs. 11-7. April and May deliveries put on As. 7 to Rs. 11-4 each. On the Continent, groundnut oil was enquired at £94 as against £91.

There was good demand for H.P.S. groundnuts from the United States at 13¼c. per lb., as against 12¼c. per lb. last week. The U.K. is quoting £95 per ton. It is stated that U.S. has decided to import 51 million lbs. of H.P.S. groundnuts by the end of June.

The linseed section ruled slightly better in sympathy with groundnuts. Bold ready opened the week at Rs. 21, as against Rs. 20-12 at the end of last week. It improved to Rs. 21-14 on the 19th inst., but declined to close at Rs. 21. April-May delivery put on As. 2 to Rs. 20. Small Sutna was higher by As. 4 to Rs. 19-8. Linseed oil lost As. 2 to Rs. 12-5. Linseed oil was quoted in the Continent at £87, as against £88 last week.

The castorseed section was featureless. The continuation of free licensing of castor oil exports up to the end of June, 1955 failed to impress the market, beyond a mild rally staged immediately after the announcement last week. May delivery was enquired at Rs. 71 early in the week, as against Rs. 70-10 at close last week. It fluctuated between Rs. 71-14 and Rs. 70-8 and closed at the latter level. Among spots, Madras quality was done quiet at Rs. 13-12 and Kanpur at Rs. 12-12. Castoroil, Commercial, put on As. 2 to Rs. 8-14, while First Pressure lost As. 10 to Rs. 9-4. On the Continent, castor oil was quoted at £80, as against £82 last week, and in the U.S. at 9½c. per lb., the same as in last week.

Among others, *kardi* Bold gained As. 4 to Rs. 11-10, while *niger* Madras lost As. 4 to Rs. 17-8.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	22-3-1955	16-3-1955	8-3-1955
	Rs. a.	Rs. a.	Rs. a.

PEPPER LACKS SUPPORT

(Messrs. Parekh & Co.)

BOMBAY, 23rd March

New York having shown casual interest, Malabar black pepper continued to rule quiet throughout the week with minor fluctuations, an exception being a flutter for a day or two when sizable purchases were made by one of the important exporters against their sale to Russia. At the moment, New York appears to be meeting its requirements either from consignment stocks or from afloat, it having small inducement to buy shipment positions, as these are available at smaller discounts. It is understood that Russia has so far purchased a small quantity of about 400 tons. Russia, having sold a fair quantity of cotton to India, is reported to be in a comfortable position as far as its foreign exchange is concerned for purchasing Indian produce like pepper, cardamom, etc. It is possible that Russia may purchase a further quantity of Malabar pepper for autumn requirements in the near future.

Growers are trying to lift the prices, but for lack of continuous buying support from New York, they have so far not been able to push up the price beyond Rs. 1,000. The moment buyers withdraw, the price resiles to the previous low level of Rs. 950, and the growers then become more anxious to sell in view of the present heavy floating stock at the terminal markets. It is generally believed that unless either Russia or the U.S.A. puts in sizable orders within a month or two, the present prices cannot be maintained, as growers will become anxious to sell as much as possible before the monsoon on the coast sets in. Therefore, a heavy shake-out appears to be necessary to make the market healthy. Garbled at Cochin and ungarbled at Alleppey are fluctuating in a narrow groove. Garbled after touching Rs. 170 came down to Rs. 167-8, while ungarbled moved from Rs. 1,000 down to Rs. 975.

In the A.S.T.A. section, prices are quoted nominally, the turnover being next to nothing. Outside speculation is dying out, there being no new incentive for operation either way. The delivery section is deserted and no notable sale or purchase is reported throughout the week.

Following are today's nominal quotations:—Ready Rs. 120 (as against Rs. 120 a week ago) per Bengal maund. April Rs. 875-85 (Rs. 855-65) per candy of 5¼ cwts.

DEMAND FOR TEA EXTREMELY RESTRICTED

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 17th March

Just over 16,75,000 lbs. were on offer in sale No. 6 which was held on Tuesday, 15th March. Offerings continued to show a decline in quality and in some cases in leaf appearance. The sale opened to an extremely restricted demand with buyers only showing interest in better sorts and types suitable for internal consumption. Quotations for common and low medium descriptions are almost impossible to make as the quantity of these types sold was negligible. Prices, for those teas which sold, were irregularly As. 8 to As. 12 easier. There was a good demand for Orange Pekoes, but these reflected the lower price drop. There were very heavy withdrawals. The following are the quotations:—

	1955 Rs.	a.	p.	1954 Rs.	a.	p.
Low grown Travancore B.O.P.	2	4	6*	2	10	0
Medium Travancore B.O.P. ...	2	6	6*	2	12	0
Anaimallais B.O.P. ...	2	13	6	3	1	0
Best liquoring Nilgiri B.O.P. ...	3	6	0	4	7	0
Well made black leaf O.P. ...	2	13	0	2	11	0

*Nominal.

London Market—Sale of 14th March, 1955.—Two-thirds withdrawn without bids, remainder sold last rates.

Sale of 15th March, 1955.—Over 50 per cent. of sale withdrawn without a bid. Remainder sold at about last weeks rates.

Colombo Market.—Sellers reserved. Improved enquiry developed. Fully firm last week's rates, except stalk and better dimbula B.O.Ps.

Calcutta Market—Export.—16,000 packages Poor demand, except for black leaf B.O.P. and fannings and whole leaf grades, which were As. 3 to As. 4 easier. Others neglected. Price As. 6 to As. 8 down. Approximately 70 per cent. of sale withdrawn.

Dust.—20,000 packages. Fair general demand. Market generally As. 1 to As. 3 lower, except powdery good liquoring and C.T.C. types, which were strongest features of sale and sometimes dearer. Leaf 9,000 packages. Irregularly one to three annas easier. C.T.C. and good liquoring sorts firm to sometimes dearer.

Export Quota.—During the week, the market eased to As. 3 in Calcutta, but strong buyers appeared on the market and there are now buyers at 54 pies. The last date for transfer of 1954-55 export quota is 20th March. The Joint Controller's books will be closed for transfer of quota from that date until 1st April.

Forthcoming Auctions.—Sale No. 7 will be held on Tuesday, 29th March.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:

"Dust sale of 280,000 lbs. Good general demand. Prices irregularly one anna easier, except best liquoring, which were dearer. Milled dusts neglected."

NARROW MOVEMENTS IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 22nd March

Narrow price movements were in evidence in jute goods during the week under review. While hessians continued to be neglected, sacking goods met with some support. A livelliness in hessians would have to wait for the commencement of buying from the United States in greater quantities, and in this regard, market circles have noted with cheer the slight increase in burlap consumption in the United States during last month to 64.9 million yards from 61.8 million yards in January. An expansion of trade in both hessians and sackings is desirable, but, as pointed out by Mr. G. J. Gardner in his presidential address to the Indian Jute Mills Association last Thursday, an increase in the offtake by such highly developed countries like the United States must largely be for new uses. He was confident that the great emphasis industrial development is receiving all over the world would be followed by new uses for jute goods.

No indications have so far been available as to the buying programme of Argentina, but considering that it lifted a lower quantity last year, it is felt that the country would not have much stocks left with it and that the country would lift a moderate quantity of hessians during the coming months. The market is now awaiting indications from these two powerful buying sources of Indian hessians, and feels confident that the mills would have no problem of accumulation. So long, sacking goods have enjoyed a good market, and, during last year, shipments had increased to 430,000 tons from 324,000 tons. This trend has continued during the three months of this year, also, but Mr. Gardner feared that these heavy shipments would have contained a considerable element of restocking. On the other hand, it can also be said that during recent months sackings have found some new markets, and in this regard, China is one instance as a result of the conclusion of the Indo-Chinese trade agreement. Added to this factor, it should be remembered that foodgrains production in Asian countries has also increased and they have thus imported more bag. from India.

Supporting the above conclusion is the reference of Mr. Gardner to the planning or construction of jute mills in Egypt, Iraq, Iran, Burma, Thailand and the Philippines. All these show that consumption of jute goods is on the increase and, in this regard, the fall in prices of raw jute during the last two weeks, the increase in arrivals of raw jute from Pakistan, and the anxiety of stockists of Indian jute to dispose of their holdings before prices fall further, are all good signs in that Indian jute goods are bound to regain their competitive capacity in world markets. The present position is that the superior variety of East Bengal jute, i.e., jat, is available in plenty, and the much-feared shortage in raw jute can now be written off. From Rs. 36, Assam bottoms declined to Rs. 34-8 this week, and other latest quotations are given below with previous rates in parenthesis. It is to be feared, if this down-trend in jute prices would affect sowing, which would commence after some rains in the near future:—

	Middles Rs.		Bottoms Rs.	
Pakistani:

Pucca bales first marks ready ... Rs. 205 (215)

Ready 40" 10 oz. hessians opened at Rs. 45-9, and lost to Rs. 45, reflecting the dull conditions. Subsequently, a fractional improvement to Rs. 45-1 was recorded, but the week-end saw the rate sag to Rs. 44-15. If mills are to maintain the current level of production in hessian, it is apparent that offtake for export should improve, and this would depend upon any new use in the United States. By the end of this year, Pakistan would have entered in the export field with more confidence and more goods inasmuch as by that time it would have installed 6,750 looms and be producing 2 lakh tons of jute goods a year. This, according to Pakistan's Agricultural Minister, would leave her with 1.6 lakh tons worth Rs. 18 crores for export, after meeting internal requirements. Yesterday, the spot rate sagged further to Rs. 44-8 with the eight oz. being priced at Rs. 36-2.

In the heavy goods section, some business was done with Australia, and enquiries from other countries were also received earlier in the week. Ready B. twills declined to Rs. 128 from Rs. 129-4, and April-June offers to Rs. 126 from Rs. 127-8. On the emergence of some enquiries for export, the quotation for spot recovered to Rs. 129-6 but closed lower at Rs. 128-4 by the week-end. Conditions were noticeably easy today, and with no business being transacted the rate declined further to Rs. 127-10. April-June after moving to Rs. 125-12 gave way to Rs. 123. Foreign buyers put off entering into commitments, as they expected a further decline in prices in view of the raw jute stockists in India, who have mostly the inferior fibre fit for the production of heavy goods, being anxious for business.

DECCAN SUGAR AND ABKHARI CO., LTD.

CHAIRMAN'S SPEECH AT EXTRAORDINARY GENERAL MEETING

AN Extraordinary General Meeting of the Deccan Sugar and Abkhari Company, Ltd., was held in Madras on 18th March, 1955, to consider the Directors' proposals for sub-dividing the Company's preference and ordinary shares and for increasing the capital by the issue of new ordinary shares. Addressing the shareholders, Mr. S. G. H. Davis, Chairman of the Company, gave an up-to-date account of the present position of and prospects for the Company.

The following is the full text of Mr. Davis' speech:

"GENTLEMEN,

"Before asking you to vote on the resolutions before the meeting, I wish to give you an up-to-date report on the present position and prospects of the Company. Some shareholders have expressed the view that such a statement might well have been circulated with the notice convening the meeting, but as I proceed with my statement, you will appreciate how necessary it was to delay making a statement till this time, in view of the rapidly changing situation, particularly after the publication of the Taxation Enquiry Commission report and the Union Government's Finance Bill for 1955.

"I must first of all inform you that since the Board originally decided in November last to put these proposals before the shareholders there has been a material change in the Company's financial position and prospects. At Pugalur, the Company is more than half-way through the best season it has had since the D.S. & A. Company took over that factory. Not only is the Company engaged in crushing an economic quantity of cane but the quality of the cane is better than we have ever seen before. The consequential better recovery is one of the results following from the seed scheme undertaken by the Company two years ago, but its success has exceeded our best expectations. Up to the time of this meeting the recovery of sugar from cane at Pugalur is only just short of 11 per cent. and there is reason to hope that the overall recovery from the complete season which will extend until May, will be close to 10½ per cent. Shareholders will be able to gauge the measure of the improvement this represents when I remind them that the recovery for the last three cane seasons had been 8.2 per cent., 7.03 per cent. and 9.11 per cent.

"At Samalkot, unfortunately, although the Company is engaged in crushing as much cane as it can handle and expects a total of 75-80 thousand tons of cane, the quality of the cane is nothing like so good as that which we are accustomed to crush at this factory. The drop in quality is due to the severe drought which was experienced during the early months of the growth of the cane. The average recovery up to date is 8.9 per cent. and it is expected that the average recovery for the season will be between 8 per cent. and 8.5 per cent. which compares unfavourably with the average of the previous three seasons which was 8.59 per cent., 9.84 per cent. and 9.07 per cent.

Good Profit Expected

"It is now possible to estimate the financial results for the current year, although the profit that will finally appear in the account will depend on how much sugar Government release and how many wagons the railway provide. Nevertheless, I can tell shareholders that the Board is expecting such a good net profit that not only is the preference dividend assured but it is evident the Company will be able to pay a reasonable ordinary dividend. In view of the length of time the Deccan shareholders have had to wait for ordinary dividends, the Board has resolved to pay an interim dividend of 5 per cent. on the ordinary share capital to shareholders registered with the Company on the 26th of March. The share register will be closed from the 26th to the 31st of March, inclusive, and it is hoped to despatch dividend warrants to shareholders on the 31st of March.

"In consequence of the material improvement in the Company's financial position, the indebtedness of the Company to its Managing Agents has completely changed. At the time when the Board took its decision to raise new capital the Company owed its Managing Agents Rs. 21 lakhs. As already reported in the circular to shareholders dated 23rd February, this indebtedness had then been reduced at that date to Rs. 13 lakhs. I am glad to report that at the date of this meeting the Company does not owe anything whatsoever to its Managing Agents. While it is not unlikely that the Company may again call upon the Managing Agents for temporary financial assistance, the necessity for a permanent unsecured advance no longer exists. Hence the most urgent of the reasons for raising further capital no longer exists. The circular to shareholders stated that the additional capital was required not only to reduce the indebted position of the Company but also to enable the Company to engage in necessary capital expenditure, particularly at the Samalkot factory. It was the intention of the Board to take up this expenditure in the next off season, but since the issue of the circular convening this meeting there have been two major changes in the outlook for the sugar industry generally. The Finance Minister of the Government of India has announced an increase in the excise duty on sugar of Re. 1-14 per cwt. It cannot be assumed, in the present market conditions, this increase will be absorbed by the consumer of sugar. It is the view of your Board that, in present conditions, sugar companies and sugarcane growers, out of their SISMA bonus are likely to have to absorb the greater part, if not all, of this increase themselves, if they are to arrest the tendency which has already started for the buyers to switch over from white sugar to jaggery. Such a change would not only make it more difficult for the Company to secure adequate supplies of cane in competition with local jaggery manufacturers but would also affect the Company's return on white sugar.

Implied Threat of Nationalisation

"The report of the Taxation Enquiry Commission has also been published and includes a recommendation that Government should set up a special sub-committee to examine a proposal that sugar, along with other industries, might be made the subject of a fiscal monopoly. This is an implied threat of nationalisation and your Board has already taken steps, through the Indian Sugar Mills Association, to try and ascertain how seriously to regard it. Meantime, we do not feel it is wise to engage in substantial capital expenditure until Government's intentions over the proposal to create a fiscal monopoly are better known, and also the Company has gained more experience as to the effect of higher excise duty on sugar demand.

"I would like to draw shareholders' attention to the fact that in the notices convening this meeting no specific programme was laid down for the raising of additional capital—the resolutions were permissive but did not commit the Board or the Company to an immediate increase in the Company's Ordinary capital. The Board has accepted the need for the Company in normal circumstances to increase its ordinary capital and had decided that when the permission of shareholders was being sought, it would be desirable to take the opportunity of bringing the voting rights of the various shareholders more into conformity with the spirit of the Companies Bill. Criticisms which have reached the Board over its proposal to offer any more additional capital, if issued, to holders of the preference capital ignore the fact that the preference shareholders are entitled to claim a proper share in any new issue under the existing law. Apart from this, in the context of existing voting rights, the Board is justified in equity to make this offer to the preference shareholders also.

"After giving shareholders an opportunity of asking questions, I intend to ask shareholders to adopt the resolutions before the meeting, but on the understanding that there is no present intention of the Board to issue any additional capital for the reasons I have already given and that adequate notice will be given before making any issue in future."

MARKET REPORTS

(Concluded from page 593)

METALS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 22nd March

The metal market put on a cheerful appearance during the week under report, and although consumers were desirous to make purchases adequate to meet day-to-day requirements only, prices generally looked up. An indication of the present tightness in copper supplies is the Government of India's announcement adding copper base alloys to the list of items prohibited for export, which already include copper ingots. From Rs. 235, electrolytic copper went up to Rs. 250 this week, and manufacturers of products containing copper were reluctant to enter into further business in view of the uncertainty in price. How far Indian requirements for copper can be fully met in the coming months remains to be seen. Some business was done in scrap for conversion to ingots. Mercury was quiet, and moved down to Rs. 1,215 from Rs. 1,220 a flask. Indian stockists were not much bothered about the declining trend in the United States in view of consumer resistance, as stocks in India are no longer plentiful. Closely following the trend in Singapore, tin hardened from Rs. 470 to Rs. 483. Some small business was transacted. Electrolytic zinc was priced at Rs. 61, and the plentiful stocks in the market especially in the hands of weaker elements are holding prices at a low ebb. Lead was steady at Rs. 71-8.

TEAS EASY

(From Our Own Correspondent)

CALCUTTA, 22nd March

There was less demand during the export tea sales yesterday, when offerings totalled 11,200 chests, mostly of stalky types. A few invoices of clean black tea were also listed. There was no competition from shippers, but buyers bought on account of internal consumption. Fannings were quiet, but commons and commonest teas were supported at dearer rates. Whole leaf grades were steady, and buyers favoured teas having black leaf. All other offerings were easy by an anna to two annas and there were heavy withdrawals. There was good demand for export quotas, and the price rose to As. 4½ a lb. from As. 3 a week ago.

Dusts offered during last week's auctions for internal consumption amounted to 20,403 packages. Prices were easy, although there was a fair general demand. Dooars and commons were lower by As. 2, as also the grainy Assam teas, excepting the powdery ones which were fractionally better. Darjeelings were fully easy by As. 4 and withdrawals were heavy. In contrast with the general trend, C.T.C. Assams of good quality were dearer by one anna, but the fibrous teas among C.T.C. Assams were lower by one anna. Grainy Assam teas gave way by As. 2, but the smaller powdery teas were steady. The rates were: Best C.T.C. Assam Rs. 3-4 to Rs. 3-5, Medium Assam grainy dust Rs. 2-8, and Medium Dooars Rs. 2-6-6 to Rs. 2-7.

Offerings of leaf comprised 9,573 packages, mostly of end-of-season teas. There was fair demand, and C.T.C. teas were in good form and they were higher by an anna. The poorer stalky teas were sold above brokers' valuations. Teas having black appearance were steady at the beginning of the sale, but eased before closure.

ZAGREB SPRING FAIR

The Zagreb Spring Fair which was scheduled to take place at Zagreb, Yugoslavia, from 25th March to 3rd April, 1955, has been postponed on account of inclement weather. The Fair will now be held from 8th to 17th April, 1955. It will provide an idea of the vast potential of Yugoslav industry and trade. With a view to enabling the maximum number to visit the Fair, the Yugoslav Government has sanctioned special reductions in fares on both railways and shipping lines.

IMPLICATIONS OF REVISED G.A.T.T. RULES TO INDIA

(Concluded from page 557)

will mean not merely the setting up of new industries but also the establishment of a new branch of production in an existing industry, the substantial transformation of an existing industry, or the substantial expansion of an existing industry supplying a relatively small proportion of the domestic demand. Even if the concurrence of the G.A.T.T. to the adoption of such measures is not forthcoming, the country concerned would still, under the revised G.A.T.T., be able to apply those measures, though in that event any country whose trade has been adversely affected could withdraw or suspend an equivalent concession under the G.A.T.T. towards the country adopting the measure.

To this general approach, there is one exception. When the item in question is one on which the tariff has been bound by negotiations under the G.A.T.T., it would be unfair to nullify the value of the tariff concession by restricting the volume of imports otherwise than on balance of payments grounds. Therefore, in cases of this kind, the country concerned can apply the measures only if it obtains the agreement of the countries interested in that tariff concession or, failing such agreement, by going through procedures similar to those relating to withdrawal of tariff concessions.

As stated earlier, these and other amendments are now under the consideration of the Government of India. The Government is also examining the draft articles of the Organisation for Trade Co-operation the establishment of which has been proposed in order to administer the General Agreement on Tariff and Trade on a more formal and permanent basis, as also to serve as an Inter-Governmental forum for the discussion and solution of other questions relating to international trade.

The respective protocols are now open for signature in Geneva and will remain so till the beginning of the next session of the G.A.T.T. in October next.

**Those share carry the right of a preferential dividend at the rate of 8 per cent. (of which only 3 per cent. cumulative) per annum. In the event of a winding up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. out of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these share carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 3 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

¶These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

††† These shares can be redeemed, at Rs. 105 any time by special resolution.

‡ Holders are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital additionally guaranteed by GoI. — Rubber Co., Ltd

ABBREVIATIONS.

A—Held by Government of India. B—Taken up by Imperial Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable (f) Income-tax free. * Loans held entirely by the Trustees. **Quotations in Pak. Currency. ***Rupee Counterparts.

† Bombay State Transport. †† Rate of interest reduced from 6 to 5 per cent. with effect from 1st June, 1944.

‡ Rate of interest reduced from 6½ to 4 per cent. with effect from 1st April, 1955. ‡—Interest free for first 12 years. §—Interest free for first [illegible] years.

N—Nominal.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and all other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which claim their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

REVISION OF G.A.T.T. REGULATIONS

QUANTITATIVE RESTRICTIONS ON IMPORTS PERMITTED IN SPECIAL CASES

AFTER deliberating for nearly four months, the 34 Contracting Parties to the General Agreement on Tariffs and Trade—the G.A.T.T.—concluded their ninth session at Geneva on the 7th of this month. The session, *it is claimed*, was the most important in the history of the G.A.T.T., for it was at this session that the Parties completed a comprehensive review of the Agreement in the light of experience over seven years. Besides such a review, the Parties reaffirmed the basic objectives of the Agreement, drew up a renewed undertaking to prolong the firm validity of the tariffs bound under the Agreement, *laid down* suitable procedures for dealing with the problems of countries in early stages of economic development, and envisaged the establishment of a permanent organisation, known as the Organisation for Trade Co-operation, to administer the Agreement and supersede the present informal operational structure. The main results of the review of Agreement undertaken at the Geneva session are, according to a *Press note* issued by the Secretariat of the G.A.T.T. as follows.

Tariffs

By providing for the assured life of negotiated rates of duty, the General Agreement has given stability to tariff levels for a large proportion of world trade. It was agreed to recommend to the Governments of the Contracting Parties the continuance of this stability by prolonging from 1st July, 1955 to 31st December, 1957, the assured life of the tariff schedules, and a declaration to this *effect* has been drawn up and opened for signature. A new principle has been introduced into the revision of the Agreement which would permit the automatic extension of the assured life of the tariff schedules in the future, by periods of three years, with provisions to enable Contracting Parties to seek authority to renegotiate during the bound period bound rates of duty if they find they must modify or withdraw some of them.

A new article dealing with tariff negotiations *sponsored* by the Contracting Parties has been included in the proposed amendments to the Agreement. The article imposes no new obligations on contracting parties. Each party retains the right to decide whether or not to engage in negotiations *or to participate in a tariff conference*. The purpose of the Article is to recognise the value of tariff negotiations directed to "the substantial reduction of the general level of tariffs and other charges on imports and exports, and, in particular, *the reduction of such high tariffs as discourage the* importation even of minimum quantities." The article states the principle that, in tariff negotia*tions, the binding against increase of low duties or* duty-free treatment shall be recognised as a concession equivalent in value to the reduction of high duties.

The Contracting Parties have also set up a *special working party to study generally the possi*bilities for and methods of future tariff reduction and to recommend the convening of a tariff conference, when it is felt that progress in that field is possible.

Quantitative Restrictions

No change has been proposed in the basic principle of the Agreement that Contracting Parties which maintain quantitative restrictions for balance of payments reasons have to eliminate them as soon as they cease to be justified for balance of payments reasons. But, in order to make this principle more *effective* in practice, particularly in order to adapt it to a period when the major currencies may become convertible, it is proposed that, soon after entry into force of the amendments, the Organisation will review all quantitative restrictions still maintained for balance of payments reasons. Thereafter, a system of annual consultations with Contracting Parties still applying restric*tions of this type* would come into effect and these countries would be required to justify each year the restrictions still being maintained.

In association with the proposed system of tighter control on the use of quantitative restric*tions for balance of payments reasons*, the Contracting Parties have taken a decision, with immediate effect, to assist in resolving the problems faced by Contracting Parties in eliminating the so-called "hard-core" of their import restrictions. These are restrictions whose elimination removal, when no longer justified for balance of payments reasons, would result in a serious injury to a domestic industry or branch of agriculture, to which they have afforded protection. The decision provides that the *applicant* party would expect to receive sympathetic consideration for its request for a temporary waiver from the obligation to eliminate quantitative restrictions. The Contracting Parties will grant the waiver subject to such conditions and *limitations as they determine* to be reasonable and necessary and the obligation is laid on the applicant to eliminate the quantitative restrictions in question over a comparatively short period of time, not exceeding five years. The application of these "*hard-core*" restrictions and the progress made towards eliminating them will be reviewed by the Contracting Parties annually.

In connection with the review of quantitative restrictions, the Contracting Parties, by a separate *decision*, dealt with the conflict which may occasionally arise between action required under U.S. legislation and the provisions of the Agreement dealing with quantitative restrictions and additional charges on imports. The Contracting Parties adopted a decision, effective forthwith, which recognises the difficulties arising from the terms of Section 22 of the U.S. Agricultural Adjustment Act, permits the U.S. to apply measures *under this legislation*, but, at the same time, *pre*serves the right of a Contracting Party whose trade is damaged by import restrictions or additional charges imposed under that Act to have recourse to the procedures of the Agreement for adjusting the balance through negotiation or otherwise. The Contracting Parties will review annually action taken by the United States under this legislation, and the U.S. Government has given assurances that, before taking any new action, it will consult with substantially interested countries and will *terminate* any restriction imposed under the legislation as soon as it is no longer required.

Assistance for Economic Development

The need to encourage and facilitate the development of the economies of countries which can only support low standards of living and are in the early stages of development is consistent with the long-term objectives of the General Agreement, and steps have been taken in the revision to reduce to a minimum the conflict which may arise between the requirements of economic development and the short-term commercial interests of the other countries. Under the new provisions, it has been recognised that Contracting Parties in the early stages of development should enjoy additional facilities to enable them (*a*) to maintain sufficient flexibility in their tariff structure to be able to grant the tariff protection required for the establishment of particular industries and (*b*) to apply quantitative restrictions on imports, to protect their balance of payments in a manner which takes full account of the continued high level of demand for imports likely to be generated by their programmes of economic development.

Procedures have been worked out by which a country, in an early stage of development, may enter into tariff negotiations with a view to modifying concessions that is bound under the Agreement, in order to promote the establishment of an industry. If agreement is not reached between the country *concerned* and other interested countries, the matter may be referred to the Contracting Parties. The Contracting Parties may allow the applicant contracting party to modify or withdraw concessions, if they find that the compensation offered is inadequate. In addition, procedures are established under which, in cases where no measure of commercial policy consistent with the General Agreement, such as tariffs or subsidies, would be practicable to protect a new industry in a country in the early stages of development during the first years of production, that country would be able to apply non-discriminatory restrictions on imports for such a transitional period.

The most significant change from the existing provisions of the Agreement would be that which would enable the country concerned to restrict, without the prior approval of the Contracting Parties, the importation of a commodity when the rate of duty on that commodity is not bound under the Agreement. In such a case, however, any other Contracting Party which is injured may withdraw substantially equivalent concessions granted under the Agreement.

In connection with these proposals for assistance for *economic development and in view of the* special responsibilities of the U.K. towards its colonies, the Contracting Parties, by a separate decision, extended to the U.K. the right, effective immediately, to give special assistance to its colonial territories which depend largely on the U.K. market, through actions which would otherwise have been inconsistent with the provisions of the Agreement. These rights will apply only in cases where the industry or branch of agriculture of the colonial territory would be benefited, but not industry or *agriculture in the U.K.* or any other country. The U.K. will report annually to the Contracting Parties on any such measures adopted.

In the course of their consideration of problems in the field of economic development, the Contracting Parties also adopted a resolution recognising that an increased flow of capital into countries in need for investment from abroad and, in particular, into underdeveloped countries would facilitate the objectives of the General Agreement by stimulating economic development of these countries, *whilst, at the same time* rendering it less necessary for them to resort to import restrictions. They recommended that Contracting Parties who are in a position to provide capital for international investment and Contracting Parties who desire to obtain such capital should use their best endeavours to create conditions calculated to stimulate the international flow of capital, having regard, in particular, to the importance of providing by appropriate methods for security for existing and future investment, the avoidance of double taxation, and facilities for the transfer of earnings upon foreign investments.

Subsidies

Provisions, additional to those already in the Agreement are proposed in order to limit the harmful effect of export subsidies. In the field of primary products, the Contracting Parties would be under an obligation not to use subsidies which increase exports so as to obtain for themselves more than a fair share of world trade. In the field of non-primary products, no new or increased export subsidies *would be permitted*. The Contracting Parties agreed that there should be a re-examination to determine before the end of January, 1957 whether existing export subsidies on non-primary commodities can be abolished or whether the maintenance of the standstill should be extended for a further period.

In connection with the consideration of export subsidies, the Contracting Parties formulated additional provisions concerning the use of anti-dumping and countervailing measures by importing countries.

Problems of Commodity Trade

The Contracting Parties adopted a resolution providing that, if a Contracting Party decides to liquidate any agricultural surpluses, it should do so in such a way as to avoid unduly provoking disturbances on the world market that would adversely affect other member countries. They recommended "that, when arranging the disposal of surplus agricultural products in world trade, Contracting Parties should undertake a procedure of consultation with the principal suppliers of those products and other interested Contracting Parties which would contribute to the orderly liquidation of such surpluses, including, where practicable, disposals designed to expand consumption of the products, and to the avoidance of prejudice to the interests of other Contracting Parties, and that they give *sympathetic* consideration to the views expressed by other Contracting Parties in the course of such consultations."

The Contracting Parties also recommended that, whenever practicable, any contracting party *intending to liquidate a substantial quantity of* strategic stocks of primary commodities should give advance notice and should consult fully with any contracting party which considers itself substantially interested and requests such consultations.

The amended Agreement would also include a new provision that would enable a contracting party whose economy depends on the export of a small number of primary commodities to consult with the Organisation on measures taken by another country which seriously affected that contracting party's exports of the commodities in question.

In the course of the Contracting Parties established a *working party to consider* a proposal for a convention which might govern international action on problems arising in the field of international trade in primary commodities. The working party, acting in the capacity of an expert group, concluded that *it could not put its* recommendations into final form until the interested Governments had studied its preliminary views. It was, therefore, decided that the working party will meet again in the summer of 1955 after receiving the views of Governments.

The Organisation for Trade Co-operation

The Contracting Parties have drawn up an Agreement which, when it comes into force, will establish the Organisation for Trade Co-operation. The Agreement contains the basic provisions relating to the structure and functions of the Organisation. There would be an Assembly, an Executive Committee and a secretariat headed by a Director-General. The main function of the Organisation would be to administer the General Agreement. In addition, the Organisation would be able to sponsor international trade negotiations and to serve as an inter-governmental forum for the discussion and solution of other questions relating to international trade. The Agreement will enter into force, among the Governments that have accepted it, after it has been accepted by Governments whose territories account for 85 per cent. of the total external trade of the territories of the Governments which comprise the Contracting Parties.

G.A.T.T. SURVIVES

IF international trade is a *two-way* business, so is *international* co-operation. No such co-operation will be feasible if the spirit of give and take does not prevail among the participating nations and if attempts are made to seek a *solution on doctrinaire* lines. Every nation must try to see the difficulties of the other and endeavour to meet them constructively. The delegates of 34 countries, which are signatories to the General Agreement on Tariffs and Trade —the G.A.T.T. for short—seem to have been fully alive to this prerequisite for the success of international co-operation. The result is that the G.A.T.T., which was described to be in the melting pot even by responsible ministers of some Governments, has emerged stronger than it was before the four-month-old negotiations started in November last. It is true that several relaxations have been made in the G.A.T.T. rules and some more concessions have been given to underdeveloped countries but the G.A.T.T. is none the worse for it. Cynics may say that the G.A.T.T. of today is a far cry from the International Trade Organisation (I.T.O.) envisaged in the Havana Charter of 1948. True as this charge is, to some extent, the fact remains that the world in which we live today is so imperfect that it is not practicable to evolve an international trade structure of great logical consistence and durability. The I.T.O. envisaged so large a measure of interference with national policies that it came to be strongly opposed even by those very nations which took the initiative for its promotion. Hence it was still-born. What good does it avail to harp on impossible ideals? If the deliberations in Geneva lasting for four months have demonstrated something, it is that reform of what are regarded as undesirable or unsound economic practices is a slow process and cannot be achieved overnight.

The strength of an international agreement does not lie in rigidity but adaptability to changing circumstances and to the varying needs of its signatories. Viewed thus, it will be recognised that the G.A.T.T. has been revitalised. The waivers given to a number of countries may suggest that the provisions of the G.A.T.T. have been watered down, but, really speaking, the concessions have strengthened the G.A.T.T., in that they have won the firm allegiance of certain countries the support of which was lukewarm. In any case, the concessions that have been extended are unlikely to deter progress towards the realisation of the objectives of the G.A.T.T., namely, (a) to eliminate discrimination of all kinds in international trade, (b) to provide a code of fair trading rules to be observed by each country in its trade with others, and (c) to reduce, *as far as possible*, the barriers to international trade (italics ours).

The success of Geneva Conference will be appreciated better if the temper in which the leading countries went to the Conference is borne in mind. Britain wanted the provisions relating to quantitative restrictions and subsidies to be tightened, as it felt that it could not embark upon convertibility if countries were free to make use of these restrictions. The U.S. literally refused to give up its right to use import quotas for certain agricultural commodities or to modify its farm price-support policy, including payment of subsidies on export of agricultural surpluses. The low tariff countries in Western Europe, too, desired freedom to protect some of their farm produce and food industries through import restrictions. The underdeveloped countries like India threatened to quit the G.A.T.T., unless they were given special treatment in regard to the use of quantitative restrictions. These attitudes showed that the G.A.T.T. was not likely to survive. Fortunately, better sense prevailed among the delegates and a workable compromise satisfactory to all has emerged.

The Geneva Conference was concerned with two questions. One related to the future of tariff agreements that had been concluded at the Torquay Conference in 1950-51 and subsequent negotiations. These duties are bound until 1st July, 1955. The other related to the review of the entire structure of G.A.T.T. Both the questions have been successfully tackled. The present schedule of agreed tariffs is to be continued for a period of 2½ years, that is, from 1st July, 1955, to 31st December, 1957. Besides, a new principle has been introduced, whereby the assured life of the tariff schedules will be automatically extended by periods of three years. There is, however, provision for enabling the Contracting Parties to seek authority to renegotiate during the bound period agreed rates of duty, if they feel the need for modification or withdrawal. In order to facilitate such renegotiations and to study generally the possibilities for and methods of future tariff reduction, a special working party has also been set up. The value of this understanding lies in the fact that the tariff levels for a large proportion of world trade will remain stable, that the periodical prolonged negotiations for entering into fresh schedules of tariffs will not be necessary and that a ready machinery will exist for facilitating re-negotiations when found absolutely necessary.

The review of the structure of the G.A.T.T. has led to no change in the basic principles. On the vital issues of quantitative restrictions and subsidies, certain relaxations have been permitted, subject to periodical review, by the G.A.T.T. authorities, and limited, in most cases, to a transitional period extending upto the end of 1962. A special chapter has been provided for underdeveloped countries, defined as countries of low living standards and in early stages of development. The conditions under which these countries can raise tariffs and impose quantitative restrictions are more liberal than in the case of developed countries. The readiness with which the latter countries agreed to accommodate the needs of their less developed confreres reflects their sympathy for, and anxiety to help, them. It is noteworthy that most of the concessions given to developed countries are in regard to agricultural commodities or to some peculiar features of their economy. It has always been recognised that agricultural commodities deserve special treatment. The great manufacturing countries are anxious to safeguard the supply of raw materials for their industries. Some of them are keen on ensuring a certain amount of self-reliance in regard to supply of food and food products. These are normal desires and cannot be seriously objected to.

The U.S., for instance, wants to place import restrictions on certain varieties of cotton, in order to protect its domestic cotton. It has been accustomed to provide a large measure of assistance to agriculturists who form the backbone of the nation. It cannot be asked to give up this policy overnight, but it can modify that policy over a period which it is trying and has, indeed, undertaken to do. Certain West European countries want to protect their food production through import restrictions, even though their balance of payments position may be quite comfortable. Similarly, Britain has to extend special treatment to some of its Colonies which are dependent upon it for marketing their production. Some of its industries are facing severe competition from non-Commonwealth countries, because of the condition that it cannot discriminate between Commonwealth and non-Commonwealth countries through tariffs except to the extent of 10 per cent.—an obligation entered into years ago. It feels that, unless it is released from this obligation, its position will become very difficult. The Geneva Conference recognised all these hardships and agreed to a number of waivers to the countries concerned for overcoming them. Another important relaxation relates to the so-called "hard-core" restrictions, designed to protect those industries which would suffer a serious setback if import controls were suddenly removed. Under this facility, the U.K., for instance, can continue to protect its jute industry through quantitative restrictions, even though its balance of payments position may not warrant such controls. But all these facilities are for only limited periods and subject to review by the Contracting Parties. Moreover, they will not have any material adverse effect on world trade, but they mean much to the individual countries. If, however, on a review, the verdict of the majority of members were to go against the continuance of any of these waivers, it would have to be withdrawn. In other words, the important point here is that, so long as the police powers conferred on the G.A.T.T. are properly used by it, the new Agreement would contribute to freer and smoother international trade. Whether or not the police force will be efficient and effective will, however, depend upon the members' honesty of purpose and determination to honour their commitments.

As against the aforesaid waivers, certain new obligations have been imposed on the members in regard to subsidies, disposal of surplus commodities and strategic stockpiles, and sudden import restrictions on primary commodities, the fortunes of which greatly influence the economy of a Contracting Party. Any member who feels aggrieved as a result of measures taken by a Contracting Party in this connection can com-

plain to the G.A.T.T. and ask for relief. These are thus valuable provisions for preventing sudden upsets to world trade. From India's point of view, almost all the objections voiced by an influential section of the mercantile community have been met. Under the revised Agreement, India has complete freedom for using the quantitative restrictions for both balance of payments and protective purposes. The Contracting Parties have also agreed to take appropriate measures for stimulating the flow of capital from the developed to the underdeveloped areas. India, therefore, has everything to gain by accepting the revised Agreement.

THE NEXT PLAN

THE private sector in India has often been exhorted by Government spokesmen to lend its responsive, constructive co-operation in the task of national reconstruction, and not to be content with the performance of the negative (however essential) service of subjecting Governmental policies to a critical analysis. The private sector has taken the Government at its word. It has now produced a plan. When we say this, we have in mind the Federation of Indian Chambers of Commerce and Industry's draft outline of the second Five-year Plan published this week. This draft Plan is a commendable effort in constructive thinking on the country's economic problems. It is also notable for the reason that the private sector can think both for itself and for the public sector, because the Plan is a composite one in that it embraces both the sectors.

It, of course, lacks the wealth of statistical details and that close analysis which might be expected of a blue-book and which characterised the first Five-year Plan. But it is, on that account, no less interesting and useful as a guide to national economic policy. On the contrary, the attempt is worthy of high praise, if only because the Federation, despite the fact that it has less equipment and possesses less access to basic data, has been able to present a comprehensive Plan for the next five-year period. In the past, too, the private sector has given ample evidence of its ability to think boldly and well on economic problems. The Bombay Plan, which was something of an inspiration to official planning, was the outcome of the private sector's effort at economic planning. Perhaps, the Federation's present draft will be no less useful. At any rate, the private sector cannot be accused of lacking in courage or imagination.

The authors of the Federation's Plan recognise that the second Five-year Plan must be built on the foundations laid by the first Plan. It is no adverse comment on the first Plan when they observe that it "only touched the fringe of our economic problem." Government spokesmen themselves have often admitted as much. The Federation too recognises that, in the context of the problems arising from the Second World War, the Partition, the Korean war and a host of other developments, it would have been impossible for the authors of the first Plan to set more than the modest targets they did. But Indian economy, thanks in part to the Plan and in part to the good monsoons, has "now acquired added strength and stability which augurs well for the future." Encouraged by this factor, the Federation has chosen to make a more ambitious attempt than was possible for the Government at the time of the first Plan at solving the country's economic problem.

The two objectives, which the Federation has set before itself, are the raising of the living standards of the people and the creation of productive employment on a significantly large-scale. The second Plan, it is held, must envisage an increase in the *per capita* income from Rs. 246 in 1950-51 and about Rs. 262 anticipated at the end of the first Plan (in 1955-56) to Rs. 320 by 1960-61. This represents an increase of about 33 per cent. over the 1950-51 level and of a little over 25 per cent. over the 1955-56 level. The increase in the *per capita* income, it is expected, will be accompanied by an increase in the consumption of essential articles. A *per capita* minimum consumption of about 22 yards of cotton textiles, for instance, is aimed at, as against the present 15 yards. As regards employment, the aim should be to provide new avenues of employment at a rate fast enough to absorb the increase in the employable group. The present rate of increase in population is about 4½ millions and, assuming that the working population is about 40 per cent. of this increase, the number seeking employment is about 1.8 million every year. The Plan should, therefore, aim at the creation of about 10 million non-agricultural jobs over the next five years.

The first Five-year Plan is aptly described by the Federation as an "Irrigation and Power" Plan, for its emphasis, as is well known, was on agriculture and power supply. This emphasis was obviously dictated by the food crisis which dominated this primarily agricultural country at the time the Plan was drawn up. Irrigation and power projects absorbed 38.5 per cent. of the total outlay of Rs. 2,069 crores, as against the 8.4 per cent. share for industry. The second Plan, it is rightly urged, should be an "Industries and Transport" Plan. It is on the manufacturing industry that emphasis should be laid, because it will help provide not only direct employment but also employment in transport, commerce, banking, insurance and other professions. For every one person engaged in industry there are some 7 or 8 others who find employment on account of the growth of industry. Further, industry makes possible higher earnings to the persons it employs directly or indirectly than would be available in occupations which use inferior techniques or little capital. Accordingly, industry takes the pride of place in the Federation's draft Plan.

The expenditure programme over the five-year period is as follows:

Industry Rs. 2,000 crores; railways Rs. 1,250 crores; roads Rs. 400 crores; road transport Rs. 100 crores; ports, harbours and inland navigation Rs. 100 crores; shipping and civil aviation Rs. 90 crores; communications Rs. 135 crores; power Rs. 400 crores, irrigation and agriculture (including rural, small-scale and cottage industries) Rs. 1,200 crores; social services and housing Rs. 1,550 crores; small-scale industries (urban) Rs. 250 crores—Total Rs. 7,475 crores.

(The total amount of development expenditure is thus about Rs. 7,500 crores. Since it includes about Rs. 300 crores, being the outlay on replacement in industry and transport, the net investment to be financed from internal and external resources will be of the order of Rs. 7,200 crores.)

The Plan, as the break-up of the total expenditure given above shows, lays considerable emphasis on industry. Another notable point is that it lays relatively greater emphasis on heavy industries. It envisages rapid expansion of machinery manufacture, metallurgical industries and mechanical and electrical engineering industries. The production of steel by the end of the Plan, it is stated, for instance, should be at least 5 million tons and installed capacity, including that under installation, should be about 7½ million tons. The Rs. 2,000 crores outlay on industries includes Rs. 440 crores for steel, Rs. 50 crores for machine tools, Rs. 77 crores for fertilisers, Rs. 42 crores for paper, Rs. 50 crores for cement, Rs. 100 crores for petroleum, Rs. 160 crores for cotton textiles, Rs. 53 crores for rayon, and Rs. 25 crores each for sugar and vegetable oils. As a result of the progress that will be achieved through these large investments in industry, it is expected that the general index of industrial production (Base: 1946=100) will go up from 144 at present to 325 in 1960. It is further expected that the contribution of factory establishments to national income will move up from the present level of about 6 per cent. to 10 per cent. by 1960.

Next to industry, the railways will absorb the single largest share. The development of railways envisages an increase in carrying capacity by laying down new tracks and by increasing marshalling yard facilities and stock and equipment in the railways. For roads, the aim is to step up the target for national highways from 12,500 miles in 1955-56 to 20,000 miles by 1960-61 and of State highways from 20,600 miles in 1955-56 to 40,600 miles by 1960-61. As regards shipping, the aim is to double before 1961 the target of 600,000 G.R.T. to be reached before the end of the first Plan. Expansion of post offices, telephones, telegraphs and broadcasting stations on a considerable scale is also envisaged.

As regards power, the aim is to add 2 million kw. over the 1955-56 level of 2.68 million kw. In agriculture, the aim is stated to be the increase in the availability of cereals to 16 ozs. *per capita* and in the availability of protective foods such as milk and vegetables. Again, the long-term objective should be to alter the crop pattern. Now, food crops account for about 78 per cent. of the area under cultivation and commercial crops for 22 per cent. The aim should be to increase the per-acre yield and to change the crop pattern so as to make more area available for commercial crops. In the case of cotton, the target of production should be raised from 4.2 million bales in 1955-56 to 6.5 million bales by 1960-61, so as to provide adequate raw material for the expansion in the textile industry. A 30 per cent. increase in sugarcane and also in oilseeds production is envisaged by the planners. The total allocation for agriculture, community development, irrigation and village industries is Rs. 1,200 crores, that is, Rs. 240 crores per annum. This is higher than the corresponding figure of Rs. 150 crores per year in the first Plan. It will thus be seen that, though the Federation's emphasis in the second Plan is on industries and transport, agriculture is not neglected.

The resources budget for the Federation's second Plan is based on the assumption that there will be a progressive increase in national income and, further, that it will be possible to devote, year after year, progressively larger share of the increase to development. By 1960-61, the level of national income is expected to be about Rs. 13,300 crores (at 1948-49 prices), as against the anticipated Rs. 10,000 crores by 1955-56, and, during the period of the second Plan, capital formation is estimated to rise by about 25 to 30 per cent. of the additional income each year. The internal resources thus generated by the process of development would give a total of domestic resources of about Rs. 6,200 crores. Domestic resources available through voluntary savings, public as well as private, will have to be supplemented by Rs. 1,000 crores of external assistance and/or deficit finance. Taking into account the shortfall in the resources in the first Plan and the subsequent additions to the outlay on the Plan, the Federation places the probable uncovered deficit in the Plan at Rs. 975 crores. Since the entire Plan may not be implemented, the actual deficit, it is estimated, will be of the order of Rs. 650 to Rs. 700 crores only. So even the first Plan will have to rely on credit money. But the Federation feels that "it seems unlikely that this resort to deficit financing will have any unfavourable effects on the economy." Explaining the scope and limitation of the use of deficit finance, the Federation observes:

"In fact, it would seem that the really relevant question at present is not whether deficit financing can or should be used as an instrument for development, but the extent to which it can be used. This will depend upon a num- of factors, such as the scale on which investment outlay is deficit financed and the purpose for which deficits are used, the extent to which the additional incomes created by the outlay are mopped up and returned to the Exchequer, the effectiveness of the investment undertaken in bringing about an increased flow of consumable output and the period taken for this flow to emerge, the behaviour of money wages in response to such initial rise in prices as may be there, and the success of the measures undertaken to prevent significant rise in the prices of basic necessities during the investment period. Besides these, the scale on which one can rely on deficit finance will be governed by the effect it has on the demand for imports and the volume of exports, that is, on the balance of payments position in the country."

The striking features of the Federation's Plan outlined above are the magnitude of the investment envisaged and the boldness of its approach. Appropriately enough, the Plan envisages allotment of a substantial part of the total outlay to the public sector. Since the public sector deals with such basic needs of a developing economy as irrigation, power and transport, and communal services like public health and education, it is only reasonable to plan for a larger expenditure in the public sector. Finally, a notable feature of the Plan is that its authors realise, as the quoted passage above shows, the need for caution in the use of deficit finance. Frequently, the men engaged in the private sector are criticised for being inflation-minded. Clearly, the authors of the Plan cannot be made the target of this criticism. Despite these commendable features of the Plan, it may be wondered whether the resources, on the scale envisaged, will become available for investment. If this expectation, on which the Plan is based, were to be proved wrong by events, do the authors envisage higher taxation? If they do, what becomes of the insistent demand for tax reliefs? To be more precise, what level of taxation do they expect to prevail during the Plan period, a level which would take into account the need for incentive and that for finance required to implement the Plan? Presumably, the authors have not raised these questions, because they were mainly engrossed in the task of drawing the outline of the Plan, rather than in filling in all the details. But they will have to explain the resources aspect in greater detail, if their Plan is to carry conviction with the Government and the public.

TIRED BULL LIQUIDATION IN SHARES

CONSTITUTION AMENDMENT DISTURBS BUSINESS MEN

WEDNESDAY, 5 P.M.

A SLIGHT fall in equities has taken place since last week. With the current fortnightly settlement drawing to a close, tired bulls have been selling out. Some of the speculators had bought in the expectation of an increase in the retention price of steel before the end of March, 1955. But this expectation has not so far materialised. On the contrary, there were rumours this week that, in case the control on prices of steel were to be removed, there would be a stiff excise duty on this metal. There were also rumours that the Government's attitude towards private steel producers was not as friendly as it was expected to be. Whether or not these rumours have any basis is beyond our ken. The fact, however, is that there was a sizable amount of selling in both Tata Iron and Steel and Indian Iron. This opportunity was availed of by one of the leading bears to reduce his commitments. The knowledge that this operator has been able to square up a good part of his short-sales has itself weakened the morale of some of the bulls. A feeling is getting abroad that the technical position in steel shares is fast deteriorating. Heavy delivery of Tata Steel Ordinaries is also feared, as a large bloc of shares is believed to have been unloaded on an investor's account.

MARKET GOSSIP

• • •

Textile shares, too, have lost their charm to some extent. The bullish fervour created by the concession given by Mr. Deshmukh in the excise duty on coarse and medium counts has waned, despite encouraging reports from the cloth market during the last two days. The heavy reduction in the dividend of Svadeshi Mills has evidently served to remind the operators that the margin of profit for mills is by no means attractive. The continued decline in the price of cotton has also had a dampening effect on textile shares. Another factor against these scrips is the drastic restriction placed by Australia on all imports, including cotton piecegoods; as readers are aware, Australia is an important market for Bombay Dyeing. The lack of response from the Government to this Company's request for permission for introduction of modern automatic looms is yet another adverse factor. Our information is that, although the Commerce and Industry Ministry has no objection to the Bombay Dyeing's request, the Labour Ministry is still hostile to it. The issue has been hanging fire for a long time, without the end being in sight. It would appear that the Company has been pressing the Government for an early decision. A meeting of the Company's spokesmen with the Government is scheduled to be held at New Delhi in a few days. The suspense is very likely to be over before the end of April.

• • •

The sliding down of equities is not confined to steels and textiles alone. Many a miscellaneous counter also has lost ground, conspicuous among them being A.C.Cs., Belapurs, Bombay Burmahs, National Rayons and Scindias. This is not surprising since almost all these scrips had gone up in recent days chiefly on account of speculative buying. Leading brokers tell us that business in the ready section has dwindled perceptibly. Those operators who felt that investment buying would follow after the budget uncertainty was over are now sorely disappointed at the apathy of investors. While middle class investors have practically deserted the market, big money bags are busy cornering the controlling interest of some of the well-known and soundly established concerns—especially tea and sugar—in the Calcutta market.

• • •

Knowledgeable circles aver that the Government is still into two minds in regard to the expansion of the T.I.S.Co. works at Jamshedpur. At the last meeting of steel producers with the Government spokesmen, the Production Ministry opposed the suggestion that Tatas should be allowed to expand by a million tons. Further discussions that were scheduled to have taken place early in April seem to have been deferred to a later date. Though these circles are confident that, ultimately, Tatas would get the permission, nothing is yet definite. This optimism is based on the ground that, whereas the public sector cannot get finance from the World Bank, the private sector can. It seems that the supporters of the private sector in the Central Cabinet are finding it a little difficult to win over its antagonists, because of Tatas' demand for an assurance from the Government that their concern would not be nationalised for at least another 25 years. A Government spokesman remarked that Tatas are very unrealistic in making this demand, as the present Government cannot effectively bind its successors. It remains to be seen whether Tatas will be convinced by this argument and drop their demand. Meanwhile, the chances of Tatas getting the assistance of private foreign investors—such as big investment trusts—either direct or through the I.C.I.C. have dimmed as a result of the drastic nature of the proposed amendments to Article 31 of the Constitution. It will be quite relevant to recall here the criticisms of *Wall Street Journal* last week, which clearly reflect the mind of U.S. financial circles. The assurance given by Mr. Nehru that he had no intention of confiscating foreign-owned property has not dispelled their misgivings. The reasons for this, as explained by the above journal, are:

"If the right to compensation for property expropriated by Government is removed from India's basic law, the power of the Government to seize property without compensation is established for foreigners as well as for citizens of India. If Mr. Nehru succeeds in preventing his Government unfairly applying this power to foreign investments—well, he will not always control India's Government. There is not even much assurance that Mr. Nehru can keep his promise, powerful as he may be. The purpose of the amendment is to further his objective of a classless society in India and spread what the few have among the many. In that atmosphere, it is not at all likely that foreign capital will escape. And in the end, Mr. Nehru may find it too difficult to explain to his people why their property may be seized but property of foreigners must remain untouchable."

• • •

The Government of India's pending decision on prices payable to producers of steel is awaited with interest not only by the iron and steel companies and investors, as well as speculators, in their shares, but also by other industries, for it will provide an indication of the Government's mind in regard to the net return on capital invested in industries, the products of which are subject to price control or enjoy tariff protection. It will show whether or not the authorities are now prepared to take a more liberal view in this matter than before.

• • •

The stringency in the money market continues unabated and banks are depending upon the lender in the last resort to provide the funds. During the three weeks ended 25th March, 1955, the Reserve Bank has advanced to Scheduled banks against usance bills as much as Rs. 31.59 crores. It is this large inflow which has prevented short-term money rates from shooting up. Inter-bank call money is quoted at 3 per cent. but not much business is passing at this rate. Although a good part of the demand for money is seasonal, such is being aggravated by large stocks of sugar, textiles and cotton which are not moving readily.

• • •

It is understood that the Government of India has under consideration a proposal to fix a ceiling in respect of the quantity of tea that can be exported out of India during 1955-56 for the purpose of auctions. The proposal appears to arise from the investigation recently made by the Special Committee on the possibility of increasing the quantity of teas sold by auction in India with a corresponding reduction in the quantities to be sold for auction outside India. The exact manner in which the Government will allocate the quantity reserved for auctions outside India among the various tea interests is expected to be announced early.

• • •

In no other sphere is the paradox of underdeveloped economy better reflected than in the electrical industry. The paradox consists in the fact that an underdeveloped country is essentially a capital-thirsty nation. Normally, one would expect the government of that country to take special care in providing incentives for capital formation. Unfortunately, it is in these countries that the governments are most suspicious of capital. This attitude is reflected in the attitude of the governments of many underdeveloped countries towards the electricity industry which is prevented, on the ground that it is a public utility industry, from earning an income that will permit continuous expansion of the industry. In India, the basic problem for the electricity industry is to pay its way. The industry has frequently demanded this reasonable facility, so far denied to it. It is not, of course, unfettered freedom that it wants. It would be satisfied, if it were allowed to declare rates of dividends which would bear some reasonable relationship with the general level of industrial dividends. Indeed, the conferment of such freedom—limited as it is—would be in the national interest, for a prosperous and expanding electricity industry provides the basis for many other industries. There is yet another ground on which the industry is entitled to special consideration. Many of the hydro-electric projects in the public sector envisage a rapid expansion in electricity supply. Even these schemes, as Mr. K. G. Milne, Chairman of the Ahmedabad Electricity Co., Ltd., pointed out, at the Company's annual meeting, "will have to rely very largely upon licensees' undertakings for purveying their power."

• • •

The demand for sympathetic treatment of the electricity industry's case for some relief from vexatious restrictions on dividends is, of course, a hardy annual and, therefore, a familiar story. Only, the case does not cease to be strong merely because it is stated in many an annual meeting of private electricity companies. This year, Mr. Milne had some encouraging information to give on this question. It would appear that, at the recent inter-State Conference to consider the Electricity Supply Act and allied matters, held at New Delhi, the Federation of Electricity Undertakings of India was given an opportunity to present its case. Mr. Milne revealed that, after attending this Conference, he "brought away the feeling that there is general realisation that some measure of relief should be granted to the industry soon." The principle of allowing for a deferred tax reserve, he said, "seems to have had a fairly wide measure of backing at the level of State Governments." The industry had continued to press for a larger differential than what would be available under the proposal to link the standard rate to the Bank rate with a differential of 2 per cent; since the Bank rate is now 3½ per cent., this proposal would give a basic maximum return of only 5½ per cent. It may be recalled that, at the recent annual meeting of the Bombay Chamber of Commerce, Mr. Milne, as the Chamber's incoming President, deplored what he happily termed the "concept of 6 per cent. sufficiency." The Central and State Governments and Industrial Courts are all obsessed by this mystic number, six, for they all seem to believe that "capital will, or should, freely flow into any kind of activity if it is permitted to earn a return of round about 6 per cent. after tax, and that anything more than that is merely rapacious profiteering." He added: "It entirely ignores the element of special risk, for instance, the risk of not making any profit on new ventures for some years, perhaps, never, the varied degrees of risk inherent in different types of even well-established business, the risk of loss of the very capital itself due to peculiar circumstances arising in a particular business, or due to political factors, constitutional or other." And yet, with a spirit of persistence, worthy of a better cause, the Government sticks to its "six per cent." gun.

• • •

To revert to Mr. Milne's address at the annual meeting of the Ahmedabad Electricity Co., Ltd. He told the shareholders that the progress with the Company's 'C' station had been "most satisfactory." It would appear that the peak demand on combined 'A', 'B' and 'C' stations, which had been given as 91,200 kw. in the report of the Company, has since risen to 95,800 kw. With the increase in the Company's generating capacity a "commensurate increase of distribution capacity is being effected." But the Company had not been permitted to effect the 15 per cent. increase in rates, which had been originally planned. The Directors could therefore maintain even the modest 6¼ per cent. dividend only through the withdrawal of about Rs. 8,80,000 from free reserves. He warned the shareholders that, unless the various issues, to which he had referred, were "satisfactorily settled in the very near future, it may not be possible to maintain the dividend next year at the present figure."

• • •

A general issue, to which Mr. Milne referred, is the effect of the proposed amendment to the Constitution on the electricity industry. He pointed out how invidious would be the effect on this industry of the proposal to make compensation a non-justiciable issue. He regretted that the framers of the Bill had given "little regard to the nature of the surveillance which the State has long had over the electric supply industry by virtue of two very comprehensive statutes." The law had laid down the method for acquiring electricity undertakings by the State. Now that the Joint Select Committee is considering the Bill to amend the Constitution, it is to be hoped that it will realise that the "proposal, as it stands, will detract from the confidence of investors which has hitherto been inspired by the terms of our licences."

• • •

It is not, of course, Mr. Milne alone that is disturbed by the proposed changes in the Constitution. At the annual meeting of the Central Bank, Mr. H. P. Mody, Chairman, regretted that the contemplated amendments presented a "very alarming picture," for they were calculated to "do away with the Fundamental Rights secured to the citizen under the Constitution." He added: "Section 31 of the Constitution, relating to compensation for acquisition of property, had been framed after prolonged and anxious deliberation, and nothing has happened, in my opinion, to warrant the drastic curtailment of the rights which holders of property enjoy in every other free society." A similar note was struck by Mr. Tulsidas Kilachand, Chairman of the Bank of Baroda, when he said:

"Instead of perfecting existing laws, the Government have taken the line of least resistance by proposing such amendments to the Constitution as will make the individual's right to property nominal. These amendments will take away the security of private property and create an atmosphere of insecurity and fear which will cut at the very root of private enterprise and devitalise its working. This may create a special problem of policy for banks intending to lend against the security of property which is liable to be acquired at any time without the payment of fair compensation. The proposed amendment will, therefore, hit at the very root of credit on which business activity depends. It is worthwhile to consider the appointment of an independent statutory tribunal to fix the compensation payable in cases of acquisition or requisition of private property, instead of leaving it to the will of the legislature or the executive."

These are not the alarmist warnings of faint-hearted men. But they are the authentic voice of men who have braved the risks attendant upon an active business and industrial career. *If they feel* that the Constitutional amendments introduce a far greater element of risk than could be reasonably borne by investors, it is surely time that the Government took notice of their views.

• • •

In our first leading article this week, we have commented on the decisions taken at the Geneva Conference on G.A.T.T. In the following paragraphs, received just before our going to press, our London correspondent explains how Britishers view the outcome of this Conference:

"Up to now in this country, the letters O.T.C. have been associated with the Public Schools and, at the Military Academy at Sandhurst, they stood for the Officers Training Corps but henceforth their significance will be wider: internationally, they will stand for the Organisation for Trade Co-operation and will replace the unsatisfactory term G.A.T.T. (General Agreement for Trade and Tariffs). The new Organisation, in effect, renews the life of G.A.T.T., which was due to expire this mid-year, until the end of 1957 and thereafter, with general agreement, the Organisation will be renewed for periods of three years at a time.

"What is the significance of the new agreement which has just been issued, which the United States

(Continued on page 656)

BEARISH TREND IN EQUITIES

ALL-ROUND LIQUIDATION

(From Our Own Correspondent)

BOMBAY, 30th March

THE week under review witnessed a reactionary trend in equities on the Stock Exchange. A mild wave of selling pressure, generated by the profit-taking operations of bulls, developed in steel shares early in the week and this gathered momentum as the week progressed. The process of liquidation soon spread to the other sections of the market and except for a break yesterday when equities tended to steady up, the trend was continuously downward, resulting in fair-sized losses over the week in many counters.

The sizable break in prices on professional selling was attributed to rumours about the levy of excise duty on steel, and reports that the announcement regarding retention prices might come much later than expected. There were also unconfirmed reports that the expansion programme of the Tata Iron and Steel Company might be delayed. Further, the none-too-encouraging reports from the cloth market, the cut in dividend of the Svadeshi Mills and, above all, the general frustration in business circles about the amendment to the Constitution, were the other bearish factors that adversely affected sentiment.

In the steel section, Tata Ordinaries opened on a bright note with a rise to Rs. 246, but fell sharply to Rs. 238-8 on Monday this week, despite heavy covering by a prominent bear operator. After a recovery to Rs. 241-12, they reacted to Rs. 239-8 at the close. Indian Irons drifted from Rs. 35-12 to Rs. 35-0¼, though the closing was a shade better at Rs. 35-3¼.

Prominent scrips in the textile section failed to resist the selling pressure. The gains noted in this section after the Finance Minister announced the cut in excise duty on cloth were more than wiped out during the week under review. Bombay Dyeings had a precipitous fall from Rs. 474-6 to Rs. 464-6, but gained partially to Rs. 466-4 at the close. Kohinoors drifted from Rs. 319 to Rs. 314-12. Centurys lost Rs. 7-8 over the week to close at Rs. 377-4. Central Indias declined by Rs. 2-8 to Rs. 127, Gokaks by Rs. 2-8 to Rs. 225, Shree Niwas by Rs. 4-6 to Rs. 231-14 and Simplex by Rs. 2 to Rs. 145. Standards were done Rs. 2-8 lower at Rs. 361-14. The declaration of a dividend of Rs. 8 per share without deduction of income-tax for the year 1954 by Svadeshis on the increased capital of Rs. 1 crore, as against Rs. 16 per share tax-free on the old capital of Rs. 75 lakhs for 1953, brought down the shares by Rs. 2-12 to Rs. 189-4. Tata Mills fell by as much as Rs. 5-4 to Rs. 55-8, reflecting the disappointment over the declaration of a dividend of Rs. 2-8 per share taxable for the year 1954, as against Re. 1-8 per share tax-free paid for the previous year.

Apart from Imperials which declined, bank shares were generally steady with small appreciation in prices. Barodas were done a fraction better at Rs. 108-4. Centrals were put through at Rs. 50 ex-div., as against Rs. 50-4 cum-div. a week ago. Centrals (New) changed hands at Rs. 51-12 ex-div. as against Rs. 52-8 cum-div. Bank of Indias gained Re. 1-8 to Rs. 145 and Punjab Nationals Re. 1-4 to Rs. 44-4.

The insurance section ruled easy, with Orientals disclosing a loss of Rs. 135 to Rs. 7,275. New Indias shed Rs. 2 to Rs. 52-8. British India Generals were done an anna lower at Rs. 13-14.

A decline of Re. 1-9 to Rs. 110-5 in Ahmedabad Electrics was the main feature in the electricity section. The obscure outlook envisaged by the Chairman of the Company in his speech at the annual meeting was mainly responsible for the reaction. Bombay Suburbans dropped As. 10 to Rs. 126-4 in sympathy with Ahmedabad Electrics. Surat Electrics, on the other hand, improved by Re. 1-4 to Rs. 127-8. Andhra Valleys gained Re. 1-4 to Rs. 1,403-12 and Tata Hydros As. 8 to Rs. 147, while Tata Powers dipped from Rs. 1,507-8 to Rs. 1,492-8.

The miscellaneous section was depressed, in consonance with the general trend. Sugar shares were prominent with sharp declines, Belapurs losing Rs. 6-8 to Rs. 311-8, Phaltans dropping Re. 1 to Rs. 117-8 and Walchandnagars falling by Rs. 3-2 to Rs. 223-2. Cement shares ruled weak, Associated Cements disclosing a fall of Rs. 3 to Rs. 179-8 and Digvijays Rs. 3-8 to Rs. 176. In the shipping group, Scindias were on offer and a fall of As. 6 to Rs. 15-3¼ was noted at the close. India Steamships were taken As. 2 lower at Rs. 7-10. In the engineering and mining group, Alcocks were conspicuous with a decline of Rs. 6-4 to Rs. 280. Premier Constructions failed to respond favourably to the higher dividend of Rs. 7 per share for 1954, as against Rs. 6 for the previous year. On the other hand, the shares reacted from Rs. 160 to Rs. 156. Shivrajpurs softened from Rs. 82-8 to Rs. 81-8. B.B. Petrols were steady at Rs. 3-14¾. Despite advices from the copper market, Indian Coppers were lower by an anna at Rs. 3-8¼. Among miscellaneous industrial shares, Bombay Burmahs (old) receded from Rs. 478-12 to Rs. 464-6, but closed at Rs. 466-4. National Rayons moved down by Rs. 4-12 to Rs. 197-8, due to delay in the announcement of dividend. A notable exception was provided by Killick Industries which attracted good investment support and advanced by Rs. 12-12 to Rs. 171-4. Tata Chemicals weakened from Rs. 16-1½ to Rs. 15. Tata Oils were quiet at Rs. 40-8, while Wimcos disclosed a loss of Re. 1-4 at Rs. 196-4.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 28th March

Mixed conditions were in evidence on the Calcutta Stock Exchange during the week under review. On Thursday, most shares remained steady with engineerings and teas adding attractive gains. On Friday, teas continued to rise, but there was no other noteworthy development. The week-end saw dullness spread to all sections. Today, conditions were not any the better, but sugars were an exception.

The good demand for tea in the export auctions and the expectation that there would be no international restriction on the extension of acreage or on replacements, made tea scrips all the more attractive. The present agreement among the major producing countries, namely, India, Indonesia, Ceylon and Pakistan, expires by the end of this month, and a fresh agreement, if reached, will control only exports. In view of the growing internal demand, India is the least worried about the export restriction at present. For, in 1954, India's exports of tea were only 449 million lbs., as against 500 million lbs. in the previous year, although, in view of the higher prices, earnings last year at Rs. 131 crores were higher by Rs. 28 crores.

Jute shares were dull for the better part of the week, although they are bound to come to the forefront and take the leadership of the market. For, there are welcome indications of moderate business in jute goods for export, prices of raw jute are falling, and raw jute is available in plenty. More attention was given to textile shares in view of the revision of excise duty on medium cloth. Following the budget proposals which added more burden on consumers of mill-made cloth both the internal and export markets indicated some recession, which has to be made good now. Engineering shares were fully steady earlier and recorded moderate gains.

Sectionwise, interest in jutes was only nominal, and in transactions Howrahs were quiet at Rs. 30-2 and were pushed down today to Rs. 29-1. Nationals after realising Rs. 34-14, receded to Rs. 34-8. Fort Glosters, on the other hand, were dealt with five points higher at Rs. 475. For the half-year ended December, 1954, Belvederes repeated the dividend of 5 per cent. and the shares declined to Rs. 213 from Rs. 222. At Rs. 189, Budge Budges were lower by Rs. 8, Anglo-Indias being priced at Rs. 225 as against Rs. 235 earlier. Ganges eased today to Rs. 102.

In the engineering section, Richardson and Cruddas were a prominent feature this week following the announcement of an interim dividend of As. 8 per ordinary share and Rs. 2-12 per preference share, and the report that this firm has a big expansion programme. At Rs. 16-12 the scrip commanded good attention and advanced to Rs. 17-11. Indian Irons opened on Thursday at Rs. 35-8 and were transacted at rates up to Rs. 35-12 by the week-end. Today's closure saw the rate ease to Rs. 35-4. Indian Galvanizings were in good demand, and from Rs. 22-12 the rate scored to Rs. 24-2, subsequently steadying around Rs. 23-5. Braithwaites were fractionally higher at Rs. 24-2, while Texmacos gave way to Rs. 16-7 from Rs. 16-12. Kumardhubis at Rs. 12 were lower by As. 9, and Jessop & Cos. at Rs. 34-12 lost Re. 1-4.

Miscellaneous industrials provided a few features. Most other scrips were held around previous levels. In the first category were Angelo Bros. which were taken to Rs. 21-12 from Rs. 20-8. Niccos improved to Rs. 24-13 from Rs. 23-9, Dunlop Rubbers being firm at Rs. 47-2. At Rs. 17-6, F. & C. Oslers lost As. 4. Rohtas Industries were at one time higher at Rs. 24, as against Rs. 23-6 previously. Metal Boxes changed hands at Rs. 20-6 as against Rs. 19-14 previously.

Titaghur Papers were better at Rs. 43-6 earlier but today gave way to Rs. 43-2. Indo-Burma Petroleums were quiet at Rs. 126, while Carews among sugars added a further fractional gain at Rs. 11-1. Belsunds were put through at Rs. 11-3.

In the tea section, there was no slackening of interest in spite of the generally depressed conditions. Nagaisurrees scored to Rs. 372 from Rs. 355, Sonai Rivers hardening to Rs. 29-2 from Rs. 28-4. Bormahjans at Rs. 23-14 added As. 6, following an announcement of 10 per cent. dividend for 1954 as against 7.5 per cent. in the previous year. Borpukhuri's hardened to Rs. 40-12 from Rs. 37-12, while Dufflaghurs lost to Rs. 50-12 from Rs. 51-8 and Dhelakhats to Rs. 21-14 from Rs. 22-3. Haslimaras were dealt in at Rs. 47 today.

N.B.—The review of Madras Stock Exchange appears on page 656.

THE MUDDLE IN BOMBAY BULLION MARKET

By S. N. Sonawalla, B.Com.

THE bullion market in Bombay faced a deadlock when about 300 members refused to do any trading for about ten days as a protest against the continued indifference of the Board and the Government to their grievances. Those who are in the know of this market can find the root of this deadlock in the developments which were going on in the market for the last two or three months. The jobbers repeatedly brought to the attention of the authorities the grave breach of margin by-laws that was being consistently committed by a group of operators. The margin payments were being evaded by the bulls and thereby the effects of these rules were nullified. They actually observed a one-day strike some time in February, after which some of their representatives were admitted in the Havala Committee. This Committee drew the attention of the Board, as well as the President, to the evasion of margin requirements, but the authorities paid no attention to it.

It is common knowledge that the stocks in the bullion market are limited and imports are banned. This situation tempts the bulls to buy unlimited quantities of silver to dictate a price over the sellers. The sellers are tempted to sell because of the economic conditions prevailing in the country, especially the lower commodity prices which they feel will discourage demand for bullion. In spite of the busy season being in full swing, the demand for ready silver is negligible and arrivals continue. The experience of the last two or three years has shown that the price reaches a high level in March/April and May, and drops to a low level in the months of September/October. It has also been proved by experience that the market faces a sort of crisis in those off-season months because of the extremely weak position in which the market finds itself consequent upon overtrading by bulls. Besides, there is one more important point. In all other markets, there is what we may term a 'ceiling' price, which brings about an adjustment in price-level in case the market is overbought, as, for instance, considerations of yield in regard to shares and of supply in regard to cotton. Even in the gold market, there is a ceiling price, that is, a price at which smuggling of the yellow metal increases and checks an excessive rise in prices. It is also common knowledge that corners are more frequent in silver than in gold. In silver, therefore, it is all a question of the financial resources of buyers to force up the price. If there is no check on this buying in relation to the capacity of buyers to pay margins, to take delivery of goods and to pay differences in case of loss due to price drops, the buyers can take up the rate to any level. It is in order to prevent this from happening that there are margin rules. There is no quarrel as to any fluctuations in the price level, so long as they occur within the by-laws of the Association. There is no grumbling against any rise or fall in the level of the price, so long as the stability of the market is not endangered and the rules of the game are observed. These are the basic facts in the silver market. It is the ignorance of these basic facts that tempts the critics to observe that the best solution to the ills of the silver trade is to close futures trading in the white metal. That will undoubtedly be the easiest thing to do, but it will not end the problem, for it will only strengthen the functioning of many mushroom markets all over the country, which are still flourishing in spite of all efforts by the authorities to kill them.

The problem of internal free trading and holding of bullion by individuals in a democratic planned economy requires scientific approach. The delinking of currency from bullion as a monetary policy is only of recent origin and, therefore, it is too early to understand the results thereof on the general economic set-up. Many factors which are responsible for the age-old habit of investing in bullion are still at work. The economic role played by bullion investments in an agrarian economy cannot be lightly ignored. A complete ban on imports of silver, in spite of constant demand for these metals and lack of internal production, cannot be defended on any ground but on priority on spending foreign exchange. Even on this ground, bullion deserves more sympathetic consideration than many consumer goods, the imports of which hamper some of our new industries. Mere refusal to face all these facts does not change them. In order to solve the bullion problem, a bold and enlightened policy is required.

This year, the trouble in the bullion market was manifest and the attention of the authorities was drawn to it by certain members, by addressing a letter in February to the Finance Ministry of the Bombay Government, wherein they requested that the By-law 33d, which was passed by the General Body of the Association in October, 1954, and which was pending awaiting Government approval, should be brought into force. Further, the sellers had some relief by the application of margin rules under By-law 33A in Fagun Settlement. This by-law was not made applicable to Chaitar Settlement, in spite of the conditions being almost the same, as in the Fagun. When the matter came up before the Board, it was lost by only one vote, which shows that a substantial minority, amounting to as much as 49 per cent., was in favour of the application of By-law 33A to Chaitar Settlement too. The members were annoyed by all these bull manipulations. They felt that it was high time that something effective

(Continuued on page 656)

NEWS IN BRIEF

THE west coast port of Kandla, in Kutch, will be declared open by Mr. Lal Bahadur Shastri, Minister for Railways, on 7th April.

The Government of India has decided to continue free licensing of exports of cane jaggery and cane jaggery powder (gur) for shipment up to the end of June, 1955.

A joint board for co-ordination of the execution of the Rs. 50-crore inter-State Chambal Project has been formed, with the Union Deputy Minister for Irrigation and Power as Chairman.

The area under tobacco crop, according to the all-India first estimate, is 792,000 acres during 1954-55, as against the corresponding adjusted estimate of 768,000 acres of the previous year. This represents an increase of 24,000 acres.

The Government of Travancore-Cochin has constituted an eleven-member Planning Advisory Committee, with the Minister for Planning as Chairman, to advise it on "general policies and priorities connected with development and planning."

The Government of India has decided to set up a fully equipped security paper mill in India. This step is intended to make India independent of foreign supplies. The project is estimated to cost Rs. 2.5 crores. Preliminaries regarding the site and other matters are actually in progress.

The Drugs and Magic Remedies (Objectionable Advertisements) Act, 1954, which seeks to control the advertisement of drugs in certain cases, to prohibit the advertisement for certain purposes of remedies alleged to possess magic qualities and to provide for matters connected therewith, will come into force on 1st April, 1955.

The Commerce and Industry Ministry is assembling a team of technical experts to advise the Government of India in the forthcoming talks with the British steel mission on the question of setting up a steel plant in India. The British steel mission, headed by Sir Eric Coates, is expected to arrive in New Delhi tomorrow.

The Railway Equipment Committee, which has been asked to recommend steps to make the country self-sufficient in rolling stock and other railway equipment, will be in Bombay from 3rd to 12th April, 1955, for a series of discussions with various industrial and other interests. The Committee has split itself into five panels, representing broadly five sections of industry, to facilitate discussions.

The next annual meeting of the Indian Labour Conference will be held in the middle of May next. The Conference will consider such matters as industrial relations, amendment to the Minimum Wages Act, extension of Provident Fund Schemes, problems of agricultural workers and second Five-year Plan. The question of merger of dearness allowance in salaries will also be taken into consideration.

The estimated total output of iron ore in India decreased from 382,314 tons in December, 1954 to 370,992 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines. Returns received from 69 mines for January show that despatches aggregated 276,624 tons to iron and steel plants and 54,762 tons to the export market. The reported stock at the end of the month was 873,951 tons.

The Estimates Committee of Punjab Vidhan Sabha has recommended a complete overhaul of the State Secretariat and a substantial reduction in the "unwieldy" administrative machinery. Apart from retrenchment, the Committee has suggested decentralisation of powers at present vested in officers at headquarters and the abolition of special pay given to members of the Central services serving in the Punjab.

The Government of India is considering a proposal for the manufacture of motor boats to ply on rivers from Assam to Allahabad for carrying passengers and goods. The boats, according to Mr. Lal Bahadur Shastri, Minister for Railways, will be designed in such a manner as they could be utilised throughout the year. An American expert will be invited to suggest a suitable design for the purpose.

No American ghee has yet been landed in India or shipped to India. The welfare consignment from American Catholic charities which has been unloaded in Calcutta, consists of liquid butter oil. This is a clarified liquid oil made from surplus butter and is meant as a substitute for vegetable oils in cooking. The proposed shipment of U.S.-made ghee will, it is expected, closely conform to Indian cow ghee in quality and will be distributed through commercial channels.

The Railway Board has sanctioned a final location survey to be carried out by the Eastern Railway for a broad-gauge railway line from Nowmundi to Bhadrasal, instead of from Barabil to Joda. The object of the proposed railway line is to open up this area for development by making available for steel works and for export, large deposits of iron and manganese ores in the Joda Hill ranges, which, however, have not been fully exploited.

Railway administrations in India have initiated steps to secure a 25 per cent. increase in the capacity of railway workshops in the country for the overhaul of locomotives, passenger coaches and goods wagons. This increased capacity will be needed during the second Five-year Plan period when the railways hope to have much larger rolling stock holdings than at present. Several steps will be taken simultaneously to secure this increased capacity. These will include measures to achieve increased efficiency and greater output in existing workshops, expansion of these workshops, and the development of new units.

According to an agreement entered into between the Government of India and the Government of the United States on 26th March, 1955, the United States will contribute 11.8 million dollars for augmenting India's steel supply. The Government of India's share in this joint project will be Rs. 60 lakhs. India's contribution will be used for defraying the costs of inland handling, transportation and other local costs connected with the distribution of the steel. Under the agreement, it is proposed to acquire approximately 98,200 tons of steel. This agreement is a supplement to a similar agreement signed last year under which 205,000 tons of steel were procured in 1954.

India's production of coarse grains, pulses and oilseeds has already exceeded the targets fixed under the Five-year Plan. Official estimates of the increase in 1953-54, as compared with the base year of the Plan were: rice 3.9 million tons; wheat 1.5 million tons; coarse grains 4.71 million tons; pulses, including gram, 1.9 million tons; and oilseeds 0.5 million tons. Cotton showed an increase of 1.03 million bales. Jute and sugarcane productions were, however, lower than those in the base year. In 1953-54, only 3.17 million jute bales were produced, as against base year's 3.28 million bales. Sugarcane production was estimated at 4.6 million tons, as against 5.6 million tons. The total cereal production in 1953-54 stood at 56.1 million tons, as against 52.5 million of the target for the Plan.

From Abroad

A Benelux Ministerial Conference will be held in Brussels on 3rd May to deal mainly with the agrarian problem of the region.

A new central authority for all questions connected with shipping is likely to be the result of a Bill just presented to the Swedish Riksdag. It will handle all nautical questions, charting, the lighthouse system, juridic, social and economic questions pertaining to shipping as well as technical and inspection matters.

The first of 15 new all-direction high frequency radio beacons planned for South-East Asia has been installed at the Manila International Airport. Similar safety devices are planned for all routes flown by U.S. commercial aircraft. Three radio ranges are now being installed in Formosa, one in Thailand and 10 are planned for India.

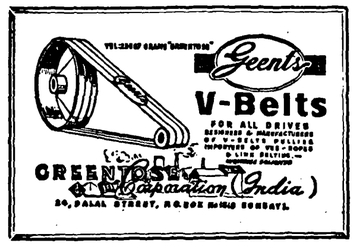
Three years' work by Rolls-Royce has resulted in a new horizontal engine to power diesel rail cars. The engine has been planned in preparation for the extensive use of diesel cars on local rail services and has been designed to operate lying on its side so that it can be accommodated beneath the floor of the rail car. It is now ready for production.

Australia has shipped its first consignment of commercial uranium to the United States. The uranium, worth £A200,000 (£160,000), was produced at the Northern Territory's Rum Jungle refinery, under a 10-year agreement with the Anglo-American combined Uranium Development Agency. This and future shipments will help to repay the £A3 million (£2.4 million) agency loan, which financed Australia's only producing refinery.

The Development Board of the Ministry of Development of the Government of Iraq has invited tenders for the supply, erection and supervision of operation, of two complete diesel-electric power plants to supply the power requirements of two cement works near Sulaimaniya and near Mosul, in Northern Iraq. The two plants will be identical and each will be comprised of a number of 800 kw. to 1,000 kw. generating sets, aggregating not less than 4,000 kw. and an identical standby unit.

Despite the development of atomic power, efforts to find new oil deposits are being intensified throughout the world, according to a petroleum survey prepared by the I.L.O. Interest has increased in the potentialities of the seabed for petroleum. Offshore explorations are being planned or undertaken in the Persian Gulf, and off the coasts of the United States, Germany, the Netherlands, Trinidad and Peru. Intensified oil activities are reported in Canada, Mexico and South America also.

The U.S. Atomic Energy Commission and two private companies have signed the first contract aimed at harnessing atomic power for rail-road locomotives. The contract is for a one-year study to be made by the Baldwin-Lima-Hamilton Corporation of Philadelphia and the Denver, Rio Grande and Western Rail-road. The new contract is the second study agreement reached with the Atomic Energy Commission in the field of peacetime propulsion. Bethlehem Steel has a contract to study possibilities of atomic power plant for commercial ships.



PERSONAL

MR. Nrantisekv Komzala has been appointed Ambassador of Czechoslovakia in India.

Mr. C. H. Baylis, the newly appointed Principal U.K. Trade Commissioner in Bombay, has assumed his duties.

Mr. J. G. Walton has been elected Vice-President of the Indian Central Jute Committee for the year 1955-56.

Dr. John Matthai, Vice-Chancellor, University of Bombay, has been appointed a member of the University Grants Commission.

Mr. N. H. Tata has been re-elected as the President of the National Institute of Labour Management. Mr. T. V. Lalvani and Mr. O. S. Kantawala have been elected Chairman and Secretary, respectively.

Mr. A. D. Campbell and Mr. T. D. F. Powell, two members of a team of six marketing experts of the British cotton industries, which will investigate into the possibilities of exporting British cotton textiles into India, have arrived in Bombay.

Mr. B. Rama Rau's term of office as the Governor of the Reserve Bank of India has been extended by a further period of two years from 30th June, 1955, as Mr. N. R. Pillai, I.C.S., Secretary-General in the Ministry of External Affairs, who had been chosen for this post on 22nd November, 1954, could not be spared for this purpose.

Mr. C. H. Bhabha has been elected as Chairman, Mr. D. R. Thom as Deputy Chairman and Mr. P. S. Nayak as the Honorary Secretary of the Indian Banks Association. The following have been elected as the members of the Association: Messrs. Pranlal Devkaran Nanjee, R. G. Saraiya, N. M. Chokshi, N. S. Captain, Shriyans Prasad Jain, S. Krishnaswamy Iyengar, Sanjiban Banerji, S. L. Kothari and C. V. Joag.

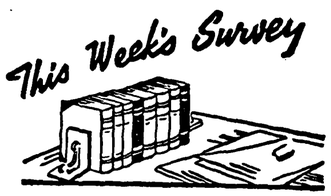
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 5th April

Bombay's Big Textile Merger

Recent developments in Lancashire have evidently fired the imagination of Bombay millowners. They realise full well that the tariff which is to place the industry on a sound footing is only a temporary expedient, and that, within the next two or three years, it will be necessary for the whole industrial machine to be so overhauled that expenses are reduced and output increased. In other words, the protection which the Government of India are rendering through the pockets of the consumer is not meant to cover up any leakage, however small, due to lack of business efficiency. Some time ago, in these columns, we held up the example of Lancashire millowners for the consideration of Bombay, and now Sir Ness Wadia has got down to tin tacks and brass nails and has introduced a big scheme for amalgamating a certain number of mills. At the time of writing details are not available, and, of course, it is desirable not to divulge at this stage the names of the mills concerned. The magnitude of this project may be gauged from the fact that a conference has been held between Sir George Schuster (the Finance Member), the millowners and the Imperial Bank of India, who are being asked to advance some crores of rupees which will be needed as additional capital in order to put this scheme into effect. The exact amount of additional capital has not been ascertained, and, though ten crores has been mentioned, Sir Ness Wadia has pointed out to newspapers the danger of making guesses on unreliable information. It is reported that negotiations for this money have proceeded along well defined lines and if it materialises—as we hope and believe it must—the merger should be for the benefit of shareholders, mill agents and, the most important of all, the 200,000 men engaged in this vital industry.



ABOLITION OF APPELLATE TRIBUNAL

THE Government of India is reported to have finally decided to abolish the Labour Appellate Tribunal, with its four benches at Bombay, Calcutta, Lucknow and Madras, and to effect certain changes in the existing machinery for settling labour disputes. The State Governments and the Labour Unions are said to have welcomed this decision, while the employers are viewing it with some concern. It is true that the employers had agreed, at the bipartite conference held in July, 1954, to certain changes in adjudication machinery, but the bipartite agreement envisaged a slightly different set-up for the constitution of State Tribunals—a condition which seems to have been ignored by the Government now. The scheme agreed to at that conference was as follows:

(1) The present machinery for adjudication be replaced by a new system, which would ensure speedy and final disposal of each dispute at a level appropriate to its nature and importance.

(2) The new set-up should consist of three tribunals—two at State level and one at national level.

(3) The lower tribunal at State level should be presided over by a sitting District or Sessions Judge.

(4) The higher tribunal at State level should be presided over by a sitting High Court judge and assisted by a representative each of employers and workers. In addition, the tribunal should consist of a technical assessor or a chartered accountant to be chosen by the presiding judge, in accordance with the requirements of the case.

(5) At the national level, there should be a tribunal similar in composition to the higher State tribunal.

(6) All disputes should normally be settled by the two tribunals at State level. The questions which are of national importance and disputes covering more than one State should be referred to the national tribunal.

(7) At State level, disputes relating to minor matters should be referred to the lower tribunal, whereas disputes relating to important matters should be referred to the higher tribunal. Regarding the classification of disputes to be allocated to different tribunals, it was decided that the Ministry of Labour should work out detailed proposals for consideration by the Joint Consultative Board.

(8) Each dispute should be settled finally by the tribunals to which it is referred and there should be no appeal. If, however, a particular dispute contained various demands some of which were minor and some major, each demand should be referred to a tribunal appropriate to its importance for final decision.

The main objects of the aforesaid scheme were to bring about speedy settlement of disputes and to place the adjudication machinery under the Ministry of Law. In effect, it meant that a separate wing of the judiciary should be created and vested with the task of specialising in labour disputes. The appointment of adjudicators was to be made by the judiciary and not by the executive, whether it was of the State or the Central Government. This would have ensured the independence of labour judiciary by making their tenure of office and other conditions of service dependent on merits and not on the pleasure of the executive.

The details of the proposed Government amendment to the present structure of industrial tribunals are not yet available. It would, however, appear from Press reports that a Bill to amend the Industrial Disputes Act, 1947, would come up at the current session of Parliament. Broadly speaking, the proposed changes are:

(1) A "National Tribunal" to settle all major and fundamental disputes of an inter-State nature and those industrial disputes within a State which might have all-India repercussions. This tribunal will consist of senior High Court judges, and no appeal will arise from its decisions. Under the Constitution, however, one can always take an issue to the Supreme Court by obtaining special leave. The "National Tribunal" will decide disputes referred to it by the Central Government.

(2) A "State Tribunal" will decide disputes of importance referred to it by the State Government concerned. It will be composed of judges of High Court status, and there will be no appeal arising from the State Tribunal's decision. (Under the existing procedure, industrial courts are the highest authorities on a State level for labour disputes and their decisions come up in appeal before the Labour Appellate Tribunal.)

(3) A Labour Tribunal with senior Civil Judges will dispose of all disputes of a minor nature under the State Industrial Acts, and its decision will be final.

The present official conciliation machinery will, however, be kept intact. Conciliation officers will hear the parties and report to the State Government, which will continue to have the discretion to refer any dispute not settled by conciliation to compulsory arbitration, either to the Labour Tribunal or to the State Tribunal as the case may be. In addition, the Industrial Disputes Act will be so amended as to include certain provisions of the Bombay Industrial Relations Act, relating to standing orders, notice of change of service conditions, etc.

The draft Bill will have exhaustive schedules enumerating the categories of industrial disputes to be referred to the tribunals both by the Central and State Governments. A feature of the Bill is stated to be the institution of assessors to be attached to the National and State Tribunals so as to assist the judges who may not be conversant with the intricacies of labour-management relations and the technicalities of a dispute. There will be two assessors to assist each tribunal, one representing the management and the other the labour concerned in a dispute. The assessors will be selected from out of a panel suggested by the two disputants.

It is not clear from the above whether the appointment of judges of the State and Labour Tribunals, as well as the National Tribunal, would be at the discretion of the appropriate executive or the judiciary. It is feared that the appointments of judges to the State and National Tribunals would be made by the appropriate executive. This would, indeed, be unfortunate. It would run counter to the letter and spirit of the bipartite agreement of July, 1944. Besides, as the executive will continue to have the discretion to refer or not a dispute to the Tribunals concerned, the net effect will be that the State and Labour Tribunals will enjoy a freedom which might well lead to vexatious decisions. In recent years, the Labour Appellate Tribunal, cumbrous though this machinery might have been, has been a stabilising force. With the abolition of the Labour Appellate Tribunal, there will be no case law that can serve as a guide to erring judges. If the labour tribunals are made a wing of the judiciary, as was envisaged in the bipartite agreement, it will then lead to the development of a healthy tradition of case law. The system now proposed is likely to satisfy only the interests of State Governments, which have all along clamoured for unfettered freedom in the field of settlement of labour disputes. But this would undo the good work, in the shape of bringing about some uniformity in decisions affecting industrial relations, done by the Labour Appellate Tribunal, since it was established four years ago. Naturally, it would re-establish the chaotic conditions that prevailed prior to 1950, which led to the establishment of the Labour Appellate Tribunal. Perhaps, no greater disservice can be done to jeopardise industrial peace than the contemplated amendment to the Industrial Disputes Act.

M. P. TEXTILE LABOUR AWARD

The judgment of the Labour Appellate Tribunal (L.A.T.) in the case arising out of the appeal of nine mills in Madhya Pradesh against the adjudicator's award granting half to three months' bonus to the workers for the years 1950-51 and 1951-52, is a notable one, for it restates clearly and succinctly some of the principles that ought to govern the grant of bonus to workers. Also, the judgment once again shows the value and importance of an all-India tribunal in rectifying errors in judgments given by courts at the lower level.

In its judgment, the Appellate Tribunal consisting of Mr. F. Jeejeebhoy, Chairman, and Mr. L. P. Dave, member, regretted that the adjudicator, by importing considerations which found no place in the Labour Appellate Tribunal's formula relating to bonus, had granted a quantum bonus in contravention of the clear decisions of the Tribunal. The adjudicator, the Tribunal held, had thereby "created false hopes in the minds of labour." It said that its present judgment should be a "warning" to the adjudicators who felt inclined to import their "personal ideas" into matters which had been already settled by its decisions. Significantly enough, it observed: "The Tribunal claims no infallibility for its decisions, but where it has settled principles and those principles have been applied and followed throughout India, it is an affront on the part of the adjudicator to set these principles at naught. It has resulted in this case in waste of time and money and, what is worse, in needless disappointment to labour."

Before the L.A.T., the mills contended that the adjudicator allowed only depreciation to the extent set apart in the balance-sheet and not as provided statutorily. The L.A.T. held that there was substance in this contention and declared that statutory depreciation had been taken as "a fixed item and a prior charge in our formula and it will also be so found in most schemes of profit-sharing." Consequently, it held that the adjudicator was "in error in allowing only the depreciation which the mill had shown in its balance-sheet, for it may well be that a particular mill, although entitled to statutory depreciation by way of a prior charge for the purpose of bonus may not have been able to set aside the amount in any year on account of business or financial reasons." But, as bonus was given to supplement the wages out of a balance of profits, the L.A.T. held that the question whether statutory depreciation had been actually kept apart in a depreciation fund or not did not arise for consideration.

The adjudicator allowed only 4 per cent. return on paid-up capital and 2 per cent. on capital which was constituted out of bonus shares, as against 6 per cent. provided in the L.A.T.'s formula. As regards return on reserves utilised as working capital, the adjudicator did not allow any return. On this issue, the L.A.T. recalled its previous decision that "no distinction can be drawn between bonus shares and paid-up shares in the matter of return which they should receive." It added: "Every encouragement must be given to the plaughing back of profits into the industry and the additional capital thus incorporated aids the structure." Further, since the reserves converted into bonus shares no longer earned a return as working capital, it was wrong to say that the creation of bonus shares resulted in any "undue burden." Proceeding, the L.A.T. considers that, when the reserves were converted into bonus shares, they became part of the block to the "advantage of the concern and to the general benefit of the workmen." Hence, the bonus shares, the L.A.T. held, were "entitled to the same return as paid-up capital for the purposes of our formula." Explaining the concept of "fair return," the L.A.T. said:

"We have not rigidly fixed the rate of fair return, because fair return depends upon a number of circumstances. In industries, there is an element of risk compared to the more sober character of Government paper, and investors enter the industrial field in the hope and expectation of getting something more than what Government paper would yield. In the Bombay Textile Mills' case, the parties considered 6 per cent., after payment of taxes, as a fair return. Possibly 5 per cent. would be a reasonable return for the mills before us. But whether it is 4 per cent. or 5 per cent., we find that it will make no appreciable difference in these cases in the ultimate result as to bonus. As regards the return on reserves utilised as working capital, the adjudicator has not allowed anything. We think that return should be allowed on this item at 2 per cent."

Another issue which came up for decision was whether the mills could be allowed to debit the difference between the purchase price of the balance of stock of cotton at the end of the year 1951-52 and the market price of the stock at that time when such market price was less than the actual purchase price. The trouble arose because the price of cotton had fallen by the end of the year and the market value had accordingly decreased. The adjudicator ruled that it was improper to take into account the market value instead of the cost price. The L.A.T., however, rightly rejected the adjudicator's decision holding that the practice adopted by the mills conformed to establish accounting procedure.

The adjudicator had added excess profits tax which the Government had returned as being part of the income of a particular year. The L.A.T. held that this was "clearly wrong." For the Supreme Court had made it abundantly clear that bonus could only be paid "if the trading results of the year in question allowed for an available surplus." The excess profits tax was "not in any way connected with trading results of the year and, therefore, its consideration must be clearly excluded."

Two other issues came up for decision before the L.A.T. The first related to the treatment of income-tax and the second to that of managing agency commission. The employer is entitled, under the L.A.T. formula for the calculation of bonus, to deduct as prior charges the income-tax which he would have to pay on the trading results of the year. The adjudicator had refused to allow such deduction to be made in instances where the tax authorities had for reasons of previous year's losses, granted exemption. The Tribunal held that the adjudicator's refusal was a mistake and stated that the concession made by the tax authorities was intended to aid a concern which suffered a loss and had nothing to do with the formula.

The adjudicator also refused the payment of managing agents' commission "in full." The Tribunal stated that it had already held that the commission was an item of expenditure fixed by contract and, therefore, the full amount must be regarded as part of the expenditure of the year so long as the amount of the commission did not exceed the limits allowed by law.

In view of these considerations, the Tribunal reversed, as stated at the outset, the adjudicator's award and held that no bonus was payable by the Madhya Pradesh mills for the years 1950-51 and 1951-52. But the mills have, however, already paid 25 per cent. of the bonus. At the instance of the Tribunal, the mills have agreed that the workers should retain the amount as ex-gratia bonus. The mills deserve to be complimented on this generous gesture.

OFF THE RECORD

By "Rover"

I OWE the Editor of this Journal and the readers of this column an apology and an explanation.

Just when they must have been congratulating themselves on being rid of me and my really innocent and harmless, but, as judged by some, cynically even if not maliciously, provocative musings, for a matter of three months and promising themselves a mentally undisturbed and reposeful time for the duration, I reappear on the scene giving a lie to what the Editor had announced at the end of my last piece with almost an audible sigh of relief. I admit that these lingering farewells are unæsthetic and tiresome and I assure you that I would not have allowed myself lightly to be guilty of such a solecism.

But soon after I wrote my piece last week and conveyed the glad tidings to the Editor that I was letting him off his weekly task of wrestling with my unaccommodating perpetrations and indiscretions, I found that something was gnawing at my vitals and making me feel uneasy. Very vaguely I felt that I had left something urgent and important unaccomplished and that, till I had paid this debt, I had no right to take a holiday even in search of health, as the Editor had generously and somewhat euphemistically put it. I am not all that ill that I cannot do my chores, if I bend my back to it. But, unbelievable as it may sound to some, even a so-called scurrilous scribe is human underneath and has need of playing truant. I wonder why this world is so badly ordered that only those things which are considered bad and immoral for us should bring us any pleasure. But lo! in trying to be sincere, I have been so indiscreet as to give away the secret behind my projected holiday and destroyed the illusion which could lend it both justification and respectability.

Anyway, enough of this nonsense! To return to my feeling of uneasiness, I discovered the cause of it irrelevantly in a stray observation of Mr. Murarji J. Vaidya, when reading a newspaper report of his presidential address to the annual conference of the All-India Manufacturers' Association at Hyderabad during the last week-end. Mr. Vaidya appealed to his fellow industrialists "to be prepared to adjust our thinking, our way of life and our actions to the overall needs of the country."

This started a strange train of thinking. It made me realise, how, when we were still at the stage when one of their progressive leaders has to appeal to our business magnates to be prepared to make this necessary adjustment in their way of thinking, way of life and way of behaviour, how marvellously and successfully the European business community in the country had already accomplished this necessary task silently, unobtrusively and without making any fuss about it. And how much more creditable and praiseworthy it was for this tiny community, in view of the fact that the degree and the range of adjustment required of these people was ever so much greater than the accommodation asked for from our industrialists. Who can deny that at least in the case of the Britishers, who formed a part of the ruling race privileged all along the line, and who decided to stay on here after the country was independent, it was nothing short of a mental and, what is still more difficult, an emotional revolution. And they did this not whiningly but with perfect dignity and nonchalance.

This in its turn reminded me of a member of this community, who had repeatedly brought this truth home to me, when my occasions led me to meet him, as frequently they did during the last few years. In his person and in his attitude to life and work in this busy city of Bombay, he typified for me this marvellous capacity for timely and smooth readjustments of his race even under the most trying circumstances. I thought of all this and much more, because he is about to retire from the midst of what has been the scene of his business activities and the background of his busy personal and social life for as many as 25 years. I propose to record some of these thoughts which his imminent departure has evoked in me, though I fear that my clumsy effort at paying this tribute is sure to embarrass this good and modest man frightfully.

Mr. W. Jenkins of Bradys and the Belapur Company—for it is he and none else who is my victim for this week—has cultivated a genial attitude to life and to his fellow human beings, as you will discover at any chance meeting with him. It is only when you approach nearer and get to know him a little better that you discover that, while this is not a pose and that the geniality and the good cheer are of a patently genuine quality, he is neither as light-hearted nor as easy-going as he tries to make himself out to be. Uncannily shrewd in his judgment, capable and efficient to his finger-tips and master of his facts, as you will find to your cost if you have to negotiate a business deal with him, he softens the hardness and lightens the matter-of-factness, which usually go with these qualities, by his Puck-like sense of humour and his all innocent proclivity to pull your leg.

Essentially humane of heart and tolerant in his outlook, Mr. Jenkins must have found it out early that life could lose much of its harshness and inevitable unpleasantness, if there is enough of give and take and a generous allowance made for the other fellow's point of view in business or social relations. Nevertheless, I suspect that this affable and kindly man could, on the few occasions when he believes that fundamentals are involved, dig his toes in and hold fast as a solid rock. There are some men I respect; there are others whom I admire; there are many whom I like. There are, however, only a few like Mr. Jenkins whom I respect, admire and like at the same time. This is, perhaps, because, as I see him, he is one of those rare beings who knows, to a nicety, when to insist firmly, when to accommodate obligingly and when to yield gracefully.

Many a tenacious man like the present Prime Minister of the United Kingdom lingers on the scene of his triumphs long past his time of usefulness. It is mostly their vanity which convinces them of their utter indispensability. There are others who are too ready to call it a day in the early afternoon and to seek repose. I happen to know that Mr. Jenkins is seeking retirement from business not in search of rest because he is fatigued, but in response to a more urgent call of domestic obligations. But I do feel concerned about him and his future happiness for a singularly strange reason.

For all his show of unconcern, he is a deeply sensitive and highly responsive man. This country, in spite of its poverty and squalor, its lack of sanitation and its weirdness, has a beauty and charm and appeal, its life a richness and variety, colour and adventure, a friendliness and hospitality, which cunningly creep to the very marrow of the bones of those who have lived here for long years and partaken richly of what it has to offer. Mr. Jenkins, in the excitement of planning his life and work anew, under vastly different conditions but amidst by-no-means-unfamiliar surroundings, may not feel the pull of this country and what he has left behind so much in the beginning, but he will feel it all the same with the passing of time.

If he were an older and less vigorous man, this pull at his heart-strings might not be so powerful; if he were much younger, the adventure of creating a fresh and more satisfactory pattern of existence would itself help to drown the voice of "India calling," because the voice itself will be weak due to the transitoriness of the earlier association. But my friend, Mr. Jenkins, is at that awkward age when the call will be insistent and his hearing unimpaired by old age. Uprooting a plant, a live and fully grown plant, is bound to prove a painful process and nostalgia cannot but breed a depression of the spirit. Mr. Jenkins will hear many voices from here, calling from across many lands and oceans, and find his unruly thoughts and memories and emotions going back to a land which gave him much and to which he gave many years of his life. I will not call them the best years of his life; because let us, who are his friends, hope and pray that the best years of his life are still ahead of him.

But let me not be a prophet of gloom and depression. There is another side of the picture as well. Fortunately for him, Mr. Jenkins is not an Englishman or a Scot or a Welshman. He is an Irishman and the Irish have a genius for extracting the last ounce of cheerfulness and gaiety out of any situation they are called upon to face. Besides, Ireland is the one country in Western Europe, which though physically farther removed than the others, comes nearest to India and life there in fundamentals bears a great resemblance to that of ours. It is as happy-go-lucky and resigned, as sentimental and, at the same time, temperamental, and as rich in neighbourliness and easy sociability as here and possibly as superstitious and rich in local colour and idiom as ours. Its design and fabric and weave will not differ as radically as it would be the case were he to settle in Britain.

Farewells are a sad affair, sad for those who are departing and for those who are left behind. It would be an anti-climax for me to say that I feel sad that Mr. Jenkins is leaving us and this country for good. But I say it because it is the simple truth and because, for once, I am not writing for effect, but paying a sincere tribute, which, if it had remained unsaid, would have made me uneasy, as it did on the eve of my holiday. We will wish him a happy life, a useful life, an active life and a long life.

All at "Brady House" will certainly miss him. Many at Belapur will miss him. His associates in the sugar industry in this State and in the Deccan Sugar Factories Association will sorely miss him. His absence will be felt also at the weekly Rotary Club meetings and his many friends outside these bodies will think fondly of him for a long time after he is gone. On a cold and rainy Irish evening, when he is sitting at his fireside and sampling his drink (there will be no prohibition to plague him there), when his thoughts turn to this country, as they must now and then, and to his friends and associates here, if he spares a thought for the "Rover" of *Commerce*, I shall fell happy, indeed. And if he were to take a holiday and revisit this country and this city of Bombay some time in the years to come, need we assure this renegade that we will welcome him with warm hearts and open arms? Having been clumsy enough, I shall be clumsier still and give Mr. Jenkins the old-fashioned parting greeting: God be with ye and yours.

And in taking the curtain and making my bow this time, I give you my solemn word that I am really disappearing from this column for as long as thirteen weeks. Even wild horses will not drag me back from my not altogether undeserved holiday. To make this promise more binding for me, I shall say it internationally, that is, in three languages; adieu, au revoir, auf wiederschen!—*All Rights Reserved.*

INDUSTRIAL PROGRESS OF INDIA

MANY NEW INDUSTRIES COMING INTO PRODUCTION

From A Special Correspondent

NEW DELHI, 29*th March*

THE industrial progress that the Indian Union has been making in recent years must be considered satisfactory despite the fact that a section of politicians, the public and the Press has been complaining that the pace of progress has been slow, restricted and uneven. There is doubtless some truth in their criticisms, but, at the same time, credit should be given where it is due. While self-praise and satisfaction might lead to complacency, carping criticisms and non-recognition of commendable achievements will also lead to a sense of frustration. The tempo of progress has been particularly greater during the last one year and more, indicating that the country is well set for solid achievements in the industrial sphere during the second Five-year Plan.

DELHI LETTER

Generally speaking, a number of industries not only set up new records in production during 1954 but many of them were able to take up new lines of production. The latter type of development is particularly noteworthy in the engineering and chemical industries. A definite trend is noticeable in regard to the establishment or strengthening of such industries as are able to produce capital goods. The manufacture of textile machinery, including ring frames, carding engines, bleaching, dyeing and finishing machinery, recorded an increase in production during last year—the production of carding engines having more than doubled. The manufacture of complete ring spinning frames was also established. Several schemes for the manufacture of jute mill machinery (automatic spinning machines), cement machinery (clinker cooler and breaker), tea processing and textile machinery made further progress and actual production in some of them is expected during the current year. The production of portable air conditioners also showed considerable improvement during the past year.

Tools

The tools industry recorded a notable increase in production during 1954. The range of tools manufactured in the country has also expanded in recent months. Whereas only twist drills and reamers were being produced from 1946 to 1952, the manufacture of more than 25 different types of tools has now begun. The production of 15 different sizes of roller bearings was established for the first time in 1954. Of the new products manufactured by the tools industry during last year, mention may be made of geared head lathes of 10" and 12½" centres, motorised bench grinders, tungsten, carbide tips, hand hacksaw blades and waterproof abrasive paper. Proposals for the manufacture of spanners, steel files, hand saws, cutters, twist drills, etc., were also received and production of these ranges may be expected to commence shortly. Proposals for the manufacture of typewriters, steel tubes, and industrial and electrical machinery, etc., were also received during 1954 and these are now under examination of the Government of India.

The past year was a significant one for the industrial sector, as it witnesed the implementation of the Government's declared policy of encouraging the establishment of the automobile industry. Five schemes were sanctioned during the year for the manufacture of (*a*) automobile valves and valve accessories; (b) piston rings, cylinder liners, oil seals and metal gaskets; (c) scammel semi-trailers; (*d*) brake lining and clutch discs, and (*e*) brake lining and friction materials. Considerable progress has also been recorded in the production of motor cycles, spark plugs and automobile radiators and actual production in many of them has already begun. The new products manufactured during the past year were gudgeon pins, electric horns and certain new ranges of pistons. In the diesel engine and pumps section, the manufacture of multi-cylinder diesel engines upto 40 h.p. was also established, as also pumps above 6" in diameter, multi-stage pumps (up to 10 stages), axial flow pumps, screw pumps, sewage disposal pumps and self-priming pumps, etc.

Mechanical Engineering

In the other mechanical engineering industries section, new items of production during the year were as under: (*a*) roll on pilferproof aluminium caps or seals, (b) steel wire ropes, (*c*) special types of welding electrodes, (*d*) eye ointment tubes, and (*e*) packing case clips. The electric motor industry made considerable progress and motors of the slip-ring type of upto 125 h.p. are now being manufactured in the country. Similarly, transformers up to 3,000 KVA/33 KV were also being produced. Of the new products manufactured during the year, mention may be made of brass caps for electric lamps, and miners' cap lamps. The capacity for the production of electric motors, transformers, switch and control gears, cables and wires and electric fans is expected to expand further during the current year.

As for aluminium, the ingot capacity was stepped up from 4,000 tons to 7,000 tons in 1954 and the rolling capacity increased by 5,500 tons. Heat treatable alloy sheets suitable for aircraft and aluminium wire bars for A.C.S.R. were manufactured in the country for the first time. The past year also saw the installation of an extension press for sections, such as pipes, tubes, bars and rods and the current year will be witnessing installation of further capacity for the production of wire rods. Steps have been taken to increase the lead refining in the country by approximately 1,500 tons a year. A scheme for the installation of a zinc rolling mill with an annual capacity of 2,000 tons of zinc strip for the manufacture of electric cell cans was also sanctioned last year. The steel castings industry has also formulated plans to increase the existing capacity of 2,000 tons by 4,000 tons per annum by another 15,000 tons in due course. The most notable development in the field of metallurgical industries during 1954 was the sanctioning of six schemes for the manufacture of a total quantity of approximately 106,000 tons of ferro-manganese per annum. These schemes are expected to result in the production of ferro-manganese within the next two years. The present production of ferro-manganese in the country is only 17,000 tons, a quantity just sufficient to meet internal requirements.

Chemicals

The chemical industry made considerable headway during 1954. New production capacity in several basic chemicals was established during the past year and many new lines, of production were commenced. The installed capacity of heavy chemicals, for example, sulphuric acid, soda ash and caustic soda, required by fertilisers, sheet glass and dyestuffs, etc., increased during the year. Among the new products manufactured for the first time in the country during the year were (*a*) sheet glass of 10 to 12 oz. gauge; (*b*) penicillin (on a pilot plant scale); (c) chloromycetin, (*d*) glacial acetic acid and acetic anhydride and (*e*) bismuth salts. Efforts are being made to establish manufacture of chemotherapeutics and dyestuffs from basic raw materials rather than from intermediates. A scheme for the manufacture of sulphuric acid from gypsum rather than from imported sulphur has made progress. A special survey was undertaken during the year to enable economic location of additional capacity for the soda ash industry in the country and as a result soda ash production in India is expected to expand soon. Licences were given for the establishment of three soda ash plants, to be located in Tuticorin, Porbander and Dalmia Nagar, with an aggregate capacity of 520 tons per day. Plans are afoot to increase the production capacity of sulphuric acid by one lakh tons. Three new projects for electrolytic caustic soda and expansion of an existing unit will increase the output by about 13,500 tons. The manufacture of heavy ash required by the glass and bichromate industries is included in the programme of the proposed new units of soda ash manufacture. Part of the soda ash will be utilised for making 40,000 tons per year of caustic soda. The other important new schemes under way are: (i) stabilised bleaching powder—capacity 6,000 tons per year; (ii) high test hypochloride—capacity 2,310 tons per annum, (iii) sodium hydrosulphite—capacity 4,000 tons per annum; (iv) hydrogen peroxide—capacity 1,500 tons and (v) precipitated calcium carbonate—capacity 1,560 tons.

Refractory

The capacity of the refractory industry is being reassessed so as to provide for the requirements of the new steel plants. The possibilities of economic utilisation of bagasse for the manufacture of newsprint are being examined at the technical level. Significant progress has also been made by the plastic industry. A beginning has been made in the successful manufacture of intricate and good quality moulds. A scheme for the manufacture of standard and long-playing gramophone records from high impact polysterene progressed and experimental production was started. One firm has been given permission for the manufacture of polysterene involving foreign collaboration. In the paint industry, progress has been made in regard to pigment dyestuff, synthetic resins, high grade finishes and industrial surface coatings (particularly nitro-cellulose lacquers). An expansion scheme for the production of zinc and lead pigments in collaboration with a Japanese firm materialised during 1954 and the zinc oxide plant is expected to go into production shortly. Progress has been recorded in the establishment of production of certain anti-leprosy, anti-tuberculon cardio-stimulants, etc. In the field of dyestuffs, the year witnessed an impressive increase in the production of azo dyes, azoics, solubilised vats and sulphur black.

The cement industry continues to make steady progress, the output in 1954 being 4.39 million tons as against 3.78 million tons in the preceding year. Twenty schemes (nine new units and substantial expansion of 11 existing units), approved by Government have been in progress. Some of these schemes are expected to be completed by the end of 1955 and almost all the others by 1956-57. The completion of all these schemes will increase the annual capacity to about 7.7 million tons which, it is expected, will largely meet the increased demand for cement in the country. Now that it is being contemplated to increase the production capacity of cement to about 10 million tons during the second Five-year Plan, the cement industry will reach the target of 10 million tons before 1961.

FALL IN FARMERS' INCOMES

OUTPUT UP BY 53 PER CENT.

(From Our Own Correspondent)

LONDON, 26*th March*

OVER the agricultural year just ended bad weather has reduced farmers' incomes by about £40 million compared with the year before, and the industry's net income is estimated at only £280 million against the £312 million which had been confidently expected. When, therefore, the farmers began a few weeks ago their meetings with the Government, they were able to make a case for assistance. The Government, however, calculates, and the farmers do not disagree, that efficiency in agricultural production is rising, possibly at an even higher rate than in industry, and reducing farmers' costs each year by something over £30 million. The farmers countered by pointing out that their costs this year had gone up even more than the normal increase in efficiency.

LONDON LETTER

This is now the seventh year since the farmers' charter in the Agriculture Act, 1947, was established. The National Farmers' Union, on behalf of its members, have considered the levels of price guaranteed by the Government and have asked for adjustments in the guarantees to maintain or to increase their incomes. At this annual review exercise both parties look at the trend of production in relation to the markets and a decision is taken whether more financial incentives or less should be given. Up to now the incentives have worked remarkably well. Agricultural production is 53 per cent. higher than it was before the war and would have been higher still had it not been for the bad weather. The previous year the index was 55 per cent. above pre-war. On individual commodities wheat is now produced equal to nearly one-third of the country's requirements while before the war it was only one-eighth; the production of refined sugar is 21 per cent. of needs against 18 per cent. pre-war. The country now covers two-thirds of its meat requirements against one-half before the war, and the production of bacon, eggs, potatoes, butter and cheese are all higher proportionately to the country's needs. But these results have only been achieved at the cost of substantial subsidies approaching £250 million, that is, an amount nearly as large as the farmers' net incomes. The conclusion is that without the subsidies the industry would be in a parlous state.

Higher Prices

Last year, the Government laid down the policy of steadily increasing expansion and has nothing new on policy to add this year. But because of the loss of income which the poor harvests caused and still more because this is called "election year," the Government has decided (against its consideration of the economic needs of the industry) to pay another £28 million. The farmers are therefore going to get higher prices for cereals, potatoes, sugar, livestock, and eggs. They are escaping any reduction in milk, although this country is now producing far more liquid milk than is needed for consumption as such and a high cost is involved in turning the surplus into butter and cheese. Only in the case of pigs is there a reduction in the prices because the policy of encouraging production has proved too successful and the national production of pig meat and bacon is becoming proportionately excessive and of course altogether too expensive.

But the aspect of the subsidy increases which interests consumers (who pay the taxes which pay the subsidy) is the apparent decision that the farmers are not only to enjoy guaranteed prices, but also a guaranteed income. So, if the season is bad and they cannot produce what they expected, the deficit is to be made up to them! If this principle were applied in industry then should not manufacturers be insured by the Government against slumps, which are to industry what the weather is to farmers? This principle is really to remove all risks from farming and the danger is that if protection is pushed too far there will be a public revulsion against it. The farmers see this danger too but for this year they have felt too strong not to reap advantage.—*All Rights Reserved.*

RESULTS OF MERCANTILE BANK OF INDIA SATISFACTORY

BUSINESS EXPANDS ALL-ROUND

NOTWITHSTANDING political uncertainties, the year 1954 witnessed considerable economic progress in the areas served by the Mercantile Bank of India Ltd., to which the Chairman has made an elaborate reference in his statement to the shareholders, published elsewhere in this issue. In common with other Exchange banks operating in these areas, the Bank shared in this progress. This is duly reflected in the increase of about £5 million in the Bank's balance-sheet total as at the close of 1954, in refreshing contrast to the sharp contraction of £10 million noted at the end of 1953. The Bank's deposits which had dropped by over £9 million in the previous year, have grown by about £4 million. This expansion has been spread over all the principal assets. The profit, however, has not risen correspondingly; on the other hand, it has been just maintained at about the previous year's level.

The net profit of the Bank (after providing for taxation and after allocations to contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets) amounts to £194,324, as against £194,687 for 1953. Though the decline in profit is fractional, it is noteworthy that the trend has been downward for the third year in succession, the aggregate fall for the three years being £1,037. With the slightly higher sum of £200,980 (as against £200,143) brought in from the previous year, the amount available for appropriation, at £395,304, is larger than the corresponding sum of £394,830 a year ago. The Directors have maintained the allocation to the officers' pension fund at £13,000 and the additional provision for the contingencies account at £50,000. The amount utilised to write off freehold banking premises and property has been reduced from £50,000 to £35,000. The Directors paid an interim dividend of 7 per cent. during the year which was the same as that for the previous year. The final dividend also has been maintained at 7 per cent., but it is on a capital raised in September, 1954, by the capitalisation of a part of the reserves. The total distribution for the year amounts to £97,020, an increase of £16,170 over the previous year. The undistributed surplus left to be carried forward is £200,284, as against £200,980 brought in.

The progress of the Bank in the last three years is fully indicated by the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1954	1953	1952	1951
LIABILITIES (MAIN)				
Capital	1,470	1,050	1,050	1,050
Reserves	1,750	1,500	1,500	1,500
Unappropriated surplus	200	201	200	200
Notes in circulation	273	279	278	229
Deposits and other accounts	63,219	59,382	68,510	67,376
Loans payable				408
Bills payable	1,137	927	1,729	2,690
Acceptances (contra item)	645	211	209	408
ASSETS (MAIN)				
Cash	14,013	13,696	15,208	15,621
Investments	16,160	13,904	20,651	14,228
Securities against note issue	371	371	371	371
Bills receivable	15,815	14,670	14,580	18,850
Loans and advances	21,063	20,206	21,846	23,927
Fixed assets	652	620	644	695
Balance-sheet total	68,594	63,634	73,655	74,154

There was a reconstruction of the capital structure of the Bank during the year under review. The 30,000 'A' shares of £25 each and 30,000 'B' shares of £25 each, of which £12 10s. were paid, were sub-divided into 150,000 'A' shares of £5 each and 150,000 'B' shares of £5 each, of which £2 10s. were paid. The 300,000 'C' shares of £5 each, of which 60,000 shares only had been issued and fully paid-up, were divided into 1,500,000 shares of £1 each, of which 300,000 shares of £1 each fully paid-up were issued. Thereafter, a sum of £420,000, being a part of the amount standing to the credit of the reserve fund, was capitalised, raising the 'C' class capital to £720,000, made up of 720,000 shares of £1 each. The Directors also transferred during the year a sum of £670,000 from the inner contingency reserves to the reserve fund, as a result of which the reserve fund stands higher at £1.75 million.

As already noted, the Bank's deposits and other accounts expanded by £3.84 million, but the expansion is not sufficient to make good the drop of £9.13 million witnessed in the previous year. Nevertheless, the upward trend in the Bank's deposits during the past several years, which had suffered a break in 1953, has been resumed. Bills payable, which had a setback for two successive years, have also shown a welcome increase, as also acceptances on account of customers (contra item).

Loans and advances, which had gone down by £3.72 million in the course of the previous two years, have risen but only by £0.86 million during the year under review. There has, however, been a rise of £1.14 million in bills receivable and, at £15.81 million, they represent the highest in the last three years. The improvement in these two main revenue-yielding assets indicates the Bank's successful efforts at utilising the opportunity provided by the economic progress in the countries in which it operates to expand its business. The highlight of the assets side of the balance-sheet is, of course, provided by the sharp rise of £2.38 million in investments (other than British Government securities deposited as security against note issue). The bulk of this increase has occurred in securities quoted in Great Britain which have strengthened by £2.35 million. The shrinkage in cash balances noted in the previous two years has been restored fractionally.

LONDON WELCOMES WORLD BANK LOAN FOR EAST AFRICA

The news of the loan of about £8,500,000 from the International Bank for Reconstruction and Development to help to finance the programme of modernisation and expansion of the railways, roads, and harbours of Kenya, Uganda, and Tanganyika has been welcomed in London. An East Africa Office spokesman in the British capital said that not only did the loan provide a substantial sum towards the ambitious schemes of transport development now under way in the East African territories, but it would assist in reducing calls on the London market for development capital. He added: "The loan also demonstrates the confidence the World Bank must have in the existing economy of East Africa, and in the potentialities for further economic development of the territories of the East Africa High Commission. It will be a real stimulus for further investment."

The loan is made to the East Africa High Commission, and will be used by the East African Railways and Harbours Administration in carrying out the programme, which is part of the post-war development plan estimated to cost some £60,000,000.

The work was begun in 1949, and will be substantially complete by 1957. The loan will pay for part of the imported goods and equipment required for the period 1954-57, during which it is planned to spend about £34,000,000. The official statement says that it is expected that most of the imports purchased with the loan will be bought in the United Kingdom with sterling.

(Concluded from next column)

of Rs. 8.14 lakhs in bills for collection and of Rs. 14.43 lakhs in acceptances, endorsements and other obligations. These acceptances are secured by part of the Bank's investments.

On the assets side, advances, which had gone up by Rs. 71.22 lakhs in 1953, have further risen by Rs. 29.81 lakhs and, at Rs. 414.54 lakhs, they represent the highest since 1948. Loans, cash credits and overdrafts show an increase from Rs. 268.94 lakhs to Rs. 285.06 lakhs, while bills purchased and discounted have declined from Rs. 109.29 lakhs to Rs. 94.98 lakhs. Money at call and short notice has risen from Rs. 6.50 lakhs to Rs. 34.50 lakhs. Investments have been enlarged by Rs. 28.03 lakhs and with this increase they stand strengthened by Rs. 51.62 lakhs during the last three years. Investments are shown at book value and the market value of the same is lower by Rs. 2.95 lakhs. The Bank's investments in Government and other Trustee securities amount to Rs. 226.89 lakhs, the redemption value of which is higher by Rs. 3 lakhs, which more than covers the gap between the market value and the book value of the total investments. Cash balances have also risen by a modest extent and these together with the investments give a liquidity ratio of as much as 57 per cent., a level which had been generally maintained in the previous two years.

PROGRESS OF BANK OF JAIPUR MAINTAINED

DIVIDEND RAISED

ENCOURAGING progress is disclosed by the audited accounts of the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur), for the year ended 31st December, 1954. The profit of the Bank, which had shown a small increase in the previous year, thereby reversing the downward trend noted since 1946, has staged a further rise of Rs. 1.12 lakhs to Rs. 5.52 lakhs. The profit has recovered during the last two years a good part of the earlier recession and has constituted the best one since 1949. This notable improvement in the working of the Bank has also resulted in the raising of the dividend level from 3 per cent. paid for the previous seven years. The Bank has thus restored the cut in dividend effected in 1947, when it was reduced from 4 per cent. to 3 per cent. It has also earned the distinction of being one of the very few banks to increase the dividend for 1954.

The dividend has been raised without in any way affecting the essential allocations. In fact, the provision for taxation has been raised from Rs. 75,000 to Rs. 1.50 lakhs. The statutory allocation to the reserve fund has been raised from Rs. 1 lakh to Rs. 1.15 lakhs, while the transfer to other reserves has been reduced from Rs. 1 lakh to Rs. 85,000. In addition, the Directors have provided Rs. 25,000 to the staff gratuity fund.

The following comparative table provides a good idea of the Bank's progress since 1951:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount	28.05	24.84	23.37	21.84

Cash	23.1	23.8	20.5	18.8

* Include bills purchased and discounted and money at call and short notice.

† Ratios arrived at after taking into account the securities earmarked against borrowings from other banks.

The gross income of the Bank amounts to Rs. 34.96 lakhs, which is the highest level reached so far, and represents an increase of Rs. 5.37 lakhs over the previous year. The bulk of this income has come from "interest and discount," which accounts for a rise of Rs. 3.71 lakhs, thus keeping the upward trend since 1951. "Commission and exchange" shows a rise of Rs. 1.47 lakhs. Offsetting these are the increase of Rs. 3.28 lakhs in interest paid and the rise of Rs. 1.06 lakhs in expenses.

The judicious appropriation of the bank's profit year after year has enabled the strengthening of the reserves sizably. Thus, in the course of the last three years alone, the reserves have been raised by Rs. 6.35 lakhs. A notable feature of the balance-sheet is the marked rise of Rs. 42.86 lakhs in the Bank's deposits during the year. It may be recalled that the deposits had dwindled from the peak level of Rs. 8.26 crores as at the close of 1948 to a low of Rs. 5.16 crores at the end of 1952. This trend which had, however, been reversed in 1953 when there was an increase of Rs. 1.44 crores, gathered, as already noted, momentum in 1954. As in the case of all other banks, fixed deposits have risen by Rs. 56.43 lakhs during the year under review to Rs. 281.34 lakhs and savings bank deposits by Rs. 10 lakhs to Rs. 70.37 lakhs. Current accounts and contingency accounts have, on the other hand, declined by Rs. 23.58 lakhs to Rs. 351.86 lakhs. The Bank's bills business has also expanded appreciably, as witness the rise

(Continued in previous column)

UNITED COMMERCIAL BANK'S PROFIT RISES BY 35 PER CENT.

DIVIDEND RAISED—ADVANCES AT RECORD HIGH

ONLY very few banks in India have had the distinction of raising their dividend level for the year 1954. To the rank and file of this small band belongs the United Commercial Bank Ltd. (General Manager: Mr. B. T. Thakur, Calcutta) by stepping up the dividend to 5 per cent. from 4 per cent. paid for the previous four years. Such an increase in the distribution to the shareholders is in consonance with the expansion in the Bank's business and the rise in the profit for the year under review. Reflecting the improvement in the Bank's business is the rise of Rs. 4.25 crores in the balance-sheet total. Deposits have risen by Rs. 2.70 crores to a record level; advances have again staged a smart rise of Rs. 3.75 crores to set up a fresh record and foreign bills have expanded substantially, as witness the increase of Rs. 1.14 crores in acceptances and endorsements. All this expansion has been recorded without any marked variation in the liquid assets which have been kept almost at the previous year's level.

The Bank's gross income has recorded an increase of Rs. 29.27 lakhs to Rs. 217.31 lakhs, a total not seen before in the history of the Bank. The profit also has advanced from Rs. 23.01 lakhs for 1953—the lowest to be recorded since 1945—to Rs. 31.06 lakhs for the year under review, which is by no means a record one. It is, however, the highest since 1951. The smart rise of Rs. 8.05 lakhs in the profit for 1954 has helped the Bank to make good substantially the decline of Rs. 12.02 lakhs noted during the previous two years. Another notable feature of the increase in the Bank's profit for 1954 is that it is much sharper than those of many other banks.

The profit could have been much higher but for the steep rise in the outgo by way of interest paid on deposits and borrowings and expenses—as readers are aware, this is not a special feature of the United Commercial Bank alone—as will be seen from the following comparative table showing the salient features of the Bank's profit and loss accounts for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount earned	142.42	127.42	107.04	105.04
Commission and exchange	73.17	59.46	60.49	53.27
Interest paid	78.48	63.33	48.60	88.12
Expenses	103.33	95.43	90.00	81.83
Depreciation	6.44	6.27	5.24	4.37
Profit	31.06	23.01	24.80	35.03
Taxation	12.50	9.50	10.00	8.00
Reserve fund	6.50	5.00	7.50	7.50
Investment account				15.00
Bonus to staff	2.50			
Dividend	10.00 (5%)	8.00 (4%)	8.00 (4%)	8.00 (4%)
Carry forward	1.06	1.52	1.01	1.71

The rise of Rs. 29.27 lakhs in gross income noted above has been shared by "interest and discount earned" to the tune of Rs. 15 lakhs, thanks to the substantial increase in advances, and by "commission and exchange" to the extent of Rs. 13.71 lakhs. Though the increase in interest and discount earned is less than that in the previous year, it has helped the Bank maintain the upward curve of income. The rise in income from commission and exchange is in refreshing contrast to the small setback noted in 1953. On the expenditure side, interest paid has also gone up steeply, the rise of Rs. 13.15 lakhs comparing with that of Rs. 14.64 lakhs in 1953 and of Rs. 10.57 lakhs in 1952. It will be interesting to note that the item of interest paid has more than doubled in the course of the last three years. Such a trend is inevitable in the context of rising trend in the Bank's fixed deposits, particularly in the last two years, and the high rates of interest on deposits and borrowings. The mounting level of expenses have again gone up with a fresh rise of Rs. 7.90 lakhs in 1954. Of this rise, salaries and allowances and provident fund alone account for Rs. 6.30 lakhs. The appropriations of the profit are clearly shown in the above table and need no further elucidation.

It will be noted from the table below that the Bank's reserves have been considerably strengthened during the last few years. The expansion in deposits is less marked than in 1953. Nevertheless, the deposits have established a fresh record, exceeding the previous best of Rs. 38.24 crores, touched at the close of 1948, by Rs. 2.18 crores. The rise has been shared by all classes of deposits, but the bulk of it by fixed deposits, as in the previous year. Fixed deposits have risen by Rs. 1.21 crores, to Rs. 15.17 crores, savings deposits by Rs. 45 lakhs to Rs. 3.78 crores and current accounts, contingency accounts, etc., by Rs. 1.03 crores. It may be noted, in this connection, that the fixed deposits of the Bank have swelled in the course of the last two years from Rs. 9.75 crores to Rs. 15.17 crores, while current and contingency accounts, etc., have risen by only Rs. 3.31 crores. The other notable features of the liabilities side of the balance-sheet is a further rise in borrowings from other banks—of these borrowings, Rs. 3.58 crores are secured by investments and the balance unsecured—and the increase of Rs. 1.14 crores in acceptances.

The following synopses of the Bank's balance-sheets as at the close of the past four years fully bring out the notable expansion in the Bank's business:

(In lakhs of rupees)

	As on 31st December			
	1954	1953	1952	1951
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserves	96.50	90.00	75.00	67.50
Deposits	40,42.18	37,72.48	30,87.73	29,58.10
Borrowings from other banks	3,92.30	3,35.13	65.25	2,21.40
Bills for collection	4,17.26	4,24.18	2,75.03	2,41.51
Acceptances	8,89.44	7,75.43	5,60.89	10,15.00
Advances*	24,84.50	21,00.26	14,26.62	17,91.56
Investments	17,15.78	17,88.38	14,81.40	12,13.02
Cash	5,87.72	5,55.43	6,53.67	5,03.71
Balance-sheet total	62,16.20	57,91.52	45,20.27	48,73.59
Ratio to deposits of—	%	%	%	%
Advances	61.4	55.9	46.2	60.6
Investments†	33.6	38.5	45.8	33.5
Cash	14.5	14.7	21.2	17.0

* Include bills purchased and discounted and money at call.

† After taking into account investments earmarked against borrowings from other banks.

As in the case of deposits, the rise in advances during 1954 is less marked than that noted in 1953. Loans, cash credits and overdrafts account for an increase from Rs. 11.99 crores to Rs. 16.07 crores and bills discounted and purchased from Rs. 7.79 crores to Rs. 8.57 crores, while money at call and short notice has dropped from Rs. 1.30 crores to Rs. 20 lakhs. Investments, shown at below market value, are lower by Rs. 73 lakhs, while cash balances are higher by Rs. 32 lakhs, but the total liquidity ratio has not suffered any serious decline.

(Concluded from next column)

lakhs to Rs. 57.18 lakhs, the percentage of increase being more than that in gross income.

The capital of the Bank shows a slight increase, but this is due to the payment of calls unpaid. The reserve fund and other funds stand at the impressive level of Rs. 77.50 lakhs, exceeding the paid-up capital by Rs. 19.71 lakhs. The upward trend in deposits noted since 1949 has been fully maintained during the year under review with a rise of Rs. 3 crores (as against an increase of Rs. 1.54 crores in 1953) to a peak of Rs. 24.85 crores. A break-up of the deposits shows that much of this increase is accounted for by fixed deposits which have risen from Rs. 6.83 crores to Rs. 8.67 crores. Season and short-term deposits have gone up by Rs. 28 lakhs to Rs. 2.58 crores, savings bank deposits by Rs. 54 lakhs to Rs. 4.56 crores and current accounts, contingency accounts, etc. by Rs. 33 lakhs to Rs. 9.03 crores. The improvement in lendable resources has helped the Bank to meet the increase in demand for bank credit, as will be seen from the rise of Rs. 2.17 crores in advances to Rs. 24.85 crores, which again is a new high level. Investments and cash balances also have been strengthened. Investments are shown at cost, the market value of the same being lower by as much as Rs. 80.04 lakhs. The excess of book value over market value has considerably increased in the course of the last three years from Rs. 43.44 lakhs to Rs. 80.04 lakhs. A part of this is covered to the extent of Rs. 18.5 lakhs by the sum of Rs. 9 lakhs standing to the credit of the non-statutory reserve and Rs. 9.50 lakhs to that of sinking fund. The great bulk of the Bank's investments are in Government securities and other Trustee securities amounting to over Rs. 9.48 crores. The redemption value of the same is also lower than the book value of Rs. 12 lakhs but such is well within the provision made as shown above.

During the year under review, the Bank added eight more offices to its list of branches. Arrangements are also being made for the opening of a branch of the Bank at Calcutta before the end of June, 1955.

PROFIT OF INDIAN BANK HIGHER

NOTABLE EXPANSION IN DEPOSITS

A WELCOME improvement in the profit for the year ended 31st December, 1954, after two years of successive decline, is disclosed by the latest audited accounts of the Indian Bank Ltd. (Secretary: Mr. N. Gopala Iyer, Madras). The profit (after providing for loss on sale of investments) which had receded from Rs. 16.82 lakhs for 1951 to Rs. 12.91 lakhs for 1953, has appreciated by Rs. 1.03 lakhs to Rs. 13.94 lakhs for the year under review. It is noteworthy that such an improvement in earnings has been achieved, as in the case of other banks, in the face of higher expenses and larger outgo by way of interest paid on deposits and borrowings. The Bank seems to have overcome the effects of the mounting cost on its income by expanding its business in a judicious manner.

The increase in profit has, however, been more than offset by the larger provision for taxation, which has been raised from Rs. 2.60 lakhs to Rs. 5.75 lakhs. This has necessitated a cut in the allocation to the reserves by Rs. 2 lakhs. The transfer to the reserve fund under Section 17 of the Banking Companies Act, 1949 has been reduced from Rs. 2.50 lakhs to Rs. 1 lakh and no addition has been made to the sinking fund which had received Rs. 50,000 in the previous year. The reduction in the allocation to the reserves is, however, no reflection on the Board's appropriation policy. In fact, the reserves are already at such an impressive level, as will be shown later on, that it would not have mattered much even if the reserves had not been strengthened at all. The distribution to the shareholders has been maintained at 12 per cent., made up of a dividend of 10 per cent. and a bonus of 2 per cent.

The following comparative table shows at a glance the progress made by the Bank during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount earned	94.79	88.85	89.86	78.52
Commission and exchange	25.06	22.23	19.79	18.26
Interest paid	49.09	45.07	42.80	34.50
Expenses	57.18	53.44	46.47	42.76
Depreciation and repairs	1.56	1.32	1.42	0.88
Loss on sale of investments	0.01	0.83	5.37	4.75*
Profit	13.94	12.91	14.18	16.82

Investments‡	39.2	43.2	41.4	33.4
Cash	14.4	13.4	13.9	15.1

* No. loss after adjusting Rs. 10 lakhs from sinking fund.

† Include investments of staff security deposits.

‡ After taking into account securities earmarked against borrowings from other banks.

The gross income of the Bank, which had reached a record level of Rs. 114.48 lakhs in 1953, has jumped up by another Rs. 8.19 lakhs to set up a fresh record in the history of the Bank. The income from "interest and discount" has risen by as much as Rs. 5.94 lakhs, as compared with the drop of Rs. 1.01 lakhs in 1953, and that from "commission and exchange" by Rs. 2.83 lakhs. Expenses have gone up by Rs. 3.74 lakhs, but a gratifying feature of the rising trend in the Bank's expenses is that the pace of increase in the last three years has been slowly declining, as will be seen from the above table. Another welcome feature of the Bank's operations is the declining trend in loss on sale of investments, the loss during 1954 being no more than Rs. 923. A study of the Bank's profit and loss accounts for the past four years reveals that, while the gross income has leaped up from Rs. 83.32 lakhs for 1950 to Rs. 122.67 lakhs, the profit has actually gone down from Rs. 15.62 lakhs to Rs. 13.94 lakhs. An explanation for this is to be found in the increase in administrative and other costs from Rs. 38.63

(Continued in previous column)

THE BUCKINGHAM AND CARNATIC CO., LTD.

THIRTY-FOURTH ANNUAL GENERAL MEETING

MR. R. E. CASTELL ON HEAVY INCIDENCE OF LEVIES ON TEXTILE INDUSTRY

ADDRESSING the shareholders of the Buckingham and Carnatic Company, Ltd., at their Thirty-fourth Annual General Meeting held in Madras on 24th March, 1955, Mr. R. E. Castell, Chairman of the Company, said that the purchasing power of consumers of cotton textiles had been adversely affected by the incidence of State and inter-State sales tax and of excise duties. He regretted that the various State authorities did not appear to appreciate the difficulties with which manufacturers and traders were burdened in the preparation of the tremendous mass of detail required for current returns and the enormous amount of work which had been caused by the retrospective effect of inter-State sales tax. For the industry as a whole, he said, the new structure of excise duties would create some anomalies such as a substantial increase in the duty on wide cloths and duties which were excessive in proportion to the value of certain cheaper varieties of cloth. So far as the Buckingham and Carnatic was concerned, the new duties would benefit consumers of fine cloths, as the Company made such cloths mostly in narrower widths.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The report of the Directors and the accounts for the year ended 31st December, 1954, having been sent to you in due time, I propose with your permission to take them as read, but will be glad to answer questions later.

"In my speech last year, I had occasion to review a successful trading year following a year of adversity. I am glad now to be able to comment on a year, the results of which are sufficiently good to justify the same improved distribution of dividend as for 1953.

"These results have been achieved, despite a number of difficulties, the general effect of which has been to lower selling prices and profit margins. There is no doubt that, for the products of the cotton textile industry as a whole, the purchasing power of consumers has been adversely affected by the heavy incidence of sales tax, both State and inter-State, and of excise duties.

"In overseas markets, competition from other manufacturing countries has become very keen and has prevented India from attaining her export target of 1,000 million yards of mill cloth. Nevertheless, the export of 898 million yards in 1954 was a substantial improvement on the preceding year. Your own Company succeeded in exporting in 1954 over one-fourth of its total production, but this result required a strenuous effort and price reductions.

Export Duty

"During 1954, the export duty on cotton cloth applied to the coarse category only and was at the rate of 10 per cent. *ad valorem*. From 28th February, 1955, the rate has been reduced to 6¼ per cent., but a revised classification has been introduced for the purpose of applying export duty. By this change, many cloths including some long-established varieties, hitherto classed as medium and, therefore, free from export duty, will henceforth be liable to a duty of 6¼ per cent. and will to this extent be less competitive overseas.

"I now come to the accounts again and, if you will turn to the capital and liabilities side of our balance-sheet, you will observe that from our profits for the year we have transferred Rs. 6 lakhs to general reserve and Rs. 5 lakhs to the debenture redemption fund. As mentioned in the report, the Directors have considered it prudent to increase the amount set aside to the redemption fund in order to equalise the appropriations over the remaining period to the final date of maturity in 1972.

"You will also note that an amount of Rs. 12 lakhs has been transferred from taxation reserve to the provision for increased replacement costs of buildings and machinery and, as this represents the relief from taxation on our profits of 1952 and 1953 through the operation of the allowances for initial and extra normal depreciation, it is but logical to utilise it for the purpose for which it was intended by the Government of India, that is, to finance expansion or reconstruction programmes.

"In this connection, I am sure that shareholders will join with me in welcoming the additional relief which has been provided in the Finance Bill, 1955. The proposed development rebate of 25 per cent. of the cost of new machinery will mean a considerable reduction in the amount of tax payable which we shall, of course, utilise in full in the financing of our capital programme.

"Debentures to the face value of Rs. 4 lakhs were redeemed and cancelled during the year and, in accordance with our policy, a similar amount has been transferred from the debenture redemption fund to the provision for increased replacement costs of buildings and machinery.

"The overdraft with our bankers is higher than last year by approximately Rs. 62,67,000 and this is chiefly accounted for by an increase of Rs. 47½ lakhs under stock-in-trade, mainly on raw materials, as we began our buying for the 1954-55 cotton year earlier than in the previous season.

Sales Tax

"One of the most difficult of our administrative problems during the year has been to satisfy the demands for retrospective and current sales tax returns from 20 different States. Considerable additional staff has had to be engaged solely for this purpose and the various States' authorities do not appear to appreciate the difficulties with which manufacturers and traders are burdened arising from the preparation of the tremendous mass of detail required for current returns, and the enormous amount of work which has been caused by the retrospective effect of inter-State sales tax.

"It may interest shareholders to know that, in our capacity as collecting agents for the Government of India and the various States, we have had to add to our selling price Rs. 23 lakhs for excise duty and handloom cess, Rs. 10½ lakhs for export duty and just over Rs. 9 lakhs for sales tax on behalf of the States in which we sell our products. In addition, there is the sales tax on our purchases of raw materials, stores and other essentials which adds appreciably to the cost of production.

"Lest you should underrate the incidence of sales tax, I would point out that the amount shown against this item in the profit and loss account represents only the sales tax on our purchases of raw materials.

"Whilst these difficulties have been appreciated by the Taxation Enquiry Commission, it seems to me, after having studied their recommendations, that it will be some time before any simplification of inter-State sales tax can be expected.

"I now refer to the new excise duties proposed by the Finance Bill, 1955. There is a change in the assessment of duty from a linear to a square yardage basis, but the handloom cess of three pies continues to be per linear yard. Your Company makes cloths mostly in the narrower widths and it so happens that the new duties will benefit consumers of our fine cloths.

"As a result of representations from various quarters and of further consideration by Government, the original proposals have been modified in certain respects and in the case of our own Company, consumers will not suffer as the result of the duties now applicable to coarse and medium varieties.

"For the industry as a whole, the new structure of excise duties will create some anomalies, such as a substantial increase in the duty on wide cloths, and duties which are excessive in proportion to the value of certain cheaper varieties of cloth. So much for Central excise, but the States Governments show no inclination to moderate their demands for sales tax, special or additional sales tax or inter-State sales tax. On the other hand, the tendency seems to be to increase the scope and scale of their income by these means.

Efforts to Improve Efficiency

"As, under the regulations affecting the cotton textile industry, your Company cannot expand its manufacturing installation, as wages and the cost of benefits to labour continue to increase, and as the purchasing power of the public is restricted by heavy taxation, both direct and indirect, the management will continue to endeavour to maintain satisfactory trading results by every possible improvement in efficiency throughout the range of its manufacturing processes.

"Your Directors' report mentioned the progress made with the new weaving shed which now contains 1,100 looms, all in full production and ultimately, nearly 1,700 looms will operate in this building. The Company's new power station recently began partial operation and is expected to be fully commissioned by June this year.

"The mill labour advisory organisation has continued to deal satisfactorily with the settlement of internal industrial affairs and I am glad to report that the year has passed with no loss of production arising from stoppages of work by our labour.

"As you were informed last year, the workpeoples' and employees' provident funds accounts having been transferred to the Trustees, no longer appear in the published accounts of the Company, but it may interest you to know that the liabilities of these funds as at 31st December, 1954, amounted to Rs. 1,15,49,504 and Rs. 13,30,086, respectively. Corresponding amounts have been invested in trustee securities."

Notice

THE ANDHRA BANK, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 31ST Annual General Meeting of the Shareholders of the Bank will be held at the Registered Office of the Bank, Cantonment Road, Masulipatam, on Sunday the 24th April, 1955, at 4-0 p.m., to transact the following business:

1. To receive the Report of the Directors and the audited Balance-sheet as at and Profit and Loss Account for the year ended 31st December, 1954.

2. To declare a dividend.

3. To elect four Directors in the places of Messrs. S. R. Y. Sivarama Prasad Bahadur, Jaldu Manikyalarao, Palakurty Sobhanadri, who are retiring under Article 94, and Sri Majesty Seshagirirao from among the next longest in office, who has volunteered to retire. The retiring Directors are eligible for re-election.

4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Brahmayya & Co. and Ch. V. Lakshmaiah & Co., the retiring Auditors, offer themselves for re-appointment.

Notice is hereby given that the Register of Members of the Andhra Bank Ltd., will remain closed from Monday the 18th April, 1955, to Saturday the 30th April, 1955, both days inclusive, during which period no transfer of shares will be registered.

By Order of the Board,
E. RAMACHENDRAMURTI,
General Manager.

MASULIPATAM, 23rd *March*, 1955.

N.B.—The Dividend Warrants for the half-year ended 31st December, 1954, will be despatched to the shareholders to their registered address on or about the 2nd May, 1955. Shareholders are requested to intimate the Bank any change of address immediately.

EXCISE DUTY ON COARSE AND MEDIUM CLOTH REDUCED

SUPERFINE COUNTS, HOWEVER, BEAR HEAVY INCIDENCE

THE reduction in the increase in excise on cotton mill piecegoods originally proposed in the Budget statement for 1955-56, announced by the Union Finance Minister while replying to the debate on the Budget in Parliament on Monday last week, has been widely welcomed. In the course of his speech, the Finance Minister said that the Government had decided to reduce the excise duty on categories of cloth most used by the middle and lower classes and the agricultural section of the community, namely, coarse and medium cloth, from one anna to half an anna per square yard, exclusive of the special cess of three pies per linear yard for the benefit of the handloom industry which would continue to be charged. Explaining the reasons for the reduction, he observed: "...all sections of the House have expressed concern about the fall in prices of agricultural commodities and there has been widespread criticism of the wisdom of levying an increased excise on cotton cloth which forms a part of the Budget proposals." It will thus be noted that, by reducing the quantum of increase in excise, Mr. Deshmukh has shown that the Government is alive to public opinion and that it is amenable to reason. It remains to be seen whether this spirit of accommodation will inform its response to equally sound criticisms of some of the other harsh proposals contained in the Budget.

Under the changes proposed in the Budget on 28th February, 1955, the original fourfold classification of cloth, namely, coarse (up to 16 counts), medium (17s to 34s), fine (35s to 47s), and superfine (48s and onwards), was abolished and, for taxation purposes, cloth was classified as superfine (48s and onwards) and others (47s and below), the rates of duty on the two categories being 2½ annas and one anna, respectively. The unit for excise levy was also changed from linear yard to square yard, so that the extent of incidence on wide width cloth came to be much more than the increase in the rate of duty. The special handloom cess, however, continued at the former rate of 3 pies per linear yard. The result of these changes was that the excise duty on coarse and medium varieties was raised from six pies per linear yard to one anna per square yard, while that on fine counts was reduced from 1½ annas per linear yard to one anna per square yard. The rate on superfine cloth remained unchanged at As. 2-6, but the change in the unit from linear to square yard meant an increase of a little over nine pies, that is to As. 3-3 per linear yard.

High Incidence

The Finance Minister estimated the extra income to the Treasury as a result of the addition to cloth excises at Rs. 9 crores. But it is now common knowledge that this was a gross underestimate to the tune of Rs. 6 to Rs. 7 crores. An increase of Rs. 15 crores to Rs. 16 crores in the burden on one industry was certainly crushing and meant severe hardship to cotton producers, the industry and consumers. The millowners spared no efforts to persuade the Government to revise the rates in a downward direction. But they have not met with complete success, as their demands have been met only in a half-hearted manner. Indeed, it is true to say that whatever reduction given was more the result of the protests made on behalf of agriculturists than in response to the petitions made by millowners. This is clear from the fact that the Government has left the incidence of duty on superfine unchanged at the unconscionably high rate of about 39 pies per linear yard, assuming the average width of this cloth at 47 inches.

It will be seen from the foregoing figures that, even after taking into consideration the effect of the reduction, there is a net increase in the rate of excise duty per linear yard of one pie each in the case of coarse and medium varieties and nine pies in respect of superfine cloth. As regards fine counts, however, there is a reduction of 4 pies per linear yard. The additional burden thus descends most heavily on superfine cloth. Assuming that the share of this category in the total production of cloth meant for consumption in the country is about 315 million yards, the brunt of the impost shouldered by it comes to Rs. 1.5 crores.

Be that as it may, the reduction in excise duty announced by the Finance Minister applies only in respect of cloth of 35 counts and below. In other words, instead of two classifications—superfine and others—as proposed in the Budget, there will henceforth be three classifications of cloth—(1) 35s and below, (2) 36s to 47s, and (3) 48s and above—the rates of duty per square yard being six pies, one anna and 2½ annas, respectively. An idea of the incidence of the new excise tariff that actually falls on the different categories of cloth can be had from the following table:

(In pies)

Average width	Coarse 42"	Medium 42"	Fine 42"	Superfine 47"
New excise tariff as announced on 21st March, 1955, on square yard basis	6	6	12	30
In terms of linear yard, the above rate of duty works out to	7	7	14	39
Pre-budget duty on linear yard basis	6	6	18	30
Net increase or decrease in the rate per linear yard over pre-Budget level	+1	+1	—4	+9

The Finance Minister has so far given no indication of the effect of the modifications, announced on 21st March, 1955, on his revenue estimates. The question is as to how much additional revenue can he hope to get in 1955-56. It is felt that he will not surely be able to realise the sum of Rs. 9 crores estimated on the Budget day; but it is difficult to arrive at an estimate which will prove fairly correct. Assuming that production and internal consumption are maintained at the 1954-55 level, one trade estimate puts the figure at Rs. 2.5 crores, raising the total excise revenue on cloth for 1955-56 to Rs. 29 crores, as against the revised estimate of Rs. 26.5 crores for 1954-55. Some, however, feel that it would be a little more than this amount.

EXCISE ON COARSE WOOLLEN RUGS

Manufacturers of coarse woollen rugs are greatly perturbed by the Union Government's decision to impose an excise duty of 10 per cent. ad valorem. In the course of a communication addressed to the Secretary, Central Board of Revenue, Mr. M. Anantharamiah, a drugget producer in Bangalore, has put forward a plea for completely exempting coarse rugs from payment of excise duty. The plea is based on the ground that the coarse rugs are produced out of coarse wool, a large part of which is the by-product of the tanning industry. Further, the rugs are used mostly as coverings by persons with low levels of income who cannot afford the costlier fine mill-produced rugs. The incidence of excise duty, Mr. Anantharamiah points out, is unduly heavy; it works out to as much as As. 12-6 per coarse rug costing about Rs. 8. As it is, coarse rugs bear a sales tax of As. 4, besides an octroi duty of As. 2. "This," to quote Mr. Anantharamiah, "is a heavy incidence which a poor man can ill-afford. In the urban centres, the cost of living continues to be high, while in the rural areas, the recent fall in the agricultural commodity prices has reduced the purchasing power of the masses . . . the industry will be forced to bear the incidence of excise duty itself. The effect would be a further addition to the cost of production which has already been rendered sufficiently heavy by high levels of wool prices and wages."

The plea for exempting coarse woollen rugs from excise duty would appear to be quite justified. The Taxation Enquiry Commission itself has specifically recommended that coarser rugs and similar articles used by the poorer people may be exempted.

NEW COTTON MILLS IN WEST BENGAL

Proposals for the establishment of three new cotton spinning mills and extension of two existing mills on the outskirts of Calcutta to provide employment to East Pakistan refugees resettled in the refugee townships around the city, were discussed by Mr. Mehr Chand Khanna, Union Rehabilitation Minister, Dr. B. C. Roy, Chief Minister, and Mrs. Renuka Ray, Relief and Rehabilitation Minister, West Bengal. These schemes, sponsored by private industrialists with Government assistance, involve a total expenditure of nearly Rs. 2 crores and are expected to absorb over 2,000 refugees in the initial stage and nearly 5,500 at a later stage. The question of grant of loans to refugees for similar purposes through the Rehabilitation Finance Administration was also considered.

The industries committee, consisting of Central and State experts, have already scrutinised these five schemes in accordance with the Union Rehabilitation Ministry's new policy of encouraging small and medium-scale industries in the Eastern States with a view to tackling the problem of chronic unemployment among East Pakistan refugees being resettled here. Industrialists willing to set up small and medium-scale industries are given land and factory buildings on rental basis, water and electricity at the rates prevailing in the neighbouring industrial areas and loans up to 50 per cent. of the value of machinery. They are required to take all unskilled labour from refugees and train them up subsequently for skilled jobs also.

TEXTILE INDUSTRY IN EUROPE

WARNING BY THE O.E.E.C. COMMITTEE

A GRIM warning that a considerable part of the textile industry of Europe would face the danger of gradual extinction, if the present trends in the world's textile economy were allowed to persist, has been administered by the Textile Committee of the Organisation for European Economic Co-operation (O.E.E.C.), in its report for 1954 published in Paris recently. The industry, says the Committee, is in danger of losing progressively its remaining export markets and is having increasing difficulty in holding its own even in the domestic markets. According to it, such a contraction of the industry will raise grave social, political and even strategic problems. European countries will have to spend on foreign textiles four to five times as much as they spend now on importing raw materials.

This warning of the O.E.E.C. Textile Committee assumes special significance, considering the pivotal place which the European textile industry occupies on the world textile map. The industry accounts, for instance, for as much as 43 per cent. of the world's cotton spindles and 37 per cent. of all cotton looms. It consumes 20 per cent. of the world's annual raw cotton output, 43 per cent. of its annual wool clip and 25 to 35 per cent. of the world's production of man-made fibres. It employs more than 3 million persons. It is, therefore, disquieting that the industry should have been lagging behind other countries in textile sales. What is this due to? The O.E.E.C. Textile Committee attributes this state of affairs to the two-fold competition from low-wage producers, such as India and Japan, and from the most highly mechanised producers such as the U.S.

View Exaggerated

The aforesaid view of the Committee is clearly exaggerated. For it is not so much the prevalence of such competition as the fact that the European textile industry is suffering from extraordinarily high wages plus low working hours and from an excess of installed equipment, much of which is old and apparently obsolete, that has made the outlook for the industry so grim. This, in turn, is the result of the following four factors:

(1) Domestic consumption of textiles fails to follow the rise in real income per head.

(2) Export markets are contracting, as the textile industries of new countries are developed under cover of high customs barriers and severe import restrictions.

(3) Cost of production is kept high by high price of cotton.

(4) The continuing large amount of labour employed per unit of output in comparison with other industries has raised the price of European textiles to a high level.

In view of these factors, it is felt that "a reduction in the quantity accompanied by an improvement in quality of the equipment is necessary." But falling profits make it difficult for the European textile industry to finance the required capital investments systematically. To quote the Special European Correspondent of the *Hindusthan Times*: "Credit is not easily obtainable. Nor is the fact that enterprises are still largely run as family concerns conducive to outside capital equipment." It is, perhaps, these considerations which have weighed with the O.E.E.C. Textile Committee in urging that, unless right measures were taken—as, for example, for improved technique, higher productivity and greater efficiency and, in general, for "regaining its vigour and financial health"—the European textile industry could not escape the vicious circle in which it finds itself today. More light on these measures may be expected to be shed by the Committee at its forthcoming Congress on textile productivity to be held in July next and at the inter-European conference on problems of textile distribution.

The Central Government has exempted from section 11-A of the Industries (Development and Regulation) Act, 1951, some lines of production of the textile industry bearing a mark as defined in the Trade Marks Act, 1940. In other words, an industrial undertaking covered by this exemption need not take a fresh licence merely for the purpose of producing an article bearing a trade mark. Among the lines of production eligible for this exemption are production of textiles (a) made wholly or in part of cotton, including cotton yarn, hosiery and rope, (b) made wholly or in part of jute, including jute yarn, twine and rope, (c) made of wool, including woollen yarn, hosiery carpets and druggets, (d) made of silk, (e) made of artificial silk, including artificial silk yarn, and (f) made wholly or in part of staple fibre.

U.K'S ANXIETY OVER AUSTRALIA'S DECISION TO CUT IMPORTS

COTTON BOARD'S REVIEW OF TEXTILE TRADE

From Our Special Correspondent

MANCHESTER, 22nd March

FOLLOWING closely on the heels of numerous uncertainties affecting the future of the Lancashire textile industry, a new set-back has been received as a result of the decision of the Australian Government to curtail imports. This move created renewed anxiety in view of the fact that Australia is the British cotton industry's leading overseas market.

MANCHESTER LETTER

Last year, the mills sold cotton and rayon fabrics and yarns to Australia worth £30,500,000. It is expected that the cuts imposed by Australia will mean a reduction in the value of exports by about one-third. The decision comes at the start of a week in which a Lancashire delegation will be taking their trade problems direct to the Prime Minister, Sir Winston Churchill, at an interview in London.

Most of the trade organisations have been officially "awaiting further details," but spokesmen were sufficiently dismayed to comment that the timing of Australia's decision was bad for Lancashire not merely economically but psychologically. To say that confidence in the industry is wavering at the present time is an understatement.

The comment of Mr. Lewis Wright, the General Secretary of the Amalgamated Weavers' Association, was typical of many in the industry. "The news could not have come at a worse time than this when the home market is being threatened by competing imports and we are having the utmost difficulty in holding on to our export trade," he said.

Meetings of trade organisations are being summoned to discuss the situation. Mr. Frank Beckett, Chairman of the Dominions section of the Manchester Chamber of Commerce, said that while the introduction of import restrictions had not been entirely unexpected, the severity of the cut as it affected textiles was greater than had been anticipated.

It was "very disturbing" for Lancashire, said Mr. Beckett, adding: "We are very disappointed because we were planning sales campaigns to popularise British goods in Australia. We can only hope it is a temporary measure."

Textile Exports

Exports of Lancashire cotton and rayon fabrics in the final quarter of last year were down by about 25 per cent. on the corresponding period of 1953. Recording this in its statistical review of world trade in cotton and rayon textiles, the Cotton Board states that there has been no improvement in the volume of business booked by the United Kingdom cotton industry during the last three months.

Order books in all the producing sections had continued to decline. This was not due to any falling off in demand in the home market, but to a combination of steadily declining exports and a rapid and continuing expansion of imports of grey cloth.

In January, this year, there was some improvement in exports—shipments of cotton cloth aggregated 60 million square yards, compared with a monthly average of 48 million square yards in the final quarter of 1954—but the January figures are not taken by the Board as a symptom of any lasting improvement in export trade.

Less to Commonwealth

The review comments: "The decline in cotton piecegoods shipments from 152 million square yards in the third quarter to 143 million square yards in the fourth quarter was caused principally by the severe reduction in deliveries to Australia and South Africa. New Zealand, Southern Rhodesia and British East Africa also took substantially less British cloth than in the previous quarter." It adds: "On the other hand, there was a normal seasonal expansion in exports to British West Africa, from 23 million to 31 million square yards, and shipments to French West and French Equatorial Africa increased sharply to reach a comparatively high level."

A most serious loss in exports of rayon and mixture cloths in the fourth quarter also occurred in the Commonwealth—mostly in Australia, New Zealand and South Africa.

Imports of cotton piecegoods into the United Kingdom rose to 89 million square yards in the final quarter of 1954, as compared with 73 million square yards in the third quarter and 29 million square yards in the fourth quarter of 1953. Imports from India again increased—from 36 million to 38 million square yards—and cloth arrivals from Japan also showed an upward trend from 17 million to 28 million square yards.

World Trade

Reviewing world textile trade, the Board says that during 1954 exports from the principal countries are estimated at 5,120 million square yards as against 4,560 million yards in 1953.

The Board comments that increases in shipments by Japan (914 million to 1,278 million square yards) and in Indian exports (655 million to about 865 million square yards) fully account for the overall expansion.

Shipments from the next most important exporting countries—the United Kingdom with 637 million square yards, and the United States with 614 million square yards—were less than in the previous year.

Between Two Fires

Considerable interest has been taken in Lancashire at the latest survey of textile developments prepared by the responsible committee of the Organisation for European Economic Co-operation. This document studies the scene and proposes remedies for the present ills of the European cotton trade.

"Caught between competition from countries with low wages and those with a high degree of productivity, the European textile industry is in danger of losing progressively its remaining export markets and having increasing difficulty in holding its own on the domestic markets," declares this report. Such a depressing outlook is not fresh in conception but it is difficult to escape such a forecast in the light of the facts and figures provided in the survey.

Conditions in Lancashire reflect to a very considerable extent the general trend of the textile industry in Europe. It is, as the report says, at present caught up in a kind of vicious circle. There is an excess of installed equipment, much of which is old and sometimes obsolete. Although most of this plant has been written off and is no longer a charge on production costs, this in itself creates a constant risk of overproduction and also tends to weaken the competitive capacity of the industry.

That the equipment involved should, therefore, be reduced in quantity and improved in quality is in theory a simple solution, but the report admits that such a policy raises difficult financial problems.

It has often been stated that if British cotton operatives worked for no wages at all the goods they made would barely be able to compete in price with comparable products from the Asiatic countries and this situation is not likely to alter. On the other hand, the textile industry in the United States has attained a very high degree of productivity aided by a high ratio of invested capital and keen specialisation together with an efficient system of distribution.

Such an example, according to the report, seems to point the way for the European textile industry. Unfortunately, its structure, financial situation and the conditions of the market make it difficult at present to carry out the necessary transformation with sufficient speed.

In Time of Need

From the economic standpoint alone this progressive contraction of the European textile trade might be regarded as an inevitable development but it carries with it grave social problems as well as political, financial and even strategic consequences. Extremists have on occasions suggested that a point may be reached when the cost of importing raw cotton will not compensate the country for the maintenance of a domestic industry.

The importance of the strategic aspect of the Lancashire cotton industry as a national asset was emphasised at one stage in the recent debate in the House of Commons. Pointing out that the policy of concentration during the last war caused curtailment of production to a stage where the mills were unable to satisfy completely the demands of the Services and civilians, Mr. Wentworth Schofield, M.P. referred to the large imports of textiles which were forced to run the hazards of war at sea.

He went on to assert that even on the present output of the industry in Lancashire there would be difficulty in completely satisfying the

TRENDS IN WORLD COTTON OUTPUT

SIGNIFICANT INCREASE RECORDED IN PER-ACRE YIELDS

FEW agricultural commodities have established so encouraging a record of increased output as cotton. In response to the growing demand for cotton fabrics the world over, nearly all the cotton-growing countries have in post-war years, encouraged the cultivation of cotton. World output of cotton is now about 26 per cent. above the pre-war level. This increase reflects the increased consumption of cotton; the world consumption of cotton is now about 20 per cent. above the pre-war level.

The following two tables give the world consumption of cotton in 1934-35 to 1938-39 (average) and in the five years ended 1953-54 and the world production of cotton in 1934-38 (average) and in six years ended 1954-55:

World Consumption of Cotton

(In million bales of 478 lbs. net)

Years	Free world	Communist countries	Total
1934-35 to 1938-39 (average)	22.27	7.11	29.38
1949-50	23.69	5.66	29.35
1950-51	26.53	6.51	33.04
1951-52	25.21	7.31	32.52
1952-53	25.96	7.78	33.74
1953-54	27.00	8.10	35.10

World Production of Cotton

(In million bales of 478 lbs. net)

Years	Free world	Communist countries	Total
1934-35 to 1938-39 (average)	24.21	6.24	30.45
1949-50	26.69	4.48	31.17
1950-51	22.26	6.01	28.27
1951-52	28.64	7.30	35.94
1952-53	28.92	6.98	35.90
1953-54	30.04	7.98	38.02
1954-55	28.7	*	*

*Not available.

It will be seen from the table of cotton output, given above, that, although the upward trend in the output has not been continuous in recent years, the level of output, except in 1950-51, has been well above that in the pre-war years. In the current season (that is, 1954-55 season), a fall in output is no doubt anticipated, the output being placed at 28.7 million bales for the free world as against over 30 million bales in the last season. But it must be remembered that the free world's cotton output in the 1954-55 season is at a much higher level than was originally thought possible. Fundamentally, this is the result of a record high yield in the U.S. and a significant expansion in cotton acreage in other cotton-producing countries. In this connection, the International Cotton Advisory Committee, Washington, has attempted to "delve more deeply," in the course of an article entitled "Current Trends in Cotton Acreage, Yield and Production," in the February issue of the Committee's journal *Cotton*, into the reasons behind this continuing high level of cotton production.

Acreage and Yield

The prime determinants of production, as the Committee points out, are acreage and yield. Production variations may be planned or fortuitous-planned in the sense that they represent the response of individual cotton growers to changes in price or other factors or the result of definite action by Governments; fortuitous in the sense that some variations are largely the result of factors beyond direct human control. From this point of view, variations in planted acreage are almost always included in the first category, while yield variations may be due to both "planned" and "fortuitous" considerations.

A Government, the Committee points out, can normally effect a reduction in planted cotton acreage by the imposition of acreage restriction schemes. Official control of acreage can also be achieved by less direct methods—for example, by lowering the monetary incentive to cotton producers. Reduction in acreage may come about as a result of the reaction of individual farmers to changes in absolute or in relative price, or they may be fortuitous—for example, in irrigated or semi-irrigated areas, dry weather will, despite farmers' desire to grow more cotton, make planting impossible.

An analysis of the trend in cotton acreage shows that since the pre-war years, there has been a significant increase in the land under cotton in the countries outside the U.S. In the U.S., the land under cotton in 1934-38 (average) was 28.4 million acres. It declined to 24.3 million acres in 1953-54 and, for the current season, it is placed at about 19.2 million acres. In the free world outside the U.S., the land under cotton averaged 41 million acres in pre-war years. It declined to 39.8 million acres in 1953-54 but recovered to 43.3 million acres in 1954-55 (preliminary estimate). Thus, there has been an increase of nearly 3.5 million acres under cotton in these countries. The big increase in acreage planted to cotton, according to the Committee, is "indicative of the attraction in cotton growing whether for domestic use or for export during the present season." The Committee admits that it is, however, difficult to determine how much of the cotton acreage increase has resulted from Government action. Analysing the ways in which the Governments can encourage the extension of acreage under cotton, the Committee observes:

"Governments can encourage cotton growing by offering higher price supports or by raising the import tariff on foreign staples. Less directly, extended credit to agricultural producers, improved marketing and distribution facilities, scientific research, and extension activities, arrangements for the supply of machinery, fertilisers and insecticides, and the opening of new areas by irrigation projects influence the level of agricultural production over the longer period. It is questionable whether direct Governmental action this season in the form of price supports has been directly responsible for more than a small fraction of the increase in cotton acreage in the various countries. The United States and Egypt increased their support prices by small amounts but in both instances, acreage restrictions have been in force. One or two of the smaller countries—for example, French Equatorial Africa—raised their price supports but this has obviously little influence on aggregate cotton production in the free world.

"The indirect effects of such action are, however, of paramount importance. It is widely acknowledged that the United States loan programme, which guarantees stable and generally profitable cotton price and generally has a similar influence on prices outside this country, has served, among other things, to stimulate cotton growing in other countries. At the same time, Government action along other than price lines undoubtedly has much to do with the long-term increase in acreage planted to cotton outside the United States."

The Committee next poses two important questions: (1) What portion of the total increase in cotton production outside the U.S. is associated with an increase in planted acreage? (2) Where did these acreage increases occur? In 1954-55, the aggregate acreage in countries outside the U.S. increased, as already stated, by 3.5 million acres. Analysing this increase further, the Committee points out that an increase of three million acres took place in the 12 major cotton-growing countries of Mexico, India Pakistan, Turkey, Syria, Brazil, Argentina, Peru, Egypt, Sudan, Uganda and the Belgian Congo. Had yield per acre remained the same as in 1953-54, this net increase of three million acres would have resulted in an increase of a little over 1.0 million bales in total production. In actual fact, however, production in these 12 countries increased by 1.2 million bales. This difference, of course, is attributable to yield factors. The increase in production due to acreage factors, it is further pointed out, occurred in mainly three countries—India, Egypt and Brazil. Commenting on this trend, the Committee says:

"In passing, it may be noted that production in India is still less than consumption while in the other two countries the increase in acreage was a return to more normal conditions after a period of reduced acreage. Acreage in these three countries increased by 2.7 million acres which means a net acreage increase in the nine other countries of only 300,000 acres. Of the 12 major cotton producers, acreage increased in 10 of them, Pakistan and Turkey being the only exceptions."

As regards the minor cotton-producing countries, the tendency here, almost without exception, has been to increase the acreage planted to cotton. Acreage data here are not accurate enough to permit a detailed analysis on the same lines as that for the 12 major countries. The number of countries is so large, however, that variations in acreage and yield in any one country are not important and they are considered on an aggregate basis. The net increase in acreage here was half a million acres or 9 per cent. which, assuming constant yields, would have resulted in an increase in production of roughly 150,000 bales. The remaining 150,000 bales increase in aggregate production in these countries, it is presumed, should have resulted from higher yields. Thus, the increase in production outside the U.S. in 1954-55 associated with expanded acreage amounted to 1.2 million bales of which over one million bales relates to the 12 major countries and the balance—150,000 bales—to the minor countries.

Effect of Weather

Generally speaking, increases in yields, in contrast to increases in acreage, are fortuitous, being dependent on variations in weather. Cultivators may, however, be induced by higher prices to increase the yield through the adoption of better cultural practices and use of fertilisers. In the U.S. the per-acre yield increased from 212 lbs. in 1934-38 (average) to 324 lbs. in 1953-54 and still further to a record level of 339 lbs. in 1954-55, a rise of more than 50 per cent. This is attributed to the greater use of the better land for cotton growing, the probable heavier application of fertiliser and insecticides per acre and the growing use of supplemental irrigation in rain-grown areas. In 1953-54, 14.8 million acres received fertiliser and in 1954-55, 11.9 million acres. Efforts continue to be made to increase yield in the U.S. but a "very important influence on yield this season seems to have been the favourable weather—the drought caused some damage by premature ripening and shedding of bolls but held insect damage down to a minimum and facilitated harvesting."

In other countries, yield has shown a net increase this season. The trend outside the U.S. recently has been for a gradual increase in yield but the fact remains that, in most countries producing American or Asiatic types, yields are very much lower than in the U.S. With over 40 million acres in cotton production each year, even a small increase in average yield would, however, have a "noticeable effect" on production. In the larger period increased yields can be expected to raise the level of production in these countries.

Aggregate yield in the 12 major countries has increased from 167 lbs. per acre in 1953-54 to 169 lbs. in 1954-55, and in minor countries from 143 lbs. to 154 lbs. For all countries outside the U.S., the increase has been of the order of 4 lbs., the yield having increased from 163 lbs. to 167 lbs. For the free world, as a whole, the per-acre yield in 1954-55 is estimated at 219 lbs., as against 224 lbs. in the previous year, and 169 lbs. in the pre-war years 1934-38 (average). In the 12 major cotton-producing countries, outside the U.S., variations in yield have resulted in a net increase in production of 150,000 bales only. This, however, conceals the actual influence of yield for (1) there have been significant improvements in yield in some countries, notably in Mexico, but decreases in others, and (2) the acreages used as weights in estimating the net increase in yield have also changed. As regards minor countries, there is a net gain of 11 lbs. per acre, though the yield in several countries has decreased, notably in Colombia, Iran, Burma and Nigeria.

The following table shows the net effect on production of changes in acreage and yield outside the U.S.

(In million bales)

	Increase in production due to net increase		
	In acreage	In yield	Total
Major countries ..	1.05	0.15	1.20
Minor countries ..	0.15	0.15	0.30
	1.20	0.30	1.50

It would, however, be wrong to conclude that all this increase in the output of cotton in the countries outside the U.S. has necessarily meant an increase in the export availability of cotton. In many of these countries, the domestic textile industry has commenced utilising a larger proportion of home-grown cotton. In Pakistan, for instance, production has increased by 100,000 bales but, at the same time, the home industry is expected to consume some 200,000 bales more this season. Similarly, Indian consumption is "likely to rise to the same extent as the increase in production." Also, increased production in importing countries reduces cotton imports. Such reduction is, however, a small quantity; it is about 50,000 bales, but this figure excludes India.

To sum up, there has been an upward trend in cotton production in recent years. In the U.S., this has been as a result of higher yields, for the acreage trend has been downwards. Outside the U.S., the situation is somewhat different. In the 12 major countries, the higher level of production is mainly due to increased acreage. Yield in many of these countries shows

CENTRAL BANK OF INDIA LTD.

SIR HOMI MODY'S SPEECH AT ANNUAL GENERAL MEETING

"THE operations of banks in India," observed Sir Homi Mody, Chairman of the Central Bank of India Limited, in the course of his speech at the Annual General Meeting of the Bank on 25th March, 1955, "recorded a substantial improvement in volume during the year 1954. Total deposits of Scheduled banks averaged Rs. 887 crores in 1954, as compared with Rs. 853 crores during the preceding year, but they were still below the peak of Rs. 990 crores attained in 1948. Demand deposits showed an improvement of Rs. 16 crores, as compared with the previous year, while time deposits maintained the continuous rise witnessed since 1948. The average amount of bills and advances of Scheduled banks during the year was Rs. 532 crores, as compared with Rs. 508 crores in 1953."

Sir Homi pointed out that the economic position in India, following the general pattern in the U.S. and Britain, had shown a further improvement during the year under review. "The food deficit," said Sir Homi, "which necessitated at one time considerable imports involving heavy commitments of foreign exchange, was practically wiped out and controls were lifted. Side by side with this, a substantial recession in food prices took place, and that has posed a somewhat difficult problem, but if the deficit financing envisaged in the Budget materialises, it is bound to arrest the decline in prices, and may even lead to inflationary pressures."

Referring to the substantial improvement in industrial production, Sir Homi observed that in several industries the targets fixed under the Five-year Plan had been achieved or exceeded. A number of new enterprises had been started and, both in the public and private sectors, substantial improvements were recorded. Inland and foreign trade were also at a higher level than in the previous year.

Commenting on the employment situation which had continued to cause anxiety, Sir Homi said that the malady was deep-seated and short-term remedies were not likely to provide anything more than a palliative. He felt that only by large-scale expansion of production and distribution would it be found possible to reduce it to managable proportions.

Measures Affecting Industrial Development

Sir Homi then commented on some of the measures vitally affecting the future of industrial development in this country initiated during the year. He first referred to the Company Law Amendment Bill. The changes proposed in the Select Committee stage of the Bill were very drastic, and they would in effect mean not the reform of the managing agency system, but its total elimination in due course. He hoped that when the Report of the Select Committee was published and the full implications of the measures proposed were appreciated, industrialists and investors alike would make an organised effort to press their views before Parliament and see that their case did not go by default.

The Constitutional amendments, now before Parliament, presented a very alarming picture, said Sir Homi, and he felt that steps should be taken to ensure that Parliament was not left in any doubt with regard to the reactions of the public which was affected towards measures which would largely do away with the Fundamental Rights secured to the citizen under the Constitution. "Section 31 of the Constitution," he continued, "relating to compensation for acquisition of property, had been framed after prolonged and anxious deliberation, and nothing has happened, in my opinion, to warrant the drastic curtailment of the rights which holders of property enjoy in every other free society."

Although the Budget presented to Parliament did not come under a review of the events of the past year, Sir Homi felt that it was impossibe to avoid a reference to it. "While the development rebate of 25 per cent. which the Finance Minister has proposed should be of undoubted benefit to industry, the proposals for direct taxation in respect of the middle and upper income groups can be understood only if it is the declared policy of Government to eliminate the savings from which investment capital is created and to destroy all incentives. The report of the Taxation Enquiry Commission contains some very radical suggestions, calculated still further to cripple the capacity of the *entrepreneur* to perform his functions. Some of the recommendations already find a place in the Finance Bill now before Parliament, and if the process goes any further, I cannot but think the economic development of the country will be seriously jeopardised."

Turning to the Directors' report and statement of accounts for the year, Sir Homi stated that the total gross earnings of the Bank showed an increase of nearly Rs. 30 lakhs, but that due to substantial increase in expenditure, the ultimate net profit for 1954 was only Rs. 1,38,000 more than in the previous year. He pointed out that the increase during the year under "interest paid on deposits, borrowings, etc." and "salaries and allowances, etc." shown on the expenditure side of the profit and loss statement, accounted for nearly Rs. 25 lakhs.

High Rates on Deposits

Sir Homi next dealt with the item relating to interest on deposits, borrowings, etc., which showed an increase of nearly Rs. 10 lakhs. "This was on account of the continuance of the high rates required to be paid on deposits, particularly on call and short-term deposits. There are no signs of any appreciable diminution of such rates in the near future. In this connection, you will appreciate the Bank has to maintain its long-standing connections with its valued constituents and cannot afford to forgo deposits and let business pass to other institutions."

Sir Homi also stated that the establishment charges increased by nearly Rs. 15 lakhs, more than two-thirds of which was accounted for by the emoluments of the clerical and subordinate staff.

Referring to the balance-sheet, Sir Homi said, "on the liabilities side, you will see that the figures of deposits show an appreciable increase compared to the previous year; the aggregate total was higher by Rs. 6 crores.

"The increase in Bank's business in 1954 is further reflected in higher figures under the heads 'bills payable,' 'bills for collection' and 'acceptances, endorsements and other obligations.'

"On the assets side of the balance-sheet, I would refer you to the item of investments. At every suitable opportunity endeavours have been made to reduce our investment portfolio so that the proceeds realised therefrom may be utilised in other channels like advances and bills yielding a higher return. Securities of the Central and State Governments and other trustee securities accordingly stand reduced by nearly Rs. 2,30,00,000. Under other heads, such as shares, debentures and other investments, there have been increases of a few lakhs, with the ultimate result that the grand total shows a reduction of Rs. 1,20,00,000.

"At the end of 1953, the difference between the book value and the market value of the Bank's investments stood at Rs. 3,13,00,000. The difference has since come down to Rs. 2,41,00,000. It has been our constant anxiety to see that the gap is narrowed and we hope that the profits of the Bank in future years would enable the Directors to set apart larger amounts. In the year under report, it was not found possible to transfer to the Bank's investments a larger sum than Rs. 15,00,000."

Sir Homi then called the attention of the shareholders to the item relating to the advances and bills business of the Bank which on the closing date showed an aggregate increase of a little over Rs. 2 crores and 85 lakhs, including a rise of over Rs. 1 crore and 9½ lakhs under the heading of "Moneys at call and short notice"; the average during the year stood at a still higher figure.

Bonus to Staff

Sir Homi regretted that, after making the necessary appropriations which were no more than required in the present circumstances, the ultimate available surplus in the hands of the Directors did not permit the provision of a higher bonus to the staff than one-twelfth of the basic salary earned by each member during the year. In this connection, he repeated what he had said last year, that if the position had warranted it, nothing would have pleased the Board better than to have sanctioned a larger amount by way of bonus.

At the conclusion of his speech, Sir Homi thanked all those engaged in the service of the Bank. "The Managing Director, Mr. Captain," said Sir Homi, "has not spared himself in the performance of his duties; he is carrying a burden which has become particularly onerous in the times through which we are passing. Mr. Karanjia, Manager, Branches, and Mr. Cooper, Secretary, have heavy responsibilities which they are discharging to the entire satisfaction of the Board. To them, and to all other members of the staff, as also to the local committees at the various centres, I desire to convey our grateful thanks."

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY, 1943)

AUTHORISED CAPITAL	Rs. 8,00,00,000	PAID-UP CAPITAL	Rs. 2,00,00,000
SUBSCRIBED CAPITAL	Rs. 4,00,00,000	RESERVE FUND	Rs. 86,50,000

TWELFTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1954.

	Rs.	a.	p.
The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,52,320-7-3 brought forward from the previous account, amounts to	32,58,724	8	9
The Directors have made the following appropriations out of the net profit:			
1. Transfer to Reserve Fund	6,50,000	0	0
2. Provision for Taxes	12,50,000	0	0
3. Provision for Bonus to Staff	2,50,000	0	0
4. Balance	11,08,724	8	9
Rs.	32,58,724	8	9

Out of the balance of Rs. 11,08,724-8-9 the Directors recommend to the shareholders payment of Dividend at Rs. 2-8 per share, free of Income-tax, which will absorb Rs. 10,00,000 leaving Rs. 1,08,724-8-9 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 19,958, as donations, including Rs. 15,600 to the Nanyang University of Malaya.

The documents of title to the Bombay flats purchased by the Bank have still not been completed on account of delay in legal formalities.

The Bank's business has continued to expand during the year and there is an increase in deposits at the end of 1954 as compared with the corresponding figure for 1953. Looking to the monetary, credit and trade conditions in 1954 in the countries in which your Bank operates, your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened sub-branches at Ballygunge (Calcutta) and Jalahalli (Bangalore) and a branch at Bassein in Burma.

The Directors have to report with great sorrow the death, in April 1954, of Mr. Baijnath Jalan who was a Director of the Bank since its inception and who was held in high esteem and respect by his colleagues. The Directors wish to place on record their deep sense of appreciation of the great service rendered by Mr. Baijnath Jalan during the long period of his office.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of Mr. B. T. Thakur, your General Manager, and Mr. S. T. Sadasivan who acted as General Manager, and thank them for their ceaseless and untiring efforts in the Bank's interests. The Directors also thank the officers and staff of the Bank for their hard work and loyal service.

Under Article 95 of the Bank's Articles of Association, four of your Directors,

Shri I. P. Goenka — Shri Navinchandra Mafatlal
Shri A. C. Law — Shri R. L. Nopany

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA, 4th March, 1955.

BALANCE SHEET AS AT 31st DECEMBER, 1954.

CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the United Commercial Bank, Limited, as at 31st December, 1954, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the Branch returns audited by the Statutory or Local Auditors, and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from branch offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

TEXMACO

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

TEXMACO

Boiler & Heavy Engineering Division • Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

TEXTILE MACHINERY CORPORATION LIMITED
BELGHURRIAH, 24-PARGANAS, WEST BENGAL.

FUTURE OF POWER ALCOHOL INDUSTRY

PLEA FOR HIGHER PRICE REJECTED

THE scope for the expansion of power alcohol industry in India seems to be bright. This is the impression one gets after perusing the inaugural address of Mr. Nityanand Kanungo, Union Deputy Minister for Commerce and Industry, delivered at the annual meeting of the All-India Distillers' Association held at New Delhi last week. The industry's claim to advance, Mr. Kanungo said, would be fully conceded in the second Five-year Plan which would have rapid industrialisation of the country as its main object. The statement is reassuring, in that it signifies the recognition of the vital role which the power alcohol industry plays in the country's economy. The development of this industry is essential from the point of view of minimising the country's dependence on foreign sources for liquid fuel, as well as from that of economic utilisation of surplus molasses produced by the sugar factories. It is needless to add that, when molasses are utilised gainfully, the cost of sugar will come down.

Despite its obvious importance to the national economy, the progress of the power alcohol industry has not only not been satisfactory but actually been disappointing in recent years. During 1953-54, for instance, the distilleries produced not more than 4.65 million gallons of power alcohol, as against 7.88 million gallons in 1952-53. The present rate of output is equal to just 31 to 35 per cent. of the aggregate annual installed capacity placed at 14.9 million gallons. Indeed, the actual output and the installed capacity of power alcohol are far from the targets of 18 million gallons and 21.12 million gallons, respectively, fixed for 1955-56 by the Planning Commission.

The Greatest Problem

What is the aforesaid state of affairs in the power alcohol industry due to? This question was impressively answered by Mr. R. K. Bajpai, President of the All-India Distillers' Association. The greatest problem of the distillers, Mr. Bajpai told the meeting, was the unremunerative price of power alcohol. According to him, many of the units were completely uneconomic, not because of wrong planning but because of low price and intermittent working due to shortage of raw material or non-utilisation of capacity. The present prices of power alcohol were fixed in January, 1950 and, since then, the prices of all other industrial raw materials had registered a big rise. To quote him:

"Molasses, the main raw material for the industry, comes from the sugar mills. While the sugar industry is comparatively free to adjust prices in accordance with the law of supply and demand, the distillers had to sell their entire production to the Government at fixed prices, with the result that they are made to bear the incidence of any uneconomic year. For instance, the industry has not yet recovered from the effects of last year's shortages of molasses, which cost many units a loss of production. The rise in the cost of freight (in many cases, the rise is said to be up to 50 per cent. of that prevalent at the time of price fixation) is also proving a heavy burden on the industry. For this reason, the cost of production in Bihar stands higher than in Uttar Pradesh."

Mr. Bajpai pointed out that the uneconomic working of some units was proving a discouragement for the industry's further growth, since the private sector, to which the industry was mainly confined at present, would not go in for further risks. He, therefore, urged the authorities to fix "a more favourable price" for power alcohol. This plea was, however, rejected by the Union Deputy Minister for Commerce and Industry on the scope that any increase in price would further curtail demand for power alcohol. He advised the distillers that, instead of making their products more expensive, they should go in for greater production. This advice would appear to have greatly disappointed the distillers. Thus, in the course of a resolution adopted, they expressed regret at the Government's unwillingness to revise the price of power alcohol.

In the light of what has been stated so far, it will be realised that the short-term outlook for the power alcohol industry is rather bleak. The unrealistic price policy adopted by the Government has prevented expansion of the existing units, with the result that the chances of even the target fixed for the first Five-year Plan being hit are far from bright. How does Mr. Kanungo expect the industry to expand, if it is not working on profitable lines? Who will make fresh investments in this industry, when it is found that the existing units are not in a position to allow a decent return on the capital already invested? In these circumstances, Mr. Kanungo's assurance regarding the place of the industry in the second Five-year Plan means nothing. It is needless to add that, unless the present distilleries are kept in good cheer and sound health, they will not be in a position to register satisfactory progress in the coming years.

Harsh Excise Rules

Mr. Bajpai did well to draw particular attention to the low level of consumption of power alcohol. The Indian distillers, we are told, find it difficult to market their meagre production of 1.3 million gallons, whereas the U.S. annually consumes more than 550 million gallons of alcohol for all industries. The main difficulty of marketing power alcohol in India is stated to lie in the harsh excise rules of State Governments. These rules are harsh because of the introduction of prohibition in many States. Explaining the nature of hardship, Mr. Bajpai remarked: "The industry is subjected to heavy fines, even when losses of spirits occur in transit through the negligence of railways. The checking system makes for endless delay in the effecting of supplies." He, therefore, sought the intervention of the Central Government in the matter and pleaded for the co-ordination of the rules followed in the States, with a view to removing the obstacles in the industry's way.

This is not the first time that the industry is stressing the need for the adoption of a uniform rate of excise duty and a uniform excise policy in all the States. The absence of such a policy, as has been pointed out in this journal on more than one occasion, has adversely affected the indigenous power alcohol industry, because the excise duty on power alcohol as well as the price of the raw material differs from State to State and their movement is also restricted. Although more than six years have elapsed since the Indian Power Alcohol Act, 1948, vesting the Central Government with powers to control the affairs of the industry, was passed, the Government has still not enforced the provisions of the Act fully and effectively.

"INDIAN SUGAR INDUSTRY—1953-54 ANNUAL"

Like the previous volumes in the series, the 1953-54 *Annual of the Indian Sugar Industry* (Editor: M. P. Gandhi. Published by Messrs. M. P. Gandhi & Co., Jan Mansion, Sir Pherozshah Mehta Road, Fort, Bombay 1. Price: Rs. 6) is an authoritative compendium of all developments relating to the sugar industry and trade. The *Annual* contains an excellent review of the events in the world of Indian sugar which covers not merely the white sugar sector but the *gur* and *khandsari* sectors as well. The agricultural problems of the sugar industry have been extensively dealt with, as also the different aspects pertaining to labour. A separate chapter is devoted to an analysis of the world sugar situation. There are as many as 64 statistical tables indicating at a glance the wide and varied aspects of the Indian sugar economy. Several Government notifications relating to sugar have also been reproduced. The utility of the publication is further enhanced by the inclusion at the end of a State-wise list of sugar mills in India and Pakistan and a list of sugar factories for the establishment of which licences have been granted by the Central Government. The *Annual* is thus a valuable reference book to all those who are interested in sugar and sugarcane.

In the course of a brief interesting preface, Mr. M. P. Gandhi, the Editor, has done well to stress once again that, since sugar is made in the fields and not in the factories, the future of the sugar industry depends on the success of the efforts at augmenting the average per-acre yield of quality cane from 13 tons to at least 25 tons. If the yield is thus increased, there will be, he feels, a fall in the cost of production which, in turn, will make it possible to bring about a reduction in the price of sugar for the benefit of the consumer. Mr. Gandhi emphasises, and rightly so, that, while intensive method of cultivation is necessary along with provision of irrigation and application of manure, which should be made available plentifully even by giving concessions in price, etc., it is essential "to create an incentive" to the cane grower in another direction too, namely, improvement of the quality of his cane. In his considered opinion, the system of payment of cane should be so arranged as to make a slightly higher price for cane with higher recovery. Surely, this problem should, as he rightly urges, be examined "with earnestness and urgency."

The production of crystal sugar amounted to 967,000 tons and arrivals of imported sugar to 280,000 tons upto the 28th February, 1955, in the current season. The figures for the corresponding period of the last season (1953-54) were 795,000 tons and 193,000 tons, respectively. Despatches of sugar from factories during the same period were 249,000 tons, as compared with 398,000 tons in the corresponding period of the last season. The stocks with the factories as on 28th February, 1955 stood at 775,000 tons, as against 595,000 tons a year before.

MARKETING OF COAL

FORMATION OF CENTRAL ORGANISATION OPPOSED

THE coal merchants have strongly opposed the proposal of the Coal Washeries Committee that a central coal marketing organisation should be created. The shares of this organisation, which will have full monopoly over the sales of all types of coal, are expected to be acquired by producers, the public and large consumers of coal, such as the railways and the steel industry. The Coal Merchants' Association, Jharia, is, however, afraid that, if the proposed organisation were to come into existence, it would be a semi-Government concern with 49 per cent. capital, more than half of which would be acquired by coal producers. As the organisation will have the sole monopoly over the disposal of both washed and unwashed coal, it is likely to be vested with powers to fix prices and license small dealers in various zones, etc. The net result will naturally be the elimination of a number of coal merchants from the coal trade. Mr. P. P. Joshi stated, in the course of his presidential address at the 22nd annual general meeting of the Indian Coal Merchants' Association, held recently at Dhanbad, that there was absolutely no justifiable ground for establishing such a monopolistic organisation. He was afraid that the constitution of such an organisation would be a breeding place for red-tapism, favouritism and corruption. To quote him: "Without mincing words, I may say that the central coal marketing organisation, which will be the law-maker, the producer, the distributor, all rolled into one, will be a congenial breeding ground for all sorts of corruption."

Nationalisation

The question of constituting a central marketing organisation involves a fundamental principle, for it actually amounts to restricting further the activities of private enterprise in the sphere of coal trade. In fact, the proposal, in whatever form it is implemented, be it a Governmental or semi-Governmental corporation, constitutes "a veiled act of nationalisation." As Mr. Joshi says, "what we are going to have is not even a pure and simple private enterprise; it is coercive concentration of a widely diffused trade into a monopoly, the fruits of which are to be jointly shared by the State and some private capitalists. That it may happen to have an aspect of nationalised enterprise is of no real significance. After all, a scheme is to be judged not by its outward look, but by its essential and precise helpfulness It is on this score that the proposed scheme calls for some careful and sober thinking. It will be recalled that a reference to this subject was made by Mr. J. W. N. Baldock also in his address at the last annual meeting of the Indian Mining Association. Stating that the report of the Coal Washeries Committee, which is yet to be made available to the public, had made very far-reaching recommendations, he remarked:

"It is a matter for regret that the Government has not yet announced its intentions in this regard. The Coal Commissioner has expressed his personal views which, broadly speaking, are to the effect that he does not favour the establishment of a central marketing agency and is of the opinion that the Coal Board should confine itself to the setting up of washeries on a large scale. We entirely agree with his views on central marketing, but require a clear indication of the Government's intentions with regard to washing. It is within my knowledge that several companies have their plans for washeries well advanced and are keen to go ahead. Much time and considerable thought has gone into the preparation of these plans, but final decisions cannot be taken on them until the Government's policy is made known. I suggest that the Government should take us into its confidence, discuss this most important matter with us and formulate plans under which the private sector can contribute its full share towards projects, which are much needed, if industrial efficiency is to be improved on these lines."

There are no two opinions on the fact that monopoly trading, be it by a State or a private body, is not desirable from the long-term interest of either the producers or the consumers. It would be seen from the above extract that Mr. R. K. Ramadhyani, Coal Commissioner, is not in favour of the constitution of such a board, but this is only his personal opinion. It is high time, therefore, the Central Government announced its policy on this question. The middle man, too, is performing an economic function, which is in no way inferior to that of a producer and as such he has a place in the society. If he is deprived of his means of existence, the State will not only be adding to its responsibility of finding employment to its people, but also be taking on the onerous burden of efficiently marketing and distributing what is produced.

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur, Ltd., for the year ended 31st December, 1954.

After providing for all expenses and making necessary provisions, the net profit of the Bank for the year amounted to Rs. 5,51,049-11-10 to which is to be added Rs. 48,178-1-6 brought forward from last year making a total of Rs. 6,00,127-13-4 available for distribution. The Directors recommend its appropriation as under:—

	Rs.	a.	p.
Reserve under Section 17 of the Banking Companies Act	1,15,000	0	0
Other Reserves	85,000	0	0
Dividend at 4 per cent. Tax Free	2,00,000	0	0
Provision for Taxes	1,50,000	0	0
Staff Gratuity Fund	25,000	0	0

and the balance of Rs. 25,127-13-4 be carried forward to next Year's account.

The working of the Bank during the year continued to be satisfactory.

On account of preoccupations Shri Radhakrishna R. Rula and Shri K. L. Jatia resigned their directorship in the Bank during the year. The Directors wish to place on record their appreciation of the services rendered by both. To fill the vacancies caused by these, Shri Swaroopnarain Purohit and Shri Ganeshnarain R. Podar were co-opted as directors and they offer themselves for election. During the current year Shri Gajadhar Somani, M.P., was co-opted as an additional Director and he offers himself for election.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-election.

(1) Rawal Sahib Madan Singhji. (2) Shri Sunderlal Tholia.

The Directors wish to convey their thanks to the members of various Local Boards for their guidance, the depositors for their valuable support and the members of the staff of the Bank for their devoted services.

Shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,
RAMNATH A. PODAR,
Chairman.

JAIPUR, 7th March, 1955.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Jaipur Ltd., as at 31st December, 1954, and also the above *Profit and Loss Account* of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from branch offices of the Bank have been found adequate for the purpose of the audit;
(d) in our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of Profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

FIFTY-SEVENTH ANNUAL MEETING

MR. S. G. H. DAVIS DEPLORES CONTINUED AURA OF UNCERTAINTY OVER SUGAR INDUSTRY

A LUCID analysis of the present position of the sugar industry in India in the context of the Government's policy on imports and the 50 per cent. increase in excise duty on sugar was given by Mr. S. G. H. Davis, Chairman of the East India Distilleries and Sugar Factories Ltd., in the course of his address to the shareholders of the Company at their Fifty-seventh Annual General Meeting held in Madras on 24th March, 1955. He felt sorry that the executive action of the Government of India in matters connected with the sugar industry conflicted with its announced policies on the industry. He felt that an aura of uncertainty as to the future of the industry persisted and, therefore, took the liberty of appealing to the Government to clarify its long-term intentions regarding the industry.

The following is the full text of Mr. Davis' speech:

"The report of the Directors which has already been circulated with the accounts for the year to 30th September, 1954, gave a much fuller account than previously of the Company's various activities. I must, however, enlarge on some particular points of policy, particularly relating to sugar; and at the same time report to you how the current season is progressing.

Chemicals

"This side of the Company's activity is perhaps not so well known to shareholders as it might be. The capacity of the two sulphuric acid plants at Ranipet makes your Company rank as potentially the second largest producer of acid in India. It is believed that in the last financial year the Company's production of acid gave it the ranking of the third largest producer. Up-to-date, the Ranipet factory has worked to two-thirds only of its rated capacity, so that there is ample margin to meet any additional demand.

1953-54 Sugar Season

"As already reported, in the 1953-54 season, the Nellikuppam factory worked for 134 days, crushing 254,000 tons cane yielding 28,475 tons sugar. Under optimum conditions the factory should crush 300,000 tons of cane, but the comparatively unattractive price fixed for cane for the 1953-54 season relative to other crops discouraged plantings for that season. A compensatory feature of the shorter operating period was, however, the higher recovery of 9.22 per cent. which compared favourably with 8.91 per cent. obtained in the previous season.

"Once again, the Nellikuppam cane-growers received a bonus of Rs. 2-0-9 per ton of cane calculated according to the S.I.S.M.A. formula and amounting to nearly Rs. 5 lakhs. A higher bonus would have been earned but for the fact that the Government of India implemented their earlier decision to requisition 25 per cent. of the season's production at the Government-controlled price and allotted such sugar to the trade without any restriction on the ultimate selling price, thereby permitting dealers to make the difference between the controlled price and the ruling market price, without any benefit to the consumers.

"There appears to be no longer any justification for Government to reserve 25 per cent. or any quantity of factory productions at an artificial price when the control of sugar prices is firmly with Government by the prices at which Government sells imported sugar. I must express the earnest hope that Government will remove this control and enable cane-growers to receive their share of the ruling market rate.

1954-55 Season

"On the production side, the outlook for Nellikuppam factory in the current season is not unsatisfactory. It is hoped to produce over 30,000 tons sugar this season—the highest quantity ever produced in a season at Nellikuppam. The average recovery for the season is, however, expected to be of the order of 8.75 per cent. This is mainly due to the season having to be extended to crush about 360,000 tons cane—another record made possible by increased yields in the cane area resulting from favourable climatic conditions.

"In order to handle this quantity of cane the normal factory season is to be extended till the middle of June. Our experience is that the quality of cane rapidly deteriorates from the middle of May onwards and the expected recovery for this period is anticipated to be in the region of 7 per cent., thus depressing the seasonal average. The justification in extending the season is solely to assist the cane ryots to dispose of the additional quantity of cane realised from the higher yields per acre.

"I am elaborating on this point, because the Board has for some time been considering the desirability of extending the crushing capacity at Nellikuppam, not so much to enable the Company to crush more cane but to restrict the crushing season to a period of optimum recovery and, therefore, produce more sugar from the cane by crushing it before deterioration sets in. I should like to be able to report that your Board could recommend for immediate action this expansion, but my concluding remarks will point to the difficulties in the way.

Sugar Imports and Consumption

"The year under review witnessed the largest consumption of white sugar in the history of India. Official estimates put consumption in 1953-54 at the unprecedented figure of 18 lakh tons or an increase of nearly 50 per cent. over the previous consumption. Over the same period, however, the all-India production was about 10 lakh tons only. The need to supplement this with foreign sugar was recognised by Government early in the year and the promptitude with which Government arranged imports prevented any shortage.

"The high sugar consumption that marked the year has naturally led to a demand for expansion of the industry and licences have been granted by the Government of India for the establishment of new factories to increase the productive capacity of the industry to an ultimate target of about 20 lakh tons. Your company has been granted one of these licences for a factory at Kolianur, near to Nellikuppam. It was in this connection that the Board made an offer in March, 1954, to purchase the share capital of the Travancore Sugars and Chemicals Ltd. and with it, of course, that Company's sugar factory. By September of last year, it was known the offer had not been accepted and that other arrangements would have to be considered.

"Conditions, however, seem to be changing with the now certain production of 14 lakh tons sugar in the country, coinciding with a steep fall in jaggery prices. The wide disparity in the retail price of jaggery and sugar has clearly caused a swing back to a more normal consumption of jaggery to the detriment of sugar and this view is supported by the figures of offtake from sugar factories in the country over the last four months. From the present trends it seems hardly likely that consumption of sugar will exceed 15 lakh tons in 1954-55. It might conceivably be much lower.

"It is in this context that the industry has to view with concern the continued imports of white sugar into the country. Indigenous production and imports may together amount this year to as much as 20 lakh tons which would leave a carry-over of 5 lakh tons. The presence of such a large surplus on internal prices can only have a depressing effect which must ultimately tell on the price the cane-grower can expect for his produce.

"It may readily be imagined, therefore, that the increase in the excise duty on sugar amounting to 50 per cent. over the rate prevailing before the 1st of March is not calculated to be of benefit either to the grower or the industry. Sugar prices have remained at more or less the same level as before the increase in duty, indicating consumer resistance, with jaggery as a cheap and ready substitute for sweetening material. It would appear, then, that the burden of the additional excise duty has to be carried by the industry indefinitely, unless the Government of India deem fit to withdraw the increase or reduce its incidence as a result of representations now being made. I may mention in passing that one result of the increase in excise duty is to nullify, on present sugar prices, the advantage the cane-growers would have under the special system of bonus payments they have hitherto enjoyed.

Government Policy

"Your Company, through its membership of the South Indian Sugar Mills Association, has been represented on the Development Council set up by the Government of India for the sugar industry. Your Board had hoped that the working of this Council would have resulted, through the harmonious co-operation thereon of representatives of manufacturers, growers, labour and Government, in the forward progress of the sugar industry being steadily and evenly advanced. I am sorry to say that in my opinion this position has not yet been reached and it appears that the executive action of Government in matters connected with the sugar industry conflict with their announced policies on this subject. For instance, while the recently proposed depreciation allowance and the move towards fixing a basis for payment for cane on quality rather than weight will undoubtedly contribute substantially towards the declared policy of increasing sugarcane growing and sugar production in the country, the proposed increase by 50 per cent. of the Central excise on sugar and some of the suggestions put forward in the Taxation Enquiry Commission Report cannot but give rise to serious speculation as to the future that lies before the industry. Very substantial imports of sugar on Government account seem likely through this year to have the effect of forcing manufacturers to hold excessive unsold stocks. In his address to the Indian Sugar Mills Association, the Hon'ble Minister for Food and Agriculture has made a reference to the future of the sugar industry taking some form of co-operative association between growers, labour and millowners.

"In this context, it is extremely difficult for any Board of Directors to pursue a policy of expansion involving the investment of very considerable amounts of capital, while this aura of uncertainty as to the future persists. I take the liberty, therefore, of appealing to Government to clarify their long-term intentions as regards the sugar industry. If the industry is to play its part in the Second Five-year Plan, it requires a large capital expansion; to support this adequately the general public are entitled to assurances that production and distribution of sugar by the companies to which they subscribe will not suffer undue interference by further imposts and controls, or any fundamental change."

SCIENTIFIC AND INDUSTRIAL RESEARCH IN INDIA

PLAN TO PRODUCE IRON WITHOUT COKING COAL

THE Board and the Governing Body of the Council of Scientific and Industrial Research (C.S.I.R.) adopted, at its meetings held on the 21st and 22nd March, respectively, a few important proposals designed to secure further scientific and industrial advancement. The most significant of them was the acceptance of a detailed plan, drawn up by the Mining Research Committee, for the establishment of a Mining Research Station at Dhanbad. The research station, which will cost Rs. 40 lakhs, will deal with problems relating to explosions, fires and ventilation in mines, mine working, engineering and testing of mining equipment, as well as health of mine workers. The importance of the establishment of this research station requires no emphasis, especially in view of the recent accidents in Newton Chikhli, Dharmabad and Amlabad collieries, resulting in the tragic death of a number of persons and injury to many. The prevention of accidents is after all a national responsibility. Mere statutory regulations are not enough. Research on new methods of tackling day-to-day problems is essential. A local Planning Committee has been set up to supervise the construction and equipment of the research station. Proposals for the development of active schools of research in mineralogy and other geological subjects in Indian universities, as also for the constitution of a committee to consider specific proposals, have also been approved.

The second important proposal that was adopted was a five-year programme of research in India for the development of industrial gas turbines suited to Indian conditions. The Plan, which was drawn up by a special committee presided over by Mr. J. R. D. Tata of the Tata Industries Ltd. and assisted by the British expert, Prof. O. A. Saunders, of London University, includes the setting up of a research centre at the Indian Institute of Science, Bangalore. A centre of post-graduate training in gas turbine technology, will also be set up under the plan, in co-operation with the Indian Institute of Technology at Kharagpur and the Bengal Engineering College, Calcutta. The estimated expenditure on this programme is Rs. 13.8 lakhs, spread over a period of three years. A committee with Dr. J. C. Ghosh as Chairman was set up to implement the programme.

The Board and the Governing Body of the C.S.I.R. adopted a proposal for the erection of a pilot plant at Jamshedpur for undertaking investigations on production of iron, using non-coking coals by low-shaft furnace process. A German firm has been asked to submit a project report in this connection. The chief feature of this project is the replacement of coking coal in iron smelting industry, in view of the limited reserves of coking coal in the country. The Board decided to set up a fuel efficiency organisation, as part of the Coal Commissioner's office, for introducing fuel efficiency methods in Indian industries. This is only as it should be, for conservation and fuel efficiency are two sides of the same coin. The one without the other is inconceivable, if a real saving in the use of fuel is to be made. These have acquired greater importance now than ever before in view of the plans to set up three more iron and steel plants and the expansion of the existing plants, both of which together are expected to boost the present output of 1.2 million tons to 6 million tons of steel ingot by the end of the second Five-year Plan.

Yet another significant development was the acceptance of the offer of Mr. G. D. Birla, the well-known industrialist, to establish a science and industrial museum and the decision to display at the museum models of industrial units, the miniature working models and products of Indian industries and scientific research. Such a display is expected to serve as a medium for the common man to know more about India's scientific efforts and industrial development. A committee with Dr. B. C. Roy, as Chairman was appointed to work out detailed plans and estimates for the proposed museum.

The Board and the Governing Body also approved of a programme drawn up by the Indian National Committee for studying solar, magnetic, ionospheric, upper atmospheric and geodetic conditions. India is co-operating with 38 countries in setting up a network of stations throughout the world for undertaking a systematic observation during 1957-58, with the object of obtaining as complete a picture as possible of world-wide geophysical phenomena. This programme has been organised by the International Council of Scientific Unions. It was also decided that the School of Mountaineering at Darjeeling should be equipped with facilities for scientific workers to undertake investigations on geophysics and high altitude biology in eastern Himalayan regions. Further, a unit for undertaking rain and cloud physics research was also set up. The unit will confine itself chiefly to fundamental studies on the physics of cloud formation.

An expert committee, with Dr. P. Maheshwari, Professor of Botany, Delhi University, as Chairman, was set up to consider the present state of development of biological sciences in India and to recommend the subjects and the extent to which biological research should be supported by the Council. A plan for the development of the Sikandarbagh Garden in Lucknow as a national botanical garden was approved and a committee was constituted to go into the details of the working of this garden in relation to the Botanical Survey of India and other botanical gardens elsewhere in India.

Finally, the progress of research in the national laboratories, and under the auspices of the research committees, was reviewed and programmes for the next year approved. Sub-committees were constituted to draw up programmes of research to be carried out in the second Five-year Plan, in the fields of physics, radio, chemical technology and industry, drugs and pharmaceuticals, essential oils, plastics and buildings.

U.K. ENGINEERING FIRMS FORM NUCLEAR STUDY GROUP

Some of Britain's biggest engineering firms have announced the formation of a joint team of nuclear physicists, engineers, and boiler technicians to study the problems of designing large and powerful atomic power stations. They are those firms which are likely to be concerned in the Government's programme for building nuclear power stations.

The use of nuclear fission as a source of heat to drive electrical engineering plant will be the first major application of atomic power to industrial uses.

The Atomic Energy Authority's experimental power station new being built at Calder Hall, Cuberland, will generate electricity by this system. It is expected to come into operation at the beginning of 1957, or possibly at the end of next year. Its power output will be at least 50,000 kilowatts. But power stations of much greater output are envisaged in the Government's programme.

Until recently, the very expensive research work involved in developing nuclear power for commercial purposes was undertaken solely by the Atomic Energy Authority, but the results of this work are now being made available to industry, and various firms are carrying out their own researches.

The new study group will work closely with the Atomic Energy Authority on the design and development of power plant, but will have within its scope the more distant projects of atomic propulsion units for ships, land transport, and aircraft.

BRITISH JOURNAL ON INDIAN STEEL INDUSTRY

A 17-page survey of "The Indian Steel Industry" is featured as the leading article in the current issue of the British Iron and Steel Federation's monthly *Statistical Bulletin*, just published in London.

In the past two or three years, says the survey, India's existing steel-making firms have given serious consideration to the question of expansion and modernisation, while, in the last 12 months, a number of plans for establishing State-owned steel works have been forthcoming. "As a result of recent negotiations, at least three new million-ton works are likely to be built, whilst a proposal for a fourth large plant has been made."

The survey goes on to describe India's existing iron and steel industry, its plans and problems, and summarises various proposals for new capacity to bring steel production eventually up to 6,000,000 tons a year.

The survey points out that "the foundation of India's present iron and steel industry was not laid until 1872." But, since then, "development has been steady, although slow judged by Western standards. The survey also analyses the industry's post-war problems, the questions of Government financial aid and oversea aid with plant and capital, development plans of leading companies, and the economics of costing and pricing.

Concluding, the survey says: "Vast projects put forward in the past year show that the Government is now alive to India's urgent need for steel. If all goes according to plan—and there is no reason to believe otherwise—then by 1960-65 India will have made very definite progress in the industrial field, with the possibility of a further advance in the more distant future. It will, however, be another three or four years before any large-scale increase in India's steel production can materialise."

WORLD OIL PRICES

U. N. COMMISSION'S REVELATION

THE U.N. Economic Commission for Europe has alleged that the international oil interests have successfully manœuvred to keep oil prices in Europe, nay, in the whole world, at a price well above the cost of production. The oil industry has maintained the prices for oil throughout the world at a fixed relation to those in the Gulf of Mexico and these in return are determined by the interplay of American domestic forces, which the Commission has characterised as "out-of-date and dangerous." For the overall U.S. cost structure is higher than that in the Middle East. The Commission admits that political risks and drilling costs are higher in the Middle East than in the U.S., but all other costs, it says, are less. The average output of a well in the U.S., for instance, is only 11.6 barrels a day. In Kuwait, which supplies much of Europe's oil, some wells produce as much as 9,000 barrels a day. Since West Europe refines most of its products from crude oil shipped from the Middle East, the Commission wonders why the prices of refined products are equated to those imported from the Gulf of Mexico. A barrel of crude oil in Saudi Arabia, according to the Commission, costs only 35 cents, but it is sold at as high as $1.75 a barrel, thereby making a net profit of $1.40. In Iraq, the cost of production of crude oil is only 25 cents a barrel. The Commission has alleged that the oil industry has kept the prices and operations in the Middle East as a closely guarded secret, thus immunising itself from public criticism. Thus, the Commission has, in effect, challenged the integrity of the world oil interests in fixing their oil prices. It is true that it does not criticise the oil industry for not introducing an absolutely free market, which, in the present conditions of plentiful supply of oil, could force down the prices to the prime cost. But what it says is that the present price reflects a situation in which only the interests of producers are taken into account.

Coming as this report does after about two and a half years of the publication of the report of the U.S. Federal Trade Commission on international oil companies, the findings of the U.N. Economic Commission for Europe have once again revived the allegations that oil companies hold a monopoly of world oil, divide markets between them and fix prices for oil arbitrarily, thereby holding the consumers to ransom. The Commission states that "world trade is made up essentially of intra-hemisphere trade with exports from the Middle East to the United States forming the only significant link between the two hemispheres." Although trade links between the two hemispheres are "weak and likely to become weak, the corporate links are very strong." Specifically, the lion's share of crude oil production and refining throughout the world is in the hands of eight major companies—five American and three European—most of which have main producing and refining centres. The eight Companies are: (1) The Royal Dutch Shell group; (2) the Standard Oil Company, New Jersey; (3) the Standard Oil Company, California; (4) the Texas Company; (5) the Socony-Vacuum; (6) the Anglo-Iranian; (7) the Gulf Oil Corporation, and (8) the *Compagnie Francaise des Petroles*. The Commission is of the opinion that the high degree vertical integration which major companies have created with regard to production and refining is continued in respect of transport and distribution.

The allegations made by the Commission are not entirely new. It will be recalled that no sooner similar allegations were made by the U.S. Federal Trade Commission than they were challenged. But nothing came out of it, as the American Government intervened and took the whole subject above the purview of civil courts on strategic grounds. Perhaps, the same may happen again in the case of the present report also. Commenting on the report, a spokesman of an American oil company, states that the report is an "attack on Middle East companies" and it is based upon "inaccurate or prejudicially selected statistics, poor economics and faulty logic." Significantly enough, Mr. Maudling, British delegate on the Commission, states that the report is incomplete and does not provide a proper basis for further study. He is of the opinion that the report does not give a clear picture of production costs in East European countries because of lack of knowledge of oil production and marketing conditions. Apart from these statements, there has been very little comment on this report.

NEW PRODUCTS AND PROCESSES

Desalting Sea Water

THE U.S. Department of the Interior is undertaking new tests to find a method of removing salt from sea water and inland mineral waters at a low cost. Present processes though satisfactory are prohibitive for large-scale production.

Pocket TV Broadcasting Station

The DuMont Laboratories, Inc., a U.S. electronics manufacturing company, has produced a package no bigger than a cigar box which contains all the elements of a complete television broadcasting system. Without the use of any other intermediate units, the device can pick up live actors or motion picture films and send them clear and sharp over cables to the receivers of a closed-circuit system. The device is especially designed for use in industry.

Nylon Tube Used to Replace Human Artery

A crimped tube of tightly woven nylon developed by Chemstrand Corporation has been substituted successfully for a damaged artery in a middle-aged man. The artificial artery serves as a "splint" for the living artery. Chemstrand says that fabric tubes previously used closed off when bent, but the crimped feature of the new tube eliminates this, and may make it possible to manufacture textile arteries in various sizes on a large scale.

New Quality of Fountain Pen Ink

An ink factory at Apeldoorn (the Netherlands) has, it is claimed, succeeded in making a superior quality of fountain pen ink, which dries rapidly on paper, but very slowly in the pen. As a result, the pen can lie open for any length of time without refusing when writing is resumed. This new ink is extremely useful for people whose work is continually interrupted. It is suitable, it is said, particularly for writing deeds and other documents of permanent value.

Plants Fed on Glass

Ground glass for breakfast would ruin your health, but there is a new kind of ground glass that is fed to plants. It is good for plants and stimulates their growth. Called "agricultural frit," it provides the so-called mineral trace elements that are essential to plant growth. These minerals are melted into glassy porcelain enamel, so that they will not wash away in the soil as soluble salts do. Marketed under the name F.T.E. (Fritted Trace Elements), the product contains manganese, iron, zinc, copper, boron and molybdenum. When it is applied to green-house flowers, it promotes earlier blooming and larger blossoms. Used on field crops, it has increased potato harvests by 40 per cent., added a ton an acre to corn crops, and increased the yield of cabbages, blueberries and tomatoes.

Tiny Scales Weigh "Invisibles"

The art of weighing and measuring has now become a science of almost unbelievable accuracy. Technicians, according to the American National Geographic Society, now weigh invisible substances by "scales" that are themselves hard to see. In one operation, a rare radioactive material is measured by a quartz fibre so thin that it has to be magnified to show the results. The twist of the fibre under pressure indicates the weight. Scientists have calculated the weight of the earth and the thickness of a soap bubble's wall. They have recorded the footfall of the common housefly and determined the degree to which a bar of steel is affected by a fly landing on it. By the vibration of atoms, they measure time with a precision never before attained.

Tubeless Tyres

A number of U.S. automobile manufacturers are equipping their 1955 models with tubeless tyres. The President of the rubber company that pioneered in the development of the tubeless tyre —B. F. Goodrich Company—predicts that in three years all the new cars will be using them and that the inner tube will be a thing of the past. The tubeless tyre—simply a tyre casing that is airtight instead of a container for an inner tube—is not a new invention. For the first time since it was placed on the market six years ago, however, it has now begun to enjoy general acceptance by the U.S. automobile industry. The industry seems to be in complete agreement about the advantages of the tubeless tyre. These include greater blowout and puncture protection, a more comfortable ride because tubeless tyres run cooler and keep air pressure down and greater durability (due to cooler running). One tyre maker estimates that the tubeless tyre can be used for 32,500 miles, which is about 12,000 miles more than ordinary tyres.

Vitreous Enamels for Wire-wound Resistors

Wire-wound resistors, so extensively used in electrical and radio industries, are made of suitable resistance wires wound over an insulating core to which a coat of insulating enamel is applied. It is estimated that every year India imports enamelled resistors worth Rs. 3 lakhs. Two types of vitreous enamel compositions, lead and lead-free type, for coating resistors have been developed at the Central Glass and Ceramic Research Institute, Calcutta. The process of making enamel compositions involves reduction of the raw materials to suitable fineness followed by their mixture in requisite proportion. The mixture is fritted in a furnace, dried, weighed and powdered in a ball mill. The dry compositions are applied to the wound resistors which are then baked at a suitable temperature in an oven. The enamel coatings obtained possess a high lustre, are uniform and free from bubbles. They possess good adherence to the wire and the core of the resistor coupled with satisfactory electrical resistance. Thermal shock resistance is high. Enamelled resistors with these coatings have been tested and found to conform to modified U.S. Navy specifications No. Jan. R-26 for thermal shock resistance. Resistors with these compositions have been reported to compare favourably with imported enamelled resistors by several industrial concerns. The process is covered by Indian Patent No. 48419. Parties desirous of undertaking the commercial development of the process are invited to correspond with the Secretary, National Research Development Corporation of India, C.S.I.R. Buildings, Old Mill Road, New Delhi-2.

Diamond-tipped Drills and Grinding Wheels for Dentists

A factory at Nijmegen (the Netherlands) has started the export of dentists' diamond-tipped drills and grinding wheels, which have been tested in actual service for a considerable time in the Netherlands. They consist of a metal body to which very fine diamond bort is applied. This bort is obtained by crushing coarse diamonds in a special manner. Due to careful sizing of the bort and highly accurate insertion, the surface of the instruments, it is stated, is perfectly uniform. The points of the diamonds are entirely free, and there is enough space between the bort granules to take the grindings. It is further reported that diamond-tipped drills and grinding wheels operate more pleasantly and rapidly than other grinding and drilling instruments, both for the patient and for the dentist. The innumerable small diamond points remove the material gradually and without objectionable vibration. The grinding action is great, so that the treatment can take place quickly; little pressure has to be exerted and thus the development of heat is low. As the instrument is practically not subject to wear and consequently keeps its original shape, does not lose its sharp angles and remains centric, very accurate work can be done with it. The assortment consists of about a hundred different shapes, each designed for a special use.

Apparatus for Paper Electrophoresis of Serum Albumins

After careful experiments with various systems, a concern at Groningen (the Netherlands) has developed an apparatus for the electrophoresis of serum albumins on filter paper, which gives a regular, well-defined diagram and which enables the various albumin fractions to be determined both quantitatively and qualitatively. The apparatus consists of an electrophoresis bath for four paper strips which are suspended vertically in the form of an inverted V and serve as electrodes, further, of a.d.e. voltage apparatus, adjustable from 0 to 350 V, a voltmeter and a milliammeter, a pilot light and a switch for changing over from anode to cathode and *vice versa*; finally, it has facilities for introducing the serum and soaking the strips. With this apparatus, it is possible to obtain, in a perfectly constant and reproducible manner, paper strips on which the various albumin fractions appear as straight bands. A quantitative determination of the albumin fractions requires special precautions; the serum is applied with a special applicator to a dry paper strip, upon which the strip is moistened homogeneously with a buffer solution in a small soaking bath. Staining takes place according to the instructions supplied. The measurements of the albumin fractions vary from micro-Kjeldahl to colorimetric determinations.

SIXTY-SECOND ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1954.

The Balance of Profit and Loss Account for the year after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets,

amounts to		£194,324
to which has to be added the balance brought forward from last account ..		200,980
making the amount available ..		£395,304
out of which the following appropriations have been made:—		
To Interim Dividend of 7 per cent. on the "A", "B" and "C" shares less Income Tax at 9s. in the £, paid on 1st September, 1954	£40,425	
To Officers' Pension Fund	13,000	
To Amount written off Freehold Banking Premises and Property	35,000	
To Additional Allocation to Contingencies Account ..	50,000	
		138,425
leaving a sum of ..		£256,879
from which the Directors recommend:—		
A Final Dividend of 7 per cent. on the "A", "B" and "C" shares, (including the increased Capital issued on 7th September, 1954), less Income Tax at 9s. in the £ payable 29th March, 1955		56,595
Balance to be carried forward to next Account		£200,284

At the Extraordinary General Meeting held on the 7th September, 1954, the "A" "B" and "C" shares were sub-divided and the sum of £420,000 was capitalised, being part of the balance standing to the credit of the Reserve Fund. During the year the Board also transferred £670,000 from Inner Contingencies Account to the Reserve Fund.

The following Directors retire by rotation under Articles 120 and 121 of the Articles of Association but, being eligible, offer themselves for re-election:—

The Hon. R. H. Vivian Smith.
Mr. J. B. Crichton.
Mr. R. W. B. Dunlop.

Special Notice under Sections 142 and 186 of the Companies Act, 1948, has been received by the Bank of a resolution for the re-election as Director of Mr. J. B. Crichton, who has attained seventy years of age.

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

LONDON, 1st *March*, 1955.

NOTES.

1. Currency Assets and Liabilities have been converted into Sterling at the following rates:—1s. 5d. per Indian and Ceylon Rupee and Burma Kyat, 2s. 3d. per Pakistan Rupee, 2s. 4d. per Straits Dollar, 1s. 3d. per Hong Kong Dollar, 7s. per United States Dollar, 4d. per Baht, Yen 1,000=£1 and Shanghai Yuan 30,000=£1.

2. Group Accounts are not prepared as the Directors consider they would be of no real value to members in view of the insignificant amounts involved in the accounts of the Subsidiary Companies.

3. Contracts for outstanding capital expenditure £7,034 (1953, £63,655).

4. There are Contingent Liabilities in respect of the following:—
Bills Receivable re-discounted £1,509,358 (1953, £1,004,976) all of which have since run off.
Outstanding Forward Exchange Contracts.
Confirmed Credits and Guarantees entered into in the ordinary course of business, including Guarantees to Government Departments in India amounting to £68,144 (1953, £34,407) for which security has been deposited with the Reserve Bank of India.
Uncalled Capital amounting to £54,963 (1953, £54,963) in respect of partly paid shares in Subsidiary Companies.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

LONDON, 1st *March*, 1955.

THE MERCANTILE BANK OF INDIA, LIMITED

ANOTHER YEAR OF EXPANSION IN GENERAL BUSINESS

SIR KENNETH W. MEALING'S REVIEW OF EVENTS IN ASIA AND FAR EAST

THE Sixty-second Annual General Meeting of the Mercantile Bank of India Ltd., was held in London on 29th March, 1955. In his statement circulated to shareholders, Sir Kenneth W. Mealing, Chairman of the Bank, said that the world situation had shown little change during the past year. So far as India was concerned, he said, the year 1954 must be regarded as the most successful one in practically all spheres of activity since Independence. Referring to the economic progress of India, Sir Kenneth expressed the view that the full extent of the first Five-year Plan might not be achieved, for the target was a high one, but much of it would be attained.

The following is the full text of Sir Kenneth's statement:

"Sir Cyril Jones, K.C.I.E., C.S.I., was appointed Deputy Chairman vice Sir John Hay, who had served for two years in that capacity and who, because of other commitments, desired to be relieved of this responsibility.

"The Board's recommendations, detailed in their circular letter of 27th July, 1954, to shareholders for the sub-division of the 'A', 'B' and 'C' shares and capitalisation of the sum of £420,000, being part of the balance standing to the credit of the reserve fund, were duly approved at an extraordinary general meeting of the shareholders held on 7th September, 1954. The Board also transferred £670,000 from inner contingencies account to the reserve fund and, as a result, the paid-up capital of the Bank is now £1,470,000 and the reserve fund stands at £1,750,000.

"The expansion recorded last year in the Bank's general business continued during 1954. The balance-sheet total at £68 millions is higher by £5 millions. On the assets side, there is an increase of £2¼ millions in the holding of Government securities, and bills receivable and loans and advances are higher by £1 million each. On the other side, there is an increase of nearly £4 millions in deposits.

Dividend

"At £194,324, the net profit is practically unchanged from that of the previous year and your Directors recommend a final dividend of 7 per cent. on the increased capital referred to in the above paragraph. If this recommendation is approved, the dividend for the year will be 14 per cent. on the actual issued capital throughout the year. I trust you will agree the results of the year's working are satisfactory.

"The opportunity appeared propitious for me to make an extensive tour of many of the main branches of the Bank, and I therefore left London on 5th October, 1954, for Japan and then visited Hongkong, Thailand, Malaya, Singapore, India, Pakistan and Ceylon, returning to London on 3rd February, 1955.

"I was greatly impressed with the quality of our business, the goodwill of our customers and the enthusiasm of our staff. I hope that the tour and the large number of interesting contacts I was able to make will prove to be of value to our business.

"The world situation has shown little change since I addressed you a year ago. The cessation of active fighting in Indo-China, resulting from the Geneva Conference, and the continuance of the cease-fire in Korea may, however, be counterbalanced by the continuing tension over Formosa and the small islands close to the China mainland occupied by the Chinese Nationalists. The fear of direct aggression in Europe appears, thanks to the increasing power of N.A.T.O., to have declined, but S.E.A.T.O., still to be ratified by the countries concerned, has not yet become a power sufficiently capable of withstanding aggression in South-East Asia, so the situation is still not without anxiety in this area.

"For the greater part of 1954 the economic situation in the United Kingdom progressed satisfactorily, although in the latter half of the year there were signs of incipient inflation. The continued weakness of sterling in terms of other currencies in the closing months of the year indicated that some deterioration in the country's economic position was taking place.

"Since the close of the year, to rectify the situation, the Bank rate has been raised on two occasions and is now 4½ per cent., the highest since 1932. Other steps have also been taken to stop the inflationary trend, increase exports, and maintain international confidence in sterling. I have little doubt that these measures will prove effective.

"The fears in the United States of America that a moderate economic recession might develop into a serious slump proved, as I surmised, to be unfounded, and the productivity of this great country both in agriculture and industry continues to increase.

India

"The year 1954 must be regarded as the most successful for India in practically all spheres of activity, since Independence. The Indian Government, headed, and indeed dominated, by Pandit Nehru, has participated, and made its influence felt, in world affairs to no mean extent. Internally, the food situation has vastly improved, the working class cost of living has shown some recession, and trade and industry have enjoyed an active year. The first Five-year Plan came into existence in 1951 and is due for completion in 1956. Of an estimated outlay of Rs. 2,249 crores, by March, 1954, only 40 per cent. had been utilised. The full extent of the first Plan may not be achieved for the target is a high one, but much of it will be attained and a second Five-year Plan is now being framed. India has become alive to the fact that the present increase in population (something like 45 million new mouths to be filled, bodies clothed and employment found every 12 years) necessitates urgent steps to increase agricultural production and industrial capacity. To meet this situation the Indian Government has vast plans for irrigation, hydro-electric power, heavy industrial production, fertiliser plants and is now planning nation-wide rural and agricultural credit and banking facilities under the ægis of a State Bank now in process of formation. The growing use of fertilisers by the agriculturists and the gradual spread of 'family planning' are two important steps towards meeting the problem of increasing population. Whilst it is true that these great problems can only be adequately solved by vast measures which private capital and private enterprise are not, in India, capable of undertaking, thus necessitating Government planning, promotion and finance, it would seem in the pronouncements made hitherto that private enterprise is only to be permitted to exist on the fringe of these developments and more or less on sufferance, instead of being encouraged to contribute as an active and welcome partner.

"The implications of Communism do not appear to be appreciated at any level in India, and there appears to be little or no restriction on the spread of Communist propaganda. Whether and to what extent this licence is having undue effect will not become clear until the General Election due to be held in 1956.

"There is still great goodwill in India towards the United Kingdom and, providing British manufacturers can compete as to price and delivery, there is a definite bias in their favour.

Pakistan

"The constitutional position in Pakistan is somewhat confused. This young country, which started from scratch in 1947, has the inherent geographical difficulty of separation by something like 1,000 miles between its eastern and western parts. Moreover, it has racial difficulties and has suffered grievous loss amongst its principal architects in the death of Quaid-i-Azam Jinnah and Mr. Liaquat Ali Khan.

"As a result, the infant democracy has had, and still has, difficult problems to face. The elections in East Pakistan early in 1954 resulted in utter defeat for the Moslem League Party, who, only obtained ten seats in a House of 236 (excluding minority seats). Unfortunately, the United Front, led by Mr. Fazlul Huq, which formed the new Government, immediately ran into trouble as a result of their own pre-election promises, and very serious riotings at the Karnaphuli Paper Mills Ltd. and the Adamjee Jute Mills and the rapid deterioration in the maintenance of law and order resulted in the Centre dissolving the East Pakistan Assembly and the promulgation of Governor's Rule under Major-General Iskander Mirza in October, 1954, as a result of which, law and order were restored.

"The economic situation, which had improved in 1953, was again deteriorating and, in October, it seemed that the Central Government under Mr. Mohamed Ali was losing the country's confidence. An Act was passed in October to remove the Governor-General's powers to dismiss a Prime Minister: Mr. Ghulam Mahomed, the Governor-General, thereupon declared a state of emergency, dismissed the Constituent Assembly and approved a new Cabinet under Mr. Mohamed Ali as Prime Minister.

"On a suit by the Speaker, this action by the Governor-General has been declared *ultra vires* and it now remains to be seen what will happen in the political field in Pakistan. But whatever the outcome, it is clear that Pakistan is passing and probably will for some time pass, through a difficult political period before a genuine and reputable democratic system can again be set up in the Provinces and at the Centre.

"The internal financial position of Pakistan appears to be sound, and very considerable industrial advances are taking place under the Pakistan Industrial Development Corporation under the efficient guidance of Mr. Ghulam Faruque, which has 24 projects in hand involving an investment of Rs. 70 crores and including shipbuilding, heavy chemicals, paper, cement, sugar, heavy engineering, textiles, jute, pharmaceuticals and petroleum and natural gas. Concerning the latter, the large gas-field at Sui is likely to be the most important single factor aiding the economy of Pakistan which has so far occurred.

"Shortage of foreign exchange is, at present, a serious problem, but when American aid starts coming forward this should result in a considerable saving in foreign exchange which in turn will enable Pakistan to spend more of its own foreign earnings on consumer goods, thus bringing about a reduction in the cost of living. The food position is far more comfortable: indeed in 1954 Pakistan was a substantial exporter of rice and it is not anticipated that there will be any shortage of grains.

"A settlement with India of the Kashmir problem seems no nearer than a year ago.

Ceylon

"Ceylon's economic outlook improved considerably during 1954. The tea crop established a record of 364 million lbs. and during the year tea prices at auction increased by over a rupee per lb. The export duty in January, 1954, was 45 cents per lb. and in January, 1955, Rs. 1.30 per lb. Thus, Ceylon's revenue is benefiting very considerably both from taxation on tea profits and from the almost trebled export duty.

"The second year of Ceylon's five-year agreement with China is reported to have worked satisfactorily, although the rise in the world price of rubber and the fall in the demand and price of rice made the barter of rubber for rice look much less advantageous to Ceylon.

"Nevertheless, Ceylon's economy is too dependent on two or three main agricultural industries, a severe drop in the world prices of which can bring a serious economic depression to the Island, which has to import a proportion of its foodstuffs. Prospects of foreign capital development are severely handicapped by the reluctance with which even temporary residence permits are granted even to citizens of other Commonwealth countries, as a result of the policy of Ceylonisation. There can be little doubt that this policy, if persisted in, can only result in the dis-investment of existing overseas capital in Ceylon and the prevention of any appreciable new overseas investments in the Island, for capital will not go to or stay in any country which refuses it the right to appoint executive staff without discrimination.

"During the year the Island was visited by Her Majesty the Queen and a royal welcome was accorded to her by all classes. Sir Oliver

Goonetilleke became the first Ceylonese Governor-General and Sir John Kotelawala, leader of the United National Party, continued as Prime Minister. The prestige of this Government remains high in the Island.

Burma

"The state of emergency continues in Burma, although it seems probable that some progress towards restoration of law and order has been made in 1954 and it is believed that a reduction has taken place in the numbers of insurgents and Communists operating against the Government forces. Nevertheless, the wrecking of trains, destruction of bridges and road or river hold-ups at one place or another in Burma are still frequent occurrences.

"Notwithstanding these difficulties, progress is being made in many directions. A Peace Treaty with Japan was signed on 5th November, with war reparations payable to Burma totalling the equivalent of U.S.$250 millions. Most of this is to be in goods and services (Japanese) to the value of U.S.$20 millions a year for ten years, also 'services and products' in joint enterprises for the economic rehabilitation and development of Burma in the form of hydro-electric plants, steel, fertiliser, shipbuilding, cement, sugar and chemical plants, also port facilities and hospital and medical services.

"The Burmese Government has also adopted an ambitious programme of industrial construction to cost some £562 millions over a period of seven years, including a steel rolling mill, two sugar mills, jute mill, bamboo paper and pulp mill, three hydro-electric plants, etc. A programme of road building is planned to provide eight main trunk roads throughout the country.

"Generally speaking, the trend during the year has been to extend State control over more branches of trade and industry to the exclusion of private enterprise.

"Whereas at the end of 1953 Burma had a favourable balance of trade, 1954 saw a reversal of this position, due to the fact that a buyers' market prevailed for her main export products. According to provisional statistics, the 1954 trade deficit balance may amount to K.14 crores. As a result, there has been a substantial fall (from K.99 crores in January, 1954, to K.56 crores at the end of the year) in Burma's foreign assets. It is estimated that Burma will have 1½ million tons of rice for export and, in view of the greatly improved world rice situation and the consequent fall in price, this presents Burma with a serious problem.

Malaya

"Economically the year 1954 proved better for Malaya than appeared likely at the beginning of the year. The principal industry, rubber, recovered from 55.88 cents a lb. in January to 86.15 cents a lb. in December, whilst tin, which in January fetched $317.33 per picul, finished the year at $348.96, having reached an average of $375 in July. As a result, the value of exports is estimated to be M.$3,400 millions, as compared with M.$3,019 millions during 1953, whilst estimated imports at M.$3,100 millions are lower by M.$127 millions, thus correcting the unfavourable trade balance of 1953. The year 1955 opened on a note of cautious optimism, but there are many difficult problems in the political and economic fields yet to be solved.

"The problem of replanting low production rubber is of considerable importance, if Malaya's rubber industry is to hold its place against the synthetic product; the problem of the Emergency which is by no means at an end, and of the financial burden this imposes; the problem of encouraging new industries and expanding existing ones such as copra, columbite, coconut oil, cocoa, etc. in order to make the economy more viable: these are all major problems for the Governments in Malaya and Singapore.

"In April, 1955, new Constitutions will come into effect in both Singapore and the Federation, under which both territories will have a large measure of self-government, with elected majorities in the Assemblies. The outcome of the first elections and the pattern of the new Cabinets resulting therefrom will be watched with lively interest and possibly some degree of anxiety. The electorate in Singapore consists of some 300,000, of which 200,000 are Chinese, the remaining 100,000 being more or less equally divided among Indians, Malayans, Ceylonese and Pakistanis and the Chinese are already demanding that the Assembly should be multi-lingual. Strikes were staged by pupils of Chinese schools, largely led by China-born Chinese, against National Service. This led to an investigation which disclosed that there was Communist infiltration into these schools. There seems little doubt that as the Security Forces make headway against the terrorists, the Communists turn their attention more to infiltration of trade unions, political parties, schools, etc., and it is very questionable whether sufficient is being done by the Western Powers to counter subversive activities and Communist propaganda, including radio propaganda from overseas, which is a major weapon in the cold war.

Hongkong

"The entrepôt trade of Hongkong has shown a slight further recession in 1954 partly due to the embargo on certain goods to China, partly due to increasing direct trade between China and the European Communist satellite countries, and partly due to the use of foodstuffs previously exported by China through Hongkong, for direct barter deals with other countries.

"Hongkong's exports declined to China, Indonesia, Japan and Thailand, and increased to the United Kingdom and Korea, whilst her imports declined from the United Kingdom, China, Germany and Thailand, but increased from the United States of America, Japan and Belgium. The value of exports totalled $2,417 millions and imports $3,435 millions. Nevertheless, the Budgetary position appears to be sound and it is estimated that the revenue for the current year will slightly exceed expenditure. Taxation remains low, which is an undoubted inducement to the growth of new industries and business enterprise.

"The expansion of local industries to which I referred last year has continued in 1954. There are now some 3,000 factories in Hongkong and Kowloon employing around 300,000 persons and during the year a modern flour mill, an artificial pearl factory, four new cotton mills, an electric clock factory and numerous other industrial projects have commenced.

Thailand

"Thailand has had a rather difficult year so far as overseas trade is concerned. The change from a sellers' to a buyers' market in rice, to which I referred last year, was not appreciated quickly enough and, as a result, rice exports were down by something like 25 per cent. from 1,352,000 tons in 1953 to 993,719 tons in 1954 and the revenue earned declined even more sharply, by approximately 40 per cent. At the end of the year, the rice export trade was given back to commercial enterprise.

"Although 1954 has been a difficult year economically, it has in other respects proved a progressive year. Closer association has developed with Burma and other free countries and the creation of S.E.A.T.O. has engendered a feeling of confidence in spite of the events in Indo-China. The Government under the Prime Minister, Field Marshal Pibulsonggram, appears to be firmly in control. The Army and the Police forces are regarded as strong and efficient and substantial American aid is forthcoming. The note issue is covered by gold and foreign exchange to about 64½ per cent., against 80 per cent. a year ago, and this loss in cover has been used to pay for the excess of imports over exports. Import licences are now rigidly restricted and new exchange control regulations came into force in December, 1954. With these measures it is anticipated that 1955 will see more stable trading conditions in the country.

"The Thais appear to be a contented people, with ample food supplies of all kinds and a reasonable standard of life and leisure, and, although not a democracy, Thailand should not prove a fertile ground for Communist infiltration. Provided S.E.A.T.O. becomes effective, Thailand may well become a bulwark against the spread of Communism in South-East Asia.

Mauritius

"Notwithstanding the fall in world sugar prices, the principal industry of Mauritius had another successful year in 1954 and, thanks to the protection granted by the Commonwealth Sugar Agreement, should also do well in 1955 provided weather conditions are not adverse.

"Over-population continues to be a major problem and necessitates the importation of foodstuffs. The Mauritius Government entered into a much criticised agreement with the Government of Burma, whereby the latter would supply to Mauritius 40,000 tons of Milchar No. 1 parboiled rice in 1954 and 30,000 to 50,000 yearly from 1955 to 1957, commencing at £54 8s. 11d. per ton f.o.b. in 1954 and falling by £2 a ton yearly thereafter. There was also a 'fall clause,' should Burma sell to any other Government at a lower price.

"Whether these Government to Government contracts are beneficial to the countries undertaking them is questionable: in peace-time, such trading is the function of merchants who, generally speaking, are better able to carry out such business and whose activities do not engender the risk of inter-Governmental friction nor loss to the public finances.

Japan

"Japan's economic position continues to cause great anxiety. Drastic import reductions were imposed and exports have increased during the year, so that the balance of international payments has improved and foreign currency reserves have increased slightly. A policy of dis-inflation has been followed which has checked the upward spiral of prices, but has also extinguished large numbers of small businesses and considerably increased unemployment.

"The population (now some 88½ millions) is rising at over a million a year, but Japan has only half the arable land and one-sixth the pasture land of the United Kingdom, which has only 60 per cent. of the population of Japan. Although Japan has a large industrial potential, much of it is 20 years out of date and costs of production are nearly 20 per cent. higher than in the United States of America or United Kingdom.

"Nevertheless, Japan must export in order to buy food and raw materials for her industries and she can only export in sufficient quantities if her costs and qualities are competitive, her trading practices are fair, and if the countries of the free world recognise the importance of assisting her through her present difficulties.

"Mr. Yoshida, who had been Japan's Prime Minister since October, 1948, resigned on 7th December, 1954, and was succeeded by Mr. Hatoyama leading what is really a caretaker Government, as a General Election is now taking place. It is generally believed that only by an alliance between the Conservatives and Liberals is a really stable Government likely to be formed.

"During my visit to Japan in October, I was received with most friendly courtesy and impressed with the goodwill existing towards Great Britain. Our three offices continue to make progress in their function of financing overseas trade.

"Our thanks are again due to Mr. Drake, our Chief Manager, Mr. Hawkins, our Deputy Chief Manager, to the managers and staff in London and at our branches and offices in all the countries in which we do business. It was a particular pleasure to me to meet so many of these officers during my tour and to observe the efficiency and enthusiasm with which they conduct the business of the Bank."

STAFF INSURANCE SCHEME

EXPERT COMMITTEE SUBMITS REPORT

THE Staff Insurance Scheme which some insurers introduced last year for the benefit of salaried employees in large-sized firms, had, as is well known, come in for some criticism at the hands of both the smaller insurers and the insurance agents. In November, 1954, the Executive Committee of the Life Insurance Council of the Insurance Association of India appointed an expert sub-committee, consisting of three actuaries, to examine the actuarial and certain other aspects of the Scheme. This Sub-committee has now submitted its report. It has generally commended the scheme, though it has suggested that the Scheme should conform to certain conditions. The report has been accepted by the Executive Committee. As a result of this acceptance, the insurers concerned will have to amend, with effect from 1st inst., the Staff Insurance Scheme they are operating.

The terms of reference of the Sub-committee included: (a) whether insurers should be allowed to reduce rates under the staff insurance schemes and (b) whether quoting special rates for "death duty" policies was consistent with the principles laid down by the Committee in regard to prohibition of dual rates. In its report, the Sub-committee has held that any scheme of staff insurance which offers benefits to the public by reducing the cost is "unobjectionable," provided equity between the different sets of policyholders and between the existing policyholders and the new policyholder is preserved. There should, however, be no attempt on the part of an insurer at subsidising one section of its business at the expense of another. After examining the Staff Insurance Scheme, in the light of these considerations, the Sub-committee has arrived at the conclusion that there "can be no objection, in principle, to staff insurance schemes."

Proceeding, the Sub-committee has examined some of the objections raised against the Scheme. Stated briefly, these objections are: (1) It is possible that persons who are eligible for insurance benefits under the Staff Insurance Schemes may be persuaded to take up policies under the ordinary rates or they may be ignorant of their eligibility. (2) It is possible that the costs incurred on the Staff Insurance Schemes are not properly assessed, so that the differences in the two sets of premiums brings about inequity. (3) Large sections of prospective policyholders are excluded from the agent's field, so that the development of an effective agency force is seriously hampered. (4) A considerable volume of business written in the past may lapse or get paid-up or surrendered, thereby checking the growth of renewal premium income. The Sub-committee recognises that there is "some force" in these objections.

Nevertheless, the Sub-committee feels that if the scheme is worked in accordance with the restrictions it has proposed, most of the objections would lose their force. The suggestions made by the Sub-committee include:

(1) The minimum number of employees to be insured under the scheme should be in accordance with the following slab:

First 100 employees—50 per cent. with a minimum of 25.
Next 150 employees—40 per cent.
Next 250 employees—30 per cent.
Balance—25 per cent. or
500 whichever is lower.

Presumably this formula is intended to ensure that the Scheme is not utilised to issue policies to a very small group of employees. Under this formula, if the Scheme were made applicable to an office, say, with 250 employees, at least 85 employees should join the scheme—a minimum of 25 employees in the first slab of 100 employees and 60 employees or 40 per cent. of the second slab of 150 employees.

(2) For the purpose of the Scheme, the total number of employees will be considered as those insurable employees who are between the ages of 18 and 45. The staff of the head office, each branch office or each factory may be considered a separate unit. The staff may be sub-divided into factory workers and others (clerks and officers being considered together) and each sub-division may be treated as a separate unit.

(3) The Scheme should apply only to (a) whole life assurance by limited payments, (b) endowment assurance, (c) children's marriage endowment and educational annuities, and (d) deferred annuities. The payment of premium under these policies should be limited to an age not exceeding 60.

(4) The reduction in premium charged under the Scheme (as compared with ordinary tables) should not exceed 8 per cent. under assurance plans where the premium-paying period is 10 years or more and 5 per cent. in other cases including deferred annuities. Any extra charged or rebates allowed by the insurer on the ordinary rates will also apply to the Scheme. On leaving the employment, an employee should pay the premium according to ordinary scale in force at the time of issue of the policy. Policies under the Scheme should have the same terms, advantages and conditions as are applicable to other policies of the insurers. Surrender and paid-up values on policies issued under the Scheme may be allowed after two years even if the insurer allows such benefits only after a longer period under the ordinary plans.

(5) The sum assured under policies issued on the same life shall not exceed the following limits:

Salary with dearness allowance	*Maximum sum assured or cash option*
Rs. 100 or less	Rs. 2,000
Rs. 101 to Rs. 200	Rs. 4,000
Rs. 201 to Rs. 500	Rs. 8,000
Rs. 501 and over	Rs. 10,000

(6) No insurance agent should be employed for the purpose of securing business. No commission, nor any overriding commission should be paid to the insurance agent or special agent.

(7) The premiums under the staff insurance schemes, both first year's and renewal premiums, should be shown separately in the revenue accounts of the insurer.

(8) The rates of premiums quoted by the insurers on "death duty" policies should be on the same basis as are adopted for the ordinary plans of insurance.

Such, in brief, are the conditions under which the Scheme, according to the Sub-committee, will have to work. It is true that the quantum of reduction in premium rates recommended by the Sub-committee is somewhat smaller than that adopted by the insurers in their Staff Insurance Schemes. Even so, it is gratifying to note that the Committee has generally endorsed the Scheme, and that the Executive Committee (as stated at the outset) has accepted the Sub-committee's report. But the Executive Committee, it is stated, has appointed an enlarged sub-committee of six members (that is, three other members, in addition to the existing members) to examine the working of the Staff Insurance Scheme. While we do not wish to underestimate the importance of expert scrutiny of the Staff Insurance Scheme, which is a new development in Indian insurance, we fail to see why such further examination is deemed necessary.

Be that as it may, there are two encouraging circumstances to which reference seems necessary. In the first place, it would appear that of those insurers who had opposed the Staff Insurance Scheme last year, some are not opposed to the Scheme now and a few others do not oppose it as vehemently as they did last year. Presumably, this is due to the apprehension that if Staff Insurance Schemes are withdrawn, the Postal Insurance authorities might try to fill the gap. We have always held that staff insurance, in some form or other, is the only way in which private insurers can forestall the extension plans of the Postal Insurance authorities.

Secondly, the Sub-committee, which examined the Staff Insurance Scheme, must be congratulated on its wise emphasis on the need for group insurance. The Sub-committee says: "Some of us foresee the time when group insurance schemes, which have brought the benefits of insurance to large sections of the working population in many countries, will take the field in India. Such group insurance should be the only alternative to the individual insurance that is being transacted now." The Sub-committee has expressed the hope that all "progressive employers will realise the advantages of group insurance." It is to be hoped that private insurers will soon be able to issue group insurance policies and the Government will facilitate this issue. Group insurance covers the risk of death only of a group of employees. From this point of view, it may well be called the only true type of insurance. Further, the premiums are low and are shared between the employers and the employees. Indeed, this form of insurance is a more urgent need than even health insurance which does not cover the risk of death of an individual employee. It is, therefore, high time that efforts were made to bring this scheme into practice over as wide an area of the country as possible.

CHECKING MOTOR ACCIDENTS

To the Madhya Pradesh State goes the honour of having taken the initiative in organising a high level conference to consider how best motor car accidents can be prevented. That the Chief Minister, Mr. R. S. Shukla, himself should have presided over the Conference, which was held at Nagpur, shows that the authorities attach considerable importance to effective prevention of accidents. The Conference, it is stated, was attended by the Chief Secretary to the State Government, high police officers and transport authorities.

It would appear that the causes responsible for accidents were first discussed. Broadly speaking, they were attributed to defective vehicles, rash or negligent driving, absence of proper road signs and road sense. It was felt that there was scope for better enforcement of the Motor Vehicles Act and the Rules framed thereunder and for speedier disposal of cases of breaches of the Act and the Rules. The Conference was of the view that the authorities should check the motor vehicles very thoroughly before issuing a certificate of fitness and that there should be effective supervision of the work of the Motor Vehicles Inspectors and Reserve Inspectors. It was suggested that the Transport Authority might be given a technical assistant, in order to enable it to exercise supervision over vehicles and to conduct surprise checks on vehicles. Such supervision and surprise checks would ensure that the vehicles are in perfect mechanical condition.

A suggestion was also made that a time limit should be fixed during the lifetime of a vehicle for which the vehicle would be considered roadworthy. Ordinarily, no public vehicle, it was felt, should be certified as roadworthy beyond a period of 10 years from the year of its manufacture. If a thorough examination, however, revealed that it was in very good mechanical condition, it might be permitted to be on the road for a maximum additional period of five years.

A notable suggestion made in the Conference was that in order to provide incentive for drivers to be careful and to avoid accidents medals should be awarded to drivers with accident-free records for 10 consecutive years. The question of establishing a training school for drivers, it was suggested, should be examined by the authorities. Further, the authorities were urged to consider how best the cases under the Act could be speedily disposed of. The Conference appointed a sub-committee to survey the traffic islands, footpaths, blind corners, parking places, etc., in Nagpur.

All the suggestions made at the Conference, it is pointed out, will be considered by the departments concerned. It is to be hoped that the departments would chalk out definite plans for prevention of accidents. Indeed, if this commendable move were to lead to a significant decline in road accidents there is no doubt that the measures adopted by the Madhya Pradesh Government will serve as a model for other States.

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

DIRECTORS' NINETY-FIFTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1954. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 13,93,696-14-8 and together with the sum of Rs. 1,23,088-2-3 carried from the previous year's account, makes a total of Rs. 15,16,785-0-11.

	Rs. a. p.
3. Out of this sum, the Directors have made the following interim appropriations—	
An ad interim dividend at the rate of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) was paid which absorbed	3,48,000 0 0
The Directors now recommend that the following further appropriations may be made—	
To pay a final dividend of 5 per cent. and a bonus of 1 per cent. (both free of income-tax) thereby making the dividend and bonus for the year amount to 12 per cent.	3,48,000 0 0
To provision for taxes	5,75,000 0 0
To transfer to the Reserve Fund under Section 17 of the Banking Companies Act 1949 raising it to Rs. 59 lakhs	1,00,000 0 0
To transfer to Bank's Buildings account	15,000 0 0
To carry forward	1,30,785 0 11
Total Rs. ..	15,16,785 0 11

4. The Bank rate remained unchanged at 3½ per cent. during the year under report.

5. Offices of the Bank were opened during the year at Alwarpot, and Nungambakkam in the City of Madras and Coonoor R. S., Rajapalayam, Pattukottai, Sankaranainarkovil, Secunderabad (Dn.) and Tiruppattur (Ramnad).

6. Mr. M. A. Chidambaram Chettiar, who was associated with the Bank as a Director for nearly nine years resigned his seat on the Board on 5th February, 1955, and the Directors record their great appreciation of his valuable services to the Bank. In his place Kumararajah M. A. M. Muthiah Chettiar of Chettinad, D.A., was co-opted.

7. In accordance with Articles 95 and 98 of the Articles of Association of the Bank four Directors, Messrs. Kumararajah M. A. M. Muthiah Chettiar of Chettinad, R. K. Venkatachalam, R. Sundram Iyer and Rao Bahadur M. R. M. S. Periannan Chettiar retire this year by rotation and they, being eligible, offer themselves for re-election.

PRIVATE ENTERPRISE AND STATE POLICIES

VIEWS OF MR. MURARJI J. VAIDYA

SHOULD the industrialists still think in terms of freedom and encouragement for private enterprise or should they accept the declared policy of the Government—establishment of a socialistic pattern of society—as an accomplished fact and adjust their own policies and practices accordingly? This was the question which Mr. Murarji J. Vaidya, Chairman of the All-India Manufacturers' Organisation (A.-I.M.O.), posed when he addressed the fifteenth annual conference of the Organisation held at Hyderabad on Saturday last. Evidently, Mr. Vaidya could not avoid the temptation of being drawn into the controversy that has been raging in the Press and on the platform since the adoption of the resolution on economic objective and policy by the Indian National Congress at its Avadi session. A section of industrialists argues, according to Mr. Vaidya, that the case of free enterprise requires to be pressed more vigorously before the people to convince them of the dangers of proceeding too rapidly in the direction of a socialistic pattern, while another section feels that the country cannot afford the luxury of free enterprise in the context of the need for rapid economic development of an underdeveloped country such as India.

Mr. Vaidya did not, of course, merely stop at posing the above issue; he attempted to answer it himself. He prefaced his answer with a lucid analysis of some of the fiscal and social policies of the Government in the light of the recommendations made by the Taxation Enquiry Commission. Referring to the Government's policy with regard to rehabilitation and modernisation of industry, he pointed out that nothing more than the barest minimum of liquid resources was being allowed to be retained in the hands of industries. He felt that the minimum would be found to be grossly inadequate even for the requirements of the industries themselves and that the industries concerned might have to resort to borrowing. Obviously, the industries would have to resort more and more to Government and semi-Government agencies for borrowings of a capital nature. Such a tendency would, in course of time, result in the latter becoming the major creditors of industries.

There is considerable force in these observations of Mr. Vaidya, as also in his statement that the proposed amendment to section 23A of the Income-tax Act was designed only to reduce individual wealth. Surely, a situation has been created, whereby private capital will, as he pointed out, find it difficult, if not impossible, to finance any new industrial development of a major character. Mr. Vaidya said:

"The sum total of all these policies and practices will be the gradual elimination of the private sector as the *entrepreneur* and, as time goes on, a greater and greater responsibility will come to rest on the Government for establishing new industrial enterprises. The fact that major industries like steel, shipping, electric power supply, etc., have had to resort to borrowing from Governmental or semi-Governmental agencies in the immediate past is a sure indication that Government will have to be the main provider of capital resources even where the State itself is not the *entrepreneur* and the financier of its own volition, as in the public sector. The reduction of wealth in the hands of the private sector will also result in their inability to contribute to philanthropic and social institutions which have so far been in the habit of relying on private philanthropy for their sustenance. Similarly, public institutions and political parties will also find it difficult, if not impossible to obtain requisite financial assistance which they have so far been expecting and receiving from the private sector."

Proceeding, Mr. Vaidya made a pointed reference to the increasing burden of taxation and the progressively mounting contributions which the industry was required to make to the various social welfare measures. These, he said, had resulted, and would continue to result, in increased costs of production or, where the buyers refused to pay the higher cost, in dwindling down of the profits on sales in both internal and external markets. The return from industry would, therefore, progressively decrease and this would, in turn, lead to a progressive decrease in the incentive for starting or developing industries by the private sector. Mr. Vaidya appealed to the Government not to adopt measures that would do more harm than good and that would give "such a shock to our economic system that the hands of the clock may be set back." At the same time, he appealed to the industrialists to appreciate the force of the arguments of the other side in the context of the need for rapid economic and social betterment. He wanted them to be prepared to adjust their policies to the overall needs of the country in the "supreme effort of making India a mighty and prosperous nation."

Having dealt with the main issue facing the industrialists at present, the A.-I.M.O. President alluded to two specific issues which were exercising the minds of the industrialists—unemployment and the proposed amendment to the Constitution. The Chairman regarded the problem of unemployment as a major one; it was a challenge to the developing economy. He no doubt believed that the avenues of employment were growing, but pointed out that the rate at which the employables were growing was faster than the rate at which these avenues of employment were being created. There is no exaggeration whatever in this view. It was only the other day that the Union Finance Minister revealed in Parliament that, out of seven million job-seekers, the number of persons who found jobs during the first four years of the Five-year Plan was four million. Mr. Vaidya stressed the need for creating "a far larger number of jobs." This need, according to him, was greater in urban areas than in rural areas, because job-seekers from rural areas migrated to the urban areas and aggravated the problem. In this connection, Mr. Vaidya suggested that the job-seekers in rural areas should be encouraged to start one-man or two-man industries on a small-scale as is done in Japan. In Japan, he said, 624,460 industrial establishments consisted of not more than four persons and gave employment to hundreds of thousands of people. Urging the emulation of the Japanese example, Mr. Vaidya made it clear that it was only through creating more jobs in the small-scale and rural industries in the village areas, on the one hand, and in a large number of new or expanded heavy and large-scale industries in the urban areas, on the other, that the great problem of unemployment could be tackled successfully.

With regard to the proposed amendment to the Constitution, Mr. Vaidya rightly observed that it would strike at the very root of the axiom that, where the property of a private citizen is acquired for a public purpose, it should be acquired only at public expense and not to the detriment of the citizen who is deprived of his property or his right. He was very emphatic when he remarked: "The fundamental rights guaranteed under the Constitution should not be made a handmaid of the party in power for implementing their economic programmes and policies."

In conclusion, Mr. Vaidya emphasised that the efficiency of free enterprise and the benefits of social welfare should be combined. To quote him: "Let us have a Welfare State in which every one is well off and let us, above all, avoid treading on each other's toes in our haste to march ahead." This, indeed, is the most rational approach which has unfortunately not been recognised by the powers-that-be. After all, it must be remembered that the task of achieving a Welfare State gradually and through co-operation of all is a "wiser" way than that of achieving it rapidly through regimentation.

ASIA'S RICE TRADE

The harvest area under paddy in Asia (excluding China) in 1953-54 was 178,000,000 acres, of which 76,646,000 acres were in India, 24,533,000 in Pakistan, and 912,000 in Ceylon. In Burma, there were 9,895,000 acres, in Thailand 14,536,000, in Indo-China 9,600,000, Indonesia 15,785,000, Japan 7,400,000 acres, and the Philippines 6,600,000 acres.

These figures are given in the latest *Rice Bulletin* published by the Commonwealth Economic Committee in London. The bulletin also shows that the first forecast for the harvested area in India for 1954-55 is 62,630,000 acres. The second forecast for Pakistan for 1954-55 is given as 22,781,000 acres.

Of the world's rice production (excluding that of the U.S.S.R.) of 166,500,000 long tons in 1953-54, India accounted for 39,822,000 long tons, Pakistan for 13,457,000 tons and Ceylon for 534,000 tons—in each case, a substantial increase over the figure for the previous year.

The bulletin records that the recent U.K.-Australia rice mission to Ceylon had reported that the Ceylon Government's efforts to raise yields were steadily becoming effective; an average level of 40 bushels per acre was considered possible within the near future.

Figures given of yield per acre of milled rice in Asian countries showed Japan had the highest yield, with 20.1 cwts. per acre in 1953-54, followed by South Korea, with 18.1 cwts. Figures for India, Pakistan, and Ceylon were, respectively, 7.1, 7.5, and 8 cwts. per acre.

Shipments of rice from the major exporters in South-East Asia amounted in 1954 to some 2,750,000 tons—about 280,000 tons more than the low figure of the previous year, but still below the level reached in 1951 and 1952. While exports from Burma, at 1,425,200 tons, were 470,800 tons higher than in 1953, those from Thailand, at 978,000 tons, showed a reduction of 353,200 tons. Shipments from Indo-China during 1954 were estimated at nearly 350,000 tons, as against recorded exports of 184,300 tons in the previous year.

Details so far available for other exporting countries suggested that total exports during 1954 might be slightly below the figure of 4,200,000 tons in 1953. Burma's rice exports were at the highest level since the war—470,800 tons above the revised figure for 1953, although still less than half the pre-war average. Contracts for 1955 included approximately 250,000 tons of rice remaining at the beginning of the year to be shipped to India under Burma's trade agreement with her.

Exports from India during the period July-December, 1954, aggregated only 5,600 tons, although some 200,000 to 300,000 tons of high-quality rice had been available for export and permits for 45,000 tons had been issued for consignment to Aden, East Africa, the Federal Republic of Germany, the Persian Gulf region, Tibet, and the United Kingdom. With the reduction in export duty, increased shipments from India were expected in 1955.

As far as Pakistan is concerned, the bulletin says it was officially reported that the following surplus from the 1954-55 rice crop was available for export: Sind *Joshi*, 200,000 tons; *Basmati*, 5,000 tons; *Permal*, 2,500 tons; *Begami*, 2,500 tons.

DEVELOPMENT COUNCIL FOR HEAVY CHEMICALS (ALKALIS) SET UP

A Development Council for the scheduled industry engaged in the manufacture and production of heavy chemicals (alkalis) has been set up by the Government of India under the Industries (Development and Regulation) Act, 1951. The Council will recommend targets for production, co-ordinate production programmes and review, from time to time, the progress made by this industry. It will also suggest norms of efficiency so as to eliminate waste, obtain maximum production, improve quality and reduce cost. The Council will also recommend measures for fuller utilisation of the installed capacity, promote arrangements for better marketing and standardisation of products. The adoption of measures for increasing the productivity of labour, including measures for securing safer and better working conditions and the provision and improvement of amenities and incentives for workers, will be another of the Council's functions.

The Development Council for heavy chemicals (alkalis) will consist of Mr. C. R. Rao, Chairman and Mr. K. M. Seth, Mr. K. K. Raman, Mr. Charat Ram, Mr. A. R. Narasimhan, Mr. V. S. Mankekar, Director, Central Electro-Chemical Research Institute, Karaikudi, Mr. G. P. Birla, Mr. N. Adhikari, Mr. B. Maitra, Mr. Surottam P. Hutheesing, and Mr. Shankar Rao P. Ogale, all members. Two representatives of labour will be appointed to the Council later.

This Development Council is the eighth such Council to be created under the Industries (Development and Regulation) Act.

AHMEDABAD ELECTRICITY COMPANY, LIMITED

MR. K. G. MILNE'S ADDRESS AT ANNUAL GENERAL MEETING

HIGHER STANDARD RATE OF RETURN URGENTLY REQUIRED

THE need for some measure of relief to the electricity industry was stressed by Mr. K. G. Milne, Chairman of the Ahmedabad Electricity Company, Ltd., in the course of his address at the Forty-second Ordinary General Meeting of the Company held in Bombay on Monday, 28th March, 1955. Mr. Milne reiterated his industry's plea for the liberalisation of the Electricity (Supply) Act in certain essential respects. In particular, he urged the enhancement of the standard rate of return and provision for deferred tax reserve.

Welcoming the shareholders to the meeting, Mr. Milne said:

"Since I last addressed you, continued representations have been made to Government to effect liberalisation of the Electricity (Supply) Act in essential respects. Principal of these, still, are the needs for enhancement of the standard rate of return and provision for deferred tax reserve.

"An important step forward recently has been the holding in Delhi last month of the long awaited Inter-State Conference to consider amendments to the Act and allied matters. A delegation from the Federation of Electricity Undertakings of India was then given an opportunity of elaborating the industry's views on the main problems, and I brought away the feeling that there is general realisation that some measure of relief should be granted to the industry soon. There are, indeed, hopes that the Bill to amend the Act may be placed before Parliament by August or earlier.

"You may have heard that the Government had a proposal to link the standard rate to the Bank rate with a differential of 2 per cent. With the Bank rate at present ruling at 3½ per cent., a basic maximum return of only 5½ per cent. would thus be permitted, a mere ½ of 1 per cent. more than now applies, and the industry has continued to press the case for a higher differential. In respect of the other major item, the principle of allowing for a deferred tax reserve seems to have had a fairly wide measure of backing at the level of State Governments, and following the debate at the Conference it is understood that the related Ministries at the Centre are now giving consideration to the precise method to be followed.

"The serious problem of deferred tax in the electric supply industry has also come in for special mention by the Taxation Enquiry Commission. In their report they say: 'We consider that the best way out of the difficulty would be to allow the concerns to put into reserve any extra surplus that they get as a tax relief on account of the initial and extra depreciation allowances. We recommend that the Act be amended so as to permit the creation of such a reserve.'

Development Rebate

"The Union Government's budget proposals for the year 1955-56 and the report of the Taxation Commission are both of great significance to the citizens of the Republic in all walks of life, but I must confine myself here to those aspects of them which appear most immediately significant to concerns such as our own. From this angle the principal change effected in the Finance Bill is the introduction of an allowance, admissible to be set off against taxable income and called a 'development rebate.' This concession amounts to 25 per cent. of the value of all kinds of new plant and machinery and is in place of the 20 per cent. initial depreciation allowances which have been available for the last several years.

"Now to the electricity industry, this development rebate is going to mean something rather different from what it means to other industries. So far as I can see, we will have to pass on at once to our consumers all the benefit of the rebate that others will be able to retain for development. This is just what happened to us in the case of the tax relief resulting from accelerated depreciation allowances, and it just as clearly calls for remedial action, but at least with the rebate we can be thankful that there will not be equivalent deferred taxation to contend with as well.

"I hasten to add that the advent of the development rebate does not mean that there is no longer any need for Government to make it possible for us to provide a reserve against deferred taxation. Quite the contrary; because the incidence of development rebate can only hold off for some time longer the day when our existing back-log of deferred tax liability becomes payable, so now is the very time to be accumulating funds into a reserve against that day.

"I should also stress that nothing has changed yet in so far as our special problems about denial of gross ups and/or additional income tax on dividends are concerned. These questions are still as they were when I spoke to you last year, namely, working their way through the labyrinths of the law courts, and no binding decision has yet come to help us. Our latest taxation position, therefore, seems to be that while the advent of development rebate will stop the further accumulation of deferred taxation to a considerable extent, it will not of itself ensure that we shall not have to meet so-called excess dividends tax, or alternatively lose our dividend gross ups.

"I am glad to say that this last question has also been carefully considered by the Taxation Enquiry Commission, although the steps which they propose to solve it have not so far been taken. The Commission says: 'The fact that assessable income may be less than the book profits in the year of installation of new machinery and in the next few years, also leads to some difficulties. The Company's dividend policy has to be based on book profits. It is possible, however, that on account of the accelerated depreciation allowances the assessable income (less tax thereon) is less than the dividends distributed. The excess dividends will then become liable to additional income-tax under the annual Finance Acts. The assessment might even result in a loss, and if this happens the shareholders will not be entitled to any tax credit in respect of the dividends. These difficulties will cease to exist if the method of taxing companies is revised on the lines suggested in Chapter X.'

"I can only hope that we will not have to wait very much longer before these difficulties do cease to exist, as they operate as a penalty imposed upon our enterprise in expanding our undertaking.

Constitution Amendments

"I will refer next to the proposals to amend the Constitution, with particular reference to the electricity supply industry. The Constitution (Fourth Amendment) Bill proposes primarily to amend Articles 31 and 31A of the Constitution which deal with the citizen's fundamental right to property. Under the proposed amendment, while compensation would presumably continue to be payable for property compulsorily acquired, the quantum of compensation would, in certain spheres, be a matter entirely within the discretion of the Legislature, and no Court would in those spheres have any jurisdiction to go into the adequacy or reasonableness of the compensation; in short, the issue of compensation in such cases would become non-justiciable. The amendment which is most significant to the electric supply industry is the enabling provision which empowers the Central and State Governments to extinguish or modify any of the rights accruing by virtue of any licence to supply electric power; and any law covering such modification or variation, if it received the assent of the President, would not be open to question in court. In introducing this proposal, the framers of the Bill appear to me to have given little regard to the nature of the surveillance which the State has long had over the electric supply industry by virtue of two very comprehensive statutes.

"During the debate in the Lok Sabha, while referring the Constitution Amendment Bill to a Joint Select Committee, the Prime Minister stated that full compensation cannot be paid when property has to be acquired for sociological considerations. I personally feel that such considerations can hardly be involved in the acquisition of electric supply undertakings, as the method to be followed in the acquisition of such undertakings has for years been elaborately laid down in the law which has governed, and still governs, the original issue of a licence to a licensee incorporating the terms of his franchise. All relevant considerations have been brought very fully to the attention of the Central Government and of the Joint Select Committee now considering the Bill. Perhaps the Select Committee will agree that the proposal as it stands will detract from the confidence of investors which has hitherto been inspired by the terms of our licences, and that it will thus have deleterious effects upon the future electric development of the country.

"An interesting feature of the debate when the Bill was referred to the Select Committee was that the element of the Opposition which abhors the principle of compensation was exceedingly vocal about the property rights of 'the small man' being protected. Among the investors in our industry, the number of these 'small men' with small holdings is legion. In the ultimate analysis the test of any legislation in the industrial sphere is how far it serves to liberate the springs of honest human endeavour. I would submit that in the case of an industry such as the electric supply industry, which has so sound a record of service in the past and such ambitious plans of expansion for the future, there is no call for further measures which could engender uncertainty. Even the vast hydro-electric schemes being built and being planned by Governments will have to rely very largely upon licensees' undertakings for purveying their power.

State Electricity Board

"An important development in this State since I last addressed you has been the formation of the State Electricity Board which was constituted on 6th November, 1954, and which now comprises four members. We welcome Mr. M. H. H. Premji who is the Chairman, and I may tell you that he has already visited our power stations, at Sabarmati. There are now four States which have constituted Boards but there still seems to be widespread hostility amongst a number of State Governments to implementing the provisions of the Act in this respect. Credit is due to the Central Government for continuously pressing the States to constitute the Boards. At the Conference in February the Union Minister for Irrigation, Power and Planning, Shri Gulzarilal Nanda, referred to the obvious urgency for rapid development of the electric supply industry and indicated that he attached great importance to the development of electricity being entrusted to autonomous Boards as envisaged in the Electricity (Supply) Act, 1948.

"Emerson urged his fellowmen to make no small plans, and your Company has been following this gallant concept in its expansion, in the expectation, of course, that ultimate justice will be done to it. In this context, progress with 'C' station has been most satisfactory, and of the immediate programme only the third turbo-alternator set and the fourth boiler remain to be commissioned very shortly. You will have been able to gather some idea of how we have progressed from the picture, on the inner cover of the annual report and accounts. The highest peak demand on combined 'A', 'B' and 'C' stations has been given as 91,200 kw. during the year under review, but has since risen to 95,600 kw.

"With the increase of our generating capacity a commensurate increase of distribution capacity is being effected. There is a growing emphasis on the need for rural electrification. While this Company is doing everything it can, and has already made considerable progress, uneconomic connections cannot be installed without subsidisation by other consumers. It would greatly assist the ends of social justice and the interests of would-be rural consumers themselves if they would get more together and produce to the Company reasonable and economically integrated propositions.

Rating Committee

"You will remember, indeed are unlikely to have forgotten, that we had proposed to revise our charges for electric supply as from April, 1954. The increase of rates which we had intended to implement averaged about 15 per cent. but our proposals were overtaken by the appointment of a Rating Committee. As the Committee's report has been published I shall not offer any detailed comment on its findings. There were some basic disagreements between the views of the Committee on the one hand and those, not only of this Company, but of electricity undertakings throughout India, on the other. One of the most important points over which we disagreed was the question of the treatment of interest on loans under the provisions of the Sixth Schedule to the Electricity (Supply) Act, and this issue has since been referred to arbitration. Although our expectation of several months standing has not yet been realised, we are still hoping to get a verdict 'any day now.'

"Government, as you are aware, did not pass any orders on the report of the Committee. Instead, we agreed with Government to defer revision of our tariffs for supply. Therefore we urgently need the answers to the several important matters I have already mentioned so that we can reopen the matter. Interest on loans, powers to create a deferred taxation reserve, and increase in the standard rate of return, these are the most important points that remain to be settled.

"There is, I find, a certain amount of confusion about the real significance of the term standard rate and the reasonable return which we are permitted to earn. The emphasis is on the word 'permitted.' The mere fact that an undertaking is allowed to earn a certain figure contains no guarantee that it is able to do so. Certainly no undertaking can earn its reasonable return nor make provision for its various reserves, if its rates are forced to remain static when changing conditions from time to time require those rates to be enhanced.

"I have already said that our rates needed revision. Because they were not revised as planned, your Directors have had to withdraw no less than Rs. 8.8 lakhs from free reserves in order to maintain the same modest dividend this year as last, namely, 6½ per cent. net.

Reserves

"You will realise that our free reserves are limited, and that under the stringent provisions of the law they will be hard to replace. Besides, we have no adequate buffer against the various tax contingencies mentioned in the notes on the balance-sheet. This situation will persist until Government takes cognisance of the difficulties with which the industry is faced. Capital expenditure needed for development in other industries can be, and indeed is to a substantial extent, met either from net profits or from the accumulated profits of previous years. For us it is not a question of financing capital expansion from revenue; that is almost out of the question as the law stands. The question is, Can we maintain our dividend? I must warn you that unless the various issues I have mentioned are satisfactorily settled in the very near future it may not be possible to maintain the dividend next year at the present figure.

"I must also point out to the authorities that to the extent our shareholders' dividend might suffer, the Company's credit in the investment market will decline. Our last issue of capital of Rs. 1,75,00,000 made in September, 1954, was an outstanding success and was heavily over-subscribed. This shows remarkable confidence in the good intentions of our Government, as well as in the intrinsic worth of your Company. I sincerely trust the confidence will prove well founded.

"Apart from dealing with the withdrawal of Rs. 8,80,000 from the equalisation of dividends reserve, which I have already done at some length, I should mention the fact that our calculation of clear profit for the year once again discloses a substantial shortfall below our figure of reasonable return. Otherwise the accounts, together with the notes, appended to the balance-sheet are, I think, sufficiently informative to obviate the need for my dealing with them in detail. Your Directors, after careful consideration, have decided to recommend a final dividend of Rs. 4 per share making, as I mentioned earlier, a net 6½ per cent. for the year, which is the same as last year.

"Quite apart from anything I have had to say on this and other occasions, you are all very well aware of the vast developments at Sabarmati just now coming to fruition. This year, therefore, there is a special feeling of physical achievement. While saying my sincere 'thank you' to the Resident General Manager and his staff, I should like to acknowledge our gratitude also to our consultants, to our suppliers, to our contractors and to all who have contributed towards the building of our power house, now one of the greatest in the East. We must seek to preserve this pre-eminent position and it is our endeavour to do so by various training schemes for all levels. Your Company must continue to have first class management, the most capable supervision and highly skilled staff. 'Training Within Industry' pioneered in India at Ahmedabad and rapidly gaining wide recognition, is intended to improve not only efficiency but mutual understanding. Our trainees sent abroad have started to return to serve with greater skill and wider knowledge. The Cadet Executive Scheme will in years to come prove its full worth. Ahmedabad is already a great industrial city, yet it can become greater. You have many contacts with industry and industrialists. I would suggest you make use of this slogan whenever you have a suitable opportunity—'Have you considered Ahmedabad as the location for your new factory?'"

Notices

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Ordinary General Meeting of the Company will be held at "Construction House," Ballard Estate, Fort, Bombay, on Friday the 15th April, 1955, at 4-00 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September, 1954, and to declare dividends on Preference and Ordinary Shares.
2. To elect Directors in place of those who retire by rotation and who are eligible for re-election.
3. To appoint Auditors for the current year and to fix their remuneration.

The Transfer books of the Company will remain closed as from Saturday the 9th April, 1955, to Saturday the 23rd April, 1955 (both days inclusive).

By Order of the Board,
THE PREMIER CONSTRUCTION CO., LTD.
Agents,
B. D. SARDESAI,
Secretary.

CONSTRUCTION HOUSE,
BALLARD ESTATE,
BOMBAY, *11th March*, 1955.

Note:—The Dividends, if sanctioned, will be paid at the Bank of India Ltd., Fort, Bombay, on and from Monday the 25th April, 1955, to those Shareholders whose names stand on the Company's Register on Saturday the 23rd April, 1955.

To the Shareholders of the Company and more particularly to:—Mrs. Marie Mascarenhas Monteiro, and Alfred Hurley.

THE CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Ordinary General Meeting of the shareholders will be held at the Registered Office of the Company, "Stephen House," Fourth Floor, No. 4, Dalhousie Square East, Calcutta, at 3 p.m. on Tuesday, the 12th April, 1955, for the purpose of receiving and passing the Report of the Directors and the Managing Agents for the half-year ended 30th June, 1954, declaring a dividend and transacting such other business as may be brought forward.

The Transfer Register will be closed from 4th to 12th April, 1955, both days inclusive, and it is notified that Dividend Warrants will be issued and posted to the registered shareholders only on application. Persons holding shares under blank transfer are advised to effect registration of scrip to their names as soon as possible but not later than 4th April, 1955.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"STEPHEN HOUSE" FOURTH FLOOR,
4, DALHOUSIE SQUARE EAST,
CALCUTTA, *16th March*, 1955.

THE JAY SHREE TEA GARDENS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, Royal Exchange Place, Calcutta, on Monday the 18th April, 1955, at 3-00 p.m.

(a) To receive and pass the Directors' Report and audited accounts for the year ended 31st December, 1954,

(b) to declare Dividend on Ordinary Shares,

(c) to elect Directors,

(d) to appoint Auditors for the current year and to fix their remuneration,

(e) to approve and confirm payment of Donations of Rs. 78,500 as per Profit and Loss Account, and

(f) to transact any other business that may be brought forward with the permission of the Chairman.

The Share Transfer Register will remain closed from 29th March to 18th April, 1955, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS LTD.,
Managing Agents.

8, ROYAL EXCHANGE PLACE,
CALCUTTA, *18th March*, 1955.

In particular to the non-resident shareholders:

Sri Jagannath Gupta, Gopal Das Seigell, Moolchand Khemka, Krishta Lal Ghosh, Sudhir Chandra Chakravorty, Mrs. Zaheda Khatun, K. M. Spalding and D. B. Spalding, Bankim Chandra Dutt, Victor Samuel Koland, R. L. Burgess and Mrs. E. Burgess, Col. C. J. Clarke, Mrs. B. E. Honeybone, Monmohon Saha, Mrs. K. Watson, George Fogt., Mrs. L. D. Jenkins and Mrs. L. P. Douglas Stone, A. D. Gaul, Lt.-Genl. S. S. J. B. Rana, P. N. Haksar, Kedarmani Acharya Dikshit and Mrs. Bidya Devi Acharya Dikshit, A. H. Johnstone, Estate of Late J. A. Mckerrow, Estate of Late D. C. Steen, Nagendra Man Singh, Mrs. E. E. Thompson and Mr. W. B. Joiner, E. F. E. Moses.

Note:—Dividend on Ordinary Shares as recommended by the Directors if passed at the meeting will be payable only to the Registered Shareholders whose names are on the Company's Register on 18th April, 1955. No applications need be sent for dividend as relative dividend warrants will be posted to such Shareholders on and from 9th May, 1955. Shareholders are requested to notify change of address, if any, without delay.

W. H. BRADY AND COMPANY LIMITED

NOTICE

MR. WILLIAM JENKINS HAVING RETIRED, his connection with us as a Director and Technical Adviser ceases from this date.

W. H. BRADY & CO., LTD.,
JOSEPH KAY,
Managing Director.

31st March, 1955.

THE TATA MILLS LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting, the payment of a dividend on Ordinary Shares at Rs. 2-8 per share, without deduction of income-tax, to the shareholders for the year ended 31st December, 1954.

For and on behalf of
THE TATA MILLS, LIMITED,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *28th March*, 1955.

OUCHTERLONY VALLEY ESTATES EARN BUMPER PROFIT

DIVIDEND TREBLED

A RECORD tea crop and a substantially larger coffee crop, together with favourable prices realised thereon, have enabled the Ouchterlony Valley Estates (1938) Ltd. (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode, Malabar) to earn a bumper profit for the year ended 31st October, 1954. The gross profit for the year, before providing for Managing Agents' commission and depreciation amounts to Rs. 18.41 lakhs, an increase of Rs. 14.25 lakhs over that for the previous year which, however, was a very lean one. As compared with the record profit of Rs. 19.50 lakhs earned in 1950-51, the profit for 1953-54 actually shows a fall. After providing for Managing Agents' commission, depreciation and taxation, the net profit shows an increase from Rs. 1.91 lakhs for 1952-53 to Rs. 10.06 lakhs. This improvement in the Company's fortunes has been availed of by the Directors not only to reward the shareholders with a higher dividend but also to strengthen its reserves substantially. Thus, they have set aside as much as Rs. 4.50 lakhs for the general reserve and stepped up the dividend to 30 per cent. from 10 per cent. paid for the previous two years.

The Company's output of tea during the year under review amounted to 934,600 lbs., which is a fresh record in its history and exceeds the previous best harvested in 1952-53 by 105,960 lbs. Despite the increase in crop, the cost of production rose from 126.30 cents per lb. to 129.96 cents per lb. The average price realised, however, was much more favourable at 231.37 cents per lb. than that of 170.19 cents realised in 1952-53 and 156.46 cents in 1951-52. There was also a very marked increase in the coffee crop harvested, such having amounted to 13,826 cwts., as against 8,449 cwts. in 1952-53. The year under review was the second in succession to show an increase in the coffee crop, the rise during the latest year being nearly four times that in the previous year. Nevertheless, the crop for 1953-54 fell short of the record one of 17,060 cwts. reaped in 1950-51. For the purpose of the closing accounts, the entire stock delivered to the Coffee Board was valued at Rs. 2-8 per point, as against Rs. 2-4 per point in the previous year. Payments received from the Coffee Board upto the time of the signing of the Directors' report, namely, 7th March, amounted to Rs. 2-9 per point or Rs. 191.96 per cwt. The Company had also a small area under cardamom cultivation. During the year under review, a crop of 242 lbs. was harvested at a cost of Rs. 795 and realised Rs. 958. As collection of further crop has become uneconomic, the cardamom area has been abandoned.

The following table presents the salient features of the Company's results for 1953-54 against the background of those for the previous three years:

(In lakhs of rupees)

—	For the year ended 31st October			
	1954	1953	1952	1951
Sale proceeds of tea	15.30	11.42	9.90	11.54
Stocks of tea	5.03	2.81	1.23	2.46
Proceeds of coffee crop ..	27.77	15.54	15.54	81.15
Other income	0.24	0.37	0.49	0.72
Estate expenditure	29.21	25.05	23.07	25.41
Other expenses	0.72	0.60	0.77	0.97
Gross profit	18.41	4.16	3.37	19.50
Managing Agents' commission..	0.73	0.44	0.48	0.70
Depreciation	2.02	1.81	1.41	1.20
Taxation	5.60	..	..	..
Net profit	10.06	1.91	1.48	17.60
To reserves	4.51	0.23	..	14.00
,, depreciation on investments.	..	0.01	0.06	..
Dividend	5.84 (30%)	1.95 (10%)	1.95† (10%)	3.60 (40%)
Carry forward	0.69	0.98	1.26	1.76
Tea crop (in lbs.)	934,800	828,840	703,602	780,928
Coffee crop (in cwts.)	13,826	8,449	7,064	17,060

† On the increased capital raised by the capitalisation of Rs. 9.75 lakhs in July, 1952.

Out of the estate expenditure for the year under review, tea accounts for Rs. 12.15 lakhs, as against Rs. 10.47 lakhs for 1952-53 and coffee for Rs. 17.06 lakhs, an increase of Rs. 2.83 lakhs over the year.

The financial position of the Company, in so far as it can be judged from the latest balance-sheet, is quite satisfactory. The reserves and surplus aggregate Rs. 24.70 lakhs, exceeding the paid-up capital of Rs. 19.46 lakhs. These include a debenture stock redemption reserve of Rs. 5 lakhs, after transferring Rs. 1 lakh to the general reserve, a buildings and development reserve of Rs. 5 lakhs and general reserve of Rs. 14 lakhs, the last mentioned reserve having been strengthened by Rs. 5.50 lakhs over the year by the transfer of Rs. 4.50 lakhs from the profit and loss account and Rs. 1 lakh from the debenture redemption reserve. As the first series debentures aggregating Rs. 6 lakhs had entirely been redeemed out of the current earnings, the debenture reserve of Rs. 6 lakhs created for the purpose was left unutilised. As the second series (5½ per cent.) debenture stocks amount to only Rs. 5 lakhs the Directors have thought it fit to reduce the debenture stock redemption reserve to cover this liability by transferring Rs. 1 lakh to the general reserve as stated above. The balance outstanding on the second series of debenture stocks as on 31st October, 1954, amounts to Rs. 3.53 lakhs, the rest having been redeemed out of the current earnings. The Directors propose to repay in full the outstanding debentures on 30th June, 1955. There is a taxation reserve of Rs. 5.53 lakhs. The current liabilities aggregate Rs. 9.86 lakhs. The gross block of the value of Rs. 37.41 lakhs (including an addition of Rs. 1.77 lakhs during the year) has been written down to Rs. 27.16 lakhs. The current assets amount to Rs. 35.91 lakhs, of which cash balances alone (18.64 lakhs) exceed the provision for taxation and current liabilities by Rs. 3.25 lakhs.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 6-7 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 10.3 per cent. per annum, free of tax.

INDUSTRIAL INVESTMENT TRUST LTD.

A *small improvement* in the working results of the Industrial Investment Trust Ltd. (Secretaries: Messrs. Premchand Roychand and Sons, Ltd., Bombay) is disclosed by the accounts of the Trust for the year ended 31st December, 1954. The gross earnings for the year have *gone* up from Rs. 6.27 lakhs to Rs. 6.52 lakhs, the increase of Rs. 0.25 lakh being in refreshing contrast to the *shrinkage* of Rs. 0.42 lakh noted in the previous year. The profit, after meeting slightly higher expenses and commission payable to the Secretaries, amounts to Rs. 5.44 lakhs, as compared with Rs. 5.18 lakhs for 1953. Consequent on the improvement in earnings, the dividend to shareholders has been comfortably maintained at the modest level of 4½ per cent.

The Company's income by way of interest on securities and dividend on shares amounts to Rs. 6.52 lakhs (as against Rs. 6.27 lakhs), of which dividend from the East India Distilleries and Sugar Factories Ltd., received in the form of 1,874 shares of Re. 1 each of Parrys Confectionery Ltd., has been transferred to the general reserve. The balance of the income, Rs. 6.50 lakhs, has been supplemented by larger income from other sources and profit on sale of investments. The profit on sale of investments amounts to Rs. 853, in contrast to the loss through this source of Rs. 5,270 in 1953 and Rs. 1,708 in 1952. The Secretaries' commission is higher at Rs. 29,125, as against Rs. 27,765 for the previous year. With the refund of income-tax amounting to Rs. 5,318 and the surplus of Rs. 2.11 lakhs brought forward from the previous year, the total available for appropriation is Rs. 7.61 lakhs. In accordance with Article 144 of the Articles of Association, the Directors have transferred to the general reserve Rs. 853, being the net profit on sale of investments, just as they had covered the loss on sale of investments in the previous year by drawing on this reserve. The Directors have reduced the allocation to the investment reserve from Rs. 50,000 to Rs. 25,000 evidently due to the substantial appreciation in the value of their investments over the year. The dividend at 4½ per cent. absorbs Rs. 4.50 lakhs, leaving Rs. 2.85 lakhs to be carried forward, subject to provision for taxation for the years ended 31st December, 1949, 1950, 1951, 1952, 1953 and 1954.

The following is a summary of the Trust's balance-sheet as on 31st December, 1954:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	99,99,250	Investment ...	1,27,85,726
Reserves and surplus ...	21,92,881	Debts, deposits and advances ...	31,362
Liabilities ...	6,73,161	Furniture and fittings ...	4,751
		Cash ...	43,453
	Rs. 1,28,65,292		Rs. 1,28,65,292

The Trust's investments are shown in the books at cost. The approximate valuation of these investments, at market quotations as on 31st December, 1954, or at the latest quotations received in the case of investments where no quotations were available on that date, was higher than the book value by 2 per cent., while a year ago, the market value was lower than the book value by 4.54 per cent. and two years ago by 9.75 per cent. A break-up of the investments shows that ordinary shares account for Rs. 97.90 lakhs, preference shares for Rs. 19.05 lakhs, debentures for Rs. 7.63 lakhs and Government securities for Rs. 2.94 lakhs.

SETBACK IN PROFIT OF STANDARD MILLS

FINANCIAL POSITION GOOD

IN consonance with the general trend of earnings of textile mills for 1954, the profit of the Standard Mills Co., Ltd. (Managing Agents: Messrs. Mafatlal Gagalbhai and Sons, Bombay), for the past year shows a striking shrinkage. The gross profit has fallen from Rs. 42.91 lakhs for 1953 to Rs. 30.61 lakhs, the decline of Rs. 12.30 lakhs being in distinct contrast to the rise of Rs. 8.93 lakhs noted in the previous year. Thus, the improvement in the Company's profit seen in 1953, after it had suffered a precipitous fall from Rs. 61.41 lakhs in 1951 to Rs 33.98 lakhs in 1952, has not been sustained in the year under review; on the other hand, it has been more than wiped out. At Rs. 30.61 lakhs, the gross profit for the year under review is the lowest since 1950.

The shrinkage in profit level of textile mills during a year of record production may seem anomalous, but such has been inevitable in the face of consumer resistance to price which has gone beyond the purchasing power of the consumer, due to factors outside the control of the mills. Even the Standard Mills Company, which is known for its quality products, has proved to be no exception to this general trend.

Nothwithstanding the decline in profit, the provision for depreciation has been stepped up from Rs. 5.70 lakhs to Rs. 9.11 lakhs, consequent on the considerable additions to the fixed capital expenditure during the year, in pursuance of the scheme of modernisation of the mills. The allocation to tax provision has been cut from Rs. 11.50 lakhs to Rs. 4.25 lakhs. These appropriations leave a net profit of Rs. 15.27 lakhs, representing a drop of Rs. 6.70 lakhs over the year. In addition to the depreciation provision noted above, the Directors have set aside to the special depreciation reserve a sum of Rs. 3.75 lakhs, as against Rs. 10 lakhs provided last year. No other addition to the reserves has been made as in the previous year. The dividend on ordinary shares has, however, been maintained at 20 per cent. for the fourth year in succession.

The following comparative table clearly brings out the progress of the Company during the past three years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	330.08	350.57	305.72	208.53
Other income	8.19	8.49	8.70	24.58
Stocks	88.35	33.17	43.88	31.02
Expenses	321.85	306.44	292.70	261.40
Gross profit	30.61	42.91	33.98	61.41
Managing Agents' commission..	1.08	2.74	2.04	5.72
Depreciation	9.11	5.70	4.70	4.42
Taxation	4.25	11.50	7.50	24.50
Net profit	15.27	21.97	19.84	26.71
To reserves	3.75	10.00	7.30	16.00
Dividends—				
4% preference	0.48	0.48	0.48	0.49
Ordinary	11.20 (20%)	11.20 (20%)	11.20 (20%)	11.20 (20%)
Carry forward	0.17	0.33	0.03	0.17

It will be observed that sale proceeds for 1954 are Rs. 40.55 lakhs more than those for 1951, but the profit is just less than half of that in the earlier year under comparison. The restriction on production of certain varieties of cloth has resulted in a fall in the Company's income by way of processing charges. In 1951, this source contributed Rs. 21 lakhs, but, in 1954, such contribution was no more than Rs. 2.53 lakhs. Apart from this, there has been a sharp rise in expenses. Of the Rs. 151.78 lakhs, an increase of Rs. 5.48 lakhs over 1953; salaries, wages, provident fund, etc., show a rise from Rs. 90.11 lakhs to Rs. 98.63 lakhs and general charges from Rs. 1.47 lakhs to Rs. 3.09 lakhs. The Directors' report does not contain any special mention of the incidence of the additional bonus for 1952 and extra dearness allowance in respect of the period from May, 1953, to December, 1954, under the L.A.T. award.

The balance-sheet of the Company as at the close of the year under review shows an impressive financial position. The paid-up capital stands at Rs. 58 lakhs, of which Rs. 56 lakhs represent ordinary capital and the balance preference capital. The reserves and surplus aggregate Rs. 122.51 lakhs, made up of premium on shares Rs. 16.07 lakhs, general reserve Rs. 56.28 lakhs, dividend equalisation reserve Rs. 10 lakhs, and rehabilitation and development reserve Rs. 31.93 lakhs. The provision for taxation stands at Rs. 5.50 lakhs and current liabilities aggregate no more than Rs. 49.49 lakhs. There has been an addition of Rs. 36.32 lakhs to the gross block pursuant to the scheme of modernisation, bringing the total value of the block to Rs. 185.08 lakhs, against which there is a depreciation reserve of Rs. 84.89 lakhs, besides the special depreciation reserve amounting to Rs. 25.76 lakhs. The current assets amount to Rs. 171.28 lakhs which are more than three times the current liabilities and the provision for taxation.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 361-14 *cum-div.* On an *ex-div.* basis, the latest dividend on the shares gives a yield of 5.85 per cent. per annum, free of tax.

Points From The Chair

Sales Tax on Cotton Textiles

"ONE of the most difficult of our administrative problems during the year has been to satisfy the demands for retrospective and current sales tax returns from 20 different States. Considerable additional staff has had to be engaged solely for this purpose and the various States authorities do not appear to appreciate the difficulties with which manufacturers and traders are burdened arising from the preparation of the tremendous mass of detail required for current returns, and the enormous amount of work which has been caused by the retrospective effect of inter-State sales tax.... Whilst these difficulties have been appreciated by the Taxation Enquiry Commission it seems to me, after having studied their recommendations, that it will be some time before any simplification of inter-State sales tax can be expected."

R. E. CASTELL,
Buckingham and Carnatic Co., Ltd.

Development Rebate to Electricity Industry

"Now to the electricity industry, this development rebate is going to mean something rather different from what it means to other industries. So far as I can see, we will have to pass on at once to our consumers all the benefit of the rebate that others will be able to retain for development. This is just what happened to us in the case of the tax relief resulting from accelerated depreciation allowances, and it just as clearly calls for remedial action, but, at least with the rebate, we can be thankful that there will not be equivalent deferred taxation to contend with as well. I hasten to add that the advent of the development rebate does not mean that there is no longer any need for Government to make it possible for us to provide a reserve against deferred taxation. Quite the contrary; because the incidence of development rebate can only hold off for some time longer the day when our existing back-log of deferred tax liability becomes payable, so now is the very time to be accumulating funds into a reserve against that day."

K. G. MILNE,
Ahmedabad Electricity Co., Ltd.

Outlook for Sugar

"Conditions seem to be changing with the now certain production of 14 lakh tons sugar in the country, coinciding with a steep fall in jaggery prices. The wide disparity in the retail prices of jaggery and sugar has clearly caused a swing back to a more normal consumption of jaggery to the detriment of sugar and this view is supported by the figures of offtake from sugar factories in the country over the last four months. From the present trends it seems hardly likely that consumption of sugar will exceed 15 lakhs tons in 1954-55. It might conceivably be much lower. It is in this context that the industry has to view with concern the continued imports of white sugar into the country. Indigenous production and imports may together this year amount to as much as 20 lakh tons which would leave a carry-over of 5 lakh tons. The presence of such a large surplus on internal prices can only have a depressing effect which must ultimately tell on the price the cane grower can expect for his produce."

S. G. H. DAVIS,
East India Distilleries and Sugar Factories Ltd.

Sugar Industry

"The report of the Taxation Enquiry Commission has also been published and includes a recommendation that Government should set up a special sub-committee to examine a proposal that sugar along with other industries might be made the subject of a fiscal monopoly. This is an implied threat of nationalisation and your Board has already taken steps through the Indian Sugar Mills Association to try and ascertain how seriously to regard it. Meantime, we do not feel it is wise to engage in substantial capital expenditure until Government's intentions over the proposal to create a fiscal monopoly are better known, and also the Company has gained more experience as to the effect of higher excise duty on sugar demand."

S. G. H. DAVIS,
Deccan Sugar & Abkhari Co., Ltd.

National Economy First Consideration

"The Chancellor has recently drawn attention to the increase in imports and the need to expand our exports still further to close this gap. We shall do our best to respond to this appeal, but with greater competition in our overseas markets and with the problem of obtaining additional workpeople in a situation of full employment, this becomes more and more difficult. Much as I am anxious to ease the burden of the housewife as early as possible, everybody must realise that exports and improvements in our national economy must come first. I, therefore, congratulate the Chancellor on the steps which he has taken to effect some sort of regulation of resources used to produce household products by the control of hire purchase, for this will play its part in ensuring that adequate labour is available to do the work that must come first in the interests of our national economy, namely, our exports."

SIR GEORGE H. NELSON,
English Electric Company, Ltd.

COMPANY MEETINGS AND DIVIDENDS

COLABA LAND AND MILL CO., LTD. Annual General Meeting, Bombay, 14th April, 1955. Transfer books will remain closed from 5th to 22nd April, 1955, both days inclusive.

GODFREY PHILLIPS, INDIA LTD. Annual General Meeting, Bombay, 14th April, 1955. Transfer books will remain closed from 8th to 14th April, 1955, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 14th April, 1955. Dividend: As. 6 per share. Transfer books remain closed from 30th March to 14th April, 1955, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 15th April, 1955. Dividend: Rs. 16 per share, payable on and after 25th April, 1955. Transfer books will remain closed from 9th to 23rd April, 1955, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, 18th April, 1955. Dividend: Re. 1 per share (final). Transfer books remain closed from 4th to 19th April, 1955, both days inclusive.

QUESTION HOUR IN PARLIAMENT

Payment for Burma Rice

OUT of the price payable to Burma for rice, an amount of Rs. 15.6 crores on the agreed quantity of nine lakh tons would be adjusted against the separation debt of Burma. Of this, Rs. 10.92 crores are estimated to have been adjusted during 1954-55 and the balance of Rs. 4.68 crores during 1955-56.

• • • •

Collection of Income-tax Arrears

The arrears of income-tax and super-tax at the commencement and end of the financial year 1953-54 were Rs. 159.3 crores and Rs. 169.6 crores, respectively. The Government launched prosecutions in respect of 11 cases. Additional collectors and other requisite staff were appointed by some of the State Governments at the instance of the Central Government for stepping up the collection of arrears.

—Minister for Revenue and Civil Expenditure

Mill for Making Security Paper

During 1954-55, special paper worth Rs. 52.59 lakhs was purchased for printing 1,156 million one-rupee currency notes. The number of higher denomination notes printed was 1,223 million during the year, for which special paper worth Rs. 102.6 lakhs was purchased. A decision has been taken in principle to set up a mill for the manufacture of security paper which would be used in printing notes. Some investigations for selecting a suitable site have been made, but the location has not yet been decided.

• • • •

Loans From World Bank

India's borrowings from the World Bank so far amount to about 126 million dollars, out of which it has actually drawn about 56.07 million dollars.

—Minister for Revenue and Defence Expenditure

Loan to Scindias

A loan of Rs. 1.83 crores has been sanctioned and a further sum of Rs. 3.4 crores is proposed to be sanctioned to the Scindia Steam Navigation Company Ltd., Bombay, for acquiring five ships. Two ships, to be bought by the Company from the loan already sanctioned, would be used for operation in the overseas trade. Orders for the construction of these five ships would be placed with a German yard which has promised quick deliveries. The Scindia Steam Navigation Company has also placed orders for the construction of five other ships with the Vizag Shipping Yard. The Government loan amount represents 85 per cent. of the cost of construction of the ships and is repayable in 12 instalments. The amount would be advanced in five or six instalments. The rate of interest would be 2½ per cent. per annum. Under the terms of the loans, the vessels acquired would be mortgaged to the Government of India as security for the period of the loans. The Company would also furnish interim security and additional security in the shape of a second mortgage to the Government of one or more of their existing vessels. The Government would have the right to nominate a person of its choice as director on the board of directors for the period of the loan.

• • • •

Coastal Trade

Foreign shipping interests are not sabotaging Indian interests in the coastal trade. The coastal trade is reserved for Indian shipping companies and there is no question of foreign interests doing anything against Indian interests.

• • • •

Production of Locomotives

Complete locomotives and separate locomotive boilers manufactured by the Tata Locomotive and Engineering Companies during 1954 numbered 47 and 56, respectively.

• • • •

Locomotives from Japan

Orders for 177 locomotives for the Indian railways have been placed with three firms in Japan against the rolling stock programmes for 1953-54, 1954-55 and 1955-56. The total estimated landed cost of these locomotives (inclusive of freight, customs duty, wharfage, etc.) is Rs. 692.25 lakhs.

• • • •

Foreign Technicians at Chittaranjan

There are at present 11 foreign technicians in the Chittaranjan Locomotive Works under the Colombo Plan. They assist in demonstrating the working of certain modern machines and fixing timings, but are not in charge of any office nor do they hold any executive function.

—Deputy Minister for Transport

Indo-U.S. Air Agreement

The Indo-U.S. Air Agreement which expired on 14th January last was detrimental to the interests of the country's international airlines, namely, Air-India International. No new proposals have been received from the U.S. Government in this regard nor have the Government of India sent any proposals to the U.S.A.

—Deputy Minister for Communications

Production of Hand-pounded Rice

Production of hand-pounded rice in the country in 1954 is estimated at 14,764,000 tons, as against 12,914,000 tons in 1953. In 1952, it was 12,050,000 tons. Precise information about the number of persons engaged in the rice hand-pounding industry during these three years is not available, but the All-India Khadi and Village Industries Board has estimated the number of professional workers in the industry in 1954 at 100,000.

—Deputy Minister for Commerce and Industry

PROFIT OF WALCHANDNAGAR HIGHER

RESULTS OF POONA ELECTRIC SATISFACTORY

Walchandnagar Industries Ltd.

THE directors of the above Company (Agents: The Premier Construction Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1954.

During the year under report, the Company has made a profit of Rs. 28,46,913 (Rs. 23,03,244) after providing Rs. 12,00,000 (Rs. 12,00,000) for depreciation and Rs. 13,00,000 (nil) for taxation. This amount, together with the sum of Rs. 1,72,670 (Rs. 2,07,326) being the balance brought forward from the last balance-sheet, makes a sum of Rs. 27,19,583 (Rs. 25,11,170), available for disposal and the directors recommend that the following appropriations be made therefrom:—

For dividend on preference shares at Rs. 7 (Rs. 7) per share, free of income-tax Rs. 24,500 (Rs. 24,500), for dividend on ordinary shares at Rs. 16 (Rs. 14) per share, free of income-tax Rs. 16,16,000 (Rs. 14,14,000), for debenture redemption fund Rs. 4,00,000 (Rs. 4,00,000) and for reserve fund Rs. 5,00,000 (Rs. 5,00,000) leaving to be carried forward Rs. 1,79,083 (Rs. 1,72,670).

The Sugar Factory commenced sugarcane crushing on 12th November, 1953 and the crushing stopped on 9th April, 1954. Sugarcane crushed during the season was 169,391 (163,107) tons, while sugar manufactured was 201,894 (187,326) bags with a recovery of 12.045 (11.61) per cent. The distillery produced 470,528 (322,218) gallons of rectified spirit during the year under report.

By a special resolution passed at the Extraordinary General Meeting of the Company held on 5th November, 1954, 23,500 ordinary shares of Rs. 100 each and 77,500 'A' ordinary shares of Rs. 100 each were consolidated into 101,000 ordinary shares of Rs. 100 each.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,04,50,000	Block ...	1,85,70,930
Debentures	46,52,000	Stock-in-trade ...	19,62,013

Liabilities ...	28,60,856	Debts, deposits and advances ...	14,33,336
Profit and loss account ...	27,19,583	Investments	8,78,055
		Cash ...	43,00,126
Rs.	3,76,81,558	Rs.	3,76,81,558

Poona Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Rajputana Textiles (Agencies) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1954.

The Company's plant, distribution system and other properties have been adequately maintained and have given satisfactory service throughout the year. The construction of the receiving station at Ganeshkhind was completed during the year and while, at present, both the receiving stations namely, the new one at Ganeshkhind and the old receiving station at Rasta Peth, are connected to Tata's incoming lines, it is expected that the requisite modification of plant, laying of cables, etc., will be completed before the end of the current year, so that the bulk suppliers will deliver power only at the main receiving station at Ganeshkhind.

In order to adequately meet the increased demand and maintain efficiency of supply, many additions and improvements were made to the distribution system. Four new sub-stations were installed and the transformer capacities of many others were increased. Several important extensions and alterations were made to the transmission and distribution system, the total mileage at the end of the year under report being 40.66 miles of 11 kv high tension overhead mains, 15.65 miles of 11 kv high tension underground mains, 30.18 miles of 3.3 kv high tension overhead mains, 29.61 miles of 3.3 kv high tension underground mains and 222.98 miles of low tension overhead mains. In continuation of the Company's programme for the conversion of supply from D. C. to A. C., 26 installations with a connected load of 54 kw. were changed over to A. C. supply during 1954. The street lighting installations served by the Company totalled 7,449 fixtures as at 31st December, 1954, being an increase of 131 fixtures during the year. The progress of the Company during the past five years is shown in the following tabulation:—

Year	Number of consumers	Connected load kw	Units of energy sold	Revenue from energy sold Rs.
1954 ..	32,551	33,675	56,614,148	45,13,061
1953 ..	30,811	32,092	55,899,697	41,40,714
1952 ..	29,412	30,730	50,747,021	34,79,412
1951 ..	27,828	29,895	51,218,598	37,18,955
1950 ..	25,582	28,128	49,288,717	36,22,090

It will be noted that the figures set out above disclose satisfactory progress. With the improvement in the supply position in the Bombay-Poona area, Government restrictions on new connections, etc., were liberalised, and the Company was able to connect a few important loads, totalling 552 kw. of estimated maximum demand.

The profit and loss account shows that the result of the year's operations compared with the previous year, was as follows:—

	1954 Rs.	1953 Rs.
Revenue from sales of energy ..	45,23,661	41,40,714
Revenue from other sources ..	2,82,444	2,74,959
Total gross revenue ..	48,05,505	44,15,673
All charges including depreciation and taxes	39,49,083	35,98,534
Net profit	8,56,422	8,17,139

It will be observed that practically all of the increased revenues have been absorbed by the higher expenses and charges. The principal increase has occurred under the head "Electrical Energy Purchased," and is due to the two surcharges amounting to more than 28 per cent. imposed by the bulk suppliers. The Company applied a surcharge of 12½ per cent. on all billings for just four months, from March to June, 1954, during the year under review. While the discontinuance of this surcharge as from July was highly appreciated by the consumers, estimates of the current year's operating results showed a substantial short-fall in revenues, and the directors have decided to levy a small surcharge varying from 3½ per cent. to 6½ per cent. depending on the nature of the supply, with effect from January, 1955 billings.

Adding to the net profit, the amount brought forward from the preceding year, the amount of excess provision for bonus during the previous year the amount transferred from the general reserve and some other small adjustments including refund of B. P. Tax for 1949, and deducting the ad-interim dividends paid on 31st July, 1954 as also the several other appropriations, the net balance available for disposal amounts to Rs. 2,56,909 (Rs. 2,09,135). The directors have recommended that this should be applied as follows:—

To payment of a final dividend on preference shares at the rate of Rs. 3-8 (Rs. 3-8) per share, after deduction of income-tax, absorbing Rs. 10,325 (Rs. 10,325) and a final dividend on ordinary shares at the rate of Rs. 5 (Rs. 4) per share (making Rs. 10 (Rs. 8) per share, free of income-tax for the year) absorbing Rs. 2,44,450 (Rs. 1,95,560) leaving to be carried forward Rs. 2,134 (Rs. 3,250).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	52,89,000	Block ...	1,05,82,202
Debentures ...	8,00,000	Work-in-progress	6,18,766
Reserves ...	26,70,817	Stores ...	3,92,697
Provision for taxation ...	3,38,716	Tools, etc. ...	61,979
Depreciation reserve ...	41,63,016	Other assets	33,853
Liabilities ...	24,81,043	Debts, deposits and advances	6,54,608
Profit and loss account ...	2,134	Investments	21,72,440
		Cash ...	12,28,161
Rs.	1,57,44,726	Rs.	1,57,44,726

Shree Ambica Jute Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bagaria More Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March, 1954.

The revenue account, after deduction of insurance, commission and other expenditure showed a profit of Rs. 6,81,369 (loss of Rs. 7,75,611). After adding the amount carried forward from last half-year of Rs. 16,678 (Rs. 7,41,054) there was a total sum of Rs. 6,98,048 (debit of Rs. 34,558). From this the following sums were deducted:—

Depreciation for the period from 1st April, 1953 to 31st March, 1954 Rs. 5,33,849 (nil) less amount appropriated in the preceding half-year Rs. 2,65,017 (nil) and reserve for taxation Rs. 2,25,000 (nil) leaving an available balance of Rs. 2,04,216 (debit of Rs. 34,558). The directors disposed of this amount by paying the dividend on the 7½ per cent. cumulative preference shares for the half-year ended 31st March, 1954 at Rs. 3-12 per share (free of income-tax) Rs. 43,875, by paying a dividend on the ordinary shares of As. 8 (nil) per share for the half-year ended 31st March, 1954 (free of income-tax) Rs. 1,50,000 (nil) and by carrying forward a balance of Rs. 10,341 (debit of Rs. 34,558).

During the period, the mill, with 12½ per cent. of its looms (all hessians) sealed, worked on the basis of 42½ hours a week in accordance with the main and supplementary working time agreement of the Indian Jute Mills Association. The Mill worked, during the half-year, the loom hours purchased from a member mill.

Notwithstanding the prices for hessians having advanced as a result of heavy purchases by the Argentine, the working results of the half-year could not be made much remunerative, though these are still satisfactory, due to uneconomic prices of raw jute and unappreciative prices of heavy goods.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,70,000	Block ...	32,14,290
Reserves ...	13,12,193	Stock ...	69,22,781
Provision for taxation ...	16,34,738	Stores and spares ...	5,09,842
Liabilities ...	99,52,341	Other assets	10,225
Profit and loss account ...	4,29,215	Debts, deposits and advances	61,51,734
		Investments	1,75,275
		Cash ...	5,14,339
Rs.	1,74,98,487	Rs.	1,74,98,487

Polson Ltd.

The directors of the above Company (Managing Agents: Messrs. Polson Agencies Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1954.

The net profit, after providing for managing agents' commission and depreciation, amounts to Rs. 10,11,048 (Rs. 9,53,774) which with the sum brought forward from the preceding year's accounts of Rs. 18,566 (Rs. 31,512) makes a total of Rs. 10,29,614 (Rs. 9,85,286). From this sum the directors have made the following appropriations:—

Reserve for taxation Rs. 4,80,000 (Rs. 3,80,000), reserve for doubtful debts Rs. 20,000 (Rs. 14,000), and reserve fund Rs. 2,00,000 (Rs. 2,00,000) leaving a balance available for distribution of Rs. 3,29,614 (Rs. 3,01,286). From the above available balance, the directors recommend the payment of a dividend of Rs. 6 (Rs. 6) (subject to deduction of income-tax) per share, on the preference shares Rs. 88,500 (Rs. 88,500) and a dividend of Rs. 10 (Rs. 9) per share, free of income-tax on the ordinary shares Rs. 2,15,980 (Rs. 1,94,220) leaving a balance of Rs. 25,134 (Rs. 18,566) to be carried forward.

The sales during the year show a substantial increase and have improved to Rs. 96,54,246, as against Rs. 82,14,577 of the previous year. The increase was mainly due to the demand of the Company's coffee in India and abroad.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,59,800	Block ...	38,21,420
Reserves ...	12,80,200	Stock-in-trade ...	9,23,782
Depreciation fund ...	13,50,050	Stores, etc. ...	6,02,593
Provision for taxation ...	13,17,034	Debts, deposits and advances ...	28,11,230
Liabilities ...	7,74,098	Investments	24,467

Coonoor Tea Estates Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Matheson, Bosanquet and Co., Ltd., Belmont, Coonoor) submit the audited accounts of the Company for the year ended 30th September, 1954.

Tea: A crop of 2,61,052 lbs. was secured against an estimate of 2,20,000 lbs. compared with a crop of 2,72,717 lbs. obtained for the previous season. The cost of production was 108.39 (96.68) cts. including manure costs of 11.89 (11.92) cts. per lb. The crop was sold at a net average of 231.08 cts. per lb. compared with 162.64 cts. obtained for the previous season. The capital expenditure during the year amounted to Rs. 24,418 (Rs. 11,965).

The profit for the year, after providing for depreciation and taxation, etc., was Rs. 2,00,295 (Rs. 1,34,931) to which is to be added the balance brought forward from last year of Rs. 58,353 (Rs. 53,875) making a total of Rs. 2,58,651 (Rs. 1,88,806). After deducting preference dividend of 6 per cent. absorbing Rs. 9,000 (Rs. 9,000) and an interim ordinary dividend of 10 (10) per cent. Rs. 24,986 (Rs. 24,986) there remains a balance of Rs. 2,24,665 (Rs. 1,54,820). The directors now recommend a final ordinary dividend of 25 (25) per cent. absorbing Rs. 62,465 (Rs. 62,465), a bonus of 10 (nil) per cent. absorbing Rs. 24,896 (nil) and a transfer to reserve fund of Rs. 60,000 (Rs. 27,000) leaving a balance of Rs. 77,304 (Rs. 58,355) to be carried forward. Provision has been made in the accounts, on the basis agricultural income-tax will be levied on profit arising after 1st April, 1954.

Crop estimate for 1954-55: A crop of 2,40,000 (2,20,000) lbs. is estimated. Cost of production is estimated at 135.87 (116.45) cts. per lb. including 18.55 (14.78) for manuring.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,99,860	Block ...	4,38,388
Reserves ...	2,04,000	Stock-in-trade ...	1,19,752
Provision for taxation ...	88,273	Stores and spare parts	28,128
Liabilities ...	27,319	Advances ...	5,770
Profit and loss account ...	2,24,665	Investments	1,27,338
		Cash ...	2,22,743
Rs.	9,42,117	Rs.	9,42,117

N.B.—Figures within brackets relate to the corresponding period of the previous year.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

SEVENTY-SECOND ANNUAL GENERAL MEETING

MR. R. E. CASTELL URGES ABOLITION OF EXCISE DUTY ON WOOLLEN FABRICS

PRESIDING over the Seventy-second Annual General Meeting of the shareholders of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., held at the registered office of the Company, Agraharam Road, Bangalore City, on Saturday, 26th March, 1955, Mr. R. E. Castell, Chairman of the Company, said:

"GENTLEMEN,

"The Directors' report and accounts for the year ended 31st December, 1954, having been sent to you in due time, I propose, with your permission, to take them as read, but, after concluding my speech I shall be glad to answer any questions members may wish to ask.

"Generally satisfactory trading has made it possible for your Directors to recommend the payment for the year of a total of 30 per cent. dividend to ordinary shareholders and a bonus of 3½ months' basic wages to employees. These results are due mainly to the high level of production achieved throughout the year during which the entire installation worked practically to continuous full capacity and to the continuing popularity of the Company's cotton products and the expanding demand for 'Cotswol.'

Serious Competition

"For various reasons, your Directors consider that the Company will be fortunate indeed, if it proves possible to continue earning profits at or near the level attained in 1954. We have to bear in mind the purchasing power of consumers which is strained by taxation, both direct and indirect, the latter including Central Government excise duties and cess and State sales taxes. On account of consumer resistance and sustained high production, serious competition developed in the course of the year in the industry as a whole and, in order to continue to attract demand, your Company lately found it desirable to make a number of changes of quality and style in their various ranges of cotton goods.

"We continue to bear sales tax on our purchases of raw materials, stores and other essentials, and I am sorry to tell you that, in spite of many representations, the Bangalore Corporation announced, in December, 1954, the levy of a heavy octroi duty, not only on all raw materials entering the City limits, but also on other items essential to the operation of the mills. This levy is now under protest by the local industry, including ourselves, but, as the matter is more or less sub judice, I will refrain from further comment except to say that, should the octroi be maintained, its incidence will add materially to the costs of the local industry and place it at a disadvantage in relation to mills elsewhere in India.

"The matter of your Company, along with other units of local industry, having to pay higher charges for electric power supply is still under negotiation with the Mysore Government.

Silk Section

"The silk section of the mills has made a modest but welcome contribution to the trading results of the year. This section has used a considerable quantity of raw silk produced in Mysore State, but, if only the local industry can succeed in improving the cocoons and producing a more even yarn, the Company can increase the use of the indigenous product without impairing the demand for its superior silk saris and other goods.

"Last year, I mentioned the need to reduce production costs in the Company's woollen department. We are doing everything possible to achieve this by the judicious purchase of raw materials, the proper maintenance and, wherever possible, the improvement of machinery, and by concentrated attention to the marketing of the Company's woollen products, but we must have the fullest co-operation from our workpeople, if we are to avoid the continuance of losses in this section.

Excise Duty

"A few days ago, news was received of a welcome reduction in the higher excise duties proposed in the Finance Bill, 1955, for coarse and medium cotton cloths. I trust we shall soon hear of a mitigation of the proposed excise duty of 10 per cent. ad valorem (plus three pies per yard handloom cess) on woollen fabrics, as this is a very considerable imposition and quite out of proportion to the excise duties applicable to cotton textiles, which are in themselves highly restrictive. I believe that ours is not the only unprofitable unit of the Indian woollen industry, most of whose products can only be classed as necessities in winter, irrespective of personal income. I am, indeed, quite sure that the Taxation Enquiry Commission have erred in suggesting that only comparatively well-to-do persons use woollen fabrics, and that only coarser rugs and similar articles should be exempted from taxation. Even this latter recommendation has not been taken into consideration in the Budget proposals. I trust that, for the sake of this depressed industry and of its consumers, no duty will be imposed.

"In the Company's export trade, which is mostly in cotton goods, keen competition was experienced, but our efforts to retain our hold on overseas markets are meeting with fairly good results, and we are striving to extend our export sales to include a wider range of the Company's products.

Accounts

"I will now deal in more detail with the accounts and you will note from our balance-sheet that we have transferred from profits Rs. 10 lakhs to general reserve, Rs. 1,19,707 to the fire and accident insurance fund and Rs. 6 lakhs to additional provision for depreciation based on replacement costs.

"I am sure you will agree with the Directors in their policy of conserving as much of the Company's resources as is possible in these days of high taxation, so that we can finance the completion of the reconstruction of the 'Cotswol' section of the Mills, the proposed replacement of some of our cotton manufacturing machinery and the installation of new plant.

"We shall also be assisted, to some extent, in the financing of these plans by the welcome relief which has been provided in the Finance Bill, 1955, as the proposed development rebate of 25 per cent. on the cost of new machinery will result in a reduction in the amount of tax payable.

"The maintenance of full production, to which I have already referred, has resulted in an increase in the cost of raw materials consumed when compared with the previous year.

"As has been pointed out in the report of the Directors, it has been necessary to increase the amount set aside for depreciation to cover the additional charge on this account on the value of buildings and machinery brought into use during the year.

"We have set aside Rs. 2,50,000 to our workpeoples' housing fund and it is the Directors' intention to proceed as rapidly as possible with their housing programme, as we are now encouraged, under the Mysore Labour Housing Act, to utilise on the construction of houses for our own workpeople an amount equivalent to the contribution otherwise payable to Government under the Act.

Administrative Problems

"In my recent speech to the shareholders of the Buckingham and Carnatic Company, Ltd., I referred to the administrative problems with which manufacturers and traders have been and continue to be, faced owing to the Supreme Court's ruling in 1953 relative to inter-State sales tax. It is unfortunate that the many States' authorities do not appear to appreciate the difficulties of assessees having to prepare the enormous mass of detail required for current returns and the additional work that has been necessary as a result of the retrospective effect of this inter-State sales tax.

"Consent has not yet been received from the Government of India to our proposal to capitalise Rs. 81 lakhs of the general reserve. We hope however, to receive their sanction in the near future and, at the appropriate time, your Directors will call an extraordinary general meeting of members for the purpose of passing the necessary resolutions.

Labour

"The Industrial Tribunal, Bangalore, allowed the workpeoples' application for an additional half month's bonus for 1952. The Company has appealed against this award and the matter is now pending before the Labour Appellate Tribunal. It is to be hoped that, for the sake of both parties, the Fourth Bench of the Labour Appellate Tribunal which has been set up in Madras will soon begin to function and this long outstanding issue will be decided.

"Although differences of opinion on various matters continue to exist between management and labour, no major industrial disputes have arisen during the year. The management continue to pursue their objective of improving the present arrangements for the internal settlement of industrial affairs and hope that the representatives of the mill labour force will help further towards the completion of a satisfactory scheme.

"As you know, the workpeoples' and employees' providend funds do not appear in the published accounts of the Company, as they are vested in trustees. It will interest you to know that the liabilities of these Funds as at 31st December, 1954, amounted to Rs. 44,72,142 and Rs. 4,92,016, respectively, and corresponding amounts are invested in trustee securities."

Notices

ALUMINIUM CORPORATION OF INDIA LIMITED

CALCUTTA

NOTICE IS HEREBY GIVEN THAT THE Directors at their meeting held on the 22nd March, 1955, have sanctioned payment of Interim Dividend on the 6 per cent. and 5 per cent Preference Share Capital of the Company at Rs. 6 and Rs. 5 per share in respect of the arrears for the year ended 31st March, 1950. Payment will be made after 20th April, 1955, to those shareholders whose names appear in the Company's Registers on that date.

Preference Share Transfer Registers will remain closed from 11th to 20th April, 1955, both days inclusive.

Write to Box No. 952, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 29th March

The short-term money market experienced extreme stringency for yet another week. With no fresh supply of funds to meet the rising tempo of demand, conditions were as difficult as in the previous week. The Reserve Bank of India continued to be the main lender of funds to banks. Inter-bank call money was bid at the self-same rate of 3 per cent., as were the short-term deposits for one to six months and house money.

The results of the Treasury Bill auctions this week showed a slight increase in the offerings, which at Rs. 1.05 crores were Rs. 3 lakhs more than those in the previous week. The rising trend in the yield noted in the previous three weeks was halted this week, the average rate of accepted tenders remaining unchanged at Rs. 2-9 per cent. per annum. In view of the holidays, the auction of Treasury Bills will not be held during the period from 4th to 9th April, 1955. Tenders for Rs. 1 crore have, however, been invited for the week after next.

As we go to press a day earlier than usual, the weekly statement of affairs of the Reserve Bank of India is not available for the customary analysis.

A steep decline in demand deposits and a sharp rise in borrowings from the Reserve Bank of India and advances, accompanied by a sizable shrinkage in cash balances and money at call, are the outstanding features of the consolidated statement of position of Scheduled banks for the week ended 18th March, 1955, as compared with that for the previous week. Thus, demand deposits have fallen by Rs. 9.29 crores and time deposits by Rs. 37 lakhs. Inter-bank borrowings are also lower by Rs. 1.75 crores. Borrowings from the Reserve Bank have increased by Rs. 9 crores and those from the Imperial Bank by Rs. 93 lakhs. A rise of Rs. 7.45 crores is noted in advances and of Rs. 4 lakhs in inland bills purchased and discounted, while there has been a fall of Rs. 1.67 crores in foreign bills purchased and discounted. The total commercial advances amount to Rs. 615 crores, constituting a record and representing an increase of Rs. 78 crores over the level in the corresponding week of 1954. They have already exceeded the peak level touched in 1954 by as much as Rs. 47.75 crores. Investments are lower by Rs. 1.56 crores. Cash on hand and balances with the Reserve Bank have together shrunk by Rs. 2.64 crores, balances with other banks in current account by Rs. 6 lakhs and money at call and short notice by Rs. 3.13 crores.

The week under review witnessed no change for the better in the conditions of the Gilt-edged market from those noted in the preceding weeks. The undertone continued to rule steady with small enquiries in selected securities. The volume of business remained small. 3 per cent. 1957 had some business at Rs. 99-3¾. 3 per cent. 1958 had buyers at Rs. 99-3, but no change in price was noted. 3 per cent. 1959-61 changed hands at Rs. 87-6, that is, an anna better than in the previous week, and at this price there were buyers. 3 per cent. 1963-65 was enquired at Rs. 93-10½, but sellers wanted Rs. 93-11. 3 per cent. 1964 was on offer at Rs. 93-10, though no business was put through. 3 per cent. 1966-68 and 3 per cent. 1970-75 were unchanged at Rs. 90-9 and Rs. 86-15, respectively. 3 per cent. 1986 Conversion Loan was done As. 2 lower at Rs. 80-10. 3½ per cent. 1961 National Plan Bond changed hands at Rs. 99-9 and 3½ per cent. 1964 National Plan Loan at Rs. 98-8½.

In the foreign exchange section, there was no change in the rupee-U.S. dollar rates during the week, banks' selling rate remaining at Rs. 479½ per $100 and banks' buying rate at Rs. 475½ per $100. In New York, sterling was slightly erratic in terms of the dollar. Spot sterling eased from $2.79½—2.79¾ to $2.79½—2.79¾, but hardened to close yesterday at $2.79½—2.79¾. Forward sterling (three months) receded from $2.78-5/16—2.78-7/16 to $2.78-3/16—2.78-5/16 before recovering to $2.78-5/16—2.78-7/16. Transferable sterling gained strength from $2.76¾—2.76-7/16 to $2.76¾—2.76¾.

GOOD GENERAL DEMAND FOR TEA

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 24th March

There were approximately 280,000 lbs. on offer in dust sale 'F' which was held on Tuesday, 22nd March. The sale opened quietly, but strengthened and a good general demand developed. Medium quality dust-1 and fine dusts were irregularly an anna easier. Better liquoring dusts met with some competition and were dearer. Milled dusts were again neglected and there were some withdrawals amongst these types.

London Market—Sale of 21st March, 1955.—Generally ½d. to 1d. dearer.

Sale of 22nd March, 1955.—Market irregular. Prices generally ½d. to 1d. dearer.

Colombo Market.—Active and general demand at dearer rates, particularly medium brokens and fannings.

Export Quota.—Business was done in 1954-55 quota upto 75 pies. Transfers are now closed. No business has yet been done in special licence. Business has been done in 1955-56 export quota at 60 pies.

As we go to press Messrs. Forbes Ewart and Figgis, Ltd., wire:

"*Sale* 7:—1,350,000 lbs. Fair general demand. Commons firm to dearer. Medium and good medium As. 2 easier. Best liquoring sold well at about last rates. Whole leaf As. 1 to As. 2 dearer."

RAYON YARN FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 29th March

A distinctly steady trend was in evidence in the rayon yarn market during the week under review. The factor which was mainly responsible for this trend was the reported cut in licences granted to mills for the import of rayon yarn in the current half-year to Rs. 1,000 per loom, as against Rs. 1,180 last year, which raised the unofficial premium for licences from 15 per cent. to 18 per cent. Another helpful factor was the decision of the Silk and Art Silk Mills Association not to enter this year into a bulk purchase agreement for the mills' yarn requirements. The sentiment of operators was also strengthened by firm advices from rayon fabrics market. These factors imparted considerable steadiness to the market and rayon yarn prices were fully maintained. In the spot section, 120D Italy spurted by an anna to Rs. 4-1. 150 Japan which had gone down by an anna to Rs. 3-15 on Saturday recovered today. 120 Japan rose by half an anna to Rs. 3-13. 150 Italy, after receding from Rs. 3-13 to Rs. 3-12-6, finished higher at Rs. 3-13. Rayon yarn (150D) for March delivery moved up by a rupee to Rs. 731.

Following rumours regarding grant of additional licences for import of staple fibre by consumers, the staple fibre yarn section ruled easy. Renewed reports that, owing to reduced prices for raw cotton and higher prices for staple fibre, several mills were shifting to spinning of cotton yarns, also acted as a damper on the market. Some selling was, therefore, in evidence and values of staple fibre yarn tended to look down. Staple yarn (40×2) for March delivery dropped Rs. 5-12 to Rs. 576 on Saturday. Lower levels evoked some support and the contract recovered to Rs. 579. April delivery declined from Rs. 581 to Rs. 578 before finishing at Rs. 581. In the spot section (40×2), Pankajas eased by nine pies to Rs. 2-14-3. Sitarams and Barodas lost three pies each to Rs. 3-0-6 and Rs. 3-1, respectively. New Greats, however, met with special buying enquiries and advanced by half an anna to Rs. 3-1-9. Kohinoors also gained a like amount to Rs. 3-6-3. Among foreign yarns, Suicos were quoted at Rs. 4-3-6, Auroras at Rs. 4 and Fujis at Rs. 3-14-6.

The cotton yarn market presented a bearish trend this week. The bearish trend was the result of slackness in demand from handlooms and powerlooms. There were, besides, reports that several mills had sold their stocks at very low prices, perhaps in order to secure some export quota. These factors induced considerable selling pressure and prices of all counts of yarn staged a retreat. Among 80s, Elphinstones receded by As. 2 to Rs. 58-10. Finlays were quiet at Rs. 70. Among 60s, Moderns dropped As. 8 to Rs. 59. Finlays were unchanged at Rs. 59. Srirams at Rs. 55-10 and Raghuvamshis at Rs. 54. Deals in 40 count yarns were done at lower rates, Moderns and Gokaks declining by As. 2 each to Rs. 24-14 and Rs. 24-8, respectively. Seksarias shed As. 4 to Rs. 22-10. Among 30s, Maduras fell by As. 4 to Rs. 21-12. Simplex lost an anna to Rs. 21-3. Among 20s, Seksarias were the worst sufferer, the quotation sliding down from Rs. 16-12 to Rs. 15-12. Moderns and Centurys finished each As. 2 lower, the former at Rs. 16-12 and the latter at Rs. 16. Among 10s, Podars eased by an anna to Rs. 13-4. Moderns were quiet at Rs. 13-5 and Elphinstones at Rs. 13-2.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those six days before:

	29-3-1955	22-3-1955
	Rs. a.	Rs. a.
Art silk yarn—		
160 D.	731 0	730 0
150 Japan (per lb.)	3 13	3 12½
150 Japan (per lb.)	4 0	4 1
120 Italy (per lb.)	4 1	4 0
150 Italy (per lb.)	3 13	3 12
Staple fibre yarn—		
40 x 2 March	579 0	581 12
40 x 2 April	581 0	585 0
Suico (per lb.)	4 2½	4 2½
New Great (per lb.)	3 1½	3 1½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18 5	18 5
20s Seksaria	15 12	16 2
30s Madura	21 12	22 0
40s Gokak	24 8	24 10
60s Modern	59 0	59 8
80s Seksaria	58 10	58 12

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, 28th March

The kip market ruled a shade firmer, due to good clearance of stocks by European and Indian shippers. In some cases, U.K. importers paid prices higher than what they had been offering in the previous week. Superior marks enjoyed good call at the hands of U.K. dressers at full prices which enabled the relative tanners to buy raw stocks at high prices to the discomfiture of the majority of tanners who produced ordinary qualities. Demand for tanned buff hides was brisk from shippers to U.S.A. and for inferior grade cow hides for inland Kavalai (water-bucket) trade and both lines have been out of reach of U.K. buyers. Tanned buff calf and cow calf remained unchanged.

In the tanned skins section, arrivals of goat and sheep met with good clearance locally and prices were firm. In the London auctions, prices of sheep skins declined by 3d. to 9d. on January levels Nearly 110,000 goat and 180,000 sheep skins —mostly lower grades—remained unsold.

TRADING IN AUGUST COTTON CONTRACT

(From Our Own Correspondent)

BOMBAY, 29th March

Commencement of trading in the I.C.C. August delivery today is the outstanding event of the week under review. The trading in this contract is governed by the amended by-law 55 of the East India Cotton Association (E.I.C.A.) as approved by the Forward Markets Commission. Under the new by-law, the tendering differences for the different varieties and staple lengths of cotton tenderable against the Indian Cotton Contract will be fixed on the basis of prices at which the basic and other descriptions of cotton tenderable are sold in the spot market, taking also into account the spot prices of the respective descriptions of cotton in the interior markets. Trading in the I.C.C. May 1955 delivery will, however, continue to be governed by the previous by-law 55. As a result of the amendment, the disparity between the spot prices of cotton and the price of the contract will, it is hoped, be reduced in the case of the August 1955 contract and thereafter.

After presenting a fully steady trend in the first two sessions of the week, the forward section of the cotton market suffered a reaction on Saturday which gathered further momentum yesterday and today. The initial steadiness was due to expectations regarding an early announcement of a further export quota of cotton. The expectation was based on the statement of the Union Minister for Food and Agriculture made in Parliament on Friday. The Minister said that there was already a floor price of Rs. 495 per candy for cotton. The export of long-staple and short-staple cotton was being encouraged and more quota for export was to be released. Encouraging reports from bullion and commodity markets also influenced the sentiment of operators favourably. Buying support ensued, as a consequence, and forward cotton staged a recovery. On Saturday, however, the market once again turned easy, owing to disappointment over the delay in the announcement of a further export quota. Cotton prices, therefore, drifted lower. The downward trend persisted yesterday and today also, following nervous unloading by bulls induced by slackness in mill demand and fall in spot prices. The initial gains were completely erased and today's closing rates stood lower than those on Wednesday last.

I.C.C. February opened the week at Rs. 556 and, after improving to Rs. 562-12 on the 25th inst., gradually receded to Rs. 551-8 today. Trading in August contract commenced at Rs. 569 today. It finished at Rs. 566-8.

The spot market remained dull during the major part of the week under review. There was slackness in mill and trade demand. Vijay and Surtis, however, continued to evoke buying enquiries from mills early in the week. Demand for exportable styles was poor. Except for a few lots of Bengals, no business was reported. In foreign cottons, interest was very much limited, such being confined to East African growths and Egyptian Karnak. Despite attractive prices, Sudans were neglected.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 560; Berar Jarillas Rs. 620; Khandesh Rs. 620; Vijay Rs. 710; Oomra *deshi* Rs. 540; Moglai Rs. 530.

Although it is more than a week since the U.S. Foreign Operations Administration announced authorisation of $3 million for U.S. cotton exports to this country, the Government of India has still not issued any notification. The authorisation, it is felt, is only the first instalment and it will be followed by further amounts. This expectation is based on the statement made by the Union Deputy Minister for Commerce and Industry in the Lok Sabha on Monday last week while replying to a question. The Minister is reported to have said that it is proposed to import about 12 million dollars worth of U.S. cotton (nearly 75,000 bales) of staple length 1.1/16" and above during the current year. Further imports may be permitted later, if necessary. The cotton will be imported through the normal trade channels against licences. The U.S. shippers will be paid by their Government, while Indian importers should deposit the rupee equivalent in a Government account.

Depressed conditions prevailed in the Karachi cotton market during the week under review. Paucity of demand from mill interests and slackness in overseas enquiries induced considerable selling pressure. Cotton prices, as a result, suffered a heavy fall. N.T.R.G. for May delivery which stood at Rs. 68-14 last week-end was quoted at as low as Rs. 65-13 (per 82 lbs.) yesterday. The latest available quotations for spot cotton prevailing in the Karachi market yesterday are:

Sind *deshi* Rs. 63; Punjab *deshi* Rs. 56; 4F roller Rs. 61-1; S.G. Rs. 65-1; Punjab roller Rs. 65-1; S.G. Rs. 69-1; 289F N.T. roller Rs. 66-1; S.G. Rs. 70-9; 289F Punjab roller Rs. 68-5; S.G. Rs. 73-12.

There were no notable developments in the Alexandria cotton market this week. Overseas demand continued to be slow. Most of the limited enquiries were for Karnak higher grades and Giza 30 higher and medium grades. Demand for Ashmouni was poor. Values of cotton tended to look down, with the forward premium for Karnak fully good slightly lower than that for spot. Premiums for entitlement currencies, however, remained firm.

In the London cotton futures market, near deliveries lacked support, while distant contracts met with buying enquiries and registered an improvement in prices. The latest available quotation from the market are: March-April 30.98d; May-June 31.05.d; July-August 30.72d.; October-November 30.39d.; December-January 30.38d. Turnover in actual cotton was moderate, most of the interest being confined to spots and near-bys.

On expectations of favourable raw cotton policy by the Government, the New York cotton futures market remained fully steady during the week under review. There was some trade buying which absorbed Liverpool straddle selling and cotton values staged a sizable recovery. The total sales in the 14 spot cotton markets during the week ended 17th March, 1955, were only 70,000 bales, the lowest for any comparable week since 1942. The U.S. cotton crop in running bales is placed at 13.59 million bales, according to the final ginning report of the season issued by the U.S. Agriculture Department's Bureau of Census. This is 103,000 bales more than the official December estimate of 13.57 million bales.

It is not clear what shape the U.S. Government's cotton policy will take. Nor is it clear whether it will give export subsidy or adopt a two-priced system for cotton. The Department of Agriculture, it is reported, continues to refer enquiries to an earlier departmental statement that no export subsidies will be considered for the current season. Congressional leaders, however, are pressing for speedier disposal of U.S. surpluses.

The following are the latest available quotations from the New York market, as compared with those six days and 13 days before:

(In cents per lb.)

	28-3-55	22-3-55	15-3-55
Spot	34.30	34.20	34.35

December	34.09	34.02	34.28

LINSEED STEADY

(From Our Own Correspondent)

BOMBAY, 29th March

Except in the linseed section which ruled somewhat steady, the oilseeds market remained generally dull. Steadiness in the linseed section was due to covering by shorts induced by the approaching delivery of the February-March contract. The groundnut section ruled easy owing to lack of demand and good supplies following better arrivals. The castorseeds section also ruled quiet. Overseas demand either from the Continent or from the U.S. was not encouraging enough. The *kardi* and *niger* seed sections tended to look down. On balance, business transacted in the market was limited and fluctuations in prices were held within a narrow range.

In the linseed section, linseed Bold which opened quiet at Rs. 21 improved to Rs. 21-4. April-May delivery gained As. 10 to Rs. 20-10. Small Sutna put on As. 3 to Rs. 19-11. Linseed oil was done higher at Rs. 12-8, as against Rs. 12-5. Linseed oil was enquired in the Continent between £87 and £88.

As the ceiling for export of linseed oil cake has been reached, the Government of India, announced on the 28th inst., that it had decided to receive no more applications with immediate effect.

In the groundnut section, Bold F.A.Q. declined from Rs. 20-10 to Rs. 20-6. Groundnut April-May delivery was lower at Rs. 20-2, as against Rs. 20-10 and June-July at Rs. 21-2 as against Rs. 21-7. Khandesh quality receded from Rs. 21 to Rs. 20-8. Groundnut oil was quoted in the Continent at £91 to £92, as against £94 last week. H.P.S. is in demand at about 13.5c in the U.S.

Explaining its decision, announced on the 19th inst., that it had decided to allow further exports of groundnut oil, the Government of India has stated export quotas to all established shippers would be at the rate of 10 per cent. of the best year of exports during any financial year from 1948-49 to 1951-52. This quota would be valid up to the end of June this year.

In the castorseed section, May delivery opened at Rs. 71-2 as against Rs. 70-8. After fluctuating between Rs. 72-12 and Rs. 70-10, it closed at Rs. 72-2. Madras quality, among spots, put on As. 2 to Rs. 13-14. Castoroil Commercial eased from Rs. 8-14 to Rs. 8-10 and First Pressure from Rs. 9-4 to Rs. 9-2. Castoroil Commercial was enquired in the Continent quiet at £80 and in the U.S. at 9½c.

Among others, *kardi* Bold eased from Rs. 11-10 to Rs. 10-14 and *niger* F.A.Q. from Rs. 17-8 to Rs. 17.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	29-3-1955	22-3-1955	16-3-1955

RAW JUTE PRICES RECEDE

(From Our Own Correspondent)

CALCUTTA, 29th March

The main feature during the week was that, while prices of raw jute fell further, those of jute goods were maintained at or about previous levels. The jute districts in Assam, East Pakistan and West Bengal have now had the first showers of the season and cultivators are busy getting their land ready for sowing. The rains experienced in the past week are a little early for the season. This factor has, however, enabled the market to forecast an early and, at the same time, a bumper jute crop. This expectation alone made stockists of raw jute much anxious and made them release their holdings, which had been kept back for sale at sellers' prices at the climax of the anticipated shortage which, apart from showing the first signs, which the market knew to be camouflage, did not enter any stage. Quotations in East Bengal have also continued to decline, but a *communique* issued by the East Bengal Government on Friday last entertains the doubt if the entire world demand for jute would be fully met by the present stocks and states that the carry-over to the next season would be insignificant. These are all contrary to the belief held in the market and as such are, perhaps, an attempt at official level to arrest the downtrend. This becomes evident in the action of the East Bengal Government, also announced on Friday last, in prohibiting forward export sales of jute at a discount. When, recently, raw jute touched the level of Rs. 40 and was moving still further up, jute goods failed to add the full rise of the fibre, as this was not possible in view of buyers' resistance for higher prices. Shippers were silent, and, as a result, stocks of finished goods with the mills began to increase. The downtrend in both raw jute and goods have continued since over a month and, while sacking and hessian have shed by about Rs. 92 and Rs. 106 a ton, respectively, raw jute has lost by about Rs. 155 a ton. This reverse direction is in full accord with the course of the uptrend.

The expectation in the market is that, while prices of jute goods would move around current levels, those of raw jute are bound to touch further lower levels. For considerable stocks are believed to exist and mills have become cautious more than ever in their buying programme in order not to disturb the downtrend. Their purchases are in small quantities and, because of quarter considerably more than mills would like to absorb, the prices as offered by mills prevail in deals. From Rs. 34, Assam bottoms fell this week to Rs. 32-8. Mills showed interest in *mesta* and cuttings, and, in Cossipore, fresh arrivals were mainly *mesta*. In certain lowland East Bengal districts, sowing has already begun and the new crop will start reaching the market much earlier than usual. This in itself has caused prices in Narayanganj to fall.

Though priced at lower levels, jute goods were steady. First signs of an imminent commencement of buying by Argentina were in evidence this week. The belief mentioned in these columns last week that it would lift a moderate quantity in the coming months, in view of the low quantity purchased by it last year, is emphasised. Ready hessian 40" 10 oz. at first sagged from Rs. 44-7 to Rs. 44-2, but the slight uptrend reported from New York brought some cheer. Some covering was done by bears and the rate gained to Rs. 44-8. April-June goods recovering to Rs. 44-10 from Rs. 44-3 to which they had fallen from Rs. 44-8. At this stage, information was available that the Argentine would be interested in hessian at lower levels, although commencement of actual buying would take some more time. These expectations attracted more covering business and the spot rate was steady around Rs. 44-8 and April-June around Rs. 44-10. In sympathy with the gain in heavy goods today, ready 10 oz. was better at Rs. 44-9, with the 8 oz. at Rs. 36.

Heavy goods were subjected to speculative pressure and, at one time, fell to levels which were not justified by prospects. Moderate enquiries have continued to come from Asian countries and some business was, in fact, put through with Australia and Africa. Stockists were, however, inclined to lessen commitments, in view of the heavy losses of holders of raw jute and the fear that the same turn was in store for them also. From Rs. 127-8, ready B. twills were pulled down to Rs. 123-12 on heavy selling in the *fatka* and goods with minister period varying from one to three months lost from Rs. 122-8 to Rs. 120-8. Traders lost no time in realising that these lower levels were a false reflection of the actual trend in the market. This was evident as the lower levels made shippers active. The ready position soon regained to Rs. 125 from Rs. 123-12, and April-June to Rs. 121-4 from Rs. 120-8. On Friday, speculative elements again began to sell at the rise and the ready goods fell by As. 2 to Rs. 124-14, but, on Saturday, considerations of the forthcoming settlement raised the rate to Rs. 125-6. Today, the rate recosded a further recovery to Rs. 127.

SHARP RISE IN COPPER

(From Our Own Correspondent)

CALCUTTA, 28th March

A feature of the trading in the metal market during the week under review was the uptrend in copper, following the acute shortage of this metal. The price at Rs. 260 was higher by Rs. 10. Advices from both London and New York were encouraging, and, to lessen the difficulties of commercial consumers, it is reported that the U.S. Government is likely to release some more quantity from its stockpile. There are also reports that some producing countries, who also consume copper, may ban exports of copper in order to meet the situation of shortage they themselves are facing. If this report materialises, India will be further affected, as India is dependent on imports for the electrolytic material. Already manufacturers of copper products have refrained from offering quotations. Imports are very small, and even scrap is difficult to obtain.

Mercury was steady, with the price moving up from Rs. 1,220 to Rs. 1,230 a flask. Virgin lead was maintained at Rs. 72, with little buying interest. Electrolytic Zinc rose from Rs. 61 to be quoted steady at Rs. 61-8. There was not much buying interest, and the improvement in price should be attributed to higher advices from overseas markets. Tin was dull, and moved down from Rs. 484 to Rs. 477.

EVENTFUL WEEK FOR BULLION

(From Our Own Correspondent)

BOMBAY, 29th March

The week under review was an eventful one for the bullion market. Though trading was resumed on full scale from Thursday, 24th March, it was not smooth, as erratic fluctuations in prices took place, particularly in silver. This was due to several outstanding developments during the week.

The Bombay Government's notification giving its sanction to by-law 33-D(1) (a)(i), as amended by the General Body of the Bullion Association in October last, which provides for the imposition of graded margin, was published on Friday, 25th March, instead of on 24th March, as expected earlier. The amended sub-clause of the said by-law as published in the *Government Gazette*, reads as follows:

"(a)(i) Whenever the daily official closing rate of the current forward contract is higher than its official starting rate and the daily official closing rate of the current forward contract is quoted higher than the daily closing rate of the next succeeding forward contract by the amount stated in the first column herein below, every member who has outstanding purchases shall pay to the Association a margin amount at the rate specified in the second column:

Closing rate of current forward contract higher than closing rates of next succeeding forward contract by:	*Rate of margin money*
	Rs.
(1) Rs. 2 or more, but less than Rs. 3, in case of silver	500 per bar
(2) Rs. 3 or more in case of silver	2,500 per bar
(3) As. 12 or more, but less than Re. 1-8 in case of gold	7 per tola
(4) Re. 1-8 or more in case of gold	25 per tola"

The Bombay Government also introduced a new by-law, 33H, which reads as under:

"33H. Notwithstanding anything contained in the foregoing by-laws, a member shall be allowed to utilise the surplus, if any, out of the margin money paid by him in his gold or silver account under any of the by-laws in respect of his outstanding transactions of a particular settlement for the purpose of payment of margin for the outstanding transactions of the same or different settlement under the same or different by-laws as the case may be, or for the purpose of taking delivery."

The Government further amended by-law 33A by providing that the imposition of the special margin under this by-law should get the prior approval of the Government. This by-law was to have come into operation in respect of the current (*Chaitra*) settlement with effect from Monday, 28th March. Meanwhile, one of the members obtained an injunction on Saturday, 26th March, from the City Civil Court restraining the Board from applying margin under by-law 33A to the *Chaitra* settlement. Accordingly, the Board suspended its earlier decision to impose the special margin, until the outcome of the member's complaint in the court was known.

The most important development of the week was the decision of the Board to permit forward trading in two more settlements, namely, *Vaisakh* and *Jeth*, with effect from today. Thus, for the first time in the history of the Bombay Bullion Association, forward trading in three settlements were done concurrently today.

The official starting rate for the *Vaisakh* settlement was Rs. 163-13 in silver and Rs. 91-13 in gold. Similarly, the rate for the *Jeth* settlement was Rs. 161-9 in silver and Rs. 91-4 in gold. As the rate for silver in the *Vaisakh* settlement was more than Rs. 2 below the closing rate today for silver in the current settlement and that in the *Jeth* settlement was below the *Vaisakh* settlement by a like amount, a margin of Rs. 500 per bar was made applicable today on the outstanding purchases of members in these two new settlements in terms of the by-law 33-D(1)(a)(i) quoted above.

To revert to the trend of prices. Forward silver (*Chaitra* settlement—8th April) opened on a firm note at Rs. 165, as against the previous day's closing of Rs. 164-7, and advanced to touch a high of Rs. 167-13 on Friday, on heavy covering by short sellers due to the delay in the Government's sanction to by-law 33A and apprehensions that the bulls would be able to take advantage of the many loopholes in the rules regarding margin. There were also rumours that a member would take legal action against the imposition of margin under by-law 33A. These rumours became an accomplished fact later, when the member obtained an interim injunction from the court.

Following the sanction given by the Government on Friday afternoon to by-law 33A, the Board announced that margin would be payable on every bar of silver and every tola of gold, if the outstanding purchases were above 50 bars in silver and 2,500 tolas in gold. This decision differed slightly from the earlier understanding, in that even the first 50 bars of silver and 2,500 tolas of gold were subject to the margin system, whereas it had been formerly understood that they would be exempt. This announcement, coupled with the Government's notification that the imposition of margin under this by-law required its prior sanction chilled the bullish enthusiasm. There was, therefore, a reaction to Rs. 166-13. On further nervous unloading by a leading bull operator due to fears that the Board might permit forward trading in the next two settlements also, forward silver receded further. When these fears proved true yesterday morning, prices dropped to Rs. 165-14 before closing at Rs. 166.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N—Nominal quotation. ex.d.=Ex-Dividend. ex.c.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus. (k) Investments.

(‡)Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March, 1954.

MARKET REPORTS

(Concluded from page 645)

Forward trading in *Vaisakh* settlement opened at Rs. 164 and closed for the day at Rs. 163-13. *Jeth* silver began at Rs. 161-12 and finished at Rs. 161-9.

Ready silver (.996 Mint) opened at Rs. 166-2, the premium over the forward being Re. 1-2. At the close, the premium narrowed down to Re. 1, when ready silver wound up yesterday at Rs. 167-1, due to waning demand. The floating stocks of silver are estimated at 1,900. The daily average offtake was placed at 15 bars.

Forward gold (*Chaitra* settlement) moved within a narrow range. After hardening from Rs. 92-2 to Rs. 92-15, it reacted to Rs. 92-5, but closed a shade better at Rs. 92-7. Business in *Vaisakh* and *Jeth* settlements opened at Rs. 91-12½ and Rs. 91-3½, respectively, and closed for the day at Rs. 91-13 and Rs. 91-4, respectively. As the backwardation charges for these settlements were below the limits at which graded margins under by-law 33D (1) (*a*) (*c*) would be applicable, no margins were enforced in gold.

Ready gold began the week at Rs. 93-9, and touched a high of Rs. 94-6 and closed at Rs. 93-8, the premium over forward narrowing from Re. 1-6 to Re. 1-1. The floating stocks of gold are reported to be 13,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was no more than 3,000 tolas on an average.

In London, spot silver shed ¼d. per fine ounce, dropping from 77½d. to 77d. Forward silver fell from 76½d. to 76¼d. Gold also was a shade lower at £12 11s., as against £12 11s. ½d. per fine ounce. In New York, silver remained unchanged at 88½ cents. per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	29-3-55	Highest	Lowest	23-3-55

LESS DEMAND IN TEA FOR DOMESTIC CONSUMPTION

(From Our Own Correspondent)

CALCUTTA, 28*th March*

Demand was less during last week's sale for domestic consumption, consequently withdrawals were heavy. Dusts offered were 17,933 packages, and prices were fully easy. C.T.C. Assams declined by As. 1 to As. 1½ and all other sorts gave way by As. 3. Best Assam C.T.C. teas were quoted at Rs. 3-3, medium Assam grainy at Rs. 2-6 to Rs. 2-6-6, and medium Dooars Rs. 2-4 to Rs. 2-4-6.

Leaf grades offered amounted to 9,047 packages. There was good demand, but the market was irregular. Towards the end of the sale demand slackened and prices gave way. Clean leaf teas with useful liquors were about steady, and all other varieties declined by As. 1 to As. 3. Although best liquoring C.T.Cs. were in good form for a time, they were affected by the general conditions and buyers were reluctant to go in for them at the rates quoted.

MANCHESTER LETTER

(Concluded from page 619)

requirements of the country in war conditions. In the recession three years ago man-power fell by nearly 60,000 and a further drop in the numbers employed would inevitably occur in the case of another period of bad trade. "Just as it is necessary to keep other industries intact in case of war," added Mr. Schofield, "so it is necessary that we should rely on our own cotton textile industry to meet the needs of this country if by some mischance it is involved in war."

Machinery Imports

Strong representations have been made to the Board of Trade over the question of duty-free imports of machinery, according to the annual report of the Overall Manufacturers' Association of Great Britain. The Council of the Association, it continues, has been much concerned to learn that the Board of Trade had decided, "for reasons of administrative convenience alone," to restrict the benefits of duty-free importation to orders for £2,000 or more.

Claiming that the effect of this has been to exclude from benefit the whole of the clothing industry, the report adds: "If the clothing industry is to be efficient it is important that the importation of new types of machinery should be permitted and encouraged."—*All Rights Reserved.*

COTTON

(Concluded from page 620)

no significant change, except in Pakistan and Brazil where it has been upward. In the minor cotton-producing countries, there has been an increase in both acreage and yield. Aggregate production here has increased each season and has nearly doubled since 1949-50.

Judging from the recent trends in acreage, it appears to the International Cotton Advisory Committee that any "future expansion of cotton production may result more from intensive rather than extensive factors." In many countries, where acreage has expanded in the last five seasons, there is evidence to show some "levelling off in acreage or at least a slowing down in the rate of expansion." But the yield in many countries is still very low. In this connection, the Committee draws attention to the fact that, although India and the U.S. planted roughly the same acreage to cotton this season, production in India was less than one-third the U.S. crop. An increase of even 10 lbs. per acre in India would add 450,000 bales to cotton production, while a similar increase in all countries outside the U.S. would add nearly one million bales to production. Clearly, yield is an important factor and a small increase or decline in it, assuming that acreage remains constant, may make all the difference between plenty and scarcity in the sphere of world cotton supply.

Notices

THE TATA MILLS, LIMITED

NOTICE

THE FORTY-THIRD ORDINARY GENERAL Meeting of the Shareholders of the TATA MILLS LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday the 29th April, 1955, at 4.30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Statements of Accounts of the Company for the year ended 31st December, 1954.
(2) To declare a Dividend.
(3) To elect a Director in place of Mr. N. M. Amersey, who retires in terms of Article 113, but is eligible for re-election.
(4) To elect two Directors in place of those who retire by rotation but are eligible for re-election.
(5) To appoint Auditors and to fix their remuneration.

The Transfer Books of the Company have been closed from Tuesday the 15th March to Wednesday the 13th April, 1955, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 28*th March*, 1955.

Note.—The dividend, if sanctioned at the General Meeting, will be payable at the Imperial Bank of India from Saturday the 30th April, 1955, to the shareholders whose names stand on the Register of the Company on the 13th April, 1955, except those who have been allotted shares on 1st January, 1955, in exchange for debentures. The diyidend warrants will be duly posted to the registered addresses of such shareholders.

To

The Shareholders of Tata Mills Limited, and in particular to:

Abdullah Rahimtullah; Major Arthur Coleman Flower; Miss Angelina Menezes; Adi Bejan Tata; Mrs. Banoobai Rattanji Khambatta; Claudino Xavier Menezes; Hassen Saleh Mia; Dr. Hormazshaw; Jamshedji Wania and another; Husenbhai Ramjee; Habib Bank Ltd; Ismail Moosa Chiboo; Rani Jagadamba Kumari Debi; Jehangir Bejan Tata; Minoo Dinshaw Challa and another; Nathubhai Jivanji Desai; Mrs. Nora Johnson; Mrs. Naja Bejan Tata; Pirosha Eruchshaw Malbari; Phiroze Bejan Tata; Rustom Jehangirji Master; Rustom Fakirjee Cowasjee and another; Bai Serene Khurshedjee Dubash; Stavoros Andrews Melas; Lt. ASIAN ECONOMIC TRENDS

E.C.A.F.E.'S SURVEY

IT is with a note of concern rather than with *one of satisfaction that the Secretariat of* the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.) records, in its latest annual report, the economic developments in the countries of the Asian region in the past year (1954). Thus, the Secretariat's survey of the state of Asian economy reveals that, notwithstanding improvement in agricultural output, higher returns received by traditional exports and inflationary situation being kept under control, the countries continue to face problems and difficulties arising from their basic poverty and underdevelopment. Indeed, Asian economies, it is said, are kept in a state of instability. To quote the survey: "...despite strenuous efforts and clear evidence of progress, real income per head of the population has remained in a state of relative stagnation and is still—nearly a decade after the war—below prewar level."

The stagnation in the Asian economy thus, it would appear, has been the result of three disquieting trends. First, there is the problem of constant and excessive fluctuations in the prices of the region's major exports. Secondly, the magnitude of Asia's economic problem is accentuated even by the normal increase in population, although the rate of increase of population in the region is not greater than in certain developed areas. Thirdly, efforts at augmenting development expenditures have run up against serious difficulties. Of these difficulties, inadequacy of domestic capital formation stands out prominently. The domestic savings actually available, for instance, are estimated at less than $2,000 million, as against the annual development requirements of as much as $5,000 million (excluding those of China and Japan). It is thus evident that a $3,000-million gap has to be bridged, while external financial aid now available is estimated at $1,000 million. The E.C.A.F.E. Secretariat has warned that, unless foreign aid becomes available on a much larger scale than at present, the efforts at economic development will be frustrated. It accordingly suggests an annual inflow of about $3,000 million foreign capital into the Asian region for a period of five to seven years. Such an inflow, according to the Secretariat, "would make all the difference between a stagnant economy and a developing one."

Besides describing the economic conditions in the Asian region as a whole, the survey of the E.C.A.F.E. Secretariat contains reviews of economic developments in the individual countries in the area. Referring to India, the Secretariat points out that many aspects of India's life in the eighth year of its independence are still in flux. Elucidating this statement, it observes:

"The aftermath of the Partition has not yet spent itself, while, on the other hand, powerful new forces are remoulding the strength of the country's economy and the life of the people. Of the total population of about 370 million, about 40 per cent. is estimated to be gainfully engaged. The population growth is at the rate of 1.1 to 1.4 per cent. per annum with infantile mortality declining. Despite relatively abundant natural resources, India's real national income per head of the population is only somewhere in the region of Rs. 280 at 1948-49 prices, or approximately U.S. $60 at current prices. It is still one of the lowest in the region, but it is now clearly and definitely rising."

The E.C.A.F.E. Secretariat has drawn particular attention to the difficulties of mobilising domestic capital for the private sector of the economy. In its opinion, there is no inherent lack of investible funds for expanding private industries; the difficulty seems to lie in attracting capital for risky ventures. In this context, the Industrial Credit and Investment Corporation and the National Industrial Development Corporation assume special importance. These institutions could give a new impetus to industrial financing for the private sector. The Secretariat rightly holds that considerably larger rates of investment than at present are necessary in order to raise living standards. For the main task before India is, as the Secretariat points out, to accelerate its economic development, while adhering to the precepts of mixed economy, "so as to absorb an enormous number of unemployed into productive work within a reasonable time."

The E.C.A.F.E. Secretariat considers that the monetary situation under the Five-year Plan is held under "satisfactory control." In support of this view, it points to the substantial expansion in industrial and agricultural production. Analysing the trend of prices, Government deficits and money supply, the Secretariat says that, by the end of 1954, there was no sign of inflationary monetary development, in spite of the fairly large budget deficit that is expected. Few will dispute this claim. During the first three years of the Plan (ended 31st March, 1954), money supply with the public was actually lower by Rs. 120 crores, despite the overall deficit of Rs. 96 crores.

MARKET GOSSIP

(Concluded from page 607)

has already signed and which only awaits general ratification to come into force in July? There is a good deal of argument as to whether the co-operating countries are retreating from the idea of trade freedom or whether they are advancing towards it. A careful study of the new proposals suggests that, while there is a substantial strengthening in form, there is a relaxing in content. The strengthening in form governs, for instance, the use of quotas: these are henceforth to be reviewed annually by the signatories to the agreement and, if the consensus goes against the country imposing quotas, then other members are free to withdraw the concessions they were themselves operating towards the quota country. This does not mean that such a step as Australia has just taken to cut its imports would be avoided under the new agreement. Australia pleads balance of payments difficulties and that is a valid defence—although under the new arrangements one that will be subjected to greater scrutiny. Moreover, the Organisation does not need to wait until an annual review to call in question the action of a country which appears to be imposing quotas unnecessarily. Quotas can also be placed by countries which can plead 'under development' (India falls in this category), and here a review is to take place every two years.

"In brief, therefore, the strengthening of the agreement takes the form of a strengthening of the machine for consultation and of enquiry into the reasons for any actions contrary to greater liberty of trade; and even the most ardent liberal in trade affairs must concede that the relaxations in content which accompany the new agreement are no more than realistic concessions—in a world not yet settled down after the upheaval of the last war—to the difficulties with which each country is faced whether it be on balance of payments grounds, or because it has got agricultural surpluses, or because it is trying to develop new industries.

"Thus, both the United Kingdom and America have got away with concessions to their special problems: the first in regard to its Colonial territories and the second to its policy of agricultural production. Here, in London, it appears an act of elementary justice that the United Kingdom can give preferences to the Colonies dependent on this country for the bulk of their trade without being obliged to extend these preferences to all other countries. It had already gained a small concession giving greater protection to domestic horticulture and this concession is now to be extended. As for the U.S.A., they have obtained general agreement to their right to protect their domestic agriculture in the context of American price support policies, while, on the other hand, the American Administration has agreed that the support prices are to be reduced and a limit is to be put on the quantity of commodities which are to qualify for assistance. Less justifiable, perhaps, is the further concession to America permitting export subsidies on their agricultural products. This country has for historical reasons never accepted the principle of subsidising exports and the feeling here is that too great concessions have been made in this regard.

"The only other feature worthy of note about the new agreement is that tariff arrangements are likely to be made more stable as they are to be bound from one three-yearly review to the next. All in all, it is generally accepted that a workmanlike job has been made of the revisions and that the new G.A.T.T. is likely in practice to work a little smoother even if it does not liberate trade a little faster, than the old."

THE MUDDLE IN BOMBAY BULLION MARKET

(Concluded from page 608)

was done to bring these facts to the notice of the proper authorities.

An informal meeting of members was held on 14th March, 1955, and a resolution was passed to this effect. An interview was sought with Mr. Jivraj Mehta, Finance Minister, Bombay State, and granted. The representatives of the members placed their point of view before the Minister and he promised to look into the matter. Even though the Finance Minister was kind enough to meet the representatives of the members, the Board of Directors did not call them before 20th March, 1955, and even this was done only under pressure. The pressure was brought about by the members refusing to send the clearing statements with payments on 19th March, 1955, when they were due. As the Valan could not be made without this, the Board had to yield and called a meeting of the members. In the meantime, the Government Director insisted upon the Board that the inward clearing payments should be completed before 3.30 p.m. on Monday, 21st March, 1955. With this threat, the representatives of the trade met the Board, when they expressed in clear terms that there was no intention to stop payments and all that they wanted was an assurance that their grievances would be redressed. No assurance was forthcoming. Without even considering the proposals, the Directors postponed the meeting.

In view of these developments, it was felt by some of the Directors that the members of the trade should be satisfied, as their claim was just and fair. One of the Directors wrote to the Finance Minister that, in respect of clearing payments members and giving them the assurance they wanted during which period they would try to bring about a settlement. They further called a meeting of the Board of Directors where they insisted upon the President having an informal meeting with the members and giving them the assurance they wanted. At this meeting, an amicable settlement was arrived at after an assurance was given by the Government Director to the effect that the By-law 33D would be implemented immediately, provided the members made the clearing payments. The Directors too assured the members that they would enforce By-law 33A and that they would look into the cases of margin evaders. This completely satisfied the members and the market began functioning on the next day after the Valan payments were completed.

These developments show that the attitude of some of the Directors was uncompromising, and it was only because of the tactful approach by Mr. Nadkarni, the Government Director, that the deadlock was resolved. He deserves all congratulations on his bold and rightful policy. The effects of the new by-laws can be known only after experience for some time. One welcome development is that the by-laws designed to check excessive speculation will come into force automatically and need not wait upon the pleasure of the Board consisting of interested parties. This should help remove the conflict between the bears and bulls on the Board. It is now the effective implementation of these by-laws that deserves more attention. Still one more by-law, namely, that in respect of penalty-in-auction, is pending before the Government, though it was passed by the Board last year. If this by-law is approved, it is expected that the working of the forward market in bullion would be smooth. It is the frequent changes in the by-laws which have been a source of trouble in the Bombay bullion market for the last few years. Now that there is little scope for such manipulation by the Board, smooth trading in the bullion market should be possible. But it is too early to be so optimistic, for much will depend upon the enforcement of strict discipline upon the erring members by the Board. It has now become a practice in this market that, whenever certain by-laws do not suit some members, the latter rush to the Law Courts for protection. Proper disciplinary action should be taken by the Board when such members prove wrong, so that one may not lightly resort to litigation and prove a nuisance. The implementation of the by-laws requires an impartial President and a Board consisting of members who will view the issues impersonally, whatever may be their position in the market. If the events of the past few days have demonstrated one thing, it is that the members of the trade will not take things lying down and that they are conscious of their rights which they will assert whenever the President and/or the Board act wrongly.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 28th March

A notable feature of the Madras Stock Exchange during the week under review was the further announcement of encouraging dividends by textile and planting companies. As a result, the performance of many scrips was generally good. Select scrips among textiles and plantings scored further gains. A significant exception was the quiet trend in miscellaneous scrips. The undertone was, however, distinctly steady.

Among the important dividend declarations by the textile companies, mention may be made of Jawhar Mills Ltd., the directors of which have increased the dividend from 7½ per cent. in 1953 to 12½ per cent. for the year ended 31st December, 1954. The management of Radhakrishna Mills Ltd. have declared a dividend of 16 per cent. for the year ended 31st December, 1954, as against 8 per cent. for the previous year. The directors of Trichinopoly Mills Ltd. have raised the dividend from 7 per cent. for 1953 to 9 per cent. for the year ended 31st December, 1954. The directors of Vasanta Mills Ltd. have declared a dividend of 15 per cent. for the year ended 31st December, 1954, as against 12 per cent. in the previous year. The dividend on the shares of Palani Andavar Mills Ltd. has, however, been maintained at 24 per cent. for the year ended 31st December, 1954.

Among planting companies, the Travancore Rubber and Tea Co., Ltd., has declared a final dividend of 10 per cent., thereby making a total of 15 per cent. for the year ended 31st December, 1954, as against 10 per cent. for the previous year. The directors of Parksides (Neilgherry Hills) Estate Company, Ltd., have declared an interim dividend of 10 per cent. for the year ended 30th June, 1955. The total dividend for the previous year was 25 per cent. The directors of Talyar Tea Company, Ltd., have announced an interim dividend of 6¼ per cent. for the year ended 31st March, 1955, as against the total dividend of 12½ per cent. for the previous year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XC. No. 2302 BOMBAY, 9 APRIL, 1955 • PRICE Rs. 1/8

ANOTHER SOMERSAULT BY GOVERNMENT

ONE of the deplorable features of the present Government's policies and pronouncements is lack of consistency. One can never tell as to how long certain statements made by the Government or its spokesmen will hold good. Many instances can be given to support this view, the most striking being the Government's somersault in regard to the managing agency system. We all know that the Government's view at one time was that this system should be mended and not ended. But it is also common knowledge that, within three or four months of making this statement, its spokesmen were busy with plans for ending the system. The latest instance of the Government's changing mentality—and every change has been towards the left—is provided by the fourth Constitution Amendment Bill as it emerged from the Joint Select Committee towards the close of last week. The changes made by the Select Committee have completely transformed the Bill in certain material respects and run counter to the statements made by the Prime Minister himself while replying to the debate on the Bill in the Lok Sabha.

The healthy convention that no fundamental changes should be made at the Select Committee stage was thrown overboard by the present Government long ago. Such changes are understandable at least in those cases where the Bills are framed in a hurry, in order to implement policies or ideas decided upon without careful consideration. The Constitution Amendment Bill does not belong to this variety. Careful preparation and deliberation had preceded its drafting. Indeed, several drafts had been prepared and all the concerned ministries and even certain State Governments had been consulted before the Bill was finalised. Some had even suggested the very changes the Select Committee has now made. But the Government did not deliberately want to include them. Even the Prime Minister, Mr. Nehru, said so in his speech at the Lok Sabha in mid-March, as we shall presently show. Yet, within 15 days, he changes his mind and agrees to a proposal that had been turned down by him and his colleagues as being too drastic. Are such actions conducive to engender people's confidence in the Government?

While being critical of the Government's present move to amend the Constitution, this journal did not say, as some did, that there should be no amendment at all. It clearly recognised that the practical difficulties, arising from some of the judgments of the Supreme Court, necessitated amendment of Article 31 clause (2), so that the regulatory powers of the Government might be safeguarded. But the Government availed itself of this opportunity to make extensive inroads on the Constitutional protection given to individuals to hold property by expanding Article 31A. The changes sought to be made in this Article were so elaborate that the protection given by Article 31 clause (2) became almost illusory. The Select Committee has gone a step further and completely ousted the jurisdiction of the Court even in regard to property taken over under this Article, so that even those properties not specified in the amendment to Article 31A can be acquired and requisitioned by the State on payment of compensation the adequacy of which cannot be challenged in a court of law. In other words, under the amendment as it originally stood, if any industrial property were taken over by the State, the quantum of compensation payable was justiciable. Under the amendment as now proposed by the Select Committee, however, holders of such property are denied that right. The country was told by the party-in-power that an expansion of the State's powers under Article 31A was necessary, in order to introduce land reforms, clear slums, resettle refugees and ensure sound management of companies and that there was no desire to whittle down the rights of holders of industrial property. But now why has it gone back on this understanding?

It will be recalled, in this connection, that, while the Bill was under discussion in Parliament before it was referred to the Select Committee, one of the members of the Congress Party itself had pointed out that a discrimination was being made against land holdings, in that, while the question of compensation in regard to industrial property was justiciable, such was not so in regard to agricultural property and land. Mr. Nehru's reply to this criticism was that "this had been deliberately done after careful thought." He could have stopped with this explanation, but was indiscreet (from the point of view of his party) enough to disclose what happened when the issue came up for discussion in the Cabinet. This he did while explaining as to why a detailed list of specific cases was being mentioned under Article 31A. According to him, one Minister had suggested a simple amendment to the effect that "whatever property was taken over by the State, the question as to what compensation should be paid for it should be left to be decided by Parliament and by the Assemblies and no court should interfere at all." The Cabinet, however, said Mr. Nehru, rejected this suggestion, because it meant that "the courts would be completely kept out." Proceeding, he added: "This (the aforesaid suggestion) could have been done, but, in that case, the Fundamental Right in this regard relating to property would have been completely nullified. The Government could do this, but we did not think it proper to go so far." Having said all this, Mr. Nehru and his colleagues in the Select Committee have quietly agreed to a violent change in the amendment to Article 31 (2) which makes no distinction whatever between industrial and agricultural property rights in regard to compensation.

In our earlier comments on the Amendment Bill (vide Commerce dated 19th March, 1955), we said that there was little reason to quarrel with the amendment to Article 31 (2), as it sought to make no fundamental change. All that we suggested was that provision should be made for payment of "just" compensation. But now the Select Committee has altered the position fundamentally, as will be seen from the following quotation of the Article as modified by it, the exact modification being indicated in italics:

"No property shall be compulsorily acquired or requisitioned save for a public purpose and save by authority of a law which provides for compensation for the property so acquired or requisitioned and either fixes the amount of the compensation or specifies the principles on which, and the manner in which, the compensation is to be determined and given; *and no such law shall be called in question in any court on the ground that the compensation provided by that law is not adequate.*"

The result of the aforesaid change is that the State can take over any property by passing the necessary legislation, provided it is for a public purpose and provided further compensation is payable. But questions as to the adequacy of compensation are outside judicial review. As already said, the holder of an industrial property not covered by Article 31A will lose, when the amendment goes through, as it certainly will, the protection he thought he would continue to get against executive and legislative tyranny. The holders of agricultural and land rights and owners of slums, however, have gained an advantage, in that, whereas, under the original Amendment Bill, they were not at all sure of getting compensation, they will now be entitled to compensation, though whether adequate or not is a different question. In fine, the irony of the Select Committee revision is that industrial property has been reduced to the status of slums.

In view of the drastic powers provided in Article 31 (2), the Select Committee has reduced the various categories of rights and properties that had been listed under Article 31A. There are only five clauses, instead of nine as before. The fixation of ceiling on land, the taking over of excess land, the acquisition or requisitioning of immovable property for relief and rehabilitation of displaced persons, the acquisition or requisitioning of vacant and waste land, buildings or huts declared as slums—all these will have to be done under Article 31 (2) and the persons who are deprived of their property as a result will have to be paid compensation. Another change relates to the "transfer of any undertaking wholly or in part from one company to another," while a third one covers "the extinguishment or modification of any rights accruing by virtue of any agreement, lease or licence for purpose of supplying power, light or water to the public." If the Government wants to do any of these things, it can do so only under Article 31 (2), that means, for a public purpose and subject to payment of compensation, however, illusory it may be. The exemption of the rights relating to the supply of "power, light or water" from the categories of rights the deprivation or curtailment of which can be done by the State without payment of compensation, if it so chooses to do, will doubtless be welcomed by electricity and other power undertakings in the country. A slight modification has been made in regard to the rights of shareholders; what they are sought to be deprived of now is only their voting rights and not the equity right. This, however, is not much of a gain, for, while shareholders are denied their right to control their company, they may be asked to bear more and more liabilities or be forced to accept a price for their company which will give them only a nominal compensation. Excepting for these minor changes, all the other objectionable features of Article 31A, explained in our issue of 19th March, 1955, have been retained in full.

During the past few days, the Prime Minister has been strongly protesting against the criticism of the Amendment Bill as being expropriatory in nature. He insists that compensation will be paid in all cases and nobody's property will be expropriated. Surely he is protesting too much. If the intention is to pay compensation,

then why not make suitable provisions for ensuring that such compensation will be just and equitable and that the vast powers that are being vested in the State will not be abused or used ruthlessly? Again, how can anyone take the Government at its word, when it goes on changing its attitude towards private enterprise and private property? When the present amendment was first mooted, we were told that the object was only to safeguard the regulatory powers rendered *ultra vires* the Constitution by certain judgments of the Supreme Court. And later on, we were told that a comprehensive amendment was necessary, in order to implement the "socialistic pattern of society" which is claimed to be in accordance with the directive principles of the Constitution. Now, it is openly stated that the Fundamental Rights guaranteed under the Constitution are subservient to the vague and idealistic directive principles of the Constitution and that the interests of the society, which for all practical purposes means the State, should override those of the individuals. What guarantee is there that, tomorrow, this very argument will not be used to sustain the plea, that, as the State has not got adequate resources, it cannot give compensation for properties acquired or requisitioned? The point that we wish to make here is that once the most cherished Fundamental Rights enshrined in the Constitution are whittled down virtually to zero, one never knows where this will end. It may very well lead to totalitarianism or autocracy, unless the people are vigilant. It is needless to add that, in view of the vast powers that are being vested in Parliament and State Legislatures, the people, including business men, must exercise great care and diligence in choosing their candidates for representing them in these august bodies .The adage that "a people get the government they deserve" may sound trite, but it is very true.

ECONOMIC GROWTH IN UNDER-DEVELOPED COUNTRIES

NEVER in world economic history has there been a more intensive study of the problems of underdeveloped countries than now. At one time, the belief was widely held that only West Europe and the U.S. could afford the luxury of an industrial economy and that the predominantly underdeveloped countries could exist only as producers of raw materials and as markets for finished goods. The rise of the U.S.S.R. as an industrial nation was an eye-opener to the West. The two world wars, in which the underdeveloped countries participated, served to make the West more conscious of the needs of these countries. It was then felt that these countries might have proved to be more powerful allies if they had been developed as an industrial arsenal. When World War II ended, and as one country after another became infected by extremist political ideology, the industrially advanced countries realised that, unless the conditions of basic poverty which provide a most fertile soil for the growth of political extremism were removed, there would be an end of all hopes of building a democratic world. It was then realised that even democracy, if it had to survive, would have to be built on strong foundations of a reasonable level of economic prosperity.

Among the many studies of the problems of economic progress in underdeveloped countries which have been made in recent years, the most recent—and from available information, the most comprehensive—is the U.N. Study entitled "Processes and Problems of Industrialisation in Underdeveloped Countries." The Study, which surveys the obstacles and the aids to economic development in these countries, points out that, notwithstanding the many difficulties which the countries face, they have one advantage in the shape of the experience of industrialised countries. It warns, however, against the facile assumption that economic progress means only industrial progress and rightly insists that what is required in these countries is a parallel development of both industry and agriculture.

These countries, according to the Survey, face three major groups of obstacles: Inadequacies of the economic environment, some demographic problems and limitations imposed by international conditions. To the first group belongs the absence of well-developed transport systems and power. Both involve large investments and, what is more, have to be established in entirety, for they cannot be gradually developed. Thus, there cannot be less than a single-track railway line between two given points or less than a barrage of a certain height and width if a given river is to be harnessed for power. Again, a rapid growth of population adds to the problem of development. Further, industrialisation represents a new type of productive organisation, to a large extent alien in origin and functionally unrelated to the existing economic and social pattern. It demands several social adjustments. In the West, they took place over a long period. But this process is not likely to be repeated in these countries and is, at any rate, incompatible with the demand and the desire for rapid industrialisation.

To overcome capital shortage in underdeveloped countries, the Study underlines the need for instituting, as well as as encouraging, savings banks, industrial development corporations and stock exchanges. It examines the possibilities of fiscal incentives in the shape of tax concessions, directional concessions designed to channel funds to specific industries, lighter taxation of corporations and tax concessions on reinvested profits. As regards credit policy, it warns against the danger of inflation, but believes that, where there is a tendency for an underdeveloped economy to stagnate, there may be justification for use of an expansionary credit policy as a stimulus to better utilisation of resources.

Next to the shortage of capital, there is the lack of business and technical know-how. In the underdeveloped countries, unlike in the industrially advanced countries, the industrial *entrepreneur* has himself frequently to perform —as managing agents have done in India—all functions—technical innovation, business promotion, capital provision and management. To overcome this difficulty, the Study suggests improving the flow of reliable economic data, lessening the likelihood of arbitrary changes in the administration of laws and regulations, not to mention changes in the declared policies, and assistance to the formation and collection of domestic capital. To remedy the shortage of technical know-how, it suggests the creation of educational and training facilities.

The Study examines the various ways in which industrially advanced nations can aid underdeveloped countries. Thus, they are asked to see that the export earnings of the underdeveloped countries are not impaired. As regards capital, special lending institutions in advanced countries, such as the U.S. Export-Import Bank, and international agencies, such as the World Bank, have assumed an important role. There has also been a relative increase in direct investment by foreign capitalists in enterprises controlled by them. In this connection, the Study discusses the need for recipient countries to keep restrictions on capital movements to a minimum or at least to publicise their policies and to adhere to them closely. This is a vital consideration, for, unless a non-discriminatory attitude is adopted towards foreign capital and, what is more, such an attitude is maintained over a reasonable period of time, there would be no inflow of such capital on a scale that would really benefit the underdeveloped countries.

CHALLENGE TO INSURERS

IT was a difficult task which Mr. K. Balasubramanyam, Chairman of the Indian Life Assurance Offices Association, had to perform at the annual meeting of the Association held in Madras last week-end. The past few months have been a period of controversy in the sphere of Indian insurance. As the Chairman of the premier insurers' body, it was left to him to survey the recent events both comprehensively and impartially. Few will doubt that he made a sincere attempt at presenting the different viewpoints in as impartial a manner as possible.

Indian insurers have had to face, in recent months, one problem after another and insurance business, as Mr. Balasubramanyam said, "was subjected to a series of shocks in the year 1954." First came a large-scale reduction in premium rates. Then, there was the staff insurance scheme which was an unwelcome development from the point of view of the agents and the smaller insurers. This was followed by a virtual bonus war. In so far as each of these crises is the result of keen competition in the field, it is a development that need not altogether be deplored. It is of the essence of private enterprise to face and overcome obstacles which are part and parcel of a competitive economy. It is, of course, open to it to regulate, through voluntary rather than through Government-sponsored agreements, the conditions of fair competition. Recent events have not only served to bring out the value and importance of working together but also underlined the impossibility of eschewing all competition.

As regards the first great shock experienced by insurers, namely, the reduction in premium rates, the Chairman of the Association, after surveying the developments following the reduction, expressed the hope that no member of the Association would in future take unilateral action on a major issue without consulting the Association. After summarising the advantages and disadvantages of the Staff Insurance Scheme, he stated that it was to be hoped that the Sub-committee, which had been appointed by the Executive Committee of the Life Insurance Council to evolve a suitable staff insurance scheme, would bear in mind the different views expressed by the insurers on this subject. He rightly urged the insurers, who are tempted to declare high bonus rates, to bear in mind two important considerations in relation to their bonus policy, namely, whether it would be possible to maintain the high rates of bonus and whether the new rates justify the declaration of high bonus rates.

Insurers have reason to welcome the reports of the Committee on Finance for the Private Sector (Chairman: Mr. A. D. Shroff) and the Taxation Enquiry Commission (Chairman: Dr. John Matthai). The Shroff Committee, as Mr. Balasubramanyam pointed out, has recognised the "increasingly useful role played by the insurance companies in mobilising the savings of the community and making them available for investment in industries." It has accordingly recommended the relaxation of some of the restrictions on the insurers' discretion in the matter of investment. The Chairman emphasised that, if these recommendations were implemented, the insurers would be able to play a more important part in the provision of industrial finance for the private sector. He welcomed the recommendation of the Taxation Enquiry Commission, which relates to the raising of the tax-free limit for contribution towards the provision of life assurance. This limit, which was one-sixth of the total income, subject to a maximum of Rs. 12,000 for a Hindu undivided family and Rs. 6,000 for any other assessee, has, on the Commission's recommendation, been raised to one-fifth of the total income subject to a maximum of Rs. 16,000 for Hindu undivided families and Rs. 8,000 for other assessees.

Proceeding, the Chairman referred to many new activities in which the Association was now engaged. Some of them are of great importance to the future of insurance in India. The Association has been engaged in the work of standardising the various forms which are used by life offices. The medical report form and the personal statement form have been standardised. It would appear that the Association has appointed a Sub-committee to recommend standard proposal form and claims form. The work on standard heights and weights tables, for which the data have been collected, is expected to be completed shortly. The preliminary work relating to the combined mortality investigation of Indian assured lives is stated to be "proceeding fairly well." The desirability of conducting some training course for insurance agents, it is stated, is under the "active consideration of the Association." Such a course would prove of great benefit to agents, as well as insurers, and would help evolve a well-informed and trained agency force.

Although Indian insurance has had its share of trials and tribulations, there is no doubt that it has an impressive record of progress to its credit. Mr. Balasubramanyam is fully entitled to the claim that "insurers have every reason to feel proud about the achievements of Indian insurance during the last decade." Over the decade ended 1953, total life insurance business in force has increased from Rs. 378 crores to Rs. 962 crores. Even so, there is a long leeway to be made up. Only 3 million families, according to the Chairman, enjoy insurance protection, and even that protection is only of the order of Rs. 3,000 per family on an average. Again, the amount paid by way of life insurance premiums in 1953 was about Rs. 52 crores or a mere ½ per cent. of the national income. "These figures," as the Chairman said, "clearly indicate that we have touched only the fringe of the problem." Insurance organisation has continued to remain "largely urban in character." He pointed out that there had been a shift in income and considerable rise in the purchasing power among industrial workers and agricultural classes. He rightly urged the insurers to extend the benefit of insurance to all classes and to "penetrate into rural areas." There is, he added, "immense scope before us for expansion and for greater and useful service." This is both a challenge to and an opportunity for insurers. If Indian insurance, which is founded on private enterprise, does not make headway, it will not be able to justify itself before the bar of public opinion.

MARKET GOSSIP

NATIONAL RAYON TO ISSUE DEBENTURES

ENGINEERING INDUSTRY NEEDS EXPANSION

WEDNESDAY, 5 P.M.

THIS has been a listless week for the share markets. The opening of new settlement on the Bombay Stock Exchange brought no fresh enthusiasm. On the contrary, business has been dull and fluctuations narrow. The only feature has been the growing volume of option business. Large scale *Teji-Mandi* option is alleged to be going on, at rates believed to be attractive. A few operators who are said to have bought thousands of Tata Ordinaries are still believed to be holding on in the expectation of a favourable decision by the Government about retention prices. According to one source, however, one of the bulls has been gradually unloading his holdings whenever market conditions are favourable. That probably explains the fall in Tata Ordinaries today from Rs. 241-8 to Rs. 238. Mill shares and miscellaneous counters are a shade steadier.

• • • •

The shares of the National Rayon Corporation have been ruling steady to firm for the past few days, advancing from Rs. 196 on Thursday last to Rs. 204 today, before closing at Rs. 202. Though the rise is due partly to the impending announcement of the dividend, variously estimated from Rs. 9 to Rs. 12 per share, knowledgeable circles attribute it to the Company's decision to raise a large amount of debenture capital. This evidently means that the Company does not propose to raise additional equity capital in the near future, as was contemplated at one time. It is reported that the amount of debentures is Rs. 1.50 crores, carrying interest at the rate of 5½ per cent. The issue price will be at par. The redemption period will be 10 to 15 years, with the option to redeem not more than 20 per cent. of the issue every year after the lapse of five years from the date of issue. Out of the debenture capital thus raised, the Company proposes to utilise a sum of Rs. 40 lakhs to repay the outstanding loan from the Industrial Finance Corporation of India. The balance will be utilised to finance the setting up of a caustic soda plant with a capacity of 20 tons per day, and also for expanding the capacity of the present rayon plant by 30 per cent.—that is, from the present level of 9.5 million lbs. per annum to 12.5 million lbs. per annum. So far as the forthcoming dividend for 1954 is concerned, we reliably understand that the Board is meeting next week to take a final decision. It is generally believed that it will be either Rs. 10 or Rs. 10-8 per share.

• • • •

A special meeting of shareholders of the Imperial Bank of India was held on Thursday last for considering the Government's decision to nationalise the Bank. The meeting was presided over by the Chairman, Mr. Vithal Chandavarkar. In a long speech delivered on this occasion, Mr. Chandavarkar deplored the Government's decision to nationalise the Bank. He averred that the Board had done everything possible to co-operate with the Government and to carry out its instructions. He catalogued the steps taken by the Board to safeguard the interests of shareholders. He argued convincingly that the Government should take the period prior to February, 1948 as the base for determining the compensation payable to shareholders, for, ever since that month, the value of shares remained depressed following the announcement, by the late Dr. Shanmukham Chetty, the then Finance Minister, of the Government's decision, in principle, to nationalise the Bank. A resolution was unanimously adopted at the meeting urging the Government to take a fair period for arriving at the market value and to pay the entire compensation amount either in cash or in Government loan at a rate which would give an income equal to the present yield on these shares.

• • • •

Two impressive points emerged from the speeches of those who addressed the meeting. One was that the total number of shareholders of the Bank exceeded 10,000, a large majority of whom were small shareholders. This shows that the Bank is not being owned by a few tycoons, as is generally believed. The other point was that, generally, politicians seemed to be of the opinion that all investors were big capitalists and they proceeded to make legislation in that spirit. There is considerable truth in this assessment of an average politician's mind. But such an impression is wrong. There are quite a number of shareholders in this country who belong to the middle class, some of them widows and young children. Then, there are also institutions such as insurance and trust companies which are performing a valuable economic function. So, whenever anything is done which affects investment, it is not the big capitalists alone who suffer but also small investors and certain institutions that are doing good work for the economic progress of the country.

• • • •

Much interest attaches to the visit to India of the British Steel Delegation. The Delegation, it is stated, met the Negotiating Committee of the Government of India this week. Although little is known about the subjects discussed, it is understood that the Mission and the Government are agreed that Durgapur will be the site for the new steel factory. A question, which seems to have remained undecided, is whether global tenders should be invited for placing orders for the steel plant. If the Indo-Russian steel agreement were adopted as a model, there would be no global tenders. Since Russia offered credit facilities, the Government felt that no global tenders were necessary. Britain, too, it is stated, has offered such facilities. As regards the Rourkela steel plant, which is being set up with the co-operation of German steel interests, global tenders were found necessary since the Government proposed to pay cash for the supply of machinery.

• • • •

Now that another steel plant is likely to be set up—that is, in addition to the two steel plants, one with the aid of Russian steel interests and the other with the help of German interests—it is certainly pertinent to enquire into the effect of the proposed new level of steel output on India's other industries. This line of enquiry, it is interesting to record here, was ably pursued by Mr. K. Chatterton, Chairman of the Indian Engineering Association Calcutta, in the course of his address at the recent annual meeting of the Association. Steel, as Mr. Chatterton did well to remind his listeners, is not an end in itself. It is not a commodity that is directly consumed. It is a basic raw material for a wide range of engineering industries. It is, therefore, important that, as more and more steel is produced, the steel-using industries also should be enabled to expand.

• • • •

At the outset, Mr. Chatterton said that the target of six million ingot tons of steel, mentioned frequently as the target to be reached by 1961, was "completely impracticable." In any case, more steel plants are being set up. And before they are taken in hand, he rightly urged the Government to start early negotiations with the engineering industry with a view to knowing whether any substantial part of the constructions, involved in the new steel plant, could be undertaken by Indian firms. He felt that, if all steel plants were simultaneously set up, the engineering industry might not be in a position to contribute its due share in the setting up of the plants. In that case, the great bulk of the plant and machinery would have to be imported from abroad to the detriment of India's foreign exchange position and of employment in this country.

• • • •

Mr. Chatterton placed the current level of consumption of steel in India at two million tons. He added: "Obviously to provide six million tons, which is treble the present usage, is unrealistic as the capacity of secondary industry to absorb the amount by 1961 cannot be made available." He thought that it would be more realistic to plan for about 3.5 million tons by 1961 and to phase the programme, so that the building of capacity beyond this level and the growth of secondary industries could proceed simultaneously. To increase steel-making capacity to 3.5 million tons, he said, would require about 200,000 tons of buildings and plant, which could be made in India with a saving of at least Rs. 30 crores in foreign exchange. It would also provide employment for 8,000-10,000 men.

• • • •

Nor is this the only aspect of the Government's steel plans that is of interest to the engineering industry. The increase in steel output would, as already indicated, call for an expansion of the steel-using section of the engineering industry. In this connection, Mr. Chatterton said: "By 1961, possibly 1,500,000 tons of new steel production will have to be absorbed annually and this will require an enormous increase in the capacity of the engineering industry, which in turn will require finance on an even larger scale than that required for the production of the steel. Government has laid down that, in general, this is a field for the private sector and, as much of this expansion must be done through a multiplication of comparatively small units, it does not lend itself to Government enterprise." The best way to obtain a large expansion of the engineering industry, according to Mr. Chatterton, is to modernise and extend existig workshops rather than to build new ones.

• • • •

Mr. Chatterton said that one of the mainstays of engineering was an efficient machine tool industry. The total output of machine tools in India was still very small, as compared with its total requirements. Much capital had been sunk in the Government machine tool factory at Jalahalli but the results had "been insignificant." Machine tool industry was essentially a field for private enterprise, and for small firms. Explaining why it was so, he said:

"It is the enthusiasm, skill and willingness to take risks of one man that makes for successful machine tool building and these are not the qualities that are found in the average Government servant. This is important, as, without these qualities in the leadership of the Government machine tool enterprise, Jalahalli will become a shell and the loss will be to the country. There is no desire to make capital out of Government's mistakes in this field, but I would make an earnest plea to those in authority to review the whole position of machine tool building in this country."

• • • •

The expansion of engineering industry would require a large amount of fresh capital. In this connection, Mr. Chatterton deplored the "unrealistic official attitude on what should be a fair return on risk capital." He added: "There is much woolly thinking on this important question of a fair return on capital. The plea, that is often put forward in India, is that the return on capital should be very restricted until the standard of living has been raised. To raise the standard of living and to provide more employment are the two most vital problems facing the country, but, on a long-term basis, the former can only be achieved by putting more capital behind each worker, whilst the latter can only be done by creating new industries, so that anything which restricts the free flow of capital into an industry is a disservice to the country. No enlightened industrialist seeks nowadays to pay extravagant dividends but rather looks for such a return on his capital that he can retain sufficient profits to meet the very high cost of modernising fixed assets, to assist towards future expansion and to provide new employment. These are all vital objects and must be catered for if industry is to expand in the way we desire."

Surely, the Government is adopting a short-sighted policy in fixing such low returns on capital. Considering that it is a fair return that determines the flow of capital to industries, the Government's policy means, in effect, that the country is losing a great deal in the shape of lost opportunities in industrialisation.

LONDON LETTER

NEWSPAPERS AND THE ECONOMIC SURVEY

From Our Own Correspondent

LONDON, *2nd April*

NEVER before since London became the home of what is called the "National Press" has the city been without newspapers for so long. Even during the general strike, there was a Government publication, but, this time, there is nothing. However, as far as the straight news goes, the public is kept informed by a few minutes of extra time each day by the B.B.C. and, for the rest, people are slowing becoming acclimatised to the shortage of daily reading matter and turning to books and periodicals. The dispute over wages is briefly that the maintenance men, electricians and engineers in the industry who are receiving a wage about 80 per cent. above pre-war want an increase to 125 per cent. above pre-war. Against this demand for an extra 45 per cent., the employers' offer is 5 per cent. and, since the latter is the sort of increase which has been successfully negotiated with other Unions, they are afraid to budge since this might re-open the other negotiations. The dispute has now lasted over a week and still shows no sign of being settled. Meanwhile, the Press proprietors are giving notice to the journalists on their staffs.

Only daily and Sunday newspapers are affected by the strike and this week saw the publication of the Government's annual economic survey. This shows very fully the reasons which have induced the Chancellor to bring increasing stringency into his money management. Up to now, all the public has had to go on about the trend of the balance of payments has been the trade accounts, but these are liable to differ substantially, particularly in time, from the true balance of payments and, in fact, it is revealed that they have been over optimistic.

A mere comparison of 1954 with the preceding year is inadequate, since this shows a surplus on the balance of payments on current account of £160 million, as against £217 million in the previous year, but over £50 million of the difference were due to a reduction in American Aid. On trade account there appears to be little reduction. The significant thing, however, is that the first half of 1954 showed a favourable balance of over £170 million, while the second half year gave an adverse balance of £12 million. It is the rapid rate of deterioration which has been one of the principal causes of concern. The other has been the relative worsening of the position with non-sterling countries. The United Kingdom's balance of payments with the sterling area gave a surplus of £114 million in the first half of last year and of £155 million in the second half, a total substantially better than that for 1953. But the trend with non-sterling countries was precisely opposite. In the first half year, there was a favourable balance of £58 million (which included £24 million of Defence Aid), but, in the second half year, there was a deficit of £167 million. Although the second half of the year normally shows a higher level of imports, yet the discrepancy on this occasion is very far from normal. Besides, it is not confined to the expansion in imports in the latter part of the year, or even to the slight reduction in exports (in which the dock strike played a part), but also to a falling off in the invisible earnings.

The United Kingdom, however, has to reckon not only with its own balance of payments but also with the balance of the sterling area as a whole. Its own balance with non-sterling countries was a favourable one of £44 million in 1953 and became an adverse one of £109 million in 1954—a worsening of £153 million. Over the same two years, the balance of the other countries of the sterling area with the non-sterling world deteriorated from £281 million surplus to only £116 million surplus—a deterioration of £165 million. Thus, the balance of payments of the sterling area with the non-sterling world has worsened by nearly £320 million. The analysis between the first and second half years shows the sharpness of the deterioration—the first half year showed a surplus of over £170 million, but the deficit in the second half wiped this out.

This external position is in contrast with a highly prosperous internal economy which might have yielded substantial tax reliefs in the coming budget. As it is, the external blasts will make the Chancellor tend to cling to some of the fat he had built up in the Exchequer accounts for the financial year just closing.—*All Rights Reserved.*

STOCK EXCHANGE RULES STEADY

TEXTILE SHARES RECOVER

(From Our Own Correspondent)

BOMBAY, *6th April*

THIS week's review of the Stock Exchange covers only three sessions, on account of the intervening holidays. Further, we go to press a day earlier than usual in view of the holiday on Friday, the 8th inst. During this short week, conditions were dull, though the undertone was steady with small gains all round, in refreshing contrast to the decline in the previous week. The absence of any large-scale selling pressure was a helpful factor, which coupled with bear covering lifted values from the low levels touched early in the week. There was, however, no investment support, the bulk of the transactions being confined to option business.

In the steel section, Tata Ordinaries were quiet with movements confined to a very narrow range. The absence of any announcement regarding revision of retention prices and rumours about the Government's policy towards expansion of steel industry in the private sector caused some uncertainty amongst operators. Consequently, after a modest advance from Rs. 239-8 to Rs. 241-4 today, Tata Ordinaries fell at the close to Rs. 239. Indian Irons dropped early in the week from Rs. 35-3¼ to Rs. 35-1½, but rallied to Rs. 35-9½ before closing at Rs. 36-6½.

Textile shares provided the main feature with hardening of prices on bear covering over a wide front. Bombay Dyeings, after a dip from Rs. 466-4 to Rs. 465, advanced to Rs. 472-8 today, but the closing was lower at Rs. 469-6. Kohinoors moved between Rs. 312-12 and Rs. 316-4, before finishing at Rs. 314-8, as against last week's closing of Rs. 314-12. Centurys gained over the week Rs. 2-12 to Rs. 380, the highest level touched during the week being Rs. 383. Central Indias showed no change at Rs. 127, as also Finlays at Rs. 260. Gokaks were marked up by Rs. 230, evidently on the strength of the Chairman's statement that the Company was doing everything possible to raise production and reduce costs. Shree Niwas picked up Rs. 2-8 and closed at Rs. 234-6. Simplex gained Re. 1-12 to Rs. 146-12, Standards Re. 1-14 to Rs. 363-12 and Svadeshis Re. 1-4 to Rs. 190-8. Tatas, however, reacted from Rs. 55-8 to Rs. 53-8.

The banking section ruled steady, barring the weakness in Imperial Banks on continued selling pressure. Centrals were a fraction better at Rs. 50-4, as also their new shares at Rs. 52. Barodas were held at Rs. 108-4. Bank of Indias gained Re. 1-8 to Rs. 146-8 and Punjab Nationals As. 12 to Rs. 43. United Commercials were done at Rs. 44-4 *ex-div.* as against Rs. 46-12 *cum-div.* a week ago. Imperial Fully Paids were marked down by Rs. 2-8 to Rs. 1,577-8 and the Partly Paids by Rs. 10 to Rs. 380.

Insurance shares ruled quiet, with a further drop of Rs. 2 to Rs. 50-8 in New Indias being a feature. Jupiters were marked down by Re. 1-9 to Rs. 8-6. Orientals were, however, unchanged at Rs. 7,275, as were Industrial and Prudentials at Rs. 42-8 and Empire of Indias at Rs. 700.

Electricity shares were featureless. Ahmedabad Electrics, however, recovered some ground from *Rs. 110-5 to Rs.110-10.* Bombay Suburbans lost As. 10 to Rs. 125-10, while Surat Electrics were better by As. 10 at Rs. 128-2. Andhra Valleys were marked down by Re. 1-4 to Rs. 1,402-8, but Tata Hydros *were maintained* at Rs. 147. Tata Powers gained Rs. 7-8 to Rs. 1,500.

The miscellaneous section recovered from the depressed mood of the previous week. Sugar shares emerged better with prices marked up. Belapurs picked up Rs. 2 to Rs. 313-8, in refreshing contrast to the loss of Rs. 6-8 in the previous week. Phaltans were fractionally higher at Rs. 118 and Walchand*nagars changed hands* Re. 1-14 higher at Rs. 225. In the cement group, A.C.Cs. were dull and moved between Rs. 179-4 and Rs. 180-12, before closing at Rs. 180-4. A feature of this group was, however, provided by Digvijays which shot up from Rs. 176 to Rs. 179-4, thus almost recovering the previous week's loss. Shipping shares were dull but steady, *Scindias gaining small ground from* Rs. 15-3¼ to Rs. 15-7¼. Great Eastern Shippings were held at Rs. 16-10. Indian Steamships were better at Rs. 7-11. In the engineering and mining group, Alcocks continued to lose ground from Rs. 280 to Rs. 272-8. This is the fourth week in succession in which the decline in Alcocks has persisted, the fall over this period being Rs. 20. After last week's recession, Premier Constructions gained Rs. 2 to Rs. 158. Shivrajpurs lost a rupee to Rs. 80-8, despite the note of subdued optimism struck by the Company's Chairman about the outlook for the Company. B.B. Petrols were quiet at Rs. 3-14, while Indian Coppers attracted attention and gained As. 2 to Rs. 3-10½.

In the miscellaneous industrial group, Bombay Burmahs recouped a part of the previous week's loss by advancing from Rs. 466-4 to Rs. 470. B.I.Cs. were in demand and rose by As. 5 to Rs. 8-3. National Rayons were firm with a rise from Rs. 197-8 to Rs. 204, though the closing was lower at Rs. 202, due to proximity of dividend announcement and rumours of a debenture issue to finance the Company's expansion programme. Tata Chemicals were a shade better at Rs. 15-4, while Tata Oils disclosed no change at Rs. 40-8. Wimcos returned to favour and rallied from Rs. 196-4 to Rs. 200.

• • • •

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *4th April*

A steady trend was in evidence on the Calcutta Stock Exchange during the week under review. There was no session on Friday on account of *Sriramanavami*. Teas once again claimed a major portion of the funds in the market, and recorded handsome gains. The reduction in the export duty on tea cheered up sentiment further. Sugar shares were also a very active section following the improved outlook for mills during this crushing season. Textiles were steady following the reduction in the excise duty. Jutes, on the other hand, were quiet and the recent publication of good working results of some mills seemed to attract little notice. This was so because of the uncertainty whether there would be an increase in exports of jute goods and, as a result, of the further uncertainty whether working results for the current accounting period would be equally good. Foreign enquiries for jute goods have been below normal, and distressingly enough, prices of raw jute have tended to move up this week. Prices of jute goods fluctuated within narrow levels, but rates would have to move down further to attract buyers. Tobacco shares were dull as it was thought that the addition to excise duties on cigarettes would affect consumption. Miscellaneous industrials were maintained at previous levels, as were engineerings.

Sectionwise, tea shares were very popular, and this week's gains included a rise of Rs. 30 to Rs. 405 in Nagalsurrees, and the hardening of Methonis to Rs. 32 from Rs. 29. Carrons were pushed to Rs. 340 from Rs. 301, with Hantaparas moving to Rs. 400 from Rs. 391. Rajabhats claimed attention and improved to Rs. 37-2 from Rs. 36. Sapols were higher at Rs. 45 as against an opening of Rs. 43-12 and Hansquas moved to Rs. 34-4 from Rs. 30-14. On the other hand, Birparas were subjected to profit-taking and receded to Rs. 297 from Rs. 308, while Jayshrees were shifted to Rs. 13-8 from Rs. 13-2, following the publication of good working results for the year ended December last.

Jutes were dull. Nationals fluctuated between Rs. 34-6 and Rs. 34-11, closing at Rs. 34-8. Howrahs were quiet at Rs. 29-10, realising today Rs. 29-14. Nuddeas receded to Rs. 54-8 from Rs. 54-12. Barnagores changed hands at Rs. 179, while Birlas firmed to Rs. 20-8 from Rs. 19-14. At Rs. 150, New Centrals shed five points, while Anglo-Indias changed hands at Rs. 227 as against Rs. 225 earlier. Indias were put through today at Rs. 208 as against Rs. 222 previously.

In the engineering section, Indian Irons opened at Rs. 35-5 last Tuesday and were around that rate throughout the week. Braithwaites were pushed to Rs. 24-7 from Rs. 24, and Richardson & Cruddas were steady around Rs. 17-9. Texmacos were better at Rs. 16-14 and Burns at Rs. 271.

Among miscellaneous shares, B.I. Corporations were a feature and improved to Rs. 8-6 from Rs. 7-14. Indian Cables were in good demand and improved to Rs. 25 from Rs. 24-12, while Dunlop Rubbers were unchanged at Rs. 37-6 and Rohtas Industries at Rs. 23-14. Martin Burns were quiet at Rs. 23-4 and moved down today to Rs. 23, but Jardine Hendersons were transacted at rates varying from Rs. 116-8 to Rs. 118. Titaghur Papers were noted for an improvement to Rs. 43-13 from Rs. 43-2.

In textiles, Kesorams were in the forefront and rose to Rs. 27-2 from Rs. 25-4, while Dunbars, after realising Rs. 214, gave way to Rs. 212. Elgin Mills were steady at Rs. 17-8.

• • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 5th April

The Madras Stock Exchange remained comparatively dull during the week under review. Textiles, banning a few select scrips, were neglected, thanks to reports of lack of domestic and overseas demand for piecegoods. Even teas did not present a bright appearance. The fixation by the Government of India of a price of Rs. 3-8-9 per lb. of tea leaves for the purpose of determining export duty, which means a reduction of As. 2 per lb. from the duty paid hitherto, did not have any salutary effect on the market. For it only reflected the declining trend in export prices for tea leaves. Rubbers also experienced a quiet trend, though coffees ruled steady. Miscellaneous scrips came in for some enquiry. On balance, business done was small and price movements were limited to narrow levels.

There were two important dividend announcements during the week under review. Peermade Tea Co., Ltd., declared a final dividend of 40 per cent. thereby making a total of 55 per cent. for the year ended 31st December, 1954, as against 37½ per cent. for the previous year. This is the highest dividend declared by any estate so far for the year 1954. Vaikundam (Travancore) Rubber Co., Ltd., announced a dividend of 22½ per cent. for year ended 31st December, 1954, as against 20 per cent. for the previous year.

In the textile section, Coimbatore Pioneers advanced by Rs. 3 to Rs. 226 and Coimbatore Spinnings by Re. 1-4 to Rs. 73-12. Cambodias gained As. 2 to Rs. 12. Maduras were higher by As. 6 at Rs. 45-8. Rayalaseemas improved from Rs. 86 to Rs. 90. Bangalore Woollens, however, lost Rs. 8-12 to Rs. 461-4 and Pankajas As. 12 to Rs. 59-4. Coimbatore Cottons were dull at Rs. 285, Rajapalayams at Rs. 80 and Vasantas at Rs. 230 *cum-div.*

In the tea section Coonoor Teas gathered As. 4 to Rs. 34-8 *cum-div.* and Talyar Teas As. 2-6 to Rs. 14-9-6 *cum-div.* Periakaramalais were better by As. 2 at Rs. 8-2½ and Highlands by an anna at Rs. 16-1. Chandramalais were fractionally better at Rs. 5-9. Coorg Teas, however, were quiet at Rs. 10-1 *cum-div.*, Devasholas at Rs. 25-8 and Devons at Rs. 17-12. So were United Nilgiris Teas at Rs. 295 and Udayagiris at Rs. 19-8. Blue Mountains were fractionally lower at Rs. 3-12.

Among rubbers Be Bes lost As. 4 to Rs. 4-5 and Peninsulars As. 2 to Rs. 16. *Kallas* were unchanged at Rs. 5-8½, Mercaras at Rs. 6-7 and Teekoys at Rs. 8-14. Vaikundams were quiet at Rs. 23-6 and Velimalais at Rs. 6-9. Malankaras, however, put on Rs. 2 to Rs. 26. Pullangodes were fractionally better at Rs. 3-9.

In the coffee section, Coffee Lands gained an anna to Rs. 17-5 and Consolidated Coffees As. 5 to Rs. 19-12. Kadur Coffees was cheerless at Rs. 1-10½ and Mysore Coffees at Rs. 1-11. Puthuiotams lost an anna to Rs. 4-11.

Among miscellaneous scrips, Dalmia Cements (Rs. 10 paid-up) hardened by As. 4 to Rs. 13-4. Mysore Chemicals and Manufacturings disclosed a gain of As. 8 at Rs. 17-8 and Parrys As. 1½ at Rs. 4-9. Rallis improved by Re. 1 to Rs. 39. India Cements gained As. 4 to Rs. 22-12. Mettur Chemicals, however, lost As. 3 to Rs. 8-10 Spencers were down by As. 2 at Rs. 17-2.

EXPORT DUTY ON TEA

The Government of India has fixed the price of tea for the purpose of determining the export duty, at Rs. 3-8-9 per lb., as against Rs. 4-3 per lb. announced on 1st March, 1955. The export duty at this price will be As. 8 per lb., being a reduction of As. 2 per lb. from the duty hitherto in force.

The price is fixed on the basis of the weighted average price of all Indian tea sold in the London auctions during the previous month. This price will be notified on the first of every month. No deduction is made from the London auctions price for transport, insurance, etc, as these factors have already been taken into account in the fixing of the slabs in the Finance Bill.

The revision of the price, as stated above, is in terms of the slab system of export duty introduced under the latest Budget proposals. Though the introduction of a slab system has been gratefully acknowledged by the tea industry as a vastly superior one, both in fairness and in flexibility, to the old system of a fixed duty irrespective of the price of tea, it must be mentioned that this system, too, is not entirely free from defect. The defect is that there is no means whereby the duty can be varied promptly in accordance with variations in the price of tea. To take the latest decision as an instance. The Government says that it has fixed the price on the basis of the weighted average price in London during the previous month, but the current price in London is much below the price fixed by the Government, namely, about 3s. per lb. If export duty is excluded from this, the export duty applicable will be only As. 6 as against As. 8. Thus, the tea exporter is being asked to pay a higher rate on account of the official delay in fixing the price. Tea circles also feel that it would help them to understand the position a great deal, if the Government were to fix and publish the exact manner in which the duty can be ascertained *from time to time.*

A CORRECTION

In the sixth para of the article "The Muddle in Bombay Bullion Market" appearing in our last issue—*vide* pages 608 and 636—some words were inadvertently left out in the second sentence. This sentence should read thus: "One of the Directors wrote to the Finance Minister that, in respect of clearing payments, two days time-limit should be extended, during which period they would try to bring about a settlement."

AMERICAN LETTER

ADMINISTRATION'S HONEYMOON WITH DEMOCRATS OVER

MOTOR WORKERS' VAGUE THREAT OF STRIKE

From Our Own Correspondent

NEW YORK, *24th March*

BY far the two most important developments in the United States in recent days and weeks was the release of the State Department papers on the Yalta Conference and the Senate Fulbright Committee's study of the rising stock market.

The release of Yalta papers, in the historial perspective of a few years, may turn out to be a major blunder. What happened was that, in the desire of the executive branch of the Government to be co-operative with Congress, the Yalta papers were made available to several Congressional committees. Literally within hours of it, both the *New York Times* and the *New York Herald Tribune* published excerpts. Then, the State Department released the papers to everybody.

The desire to be co-operative with Congress on the part of the Administration backfired badly. Republicans in both the Senate and the House of Representatives, apparently, thought the revelation of the Yalta documents would be damaging in the strictly partisan sense. That remains to be seen at the next election.

What happened was that the Democrats became quite angry and now the entire liberal foreign trade programme of President Eisenhower is in danger of collapse since it requires the support of a substantial number of Democrats. In other words, the release of the Yalta papers not only jeopardised an important part of the Administration's legislative programme, but it ended the honeymoon of the Republican Administration with the Congress, now controlled by the Democrats.

The strange aspect of the political side is that the popularity of the President has never been greater than it is at present. No doubt, he could be elected tomorrow on either the Republican or Democratic ticket without any difficulty.

Regional political stresses are great, however, and party lines are being transcended in many instances for matters of principle or expediency. Senator Joseph McCarthy, who was so much in the headlines last year, has almost completely disappeared in public print since the mild denunciation of his practices by the Senate.

Two outstanding observations about the Yalta papers are being made here. One is that, obviously, President Roosevelt was a very sick man and should never have attended the Conference. The other is that the East and the West spoke two different languages as it were.

The promise of free elections meant Communist elections to the Communists and an unfettered expression of opinion by the voters to the West. As a matter of hindsight, few people understand how the leaders of the West could have been so gullible at the time.

Another point which seems to be established in United States public opinion is that American intelligence during the war left much to be desired. Military advisers of the President were suggesting at the time of Yalta that it would take two more years to subdue Japan at the cost of hundreds of thousands of lives and that Russia would have to cope with the mighty Japanese armies in Manchuria. It now turns out that Japan was about finished even without the atom bomb and there were hardly any Japanese left in Manchuria.

So far as the investigation of the stock market by the Senate Fulbright Committee is concerned, it produced at one point sharp setbacks which were eradicated later. In everybody's mind, old enough to remember, the study resembled the Congressional investigation into the stock market shortly before the market crash of 1929.

Hearings, now and then, found no reason for alarm, even though prices had gone up. The most eminent authorities suggested that the market upsurge was primarily the result of the previous inflation and that there was nothing to worry about.

There is a chance, though, that the Federal Reserve Board may become concerned with substantially higher stock prices and might raise margin requirements above the present level of 60 per cent.

Another field which is causing concern is that of building and construction. Builders started homes under private financing at a rate of 1.4 million a year in February, 20 per cent. above February, 1954.

In order to sell these homes, innumerable incentives are being offered. The shrewdest observers claim there is not much more room in this country for more than 1 million homes a year to go up considering obsolescence and the normal increase in population.

On the other hand, an air of optimism prevails. This is exemplified not only by the stock market but by planned expenditures of business for new plant and equipment this year at the rate of $27,400 million, as against about $26,000 million last year.

AID FOR UNDERDEVELOPED COUNTRIES

IT was, indeed, an able and impressive survey of the recent trends in the economy of South-East Asian countries that Mr. C. Blaker, Chairman of the Hongkong and Shanghai Banking Corporation, made when he addressed the ordinary annual general meeting of the Bank held at Hong Kong recently. Mr. Blaker did well to lay special stress on the need for more external capital investment in this region and that on more generous terms than hitherto offered to the the underdeveloped countries. Evidently, he must have been prompted to make this remark by two vital considerations. First, the standard of living of the masses in South-East Asia is at too low a level and, unless it is raised speedily, the economic position of the free world will not be secure. Secondly, the policy of financing a part of the development programmes by budget deficits, now being followed by some countries, should not be carried too far, as such is beset with dangerous consequences. Urging caution in deficit financing, Mr. Blaker said: "There have been so many instances during the last two decades of inflation getting out of hand in Eastern countries that the risks must be clearly in the minds of the financial authorities responsible for any inflationary action and the responsibility is a serious one."

There is much reason in Mr. Blaker's warning, as also in his statement that, if internal finance cannot be raised for development needs, "the safest way out of the difficulty" is to seek external finance—private or Governmental. But the point is whether much reliance can be placed on external finance, what with the restrictions imposed by the Governments of several countries on the inflow of such capital. Mr. Blaker was, therefore, right when he complained that foreign private investment had not hitherto received much encouragement from the less developed areas. "Political uncertainties, nationalistic suspicions and rapid restrictions," to quote him, "have antagonised and frightened potential investors ... even foreign Governmental aid, if coming from one exclusive source, has been looked at with some suspicion in recent years."

The Hongkong and Shanghai Banking Corporation Chairman considered the establishment of an International Finance Corporation (as an affiliate of the World Bank and with an initial capitalisation of $100 million) as a step in the right direction. The Corporation, as is well known, is designed to increase private investment in the less developed countries. He also welcomed the setting up of the Industrial Credit and Investment Corporation of India. Characterising this body as "a promising international-cum-private investment concern," he observed that, if successful, the Corporation might well prove to be a model for similar ventures in other Eastern countries. Indeed, Pakistan has already taken steps to establish a similar corporation.

Mr. Blaker's references to India are noteworthy. He had all praise for the financial policy of the Government, as witness his statement that Mr. Nehru's right-hand man is Mr. Chintaman Deshmukh, "the able Finance Minister, whose policy gives ample evidence of the practical financial mind which has maintained firm control of India's financial economy in the last few years." He also felt that the facts of unemployment, under-employment and low level of national income were being faced with realism. He felt, too, that private capital had been encouraged to go ahead without hindrance in certain fields of operation. At the same time, Mr. Blaker drew attention to some of the disturbing trends in Indian economy. He said: "Indianisation is not being pressed unduly, but it remains a threat of uncertain cogency. The revision of Article 31 of the Constitution may not be harmful at the present time, but there are fears as to what may happen when new people come into power. Similarly, the managing agency firms have been told that they are unduly apprehensive, yet their fears for the future are not assuaged. Finally, the nationalisation of the Imperial Bank of India was done with worthy motive, but it caused a bad impression, as it was not thought to be necessary nor desirable."

The above extract is a clear and objective appraisal of the misgivings under which foreigners are doing business in India. These misgivings, as Mr. Blaker pointed out, apply not so much to the present as to the future. This note of warning deserves to be headed, as it has been sounded by a person who is the head of an institution which is really interested in the economic development of India (as also of other countries in the Asian region) and which fully supports programmes designed to raise the living standards of the people of this region.

INDO-GERMAN TRADE PACT

A trade agreement between India and the Federal Republic of Germany was signed on 31st March in New Delhi. The Agreement, effective from the 1st inst., will remain valid up to the time it is terminated by either party by giving three months' notice. It facilitates trade between the two countries in all commodities, subject to their respective import, export and foreign exchange control regulations in force from time to time. According to present Indian regulations, the Federal Republic is treated on a par with other countries in the soft currency area. The Federal Republic has agreed to treat India on a par with those countries which, not being members of the Organisation for European Economic Co-operation, clear their accounts through the European Payments Union. Imports into the Federal Republic from these countries have been liberalised to the extent of 88 per cent. of the total import trade of Germany, which means that, for commodities covered by the liberalisation scheme, import licences are freely issued.

This Agreement differs from other trade agreements in some important respects. It is not for a limited period. It is not really in the nature of a bilateral deal. It is does not contain an exhaustive list of the items, the import of which would be permitted by each country from the other in terms of the Agreement. Instead, the Agreement only reaffirms the desire of the two countries to expand their mutual trade and to give each other non-discriminatory treatment in the matter of import licensing. In 1954, imports from West Germany were valued at Rs. 34.52 crores, as against Rs. 28.78 crores in 1953. Exports from India to West Germany accounted for Rs. 14.59 crores in 1954, as against Rs. 10.37 crores in 1953.

In India, all import licences are issued with a validity for the entire soft currency area, so that the importer is free to go to Germany for his requirements if German prices, qualities, deliveries, etc., are suitable. Likewise, in Germany, a very large percentage of the import trade has been "liberalised" for all items covered by such liberalisation. Consequently, it is expected that there would be very little difficulty on the part of Indian exporters in securing import licences to Germany, if the German importer were prepared to buy the goods in India.

Among the items of interests to Indian exporters to which the liberalisation is applicable, the following deserve mention:

Tea, coffee, cotton, wool, coir ropes and cordage, palmyra fibre, manufactured and unmanufactured tobacco, animal hair, herbs and other raw drugs, leather manufactures, sheep and goat skins and leather, iron ore, manganese ore, mica and shellac.

There are, however, certain commodities, the export of which the Government of India is anxious to promote and the import of which into the Federal Republic of Germany is still subject to quantitative restrictions. These are cotton piecegoods, coir products (including mattings, door mats and carpets), jute manufactures, miscellaneous cotton, silk and artificial silk textiles, hand-made laces, tanned and finished leather from hides and calf skins and certain varieties of finished leather from sheep and goat skins, and pineapple juice. The Government of the Federal Republic of Germany has agreed to permit import of these goods into Germany up to certain annual limits. The exact quota for each item will, however, be announced in May. The quotas will be subject to revision annually. An important feature of the Agreement is that it also contains an offer from the German Government to facilitate technical co-operation between German and Indian firms and institutions.

FLOOD CONTROL

A notable feature of the outcome of the proceedings of the third meeting of the Central Flood Control Board, held recently in New Delhi, under the chairmanship of Mr. Gulzarilal Nanda, Union Minister for Irrigation, Power and Planning, is the Central Government's decision that financial assistance to States for flood control works will be in the shape of 30-year loans, interest-free for the first five years. Although some States felt that the interest-free period should be longer, the Board concurred with the Central Government's decision. Funds, in the shape of such loans, aggregating Rs. 2.31 crores, had been placed at the disposal of various States, in order to enable them to finance their flood protection works in 1954-55, but it is not yet known as to how much of this has actually been spent. It is also noteworthy that a provision of Rs. 10 crores is being made in the Central Government's Capital Budget for 1955-56 for giving loan assistance to the States in connection with their flood protection programmes.

The Board approved of a few flood control schemes, proposed by Assam, Bihar, Uttar Pradesh and Punjab States. It emphasised that greater use should be made of the existing research stations for conducting model experiments for flood control works and advised the States, which found it hard to secure research staff, to depute their best technical officers to the Poona Research Station for training. It requested the States to expedite schemes for soil conservation in flood-affected areas. The Board also considered the procedure laid down for scrutiny of flood protection works and agreed that non-emergent schemes should be prepared by State Governments, in consultation with their technical committees and Flood Control Board, and then sent to the Central Water and Power Commission for technical scrutiny. In the event of there arising a difference of opinion between the Commission and the States, or where the Commission desires a second opinion, the schemes concerned would be placed before the appropriate River Commission. (It may be mentioned here that there are three River Commissions—the Ganges, the Brahmaputra and the North-Western Regional rivers.) Thereafter, the schemes would be processed by the Ministry of Irrigation and Power in the usual manner and the C.W.P.C. would put all the schemes before the Central Flood Control Board for approval.

It is gratifying to note that flood control schemes are being executed expeditiously. Public co-operation is also not lacking. According to Mr. Nanda, about 50 per cent. of stone in the spurs and 10 per cent. of *ballies* at Dibrugarh has been laid. In Bihar, where the construction of embankments is in progress, about 12 per cent. of the work has been completed on the Kosi, 54 per cent. on the Burhi Gandak and 32 per cent. on the Baghmati. Satisfactory progress is being maintained in the U.P., where 75 per cent. of the work for providing protection to certain villages has been executed and 60 per cent. of the Chitauni bund and 50 per cent. of the Bellia-Beria bund has been finished. For giving flood protection to towns in West Bengal, 60 per cent. of the earthwork and 35 per cent. of the stone work has been done and 50 per cent. of the sal *ballies* needed has been collected.

Apart from these, it is proposed to install 119 additional rain gauges and observatories in Nepal, Bhutan, Sikkim, U.P., Bihar, West Bengal and Assam during the next three years, commencing from April, 1955. The Union Government is considering an estimated expenditure of Rs. 7.80 lakhs. Permission for Indian Meteorological Department parties to visit Nepal, Sikkim and Bhutan for the installation and observation of rain gauges has been sought from the Governments concerned. The Nepal Government has already agreed to allow work to proceed at 10 stations in the *terai* area, as against 51 stations in the hills. The Government of China has been requested to install 41 rain gauges in Tibet and to supply the data recorded at these stations for technical studies.

INSURANCE ACT

A non-official Bill to amend the Insurance Act in respect of payment of renewal commission to agent's successors has been introduced in the Rajya Sabha. The law, as it stands, no doubt provides for such payment but, in actual practice, it has been found difficult to implement this provision owing to certain legal impediments. The intention of the author of this non-official Bill is evidently to rectify them.

It may be mentioned here that, as a result of an amendment made in 1950 to the Insurance Act of 1938, there is a provision in the law which says that, if an agent has served the insurer continually and exclusively in respect of life insurance business for at least five years and policies assuring a total sum of not less than Rs. 50,000 effected through him for the insurer were in force on a date one year before his ceasing to act as such agent for the insurer, and that the commission on renewal premiums due to him does not exceed four per cent. in any case, or if an agent has served the insurer continually and exclusively for at least ten years and after his ceasing to act as an agent he does not directly or indirectly solicit or procure insurance business for any other person, the commission payable to him shall, notwithstanding the death of the agent, continue to be payable to his heirs for so long as such commission would have been payable had such insurance agent been alive. There is nothing new in this move as an unsuccessful attempt to this effect was made formerly.

It would appear that the implementation of this provision is difficult, because the renewal commission varies from year to year, so that its capital value cannot be assessed and a succession certificate obtained. The Bill, it is stated, seeks to remove this difficulty, in order that the interests of both the insurers and the agents may be protected and the intention of Parliament may be given effect to.

PAKISTAN BUDGET

Thanks to political exigency, there was complete departure in the presentation of the Pakistan Government's Budget for the financial year 1955-56. As the Constituent Assembly remained dissolved, the Finance Minister of Pakistan, Mr. Mohammed Ali, announced the Budget in a broadcast speech on the last day of the previous financial year, that is, on 31st March, 1955. The Budget has been published in a White Paper and authenticated by the Governor-General under Sections 33 and 36 of the Government of India Act, 1935, as amended by Sections 4 and 5 of the Emergency Powers Ordinance of 1955. A deficit of Rs. 1.4 crores (before taking into account the contemplated tax measures), according to the Press version of the Budget, is anticipated for the current (1955-56) year. The deficit compares somewhat favourably with the revised estimate of the deficit for 1954-55 at Rs. 2.5 crores.

The statement below gives the budget estimates for the current year, as compared with the revised and budget estimates for the previous year:

(In crores of rupees)

	1954-55 Budget	1954-55 Revised	1955-56 Budget
Expenditure ...	111.37	177.95	120.39
Revenue ...	113.68	115.44	119.02
Deficit (−) or surplus (+) ..	+2.21	−2.51	−1.37

The deficit of Rs. 1.40 crores is proposed to be converted into a nominal surplus of Rs. 5 lakhs through the implementation of three additional tax proposals which have already been given effect to by a special ordinance. These are: (1) an increase in the rates of excise duty on cigarettes falling in three higher priced categories by Rs. 4-3, Rs. 2-10 and Rs. 2-10, respectively, per thousand cigarettes; (2) the levy of an excise duty of 6¼ per cent. *ad valorem* on rayon cloth; and (3) the reimposition of the export duty of As. 3 per lb. on tea which had enjoyed full exemption since September, 1952. As against these fresh tax imposts, the Finance Minister of Pakistan has also endeavoured to provide relief to lower-income groups by reducing the excise duty on coarse cotton cloth by 50 per cent. Further, with a view to encouraging exports and thereby to ensure better return to producers of rice, raw hides and skins, and jute rope, he has exempted these products from payment of export duty. Another important measure of tax relief announced by the Finance Minister relates to enhancement of rebate allowed in import duty on component parts of radios from 20 per cent. to 44 per cent. as a measure of additional assistance to the radio assembly industry.

A striking feature of Pakistan's Budget for the current year is the continued high level of defence expenditure. Thus, the Government proposes to spend during 1955-56 as much as Rs. 80 crores on defence, exclusive of the outlay of Rs. 8 crores on reorganisation of Defence Services to be met from counterpart funds established under the U.S. commodity aid; even this is exclusive of the cost of equipment being supplied under the U.S. military aid programme. Although the amount of Rs. 80 crores is the same as that incurred in the year 1954-55, it represents more than 67.2 per cent. of the aggregate revenue receipts, including those of railways. This is, indeed, a huge amount, considering the size of Pakistan and the more urgent need for accelerating the pace of economic activity in the country.

The capital budget of the Pakistan Government provides for an expenditure of Rs. 124.4 crores during 1955-56. This expenditure, according to the Finance Minister, is meant almost entirely for financing the economic development of the country. The provision made for the next year is higher than that in any previous year and is nearly eight times the amount of Rs. 14.9 crores spent in 1950-51 on development. Capital expenditure will be financed by internal and external borrowings, foreign aid and a moderate degree of deficit financing. Out of the provision for development expenditure, a sum of Rs. 51.9 crores is earmarked for development schemes sponsored by the Central Government and Rs. 49.5 crores are to be given as loans to the Provinces and local bodies for their development schemes. A sum of Rs. 13.4 crores will be spent out of various development funds created for specific purposes such as the Refugee Fund, Social Uplift Fund and Agricultural Development Fund. This sum will be given as grants to Provinces and other organisations for similar purposes. Of the amount to be directly spent by the Central Government provision of Rs. 14.5 crores has been made for railways and the Chittagong port, Rs. 3.7 crores for posts and telegraphs, and Rs. 2.4 crores for the Warsak Hydro-electric project. Provision of Rs. 15.1 crores has been made for investment in projects of the Pakistan Industrial Development Corporation. In order to meet the growing requirements of industrial credit, it is proposed to establish an Industrial Bank during the next year. The Government will make a special deposit of Rs. 3 crores in this Bank, without interest, and the State Bank will give a loan of Rs. 2 crores at a low rate of interest. A sum of Rs. 2 crores has been provided for investment in the share capital of the Agricultural Development Finance Corporation and Rs. 1 crore for the House Building Finance Corporation. A provision of Rs. 75 lakhs has been made for establishing small-scale industries.

The 1955-56 Pakistan Budget White Paper and the broadcast speech of the Finance Minister do not make any reference to the repayment of the Partition dbet to India. This means that this year, too, the Pakistan Government does not intend to make any payment to India in satisfaction of this claim. Two instalments of Rs. 9 crores each have already become overdue. India's Finance Minister has, however, stated that further negotiations are due to take place in the near future and that a settlement will be reached in the current year.

SOME SHIPPING PARADOXES

From A Correspondent

NOT long ago, there were talks of over-tonnage on the coast—indeed some shipowners went to the length of saying that the saturation point in the coastal trade had already been reached. Oddly enough, now we are told that the coast is faced with a situation of under-tonnage, that difficulties are being experienced to get enough ships even for the carriage of the two most important bulk cargoes, namely, coal and salt. Coal shipments at present amount to only 11 to 12 per month, or barely one-third of the peak reached in the early post-war years when there were as many as 38 shipments of coal in a single month. Only a few months ago, the shipowners were agitated over the dwindling volume of coal cargo which continues to be the backbone of the coastal trade, and urged the Government for better rail-sea co-ordination and pressed for a guarantee that at least two million tons of coal, or almost double the present quantity, would be earmarked for coastal ships. But today not enough vessels are being offered to meet the modest requirement of 11 or 12 shipments. The earlier scramble for coal cargo has given place almost to an attitude of indifference.

This tendency is noticeable also in the salt trade. Some 20 shipments of salt have been programmed for the next two months; only one-quarter has been covered so far by the offer of vessels. The transport of Andamans timber, which is a relatively small item, underlines the same trend. The shipowners, never too keen on this cargo, are even less so today, especially since they consider the present rate uneconomic.

What are the reasons for this tight tonnage position on the coast? There has been some increase in the volume of trade—as against 27.5 lakh tons of cargo in 1953, there were about 28.5 lakh tons in 1954, while the total may reach 30 lakh tons in the current year. This is, however, a small increase which by itself could not have created the present shortage, the more so as during the same time more ships have been added to the fleet. For the real explanation we must look in other directions.

Effect of Labour Situation

First of all, there is the appalling labour situation at the ports with all its devastating impact on shipping—go slow, low output, chronic congestion, abnormal hold-ups in berthing ships, all leading to inordinate delays in their turn-round. With this increase in the idling time of the ships, much more tonnage is now needed to carry the same quantum of cargo. In other words, the effective tonnage, as measured in terms of the cargo carried, has gone down by 15 to 20 per cent. Besides, there has been a big rise in the operating costs. It is understood that the shipowners, in their anxiety to meet the extra costs, are now proposing to raise the coastal freight by something like 10 per cent. These are the cumulative effects, long foreseen by many, of a fast developing disease that has been eating into the vitals of the shipping industry. It is yet to be seen how far the Dock Labour Enquiry Committee succeeds in arresting this trend.

It cannot be denied, however, that two other factors have contributed towards the creation of a tonnage shortage: virtual elimination of chartered tonnage from the coastal waters and increasing overseas fixtures of Indian-owned vessels. In July last, for example, there were 33 owned and 12 chartered vessels operating on the coast; today there are only 23 owned ships and six charters. The number of chartered vessels will come down to three with effect from 1st April, and these too are destined to disappear by, say, June next when their charters are due to expire.

The elimination of charters just when the coast needs more tonnage because of port delays and, to some extent, also of increased trade, has no doubt aggravated the shortage. Moreover, owned vessels, though originally intended for the coast, are now increasingly plying in the overseas trade. Owing to a favourable world freight market, the overseas employment of the larger ocean-going oil or diesel boats have become more attractive than their coastal operation.

What would be the best way of meeting the present shortage in the coastal tonnage? An improvement in the dock labour situation is, of course, the first obvious necessity, if only to rescue our shipping from a crisis that threatens to cripple it. But even if normalcy is restored at the ports leading to normal turnround of vessels, we shall still be faced with the problem of finding more tonnage. For the fact remains that the coast is now served by only 29 vessels, as against 45 in July last, and that, by June when all charters are withdrawn, the coastal fleet may not have more than 23 vessels. Acquisition of fresh tonnage will take time and cannot give relief in the present situation. There are only two real alternatives: either to bring enough owned ships back from their overseas employment, or to lift the ban on the employment of charters on the coast.

Nothing to Gain But a Great Deal to Lose

There is nothing to gain, and a great deal to lose, from the first course. If the shipowners are now employing more of their owned vessels overseas, it is only because by doing so they can earn more freight; there is no reason why they should not be allowed to do so. The extra profit they earn from such overseas employment will help them acquire more tonnage later; it is to nobody's interest to compel them to forgo it. The increased overseas employment will bring much more foreign exchange; there is no reason why the country should sacrifice it. Yet, incredible as it may seem, some are tenaciously advocating exactly this retrograde line of action, namely, that the owned tonnage should be withdrawn from the overseas field and placed on the coast to meet the tonnage shortage. Why? Because a decision has already been taken to eliminate all foreign flag charters from the coast. The decision itself is looked upon as sacrosanct; its wisdom must not be questioned by anyone; all policy must be rigidly subjected to it, no matter what price we may be called upon to pay in the process.

Here, then, are some of the worst paradoxes that our shipping suffers from today. When there should be an all-out drive to raise our participation in our overseas trade, we are unwittingly doing our best to stabilise it at the pitifully low level of 5 per cent; we are so concerned with the idea of eliminating foreign flags from the coast that we no longer mind if 95 per cent. of our overseas cargo continue to be carried in bottoms flying foreign flags; we are so preoccupied with the thought of carrying all the "rupee cargo" in national flag vessels that we are quite happy to leave all the "sterling and dollar" cargo to be handled by others practically as before; we are so fond of our newly acquired emotional blinkers that we can hardly see the advantages of carrying the Indian flag across the seas more and more to foreign ports, or the folly of expending crores of rupees worth of foreign exchange without an attempt to save as much of it as we can with whatever tonnage we possess.

Poor Patriotism

We have, on several occasions, expressed the view that the decision to eliminate charters from the coast was a hasty one, that it was based on an inadequate appraisal of facts, even of our own economic interests, that it was essential to take a second look at it. All that we have heard in reply up till now is a reiteration of the thesis that plying foreign flag vessels in the sheltered waters of the coast would be an unpatriotic act. Surely, it is poor patriotism that makes us do poor business with the tonnage that has been painfully acquired at the cost of a vast sum of money.—*All Rights Reserved.*

BRITISH STEEL MISSION IN INDIA

FOREIGN TECHNICAL ASSISTANCE ASSUMES GREATER IMPORTANCE

From A Special Correspondent

NEW DELHI, *5th April*

THE arrival of the British Steel Mission, this week, headed by Sir Eric Coates, sometime Finance Member to the Government of India, is a significant event, not only indicating the growing Indo-British partnership in the commercial sphere but also the desire of Britain to contribute its share to the development of one of the vital key industries of this country. It is likely that the new steel factory will be located in Durgapur, West Bengal. The Mission will study, along with Indian experts, matters relating to capacity, processing, range of products, estimation of cost, etc. It will also study the distribution of functions between the Indian organisation which will own the plant, on the one hand, and the consultants, suppliers, erectors and other parties concerned in the commissioning of the works, on the other. Sir Eric Coates is accompanied by seven experts, Dr. Thomas Colclough, and Messrs. G. N. Hewett, W. W. Franklin, T. H. Stayman, D. T. Barritt, V. G. Burley and M. D. J. Brisby.

DELHI LETTER

It is generally expected that the above steel plant will cost nearly Rs. 45 crores. Despite the fact that, at the time of the construction of the factory, competitive tenders are to be invited from leading international manufacturing firms, the British Mission is hopeful that a substantial portion of these tenders will be secured by British firms. The U.S. firms are expected to be keen competitors in this field in the coming months. The American firms are reported to be short of work of this kind and to have begun to cut prices in order to secure orders. Now that this Steel Mission has been received by Mr. S. Boothalingham, Special Secretary in the Ministry of Commerce and Industry, it should be clear that negotiations for the establishment of the steel factory, the third of its kind in the country, will be conducted by the spokesmen of the Commerce and Industry Ministry.

A welcome development is that the Bhilhai steel works project division will set up a design engineering branch of 300 technicians to collaborate with the Russian experts in designing the Bhilhai plant. This step is being taken with a view to enabling Indian engineers to design in future steel plants independently of foreign assistance. Efforts are beign made to speed up the Bhilhai steel project also. The General Manager for this project has already been appointed. Recruitment of key personnel, such as chief design engineer, chief civil engineer, engineer in charge of water works, etc., is being expedited. Foreign technical help, collaboration and arrangement of training facilities for Indian personnel in foreign countries under the Colombo Plan and the United Nations Point Four Scheme have become important factors in the industrial development of India during the post-war period. This form of assistance has assumed greater importance, particularly during the last one or two years. For instance, in regard to steel manufacture, the Government of India is receiving assistance from Germany, Soviet Russia and the U.K.

As regards the Rourkela steel plant, there is already a proposal that the factory should be built up in such a way as to produce ultimately two million steel ingots as against the present plan to produce one million tons of ingots. The Bhilhai steel plant is also being designed in such a way that its capacity might be expanded to one million tons of end-products, besides one to three lakh tons of foundry pig iron. The Mysore Iron and Steel Works at Bhadravati is also being expanded to produce one lakh tons of steel. The installation of two electric furnaces for the production of pig iron (each of capacity 35,000 tons per annum) has been completed and schemes for the installation of a spun cast iron pipe plant (for the production of about 17,000 tons spun pipes per annum) and for putting up a sintering plant (which would enable them to use powdered ores in their furnaces) have been taken in hand. A provision of Rs. 120 lakhs as loan has been made in the Central Budget for 1955-56.

The Mysore Government has also submitted proposals for the manufacture of alloy, tool and stainless steel at an estimated cost of Rs. 7.4 crores. These schemes have been scrutinised by a firm of American experts and the Mysore Government is of the view that the Central Government should give necessary help in the interest of economic utilisation of available resources and integrated progress of the industry. The production of special types of steel will also reduce imports of these products and strengthen the economy of the country.

In a number of other directions also, foreign technical advice and help have been forthcoming in abundant measure. During 1954 the services of two experts from a reputed firm of consulting engineers of New York were obtained to advise the Indian Standards Institution in connection with the standardisation and preparation of Codes of Practice, etc., relating to the production and use of structural steel. Also, a Technical Assistance Agreement was signed between the Governments of the U.S.A. and India in 1954, under which the services of some production engineers and other specialists would be provided to certain important Indian industries such as electric fans, bicycles, hurricane lanterns, etc., cutting tools, electroplating and enamelling, diesel engines, bolts and nuts, wood screws, razor blades, sheet glass, coated abrasives and incandescent filament lamps. Under this Agreement, a productivity and management team of five engineers has been made available to the National Newsprint and Paper Mills Ltd. in Madhya Pradesh.

Demands were also placed for the services of experts for glass moulds, tea chest plywood, textile machinery and blacksmithy under Point Four Programme and U.N.T.A.A. The services of two Russian experts to advise the Indian steel foundries on improvement of technique and methods have been obtained from the Government of the U.S.S.R. through direct negotiations.

Efforts have also been made to secure training facilities abroad on behalf of Indian industries. Under the Colombo Plan, training has been arranged in Canada for one candidate in the processing of bread flours and production methods of baking bread and for two candidates in the U.K. in the application of dyestuffs in the textile industry and for five candidates in iron and steel foundries. Training facilities are also being arranged for one candidate each in such fields as aluminium, wall boards and glass tubes in Canada and fine chemicals and anti-friction alloys in the U.K. under the Colombo Plan and in mineral wool fibre insulation, cement, asbestos sheets, glass, fertilisers, refrigeration and hydraulics in the U.S.A. under the Point Four Programme. Training has also been arranged for one candidate in automobiles in Canada and for another in machine tools in the U.K., outside the Technical Assistance Scheme.

Foreign capital is also being encouraged in industries which require considerable technical skill and expert knowledge. During the first eleven months of 1954, consent was given for the issue of capital aggregating Rs. 93.6 crores, out of which Rs. 84.2 crores were proposed to be invested in industrial companies. Out of this, the Government permitted Rs. 26 crores to be invested by non-residents. Among the industries in which foreign capital was permitted to be invested are coal mining, manganese mining, boating and shipping, coal-tar dyes, spindle tapes and other belting, cement, flocked textiles and steel rolling and wire products. Apart from cases involving the participation of foreign capital there are a number of schemes in which manufacture has been undertaken by Indian firms on payment of royalties or fees to foreign firms which supplied technical know-how. Some schemes of this kind, sanctioned during the last year, relate to elevating trucks, timkin axles, diesel engines, oil engines, centrifugal pumps, adrema address plant models and hand printing machines, metal closures, saddles for cycles, paints (galvanising process), photoprinting on glass, manufacture of bichromates of soda and allied chrome compounds, plastic moulding and aureomycin.

RUBBER PRODUCTION TO BE DEVELOPED

The Government of India has under consideration certain development schemes to increase the supplies of indigenous rubber in order to meet the increased demand. This is disclosed by the Union Ministry of Commerce and Industry's Administration Report, 1954-55, which foresees a considerable increase in consumption of raw rubber with the progressive development of transport industries.

The total production of raw rubber during 1954 amounted to 21,493 tons, as compared with 21,136 tons in 1953. The total consumption during the year was 25,487 tons, as against 22,373 tons in the previous year. Thus, the rate of increase in consumption outstripped that in production. On the recommendation of the Rubber Board, the Government of India allowed manufacturers to import rubber up to a total quantity of 1,844.50 tons. In addition to a quantity of 1,651.90 tons allowed to be imported under Dry Rubber Content Scheme for the first and second half of 1954. The actual quantity imported by the manufacturers on the above account during the year was 3,371 tons. The total stocks in the hands of producers and dealers (including stocks in transit) at the close of the year amounted to 5,408 tons, as against 6,253 tons at the beginning of the year, and those with the manufacturers were 3,279 tons, including 1,189 tons of imported rubber.

DOES DEFICIT FINANCE MEAN NO DANGER?

MR. G. D. BIRLA'S ANALYSIS OF PROBLEM OF UNDERDEVELOPED ECONOMY

FOR a studious and observant banker, the past twelve months have provided ample food for thought, thanks to the publication of three monumental reports—the reports of the Committee on Finance for the Private Sector, the All-India Rural Credit Survey and the Taxation Enquiry Commission. Together, these three reports, which might well be designated the triad or trilogy of Indian finance, discuss many intricate financial themes. Small wonder then that, when Mr. G. D. Birla, Chairman of the United Commercial Bank, addressed the annual meeting of the Bank, he devoted a considerable part of his critical and comprehensive address to a discussion of the recommendations of these reports, in general, and the Report of the Taxation Enquiry Commission in particular.

Mr. Birla called attention to the "valuable" recommendations of the Committee on Finance for the Private Sector which were calculated to facilitate the undertaking by commercial banks of new responsibilities to help the industry directly and through the medium of specialised finance corporations. It was a matter for gratification that the Reserve Bank had implemented several of these recommendations. Referring to the report of the All-India Rural Credit Survey, he pointed out that the Committee had made it "unambiguously clear that the whole object of the programme would be, not the nationalisation or near-nationalisation of commercial banking in the country, but the provision for, and the increasingly effective evolution of, an integrated India-wide, commercial banking institution associated with the State and responsive to its policies for the benefit of the rural areas." He expressed the view that, if the Committee's suggestions were implemented, the problem of agricultural credit and marketing which had baffled generations of bankers would be nearer a satisfactory solution.

Naturally enough, the Taxation Enquiry Commission's Report, that *magnum opus* among blue-books, came in for more extended comment. After summarising the salient features of the Commission's recommendations, Mr. Birla referred to the fact that the Commission did not favour deficit financing but recommended increased taxation. He felt, however, that there was not only need for deficit financing but there was no danger from it. The need for it, according to him, arises from the fact that the second Five-year Plan calls for greater investment than the first Plan and the available resources, internal as well as external, will be insufficient for reaching the targets of development. Nor is deficit financing harmful, because "where employment is low and there is a great margin for increasing production, a spending programme cannot lead to inflation." It seems, however, necessary to emphasise that deficit finance will not have dangerous consequences only when production is actually increased through its use, and also when sufficient care is taken to ensure that such increase in production is brought about, not at any cost, but through economic costs.

The Matthai Commission has, as is well known, laid great stress on restriction of consumption, with a view to increasing capital formation and has at the same time advocated the levy of excise duties. There is a certain difficulty in reconciling the two objectives. Capital formation is advocated because capital is needed to increase production. But, in so far as excise duties and the levy of other taxes, inhibit consumption, increased production is not likely to be fully absorbed. As Mr. Birla put it, "if restraint is to be placed on consumption, increased production would only result in stock-piling which, in turn, would react on production." A higher standard of living, as he rightly held, can be obtained only through a parallel increase in both production and consumption. As regards capital formation, he feared—this fear is not altogether unfounded—that the implementation of the Commission's recommendations, especially those in respect of the levy of increased taxes, would result in the "diversion of funds from the private sector to the public sector and thus unduly handicap the private sector." Accordingly, he felt compelled to invite the attention of the authorities to the need for some caution in implementing the Commission's report. He said:

"The report is bound to be the reference book of Finance Ministers for several years to come, but I hope that, in giving effect to fresh proposals for taxation based on the Commission's recommendations, the Government would always bear in mind the need to ensure that capital formation is not impeded and that production and employment would increase."

Although Mr. Birla thus emphasised the need for enabling the private sector to acquire and retain sufficient resources for development, he was not oblivious of the requirements of the public sector. He recognised that the public sector was as vital to the national economy as the private sector. Indeed, in some spheres—as, for instance, in a sphere where the capital required is large and beyond the ability of the private sector—it is only the Government that can undertake to function at all. But he rightly insisted that there should be close co-ordination between the private and public sectors, in order to reach the goal of maximum production and full employment. He declared: "It is the goal that matters and not the means which scare some unnecessarily."

The crux of the problem of an under developed country is, as Mr. Birla put it aptly enough, that the desire to consume is more than what is consumed. "The desire to buy is there, but the wherewithal is absent," he said. The immediate problem, he thought, was to raise the purchasing power of the people, so that they could buy more goods which ultimately could be produced. In this connection, he welcomed the two Development and Finance Corporations that were being set up. He felt that there were other fields too in which expansion of credit could be undertaken with benefit to the general economy. For instance, he was in favour of the extension of credit for the purchase of durable consumer goods. Again, he cited the instance of housing. He argued a convincing case for a well-considered scheme for financing construction of houses for the middle class in urban areas. Those who know how acute is this problem, and how intractable it has proved, will certainly welcome Mr. Birla's views on this subject.

STAFF EXPENSES OF BANKS

MR. PRANLAL ON INCREASE IN BURDEN

ALTHOUGH India has recorded some notable progress in many sectors of its economy, it is greatly to be deplored that this expansion is not reflected in its banking institutions. An index of a developing underdeveloped economy is the increase in the number of bank branch offices both to serve new areas and to cater to the increasing needs of the economically well-developed areas. This test, it seems clear, cannot be applied to India. There is no gainsaying the fact that the expansion of the Indian banking system has not kept pace with Indian economy. Actually, there has been a fall in the number of branch offices.

It is to this paradox that Mr. Pranlal Devkaran Nanjee, the retiring Chairman of the Indian Banks Association, addressed himself when he presided over the annual meeting of the Association, held last week in Bombay. The total number of banking offices in the country, as Mr. Pranlal pointed out, fell from 5,277 at the end of 1948 to 4,839 at the end of 1952, though it rose slightly to 4,879 at the end of 1953. He regretted that there was "much less enthusiasm among bankers to open up new branches." He attributed this to the "burden and rigours of the Industrial Awards" which he thought would "retard the further development of branch banking in this country."

The increased emoluments which the banks are called upon to pay their staff, without any regard to the trends in their earnings, are reflected in the high proportion which establishment expenses form in banks' profits. In 1952, such expenses absorbed 50.86 per cent. of banks' gross profits. This stands out in sharp contrast to the experience of the American banks for which the proportion is only about 33 per cent. It is true that the basis of comparison is not absolutely correct, inasmuch as American banks are giant institutions with large turnover. Even so, the fact remains that a substantially large proportion of the profits of Indian banks is absorbed by establishment expenses. This factor is an impediment to the expansion of branch offices, even after making allowance for the consideration that indiscriminate opening of branches is an unwise practice.

The increase in establishment charges is, as is well known, the result of the salary award in respect of the pay and service conditions of bank employees. After referring briefly to the recent history of the dispute between the banks and their employees, Mr. Pranlal reiterated his faith that the Bank Award Enquiry Commission (Chairman: Mr. Justice Gajendragadkar) would, in giving its decision, take into account all the "relevant factors on the banking industry in India and its future role in the Indian economy." He revealed that the Association had made a submission to the Commission that the "effect of the burden of establishment charges upon banks should be co-related to their capacity to pay and should be considered in the light of the peculiar nature of banking business which necessitates building up reserves for doubtful debts, contingencies and depreciation in investments."

If the banks have thus not been able to hold down the establishment expenses, they have fared no better in respect of interest charges. Mr. Pranlal deplored that banks have had to pay, during the greater part of 1954, as much as 3 to 3½ per cent. on call money. Although this practice did not bring much new money into the banking system, it enabled business houses to earn, at the expense of banks, considerable income by way of interest on deposits. Referring to the efforts which were made by the authorities of the Reserve Bank to bring about an agreement on the part of the banks in respect of interest rates, he said:

"Unfortunately, these efforts failed and no agreement that would be acceptable to all the banks, including the Exchange banks, could be arrived at. The result has been that this available burden of high interest rates on deposits continues, to the great detriment of the banks, at a time when the incidence of their establishment charges has made large inroads on their earnings."

Although some voluntary agreement on interest rates may be welcomed, provided it is not too rigid and is workable, a blanket on interest rates is neither good for the banks nor the depositors. After all, a competitive banking system, working in a climate of free enterprise and competition, implies that the banks should be allowed to compete for use of money through payment of an attractive rate for money with-

PUNJAB NATIONAL BANK REPORTS EXCELLENT RESULTS

DIVIDEND RESTORED TO PRE-PARTITION HIGH

THE Punjab National Bank Ltd. (General Manager: Mr. B. N. Puri, Delhi) has just completed 60 years in the service of the nation and the Diamond Jubilee celebrations are scheduled to be held next week. On this occasion, it can look back with pride at the unique place, namely, the second largest joint-stock bank in India, it has carved for itself. The last eight years of its history proved to be a testing time for the Bank on account of the Partition. No other bank suffered so much from the effects of the Partition as did the Punjab National, but it has overcome them all successfully. It is a happy augury for the memorable occasion of the diamond jubilee of the Bank that these efforts were crowned with excellent results for the year ended 31st December, 1954. The deposits and total working capital at the close of 1954 constitute fresh records in the history of the Bank and the profit for the year is the highest for the post-Partition period.

The total working capital of the Bank had dwindled from Rs. 77.81 crores at the end of 1946 to Rs. 52.06 crores at the end of 1949. Since then, there has been a sizable improvement, the working capital at the end of 1953, at Rs. 79.78 crores, exceeding the pre-Partition high by Rs. 2 crores. The improvement gathered further momentum in 1954, the year end total touching a new high of Rs. 91.16 crores. Deposits as at the close of the year under review aggregate Rs. 75.64 crores, having successively risen from Rs. 42.94 crores five years ago, and exceeds the pre-Partition record touched at the close of 1946 by Rs. 13.62 crores. The profit had fallen from a peak of Rs. 70.23 lakhs for 1947 to Rs. 34.12 lakhs in 1952, but there was a notable recovery in 1953 to Rs. 39.86 lakhs, accompanied by a further sharp rise to Rs. 53.76 lakhs in the year under review. Thus, the shrinkage in profit noted since the Partition has been made good to a large extent. In consonance with this trend, the dividend has been stepped up for the third year in succession from 4 per cent. paid for 1950 and 1951 to 12 per cent. for 1954, thus restoring it to the level paid for 1946.

Such, in brief, is the record of achievement of the Bank since 1946, but a more detailed picture of the Bank's progress in very recent years can be obtained from the tables published in these columns of which the following gives the trend of earnings and appropriations thereof:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount	275.84	245.29	214.36	177.51
Commission and exchange ..	61.88	55.05	47.80	43.74
Other income	37.10	31.09	32.70	35.84
Interest paid	124.72	106.51	83.53	67.39
Expenses	189.08	176.86	171.15	150.14

Dividend	10.50	7.00	5.25	3.50
	(12%)	(8%)	(6%)	(4%)
Carry forward	4.99	3.10	1.93	5.34

* Include sums utilised for scaling down Pakistan assets and for writing down other assets, bad debts written off and assets lost in Pakistan.

The gross income of the Bank for the year under review amounts to Rs. 374.11 lakhs, an increase of Rs. 42.68 lakhs over the year. Of this increase, the share of income from "interest and discount" amounts to Rs. 30.35 lakhs, that from "commission and exchange" Rs. 6.33 lakhs and "other income" Rs. 6.01 lakhs, the last mentioned item includes a sum of Rs. 4.07 lakhs being the income-tax refund. On the expenditure side, the rise in "interest paid" amounting to Rs. 18.21 lakhs is less than that in the previous year, while the increase of Rs. 10.83 lakhs in administrative and other expenditure is sharper than that in 1953. In consonance with the rise in profit, the provision for taxation has been raised by Rs. 3.50 lakhs. A sum of Rs. 12.50 lakhs has been transferred to the contingency reserve, which had received Rs. 10.25 lakhs in the previous year. The transfer to the reserve fund has also been raised from Rs. 0.94 lakh to Rs. 2.47 lakhs.

The following table brings out the variations in the main features of the Bank's balance-sheet as at the close of the last four years.

(In lakhs of rupees)

	As on 31st December			
	1954	1953	1952	1951
Capital	87.50	87.50	87.50	87.50
Reserves	92.50	90.00	89.00	87.50
Deposits*	75,63.84	65,81.18	58,94.02	51,94.34
Borrowings from other banks ..	0.47	30.58	2,50.63	1,09.71
Bills payable	4,17.62	4,07.22	3,73.91	4,23.08
Bills for collection (contra) ..	5,84.18	5,55.93	5,05.19	6,12.86
Acceptances (contra)	3,57.33	2,68.47	1,92.36	1,31.86
Advances†	33,57.40	25,69.91	20,89.40	24,22.05
Investments	35,37.50	36,14.27	28,79.00	26,55.04
Cash	10,00.23	7,32.49	6,53.78	6,91.52
Balance-sheet total	91,16.27	79,78.22	73,98.68	67,51.82
Ratio to deposits of—	%	%	%	%
Advances	44.4	39.3	49.9	46.6
Investments‡	46.8	54.9	44.6	47.3
Cash	13.3	11.2	11.1	13.3

* Include contingency accounts.
† Include bills purchased and discounted and money at call and short notice.
‡ Ratio arrived at after taking into account the securities earmarked against borrowings from other banks.

Though the reserves stand at the impressive level of Rs. 92.50 lakhs, Rs. 5 lakhs more than the paid-up capital, they still fall short of those (Rs. 113.84 lakhs) at the close of 1950. The rising trend in deposits since 1949 has not only been maintained during 1954 but the pace of expansion, too, has been sharper. It may be noted, in this connection, that, over the last four years, while the deposits of other Scheduled banks show a decline of 3 per cent., those of the Punjab National have gone up by over 70 per cent. More than half of the rise in deposits during 1954 is accounted for by fixed deposits which amount to Rs. 31.63 crores, as against Rs. 26.07 crores. Savings bank deposits have gone up by Rs. 2.11 crores to Rs. 19.42 crores and current accounts, contingency accounts, etc., by Rs. 2.65 crores to Rs. 24.20 crores. There has practically been no outstanding borrowings from other banks at the close of the year. There has been a notable rise of Rs. 88.86 lakhs in acceptances, bringing the total rise in this item for the last three years to as much as Rs. 2.25 crores.

On the assets side, advances have recovered by Rs. 7.87 crores, in contrast to the fall of Rs. 3.74 crores in 1953, of which loans, cash credits and overdrafts account for Rs. 5.74 crores, bills purchased and discounted for Rs. 1.12 crores and money at call and short notice for Rs. 1.02 crores. As the percentage of increase in total advances is much more than that in deposits, the advances ratio has risen from 39.3 per cent. to 44.4 per cent., but it is still less than that at the close of 1952. There has been a fall of Rs. 77 lakhs in investments, mainly accounted for by the decline of Rs. 98 lakhs in Government securities and other trustee securities, while debentures in joint-stock companies have risen by Rs. 24 lakhs. The investments are shown at or below cost, the market value of the same being lower by about Rs. 17 lakhs, mainly accounted for by investments in shares of joint-stock companies. Cash balances are higher by Rs. 2.77 crores, resulting in the cash coverage going up from 11.2 per cent. to 13.3 per cent.

(*Concluded from next column*)

this is in keeping with the general trend, the pace of increase is more than that in the case of Scheduled banks in general. We are told that the improvement in deposits took place towards the latter part of the year and its effect is not, therefore, fully reflected in the profit figure. Of the advances, loans, cash credits and overdrafts account for Rs. 11.85 crores, a decline of Rs. 16 lakhs, bills discounted and purchased for Rs. 2.02 crores, representing a rise of Rs. 68 lakhs and money at call and short notice for Rs. 43.40 lakhs, an increase of Rs. 23.40 lakhs. Thus, commercial advances alone aggregate Rs. 13.87 crores, which is considerably below the peak figure of Rs. 15.42 crores touched in the course of the year, because of the "healthy seasonal character" of a large proportion of the Bank's commercial lendings.

Investments are higher by Rs. 1.27 crores, but it must be noted that, unlike a year before when they were shown at book value, they are shown as at the close of 1954 at or below market value, after adjustment of the investment reserve of Rs. 37 lakhs, as stated above. Cash balances stand strengthened by Rs. 98 lakhs, so that the cash coverage has risen from 10.4 per cent. to a high of 15.7 per cent. This has also improved the total liquidity ratio from 59.9 per cent. to 63.6 per cent.

UNITED BANK OF INDIA'S RESULTS SATISFACTORY

DOWNWARD TREND IN PROFIT REVERSED

SATISFACTORY results are disclosed by the audited accounts of the United Bank of India (General Manager: Mr. B. K. Dutt, Calcutta) for the year ended 31st December, 1954, in that the declining trend in profit noted during the previous two years has been reversed, albeit in a small way. The profit, which had shrunk from Rs. 21.01 lakhs for 1951 to Rs. 12.07 lakhs for 1953, has improved to Rs. 13.05 lakhs for the year under review. The other encouraging features of the accounts are a sharp rise of Rs. 3.54 crores in deposits, accompanied by a moderate increase in advances and substantial additions to liquid assets.

The profit for the year under review, at Rs. 13.05 lakhs, still falls short by Rs. 7.96 lakhs of the peak level touched in 1951, the first full year of working after the Bank was formed in 1950 by the amalgamation of four Scheduled banks of Bengal. After providing Rs. 2.46 lakhs for taxation, as against Rs. 1.72 lakhs in the previous year, the Directors have transferred Rs. 2.61 lakhs to the reserve fund, under Section 17 of the Banking Companies Act. Of the amount thus set aside to the statutory reserves, the Directors have utilised a sum of Rs. 1.61 lakhs for meeting depreciation in Government securities, taking advantage of the concession allowed to banks by the Government of India, following the substantial drop in the market value of Government securities as a result of the raising of the Bank rate in November, 1951. No sum has been transferred to the investment account as in the previous year. The dividend has been maintained at the very modest level of 3 per cent. for the fifth year in succession.

The following comparative table gives a bird's-eye view of the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount earned ..	94.88	92.12	98.38	102.16

* Include bills purchased and discounted and money at call and short notice.

The gross income of the Bank for the year under review amounts to Rs. 134.50 lakhs, representing an increase of Rs. 7.23 lakhs from Rs. 127.27 lakhs for 1953, to which level it had declined from Rs. 143.52 lakhs earned in 1950, the first year of amalgamation. "Interest and discount" earned had declined from Rs. 115.60 lakhs in 1950 to Rs. 92.12 lakhs in 1953, but the trend has been reversed in 1954 with a rise of Rs. 2.76 lakhs to Rs. 94.88 lakhs. The rise in "commission and exchange" is more encouraging, in that this source of income has gone up by Rs. 6.45 lakhs, while "other income" has fallen by Rs. 2 lakhs. Interest paid has risen by Rs. 3.18 lakhs, "an indication of a distinct change in money market conditions, particularly in Calcutta, where short-term money has for the most part been expensive throughout the year." It is also partly due to the increase in deposits. It is only in consonance with the general trend that expenses of the Bank have gone up.

It will be observed from the above table that the reserves have declined by Rs. 36 lakhs, consequent on the transfer of the sum of Rs. 37 lakhs representing the investment reserve to the investment account to enable the Bank to show the investments at or below market value. Referring to this step, the Chairman of the Bank, Dr. N. N. Law, said, in his speech to the shareholders at their annual general meeting held the other day:

"Your Board deemed this to be advisable to facilitate switches of our Government security holdings from lower to higher yielding scrips with the prospect thereby of improving the Bank's earnings on investment income. Also, in the case of some of the share investments, preference shares for example, there is a degree of permanency at least for the time being in respect of the lower market values of these fixed dividend shares as compared with our book values and your Board considered it desirable to eliminate the disparity, so that, when opportunity offers, improvements in this category of investments may also be effected."

The most notable feature of the balance-sheet is the expansion of Rs. 3.54 crores in deposits. Though

(*Continued in previous column*)

PROFIT OF HONGKONG AND SHANGHAI BANK HIGHEST SINCE 1930

BONUS SHARES ISSUED

A DISTINCT improvement in turnover and a marked rise in earnings are the notable features of the accounts of the Hongkong and Shanghai Banking Corporation (Chief Manager: Mr. Michael W. Turner, Hong Kong) for the year ended 31st December, 1954. Thus, the balance-sheet total as at the close of the year discloses a rise of H.K.$34.50 million, in refreshing contrast to the shrinkage of H.K.$4.72 million at the end of 1953 and of H.K.$532.6 million at the close of 1952. The profit for the year (after providing for taxation on profits earned and after making transfers to the credit of reserves for contingencies, out of which reserves provision has been made for any diminution in value of current assets) amounts to H.K.$19.29 million, representing an increase of H.K.$2 million over that for the previous year.

Such an improvement in the results of working of the Bank is, indeed, highly satisfactory, especially as the year was one which was by no means of easy trading conditions in the territories in which the Bank operates, as Mr. Blaker, Chairman of the Bank, points out in his speech to the shareholders at the annual general meeting of the Bank. The picture was, however, rather changed in some areas by the increase in the prices of certain primary commodities in the latter part of the year. This change probably accounts for the increase in the balance-sheet total and the profit.

A gratifying feature of the profit for the year under review is that it constitutes a fresh record since 1930, when it aggregated H.K.$20.68 million. With the undistributed surplus of H.K.$9.86 million brought in from the previous year, the distributable amount, at H.K.$29.15 million, is higher by H.K.$2.37 million. A sum of H.K.$6 million has been utilised to write off bank premises account. This provision is H.K.$2 million more than that set aside in the previous year, the increase necessitated by the heavy expenditure on new bank premises. The dividend has again been maintained for the eighth year in succession at £5 per share, made up of an interim distribution of £2 per share and a final one of £3 per share, absorbing H.K.$12.93 million. The balance left to be carried over is H.K.$10.21 million.

Balance-sheets Compared

The progress made by the Bank during the past three years is indicated by the following comparative table:

(In thousands of H.K. $)

	As on 31st December			
	1954	1953	1952	1951
Capital	20,000	20,000	20,000	20,000

* Includes cash in transit.
† Include sums deposited as security for authorised note issue.

A notable feature of the latest balance-sheet is the impressive reserve fund, which, at H.K.$128 million, shows an increase of H.K.$32 million over the year. This represents the transfer of a like sum, just before the close of the year, from the contingencies account, as it is no longer required for the purposes for which it was originally set aside. The decline of H.K.$80 million in note issue is accounted for the contraction in excess note issue. After the fall of H.K.$497.67 million during the previous two years, current deposits and other accounts show an expansion of only H.K.$36.17 million in 1954. Acceptances have risen by H.K.$45.96 million, which have more than made good the decline in the preceding two years.

On the assets side, cash and money at call and short notice have shrunk by H.K.$108.33 million and H.K.$103.87 million, respectively. Of the bills receivable, Treasury Bills, amounting to H.K.$208.22 million, account for a decline of H.K.$87.71 million, while trade bills aggregating H.K.$494.65 million, reveal an increase of H.K.$168 million. Advances to customers have gone up by H.K.$183.80 million. The Chairman notes with some satisfaction that the Bank has been able to employ the larger funds it was able to command during the year in its "rightful sphere of financing international trade and commerce." Investments (shown at under market value) have been strengthened by H.K.$18.55 million. The contraction in cash, money at call and Treasury Bills has, no doubt, brought down the ratio of the Bank's readily realisable assets to its total liabilities to customers from 65 per cent. to 58 per cent. but the ratio is still high, representing a satisfactory degree of liquidity.

At an extraordinary general meeting held on 11th March, 1955, soon after the ordinary general meeting, the capital of the Bank was raised from H.K.$20 million to H.K.$25 million by capitalising a sum of H.K.$5 million from the reserve fund and issuing one new share for every four shares held by the shareholders. This is probably the first time that the Bank has thus capitalised its reserves and issued bonus shares. Referring to the proposal to increase the share capital, the Chairman said, in his address to the shareholders, that it was hoped to pay the same annual dividend of £5 per share for the current year on the increased capital, provided, of course, the profits of the Bank were maintained.

VOLUME OF MONEY IN HOLLAND IN 1954

According to data furnished by the Netherlands Central Bureau of Statistics, the total volume of money in the Netherlands in the year 1954 rose from fls. 8,549 millions to fls. 9,118 millions. The volume of currency increased from fls. 3,394 millions to fls. 3,682 millions, the volume of check-book money from fls. 5,155 millions to fls. 5,436 millions.

(Concluded from next column)

to which the Bank has been successful in financing trade. It also reflects the increase in commodity prices in India, Ceylon and South-East Asian countries. Despite the increase during the last two years, acceptances as at the close of 1954 still fall very much short of those at the end of 1951.

On the assets side, the most notable feature is, as already indicated, the small decline in total advances. This is mainly due to the fall in bills purchased and discounted and money at call and short notice. Thus, loans, cash credits and overdrafts show an increase of Rs. 17.30 lakhs to Rs. 269.77 lakhs, while bills purchased and discounted have dropped by Rs. 2.63 lakhs to Rs. 278.56 lakhs and money at call and short notice by Rs. 22.19 lakhs to Rs. 3.81 lakhs. Investments (at or below market value) have been strengthened by Rs. 99.75 lakhs and cash balances by Rs. 41.96 lakhs, so that the total liquidity ratio has gone up from 54.8 per cent. to a high of 61.3 per cent.

During the year under review, the Bank added one more office to its list of branches.

INDIAN OVERSEAS BANK KEEPS UP PROGRESS

LIQUIDITY RATIO HIGH

A NOTABLE feature of the working of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras), in recent years has been the steady rise in its profit, in distinct contrast to the experience of many other banks. Thus, its profit had progressively risen from Rs. 5.35 lakhs for 1949 to Rs. 13.25 lakhs for 1953. This upward trend was well maintained during 1954, too, with a further improvement in profit to a record level of Rs. 13.35 lakhs. Thus, in the course of the last five years, the Bank's profit has appreciated by Rs. 8 lakhs, that is, by 150 per cent., a performance which very few banks can boast of. It must, however, be mentioned that a definite slowing down in the pace of increase in the Bank's profit level was noticeable during the last two years, the rise in profit for 1954 over that for the previous year being about Rs. 10,000 only.

There has been an impressive rise in the Bank's deposits to a new high level, but there has been no rise in advances—they are, on the other hand, a shade lower—in distinct contrast to the general trend. The improvement in the Bank's lendable resources has, however, been utilised to strengthen its liquid assets. This probably accounts for the relatively small rise in profit. A sum of Rs. 3.50 lakhs has been added to the reserve fund as in the previous two years and the dividend has been repeated at 6 per cent. for the fourth year in succession.

The following comparative table presents an idea of the Bank's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Gross income	69.09	67.19	66.37	49.43
Interest and discount earned ..	88.64	87.31	86.83	24.76
Commission and exchange ..	30.38	29.88	29.31	24.58
Interest paid	16.96	16.59	15.83	10.50
Expenses	86.66	85.41	86.40	26.37
Depreciation and repairs ..	2.12	1.94	1.78	1.10
Profit*	13.35	13.25	12.87	11.46
Provision for taxation	7.00	6.45	6.75	5.50
To reserve fund	3.50	3.50	3.50	2.00
Dividend	2.94	2.94	2.94	2.53
	(6%)	(6%)	(6%)	(6%)
Carry forward	2.16	2.25	1.90	2.23

	As on 31st December			
	1954	1953	1952	1951
Capital	49.20	49.05	48.98	47.36
Reserves	26.00	22.50	19.00	15.50
Deposits	11,22.91	9,96.74	9,93.32	9,59.61
Borrowings from other banks ..	2.81	6.19	0.18	67.98
Bills for collection	2,19.46	2,27.71	1,98.58	2,09.43
Acceptances	3,53.75	2,58.71	2,29.71	6,33.16
Advances §	5,52.14	5,59.66	5,68.77	5,47.79
Investments	4,06.99	3,09.24	2,74.13	2,66.65
Cash	2,85.41	2,43.45	2,36.96	3,13.57
Balance-sheet total	18,47.59	16,18.58	15,29.96	19,91.44
Ratio to deposits of—	%	%	%	%
Advances	46.9	56.1	57.8	56.5

Cash	25.1‡	23.6‡	23.8	32.3

* After providing for depreciation on investments.
§ Include bills purchased and discounted and money at call and short notice.
† After taking into account the investments earmarked against borrowings from other banks.
‡ After taking into account the cash balances with other banks outside India earmarked against borrowings from other banks.

The gross income for the year under review shows a rise of only Rs. 1.90 lakhs over the previous year and both the main sources of income, namely, "interest and discount" and "commission and exchange," have contributed to this increase. The increase in outgo by way of interest paid is very much smaller than that noted in the previous years. In contrast to the decline of Rs. 1 lakh in expenses during 1953, there has been a rise of Rs. 1.25 lakhs in the year under review. The provisions for depreciation and taxation have been raised, but the allocations to the reserve fund and dividend have been maintained.

The fractional rise in the Bank's capital in 1954 is due to the receipt of a portion of the calls unpaid. It will be noted that there has been an addition of Rs. 10.50 lakhs to the reserve fund during the past three years, thanks to the judicious policy followed by the Bank's management. The increase in deposits during 1954 is much sharper than that in the previous two years. Of this rise, fixed, time and staff security deposits show an increase of Rs. 27.81 lakhs savings bank deposits Rs. 36.42 lakhs and current and other accounts Rs. 67.95 lakhs. As in the previous year, borrowings from other banks represent those outside India and are secured by part of cash balances with foreign correspondents. Acceptances and endorsements disclose a rise of Rs. 1.04 crores, reflecting the extent

LONG-TERM NEEDS OF BRITAIN'S TEXTILE INDUSTRY

EXPERTS SUGGEST CONCENTRATION OF OUTPUT IN FEWER UNITS

From Our Special Correspondent

MANCHESTER, *29th March*

MANCHESTER LETTER

COTTON traders are now awaiting an indication as to the Government's attitude over the many problems facing the industry in Lancashire as a result of the representations made to the Prime Minister last week. An early Government statement is anticipated. At the outset, however, it is unlikely that any action will be more than on a short-term basis. What the industry is currently anxious to secure is a state of reasonable stability, from which point confidence can be restored so that business can flow smoothly.

Yet there still remains the long-term problem of how the future size of the industry is to be tackled and what is to be done to increase Lancashire's competitive ability and efficiency. In some quarters it is hoped that the approach to the Government over the immediate difficulties involved may lead to a better appreciation of the whole circumstances surrounding the cotton industry's future. Thus, it may be possible to arrange a series of discussions at a high level, looking much further ahead than the current uncertainties.

More voices are to be heard proclaiming the necessity of wider shift working in Lancashire in the long run and the inevitability of some form of contraction. Within the past week or two action along these lines has been urged by several speakers, including Mr. W. T. Winterbottom, retiring President of the Master Spinners' Federation.

In a plea for a new outlook he has urged the importance of attaining maximum efficiency by further modernisation and re-equipment in return for Government support. "A great deal has been done in Lancashire since the war," he told the annual meeting, "but there is still more to be done. The wages structures most commonly used are hopelessly out of date and the redeployed wages structure is not universally accepted by the unions."

A Gradual Switch?

No sudden transformation in the established systems for so long adopted in Lancashire is likely, but it is being suggested in some directions that moves to assist in a radical change may not be far distant. Soon after the war Government aid through modernisation was offered and accepted; it might be possible to introduce some form of financial assistance in a fresh attempt to reduce surplus capacity, on the understanding that shift work would be adopted as the mills were concentrated.

Not long ago there was an acute shortage of Labour in the industry and at such a time proposals of this kind were shelved because they were held to be uneconomic. Mr. Winterbottom takes the view that the time is now rapidly approaching when output will have to be concentrated in fewer units. Agreements on shift working, he says, should be reached with the unions to operate a working week comparable to that in other industries.

Another advocate of this policy of "telescoping" the industry is Mr. S. S. Hammersley, Chairman of Cotton and Rayon Spinners Ltd., the Oldham mill group. His annual report suggested that if Lancashire had fewer spindles and if all were modern and were worked twice as long, the ensuing result would be a great step forward in the industry's competitive power and in its ability to pay high wages.

But the sponsors of such ideas are under no illusions about the current situation. Mr. Hammersley adds: "Under existing conditions any such arrangement would involve an increase in wages expenses of some 20 per cent. so that in many sections of the trade the economies achieved by working machinery longer would be nullified by substantially increased wages charges."

It follows that a necessary condition for any financial assistance on the part of the Government would be agreement between the cotton employers and unions on the hours to be worked on a shift system.

Import Fears Increase

It is a fitting commentary on affairs in Lancashire at the moment that the present tendency, when considering official overseas trade affairs, is to look first at imports rather than the export situation.

Within the first two months of this year there has been a significant change in the trade balance affecting cotton and rayon cloth. In the whole of 1954 British exports of such fabrics amounted to 812,445,000 yards and imports to 334,704,000 yards. These arrivals were big enough in all conscience, but in January and February this year they amounted to 78,469,000 yards, whereas exports were only 136,205,000 yards.

A continuation of this trend is exactly what the industry has been fearing ever since imports began to rise about a year ago. The fall in overseas trade has merely accentuated the problem.

The three main suppliers of foreign grey cloth have all raised their imports to this country. India's share has risen from 16,241,000 yards in the first two months last year to 27,740,000 yards, while a startling advance has occurred in Japanese cloth from only 1,149,000 yards to 21,221,000 yards. Also significant is the rise in shipments from Hong Kong from 1,024,000 yards to 8,059,000 yards—nearly half as much in two months as arrived from that Colony in the whole of last year.

To the end of February earnings from shipments of British cotton goods did not show any marked change from a year ago. The amount was £19,045,745 against £19,529,784. Cotton cloth exports were 111,430,000 yards against 112,979,000 yards and yarn shipments were 7,092,011 lbs., against 7,740,027 lbs.

In view of the adverse news from Australia, however, the fact that that country again absorbed by far the largest volume of goods adds further urgency to Lancashire's export predicament. Australia took 20,633,000 yards of cloth in the first two months of the year, followed by Nigeria with 11,894,000 yards and South Africa with 10,908,000 yards. In the case of yarn, only Australia with 1,352,913 lbs., exceeded the 1,000,000-lb. mark, the next customer being the Irish Republic with less than 650,000 lbs.

Nor is the situation any better on the rayon side, where cloth exports of 24,774,500 square yards compared with 31,025,000 yards last year. Australia was again the leading buyer, with nearly 4,000,000 yards, and it also took 1,560,000 lbs. of rayon yarn out of total shipments of 5,198,900 lbs.

Anglo-Pakistan Trade

While there are opportunities for British exporters of capital goods to the Pakistan market, the openings for Lancashire textile shipments are limited. This view was expressed by Mr. Arthur P. Timms, United Kingdom Trade Commissioner at Karachi, on his arrival in Manchester this week for a three-day visit during which he will have discussions with exporters.

Speaking at the Manchester Chamber of Commerce, Mr. Timms said Pakistan's own textile industry was moving towards self-sufficiency in the manufacture of the medium and coarser qualities of cotton textiles. When its industry was in full production it would need to import only the finest qualities of cloth and it was in this category that Lancashire firms would have an opportunity of securing export business.

A "considerable amount" of export business for heavy electrical plant and textile machinery had been secured by Lancashire concerns. "In my view the future of British exports to Pakistan will be mainly in the field of capital goods, equipment for industry and consumer goods will not be so bright, at least until such time as Pakistan's foreign exchange position improves."

Extended Easter Holidays

Lancashire mills face a large-scale shutdown at Easter because of lack of orders. "It is a very gloomy picture," Mr. William Roberts, of Bolton, President of the United Textile Factory Workers' Association, said after cotton union leaders had reviewed the latest trade developments at a meeting in Manchester.

The Association's Legislative Council decided to take no further steps until the Prime Minister has announced his proposals for helping the industry following last week's cotton industry delegation to 10, Downing Street.

Mr. Harold Bradley, of Darwen, the Association Secretary, said cotton union leaders were "scared stiff" about the way the trade situation was developing for Lancashire.

"The position is worsening. All the members of the Legislative Council take the view there will be heavy stoppages at Easter. Reports from the districts show that the position is getting very grave," said Mr. Bradley.—*All Rights Reserved.*

(Established in 1895)

DIRECTORS' 108th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1954

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1954.

The transactions for the year under report have resulted in a profit of Rs. 56,86,180-2-0 (including Rs. 3,10,289-1-7 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:—

	Rs. a. p.
1. Transferred to Income-tax Provision	16,00,000 0 0
2. Transferred to Contingency Reserve	12,50,000 0 0
3. Transferred to Reserve Fund	2,47,140 4 6
4. Transferred to Bonus to Staff Account	9,50,000 0 0
5. Transferred to Charity Account	40,000 0 0
6. Transferred to Gratuity to Staff Account	50,000 0 0
7. Ad-interim Dividend @ Rs. 1/- per share free of income-tax paid	3,50,000 0 0
Total .. Rs.	44,87,140 4 6

The Directors recommend that the balance of Rs. 11,99,039-13-6 be disposed of as follows:—

	Rs. a. p.
(a) Dividend @ Rs. 2/- per share free of income-tax making the total at 12 per cent per annum	7,00,000 0 0
(b) Carry forward to the next year's account	4,99,039 13 6

The Bank rate remained unchanged at 3½ per cent. per annum.

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors.

S. P. JAIN,
Chairman.

DELHI, 5th February, 1955.

BALANCE SHEET AS AT 31st DECEMBER, 1954

CAPITAL AND LIABILITIES	Amount Rs. a. p.	Total Rs. a. p.

U.K. COTTON TEXTILE MISSION TO INDIA

PLEA FOR LOWER IMPORT DUTY EXAMINED

THE team of six marketing experts of the British cotton industry which arrived in Bombay last week is now busy investigating the possibilities of improving exports of British cotton textiles to India. The team is led by the Hon. A. D. Campbell, a well-known British business man, and includes Messrs. A. Haugh, W. Roberts, G. D. Hughes, B. D. Straw and T. D. F. Powell, the last mentioned being the Secretary to the team. After holding informal talks with millowners and traders, the team is now in New Delhi discussing with Government representatives. Even before these lines appear in print, it is expected to meet Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who indicated to Mr. A. R. W. Low, Minister of Trade at the British Board of Trade, during the latter's recent visit to India, that the Government of India "would examine with sympathy and consideration any suggestion made." The representatives of the millowners are also expected to have discussions with the Government of India separately on this question.

Readers are aware of the general nature of the controversy in the field of Indo-British textile trade. The main complaint of Lancashire millowners is that, while imports of Indian-made cloth into the U.K. are free of duty and have been speedily increasing, exports of British cotton goods to India are negligible and are subject to a high level of import duty. The British cotton industry, therefore, wants two things to be done. It wants India's import duty on cotton textiles to be reduced, so that more of its goods can enter this country. Secondly, it wants its Government to take suitable measures to curb imports of Indian cotton goods into the U.K., for, in its view, a good part of the cloth received from India is competing with its manufacturers in the domestic market.

As already stated, during their stay in Bombay, the members of the British textile delegation held informal discussions with the representatives of cotton millowners and trade interests. The discussions, it is believed, centered round the question as to what varieties of U.K.-manufactured cotton goods are saleable in India. The spokesmen of the import trade are said to have told the delegation that there were certain types of finer varieties of cloth, particularly the high quality and fancy goods which are Lancashire's specialities, in which Britain may develop a market in India. They would, however, appear to have emphasised that the landed cost of those varieties had to be reduced by about 25 to 30 per cent., which, in their opinion, was the approximate difference between the prices of cloth produced in the U.K. and India. The U.K. textile delegation no doubt appreciated the force of this contention, but is reported to have emphasised that, since it was practically impossible for Lancashire millowners to lower their prices in view of the heavy cost structure of the industry, the high level of import duty of about 60 per cent. *ad valorem* should be reduced. In its opinion, the import duty was the main factor standing in the way of larger imports of British textiles into India. The delegation is expected to advance this view strongly when it meets the Union Minister for Commerce and Industry.

The issue relating to the reduction of import duty on British cotton textiles is not such a simple one as it seems. In fact, it is quite a complicated one. As a member of the G.A.T.T., India cannot reduce the import duty on cotton manufactures in favour of Britain alone, for such would amount to discrimination against other countries. It is the declared policy of India not to grant or receive new preferences in the field of tariffs. As a firm believer in the principle of non-discrimination, India cannot also issue discriminatory import licences in respect of countries which belong to the same currency area. In these circumstances, any concession shown by India in regard to imports of cloth will apply to all exporting countries. If the preferential import duty is cut for the sake of Lancashire, the standard rate, too, will have to be lowered correspondingly. The result may well be that, instead of Britain benefiting therefrom, Japan or Hongkong, the competitive capacity of which is superior to Lancashire, may have the advantage. There is also another point to be borne in mind in this connection. If Indian mills are to be exposed to a larger amount of competition in the domestic markets, then it is only but fair they should be freed from controls on production, so that they may make the type of goods that can effectively compete with the imported ones. We wonder whether the Government will be willing to remove these controls.

It is true that the Indian cotton textile industry was deprotected long ago and cannot, therefore, claim the right of protection in the form of existing high tariffs which are being levied purely for revenue considerations. Nevertheless, there is another side to this picture, namely, the high level of domestic taxation that neutralises a big part of the protective effect of the existing import duties.

As already noted, the difference in the prices of cloth imported from the U.K. and that of cloth produced in India is only 25 to 30 per cent., even though British cloth is subjected to an import duty ranging from 60 to 80 per cent. This is due to the fact that Indian cloth bears excise duty. Take, for example, superfine cloth with an average width of 47 inches. The incidence of excise duty on this category accounts for quite a large part of the price of cloth, or about As. 3-6 per linear yard. Again, where is the guarantee that British textile interests will not reduce their prices after the import duty in India is lowered? Also, where is the guarantee that the U.K. would continue to purchase Indian cloth on the same scale as it is doing at present? All these issues have to be examined dispassionately by the Government of India before deciding on a downward revision of the import duty on foreign cotton goods.

"INDIAN TEXTILE JOURNAL—CENTENARY SOUVENIR NUMBER"

The centenary souvenir number of *The Indian Textile Journal* (Editor: Mr. Jal S. Rutnagur. Published by Indian Textile Journal Ltd., "Surya Mahal," Military Square, Fort, Bombay 1. Price: Rs. 15) is a sumptuous record of the progress achieved by the cotton mill industry in India since its inception more than a hundred years ago. Among the innumerable issues which have been comprehensively and lucidly dealt with in this souvenir, particular mention may be made of those relating to the exact date of the establishment of the first cotton mill in India, the principal changes in the capital outlay and the mechanical set-up of the industry. The story of the pioneering days of 1854 and of the subsequent growth and development of the industry, as narrated in the souvenir, makes very interesting reading.

The souvenir contains a number of authoritative articles written by experts. Several leading millowners and important persons have given their own personal appraisal of the future awaiting the Indian cotton mills, while authoritative contributions deal with the general history of the industry in the different regions of the country. A separate section is devoted to the review of the technical developments in the cotton mill industry during the last hundred years, all the contributions coming from acknowledged authorities on the subject. Another important section is devoted to specific information concerning practically every cotton mill under several vital heads. The history and achievements of the various millowners' associations, chambers of commerce and other allied organisations in the country form the subject matter of another section. It will indeed be no exaggeration if it is said that the souvenir is encyclopædic in the nature of its contents. The printing is excellent and the get-up attractive.

THE PUNJAB NATIONAL BANK, LIMITED, DELHI—*Contd.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1954

EXPENDITURE	Amount Rs. a. p.
1. Interest paid on Deposits, Borrowings, etc.	1,24,72,187 6 4
2. Salaries and Allowances and Provident Fund (includes Rs. 59,281-12-6 paid to the General Manager, besides payment of bonus amounting to Rs. 3,756-7-0)	1,87,09,922 15 3

(viii) Maximum total amount of advances including temporary advances granted during the year to the companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of private companies, as Members	1,39,51,849 13 8
(ix) Due from Banking Companies	18,58,715 14 8

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE PUNJAB NATIONAL BANK, LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank, Ltd., Delhi, as at 31st December, 1954, and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) the Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit;

(d) in our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with law;

(e) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true Balance of Profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office; and

(f) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

SHIFTING OF SUGAR MILLS IN U.P.

GOVERNMENT TO CONDUCT SURVEY

IT will be recalled that, in its development programme for the sugar industry under the first Five-year Plan, the Planning Commission has specifically emphasised the need for shifting some of the factories located in areas where sufficient cane supplies are not available to areas which are assured of adequate supplies of right quality cane or which are suitable for growing cane. The Government of India, too, accepted this recommendation and gave permission to some factories to migrate to more congenial areas. But not much has happened in this direction; excepting one or two factories, there has hardly been any perceptible migration of the industry from U.P. and Bihar. Even the efforts of the late Mr. Rafi Ahmed Kidwai to bring about a dispersal of some factories in North India to South India did not meet with complete success. Apart from stiff opposition from the Governments of Uttar Pradesh and Bihar as well as from workers and cane growers, the implementation of the scheme to disperse the sugar factories would appear to be beset with several limitations. Prompted, evidently, by this consideration, the Union Food and Agriculture Minister, Mr. Ajit Prasad Jain, remarked, in the course of his address at the recent annual meeting of the Indian Sugar Mills Association, that the dispersal of factories from North to South India was not a practical solution. He felt that a more feasible proposition was to take vigorous steps to increase the output of cane in U.P. and Bihar. If the per-acre yield of cane in these areas were to be doubled, it would go a long way towards improving the economy of the Indian sugar industry. He accordingly urged the adoption of measures which would step up production of high-sucrose content sugarcane in these two States where nearly 74 per cent. of the industry is situated.

The suggestion seems to be receiving the serious attention of the U.P. Government. Replying to a question in the State Vidhan Sabha the other day, Mr. C. B. Gupta, Minister for Planning and Industries, announced, for instance, that appropriate steps would be taken to assist the sugar industry "which is suffering from lower percentage of recovery and lesser duration of the crushing season as compared with other parts of the country, especially South India." The Government, according to him, has decided to give a subsidy of about one-third to one-fourth of the total cost in respect of construction of wells, roads, etc., with a view to developing sugarcane areas. Another important step relates to the redemarcation of the sugarcane zones to the factories and their reallocation for a longer period, "so that factories can take more interest in cane development." It is also proposed to summon a high-level conference of the representatives of the sugar industry, labour and cane growers to discuss what further steps should be taken to strengthen the industry.

New Sugar Mills

The deliberations of the high-level conference, the decisions taken thereat and their actual implementation will be watched with interest. In the meantime, sugar producers in the other parts of this country will be surprised to hear that, not content with the factories that are already in Uttar Pradesh, the Government of that State has decided to conduct a survey to find out whether any new sugar mills can be established in its jurisdiction and which of the existing mills needs to be shifted from the present location to more ideal sites. An officer, it is said, will be appointed some time next month to carry out the investigation. It is further stated that attempts are being made to open those sugar mills which remain closed now, to increase the production capacity of all the mills to the maximum, and to raise output of cane both intensively and extensively.

The U.P. Government's move "to help put the sugar industry on firm feet" is in the right direction. Uttar Pradesh, as readers are aware, is the major centre of the sugar industry and accounts for the bulk of the country's sugar output. If the sugar industry in this State is put on a sound footing, consumers in the whole country will doubtless derive benefit. But its wisdom to establish some sugar factories in the area within its jurisdiction is of a dubious nature. Surely, the question of enabling the existing units, most of which are struggling for existence even when domestic production falls short of domestic consumption, should get first priority. We wonder what would be the reaction of the Planning Commission to the proposal for putting up more factories in Uttar Pradesh.

Despite the progress made during the past two decades and more, the sugar industry in U.P. and Bihar is in the doldrums, for the large part. This is the result of the defective location of several mills even within these States. A number of mills is found in areas quite unsuited for the cultivation of good quality cane. If the economics of sugar industry in U.P. and Bihar are to be made sound, it is imperative that these locational defects of the industry are removed as early as possible by shifting the factories at least to areas in the same States where sugarcane is easily available. The decision of the U.P. Government to conduct a survey of the factories which are not working or which are working below capacity, due to paucity of cane supplies, with a view to determining which of the factories should be shifted from their existing location, must, therefore, be considered as a right move.

It must, however, be stressed that, while implementing the suggestion for the dispersal of factories, special care should be taken to ensure that the factories will get their requirements of sugarcane without much difficulty. This is best done by reaching an understanding with sugarcane growers in the surrounding areas that they would unfailingly supply their cane crop to the factories designated by the Government. Unless some such arrangement is made, the hope of these factories securing adequate supplies of cane and producing maximum quantity of sugar at economic prices will not be fulfilled.

RAISING OUTPUT OF SUGARCANE

The sugarcane development staff of the Agricultural Department, Government of Madras, must, indeed, be congratulated on their successful efforts at augmenting output of sugarcane in the factory zones in the State. The average yield of cane in these zones during the season 1953-54, for instance, was 35.31 tons per acre, which compares favourably with 25.58 tons before intensive work was taken up five years ago. The highest per-acre yield was 87.7 tons. Disclosing this, Mr. M. S. Sivaraman, Director of Agriculture, claimed, in the course of his speech at the third annual competition among the sugarcane growers of the factory zones held at Madras recently, that the average per-acre yield of sugarcane in Madras was nearly three times the average (12 tons) for the whole of India. In his opinion, there seems to be further scope for raising the yield, for he emphasised at the same time, the need for adopting proper agronomic practices in cane cultivation so that the decline in prices could be counteracted, to the extent possible, by increased output per acre.

Giving away the prizes to cane growers who had reported high yields, Mr. M. Bhaktavatsalam, Minister for Agriculture, also laid stress on the need for further augmenting the yield of cane, which, he declared, would not only benefit the grower but also result in a saving of foreign exchange now being spent on imported sugar. Mr. Bhaktavatsalam felt that it would be better if agriculturists raised crops such as sugarcane and cotton along with paddy. Congratulating the prize winners, he hoped that the award of such prizes would induce people to adopt the methods suggested by the Department and get the benefits of increasing yield. Incidentally, the Minister revealed that his Government was making representations to the Centre to allow export of *jaggery* to some extent in order to counteract the fall in prices. Stressing the importance of establishing more factories to step up production of sugar, the Minister disclosed that some persons had come forward to start a co-operative sugar factory in Ambur in North Arcot District and that the Government would consider the question of helping them.

The Regional Director of Food, Bombay, has abolished the system of collecting balance payment against sale of sugar on f.o.r. destination basis through the Imperial Bank of India. The tenderers whose despatches are pending are now required to make the balance payment in the form of a demand draft payable to Pay and Accounts Officer, Union Ministry of Food and Agriculture, New Delhi, on the Imperial Bank or any Scheduled bank supported by the usual certificate from the Reserve Bank of India.

The aggregate quantity of sugar produced in India during the period 1st November, 1954 to 15th March, 1955, amounted to 1,333,000 tons, as against 892,000 tons in the corresponding period of 1953-54. This was revealed by Dr. Punjabrao Deshmukh, Union Agriculture Minister, in the course of the debate on the demands for grants for the Food and Agriculture Ministry, in the Lok Sabha last week.

The Government of India has reduced the selling price of East German sugar for ex-dock/ex-godowns delivery at the ports from Rs. 30-8 to Rs. 29-7 per maund with effect from the 5th inst.

INSTALLATION OF WASHERIES

COAL BOARD'S POLICY ELUCIDATED

THE Coal Board has elucidated its policy regarding installation of washeries by coking coal collieries. Following requests by coking coal collieries which propose to install washeries that they be allowed to increase their output to the extent of the capacity of such washeries, the Coal Board has, through a Press note issued on the 26th inst., stated that it is unable to permit increase in output as a general measure of policy. In other words, it will consider the question of granting permission to increase output of individual cases only under exceptional circumstances.

The Coal Board has expressed its inability to concede the request of the coking collieries for fear of "overproduction" of coking coal. The Board is generally of the view that, where output is not large enough to feed the full capacity of a washing plant, the colliery concerned should join with other neighbouring collieries producing coal of similar characteristics or undertake to wash such coals together with its own output. Where, however, it is found necessary for a colliery to install a washing plant with a capacity higher than its output, the Coal Board may approve such an installation. If, in such a case, the plant is worked below capacity, as it would naturally be, and if, as a result, the cost of washing including depreciation, is higher, the Coal Board will, it is stated, take into account all these facts in assessing the quantum of assistance that will finally be given to encourage coal washing. All collieries with plans for the installation of washeries are, therefore, advised to intimate the Coal Board, without delay, at least the main features of their plans, so that the Board can give it suitable advice.

This move is apparently designed to prevent production of coking coal exceeding the ceiling fixed under the policy of coal conservation. As readers are aware, the output of selected "A" and "B" grades is pegged at 7.35 million tons for 1955, as against 7.4 million tons in 1954. There are, besides, Grade I and II coal, which, though they are not at present used for metallurgical purposes, because of their higher ash content, are capable of yielding, on beneficiation or as blends with the superior grades, good metallurgical coal. As against this, the requirements of coking coal in 1955-56 are estimated at 3.78 million tons, as compared with 3.65 million tons in 1954-55 and 3.39 million tons in 1953-54. Thus, the output of coking coal is already about 100 per cent. over the requirements for metallurgical purposes. The surplus output is used for non-metallurgical purposes and for export. At one time, the Board thought of substantial reduction in output of selected grades of coking coal, but it was found that such would not be possible without involving considerable retrenchment of labour and without the possibility of rendering some of the collieries uneconomic even after retrenchment of labour. It is calculated that the reduction in output at the rate of 0.5 million tons per annum would involve retrenchment of about 5,000 labourers each year. Besides, the saving of coking coal by this method is also considered inappreciable. There are, however, restrictions on opening of new seams containing coking coal, as well as on reopening of even closed seams. It will be interesting to know the reaction of colliery interests to the Coal Board's aforesaid decision in regard to the establishment of washeries.

COAL STATISTICS

The output of coal in collieries in India declined from the peak figure of 3,505,446 tons in December, 1954, to 3,152,967 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines in India. Despatches of coal amounted to 2,671,573 tons in January, 1955, as against 2,749,302 tons in the preceding month. Coal stocks at pitheads, however, declined from 3,501,388 tons at the beginning of the month to 3,462,040 tons at the close of the month. Coke plants at collieries and elsewhere produced 390,959 tons of hard, soft and other kinds of coke during the month and despatched 210,007 tons. During the month under review, 831 collieries were reported to be working with an average daily employment of 350,077 workers. The output per man-shift was estimated to be about 1.07 tons for miners and loaders, 0.87 ton for all workers underground and in open workings, and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 14.26.

"World Energy Resources in the Light of Recent Technical and Economic Developments" is chosen as the main theme of the discussions at the fifth plenary World Power Conference, to be held in Vienna from 17th to 23rd June, 1956.

It's a BIG job....
running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead". For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

MODEL RULES UNDER PLANTATION LABOUR ACT

MADRAS GOVERNMENT'S DRAFT PUBLISHED

MADRAS is the foremost among the State Governments to publish its model rules under the Plantation Labour Act of 1951. No other State Government in India has so far published any model rules under this Act. It is announced that these rules will be taken into consideration after 30th April, 1955.

The Madras Rules generally follow the pattern of the Central Government's Rules, but they appear to give some concessions in respect of the provision of canteens, supply of drinking water to workers, etc. In these and some other respects, the Madras Rules appear to take a practical view of the amenities and facilities that can be provided by plantation employers for their workers. With the exception of rules 13 to 20, which deal with the provision and equipment of latrines, and rules 30 to 43, which deal with canteens, creches, recreational facilities and educational facilities of workers' children, the draft rules are to come into force immediately they are approved. Rules 13 to 20 and rules 30 to 43 are to come into force at a subsequent date.

Rule 3 defining the powers and functions of the inspecting staff confers wide powers on inspectors including the power to prosecute or defend before a court any complaint or other proceedings arising under the Act, and to require employers to supply returns or information relating to the provisions of the Act. The duties of certifying surgeons, given in rule 5, include their satisfying themselves during their periodical visits about the fitness of all the adolescents and children employed in the plantation.

In Chapter III, dealing with health, rule 7 provides that an adequate supply of wholesome drinking water shall be made available in every plantation at work sites at all times during working hours. Rules 10 and 11 provide measures for maintaining a clean supply of water. Rules 13 and 20 provide that suitable latrine accommodation are made available in every plantation at the rate of one latrine for every 50 acres of the area under cultivation, that the latrines shall conform to public health requirements, and that adequate water-supply should be provided near latrines. Similar provisions are also made in respect of urinals.

Rule 21 prescribes that there shall be two types of hospitals in plantations, namely, garden hospitals and group hospitals. Every plantation employing 1,000 or more workers shall run its own garden hospital wherever possible, while every plantation employing less than 1,000 workers which are situated within reasonable distances from one another may, with the approval of the Chief Inspector, combine and provide joint hospitals/dispensaries and share their expenses. Group hospitals are to be established by 1st July, 1957.

In Chapter IV, dealing with welfare, rule 30 requires the provision of a canteen in or near every plantation wherein 150 or more workers are employed. In rule 32, it is provided that in every plantation where 50 or more women workers are employed a creche or creches should be maintained. At least half a pint of pure milk if possible, or powdered milk, shall be made available for each child daily. An adequate supply of clean clothes, soap and oil shall be made available for every child in the creche.

Housing accommodation for workers is provided for in rules 44 to 52. Quarters shall be built in accordance with standards and specifications to be approved by the State Government. Accommodation to be rent-free.

The constitution of an advisory board by the State Government is provided for in rule 54. The Board is to consist of representatives of the State Government and of employers and workers. Weekly holidays and sickness and maternity benefits are also clearly specified.

COFFEE INDUSTRY

The season 1953-54 proved to be a record one for the Indian coffee industry, so far as production and exports were concerned, according to the Administration Report, 1954-55, of the Union Ministry of Commerce and Industry. The output of coffee during 1953-54 amounted to 29,410 tons, made up of 22,630 tons of arabica and 6,780 tons of robusta, and constituted the largest crop during the present century. Such a high level of production is not expected to be maintained during the current year. For the Report estimates the 1954-55 crop, which is under picking and the bulk of which will be gathered by the end of May, 1955, at 24,200 tons, consisting of 15,000 tons of arabica and 9,200 tons of robusta.

The quantity of coffee released from the Coffee Pool for the internal market exceeded 21,000 tons during 1954. This quantity constitutes a record, the previous best being 18,407 tons in 1946. The year also saw a record in exports of coffee. A quantity of 9,613 tons of coffee was sold for exports and this represents the highest since the inception of the Board, the previous best being 5,373 tons in 1945-46. The Ministry does not seem to have collected statistics of actual consumption of coffee in the country. It is not known whether all the coffee sold for the internal market was consumed. The Report has not also given the figures of stocks with the Pool at the end of the season.

The internal coffee prices at Pool auctions, according to the Report, showed a high degree of stability during the year. The Pool auction prices for Plantation 'A' ranged from Rs. 197-14 to Rs. 218-15 per cwt., as against Rs. 199-1 to Rs. 258-5 in 1952. The allotment price for Plantation 'A' was only Rs. 195-8. The export prices were 50 to 100 per cent. higher than the internal prices, the range for Plantation 'A' being Rs. 281-7 to Rs. 462-8 per cwt. The prices obtained in the latter half of the year were lower than those in in the first half. The export duty of Rs. 62-8 per cwt. imposed in October, 1953, continued to be in force up to 18th February, 1955, when it was reduced to Rs. 21 per cwt.

The area under coffee in 1953-54 was 248,300 acres, representing an increase of 26.65 per cent. over that of 194,474 acres in 1942-43. The area under cultivation of arabica was 168,722 acres, as against 161,261 acres ten years ago, and that under robusta 77,578 acres as compared with 33,213 acres in 1942-43. The present trend in coffee planting, the Report adds, is for the robusta acreage to expand more rapidly than the arabica acreage, as is borne out by the aforesaid figures, evidently due to the better resistance of robusta to pests and diseases, higher yield and cheaper cost of production, although arabica is noted for its good quality.

The Government has under active consideration the possibility of further expansion of the coffee industry. With this object in view, an officer on special duty has been appointed to conduct a field survey of the vast undeveloped area in the States of Madras, Mysore and Coorg and to make recommendations to the Government of India on the desirability of increasing the total acreage of coffee. This officer has already visited some important coffee growing areas in Mysore State and studied the problems of the industry. The detailed report is expected to be submitted in the course of the next few months.

PLANTATION ENQUIRY COMMISSION

The Plantation Enquiry Commission consisting of Mr. P. Madhava Menon, I.C.S. (Chairman), Prof. M. V. Mathur and K. G. Sivaswamy, started a tour of the Anamallais, Shevaroys and Nilgiris areas on the 1st inst. After visiting tea packing and coffee curing houses in Coimbatore, the Commission toured tea estates in the Anamallais and proceeded to the Nilgiris where it held consultations with the United Planters' Association of Southern India and other local associations of planters. It is understood that during the course of discussions the planters clarified several points raised in their written memorandum to the Commission. Questions relating to expenditure on replanting and new planting of tea, coffee and rubber areas in South India, the present system of allocation and transfer of tea export quotas, practical difficulties arising from the new system of levy of tea export duty, difficulties connected with the implementation of the Plantation Labour Act, the problem of damage caused by cattle on plantations and anomalies resulting from over-lapping legislation of different kinds of plantation labour were raised by the planters during discussion with the Commission. A number of tea, coffee and rubber estates belonging to large and small growers, as well as companies, were visited by the Commission.

PROSPECTS FOR JUTE FABRICS

IMPORTANCE OF STABLE PRICES

THE thesis of the address of Mr. P. Drollas at the annual meeting of the Calcutta Jute Fabric Shippers' Association, in his capacity as the Chairman, is that, unless prices of jute goods are held at a reasonable level from the point of view of consumers and constant supplies of the goods are assured, the future of jute goods industry will be bleak. This, according to Mr. Drollas, is the lesson that one can draw from the trading conditions in 1954. For early in the year, when the prices of jute goods were at more or less a reasonable level, the demand was exceedingly good. The offtake from Argentina, though smaller than that in the previous year, was considerably satisfactory, the season's purchase aggregating over 80,000 metric tons. Sackings in particular fared very well in export markets, Australia figuring prominently with a total import of 70,000,000 bags in 1954, as against 45,000,000 in 1953. The U.K. markets were ready and the demand from the African markets equally satisfactory. Burma purchased considerable quantities and China, for the first time after many years' absence, entered the market taking about 25,000 bales of bags. Competition from substitutes were generally less aggressive. A notable exception, however, was the disappointing market conditions in the U.S. The consumption of burlap fell from the monthly average of 70,000,000 yards in 1953 to 65,000,000 yards in 1954, a decline by 5,000,000 yards.

Unfortunately, later in the year, the performance of jute goods in export markets proved to be disappointing. This was due to a rapid rise in the price of jute goods, which, said Mr. Drollas, "drove business away from Calcutta." This rise was attributed to reports of small raw jute crop both in India and Pakistan. Then, there were the unprecedented floods in East Pakistan and in some of the important jute growing parts of India which affected adversely the jute crop position. This state of affairs was made worse by the large speculative activity of the Calcutta operators, which pushed up jute prices to artificially high levels. Small wonder, therefore, that the demand for jute goods from export markets slackened. Substitutes for jute goods once again began to extend their inroads; in fact, some markets have already been irrevocably lost to substitutes.

It is true that there are certain factors which are virtually beyond the control of man and which affect the supply of jute goods and their prices. But there are certain others which are within the control of man. Excessive speculation is one of them. Mr. Drollas insists that the worst feature of the jute goods market is the existence of the highly undesirable speculative elements. He wonders why the fortunes of the industry of the size and national importance as jute should be at the mercy of a few speculators in Calcutta. To quote him: "These speculative elements enjoy considerable influence and appear to command unlimited financial resources, such as enable them to manipulate the market and prices to an extent which has recently assumed alarming proportions." Indeed, the only way out of the situation, as pointed out by the Chairman, is the regulation of the futures market on sound lines. It is true that the Government has made a beginning towards establishing a well-regulated market, but Mr. Drollas regrets that the progress has been slow. This is a perfectly valid complaint. Although well nigh 18 months have passed since the Forward Markets Commission was appointed, nothing tangible has materialised in regard to the question of improving the working of the jute goods futures market. It is to be hoped that the matter would be looked into and the progress of reform quickened.

Mr. Drollas also made out a case for the removal of export duty on gunnies. He is of the considered opinion that the existence of the export duty, even though not heavy, might harm India's exports.

Introduction of bulk transport system, although very slow and gradual at present, in the Scottish flour milling industry is considered a threat to the textile bag business. Millers in Scotland, it appears, have already adopted the system on a limited scale. Its wider use is likely to reduce the volume of sack sales to flour mills and bakeries. So far, the bulk transport of flour is limited only to a few mills and large bakeries. Units now in use carry about 10 to 14 tons of flour. There are not a very large number of bakeries capable of holding and baking such a tonnage sufficiently fast to justify the use of bulk transportation. But the economies possible by the new system are reportedly so obvious that bakers may soon see their way for installing storage bins capable of holding full load.

THE HIND BANK LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1954.

	Rs.	a.	p.
The Profit and Loss Account after deduction of all working expenses shows a profit of	6,55,597	0	10
to which must be added the amount brought forward from previous account	1,01,223	5	10
Total .. Rs.	7,56,820	6	8

which the Directors have disposed of as follows:—

	Rs.	a.	p.
Amount transferred to Reserve Fund	1,50,000	0	0
Provision made for taxation	2,80,000	0	0
Bonus to staff	89,000	0	0
Amount transferred to Gratuity Fund	25,000	0	0
Balance	2,62,820	6	8
Total .. Rs.	7,56,820	6	8

Out of the balance of Rs. 2,62,820-6-8 the Directors recommend to the shareholders payment of Dividend at Rs. 1-8 per share free of Income-tax which absorbs Rs. 1,50,000-0-0 leaving Rs. 1,12,820-6-8 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved are satisfactory. The Investment policy of the Bank during the year 1954 continued to be the same. About 54 per cent. of Time and Demand Liabilities are held in Cash and Investments. Of the Investments, about 64 per cent. are held in Government of India and State Government bonds, of which about 92 per cent. mature within the next 7 years. The Bank's Investments in the Balance Sheet stand at below market value as at the end of December 1954.

The Directors have to report with regret the resignation of their colleagues Mr. Chimanlal B. Parikh, Mr. Jal H. Mehta and Mr. J. R. Jacob and they desire to place on record their sincere appreciation of the valuable services rendered by them to the Bank.

During the year under review Mr. B. V. Jacob of Messrs. B. N. Elias & Co., Ltd., at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company Mr. K. P. Goenka and Mr. B. Kumar Birla retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal and Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the numerous constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and Branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

Dated, CALCUTTA, the 10th March, 1955.

BALANCE SHEET AS AT 31st DECEMBER, 1954

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL— 2,00,000 Shares of Rs. 100 each	2,00,00,000	0	0			
ISSUED AND SUBSCRIBED CAPITAL— 1,00,000 Shares of Rs. 100 each	1,00,00,000	0	0			
AMOUNT CALLED UP— 1,00,000 Shares at Rs. 50 per share				50,00,000	0	0
2. Reserve Fund and Other Reserves— Reserve Fund (including under Section 17 of the Banking Companies Act)				25,50,000	0	0
3. Deposits and Other Accounts— Fixed Deposits	1,35,85,936	11	8			
Savings Bank Deposits	16,25,017	4	4			
Current Accounts, Contingency Accounts, etc. ..	2,55,20,335	0	1			
				4,07,01,088	15	10
4. Borrowings from Other Banking Companies, Agents, etc.— (i) In India	....					
(ii) Outside India	....					
Particulars:— (i) Secured	....					
(ii) Unsecured	....					
				2,18,556	2	10
5. Bills Payable						
6. Bills for Collection being Bills Receivable as per contra— (i) Payable in India	29,09,146	4	0			
(ii) Payable outside India	1,72,263	11	7			
				30,81,409	15	7
7. Other Liabilities— (i) Unclaimed Dividends	14,339	0	0			
(ii) Branch Adjustments	4,36,445	15	6			
				4,50,784	15	6
8. Acceptances, Endorsements and Other Obligations per contra ..				1,59,22,800	11	7
9. Profit and Loss— Profit as per last Balance Sheet	2,51,223	5	10			
Less—Dividend	1,50,000	0	0			
	1,01,223	5	10			
ADD—Profit for the year brought from the Profit and Loss Account	6,55,597	0	10			
	7,56,820	6	8			
LESS—Appropriations thereof—	Rs.	a.	p.			
Amount transferred to Reserve Funds	1,50,000	0	0			
Provision for Taxation	2,80,000	0	0			
Bonus to Staff	89,000	0	0			
Amount transferred to Gratuity Fund	25,000	0	0	4,94,000	0	0
				2,62,820	6	8
10. Contingent Liabilities— (i) Claims against the banking company not acknowledged as debts Rs. 44,840-4-0.						
(ii) In respect of Guarantees issued on behalf of constituents Rs. 1,76,100-0-0						
(iii) On Imperial Bank shares partly paid up Rs. 84,875-0-0.						
(iv) Liability on Bills of Exchange rediscounted Rs. 12,35,678-12-8 of which Rs. 48,88,865-10-0 have run of upto 28-2-55.						
(v) Liability on account of outstanding forward exchange contracts Rs. 2,61,45,98-9-7 of which Rs. 1,41,90,987-0-0 have been delivered upto 28-2-55.						
(vi) Claims by employees not acknowledged as debts and under dispute before the Tribunal.						
Total .. Rs.				8,79,87,461	4	0

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Hind Bank Limited, as at 31st December, 1954 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated Branch returns audited by the Statutory or Local Auditors, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of audit;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of accounts have been kept by the Bank as required by Section 150 of the Indian Companies Act, 1913.

CALCUTTA, the 10th March, 1955.

PROMOTION OF RURAL ELECTRIFICATION IN ASIA AND FAR EAST

FINANCE, THE BIGGEST SINGLE OBSTACLE

THE importance of electric power to the economic development of a country needs no emphasis. This power is indispensable for raising the living standards of underdeveloped regions of Asia and the Far East. For more than 80 per cent. of the population of the region lives in rural areas. Unless production and employment in these areas are expanded, no real improvement in the living standards of people can be achieved. This means that the productivity of agriculture must be raised and scores of new industries—small and big—must be established in rural areas. Accordingly, development of the region is closely related to the success of rural electrification programmes. Unlike the urban, the rural loads are scattered. The demand per consumer is small, owing to the low standard of living, and it is difficult to supply power at economic rates for such small scattered loads. The problem, in fact, offers a challenge and an opportunity to engineers and administrators of the power supply industry. There is no gainsaying the fact that a satisfactory solution will depend upon the ingenuity and the professional skill brought to bear upon it and also on the co-operation of all concerned, especially research institutions, manufacturers, distributors of agricultural equipment and domestic appliances and consumers.

The problems of rural electrification are impressively dealt with in a report of the *U.N. Economic Commission for Asia and the Far East*, entitled *Rural Electrification* (priced at 6s. or 80 U.S. cents). The Report confines itself to the problems facing the countries of the region. Various technical and economic questions relating to electric power development in rural areas are discussed and suitable methods and practices are suggested. The financial considerations relating to rural electrification projects are dealt with in some detail, as finance is the greatest single obstacle faced by all the countries. The Report points out that, for a number of reasons, the economics of rural electrification schemes cannot be judged on the same basis as those of ordinary commercial enterprises, and that it accordingly appears necessary for the Governments concerned to accept the main responsibility for promoting rural electrification and for bearing the financial burden involved through one or other of the various methods described in the Report.

According to the Report, the progress achieved so far in the E.C.A.F.E. region is insignificant, except in the case of Japan and China (Taiwan). It points out that, while installed capacity (in kw. per 1,000 inhabitants) is as high as 620 in Canada, 436 in the U.S., 425 in Sweden, 291 in the U.K., that in the Asian countries amounts only to 108 in Japan, 47 in China (Taiwan), 68 in Hongkong, 37 in Singapore, 26 in Malaya, 7.6 in Ceylon, 6.9 in the Philippines, 4.5 in India, 2.2 in Burma, 1.8 in Indonesia, 1.7 in Cambodia, Laos and Viet Nam, 1.58 in Thailand and 1.12 in Pakistan.

Finance

Finance is the greatest single obstacle for carrying out rural electrification on an extensive scale. The continuous rise in costs in most of the countries has seriously affected the power supply industry. The result is that the principle of amortisation has lost its objective value. This has been largely responsible, the Report says, for the declining supply of private capital for long-term investment. Furthermore, the increase in the price of equipment has necessitated considerably more capital for the establishment of new plants.

Another factor that has adversely affected the development of electricity supply industry is the intervention of the Government, varying from complete nationalisation to legislation controlling the development and the financial activity of the private electricity undertakings. Dealing with this aspect, the Report candidly remarks:

"Nationalisation has changed the very basis on which the industry operated earlier. To mention a few factors, revenue surpluses are claimed by the treasury, and adequate provision is not always made for development plans commensurate with the importance of the industry, apart from the delays in sanctions and allotments of funds, etc., that occur in Government routine."

The Report makes a pointed reference to the allegation that, where there is Government control of private undertakings, the "reasonable returns" fixed in many cases are too low to attract the required capital. The taxation policy adopted by the Government does not always admit of sufficient reserves being built up for re-investment in the industry as has been done in the past. So far as rural electrification is concerned, the Report, however, is of the considered opinion that financing cannot be subjected to the normal tests of satisfactory returns on investment. Experience has shown that, even in some of the Western countries, where the standard of living is higher and the farm holdings are larger, the return on investments for rural electrification is not adequate. In the case of the rural areas in the countries of the E.C.A.F.E. region, the problem is more difficult, as the concentration of load per unit area is much less and the growth of load will be slow, owing to very low standard of living. Discussing the economics of fixing tariffs, the Report observes:

"The two basic considerations that govern the formulation of tariffs, which will satisfy both the producer and the consumer, are what the service costs to produce and what it is worth to the consumer. Electricity has special features which require consideration in the formulation of tariffs. It is not possible economically to store electricity in significant quantities, at least at the present stage of technical development; the demand in a power-supply system fluctuates sharply over different periods of time; it reaches a maximum at a particular time of the day and this maximum varies with the seasons of the year; the capacity of each part of the equipment, such as the generating plant, transmission lines, transformers, etc., should be adequate to meet that highest demand even though it may occur only once a year and may last for a short time. Furthermore, the electric supply industry enjoys a limited monopoly; therefore, the ordinary laws of supply and demand are not applicable to the determination of prices.

"On the production side, the cost will be influenced either by the encouragement given and subsidies paid by the Government or by municipalities in order to secure the incidental benefits to the health of the community and the establishment of industries, or by their attempts to secure high profit to be used for the benefit of other services. On the consumption side, habits, prejudices, initial investment and competition from alternative services influence the value of the service to the consumer.

"Tariffs for rural areas present a special problem. The main problem in rural electrification is the economical supply of power to small loads scattered over wide areas. On the one hand, the cost of energy supply is higher than for urban areas, and, on the other hand, the value of service to the consumer is lower. Although cost considerations demand higher tariffs, a uniform tariff for urban and rural supply for a particular class of service is the cry of the day. Therefore, tariffs which are broadly based on the laws of economics and duly modified to take into account all factors influencing production (such as maximum demand, time and place of supply) as well as the value of service to the consumer, may be considered satisfactory."

The Report expresses the view that financing of rural electrification cannot be subjected to the normal tests of satisfactory return on investment. While every effort should be made to reduce costs, it is felt that, in the interests of encouraging rural electrification, at least in the initial stages, it will be essential to provide suitable inducements to the rural consumer in the form of reduced rates, etc. This naturally leads to some kind of subsidy for rural electrification by the Government or by some public authority. The Report lists the following as the possible methods of Governmental assistance:

(a) The Government advances the entire amount of capital required for rural electrification and recovers the amount in easy instalments as the schemes begin to yield a return, a low rate of interest being charged for the outstanding loan during the initial stages of operation. This may be done in two ways:

(i) The money may be advanced to electric supply undertakings, which are directed to extend electricity to rural areas;

(ii) Co-operatives may be formed in the areas to be served and the money advanced to them, the necessary technical and administrative assistance being rendered by a Government organisation exclusively set up for the purpose.

(b) Outright payment is made to an electric supply undertaking to cover a portion of the capital cost of rural electrification, the proportion payable by Government being determined in each case depending upon the prospective load conditions of the area to be served.

(c) The Government guarantees the undertaking entrusted with the work of rural electrification to make good the losses that may be incurred.

(d) A suitable taxation policy is adopted to enable undertakings to build up reserves to be utilised for extension of electricity to rural areas.

Dealing with rural electrification in India, in particular, the Report observes as follows:

"No definite financial policy has been laid down in respect of rural electrification. However, the need for extending electricity to rural areas has been increasingly felt in recent years. In the Electricity Supply Act of 1948, the creation of State Electricity Boards in the various States in India has been envisaged. Although the Act does not contain any specific provision for special measures designed to give impetus to rural electrification, it enables State Governments to grant subventions for such other purposes beneficial to electrical development in the State. In almost all cases, the rates offered to rural areas are maintained at the same level as in the adjoining areas falling within the same grid system. The Planning Commission, in its first Five-year Plan, has attached considerable importance to the use of electricity in rural areas and has suggested that the States should set up a special machinery on the lines followed by the Rural Electrification Administration in the United States of America. It is also held in some quarters that, in order to augment the financial resources required for the expansion of rural electrification, certain portions of the proceeds of taxation on the sale of electricity and of the betterment levy (which is in the nature of capital levy) on properties which are supplied with electricity could be credited to the electricity development fund."

It will be seen from the aforesaid quotation that India has not evolved any specific policy for promoting electrification of rural areas.

Estd. 1906. *Head Office:* UDIPI (S. India)

THE

CANARA BANKING CORPORATION LIMITED

(A Scheduled Bank)

We have pleasure in announcing that our second branch in Bombay has been opened at 51, Pydhoni Road, Bombay-9, and since 28th January, 1955, it has been carrying on regular banking business. All our shareholders, constituents and well-wishers are requested to extend their co-operation to this branch as well as our other Bombay Branch at "Lentin Chambers" (Ground Floor), Dalal Street, Fort.

Dr. U. Sunder Ram Pai, M.B.B.S., *Chairman.* V. R. Kamath, B.A., LL.B., *General Manager.*

MANUFACTURE OF HEAVY ELECTRICAL EQUIPMENT

The Government of India has decided to set up a State-owned factory for manufacturing heavy electrical equipment, as recommended by the Heavy Electrical Project Enquiry Committee. It will shortly invite some of the leading electrical manufacturers of international repute to discuss the scheme and to ascertain the basis for obtaining technical and financial collaboration with them. The Government has already assembled a committee of electrical experts to advise it on the implementation of the project. They will select a firm of international repute for collaboration in the project.

It will be recalled that the Heavy Electrical Project Enquiry Committee was appointed in October last year to report on the exact requirements of the country in the matter of heavy electrical equipment and to recommend measures to meet the demand, which could not be supplied by the current production of the country. The Committee is reported to have recommended that the State should establish a heavy electrical project to fulfil the objective of self-sufficiency in this important field within a reasonable time. The Committee has suggested, we are told, that the State factory should include in its programme items such as hydraulic turbines and generators, generators for diesel sets and static capacitors in the manufacture of which none of the existing units is interested. Besides these, the factory should manufacture certain other items of large size, as, for instance, heavy transformers. In respect of these, the range of manufacture should, as a rule, start from the level that has already been reached by the existing units. The overlapping of production should be no more than marginal and to the extent that is essential for proper planning.

Those who are in the know of things are, however, doubtful whether the factory would be an economical proposition, though they concede that the present decision to establish it is strategically sound. The domestic market for heavy electrical goods, they point out, is limited to the multi-purpose river valley projects and a few large electric companies. This, it is felt, will not be enough to make the factory an economic proposition. Consequently, it is feared that the State may have to subsidise its production, as in the case of the Visakhapatnam Shipyard. They, however, do not overlook the fact that, in the long run, this factory may be able to cater to the demand from beyond the borders of India, that is, from Malaya, Indonesia, Burma and the like, which are expected to embark on large-scale industrial planning and which initially involves the production of electric power. But finding export markets is not going to be an easy task. Even as it is, a buyers' market has developed for this. India will have to compete with well-established foreign manufacturers. Success in this field depends chiefly on the quality of technical aid India gets, on the efficiency of management and on its ability to win export markets. It will be pertinent to mention here that, recently, the Government-owned telephone factory at Bangalore failed in its attempt to get the market in Burma.

NEW PRODUCTS AND PROCESSES

Rubber Hose Transports Ore and Coal

A RUBBER hose that outwears steel pipe in transporting 10-pound chunks of ore or coal has been designed by engineers of the B.F. Goodrich Company, a U.S. rubber concern. The hose is lined with a special abrasion-resisting rubber. Lumps of ore or coal are propelled through the hose by a high-pressure stream of water. The hose has proved especially useful as a substitute for bent and curved pipes. Abrasive particles of ore cause severe wear at turns in metal piping systems. Unlike the pipe, the rubber hose can be rotated to distribute the wear at these points.

Fog Dispellers

The U.S. State of New Jersey has started to install experimental fog-dispelling devices on heavily-travelled roads where heavy fogs are frequent. The devices are large two-bladed rotating fans mounted near the top of 30-foot high aluminium posts. A metal cone mounted on top of each post forces the blast of air downward. The fan starts to rotate when a photo-electric cell, registering the presence of fog, activates an electric motor. It is claimed that the devices disperse fog at ground level and draw down clear air from above. Each unit is capable of dispersing fog within a radius of 600 feet.

Blood Cells Magnified to Baseball Size

Red blood cells appear as large as baseballs and tiny bits of hay-fever-producing pollen look like spiny basket balls when viewed through a new high-power microscope just developed by the U.S. Columbia Broadcasting System Laboratories. Even living cells can be enlarged up to 15,000 times with the new microscope, which enlarges electronically and projects in full colour optical images from a conventional microscope adapted for the purpose. An important feature of the microscope is that it provides, instantaneously and in colour, images 100 times brighter than were possible before.

New Chemicals to Fight Flies

A large assortment of new chemical compounds to fight flies and mosquitoes is being developed by the U.S. Department of Agriculture. The Department's Agricultural Research Service predicts that new and effective insecticidal baits to control flies will soon be in widespread use. The service also reports the discovery of 11 new mosquito-repellent chemicals, all of which are better than anything now in use against several species, including those which spread malaria and yellow fever. The development of new chemicals to combat flies has been stimulated by the fact that, in many areas, these pests have developed relative immunity—or at least a high resistance—to D.D.T. and other chemicals. Tried out in a recent test, one of the new compounds reduced the fly population 99 per cent. in four hours. Agricultural research service workers are convinced that they can produce nearly perfect fly control both on the farm and in the home.

Controlling Pest Damage to Grain in Storage

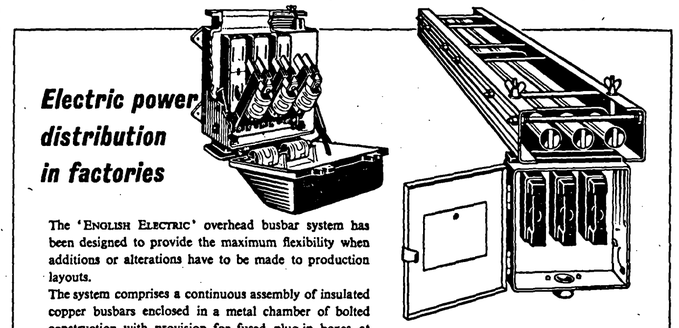
Research on methods of controlling insect pests on grain stored in large quantities for food or for seed point to simple chemical methods that assure an almost complete control of the pests. Insects, along with other pests, are responsible for causing losses amounting to about 25,00,000 tons of grain every year in India. Measures adopted to save this grain from pest damage will go a long way in saving food for the nation. Entomologists recommend that the grain after harvest and before storing should be thoroughly dried because grain which is fully dried is not favourable to the breeding or growth of the insects. They also prescribe light fumigation with a fumigant like chlorosol. This is available in liquid form, but vapourises on exposure to air. The fumigation is done by covering the stored grain under an air-proof cloth and pouring the liquid in a shallow dish kept on the top of the grain. The liquid is applied at 4 lbs. per 100 maunds of the grain. The grain is kept exposed to the fumes for 24 hours. Grain stored for seed should be dressed with 10 per cent. D.D.T. dust at the rate of 2 ozs. per 125 lbs. of grain. Research at the Indian Agricultural Research Institute, New Delhi, has shown that such a treatment will not interfere with the germination of the grain.

Manufacture of Ethyl Ether

Ethyl ether or ether sulphuric finds extensive use in chemical and pharmaceutical industries. In surgery, ether is employed as a general anæsthetic. Present production in India is of the order of 400,000 lbs. per annum. The process chiefly employed in India at present, involving the use of concentrated sulphuric acid as a catalyst at a high temperature, presents severe corrosion problems. Vapour phase catalytic dehydration of alcohol in a static bed, employed in some countries but not in vogue in India, is reported to be thermally inefficient and suffers from the disadvantage of producing large quantities of by-product ethylene. In the new continuous process, for production of ether, developed at Shri Ram Institute for Industrial Research, under a scheme sponsored by the Council of Scientific and Industrial Research, these disadvantages have been overcome by using a fluidised catalyst bed technique for vapour phase catalytic dehydration of alcohol at 200-300°C. Corrosion problems have been eliminated with better thermal efficiency; by use of smaller size catalyst particles and thus increasing the reaction surface, a better output is obtained. The catalytic material, bauxite, is abundantly available in India. Conversion to the extent of 43 per cent. is obtained. The plant is compact and easily controlled. The crude ether obtained is purified in the usual manner. The process has been worked satisfactorily on a pilot plant treating 66 lbs. of alcohol per hour. The product conforms to prescribed standards. The equipment is simple and can be easily fabricated. The process is covered by Indian Patent No. 49836.

'ENGLISH ELECTRIC'

overhead busbar systems and fusegear



Electric power distribution in factories

The 'ENGLISH ELECTRIC' overhead busbar system has been designed to provide the maximum flexibility when additions or alterations have to be made to production layouts.

The system comprises a continuous assembly of insulated copper busbars enclosed in a metal chamber of bolted construction with provision for fused plug-in boxes at 2 ft. intervals. Also designed for factory distribution is the 'ENGLISH ELECTRIC' range of combination fuse switch units and industrial distribution boards.

All 'ENGLISH ELECTRIC' combination fuse switches and plug-in boxes incorporate 'ENGLISH ELECTRIC' high rupturing capacity non-deteriorating cartridge fuse links.

ANNUAL MEETING OF UNITED COMMERCIAL BANK

IMPROVEMENT IN OPERATIONS MORE THAN OFFSETS HIGHER EXPENSES

MR. G. D. BIRLA'S REVIEW OF INDIAN AND OVERSEAS ECONOMIC CONDITIONS

PRESIDING over the Twelfth Ordinary General Meeting of the United Commercial Bank Ltd. held at Calcutta on Wednesday, 30th March, 1955, Mr. G. D. Birla, Chairman of the Bank, made a comprehensive and critical review, in the course of his speech, of Indian and overseas economic conditions. Emphasising that the public and private sectors have each a place in Indian economy, he pleaded for close co-ordination between the two. He stressed that what really mattered was the goal of maximum production and full employment and not the means which "scare some unnecessarily." After referring to the salient features of the Taxation Enquiry Commission's report, which was "bound to be the reference book of Finance Ministers for several years to come," he expressed the hope that the Government, in giving effect to the recommendations of the Commission, would "bear in mind the need to ensure that capital formation is not impeded and that production and employment would increase." As regards the working of the United Commercial Bank, he pointed out that the growth of its resources and their profitable employment in advances and bills have more than offset the increase in working expenses and the higher cost of money.

The following is the text of Mr. Birla's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to our twelfth annual general meeting. Before proceeding with the business of the meeting, I have to report to you, with great sorrow, the death of Mr. B. N. Jalan who was a member of the Board of Directors since the inception of the Bank and who, during the period of over a decade of his directorship, rendered great service to the Bank and brought to the deliberations of the Board the benefit of his wise counsel and experience.

"The balance-sheet and profit and loss account of the Bank have been in your hands for some time and you would, no doubt, have been pleased to note the improvement of the Bank's business to which the figures bear testimony.

Deposits

"You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1954 stood at Rs. 40.42 crores as compared with Rs. 37.72 crores at the end of 1953. The increase in deposits of Rs. 2.70 crores represents a rise of 7.1 per cent. and though the increase is somewhat smaller than the 22 per cent. recorded in 1953, it should, nevertheless, be considered as quite satisfactory.

"Cash on hand, balances with banks and money at call and short notice together accounted for Rs. 6.08 crores and represented 15 per cent. of our total deposit liabilities.

Investments

"The investments of the Bank in Government and other approved securities stood at Rs. 17.16 crores which shows a small reduction of Rs. 72 lakhs as compared with the figure at the end of 1953. The reduction is due to a moderate lightening of our holding of Government securities and a substantial reduction in debentures of joint stock companies. The ratio to deposits of our investments, after deducting the amounts borrowed thereagainst, is 33.6 per cent. Cash resources and unencumbered investments together amount in the aggregate to Rs. 19.66 crores giving a liquidity ratio of 48.7 per cent. to total deposits. The Bank's investments are shown in the balance-sheet, in accordance with our usual practice, at below the prevailing market rate.

"The amount of bills discounted and purchased has increased during the year from Rs. 7.79 crores to Rs. 8.57 crores. Bills constitute a very desirable self-liquidating asset and it is gratifying to note that these form 21.2 per cent. of the total deposits of the Bank.

"The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 69.9 per cent. of our deposit liabilities. We have always aimed at keeping a high liquidity ratio and I trust you will agree that this is a correct policy.

Foreign Exchange Business

"The Bank continues to make satisfactory progress in the field of foreign trade financing and though the balance of bills payable outside India on the balance-sheet date shows a slight reduction, the total business handled during the period under review has been larger than previously. The total of outstanding acceptances, endorsements and other obligations, which is an index of our activity in the finance of foreign trade, has shown a gratifying rise over the year and, with the relaxation of import and export controls, it is permissible to look forward to a satisfactory expansion of business under this head.

Advances

"The advances of the Bank, which from the point of view of revenue contribute the largest return, have increased from Rs. 11.99 crores to Rs. 16.07 crores. The increase is largely due to the high level of industrial and commercial activity which prevailed in the year 1954. The removal of control over foodgrains and the financing of the storage and movement of grains through normal banking channels is one important factor in the higher level of bank advances. The advances of the banking system as a whole stood at Rs. 467 crores at the end of 1954 as compared with Rs. 419 crores at the end of 1953. This represents a rise of 11.5 per cent. for all scheduled banks.

"The combined total of our advances and bills rose during the year 1954 from Rs. 19.79 crores to Rs. 24.64 crores and it now forms 61 per cent. of our total deposits.

Profit

"Turning to the profit and loss account, it is gratifying to note that the profit for 1954 is Rs. 31,06,404-1-6 as compared with Rs. 23,01,201-5-3 for the year 1953. The growth of the resources of the Bank and their profitable employment in advances and bills have more than offset the increase in working expenses and the higher cost of money. The results have been arrived at after providing Rs. 6.52 lakhs for depreciation of Bank's property, furniture and fixtures and other equipment.

"The earnings of the Bank under the head of 'interest and discount' has gone up by Rs. 15.00 lakhs and under the head of 'commission, exchange and brokerage' by Rs. 13.71 lakhs. On the expenditure side 'interest paid on deposits and borrowings' is higher by Rs. 13.14 lakhs, salaries and allowances by Rs. 6.30 lakhs and other working expenses by Rs. 1.77 lakhs.

Appropriation of Profits

"As stated in the Directors' report, the net profit of the Bank for the year 1954, including the sum of Rs. 1,52,320-7-3 brought forward from 1953 accounts, is Rs. 32,58,724-8-9. Out of this amount the Directors have already transferred Rs. 6,50,000 to reserve fund which now stands at Rs. 86,50,000 and have made a provision of Rs. 12,50,000 for income-tax and of Rs. 2,50,000 for bonus to staff, leaving a balance of Rs. 11,08,724-8-9. In view of the improved working results the Directors have thought it right and proper to recommend to you that the dividend be increased from 4 per cent. per annum paid last year to 5 per cent. per annum, free of income-tax, leaving Rs. 1,08,724-8-9 to be carried forward to next year's account.

Branches

"During the year, the Bank opened sub-branches at Ballygunge (Calcutta) and Jalahalli (Bangalore) and a branch at Bassein in Burma.

"Consequent on the merger of the French establishments in India with the Indian Union, the Banque de l'Indo-chine, which had the prerogative of issuing bank notes in French India and which had a branch at Pondicherry for the last 80 years, decided to close down its office there and we have purchased the premises and taken over the valuable business of its Pondicherry branch with effect from 14th March, 1955. Our already existing branch at Pondicherry has now been shifted to the more commodious and more prominently located premises acquired from the Banque de l'Indo-chine.

Management

"At the end of November last, under medical advice, your General Manager, Mr. B. T. Thakur, had to fly to London to undergo a major operation. I am glad to say that the operation was successfully performed and his health has improved. He has now resumed his duties. During his absence your Deputy General Manager, Mr. S. T. Sadasivan, acted as General Manager of the Bank in addition to doing his own work. I am glad to say that Mr. Sadasivan performed the additional duties of the General Manager most satisfactorily. I also take this opportunity to mention the valuable contribution made by the officers and staff at the head office and branches to the achievement of the successful results of the past year and to thank them for their loyal and devoted service.

Trend of Deposits

"It is gratifying to note that the deposits of scheduled banks have shown a decisive expansion in 1954 and this is in strong contrast to the stagnant or declining tendency during the past several years. The total deposits of Scheduled banks on 31st December, 1954, were Rs. 932.31 crores as compared with Rs. 838.12 crores on 31st December, 1953, and Rs. 830.72 crores on 31st December, 1952. Expressed as a percentage there is an increase of 10.9 per cent. on 1953 and 12.2 per cent. on 1952 figures.

"There are several factors which influence the trend of commercial bank deposits, the chief of which are: (1) the balance of external payments and export and import policy, (2) the inventory position with manufacturers, merchants and producers of raw materials, (3) the degree of promptness of disbursements on Government account for supplies and services, and (4) Government's policy as regards tax collections. It is axiomatic that if the country is running a surplus on its balance of international payments account the deposits tend to expand and *vice versa*. The balance of payments position is governed by conditions abroad and also by the Government's policy as regards imports and exports. In the year 1951 when we had an adverse balance of nearly Rs. 147 crores on trade account the deposits of commercial banks contracted by Rs. 16.5 crores and advances moved up by Rs. 100 crores. If inventories are high as a result of increased production or of over-imports or of inability to export, deposits of banks begin to contract. If the Government makes quick payments for the supplies and services secured by it deposits of commercial banks tend to increase but, on the other hand, if there is delay in these payments the growth of deposits is retarded. The considerable expansion in deposits during the war-time was, among other things, due to the advance payments made in anticipation of supplies and services; but with the passing of the emergency, advance payments gave way to delayed payments with the result that, as stated at the meeting of the Associated Chambers of Commerce and Industry in January, a sample survey of overdue bills on the Government indicated that payments were in arrears to the extent of about Rs. 12½ crores to the limited number of members who had sent in returns. If a complete census of the amounts overdue from the Government is taken, the figures will probably be startling. If this state of affairs is remedied and prompt payments from the Government become the normal rule, the resulting defrosting of frozen money will have a very healthy effect on deposits.

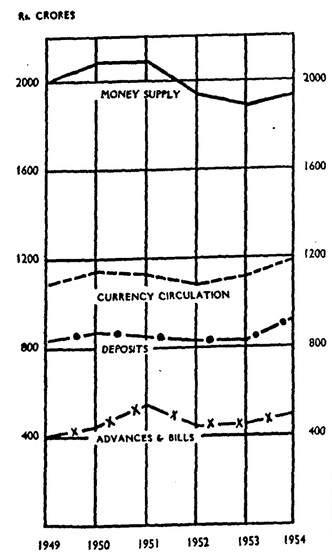
MONEY MARKET



Banking Resources

"Again, the pace of collection of taxes determines the extent to which tax provisions continue to remain in the banking system and to make a welcome, though temporary, addition to banking resources. Government policy, therefore, largely determines the growth of commercial banks' deposits.

"Though in the first Five-year Plan Government disbursements have been very large, these were not reflected in increased bank deposits but only in somewhat higher circulation of currency. The decisive expansion of deposits in 1954 may, however, be taken as the first sign that the financial disbursements arising from the execution of Government plans are at last beginning to percolate into the banking system, and it is to be hoped that the operation of the second Five-year Plan will result in a healthy growth of the resources and strength of the banking system.

"While the long-term outlook for deposits may, therefore, be considered as fair, competition among banks for available deposits is getting keener and the rate of interest paid on deposits has tended to keep quite firm. Moreover, by reason of the stiff rise in the Bank of England rate, London is becoming unattractive for borrowers and there is, therefore, keener competition from Exchange banks in India to secure all available surplus funds in the local market. In this situation, it is a matter for regret that it has not been possible for banks to arrive at an inter-bank agreement governing the rates of interest to be allowed on deposits. Last year, I had drawn the attention of my banker friends to the necessity of arriving at an understanding and chiselling out an agreement on interest rates with a view to avoiding uneconomic competition. In this connection I must acknowledge the help given by Sir B. Rama Rau, Governor of the Reserve Bank of India, who called an informal meeting of the Imperial Bank of India, the Indian Banks Association and the Exchange Banks Association to discuss the large increase in rates of interest on deposits that had taken place and to point out the desirability of arriving at an agreement governing the rates which would be fair to depositors and banks alike. After protracted negotiations, it was found that no agreement could be reached. The majority of the big Indian banks were willing to enter into such an agreement but some of the Exchange banks did not agree to fall in line and the scheme had to be abandoned as it was considered inadvisable to proceed with it unless all the major banks agreed to it. It is regrettable that the Exchange banks who find it so easy to work within the framework of fixed rates of exchange should not consider it fit to join the Indian banks to work within a framework of an integrated interest rate structure. The Exchange banks, not being content with a major share of the business connected with the foreign trade of the country, are making a great drive for capturing domestic business also with the offer of higher rates of interest on deposits. For healthy development of banking there should be an equitable distribution of business and closer co-operation among banks as regards rates and margins of profit.

Establishment Expenses

"In April, 1954, the decision of the Appellate Tribunal, presided over by Mr. Justice Jeejeebhoy, was announced. The Appellate Tribunal's decision increased the starting salary of employees in several grades and enhanced the dearness allowance and other benefits granted by the Sastri Tribunal to such an extent that, by reason of the resultant increase in establishment charges, the banks would have been obliged to close down several of their branches. In response to the representation made by the banks to the Government of India, the Appellate Tribunals' decision was modified. The modified award of the Government retained the pay scales and dearness allowance of the Sastri Award with certain changes. In order that no employee may be adversely affected, all on a sudden, the modified award also provided that the total emoluments of an employee should not in any case be reduced in the first year and that any excess now received by him over what he would be entitled to under the modification be adjusted thereafter in three yearly instalments. The Government also instituted a fact-finding enquiry presided over by Mr. Justice G. S. Rajadhyaksha. The terms of reference were to examine the effects on the banking structure of the Sastri Award, the Appellate Tribunal's decision and the modified award and to make recommendations to the Government regarding salaries, dearness allowance, etc., bearing in mind the need for ensuring an equitable treatment to bank employees consistent with the capacity to pay of various classes of banking companies or individual units. In making recommendations, the Commission was directed to pay due regard to the desirability of avoiding widespread closure of banking companies or their branches, to the necessity to promote development of banking in the country generally and in rural areas in particular and to any possibilities of economies in the expenses of banking companies. Detailed information regarding their working for several years was submitted by the banks to the Commission. Unfortunately, however, when Mr. Justice Rajadhyaksha was about to complete his work he fell ill and expired after a short illness. His death is a great loss to banking as it was expected that on account of the confidence of banks and employees alike in his sense of justice and fairplay he would have given an award which would have put an end to the dispute. Mr. Justice Gajendragadkar has now been appointed to continue the enquiry and I hope his decision will be given soon.

"The dispute between the banks and their employees has dragged on for the past several years. Conditions are further deteriorating as no final decision acceptable to both parties has, so far, been arrived at. The outturn of work, efficiency and sense of service on the part of employees have considerably gone down. After all, the success of any institution depends upon the combined and co-ordinated efforts of the management and the staff and it is essential that the employers should consider the changing times and work in close co-operation with the employees. It is also the duty of the employees to work devotedly for the institution as it is only with their increased efforts higher income can be earned which in turn would enable the management to pay higher wages. Mutual recriminations must cease and everybody's energies should be directed towards the improvement and smooth working keeping always in view the increased production.

"Before proceeding to review the economic conditions in India, I shall first briefly comment on the conditions in the overseas countries where we have branches.

Malaya

"During 1954, Malaya had an overall adverse trade balance of $28.7 million compared with an adverse trade balance of $206 million in 1953. This improvement in the trade position was mainly due to better rubber and tin prices during the second half of the year, and to a general improvement in trade conditions. Production of rubber in 1954 at 583,126 tons was higher by 10,334 tons than 1953, and its exports from Malaya rose by 67,903 tons to reach 915,114 tons as compared to 1953. The average price was 66.56 cents per lb., the average during 1953 being 67.00 cents. Exports of tin during 1954 totalled 60.831 tons—a rise of nearly 7.4 per cent. on 1953; the average price during the year was $353.59 per picul (133.1/3 lbs.). The increased production of rubber and tin indicates that conditions were less disturbed in the interior of Malaya. As a result of this improvement the Straits dollar strengthened against sterling.

"The prospects for Straits-Indonesian trade appear somewhat poor. Indonesia continued to be a large supplier of petroleum, rubber and copra but it took much less of Malayan exports than previously. Singapore merchants are hopeful that the trade will recover when the internal political and economic difficulties of Indonesia are brought under control; but, for the present it would appear that the Indonesian authorities are pursuing a policy of import trade control which seems to be aimed at reorienting the country's trade through its own ports and this policy is likely to have an adverse effect on the business of Singapore.

"If the political conditions in the Far East do not deteriorate during the current year and if the U.S.A. maintains the same policy regarding stockpiling, we can confidently hope that steady prices will prevail for Malaya's principal commodities, rubber and tin, which will have a very beneficial effect on the country's economy and its Government's revenues.

Burma

"During the year 1954 internal security conditions in Burma improved further with a corresponding improvement in communications.

"Trading conditions have been somewhat difficult on account of the changed world situation in foodgrains. The total amount of rice exported during the year 1954 was nearly 1½ times that exported in 1953. Japan and India were the largest purchases of Burma rice. India entered into a contract for the purchase of 900,000 tons most of which was lifted by the close of the year. However, due to the lower price which it fetched, the value of exports was almost identical to that of 1953. The exportable surplus from the 1954-55 rice crop is expected to be 1,600,000 tons and efforts are being made to dispose of this surplus. Japan has already entered into a contract for the purchase of 200,000 tons while Ceylon is likely to purchase the same quantity. The agreement with China which has been concluded provides for a sale of 150,000 tons on partly cash and partly barter basis and it appears likely that the U.S.S.R. may also purchase a reasonable quantity. As rice forms about 75 per cent. of the exports of Burma the Government is engaged in pressing forward with schemes for disposal of rice through Government and trade channels.

"The Government has continued to nationalise many foreign-owned enterprises. A joint venture agreement on oil was signed between the Government of Burma and the Burmah Oil Company and other associated companies and Government made an initial payment of Ks. 3.30 crores to the oil company under the said agreement. A new refinery is being built at Syriam by the Burmah Oil Company (1954) Ltd., and when this comes on stream in about a year's time the output of refined products should reach 350,000 tons a year, which would make the country self-sufficient in oil. The scheme is, however, not big enough to permit Burma to export oil as she did before the war.

"The budget for the year ending 30th September, 1954, showed a deficit of Ks. 32.40 crores. A mission from the World Bank visited the country during the latter part of 1954, and a report on its findings is awaited with interest.

"Burma has a large programme for the development of the country and the need for foreign equipment for the implementation of these programmes is reflected in the ceaseless flow of tender notices issued by the Government authorities and in the activities of the various Government Purchasing Missions. Development projects include the Balu Chaung Hydro-electric Scheme, a medium-sized steel mill, sugar mills, jute mill and tea blending and packing factory. The result of all these schemes is likely to be felt in about a couple of years.

"During the year the State Commercial Bank was established under an Act of Parliament and it started work with initial capital funds of Ks. 1.20 crores contributed by the Government.

Hongkong

"During the year there was little change in the political situation in the Far East, though the settlement in Indo-China certainly improved the business prospects in this region. Consequently the trade pattern remained unchanged.

"The economy of Hongkong is vitally connected with the countries of South-East Asia region like Indonesia, Thailand, Malaya, etc., who have been good buyers of her manufactured products. The continuous fall in the prices of the primary products of this area has badly depleted the purchasing capacity of these countries and this was partly responsible for the decline in the total value of the trade of the Colony which showed a decrease of 11 per cent. as compared to the previous year. The volume of total trade, however, increased slightly which shows that the fall in the value of trade was accounted for mostly by the fall in commodity prices.

"Imports of cotton, rayon and woollen textiles from Japan have risen and have supplanted Italian and British supplies. Exports to Indonesia and Malaya are on the increase. India and Japan are both selling more cotton textiles to Hongkong and Japan's decision to reduce her overall cotton textile export by 20 per cent. should be welcome news to exporters of textiles in India.

"During the last few years the entrepot trade has fallen off considerably but the steady development of the local manufacturing industry has been a bright feature and it has helped to sustain the economy. Hongkong's industries, though young, have continued to progress further during the last year so that they now employ nearly 200,000 workers. Locally manufactured products form 25 to 30 per cent. of the total exports and the value of such exports increased from $635 million in 1953 to $682 million in 1954.

"The outlook for the coming year does not seem to be very bright and much depends on the course of political events in the Far East and the progress that the countries of South-East Asia region make in stabilising their economies. A settlement in the Far East, with possible removal of the embargo on trade with China may have beneficial effect on her trade. Improvement in the economy of neighbouring countries would give further impetus to her industrial development.

Pakistan

"Pakistan's foreign exchange earnings have been progressively dwindling since the bumper earnings of 1951 and this has resulted in increased restrictions on foreign exchange expenditure on essential items. Pakistan's earnings have been derived principally from the sale of raw jute and cotton and the prices of agricultural commodities generally have been subject to unpredictable fluctuations in the world markets. Internally, Pakistan's industrial production, particularly of jute goods and cotton textiles, have gone up considerably and these two industries are experiencing near-boom conditions. An agreement has been entered into with the U.S.A. for large-scale economic assistance and it is expected that this will help Pakistan to improve her position, and result in increased imports of more consumer goods of which the country had been on short ration for some time past.

United Kingdom

"The United Kingdom had a remarkable year of prosperity with industrial production, employment and consumer expenditure reaching new peaks. The terms of trade, however, turned somewhat adverse and the rate of increase of gold and dollar reserves slackened. During the second half of the year sterling turned weak in terms of the dollar and the prolonged weakness of sterling indicated the presence of elements of inflation and an expansion of internal consumption on the basis of instalment purchase to the detriment of the export trade. Timely action has, therefore, been taken by putting up the Bank rate first to 3½ per cent. and then to 4½ per cent. and the increased Bank rate is already proving effective as is indicated by the rise in the quotation of sterling in the foreign exchange markets of the world. Convertibility of sterling, however, still appears to be far off but the improvement in the technique of controlling exchange rates by the intervention of the Bank of England in the transferable sterling market might bring about a closer integration of the official and unofficial rates of sterling and pave the way for convertibility sooner than it is permissible to hope for now.

General Conditions—India

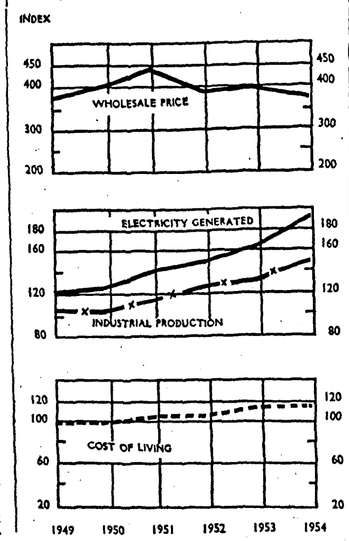
"The Committee on Finance for the Private Sector, of which your General Manager, Mr. B. T. Thakur, was a member, published its report in April, 1954, and made several valuable recommendations calculated to facilitate the undertaking by commercial banks of new responsibilities to help the industry directly and through the medium of specialised finance corporations. The Committee also made recommendations regarding the assistance which should be extended by the Reserve Bank to commercial banks with special reference to rediscounting and remittance facilities and it is a matter for gratification that the Reserve Bank has implemented several of these recommendations. In particular, the Reserve Bank has extended the facilities of the bill market scheme to all licensed scheduled banks and has brought down the amount to be borrowed at any one time and the amount of individual bills to Rs. 10 lakhs and Rs. 50,000 respectively.

All-India Rural Credit Survey

"The Committee appointed by the Reserve Bank of India, under the chairmanship of Mr. A. D. Gorwala, to enquire into rural credit problems has also published its report. The principal recommendations of this Committee are:

"1. The establishment of a State Bank of India by the integration of the Imperial Bank of India and the major State-associated Commercial banks under the effective control of the Government of India. The opening of new branches by the State Bank of India with a view to taking over cash work from non-banking treasuries and sub-treasuries, providing vastly extended cheap remittance facilities for co-operative and other banks and developing rural banking facilities effectively and on a country-wide scale in effective consonance with the national policies as expounded through the Central Government and the Reserve Bank of India.

ECONOMIC TRENDS



"The Committee has made it unambiguously clear that the whole object of the programme would be, not the nationalisation or near-nationalisation of commercial banking in the country, but the provision for and the increasingly effective evolution of, an integrated, India-wide, commercial banking institution associated with the State and responsive to its policies, especially its policies for the benefit of the rural areas.

"2. The progressive organisation, on a co-operative basis, of the processing and marketing of agricultural commodities and the development of State warehousing facilities through an all-India warehousing corporation and State warehousing companies.

"3. The progressive organisation on a co-operative basis, of as large a sector of rural economic activity as possible, e.g., farming, irrigation, transport, milk supply, dairying, livestock breeding and cottage industries.

"The Government has accepted with modification the recommendation of the Committee to assume effective control of the Imperial Bank of India forthwith and the question of integrating into the new State Bank other institutions which are already doing treasury work of the various State Governments is still under consideration. The Committee's recommendations on rural credit are very valuable and when they are implemented the problem of agricultural credit and marketing which had baffled generations of bankers will be nearer a satisfactory solution.

Taxation Enquiry Commission Report

"The Taxation Enquiry Commission presided over by Dr. John Matthai have made a thorough enquiry into the changes which have taken place since an earlier Commission reported thirty years ago and have made recommendations regarding systems of taxation, sources of revenue, State commercial enterprises, State trading and a number of other important subjects. In the opinion of the Commission there has been very little addition to the national tax effort in the last two or three decades; while the national income and public revenues have kept pace with each other in money terms, neither of them has shown any significant increase in real terms. Their distribution *vis-a-vis* different groups in the country has undergone alteration. A greater degree of elasticity of revenue is now available and, with the disappearance of the old rivalry between the Central Government and State Governments as regards sources of revenue, there is now complete co-ordination in improving revenues from well demarcated sources. The Commission recommend the need for utmost restraint in the growth of non-development expenditure and stress the existence of room for economy and avoidance of waste in public expenditure. The Commission emphasise the roles of taxation and of borrowing in the financing of development programmes and suggest that deficit financing should be kept at a minimum. Increases in both direct and indirect taxation are recommended. Direct taxation has to be stepped up with a view to reducing inequalities and a ceiling on net personal incomes is to be achieved by stages over a period of time. The recommendations for rationalisation of taxation include the carry forward of losses for an indefinite period instead of the present limit of six years, removal of restrictions so as to permit setting-off of losses of one business against the profits of another and increase of depreciation allowance in respect of plant and machinery.

"A welcome recommendation to new enterprises is the grant of a development rebate at the rate of 25 per cent. on the cost of new fixed assets and the complete exemption from tax for a period of six years of all new concerns falling within the category of selected special enterprises of national importance.

"Changes are also recommended to permit general insurance companies to strengthen their underwriting reserves.

"Notwithstanding the appreciation by the Commission of the need for development of the economy of the country some of their recommendations might, instead of helping such development, defeat that laudable object. The Commission are not in favour of deficit financing and recommend increased taxation, direct and indirect, to bring about the realisation of the objectives of National Planning. The second Five-year Plan calls for greater investment than the first Five-year Plan and the resources of revenue surpluses, the proceeds of internal and external loans, and foreign aid will be insufficient for achieving the target of development without resort to deficit financing.

"It is obvious that where employment is low and there is a great margin for increasing production, a spending programme cannot lead to inflation. Inflation through spending programme comes in only when there is no possibility of new employment and creating new production. The spending programme of 'deficit financing' as it is called is thus fully justified. The index of general prices has, in fact, recently come down from 434 in 1951-52 to 390. The tendency of commodity prices at present is still to go down. The problem is not one of fighting inflation but rather of creating conditions for reflation. Created money will bring about such reflation and hasten the economic development of the country.

"The Commission lay great stress on restriction of consumption with the object, probably, of releasing capital for development, and with this object in view and also in order that the loss of import duties as a result of increased industralisation may be made good, the Commission have recommended the levy of excise duties on several commodities. In their opinion, these duties would be spread over a large number of the country's population which, at present, do not contribute much to the tax revenues of the State. These duties will, however, act as a brake on production. Increased national wealth can only be achieved by increased production but production cannot be increased unless there are markets ready and willing to absorb it. If restraint is to be placed on consumption, increased production would only result in stock-piling which, in turn, would react on production. The output of foodgrains, industrial raw materials and manufactured goods has increased all over the world and India cannot depend always on its export markets but will have to look to the internal market for the offtake of its products. A higher standard of living can be obtained only by parallel increase in both production and consumption.

Proposed Income-tax Rates

"The proposed increase in income-tax rates, the increase of indirect taxes, the levy of new duties and the raising of the land revenue at a time of declining agricultural prices will all tend to lessen the savings in the hands of the people on whom reliance has to be placed for securing the resources with which investments can be made in the public and private sectors. While it is the declared policy of the Government to encourage private industries to continue to function in the narrow and limited sphere allocated to them, the recommendations of the Commission will result in the diversion of funds from the private sector to the public sector and thus unduly handicap the private sector.

"Not so welcome, either, is the recommendation, since adopted in this year's budget, for the amendment of section 23A of the Indian Income-tax Act and the imposition of a penal tax of 25 per cent. on undistributed profits of private and quasi-private companies. Such higher taxation of undistributed profits would force the companies to distribute their profits to the hilt in the form of dividends instead of ploughing profits back to augment the resources of the private sector. The undistributed profits in the hands of private individuals would gravitate to the central exchequer in the form of direct taxes. This will have the effect of starving the private sector to the benefit of the public sector.

"The Commission recommend the creation of a fiscal monopoly in certain commodities like tobacco, matches and salt as a source of increased revenue. In spite of the Commission being aware of the factors which might operate against the success of fiscal monopolies, such as the lack of expert personnel, uneconomical management and the possibility of deterioration in the quality of products, they suggest an expert enquiry into the possibility of setting up fiscal monopolies. State trading, as is the experience of several countries, would result, in a vast country like India, in throwing out of employment a large number of persons engaged in distribution trade with no appreciable increase in revenue. It is only in a free competitive economy that large employment could be found and the consumers would be able to get better quality at cheaper prices.

"The report is bound to be the reference book of Finance Ministers for several years to come but I hope that in giving effect to fresh proposals for taxation based on the recommendations the Government would always bear in mind the need to ensure that capital formation is not impeded and that production and employment would increase.

"The flotation of the 3½ per cent. ten-year National Plan Loan dominated the capital market in 1954. This loan which was opened for subscription on the 19th April, 1954, and closed on the 16th September, 1954, realised about Rs. 158 crores, a substantial part of which came from the public and a smaller part is believed to have come from the Reserve Bank of India.

"There were no State Government loans with the exception of the ten-year 4 per cent. Saurashtra State (Local Bodies Development) Loan issued at Rs. 98. A number of State Financial Corporations were floated during the year, the chief of which were the Bombay, West Bengal, Hyderabad, Assam and Saurashtra Financial Corporations. Several debenture issues were also made by companies the most important of which was the issue by the Burmah-Shell Refineries Ltd. of Rs. 8 crores at 5¼ per cent. interest, repayable in 1965-69. On the whole, the new capital issue market might be said to have had a remarkably successful year.

Government Securities

"The Government securities market which was depressed at the time of the flotation of the National Plan Loan staged a steady recovery and at the end of 1954 the price of Government securities with the exception of 3 per cent. Conversion Loan stood at materially higher levels than at the end of 1953. The following prices of representative Government securities will show the extent of the movement of prices.

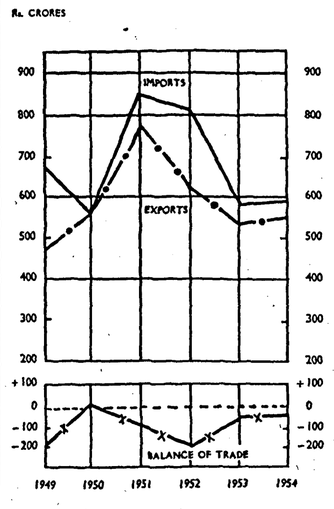
	31-12-1954 Rs.	a.	31-12-1953 Rs.	a.
3% Conversion Loan 1986	80	14	82	7
3% Government of India Loan 1957 ..	99	1	98	5
3½% " " " 1963-65 ..	93	9	92	7
3½% " " " 1961 ..	99	2	98	14
3% " " " 1970-75 ..	86	14	86	8

"The stock exchange went through remarkable boom conditions and ordinary shares continued to rise throughout the year till early November when the prices tapered off and began to decline, thus bringing to an end the fourteen-month-old boom on the Indian stock exchanges. The fall was partly due to a natural reaction from the sustained rise which had taken place earlier but it was also to some extent due to investors' fears regarding the future of private industry in India and also the likely recommendations of the report of the Taxation Enquiry Commission. The re-statement of Government's economic policy on the role of the private sector in industrial development had also adverse psychological influence.

Foreign Trade and Balance of Payments

"The value of exports in the first seven months April-October of the current financial year was nearly Rs. 6.05 crores higher than the same period of 1953 but with increasing imports a trade deficit has re-emerged. Total exports in the first eight months were Rs. 369.99 crores while imports were Rs. 407.46 crores, the result being an adverse balance of Rs. 37.47 crores. The mainstay in the exort trade continued to be tea, jute goods and cotton textiles while minerals and ores have staged a recovery towards the end of the year and have begun to contribute to the foreign exchange earnings. The higher level of export earnings is due partly to higher prices as in the case of tea and partly to higher volume of trade as in the case of jute and cotton textiles. The outlook for the export trade is reasonably good and exports should remain at a high level. The import of 800,000 tons of rice, wheat and milo from Burma, Australia and the U.S.A. and of nearly 750,000 tons of refined sugar and smaller quantities of raw sugar was an outstanding feature of the year. Moreover, the liberalisation of import policy is likely to result in a rise in imports of all commodities in the coming months and a fuller utilisation of sterling balances is likely to materialise. The balance of payments position, as contrasted with the balance of trade position, is expected to be square or result in a small surplus as against a surplus of Rs. 55 crores in 1953. Sterling balances rose by Rs. 4 crores during the year from Rs. 727 crores on 1st January to Rs. 731 crores on the 31st December, 1954.

FOREIGN TRADE OF INDIA



Foreign Trade of India

Merchandise by Sea, Air and Land

(Rs. crores)

Year	Imports	Exports (including re-exports)	Balance of trade
1949	670.80	475.08	—195.72
1950	558.96	501.00	+ 5.04
1951	854.40	783.84	— 70.56
1952	803.16	618.48	—184.68
1953	577.44	531.72	— 45.72
1954*	585.96	547.92	— 38.04

* Estimated.

Agricultural Production

"The progress made in 1954 in the field of agricultural production is highly satisfactory. Our food production which was roughly 46 million tons in 1947-48 showed an increase and in 1953-54 stood at 66 million tons, exceeding the target figure of the Five-year Plan by 4.4 million tons. In 1951, which was the worst period of our food crisis, we imported about 4.7 million tons which was a little more than 10 per cent. of our food production. In 1952, 1953 and 1954 the imports of foodgrains fell progressively to 3.9 million tons, 2 million tons and 0.8 million tons respectively. In future, we may not have to import at all. On the contrary, the grain position is so satisfactory that the Government has announced that it would allow 300,000 tons of rice to be exported from India.

"The position of industrial raw materials such as cotton, jute and oilseeds has improved. Cotton production has gone up as compared with the 1947 figure by 100 per cent. We have just enough for internal consumption and we may shortly be in a position to export cotton. We are still short of raw jute but we are likely to produce 70 per cent. of our requirements this year. As regards oilseeds, the production was 5.6 million tons. We have now reached the stage of self-sufficiency and we are in a position to allow exports of moderate quantities of oil and oilseeds.

Industrial Production

"In the field of industrial production, both the public and private sectors have taken great strides.

"Turning to the public sector first, the Sindri Fertiliser Factory, the Chittaranjan Locomotive Works, the Hindusthan Cable Factory, the Hindustan Aircraft Factory, the Telephone Industries and the Hindustan Machine Tools Factory at Bangalore and the Integral Coach Factory, Madras, are some of the large projects which have been undertaken by the State. The Government has also planned to set up two more steel mills. These industrial projects are in addition to the river valley projects, the hydro-electric schemes and the community projects which have relation to land and social welfare.

"In the private sector, production of capital and consumer goods has gone up all round. During the last seven years more than Rs. 500 crores have been invested in new ventures. The production index is now about 150 against 100 in 1946.

"There has been an increase in almost every branch of industrial production except the jute industry which depends on the export market and for which the raw material has to be imported to a considerable extent. The growth of the cement industry has been phenomenal as also the production of diesel engines, electric motors, electrical equipment, etc. The generation of electricity has grown from 552 million units per month in 1953 to nearly 700 million units per month at the close of 1954. With the additional thermal and hydro-electric power plants coming up the output of electricity, which is a real

index of growth of the standard of life, will still further increase.

"India is now not only self-sufficient in respect of cloth but is also a great exporter. We are making our own textile machinery and also boilers and locomotives. Half of the rayon requirements will be produced in India before the end of this year.

"Shipbuilding is progressing satisfactorily. We are producing our own automobiles and trucks and in a few years we expect to be able to satisfy all the demand for moderate-sized cars. We have made great progress in respect of production of bicycles and perhaps in a few years all the bicycles needed would be produced in India itself.

"In the paper industry we are self-sufficient except in newsprint. In sugar, our capacity is to produce as much as is needed. But in the last two years, due to shortage of sugarcane, we have had to import sugar. This must be treated only as a passing phase.

"Our steel production is expanding. In heavy chemicals we have done a lot and have also started producing dyes in collaboration with American and Swiss firms. In heavy engineering too we are making great progress and expect to start very soon making jute mill machinery. We are also planning to produce heavy electrical goods, though we are already producing almost all our needs of small units like fans, motors, etc. Many of the targets as envisaged in our plans have already been achieved or have been exceeded.

Need of Capital

"The desire to consume, however, is much more than what is consumed. And yet many industries have reached saturation point. The desire to buy is there, but the wherewithal is absent. The immediate problem, therefore, is to raise the purchasing power of the people so that they can buy more goods which ultimately could be produced and the solution lies in expanding credit in various directions.

Expansion of Credit

"In order to expand credit, further steps have been taken recently. Two Development and Finance Corporations are being set up. One of them is sponsored by the Government and it will come into existence very soon. Its object would be not only to help private enterprise to find finance for new projects but also to set up such industries as may not be remunerative in the initial stage and then hand them over to private enterprise after they have been made to stand on their legs. The second is sponsored by private interests in India, the U.S.A. and the United Kingdom and is assisted by loans from the Government of India and the World Bank. We have made a substantial subscription to the capital of the Corporation and the response to the shares offered for public subscription was also satisfactory. I am confident that the Corporation will be of great help in providing finance for the inauguration of new industries and development of existing industries and that it has a useful and profitable career before it.

"There are other fields in which expansion of credit can be undertaken with benefit to the general economy. There is a large deficiency of houses all over the country and the back-log of housing for the middle class urban population is enormous. A well-conceived scheme for financing construction of houses through special institutions like housing societies would help in solving this problem. The housing societies would be in a position to raise moneys on reasonably cheap terms in the form of share capital from their members and from deposits and also through loans from banks and perhaps even from the Reserve Bank of India and flotation of debentures and thus be in a position to afford facilities on reasonable terms for the middle class population to own houses and pay for them as they earn by instalments spread over a long period.

"Another field in which credit can usefully be extended by the existing credit institutions is the financing of the purchase of durable consumer goods on the instalment purchase system. Hire purchase finance here is in operation only to a very small extent in the distribution of automobiles and commercial motor vehicles and a whole new field of hire purchase finance is waiting to be developed. The extension of credit in this field would bring about a substantial increase in the consumption of durable goods with great benefit to the industries concerned.

"The Government's goal is a mixed economy in which both the public and private sectors work in co-operation to secure maximum production and full employment. The reconstruction of New India is undoubtedly beyond the capacity of the private sector alone. Private enterprise can do any job more efficiently and with greater speed and greater economy. But the private sector can come into the picture only when it can raise adequate capital. On the other hand, if the capital required is huge and beyond the ability of the private sector to raise it then it is the natural function of the Government to step in and take over the development of those sections of economy which are beyond the ability of private enterprise to tackle and which Government alone, with its enormous credit and resources, can effectively tackle. Close co-ordination between the private and public sectors should, therefore, be the objective and I am confident that the private sector will do its utmost to extend such co-operation.

"We must, therefore, fit ourselves into the task of reconstruction and help the nation with our experience and talent to reach the goal instead of worrying about the means. It is the goal that matters and not the means which scare some unnecessarily. If we do not progress quickly towards the objective, the means must undergo changes."

WORLD BANK LOAN TO AUSTRALIA

The World Bank gave a loan of $54.5 million to the Commonwealth of Australia on 18th March, 1955 to finance imports of equipment for the development of agriculture, transportation, electric power and industry. The loan is for a term of 15 years and bears interest at 4½ per cent. including the 1 per cent. statutory Commission charged by the Bank. Amortisation will begin on 15th March, 1958. The Bank has arranged to sell $10.4 million of the loan, without its guarantee, to 11 private banks in the United States—the largest number ever to participate in such a transaction with the World Bank. The amount being sold represents the first six maturities of the loan, which fall due from 15th March, 1958, through 15th September, 1960.

This is the Bank's fourth loan to Australia, and brings to $258.5 million the amount the Bank has lent for the import of capital goods and equipment needed from the dollar area for development in various sectors of the economy of Australia. Like the other three, this loan, too, will benefit both private and public enterprise. Goods imported with the proceeds will be used by farmers, private businesses, and Commonwealth and State agencies.

About $47 million of the loan has been allocated to agriculture and transportation. Although Australia is a highly industrialised country, agricultural products still account for more than 80 per cent. of its earnings in international trade. Individual farmers are increasing their agricultural output through more extensive mechanisation, and imported machinery and equipment has enabled the Commonwealth and State Governments to carry forward programmes to intensify land use and increase productivity through reclamation, pasture development, irrigation, water and fodder conservation. The present loan will finance further imports of equipment and machinery for these purposes, largely tractors, combine harvesters, hay balers and other equipment for fodder conservation.

The remainder of the loan (about $7.5 million) will be used to buy equipment for power plants and transmission lines and for manufacturing industries. The industrial equipment will be used in iron and steel production, food processing, mining and automotive and general engineering industries.

The largest allocations from the $204 million of earlier Bank loans have been made to agriculture and transportation. Nearly $70 million is being used to buy tractors and other equipment for agriculture About $76 million from the earlier loans is The loans are also being used for electric power being spent for improvement of the railways, for modernisation and improvement of Australia's air fleet and for better road transport. The re-equipment of railways, and particularly the introduction of diesel locomotives, has brought about a marked improvement in rail service at lower cost.

PUSA AGRICULTURAL INSTITUTE COMPLETES 50 YEARS

RESEARCH AS MEANS OF SATISFYING CREATIVE URGE

By B. Viswanath

FORMER DIRECTOR OF THE INDIAN AGRICULTURAL RESEARCH INSTITUTE

AFTER an unostentatious but auspicious beginning at Pusa—a village in the Darbhanga district of Bihar—and nourished by the pioneering skill and devotion of early workers, the Indian Agricultural Research Institute (I.A.R.I.) has now become 50 years of age. This is an age of discretion when a person or an institution can look back with satisfaction and look forward with confidence. In attaining this age, the I.A.R.I. has become world-renowned.

For its birth, the Pusa Institute had the advantage of a generous donation of Rs. 4,50,000 given to the then Government of India by Mr. Henry Phipps of Chicago for some purpose of public utility, preferably scientific research. A greater part of the gift was utilised for the establishment of the Institute. The disastrous earthquake in 1934 destroyed the main building and the laboratories beyond repair. The Institute was re-established at Delhi in 1936. A tablet in the soil science and agricultural chemistry division of the Institute at Delhi gratefully acknowledges Mr. Phipp's generosity and has named the laboratories after him.

During its infancy and early growth, the Institute obtained its intellectual food and inspiration from the scientific developments in the West, particularly in Britain and Germany. In its vigorous youth and during the period of transition into manhood, it has had able co-operation and support from similar institutes and universities in the Provinces and from the Indian Council of Agricultural Research. Today, the Institute can look back with gratitude on the inspiration and guidance received from the West and with justifiable pride on the wealth of knowledge and experience gained during the past 50 years, and can look forward to repaying the debt of gratitude by its own contributions to the world pool of knowledge.

Writing of science and agricultural research in India, it is difficult to avoid the feeling that these are not the speciality of the present age. Though organised agricultural research is a feature of the present age, the sense of curiosity that is at the bottom of all research must have been present in the primitive man. The curiosity to understand natural phenomena, such as seasons, and their influence on vegetable and animal life on the one hand and the struggle for subsistence and survival on the other must have induced observation, inference and experiment.

Notable Advances

As a result, notable and enduring advances had taken place even in the distant past. Perhaps, one of the most remarkable examples is the development of rice cultivation and of rice varieties in the utilisaton of low-lying land and flood waters to a high degree of perfection. In this marvellous development, science and research, as we understand today, played no part and the result was due to long and laborious experience. Nevertheless, there is science in all this experience. Modern science obtains results very much more quickly. Even so, we cannot yet say that we have completed the preliminary analysis, by modern science, of the several factors involved in the cultivation and growth of the rice crop.

Modern agricultural science is that great collection of physical, chemical and biological sciences and research which is concerned with the studies of the natural phenomena which profoundly influence agriculture. The many varieties, apart from the individual characteristics of the many plants that we grow and the animals that we rear, are examples of the influence of natural forces under which plants and animals grow and die. From the same soil and with the same water and manure different plants spring up and grow and display themselves with flowers of variegated colours of all hues and shades. The question is: which is of greater consequence and importance, the soil or the plant? The function of agricultural research is to find out ways and means of utilising the knowledge of the material aspects of agriculture and to achieve results of practical value.

When agricultural research began 50 years ago, with a meaning and purpose, chemistry was prominent. Liebig's theory of plant nutrition dominated ideas of research for improvement in crop production. It was soon realised that successful improvement could not be based on soil chemistry alone. Soil microbiology and soil physics were invoked and Liebig's original concept of soil fertility was gradually modified and extended to these sciences.

Selection of Plants

A new realisation was that, in addition to the soil in which the plant grows, the plant itself should receive attention. The stimulus for this realisation and departure from the then prevailing ideas was the re-discovery of Mendel's laws of inheritance of characters in plants and the recognition of the importance of this new knowledge in crop improvement by selection and hybridisation of plants.

The potential growth and prospects of a plant or animal are determined by their genetic constitutions but the actual performance is a function of the physical and chemical environment in which the plant or animal is compelled to exist. Having obtained the necessary knowledge for *shristi* (creation), *sthithi* (maintenance), attention had to be directed towards *layam* (destruction). The next step, therefore, was the study of plant growth and development, involving studies on the likes and dislikes of the plant in its environment and its ability to withstand adverse conditions of drought, flood and attacks of insect pests and diseases. This broadening of research has enabled new additions to knowledge and, as would be expected, created new problems for study.

The practical and direct benefits from research, to mention briefly, are the conquest of waste and the creation of more and new wealth. Waste lands have been brought into use. Improvement of lands already under production has been made possible. New varieties of food and agricultural crops have been introduced Manurial problems have been investigated. Apart from food production, our agriculturists require more income and our industries need raw materials. Factory and rural industries depend on agricultural raw materials. The sugar, cotton, tobacco and food industries would not be what they are but for the developments brought about in the cultivation and production of these crops by research.

Low Cost and Better Quality

As society progresses, its standards and demands also change. This is necessarily followed by changes in the agricultural industry. During the past few decades, the position has so much changed that, without in any way lessening the emphasis on increased production per acre of land, more and more stress is being laid on lower costs of production and on better quality of the produce. For example, the qualities required in wheat for loaf, *chapatti*, *poori* and biscuit making are different. In rice, the quality for cooking is not the same as in rice required for making starch. So also in potato. In sugarcane, the demand is for better quality in *gur* and higher sugar recovery in the factory. In tobacco, colour, flavour and nicotine content in the leaf determine the suitability for making cigars, cigarettes, *biris*, snuff and *hookah*. In cotton, staple length, strength and sheen in the fibre are valued besides a high ginning percentage.

Described in simple language, modern agriculture is no more growing two blades where one grew before. It has to deal, all along the line, with problems which in the ultimate analysis resolve themselves into phases in growth and competition. Within the soil, there is growth and competition for food and air among the myriads of conflicting micro-organisms on the one hand, and between the micro-organisms and subterranean parts of the plant on the other. On and above the soil, there is mutual help and fierce competition occurring among the many plants living together for water, nutrients and light.

Growth and Competition

There is growth and competition among insect pests of different kinds and their predators as one phase and between plants and their pests and diseases which are trying to destroy crops in the field and in storage as the other. Besides these, there is growth and competition for food between animal and human populations. On top of all these, there is among the human population growth and competition in ideas, values, standards and fashions.

The impact of all these, jointly and severally, on agriculture brings about changes in the meaning and purpose of agricultural research. The experience of agricultural research shows that the problems often go beyond the boundaries of the usually accepted natural sciences and touch psychology, sociology and economics.

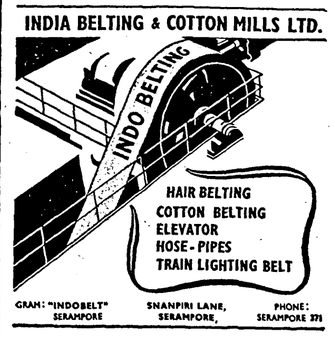
In academic research, a discovery made and reported is either confirmed or repudiated or modified, and there, ordinarily, the story ends. It is not so in applied agricultural research. Here it is usually the beginning of a fresh chapter for two reasons—first, agricultural research cannot be split into cut-and-dried formal divisions of the sciences, and, second, as soon as agriculturists begin to put it into practice, a number of difficulties arise. These, when examined, are found to involve new problems of scientific interest and practical importance. Early workers obtain much knowledge rapidly. Then comes a stage when progress apparently ceases and instead confusion prevails. A review and revaluation of the available data and experience discloses certain patterns. Suddenly, a generalisation becomes possible and, sooner or later, light is thrown on the curious and inexplicable observations of practical agriculture. And a new chapter of research begins.

Agricultural research is wonderful. It is profitable and intensely interesting. It may be sometimes exasperating, bringing up an endless succession of problems for study. In it can be sought the satisfaction of a creative urge, as in literature, poetry, music and art. The philosophically inclined can pursue the endless quest for unity in diversity. It is a thrilling experience to the young scientists to whom the problems are not circumscribed and cut and dried. What happens in research is that the leader integrates and the specialists team disintegrates. It is the response of the man that is the test and the test is conditioned by the whole environment rather than by that of the individual himself.

Research to Continue

The great mass of people have to be fed and clothed better than before. Our agriculturists are planning to produce more food and agricultural and livestock products than at any time in the history of the country. The prospects of higher yields are in the hands of our growers, who know as much about agriculture as any farmer anywhere in the world. The recent crop competitions have demonstrated this. The skill of the agriculturist is there and so is the productive potential of the land there. To the individual farmer the increase in production may be small, but in the aggregate it will mean a substantial increase in national production. Many problems which science can solve will arise and there will be even more insistent demand for research.

This ancient country has need for the use of agricultural science even more fully than now. Research must, therefore, continue uninterrupted so that those who believe in the welfare and prosperity of the farmer may enjoy the benefits of his production and feel happy over his improved status. To this end, the Indian Agricultural Research Institute will have even a greater part to play.



BRITISH INDIA CORPORATION LIMITED

SIR ROBERT MENZIES' SPEECH AT ANNUAL GENERAL MEETING

"GOOSE LAYING GOLDEN EGGS IS SLOWLY BUT SURELY BEING STRANGLED"

THE Thirty-fifth Annual General Meeting of the shareholders of the British India Corporation Ltd. was held in Kanpur on 26th March, 1955. In the course of his address to the shareholders, Sir Robert Menzies, Chairman of the Corporation, dwelt at length on the various aspects of the Corporation's working and the factors which were responsible for the adverse results for the past year.

Sir Robert Menzies began his address by referring to the great loss which the Corporation had sustained by the death last September of its largest shareholder, Lady MacRobert, widow of the founder of the Corporation. Her history had been a tale of philanthropy and courage in the face of cruel personal bereavement. He went on: "With an unusual flair for business and a determination that her good works should be continued after her death, she created, in her lifetime, trusts and other organisations to which she transferred a very considerable portion of her worldly goods, including the major portion of her holding in this Corporation, and she made her wish quite clear that the executors and trustees, to whom she had given wide powers, were to carry on just as if she were still alive, and they will meticulously carry out this policy which she laid down. The Chief Executor and Trustee has asked me to convey his greetings to the shareholders, and to assure them that the MacRobert interests and tradition will be carried on.

"Although Government controls are gradually being lifted, in the great Indian cotton textile industry they still exist in so far as production and the purchase of new plant are concerned; such controls naturally are harassing and hampering. Control of the sugar industry, however, still continues, and again, the production of sugar in India has been insufficient to meet the country's needs, and the Government has again deemed it necessary to import foreign sugar. It would appear, however, that the indigenous crush in the current season, which is now in operation, will considerably exceed that of last year, and it looks as if India will come nearer to meeting the country's sugar requirements than ever before. We must remember, however, that with the gradual improvement of social conditions, and the steadily increasing population, the consumption of sugar must necessarily keep on expanding.

Labour Conditions

"There is very little to report in regard to changes in labour conditions during 1954, though references to conciliation, adjudication and to the Industrial Courts and Appellate Tribunals continue to be numerous. The intention now apparently is to replace the present Labour Appellate Tribunals by a series of courts which are to be set up in the States and at the Centre. It is a little difficult, however, to visualise how the State and Central Governments will be able to find judges of the required calibre to man these courts, and although the intimation to this effect was made some time ago, it is perhaps of interest to note that, only recently, a fourth Labour Appellate Tribunal has been established, in view of the burden of work which has been faced by the previous three Appellate Tribunals. One of these three Appellate Tribunals had its sittings in Uttar Pradesh and in Madras, and it is understood that the appointment of this fourth Labour Appellate Tribunal will enable one court to be allotted to Madras and another to Uttar Pradesh. This should accelerate the hearing of cases. It is also hoped that in the near future, steps will be taken to amend certain existing Acts which now very considerably hamper good relations with labour.

"I regret that I cannot report any material progress to you in regard to rationalisation, with the result that redundancy of workers still exists, particularly in the mills and factories of Kanpur. During the past year, the State Government set up a high level committee, with representatives of employers and labour further to consider schemes of rationalisation, but owing to lack of co-operation on the part of some of the members, this committee had to be dissolved, and the State Government then ruled that further negotiations could only be continued direct between the employers and the employed. In Kanpur, the result of this was that a number of labour unions, all of which were opposed to rationalisation, combined to form one anti-rationalisation union, and while the workers themselves appear to be willing to earn increased wages, they are being restrained from doing so wherever it lies within the power of the union leaders to do so. I have mentioned that we are still faced with considerable redundancy of labour, particularly in our textile mills in Kanpur, and the Directors' report informed you that the Board had under consideration the starting of a third shift at the Cawnpore Cotton Mills Branch, into which shift it was hoped to be able to absorb most of the redundant labour at that branch, but this can only be done, and the additional employment involved can only be provided if the workmen will co-operate with the employers, and will agree to give the schemes which are being put forward to increase both wages and production a fair chance. It certainly seems that there can be no hope of running certain industries profitably within the foreseeable future unless production costs are reduced, and it must here be reiterated and emphasised that the schemes which have been put forward to this most desirable end do not necessarily involve retrenchment.

"I referred last year to the conditions which were imposed by the Industrial Development (Amendment) Act of 1953 as regards a retrenchment gratuity. When this Act was passed, the measure to which I have referred, was probably intended as a deterrent to employers, and it has certainly acted as such. The Directors' report has already informed you that during the past year alone the Corporation had to disburse over Rs. 9 lakhs in retrenchment gratuities. This money, and the resulting unemployment, might well have been saved had labour been prepared to co-operate in the schemes intended to increase production and also wages. It is to be hoped that, in the near future, reason will prevail, as unless production can be expanded at lesser cost than at present, expansion and prosperity will definitely be retarded, and, in fact, it is obvious that unemployment and lower output will be the inevitable result. In one of the Corporation's mills, it has been necessary by the vagaries of trade throughout the past year, to play off a certain number of redundant workmen, and the steps which the mill took are now being challenged by the labour unions, though so far as your Directors know, the steps taken were definitely within the law, and became unavoidable as a result of trading conditions which resulted in an inability to sell production; output, therefore, had to be reduced if losses were to be restricted.

Excise Duties

"Last year, I stated that the imposition of an *ad valorem* excise duty then imposed on footwear, and the additional excise duty on cotton cloth were severe blows to the Corporation, and my words have certainly been proved to have been correct. The Directors' report makes it clear that the cost to branches of these excise duties amounted to Rs. 19½ lakhs, and it will be recalled that these duties were not operative for the full year. Your Directors had great hopes that, in his current Budget, the Hon'ble Finance Minister might be prepared to reconsider and reduce or abolish these intolerable impositions which, though presumably intended primarily as a form of indirect taxation, in effect became a further direct tax on manufacturers. To make matters worse, this year the Budget proposes further increases in the excise duties on cotton cloth and sugar, and, *inter alia*, an entirely new excise duty of 10 per cent. *ad valorem* on woollen cloths, while the excise duty on footwear is apparently to be continued. I cannot be in any way optimistic regarding the possibility of passing even a reasonable proportion of these excise duties on to the customer, and it will be recognised that all the industries represented by the Corporation's branches are now severely affected by this form of taxation, and the goose which in the past had laid the golden eggs is slowly but surely being strangled.

"In the Directors' report, you were informed that raw material prices, in so far as the Corporation's woollen branches were concerned, remained reasonably stable, but particularly in some varieties at a level so high as to reduce demand for types of cloth formerly popular in the Indian market. It stands to reason that if these prices now have to be increased by an additional 10 per cent. *ad valorem* excise duty, there will be all the less chance of them becoming marketable, and such lines must, therefore, be discontinued which will result in loss and a further redundancy of labour. On the finer side of the worsted trade, however, demand remained fairly satisfactory in 1954, but whether it will remain so with this compulsory increase of price added, when the margin was already uneconomic, remains obscure, but it seems unlikely that the result will be different from that experienced by the Corporation's other branches.

"Excise duty as a form of taxation is all very well so long as it adds almost unnoticeably to the price of any article to the consumer, but when the price per yard of material is increased by 10 per cent., the customer normally will look for something cheaper, or do without. In days gone by, our woollen branches used to produce a vast number of Indian shawls, known as *lohis*, which were popular in many of the markets of India. In those days, *lohis* could be sold at prices ranging from Rs. 3 to Rs. 7 each. With the increased cost of the raw material imposed by world conditions, the increased cost of labour imposed by local conditions, and the excise duty imposed by the Central Government, the current day cost of production of the *lohi* would amount to around Rs. 25 each, and it is small wonder, therefore, that the man in the street who bought a *lohi* as a utility garment, cannot now afford what was then regarded as a necessity, but which, because of its price, can now only be regarded as a luxury. Every year, the woollen branches are finding less and less demand for the heavier woollen goods, a state of affairs which, of course, results from increased production costs caused by the reasons which I have mentioned. This means that expensive plant is either not employed, or is insufficiently employed, and the opportunity of finding work for additional labour is accordingly materially diminished.

Cotton Branch

"On the cotton side of our business, I regret to say that our experience during 1954 was again unhappy. As you were informed last year, the branch mill at Juhi was closed down at very considerable expense, and since then your Directors have been considering how best this valuable site could be turned to profitable use. Here again, one bumps into Government restrictions, but the matter is under constant consideration and certain alternative plans are under examination.

"I have already made reference to the attempt which is to be made to start a third shift at the main Cawnpore Cotton Mills, and I should perhaps explain that before the Corporation is permitted to take any action to this end, sanction from the Government of India is necessary, and I am given to understand that this is only being given conditionally on the monthly production of a prescribed number of bales of yarn for the handloom weavers. This seems rather incongruous when one considers that the branch mill at Juhi, which only produced yarn for handloom weavers, had to be closed down last year owing to lack of demand, and this instance goes to show how difficult it is at the present time to run any organised business as the owners would wish, and in a manner which they could regard as reasonably likely to be profitable. It is by no means ignoble to look for profitable business. Business to be worth anything at all, must be profitable, and no management worthy of the name would be satisfied to continue running a business which showed no profit, or could only break even.

"There is an old adage that every labourer is worthy of his hire, and, as this is an admitted fact, surely it must also be admitted that every shareholder is worthy of his dividend.

"I have referred to the cost incurred to certain of the Corporation's branches by having to carry on their books redundant workers, inasmuch as what we used to regard as an employer's duty to maintain a balanced labour force is now impossible to perform. If one assumes that the average wage for a worker in a textile mill is Rs. 100 per mensem, or Rs. 1,200 a year, it will be appreciated that 1,500 redundant workers in a mill will cost that mill no less than Rs. 18 lakhs per annum. This is obviously a burden which, in these competitive days, no mill can stand.

Leather Branches

"In regard to the Corporation's leather branches, I cannot repeat too often how disastrous on the fortunes of these branches was the imposition last year of the excise duty on footwear. Every possible opportunity was taken of bringing the ill effects of this imposition to the notice of the Finance Department of the Government of India. The fact that the smaller factories, employing less than 50 men, were totally exempted from this excise duty, strengthened their position and meant that only the larger and better organised footwear factories were hit by this method of taxation. It is understood that a number of such organised factories have already had to close down and go out of business, and the main burden is, therefore, now felt by the surviving companies, and thus the impact of excise duty on these companies, quite unintentionally perhaps, but through force of circumstances, becomes discriminatory. Your Directors had hoped that, as a result of the many representations made, the Finance Minister, in his budget proposals this year, would have removed this stifling burden in whole or at least in part, but to our great regret the question of the excise duty on footwear did not even get a mention in the Budget speech. Meantime, hides of the quality required are still scarce, and many of our former markets remained closed to us, and it is unfortunate that we are unable to continue our export of leather on the desired scale, by virtue of the absence of suitable hides, and the fact that hide prices now do not enable us to take part to the extent desired in this highly competitive business. Leather, which competes both as to quality and price with the Corporation's production, is becoming increasingly available in overseas markets, from South American, and even European, countries.

"Last year, the branch selling arrangements for footwear and leather were altered in order, if possible, to reduce the selling costs, and it would appear that this object is being achieved, and sales of footwear have increased, but unfortunately, owing to the excise duty, continue to be unprofitable. I can only remind you that when referring to the excise duty on footwear last year, I estimated that the cost to the Corporation might well be in the vicinity of Rs. 14 lakhs per annum, and that this burden had certainly come at an unfortunate time when our manufacture of footwear showed no margin of profit. I also reminded the shareholders on that occasion that the imposition of the excise duty on footwear, and the additional excise duty on cotton cloth, were severe blows to the Corporation, and so they have certainly proved to have been. Furthermore, in regard to our heavy footwear section, the orders received for Government supplies have been quite inadequate, and such orders as have been secured, have only been at prices which were unprofitable, but which had to be accepted to keep a certain amount of work going through the extensive plant maintained for this purpose.

Modernisation of Plant

"Throughout the branches of the Corporation, increasing attention is being paid, as has been stated in the Directors' report, to the modernisation of plant to enable the introduction of more attractive and more readily saleable goods. This, as indicated in the balance-sheet, will involve considerable outlay, but it is essential in these difficult times to go ahead and expand where possible, rather than to continue on static lines with little chance of earning adequate profits. This is a matter which is receiving close and continuous attention from your Board and the management. It is perhaps unfortunate, however, that there is still a very considerable time lag in the receipt of new plant, even after import licences have been received.

"In my remarks to the shareholders last year, I dealt fairly fully with the question of finance, as it affected industry generally, and the Corporation, in particular. I also referred to the fact that increased finance is now required for business purposes, inasmuch as wages and raw materials cost many times pre-war rates, and that as regards capital expenditure, the cost of plant and machinery was approximately four times what it was immediately before World War II.

"I mentioned last year how essential it was in the shareholders' interests that we should plough back as much as possible each year from profits into the business. Unfortunately, however, the results obtained for 1954 have not permitted of anything in that line. In fact, after allowing Rs. 10 lakhs for depreciation, the profit and loss account shows a loss of over Rs. 4 lakhs, and while this is a little more than balanced by the profit on the sale of investments, which has been carried to reserve, Rs. 14 lakhs have been written back from a previous income-tax reserve in order to permit of the payment of the preference dividend, and a nominal dividend of 1 anna per share on the ordinary shares. Even the carry forward has been reduced by nearly Rs. 1 lakh, so that the financial position of the Corporation is none the stronger as the result of the trading conditions experienced in 1954. It is, accordingly, all the more necessary, for reasons which have already been explained to you that, whenever opportunity will permit, as much as possible should be ploughed back into the business, in order to strengthen the Corporation's finances.

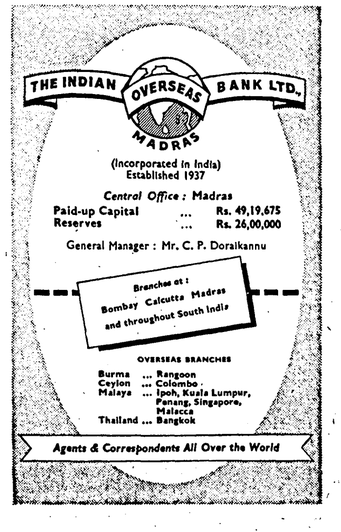
"The Directors' report makes it clear that it is impossible to pay a gratuity to employees in respect of 1954. No such payment could possibly be expected when the results for the year have shown a trading loss.

"Your Board and the management fully appreciate that the fact that the Corporation's trading in 1954 showed a small loss instead of the fairly comfortable profit to which we have for many years now been accustomed, must have come as a most unpleasant disappointment to the shareholders, and I have endeavoured in the course of my remarks today, to explain to you many of the difficulties which were encountered during the year, and to counteract which all possible steps have been, and are being, taken.

"To sum up briefly, our woollen branches maintained their position and their sales, but as a result of more intense competition, the margin of profit was lower than in the past few years, hence the remark in the Directors' report that sales had had to be made at a level which was barely economic. The cotton branch, minus of course the Juhi Branch mill, had to face unprecedented difficulties, and seldom during the year was it possible to sell any of the Branch's production other than at a loss. That aspect, the retrenchment gratuity paid in respect of the closure of the Juhi Branch mill, the carrying of many redundant workers whose services could not be dispensed with, and the inability to pass on the excise duty to the customer, have resulted in a heavy loss to the branch. The leather branches also suffered from the inability to secure a profitable price for its output on footwear, as the result of the imposition of the excise duty, and, of course, also of competition arising from footwear exempted from that duty. Further, owing to the paucity of good quality hides, their leather sales were greatly reduced, with the combined result that total sales were materially smaller, and a loss on the year's working was sustained. At head office, the surplus was less as the result of a reduction in the income on investments and of the increase of interest charges. We can all share the hope that the strenuous efforts being made to overcome the difficulties which I have described will shortly begin to show improved results.

Outlook

"My remarks so far are confined to the Corporation's operations during the year 1954, and perhaps the shareholders will expect me to say something as to the future. In this connection, may I refer you to what has already been stated in the Directors' report, to the effect that, while unfortunately it would not be realistic for shareholders to expect any early return to the level of dividends paid in recent years, your Directors and the management are sparing no effort to improve the present unsatisfactory position. The shareholders will probably realise that the Directors' report was drafted before the Hon'ble Finance Minister introduced his Budget in the Lok Sabha. The fact that he has seen fit to increase the excise duty on cotton manufactured goods, and has retained the excise duty on footwear, and imposed an excise duty on woollen goods makes the position, as I have already indicated, all the more difficult, and it is impossible at this juncture to foretell just what the effect of these severe impositions will be, but I cannot for a moment hold out any hope that, in respect of the trading for the current year, it will be possible to pay any substantial dividend, and I am frankly of opinion that it will be exceedingly difficult under these circumstances to earn sufficient to pay even the modest dividend which was distributed during the war years, but shareholders may rest fully satisfied that every effort is being, and will be, made to improve conditions to whatever extent is humanly possible."



THE HONGKONG AND SHANGHAI BANKING CORPORATION

SATISFACTORY RESULTS IN A YEAR OF DIFFICULT TRADING CONDITIONS

MR. C. BLAKER FEELS BRITISH BANKERS HAVE IMPORTANT ROLE IN ASIA

THE Ordinary Annual General Meeting of the Hongkong and Shanghai Banking Corporation was held in Hong Kong on 11th March, 1955. In the course of his customary statement to the shareholders of the Corporation, Mr. C. Blaker, M.C., E.D., the Chairman, says that economic development has been the most pressing pre-occupations of all Asian Governments, for they need more capital investment and on more generous terms than hitherto offered. In this connection, he points out the need for exercising caution in financing development programmes by budget deficits, a device which some of the South-East Asian countries have already resorted to. New measures are being adopted he says, for the mobilisation of capital to assist industrial development in the free countries of the East and particularly in the area of the "Colombo Plan" countries. He feels confident that British bankers have still an important part to play in Asia and elsewhere.

Opening the proceedings of the meeting, Mr. Blaker said:

"LADIES AND GENTLEMEN,

"The hour for which this meeting was called having now passed, I will call upon the Chief Manager to read the notice convening the meeting."

Mr. Michael W. Turner having read the notice convening the meeting, and a representative of the auditors having read their report, the Chairman continued:

"Ladies and gentlemen,—Before I proceed to comment on the accounts, I want to draw your attention to two anniversaries connected with this Bank which may not have come to your notice. The first was on 6th August last year. It was the 90th anniversary of the meeting held in Hong Kong on 6th August, 1864, to form a provisional committee to undertake the establishment of this Bank.

"The second anniversary was on 3rd March last week. That was the 90th birthday of the Bank, which opened for business for the first time on 3rd March, 1865.

"The Bank's centenary still lies ten years ahead, but ninety years is a long time to all of us and it happens to be a suitable occasion for bringing about a small change in the capital structure of the Bank and so to benefit shareholders as has not been done since 1921. I shall be referring to this matter again in a few moments.

"I am particularly happy at being able personally to call attention to these anniversary dates, as a predecessor of mine, Mr. H. B. Lemann, of Gilman & Co., was one of the original directors of the Bank. Moreover, Gilman & Co., together with David Sassoon & Co., are the only firms which were represented on the original Board and are still represented on the Board as constituted today, ninety years later.

"Incidentally, the first London Manager of the Bank was Mr. W. H. Vachell, previously a partner of Gilman & Co., and of Ashton & Co., the London Branch of Gilmans. For a short time, the Bank appears to have had its office in Gresham House, Old Broad Street, where Ashton & Co. were established.

The Accounts

"I will now turn to the accounts. The net profit for the year amounts to HK$19,290,451 which is some HK$2 millions in excess of last year's figure. As in previous years, the published profit has been arrived at after transferring to our inner reserves such amounts as your Directors have deemed appropriate, out of which reserves full provision has, as usual, been made for all known bad and doubtful debts and contingencies. The balance of profit brought forward from last year amounts to HK$9,859,542, and the total available for appropriation is accordingly HK$29,149,993. In view of the heavy expenditure which it has been necessary to incur in recent years on new Bank premises, it is proposed that a sum of HK$6 millions should this year be written off bank premises account and, after allowing for this transfer and the interim dividend of £2 per share, it is recommended that the final dividend should again be £3 per share, leaving a balance to be carried forward to next year of HK$10,215,256.

"As shareholders will be aware, it is proposed to increase our share capital by the issue of one new share for every four shares now held and an extraordinary general meeting is being held after this meeting to pass two resolutions for this purpose. In this connection, it is hoped, provided, of course, the profits of the Bank are maintained, to pay the same annual dividend of £5 per share for the current year on the increased capital.

Balance-sheet Features

"From the balance-sheet, it will be observed that our published reserve fund now stands at HK$128 millions (£8,000,000), the increase of HK$32 millions (£2,000,000) representing a transfer from contingencies account of funds which are no longer required for the purposes for which they were originally put aside. With regard to the other items in the balance-sheet, it will be noted that the excess note issue has been decreased during the year by some HK$80 millions, which is reflected in a corresponding reduction in the total of Certificates of Indebtedness. Current and other accounts and acceptances on behalf of customers have increased by HK$36 millions and HK$46 millions, respectively.

"On the assets side of the balance-sheet, cash, call money and treasury bills have decreased by approximately HK$300 millions, and the funds thus made available, together with the increase in our total funds during the year, have been mainly re-employed in trade bills and advances to customers which have increased by HK$168 millions and HK$184 millions, respectively. It is a source of some satisfaction that we have been able to employ these larger funds during the year in their rightful sphere of financing international trade and commerce. As a result of the reduction in cash, call money and treasury bills, the ratio of the Bank's readily realisable assets to its total liabilities to customers has decreased from last year's figure of 65 per cent. to 58 per cent. which, however, still represents a satisfactory degree of liquidity.

"As shareholders will be aware, trading conditions in the territories in which we operate have, in general, continued to be difficult, although the increase in the prices of certain primary commodities in the latter part of the year rather changed the picture in some areas. In all the circumstances, your Directors feel that the results of the year must be regarded as satisfactory.

"The printed statement which is in your hands today deals with the political and economic situation in the Eastern countries where we have offices. It also refers to the position in China and to our negotiations regarding final closure of our Shanghai office. I will now only say that, while the Bank's main problem in China is still unresolved, our offices at Swatow and Tientsin have been wound-up during the past year and Peking is likely to be closed soon.

"In Viet-Nam, we have shut our office at Haiphong, but to counter-balance this, as you will see from the statement, we have now completed arrangements for opening an independent branch at Phnom-Penh, the capital of Cambodia.

Chief Manager's Extensive Tour

"Most of you know that our Chief Manager, Mr. Michael Turner, has had a busy time this year. I do not refer so much to all the varied matters with which he has to deal in his office here in Hong Kong, as to the extensive tour he has made of our offices throughout the East and in America. He has visited every one of our offices in Japan, Malaya, the Philippines, and Borneo including Brunei, and Indonesia. He has been to Bangkok and Saigon, and, in addition to spending some days at San Francisco and New York, he has also paid a visit to Washington to make contacts with our Embassy and with the U.S. Treasury. Wherever he went he interviewed Government officials and our banking friends. He now proposes to take a few weeks' leave in England, but at the same time he hopes, to complete the circle by visiting those offices he has not yet seen. I am sure that the personal contacts made and the personal knowledge gained by the Chief Manager will prove to be of great value to the Bank in the future.

"I am glad to say that Mr. Turner reports favourably on our staff of all nationalities. He has been able to take steps to ensure that their welfare is properly assured. We are most grateful to them for their loyalty and efficient service to the Bank.

"During Mr. Turner's absence, Mr. G. H. Stacey, who holds the appointment of Deputy Chief Manager, has very efficiently taken charge of the head office.

"There is no need for me to say anything about the changes in the Board of Directors, but I much regret that I have to record the death last September of Major-General Sir Frederick Sykes, G.C.S.I., G.C.I.E., G.B.E., K.C.B., C.M.G. Sir Frederick joined the Board on 8th October, 1943, while it was established in London as a result of the war, and after the Board moved back to Hong Kong he sat on the London Committee up to his death. He had a very distinguished and varied career and will be greatly missed by his many friends.

"Ladies and gentlemen,—The Report and Statement of Accounts having been in your hands for the required period, I will now formally propose their adoption as presented.

"After the proposal has been seconded, I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask."

The resolution having been seconded, the report and accounts were adopted.

Chairman's Statement

The following is the statement referred to by the Chairman:

"Last year, we noted that the world-wide cold war continued without abatement, but that in Asia there had been progress in economic development programmes in spite of a continued deterioration in foreign trade. We also referred to the great need for capital investment in the underdeveloped countries and to the difficulties lying in the way of this.

"The year 1954 brought about some improvement in the cold war. It became less cold, though I fear that already in 1955 there has been some reaction. It is clear that the Geneva Conference which lasted from the end of April to 21st July effected a change of atmosphere in the relations between the West European powers and China. This was not due so much to the agreements then concluded nor to the cease-fire in Indo-China, although these were important and cheering, but rather to the intangible consequences and advantages of the presence at Geneva of important political leaders of the Asian administrations and particularly to the presence of Mr. Chou En-Lai, the Chinese Prime Minister. The opportunities of direct contacts and discussions between leading Eastern and Western diplomats which the Geneva Conference brought about for the first time since Communist Governments were set up in East Asia unquestionably effected a clearing of the air.

"I am afraid that the subsequent S.E.A.T.O. Conference in the Philippines dampened down some of the cheerfulness created by Geneva and the more recent developments in the sea areas between the mainland of China and Formosa have brought downright gloom. Yet Article III of the Manila Treaty was promising in that it bound the signatories 'to co-operate with one another in the further development of economic measures, including technical assistance, designed both to promote economic progress and social well-being.'

"Unfortunately, the unrepresentative nature of the S.E.A.T.O. Conference gave rise to fears lest the economic steps there visualised would divert attention and finance from the wider sphere of the Colombo Plan. However, in the debate in Parliament on 8th November, when the House approved the policy of H.M. Government in regard to the Geneva Agreements and the Manila Treaty, an official assurance was given that the Colombo Plan would not in fact be impaired by any commitments arising under Article III of the Manila Treaty. But doubts prevail. Economic assistance is greatly needed

in South-East Asia and the available capital is limited. The Colombo Plan was first in the field and has proved generally acceptable throughout Asia, because it has not been suspect on account of any national or political tinge. It remains to be seen if there is any way in which the Manila proposal can be consolidated with the Colombo Plan arrangements.

Aid for Underdeveloped Countries

"The question of economic aid for the underdeveloped countries in Asia has been dealt with from this chair on many occasions. Not long ago, in a Parliamentary debate, Sir Anthony Eden said, 'Economic development is the key to all that may follow in South-East Asia,' and this is a fact of which all Asian Governments are fully aware. It is one of their most pressing pre-occupations, for they need more capital investment and on more generous terms than hitherto offered.

"Some South-East Asian countries are already financing part of their development programmes by budget deficits and caution is, therefore, needed, as has been pointed out by a recent E.C.A.F.E. working party. There have been so many instances during the last two decades of inflation getting out of hand in Eastern countries that the risks must be clearly in the minds of the financial authorities responsible for any inflationary action and the responsibility is a serious one.

"If internal finance cannot be raised for development needs, the safest way out of the difficulty is to seek external finance, either private or Governmental. But foreign private investment has not hitherto received much encouragement towards venturing capital in the less developed areas. Political uncertainties, nationalistic suspicions and rigid restrictions have antagonised and frightened potential investors, but I am glad to say that recently some signs of a change of policy in this respect have been noted in some countries. On the other hand, even foreign Governmental aid, if coming from one exclusive source, has been looked at with some suspicion in recent years and Asian countries mostly prefer joint international action such as the Economic and Social Council of the United Nations has for some years been trying to get adopted.

International Finance Corporation

"Now at last, a new phase seems to have been reached after about four years of discussions in the United Nations and by the authorities of the International Bank, and it looks as if a step is being made in the right direction. This is the establishment of an International Finance Corporation as an affiliate of the International Bank and with an initial capitalisation of U.S. $100 millions. The Corporation is designed to increase private investment in less developed countries. This project was dealt with in some detail, and on the same lines as now formally proposed, in the report of the International Bank for 1951-52. The care expended on the project has thus a good chance of bearing fruit. Similarly, the establishment of the Industrial Credit and Investment Corporation of India is another step forward. Here we see a promising international-cum-private investment concern, which, if successful, may well prove to be a model for similar ventures in other Eastern countries. The Government of India, the International Bank, the Commonwealth Development Finance Company, certain Indian banks and insurance companies and a group of British exchange banks, insurance companies and industrial firms, are participating together with a strong American group. I am glad to say that we are one of the British banks which have taken up shares in this Corporation.

China

"From the vantage point of Hong Kong we have seen or heard much about the considerable number of British delegations of one kind or another which have visited China. Their members, as compared with those of earlier visits, represented more varied points of view and interests covering political, cultural, professional and commercial affairs. They had opportunities to see a fair amount of the areas they visited in the short time at their disposal, and they were thus able to bring back a broader picture of People's China than has hitherto been generally available. What these travellers reported was fresh to many persons interested in China and in the Chinese impact on world affairs. They have not revealed much that was new to those of us in Hong Kong who have had our eyes open in the past few years. However, even fleeting visits such as these are worthwhile and most of the travellers who took part were careful not to claim omniscience in regard to China and its recent developments. Some of them may have put rather undue emphasis on 'peaceful co-existence,' a phrase which has become so well-worn in pronouncements from the other side of the curtain. But this phrase has recently received wider recognition through its adoption as Point 5 in the principles which were agreed last year between China and India, as a guide to relations between these countries. In its literal English sense peaceful co-existence is a good phrase which expresses the desires of many millions of people to live in peace free from fear of war. But we are on unsubstantial ground when we come to ask whether this phrase 'peaceful co-existence' means the same to all people. It is doubtful whether even Mr. Clement Attlee and his colleagues got clear and satisfactory explanations on this particular point. Their visit received considerable publicity in China as well as in the West and we all hope that that particular visit, joined with the many other visits to China by British parties, may have brought us forward a little way towards bridging the East-West gap which is still a wide one. Mr. Nehru has consistently been working towards this aim and the Burmese Prime Minister has added his support. We now look hopefully to China for a move from that side.

Settlement Negotiations—Extremely Slow Progress

"Our own particular hopes about China are that the negotiations for the settlement of our problems in closing our offices, which have been carried on now for nearly four years, should be satisfactorily concluded. Progress has been extremely slow. One stumbling block is that of U.S. dollars held by us on Chinese account, which the U.S. Government froze in December, 1950, and which it is totally out of our power to release, as is demanded by the Chinese. This matter rests in the hands of the U.S. Government and all the representations we have made, even with the help of our own Government, have so far been unavailing. Nevertheless, we hope that before long we shall be able to come to a settlement with the Chinese about all outstanding matters, including the repatriation of our Manager at Shanghai. Meantime, the question of future representation in China has been raised with us and we have expressed our willingness to come to some arrangement after our closure at Shanghai has been effected.

Possibilities of Future Trade

"We sent a representative with the British Trade Mission which visited Peking last November under the auspices of the Sino-British Trade Committee, in order that he might investigate the possibilities of future trade. We hoped that at the same time he might get an opportunity to clear up some of our difficulties. His journey was worth while for many reasons, and especially because he was able to see our Manager in Shanghai and discuss his problems on the spot.

"Another Trade Mission will be going to Peking this month, and still more visits, whether by individuals or by organised parties, will probably follow. In terms of the volume of trade concluded such visits may not effect a great deal, considering the total trade of the United Kingdom, but it is to the possibilities of expansion that merchants and manufacturers look and from which they hope for real benefit in the future. The potentialities are as great as they have been for over a hundred years. As in the past century, so now they would in actuality be greater if political and ideological difficulties and suspicions could be swept out of the way.

"You are aware that China's trade with the Soviet bloc now probably covers four-fifths of her total trade. When the blockade is removed the switch of trade to other countries is bound to be slow and it is hardly likely that China's trade will ever go back fully to the pre-war channels. No doubt, Japan will get a fair share, so the slice left for Europe and America may not be large. Much of course depends on the extent to which China is able to proceed with her development plans and in this connection, what will count is the way in which China's export trade develops and whether greater quantities of minerals and agricultural products will be available for shipment overseas. Only thus will it be possible to obtain sufficient foreign exchange for use in the purchase of the capital goods required for industrialisation purposes.

Remarkable Developments in Agriculture and Industry

"It is not possible under existing circumstances to give shareholders a reliable analysis of what agricultural and industrial progress has been made in China throughout the past year. If one were to confine attention to the speeches made by officials in Peking, all would seem to be well and the progress astonishing. If one were only to read the controlled Chinese Press emanating from the mainland, one would note certain frank criticisms indicating that there were serious difficulties, that planned targets were not always being reached and that in some cases they had been reduced. If one were to rely upon anti-Communist publications it would seem that all official reports from China were nonsense. Yet without giving chapter and verse, but basing opinion on evidence collected from many sources, I think we are justified in deciding that very remarkable developments in agriculture and industry have taken place since the People's Government came into power: there may have been some slackening of progress or even some deterioration in agricultural output in 1954, but the industrial progress during the year has continued at a rapid pace in spite of the United Nations embargo on shipments to China of many categories of capital goods. It is clear that the strains on the country caused by the embargo are getting more and more serious, but strict regimentation and careful economy in materials is enabling the country to overcome a great many difficulties. Nevertheless, China must surely attach very great importance to obtaining easier conditions and wider opportunities for importing the wide range of materials required for industrial expansion. The 156 industrial units for which large-scale Russian help is being received have no doubt progressed rapidly, but the significance of this number of plants, and of the whole Five-year Plan should be put in the proper perspective of the tremendous size of the country, and its vast population of nearly 600 million people. One wonders if Russia and the Soviet bloc can do much more than they are now doing in the direction of loans and technical assistance to China. So far China has followed the Soviet road because there has been no other road to follow: that is why many of us think it would be wise policy for the democratic countries to open an alternative route. But still wiser would it be for China, upon whom the onus rests, to come to terms with the United Nations, and so to provide an opening for that 'peaceful co-existence' she claims to desire so much. We had hoped that the Secretary General of the United Nations, when he was in Peking in January, would have been able to clear the way for diplomatic negotiations leading to a solution of many of these problems, but tempers have flared up about the Formosan question, so we shall have to wait for a more propitious occasion.

Hong Kong

"From China we must now turn to Hong Kong which does not attempt to conceal the fact that what happens in China, how she prospers, how her trade fares, whence it comes and whither it goes, all are matters of great concern to the Colony. This is natural and inevitable. In the political field Hong Kong is dependent externally on H.M. Government to ensure that the peace and security of the Colony is upheld by all the means at its disposal and Hong Kong's omission from the scope of the Manila Treaty does not, therefore, cause us any perturbation. Internally, Hong Kong is dependent on the police and defence services together with the help of all dutiful citizens, to maintain law, order and stability. We are thankful to say that in this respect all has gone well with Hong Kong in the past year.

"In the commercial field Hong Kong has, of course since the war and particularly in the last few years, done a lot to adapt her trade to the new conditions. In this there has been help from external capital which, especially since 1949, has found its way to the Colony from surrounding areas and has added to and improved upon many of the existing industrial activities. It is estimated that in 1947 about 10 per cent. or HK$120 millions of Hong Kong's annual exports, represented goods manufactured in the Colony. In 1954, locally manufactured goods, including some items not recorded separately, are believed to have amounted to one-third of the export trade. In 1954, 328 new factories were registered bringing the total of registered factories up to nearly 2,500 and the total labour employed in such factories up to over 115,000. Nearly two-thirds of Hong Kong-manufactured exports are cotton goods, the majority of which were sent to Indonesia last year. The United Kingdom took HK$75 (or £4½) millions of Hong Kong's products of which about a half were cotton goods. This is a drop in the ocean when compared with the total annual imports of the United Kingdom which are in the region of £3,500 millions. Questions in Parliament or in the Press about alleged small irregularities over

a few minor shipments of Hong Kong goods surely ought to be looked at in the proper perspective. Attacks on Hong Kong from other sources in regard to alleged infringements of the embargo on trade with China have, I am glad to say, died down. Hong Kong is, of course, still suffering seriously from the continuation of the embargo and it is indeed only too aggravating to know that others are benefiting from the relaxation of restrictions on trade with the Soviet bloc.

Scope for Greater Industrialisation

"There is still scope for greater industrialisation in Hong Kong, as was confirmed by the report of a recent Inter-departmental Committee, which recommended the reclamation of land suitable for new sites for factories at Kun Tong on the Eastern shores of Kowloon Bay. This recommendation having been approved, preliminary work has already started on the area, but a decision is awaited as regards the price and method of disposal of the sites. It is to be hoped that the procedure of preparing sites and developing common user services adopted in Singapore by the Colonial Development Corporation will be copied in Hong Kong so as to provide strong inducements to industrialists to move their existing factories or to start up new ones on the Kun Tong reclamation area.

"The future of Hong Kong may well depend on the encouragement at the present time, when capital is available, both of additions to the present scale of industrialisation and also of the removal of existing factories which are in many cases situated in crowded and unsuitable areas and in most hazardous buildings. It is also a matter for serious consideration whether Hong Kong should not go even further and provide, as is done in other underdeveloped countries, more specific inducements to encourage the establishment of factories of a larger and more up-to-date type to take the place of small units operating inefficiently on a hand-to-mouth basis. Ample unskilled labour is, of course, available in Hong Kong and some of this must be trainable for skilled work. This gives special point to the remarks made only a few weeks ago by Mr. Edward Hambro, when, in reporting to the United Nations on the refugee situation in the Colony, he stated that there were 667,000 refugees here and that he thought that these would have to be settled and integrated into Hong Kong.

Trade Tendency

"Hong Kong's trade in 1954 fell off about 11 per cent. in value although cargo tonnage changed little as compared with 1953. But it was satisfactory to observe that there was a slowly rising tendency in the figures recorded month by month throughout the year, even if the average monthly figures remained lower than we would like them to be. Trade with East Asian countries dropped in almost all cases except S. Korea and in the case of China the reduction was HK$315 millions (£20 millions)—from HK$1,397 millions in 1953 to HK$1,082 millions in 1954. There were local reasons for the drop in trade with some countries, such as Indonesia and Thailand, and a reversal of this situation may well appear before another year passes. Shipping statistics show a drop in the number of entrances and clearances but this is counter-balanced by slightly improved quantities of cargo carried.

"Business on the Hong Kong Stock Exchange was exceedingly buoyant and reached its peak in December. Moreover, land prices in the central districts reached record figures and remain high everywhere. It seems probable that a partial explanation for what might be called a boom in these activities was an inflow of capital from neighbouring countries, to which we may add increased confidence in the stability of Hong Kong.

Economic Commission

"We had the pleasure, some two months ago, of welcoming to Hong Kong a representative gathering of members of the Economic Commission for Asia and the Far East which met here to discuss certain trade problems. The Conference, I am glad to say, came out strongly in favour of multilateralism in international trade as being a desirable target. One interesting fact it publicised was that the region covered by the E.C.A.F.E. organisation which contains almost half of the world's population and also immense raw material resources, only accounted for 10 per cent. to 12 per cent. of the world's trade. When one considers how backward in development most of the countries in this region are, this small percentage figure is not altogether surprising. But it only underlines the remarks recorded in the beginning of this statement about the need for international efforts to remedy this state of affairs.

Colony's Financial Position

"Before passing on from the subject of Hong Kong I must refer to the financial position of the Colony which was dealt with so lucidly and comprehensively by the Financial Secretary, Mr. A. G. Clarke, last week. It was very satisfactory to hear that a surplus of HK$21 millions was expected for the current year and that the figure might prove to be even higher. This did much to temper the disappointment that the estimates for the financial year 1955-56 showed a record deficit for the Colony of HK$32 millions. Revenue was expected to amount to HK$413.7 millions and expenditure to HK$445.7 millions.

"However, Mr. Clarke was able to point out that the Colony had satisfactory reserves in the general reserve balance and revenue equalisation fund which would shortly be over HK$400 millions—that is to say more than the current year's total expenditure. Under the circumstances, it was not proposed to increase direct taxation or duties. It was proposed, however to look into the possibility of increasing various forms of licence fees such as for motor vehicles and of stamp duty on assignments.

"The expenditure on education, public health and public works non-recurrent is estimated to cost no less than HK$193 millions in the forthcoming year. While the Colony wants all these things including the larger airport and more reservoirs, the people of the Colony must not forget that they will have to pay for them out of their own pockets.

"It was interesting to see that both the Governor and the Financial Secretary dealt with the importance of encouraging sound local industries by such methods as the provision of land at reasonable prices in cases where a definite contribution to the well-being of the Colony would be made.

"I cannot complete my remarks about Hong Kong without saying how pleased we are that Sir Alexander Grantham is still with us and will be remaining until towards the end of the year.

Japan

"Japan has not yet fully re-established her position in the political arena in the East, partly because she has failed to reach agreement about reparations with the Philippines and Indonesia and partly because of her undefined relations with China, Russia and South Korea. However, the Reparations Agreement which Japan and Burma signed in November, may well be the precursor to further developments, and recent overtures to and from Russia and China indicate a desire for negotiations on trade, if not on other outstanding questions. Trade between Japan and China did indeed increase a good deal in 1954 but from the very low levels of 1953. Whether formal negotiations with Russia and China take place or not depends on the policy of the Government emerging from the elections which have just been held. The Government in power will have to take account of the West as well as of the East and Trade, while very important for Japan, is only one of many matters to be taken into consideration. Hong Kong, like Japan, considers trade with China of great importance but both Hong Kong and Tokyo are probably agreed that there are potent reasons why neither should be short-sighted in regard to this matter.

"Meantime, it is to be noted that discussions are proceeding between Japan and the United States as to the way in which some U.S.$85 millions worth of farm surplus products are to be made available to the Japanese Government. Japan has also taken over responsibility from the United States authorities for the defence of Hokkaido where some big development projects are now being rapidly pushed forward.

A Remarkable Transformation

"Internally, 1954 witnessed a remarkable transformation in the economic situation from one of inflationary dangers at the beginning of the year to an economy brought back to a reasonably sound basis at the end of 1954 by a successful deflationary policy. A few figures will help to illustrate the change that has taken place. Japan's foreign trade returns show that whereas there was an adverse balance of U.S.$1,135 millions in 1953, it was down to U.S.$770 millions in 1954. Imports were about the same in the two years, but exports were 27.8 per cent. higher in the past year. The balance of payments indicated a surplus of about U.S.$100 millions in favour of Japan over the calendar year 1954, as compared with an adverse balance of U.S.$194 millions in 1953. There were surpluses of £44 millions and U.S.$68 millions, respectively, with the sterling and open account areas and a deficit of U.S.$92 millions with the other currency areas. In this connection the falling off of special procurements by the United States authorities destroyed hopes of a still higher favourable balance last year. Japan's foreign currency balances were also higher at the end of 1954 at approximately U.S.$1,060 millions. Furthermore, the note issue at the end of the year broke a twenty-year record by falling below the figure at the end of the previous year instead of rising. The deflationary measures have also been successful in bringing down wholesale prices: this in turn is causing a fall in export prices which is expected to be as much as 10 per cent. by 31st March, the end of the fiscal year. It is thought that, if this reduction is accomplished, it will go a long way to putting many of Japan's export quotations more on a level with international prices.

Increase in Unemployment

"One unfortunate result of the past year's deflationary policy has been a considerable increase in unemployment which is likely to get worse so long as there is no relaxation in this policy. A number of industrial concerns have had to close down for the same reason, but the number has not been as high as was at one time expected. The Economic Counsel Board nevertheless considers that the present policy will, within five years, bring about full employment. Amalgamations and other steps to put industry on to a more efficient basis have increased notably and there are clear indications of a return to the pre-war pattern of Zaibatsu combines, although at present on a much smaller scale.

"The long-drawn out negotiations regarding Japan's full membership of G.A.T.T. seem likely to be renewed when present tariff discussions now proceeding at Geneva have been concluded. The need for safeguards is underlined by the 61 per cent. increase in Japan's exports in 1954, to the sterling area. Nearly 60 per cent. of those exports were textile goods although such shipments to the United Kingdom itself appear to have been lower than in the previous year.

"The Anglo-Japanese Sterling Payments Agreement is due to expire at the end of this month and in principle, but subject to certain discussions, an extension for three months is reported to have been agreed. It appears that the figure of £209 millions for the trade each way is not likely to be reached in the period of the Agreement.

Indonesia

"Indonesia has not been much in the limelight of the world in the past year because, fortunately for her, she has not been seriously affected by any of the current international polemics. Her Government has maintained its position notwithstanding a near crisis in December and in spite of Communist support which antagonises Moslem groups within the country. Yet the internal economy is far from healthy and a few weeks ago a famous economic journal did some straight talking in regard to the barriers obstructing foreign trade and restricting the operation of foreign concerns resident in that country.

"It would not help matters to reiterate complaints regarding regulations which make normal trading impossible, which upset established procedure and which discriminate against non-Indonesians. Such factors naturally give rise to a feeling of frustration and make it useless to expect the investment of foreign capital which is badly needed in order to turn to good account the potential wealth of the country. The Indonesian Government issued a statement a year ago with a view to encouraging foreign investments but almost at once afterwards a levy of 40 per cent. on overseas remittances was imposed. We agree with the Governor of the Bank Indonesia when he expressed the hope, in his report for the year 1953-54, that the promised elaboration of that statement 'would be formulated in such a way that at least as far as official conditions are concerned, Indonesia may become an attractive field of investment for foreign investors.' He added the hope that there would also be a 'positive improvement in the investment climate in Indonesia.' Another remark of his was:

"'Only as and when many of the obstructionist factors—which I shall not go into here because they may be assumed to be well known—will have been swept away, is it to be expected that the Government's efforts to attract foreign investments will crowned with success.'

"Official trade returns for the full year 1954 are not yet available, but it is reported that the unorthodox system under which import licences continue to be issued did at any rate limit imports, which were therefore expected to be some Rps. 800 millions less than in 1953. On the other hand, exports increased Rps.70 millions in value. If the oil companies' returns are omitted (as they are on a special basis), there should be a small favourable balance of trade in 1954.

"The restrictive system applied to imports has resulted in a considerable reduction in the availability of consumer goods and a consequent rise in prices. Rice production has been steadily improving and imports during the past year have again been reduced considerably. Exports of both rubber and tin from Indonesia increased as compared with 1953. In the case of rubber the increase was as much as 24,000 tons and the fortuitous rise in price in the latter part of 1954 accounted for some of the increased value of exports and also helped to maintain the ratio of gold and foreign currency holdings to the note issue.

"The returns of the Bank Indonesia show that gold and convertible foreign exchange figures rose steadily in the latter part of the year from about Rps. 1,535 millions in June to Rps. 2,127 millions in the middle of January, 1955, while the note issue increased in the same period from about Rps. 5,790 millions to Rps. 7,395 millions.

"In April last year, the Minister of Finance announced that his draft budget showed a deficit of Rps. 1,200 millions: In September, he stated that the deficit was then estimated at Rps. 2,600 millions. Later on, this figure appears to have been once more revised upwards to Rps. 3,500 millions or over. It was not, therefore, surprising that as long ago as last June the Governor of the Bank Indonesia should have shown some alarm at the budgetary situation.

The Philippines

"The Philippine Islands have had a prosperous year, but the Government has not had an easy time owing to internal political antagonisms. President Magsaysay's reputation for probity, sincerity and hard work has been enhanced and he deserves much credit for his vigorous efforts to push through a programme of rural development, striving to make the country self-sufficient and to reduce unemployment. Administrative difficulties have, however, slowed down many of the best intentions of the Government.

"In the President's 'State of the Nation' message to the joint session of the House and Senate on 24th January, after dealing with rural development and labour legislation, he referred to encouraging results in manufacturing and processing but confessed that industrial developments did not measure up to their needs. He then gave a word of welcome to foreign capital. He said that to encourage and facilitate its entry into the Philippines the essential conditions governing such entry should be specified.

"Perhaps, one of the most important events of the year was the conclusion of negotiations for the revision of the Bell Trade Act. Ratification has not yet taken place so detailed comment would be premature, but the Philippines appear to have gained considerable concessions from the United States. In the meantime the free trade period of the Act has been extended for 18 months to 1st January, 1956.

"In the financial sphere, few significant changes took place in the year but the International Reserves dropped moderately from U.S.$296 millions to U.S.$273 millions while the General Fund at 30th November last showed a surplus of Ps. 10.7 millions, as compared with a deficit of Ps. 48.7 millions in the same period of 1953. The reappointment of Mr. Miguel Cuaderno as Governor of the Central Bank for a further term of six years was much welcomed by all bankers.

"Much legislation has been in the hands of Congress during its sessions in the past year and many important Bills have been adopted, but out of some 45 so-called 'nationalisation' Bills introduced only one passed into law. This was the very controversial Act to Regulate the Retail Trade which aimed at restricting such business to Philippine nationals. After many protests, particularly by Chinese traders, at length an amending law has been submitted to the House. In the explanatory note attached to this amending Bill it was stated that the original Act had been found to have had a far-reaching effect on the national economy by causing the withdrawal of foreign capital and by heightening the problem of unemployment. It added that by 'nationalisation' they were not only driving away foreign capital which intended to enter but were also dislodging capital already established and contributing to the progress of the nation.

"How widely the above views are held in the Philippine Congress is not known, but they indicate that there is a growing realisation that ultra nationalistic measures, if applied to business concerns operated by foreign private enterprise, may likewise deter new capital and even cause long-established undertakings to withdraw from the country.

Malaya

"Important Constitutional changes came under consideration during the past year both in the Federation of Malaya and in Singapore. There was first the Report of the Committee appointed to examine the question of elections to the Federal Legislative Council and shortly afterwards the Report of the Rendel Constitutional Commission in Singapore.

"The Federation Report included a surprisingly large number of unanimous recommendations: the main disagreement being on the question of the composition of the new Legislative Council. In due course General Templer recommended a compromise providing for 52 elected members out of a total of 98, excluding the Speaker. This was approved by the Secretary of State and the Bill, which put the new proposals into effect, was passed on 18th August. The Bill covered not only the Legislative Council but also election procedures and many other matters of detail. When one bears in mind the complicated structure of the Federation of Malaya, with nine separate States and two settlements and a community of a particularly varied nature, it was a remarkable feat to bring about agreement on such a unique constitutional arrangement within a period of about a year.

"We were glad to see that in moving the third reading of the Bill the Attorney General of the Federation made it clear that Britain had not, and is not going to relinquish its responsibilities for the protection of the people in that country until the present threat of communist force is removed. At the same time, he added that the policy of self-government had not been forced on Malaya by Great Britain, but was entirely in accord with her record elsewhere. The Attorney General reminded, the Council that self-government would not produce any miraculous changes: the hard facts and problems would still remain and hard work would have to be faced and accomplished.

"We are firmly of opinion that H.M. Government has taken the right line in regard to these constitutional changes and there seems no reason to fear any untoward consequences. Adequate powers have for the present been reserved to the High Commissioner in the Federation and to the Governor in the Colony. Moreover, there is a very widespread feeling in responsible circles in Malaya that the strong link which binds the territory with H.M. Government and the Commonwealth must be firmly maintained without any time limit.

"The elections to the Legislative Council take place next July and will give great responsibilities to the leaders of the political parties. Considering how serious the so-called 'emergency' still remains and how many difficult problems in regard to financial, economic, social and administrative affairs still face the Government, the elected party will have a heavy burden to carry.

Federation's Finances

"The finances of the Federation were dealt with very clearly by the Financial Secretary, Mr. E. Himsworth, in his Budget speech to the Legislative Council on 17th November which, in spite of the spate of figures, was well worth reading for the pertinent comments, not only on the Budget but also on taxation, on the basic conditions necessary for the encouragement of ment Corporation and by the Federation Govern- investors, and on the need for extensive capital investment with which to expand the production of agricultural products, to set up new industries and so to strengthen the national economy.

"Put shortly, the accounts of the Federation of Malaya show an expected deficit of M.$173.6 millions in 1954 which will be covered by the reserve balance which was M.$355.5 millions on the 1st January, 1954. After deducting this deficit for 1954 and adding grants-in-aid from H.M. Government, the M.$30 millions loan from Singapore and other items, the reserve balance comes to about M.$289 millions. Against this there is an estimated deficit for 1955 of about M.$148 millions, but the Financial Secretary warned Councillors that expenditure was rising more rapidly than revenue and that one day the gap would have to be closed by the efforts of the country without outside aid. He emphasised that no country could be financially stronger than its basic industries, which in Malaya, meant rubber and tin, for the prosperity of which everything possible should be done, even at the expense of other desirable projects.

"There was a significant sentence in the speech of the High Commissioner of the Federation, Sir Donald MacGillivray, when he opened the budget meeting of the Legislative Council on 17th November last. He said that a very approximate computation of the cost to the British Treasury of the forces engaged in duties connected with the emergency in Malaya was M.$550 millions per annum; that is more than the total annual income of the Federation. Few Malayans realise this fact.

Rendel Commission's Report

"We referred above to the Report of the Rendel Commission which recommended a big step forward towards self-government, a step regarded by some as dangerous and by others as not far enough. Much depends on the leaders of opinion in Singapore as to whether the electorate accept their new responsibilities in going to the polls and electing as members of the Legislative Council, persons who will discharge their duties for the real benefit of all sections of the community. The large increase in the number of elected members who will sit in the new Legislative Council gives them responsibilities greater than those put upon similar assemblies in other territories. Singapore is a city which has developed a pride in its important status in the East and, indeed, in the world. These constitutional changes will give it an even greater position of importance. Its future will depend much on its elected representatives. We all hope that the leaders of the commercial community as a whole will stand together to ensure that no rash experiments will be attempted, but that safe, sound and orthodox policies will be adopted.

"The new Legislative Councils in the Federation and in Singapore will have many complicated problems to face. One of the most important concerns the organic differences existing between the Federation and the Colony. Nevertheless, the two territories are so interdependent that necessarily each Government has to ensure that whatever legislation is introduced in the one will not be prejudicial to the other. For this reason veto powers are held by the High Commissioner and the Governor, which of course limit the authority of the Legislatures and will impede progress towards self-government until a federal or other solution is evolved. A Joint Co-ordination Committee has had this matter under consideration for some time but no information as to its progress has been made public.

Industrial Development

"The Governor, Sir John Nicoll, recently urged the expansion of industrial development and the attraction of capital investment. A comparison with Hong Kong's industrial progress has been made and special inducements to encourage secondary industries have been suggested. This is a subject which is no doubt receiving the attention of the Government departments concerned. Our Singapore Branch has been playing its part in the encouragement of new factory developments. As a step in line with this policy our Manager, Mr. J. A. D. Morrison, has recently provided finance for and become Chairman of the Federal and Colonial Building Society, an organisation sponsored by the Colonial Development Corporation and by the Federation Government to encourage the building of houses which are so much needed in these territories. There are many other developments in Malaya which could be mentioned if there were more space. In particular, Singapore's magnificent harbour with its easy berthing facilities and docks has not, in recent years, received its due meed of praise. The tonnage of vessels berthed and docked and of cargo dealt with, has been increasing rapidly in the post-war years and the improvements now under way will make the port in many respects the best equipped in the East.

"A number of development projects and other plans are being held in suspense awaiting the report of the International Bank Mission which visited Malaya early in 1954. I understand the delay is due to the sickness of one of the members of the Mission.

Rubber and Tin

"There is no need to comment in detail on the subject of rubber and tin as reports on these commodities are published in profusion by those closely connected with the two industries. The natural rubber industry is so important to the Malayan economy that the improved statistical outlook and the rapid rise in price from under 1s. 5d. a lb. in January, 1954 to nearly 2s. 4d. at the end of the year naturally brought considerable optimism and benefit to Malaya. Although the average prices for the full years 1953 and 1954 showed little change, exports from Malaya

increased by 67,900 tons in 1954 compared with 1953. There is, however, a fairly general feeling that the rise in price since last August has been overdone for reasons not entirely connected with the market position. Let us hope that the recent set-back will be no more than a healthy jolt to speculators.

"The Mudie Report on the Malayan Rubber Industry which was published in September met with a mixed reception. Government and producers are now trying to work out a compromise in regard to differences on the controversial parts of the Report. The synthetic industry remains an uncertain and potentially dangerous factor over-hanging the natural rubber industry.

"Tin prices per ton in 1954 fluctuated between £620—the lowest point—and £785—the highest, but the average for the year was £708 compared with £731 in 1953. The International Tin Agreement has not had a smooth passage since it was signed in June 1954 and ratification by the necessary number of countries is still awaited before the agreement can be put into effect. If this proves abortive the industry will no doubt be able to adjust itself, although some sections will undoubtedly suffer. Malayan exports were 70,333 tons in 1954 as compared with 61,734 tons in 1953.

Malayan Trade Returns

"The Malayan trade returns for the year 1954 show a moderate reduction of about 3 per cent. in imports to M.$3,140 millions and a rise of 6 per cent. in export values to M.$3,109 millions.

"Before I pass on to other countries, I must refer to the retirement of the Governor of Singapore, Sir John Nicoll, which is to take place this Spring. Sir John's departure will be much regretted by the commercial community in that Colony where he has worked wholeheartedly for the good of all classes and races. It is regrettable that he should not see the constitutional changes and the many local projects, commenced under his influence and guidance, steered through their critical stages. However, Mr. R. B. Black, whose sterling qualities we in Hong Kong know so well, will worthily don the mantle and we wish him well in the important post which he will shortly be taking up.

North Borneo

"We are glad to be able to record that on 22nd May last, the Governor of North Borneo, Mr. R. E. Turnbull, was kind enough to open our new Bank premises at Jesselton and that during the year our new buildings at Kuala Belait and Tawau were also opened for business.

"The Budget debate of the Colony's Legislative Council in November brought the good news that at last agreement in principle had been reached with the Government of the Philippines, which will it is hoped make possible the introduction of Filipino labour to work and settle in Borneo. At any rate a partial solution of the labour shortage there seems likely in the course of this year. It was not so welcome to hear that income-tax on companies was to be increased from 30 per cent. to 40 per cent. But still more unfortunate does it seem that H.M. Government are to make no further direct grants to the Colony after this year as distinct from grants under the Colonial and Development Welfare Fund. Borneo suffered greater devastation than any other area as a result of the war and has, I believe, only received about £1 million for direct war reconstruction. Various changes in town planning arrangements have retarded rebuilding in some towns, but we are glad to note that a definite scheme for the rebuilding of shops has recently been put into effect and we are assisting the work by providing building loans on easy terms under Government guarantee. Rubber replanting legislation has recently been adopted and we have co-operated in the establishment of a fund for financing this project. A rubber cess will be imposed which will be refundable to producers after replanting is carried out.

"We were glad to see satisfactory increases of about 50 per cent. in the case of timber and copra exports in 1954 as compared with 1953.

"The happy position of Brunei State is shown in the Budget estimates for the current year of M.$100 millions for revenue and M.$43 millions for expenditure.

Thailand

"A recent article on Thailand in a prominent British newspaper was headed 'Cautious Pessimism'. Such also seems to be the general feeling of the mercantile community in Bangkok who fear that widespread corruption will bring about an upset such as took place in China not so many years ago. Others consider that this is not a fair comparison, that Thailand's leaders realise the dangers and have laid their plans to cope with any internal or external dangers. These speculations indicate that the political outlook is by no means stable. Naturally, many eyes are turned to the Laos frontier about which much nervousness exists.

"The economic situation is also rather a difficult one. Currency controls are strict and constantly changing: the official rate of exchange has remained unchanged but an active open market is permitted by the exchange control authorities. A rice surplus of 400,000 tons was accumulated from last season owing to the Government's refusal to sell at the reduced world prices but the new crop is smaller owing to unfavourable weather, so the total available for export in 1955 is estimated to be about 1¼ million tons. As from 1st January of this year trading in rice once again reverted to private hands and intergovernmental contracts have ceased. Rubber exports increased some 17,000 tons over 1953 and totalled about 114,000 tons, but tin and teak exports were reduced.

Burma

"The British have a spontaneous liking for the Burmese which is, I think, reciprocated. So it was not surprising to read in the report of the United Kingdom Industrial Delegation to Burma how much they appreciated their warm reception in Rangoon. The Delegation paid tribute to the 'enthusiasm and deep sincerity which lie behind the Government's development policy and their desire to improve the economy of the country and the conditions under which the people live and work.' They felt bound to add a mild word of warning against the Burmese attempting too much in too short a space of time. We ourselves hinted at this danger in our remarks about Burma this time last year. However, it is common to all Asian countries, whose development is somewhat retarded to feel they must hasten to make up lost ground: and some of them are indeed succeeding in their efforts. There are signs that the Burmese Government are aware of the dangers of their ambitious plans and the newly appointed Minister of Trade Development appears to be proceeding with some caution.

"The 1955 rice crop is estimated to provide an exportable surplus of 1¼ million tons, of which 900,000 tons has been sold on a Government-to-Government basis: the remainder has been put at the disposal of merchants for private sale under certain conditions. So far as figures are available it appears that exports of the leading products of the country were lower in 1954 than in 1953 and that imports were higher. As a result, external assets fell some Kyats 400 millions in the year ended October, 1954. The Finance Minister proposes to make a determined drive to increase internal savings this year and he has said that if there is then still need of capital he hopes to obtain a loan from the International Bank.

"During the year, other important matters which took place in the country, but with which we cannot here deal in detail, were the establishment of the State Commercial Bank on 11th August which I fear is deliberately being favoured to the detriment of private commercial banks; the first steps in the implementation of the Land Nationalisation Act; the assumption of its formal duties by the Karen State Government in districts where law and order have been restored; and the initiation of a local administrative system in villages, towns and districts.

"Finally, there was the signature on 5th November of the Burma-Japan Reparations Agreement by which Japan is to give to Burma as reparations 'the services of the Japanese people and the products of Japan' equivalent in value to U.S.$200 millions in ten equal annual instalments. Some fear has been expressed lest the effect of this and other clauses of the Agreement might mean the Nipponification of Burma, but the Prime Minister has ridiculed the suggestion.

India

"Thanks to the personal prestige of Prime Minister Nehru, India has, in recent years, been steadily increasing her influence and standing in international affairs. There has even been talk of the germination of a future Monroe Doctrine for Asia led by Mr. Nehru and the Asian powers which attended the Colombo-Kandy Conference last April. A possible step towards the integration of Asian countries was seen when, as a consequence of Mr. Chou En-Lai's visit to Delhi in June, a declaration of five Principles was proclaimed to govern relations between India and China. These principles restated some fundamental conditions upon which international relations are based but they did not indicate any special change in policy.

"As regards economic policy, Mr. Nehru is reported to have said that he wants a 'peaceful social and industrial revolution.' It is clear that the Prime Minister dislikes communism even more than he dislikes capitalism. On the other hand, he has claimed that there is plenty of room for private enterprise which must be given 'scope, freedom and encouragement to develop.' Mr. Nehru's right-hand man is Mr. Chintaman Deshmukh, the able Finance Minister, whose policy gives ample evidence of the practical financial mind which has maintained firm control of India's financial economy in the last few years.

"The problem of keeping a grip on economic development and planning in a country like India is immense. The unemployed and underemployed run into millions and the annual income is barely £20 per head. But the facts are being faced with realism. The Finance Minister has claimed with justice that the increase in food production is substantial, that industrial production is steadily rising, that inflation has been wiped out and that the balance of payments has improved. Moreover, private capital has been encouraged to go ahead without hindrance in certain fields of operation. We saw last year the establishment of an Industrial Development Corporation (a Government concern) and of the Industrial Credit and Investment Corporation to which reference has already been made above. Now, an extensive steel industry seems to be well on the way to establishment with new units which will probably be set up with the help of British, German and Russian capital.

Fears and Uncertainties

"There are, of course, fears and uncertainties which are widely held by merchants of many nationalities. May be these apply not so much to the present as to the future. Indianisation is not being pressed unduly, but it remains a threat of uncertain cogency. The revision of Article 31 of the Constitution may not be harmful at the present time, but there are fears as to what may happen when new people come into power. Similarly, the managing agency firms have been told that they are unduly apprehensive, yet their fears for the future are not assuaged. Finally, the nationalisation of the Imperial Bank of India was done with worthy motives, but it cause a bad impression as it was not thought to be necessary nor desirable.

"It is difficult to sum up the pros and cons, but we are inclined to regard the solid achievements of the past few years as giving grounds for hope that the clouds ahead of India will disperse before they are reached.

Ceylon

"The outstanding event of the year in Ceylon was the visit of H.M. The Queen in April. It was an unqualified success and the enthusiasm of the crowds was unmistakable. By her grace and charm Her Majesty endeared herself to all who met or saw her.

"On 17th July the inauguration of the first Ceylonese Governor-General, Sir Oliver Goonetilleke, took place and a further event of importance during the year was the conference of five Asian Prime Ministers.

"Ceylon has indeed experienced a remarkable year, not least in that she staged a notable economic recovery. Whereas at the end of 1953 there was an adverse trade balance of Rs. 40 millions, at the end of 1954 the picture was completely reversed, the preliminary figures being exports about Rs. 1,800 millions and imports Rs. 1,400 millions, giving a record favourable balance of about Rs. 400 millions. The main contributions to this recovery were first the high tea prices which averaged Rs. 2.56 per lb. in 1954, compared with Rs. 1.92 in 1953, and secondly the favourable rubber contract made with China under which some 56,000 tons were shipped to China in the year out of the total exports of about 90,200 tons. The rice part of the contract with China has not proved so successful owing to the fall in rice prices and Ceylon appears to be trying to dispose of some of the Chinese rice to other markets. The Government has meantime been pressing forward with attempts to improve and expand local rice production and a Joint United Kingdom and Australian Rice Mission has recently visited Ceylon and issued a report dealing with this matter.

"The financial position of the Government has also improved in line with trade, and external assets are reported to have risen from Rs. 607 millions in December, 1953, to Rs. 863 millions at the end of last October. The Minister of Finance announced last July a small deficit in the Budget which he proposed to meet by new taxation or borrowing. He stated that the Government did not propose to adopt any form of deficit financing. The crying need for capital for development purposes is to be met by raising loans authorised by the Ceylon Development Loans Act which was enacted early last year. This provided authority for raising loans internally, in the United Kingdom, or from the International Bank. Soon afterwards, a loan of £5 millions was successfully floated on the London market and the International Bank granted a loan equivalent to about U.S.$19 millions to finance a second stage of the Laxapana Hydro-electric Scheme. When moving the second reading of the above Act, Sir Oliver Goonetilleke, then Minister of Finance, reiterated that the Government's policy was to welcome foreign capital, that there would be no nationalisation or expropriation of any enterprises and that no special fields of development would be reserved for nationals of Ceylon. This was a very encouraging statement coming from so authoritative an official.

Indo-China

"Our office in Saigon is now situated in the independent State of Viet-Nam, more generally known as South Viet-Nam, which is, of course, distinct from the Democratic Republic of Viet-Nam (Viet-Minh), which controls the area called North Viet-Nam. The name 'Indo-China' appears to have become an anachronism, though it is still useful in referring to the combined area of the four Governments at present holding authority there.

"The Agreements signed at the Geneva Conference in June and July last year have been criticised from many angles according to the particular bias of each individual. They brought the cessation of hostilities, yet they postponed many decisions until the proposed elections in 1956. Much may happen before then, but it would be foolish to speculate about the future. It is difficult enough to follow the present events and policies of those in positions of authority. The three States of Viet-Nam, Laos and Cambodia have recently been granted complete independence by the signature of a quadripartite agreement in Paris on 29th December, 1954. The Pau Convention has thus been abrogated. Each country now has full control over its own currency and there are three autonomous Exchange Controls. An Agreement has been reached regarding shipping on the Mekong and the use of the port of Saigon by the three States, but Cambodia is contemplating the establishment of her own port on the Gulf of Siam.

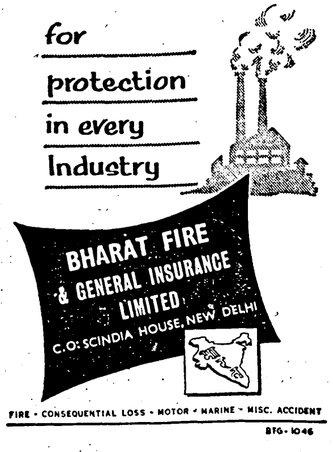
Phnom-Penh Branch

"Although the French are anxious to come to an agreement with the Viet-Minh authorities about French industrial interests in Tonkin, the prospects of a satisfactory arrangement are obscure. Owing to the precarious outlook we decided to close down our Haiphong office, but we have obtained the Cambodian Government's permission to open a branch in Phnom-Penh and our arrangements there are well under way. Cambodia, like the whole area of South Indo-China, produces large quantities of rice and a considerable amount of rubber. Phnom-Penh, its capital, is a pivot point through which much of the trade of Laos must pass, as well as that of Cambodia itself. When the latter gets her own port she will no longer be dependent on Viet-Nam for an outlet for her foreign trade.

British Bankers' Important Role

"The above notes on the various countries in which we operate have taken shareholders rapidly round the Eastern seas. We might have been more comprehensive, but we would then have risked being tedious. We have tried to state our viewpoint categorically and yet to see the picture from the other side. Without blinding our eyes to the trend of events in the East, we feel confident that British bankers still have an important part to play in Asia as elsewhere. New measures are being adopted for the mobilisation of capital to assist industrial development in the free countries of the East and particularly in the area of the 'Colombo Plan' countries. In these areas the expansion of trade is growing rapidly and will continue as the countries increase their development and raise their standards of living. We are well aware that we must continually adapt ourselves, as we have done in good times and in bad throughout the past ninety years of the Bank's existence and you may be confident that we will do so."

At a subsequent extraordinary general meeting, the two resolutions referred to, increasing the capital of the Corporation from HK$20,000,000 to HK$25,000,000 and capitalising the sum of HK$5,000,000 by the issue of one new share for every four shares now held, were carried.



THE

HONGKONG AND SHANGHAI BANKING CORPORATION

(THE LIABILITY OF MEMBERS IS LIMITED TO THE EXTENT AND IN MANNER PRESCRIBED BY CHAPTER 70 OF THE LAWS OF HONG KONG)

BALANCE SHEET AT 31st DECEMBER, 1954.

2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1954. The Sterling equivalents of the figures shown in the above Balance Sheet have been converted at the rate of H.K. $1=1/8d.

MICHAEL W. TURNER, *Chief Manager.* G. O. W. STEWART, *Chief Accountant.* C. BLAKER, R. GORDON, J. H. HAMM } *Directors.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited accounts of the London Office and with the returns received from the other offices which have been signed by the Branch Managers. We have obtained all the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs at 31st December, 1954, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and by the returns received from the other offices.

HONG KONG, 14th February, 1955. PEAT, MARWICK, MITCHELL & CO., LOWE, BINGHAM & MATTHEWS } *Chartered Accountants, Auditors.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1954.

1953 Hong Kong Dollars			Hong Kong Dollars
$6,163,025	Interim Dividend of £2 per Share, free of Hong Kong Corporation Profits Tax, paid 9th August, 1954, £250,000 @ 1/2-27/32		5,173,895
4,000,000	Appropriations recommended by the Directors: Amount to be written off Bank Premises	$ 6,000,000	
7,760,842	Final Dividend of £3 per Share, free of Hong Kong Corporation Profits Tax, £480,000 @ 1/2-27/32	7,760,842	13,760,842
9,859,542	Balance carried forward to next year		10,215,256
$ 26,783,409			$ 29,149,993

Special Administrative Expenses, including Chief Managers' emoluments, Directors' Fees and London Committee Fees amounted to H.K. $889,559 (H.K. $517,960).

CREATION AND CONDUCT OF ENTERPRISES

WARNING AGAINST REPLACEMENT OF PRIVATE ENTERPRISE

A STERN warning that, if the socialistic pattern of society aimed by the powers-that-be were to result, as it well might, in the creation of vested interests in the form of bureaucrats in commercial and industrial life to replace the existing entrepreneurial, managerial and directional talents therein, the country would not make any progress, was administered by Mr. Kishan Narain, President of the Merchants' Chamber of U.P., while addressing the annual meeting of the Chamber held at Kanpur early last week. This is, indeed, a very pertinent and timely warning. As we have pointed out on many an occasion, apart from the fact that State management is not generally conducive to efficiency, it will, when it becomes all-pervading, make the individuals vassals of the State, thereby undermining the very basis of democracy. True lovers of a free society cannot, therefore, readily endorse Mr. Kishan Narain's statement that whatever may be the form and conduct of enterprise—public or privatt—the utility of enterprise and the relative value thereof to the economy must be the deciding factors. Mr. Kishan Narain may say that we are swayed by ideological considerations in making this statement. That is perfectly true, but the ideals to which we subscribe are the fundamentals of a free society and there can be no compromise on fundamentals.

Business men must, therefore, be a little careful on this point, when they try to defend the private sector. They should not indulge in loose expressions. If the test is to be "execution of a job in the least possible time and with maximum efficiency," as Mr. Kishan Narain put it, then there could be nothing wrong with the system which Hitler or Mussolini or Stalin reared. And, if the present political trends are allowed to persist unchecked, it will provide ample scope for similar characters to rise in this country. This surely is not what Mr. Kishan Narain wants to happen to this country. He was, however, right in saying that "the psychosis that public weal may not be safe with private enterprise is the very antithesis of development of welfare society on a socialistic pattern." The true concept of socialism, namely, decent living conditions for all and equality of opportunity to advance in life is not inconsistent with a system of enlightened private enterprise. Indeed, the chances of attaining these goals are better in such a society than in one in which the State dominates.

Another important piece of warning which Mr. Narain gave was that, unless the mass of Indian population was in a position to buy and consume the products of the industries and services as they develop, unemployment would be a static feature of the economy. Significantly enough, he remarked: "Industrial production and expansion will have to face a blind alley, unless development is characterised by progressive outlook and dynamism and the same comes in as a prelude to industrial expansion . . . It is the productivity of the agrarian masses and what the agrarian population is able to do with the means made available to them that will determine the ultimate goal in production and industrial expansion." Assessing the possibilities in this direction, Mr. Kishan Narain cited the following statistics:

Out of about Rs. 540 crores worth of imports from abroad annually, there are 14 items which appear to account for as much as Rs. 440 crores. A total of about Rs. 120 crores worth of imports is in the agricultural domain and it should be well within our means to put a stop to these imports through the appropriate development of our agrarian economy. Out of the remaining Rs. 420 crores worth of goods, about Rs. 130 crores will have to be treated as unavoidable and necessary imports because of the lack of natural resources in India to yield items like mineral oil. Out of the remaining Rs. 290 crores worth of imports, it should be possible for us to manufacture in India about Rs. 250 crores worth of goods in the next few years. In the manufacture of Rs. 250 crores worth of goods in India, about Rs. 200 crores worth of goods can be expected to be distributed in the form of wages and salaries and other money earnings arising from labour and service contents in raw materials, internal transport, etc. In the present state of industrial costs, about two million persons can be absorbed in direct employment resulting from this additional industrial effort in India. These two million persons should be able to generate auxiliary employment to be able to absorb another one million persons. It will thus be seen that employment potential exists for another three million persons through industrial expansion and production.

At the same time, Mr. Kishan Narain laid emphasis on a "more fragmatic approach" to rural planning and reconstruction. For industrialisation, he said, had not been able to siphon off the surplus population from land to the extent necessary. Thus, out of the total population of 249.1 million in the agricultural sector, as much as 59 per cent. (147 million, to be precise) is accounted for by non-earning dependents, according to the *Census of India*, 1951. Again, out of a total of 58 million rural families in India, 17.6 million families consist of landless workers and, what is worse, 53.7 per cent. of these landless workers are within the ages of 15 and 55. The problem, therefore, centres round, as Mr. Kishan Narain very aptly put it, the reorganisation of the rural units, "so as not only to step up land productivity on a par with the other civilised countries of the world but also to provide scope for perennial employment in rural areas in sectors other than land and agriculture."

Turning to the more specific problems confronting the business community, the President of the Merchants' Chamber of U.P. touched on certain proposals relating to Central taxation. Pointing, in particular, to proposed changes in regard to taxation of income, he warned that, if they were implemented, they would, besides enhancing the tax burden on the different sectors of income-tax assessees, adversely affect development and expansion of joint-stock enterprises. There is no exaggeration whatever in this statement. Take, for instance, the inclusion of amenities and perquisites for purposes of taxation envisaged in the Finance Bill. While there is no doubt that exemption of perquisites has led to a considerable amount of tax evasion, the manner in which the Government proposes to plug this loophole will lead to severe hardship to those who require provision of certain perquisites, such as conveyance, for the efficient discharge of their duties. We, however, do not quite agree with the grounds on which Mr. Narain sought to defend the perquisites. He said: "The concept of perquisites is a very elusive one. In the manner it has been tackled in the Finance Bill, it turns out to be purely discriminatory in character and exposes the income-tax structure to the charge of favouring employees in one sector as against those in the other. Far from rationalising the income-tax structure, it creates further confusion with regard to many invisible perquisites that do not lend themselves to any rigid calculation. In any socialistic order of society, provision of perquisites should be encouraged more and more, as the tax structure is fashioned to shorten more and more net effective money incomes at the top. What is now sought to be done is exactly the reverse of what a socialistic pattern of economy calls for."

The provision of perquisites will be in conformity with the socialistic pattern of society only if the recipients belong to the low-income group, but that is not what has been happening all along. In any case, the perquisites received by those whose basic salary does not exceed Rs. 18,000 are exempt from tax. If perquisites are used as a device to defeat the Government's objective of taxing large incomes, as they would appear to have been used, the Government cannot be criticised for taking measures to stop such evasion. Mr. Kishan Narain's criticism of the decision to amend section 23A of the Indian Income-tax Act is quite valid. The result of this amendment will be to deem thousands of genuine public companies as private companies. In recent years, the tendency had been, he pointed out, for industrial development to be financed more and more by profits built up and retained by the companies, as the savings left with the community after taxation were very little. But my mulcting the companies, for no fault of theirs, even this would be made impossible.

STATE-OWNED D.D.T. FACTORY GOES INTO PRODUCTION

The State-owned D.D.T. factory located in the industrial area on the outskirts of New Delhi has gone into production. This is the first time D.D.T. has been produced in India.

The factory has a capacity of 700 tons of D.D.T. per year. It has been set up in co-operation with the United Nations International Children's Emergency Fund and the United Nations Technical Assistance Administration. Out of its total cost of Rs. 51.75 lakhs, the two United Nations bodies have provided aid equivalent to Rs. 16.75 lakhs.

The factory expects to deliver the first 18 to 20 tons of D.D.T. for the National Anti-Malaria Campaign by next month. Full production capacity is expected to be reached in November this year when two tons of D.D.T. will be produced every day.

Work on the building of the factory began in November, 1953, and was completed at the end of last year. The installation of machinery began in August, 1954, and was completed by the end of October, 1954. Trials for production of monochlorobenzine began in January this year and the

AUDITORS' REPORT.

We have audited the Balance Sheet as on 31st December, 1954, and Profit and Loss Account for the Year ending 31st December, 1954, of United Bank of India Ltd., as above and in attached sheets set forth respectively with Books of Accounts as kept at the Head Office with which are incorporated the Branch Balance Sheets as on 31st December, 1954, and Profit and Loss Accounts for the year ending 31st December 1954 (both in India and Pakistan) as audited, certified and reported to by the respective Auditors and report that—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(c) The Balance Sheets and Profit and Loss Accounts and the relative returns received from branch offices of the Bank have been found adequate for the purpose of the audit.

(d) The Balance Sheet and the Profit and Loss Account are drawn up in conformity with the Law.

(e) Such Profit and Loss Account shows a true balance of Profit for the year.

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank

(g) In our opinion the Books of Account have been kept by the Bank as required by Section (180) of the Indian Companies Act, 1913.

SECOND FIVE-YEAR PLAN FOR MADRAS

VIEWS OF STATE INDUSTRIALISTS

A CONFERENCE of prominent industrialists of the Madras State was held in Madras on 25th March, under the chairmanship of Mr. M. Bhaktavatsalam, Minister for Industries. A background note of the present state of industrial development in the State was presented to the Conference to facilitate discussion on scientific lines. It also called for the views of the participants in the discussion on the prospects of industrial development, generally, in the State, covering major, medium-sized and small-scale industries and on the following points, in particular:

(1) What are the industries which could be established in the public sector and what should be their appropriate locations?

(2) What are the industries which should be dealt with in the private sector in the State and their suitable locations?

(3) In what form, namely, independent units, or a central unit with satellites, or industrial co-operatives, should each type of industry proposed, be established?

(4) What is the minimum economic size of each such unit and what should be the quantum of annual production?

(5) What State assistance will be required under the following heads in the case of each type of industry to be proposed for the private sector? (a) Power, (b) water, (c) capital, (d) machinery and equipment, (e) raw materials, (f) trained technical personnel, (g) marketing and (h) any other type of aid.

It is common knowledge that, except possibly for the textile industry, the State of Madras is industrially backward, as compared with States like Bombay, Bengal, Uttar Pradesh and Mysore. Even in the field of medium- and small-scale industries, the progress is by no means considerable. It is true that a good deal has been done to secure improvement in agriculture, in order to increase the supply of foodgrains and industrial raw materials, but there is need to secure an appropriate balance between agricultural and industrial development in the State. The industries, which could be established in the State, include glass, particularly sheet glass, paper, paper board and straw-board, heavy and light machinery, including electrical machinery, electrical equipment as, for example, transformers, switchgear and other accessories, a wide range of light engineering industries, such as the manufacture of typewriters, watches, clocks, air-conditioning plants, etc., electrical goods and accessories, such as water heaters, cookers, table lamps, regulators, switches, etc., heavy chemicals, drugs, light chemicals and pharmaceuticals, production of scientific instruments, photographic equipment etc., and a large range of industries in the ceramic field, such as sanitaryware, insulators, pipes, fibre-bricks, crockery and other chinaware.

Small-scale Industries

It would appear that there is wide scope for developing small-scale industries, in particular, in the form of independent units as well as satellite units, which produce components or deal with particular items of processing, so that they may be assembled or completed in a central unit, which will regulate production in the satellite units and market the products. In this connection, it is suggested that the formation of industrial co-operatives in the field of medium-sized industries, to some extent, and perhaps to an appreciable extent in the field of small-scale industries would go a long way in advancing the industrial development of the State. The membership of such co-operatives, while being confined mainly to workers themselves, may also include other persons who can provide the capital and technical know-how required. The possibility of establishing industrial estates, which can provide power, water, lighting, etc., is also suggested. Since all this involves the preparation of a comprehensive industrial plan as a part of the second Five-year Plan, little can be achieved without the active advice and co-operation of persons who have knowledge and experience of industrial and technical matters and of those who are concerned with investment. It was for this purpose the State Government called the aforesaid conference.

The highlight of the discussions was the announcement of Mr. Bhaktavatsalam that the State Government would shortly constitute two standing committees of the Conference, one for large-scale and another for small-scale and cottage industries to draw up plans for inclusion in the second Five-year Plan. He reiterated the view that the industrial policy of the country and the State was that only industries based on defence requirements and certain others of strategical or national importance, such as communications, iron and steel, the capital requirements of which might be rather beyond the competence of private enterprise, would be developed by the public sector, with the co-operation of private enterprise wherever necessary. The rest of the industrial field, he said, was left for development by private enterprise and regulated by the Industries (Development and Regulation) Act, 1951, by a system of licences. Fiscal and import controls were also designed to assist in achieving this objective. Here and there, small units, practically of the pilot plant type, might be set up in the State by the Government to serve as models and to encourage private enterprise to establish similar but larger economic units. There were the Industrial Investment Corporation, sponsored by the State Government, and the Government departments, including the Department of Industries, to give private enterprise legitimate assistance, so that a co-ordinated and combined effort could be made towards balanced industrialisation.

Economic Production

Referring to the role of small-scale industries in the Plan, the Minister for Industries said that the problem of industrial development in India, and in the State particularly, was how to increase productivity and industrialise, and at the same time find useful employment for the unemployed and under-employed and maintain employment at the highest level. It would seem that small-scale and cottage industries were likely to furnish the answer and would probably be most suitable for their conditions. But that did not mean that the development of medium and large-scale industries should be ignored. Wherever the availability of raw materials power and skill permitted economic production the Government must, of course, plan for and develop medium and large-scale industries. And the small-scale and cottage industries should be complementary, so that all could work as an integrated whole for the benefit of the people of this State and of the country. For instance, wherever possible, the Government must help develop small-scale and cottage industries to produce components and execute processes which would be assembled or completed by larger units, which might be more appropriate for the purpose. That did not preclude the setting up of medium, small-size and cottage units, which could do all the work themselves, each as an integrated unit. The entire question would depend upon the nature of the product, the demand for it, the resources available in the vicinity and the location and the nature of the markets.

Realising the importance of small-scale and cottage units, the Government of India, the Minister for Industries said, was prepared to afford special assistance to the State for the establishment and operation of small-scale and cottage industries by way of training of personnel, provision of facilities for setting up units, such as the establishment of industrial estates which would arrange for land, workshops, power, water, drainage, railway sidings, etc., and for marketing, particularly to meet Government requirements of manufactured products.

Initiating the discussion, Dr. Rm. Alagappa Chettiar, the noted industrialist, said the country was passing through a stage when production targets in many directions had been more than fulfilled, but products were not being fully absorbed. It was a "famine of a new kind." From the shortage of goods, they had come round to a stage of plenty of goods but no purchasers, thanks to lack of purchasing power in the hands of the people. They had thus to plan for increasing consumption as well as production.

The idea of starting "industrial estates" was welcomed by Mr. Easwara Aiyar, who said that in South Wales he saw how such estates were of great help in starting industries. One who wanted to start a new industry need not have to think of investing much on buildings, etc. In such estates, buildings were available on long-term lease. Such estates were located in places where plenty of labour was available in the neighbourhood and also within easy reach of power resources. Engineering colleges and laboratories of such institutions helped the industrialists by doing research for them in quality, processes, equipment, performance, etc., for which the industrialists otherwise might have to spend much money. Such work should be done keeping confidence inviolate. In advancing loans also, the Government should follow a liberal policy, taking into consideration the employment potential of a given industry, instead of merely going by its profit-earning capacity.

A reference to the role of the automobile industry in the U.S., which had brought about almost by itself the industrial prosperity of the country, was made by Mr. Anantaramakrishnan. It covered some 700 subsidiary and ancillary industries, employing nearly 50 per cent. of industrial labour. Similar results could be achieved in India too, provided cautious and steady steps were taken in that direction.

Taxation

Mr. M. A. Chidambaram Chettiar expressed the view that it was for the Government to give the lead, and tell them what they proposed to do. The Government not only took away a good lot of profit from private sector by taxation, but also was becoming a partner in industry. A large industry once started would bring along with it a number of small and ancillary industries. Neiveli held vast possibilities. A steel plant could be built on the basis of Neiveli mining. But mere discussions at the Conference about the private sector might not carry them far, until they knew what was proposed to be done in the public sector. "New industries," he said, "will not grow with the present policy and taxation measures of the Government and its control and regulating measures which were coming overnight." He was voicing the view, he said of his Chamber of Commerce—the Southern India Chamber of Commerce—in saying that in the present context, few private interests would venture to launch new industries.

Winding up the discussions, Mr. Subramaniam, Finance Minister, said that development had necessarily to be within the larger pattern of development of the country as a whole. But, as Madras was industrially an under-developed part of the country, he was sure that the Government of India would be prepared to give greater assistance for the development of the State. For that purpose, concrete proposals should be drawn up. Proceeding, he observed: "Unless we have a co-ordinated plan, it would be impossible to get the assistance we want from the Government of India. And we should do it also well in time, for once they formulate the Plan and that Plan takes crystallised shape, then even though we may put forward many useful schemes, we may be told to wait for the next Five-year Plan. That is why the problem is very urgent."

In brief, the discussions revealed that Madras had good potentialities for industrial development. All that was needed was careful planning, where the public sector could supplement, rather than compete with, the private sector. The Centre, it is to be hoped, would help the State to contribute a greater share to the country's prosperity than now. The State lacks neither resources nor manpower. Given adequate facilities, it should be possible for it to make such a contribution.

(Concluded from previous page)

first D.D.T. technical was produced on 25th March, 1955. When in full production, the factory will employ about 140 persons, including technicians, skilled workers and managerial and secretarial staff. The cost per pound of the technical D.D.T. produced in the factory is expected to be Re. 1-11-6 which compares very favourably with the cost of imported technical D.D.T. which is about Rs. 2-4 to Rs. 3 per pound. It is proposed to double the capacity of this factory and also to set up another factory with a capacity of 1,400 tons of D.D.T. per year to meet the growing requirements of the National Anti-Malaria Campaign.

The present factory is being managed by a private limited company known as the Hindustan Insecticides Limited which is owned and controlled by the Government of India in the Ministry of Production.

BRITISH INDUSTRIES FAIR

Thousands of buyers from more than 50 countries are expected to visit the British Industries Fair (B.I.F.) to be held in London and Birmingham from 2nd to 13th May. There will be two sections, one at Olympia (London) and the other at Castle Bromwich (Birmingham). About 600 firms will exhibit their products in the 19 trade sections at Olympia. Among the larger sections will be those for textiles, jewellery, fancy goods and toys. The dominant feature of the textile section will be the biggest display ever held in the B.I.F. of clothing and fabrics made from man-made fibres. Other features at Olympia will be a Hosiery Court, a "London Street" of goldsmiths and silversmiths, a Commonwealth Court, and a TV Inventors' Club. A specially constructed cinema, with 300 seats, will have the latest equipment, including large-screen television and an all-purpose screen that can be converted for the latest projection techniques. In the Castle Bromwich section, which will again include many outdoor exhibits, about 1,000 firms will be represented. Products that will interest the factory-owner and the housewife—from the latest mechanical handling equipment to recent improvements in domestic heating—will be prominent among a wide range of exhibits from the engineering, electrical, hardware, building and heating industries.

INDIAN ALUMINIUM'S PROGRESS GOOD

DIVIDEND, HOWEVER, PASSED OVER AGAIN—OUTLOOK BETTER

SUBSTANTIAL progress in the working of the Indian Aluminium Company Ltd. (Managing Director: Mr. J. W. Cameron) during the past year is disclosed by the Directors' report and audited accounts of the Company for the year ended 31st December, 1954. The trading profit, which had dwindled from Rs. 32.58 lakhs for the 15 months ended 31st December, 1952, to Rs. 7.85 lakhs for the following 12 months, shows a rise to Rs. 20.16 lakhs. After providing for administrative, selling and other expenses and depreciation, the Company had suffered a loss of Rs. 13.65 lakhs for the previous year, but this loss has shrunk to Rs. 5.23 lakhs.

After taking into account the sum of Rs. 1.05 lakhs, being the over-provision for taxation made in respect of the previous year and excess liability in respect of the earlier year, and after paying the 5 per cent. preference dividend, the loss has been wiped out by the undistributed surplus of Rs. 9.15 lakhs brought in from the previous year, leaving a small surplus of Rs. 3.49 lakhs to be carried forward to the next year's accounts. The dividend on ordinary shares has been passed over for the second year in succession, consequent on the aforesaid loss.

The adverse result for 1954 has been largely due to the loss of smelter production resulting from power cuts enforced by the Travancore-Cochin Government during the year and higher initial costs incurred during commissioning of new equipment at the rolling mills. Production at the Company's Lohardaga Mines and the Muri ore plant was satisfactory throughout the year. The Directors point out that the operations at Muri proved that its capacity is sufficient to supply the additional ore requirements of the enlarged smelter without difficulty. Expansion of the Alupuram smelter to double its original capacity was completed on schedule in June, but the Government of Travancore-Cochin was able to supply only a part of the additional electric power which had been assured. There were also power cuts at the end of September and early in October. The cumulative effect was a loss in production of virgin metal to the extent of about 1,000 tons, which more than accounted for the loss on the year's operations. Consequent on this loss of production, the Company had to obtain replacement ingot from outside sources at a higher price in order to meet its sales commitments. It was not until 17th February, 1955, that the Company received 14,000 kw. of power. This was the first time since the smelter began producing metal in 1943 that the Company had sufficient power to operate to full capacity. The renovation of old and the installation of new additional equipment at Belur Works, increasing the Company's capacity for rolled sheet products from 4,000 tons to 7,000 tons of common alloy products yearly, was completed in 1954. In December, 1954, production reached the increased monthly rated capacity.

The following comparative table gives an idea of the Company's progress:

(In lakhs of rupees)

—	For the year ended 31-12-54	For the year ended 31-12-53	For 15 months ended 31-12-52	For the year ended 30-9-51

Carry forward	3.49	9.15	22.28	27.88

The sale proceeds for the year under review include Rs. 39.79 lakhs, representing sales of agency products. The Company, it may be recalled, took over the selling agency for Venesta Ltd. of aluminium foils other than tea chest linings. Even excluding the agency products, the sale proceeds show a rise of Rs. 80 lakhs, reflecting the overall advance in the economy of the country and the intensified efforts made by the Company to sell in new markets. Notwithstanding this the Company has not been able to make any profit during the year. An explanation for this is to be found in the sharp rise in manufacturing expenses, including raw materials consumed. The Directors observe that, due to the increased requirements of raw aluminium which could not be supplied from the smelter, because of power cuts resulting in substantial loss of ingot production, the Company had to purchase raw aluminium in 1954 to the extent of some Rs. 40 lakhs in order to fulfil its commitments to clients. In the previous year, purchases of metal from outside sources amounted to less than Rs. 2 lakhs. The larger-scale plant operations are reflected also in the increase in purchases of other raw materials and supplies from Rs. 42 lakhs to just under Rs. 70 lakhs or a rise of almost 65 per cent.

The reserves and surplus of the Company as on 31st December, 1954, aggregate Rs. 40.27 lakhs, as against a paid-up capital of Rs. 2 crores. The gross block of the value of Rs. 3.96 crores, including an addition of Rs. 51.96 lakhs made during the year, has been written down to Rs. 2.42 crores. The current assets amount to Rs. 1.96 crores, as against current liabilities aggregating Rs. 1.98 crores.

The outlook for the Company is, however, promising, as is borne out by the following extract from the Directors' report:

"The general economic condition of India continues to improve and this coupled with the hardening of prices in world non-ferrous metal markets, augurs well for 1955, more particularly as the intensive efforts made by the Company to develop new outlets for its products are beginning to bear fruit. Increased demand for aluminium paste, used in the manufacture of paint, resulted in the operation of Kalwa Works, located outside of Bombay, at near capacity during the last half of the year.

"Installation of the extrusion plant at Alupuram which will be the first such plant in India, devoted exclusively to the extruding of aluminium, was well advanced. Commercial production is scheduled to commence in March, 1955, instead of December, 1954, as originally planned, due to delay in supply of certain items of electrical equipment."

The Directors regret that the supplemental power agreement with the Government of Travancore-Cochin regarding rates to be in force for electric power until 1975, referred to in last year's report, has not yet been formally signed.

ORIENT JUTE MILLS

The steady rise in demand for jute goods, the acceleration in the pace of exports, the maintenance of prices at firm levels and the satisfactory supplies of raw jute, albeit at prices which fluctuated rather widely, were the main features of the jute markets during the past year. These are duly reflected in the financial results of the Orient Jute Mills Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) for the half-year ended 30th November, 1954. The gross profit, which had declined successively from Rs. 5.28 lakhs for the six months ended 31st May, 1953, to Rs. 3.01 lakhs in the following half-year and to Rs. 2.22 lakhs in the succeeding six months, has improved to Rs. 4.06 lakhs in the half-year under review.

The Managing Agents' commission has been provided with Rs. 25,000, the same as in the previous half-year, while the provision for depreciation has been raised from Rs. 46,000 to Rs. 48,000 and that for taxation from Rs. 66,000 to Rs. 1.46 lakhs. After all these provisions, the net profit amounts to Rs. 2.35 lakhs, as against Rs. 1.31 lakhs for the previous half-year and Rs. 4.23 lakhs for the six months ended 31st May, 1953. The net profit has been supplemented by a sum of Rs. 75,000 being the excess tax provisions made in previous years. After a lapse of two half-years, the general reserve has been strengthened by the addition of Rs. 1.25 lakhs which is, however, only half of that added out of the profit for the six months ended 31st May, 1953. The dividend has been maintained at 10 per cent. per annum, to which level it had been cut in the previous half-year from 12 per cent. per annum paid for the preceding three half-years. The dividend distribution absorbs Rs. 1.25 lakhs, leaving to be carried forward Rs. 1.21 lakhs, as against Rs. 1.08 lakhs brought in.

The following table gives a good idea of the Company's progress during the past three half-years:

(In lakhs of rupees)

—	For the half-year ended 30-11-54	31-5-54	30-11-53	31-5-53
Gunny sales	45.29	42.73	44.39	40.00

Net profit	2.35	1.31	2.27	4.23
Other income	0.75	0.15	..	..
To general reserve	1.25	..	..	2.50
Dividend	1.25 (10% p.a.)	1.25 (10% p.a.)	1.40 (12% p.a.)	1.40 (12% p.a.)
Carry forward	1.21	1.08	1.33	1.06

As in the case of other mills, Orient Jute increased the working hours during the half-year under review to meet the growing demand and to reduce cost of production. From 12th July, 1954, the working hours were increased from 42½ to 45 per week and again from 45 to 48 per week from 18th October, 1954. Throughout the period under review, 12½ per cent. of the total looms remained sealed.

The balance-sheet of the Company as on 30th November, 1954, shows a good financial position. The paid-up capital of Rs. 24.91 lakhs is supplemented by reserves and surplus to the tune of Rs. 29.02 lakhs. The gross block of the value of Rs. 71.20 lakhs has been written down to Rs. 21.05 lakhs. The current assets amounting to Rs. 41.22 lakhs exceed the provision for taxation (Rs. 3.10 lakhs) and current liabilities (Rs. 5.84 lakhs) by a very large margin.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 190 *ex-div.*, at which rate and on the basis of the latest dividend, the yield works out to 5.3 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

BAGDIGI KUJAM COLLIERIES CO., (1946) LTD. Annual General Meeting, Calcutta, 11th April, 1955. Transfer books remain closed from 2nd to 11th April, 1955, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 14th April, 1955. Dividend: As. 6 2/5 per share. Transfer books remain closed from 8th to 14th April, 1955, both days inclusive.

COLABA LAND AND MILL CO., LTD. Annual General Meeting, Bombay, 14th April, 1955. Dividend: *Nil*. Transfer books remain closed from 5th to 22nd April, 1955, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 15th April, 1955. Dividend: Rs. 16 per share. Transfer books remain closed from 9th to 23rd April, 1955, both days inclusive.

SAVAMALAI ESTATES LTD. Annual General Meeting, Kozhikode, 15th April, 1955. Dividend: Rs. 2-8 per share. Transfer books remain closed from 8th to 15th April, 1955, both days inclusive.

CHEVIOT JUTE RAISES DIVIDEND LEVEL AFTER FIVE HALF-YEARS

PROFIT OF TRICHINOPOLY MILL HIGHER

Cheviot Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1954.

After providing Rs. 1,92,500 (Rs. 1,25,000) for taxation and transferring Rs. 75,000 (nil) to general reserve, there is a balance of Rs. 3,00,079 (Rs. 2,63,604) at the credit of profit and loss account, from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share, absorbing Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 8 (Rs. 6) per share, absorbing Rs. 1,27,600 (Rs. 95,700), leaving Rs. 1,37,479 (Rs. 1,32,904) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week upto 10th July, 1954. From 12th July, 1954, working hours were increased from 42½ hours to 45 hours and again from 45 hours to 48 hours per week from 18th October, 1954. Throughout the period under review 12½ per cent. of the total looms remained sealed.

Accounts in brief are as under:—

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee and Sons, Ramjeenagar) submit the audited accounts of the Company for the year ended 31st December, 1954.

The net profit for the year after providing for all expenses and writing off Rs. 47,677 (Rs. 55,537) as depreciation on fixed assets, is Rs. 4,14,192 (Rs. 2,071). Adding the balance of last year, a sum of Rs. 4,18,202 Rs. 1,01,914 including Rs. 90,000 taken from dividend equalisation fund stands to the credit of the profit and loss account. The directors recommend to dispose of this amount as follows:—

To provision for taxation Rs. 1,84,000 (*nil*), to pay a tax-free dividend of 9 (7) per cent. for the year Rs. 1,25,880 (Rs. 97,904), to rehabilitation reserve Rs. 1,00,000 (*nil*), and to be carried forward the balance of Rs. 8,321 (Rs. 4,009).

Asoka Mills Ltd.

The directors of the above Company (Agents: Messrs. Lalbhai Dalpatbhai and Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The profit for the year amounted to Rs. 9,87,753 (Rs. 13,73,870) after providing for depreciation Rs. 3,50,000 (Rs. 4,00,000) to which was added the last year's balance of Rs. 1,23,642 (Rs. 1,05,810), making a total of Rs. 11,11,396 (Rs. 14,79,680). From this sum, the following amounts were appropriated:—

To provision for taxation Rs. 4,50,000 (Rs. 5,50,000), to reserve fund Rs. 50,000 (Rs. 1,00,000), to machinery renewal fund Rs. 1,00,000 (Rs. 1,00,000), to dividend equalisation fund Rs. 50,000 (Rs. 2,00,000), to contingency fund Rs. 1,00,000 (Rs. 1,00,000). There was an available balance of Rs. 3,61,396 (Rs. 4,29,680). The directors disposed of this amount as follows:—

Paid a dividend on 6,000 5 per cent. cumulative preference shares for the year ended 31st December, 1954 (less income-tax) Rs. 22,125 (Rs. 22,125), paid a dividend on 6,000 4½ per cent. redeemable cumulative preference shares for the year ended 31st December, 1954 (less income-tax) Rs. 19,913 (Rs. 19,913) paid a dividend of Rs. 22 (Rs. 22 including bonus of Rs. 7) per share, free of income-tax on 12,000 ordinary shares for the year ended 31st December, 1954 Rs. 2,64,000 (Rs. 2,64,000) and carried forward to next year's account Rs. 55,358 (Rs. 1,23,642).

The directors reported, that the result of the working of the Mills were satisfactory. The Mills have 37,368 spindles and 914 looms and complete dyeing and bleaching plants.

Accounts in brief were as under:—

Dhanalakshmi Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. M. Nanjappa Chettiar and Sons, Tirupur) submitted the audited accounts of the Company for the year ended 31st December, 1954.

After deducting all working expenses and interest and providing Rs. 3,75,788 (Rs. 4,75,201) for depreciation, the year's working resulted in a net profit of Rs. 20,51,725 (Rs. 11,34,166). With the sum of Rs. 9,452 (Rs. 20,746) the balance of profit brought forward from last year, there was a sum of Rs. 20,61,177 (Rs. 11,54,912) to the credit of profit and loss account. From this sum Rs. 300 (Rs. 300), Rs. 2,901 (Rs. 2,200) and Rs. 28,288 (*nil*) have been appropriated respectively for mahimai donations and income-tax, leaving a balance of Rs. 20,29,688 (Rs. 9,86,412). From this amount the directors have set apart for provision for taxes Rs. 9,40,000 (Rs. 3,60,000), for provision for bonus Rs. 3,50,000 (Rs. 1,36,000), paid a tax-free dividend of 30 (20) per cent. to the share-holders Rs. 7,30,440 (Rs. 4,86,960) and carried forward to next year Rs. 9,248 (Rs. 9,452).

The Company, has purchased, in the year of account, the ginning and pressing factory, previously known as Ratna Cotton Gin and Press Factory, for a consideration of Rs. 1,56,000. This factory consists of nine gins, a press and buildings and godowns connected therewith. The factory is 5.11 acres in extent.

Britannia Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

Trading: The results of the works department for the year show a profit on trading account amounting to Rs. 8,51,025 compared with Rs. 16,36,133 for the preceding 12 months. The agency department shows a profit of Rs. 80,769 compared with Rs. 1,32,748 for 1952.

After charging interest and debenture interest and providing for taxation which it is estimated will be payable on the year's profit, commissions and depreciation and transferring a sum of Rs. 2,50,000 (Rs. 3,50,000) to machinery reserve and taking into account the carry forward from 1952, there remains at the credit of profit and loss account a balance of Rs. 2,67,796 (Rs. 2,25,185) from which the directors recommend payment of dividend on 1,00,000 ordinary shares at 15 (15) per cent. per annum for the year, which absorbs Rs. 1,50,000 (Rs. 1,50,000), leaving Rs. 1,17,796 (Rs. 75,185) to be carried forward.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	10,00,000	Block ...	13,44,261
Debentures ...	5,00,000	Patent Rights ...	2,25,000
Reserves ...	28,35,000	Stock-in-hand ...	4,70,274
Provision for taxation ...	7,99,592	Stores ...	9,72,887
Liabilities ...	23,10,621	Work-in-progress ...	18,51,460
Profit and loss account ...	1,17,796	Debts, deposits and advances ...	26,43,768
		Investments ...	2,300
		Cash ...	53,059
Rs.	75,63,009	Rs.	75,63,009

Agra Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

Satisfactory progress is being maintained as will be seen from the schedule of units sold and revenue incorporated herein.

Half-year ended	*Units Sold*	*Revenue* Rs.
31st March, 1952	9,703,497	14,04,904
30th September, 1952 ...	11,463,384	14,97,507
31st March, 1953	10,713,328	14,32,952
30th September, 1953 ...	12,152,915	14,79,566
31st March, 1954	10,703,548	15,27,036
30th September, 1954 ...	12,960,709	15,62,370

After making adequate provision for liabilities and setting aside Rs. 75,000 (Rs. 50,000) to development and extensions account, a balance of Rs. 1,48,526 (Rs. 1,49,410) including Rs. 48,716 (Rs. 49,489) brought forward from the previous half-year remains available, and this amount, the directors recommend, be disposed of as follows:—

In payment of a dividend at the rate of 10 (10) per cent. per annum, free of income-tax for the half-year Rs. 99,980 (Rs. 99,920) and in carrying forward to next half-year Rs. 48,546 (Rs. 49,490).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	19,99,600	Block ...	46,75,589
Debentures	10,00,000	Work-in-progress ...	3,40,532
Reserves ...	29,80,466	Stores, coal and fuel ...	9,08,763
Provision for taxation ...	2,46,950	Tools and instruments	27,569
Liabilities ...	26,94,338	Other assets	40,017
Profit and loss account ...	1,48,526	Debts and advances ...	10,99,109
		Investments	13,15,160
		Cash ...	6,63,141
Rs.	90,69,880	Rs.	90,69,880

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August, 1954.

Including the sum of Rs. 8,837 (Rs. 4,862) brought forward from the previous half-year and transferring Rs. 15,000 (Rs. 1,175) to general reserve and Rs. 5,000 (Rs. 7,500) to revaluation of investments reserve, there is an available balance of Rs. 27,717 (Rs. 28,536). It is proposed to dispose of this balance as follows:—

In paying a dividend on the 1st cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000), in paying a dividend on the 2nd cumulative preference shares at the rate of 6 per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425), in paying a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 12,500 (Rs. 12,500) and in carrying forward Rs. 5,792 (Rs. 6,611).

Market.—The revival in activity in all sections continued during the period of review which saw the first sustained buying interest since 1946, particular interest being shown in Tea and Engineering shares owing to improved trading conditions. The Company's portfolio continues to stand at a conservative figure.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	9,00,000	Investments ...	11,18,234
Reserves ...	1,77,501	Debts, etc. ...	33,222
Taxation and special reserve ...	19,756	Cash	12,186
Liabilities ...	60,593		
Profit and loss account ...	5,792		
Rs.	11,63,642	Rs.	11,63,642

N.B.—Figures within brackets relate to the corresponding period of the previous year.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *1st April*, 1955.

AMERICAN LETTER

(*Concluded from page* 661)

A sharp bulge in expenditures by commercial and public utility companies is indicated for the second quarter. The housing boom, concentrated in suburban areas, is creating a large demand for shopping centres, pipelines, electric installations and other facilities.

Since sewers, water pipes and electric generating installations cannot be built overnight, this demand will last for some time even if home building should turn down.

Auto production promises to soar above 750,000 in March, far surpassing the record of June, 1950. First quarter output will approach 2.1 million units, about a third of the total expected for 1955, but uncertainties are multiplying.

In many parts of the country, instalment payment for buyers have been stretched out to three years. This is not regarded as a particularly healthy practice. There must be a drop in auto production in the second half of 1955 and that is certain to be registered in various business activity indices.

The large automobile manufacturers will soon begin to negotiate with the trade unions over the issue of a guaranteed annual wage. A strike against Ford Motor Company and General Motors Corporation is threatened vaguely. Whether walk-outs will develop, nobody really knows. It will depend on the handling of the issues by the negotiators.

Meanwhile, retail sales all over the United States are from 2 to 6 per cent. ahead of last year, varying regionally. Early Easter promotions have spurred business.—*All Rights Reserved.*

QUESTION HOUR IN PARLIAMENT

Mica Price

THE Government has received representatives from the Indian mica industry that the U.S. Government should give the same increase in price for Indian mica as it has given for Brazilian mica. The matter is under Government's consideration.

* * * *

Development of Diamond Mines

The Panna Diamond Mining Syndicate has asked for Russian technical help and advice for the development of diamond mining. The Syndicate's development scheme is said to be progressing and, in the event of development being achieved according to expectations, they would have about 2,000 carats of diamonds per day. A sum of Rs. 7,274-10 has been spent on travelling allowances and contingent expenditure of the officers of the Indian Bureau of Mines who visited diamond-bearing areas in Vindhya Pradesh and South India in connection with the study of the deposits of diamond formations for planning detailed prospecting. No modern machinery had been set up by the Bureau for the prospecting of the diamond fields.

—*Minister for Natural Resources and Scientific Research*

Postal Savings Bank

The system of cheques will be introduced in post office savings bank accounts as early as possible. The Government is advised that, before the cheque system can be introduced in post office savings bank accounts. Section 3 of the Negotiable Instruments Act should be so amended as to include the post office savings bank within the meaning of the term 'banker'. This matter and the settlement of procedural details connected with the introduction of the cheque system are being considered by the Government.

—*Deputy Communications Minister*

Loans to Shipping Companies

A provision of Rs. 832 lakhs has been included in the capital budget for 1955-56 for grant of loans to Indian shipping companies for the purchase/construction of ships. The Government is already committed to pay during 1955-56 a sum of Rs. 376.18 lakhs to Messrs. Scindia Steam Navigation Co., Ltd., Bombay, and Rs. 198.40 lakhs to the India Steamship Co., Ltd., Calcutta, representing the balance of the loans already promised to these companies. It is not definitely known at this stage which other companies will come forward for such loans during the ensuing year, but it is expected that the entire budget provision will be utilised.

—*Deputy Minister for Railways and Transport*

Survey of Bundelkhand and Vindhya Pradesh

The Geological Department has recently made a survey of Bundelkhand and Vindhya Pradesh. The survey work is still in progress. So far, this work has covered only a few parts of these areas. Uranium, monazite, etc., have been found in very small quantities. Only one new deposit of beryl ore had been discovered in the Srikakulam district of Andhra State. The survey work in that area is in progress.

India's Financial Contribution to U.N.O.

The amounts of contribution made by India to the United Nations Organisation are: 1946—Rs. 26,03,300 ($786,507); 1947—Rs. 35,89,000 ($1,084,275); 1948—Rs. 45,34,600 ($1,370,571); 1949—Rs. 43,55,500 ($116,157,952); 1950—Rs. 50,45,000 $1,059,552); 1951—Rs. 66,17,200 ($1,389,615); 1952—Rs. 70,37,000 ($1,477,760); 1953—Rs. 68,89,900 ($1,446,878) and 1954—Rs. 63,43,705 ($1,332,178). For the year 1955, a sum of $1,226,089 (Rs. 58,38,562) has been computed as India's contribution.

—*Prime Minister*

Loan From I.M.F.

India purchased in exchange for rupees $99.98 million. The equivalent of $72.4 million has been repurchased so far.

—*Finance Minister*

Export Promotion Councils

The Export Promotion Councils, namely, the Cotton Textiles Export Promotion Council and the Silk and Rayon Textiles Export Promotion Council, were set up during the financial year 1954-55. The functions of the Councils were to undertake market studies, sent out trade delegations, appoint representatives in foreign markets, conduct propaganda and disseminate information to manufacturers and traders. The Councils are also to advise Government on standards and schemes for inspection of goods for export, investigate complaints, advise exporters in adopting methods for obviating such complaints and arbitrate in the settlement of disputes. The Cotton Textiles Export Promotion Council draws its funds from the Cotton Textile Fund. The Cotton Textile Fund Committee had decided to grant Rs. 5 lakhs to the Council during 1954-55. The Government has paid Rs. 12,000 to the Silk and Rayon Textiles Export Promotion Council and the industry has contributed Rs. 6,000.

—*Minister for Commerce*

Industrial Training Centres

The Union Ministry of Labour is running 55 industrial training centres in the country. The expenditure so far incurred on the centres is Rs. 49,30,927 (based on 1952-53 actuals). The number of persons who completed training in 1951 in vocational trades only was 1,767; in technical and vocational trades in 1952 and 1953, 6,755 and 7,215 respectively, and of those in vocational trades only in 1954, 1,572.

—*Deputy Minister for Labour*

SHORT-TERM MONEY RATES UNCHANGED

(*From Our Own Correspondent*)

BOMBAY, *6th April*

Conditions in the short-term money market continued to be stringent during the week under review also. The seasonal demand for funds gathered further momentum, with the result that banks were very keen borrowers as in previous weeks and money rates held their ground. In the inter-bank section, business was on a very attenuated scale owing to paucity of funds. Inter-bank call money rate was, therefore, stagnant at 3 per cent. Short-term deposits for one to six months were also bid at the self-same rate of 3 per cent., as were house money.

As was announced last week, there was no sale of Government of India three months' Treasury Bills this week, in view of the intervening holidays. Tenders have, however, been invited for Rs. 1 crore for the next week.

A sharp expansion of Rs. 14.50 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 1st April, 1955, as compared with that for the previous week. Notes held in the Banking Department are lower by Rs. 4.68 crores, so that total notes issued are higher by Rs. 9.82 crores. This increase in total notes issued has been covered by a decline of Rs. 19.87 crores in foreign securities, an increase of Rs. 29.81 crores in rupee securities and a contraction of Rs. 11 lakhs in rupee coin. In the Banking Department, the deposits of the Central Government have recorded an increase of Rs. 5.57 crores, in contrast to the decline of Rs. 8.50 crores in the previous week, and those of other Governments Rs. 1.33 crores, following the rise of Rs. 41.76 crores in the previous two weeks. Deposits of banks have fallen by Rs. 1.46 crores. On the assets side, there has been a contraction of Rs. 4.79 crores in cash balances and an increase of Rs. 14.61 crores in balances held abroad. There has been no change in loans and advances to Governments, but other loans and advances are up by Rs. 27 lakhs. Of these loans and advances, outstanding advances to Scheduled banks show a fall of Rs. 1.07 crores, though there have been fresh borrowings to the extent of Rs. 3.84 crores. Investments have declined by Rs. 1.60 crores.

The consolidated statement of position of the Scheduled Banks for the week ended 25th March, 1955, as compared with that for the previous week, discloses some notable features, such as a sizable increase in the banks' deposits, a decline in their borrowings from the Imperial Bank and a fall in their advances by way of loans, cash credits and overdrafts. These changes are somewhat anomalous in the context of the busy season which is in full swing for some weeks past. The changes in the other portfolios are, however, in consonance with the seasonal pattern.

Demand deposits of banks show an increase of Rs. 2.23 crores and time deposits Rs. 1.08 crores. No worthwhile variation is noted in borrowings from banks, but a rise of Rs. 1.64 crores is disclosed by borrowings from the Reserve Bank. Borrowings from the Imperial Bank are lower by Rs. 1.67 crores. Advances disclose a fall of Rs. 1.79 crores, while inland bills purchased and discounted have risen by as much as Rs. 7.43 crores and foreign bills purchased and discounted by Rs. 1.92 crores. A decline of Rs. 1.79 crores is seen in investments. Cash on hand and balances with the Reserve Bank together account for a fall of Rs. 22 lakhs, balances with other banks in current account for Rs. 16 lakhs and money at call and short notice for Rs. 67 lakhs.

The Gilt-edged market ruled dull during the week under review, with insignificant demand. The undertone, however, remained fairly steady in the absence of large-scale offerings. The volume of business was thin. 3 per cent. 1957 had some business at Rs. 99-4, at which rate the reserve Bank was a buyer against switches. 3 per cent. 1958 was unchanged at Rs. 99-3. 3 per cent. 1959-61 had buyers at Rs. 97-5½ and sellers at Rs. 97-6. 3 per cent. 1963-65 had enquiries at Rs. 93-10½ and 3 per cent. 1964 stood at Rs. 93-10. 3 per cent. 1966-68 was on offer at Rs. 90-7 *ex-voucher*. 3 per cent. 1970-75 was placed at Rs. 86-15. 3 per cent. 1986 Conversion Loan was placed an anna lower at Rs. 80-9 on lack of enquiries. 3½ per cent. 1961 National Plan Bond was in demand at Rs. 99-8½, but sellers wanted Rs. 99-9. 3½ per cent. 1964 National Plan Loan was changed at Rs. 98-8, the price at which Reserve Bank was seller.

In the foreign exchange section, the rupee-U.S. dollar rates were unchanged during the week under review. Sterling, on the other hand, gained strength slightly in terms of the dollar. Thus, in New York, spot sterling advanced from $79⅝—2.79⅞ to $2.79.7/16—2.79.9/16, three months forward from $2.78.5/16—2.78.7/16 to $2.78.7/16—2.78.9/16 and transferable sterling from $2.76¾—2.76⅞ to $2.76½—2.76⅞.

LINSEED EASY

(*Messrs. A. Bradley & Co.*)

CALCUTTA, *4th April*

The general undertone of the linseed market during the latter part of the week has been easier, with a notable decline in prices. There have been keener offerings of new crop supplies from upcountry and arrivals somewhat better. A small daily turnover is reported, chiefly for ready goods. Demand for forward delivery has been small despite lower offers. Less activity is recorded in the oil section and *overseas markets are at present very* quiet.

Latest available quotations are: Ready Rs. 16 and April-May Rs. 15-8 per maund.

FURTHER RESTRICTION ON RAYON YARN IMPORTS

(*From Our Own Correspondent*)

BOMBAY, *6th April*

Much confusion prevailed in the rayon yarn market during the week under review. This followed the Press note with regard to import of rayon yarn issued by the Joint Chief Controller of Imports last week. The Press note says: "In order to prevent any circumvention of the restrictions on imports of art silk yarn of 120 and 150 deniers produced indigenously, it is considered necessary to enlarge the range of restrictions (viz. 101 to 119 deniers), and it has been decided that licences for art silk yarn issued hereafter should not be made valid for import of yarn of deniers 110 to 160 both inclusive." This Press note was interpreted in two ways. One section thought that the extention of the ban on imports would not cover 120 and 150 deniers which continue to be imported on the basis of 10 per cent. and 25 per cent. licences, respectively. Another section, however, felt that the extension of the ban would include those deniers as well. Thanks to the confusion arising from these interpretations, business in the rayon yarn market was practically at a standstill, as operators preferred to await clarification of the Government's policy. In a communication addressed to the Controller of Imports, the Bombay Yarn Merchants Association and Exchange Ltd. has sought for this clarification.

Rayon yarn (150D) for April delivery remained unaltered at Rs. 731. The spot section depicted a firm trend due to enlargement of the range of restriction on imports of foreign rayon yarns. Owing to better demand from silk weaving mills and limited arrivals, prices of rayon yarn registered handsome improvement. 150 Japan rallied As. 4 to Rs. 4-4. 120 Japan advanced by As. 2 to Rs. 4-3. 120 Japan rose by an anna and a half to Rs. 3-14-6. 150 Italy was higher by an anna at Rs. 3-14.

The staple fibre yarn section ruled quiet, thanks to reports of reduced demand for staple fibre yarn by mills. Such reports had an unsettling effect on the market and staple fibre yarn prices tended to decline. In the forward section, staple fibre yarn (40 x 2) for April delivery receded from Rs. 581 to Rs. 577. May delivery was quiet at Rs. 578 today. In the spot section (40 x 2), Aurora among foreign yarns shed half an anna to Rs. 3-15-6. Among indigenous yarns, Kohinoors fell by an anna and a half to Rs. 3-5. Citys were lower by half an anna to Rs. 3-3-6. New Greats eased by three pies to Rs. 3-1-6.

The cotton yarn market presented a bearish trend this week too, thanks to reduced offtake and renewed weakness in raw cotton prices. There was pressure of sales and deliveries from several spinning mills, induced by anxiety to secure increased export quotas. The pressure was so great that some of the South Indian mills were reported to have sold their stocks at considerably lower prices. Dealers in the market were, therefore, obliged to liquidate their holdings, while buyers were inclined to limit their purchases. Consequently, cotton yarn prices continued to rule weak.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those eight days before:

	6-4-1955	29-3-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. April	731 0	
120 Japan (per lb.)	3 14½	3 12
150 Japan (per lb.)	4 4	4 0
120 Italy (per lb.)	4 3	4 1
150 Italy (per lb.)	3 14	3 13
Staple fibre yarn—		
40 x 2 March	577 0	579 0
40 x 2 April	578 0	581 0
Suico (per lb.)	4 2½	4 2½
New Great (per lb.)	3 1½	3 1½
Cotton yarn (per bundle of 10 lbs.)—		
20s Modern	13 4	13 5
20s Raghuvamshi	16 12	16 14
30s Madura	21 8	21 12
40s Gokak	24 8	24 8
60s Modern	58 12	59 0
80s Finlay	69 0	70 0

SUGAR DEPRESSED

(*From Our Own Correspondent*)

HAPUR, *2nd April*

The sugar markets continued to rule depressed during the week and prices for mill delivery declined further by As. 6 to As. 8 per maund. The supply position was very easy, due to the release of a further quantity of more than one lakh tons of sugar for free sale by the Government of India. Turnover was on a small scale, as traders preferred to follow a wait and watch policy. The latest prevailing rates for wholesale mill delivery are: Jaswant Rs. 29-4, Simbhauli Rs. 29-8 and Mowana Rs. 29-8. *Khandsari* prices also sagged by about Re. 1 per maund to Rs. 22 to Rs. 25.

There was appreciable advance in the ready *gur* prices during the week, that is, from Rs. 8-4 to Rs. 8-12 quoted last week to Rs. 9-8 to Rs. 10-2 today. These rates are for the second quality, as the best quality is purchased by the State Government at Rs. 10-4 per maund. The local stock is estimated at 109,500 maunds, including about 45,000 maunds owned by the State Government. Arrivals have gone down to about 500 maunds daily. The Government of India's announcement of freely licensing exports of *gur* and the U.P. Government's efforts to arrange exports were the twin factors responsible for this firmness in ready prices. The mills in East U.P. are closing their season, but, in West U.P., the cane is still available and the crushing season is expected to last upto the end of April or even upto the middle of May.

COTTON SLUGGISH

(*From Our Own Correspondent*)

BOMBAY, *6th April*

Since the time of the last report, that is 29th March, 1955, the cotton market has been sluggish. Notwithstanding the reduction in excise duty on coarse and medium cloth, mills continue to be somewhat reluctant to enter into large commitments. The dull conditions in the market are attributed to the disappointment over the inordinate delay in the announcement of an export quota for long-staple cotton. The persistence of the downward trend in spot prices locally as well as upcountry, together with lack of resistance at lower levels, has also acted as an additional damper on the market. Consequently, turnover remains restricted, with values fluctuating within a narrow range, the general tendency being downwards.

The difference between the current quotation for I.C.C. May delivery (Rs. 550) and the floor level (Rs. 495 plus Rs. 25) is very small, being only Rs. 30. Indeed, some traders fear that, even if the Government were to release a large export quota of staple cotton, the possibility of any sizable recovery in values is remote, for, in their opinion, much damage has already been done by the inordinate delay in the announcement of the quota. The fear has gathered further momentum, thanks to lack of any reference, in the Union Commerce and Industry Minister's statement in Parliament yesterday, to any measures designed to stem the rot in the cotton market. The Minister merely said: "The ceiling and the floor prices of raw cotton are altered from time to time, in view of various factors which include prices of other agricultural products, particularly foodstuffs. If the ruling prices of raw cotton go down so much as to be lower than the floor prices, the Government will certainly buy up. But that is more or less a hypothetical proposition, because, as far as can be foreseen, there will be no necessity to invoke the Government's guarantee."

Of much interest to cotton circles is the Central Government's announcement prescribing the procedure for imports of cotton of staple lengths 1-1.1/16" and above from the U.S. The procedure has come into force with immediate effect. This announcement follows the U.S. Foreign Operation Administration's $9 million (Rs. 4.2 crores) cotton authorisation to India. As already stated, cotton will be of staple length 1.1/16" and longer. The contracting period is from 4th April to 31st October, 1955, and the delivery period is from 1st August to 31st December, 1955.

The forward cotton market opened the week with an easy note. The downward trend was somewhat halted on Thursday when, following revival of hopes regarding early grant of export quota, prices staged a recovery which persisted on Saturday too. On Monday again, the market developed an easy trend. The disappointed bulls, who had earlier bought cotton in anticipation of export quota announcement, decided to sell their holdings and bears tried to depress the market. Cotton values, as a consequence, suffered a recession which gathered further momentum today.

I.C.C. May delivery was quoted at Rs. 551 on Wednesday last and receded to Rs. 547 the same day. After recovering to Rs. 533-8 on the 2nd inst., it slipped to Rs. 546-8 today before finishing at Rs. 550-8. I.C.C. August opened lower at Rs. 563, as against Rs. 566-8 last week-end, and fell to Rs. 561. After recovering to Rs. 567 on Saturday, it eased to Rs. 560 today before closing at Rs. 565-4.

The trend of prices during the week under review is indicated below:

	29-3-55	*High*	*Low*	6-4-55
I.C.C. May ...	551½	553½	546¼	550½
I.C.C. August ...	566½	567	560	565½

The spot market remained closed for four days this week. During the three days it was open, the market presented a very dull appearance. Barring Vijay, Kapadganj, Wagad and Berars which evoked some demand, other varieties were neglected. The trend of prices was downward. The latest available quotations from the Sewri market are: Sind *deshi* Rs. 560; Berar Jarilla Rs. 600; Khandesh Rs. 600; Vijay Rs. 700; Oomra *deshi* Rs. 560; Moglai Rs. 525.

The removal of price control on indigenous mill-made cloth, announced by the Pakistan Government on 27th March last, had a salutary effect on the Karachi cotton market which presented a cheerful note this week, in distinct contrast to the depressed conditions which prevailed last week. Mill interests lent good support. There was also some improvement in overseas enquiries. Cotton prices, as a consequence, staged a recovery. N.T.R.G. for May delivery was quoted on Monday at Rs. 66-7 (per 82 lbs.), as against Rs. 65-13 on 28th March, 1955. The latest available quotations for spot cotton are:

Sind *deshi* Rs. 62-8; Punjab *deshi* Rs. 55-8; 4F Punjab R.G. Rs. 65-4; S.G. Rs. 69-12; N.T.R.G. Rs. 67-4 to Rs. 68-4; S.G. Rs. 72-4 to Rs. 73-4; 289F Punjab R.G. Rs. 68-12; S.G. Rs. 73-4.

The seventh auction of the new (1954-55) Sudan cotton is being held at Khartoum today. Total offerings are estimated at 19,167 bales, of which long staple cotton account for 14,967 bales and American Nuba Mountains for 4,200 bales. The results of the auction are awaited with interest. At the last Sudan Gezira Board auction, practically all the new crop cotton offered had to be withdrawn, as no offers were received at the reserve prices. This is attributed to two factors, namely, fears of a deterioration in the quality of cotton and lack of adequate hedge facilities which would appear to have militated strongly against buyers undertaking substantial forward commitments.

The Liverpool cotton futures market experienced nervous fluctuations in prices, the general tendency being downwards. Easy advices from New York resulted in a weakening of new crop position. There was practically no offtake for small offerings

which came into the market against hedge sales of outside growths. The latest available quotations from the market are: May-June 30.93*d*. July-August 30.38*d*. October-November 29.95*d*. December-January 29.93*d*.

A notable development in the New York cotton market is the statement by the U.S. Secretary of Agriculture, Mr. Benson, to the effect that the Government did not contemplate the grant of a subsidy on exports of U.S. cotton during the marketing year ending July next. The Secretary, however, declined to say what he would do in the ensuing season. Mr. Benson admitted that cotton exports had declined on account of uncertainty over export subsidy. He was considering the possibility of issuing a statement soon "to clear the atmosphere."

During the week under review, the New York cotton market depicted a quiet trend. Operators showed little interest in business, as they preferred to await further development on export subsidy question for the new crop and also action on other farm legislation. Some selling was coupled with the suggestion of cotton State legislators that the national cotton policy should be so modified as to make lint more competitive with rayon and easier to sell in competition with foreign growths. There were, besides, hedging and liquidation. Cotton prices, therefore, tended to look down.

The following are the latest available quotations from the New York market, as compared with those eight days and 14 days before:

(In cents per lb.)

	5-4-55	28-3-55	22-3-55
Spot	34.25	34.30	34.20
May	33.61	33.66	33.61
July	33.81	33.90	33.89
October	33.84	34.01	33.91
December	33.94	34.09	34.02

SILVER MARKED DOWN

(*From Our Own Correspondent*)

BOMBAY, *6th April*

An irregular trend in both silver and gold was noted in the bullion market during the week under review. While silver closed the week on a quiet note, due to bull liquidation and reports of large arrivals of unrefined silver from upcountry centres, gold emerged better, consequent on buying by Calcutta interests in both ready and forward positions and bear covering. Paucity of stocks in Bombay and the widening of backwardation charges, resulting in the application of margin under by-law 33-D were additional factors in inducing a bullish sentiment in the yellow metal.

A notable development of the week was the frequent changes made by the Board of the Bullion Association in its earlier decision to impose a margin of Rs. 500 per bar of silver under by-law 33-D. Following the sanction by the Bombay Government of by-law 33-D referred to in these columns last week, the Board imposed on 29th March a margin of Rs. 500 per bar on all outstanding purchases in silver in the *Chaitra* settlement, as the immediately succeeding forward contract was quoted on that day more than Rs. 2 below the current forward contract. The imposition of such margin was given retrospective effect on transactions prior to 25th March, the day on which the Bombay Government published the above by-law in the *Gazette*. On 30th March, however, a section of the bull operators served a legal notice on the Board to the effect that the margin was applicable only on outstanding transactions on or after 25th March and not on prior transactions. In support of their contention, these members quoted the Bombay Government's notification that the by-law would come into force with immediate effect, that is on 25th March. The Board was, however, unwilling to yield to this demand and the issue was, therefore, referred by the Board to the Advocate-General for his legal opinion. The Advocate-General gave an oral opinion to the effect that the Board should not recover margin under the said by-law on transactions prior to 25th March. On the strength of this opinion, the Board modified, late on 30th March, its earlier decision and notified that margin would be levied only on transactions made on or after 25th March.

The members in the opposite camp, however, made representations to the Government of Bombay which, it is reported, took a serious view of the situation. It would appear that the Government Director made it clear at the meeting of the members held on 22nd March that the by-law 33-D would operate with retrospective effect. In the meantime, the Government Director discussed the issue with the Advocate-General placing the Government's point of view. Thereupon, the Advocate-General withdrew his earlier opinion. The Government, it is stated, issued a directive to the Board asking it to impose margin on outstanding transactions prior to 25th March also. Consequent on this, the Board re-modified its earlier modification on the lines of the Government directions, so that its original decision of 29th March became effective. No further action was taken by the dissident bull operators. Most of the bulls preferred to square up their outstanding positions.

Silver for forward delivery (*Chaitra* settlement —8th April) opened the week at Rs. 165-8, as against the previous week's closing of Rs. 166-1, and dropped to a low of Rs. 164-5 on Friday on persistent bull liquidation. At the lower level, there was some bear covering and replacement buying, following the first opinion given by the Advocate-General. Despite the Government's directive stated above, the forward silver gained strength to Rs. 165-12 on Monday, as one of the leading bull operators continued to sit tight on his purchases and exact heavy carry-forward charges from the sellers, although he had to pay heavy margin. Later, however, the forward silver for this settlement gave way under the weight of liquidation by other bulls and closed today at Rs. 164-11.

Forward silver for the *Vaisakh* settlement was marked down from Rs. 163-13 to Rs. 161-14 and *Jeth* settlement from Rs. 161-9 to Rs. 159.

Ready silver (.996 mint) declined from Rs. 167-1 to Rs. 165-11. The floating stocks of silver are estimated at 1,900 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (*Chaitra* settlement —9th April) declined from Rs. 92-7 to Rs. 91-10, in sympathy with silver, but revived to Rs. 92-6 at the close of business on Saturday, on buying by Calcutta operators and covering by bears. As this rate was As. 12 above the closing rate for the next succeeding settlement, the bulls were obliged to pay a margin of Rs. 7 per tola, in terms of the by-law 33-D. The margin was in force throughout the rest of the week, as the backwardation charges stood at As. 12 and above. Persistent buying by Calcutta interests, paucity of stocks in the ready section and the widening of the *badla* charges to As. 13 further helped bullish sentiment and forward gold for the current settlement closed today at Rs. 93-3.

Forward gold for the *Vaisakh* settlement hardened from Rs. 91-13 to Rs. 92-4 and that for the *Jeth* settlement from Rs. 91-4 to Rs. 91-8.

Ready gold gained from Rs. 93-8 to Rs. 94. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was a shade better at 4,000 tolas on an average.

In London, silver remained unchanged almost throughout the week, but declined yesterday by 1½*d*. per fine ounce, spot silver dropping from 77*d*. to 75½*d*. and forward silver from 76¾*d*. to 75¼*d*., evidently in sympathy with the decline in New York silver price on Monday last. After moving between £12 11*s*. and £12 11*s*. ½*d*. dropped yesterday to £12 10*s*. 9½*d*. In New York, silver held its ground at 88¼c. till Saturday last, but, on Monday, declined to 87 cents, which level was maintained yesterday also.

The following comparative table shows the trend of the market during the week under review:

	6-4-55	Highest	Lowest	29-3-55

OILSEED EASY

(*From Our Own Correspondent*)

BOMBAY, *6th April*

The oilseeds and oils market experienced a generally easy trend during the week under review. This was particularly pronounced in the linseed section, on discouraging overseas advices for linseed oil. The rate for linseed oil in the U.K. and the Continent was quoted at £79 per ton, as against £80 in the previous week. The groundnut section also was quiet on reports of good arrivals. Besides, Burma was quoting lower at Rs. 1,250 per ton of groundnut oil, as compared with Rs. 1,275 per ton a week back, that is a decline of Rs. 25 per ton. The performance of the castor oil section too was also not encouraging. The *kardi* and *nigerseed* sections proved no exception to the generally easy trend. As a result, business done in the market was limited and the list of prices of oilseeds and oils, as a whole, disclosed sizable losses over the week.

In the groundnut section Bold F.A.Q. lost As. 6 to Rs. 20. April-May delivery suffered As. 2 to Rs. 20 and June-July As. 14 to Rs. 20-14. Khandesh quality declined from Rs. 20-8 to Rs. 20-6. Groundnut ex-mill was lower at Rs. 10-15, as against Rs. 11-4. May delivery eased by an anna to Rs. 11.

The Bombay Oilseeds Exchange has, in a communication addressed to the Chief Controller of Exports, New Delhi, has requested the Government of India to extend the period of shipment of groundnut oilcake and deoiled groundnut meal from 15th May, 1955, upto the end of July, 1955. The communication states that these cakes are generally used as cattle fodder in autumn and winter and, therefore, they are generally bought after summer.

Bold ready, in the linseed section, eased from Rs. 21-4 to Rs. 20-4. April-May was down by As. 10 at Rs. 20. Sutna small receded from Rs. 19-11 to Rs. 18-12. Linseed oil declined from Rs. 12-8 to Rs. 12-6.

May futures, in the castorseed section opened at Rs. 71-12, as against Rs. 72-2. Thereafter, it fluctuated between Rs. 73 and Rs. 71-10. Among readys, F.A.Q. was quiet at Rs. 13-12 and Madras quality at Rs. 13-14. Castor oil Commercial, lost As. 6 to Rs. 8-4. First Pressure was also lower by a similar amount at Rs. 8-12.

Among others, *kardi* Bold lost As. 6 to Rs. 10-8 and *niger* Madras Re. 1-6 to Rs. 16-15.

The Grain and Oil Merchants Association has urged the Central Government, in the coarse of a communication addressed to the Ministry of Commerce and Industry and the Ministry of Finance to allow free exports of *niger* and *kardi* seeds. The Association says:

"Price of *nigerseed* on 1st November, 1954, was Rs. 22-4 per cwt., while the present price is Rs. 16 per cwt. Similarly the price of *kardiseed* was Rs. 14-12 per cwt. on 1st November, 1954, and the present price is Rs. 10-12 per cwt. Thus, the fall today represents nearly 33 per cent. due to not allowing export of these commodities. By stopping the export of these commodities, the Government is not only losing revenue but foreign exchange too and the agriculturists losing in prices. In spite of export duty of Rs. 7-8 per cwt. on these commodities, there is good demand for the same in foreign countries. The Government policy is to encourage export, but the policy hitherto followed, namely, allowing periodical exports in aforesaid commodities, has failed to achieve the objective, which the Government has in view. On the other hand, because of not allowing the export of the same, India is gradually losing foreign markets in these commodities. Production in these oilseeds is higher than last year. Government, therefore, in view of the changed present day condition of the trade, is requested to allow free export of *nigerseed* and *kardiseed*."

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	5-4-1955	29-3-1955	22-3-1955

SUGAR PRICES RECEDE

(*From Our Own Correspondent*)

BOMBAY, *6th April*

The distinctly easy conditions prevailing in the sugar market during the week ended 23rd March, 1955, gathered further momentum in the two subsequent weeks. The easiness was due to two important bearish factors, namely, reduction in the price of East German sugar by Re. 1-1 per maund (or Rs. 2-12 per bag), that is, from Rs. 30-8 to Rs. 29-7 per maund, and lowering of the minimum quantity for tender purposes from 60 tons to 20 tons. The Union Food Ministry's move to store imported sugar in centres like Nagpur, Akola, Ahmedabad, Indore, etc., and to sell it in these centres at the same prices as those prevailing at ports also acted as a damper on the market. Report of a fall in ex-mill quotations from Kanpur was another unhelpful factor. All these factors induced selling in the sugar market and prices continued their downward march during the fortnight under review.

*

Sugar for *chaitra* delivery, which stood at Rs. 84-7 on 23rd March last, was quoted lower at Rs. 83-8 today. The delivery is expected to be squared up at this level tomorrow. *Vaisakh* delivery receded from Rs. 84-4 two weeks ago to Rs. 83 today.

In the spot section, large grain indigenous sugar was done at Rs. 92-Rs. 102, as against Rs. 92-Rs. 103 on 23rd March. Medium grains were quoted at Rs. 88-8 to Rs. 89. Among foreign sugars, East German sugar dropped As. 12 to Rs. 81-8 per bag of 220 lbs. Deals in French sugar were put through at Rs. 82-Rs. 84 per bag of 220 lbs., as against Rs. 83-Rs. 84. Cuban and Czechoslovakian sugars were quiet at Rs. 91-12 (250 lbs.) and Rs. 85-Rs. 88 (220 lbs.), respectively. British refined sugar, however, elicited some support and gained As. 4 to Rs. 83-4 per bag of 224 lbs.

As already noted, the minimum quantity for which any sugar trader may submit tenders has been reduced from 60 tons to 20 tons. This decision of the Government was a sequel to slackness in demand and heavy accumulation of stocks. With the reduction in the minimum, even small consumers now have the benefit of direct purchase at Government prices. Another notable decision announced by the Government is the reduction of Re. 1-1 per maund in the price of East German sugar. It will be recalled that, following the upward revision in excise and import duty on sugar, the Central Food Ministry raised the issue price; the increase, however, was lower by a rupee per bag as compared with the increase in excise duty on indigenous sugar. With the reduction of about Rs. 2-12 now effected, the disparity in prices of indigenous sugar and imported varieties has been widened to Rs. 3-12 per bag. Such a wide disparity, it is considered, is bound to affect indigenous sugar prices adversely. For it is argued that, with less than ten weeks left for the monsoon to break, there will be a serious scramble by northern millers to sell their huge releases. The modified f.o.r. destination system for distributing imported sugar is also considered to be another factor which would force the millers to cut down their quotations substantially. In the circumstances, some trade circles anticipate a consistently steep fall in sugar prices till the end of May next.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.D.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly). P=Company has Preference shares. T=Company has Debentures. N—Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period.§ In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years
