PREFACE.

The registration of rainfall in India has always been carried out under the control of provincial authorities, and the Director-General of Observatories is only a consulting officer in connection with this work. Daily rainfall data for provinces are in general printed by local Governments in their gazettes as soon as figures are available, and these printed statements form the source of prompt information to the public. Subsequently the Meteorological Department collects all the statements throughout India and binds them into volumes for permanent record. The present volume contains monthly and annual rainfall for about 3,000 stations over the Indian Empire.

Symons' rain-gauges were in use at the great majority of stations, the only important exceptions being the Mysore and Travancore rain-gauge stations, which are provided with rain-gauges of local construction. The rainfall is measured at all stations daily at 8 A.M.

It may be noted that these statements are prepared in most cases by local officers appointed by the Provincial Governments, and that they are published in the first place in the Provincial Gazettes. Copies are sent to the Meteorological Office, Calcutta, which arranges through the Government Press for their combination into volumes and for their issue to the recipients. The Meteorological Department is hence not responsible for the accuracy of the data. Great attention is, however, now paid to the correct registration of rainfall in India by the Provincial Governments, and it is believed that the returns are as a whole reliable.

The tables are arranged, as far as possible, in the order of the provinces adopted in the Indian Daily Weather Report and the other publications of the Meteorological Department. They are drawn up in a form which practically explains itself. It should be noted that, although the rainfall is measured to hundredths of an inch, a "rainy day" is assumed to be that on which a tenth of an inch or upwards has fallen, and the figures in the column "Total number of rainy days" and "Normal total number of rainy days" are calculated on this assumption.

It may be noted that the available rainfall data of India were originally collected and tabulated in the Meteorological Office, Calcutta, in the year 1888, and that the average monthly rainfall and number of rainy days in each month were calculated from this tabulated information for all stations for which at least five years' rainfall statistics were available. These averages were used in the tables of Volumes I to XI of this "Rainfall of India." In 1901 the additional data for the period from 1889 to 1900 were utilised, and fresh normals based on the whole of the available data up to the year 1900 were prepared; in the great majority of cases the normals depended on the records of 30 to 40 years. The preparation of averages based on records as far as 1910 was begun in 1911, and from October 1911 inclusive these new normals were used in the returns of Assam and Eastern Bengal. The normals revised up to 1910 for the whole of India were published in 1913 in Volume XXII, Parts I and II, of the Memoirs of the Indian Meteorological Department and were brought into general use from January 1914. A further revision of the rainfall normals from all the available records up to 1915 was effected in 1917, and the new normals were introduced from January 1918. In the returns of Bihar and Orissa revised normals of number of rainy days were used from August 1918 and in those of Bengal from December 1918, while in the other returns the normals of 1910 were employed throughout the year. From January 1919, however, these new normals were used for all the provinces and no change was effected till December 1922. Another fresh revision of the normals was in the meantime undertaken from data extending up to December 1920 and in the volume for 1923 these latest normals, both of rainfall and the number of rainy days, were employed in the case of Kashmir, the North-West Frontier Province, Baluchistan, Rajputana and Central India. In the volume for 1924 the new normals were employed throughout for all divisions except Hyderabad, where the change in the normals was introduced from 1st December 1924. Since then no change has occurred in the normals.

J. H. FIELD,
Director-General of Observatories.

METEOROLOGICAL OFFICE,
ALIPORE (CALCUTTA);
The 24th January 1927.

TABLE OF CONTENTS.

Monthly and annual rainfall for 1925.

	Stations.	
1. Burma	242	
2. Assam	126	
3. Bengal	254	
4. Bihar and Orissa	316	
5. The United Provinces	288	
6. The Punjab	191	with errata.
7. Kashmir	41	with errata.
8. The North-West Frontier Province	33	with errata.
9. Baluchistan	81	
10. Rajputana	144	with errata.
11. Central India	85	with errata.
12. The Central Provinces	189	
13. Bombay Presidency	338	
14. Hyderabad	18	
15. Mysore	77	
16. Madras	527

** Meteorological observatory.

† P. W. D. Rain-recording station.

N = Not ascertained.

Masein station withdrawn from October 1924.

Statement showing the Monthly and Annual Rainfall at Rain-recording Stations in Burma for the year 1925—continued.

District and Sheets No.	Station.	January.				February.				March.			
		Number of rainy days.	Normal number of rainy days.	Normal rainfall for the month in inches.	Total rainfall for the month in inches.	Number of rainy days.	Normal number of rainy days.	Normal rainfall for the month in inches.	Total rainfall for the month in inches.	Number of rainy days.	Normal number of rainy days.	Normal rainfall for the month in inches.	Total rainfall for the month in inches.

* Districts in the Meteorological Division "United Provinces West" are distinguished from those in "United Provinces East" by an asterisk.

N.B.—The names of stations under the Irrigation department are printed in italics.

† The new raingauge stations of Canal department at Dasna and Bulandshahr in Meerut and Bulandshahr districts respectively were erected from 1st November, 1925.

Monthly and annual rainfall table recorded in the United Provinces of Agra and Oudh for the year 1925—*(continued)*.
