* Including bonus.

(i) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

(k) Investments.

(a) For seven months ended 31st March, 1954.

MARKET REPORTS

(*Concluded from page 701*)

TEAS IRREGULAR

(*Messrs. Forbes, Ewart and Figgis Ltd.*)

COCHIN, 31st *March*

Approximately 1,350,000 lbs. were on offer in sale No. 7 which was held on Tuesday, 29th March, 1955. Quality was much the same as the previous *sale, although there were rather fewer flavoury* high growns on offer. There was a fair general demand, but prices were irregular. Commons were *firm to dearer, but low medium teas met with a* poor response. Medium and good medium teas were two annas easier. Best liquoring high-growns sold well at about last rates with buyers following quality closely. There was keen competition for *whole leaf grades, particularly orange pekoes and* these were As. 1 to As. 2 dearer. Fannings generally met with less demand than broken grades. The following are the quotations:

	1955 Rs. a. p.	1954 Rs. a. p.
Low grown Travancore B.O.P.	2 4 0	2 10 0
Medium Travancore B.O.P. ...	2 6 6	2 11 0
Anaimallais B.O.P. ...	2 12 0	2 14 0
Best liquoring Nilgiri B.O.P. ...	3 7 0	4 0 0
Well made black leaf O.P. ...	2 15 0	2 11 0

London Market—*Sale of 28th March, 1955.*—*Weaker demand.* Market ½d. to 1d. lower.

Sale of 29th March, 1955.—High-growns firm, mediums and low-growns ¼d. to 1d. lower.

Colombo Market.—Limited demand. Prices brokens and fannings declining, as sale progressed. Leaf grades steady.

Calcutta Market.—No sale this week.

Export Quota.—Business has been done in 1955-56 quota at 72 piles. There are buyers of special licences at 54 piles and business has been done.

Forthcoming Auctions.—Due to Easter holidays, the auctions for April will now be as follows:—

Dust sale 'G': 5th April, sale No. 8: 19th April, dust sale 'H': 19th April, and sale No. 9: 26th April.

Catalogues for Sale No. 9 will close on 14th April.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire: "*Dust Sale G*: 475,000 lbs. Good demand for natural dusts. Best liquoring stronger. Milled dusts very weak and considerably easier."

JUTE GOODS PRICES TOO HIGH

(*From Our Own Correspondent*)

CALCUTTA, 4*th April*

The jute markets had an uneventful period during the week under review. Not much business passed for export. Despite the recent fall in prices, the present levels are considered still too high *by buyers. It is, therefore surprising that prices* of raw jute have tended to rise this week, although the advance was to the extent of only Re. 1 to Rs. 2. A situation that is becoming clearer day by day is that full interest of foreign buyers, especially *American, can be revived, if prices come down* further and the determination of prices is not left to the mercy of the speculative elements who have little or no interest in the welfare of the Indian jute industry. During 1954, the burlap consumption in the United States fell by an average of 5 million yards per month. So far during the current year, there has been no sign of an improve*ment in consumption. This is, indeed, a very bad* development despite America's need for more packe*aging materials. Prices of both raw jute and jute* goods should be brought down and a sound relationship between them evolved.

The aforesaid aim is difficult of realisation so long as speculators hold the ground. An attempt in the right direction is the establishment of a well-*organised futures market.* This has been recognised by the Government; but, as stated by Mr. P. Drollas, Chairman of the Calcutta Jute Fabric Shippers' Association at the Association's annual meeting held on Friday last, only little progress has *been made towards its establishment.* As is usual with speculation, if foreign buyers take some quantity, prices are put up, forcing buyers to withdraw *from the market.* Mr. Drollas pleaded for the abolition of the export duty. It is recognised that the duty is not a heavy one, but, if it is abolished, prices of jute goods can move down without a reduction in raw jute prices. This would ensure *cultivators to sow a much bigger area this season.* There have been more rains in the jute-growing districts this week and, with one or two more heavy showers, sowing must commence. It is very unlikely that the Finance Minister would heed the *plea for the abolition of the duty on exports of* jute goods, but, if this is done, it will change the outlook of the industry in a dramatic way.

More exports of jute goods can be achieved only if prices remain at reasonable levels and supply is uninterrupted. *If this is not done, sub*stitutes and bulk handling will make further in-*roads into the fortunes of jute goods, as the world's economy is expanding and needs more packaging materials.* Ready 40" 10 oz. hessian opened at Rs

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XC. No. 2303 BOMBAY, 16 APRIL, 1955 PRICE Rs. 1/8

STATE-OWNED INDUSTRIES

IT was heartening to find that at least a few members of the Lok Sabha evinced a lively interest in the working of the Ministry of Production, when that Ministry's demand for grants came up for the approval of the House. It was equally heartening to note that the pleasant-mannered distinguished Minister for Production, Mr. K. C. Reddy, took the criticisms in good spirit and endeavoured his best to answer them. All this is, indeed, a healthy feature and deserves to be kept up. As readers are aware, quite a number of important industries, involving huge capital investment by the State, is under the charge of this Ministry and there is every indication that more State-owned industries will be entrusted to its care. Parliament is the only body that can effectively ensure the efficient working of these industrial concerns. Its members must, therefore, maintain a close watch over the results of these ventures and impress upon the Minister concerned the need for their sound management. It is needless to add that their criticisms should be constructive and not destructive. Their object should be not creation of political capital out of the faults found in the working of State concerns but removal of such faults, so that the country as a whole may benefit by the successful results of these concerns. Rightly or wrongly, the Government has taken to promotion and ownership of even those industries which can very well be in the private sector, provided the latter is given suitable assistance. It has assumed responsibility for certain industries despite its shortcomings in managerial ability. It is sheer foolhardiness to venture thus, but that the Government has done so is a fact which has to be faced. It is the duty of everyone, who has the welfare of the country at heart, to see that these State-owned industries succeed by offering positive suggestions and active co-operation. But this task will be possible only if adequate information about the working of these corporations is promptly placed before the members of Parliament and the Press.

On this last point, we should say that the Central Government is more accommodating and helpful than the State Governments. The latter provide hardly any worthwhile information about the working of ventures under their ownership. Even the members of the legislature are not able to get up-to-date statements of accounts and auditors' reports. The Press is, of course, completely ignored, with the result that it has to depend upon only what the Treasury and Opposition members have to say. It is to be hoped that, in future at least, the State Governments will emulate the Central Government in this respect and circulate to the Press the annual reports and the Ministry's explanations on the working of their commercial undertakings. The Ministry of Production deserves to be complimented for including in its *Report for 1954-55* a running commentary on the progress of all the industrial concerns under its charge and also the directors' reports and audited accounts of these concerns for the latest year, namely, 1953-54, together with the speeches of their chairmen, if any. These reports and acounts are drawn up in the same way as those belonging to the companies in the private sector, so that it is easy for one to study and understand them. It would, indeed, be ideal if all the Governments were to follow this method in regard to all their commercial undertakings whether or not they are registered under the Companies Act.

One of the criticisms levelled against the completely State-owned companies (that is, companies such as the Sindri Fertilisers and Chemicals Ltd. and the Hindustan Machine Tool Ltd.) or companies the majority share capital of which is owned by the State (such as the Hindustan Shipyard Ltd.) is that, in many cases, the board of directors is not a "functional body" and is lacking in personnel who know the job. There is, in our view, considerable truth in this charge. And, if any proof were needed, one has only to go into the causes for the unconscionably slow progress of some of the State undertakings such as the machine tools, housing, Chittaranjan locomotive factory, Rourkela steel factory and shipyard. It is no exaggeration to say that none of these enterprises is as successful as one was led to expect. Even the Minister for Production will readily admit the validity of this criticism. The Government must pay serious attention to remedy this defect. There seem to be two ways in which this could be done. One is to have a body of advisers chosen from the business community to guide the Ministry in regard to technical details relating to administration, purchases of plant, machinery, stores and raw materials, and appointment of technical consultants. The other is to have tried business men on the boards of directors of the State-owned companies, as was being done in the Mysore State during the pre-independence era.

A prerequisite for the success of the aforesaid suggestion is that the Government must have implicit confidence in the advice of business men chosen by it. And sufficient time and freedom must be given to them to show results before they are condemned. But this requires a definite change of heart in the Government and, to a certain extent, in business men, too. The latter, we have no doubt, will readily co-operate with the powers-that-be, if only there is better appreciation of, and respect for, their role in the economic development of the country and if they are not made to feel that they are being just tolerated as a necessary evil. We are sure that there must be many business men in this country, who would welcome an opportunity to serve the public, but in their own light and in those spheres in which they have specialised. We realise that, in the present mood of the Government, it is too much to hope that our suggestion will go home. But this suggestion seems to be the best way of ensuring successful working of State-owned industries, especially as the vast majority of members of legislatures and Parliament has little experience of industry, trade and finance. The alternative is the costly method of learning by trial and error. It is ridiculous for a poor country like India to follow this terribly costly method. Indeed, it is a crime to do so, when it can be avoided without any cost to the public.

While on the subject of board of directors of State-owned companies, it will be pertinent to draw the attention of managements of joint-stock companies in the private sector to an important feature. In all these State-owned companies, representation has been given to labour on the directorate. Mr. Michael John of the I.N.T.U.C., for instance, has a seat on the Board of the Hindustan Shipyard, while Mr. S. R. Vasavada, another I.N.T.U.C. leader, is on the Board of the Sindri Fertilisers and Chemicals. This practice by the companies in the public sector will strengthen the demand already being voiced by trade unionists in this country, including such an enlightened leader as Mr. V. V. Giri, our erstwhile Labour Minister, that representation should be given to labour on the directorate of companies in the private sector, too. The demand is likely to derive further strength, if the Government recognises the railway workers' claim for representation on the Railway Board. The employers in the private sector will do well to take note of this trend and to remember that, in course of time, it will assume serious proportions. As the Government has already recognised the workers' demand in this connection, it is obvious that the employers will get little support from it to resist this demand. It may interest them to know that the principle of co-management is gradually receiving recognition at the hands of employers in Western Europe. Several industries in West Germany are being run on the principle of co-management. The issue of bonus shares to employees by some of the big industrial concerns in the U.K. is also based on this principle. That is, perhaps, one way of placing on firm foundations a "property-owning democracy," as Sir Winston Churchill described Britain to be in one of his memorable speeches last year in his capacity as its Prime Minister.

To revert to our discussion of State-owned industries in India. Almost all of them are based on foreign technical skill secured through special agreements. In the case of a number of these ventures, such skill has been obtained from countries which are either small or which do not figure as the foremost producers of the industries concerned in the world map or with which India has had no significant trade relations. At the time when agreements were concluded with these countries, the Government was warned by its well-wishers in the private sector not to buy technical aid and skill from them, but this warning went unheeded. It is regrettable to find that events have justified this warning. Competent observers who have seen the shipyard at Visakhapatnam and the machine tool factory at Jalahalli, the two most important major industrial undertakings in the public sector, assert that one of the principal causes for the poor progress of these projects is the sluggishness of the foreign experts who are in charge of them. The shipyard is under French experts, while the machine tool factory is under Swiss experts. India's experience of Swiss experts in regard to the Perambour railway coach factory also was not satisfactory and a row had to be kicked up for bringing them round. The expert assistance received from Sweden in regard to the housing factory was so defective that it became a scandal. Mr. Reddy himself admitted in the Lok Sabha that two of the top men sent by the French concern which is in charge of the technical direction of the yard "were found not up to the mark" and had to be sent back. He, however, did not say how long the Government took to discover that these top French technicians were useless. Several instances of similar nature can be cited. But enough has been said to show that it is not safe to enter into agreements for technical and other assistance with countries which are small producers and have not attained international eminence in the fields in which India needs help. This is particularly so in the case of projects owned by the Government, for the Government itself is inexperienced in these matters. In spite of the aforesaid bitter experience, the authorities continue to make similar mistakes, as witness their steel deal with Russia, a country about which little is known.

PROBLEMS OF PAPER INDUSTRY

FOR a country of India's continental size, the total consumption of paper is certainly pitifully small. Estimated at about 240,000 tons, the consumption works out to one pound per person, as against the impressive *per capita* consumption of 340 lbs. in the U.S. and 60 lbs. in Europe. But the trend of output and consumption in recent years, especially in 1954, has been encouraging. Mr. C. J. E. Keene, Chairman of the Indian Paper Makers' Association, was, therefore, fully entitled to the claim that 1954 was a "progressive year" for the paper industry. Addressing the recent annual meeting of the Association, he pointed out that India produced 155,328 tons of paper in 1954, as against 139,704 tons in 1953 and 108,912 tons in 1950. Had illegal strikes not interfered with production, the industry would have established an even more creditable record.

Although the paper industry may thus derive considerable satisfaction from this trend in output, it faces a somewhat difficult issue in the shape of the newly-imposed 10 per cent. excise duty. Like many measures of its kind, this levy, which forms part of the budget proposals for the current year, derives its justification from the Taxation Enquiry Commission which held that a "moderate rate of duty could be levied with exemption for hand-made paper." Whether the levy is justified or whether the 10 per cent. rate can be called "moderate" are debatable issues. Surely, a levy on paper is a tax on knowledge, considering that a very large proportion of the paper produced in the country is used for printing text books. Also, it is too early to say what the effect of this duty would be on production trends An immediate issue, however, is that the form in which the tax is being levied, that is, the *ad valorem* basis, introduces additional complications in the already necessarily complicated structure of paper prices. Because the levy is imposed at a flat rate, it distorts the finely balanced structure of paper prices. As Mr. Keene pointed out, paper is not produced in bulk like cement or sugar, there being a wide range of different qualities of paper. These, in turn, are sub-divided into different varieties in accordance with their thickness, size, colour and finish. There are further sub-divisions which depend upon the processes through which paper, after it is manufactured, passes, such as embossing, ruling and cutting. In short, there are varieties and varieties of paper, and there is necessarily a wide range of prices. A flat rate of excise duty will, therefore, weigh less heavily on some varieties, more heavily on others, and will generally distort the price differentials between varieties. It is, therefore, necessary that a different method of levy should be evolved, if excise duty is to prove a tolerable burden on the paper industry.

Such a change would no doubt be welcome to the industry. It would, however, be no solution to the problem of rising costs. Indeed, the duty is unwelcome precisely because it is imposed at a time when production costs have risen and are rising. The Government is burning the candle of industrial profits at both ends. On the one side, its decisions are calculated to increase production costs and thus reduce profits. At the other end, the profit margin is sought to be reduced through taxes. This seems particularly true of the paper industry. Mr. Keene pointed out how the industry's production costs have risen through such measures as withdrawal of concessional freight rates on bamboo, higher coal freights and increased labour costs. Surely, the Government cannot have it both ways. It cannot complain if prices of manufactured goods do not come down, while it does all it can to swell production costs and heaps fresh burdens on industries.

It should be possible for the Central and State Governments to assist the industry in bringing down its production costs. Thus, they could—in fact, they ought to—follow a constructive long-range forest policy. The paper industry has a vital interest in the conservation and development of forests, for its main raw material, bamboo, is a forest product. Mr. Keene deplored that the State Governments' forest policy seemed intended "only to derive the highest possible revenue in the shortest possible time by means of annual auctions of forest areas" and that forest areas were being "ruined by some unscrupulous contractors." Recognising that the main problem of the industry was the shortage of raw materials, which has been accentuated by the partition of the country, the Planning Commission suggested several measures which, if implemented, would improve the raw material position. These measures included: (1) Reservation of specific forests areas for the paper industry and grant of long-term leases for working such areas; (2) a rational method of price-fixation on an all-India basis to enable the industry to obtain regular supplies of bamboo and grass at reasonable prices; and (3) development of roads in forest areas for facilitating transport of raw materials to factories. The Commission further insisted that the State Governments should follow a uniform policy for leasing bamboo and other timber forests and to undertake plantation of bamboo and development of *sabai* grass in order to make good the depletion of raw materials through consumption by mills.

It is deplorable that the Central and State Governments have not given sufficient attention to the problem of raw material supply to the industry. In bamboo, this country has a raw material which is superior in certain respects to the raw material used by the paper industries in several countries. Bamboo is a first-rate raw material for paper. It is as cheap as the States' forest policies can make it. It has the additional advantage of rapid and dense growth. The softwoods, a raw material for the paper industry in certain countries, take four to five decades to attain maturity, whereas bamboo attains full growth in four to five years. Again, since bamboo grows densely, no extensive area is needed for purposes of bamboo cultivation. Further, bamboo cultivation requires little attention. Since nature has endowed this country with such excellent raw material, there should be no difficulty in assuring the industry of an ample and continuous supply of the material it needs for manufacture of paper.

Indeed, if the Government takes care to see that there is no shortage of raw material for the industry, that raw material is made available at economic prices and also provides easy communication and prompt transport facilities for the carriage of this material to the factories, it will have done a signal service to the industry. Such measures would also help bring down production costs. The industry should, on its part, respond to such assistance by producing quality paper and that, at reasonable prices. The Planning Commission has advised the industry to modernise the technique of production, in order to achieve two objectives, namely, (1) reduction in the price of paper by reducing the consumption of fuel and different raw materials and (2) improvement in the quality of different varieties of paper, particularly wrapping paper and kraft paper. It is not clear what progress the industry has made in these directions.

There is no gainsaying the fact that early and rapid advances should be made in the direction of increased output, lower prices and better quality. India's consumption of paper is bound to increase with the improvement in its economic position and the spread of literacy. Education both aids and is aided by the paper industry. There is widespread resentment that text books are costly and lack physical excellence like durability and get-up. These defects could be remedied by attention to printing and through use of better paper. It should be the joint responsibility of the Government and the industry to aid the spread of literacy and to help place attractive books at reasonable prices in the hands of young children. The market for paper is there and the necessary raw materials for producing it are there and their supply can be replenished by following a judicious forest policy. If there is surplus production, it is possible to build up even an export market. As, Mr. Keene said, "with careful husbandry of her products, the Indian industry should be able to look forward to a period of expansion and not only fulfil the growing demands for supplies of paper for the nation, but even go further and develop a healthy export trade." A prosperous and expanding paper industry is certainly not beyond the pale of immediate possibility.

TAX ON INTER-STATE SALES

THERE is no more vexatious aspect of the fiscal system in India than the levy and collection of sales tax by the States on inter-State transactions. Ever since the Supreme Court conceded the right of the States to levy the tax on inter-State sales, the State Governments have left no stone unturned to collect the tax on such sales. This has meant considerable hardship, not to say harassment, for the traders in nearly all the States. The trading community, naturally enough, heaved a sigh of relief when the Taxation Enquiry Commission, after an impartial and exhaustive survey of the problem, held that the levy of tax on inter-State sales should be the concern of the Union Government, though powers should be delegated to the States to assess and collect the tax. The receipts, the Commission said, should, however, be distributed among the States on the basis of collection.

If the scheme suggested by the Commission were implemented, it would certainly put an end to the difficulties arising from the present procedure of levying tax on inter-State trade. The dealers are now finding it very difficult, as a communication addressed by the Indian Merchants' Chamber to the Government of India points out, "to keep themselves fully informed of the provisions in the Sales Tax Acts of several States." Also, they are not in a position to "know exactly their liabilities and obligations under the various State tax laws." The Chamber says: "In short, the application of their own sales tax laws to non-resident dealers by the different State Governments has given rise to a great deal of chaos and confusion in the spheres of inter-State trade and commerce." It is precisely this state of affairs that the Commission's scheme is intended to remedy.

The Commission rightly pointed out that, if its scheme were accepted, it would become unnecessary for the States to continue their present practice of taxing non-resident dealers. It, however, recognised that some constitutional amendments would become necessary before its scheme could be implemented. Accordingly, it proceeded to suggest such amendments. It further stated: "In the event of our recommendations being accepted, it would be imperative that the States do not attempt either to tax non-resident dealers or to introduce a purchase tax during the interim period, that is, during the time taken to carry out the necessary constitutional and legislative measures for implementing the scheme proposed by us." After drawing the Union Government's attention to this recommendation, the Chamber has urged the Government "to persuade the State Governments to desist from levying and collecting inter-State sales tax from non-resident dealers, pending the implementation of the permanent solution of the problem of inter-State sales tax recommended by the Taxation Enquiry Commission."

The Chamber's request is clearly based on the Commission's recommendation. It is true that, if this request were granted, the State Governments would lose some revenue during the interim period. But it would provide considerable stimulus to inter-State trade. As this trade expands, the State Governments are bound to derive more and more revenue through receipts from the Central pool of sales tax on inter-State trade. Also, this interim period can be shortened if the Union Government takes early action to amend the Constitution and levy sales tax as recommended by the Commission. It is perhaps a sad commentary on the Union Government's sense of legislative priority that, whereas the Government has so far taken no action on the Commission's recommendation on the vital and pressing problem of sales tax on inter-State trade, it has shown indecent haste in carrying through controversial constitutional amendments of doubtful value.

In many trading centres, notably Delhi, Ludhiana and Jaipur, there has been very strong agitation against the imposition of inter-State sales tax. Wholesale and retail businesses were partially or wholly suspended last week as a mark of protest against the levy. There is evidence to show that the movement is gaining strength as well as spreading. This shows that the patience of traders—wholesale and retail—has reached breaking point. An obnoxious feature of the tax is its complexity. We have repeatedly emphasised that, in India, where traders do not possess high educational attainments, the tax system should be simple and easily intelligible. The regulations relating to inter-State sales tax do not answer this test. Small wonder that the traders find the levy not only burdensome but mysterious.

While we strongly deprecate the form which this agitation has taken, we would urge the Government to restore confidence among the traders by appropriate action. The Speaker of the Lok Sabha disallowed an adjournment motion which sought to discuss the situation arising from the levy of inter-State sales tax. In disallowing the motion, the Speaker said that sales tax was a State subject, that the situation had been continuing for a long time and that nothing had suddenly arisen to justify the motion. The Speaker is, of course, technically correct in his decision. Even so, it does not take into account the serious turn which the agitation has taken. It is to be hoped that, when the Finance Ministry's demands come up for discussion, he will allow a fuller discussion of the subject. By then, the Government too should be in a position to take a constructive decision.

SUGAR INDUSTRY HEADING FOR TROUBLE?

LANCASHIRE TEXTILES—OILS AND OILSEEDS

THURSDAY, 5 P.M.

MARKET GOSSIP

THE sugar industry seems to be in for trouble again. We advisedly say "seems to be," because the trouble can be averted, if the Government acts wisely without any further delay. This time last year, the price of sugar was shooting up. But now the reverse is true; during the last few days, there has been a perceptible fall in sugar prices. This time last year, the Government was rushing sugar to upcountry markets to prevent consumers being squeezed by the merchants. Now, too, the Government is rushing sugar bags to the interior. Only, the object is different. It wants to dispose of its sugar stocks as quickly as possible, so that it can get the maximum profit. The Government knows as well as the industry that sugar stocks are mounting and that, if it were not to sell its stocks now, it might have to do so later at prices considerably lower than those current. This anxiety of the Government is understandable. It may even appear to be laudable, for the authorities have to safeguard the interests of public revenue. But at whose cost are they doing this? The victim here happens to be the sugar industry.

• • • •

It is common knowledge that sugar mills cannot release their production to traders unless the Government permits them to do so. This control was introduced in order to prevent mills, in days of shortage, from distributing their output to hoarders and to ensure the maintenance of a reserve stock for meeting unforeseen contingencies. But the Government is using this regulation now for a different purpose, namely, to protect its stocks of imported sugar from depreciating in value. Apparently, it wants the industry to shoulder the burden of excess stocks, a case of "heads I win, tails you lose." As if this is not enough, the Government has started undercutting the mills, in that it has substantially reduced the issue price for imported sugar. As a result of this reduction, the industry will have to bear practically the whole of the recent increase in the excise duty on sugar.

• • • •

This is hardly fair to the industry. The Government has compelled the industry to pay a fixed price of Re. 1-7 per maund for sugarcane. On this basis and taking into account the increase in excise duty, the fair price for factories is Rs. 28-8 per maund. They would not be able to get this price if the Government were to continue sale of imported sugar at Rs. 29-4 even in the interior markets. Besides the heavy import duty, the Government is making a fat profit, notwithstanding the reduction made in its selling price. The landed cost of imported sugar is still cheaper. It can, therefore, very well afford to wait and let the industry sell its production first. Or it should guarantee the fair price to the industry. Indeed, the Government has a moral obligation to the industry in this respect, inasmuch as it has fixed the minimum price for cane at Re. 1-7 not only for this season but also for the next.

• • • •

Why is it that the country which faced scarcity of sugar last year is now confronted with a surfeit of it? An answer to this poser is provided by Mr. Gulabchand Hirachand in his speech to the shareholders of the Walchandnagar Industries Ltd., published on page 729 of this issue. Briefly stated, production of sugar is going up, while consumption is falling. On the basis of production up to the end of March last, it can be safely stated that the total output during the 1954-55 season will be 1.4 million tons, as against a little over 1 million tons in the 1953-54 season, an increase of about 400,000 tons. On top of this, imports (including raw sugar) are expected to amount to 600,000 tons, of which more than half have already arrived. In the past season, imports aggregated 676,000 tons. Adding the surplus of about 50,000 tons brought in from the previous season, the total supply for the current season will be of the order of 2,050,000 tons. This compares with 1,869,000 tons in the 1953-54 season. While there is thus an improvement of nearly 200,000 tons in supply, consumption is expected to fall by 300,000 tons, that is, from 1.8 million tons to 1.5 million tons. The main reason why consumption is falling is stated to be the relative cheapness of *gur* consequent upon increased production.

• • • •

On the basis of the aforesaid statistics, the country will have an end-season stock of 500,000 to 510,000 tons of sugar, as against a mere 50,000 tons at the commencement of the season. What will be the repercussions of such large stocks on the next year's production? Trade circles feel that the effect will be very serious, especially as the industry will have to nurse the bulk of these stocks. The factories may not be able to commence crushing early next season, in which case cane will go abegging. More *gur* may be produced which in turn will depress *gur* prices further. The result of this will be lower cane sowing for the subsequent season, leading, once again, to lower sugar and *gur* output and higher prices for both. In short, the fortunes of the industry will continue to fluctuate, a sad reflection on the efficiency of a planned economy which India is supposed to be.

• • • •

The sugar industry and trade feel that this state of affairs can be avoided if the Government acts quickly. Fortunately, for the country, all import orders have not yet been executed. Out of the Government's commitments of 450,000 tons, only about 300,000 tons are said to have arrived, leaving a balance of 150,000 tons. The position about raw sugar is not clear. May be, the bulk of it has yet to reach this country. It is suggested that the Government should cancel all the pending import orders and let the importers of raw sugar also do likewise. This will bring down the surplus at the end of the season to a manageable proportion of 200,000 or 250,000 tons. We are told that the Government will have nothing to lose by re-selling the sugar which it has bought as the world price has gone up by £2 to £3 per ton since the placing of orders. This margin is believed to be more than sufficient to cover the penalty it will have to pay for cancelling the shipping space that has already been reserved. Even if there were to be a slight loss on this score, it would be better, it is argued, to incur that loss rather than face the unpleasant consequences of a heavy carryover at the end of the current season. As there appears to be considerable force in this suggestion, the Government will do well to pay serious thought to it.

• • • •

In the light of what has been stated above, the outlook for sugar shares has become somewhat uncertain. So far as the Deccan factories are concerned, the effect of lower prices on profits may be offset, to a considerable extent, by the increase in production facilitated by larger sugarcane crop. But their position in the next season cannot be foreseen, unless the Government clarifies its import policy. If the suggestion made by a section of the industry is accepted and the import programme revised, the chances of their faring better, without any marked fall in their earnings, will certainly improve.

• • • •

The British cotton delegation, which was in this country last week and had discussions with millowners, importers and the Government, has returned home with some achievements to its credit. Its visit has definitely helped both the countries to understand and appreciate each other's position better. The British delegates obtained a clear view of the Indian textile industry's problems and performance. They were struck, we learn, by the high level of taxation to which the industry here is subjected. They realised that, because of this taxation—excise duties, cesses and sales tax—the effective level of import duty on their goods was not as high as they once believed it to be. It would appear that a moderate reduction in import duty on fine and superfine goods—the only varieties in which they are interested as exporters to this country—will satisfy them.

• • • •

Some spokesmen of the mill industry hold the view that India will do well to make this gesture to Lancashire which is still a power to reckon with in British domestic politics. They feel that, as the present system of quoting import duties leads to misunderstanding in foreign countries, the Government should express them at so much percentage above the excise duties. It would appear that the millowners have either suggested or are about to suggest to the Government that they would have no objection to the import duties on fine and superfine counts being reduced by 20 to 25 per cent., provided the rate of duties were related to the excise duty as just mentioned. They realise that any such reduction will have to be followed by a similar cut in the standard rates applicable to non-Commonwealth countries. But they are confident that, as the margin of preference in favour of Commonwealth countries is as high as about 40 per cent., it would be very difficult for Japan to take advantage of this reduction to the detriment of Lancashire. It is pointed out by them that, as Britain is importing Indian cotton textiles at the rate of 120 million yards per annum, it is worthwhile to offer some concession to the cotton goods of that country in the Indian market. Most of these goods will be of types not manufactured in this country. Further, it is believed that total imports of British cotton textiles may not be more than 15 or 20 million yards. If this estimate is correct, it is not, of course, something that can upset the position of Indian cotton mills. It represents only a fraction of our domestic consumption, amounting to about 5,000 million yards, including the handloom products.

• • • •

The fall in agricultural prices has rightly attracted public attention and has been the subject of Parliamentary discussion. Whether the fall is really as serious as those who speak for the farmers make out and whether the suggested remedies, including support levels, will arrest the fall are all disputable issues. But there is an aspect of this controversy that deserves notice. Whenever the subject of fall in agricultural prices is discussed, it seems to be tacitly assured that only foodgrain prices need attention. What is ignored is that, if there has been a marked fall in the prices of foodgrains, the fall is no less marked in that other variety of food articles, oilseeds. Over the last 12 months, groundnut, Khandesh quality, has declined from Rs. 36-14 to Rs. 20-4 and groundnut oil from Rs. 18-6 to Rs. 10-14. Non-edible oilseeds have suffered a similar fate. Linseed bold has declined from Rs. 26 to Rs. 21-6 and castorseed from Rs. 23-4 to Rs. 14-2. Linseed oil, which was quoted at Rs. 15 a year ago, is now quoted at Rs. 13-0 while castor oil has receded from Rs. 11-12 to Rs. 8-2. If the next monsoon turns out to be as good as the last, this trend may even be accentuated.

• • • •

For two reasons, the fall in oilseeds prices is, perhaps, more serious than that of foodgrains. In the first place, the foodgrain output per acre has increased, so that the farmers' total income has probably not been too heavily reduced. There has been no such improvement in the output of oilseeds. Secondly, it could be claimed for foodgrains that their production has very nearly caught up with demand. In the case of oilseeds, especially edible oilseeds, there is need to step up output both because they are an important article of subsidiary diet and increased production is needed to permit the crushing industry to utilise all its available capacity. The fall in oilseeds prices assumes significance only in so far as it is likely to affect adversely the cultivation of this crop.

• • • •

From the point of view of the crushing industry, an ample supply of oilseeds is a vital consideration. It is an equally vital consideration from the point of view of the people's nutritional needs. These two aspects of the oilseeds economy were lucidly explained by Mr. H. R. Raja, President of the Bombay Oilseeds Crushers' Association, in the course of his address at the recent annual meeting of the Association. Mr. Raja called attention to the fact that, for some years past, the crushing industry has been able to utilise no more than 50 per cent. of its capacity. He attributed this to "non-availability of oilseeds at appropriate times, non-parity of oils and oilseed prices, heavy cost of production, labour trouble, unbearable taxation, etc."

• • • •

Thus, while vegetable oils output is lower than what it could be, India's population is increasing at a rate of 4½ millions a year, which "will have to be fed with oils and fats for proper nourishment." The *per capita* consumption of fats in India is as low as ½ oz. per day, as against a minimum of 2 ozs. recommended by the Nutritional Advisory Committee. The Planning Commission, it may be recalled in this connection, calculated that, on the basis of the minimum level of fat consumption envisaged by the Committee, the "total annual requirements of fats of the entire population in the country would come to about 7.0 million tons, as against the present estimated consumption of 1.2 to 1.3 million tons of fats." It must be remembered, however, that the non-vegetarian section of India's population supplements its fat requirements from certain non-vegetarian sources. In any case, India's fat requirements are, to a very large extent, met from vegetable sources, that is, from vegetable oils. The production of edible oilseeds has, therefore to be increased from the present level of 5.5 million tons. Emphasising that the Indian Central Oilseeds Committee's target of 6.7 million tons of oilseeds should be reached during the period of the second Five-year Plan, Mr. Raja said that particular attention would have to be devoted to fuller utilisation of the capacity of the oilseed crushing industry and to the encouragement of cottonseed crushing. Considering that India produces a larger quantity and variety of oilseeds than any other country in the world, it is certainly strange that there is no organised facility for research. Mr. Raja deplored that, while many industries, some of them even smaller than the oil industry, had exclusive and well-equipped National Research Laboratories, there were no such facilities for the vegetable oils and allied industries.

• • • •

A controversy, similar to that of mills *versus* handlooms, has, as is well known, developed in the sphere of the oilseeds crushing industry too. Here, the village *ghanis* are pitted against the organised crushing factories. There are suggestions for the reservation of certain oilseeds for exclusive exploitation by *ghanis*. Obviously, this is an echo of the policy of reserving certain varieties of *saris* and *dhotis* for handlooms. There is also a suggestion that the power mills should be subjected to an additional cess, which is again a shadow of a similar burden to which the cotton mills have been subjected. The crushing industry is naturally perturbed by these suggestions. Mr. Raja said that any policy of reservation of certain varieties of oilseeds for crushing by *ghanis* would have "deleterious effects on employment, supply of oils to consumers, exports, etc., and will mean the ruin of this struggling industry" (crushing industry). He rightly pointed out that the village *ghani* already enjoyed certain advantages in the shape of a local market where it could buy seeds and sell its oil and cake and exemption from sales tax, income-tax and other levies. The crushing industry, besides having to pay all the taxes to which other industries are subject, has to bear the burden of railway freights, labour charges and the cess of one anna per maund of oil produced. He said: "No one would grudge the village *ghani* its due, but I trust that the Government would so devise their policies and taxation structure as would be conducive to the healthy development of the power crushing industry also, in the interests of all concerned." From this point of view, it is certainly a pity that the Committee which the Government has appointed to enquire into the position of the seeds crushing industry does not contain any representative of the power mill, although it has representatives of village *ghanis*. This is a serious defect in the composition of the Committee. It ought to be possible to include one or two representatives of the crushing industry in the Committee. Otherwise, the Committee would, as Mr. Raja pointed out, be "deprived of expert advice and guidance of this branch of industry in which crores of rupees have been invested and which has come to play an important role in the economy of India."

• • • •

A country-wide network of organised markets for oils and seeds is necessary for the progress of the oils industry. The Forward Markets Commission is now engaged in the task of regulating forward trading in seeds and oils. As a first step, it has invited applications from trading bodies which desire to be recognised for purposes of forward trading in oils and seeds. Mr. Raja, on behalf of the Association of which he is the President, urged the Commission to see that in any association it might deem proper to recognise all interests (that is, producers, consumers, crushers, exporters, *vanaspathi* manufacturers, merchants and brokers) were genuinely represented. Further, the exchange should be so organised as to render to its constituents such services as modern arrangements for

(Continued on page 763)

DULL CONDITIONS IN SHARE MARKET

WEAKNESS IN STEELS AT CLOSE

From Our Own Correspondents

BOMBAY, 14th April

TRADING on the Stock Exchange was characterised by extremely sluggish conditions during the week under review, in the absence of fresh incentives. Activity was restricted and fluctuations were confined to a narrow range. There was no selling pressure during the major part of the week and the undertone remained quietly steady. At the close of the week, however, heavy liquidation in steel shares by one of the main operators who was involved in the debacle of the cotton market affected sentiment, and values over a wide front were pruned.

The higher production of the Indian Iron and Steel Company for the year ended 31st March, 1955 failed to enthuse the operators, who appeared more concerned about the retention prices. Nor did the Prime Minister's assurances in the Lok Sabha, while moving the Constitution Amendment Bill as reported by the Joint Select Committee, that no property would be acquired except on payment of just compensation, inspire the market men, because there was no change in respect of the main issue; the payment of compensation under the Bill is non-justiciable.

In the steel section, Tata Ordinaries drifted, early in the week from Rs. 239 to Rs. 236-8, but staged a recovery to Rs. 239-8 yesterday. Today, however, the heavy selling pressure brought them down to Rs. 235-12, the lowest level since 1st March this year. Indian Irons moved between Rs. 35-6 and Rs. 35-1½, before dipping at the close to Rs. 34-15, a level that has not been seen since 4th March.

Textile shares were sustained for a while at higher levels, on reports of good enquiries in the cloth market, but subsequently developed a softening tendency in consonance with the steel shares. Bombay Dyeings advanced from Rs. 469-6 to Rs. 471-14, but retreated to Rs. 466-14. Kohinoors declined over the week by Re. 1-8 to Rs. 313 after touching Rs. 316. Centurys were done up to Rs. 383, as against last week's closing of Rs. 380, though at the close they were marked down to Rs. 378-12. Central Indias were dull at Rs. 126-8. Finlays were held at Rs. 260. Gokaks were put through at Rs. 215 *ex-div.*, as against Rs. 230 *cum-div.* last week. New Citys picked up Re. 1-4 to Rs. 141-4 and New Greats Re. 1-12 to Rs. 149. Simplex advanced by Rs. 2-12 to Rs. 149-8, due to proximity of dividend announcement. Standards closed at Rs. 343-12 *ex-div.*, as compared with Rs. 363-12 *cum-div.* Svadeshis hardened by Rs. 4 to Rs. 194-8.

The improvement in Bank of Indias and Imperial Banks, consequent on better enquiries during the latter part of the week was the main feature in the banking section. Bank of Indias gained Re. 1-12 to Rs. 148-4. Imperial Fully Paids, after dropping from Rs. 1,577-8 to Rs. 1,565, recovered to Rs. 1,580 before closing at Rs. 1,577-8. Partly Paids recorded a gain of Rs. 8-12 to Rs. 388-12, although they were done lower at Rs. 375 during the week. Barodas were fractionally lower at Rs. 108. Centrals were held at Rs. 504, while United Commercials changed hands at As. 4 better at Rs. 44-8.

In the miscellaneous section, sugar shares displayed some weakness, in contrast to the better tone in the previous week. Belapurs lost Re. 1-8 to Rs. 312, Phaltans Re. 1 to Rs. 117, Walchandnagars Rs. 2-8 to Rs. 222-8 and Bhopals As. 14 to Rs. 13-6. In the cement section, A.C.C. disclosed a loss of Re. 1 to Rs. 179-4, while Digvijays were steady at Rs. 179-8. Shipping counters did not show any deviation from the general pattern, Scindias being placed As. 4 lower at Rs. 15-3½ and Great Easterns As. 8 lower at Rs. 16-2. India Steamships softened from Rs. 7-12 to Rs. 7-10. In the engineering and mining group, Alcocks continued to rule extremely weak with a further drop of Rs. 10-10 to Rs. 261-14. Premier Constructions were, however, better by Rs. 2-8 at Rs. 160-8. Shivrajpurs slumped from Rs. 80-8 to Rs. 75-12. B.B. Petrols were on offer to decline by As. 10 to Rs. 3-4, due to disappointment over the absence of any increase in dividend. Indian Coppers lost As. 2 to Rs. 3-8½. Among other miscellaneous industrials, Bombay Burmahs (old) closed at Rs. 468-2, as against Rs. 470, after touching a high of Rs. 476-4. National Rayons moved up from Rs. 202 to Rs. 204, but slipped back to Rs. 200-8. B.I.Cs. lacked support and dropped As. 5½ to Rs. 7-13½. Killicks picked up Re. 1 to Rs. 173, Wimcos firmed up by Rs. 2-8 to Rs. 202-8. Tata Chemicals were quiet at Rs. 15 and Tata Oils at Rs. 40.

• • • •

Calcutta Stock Exchange

CALCUTTA, 13th April

There was a broadening of activity on the Calcutta Stock Exchange during the week and the volume of business increased. Tea shares were again the centre of attraction and were sent to high rates. The tea crop during this season is expected to be larger than in the previous season, and it is thought that India would be able to utilise its export quota to the full as well as complete the carry forward from the 1954-55 season amounting to 19 million lbs. Sugar shares were shown increased attention and more scrips changed hands. Another lively section was paper shares, which attracted attention on account of the plans of mills to increase their capacity and production. Engineerings were firm. There is a keen desire in the market to await Government's announcement regarding new steel prices. Jute shares, however, were sluggish around previous levels, as business for export in jute goods was lacking and there was a substantial increase in stocks of goods held by mills as at the end of March. There was a decline in the prices of jute goods, and with the expected entry of Argentina in the market the present lull may come to an end.

Sectionwise, teas accounted for several advances, the more important of which are given below:

	Rate as on 5th April	Latest quotation	Gain
	Rs. a.	Rs. a.	Rs. a.
Hoolungoorie	385 0	407 0	22 0
Telliapara	210 0	228 0	18 0
Teen Ali	45 8	52 0	6 8
Methoni	31 8	33 10	2 2
Bishnauth	50 6	53 4	2 14
East India	32 10	34 8	1 14
Hansqua	33 0	35 8	2 8
Dufflaghur	51 4	57 4	6 0
Sapoi	45 12	47 8	1 12
Baghmari	29 8	34 4	2 0
Central Cachar ..	160 0	170 0	10 0
Gungaram	483 0	506 0	23 0
Hantapara	411 0	417 8	6 8
Hasimara	49 2	50 4	1 2

Engineering shares were maintained at previous levels. Texmacos recorded rates between Rs. 16-15 and Rs. 17-3, returning today to Rs. 17-1. Burn & Cos. rose from Rs. 270 to Rs. 271 on Monday, but lost to Rs. 268 on Tuesday. Indian Irons rose from Rs. 35-5 to Rs. 35-10, but subsequently gave way to Rs. 35-2, before regaining today to Rs. 35-5. Indian Standard Wagons were steady at Rs. 139, while Indian Galvanizings, after realising Rs. 23-8 receded to Rs. 23-2. Jessops were unchanged at Rs. 35-15, but Kumardhubis were easy at Rs. 11-12.

Jutes were quiet. Howrahs receded from Rs. 29-12 to Rs. 29, although a recovery was staged today to Rs. 29-10. Ganges, on the other hand, were a few points better at Rs. 105, and Deltas changed hands at Rs. 258, as against Rs. 255 earlier. Budge Budges were shown moderate interest and at Rs. 199 were better by two points. Anglo-Indias after remaining unchanged at Rs. 228 receded today to Rs. 266, and Nationals, after registering a fall from Rs. 34-10 to Rs. 34-4 shifted to Rs. 34-8. Gourepores were steady at Rs. 344. Under moderate support, Naihattis advanced from Rs. 116-8 to Rs. 119. Chitavalsahs were fractionally higher at Rs. 14-11. *Champdanies changed hands today at Rs. 172.*

Shares of paper mills were in good demand. Titaghurs were taken from Rs. 43-14 to Rs. 44-4, but subsequent profit-taking neutralised the gain. At Rs. 258, India Pulps were strong by two points. Shree Gopals, after giving way to Rs. 16-1, recovered to Rs. 16-6. Bengals were steady at Rs. 67.

Miscellaneous industrials were not subject to visible changes. Thus B.I. Corporations were put through at Rs. 8-3 and F. & C. Oslers at Rs. 17-4. Indian Wood Products changed hands at Rs. 39-2, while Rohtas Industries moved down from Rs. 24-7 to Rs. 24. B.B. Petroleums, after giving way to Rs. 3-3 from Rs. 3-14, staged a partial recovery to Rs. 3-6. I.B. Petroleums were done at Rs. 126. Indian Cables were quiet at Rs. 25 and Indian Coppers were bought at Rs 3-10.

• • • •

Madras Stock Exchange

MADRAS, 13th April

The Madras Stock Exchange presented a mixed trend during the week under review. Textiles came in for very little enquiry on lack of demand for piecegoods both from consuming centres in India as well as abroad. The performance of teas among plantings was, however, encouraging, and some selected scrips received good support. Despite expectations of a good crop, it is believed that it might not be sufficient to meet overseas demand, which is likely to improve further. Rubbers ruled rather quiet, and so did coffees. There was little activity in banking, sugar and electric shares. Miscellaneous and insurance scrips evoked some moderate enquiry. On balance, business transacted over the week was moderate. The undertone was steady.

There were a few important dividend announcements during the week under review. The Directors of Travancore Rayons Ltd. declared a dividend of 6¼ per cent. for the year ended 31st December, 1954, as against 5 per cent. in the previous year; an increase of 1¼ per cent. The Directors of Travancore Cements Ltd. increased the dividend from 5 per cent. for the year 1953 to 6¼ per cent. for the year 1954. The West Coast Electric Supply Corporation Ltd. announced an interim dividend of 5 per cent. (tax-free) for the half-year ended 30th September, 1954. The dividend for the year ended 30th March, 1954, was 10 per cent. (tax-free). The Cambodia Mills Ltd. passed over the dividend for the year ended 31st December, 1954. The dividend for 1953 was 7½ per cent.

AMERICAN LETTER

FEDERAL RESERVE BANK BUYS BANK BILLS

PRESIDENTIAL ELECTION PROSPECTS

From Our Special Correspondent

NEW YORK, 7th April

THE business recovery in the United States made further progress in March against the background of political uncertaintics. Several Government spokesmen predicted a mid-April invasion of islands around Formosa—statements which were disputed by the White House. The financial markets, while a bit jittery, paid no attention to the forecasts of imminent shooting in the Pacific and their strength stemmed chiefly from the business outlook. The orderly transfer of the Premiership from Sir Winston Churchill to Sir Anthony Eden in Britain was also accepted here with calmness.

There is very little which can be reported on the progress of foreign trade legislation. What has happened, however, is that the Federal Reserve system, for the first time since 1951, has stepped into the open market for bankers' acceptances.

First purchases for own account and others under repurchase agreement with dealers did not amount to very much so far as total dollar amounts are concerned. Psychologically, however, it constituted market support for that type of financing.

It meant not only a change of policy, but a positive intervention on the side of the advocates for greater foreign trade headed by President Eisenhower himself. In that sense, what appeared a strictly isolated move by the monetary authorities here, should be understood abroad as a major indication of assurance of the positive attitude of Government leaders here in relation to foreign trade, regardless of what legislators do or do not about it.

While the monetary authorities in the United States are still more afraid of deflation than inflation, interest rates, at present, have a rising tendency. Commercial paper rates have been rising fractionally over the last two weeks and this trend will make itself felt, no doubt, in all segments of the money market in due course.

The Employment Act of 1946 is now the main guide of public economic policy here. This means full employment, but not necessarily maximum employment. It also means, though, that the doctrinarian concept of a balanced budget and sacrifices to achieve this end will be subordinated to the full employment philosophy, even if it does mean a little more inflation.

Cost of Living Stable

The present Administration so far has achieved a precariously fine balance between inflation and deflation. It inherited a budgetary situation it could not alter, but the means of coping with it have been far less inflationary than in previous Administrations. The net result has been that, since President Eisenhower took office, the cost of living has been more or less stable.

This has benefited the people, but it is, undoubtedly, not realised too much. It has also been of considerable benefit in the financial markets where traders and securities underwriters knew the official position and could engage in some long-range planning.

Presidential Election

Politically, things are beginning to foreshadow the Presidential election of 1956. At this time, it looks as though President Eisenhower will run again, and, as indicated in previous despatches, his popularity has never been greater.

Traditionally, he should be opposed by the Democratic standard bearer, Adlai Stevenson. So far, neither Mr. Eisenhower nor Mr. Stevenson have declared their intentions. There is another contender in the field, Averell Harriman, who has held many Government posts and who was elected Governor of New York State.

It could just be that Mr. Stevenson may figure he could not beat Eisenhower if he ran again and he may manœuvre the nomination of Harriman. It is also possible, in my opinion, that party leaders among Republicans and Democrats may force the nomination of both Eisen-

(Continued on page 763)

NEWS IN BRIEF

THE *Lok Sabha* passed on 12th April, 1955, by a very large majority, the Constitution (Fourth Amendment, Bill, as revised by the Joint Committee of both the Houses.

The production of cottonseed in India during 1954-55 is estimated at 1,431,000 tons, as compared with 1,290,000 tons in 1953-54.

Export of calcium sulphate (marine gypsum) will be licensed freely to all permissible destinations other than Portuguese possessions in India.

The Railway Corruption Enquiry Committee, appointed in October, 1953, has completed its enquiry and is expected to submit its report to the Government of India very shortly.

The Madhya Pradesh Government has taken up a preliminary enquiry in connection with the sample survey of agricultural holdings under the F.A.O. World Agricultural Census Programme. The survey is planned to be conducted in 324 villages of the State.

The first of three generators, each with a capacity of 17,000 kw. to be installed at Machkund this year, will be commissioned within the next two months. Power from the Machkund project on the Andhra-Orissa border will be available for public consumption from July.

A proposal is afoot to bring the Forest College at Coimbatore in line with the Forest College and Research Institute at Dehra Dun. For this purpose, a modern forest research institute will be established at Coimbatore, so that forest research can be done in South India without depending on the Dehra Dun Institute.

The Government of India has released a small quantity of Pashmina wool for export from the States of Punjab and Jammu and Kashmir. The future policy with regard to the export of Pashmina wool will be considered after the present quotas have been exhausted in the light of the supply and price position at that time.

The Committee of Experts appointed by the Planning Commission to study the technical and economic aspects of the West Bengal Government's scheme for the establishment of a coke-oven plant at Durgapur has submitted its interim report, in which it is reported to have expressed itself in favour of the project.

The Government of Bihar has drawn up an integrated irrigation plan at a cost of Rs. 57.2 crores for South Bihar and Chota Nagpur on the pattern of major river valley development schemes for inclusion in the second Five-year Plan. The schemes are designed to provide irrigation for about 2.3 million acres and to generate over 10,000 kw. of power.

With a view to encouraging hand-pounding of rice and use of hand-pounded rice, the Madras Government has decided not to give fresh licences for rice mills in the State. A committee appointed by the Government of India is now enquiring into the question of hand-pounding of rice and pulses and its recommendations are expected to be announced shortly.

The President has given his assent to the Coorg Agricultural Income-tax (Amendment) Bill, 1955. The purpose of this Bill is to introduce provisions on the lines of the Indian Income-tax Act for provisional assessment in a summary manner on the basis of the income admitted by the assessees in their returns, and to clarify that agricultural income during 1950-51 will also be liable for assessment.

The Government of India has decided, as an experimental measure, to license freely the export of husks of all pulses, including those of gram. Exports will be allowed by all shippers, subject to a maximum allotment of 100 tons to any one shipper from Bombay, Calcutta or Madras and 50 tons from Jamnagar, Porbandar, Veraval, Bhavnagar, Cochin, Tuticorin, Visakhapatnam, Negapatnam or Pondicherry.

A new source of oil has been discovered in Nahorkatiya in Assam. Out of the seven deep wells drilled so far in the Nahorkatiya region by the Assam Oil Company, which holds a lease for oil prospecting, five wells have shown the existence of oil. It may take some time before an estimate of the new oil find can be arrived at. The oil has been sent to Digboi for being refined.

The employment exchanges placed 12,293 persons in employment during February, 1955. The number of vacancies notified by both Government and private employers during the month was 20,094. As compared with January, the number of fresh registrations of unemployed persons and the total number of unemployed on the register during the month was smaller by 7,500 and 8,000, respectively.

The Planning Committee of the Congress Working Committee has set up a sub-committee, consisting of Mr. Govind Ballabh Pant, Mr. Morarji Desai and Mr. Gulzarilal Nanda, to review the progress of land reforms in the various States in the light of the recommendations contained in the first Five-year Plan. The Sub-committee is expected to recommend measures for speedier implementation of agrarian reforms.

The estimated total output of the iron ore mines in India increased to 362,330 tons in February, 1955, from 358,510 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 68 mines for the month of February, 1955, show that despatches aggregated 257,636 tons to the iron and steel plants and 29,912 tons to the export market. The reported stocks at the end of the month amounted to 945,938 tons.

An agreement has been concluded between the Madras and Andhra States on the question of levy of taxes on various types of vehicles plying on inter-State routes. Under the agreement, each Government will levy two-thirds of the normal tax payable under the Madras Motor Vehicles Taxation Act, 1931, so that the total amount payable to both the Governments would come to 1⅓ of the normal tax on goods vehicles traversing inter-State roads.

The Government of Mysore has introduced a Bill to amend the Mysore Sales Tax Act. This amendment Bill seeks to increase the rates of sales tax on certain kinds of tobacco and tobacco products to the level proposed in the Madras State. Thus, sales tax on bidis will be raised from one pie to three pies per rupee and on other kinds of tobacco and its derivatives from 3 pies in the rupee to 3¼ per cent. The amendment is sought to be made in order to prevent unauthorised movement of these goods into Madras to the detriment of honest dealers.

The newly reconstituted Tungabhadra Board, with Mr. B. K. Gokhale as Chairman, which met for the first time in Hospet, last week, discussed in *camera*, among other matters relating to the execution of the hydro-electric project. Addressing a Press meeting at the end of the Conference, Mr. Gokhale stated that the Board had realised the necessity of expediting the completion of the project at as early a date as possible and had initiated steps necessary for it. He disclosed that the Board had placed orders with a Czechoslovakian firm for the power machinery needed for the generation of electricity.

From Abroad

The Government of the Netherlands has proposed abolition of centralised import of wheat into the country.

With K. L. M.'s new summer time-table, valid from 17th April to 1st October, 1955, the air network will have a length of 240,000 km. (150,000 miles) linking up 106 cities in 68 countries.

The new titanium plant, being erected by Imperial Chemical Industries in the U.K., is expected to commence production this summer. The plant will handle about 1,500 tons of raw titanium annually.

Japan has agreed to pay Thailand £15 million in settlement of its war debt. Of this amount, £5.4 million will be paid in cash and £9.6 million in goods over a five-year period beginning from the 9th inst.

American tourists spent $972 million in foreign lands in 1954 in addition to $183 million paid to foreign carriers. This foreign exchange provided foreign countries with enough dollars to pay for 10 per cent. of all their U.S. imports.

In response to a request from the Government of Colombia, the World Bank has deputed a mission, headed by Sir Herbert Stewart of the United Kingdom to advise the Government in accelerating the country's development in the field of agriculture.

Meteorological aspects of the uses of atomic energy are being considered by the World Meteorological Organisation (W.M.O.) at its second congress now in session in Geneva. The session is the first to be held since 1951, when the specialised United Nations agency began its task of promoting international co-operation in meteorology.

A delegation from the Western German Miners' Trade Union will pay a visit to Yugoslavia shortly. The members of the delegation will spend about fifteen days in the country as guests of the Central Council of the Miners' Trade Union of Yugoslavia. The delegates will acquaint themselves with workers' self-management in enterprises and with social legislation and working conditions of Yugoslav miners.

According to the latest statistical abstract of the United Nations, the density of population in the Netherlands has increased from 320 to 324 inhabitants per square kilometre. The Netherlands is thus the most densely populated country in the world. The number of inhabitants per square kilometre in the U.K. is 292, Belgium 288, Western Germany 200, Luxemburg 118, France 78, United States of America 20, Dutch New Guinea and Surinam 2, Canada and Australia 1.

The Government of Sweden has proposed a scheme of compulsory saving, with a view to freezing chiefly a part of the increased purchasing power resulting from wage increases this year. The scheme provides for a deduction of 10 per cent. of private income for a period commencing from 1st July, 1955, to 31st December, 1956. The measure will provide for taxation of company incomes also. It is estimated that this measure will yield about $2,600 million, which will be refunded primarily in the form of Government bonds.

Business activity in the United States rose during January and February, 1955, continuing the upward trend which started in the fourth quarter of 1954. According to the U.S. Department of Commerce, construction work in the first two months of the year was well above that a year ago, with a substantial rise in private residential activity. Number of housing projects begun in this period are estimated at a rate of 1,400,000 per annum, equal to the 1950 record total. The combined retail sales during the period under review were higher than those of the corresponding period of the previous year by 7 per cent.

The Westinghouse Electric Corporation has plans to build an atomic reactor test centre, which will be the first to be owned by a private corporation. Proposed for a 550-acre site, 40 miles east of Pittsburgh, the project is estimated to cost about $6.5 million. The reactor will be used for testing materials under conditions of intensive nuclear radiation. It will have a capacity of 10,000 kw. and is expected to be in operation in two years. It will have facilities for testing atomic fuel, protective materials, structural designs and other components of power-plant equipment.

World diamond sales are still rising and, in the first quarter of this year, sales of both industrial and gem stones by De Beers, which hold a semi-monopoly in this field, touched new high records. Sales of gems were £15.2 million in the first quarter of 1955, as compared with £10.9 million in the previous quarter and £11.7 million in the first quarter of 1954. Sales of industrial stones during the period under review were of the value of £6 million, as against £5.2 million in the previous quarter and £4.9 million in the first quarter of 1954. Sales have risen practically all the time since the war and various reasons for this are given. One is the American purchases of industrial stones for the stockpile. Gem stones are still very much sought after and the temporary loss of one million pounds worth of gems for the U.S. in an air crash in Scotland emphasised the tightness of supply.

PERSONAL

SIR Joseph Kay, K.B.E., Chairman and Managing Director of Messrs. W. H. Brady & Co., Ltd., left for England on Monday the 11th inst.

Mr. John Sherman Cooper, U.S. Ambassador to India, presented his credentials to President Dr. Rajendra Prasad on Saturday last.

Mr. S. Basu, Director-General of Observatories, is the leader of the Indian delegation to the Congress of the World Meteorological Organisation which commenced at Geneva on the 14th inst.

Mr. Madanmohan Mangaldas, a prominent industrialist of Ahmedabad, has been elected President, and Mr. Jayakrishna Harivallabhdas, Vice-President of the Ahmedabad Millowners' Association for the current year.

Mr. G. V. K. Murthy, Director, Brooke Bond India Ltd., has been appointed Chairman of the Company, in place of Mr. W. G. Henshilwood who retired. Mr. Murthy is the first Indian to be appointed to this high office in the Company. Mr. W. G. Henshilwood sailed for London on Monday this week.

Mr. K. R. Damle, Additional Secretary to the Union Ministry for Food and Agriculture, who headed an eight-man Indo-American Technical Co-operation Mission which toured the U.S., the U.K. and the Continent to study the training and research systems in regard to agriculture, returned from Geneva on Friday last week.

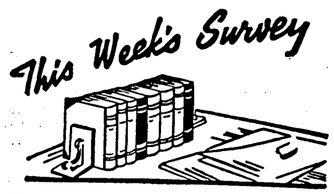
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 19th April

The Banking Enquiry

Most of the nine provincial banking enquiry committees have come to the end of their journeys and their reports, which are in course of preparation, will be submitted to the Central Committee by the middle of May. Besides these nine, committees have also been appointed by as many as fifteen Indian States and their reports are also expected before the middle of next month. The Central Committee will thus be able to start work soon with Sir B. N. Mitra as its head. The Central Enquiry Committee authorities are pleased at the manner in which enquiries have been conducted by their provincial colleagues and, from the information at their disposal, they believe that valuable data will come to them, especially from the point of view of the development of agricultural credit facilities and the promotion of indigenous banking. The provincial committees have also been looking into the question of how best to promote the investment habit in India, for it has been pointed out, time and again, that the real salvation of India lies in the mobilisation of her capital resources which lie dormant at present. So far as can be gathered at present, the provincial committees are reported to be mostly of the opinion that national savings associations, on the lines of those existing in the United Kingdom, should be started in India.



DOCK LABOUR TROUBLES

IT is difficult to forecast the reactions of the shipowners and dock labour to the appeal of Mr. O. V. Alagesan, Deputy Minister for Transport and Railways, to restrain their tempers and help ensure maintenance of peace until the Dock Labour Enquiry Committee submitted its findings. For labour, under the leadership of political self-seekers, has gone beyond its limits by indulging in not merely go-slow tactics but also incendiarism. Attacks on port and ship executives have become frequent. In fact, the working conditions at Calcutta port are conspicuous by the absence of the "Rule of Law." In other words, the 18-month-old labour unrest there has deteriorated into mob rule of the worst kind.

The state of affairs is so bad that shipowners, shippers and stevedores have complained to the Government of West Bengal and the Government of India that it would not be possible for them to carry out their normal duties, if the present conditions were to persist. They have stated that there is a deliberate decrease in the output of labour in almost all ports. As a result, the average cost per ton of cargo has, it is stated, increased from Rs. 4.7 in 1953 to Rs. 8.2 today. Besides, the inordinate delay in the turnround of ships has led to a situation of undertonnage at the port. Small wonder, therefore, the U.S.-India, Pakistan, Burma, and Ceylon. Outward Freight Conference, an organisation of shipping interests, has decided to impose a surcharge of 35 per cent. on freight and other charges on all cargoes to Bombay, Calcutta and Madras, with effect from 1st June next. The surcharge will be effective on cargoes delivered to ocean carriers at docks or alongside by lighters. The Conference has, however, stated that it would ask the member-lines to consider the question of suspension or even abolition of the proposed surcharge, if the situation at the ports were to improve by the end of May.

Naturally enough, business men have been perturbed about the deteriorating dock labour situation. The President of the Indian Chamber of Commerce, Calcutta, has expressed his fear that industry and trade would be seriously affected, unless labour conditions at Calcutta port improved. The general consensus of opinion is that India's exports would be "priced out" from foreign markets, if immediate and strong measures were not taken to check the deterioration in working conditions at all ports, for the state of affairs in other ports, too, is no better than that in Calcutta. It is time, therefore, that the work of the Dock Labour Enquiry Committee was expedited. In the meantime, interim measures should be taken in order to ensure smooth working in all the ports. It is gratifying to note that the West Bengal Government has become alive to the situation and is planning effective measures to establish a firm "Rule of Law" in the port of Calcutta, in co-operation with the port authorities and the Government of India.

CO-EXISTENCE OF ECONOMIC SYSTEMS

Marxist enthusiasts in India will do well to ponder the statement of Mrs. Joan Robinson, Professor of Economics in the Cambridge University, made in the course of a speech at Pachaiyappa's College, Madras, the other day. She said that the Marxist theory of the inevitable explosion of industrially developed capitalist countries from within had been disproved and that there was scope for the co-existence of different economic systems. If capitalist systems had developed on lines of their own and if a revolution had not come, then it meant, Mrs. Robinson declared, that capitalist countries could co-exist with communist countries. Substantiating this contention, she pointed to the rising standard of life in the capitalist countries. A large part of the benefit which had gone to the industrial workers, she observed, was due to the improved technique of production under the capitalist system. Instead of the growing tension between labour and capital in the industrial countries of the West which Marx had predicted, she found that workers there had become less and less revolutionary.

Mrs. Robinson was of the view that, "while Marx's prediction of revolution in highly industrialised countries has not come about, it has occurred in countries which are hardly developed and which are feudal in character." She felt that planning for economic development undertaken in communist countries could be adopted with advantage in the underdeveloped countries. To quote her: "One may not like the political features of the pattern, but, as an economic system, it is suited to underdeveloped countries. "Incidentally, the learned professor alluded to "India's method of planned development in a democratic set-up" and considered its success as being of the greatest importance to the world. For, in her opinion, if the method were to prove successful, or at least if it did not fail, it would mean that peaceful co-existence was possible between different economic systems as much as between different political systems. A far more practical issue on which planners in this and certain other countries in South-East Asia would be happy to be enlightened is as to which of these systems promises rapid economic progress with minimum tears. The Press report of Mrs. Robinson's speech does not show that she addressed herself to this question.

INTEGRATED PLANNING

It is an economic truism that, whatever may be the nature and size of a plan for economic development, there must be perfect co-ordination between programmes drawn up at different levels—Centre, State, district and *taluka*—if the plan is to be successfully implemented. The Planning Commission has done well, therefore, to urge the State Governments, in the course of a communication addressed to them, to aim at achieving a more integrated approach in regard to the preparation of district and village plans. Laying stress on intimate relation between planning in National Extension Service (N.E.S.) and Community Project areas and district planning, it states that a district plan will include programmes for all parts of a district irrespective of whether or not they are now covered by the N.E.S. The Commission wants the States to ensure that there is "forward planning" of areas to be included in the various N.E.S. blocks and the dates on which each N.E.S. block will be taken up as part of the N.E.S. programme. This is, indeed a valuable suggestion, in that it seeks to widen the scope of the district plans by taking into account the needs and programmes of areas which would all ultimately come under the N.E.S. at different periods of the second Five-year Plan.

Equally valuable is the suggestion of the Planning Commission that, while drawing up State programmes for agriculture, animal husbandry, co-operation, health, education and cottage industries, the State departments should note that development in areas which would come under the N.E.S. is undertaken "in a more intensive manner." The Commission has further urged the State departments to indicate clearly the specific programmes and schemes that would be tackled in detail at the State level. Attention is drawn, in particular, to the lack of sufficient emphasis on increased rural production in the village plans which are now under preparation. "These programmes," to quote the Commission, "constitute the crux of village planning."

With regard to the duration of the plan, the Planning Commission suggests that each State may adopt the period which appears best according to local conditions. If, for instance, a two-year period is taken as the basis for specific village programmes, the village can add each year one more year to its immediate programme, so that it will always have a two-year programme ahead of it. In making this suggestion, the Commission has evidently been prompted by the fact that some States find it more feasible to prepare programmes for five years in a general way and more specifically for shorter periods, say, for two or three years.

MYSORE AGRICULTURAL INCOME-TAX BILL

The Mysore Agricultural Income-tax Bill, 1955, which is now being discussed by the State Legislature, is one of the measures proposed by Mr. K. Hanumanthaiya, Chief Minister, to meet a part of the State's budget deficit. The levy is expected to yield Rs. 20 lakhs per annum. According to the statement of objects and reasons, the Bill is in consonance with the recommendations of the Taxation Enquiry Commission for the levy of agricultural income-tax in all the States. The scheme of taxation is confined to such of the agricultural crops as are considered to be of commercial and profitable nature. Foodgrains and other agricultural produce forming the necessaries of life will not be taxed. The Bill will, when passed, come into force, with retrospective effect, from 1st April, 1955. The rates of tax on agricultural incomes are as follows:

(1) On the first Rs. 1,500 of the total agricultural income—*nil;*

(2) on the next Rs. 3,500 of the total agricultural income—nine pies in the rupee;

(3) on the next Rs. 5,000 of the total agricultural income—one anna and six pies in the rupee;

(4) on the next Rs. 5,000 of the total agricultural income—two annas and six pies in the rupee;

(5) on the next Rs. 5,000 of the total agricultural income—three annas and six pies in the rupee;

(6) on the next Rs. 5,000 of the total agricultural income—four annas in the rupee; and

(7) on the balance of the total agricultural income—five annas and six pies in the rupee.

It is, however, provided that no agricultural income-tax shall be payable (1) on a total agricultural income which is less than Rs. 3,500 or (2) by a person who derives agricultural income (*a*) from any land not more than six acres in extent if it is used for growing arecanut, chillies, coconut, sugarcane, potato, onions, garlic, tea and certain other crops, or (*b*) from any land not more than 18 acres in extent if used for growing cardamom, coffee, rubber, groundnut, tobacco, cotton, mangoes or oranges. The limit of exemption will be Rs. 7,000 in case of every Hindu undivided family, which satisfies at the end of the previous year the condition that the family consisted of at least five members. It is further provided that (1) the agricultural income-tax payable shall in no case exceed one-half of the amount by which the agricultural income exceeds Rs. 3,500 or Rs. 7,000 as the case may be. In the case of every company, agricultural income-tax shall be charged at the maximum rate on the whole of the total agricultural income.

The Bill exempts from payment of the tax any agricultural income derived from property held under trust or other legal obligation wholly for religious or charitable purposes. It provides for carrying forward of losses in agricultural income in the year to the following year and set off against the agricultural income for that year. If it cannot be wholly so set off, the amount of loss not so set off will be carried forward to the following year and so on, but no loss will be carried forward for more than six years.

It may be recalled that Bihar was the first State in India to levy a tax on agricultural incomes. Then a number of other States including Assam, Bengal, Orissa, U.P., Hyderabad, Travancore-Cochin, Madras, Rajasthan, Coorg, Bhopal and Vindhya Pradesh introduced the levy. In some of these States, it was the existence of big landlords under permanent settlement or of large plantations of commercial character that drew the attention of the Governments to the desirability of this tax. Madras has restricted the tax to income from plantations.

The Taxation Enquiry Commission has supported the levy of agricultural income-tax. There is, according to it, ample justification for taxing incomes from agriculture. In fact, income from agriculture should be taken into account for the purpose of determining the rate at which the tax on the other income of the same person should be assessed, if it should prove "administratively feasible and practically worthwhile." The real significance of agricultural income-tax, as pointed out by the Commission, lies, "in the consideration that larger contributions will be secured from the higher incomes from land and to that extent, the burden of land taxation rendered more equitable than at present."

There is another and equally important reason for the levy of agricultural income-tax and this arises from the anomalies that have resulted from the fact that agricultural and non-agricultural income in India are treated as two distinct compartments, State and Union, for the purpose of taxation and from the further fact that some States have made no use of their compartment. As a result, a big landholder, for instance, with an agricultural income of, say, Rs. 50,000 pays no more than the land revenue in a State, where there is no tax on agricultural incomes, and that too at a rate which also applies to the small landholder, while another

person with a non-agricultural income of Rs. 10,000 has to pay, relatively speaking, a much larger amount in the shape of income-tax. There are also several other anomalies in the system of agricultural income-tax on which it is not necessary to dwell here. Suffice it to say that the Mysore Government's claim that its measure is in consonance with the recommendations of the Taxation Enquiry Commission is not wholly correct. First, whereas the Commission has recommended levy of this tax on all agricultural incomes, the Government proposes to confine it only to incomes from commercial crops. Secondly, the Commission has recommended an exemption limit of only Rs. 3,000, but, in this case, the limit has been fixed at a higher level, namely, Rs. 3,500. And thirdly, the Commission has recommended levy of surcharges on agricultural income-tax in the case of assessees having both agricultural and non-agricultural incomes. No such surcharge is sought to be levied under this Bill. Incidentally, a point that has been ignored both by the Bill and the Taxation Commission is that it is not equitable to levy both land revenue and agricultural income-tax. When the latter is introduced, it is but fair that land revenue should be dropped, especially as the object of collecting agricultural income-tax is to see that no discrimination is made as between agricultural and non-agricultural incomes.

FREER WORLD TRADE

The move of the 18 member-Governments of the Organisation for European Economic Co-operation (O.E.E.C.) to adopt an economic policy of expansion and free trade culminating in a return to convertibility will be widely welcomed. It follows the recommendations made by the O.E.E.C. in its sixth report published in Paris on Wednesday last week. Urging the countries of Western Europe to strive for freer trade, the O.E.E.C. observes: "The task ahead is to build a better economy than the pre-war one. The expansion of production will make it easier to liberalise trade without causing unemployment and freer trade will mean that the expansion of production is directed to the more efficient sectors. Convertibility is the technical expression of this movement towards freer international transactions."

If the West European countries were to adopt measures designed to restore convertibility, it would prove to be a step of great importance, considering that these countries play a prominent role in influencing the trend of world trade. It is true that, since the establishment of the O.E.E.C. in 1948, the countries of West Europe have generally achieved financial stability, expanded production, reduced trade barriers and improved balance of payments. In fact, it is claimed that the countries as a whole have now freed over 80 per cent. of their trade on private account. But liberalisation of invisible transactions, the O.E.E.C. says, has proceeded more slowly and the control of capital movements remains considerable. Although some progress has been made in the reduction of quantitative restrictions on dollar imports, there still remain restrictions, largely discriminating in character, mainly on American and Canadian manufactured goods. Again, no great results have been achieved in reducing the obstacles to the international movement of labour, "a field in which the restrictive spirit is still widespread."

The success of the efforts of the West European countries to liberalise world trade will, of course, depend on the policy of the U.S. which plays a formidable role in world trade. The O.E.E.C. has urged the U.S. to adopt a trade policy that would be more appropriate to its present position in the world. By doing so, the U.S. will, it rightly remarks, "contribute to a general lowering of barriers which at present so powerfully hinder trade and the optimum division of labour." For, in its considered opinion, regularity of the outflow of dollars in the form of American purchases and investment abroad was, and will remain, an essential factor in the world's economic stability. At the same time, the O.E.E.C. emphasises that, in future, West Europe's commercial transactions and investment abroad will have to play an increasingly important part.

IGNORANCE OF AIR TRANSPORT ECONOMICS

By "Rudderbar"

A RECENT announcement by the Deputy Minister for Communications in the Lok Sabha indicates that the Indian Airlines Corporation (I.A.C.) intends to operate Skymaster aircraft on the night mail services in place of the present Dakotas. The night mail, as readers are probably aware, operates on the routes Bombay-Calcutta and Madras-Delhi, both services halting at Nagpur, the focal point, for exchange of passengers and mails. The mileage flown each night is therefore approximately 4,400.

The Skymaster is a comparatively large four-engined aircraft, now approaching obsolescence but still used in fairly substantial numbers throughout the world. The I.A.C. owns three of these aircraft which have, it is understood, lately been converted to higher density seating at Copenhagen. The intention is, apparently, to purchase three more, and these, at ruling market prices, will cost in the neighbourhood of 28 to 30 lakhs of rupees each. The annual hours to be flown by the Skymaster fleet on night mail services alone can be approximately computed at 9,000 or, assuming there are six units, 1,500 hours per aircraft. Such utilisation, although not high enough to be economical, will entail a supply of spare parts and spare engines for these aircraft greatly in excess of stocks which the I.A.C. presently possesses. The capital outlay on this new venture will, therefore, run into approximately one crore and five lakhs of rupees and this is a conservative estimate.

The I.A.C's operating loss over its first year of operation was Rs. 127 lakhs and the indications are that the second year's loss will certainly exceed that of the first year by a substantial margin. This is hardly surprising, because, in the first place, the Corporation has indulged in a number of costly and ill-conceived experiments and has made no attempt to rationalise its plan of operation and, in the second place, all units of its fleet, that it to say, Skymaster, Viking and Dakotas, are, at our fares and in the context of the I.A.C's overhead costs, uneconomical to operate.

This is to say that, on every route which the I.A.C. operates, practically without exception, a loss of greater or lesser degree is incurred. It is, however, probable that the night mail services operating, as they do, at about 85 per cent. capacity, and, in spite of the very low passenger fare in force (2½ annas per seat-mile) and the poor rate of mail carriage payment received, lose less than the majority of routes.

Economics of Dakota

The cost of operating Dakota aircraft is fairly easy to assess, the only unknown quantity being the I.A.C's overhead costs. At the time of the enquiry into the affairs of our domestic air transport, which was conducted by the Rajadyaksha Committee in 1950, the Committee estimated that an economical company could operate a Dakota at an all-in cost of Rs. 586 per hour, assuming a utilisation factor of 1,500 hours per unit of the fleet. Since that time, the cost of petrol has risen and an additional figure of Rs. 30 per hour must be allowed to cover this item of expenditure. This gives us a final figure of Rs. 616 per hour. It is, of course, doubtful whether the I.A.C. does operate within this figure but, in the absence of accurate data, it is better to assume that to be the case.

At a block speed of 140 miles per hour, total Dakota operation on the night mail services amounts approximately to 11,330 hours per annum and in terms of cost, therefore, approximately Rs. 70 lakhs. Revenue is more difficult to assess. Assuming, however, a constant load factor equivalent to 18 passenger seats filled at the standard night mail fare of 2½ annas per seat-mile—and this is a reasonably generous estimate—the total annual revenue drawn from the night mail is in the neighbourhood of Rs. 45 lakhs. The operating loss, therefore, is Rs. 25 lakhs.

Skymaster Expensive

Now the Skymaster is a much larger aircraft than a Dakota. The I.A.C's present versions have been converted to take 53 seats, as against the Dakota's 21. The total payload which this aircraft is likely to offer on the comparatively short sectors of the night mail is 4½ short tons, as against the Dakota's two. It has four engines of greater horse-power than the Dakota's two, in fact, some 6,400 horse-power as compared with 2,200. All this adds up, naturally, to much more expensive operation. I have, unfortunately, no up-to-date figures of this cost but, from earlier figures in my possession, I would conservatively estimate the hourly cost as between Rs. 1,200 and Rs. 1,400, depending on the utilisation achieved, the economy exercised in the matter of overheads, and the stage lengths to be operated.

Assuming a block speed of 180 miles per hour, the annual hours of operation will, as already computed, total 9,000. If the lower figure of cost is taken, the annual operating expenditure with this type of aircraft on the night mail services will be Rs. 108 lakhs. The question of revenue is problematical The protagonists of this proposal will probably argue that these four-engined aircraft, providing greater comfort, will create additional new traffic on the night mail services. This, to a very limited extent, can be conceded. The *total annual* passenger traffic on the domestic air transport system has remained fairly constant over the past five years at about 500,000 tickets sold. There is not sufficient significance, in the mere introduction of a four-engined aircraft on the night mail routes, substantially to alter this figure. It would, in my opinion, be very generous to estimate any new traffic thus created at more than 10 per cent. of the present night mail figure. Any additional traffic over and above this figure will, therefore, merely represent traffic taken from the normal day services and attracted to the night service by the cheaper fare, the greater comfort and the supposedly greater safety factor.

We have already computed the night mail revenue earned by the present Dakota services. If we now add 10 per cent. to that figure, we shall not be far from the truth in assessing the actual revenue likely to be earned by the Skymasters. A little simple mathematics will show this to be Rs. 49,50,000. The gap between cost and revenue will thus be seen to have increased from the present Rs. 25,00,000 to the much higher figure of Rs. 58,50,000; nor does this include the loss of revenue which will occur when traffic travels by the night mail in preference to the higher-priced day services.

A Wrong Notion

The I.A.C. is, admittedly, in a difficult position. Accidents on the night mail have been too frequent to escape public notice. Not all these accidents, however, have been attributable to any defect in the Dakota; indeed, to my present knowledge, only one accident out of six can be so attributed with any certainty and that, too, might have been averted with better lighting of our airports. Indeed, the Dakota, apart from its admittedly poor single-engine performance, has a multitude of excellent characteristics. It is extremely docile and easy to handle, it lands very slowly without fuss and it has two of the world's most proven and reliable engines. In my opinion, the Dakota, on our domestic routes, has, on account of these characteristics, conserved a great many lives, which, in a faster and less docile aircraft, might have been lost in difficult circumstances. The public should realise that for every accident which occurs, there are a number of what pilots refer to as "near misses." Nor should it be imagined that four engines necessarily spell greater safety. Indeed, statistics seem to prove the contrary.

The Dakota must be replaced as soon as possible, both for economic reasons and because of its marginal single-engine performance. That cannot be done at once and in the meantime, it can be most usefully employed on the night mail but preferably with mail and freight only. The closing of the service to passengers might be an unpopular move but it need be temporary only. On the replacement of the Dakota with a suitable economic twin-engined aircraft, passenger services could be resumed.

The crux of the I.A.C's problem lies in finding a suitable aircraft to replace both the Viking and the Dakota. To purchase further Skymasters at this stage is a very doubtful policy and the proposal to place these aircraft on the night mail service displays, in my opinion, an ignorance of air transport economics so fundamental as to be almost incredible. If, on the other hand, the proposal does not spring from any inability to assess the financial implications, then, the inevitable conclusion is that such disregard of wasteful expenditure is most undesirable in a public undertaking.

SIZE OF SECOND FIVE-YEAR PLAN

TARGET FIXED BY ECONOMISTS TOO LOW

From A Special Correspondent

NEW DELHI, 12th April

DELHI LETTER

DEMANDS of grants for various Ministries of the Government of India are being put through in Parliament during these days. Two important Ministries which are in charge of vital matters of economic interest have been able to get their demands passed by Parliament during the last few days. They are the Irrigation and Power and Production Ministries. The debates on the cut motions of these Ministries have generally been mild and even the speeches of the members of the Opposition have been insipid and dull. Most members would appear to have lost interest in the proceedings of the House, with the result that on many an occasion bells have had to be rung in order to maintain the quorum of the House. The strident advance of summer in the Capital, with the mercury exceeding well above 100 degrees, has already begun to exercise an enervating atmosphere not only to the proceedings of the House but elsewhere also.

Outside Parliament, the leading economists of the country happened to confabulate on the approximate outlay of expenditure on the forthcoming second Five-year Plan. It was suggested by these academicians that the total amount to be spent should be somewhere near Rs. 5,600 crores which should be shared between the public and private sectors in the proportion of 60 and 40 per cent, respectively. In arriving at this figure, the economists would appear to have failed to take into account the fact that the level of expenditure suggested by them might not be adequate to maintain the tempo of economic activity in the country at a progressive rate. For, according to the latest report of the Planning Commission, the expenditure during the fourth year of the Plan shows an increase of nearly Rs. 200 crores over that of the third year. In other words, during the first year of the Plan the amount of expenditure amounted to Rs. 260 crores, increasing to Rs. 270 crores during the second year. The outlay in the third year, as now revised is Rs. 340 crores, the total for the first three years being Rs. 870 crores. Assuming that the total expenditure of the Plan during the fourth year would be Rs. 540 crores, the total for the first four years may be estimated at Rs. 1,410 crores.

It is well known that, during the last year of the Plan, that is, the current year, considerable efforts are being made to step up the level of expenditure on various development projects. Many State Governments have allocated a substantially higher sum to be spent during this year with a view to catching up the lost ground of the earlier years. In fact, many of them are confident that they would be able to overreach the targets by a slight extent. The budget figure in regard to some States for 1955-56 represents nearly 30 to 35 per cent. of the total expenditure envisaged to be spent under the Plan by respective States. In case the States are able to spend according to their budget estimates for this year, the total expenditure in the last year of the Plan will amount to well above Rs. 750 crores. It may be mentioned here that even this level of expenditure from the public sector is having very little effect in tackling the unemployment problem. One is, therefore, temoted to pose the question as to how far the level of expenditure envisaged by the economists to be spent during the second Five-year Plan would be able to mitigate the intensity, much less solve, the unemployment problem in the country during the next five years.

Again, with the capital market lying low all these years and with a complete absence of invitation for fresh capital by *entrepreneurs* and industrialists, it is a doubtful proposition whether the private sector will be able to invest nearly Rs. 2,200 crores on industrial development without any large-scale, direct help from the Central and State Governments. Further, some of the Government spokesmen have now begun to give an idea of the probable level of expenditure to be incurred during the second Plan by their respective Ministries. The Railway Minister has already hinted that the railways would be requiring nearly Rs. 1,000 crores for expansion, consolidation and renovation. Mr. Gulzarilal Nanda, the Union Minister for Irrigation and Planning, revealed this week that irrigation and power schemes under the second Five-year Plan would be about Rs. 1,100 crores. According to him, the next Plan will envisage an additional irrigation of about 15 million acres and additional generation of 3 to 3.5 million kw. of power. The estimated cost of Rs. 1,100 crores, it is said, includes a carryover of Rs. 322 crores earmarked for projects scheduled to be undertaken in the first Five-year Plan. Irrigation and power schemes under the first Five-year Plan are estimated to cost Rs. 623 crores.

Apart from irrigation, power and railways, other big claimants during the second Five-year Plan are agriculture, large-scale key industries, medium, small-scale and cottage industries, housing and construction activities, roads and other forms of transport such as shipping, social services like health, education, etc. Taking all these factors into consideration, it can safely be stated that the level of expenditure in the public sector alone should be of the order of Rs. 5,000 to Rs. 6,000 crores, so that the tempo of economic activity in the country can be maintained at a progressively rising rate. Since there has been an increase of nearly 200 per cent. in the expenditure between the first and the last year of the first Plan, it should not be impossible for the Government of India to attain a level of expenditure of the magnitude of Rs. 1,500 crores during the fourth and the fifth years of the second Plan, placing the estimate of the expenditure in the first year of the second Plan at about Rs. 850 crores. At the same time, the Government of India should take note of the fact that, in order to stimulate the economic activity in the country, it is absolutely necessary to provide sufficient inducements to the private sector to expend Rs. 3,000 crores or thereabouts during the second Plan. For, without a proper development of heavy and light engineering industries, it will not be possible for the country to absorb the six million tons of steel that Government hopes to produce before the expiry of the second Plan. In other words, the target of expenditure for the second Plan should be aimed at about Rs. 8,000 to Rs. 9,000 crores. It must, however, be mentioned that, if the Government of India is earnest about the speedy establishment of a socialistic pattern of society, it must from now on try to show more tangible results in the public sector. The record of the Ministry of Production during the last one or two years, for instance, does not inspire confidence that the Government of India would be able to bring about a speedy industrial development during the second Plan without the full co-operation from the private sector.

HANDLOOM CLOTH

With a view to encouraging larger offtake of handloom cloth, the Central Government has reduced the minimum sale eligible for rebate from Rs. 5 to Rs. 2. The rates of rebate, however, remain the same, that is, a minimum of nine pies in the rupee for all States and a maximum of As. 2 in the case of Bombay and of 18 pies in the case of other States, on sales of handloom cloth made by weavers' co-operative shops and State-owned depots. The maximum rebate allowed on sales made by consumers' co-operative societies and fair price shops approved by State Governments throughout India also remains the same, that is, one anna in a rupee.

The Central Government has decided to continue the scheme of rebate on retail sales of handloom cloth by weavers' co-operative shops and State-owned depots for the year 1955-56. The rebate on retail sales by consumers' co-operative societies and fair price shops approved by State Governments, as well as on wholesale sales, has been continued till August, 1955, and that on export sales till September, 1955.

(Concluded from next column)

But, in practice, one must recognise that the connection between the immediate prosperity of the home economy and the long-term trends in the balance of payments is too tenous to do more than influence without determining the taxation pattern of the year before us. The Chancellor will no doubt attempt to hold a fine balance between giving tax reliefs, especially where they can stimulate enterprise and production and sufficient to look generous in relation to the overall expansion in national income, while, at the same time, not going as far as he otherwise might for fear lest resources should be diverted from the exigent demands of exports.

RETROSPECT ON PROSPERITY

DELICATE TASK FACING MR. BUTLER

(From Our Own Correspondent)

LONDON, 7th April

LONDON LETTER

THE Government's pre-budget *Economic Survey*, gloomy as it is on the balance of payments trend, cannot resist pointing out that "at home 1954 was a prosperous year" or, to vary the phrase, "at home, 1954 was very successful." The Chancellor is thus going to face the dilemma of being unsure whether it is wise to use the substantial budget surplus with which the year just closed has thrown up to provide tax remissions which will increase consumption at home and may make exports more difficult, or whether to maintain an unchanged taxation pattern, build up an even larger budget surplus in the new year, and so give his maximum assistance to the balance of payments.

The latter course would be favoured by the economic purist, but it is now widely believed, following Sir Winston Churchill's retirement from the Premiership, that an election cannot be many weeks away. In that case, it would be gambling too much on an electorate's appreciation of the virtues of austerity in tax matters to present them with a bleak budget and still hope to collect their votes. An election year budget, though it may be bad for the external economy, usually has to be good for the domestic consumer, and everything in the picture of the past year at home suggests that the domestic consumer is entitled to reap some greater fruits of his industry.

Industrial production last year was no less than 29 per cent. above that of 1948 and showed an increase of over 6 per cent. on the calendar year. Part of this increase was due to the continued rise of employment in industry (the total working population in civil employment increased by 350,000 over the year), but output per man-year rose by about 4½ per cent., while prices of goods and services rose on average by 1½ per cent. over the year, and salaries rose by 7½ per cent., so that there was an increase in real income of about 6 per cent. Indeed, the national income calculated as total expenditure at market prices, after allowing for taxes and subsidies, has risen to nearly £19 million, as compared with a little over £17 million two years ago and £18 million last year. Consumption expenditure is a little less than two-thirds of these figures but investment has continued to rise normally.

All the indications are that investment is to be still higher this year than it was last—not only in the private enterprise sector but also in coal-mining, power and nationalised transport. The pattern in the private sector shows anticipated increases in iron and steel, motor manufacture, chemicals and synthetic fibres. All these increases are mainly in plant and equipment rather than in buildings but the building trades are also expected to be very active: the housing programme shows more and more houses completed each year; the new towns designed to relieve the pressure on London are active in the building of shops, offices and hotels.

The forecast is also that, without any change in taxation, money incomes and purchasing power are likely to be higher in the coming year. Remissions in taxation will increase the purchasing power still further while being unlikely to have very much effect on investment. The *Economic Survey* points out that such a trend in the economy means more imports and that, indeed, without higher imports, it would be impossible to keep up the steady rate of expansion. The higher imports must be matched by higher overseas earnings, and this in turn depends on a British industry fully competitive in the export markets; but the consumer potential of the export markets is also a relevant factor so that an expanding world economy is part of the foundation of an effectively rising standard of living in this country. The *Survey*, which is a document which emanates from the Chancellor's own Office, declares that the country cannot indeed pursue the policy of expansion without regard to the needs of the balance of payments and, thus having stressed the strength of the home economy comes round to pointing out that in future everything depends upon the balance of payments.

(Continued in previous column)

PAKISTAN NOTES

PROMOTING EXPORTS OF JUTE

W. PAKISTAN PROVINCE BY END OF NEXT MONTH

IT would appear that a new machinery for shipment of Pakistan jute to the United Kingdom would shortly be constituted in Dacca. Press reports from Dacca and Narayanganj claim that an agreement has been arrived at between the four-man delegation of the London Jute Association, headed by Mr. R. E. D. Wilcox, Chairman of the Association, and the East Pakistan Government. The delegates have also had talks with jute interests of the State in regard to the setting up of the new machinery for the promotion of raw jute exports to the United Kingdom and sought their co-operation, which is stated to have been assured. Details of the arrangement are not known at the time of writing.

The reported arrangement made by the U.K. delegation is evidently a sequel to the cancellation of trade licences of 13 jute exporting firms, towards the close of last year, by the Director of Jute Prices, Government of East Pakistan, and approved later by the Central Government. This action, it will be recalled, interrupted the flow of raw jute to the United Kingdom. It is true that the Provincial Government revalidated these licences subsequently, following the representations from the London Jute Association, Continental and other jute consuming interests, but they were only for a temporary period. It is now common knowledge that the licences were cancelled by the East Pakistan Government as the exporting firms concerned were alleged to have indulged in certain malpractices, which contravened the provisions of the East Bengal Jute Dealers Registration Act. These malpractices, it was alleged, included under-invoicing, under-grading, registration of bogus contracts, etc. Commenting on this development, Mr. A. D. Boldy, President of the Pakistan Jute Association, observed in the course of his speech at the last annual meeting of the Association as follows:

> "The written charges received by the traders concerned refer merely to petty offences under the East Bengal Jute Dealers Registration Act. We understand that all the affected firms have lodged appeals and we trust that the Government will expedite investigation and consideration. The cancellation of licences took the trade by surprise, as the Government did not take the Association into their confidence. Immediately the announcement was made, we hastened to inform the Government of its probable repercussions on local banks, local buyers and sellers, inland water transport companies, ports, foreign buyers and jute manufacturers. We made our recommendations to the Government and we are pleased that they were eventually accepted, but we are afraid that the delay in arriving at a decision did cause a lot of anxiety in the jute world, particularly on the part of our overseas friends."

There can be no two opinions on the fact that business malpractices and infringement of exchange controls are detrimental not only to the economy of Pakistan but also to the stability of jute trade itself and that, therefore, they should not be tolerated. It is high time that a system, which would be free from malpractices, was created to promote exports not merely to the U.K. but to all other countries interested in Pakistan's raw jute. Care, however, should be taken to see that the Government does not use the present situation as a pretext to monopolise trading in raw jute exports. After all, despite its shortcomings, it is private enterprise that can deliver the goods better than State monopoly. What is needed is strict control over trading practices and prescription of drastic penalties for infringement of established trade conventions and rules. If the willing co-operation of traders is to be secured, the control should take into account their practical difficulties. Incidentally, it must be mentioned that detection of malpractices will depend on the integrity of the personnel entrusted with the task.

Merging Provinces

In about a few weeks' time, at any rate by the end of next month, the new Province of West Pakistan will formally have been established. An ordinance investing the Governor-General of Pakistan with powers to bring such a Province into existence, and, for that purpose, to secure the merger of the existing units, including the States of Baluchistan, Bahawalpur and Khairpur, was promulgated on 27th March, 1955. By an order issued under this Ordinance, the Governor-General has fully authorised the Council for the Administration of West Pakistan to take whatever steps it considers necessary to set up the administration of the new Province within the time stipulated. He has also empowered the Council to issue such directions as it may deem necessary or expedient to any Provincial Government or Federated State in West Pakistan or to any officer or authority thereof.

The Government of Pakistan has already examined and approved in principle the recommendations relevant to the creation of the new Province contained in the report which the Council submitted sometime in February last. One of the principal recommendations relates to the actual set-up of the Province. The new Province will have 50 districts grouped into 11 divisions. The administration of all areas in West Pakistan at present directly administered by the Centre, including the tribal areas and Karachi, with the exception of the federal area, will vest in the new Provincial Government. No change is, however, contemplated in the present system of administration in tribal areas. Lahore will be the capital of the Province. At the headquarters of the Government will be located the Governor, the Cabinet, the Legislature and a single Secretariat. This set-up will replace the present several Governors, cabinets, legislatures and seven separate secretariats. The new Secretariat will be a compact organisation. The heads of departments and their offices will be delegated adequate administrative and financial powers, so that they may implement the decisions of the Government effectively and promptly. Mr. M. A. Gurmani, Governor of the Punjab (P), and Dr. Khan Sahib, Minister for Communications in the Central Government, have been appointed Governor and Chief Minister, respectively, of the new Province of West Pakistan.

Corporation for Small Industries

The Government of Pakistan has set up a corporation for the promotion and development of small-scale industries. The authorised capital of the Corporation is Rs. 1 crore, dividend into 100,000 fully paid up shares of Rs. 100 each, of which the share of the Central Government is 51 per cent. The Corporation will advance loans in the form of factory buildings, residential houses, machinery and equipment on a hire-purchase basis. The loans are to be repayable in a period of 20 years.

Two important considerations, it would appear, have weighed with the Government in deciding to set up the above Corporation. First, in view of the considerable pressure of population on land and meagre earnings from agriculture, there is the need for providing the agriculturists with subsidiary sources of income through establishment of small-scale industries. Secondly, small-scale industries produce goods which earn much precious foreign exchange.

NATIONAL BANK OF INDIA

LIMITED

Incorporated in the United Kingdom (Established 1863)

BANKERS TO THE GOVERNMENT IN KENYA, UGANDA ZANZIBAR AND ADEN

Subscribed Capital	£4,562,500
Paid-up Capital	£2,851,562
Reserve Funds	£3,104,687

Head Office: 26, BISHOPSGATE, LONDON, E.C. 2

UGANDA: Entebbe, Port Portal, Kampala, Masaka, Jinja, Tororo, Soroti, Mbale

Current Deposit Accounts are opened and Fixed Deposits received on terms which may be ascertained on application.

The Bank issues Letters of Credit and Travellers Cheques and it offers every facility for the conduct of all classes of Banking and Exchange business with the principal commercial centres throughout the world.

The Bank's Head Office undertakes to act as Executor and Trustee in approved cases.

Savings Bank Accounts opened.

Bombay Branch: Mahatma Gandhi Road, Fort, BOMBAY 1.

G. R. WEST, *Manager.*

Kotri Barrage

What is claimed as the first giant irrigation project in Pakistan, the Kotri Barrage on the river Indus, was declared open by the Governor-General of Pakistan the other day. The Barrage is situated about 110 miles north east of Karachi. The construction of the Barrage is estimated to have cost over Rs. 24 crores. The Barrage, it is said, is a prototype of the Sukkur Barrage. Its headworks is 3,000 feet long, designed to pass a maximum flow of 875,000 cusecs. It consists of 44 bags, 60 feet span each, and has three main canals on the left bank and one main canal on the right.

The Kotri Barrage will irrigate 2.7 million acres of land, of which 1.1 million acres are at present waste and barren land. With the expansion in area under cultivation, there is expected to be a fivefold increase in agricultural output, that is, from 4.75 million maunds to 21 million maunds. The Pakistan Industrial Development Corporation has drawn up a plan to set up five sugar mills in the area commanded by the Kotri Barrage. Preparations are being made for large-scale mechanised cultivation of sugar-cane on 50,000 acres of land.

Foreign Exchange

The foreign exchange position of Pakistan continues to be none too happy. During the calendar year 1954, for instance, the total foreign exchange earnings amounted to only Rs. 127.5 crores, which compares unfavourably with Rs. 155.1 crores in 1953, Rs. 191.6 crores in 1952 and Rs. 287.9 crores in 1951. The extent of the decline in the course of four years is thus over 125 per cent. Thanks to the continued deterioration in foreign exchange earnings, Pakistan rupees are being exchanged for Indian rupees at a substantial discount. As against the official rate of 144 Indian rupees to 100 Pakistan rupees, the moneychangers, it is stated, are actually offering 112 Pakistan rupees—125 rupees in some places for 100 Indian rupees. Pakistan's weak foreign exchange position is also reflected in the current black market rate for sterling, which is reported to have been sold recently in Karachi at a premium of 25 per cent. over its official value.

Target for Cotton Production

If the several schemes outlined by the Government of Pakistan were fully implemented, the aggregate production of cotton in the country would expand to 2.5 million bales by 1957, as against the present annual output of 1.4 to 1.6 million bales. The increase in production is expected to be realised by bringing more land under cotton, using fertilisers extensively, intensifying cultivation methods, and preventing and controlling plant disease. About 700,000 acres of additional land are proposed to be brought under cotton. Cotton is Pakistan's biggest earner of foreign exchange. By 1957, Pakistan, it is estimated, will have a surplus of about 1.2 million bales for export.

• • • •

A new trade agreement between Pakistan and Germany was signed in Karachi recently. It is valid for a period of 18 months and replaces the one which expired in February last. Under the new trade pact, Pakistan and Germany are expected to exchange goods worth about Rs. 1.5 crores. The main items of exports from Pakistan include cotton, jute, hides and skins, and a number of other raw materials. Among the goods which Pakistan will import from Germany are machinery, manufactured goods, iron and steel, chemicals and medicines. Incidentally, it may be noted that, during the last three years, Pakistan had a favourable balance of trade with Germany to the extent of about Rs. 1.5 crores.

• • • •

There will not be any imports of foreign wheat into Pakistan during the current year. A decision to this effect is reported to have been taken by the Central Ministry of Food. It is said to be a sequel to the comfortable wheat supply position in the country. Wheat reserves in hand, it is claimed, are quite sufficient to meet any emergency. The Ministry is expected to launch a new wheat procurement drive shortly, under which several *mandis* are being opened where Government agents will be authorised to purchase wheat. It may be noted that the Provinces of Sind and the N.W.F.P. are deficit in wheat production and the wheat procured from the Punjab (P) will meet this deficit.

ANDHRA BANK EARNS RECORD PROFIT

DIVIDEND STEPPED UP

ESTABLISHED in 1923, the Andhra Bank Ltd. (General Manager: Mr. E. Ramachendramurti, Masulipatnam) has been serving the people of Andhra and Madras for over 30 years. Its progress during the first two decades had been very slow because of the undeveloped economy of the area now constituting Andhra State. The year 1943 was, however, an important landmark for the Bank, inasmuch as it witnessed considerable expansion in the Bank's activities, evidently due to the stimulus provided by the war. Since then, the Bank has made rapid progress. It has expanded its capital from Rs. 3.22 lakhs in 1942 to the present level of Rs. 25 lakhs. The number of offices of the Bank has risen from 14 to 60. Its reserves, which stood at a mere Rs. 47,160 in 1942, aggregate Rs. 13.51 lakhs, as at the end of 1954. Deposits have swollen from Rs. 31.16 lakhs to Rs. 652.94 lakhs. The level of profit has advanced from under Rs. 20,000 to about Rs. 5.5 lakhs.

Notwithstanding the economic progress during the past one decade, the Andhra State is still predominantly agricultural and banking there has not been fully developed. The management of the Bank has, therefore, been considering for some time now as to "how best the Bank, with its number of offices spread over all the important towns in the State, would further develop itself to spread the banking habit in the undeveloped areas and play its part in the rapid economic development of the people."

The profit of the Bank for the year ended 31st December, 1954, amounts to Rs. 5.37 lakhs, an increase of Rs. 1.25 lakhs over that for 1953. This is the second year in succession for which the profit has shown an upward trend, having risen from Rs. 3.68 lakhs for 1952, to which level it had dwindled from Rs. 5.09 lakhs earned in 1950. As a result of the increase of Rs. 1.69 lakhs during the past two years, the Bank's profit for 1954 constitutes a new high, exceeding the previous best of Rs. 5.18 lakhs earned in 1947. The increase in profit has necessitated a larger provision of Rs. 2.30 lakhs for taxation, as against Rs. 1.65 lakhs in the previous year, but such has not stood in the way of the Directors' decision to increase the allocation to the reserves from Rs. 85,000 to Rs. 1.10 lakhs and step up the dividend to the shareholders to 7½ per cent. from 6½ per cent., to which level it had been raised last year from 6 per cent. The dividend for the year under review is, however, less than the highest rate, namely, 8 per cent. paid on the present capital for the years 1947 and 1948.

The salient features of the Bank's accounts for the past four years presented in the following comparative table provide an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount	31.98	25.45	23.61	23.40
Commission and exchange ..	6.10	5.70	5.02	5.51
Interest paid	16.09	12.41	11.11	11.21
Expenses	16.33	15.00	14.01	12.67
Depreciation and repairs ..	0.27	0.25	0.20	0.16
Loss on sale of investments ..	0.62	..	0.13	0.88
Profit	5.37	4.12	3.68	4.46
Provision for taxation	2.30	1.65	1.40	1.90
To reserves	1.10	0.85	0.75	0.86
Dividend	1.87	1.62	1.50	1.50
	(7½%)	(6½%)	(6%)	(6%)
Carry forward	0.16	0.07	0.07	0.04

	As on 31st December			
	1954	1953	1952	1951
Capital	25.00	25.00	25.00	25.00
Reserves	13.51	12.41	11.28	11.98
Deposits (including contingency accounts)	6,52.94	5,39.86	4,67.45	4,45.04
Borrowings from other banks ..	..	..	..	65.00
Advances*	3,99.25	3,11.97	2,85.69	3,21.82
Investments	1,39.69	1,00.79	1,04.93	1,04.65
Cash	1,14.13	87.84	75.89	91.70
Balance-sheet total	8,17.55	6,82.73	6,03.12	6,60.62
Ratio to deposits of—	%	%	%	%
Advances	61.1	57.8	61.1	72.1
Investments	23.9	25.3	23.1	19.3†
Cash	17.5	16.3	16.2	20.7

* Include bills purchased and discounted and money at call and short notice.

† Ratio arrived at by taking into account only the unencumbered portion of the investments.

The gross income of the Bank amounts to Rs. 38.68 lakhs, exceeding the previous year's record of Rs. 31.78 lakhs by Rs. 6.90 lakhs. Receipts from "interest and discount" account for an increase of Rs. 6.53 lakhs, as against Rs. 1.84 lakhs in 1953. More than half the rise in gross income—Rs. 3.68 lakhs to be precise—has been absorbed by the increase in interest paid on deposits and borrowings. Expenses, too, have shot up, by Rs. 1.33 lakhs. In addition to these higher outgo, the Bank has also incurred a loss of Rs. 62,360 on sale of investments. Had it not been for this loss, the profit of the Bank would have been even more impressive.

Although the Bank is 31 years old, it was not until 1944 that its deposits crossed the Rs. 1-crore mark. During the past one decade, the deposits have steadily grown more than six times and, barring a decline in 1949, the trend has been consistently upward. The expansion of Rs. 1.13 crores in 1954 has been shared by all classes of deposits; fixed deposits (including cash certificates and season deposits) have gone up from Rs. 2.53 crores to Rs. 3.28 crores, savings bank deposits from Rs. 1.58 crores to Rs. 1.82 crores and current and contingency accounts from Rs. 1.29 crores to Rs. 1.43 crores. There are no outstanding borrowings from other banks as at the close of the year under review, though as on 30th June, 1954, they stood at Rs. 39.50 lakhs. Advances show a rise of Rs. 87 lakhs, but the bulk of this is due to the increase in money at call and short notice which is higher by Rs. 73 lakhs at Rs. 83 lakhs. Commercial advances are better by only Rs. 14 lakhs and even this is accounted for by the increase of Rs. 18 lakhs in bills purchased and discounted, that is from Rs. 24.25 lakhs to Rs. 42.88 lakhs. Loans, cash credits and overdrafts are slightly lower at Rs. 273.37 lakhs, as compared with Rs. 277.71 lakhs a year ago. Investments (at cost) have declined by Rs. 2.10 lakhs, evidently due to the sale of some Government securities, because the entire decline is noted in investments in Government securities which amount to Rs. 186.69 lakhs. Cash balances (other than money at call and short notice) show an expansion of Rs. 26.29 lakhs.

U.K. LOANS TO COMMONWEALTH

Details of British loans to Commonwealth countries during 1954, released by the United Kingdom Treasury last week, disclose that the total amount of the loans and grants authorised by the British Government (but not necessarily drawn) during the year was slightly smaller, being £120,000,000, as compared with £122,600,000 in 1953. The following London market loans were authorised during the past year:

(a) *Colonial:* East Africa High Commission, £7,045,000; Trinidad, £4,245,000; Nairobi City, £1,000,000; Malaya, £4,000,000.

(b) *Other Government loans:* Rhodesia and Nyasaland £10,000,000; New Zealand, £10,000,000; Ceylon, £5,000,000.

(c) Consent for private capital issues, £48,327,000.

The following loans and grants were sanctioned from Government funds:

(a) From the U.K. contribution to the International Bank for Reconstruction and Development: to India, £5,000,000, to Pakistan, £2,750,000.

(b) Under the Colonial Development Act, £15,567,000.

(c) Colonial Development Corporation, £6,014,000.

UNITED BANK OF INDIA LTD.

At the foot of the balance-sheet of the United Bank of India Ltd., published in our issue of 9th April, 1955 (*vide* pages 692-693), the name of Mr. K. C. Das, one of the Directors of the Bank, was wrongly printed as Mr. K. D. Das. This error is regretted.

An office of the Hongkong and Shanghai Banking Corporation will be opened in Phnom-Penh (Cambodia) on 18th April, 1955.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

BANK OF RAJASTHAN MAKES GOOD PROGRESS

IMPRESSIVE RISE IN DEPOSITS

THE audited accounts of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta, Udaipur) for the year ended 31st December, 1954, indicate that there was a further expansion in the Bank's business during the past year and that the progress made by the Bank during the preceding year was well maintained in the year under review also. Thus, the total working funds of the Bank, which had improved from Rs. 1.90 crores at the close of 1952 to Rs. 2.09 crores a year later, have increased further to Rs. 2.39 crores as at the end of 1954. Deposits have expanded by about Rs. 33 lakhs to a record level of Rs. 2.03 crores; this increase compares with that of Rs. 23 lakhs in the preceding year. Advances have risen by Rs. 14 lakhs to a new high of Rs. 83.87 lakhs and liquid assets have been strengthened further. The profit, too, has gone up from Rs. 1.05 lakhs for 1953 to Rs. 1.13 lakhs for the year under review; for 1952, it was only about Rs. 85,000. After providing a small but useful sum to the reserves, the dividend has been maintained at 3½ per cent. per annum for the third year in succession.

The following comparative table gives a broad idea of the Bank's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Interest and discount earned ..	6.81	5.02	5.63	5.84
Commission and exchange ..	2.75	2.70	1.92	2.38
Interest paid	3.46	2.71	2.29	1.78
Expenses	5.18	4.94	4.63	4.41
Depreciation	0.20	0.22	0.11	0.21
Profit	1.13	1.05	0.85	2.00
Provision for taxation	0.54	0.50	0.27	0.25
To reserves	0.24	0.24	0.29	1.58
Dividend	0.32	0.32	0.24	0.26
	(3½%)	(3½%)	(3½%)	(4½%)
Carry forward	0.01	0.02	0.03	0.02

	As on 31st December			
	1954	1953	1952	1951
Capital	9.23	9.22	9.22	7.45
Reserves	5.03	5.01	4.82	4.56
Deposits (including contingency accounts)	2,05.79	1,72.80	1,50.22	1,52.81
Advances*	83.87	69.92	70.53	63.22
Investments	79.46	63.02	55.61	55.76
Cash	61.50	60.99	47.06	57.33
Balance-sheet total	2,39.02	2,09.50	1,90.23	1,97.24
Ratio to deposits of—	%	%	%	%
Advances	40.7	40.5	46.9	41.4
Investments	38.6	36.5	37.1	36.5
Cash	29.9	35.3	31.9	37.3

* Include bills purchased and discounted and money at call and short notice.

The gross income of the Bank for 1954 amounts to Rs. 9.95 lakhs, representing an increase of Rs. 0.98 lakh over that for 1953. This increase is smaller than that of Rs. 1.09 lakhs noted in the previous year, evidently due to the decline in commercial advances in the latter half of the year. As will be noted from the above table, the bulk of the increase in gross income is accounted for by "interest and discount" earned which is up by Rs. 0.89 lakh. Interest paid on deposits and borrowings has risen by Rs. 0.75 lakh, which increase is more than that in the previous year, evidently due to the sharp rise in deposits, particularly fixed deposits. Expenses also have gone up by a further Rs. 0.18 lakh, so that the rise in profit has not kept pace with the increase in gross income.

For the second year in succession, deposits of the Bank have recorded an expansion to establish a fresh record of Rs. 2.06 crores. Thus, the Bank had its own share of the increase in the deposits of all banks.

Advances, including bills purchased and discounted and money at call and short notice, have risen by Rs. 3.95 lakhs to Rs. 83.87 lakhs. Of these, commercial advances, that is, loans, cash credits and overdrafts and bills purchased and discounted account for Rs. 58.37 lakhs, showing a decline of Rs. 10.75 lakhs over the year. This decline, according to the Directors' report, is "due to general reduction in the demand for credit in the second half of the year on account of partial failure of *rabi* crops, particularly oilseeds crop." The report adds that a decline in commodity prices towards the end of the fourth quarter of the year further contributed to the fall in advances. The balance of advances, Rs. 25.50 lakhs, represents money at call and short notice which is in the nature of advances to other banks. Investments show an increase of Rs. 16.44 lakhs, as against Rs. 7.21 lakhs in the previous year. The bulk of investments—Rs. 79.18 lakhs to be precise—represent Government and trustee securities, the market value of the same being Rs. 77.73 lakhs. The gap between the market value and book value is more than adequately covered by an investment reserve of Rs. 1.75 lakhs. The redemption value of the securities is Rs. 79.51 lakhs, 98.7 per cent. of these maturing within 10 years. There are no securities which mature after 15 years.

PROVISION OF INDUSTRIAL CREDIT

MR. T. T. KRISHNAMACHARI'S PERTINENT ADVICE

A PERPLEXING paradox of the system of industrial credit in this country is that, whereas there is an insistent demand that more and more credit should be made available to those who desire as well as deserve it, not many borrowers are forthcoming to make use of the credit facilities offered by the industrial finance corporations; indeed, even those who can borrow are actually reluctant to utilise these institutions. This is doubtless a disturbing situation. The paradox has certainly to be resolved if the funds that are at the disposal of these institutions have to be put to maximum use and the object for which they were started have to be achieved.

Surely, if everyone in this country followed the Shakespearean dictum, "neither a borrower nor a lender be," there would be neither banking, nor credit, much less industrial progress. Credit is, in fact, the crux of the whole problem of such progress. Like mercy, it is twice blessed, in that it benefits the institution that gives and the man who receives it, provided, of course, it is given for a really worthwhile purpose and is utilised in the most efficient manner. An interesting problem seems to be that as more and more institutions for purveying industrial credit are ushered into existence, and there is no lack of willingness to grant credit, there is actually some drying up of the enthusiasm for borrowing. It was to this problem that the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, called attention when he inaugurated the Rajasthan Finance Corporation at Jaipur. He deplored the inflow and outflow of money from the Industrial Finance Corporation of India for a period of one year was negligible. In this connection, it is worthwhile recalling what the Corporation had to say on this aspect of its operations in its last Annual Report:

"During the last six years, a number of companies, for various reasons, mostly on account of changes in the economic conditions in the country, or changes in their plans or favourable changes in their financial position, did not avail of the loans sanctioned to them. Besides this, some of the companies did not avail of the full amount of loans sanctioned; some others could not fulfil some of the important conditions and the loans sanctioned were, therefore, not disbursed to them."

This extract explains why the loans sanctioned were not availed of by the borrowers. The experience of State financial corporations is not dissimilar. But it does not entirely explain why there is reluctance to borrow. Mr. Krishnamachari, however, put his finger on the right spot when he said: "Nobody is prepared to borrow from an institution where everything is put before a magnifying glass." He was obviously referring to the adverse criticisms, in Parliament, about the working of the Corporation. Clearly, these criticisms were overdone, if not mischievously ill-conceived, as the subsequent enquiry revealed. The fact is that when the relationship between a lender and a borrower, which must necessarily be of the most intimate kind, is exposed to public gaze, and made the subject of acrimonious public controversy and rigid Parliamentary scrutiny, it is only reasonable to expect that the prospective borrowers, however honest they may be, would be willing to forgo credit rather than face criticism.

All this is not intended to suggest that the finance corporations should be unwisely generous, and that they should abandon all attempts at ascertaining the creditworthiness of borrowers. Only, it is necessary to remember that the corporations should not be compelled too frequently to answer charges, and that the corporations themselves, out of sense of frustration and fear of public criticism, interpret too rigidly the conditions for the grant of credit. This latter aspect was rightly emphasised by Mr. Krishnamachari when he said that the utmost precautions provided in the legislation defeated the purpose for which these organisations were created. He added that by mere legislation no purpose could be served. Appropriately enough, Mr. Krishnamachari stressed that, although a certain degree of strictness was introduced, the essential thing in lending credit was the worth of the man who borrowed. What is more important from the point of view of the corporations is the standard of character of the borrower. If the corporations were to decide the creditworthiness of a borrower merely on the basis of collateral he has to offer, they would not be able to make much contribution to the country's industrial progress. If the borrower's standard of character is good and the scheme he has in mind is economically sound, the corporations must help him to implement his scheme by providing the necessary credit facilities. In such cases, the corporations' duty does not end with the provision of credit. They should continue to exercise a diligent watch over the progress of their borrowers and make sure that the latter are proceeding on the right lines. If need be, they should provide their borrowers with the right advice. All these things they will be able to do, only if they are manned by the right type of personnel and have the benefit of expert advice.

In the ultimate analysis, it will be found that it is not the mere fact of the availability of credit that will determine that credit is availed of. No one in his senses will borrow, and no prudent finance corporation will lend, unless the borrower knows and can show that the loan can be put to profitable producive use. Thus, it is a question of creating the conditions under which men will be induced to borrow. This resolves itself into questions of constructive fiscal, industrial and labour policy, technical training, and of provision of transport and other prerequisites of industrial progress. Where these factors are absent or shrouded in uncertainty, the mere creation of credit will yield no satisfactory result. It is necessary to remember that credit is only a means to an end, and that, though it is necessary, it is by no means all that is needed for rapid economic progress. From this point of view, the Rajasthan Finance Corporation would be able to show significant results only when the State Government expedites its industrial schemes.

The authorised capital of the Rajasthan Finance Corporation is Rs. 2 crores, but for the present it has been decided to work with a capital for Rs. 1 crore only. The payment of the annual dividend at the rate of 3.5 per cent. is guaranteed by the State Government, after payment of income-tax and super-tax of the Corporation on its profit. Mr. Ramnath Podar, Chairman of the Corporation, averred that the Corporation would go a long way towards meeting the financial needs of small and medium size industries but that would not solve the whole of their problem. But still they needed cheap power and better means of transportation and the Rajasthan Government was fully aware of those needs. He hoped that within a few years they would get ample cheap hydro-electric power and with the construction of new roads and railways the difficulties of transport would also be solved. The success of the Corporation is, therefore, intimately bound up with provision of basic services which are clearly the responsibility of the State Government.

GIANT MERGER

The banking public of Bombay will now find the familiar name of the National City Bank of New York changed into the First National City Bank of New York. This change, which comes into effect from 1st April, 1955, follows the merger of the two giant banking companies, the 143-year old National City Bank of New York and the 92-year old First National Bank of the City of New York. The merger was ratified by more than the necessary two-thirds majority of the shareholders of both banks at their special meetings held on 30th March and approved by the Comptroller of the Currency. Under the merger plan, the National City Bank will pay to the shareholders of the First National Bank in cash a sum of $165 million for the 300,000 shares at the rate of $550 per share. This will not, however, bring about any change in the capital stock of the National City Bank which consists of 10 million shares of $20 par value or in its surplus which is $300 million. This will mean that the shares of the First National Bank will be abolished by paying the above compensation. The merger has, however, been commemorated by changing the name of the National City Bank as stated above. The Board of Directors of the National City Bank has also been reconstituted to include some Directors of the First National Bank. Mr. Howard C. Shepherd, Chairman of the Board of National City, will be Chairman and Chief Executive Officer of First National City, while Mr. Alexander C. Nagle, formerly President of First National, will become a Director and Chairman of the Executive Committee.

The National City Bank of New York was established in 1812 and, at the last year-end, had deposits aggregating $5,639 million, total resources of $6,323 million and total capital funds of $585 million (including $32 million capital funds of its trust affiliate, City Bank Farmers Trust Company). Established in 1863, the First National Bank of the City of New York had at the last year-end deposits of $556 million, total resources of $713 million and capital funds of $143 million. In the course of a joint statement issued prior to the merger, the Chairman of the National City Bank and the President of the First National Bank observed:

"Merger of the First National Bank with the National City Bank will bring into one institution two banks whose activities are largely complementary. Both banks supply general banking and fiduciary services to business and personal clients and to correspondent banks. The First National Bank, however, has specialised particularly in large corporate relationships and has no branches. The National City Bank operates seventy-one branches in New York, which supply the requirements of business and personal banking needs, including facilities for saving, for convenient payment of bills and for personal loans, of a large segment of the city's population. It also operates 57 branches in 19 foreign countries. The merger will make available to customers of the First National Bank not only more extensive foreign banking facilities, but also larger loan limits and broader banking services generally. The enlarged institution will be better able to meet the growing needs of American business, at home and overseas, and to keep pace with the expansion of the American economy. It will strengthen the leadership of New York City among the country's banking centres. It can be expected to develop a greater earning power and a greater potential for growth than the two banks could develop separately."

The combined total resources of the two institutions, including those of City Bank Farmers Trust Company of $143 million, were $7,180 million as on 31st December, 1954. The combined deposits of National City including City Bank Farmers and First National, amounted to $6,301 million. Since the assets of First National were acquired by a cash payment of $165 million for the 300,000 shares outstanding rather than through an exchange of stock, the capital structure of the First National City remains the same as National City's. At the last year-end, total capital funds were $585 million including $32 million capital funds of City Bank Farmers Trust Company.

HIND BANK LTD.

A decline of Rs. 1.35 lakhs to Rs. 6.56 lakhs in the profit is disclosed by the accounts of the Hind Bank Ltd. (General Manager: Mr. S. D. Pardiwalla, Calcutta) for the year ended 31st December, 1954. This shrinkage follows an expansion of Rs. 1.16 lakhs to Rs. 7.91 lakhs noted in the previous year and is in distinct contrast to the experience of other Scheduled banks in India during the past year. Nevertheless, the profit, after providing for taxation, is sufficient to make a useful addition of Rs. 1.50 lakhs to the reserve fund—though it represents a cut of Rs. 50,000 from that provided last year—and to maintain the dividend at 3 per cent., to which level it had been raised in the previous year from 2 per cent.

The gross income of the Bank amounts to Rs. 23.85 lakhs, as compared with Rs. 22.43 lakhs for 1953, of which the share of "interest and discount" earned is Rs. 15.54 lakhs, an increase of Rs. 1.03 lakhs, and of "commission and exchange" Rs. 8.26 lakhs, as against Rs. 7.89 lakhs in 1953. Interest paid on deposits and borrowings shows a rise from Rs. 5.75 lakhs to Rs. 7.73 lakhs and expenses from Rs. 8.53 lakhs to Rs. 9.38 lakhs. Out of the profit of Rs. 6.56 lakhs, the Directors have set aside Rs. 2.80 lakhs (Rs. 3.86 lakhs) for taxation and Rs. 1.50 lakhs (Rs. 2 lakhs) for reserve fund. The dividend absorbs Rs. 1.50 lakhs, leaving Rs. 1.13 lakhs to be carried forward.

The salient features of the Bank's latest balance-sheet are compared with those at the close of the previous three years in the following table:

(In lakhs of rupees)

	As on 31st December			
	1954	1953	1952	1951
Capital	50.00	50.00	50.00	50.00
Reserves	23.50	22.00	20.00	17.50
Deposits	4,07.01	3,90.90	3,17.09	3,48.30†
Borrowings from other banks ..	..	..	0.78	..
Bills for collection	80.81	60.32	56.88	51.36
Acceptances	1,59.23	2,29.06	96.33	95.55
Advances*	2,00.67	2,51.59	1,98.06	1,74.99
Investments	1,12.33	1,10.25	1,14.63	1,15.58
Cash balances	79.65	99.80	77.31	1,19.60
Balance-sheet total	6,70.87	7,61.79	5,52.19	5,68.08
Ratio to deposits of—	%	%	%	%
Advances	71.4	66.2	62.4	50.2
Investments	27.6	29.0	35.8	33.2
Cash	19.6	26.3	24.3	34.3

* Include bills purchased and discounted and money at call and short notice.

For the second year in succession, the deposits of the Bank have recorded an expansion, though the pace of increase in 1954 is less than that in 1953. At Rs. 407.01 lakhs, the deposits are the highest since 1948. In contrast with the general trend, fixed deposits of the Bank have declined from Rs. 139.46 lakhs to Rs. 135.86 lakhs, while savings bank deposits have improved from Rs. 14.37 lakhs to Rs. 15.28 lakhs and current and contingency accounts from Rs. 226.47 lakhs to Rs. 225.89 lakhs. Substantial decline in the bills business is indicated by the fall in bills for collection and acceptances. More than 71 per cent. of the deposits are absorbed by advances, of which commercial advances represent Rs. 262.67 lakhs, an increase of Rs. 26.08 lakhs, and money at call and short notice Rs. 28 lakhs, as against Rs. 15 lakhs. Investments are shown at below market value. Of these, investments in Government securities amount to Rs. 108.62 lakhs or about 94 per per cent. of the total. About 92 per cent. of the securities mature within the next seven years. A shrinkage of Rs. 20.24 lakhs is noted in cash balances (excluding money at call) and even at Rs. 79.65 lakhs they provide a comfortable cash coverage of 19.6 per cent. to the deposits.

WORLD TEXTILE EXPORTS IMPROVE

JAPAN SCORES OVER ALL COUNTRIES

THE calendar year 1954 witnessed a distinct improvement in the international textile trade. The quantity of cotton cloth actually exported from the chief textile producing countries of the world during the year, for instance, aggregated 5,120 million square yards. This quantity represents an increase of over 500 million square yards or 10.8 per cent. as compared with 1953, according to a statistical review recently issued by the British Cotton Board.

The bulk of the rise in world cotton cloth exports during 1954 was accounted for by Japan, the exports of which amounted to as much as 1,278 million yards—the highest figure recorded in any post-war year—as against 914 million yards in the previous year. Thus, in the past year, Japan was able to step up its exports by as much as 40 per cent. This rise followed a high level of activity in the Japanese textile industry. During 1954, the cotton spinning mills in this country produced an average of 194,000 bales of yarn per month, which was far higher than the target of 172,000 bales aimed at by the Japanese Government. It is rather difficult to say whether the aforesaid trend of Japanese cloth exports will be maintained in the current year also. Available indications, however, point to a slightly downward trend. The Textile Export Council in Japan has set the export target for cotton yarn and textiles at $250 million, as against the actual exports of the value of $275 million in 1953.

India also registered an increase in exports of cotton cloth during 1954, the quantity shipped being 898 million yards, as against 701 million yards in 1953. These figures refer only to mill-made cloth and exclude handloom fabrics. The shipments of the latter aggregated 58 million yards, as against 63 million yards in 1953. In other words, India's exports of mill cloth went up by about 28 per cent. This performance, it may be noted here, is not as splendid as that of Japan. It is regrettable that, although Indian mills had the advantage of the cheapest cotton in the world, they could not beat Japan and recapture the first rank it held in 1951. The fault is not entirely that of mills alone. The authorities, too, are to be blamed, for their policy in regard to labour, modernisation and taxation has not been conducive to higher productivity. It is needless to add that, unless they allow the mills to modernise their equipment without any further delay, Indian cotton textiles will not be able to hold for long even their existing position on the export front.

The modest improvement noted last year in India's exports must be attributed mainly to the abolition of the 10 per cent. export duty on medium counts cloth. Most of the increased trade in cotton goods was with British East and West Africa, the U.K. and Australia. India benefited, to some extent, from the continuation of restrictions on Japanese cotton goods in East Africa. Most of the Continental countries, too, were able to step up their exports. Thus, France, Belgium and Holland accounted for a rise in cotton cloth exports. Another country that figured prominently in the picture was Hong Kong in the East. Presently, this tiny British territory seems to be effectively challenging India in a number of markets, particularly in the U.K.

In sharp contrast to the above trend, exports of cloth from the U.K. suffered a fall from 709 million yards in 1953 to 637 million yards in 1954, a fall of 10.1 per cent. Similarly, shipments of cloth from the U.S. also declined from 628 million yards to 611 million yards.

The following table indicates the trend of cotton (and rayon) cloth exports from the world's chief textile producing countries during the years 1953 and 1954:

(In million yards)

	Cotton cloth		Rayon Cloth	
	1953	1954	1953	1954
Japan	914	1,278	424	603
India	701	898	..	..
U.K.	709	637	172	175
U.S.	628	611	216	172*
France	493	518	109	149
Holland	229	230	32	40
Germany	232	206†	175	224†
Belgium	182	195†	31	37†
Hong Kong ..	134	150	10	20
Portugal	96	94*	..	..
Italy	144	92†	176	126†

* For nine months. † For eleven months.

It will be seen from the above table that, during the year 1954, Japan continued to enjoy the unique distinction of being the world's largest exporter of cotton cloth for the second year in succession. India improved its position to hold second place. Next in importance was the United Kingdom, followed by the U.S., the order of importance of both the countries being more or less the same. It will be recalled that, in 1952, the U.S. was the largest exporter of cotton textiles in the world. The disappointing performance of the U.S. export trade in cotton textiles in the past two years was due to higher import restrictions in many foreign markets and competition from Japan in Indonesia and other markets in the Far East.

The figures relating to world trade in rayon cloth reveal that exports from Japan during 1954 advanced by nearly 50 per cent., from 424 million yards to 603 million yards, to be precise. As in the case of cotton goods, Japan led the field in exports of rayon cloth, too, its share being about thrice as much as its nearest rival, the United States. Exports from Germany also staged an impressive rise, the quantity shipped during the first eleven months of 1954 being 224 million yards, as against 175 million yards for the whole of 1953. Exports from France, the U.K., Holland, Belgium and Hong Kong, too, were higher. On the other hand, the trend of rayon cloth shipments from Italy, an important producer of rayon goods, was downward.

INDIAN CLOTH EXPORTS TO BURMA

An assessment of the prospects for Indian cotton piecegoods exports to Burma has been made by the Cotton Textiles Export Promotion Council in the course of an interesting analysis published in its latest issue of the *Texprocil Bulletin*. The study reveals that, since August, 1954, there has been an alarming drop in Burma's offtake of Indian fabrics. Thus, Burma purchased from India only 1.11 million yards of cloth during the month of December, 1954, as against as much as 9.73 million yards in July, 1954. For the whole of 1954, the purchase amounted to 40 million yards, as against 90 million yards in the previous year. The first blow to the export of Indian textiles to Burma was the abolition of preferential rate of customs duty which nullified the price advantage enjoyed by Indian cloth. As a result of this, as also of the burden of export duty (on coarse cloth), the prices of many varieties of Indian textiles offered to the Burmese market are higher than those of similar types of Japanese goods, by nearly 25 per cent. in some cases.

Analysing the competitive position of India *vis-a-vis* Japan, the Council has made the following points:

(1) Importers in Burma are used to placing short notice orders. Japanese exporters supply almost immediately and, in many cases, from ready stock. It is complained that orders placed with Indian mills are not executed so promptly.

(2) Indian mills and exporters are not willing to entertain small orders, nor are they able to cater to actual requirements in regard to colours and designs. Japanese exporters, on the other hand, cater even to the smallest order, bearing in mind the minutest detail of individual requirements.

(3) There is lack of standardisation of Indian cloth; even specification in final shipments vary from those of samples. But the Japanese producers offer well-known standard varieties. Rigid quality control by Japanese manufacturers has instilled confidence in Burmese importers, whereas very few mills in India control the quality of their production.

(4) Most of the Indian shipments are badly packed, which often results in cloth being damaged in transit.

(5) The markings and labellings on a large part of Indian textiles are made in a haphazard manner, while Japanese textiles are so clearly stamped and attractively labelled that they help boost the retail sale.

(6) Indian shipments contain seconds, rejects and two-part pieces, while those from Japan are in standard pieces.

In addition to the aforesaid factors, other complaints such as yardage and measurement disparities, inaccurate constructions, excessive starch, divergent price quotations to different parties at the same time, etc., are also said to have been levelled against many Indian mills and exporters. The Council, therefore, urges elimination of these defects. In its opinion, if earnest efforts are made to obviate the complaints, there are bright chances of arresting the unhappy trend. It says: "It must not be overlooked that it is much easier to regain a contiguous market whose needs Indian exporters and mills know well rather than trying to break new ground."

Incidentally, the Council has alluded to the recent changes in the dressing habits of the Burmese people who love attractive designs at cheap prices. Citing the example of Japan, the Council suggests that Indian mills may carry out consumer research at least once a year to know the changes in national tastes. The Council has also given an idea of the types of cloth required by the Burma market. The types usually in demand are said to be bleached shirting (medium, 36" grey shirting (coarse and medium) 36", 42", 44" printed material in bright colours, bold clean designs and better finish *lungis*, *dhotis* and *saris*.

INDO-BRITISH TRADE IN CARPETS

Trade in carpets between India and the U.K. formed the subject of an interpellation in the British House of Commons last week. Replying to a question relating to tariffs on imported carpets by the Governments of the two countries, Mr. Austin Low, Minister of State, Board of Trade, said: "Our trade agreement with India provides for a measure of reciprocity in preferences, though not for the level of duty. The Government of India accord the U.K. carpets a 12½ per cent. preference, but their imports are at present severely restricted for balance of payments reasons. We hope this restriction will be relaxed as soon as possible." The figures cited by Mr. Low reveal that, during the year ended February, 1955, the value of carpets (subject to duty) exported from Britain to India was £7,600, while that of carpets (duty-free) imported into Britain was £2.3 million. One of the Labour members of the House stated that "the very big increase in jute carpets exported from India is causing unemployment in the Dundee area." He suggested that some form of control might be considered. Replying to this, Mr. Low said: "I will consider that point. But you know the regulations there are at present."

U.K. COTTON MISSION

The team of six marketing experts of the British cotton industry which was in India investigating the possibilities of improving exports of British cotton textiles to this country, left for London last week-end. During its stay in New Delhi, the team is reported to have submitted a memorandum to the Ministry of Commerce and Industry. The details of this memorandum are still not made known. From Press reports, it is, however, gathered that the team has made certain suggestions evolved after its talks with the millowners of Bombay, Calcutta, Madras, Delhi and Amritsar, as also with Mr. T. T. Krishnamachari.

The Mission is understood to have come to the conclusion that it is impossible to retrieve the pre-war days of cotton textile trade with India. It has, however, selected several specialised items in which steady exports from Britain to India seems possible. These items, it is said, are either not made in India at all or are manufactured in inadequate quantities. It is also believed to have formally requested the Government of India to consider the possibility of reducing the import duty on a number of items.

PLEA FOR FREE EXPORT OF WOOL

A plea to the Government of India to allow free export of wool and to abolish the present quota system was made at the fourth All-India Wool Trade Federation's Conference held at Beawar early this week. Presiding over the conference presidential speech, Mr. Shivratan Mohatta said that India had a minimum surplus of about 41 million lbs. of wool which could be exported without jeopardising the interests of the indigenous industry. The quantitative restrictions on the export of raw wool were far from justified, he said. In his inaugural speech, Mr. U. N. Dhebar, the Congress President, said that, in the wool trade, the primary risk was being taken by the shepherd and he must be rehabilitated.

ERRATA

Commenting on the reduction in the increase in excise duty on cotton mill piecegoods originally proposed in the Budget statement for 1955-56, we observed in our issue dated 2nd April, 1955—*vide* page 618—that the reduction applied only in respect of cloth of 35 counts and below. This is not correct. For the reduction applies to cotton fabrics in which average count of yarn does not exceed 34. The three correct classifications of cloth for purposes of excise levy are: (1) 34s and below, (2) 35s to 47s, and (3) 48s and above.

The review of the woollen textile industry in India appearing in our issue dated 5th March, 1955—*vide* page 408—relates to the calendar year 1952 and not 1954 as was inadvertently mentioned. Similarly, the number of persons employed in the industry in the States of West Bengal, Bihar and Saurashtra during 1952 was 1,558 and not 13,801.

DRIFT OF WORKERS FROM MILLS TO OTHER OCCUPATIONS

SIR RAYMOND STREAT STRESSES NEED FOR DOUBLE-SHIFT WORKING

From Our Special Correspondent

MANCHESTER, *5th April*

MANCHESTER LETTER

BRITISH cotton millowners and operatives view the approaching Easter holidays with nothing less than dismay. Fears of the biggest stoppage in the cotton towns for three years have been growing as reports have come to hand of many mills extending their normal holiday break due to shortening order books.

It is already known that some 120 Lancashire weaving mills will remain shut for periods of up to a week after the holidays have ended. Around 50,000 looms will be idle, representing one in six of those employed in the industry. It is estimated that more than 17,000 weaving operatives alone will be affected by these stoppages.

A preliminary statement on the situation has already been issued by the Cotton Spinners and Manufacturers' Association but further news is likely to reach the headquarters of this organisation before the week-end. Most weaving districts will be hit by the interference with production but the areas likely to be worst affected are Blackburn, Burnley and South and East Lancashire.

No survey of the position has been taken by spinning employers but reports filtering in to Manchester indicate that the position may be almost as serious as on the manufacturing side.

Manpower Drift

Underlining the serious state of trade in both spinning and weaving mills are official figures from the Cotton Board showing how labour is leaving the cotton industry to obtain employment in other directions where prospects of steadier jobs are available.

The Cotton Board statistics show that by mid-March the net loss of operatives in the spinning section alone this year had reached 2,500.

Spinning mills suffered their most severe manpower setback since June, 1952, in the week ended 19th March when 413 full-time and 70 part-time workers were lost.

During February, the Board's returns show, more than 900 full and part-time workers left Lancashire cotton weaving sheds. The number of operatives in the industry as a whole has declined to 284,000—6,000 fewer than the total a year ago.

With fewer operatives at work, output of cotton and rayon yarn fell to 19,080,000 lbs. in the week ended 19th March. This compared with 19,290,000 lbs. in the previous week and 20,570,000 lbs. in the corresponding week of 1954.

The Cotton Board also stated that production of cotton and rayon cloth averaged 55,630,000 yards weekly during February. In the previous month output averaged 53,690,000 yards a week and 55,480,000 yards weekly in the corresponding month last year.

Decade to Come

The next 10 years is going to be tougher for the Lancashire cotton industry than the first 10 years after World War II, Sir Raymond Streat, Chairman of the Cotton Board, said last week. "But I do not think the industry lacks either the will or the means to make a good fight for trade in the years which lie ahead," he told members of the Textile Works Managers' Federation, in conference at St. Annes.

The industry looked to the Government, however, to set conditions in which it could fight fairly and effectively. They required and deserved a fuller measure of protection in the home market. The motor car industry, for instance, enjoyed a higher rate of tariff protection and did not have Commonwealth countries sending in goods free of duty to shake their confidence on the home market. He said: "We are not asking for unreasonable measures and I do not think other industries more fortunately placed will object if the Government makes things fairer all round by adjusting the handicap so that cotton is less unfairly treated."

Sir Raymond spoke of the disadvantages imposed by the "D" Scheme of purchase tax and the need to increase cotton exports. The decline in the export trade last year was serious, he said. He added:

"To get what we want, there is an urgent need for several significant modifications of policy and structure within the industry. We must move faster towards double-shift working. Progress in double-shift working means that mills will become redundant, but not workers, technicians and managers.

"Those mills which do not intend to take all the risks which in the next 10 years will be the price of progress might wisely cease production in the fairly near future. It should be possible to find work in other and more modern mills for all their workpeople.

"I am increasingly convinced that we need bigger units and many of them should be more vertical in character. That makes it easier to translate improved mill efficiency into keener competition for export trade."

Spiral of Earnings

Six months have passed since the last wage advance was granted to Lancashire cotton operatives. In the meantime conditions, then by no means promising, have deteriorated still further. It is questionable whether the increase secured in October last has had any appreciable effect on the trade other than to raise costs of production and react on Lancashire's competitive ability.

According to the latest census of earnings issued by the Ministry of Labour, covering about 7,000,000 British workers, average payment in the last week in October was at a higher level than at any time in the past. Men for the first time earned an average of more than £10 weekly, while the overall average at more than £8 10*s*. showed a rise of 223 per cent. compared with October, 1938.

Figures relating to cotton operatives alone, as the table below shows, continue the favourable trend in earnings which has not been halted since the 1952 recession. Were it not for the rather lower wages paid to male workers the industry would compare very favourably with the general average, as the payments made to youths, women and girls are all substantially above the level of other trades.

All workers	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
	s. d.	s. d.	s. d.	s. d.	s. d.
October 1951 ..	166 0	69 1	90 1	57 11	141 1
April 1952 ..	173 7	71 9	92 2	57 9	147 3
October 1952 ..	178 6	74 11	96 4	60 9	151 11
April 1953 ..	185 11	77 7	100 8	62 6	157 7
October 1953 ..	189 2	78 11	102 5	64 11	160 1
April 1954 ..	197 8	82 0	105 8	65 10	166 6
October 1954 ..	204 5	83 7	108 2	69 5	171 9
COTTON SPINNING AND WEAVING					
October 1951 ..	166 10	90 6	105 1	79 11	124 5
April 1952 ..	149 0	80 4	93 9	70 4	111 6
October 1952 ..	160 6	88 6	102 5	77 8	121 0
April 1953 ..	166 1	90 7	106 2	79 0	124 8
October 1953 ..	178 3	95 7	113 3	85 5	133 4
April 1954 ..	180 6	96 8	114 3	85 0	134 0
October 1954 ..	191 8	104 4	121 8	92 3	142 10

The rise in wages showed little variation between the various sections, with male spinners still the highest paid at £9 12*s*. 2*d*. and women weavers £6 6*s*. 2*d*. The favourable position of juveniles was maintained, with youths receiving an average of £5 10*s*. 1*d*. in spinning and girls under 18 getting £4 13*s*. 10*d*.

There was also a proportionate rise in earnings of operatives weaving rayon and other synthetic fibres from £7 4*s*. 4*d*. to £7 10*s*. 4*d*. In the textile finishing trade average earnings increased from £7 17*s*. 5*d*. to £8 6*s*.

Yarn Imports

Foreign competition in doubled cotton yarn was blamed for causing the threat of unemployment and short-time working in Lancashire textile mills at the annual meeting of the British Cotton Yarn Doublers' Association.

Mr. Alan J. Stott, Chairman, said that imports of yarn, most of it doubled, amounted to some 10,000,000 lbs, last year, and 3,000,000 lbs. had arrived in this country in the past three months.

"Two of the countries chiefly involved—Egypt and Portugal—are newcomers to this field," he added. "The prices of this foreign yarn are such that in some cases, if no margins for doubling at all were allowed, they would still be cheaper than ours. Subsidies, cheap labour and State-aided export schemes make up the difference."

Lancashire spinners and doublers, said Mr. Stott, were forced to pay prices for cotton based on the American support policy and other cotton producing countries also sheltered under this umbrella. But in the case of India, Egypt and Portugal domestic or colonial cotton was available at much cheaper rates—in India it was 10*d*. per lb less than local spinners had to pay and in Egypt some 4½*d*. per lb. plus certain Government subsidies.—*All Rights Reserved.*

CONCERN OVER U.S. COTTON POLICY

SUBSIDY ISSUE REMAINS UNSETTLED

A SOMEWHAT unexpected, though not perhaps unjustified, change in the attitude of the cotton consuming countries towards the U.S. cotton export policy has taken place. There is growing concern over the prospect of an export subsidy in the U.S. Formerly, the U.S. price-support policy used to be criticised on the ground that it is mainly responsible for an artificially high level of prices for cotton. This policy, it used to be said, provided a prop for world cotton prices, since the U.S. is the world's leading producer and exporter of cotton. It now seems that this line of criticism has been abandoned. There is virtually a demand for the maintenance of high prices for cotton, and a guarantee from the U.S. that it would not depress prices through the grant of export subsidy.

This change in the cotton consumers' attitude towards the U.S. cotton policy is reflected in the statement made by Mr. Austin Low, U.K. Minister of State at the Board of Trade, to the effect that Britain had "strongly represented" to the U.S. on the serious damage that the threat of a substantial artificial reduction in the price of American cotton some time after 31st July could have on the cotton industry. Mr. Low said the U.S. price governed the world price. Britain had no promise from the U.S. that there would be no export subsidy after 31st July. He said: "We have no statement of intention by them at all." Obviously, he was referring to the repeated declarations of the spokesman of the American Government to the effect that no subsidy was contemplated for cotton this season. But these statements have thrown no light whatever on the U.S. Government's probable line of action after 31st July.

Mr. Low's expression of concern over the continued uncertainty surrounding the U.S. cotton export policy follows Liverpool's request for a clarification of this policy. About three weeks ago, the Liverpool Cotton Association appealed direct to Washington for a declaration of the U.S. Government's policy. In a communication addressed to the U.S. Secretary of Agriculture, the Association drew attention to the disastrous market reaction due to uncertainty about this policy. It said that fresh importing of American cotton was virtually at a standstill and that consumption of other growths was being encouraged by price cutting in anticipation of possible American export subsidy.

Clearly, the Association's request for clarification stems from the fear of the possible losses which the U.K. as a cotton importing country would suffer on its stocks, if the U.S. granted an export subsidy and thereby depressed cotton prices. It is true that the British spinners can utilise the Liverpool cotton market to provide a hedge against a fall in cotton prices arising from an export subsidy in the U.S. Indeed, in this matter, the Liverpool market is at an advantage, for the New York market offers no hedge against a fall in prices outside the U.S. Nevertheless, the uncertainty over the U.S. cotton export policy, it is stated, operates to the long-term disadvantage of Liverpool, not only because of the general depressing effect on trade and on imports of cotton, but specifically because it discourages the building up of stocks of spot cotton.

The U.S. is obviously in a difficult position. It has a record supply of cotton in the current season, placed at 23.1 million bales (of 478 lbs. each) consisting of an output of 13.5 million bales and carryover of 9.6 million bales, as against 22.0 million bales, consisting of an output of 16.4 million bales and carryover of 5.6 million bales in the last season. Exports of American cotton upto the end of March this year were about 3 million bales. Some experts believe that exports might reach 4½ million bales during the current season, though there are many within the trade who do not think that the U.S exports would reach this total. The carryover stocks at the end of this season, it is stated, would be well over 9½ million bales.

It should therefore be clear that surplus cotton stocks are a huge burden on the American economy. Opinions differ as to the best method of disposal of these stocks. Some observers suggest selling supplies at competitive prices in the world market. There are advocates of a two-price system and those who favour a direct subsidy to the farmer. Some observers believe that the situation will adjust itself after two or three more years of acreage controls. Last week, Mr. Ezra Benson, U.S. Secretary of Agriculture, told a group of Congressmen that the Department was studying the situation with a view to developing an export programme. It remains to be seen what measures the U.S. will finally take in order to dispose of its burdensome surpluses. Meanwhile, the uncertainty over those measures will continue to cast its shadow over world cotton markets.

CROP ESTIMATE

The Fourth All-India Estimate of cotton for the current season (1954-55), issued by the Union Ministry of Food and Agriculture, places the area and production at 17,465,000 acres and 4,089,000 bales (of 392 lbs. each), as against the corresponding estimate of 16,224,000 acres and 3,686,000 bales for 1953-54. The current year's estimate thus shows an increase of 1,241,000 acres or 7.6 per cent. in area and 403,000 bales or 10.9 per cent. in production, over last year's.

The official estimate of cotton is as is well known, always lower than the trade estimates which generally reflect the true crop pattern. Trade estimates place the current season's crop at 48.27 to 48.31 lakh bales. Nevertheless, the official estimate is valuable for the reason that it throws light on the relative importance of the different growths of cotton. The following two tables give the details regarding the output of different varieties of cotton and the staple lengths of the current and previous years' estimates:

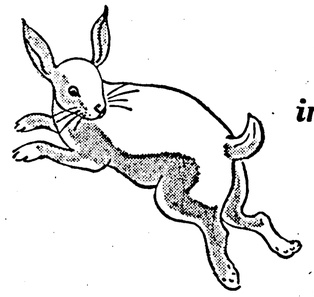
Varieties of Cotton

Varieties	Area (In 000 acres)		Output (In 000 bales of 392 lbs.)	
	1954-55	1953-54	1954-55	1953-54
Bengals	794	836	205	362
Americans ..	2,890	2,562	1,014	836
Jarilla	2,592	2,463	488	504
Verum	320	292	56	53
H. 420	431	293	73	53
Oomras	2,339	2,279	372	405
Hyderabad Gaorani	1,153	1,328	154	129
Malvi	1,202	1,134	253	253
Broach-Vijay ..	1,079	858	359	280
Surti-Sayog ..	527	488	165	130
Dholleras	1,870	1,506	502	319
Southerns ..	2,210	2,127	340	316
Comillas	58	58	18	27
Total ..	17,465	16,224	4,089	3,686

Staple Lengths

Staple	Area (In 000 acres)		Output (In 000 bales of 392 lbs.	
	1954-55	1953-54	1954-55	1953-54
Long staple ..	5,447	4,969	1,456	1,144
Medium staple ..	8,278	7,630	1,826	1,666
Short staple ..	3,740	3,625	807	876
Total ..	17,465	16,224	4,089	3,686

The increase in area and output during the current year, it is stated, has occurred mainly in Bombay, Punjab, P.E.P.S.U., Saurashtra, Kutch, Madhya Pradesh and Andhra.



in the long run...

Dulux Synthetic Enamel is not only famous for its *high gloss*, but goes much further and lasts much longer. It has exceptional properties of flexibility and adhesion to metal, wood and other surfaces. Easily applied by brush or spray, Dulux has good flow and dries quickly to a hard abrasion resistant finish. Use Dulux for every job where outstanding *durability* is required.

OUTLINES OF TAX POLICY

MATTHAI COMMISSION'S THESIS EXAMINED

By Dr. Sadasiv Misra

THE Taxation Enquiry Commission was required to examine the suitability of the tax system with reference to the objective of reducing inequalities in income and wealth, as well as the development programme of the country and resources required therefor. It was also required to examine, in particular, the effect of income-tax on capital formation and maintenance and development of productive resources. These are fundamental issues on which there have been acute controversies. Political views and affiliations have further complicated the problems. The Taxation Enquiry Commission, comprising eminent authorities on the subject, was, therefore, called upon to give expert guidance on the issues.

The nature and contents of a tax system have to be adjusted to the changes in the character of society and the relation of the individual to the community. Failure in the necessary adjustment has, in the past, led to social revolutions and political upheavals. Nevertheless, till about the end of the nineteenth century, it used to be usually agreed that taxation should be "for revenue only." Progression in the tax system made slow progress. Since the First World War, taxation has been more and more utilised as an effective weapon of social and economic adjustment. Even so, the existing tax system has not been devised at any particular time to conform to any definite objectives and ideals. The system has been evolved over a long period of history. Alterations and adjustments have been introduced piecemeal from time to time to suit exigencies of situations. In fact, the most outstanding developments in the tax system have been brought about under the compelling circumstances of the two world wars. All these have, in some ways, contributed to the solution of certain problems, but they have at the same time given rise to certain others.

Consumption Taxes

Our tax system continued for long to be overridden with consumption taxes. During the inter-war years, there were severe criticisms against the system and demand for reform. The Government was conscious of the drawbacks but was unresponsive. A definitely progressive rate-structure in income-tax was introduced in 1939. "There must in future," said the Finance Member on this occasion, "be no suggestion that the administration was harsh to the small taxpayers and far too lenient to the rich." During the war, the rates of income-tax and super-tax were highly steepened. Whatever the circumstances, a change once introduced tends to continue. At the end of the war, both in rate-structure and importance, income-tax emerged almost beyond recognition.

The development of income-tax during the war made a great advance towards distributive justice. In 1947, Liaquat Ali Khan pursued the policy of moving further in this direction. He wanted to reduce the glaring disparities of income between the classes and the masses. Accordingly, the rates of income-tax were made exceedingly steep and the maximum of 15¾ annas in the rupee was made applicable to the excess of income beyond one and a half lakhs of rupees. In addition, a business profits tax and a capital gains tax were also levied. Naturally, there was acute resentment from the business interests in the community. Thereafter, the first two Finance Ministers, Dr. Shanmukham Chetty and Dr. John Matthai, in their budget speeches, emphatically pointed out that the high level of income taxation adversely affected the incentive for saving and investment and retarded production. It was necessary to provide relief in taxation to stimulate investment and expand production. Accordingly, in stages, the B.P.T. and the C.G.T. were abolished and the rates of income-tax brought down. Thereafter, the rates again went up to a certain extent. But the conflict between the two objectives had not been officially raised, presumably being left over for the expert advice of the Taxation Commission.

The directive principles of the Constitution have prescribed that concentration of wealth and income in the hands of a few has to be prevented and inequalities of income should be effectively reduced. The machinery of public finance may not be the only instrument for realising these objectives; but it is undoubtedly a very powerful and effective instrument. It must be appreciated that, if the fruits of economic progress and development are not made available to all the different sections of the community, such development may not be worth having at all. On the other hand, if attempt to secure distributive justice results in drying up the very distributable source, it would only lead to distribution of poverty. Financial policy has to shoulder the responsibility of accelerating the flow of production. The crux of the problem is to solve the conflict between these two objectives. Pointing out the importance of distributive justice, the Commission says:

"The attainment of a wider measure of equality in incomes, wealth and opportunities must form an integral part of economic development and social advance currently. . . . The tax system can certainly assist in this process by recognition of the fact that the distribution of income is not immutable, but is capable of adjustment, if definite emphasis is directed towards it in the fiscal system."

And at every stage of elaboration of this objective, the Commission hastens to sound a caution, a serious note of warning. The emphasis on distribution "should be based on a realistic appraisal of what the tax system can, at any time, achieve in the direction of lessening inequalities and, secondly, how far the process can be carried without undue adverse repercussions on private productive effort and enterprise."

Conflicting Objectives

This is not a problem peculiar to India alone. Almost in every country, fiscal policy is faced with the difficult issue of reconciling the two conflicting objectives. The President of the United States of America set out, in his tax proposals in January, 1954, the same principles in clear and straight forward terms. "We should now remove the most glaring tax inequities, particularly on small taxpayers; reduce restraints on the growth of small business, and make other changes that will encourage initiative, enterprise and production." All our discussions and criticisms with regard to financial policy have centred round this conflict between the same two objectives. The Taxation Commission has only restated the issues with a caveat to the enthusiasts for distributive justice. The degree of progression considered desirable over various income ranges will depend, says the Commission, on the need to strike a balance between the aim of lessening economic inequalities and that of sustaining and strengthening incentives to invest and to increase production. The problem is everywhere understood and appreciated; but it is exceedingly difficult to strike the balance. How far should tax policy be carried to reduce inequalities without encroaching upon incentives?

Discussing the problem of equity, the Commission is of the view that there should be a ceiling on personal net incomes after taxation and this should not exceed 30 times the average family income. With about Rs. 250 *per capita* income and 4.5 as the size of a family, the highest family income after taxation should not exceed Rs. 34,000 a year. But this concept has not been carried further. It is not suggested for immediate implementation, but to be kept in view as a long-period objective. One would expect this view to shape the considerations of rate-structure in direct taxation. But in top-most brackets of income, the scope for further increase is considered to be very small and the Commission is satisfied that present maximum income-tax rate of 13¾ annas a rupee applicable to incomes above Rs. 1½ lakhs is as far as one can go in the present circumstances. There is not the slightest doubt that even this rate is a heavy rate of taxation. But to propound an objective, even though over a long period and to leave the policy programme regarding maximum rates and their applicability over different income ranges unaffected, would make the objective sound like pious platitudes. The Commission visualises the reduction of inequalities to be achieved through an acceleration of the tempo of economic development and widening of employment and production opportunities. Hence its emphasis on encouragement to production.

The keynote underlying all the analysis by the Commission about taxation policy is the promotion of development and production. The problem of capital formation forms the central issue in the determination of appropriate objective. In the context of the development programme, the vital question is how to adapt the tax system to the imperative need for stepping up the rate of capital formation both in the public and private sectors. In the pattern of economy accepted, a large role has been assigned to private initiative and enterprise in the development programme. In the first Five-year Plan, a little less than half the total net investment has been left over to the private sector. Obviously, therefore, if tax measures depress enterprise and discourage private investment, the very development programme may be defeated.

The terms of reference required the Taxation Enquiry Commission to examine the structure and level of income-tax on capital formation and maintenance and development of productive enterprise. How has the existing income-tax affected savings, investment and enterprise? On the answer to this question will depend how far progression can go to attain distributing ends without retarding incentive to saving and investment. A factual estimate is essential in striking the balance.

Divergent Views

This issue has been the crux of conflict and dispute everywhere. In his Economic Report in January 1954, the President of the United States of America pointed out that the present structure of business income taxation "leaves too little an incentive for the assumption of risk by investors, and offers too meagre a reward to enterprisers who assume high risks." Accordingly, he initiated major reforms to remove the impediments. On the other hand, Prof. Lindholm pointed out how extensive studies in the U.S.A. showed that "people in the high-income brackets do not seem to have been materially dissuaded from making risky investments because of the high income-tax on the net return (*Current History*, August 1954). Divergent views have been expressed in our country about the effect of the present income-tax on incentive, often with little supporting evidence. The findings of the Taxation Commission were therefore eagerly awaited.

In analysing the effects of income-tax on saving and investment, the different aspects of the issue are often confused together. Taxation reduces income and, therefore, necessarily private consumption and investment. But all that amount may be utilised for capital formation by the public sector. In that case, to the extent to which this has been secured by curtailment of private consumption, there may be an increase in the capital formation over what would be otherwise possible. Taxation reduces taxpayers' ability to save and invest and not his incentive; the economy as a whole does not suffer. This issue has been made sufficiently clear by the Commission.

EXPANSION OF SUGAR INDUSTRY UNDER SECOND FIVE-YEAR PLAN

VIEWS OF FEDERATION OF CHAMBERS OF COMMERCE

THE sugar industry is one of the major industries for which the Planning Commission is now busy formulating the development programme for inclusion in the second Five-year Plan. The programme will be based largely on the recommendations of the Development Council for Sugar Industry which is scheduled to meet at New Delhi towards the end of this month. Meanwhile, the Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.) has come out with a draft note on the second Five-year Plan, editorial comment on which was made in this journal two weeks ago. The second part of the draft includes brief notes on expansion plan for the sugar industry. In these notes, an attempt is made to assess briefly the present position of the industry and the estimated demand for sugar by 1960-61, to fix the targets of production, to determine the installed capacity, the capital, raw materials and foreign exchange resources that would be required to hit the target and to estimate the employment that is likely to be generated.

The Federation suggests that the installed capacity of the sugar industry should be raised from 2.0 million tons in 1955-56 to 2.5 million tons by 1960-61. This target is based on the rising trend of sugar consumption. The *per capita* consumption is expected to be 13 to 14 lbs. by 1960-61, which represents an increase of nearly 100 per cent. as compared with the consumption of 7 lbs. in 1950-51. In arriving at the production target, the Federation must have taken into account three factors. The first factor is the growth of population. It is estimated that India's population will increase from 385 million in 1955-56 to 416 million in 1960-61, a rise of 6.5 per cent. Secondly, the dietetic habits of the people are changing; there is a steady improvement in the demand for white sugar for tea, coffee and cold drinks. Thirdly, with the increase in the standard of living of the masses, more people are likely to take to white sugar instead of *gur*. An analysis of the trend of sugar and *gur* consumption in the first four years of the Five-year Plan bears testimony to this fact. Thus, during 1953-54, the *per capita* consumption of white sugar was higher at 10.6 lbs. as against 7.0 lbs. in 1950-51, while that of *gur* was lower at 17.0 lbs., as against 19.4 lbs.

Since 1950-51, it will be recalled, some sugar factories have expanded their installed capacity, thereby stepping up the capacity of the industry as a whole to 1.63 million tons of sugar per annum. Besides, by March, 1954, the Licensing Committee had recommended for sanction an additional capacity of about 51,000 tons per annum by way of expansion of the existing units or setting up of new units. Permission has also been granted to some sugar mills to shift their plants to suitable sites where there are adequate supplies of sugarcane. The net effect of this movement on productive capacity of the industry has so far been not perceptible. According to the Progress Report of the First Five-year Plan (1953-54), the whole question of increase in capacity was reviewed and it was felt that an additional capacity of about 450,000 tons per annum would be needed over the next two years. It was, therefore, decided that, by 1955-56, the capacity of the sugar industry should reach the level of about 2.0 million tons. But whether this level would actually be reached in the next 12 months remains to be seen. If the present state of affairs is any indication of the shape of things likely to take place in the coming months, it looks as though the chances of this target being reached are remote.

The development programme for the sugar industry as drawn up by the Federation in its draft second Five-year Plan is as follows:

		1955-56 (*Estimated*)	1960-61 (*Target*)
No. of units		200*	240
Annual rated capacity	(000 tons)	2,000	2,500
Production	(000 tons)	1,800	2,500
Investment	(Rs. crores)	N.A.	25†
Employment..	(No. of persons)	145,000	185,000*

* Estimated.

† Represents an estimate of additional capital outlay during the period of the second Five-Year Plan.

N.A.—Not available.

The increase in the production capacity of the Indian sugar industry from 2 million tons in 1955-56 to 2.5 million tons by 1960-61 will involve the setting up of about 40 new mills with a crushing capacity of 1,000 tons of sugarcane per day each. The average duration of the crushing season is taken as 120 days and recovery percentage as 10. The capital outlay on the establishment of 40 new sugar mills is estimated at Rs. 25 crores. The aggregate capital investment in the industry at present is said to be of the order of Rs. 60 crores. On a rough estimate, it is calculated that the fulfilment of the production target of 2.5 million tons by 1960-61 would involve direct employment of another 40,000 persons. Incidentally, it may be noted that the number of workers employed in the sugar industry in 1952 was 135,000. The quantity of white sugar produced in the same year was 1.2 million tons. By 1955-56, the number of workers employed is expected to be higher at 145,000.

The Federation considers that, although manufacture of sugar machinery has been undertaken in the country, a substantial part of the plant and equipment has still to be obtained from abroad. After allowing for further developments in the manufacture of machinery that may take place during the period of the next Plan, the foreign exchange required on capital account is estimated at Rs. 5 crores.

A mere expansion in the capacity of the sugar industry will not solve the problem. It must be accompanied by measures for stepping up the production of sugarcane. Assuming a recovery of 10 per cent. and a per-acre yield of 15 tons, the Federation feels that it will be necessary to bring an additional area of 450,000 acres under sugarcane cultivation. We, however, feel that stress should be laid more on intensifying sugarcane growing than on devoting a larger area. Considering the low yield of cane per acre and poor sucrose content, the scope for intensive cultivation is, indeed, vast. Viewed thus, the intensive campaign for augmenting the per-acre yield of high sucrose-content cane that has been launched by the Central Government is a step in the right direction. This would not only meet the sugarcane requirements of the new factories but also ensure adequate supplies to the existing units at lower prices. Equally important is the need for developing early and late ripening varieties of sugarcane. This would go a long way towards lengthening the period of crushing operations which is at present limited in the case of most factories to only 120 days a season.

The Union Ministry of Food and Agriculture has appointed an expert committee to examine the formula adopted for 1953-54 season for linking sugarcane prices with the price of sugar realised by factories and to suggest modifications, with a view to its improvement. The committee is also to consider the feasibility of payment for cane by factories on the basis of sugar content and other allied matters. The committee is to submit its report within six months. Mr. P. A. Gopalakrishnan, Joint Secretary to the Ministry, will be the chairman of the committee.

(*Concluded from next column*)

usuage basis. But the Board is insisting that the cost of aerial rope should be put on time basis and that this item should be included in the list of items subject to depreciation. This means that it is virtually impossible to recover more than a portion of the assistance for which this recurring item is eligible.

Finally, it is pointed out that it is several months since the Coal Board announced that the level of assistance in respect of sand-stowing for conservation would be raised from 75 per cent. to 85 per cent. of the admitted cost. Unfortunately, it is still not known when this increased assistance would become effective. Nor is it clear as to where lies the dividing line between stowing for safety and stowing for conservation, for most of the stowing projects fulfil both objects simultaneously. It is to be hoped that these complaints will be looked into by the concerned authorities and that the assistance to be given to the collieries will be based on such lines as would help execution of stowing operations to the maximum extent possible in the prevailing circumstances.

STOWING IN COAL MINES

ANOMALY IN THE SCHEME OF ASSISTANCE

LATTERLY, the promotion of stowing in collieries on an extensive scale has been receiving increasing attention at the hands of both the industry and the Government. This is only as it should be, for stowing is vitally important not only for ensuring safety of labourers working underground, but also for conserving coal, especially metallurgical, the reserves of which are limited.

Stowing, however, is a costly process and the collieries have not been in a position to raise the necessary finances for installing stowing plants. This explains why the Government of India has been rendering assistance to collieries stowing for safety and for conservation. According to the scheme now in vogue, the rate of assistance for stowing is 75 per cent. of the actual cost of stowing, subject to a maximum of Re. 1-5 per ton of material stowed by hydraulic system, and 85 per cent. of the actual cost of stowing, subject to a maximum of Re. 1-9 per ton of material stowed, where it is done by hand packing with surface material. The Government also decided recently that assistance for stowing for conservation may be granted, at the discretion of the Coal Board, at the rate of 85 per cent. of the actual cost of stowing or 85 per cent. of the average cost of stowing, whichever was less.

The following table gives a comparative statement of the number of collieries and the quantity stowed as well as the assistance rendered during the four-year period, that is, 1950 to 1954:

Period	*No. of collieries stowing*	*Quantity of material stowed* Tons	*Amount of assistance paid* (Rs. lakhs)
1950-51 ..	53	4,142,244	40.22
1951-52 ..	58	4,562,199	54.63
1952-53 ..	54	4,921,695	60.77
1953-54 ..	55	..	62.72

The collieries, however, have not been satisfied with the scheme of assistance for stowing. They allege that there are some lacunæ in the present practice, which are bound to affect the future of stowing adversely. This is best illustrated by the following extract from the address of Mr. J. W. N. Baldock, delivered at the recent annual general meeting of the Indian Mining Association:

"The Coal Board has stated that the average cost of stowing is in the neighbourhood of Re. 1-12 per ton of sand stowed, and that the Board renders assistance up to 75 per cent. of the cost, subject to a maximum of Re. 1-3 per ton. What has not been made clear, however, is that this cost of Re. 1-12 has been calculated according to the Coal Board's formula and bears little relation, in many cases, to the actual cost of stowing. As a result, far from receiving 75 per cent. of the expense of stowing, most concerns are receiving assistance at a rate considerably below this. This situation applies particularly to those who have mechanised their arrangements for excavating and transporting the stowing material. Although it is universally conceded that mechanisation is more efficient—and in the long run cheaper—the outmoded rules by which the Coal Board determines the quantum of assistance place a premium on inefficient manual methods, while the heavy capital cost of mechanical equipment goes partially unrequited. The reason for this unfortunate anomaly is to be found in the way the Board assesses allowances for depreciation, and repairs and renewals of capital equipment."

On the basis of the maximum theoretical designed capacity of the stowing installations, the Coal Board is determining the rate per ton allowed for depreciation, calculated as a percentage of written down value of the plant. But, if the plant fails in any particular year to reach the maximum designed capacity, the depreciation allowable is reduced. The same procedure is followed when dealing with the cost of repairs and renewals. There can be no gainsaying the fact that it is patently absurd to expect any machine to run continuously at its maximum designed capacity. This is particularly so in regard to sand-stowing plants, the operation of which is dependent on such unpredictable factors as monsoon floods. Besides, as such a plant has to work in rugged conditions, time must be allowed for necessary repairs and major overhauls.

There is one more complaint against the Coal Board and that relates to the basis on which it is determining the cost of aerial rope for transport of sand. It is true that the Board has admitted that haulage rope, scraper rope, pipes and conveyor belts should be charged on a

HEAVY STOCKS OF SUGAR FEARED AT THE END OF SEASON

DRASTIC REVISION OF IMPORT PROGRAMME REQUIRED

TIMELY WARNING BY MR. GULABCHAND HIRACHAND

IN an excellent survey of the problems facing the sugar industry, presented to the shareholders of Walchandnagar Industries Ltd., at their Forty-sixth Ordinary General Meeting, held in Bombay, on Friday, 15th April, 1955, Mr. Gulabchand Hirachand, Chairman of the Company, made a pointed reference to the shape of things to come in the near future. He observed that production was running at a level better than expected, while offtake was definitely falling. At the same time, the Government had entered into heavy import commitments. He feared that, unless the import programme was drastically revised before it was too late, stocks of sugar at the end of the season would be heavy. Such a state of affairs would, he warned, have a deleterious effect on the factories and cane growers, and that at a time when strenuous efforts were being made to step up the output of sugarcane in the country.

After expressing the hope that the shareholders had found the results of the year's working disclosed by the statement of accounts for the year ended 30th September, 1954, as submitted to them, quite to their satisfaction, Mr. Gulabchand Hirachand said:

"You must have noticed that the production of sugar, as well as the percentage of recovery, during the year marked considerable improvement over those for the preceding year. You must also have noticed that, even after making due provision for depreciation and setting aside a large amount of Rs. 13 lakhs for taxation for the first time in your Company's history, it has made a profit of Rs. 25,46,913-4-3, making it possible to increase the rate of dividend by 2 per cent.

Taxation

"The provision for taxation requires a word of explanation. As you are aware, the bulk of the profit earned by your Company is from its cane plantation. I am sorry to say, however, that the tendency on the part of the Income-tax authorities of late has been to fix the price of cane delivered for crushing to the manufacturing side somewhat arbitrarily, so as to minimise profit on the agricultural operations of the sugar companies and to inflate that on the manufacturing side. As assessment is in arrears for income-tax for some years, your Directors have considered it prudent to make this provision against a contingent liability which your Company may be asked to face at a later date. At the same time, I would assure you that the management will make every effort to secure that legitimate earnings from agricultural operations are not assessed as manufacturing profit to the extent that it lies in its power to do so. Quite apart from this, I must explain that the provision on this account this year appears to be large because it includes provision for two previous years also. The amount to be set aside in future will, therefore, be necessarily smaller than this.

"Though the year was not favourable on the whole for the sugar industry in this State, owing to the crop which was crushed during this year having been subjected to shortage of water-supply, your Company was able to surmount this difficulty because of the precautions taken in the earlier years to install lift irrigation facilities for raising additional crop. It is to this fact that the Company owes its larger production in a year when many of the factories showed a decline in this respect.

"The good results shown in the report before you are also in a measure due to the fact that prices for your product were maintained at profitable levels during the year, owing to the sudden jump in consumption of factory sugar. The price levels during the current season have not been so favourable, because of a very large influx of imported sugar, especially in those markets which are open to industry in this State. The entry of the Government into the field of sugar trade with a large stock of sugar imported by it from abroad has, apart from its effect on the price structure, created a number of complications in the matter of disposal of the produce.

No Planning in Imports

"The import programme has not followed any planning; the markets have, therefore, from time to time been subjected to a glut, creating unnecessary fluctuations in the price structure. The system adopted for some time of supplying sugar on what is known as an f.o.r. basis, that is, Government bearing the cost of freight and supplying sugar at various upcountry centres at the same rate as at the ports of entry, had the effect of depriving the factories of the natural markets round about them. In these markets, they could command somewhat better prices, because of the saving effected by the buyers in freight. The prices fixed by the Government for imports have also varied from time to time unexpectedly and made the disposal of indigenous product more difficult, because of a lack of system in the Government pricing policy. And, finally, the method of spasmodic releases from factories from time to time without any prearranged programme has tended to make the marketing of sugar more complicated than it used to be in the past. You will be glad to know that your Company has been consistently pressing on the attention of the Government the need for a more rationalistic and planned system of release of sugar for sale from the factories.

Quality of Sugar Raised

"At the same time, I cannot help feeling that, as time goes on, due to various factors, the task of production and disposal of sugar by the Indian industry is going to demand new skills and new techniques, both on the technological and the managerial sides of the industry. Let us hope that imports of sugar will prove a temporary phase and the complications created by this phase would disappear in a year or two. Even then, as has been proved during this period of imports from abroad, the consuming public having become more and more quality-conscious, there will be a satisfactory margin of profit only for those units of industry which are in a position to maintain a uniformly high standard of quality in their production. In view of this, it should be a matter of gratification for you that your Company has been able to hold its own, in part, because it has concentrated more and more on producing superior grades of sugar and developing new markets for these grades. Today a bulk of your product consists of superior grades which have not to stand in competition with imported sugar. This has not only made marketing of your sugar less difficult but has generally earned a reasonable premium, grade for grade, over the prevailing rates for its consistency and quality.

Outlook for Current Season

"It is difficult to say anything with any degree of precision regarding the working of your Company during the current season. In the first place, as a large part of the produce still remains to be sold, the price factors during the coming months will naturally go to shape the final results. However, I may say for your information that there is no reason for any despondency with regard to the financial results for the current year, in spite of my earlier indication of lower price trend this year. There is every reason to believe that your Company will, perhaps, during this season break all previous records in the matter of production. In any case, the higher production is bound to neutralise, to a certain extent, the fall in earnings owing to the lower price trend.

"With regard to recovery also, I am happy to say that the results so far have been very satisfactory. The standing crops which will come for crushing during the next two seasons are also in good shape and progressing satisfactorily. While, therefore, much will depend on the price trend during the next six to eight months, one would be justified in expecting satisfactory, though not spectacular, results. What I want to emphasise, however, is that to obtain these results, because of the difficulties alluded to by me, the management as well as the technical staff will have to be both as efficient and alert all the time as they have been in the past.

"So far, I have not referred to the recent increase in the excise duty on sugar amounting to 50 per cent., from the beginning of March this year. As much has been said about this rise in duty and as representations to the Government have been made by the industry for a reconsideration of this issue, I shall not say anything about it. However, I cannot help wondering how a Government, whose declared policy it is to raise the standard of living for the masses, could consistently go on heaping fresh burdens on such primary necessities as cloth and sugar, which must in the end make them dearer for the consumers. Sugar is one of the most highly taxed commodities in the country, when we consider various levies by way of excise duty, cane cess and sales tax.

Old Problems Unsolved

"Most of our old problems have remained unsolved. We have by this time, after complaining bitterly against it for years, got reconciled to the heavy incidence of cane cess. But we are disappointed that even our reasonable request to use a greater part of the income from this source directly for improving sugarcane cultivation and providing better transport conditions in the factory areas have fallen on deaf ears. Even our very modest representation for being associated in a purely advisory capacity with the authorities in fixing the programme of expenditure from cane cess, has been curtly turned down. We have also failed to obtain any relief from the steep increase in the water rates both for flow and lift irrigation. I have, however, no desire to make hardy annuals of our grievances and would, therefore, refrain from adding to those I have already mentioned.

"At the same time, I cannot help referring to a problem which might assume serious proportions unless tackled in time. The Government is carrying heavy stocks of imported sugar in its godowns. It has also entered into large-scale commitments for further imports during the year. Production within the country itself will show during this season a rise of at least 40 per cent. over that of last year. Much of this is still held by the factories. Consumption of sugar is definitely on the down grade and I should not be surprised, looking to the low price of *gur*, if it were to show a decrease of at least 2 lakh, if not 3 lakh, tons at the end of the year. The Government is naturally in a hurry to dispose of its own stocks by effecting a reduction in the issue price. Unless the programme for imports is drastically revised in time, there is every reason to believe that the country will have a big carry-over into the next season.

Government Warned

"It is feared that, with its control over the release of sugar from factories, the Government might so arrange things as to compel sugar factories to bear a substantial part of the burden of this large carry-over. This would not only create heavy financial difficulties for factories as it would necessitate locking up of their resources, but would certainly result in deterioration of the stocks during the monsoon. I, therefore, take this opportunity to warn the authorities that, unless timely steps are taken to avert this undesirable situation, they would be creating conditions which would again tend to reduce production of sugar in the country and perpetuate the vicious cycle of alternate rise and fall in production, which has been an unfortunate characteristic feature of this industry for the last few years. I need not point out that this would also have a very deleterious effect on the demand for the cultivators' cane from the factories in the coming season, just at a time when strenuous efforts are being made by all official and unofficial agencies to secure a heavy increase in cane production. We had a taste of it during the current season when cultivators in this State found it difficult to market their crop.

Subsidiary Activities

"I would now request you to turn your attention from sugar to the other products of your Company. I hope you have not failed to notice the progressive increase in the production of rectified spirit in your distillery. This stood at 2,59,518 gallons in 1951-52. In 1952-53, this had increased to 3,22,218 gallons. During the year under report, it reached the record figure of 4,70,528 gallons. The prices realised during the

(*Continued on page 763*)

IMPACT OF BUOYANT ECONOMY ON U.K. BALANCE OF PAYMENTS

OPTIMISTIC TONE OF 1955 SURVEY

By Paul Bareau

ONCE a year, the British Government publishes a survey of the economic situation. Its appearance normally precedes, by a brief period, the presentation of the Budget and it sets the general framework in which not only the Budget picture but the whole economic policy of the Government has to be set.

The *Economic Survey* for 1955, published at the end of March this year, is one of the most interesting and varied of this now well-established series of reports. It is made particularly interesting by the contrast which it presents between the buoyant domestic economy and the signs of strain in the British balance of payments which have recently become apparent and which have demanded the imposition of fairly severe remedial measures.

Of the buoyancy and appearance of prosperity of the domestic economy, there can be no doubt or question. At home, 1954, was an exceptionally successful year. Production continued to expand. For the whole domestic product the increase over the previous year was 4 per cent., and for industrial production the increase, as measured by the index of industrial production, was 6½ per cent.

It was not only production, but production per man, that increased last year. For the whole of industry, this productivity must have risen by about 4 per cent.—a figure which few other countries of the world will have matched in that particular year.

Rise in Personal Income

Rising production was matched and, perhaps, more than matched, by the rise in effective purchasing power. Personal income last year rose from £13,580 million to £14,408 million. The lion's share of this went to wages and salaries, which increased by 7½ per cent.

These are gross figures, and, after allowing for direct taxation and other charges on income, the total disposable income of the country rose by £645 million, or nearly 5½ per cent. It will be seen that the rise in disposable income was not very far out of line with the concurrent movement in production.

It is, however, interesting to note that the whole of this increase in disposable income was spent and not saved. Helped by the relaxation of restrictions on hire-purchase, the British people lived more plentifully last year than they had at any previous period of their history.

As compared with the previous year, they increased their expenditure on private motoring and cars by 19 per cent.; on household goods by 10 per cent.; on clothing and footwear by 5 per cent.; on food by 4 per cent. Their calory intake at 3,120 grammes a day was their highest ever. What is more, they ate larger quantities of the higher-quality, more expensive foods, such as meats, fats, sugar and tea and less of the roughage represented by potatoes and bread.

Investment was also maintained at a satisfactory level. Personal savings may have remained unchanged, but other sources of savings were canalised into investment and increased the total by about £155,000,000, or 5 per cent. Of this increase the bulk went into plant, machinery, vehicles and factories.

Development Programmes

British industry did not lag behind in its re-equipment and modernisation. Nor is it likely to lag behind in the years to come. There are massive development programmes dealing with atomic energy, roads, railways and housing. These are one of the guarantees of a containing policy of full employment in Britain.

So far, so good—and perhaps one should say, so far, too good. There is no doubt that the buoyancy of the domestic economy has in recent months become a little excessive. The purchasing power available for consumption at home has not only absorbed into current consumption the whole of the increase in personal incomes; it has also absorbed the bulk of the increase in production, leaving an inadequate amount for additional exports.

As a result, the domestic market has absorbed rather too much by way of imports and has, in addition, consumed some of the resources that should have gone to the export market. These influences became evident in the trend of the balance of payments towards the end of the year. The monthly trade returns in late 1954 and early 1955 showed that imports were rising sharply in value, while exports lagged behind. The gold and dollar reserves began to fall and the exchange rate of sterling against the dollar approached the lower limit of 2.78 in the official market and fell to a substantial discount in the free market.

Two Reasons

There were two main reasons for these developments. One was the increase in the volume of imports, due, in the main, to rising industrial production. The other was the reversal, during 1954, of the favourable trend in the terms of trade which previously had persisted since 1951. On the average, Britain's imports cost 5 per cent. more at the end of 1954 than at the beginning of the year, while the average prices for exports, held down by increasing competition from other industrial countries, remained virtually steady.

There is, thus, no inherent contradiction between the picture of a buoyant domestic economy described in the *Economic Survey* and the strains on the balance of payments which are also a part of the scene it reviews. The two are in fact complementary—the opposite sides of the same medal.

The steps which have been taken in Britain to deal with the situation are an increase in the Bank rate, new restrictions on hire-purchase transactions, and a general tightening of bank credit. They should suffice, provided their good is not undone by excessive wage increases and other inflationary developments.

These measures, however, are not to be taken as a sign that contraction in economic policy as a whole is now the order of the day. That is far from being the case and the *Economic Survey* ends on a note of optimism and expansion.—*Exclusive to "Commerce."*

(Concluded from next column)

operated at a higher speed once the formation of static electricity has been mastered.

New methods of applying isotopes to industry are being found every day, but, perhaps, the biggest advances during the last year or so have been the perfecting of some known methods. The greater use which industry, as well as the medical profession, is making of radioactive materials can be seen in the enormous increase of Britain's radio-isotope production, which has doubled during the past two years. Britain is by far the biggest exporter of these most modern tools of science, and there is hardly an industry which does not make use of them.

An entirely new field is opening up at the moment where vast radioactive sources, such as the waste products of nuclear energy plants, are being mustered to change chemicals, to improve plastics, or to sterilise foods and drugs. The next few years should bring new applications in these fields.

RADIOACTIVE MATERIALS IN INDUSTRY

BRITISH ATOMIC SCIENTISTS REPORT NEW ADVANCES

By Dr. Henry Seligman

THE applications of radioactive materials to industry have for the past seven years occupied the attention of a small group of scientists. Consisting of members of the Isotope Division of Britain's Atomic Energy Research Establishment at Harwell, the group was formed to make industrialists more conscious of the modern scientific aids—aids which, as a result of continuous investigation in the field of nuclear physics, can be of great help in research, in controlling industrial processes, and in improving the quality of output.

The work in this field is fully international. Indeed, as long ago as 1951, the Atomic Energy Research Establishment organised the first International Radio-isotope Conference, followed by another in 1954, attended by over 700 delegates from 28 countries. An extremely wide field was covered, ranging over the uses of isotopes in scientific research, medicine and industry.

Radioactive materials, which can now be produced in any desired form, such as gases, organic or inorganic compounds, or incorporated into metals, have many industrial uses. They enable problems to be solved which before could not even be investigated. One such problem, the purification of metals by the method of zone melting, was described at last year's conference.

Some more recent work on similar problems, done by members of the Atomic Energy Research Establishment in conjunction with Aluminium Laboratories Ltd., of Banbury, Oxfordshire, showed that isotopes are extremely good tools for finding solidification boundaries in continuous casting processes of aluminium.

Improved Casting Process

In this case, two different radioactive methods were used. The first is called "activation analysis," in which the sample to be investigated is irradiated in a nuclear reactor after a trace of non-active material has been added during the casting process. Conclusions can then be drawn from simple autoradiographs. In the other method, a radioactive component was added during the casting. Both methods proved to be highly successful and helped to improve the casting process.

Gauges containing radioactive materials are also helping industry to produce better quality products and to save time in locating faults. These have proved of great value in measuring the thickness of materials being rolled—such materials as paper, plastics, linoleum, rubber or sheet metal. The latest developments in this type of gauge enable speedy location of corrosion in pipes without dismantling the installation. With this gauge, one operator can detect from the outside any corrosion within the pipes, eliminating the need to halt production and saving the expense of X-ray equipment.

Other thickness gauges have been improved, and Britain is now supplying some of the finest instruments of this type in the world.

Detecting Leakages

A paper read at the International Radio-Isotope Conference dealt with the use of isotopes for water flow and velocity measurements. Further progress has been made in this field since then, perhaps the most outstanding achievement being the ease with which it is now possible to detect leakages in pipelines—hitherto an exceedingly difficult task.

To trace a leak in an underground pipeline, a radioactive salt is dissolved and put into the pipe, which is then washed out with clean water. A recording detector is sent through the pipe; this records any activity that has leaked out into the surrounding ground, and by knowing at what time this recorder was at each place during its journey, it is possible to find the exact spot where the leakage has occurred. This simple method will save considerable sums in the future detection of leaks.

Isotopes are also being used in the construction of pipelines. Wherever a pipeline is being laid, all wells have to be checked with the help of X-rays, but to use a conventional X-ray apparatus in the field presents problems of its own for electrical supplies are needed, and X-ray sets require maintenance. By the use of radioactive isotopes no larger than a small pea, the need for special power lines and the problem of maintaining complicated equipment can be overcome.

Fire Risks Reduced

Radioactivity can be used, too, to reduce or prevent fire risks in certain types of factories. In the manufacture of paper and textiles or any other insulating materials, for example, it is quite common, especially in dry climates, for static electricity to be produced by the rubbing of the material. If the static electricity potential is too high, there is a danger of sparking and, therefore, a big fire risk.

Production engineers have for long been seeking a means of getting rid of "static," which can now be achieved fairly easily and cheaply by installing a radioactive source near the place where it is being formed. In most cases, this will overcome the fire risks, and, in some instances, production can be increased, for machines can be

DEVELOPMENT OF KANDLA PORT

GATEWAY FOR NORTH AND CENTRAL INDIA'S TRADE

THE inauguration of the oil discharge facilities at Kandla by Lal Bahadur Shastri, Minister for Railways, and the grant of the status of a major port to Kandla, last week, represent a significant milestone in the development of shipping and transport in the country. The Kandla port development scheme is one of the biggest and unique projects undertaken after independence. For, while the existing major Indian ports were developed over decades at sites where established trade flourished, Kandla is situated at a place where very little trade exists at present.

The need for a major port on the West Coast between Kutch and Saurashtra has been felt since the loss of Karachi, following the partition of the sub-continent. The minor port at Kandla had only a single reinforced concrete jetty with a length of 300 feet and a depth of 30 feet. It was the West Coast Major Port Development Committee, appointed by the Central Government in 1948, that selected this minor port for development into a major port. Apart from the fact that a vast hinterland could be served through this port, an important consideration that weighed with the authorities in choosing Kandla for development was the necessity to provide a home for the refugees from Sind in surroundings more or less similar to those to which they had been accustomed.

Preparations for drawing up a detailed project report commenced in 1949. A Development Commissioner was appointed in August, 1949. In order to give him the benefit of advice of shipping, trade and commercial interests, an advisory committee, with Mr. Kasturbhai Lalbhai as Chairman, was constituted in October, 1949. Early in 1950, a firm of consulting engineers of international repute was entrusted with the task of preparing an outline project report, which was received in May, 1950. The consulting engineers, it will be interesting to note, endorsed the findings of the West Coast Major Port Development Committee as to the suitability of the site at Kandla Creek. They too felt that, while the best site for bulk oil discharge should be near the existing minor port jetty, the open wharves should be built at a spot about two miles south of that jetty. As recommended by the consulting engineers, the work on collection of data required to plan and execute the project was commenced immediately. The collection of data was complete by November, 1950, when tenders were invited from a selected group of outstanding harbour engineering firms for design as well as construction. The tenders, which were received in April, 1951, were examined first from the technical aspect by Prof. Agatz, a German harbour engineering expert of international repute, and later by a high level expert committee of leading engineers of the country. The contract was awarded to Messrs. McKenzies Heinrich Butzer (India) Ltd., the well-known contractors of West Germany, in association with an Indian firm.

Cost Aspect

The Kandla Port Development Project is estimated to cost Rs. 13.83 crores. It consists of the main harbour works contract, valued at Rs. 7.01 crores and the provision of port buildings, cranes, harbour equipment, roads, water-supply, staff colonies, drainage arrangements, which account for the balance of Rs. 6.82 crores. The harbour works consist of:

(i) A cargo jetty 2,700 ft. long providing for four deep-water alongside berths for ships 600 ft. long each, including three transit sheds each 450 ft. by 140 ft. and four warehouses at the back of the transit sheds each 500 ft. by 120 ft. The quay will be 75 ft. in width and provides for three railway tracks and two road tracks so as to enable direct despatch of cargo by rail as well as by road. The rail track is designed for metre-gauge operation in the first stage and conversion into broad-gauge operation when necessary in the future.

(ii) A bunder suitable for the accommodation of both lighters and sailing vessels. The bunder wharves will be equipped with cranes including provision for unloading heavy cargo up to 60 tons.

(iii) A passenger berth for passenger launches.

(iv) A floating dock berth for maintenance of port craft.

(v) An oil jetty for handling oil tankers up to 20,000 tons capacity.

The construction of the main harbour, the foundation-stone for which was laid on 10th January, 1952, is expected to be completed early in 1957. The bunder and the oil jetty are expected to be completed in June, 1955. The progress of workers on the main harbour project, which has been given on contract to Messrs. McKenzies Heinrich Butzer (India) Ltd, had continued to be rather slow, owing to certain internal differences between the partners of the contracting firm and their lack of adequate financial resources. As a result of continued pressure exercised by the Government for remedying these defects, the firm reconstituted itself recently by letting one partner withdraw from the group and allowing another German firm of engineering contractors to enter into sub-partnership with the original German partner. The result of this strengthening of the contractors' organisation has just begun to be reflected in the pace of the works. It is estimated that the quantum of outturn of work, which was some time back of the value of Rs. 10 lakhs per month, has been stepped up to Rs. 25 lakhs at present and that it would be maintained at that level till the works are completed.

The bunder and the oil jetty are expected to be completed by about the middle of June, 1955. A double 12" pipeline, with a diameter of 15", is ready to be put into commission. Oil will be pumped through this five-mile-long pipe into the oil installations constructed by the oil companies. The navigational aids to shipping in the gulf and the creek are almost ready. Work on the main wharves is proceeding apace.

The new port will be equipped with modern types of mechanical cargo handling appliances, such as mobile cranes and fork lift trucks. A suitable workshop designed primarily to carry out the maintenance of, and repairs to, floating craft, electric cranes and other tools is also being planned. All these facilities will be provided with the triple objective of quick turnround of ships, minimum handling of cargo and rapid movement to and from the transit area.

Model Township

One of the important features connected with the development of Kandla Port is the plan for a model township, namely, Gandhidham, adjacent to the port. The development of the township is expected to serve the requirements not only of displaced persons but also of trade and commercial interests. The plan, as prepared by the well-known American firm of architects and town planners, namely, Messrs. Adams, Howard and Greely, the services of which were secured under the U.S. Technical Co-operation Administration programmes, provides for three different sizes of community as follows:

(a) A community of 60,000 to 75,000 population, which may be assumed to be the minimum size, on the assumption that anything smaller than that would not serve the immediate function adequately.

(b) One of about 100,000 to 125,000 population which might be the ultimate for several decades, if no basic manufacture moves into the area beyond that directly relating to the port activity and the strictly 'local' economy; and

(c) One from 250,000 to 400,000 population accepting the more optimistic estimates of the future population when the economic possibilities of Kutch and the nearer parts of Rajastnan are more fully developed.

The overall scheme for the development of township is estimated to cost Rs. 5.67 crores.

The Kandla Port will serve a vast hinterland of 275,000 sq. miles, with a population of 45 million. On completion of the harbour works, the initial traffic expected to flow consists of about 5 million tons of oil and 4.4 million tons of general cargo per annum. The trade to and from the hinterland of the port is estimated to bring about Rs. 90 lakhs by way of railway freight alone. The following table shows roughly the position regarding the cargo that is expected to be handled at this port in its initial stages:

Import	Tons	Export	Tons
Oil	5,00,000	Salt	75,000
Coal	22,000	Groundnuts ...	20,000
Foodgrains ...	70,000	Cotton	10,000
Cotton ...	30,000	Wool	15,000
Piecegoods ...	30,000	Bonemeal and bone crust ...	12,000
Building materials ...	26,000	Other cargo ...	11,000
Chemicals and minerals	25,000		
General cargo	89,000		
Total ...	792,000		1,43,000

There can be no gainsaying the fact the development of Kandla as a major port and of Gandhidham township will together make good the loss of Karachi. It will constitute a gateway for parts of Western, Northern and Central India's trade lines. The port will add substantially to India's capacity for handling its overseas trade. Since it is a deep sea port—deep water runs closest to the shore—it will go a long way towards relieving the congestion at Bombay and facilitate the economic development of Kutch and the surrounding area rich in limestone, silica, gypsum and bauxite. Kandla is, indeed, a tribute to the vision of the late Sardar Vallabhbhai Patel and the late Mr. N. Gopalaswamy Ayyangar, who conceived the project and gave it an effective start.

BRITISH STEEL INDUSTRY'S FIVE-YEAR PLAN

The developments in Britain's iron and steel industry cited in the Government's *Economic Survey* for 1955 underline the efforts being made by the industry to meet the rising demand for steel by the country's heavy industries. These steps were outlined by the Iron and Steel Board in its report, *Development of the Iron and Steel Industry, 1953-1958*, recently laid before Parliament, in which the aim was stated to be the raising of output from last year's 18,500,000 ingot tons to 22,500,000 tons in 1958.

As that report was being studied by Parliament, the Board's Chairman, Sir Archibald Forbes, said in London that major schemes of modernisation and expansion now taking place in 25 different United Kingdom steelworks would cost £257,000,000. These had been approved for the five-year period 1953-58. Further plans were being studied that would mainly affect production after 1958, and these would bring development expenditure for the period to rather more than £300,000,000.

The estimated demand for 22,500,000 tons of steel in 1958 (of which 3,000,000 will be available for export) is based on an expected annual rise of 5 per cent. in the output of Britain's metal-using industries (compared with a 3½ per cent. annual increase in productivity in 1948-53). These demands fall into four main sectors.

First and biggest item in steel consumption is home investment, which took nearly 10,000,000 ingot tons of steel in 1953. This sector includes housing and construction, machinery, plant, and vehicles for basic industries, railways and roads, and the report comments: "It is likely that in the next five years there will be an acceleration of the rate of industrial investment generally." The expansion of the second group—embracing the motor and canning industries and production of consumers' durable goods—is expected to be at a rate higher than 5 per cent. per annum. In the third group of requirements—of steel for defence—a significant change from the 1953 level is not foreseen. In the fourth group, of goods for export, an increase in line with the upward trend of recent years is expected. Steel taken for manufacturing these goods in 1948-53 increased at roughly the same rate now being assumed for steel supplies generally in 1953-58 (the 1953 total was 3,500,000 tons). The report says that "further increases in the volume of metal-goods exports should be possible in the context of a growing volume of world trade and the great scope for capital development overseas."

Should the demand for British steel exceed the estimated level in 1958, there are possibilities of increasing supplies from home production and imports. Production is already growing rapidly, and should reach 19,500,000 tons this year. It is expected, however, that the need for imports will become "of minor significance" by 1958, for which year a nominal figure of 100,000 tons has been assumed, while about 400,000 tons should be available from reprocessing re-usable steel.

As regards finishing capacity, special attention has been paid to wide, flat products. Over the five-year period, finishing capacity for tinplate will increase 85 per cent. and for sheet about 50 per cent., while the potential output of tubes in 1958 will be nearly 40 per cent. higher than in 1953. Additional capacity being created for these three types alone will total nearly 2,000,000 finished tons.

Pig-iron output should increase from just over 11,000,000 tons in 1953 to over 15,000,000 tons in 1958. The industry's requirements of coal, home and imported ores, shipping, and transport, have all been reviewed in relation to the foreshadowed increase in iron and steel output. Expected requirements of ore in 1958 are: home-produced, 17,500,000 tons; imported, 16,500,000 tons iron ore and 500,000 tons manganese ore. The Board foresees increased supplies from Sweden and Norway due to major developments now under way in the mines there, and from Labrador and Liberia. It has invited a consultant geologist and a consulting mining engineer to advise it on expanding home supplies. In addition, Conakry ore-field in French Guinea is being developed by the British steel industry in partnership with French interests, and a field in the French West African territory of Mauretania is being surveyed by British, French, and Canadian interests. There are also possibilities of new development in Sierra Leone.

STEEL VERSUS CONCRETE

Described as the first phase of a battle between steel and concrete, an open hangar has just been inaugurated at the airport of Orly, near Paris, entirely of steel. It is the largest in the world. It is 216 metres long and has a width of roof of 38 metres (124 feet) unsupported by pillars. This has been followed by a bridge 411 metres (449 yards) long, all in welded steel, the longest in Europe. Steel is being favoured because at the time of the earthquake at Orleansville, in Algeria, the only buildings that resisted were those with steel as the basis of their construction. In the considerably enlarged public works section at this year's Foire de Paris, the annual Paris international trade fair, many exhibits will be devoted to steel and reinforced concrete construction.

NEW PRODUCTS AND PROCESSES

Akulon-coated Steel Wire Ropes

A factory at Gorinchem (the Netherlands) turns out steel wire ropes coated with Akulon, a Netherlands polyamide product of the thermoplastics group. Outside the United States of America, this factory is the only one producing steel wire ropes coated with polyamide. This coating gives the ropes a greater resistance to fatigue, corrosion, dilute acids and alkalis, wear and damage, any one of which causes may lead to untimely destruction of the usual types of steel wire ropes. The Akulon is extruded on to the steel wire rope, fitting snugly round it as a smooth coat. Ropes with a diameter of up to 16 mm. (0.63 in.) can be coated as a whole; in the case of larger diameters the separate strands are coated and then twisted to form a rope.

Gold from Air

Gold is being pulled out of the air of a pen manufacturer's workrooms at Fort Madison, Iowa, thanks to new electronic machinery. The air, containing minute particles of gold from pen-point grinding and polishing, is carried by exhaust ducts to a giant precipitron where it is charged with 13,000 volts of current. The charged particles are then attracted to plates charged with the same voltage. Each night, the gold is automatically flushed from the plates and salvaged. The operation is so new that the Sheaffer Pen Company is not yet able to determine how profitable it may be, but the Company officials expect the return to be more than the cost of the electronic equipment. In other operations, the Company salvages approximately $300,000 a year in gold dust from workbenches, floors and the aprons of workmen.

Stamp Holder for Stamping a Wide Variety of Containers

A factory at Maassluis (the Netherlands) produces an apparatus with which all sorts of containers can be provided with texts and names. It is a stamp holder consisting of metal braces and inserts, which can be assembled by means of studs and wing nuts. The use of loose plastic letters and figures makes it possible to compose in a simple manner stamps for marking cases, crates, bags, casks, drums, boxes, etc. By exchanging the inserts, which at the same time serve as handles, the braces can be readjusted, so that texts of different sizes can be composed, up to a maximum height of 50 cm. (19½ ins.). The braces are supplied in lengths of 20, 30, 40 and 60 cm. (7.9, 11.8, 15.8 and 23.6 ins.). The letters and figures can be obtained in heights of 22, 28, 35, 42, 50, 60 and 70 mm. (0.87, 1.10, 1.38, 1.61, 1.97, 2.36 and 2.76 ins.)

Radio Detection of Radio-active Metals

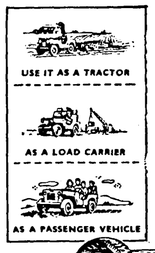
An Australian radio service man in Melbourne has designed an apparatus, which it is claimed will emit a signal when it is within 20 yards of radio-active mineral deposits. It thus has an advantage over the geiger counter for prospecting work. A small black rod from a wireless set, and a broom handle are the main parts, and the device is basically the type of radio location set often used by radio "hams" in competitions to find hidden transmitters. The antenna is a ferrox cube rod, taken from an ordinary commercial radio set, and strapped with adhesive tape to a wooden cross piece at the top of the five foot length of old broom handle. The inventor who is secretary of the Victorian Division of the Wireless Institute of Australia, states that when obout 20 yards from a granite outcrop in the Victorian district of Castlemaine, the apparatus gave out a loud hissing signal. Later, on testing a sample of the granite with a geiger counter, the counter ticked very quickly. The inventor is planning to conduct further tests and then patent the apparatus.

Oil-gas Apparatus

An engineering works at Arnhem (the Netherlands) has for some time been manufacturing an apparatus in which light fuel oil is first gasified, after which the gas is burnt in gas burners. The advantage of this system is that fuel of a reasonable price can be used, and can be converted into heat with a useful effect of 95 per cent. The combustion can be made to take place entirely automatically and with great uniformity. The system works as follows: The oil in a generator is kept at a given level by means of a level controller. This oil is gradually vaporised by the heat developed by a pilot flame and is drawn through the oil bath into the generator by a blower. Via a superheater built into the generator, the oil vapour is conveyed to a mixing chamber, where it is mixed with preheated air. The gas-air mixture then passes to the service lines via the blower. A small portion of the gas produced is conducted to the auxiliary burner to feed the pilot flame.

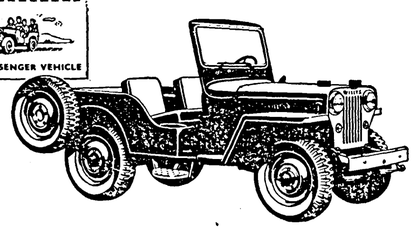
New Method to Destroy Locusts

French scientists have discovered that certain sounds irresistibly attract certain living creatures. The researches which led to this discovery were carried on under the direction of M. Busnel, who is the head of the laboratory for acoustics physiology of the French National Institute of Agricultural Research. The instruments already perfected include magnetophones, oscillographs, and the like, which makes it possible to analyse and study the sound emitted by the insects. It has been found that the frequency of the sound is not of as much importance as the form of the sound signal. Even a short emission of such a signal produces an automatic reaction in animals from a whale to a mosquito, sometimes repelling, sometimes attracting them. Experiments have been made on individual insects as well as swarms, and the main object is to devise some means of drawing large swarms of locusts to a desired place where they may be destroyed by employing suitable means. It is thought possible that this method will succeed in controlling one of the worst menaces to crops.



The 4-wheel drive Willys

'Jeep'



The world's biggest little vehicle

THE Jeep — the all-purpose vehicle. It works the year round to perform any and every task — on the farm, in industry and as a passenger vehicle on and off the road.

As a tractor, it can operate any standard farm implement—as a tow-truck it carries upto half a ton...and pulls loads of 5,500 lbs. on and off the roads. The Jeep which proved its efficiency on the battle fields of war, is now greatly improved to meet civilian needs.

The 4-cylinder 72 *H. P. Hurricane* engine, with larger connecting rods, reduces leverage pressure against cylinder walls, pistons and wristpins — features which lengthen engine life.

There is no other vehicle that does so many different jobs or goes so many places as the *4-wheel drive* Universal 'Jeep'.

APPOINTMENT OF INSURANCE AGENTS

IMPORTANCE OF PROPER SELECTION

IN India, as in all countries where insurers function under a free enterprise system, insurance is sold rather than bought. It is not a commodity which its purveyors sell across the counter. Rather, it must be strongly canvassed, and the prospect persuaded to go in for it. The mere fact that insurance benefits those who buy it has not in any way minimised the difficulty of selling it. The result is that insurers have to rely for an expansion of their business on a well-equipped agency force. From this point of view, the papers read at the symposium on "Appointment of Agents," organised by the Indian Life Assurance Offices Association, as part of its annual conference held in Madras, throw interesting light on the somewhat intricate problem of selection of agents.

The importance of agency force to insurance was rightly emphasised by Mr. G. Somasundara Row of the Andhra Insurance Company, Ltd., who said that the "agents of insurance companies constitute their life-blood and, inferentially, unless the agency phalanx is healthy, the insurance companies can have no good organisation, in order to meet adequately their respective needs of expansion, progress and service." After referring to the improvement in the position of agents that had been effected by the Insurance Act, Mr. Row pointed out that the crux of the problem for insurers was the selection of the right type of men. He deplored the somewhat casual manner in which insurers appointed agents. He said: "The indiscriminate and over-ambitious scheme of scattering agencies anywhere and everywhere and for the mere asking denotes desultory attention rather than determined effort to furrow the field and raise the crop in fullness of the harvest time." He regretted that "no great thought" was bestowed on the selection of agents and, in the "emotion of the first personal contact, the candidate is not only picked up but also fixed." A mere multiplication of agents, as he rightly pointed out, is only an "enormous waste of energy." In this connection, he did well to stress the need for proper training of agents.

Proceeding, Mr. Row made a few suggestions in relation to appointment of agents which merit insurers' consideration. The suggestions are:

(1) Avoidance of overlapping in fixing up agents; (2) to stop indiscriminate multiplication of agents in one and the same place irrespective of its size and potentialities; (3) clarification of jurisdiction of paid inspectors and organisers; (4) frequent visits by field officers to the centres where agents work and giving of practical suggestions to agents; (5) provision of incentive in the shape of fixed salary and allowance to successful men and (6) arranging periodical meetings of agents at the branch offices and at the head office.

It is true that many of the leading insurers already work on these lines. Even so, there ought to be a better appreciation of the need for frequent and friendly contacts between field officers and agents and of the need for reward and encouragement to the successful agents.

The principles which should guide the selection of agents were discussed by Mr. S. C. Mitra of the Palladium Assurance Company, Ltd. Mr. Mitra discussed them under four headings: (1) legal eligibility, (2) business policy, (3) non-enticement, (4) personal eligibility. By legal eligibility, he meant that the candidate should possess a licence in accordance with the relevant provisions in the Act. As regards business policy, he, like Mr. Row, stressed that the concentration of a large number of agents in a particular area did not necessarily make for larger volume of business. He said: "A company has, therefore, to decide what is the optimum number of agents that a particular locality can absorb for maximum exploitation and it should cease to appoint an agent beyond that number." He deplored the practice of enticing agents of another company. This caused instability to the trade and also injured the prospect and reputation of the agent.

As regards personnel eligibility, Mr. Mitra said that a candidate should satisfy three conditions. In the first place, he should have a reasonable standard of education. Secondly, he should possess physical fitness. Thirdly, he should be efficient as a salesman. Mr. Mitra recognised that at present there was no means of judging whether a candidate could shape well; nor was there any organised institution where insurance salesmanship was taught In this context, Mr. Mitra said that at least the negative test should be applied; the candidate should not suffer from such disability as might make him unsuccessful as an agent—for instance, stammering, shyness, or inferiority complex. Since it is the personal qualities of the agent that make him a successful salesman and an asset to the company he represents, insurers should pay utmost attention to these qualities before they decide the question of appointment of agents.

WORK OF INSURANCE DEPARTMENT

The administration of the Insurance Act, 1938, is the responsibility of the Department of Insurance, Government of India. The Controller of Insurance, who heads this Department, is responsible for tendering appropriate advice to the Central Government in connection with the discharge of the duties imposed on and the exercise of powers vested in the Central Government under the Act. The Department also plays its part in building up a healthy insurance industry. Further, it acts as actuarial and insurance adviser to the Government.

An important function of the Department is to sanction schemes of capital reconstruction that may be submitted by insurers from time to time, to approve transfers of business from one insurer to another and to appoint administrators to the companies, which, in the opinion of the Government, have been managed to the detriment of the policyholders. From the report of the working of the Department during 1954-55, which appears as a section in the report of the Finance Ministry, it would appear that no fresh schemes of reconstruction of capital structure were submitted during the year under review. Of the eight schemes which were under consideration at the beginning of the year, four schemes were sanctioned. The remaining four schemes are still under the consideration of the Department. The three cases in which orders sanctioning the reconstruction scheme were issued are the subject of appeal in the courts.

The Controller sanctioned nine schemes for transfer of business, six from insurers and three from provident societies. He rejected three cases, which involved transfer of business from provident societies. The Department has under consideration 10 cases of transfer of business (six from insurers and four from provident societies.) Further, judicial sanction was obtained in the case of transfer of business of a non-Indian insurer to an Indian insurer.

Of the eight companies which were under the management of administrators at the beginning of the year, one was ordered to be wound-up by the Court on an application made by a policyholder and the business of another was transferred to an insurance company. At present, there are six insurance companies under the management of administrators who act under the control and direction of the Controller. In all these cases, the administrators concerned pursued the task of consolidation of investments and curtailment of expenses. During the year under review no fresh appointment of administrators was made.

In the light of the experience gained in the administration of the Code of Conduct evolved for general insurers, the Executive Committee of the General Insurance Council effected certain improvements in the Code. In order to provide a more effective check on the accounts of general insurers the Committee is considering the introduction of certain reforms in the accounting system. The question of revision of tariff rates in fire insurance business was taken up with the Tariff Committee of the General Insurance Council. The Sub-committee which had been appointed to go into the question has submitted its recommendations which aim at reducing the rates in stages. Action is being taken to implement these recommendations.

It is gratifying to note that the Department has made the latest issue of the *Indian Insurance Year Book*, an annual publication of the Department, more informative than in the past. The new features of the *Year Book* are: (1) information on (a) lapses, (b) basis of life premiums of Indian insurers, and (c) contravention of section 27A of the Act; (2) additional information relating to expenses of insurers and (3) a note on the activities of the Executive Committees of the Life and the General Insurance Council.

The Department continues to act as the liaison between the Indian Insurance Companies Association Pool, Bombay, on the one hand, and the Government and local bodies, on the other. With the nationalisation of aviation industry, the Pool, at the instance of the Department, commenced transacting aviation insurance business. The Department is providing the necessary encouragement to the Pool to start marine hull insurance business, in order that it may meet the Government's insurance requirements.

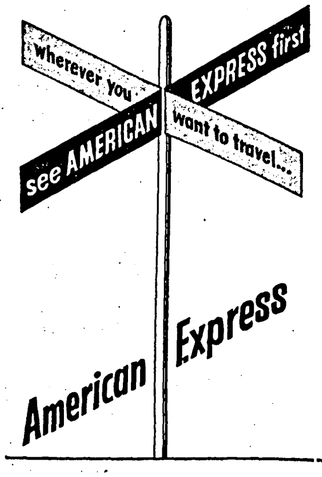
The Department is now engaged in examining a few insurance problems. Thus, it is examining the question of evolving a suitable formula for an equitable assessment of taxation of profits of non-resident insurers on re-insurance transactions. It is, however, not clear why this problem is being examined, considering that the Taxation Enquiry Commission has strongly urged the Government to abandon the practice of taxing such profits. The Department, it is further stated, is studying the question of the annual drain involved in the placing of re-insurance in foreign countries by Indian insurers. Another line of investigation which the Department is pursuing is the examination of the mortality of pensioners in Central Government service. This is intended to provide a basis for modifying the existing table of commutation values of pensions. The results of this investigation are bound to prove useful to the State Governments too.

INSURANCE IN INDIA

Some interesting calculations about the position of insurance in India *vis-a-vis* other countries were made by Dr. L. Subba Rao, Chairman of the Andhra Insurance Company, in the course of his speech at the recent annual meeting of the Indian Life Assurance Offices Association, at Madras. He pointed out that the total number of policies issued by Indian insurers was 3,833,000 and that issued by non-Indian insurers was 246,000, the total sum assured, including bonuses, being Rs. 961.9 crores, while the annual premium income was Rs. 47.41 crores. The *per capita* saving for insurance premium, according to him, was not more than Re. 1½ per year. He believed that one in 110 or 120 had taken an insurance policy, the average amount insured per policy was only Rs. 2,400, which showed that they had a low economy. In contrast, in the U.S., for a population of 150 million, there were 90 million policyholders. The average amount insured per policy was a little over Rs. 16,000.

Dr. Subba Rao averred that there was not much force in the proposal for nationalisation of insurance. Insurance, he said, was an enterprise which was best left to the private sector. He urged insurers to consider the possibility of introducing credit life insurance of the kind that was operated in the U.S. This form of insurance covered loans in the event of the death of the borrowers. He also suggested that the universities might institute a special course in insurance in order to ensure efficient service to the public.

The need for close co-operation among insurers was emphasised by Mr. N. Rama Rao, Chairman of the United India. He said that every class of insurance had to render service in greater measure to the national economy. He deplored that, although the benefits of insurance were better understood today than they were some years ago, insurance consciousness had not developed sufficiently in the country.



. . . and remember !

IN 1954

OVER 1,23,000 POLICIES WERE ISSUED
ASSURING OVER Rs. 47,50,00,000

Way back in 1874, even as its first policy was issued, the ORIENTAL adopted as its motto : HEAVENS LIGHT OUR GUIDE. Behind this motto lay the pledge—

— *to foster thrift among the people, to help them conserve their savings, to ensure security for their families through life insurance — adequate for their needs and well within their means — and to invest the accumulated savings in Government and other securities that ensure the greatest good to the largest number,*

— *to provide* **TRIPLE-PHASE SECURITY** *for the savings of the people— firstly, by introducing in the Policy Contracts benefits designed to completely safeguard every rupee invested; secondly, by handing over a major part of the annual income to the Official Trustee of Bombay to be held in trust for the Policyholders; thirdly, by giving qualified Policyholders the right to attend and vote at meetings of the Company,*

— *to secure the largest possible returns for the investment of the people,*

— *to maintain absolute honesty in its transactions.*

By steadfastly adhering to these sound principles of working, the ORIENTAL has built up a name that is synonymous with absolute integrity, unimpeachable security and utmost honesty. As a pioneer in Indian Insurance, it has overcome the resistance arising from ignorance and economic backwardness. Its sustained growth has virtually shaped the history of Indian Insurance. And in 1954, which witnessed the triumph of the First National Plan and the Blue-prints of the Second, even as this great Nation of ours made rapid strides towards economic prosperity, the ORIENTAL, this great National Institution, standing foursquare in the forefront of Indian Insurance, recorded another year of splendid achievement by providing greater security for more families and releasing more money for greater achievement in the Nations' economic field.

In conformity with its tradition of serving the people, the ORIENTAL now underwrites every risk that can be insured and, in doing so, it affords the opportunity to its life Policyholders of sharing in the profits of not only life but also all classes of general insurance business.

THE INDIAN PAPER MAKERS' ASSOCIATION

PRESENT METHOD OF ASSESSING EXCISE DUTY WILL DISTORT PRICE STRUCTURE

MR. C. J. E. KEENE ON INDUSTRY'S FUTURE

ADDRESSING the Annual General Meeting of the Indian Paper Makers' Association, held in Calcutta on Tuesday, 5th April, 1955, Mr. C. J. E. Keene, Chairman of the Association, pointed out that the 10 per cent. excise duty which had been imposed on the industry would be a heavy burden on the consumers. He stated that if the duty was nevertheless found necessary in the interests of national economy, the Government should at least consider the question of devising a simpler method than the present *ad valorem* basis of assessment. Since paper was produced in a wide range of qualities, the price structure was necessarily complicated. And the present basis of assessment of excise duty would only add to these complications. As regards the outlook for the industry, he struck an optimistic note and stated that, if the Central and State Governments' forest policy were so designed as to conserve forest wealth, the industry "should be able to look forward to a period of expansion and not only fulfil the growing demands of supplies of paper for the nation, but even go further and develop a healthy export trade."

The following is the text of Mr. Keene's speech:

"GENTLEMEN,

"I have to regret that the report of the Association has not been in your hands for very long With your permission I will take as read the notice calling this meeting.

"My predecessor, on this occasion last year, described the previous year as being not a particularly eventful one. This year, I think, the industry has had a greater number of problems with which to contend, culminating in the major event on 1st March this year, of an excise duty of 10 per cent. *ad valorem* being imposed on indigenous production of paper. The effects of, and market reactions to, this additional burden to the consumers of our products may take a little time to be fully assessed, but it is certain that this additional cost will increase the difficulties that lie ahead in the maintenance and development of our industry. I shall refer to excise duty in greater detail later.

"Prior to this event there had been no violent fluctuations in market sentiments during the year, and whilst there has been a healthy demand for our products, broadly speaking, the position between supply and demand has been well balanced. This situation has also generally applied to supplies of raw materials, coal, chemicals and railway transport. In many ways it has been a progressive year, and production of paper in the country has again shown a gratifying increase. 155,328 tons of paper were manufactured in India during 1954 as against 139,704 tons in 1953. These figures may be compared with 108,912 tons manufactured in India in 1950. Unfortunately, during the year serious loss of production, owing to illegal strikes, was again experienced, otherwise the 170,000-ton mark would have been exceeded.

Supplies to Government

"The Government contract for 1955-56 for supplies of paper has, I am sorry to say, not yet been concluded. Since the Government takes such a large percentage of the mills' production, it is an advantage to the industry to have the contract finalised before the contract period begins so that production programmes can be planned ahead, deliveries spaced evenly, so far as transport facilities permit, throughout the contract year, and thus an even and uninterrupted flow of supplies also maintained to the civil market. Delays have, however, frequently been experienced, and this year when only 15 days remained before the new contract period was due to start we were requested by the Government to agree to an extension of two months, under the same terms, of the 1954-55 contract. Under the circumstances, it was considered the better course to accept this extension, pending finalisation of the contract for the remainder of the year.

"A matter which is becoming of increasing concern to units of our industry is the upward trend of manufacturing costs, despite the installation of much new plant, increased production and improved methods, which should result in lower cost per pound of paper produced. There are a number of reasons for this, most of which have been referred to in previous years—withdrawal of concessional freight rates on bamboo, increased cost of bamboo and forest royalties, higher coal freights, poor quality coal which we have been compelled to use, and increased labour costs being among them. During the past year there has been no indication of this upward trend being halted. Many items continue to increase, in particular labour costs and railway freight rates on paper have recently been increased. Added to this, we now have to make provision in the selling price of our products for the recently imposed excise duty. By the very nature of the uses to which paper is put, it is essential that it should be a cheap commodity and no restrictions placed on its free use and availability. For our primary raw materials we can only afford to use materials, whether of rag and textile wastes, or materials such as bamboo, grasses, reeds, etc., which, for economical paper-making, must be products which are of no commercial interest to other industries. This is a fundamental principle on which the paper-making industry is founded.

Excise Duty on Paper

"It is against this background that our concern on the new excise duty is based. If paper becomes too expensive its use becomes subject to economy as regards quantity and quality, resulting in a diminishing market. A very large portion of the production of the member-mills of this Association is paper for educational purposes—pure printing paper for school text books, pure cream laids for school exercise books, drawing cartridges, etc. The 10 per cent. excise duty will therefore be a heavy burden on these important consumers of our products at a time when the country is making every effort against illiteracy. It will tend to hamper development and improvement, and possibly mean plans for expansion in our section of industry being retarded. Another aspect which has caused considerable misgiving is that newsprint is exempt from excise duty. Members of this Association fully appreciate that newsprint should be available as cheaply as possible to the newspress, but we have had previous unfortunate experiences of newsprint, or paper imported under the guise of newsprint, finding its way into the Indian market and being readily available to consumers outside the newspaper industry in competition with our qualities of paper. As an example, newsprint has been used for such purposes as printing school text books, the initial cost of which may be cheaper, but in the long run it is no economy as newsprint is not manufactured to be durable, and the student eventually has to purchase two, or possibly more, books, when one should have sufficed. We are of the opinion that the tendency for newsprint to compete unfairly in the market against our qualities will increase, now that the difference in price is increased by the amount of excise duty which is leviable on our qualities of paper.

"The Association has expressed its regret to our Government, therefore, that this excise duty on paper should be imposed, but if in the overall picture of industrial development in the country it is unavoidable we have requested that consideration should be given to devising a simpler method of assessment than on an *ad valorem* basis. Paper is not a bulk commodity like cement, sugar or coal, there being a very wide range of different qualities of paper, each subdivided into various thicknesses, sizes, colours and finishes, and again sub-divided by subsequent processes of embossing, guillotining, ruling, cutting watermarks to position, etc., after actual manufacture. A somewhat complicated price structure is unavoidable and the excise duty will add to these complications. Also, part of the service of the paper manufacturer is to have stocks in the various specifications available to consumers at upcountry depots, and since some of our consumers, particularly publishers, do not see a return on their money for many months after the actual purchase of the paper, extended credit facilities frequently have to be given. These are among the facilities, and there are many other customs and usages of the trade of benefit to consumers which, under the rigid rules of excise, may have to be withdrawn, or at least considerably amended. So far as imports of newsprint are concerned, it is to some extent reassuring that the Government announced two days ago that newsprint is to be removed from O.G.L. and imports are to be regulated.

Raw Materials

"On the subject of raw materials, previous Chairmen of the Association have referred to forest policy. Our vital interest in this does not diminish and I therefore, make no apology for bringing it forward once more and repeating our frequent request that the Central Government should co-ordinate all State forest policies. For some years, the policy of many of the States appears to have been only to derive the highest possible revenue in the shortest possible time, by means of annual auctions of forest areas. Such a short-term policy can only result in the forest wealth of the country being gradually dissipated. Some of the forest areas are being ruined by unscrupulous contractors, whose only interest in the lease is to make as large a profit as possible during its short term. The paper industry asks that mills should be granted long-term leases on reasonable terms, and, in their own interests, they would ensure that the areas are properly developed and conserved to give adequate supplies for the present without jeopardising requirements for the future. Another aspect concerning forest policy which has been brought into prominence during the year, is the question of allocation of raw materials to mills, in the period of expansion of the industry. It cannot, of course, be regarded as true expansion if, in increasing installed capacity, existing units are deprived of their established areas for raw materials, compelled to go further and further afield for their supplies, and thus by virtue of their present sites become uneconomical units. This question has been carefully studied by the Planning Commission, and it is a source of great satisfaction to members that in the Planning Commission Publication (*Programmes of Industrial Development* 1951-56) the industry's point of view has been fully supported. This matter is of such importance to us that I would like to quote the relevant portion:

"'The main problem of the industry is the shortage of raw materials, which was accentuated by the partition of the country, as the factories in West Bengal were deprived of their supplies of bamboo previously obtained from East Bengal. In view of the projects already under implementation and other expansions which are contemplated the demand for the various raw materials is expected to expand considerably. In this connection, it may be stated that a number of units in Bengal and Bihar have to depend on supplies of bamboo from Orissa. It is, therefore, essential to organise adequate supplies of this raw material to the existing factories in the first instance, and later on to the new projected units.'

"If this wise counsel is observed we shall be quite satisfied.

"During May last a serious situation developed concerning supplies of salt cake from the Rajasthan Government. This material is obtainable only from the unique natural deposits in Rajasthan, and without it, the mills' pulp producing plants cannot operate economically. Failure of supplies would therefore be a calamity to the mills. During the previous year, we had experienced acute difficulties, but last year the position deteriorated to such an extent that large-scale dislocation of pulp production appeared imminent. It was evident to the Association that these valuable deposits were not being administered in an efficient manner—at one stage, supplies were erratic due to the comparatively trivial difficulty of the department having no empty bags in which to remove the salt cake. The Association, therefore, represented these serious difficulties to the Government of India, and when the gravity of the situation was realised, considerable and much appreciated assistance was extended by Government officials in organising more efficient arrangements. I am glad to say that for some months past there has been a considerable improvement and regular despatches have been maintained. Our thanks are due to the Government for the assistance given and I hope that this improved supply position will continue as it is necessary for the mills to build up stocks of this material to carry them over the monsoon period when work in the salt pans comes to a standstill.

On the subject of labour matters, over recent months there have been no major stoppages of work at the mills, but the past year has again seen prolonged closures, serious loss of production and wage money among large units of the industry, due to illegal strikes. This has again been the dark spot of the year's working, and, as in the previous year, has been brought about by the workers being misled by certain of their union leaders not employed in the mills. In organised industry, ours is among the foremost in improving the lot of our workers, and all that the large majority of them ask is to be allowed to work in peace. It is a matter of great regret that with present labour legislation largely benefiting the worker, the Government machinery for settling differences is frequently disregarded and illegal strikes resorted to, with serious losses to all concerned.

"In connection with railway matters, whilst at the beginning of the year the industry experienced great difficulties in obtaining adequate rail transport, particularly as regards our seasonal requirements in conveying raw materials to the mills, for the major part of the year there has been a considerable improvement. Wagons have been more readily available, and operational restrictions less. A point which has been particularly noticeable is the more rapid arrival of wagons at destinations which must result in quicker turnround and more economical use of the available wagons. I think great credit is due to the Railway authorities in achieving this gratifying improvement. Unfortunately, we have recently again struck a spell of transport difficulties, apparently of a seasonal nature, which also coincides with the industry's seasonal requirements for raw materials; in particular, one member is experiencing great difficulty in securing wagons especially in the Waltair and Khurda Road Districts of the Eastern Railway for the transport of grass, just at the peak period of their grass season. We shall, therefore, greatly appreciate urgent assistance from the railways in overcoming this latest difficulty.

Future Outlook

"On the subject of the future outlook of the industry, I have referred to some of our difficulties and uncertainties, but on the other hand there are a number of promising features. India can, with pride, regard itself as a pioneer country in developing the manufacture of high class paper from bamboo, and some of the finest pulp and paper-making plant in the world has been, and continues to be, installed in India to process this raw material. Members of this Association have taken a leading part in this development. From time to time we hear reports of the world's diminishing timber forests due to over-exploitation by the wood-pulp industry, and bamboo, with its prolific growth, should place India in a strong position as a paper-making country. The Indian market for paper should expand considerably as educational programmes and the industrialisation of the country develop. With careful husbandry of the forests, therefore, the Indian industry should be able to look forward to a period of expansion and not only fulfil the growing demands of supplies of paper for the nation, but even go further and develop a healthy export trade. Adjacent countries, of course, are also aware of this position, new pulp and paper industries are being built up and the Indian industry therefore needs every encouragement if it is to keep its lead.

"We have maintained our usual friendly relations with the Forest Research Institute at Dehra Dun and also the Indian Paper Mills' Association. During the year, members of both Associations have benefited from our mutual discussions.

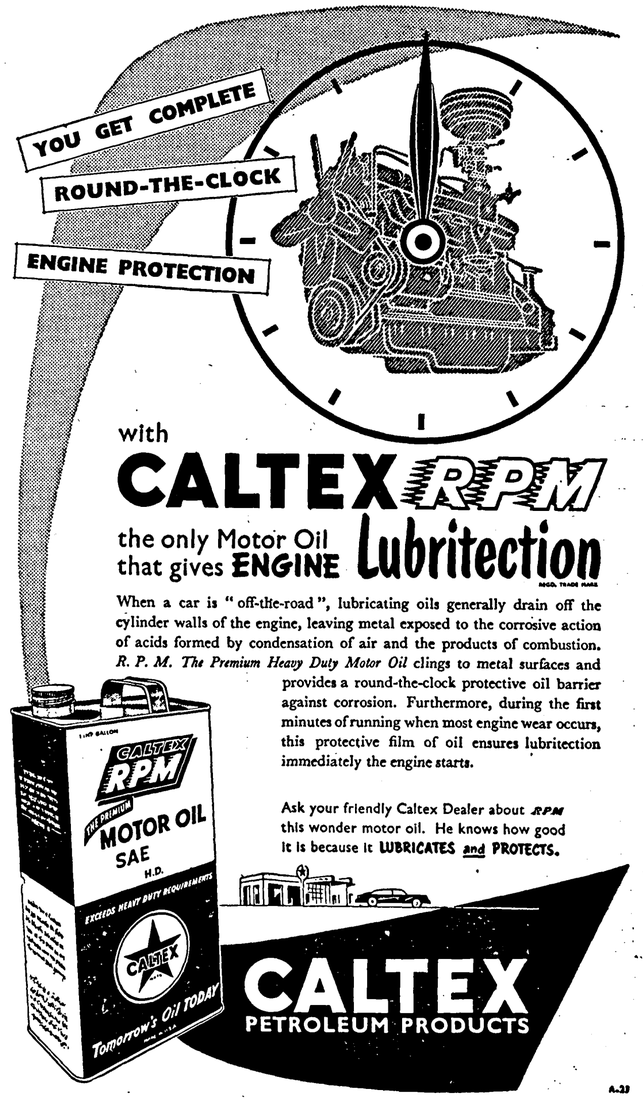
"During the year, I have had the honour of representing your interests on the Industrial Affairs Sub-committee of the Bengal Chamber of Commerce and Industry.

"I should like to tender my sincere thanks for the able assistance and advice I have received from the Vice-Chairman and other members of the Committee. In passing, I should also like to mention that whilst appreciating the great distance and difficulties of travel, attendance of upcountry committee members at least at some of our meetings, is of great assistance in our deliberations.

"I also wish to express my gratitude to the very able Secretaries who have served during the year, Messrs. Nish and Windridge."

New Committee

The Association elected Mr. V. Mehta of Shree Gopal Paper Mills Company, Ltd., as Chairman and Mr. C. I. Turcan of the India Paper Pulp Company, Ltd., as Vice-Chairman for the year 1955-56. The Committee of the Association for the year will consist of Messrs. P. H. Sykes, L. Shuttleworth and P. K. Mehta.



CHLORIDE AND EXIDE BATTERIES (EASTERN) LIMITED—CALCUTTA, BOMBAY, MADRAS

THE ANDHRA BANK, LIMITED

ESTABLISHED : 1923

Head Office: **MASULIPATNAM**

The 31st Report of the Board of Directors to be presented to the Shareholders at the 31st Annual General Meeting to be held at the Registered Office of the Bank, Cantonment Road, Masulipatam, on Sunday the 24th April, 1955.

The Directors have the pleasure to submit to the Shareholders their annual report on the working of the Bank for the year 1954 together with the Balance Sheet as at and Profit and Loss Account for the year ended 31st December, 1954, and the Auditors' Report thereon.

The net Profit of the Bank for the year 1954, including a sum of Rs. 7,142-14-2 brought forward from the previous year's account and after payment of one and a half months' substantive salary amounting to Rs. 55,880-8-9 as bonus to staff, amounted to Rs. 5,43,821-7-0, out of which the following interim appropriations were made.

	Rs.	a.	p.
Interim dividend for the half-year ended 30th June, 1954, at the rate of 7 per cent. per annum free of income-tax, which absorbed	87,500	0	0
Transferred to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	75,000	0	0
The following final appropriations were further made:—			
Transferred to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	35,000	0	0
Transferred to Provision for Taxes	2,30,000	0	0
Your Directors now propose:—			
To pay a final dividend for the half-year ended 31st December, 1954, @ 8 per cent. per annum free of income-tax, making a total of 7½ per cent. per annum for the year 1954, which will absorb	1,00,000	0	0
To carry forward to the next year's account	16,321	7	0
Total .. Rs.	5,43,821	7	0

The official rate of the Reserve Bank of India remained at 3½ per cent. per annum.

The Bank has, during the year, recorded all-round progress.

Three Sub-offices were opened during the year at Bobbili, Tanuku and Vuyyuru (Krishna District).

Messrs. Sri S. R. Y. Sivarama Prasad Bahadur, J. Manikyalarao and P. Sobhanadri are three of the Directors retiring by rotation under Article 94. From the next longest in office, Sri Majety Seshagirirao has volunteered to retire. The retiring Directors are eligible for re-election.

You are requested to appoint Auditors for the current year and fix their remuneration. Messrs. Brahmayya & Co., and Ch. V. Lakshmaiah & Co., the retiring Auditors, offer themselves for re-appointment.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR,
Chairman.

22nd March, 1955.

BALANCE SHEET AS AT 31st DECEMBER, 1954

PROBLEM OF AGRICULTURAL PRICES

SHORT- AND LONG-TERM ASPECTS ELUCIDATED

By R. Dayal

IN a complex question like the stabilisation of agricultural prices, an enunciation of the problem is no less difficult than devising a solution for it. Simple questions, such as what the stability of agricultural prices means and why the stability is desired, seem to have obvious answers, but a fuller discussion of these questions will lead to a better appreciation of the problem and facilitate a solution on proper lines.

Stability means avoidance of fluctuations—three types of fluctuations to which agricultural commodities are subject, namely, short-term changes, medium-term cyclical fluctuations and the long-term trend. The first and foremost question that comes up in the problem of price stabilisation is whether the object is to eliminate only the short-term fluctuations, or also to prevent any long-term downward tendency of the prices. In our country, short-term upward and downward movements in prices may be caused by alternations of rich and poor crops due to climatic changes. To iron out these fluctuations is not a difficult task, because, if we have above-the-average crops for a year or two or even three, there would follow below-the-average crops too. All that is required is some financial resources to buy surplus stocks when climate is favourable and rivers behave well, and to sell them in times of floods and poor rainfall.

These short-term variations are not new in the history of Indian agriculture. Indian agriculture has always been subject to the vagaries of nature. Droughts, floods and plant diseases have been causing temporary fluctuations in crop yields. But stocking operations of the private trade, helped by changes in imports and exports, were able to protect the adequacy of physical supplies against weather hazards, with the result that weather changes did not cause any violent changes in prices. But, in these days of official crop forecasts, public opinion, instead of being divided, tends to be unanimous about the direction in which price movements would take place. Therefore, short-term changes in supply are likely to create, in the absence of a public storage programme, much more marked changes in prices these days than a decade and a half ago.

Implication of Government Support

On the other hand, if Government starts stabilisation purchases, it may leave no inducement for the private trade to continue speculative purchases. And Government may be taking upon itself the responsibility of a task (involving locking up of huge sums of money) which private trade would do as a matter of business. A substantial margin between floor and ceiling prices in the stabilisation programme would leave sufficient inducements for private speculative activity, without permitting wide fluctuations, and Government would be relieved of much of the burden of committing its finances to an unproductive task of commodity purchasing. Stability, therefore, would imply not inflexibility of prices, but avoidance of wide fluctuations.

Over and above these short-term fluctuations, we are likely to be faced with a permanent tendency of the prices to go down as a result of progressively increasing pressure of supply. There is a statistical method—called the method of moving average—to isolate the long-term price trend from short-term fluctuations. A five-yearly moving average of price index of food articles, for instance, is the series of average figures obtained for the quinquenniums 1949-53, 1950-54, 1951-55 and so on. The average index for the period 1949-53 was 390 and that for the period 1950-54 was 384. Though during the years 1949 and 1954, the price index ranged between 410 and 358, the five-yearly moving average shows a decline of only six points. It has isolated short-term fluctuations and denotes only the long-term trend. It is almost certain that, in the absence of corrective measures, agricultural prices will hereafter continue to show a long-term downward tendency due to our agricultural development programmes and the consequent increasing supplies. We have to decide our attitude to this long-term falling trend. Should our price stabilisation programme try to prevent it?

If we decide in favour of stabilising the "trend", then merely a programme of stabilisation purchases will not be enough. A stabilisation programme can be successful only if it involves buying as well as selling, and not buying alone. But, in the face of supplies increasing faster than the demand, a stabilisation programme would involve constantly keeping the price level higher than it would otherwise be, and accumulating, progressively and indefinitely, of surplus agricultural products year after year. Obviously, the long-term falling trend can be checked only by devising measures necessary to control the supply of, and stimulate the demand for, agricultural products.

Effect of Deficit Financing

The Finance Minister has, indeed, taken a big step towards stimulating the demand for farm products. His plan to create a budgetary deficit to the extent of Rs. 340 crores would go a considerable way in augmenting the purchasing power of the people and thus leading to a larger demand for agricultural commodities in common with other articles of consumption. But it would be wrong to be too complacent about the effect of more money incomes on the demand for agricultural products. There are the following limitations:

(1) Increase in money incomes can help agriculture a great deal where it forms only a small part of the total national income. But in India, where agriculture represents 50 per cent. of the national product, only extraordinarily big doses of new money can help. And such big doses may not be advisable on other grounds.

(2) The calorie intake in India may be lower than in advanced countries, but it has to be remembered that the inhabitants of a hot country need not derive so much heat and energy from food as people in cold climates have to do.

(3) Though the expenditure on food is quite elastic, in the sense that, with higher incomes, people would take to costlier foods, yet the consumption of food as a whole is relatively inelastic, in the sense that living people have always derived the minimum nutrition from food.

Thus, while deficit financing would definitely stimulate the demand for agricultural products in the immediate future, a general measure like this may, before long, cease to create much effect on the consumption of food articles, which constitute a major part of agricultural production. It is known that in America, for instance, the annual human consumption of wheat has virtually remained the same (about 490 million bushels) as 40 years ago. Therefore, instead of relying on a general measure, it would be necessary to study the conditions of demand and supply of individual products of agriculture. For instance, a programme for stabilising cotton prices must pay more attention to the creation of more demand by the expansion of textile production. But, in the case of wheat, the possibility of stimulating demand is not so great and it may be necessary to look more to restricting production at some future date.

In any case, it is definite that the long-term falling trend of agricultural prices can be prevented only by equating demand and supply in ways other than making stabilisation purchases. For stabilisation purchases aimed at controlling the long-term trend would mean huge financial losses to Government in addition to the locking of enormous funds permanently. It has also to be borne in mind that, by keeping prices at a higher level than they would otherwise be, stabilisation purchases themselves work against an expansion of demand.

Short-term Fluctuations

If we decide to stabilise short-term fluctuations, leaving the long-term trend alone, then the procedure to be followed would be to base floors and ceilings for each year upon the average of prices of the most recent five years (since we are assuming that a five-yearly moving average will isolate the "trend" from short-term fluctuations). Floors and ceilings fixed by the stabilisation agency would be lower each year than in the preceding year (if other measures to equate demand and supply do not succeed), but market prices may be higher than the mean between the floor and ceiling in one year, and lower in another.

The third type of price fluctuations is the trade cyclical (medium-term) fluctuations. The duration of a trade cycle is generally 10 years. During the years of prosperity, agricultural prices tend to rise faster than other prices, and during depression they tend to fall faster. While the short-term fluctuations in agricultural prices are caused by sudden changes in supply due to weather, the cyclical fluctuations are caused by changes in demand. Measures to control these types of fluctuations are in common with those needed for fighting depressions in general. But, as agricultural prices tend to fluctuate more violently than other prices, efforts are made, particularly in America, to ensure that farm prices are stabilised in relation to the prices of things that farmers buy.

AUDITORS' REPORT.

We have audited the Balance Sheet of the Andhra Bank, Ltd., as on 31st December, 1954, and the Profit and Loss Account for the year ended on that date, as set-forth above, with the books of the Head Office and the certified returns from Branches and Sub-Offices and we beg to report that:—

(a) We have obtained all the information and explanations we have required and such information and explanations have been found to be satisfactory;

(b) the transactions of the Company which have come to our notice have been within the powers of the Company;

(c) the returns received from the Branch Offices of the Company have been found to be adequate for the purpose of our audit;

(d) the Profit and Loss Account shows a true balance of profit for the year ended 31st December, 1954;

(e) the Balance Sheet and Profit and Loss Account are, in our opinion, drawn up in conformity with the Law;

(f) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs as on that date according to the best of our information and explanations given to us and as shown by the books of the Bank; and

(g) that, in our opinion, the books of account have been kept by the Bank as required by Section 180 of the Indian Companies Act.

The concept of price parity for agriculture has been devised to that end. It ensures that a given quantity of a farm product should buy the same amount of non-farm articles as it did in a base year. The parity price for a farm product is its average price in the base year, increased by the same proportion as the general index of prices paid by farmers had increased. Assuming that the price of wheat in a base year was Rs. 10 a maund, and the price index of things purchased by farmers has moved from 100 in the base year to 150, then the parity price for wheat would be 10 x 150/100, that is, Rs. 15 a maund.

The parity price concept, devised to counter excessive cyclical fluctuations in agricultural prices, does not imply any rigidity for agricultural prices but only their comparability to non-agricultural prices. This concept can also be used in dealing with short-term fluctuations, preferably by fixing floors and ceilings (as, for instance, between 75 per cent. and 95 per cent. of parity). But the application of the parity concept to control the long-term falling trend would amount to partial stabilisation of the trend. The long-term prices would be allowed to fall, but only to the extent of a decline in the prices of non-farm products. This partial stabilisation would involve the same difficulty of growing accumulation of stocks, though to a reduced extent.

If we decide to stabilise short-term and medium-term fluctuations in terms of "parity," leaving the long-term trend to take its own course, then every year floors and ceilings would have to be based on a lower percentage of parity than in the preceding year (for instance, between 95 per cent. and 100 per cent. in 1954, between 93 per cent. and 98 per cent. of parity in 1955 and so on).

U.S. Experience

In America, it has been realised that it is impossible to stabilise agricultural prices at 96 per cent. of parity. The President has been recommending to Congress an early implementation of the decision to control prices between 75 per cent. and 90 per cent. of parity. In view of the enormous accumulation of stabilisation stocks, it may be unavoidable in subsequent years to let prices go down to even a lower percentage of parity. The same thing is bound to happen in India. Therefore, the concept of parity does not seem to be of much value except as a measure of the terms of trade between farm and non-farm products. It cannot stabilise those terms of trade. The Government of India is at present trying to evolve a parity formula to be used in the stabilisation of prices. For the sake of simplicity, it might be better to leave out this unnecessarily cumbersome concept.

After the above analysis of what price stability means and implies, it is possible now to pass on to the second question about the objectives of price stability. These objectives can possibly be four in all:

(1) To assure a satisfactory standard of living to farmers, which would be adversely affected when prices of farm products fall; (2) to maintain the growth of income in the agricultural sector as a whole, which forms the bulk of the market for industrial goods; (3) to prevent any possible harmful effect of falling agricultural prices on industrial production; and (4) to prevent any possible harmful effect of falling prices on agricultural production.

Who Will Pay?

It is true that an undue decline in agricultural prices, which moves the terms of trade against agriculture, would deprive, to some extent, the agricultural community from sharing adequately in the fruits of the nation's economic progress. The first important question, in this connection, is as to who will have to pay and who will receive the benefit of expenditure involved in the price stabilisation programme. In a country like America, where agriculture accounts for only 9 per cent. of the total working population and even less percentage of the national income, the money spent on stabilisation purchases comes mainly from the non-agricultural classes, and the beneficiaries are the farmers and, to a small extent, the traders. But in India, where agriculture predominates, the money burden of price stabilisation funds, raised by Government through various direct and indirect taxes or deficit finance, ultimately falls, in a large measure, on the consuming population which is preponderantly agriculturist. Thus, farmers will themselves have to pay for the benefits they get.

Moreover, our agriculture consists chiefly of small farm families, who produce too little for sale to benefit appreciably from farm price support, however high. The solution to their income problem lies largely in the expansion of local non-farm employment, or in movement to better opportunities elsewhere. The aim of securing satisfactory levels of incomes to farmers can be achieved only if small farms are replaced by more efficient large-scale farms. This will require both a continuing shift of under-employed farm people into more productive work and a substantial influx of capital into agriculture. The available capital resources must be used for creating new avenues of employment, instead of using them on a price support programme.

While a price support programme would not give any net benefit to the farmers, except the fractional large-scale farmers and rentiers, it would hit hard about 4½ crores of agricultural wage earners including their dependents and an equal number of non-agriculturist rural population. These two sections together form the lowest income group in the country. Any price policy has to keep in mind the interest of these people which lies in cheaper food.

Stabilisation for Short-term Welcome

It may be noted that the above observation relates only to the long-term falling trend. Short-term fluctuations are in nobody's interest. Upward and downward fluctuations round an average do not give any net advantage to consumers or producers of agricultural products. They only create inconvenience for consumers when prices are above the averaged and for producers when prices are below the average. Stabilisation of short-term fluctuations would be welcome to all, but any checking of the long-term falling trend—a costly job—would not, on balance, contribute to the welfare of the rural population.

Next is the objective of ensuring a continuous income growth in the agricultural sector as a whole. The total income of the agricultural sector is a matter of vital importance not only to farmers but to the entire population. The agricultural population provides a major portion of the market for industrial goods. Our industries would face serious problems of marketing, if agricultural income does not expand proportionately with the expansion of industry. In fact, the Great Depression of the 1930's had its origin in the decline in agricultural incomes.

Up to the end of 1953-54, the price fall did not affect the growth in the total agricultural income. The rise in production more than offset the fall in prices. But after that, the trend is not known because figures of agricultural production cannot be known for part of the year. But the price fall has been rapid enough to evoke the fear that the agricultural income has ceased to grow.

In any case, the problem of market for industrial goods would be better solved, if the funds that would be locked in the public storage programme are instead spent on public works like roads, hospitals, rural housing, schools, etc., and on capital construction in the industrial and agricultural fields. That would not only ensure a market for manufactures but also help in withdrawing excessive population from agriculture.

Study and Research Needed

About the effect of falling agricultural prices on industrial production, the matter deserves study and research. But first thoughts suggest that, while sudden and violent movements may lead to uncertainty and suspension of production, an orderly and gradual downward movement may speed up the pace of production instead of retarding it. The various measures, other than stabilisation purchases, that we would be taking to equate the supply and demand of agricultural commodities, would ensure the long-term downward movement of prices to be step by step and not a dashing one. Then, all that is required is that short-term fluctuations, which often are abrupt and violent, should be prevented.

Lastly, so far as the effect of falling prices on agricultural production is concerned, the general belief that they adversely affect production, seems to be unfounded. Farmers do not cut down the margin of production in times of falling prices, because there is almost a proportionate and concurrent fall in the farmer's costs too. So long as there is labour superfluity in agriculture and costly machinery is not used, the equilibrium between marginal revenue and marginal cost will not be disturbed as a result of falling prices.

While the long-term falling trend will not affect agricultural production, short-term fluctuations may disturb balanced production. High price of a particular commodity relatively to others tends to induce an excessive expansion of output of that commodity, which results later in an unduly low price that in turn brings about over-contraction. In such a quick diversion of land from and to a particular commodity, the farmer's order of rotation is upset and land has to be kept fallow for a longer time. The conclusion can, therefore, be drawn that short-term fluctuations may have deleterious effect on production, while the long-term falling trend will not.—*All Rights Reserved.*

The Government of India is reported to have agreed to advance about Rs. 12 crores to the Governments of the principal wheat-growing States for the purchase of wheat on the Central Government's account in case the prices tended to decline to the uneconomic level. The measures already taken by the Government for the stabilisation of wheat prices at reasonable level include: (1) withdrawal of zonal restrictions, allowing the demands of important deficit pockets, like Calcutta and Bombay, to operate on the internal markets; (2) banning of import of wheat by flour mills from abroad for the time being; and (3) permission to flour mills in Bombay and Calcutta to purchase about 200,000 tons of wheat from the internal markets to cover their requirements for three months.

OUTLINES OF TAX POLICY

(Concluded from page 727)

But does the present income-tax in its structure and level depress incentive to save and invest? The Commission has made a broad estimate of the growth of capital formation. But whether and, if so, to what extent income-tax has affected incentive during the last few years is an exceedingly difficult issue and still remains a matter of general impression. "The disincentive effect of higher taxation," says the Commission, "on the will to work on the part of the higher-income groups is generally exaggerated." It may, perhaps, be argued from this that there is still some scope for further adjustment of income-tax for realisation of greater distributive justice. The Commission then proceeds to say that the tax system should not be strained to a limit which will endanger the productive system of the country or impair the possibilities of its expansion by affecting savings and investment in the private sector.

The tax system should be such as to promote conditions for rapid production and development. The Commission considers that the achievement of increased investment on public and private accounts represents the crux of the tax with which they are charged. Anyone who accepts the planned development programme and the role assigned to the private sector in this programme must necessarily agree that the tax system should be so designed as to assist incentive for saving, enterprise and investment. The Commission has paid special attention to this problem by suggesting appropriate incentives in the income-tax system. Promotion of such incentives is essential and imperative, and the suggestions are valuable. But this does not prove or suggest that the existing income-tax has militated against incentives. It is one thing to create special incentives and another thing to remove existing disincentives. Provision of concessions to promote rapid development is necessary; but that does not show that the existing tax has been baneful in its effects.

Since about the end of the war, special measures have been adopted in different countries providing concessions in the tax system for promoting production. On the model of the provisions made in the United Kingdom in 1944, special initial depreciation and exemption of current expenditure on research were provided in the system of our income-tax in 1946. Since then, further steps have been taken on those lines. The Taxation Commission has made several recommendations to provide incentive for developing productive enterprise. It has suggested tax concessions to encourage industrial production. Certain selected industries should be granted a "development rebate" by being allowed to charge to revenue 25 per cent. of the cost of new fixed assets. All new concerns in certain selected industries should be allowed a "tax holiday" for six years from the year when production begins. All these are advances on the lines initiated in 1946. Such reliefs and concessions are essential for an economy wedded to rapid development programme, where private initiative and enterprise are to play a substantial role. The Commission has examined the tax policy on the basis of this programme and structure. Special tax concessions for encouraging private effort and investment are essential in such a set-up and other objectives of tax policy, therefore, receive secondary consideration.—*All Rights Reserved.*

Ex-Officio Director and General Manager.

ANNUAL MEETING OF INDIAN BANK LIMITED

MR. K. BALASUBRAMANIA IYER'S SPEECH

GOVERNMENT'S POLICY NOT CONDUCIVE TO GROWTH OF SAVINGS AND INVESTMENTS

THE view that banks would have to play a very vital part in future for the supply of the working capital and the proper functioning of the private sector was expressed by Mr. K. Balasubramania Iyer, in the course of his address to the shareholders of the Indian Bank Ltd. at their Forty-eighth Annual General Meeting held in Madras on 9th April, 1955. While commending the various measures taken by the Government for helping banks to function effectively in this direction, the Chairman regretted that the policy of the Government in other respects had not been conducive to growth of individual savings and deposits in banks, as also investments in general. In this connection, he commented on the recent income-tax proposals and the proposed amendments to Article 31 of the Constitution.

The following is the full text of Mr. K. Balasubramania Iyer's speech:

"GENTLEMEN,

"I am very grateful to the shareholders of the Indian Bank, Ltd., for the great honour they have done me by electing me as Chairman of today's meeting.

"Gentlemen, we are living in an era of planning. The year 1954 marks the final stage of the first Five-year Plan and the second Five-year Plan is in the making now. While the first Five-year Plan emphasised the construction and development of large irrigation works, electricity schemes and agricultural improvement, the second Five-year Plan, according to the Prime Minister who is the spokesman of the Union Government, emphasised the concentration on the establishment of heavy industries and the development of transport facilities. This plan envisages a total outlay of Rs. 2,000 crores, of which nearly 65 per cent. is scheduled to be in heavy industries, which will augment the capital-base of the economy. The second Five-year Plan also recognises the need for the efficient functioning of private industry and for the co-operation of the private sector with the public sector. The total investment necessary in the private sector has been estimated by the Planning Commission to be Rs. 613 crores, of which investment in working capital will be Rs. 150 crores. For the supply of the working capital and the proper functioning of the private sector, banks will have to play a very vital part in future. In regard to the public sector also, banks will have to co-operate to a great extent with the Government and other public bodies.

"Fully appreciating the necessity for the encouragement of the sound functioning of banks, the Reserve Bank of India has taken various measures to ensure that the pattern of bank credit conforms to the general economic policy and to the needs of the situation in the country.

Bill Market Scheme

"The bill market scheme, introduced in 1952 to facilitate banks to meet the seasonal demand for funds, has now become a permanent feature of the credit system of the country. Advances under this scheme were granted at half per cent. below the Bank rate. The scope of the bill market scheme has recently been extended to be made available to all the Scheduled banks with deposits of Rs. 1 crore or over and it has been further decided now to extend the scheme to all Scheduled banks in possession of licence irrespective of the size of their deposits.

"The most important step taken by the Reserve Bank of India was the appointment in October, 1953, in consultation with the Government of India, of a committee under the chairmanship of Shri A. D. Shroff to examine how increased finance should be made available to the private sector through sources other than those which are under the consideration of the Taxation Enquiry Commission. The Committee was in particular asked to examine the possibility of providing bank finances for development purposes on a larger scale. The Committee has finished its labours and has submitted a very valuable report. Our State was represented therein by Shri S. Anantharamakrishnan, member, Local Board, Reserve Bank of India, Madras.

"There is also the proposal for the setting up of two Development and Finance Corporations. One sponsored by the Government, with a view to helping private enterprise. The other Corporation has been sponsored by private industries in India, the United States and the United Kingdom and is assisted by loans from the Government of India and the World Bank.

Government Policy Will Not Help Savings

"While the necessity for giving facilities to banks has been recognised by the Reserve Bank and the Shroff Committee has also recommended various measures for helping banks to function effectively in contributing to the working capital of all private industries, we have to note with great regret that the policy of the Union Government in other respects has not been conducive to the encouragement of savings by individuals and of the increase of deposits and of investments in banks. The recent income-tax proposals will largely affect the middle class incomes, not to speak of the richer classes. The introduction of the intermediate personal slabs, the lowering of the super tax level, slashing of the earned income allowance and the reduction of the entertainment allowances will all affect the incentive of the middling and top executives of the business world.

"The proposed amendments to Article 31 of the Indian Constitution in respect of the deprivation of the right to property and of the compensation payable to persons, whose rights to property are affected and the drastic changes introduced by the Select Committee making compensation not justiciable and including industrial and agricultural property also within the scope of the amendment, have produced panic among all property-holders and investors. They certainly tend to make the right to property guaranteed by the Constitution illusory. The wisdom of this step is to be seriously doubted at a time when our country has not yet solved the problems of production of absolute self-sufficiency in food and other cereals and of the raising of the standard of living and the increase in the national income. It is sure to produce disastrous effects on the general economy of the country. While it may satisfy the advocates of the ideologies bordering on communism, it is certainly not helpful for the practical realisation of our objective of the establishment of a Welfare State here. At any rate, it will have a deleterious effect on the deposits in banks and on investments in general. As the Scheduled and non-Scheduled banks in the country are at present the main source of supply of credit to the organised trade and industry in our country, it will seriously affect their progress also.

Nationalisation of Imperial Bank

"There is also the proposal for the nationalisation of the Imperial Bank of India and other State banks. The shareholders of the Imperial Bank of India are not in favour of such a step. When this question is viewed calmly, we are bound to come to the conclusion that it is certainly not at all desirable so far as the efficient functioning of the banking system in our country is concerned. It is also to be noted that there has been a marked decline in the prices of agricultural produce all over the country.

"There are at present, according to the figures of the Reserve Bank, 504 commercial banks working in our country, out of which 50 banks have deposits over Rs. 1 crore. The banks that have deposits over Rs. 20 crores are only eleven. We are happy and proud to note that our Bank is one of the eleven.

"The Rural Banking Enquiry Committee established by Government has recommended that the number of branches of the Imperial Bank of India should be increased and that these branches should progressively take over the cash work of the treasuries and run currency chests. Following this tendency of the Imperial Bank of India, other commercial banks also have tried to increase their branches. Our Bank also during the year opened branches at two places in the city and at six places in the districts.

"While the increase of branches may be helpful in the spread of the banking system and in the development of the banking mind among our people, the strain that it involves upon the management of banks is very great. The efficiency of periodical inspection has to be ensured and trained personnel have to be recruited to be in charge of these branches. The cost of establishment is bound to increase. The staff has to be organised on a high level for smooth and intelligent co-operation between the branches and the head office.

"Every banking institution consists of five sectors—viz., the shareholders, the depositors, the Directors, the staff and the constituents. When all the five sectors work efficiently, smoothly and soundly, the banking institution progresses very satisfactorily. I may, generally state, with a legitimate sense of satisfaction that all the five sectors in our Bank are sound.

Bank Disputes Must End

"But in regard to the staff, I have to make a few observations. As regards the clerical and subordinate staff, the All-India Industrial Tribunal (Bank Disputes), which was presided over by Shri S. Panchapagesa Sastri of blessed memory, gave its award in March, 1953. There was an appeal from the Award by the employees and the Appellate Tribunal gave its decision in April, 1954. By that decision the financial burden upon banks increased. On the representations made by the banks to the Central Government that the burden imposed by the decision of the Labour Appellate Tribunal was heavy, the Central Government modified the decisions of the Labour Appellate Tribunal and restored the scales of dearness allowances as laid down in the Sastry Award, subject to adjustments and also to the condition that no employee shall receive less total emoluments than were received by him in March, 1954. This did not satisfy the employees and the All-India Bank Employees' Union decided to observe a token strike throughout India and further threatened an All-India strike on 10th December, 1954. The Central Government thereupon appointed an enquiry commission with Justice Rajadhyaksha as Chairman to enquire into the whole matter. As a result of this, the threatened strike of the employees did not materialise. Unfortunately, Justice Rajadhyaksha died in February and the Government have appointed Justice Gajendragadkar in his place to conduct and finish the enquiry. We hope that the enquiry would be finished soon this year.

"These disputes between banks and their employees have dragged on for the past several years and no final decision satisfactory to both the parties has been arrived at. For the smooth and sound working of banks, it is absolutely necessary that these disputes should no longer exist and that the managements of banks should be allowed to use their time and labour to increase the efficiency and progress of banks. The establishment expenses consequent on these disputes and on these tentative decisions have been increasing and the net profit is also affected on that account.

"In spite of these unsatisfactory features, we note with a sense of satisfaction that, on the whole, our staff has been working loyally and rendering good service.

Satisfactory Progress

"I now refer a little in detail to the balance sheet which all of you would have, I take it, perused carefully by this time. You will be gratified to note that the Bank's progress in the year 1954 has been very satisfactory. At the foot of the balance-sheet you will find Rs. 31 crores and odd representing an increase of Rs. 3 crores, 90 lakhs and odd over the figure of Rs. 27 crores and 20 lakhs and odd last year. This is clearly a general indication of the expansion of the Bank's business in the year. If you take the gross profit of the Bank for the year, it shows an increase of nearly Rs. 8 lakhs over the gross profit of last year. But there has not been a corresponding increase in the net profit. While the gross income has risen from Rs. 83.32 lakhs in 1950 to Rs. 122.67 lakhs in 1954, the net profit has gone down from Rs. 15.62 lakhs to Rs. 13.94 lakhs. The reason is that the expenditure on the heads of 'interest on deposits' and on 'salaries and allowances etc.,' have absorbed a greater amount than last year, the increase being Rs. 7,60,000.

"While I am on the subject of 'interest on deposits' I may be permitted to state that it will be a very healthy convention to have an understanding among the leading banks as regards the rate of interest to be paid on deposits. At present, there is an unhealthy competition in our State among big banks as regards this.

"So far as the deposits are concerned, there is a marked increase by Rs. 3 crores during the year. Acceptances, endorsements and other obligations have shown an increase of over Rs. 50 lakhs over the figures of last year. This is mainly due to the fact that the foreign exchange business in our Bank has improved. It is now three years since the Foreign Exchange Department was organised by the head office of the Bank in Madras. The Bank has obtained more considerable business in Bombay, particularly in the import of dollars, cotton and metals. It is hoped that the figures for 1955 will be more satisfactory.

"For the improvement of foreign exchange business it is necessary that very qualified and trusted agents will have to be employed in distant branches like Bombay and the branches in Malaya. With a view to giving training to the members of the staff in foreign exchange business, we secured the services of Mr. S. C. Prior of the Westminster Bank Ltd., London, and also sent six members of the staff to England for training and all the six have returned after undergoing training there. The improvement in foreign exchange business is also reflected by the rise in the contingent liabilities on forward exchange contracts.

Investments Up

"The liquid resources of the Bank representing cash on hand, balances with other banks, money at call and at short notice, investment on bills discounted and purchased represents 63 per cent. of the total deposits of the Bank. The investments have gone up by Rs. 16 lakhs and this is to be accounted by the fact of the larger holdings of gilt-edged securities at Rs. 9.49 crores.

"As regards depreciation on securities, it stands now at Rs. 60 lakhs, as against Rs. 63.63 lakhs last year. The investments in securities are mostly short-dated. The securities maturing within five years amount to Rs. 3.81 crores. The securities maturing within five to ten years amount to Rs. 3,00,25,000. The securities maturing in 10 and 15 years amount to Rs. 2.24 crores. Thus, more than a third of the securities mature within the next five years and three fourths of the securities fall due for payment within ten years. The difference in the face value and the book value in the securities of Rs. 12.72 lakhs has been met by the provision of Rs. 9.50 lakhs in the sinking fund and Rs. 9 lakhs in the non-statutory reserve fund. There is no reason to feel any concern about the depreciation in the market value of the securities, when we consider the fact that major portion of the securities are terminable and redeemable within a period of five to ten years.

"The advances show an increase of Rs. 1,75,00,000 over the amount of the previous year, though the entire increase in deposit of Rs. 3 crores has not been fully utilised.

"The amount of bills for collection also shows an increase of Rs. 28 lakhs over that of last year. The book value of the premises of the Bank stands at Rs. 2.99 lakhs, whereas the market value will be somewhere about Rs. 8 lakhs. The reserve fund, together with the recommendation of Rs. 1 lakh for the appropriation to the reserve fund this year, will amount to Rs. 59 lakhs, while the paid-up capital is Rs. 57.80 lakhs. Though in 1954 no call was made on the partly paid-up shares, it is proposed to make a call of Rs. 5 on the partly paid-up shares this year.

Increased Taxes

"It is to be noted that taxation has eaten far more sharply into the profits of the year than was the case in 1953. We are making a provision of Rs. 5,75,000 for taxes.

"So far as the Directorate is concerned, we had to accept with great regret the resignation in February of Mr. M. A. Chidambaram Chettiar who, we are glad to say is now elected as the Mayor of Madras and in his place we have co-opted Sri M. A. M. Muthiah Chettiar, Kumara Raja of Chettinad. The Board of Directors have already recorded their great appreciation of the services rendered by Mr. M. A. Chidambaram Chettiar to the Bank for the period of eight years during which he was associated with the Bank as a Director.

"It now remains for me to express our thanks to the Secretary and other members of the staff for their energetic work and for their devotion to the best interests of the Bank. We should also express our thanks to the members of the Local Advisory Boards who have assisted the various branches of our Bank by their sound advice. We have always been careful in scrutinising the work of overseas branches of the Bank in Colombo and Malaya. On the whole, we are satisfied that the general progress is maintained. We have to make much greater progress in future.

"This Bank was started in August, 1907, and embodied a bold and far-reaching effort in indigenous banking by our people and we are happy to feel that we will be celebrating our golden jubilee in two years with great enthusiasm and joy."

Messrs. Kumara Rajah M. A. M. Muthiah Chettiar of Chettinad, R. K. Venkatachalam, R. Sundaram Iyer and Rao Bahadur M. R. M. S. Periannan Chettiar were re-elected Directors of the Bank.

Messrs. B. Purushottam & Co., Messrs. Sundaram & Srinivasan, Messrs. V. Soundararajan & Co., and Messrs. Brahmayya & Co., were elected Auditors of the Bank for the year 1955.

FAMILY INCOMES IN U.S. RISE

More than 40 per cent. of the families in the United States have an income over $5,000 a year, and 55 per cent. have an income of $4,000 or more. Of the total family income of $272,000 million before taxes, almost $85,900 million goes to families with incomes under $5,000, about $117,000 million to families with incomes between $5,000 and $10,000, and the remaining $70,000 million to those with incomes over $10,000. In most years since 1945, there has been a broad increase in incomes which reflected both the rise in real income and the general rise in prices.

Since 1947, total family income has increased by almost 50 per cent., while the average income per family rose by about 30 per cent. as the number of families has increased by six million.

The number of families with incomes over $10,000 now stands at 3,800,000—double the number in 1947. Real purchasing power has increased substantially from 1947 to the present time. Real income—income adjusted for price changes—has risen one-quarter since 1947.

PROMOTION OF TRADE IN ASIA AND FAR EAST

MULTILATERAL AGREEMENTS PREFERRED

A WIDE range of problems relating to the development of industry and trade in the underdeveloped regions of Asia and the Far East was discussed at the seventh session of the E.C.A.F.E.'s (Economic Commission for Asia and the Far East) Committee on Industry and Trade, which was held in Tokyo from 15th to 24th March. The general consensus of opinion of the 150 delegates, who attended the Conference, was that foreign trade should be conducted as far as possible on a multilateral basis. They, however, conceded that countries might resort to bilateral agreements as temporary expedients whenever they were faced with foreign exchange difficulties or problems of export marketing. India's delegate was outspoken in expressing his country's faith in multilateral trade agreements and in holding bilateral agreements as "not serving the interests of Asian countries."

Anxiety was expressed, especially by Burma, over the possible adverse effects of an indiscriminate disposal of farm surpluses by advanced countries on the trade of the E.C.A.F.E. region. It is noteworthy that, in his reply, the U.S. delegate reaffirmed his Government's interest in an orderly liquidation of stocks. He gave the assurance that the U.S. would not dump any surpluses on world markets and that it had no desire to "undermine the position of its friends." This is no doubt an encouraging statement. But it remains to be seen how far the U.S. will be able to dispose of its burdensome surpluses without disrupting world markets.

Restrictions on trade with Communist China, and especially the American policy towards that country, were denounced by the Soviet representative in a statement in which he referred to "acts of piracy" directed against maritime shipping. This "most unwarranted and intemperate attack" was repudiated by the U.S. and some other delegates. It was pointed out that the trade restrictions objected to had been put into effect in support of a United Nations resolution against a "branded aggressor." India suggested that the trade of the countries of the E.C.A.F.E. region with China should be normalised and this question be considered from the point of view of trade, and not of politics. Burma and Indonesia supported this view.

Trade Consultations

Divergent views were expressed by the delegates on the question of conducting trade consultations between Asian and European countries. It was proposed that the E.C.A.F.E. should facilitate consultation on lines similar to those arranged in Europe by the European Economic Commission. These consultations, which would, if agreed upon, take place between countries participating in the work of the two Commissions, provide for bilateral negotiations against a multilateral setting. Several delegates, including those of India, Indonesia, Burma, France and the U.S.S.R. favoured trade consultations as proposed. They felt that such a technique might open new channels and improve and diversify trade by providing to the countries of the region more detailed knowledge of supply and market possibilities. The U.S. and some others felt that the proposal had better be considered by the Commission, rather than by the Committee and that it should be the subject of careful examination. It was also observed that, as conditions between the E.C.E. and the E.C.A.F.E. regions differed, techniques adopted in the former might not be suitable to the E.C.A.F.E. region.

The Committee endorsed the findings of an expert group, which met last year, that a regional payments union would have only a limited scope. In view of the constantly changing trade conditions, it was considered that the question be kept under review by the Secretariat, in consultation with the International Monetary Fund. The Committee agreed also with another E.C.A.F.E. expert report which had arrived at the conclusion that a budget deficit was not necessarily desirable in itself and that it might prove a valuable instrument of economic progress only under certain conditions and if it were of a moderate size. The Committee underlined the warning that a policy of deficit financing, if adopted, should be pursued with extreme caution. It is noteworthy that the Soviet delegate abstained from adopting this part of the report, as he felt that deficit financing might lead to a lowering of living standards.

The Committee discussed the issues relating to the use of electric power. It emphasised the need for using electricity for the manufacture of chemical fertilisers and considered that electricity in rural areas should be used in the first place for the development of irrigation and cottage industries rather than for domestic purposes. The delegates felt that an assessment of the hydro-electric resources of the region was one of the major tasks to be performed and they urged that appropriate standards for electrical plant and equipment be considered in the different countries. Support was given to the proposal for a visit of Asian electric power experts to Europe and North America, and it was noted that the United Nations Technical Assistance Administration would consider this proposal in 1956. France and the United Kingdom offered to contribute towards the expenses of the experts during their stay in these countries. Several delegates stressed the importance of small power generating stations. Australia and other countries, which had gained considerable experience in this field, offered their assistance for setting up such stations. The Chinese delegate reported that his country had followed many of E.C.A.F.E.'s recommendations in developing electric energy.

Another subject which evoked considerable interest was the development of mineral resources. The delegates commended, in particular, the proposals of the E.C.A.F.E.'s mineral resources sub-committee for a joint aerial survey and joint geographical mapping of areas by adjoining countries for undertaking surveys of neighbouring countries, which had no central surveys, for carrying out joint research on low-grade ore deposits and for securing effective co-operation between exporting and importing countries. Japan reported that it had rendered assistance to the exploitation of mineral ore deposits in the Philippines, Hongkong and India. Since Japan had already become an exporter of aluminium, its representative stated that his country would be willing to help other countries in the exploitation of their bauxite deposits. India offered the services of its Fuel Research Institute for joint studies, especially with Indonesia and the Philippines.

INDIA TO SUPPLY ANIMAL FEEDINGSTUFF TO U.K.

Mr. F. L. Winter, a director of the London Corn Exchange, addressing the Farmers' Club in London a few days ago, described India as the key to Britain's animal-feedingstuffs protein problem.

Speaking of imported oilcakes and meal, Mr. Winter outlined the picture of Britain's imports of vegetable protein for animals—640,000 tons in 1954, only slightly below the previous year and comparing favourably with the 1936-38 average of 595,000 tons a year.

"Until a month ago," Mr. Winter said, "we have been mainly dependent upon the Argentine for our supplies. This February, for the first time since 1941, India is granting export licences for a limited tonnage of groundnut, linseed, and cottonseed cake. In a matter of weeks, India's re-entry into the export market has helped to bring first-hand prices of groundnut cakes down from £50 to £37 per ton (c.i.f. U.K.)."

Mr. Winter recalled that last year Britain's total imports of feedingstuffs, excluding cereals, amounted to 1,466,000 tons, valued at nearly £43,000,000, as against 1,334,000 tons (nearly £40,000,000) in 1953.

For 14 years, he commented, Britain had had to compete in a strong sellers' market for her requirements of animal-feedingstuffs protein. "At the moment we see a ray of hope from India," he declared, pointing out that, up to 1941, the subcontinent had exported freely, in oilseed and oilcake, the equivalent of 1,250,000 tons of oilcake a year. "The tonnage so far released for export by India is insignificant—75,000 tons of groundnut, linseed, and cottonseed cake. But it is hoped that this is just a beginning."

PRIVATE ENTERPRISE AND INITIATIVE

SOUND TAXATION SYSTEM WANTED

MR. G. D. Binani, President of the Indian Chamber of Commerce, Calcutta, stated the truth without any exaggeration when he said, in his address at the annual meeting of the Chamber last week, that the private sector, which represented individual initiative and enterprise, was the basis of all social and economic activity and that it always formed a vital part of a democratic society. The party-in-power, which swears by democracy, has, however, chosen to ignore this fundamental assumption. How else can one explain, for instance, the series of restrictions which the Governments—Central and State—have placed on the private sector? No one has any dispute with the ideals of a socialistic pattern of society. But what one stresses most is that, while pursuing the ideals, the machinery of the Government should not come in the way of the fullest utilisation of initiative and enterprise of the individual. The ultimate goal envisaged by the protagonists of private enterprise is the same as that of the party-in-power; the goal is the betterment of the common man's life through an increase in the level of income brought about by augmenting production, raising consumption and accelerating pace of investment. Mr. Binani did well, therefore, to urge the Government to think in positive terms towards creating the means of implementing the Plan and making it possible for the private sector to fulfil its obligations.

Mr. Binani did not merely stop at that; he ventured to suggest as to what those means were. His observations on taxation, in particular, are noteworthy. There are no two opinions on the view that, in an expanding economy, the tax structure must give the "maximum" scope and encouragement to the individual to invest in productive enterprises and to consume more. The importance of the latter, that is, the need to encourage more consumption, has somehow failed to receive adequate recognition at the hands of the Taxation Enquiry Commission, as witness its suggestion that the propensity to consume should be checked through higher taxation. Mr. Binani was certainly right when he said that this was not the right approach to the problem and did not hold good for an economy such as ours. Elucidating this point, he observed:

"Consumption, after all, is the basis of all production and, unless there is scope for increasing the level of consumption, it inhibits more production and further employment.... Our problem is that of an expanding economy. The levels of income have to rise fast enough and that will not be possible without raising the level of production and consumption. When incomes grow as consumption grows, it would be possible to provide for more investment. Production must be consumed which means that goods produced in one sector should find a market in another. Without this exchange of production through a corresponding rise in consumption, it is neither possible to raise production nor to expand the economy or push up the rate and level of employment."

Stepping up Incomes

There is considerable force in these observations of Mr. Binani, as also in his statement that taxation must rationally be viewed against the background of the poverty of the country. Those who are persistently urging an equitable distribution of income will do well to note that, in India, there are only about 800,000 persons who have incomes above the income-tax minimum and almost half the tax comes from less than 5,000 assessees, many of whom being accounted for by corporations. The level of direct taxation is already as high as, if not higher than, in any of the advanced countries, though the *per capita* income is several times less than that in those countries. Indirect taxation has reached even the barest necessities of life, including cloth, kerosene and matches. Indeed, there is hardly any item of daily use which is outside the purview of excise duty. The Union Finance Minister recently revealed in Parliament that, with the implementation of the new tax proposals, only about 100 individuals would be left with an income of over Rs. 1 lakh. What more is required to prove the comparative backwardness and the poverty of the people as a whole? The solution to this disquieting problem lies, not in levelling down of incomes, but in raising the level of incomes of the people, so that the whole country may move forward.

How old is a Bank?
As old as the *confidence* people have in it!
A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.
The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.
Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Bombay, one of more than four hundred offices waiting to serve you throughout India

PROFIT OF DUNLOP RUBBER RISES MODERATELY

SUBSTANTIAL INCREASE IN TURNOVER

THE audited accounts of the Dunlop Rubber Company (India), Ltd. (Managing Director: Mr. Cecil Stack, Calcutta), for the year ended 31st December, 1954, fully reflect the substantial increase in the production of rubber tyres and tubes and other rubber goods during the past year and the constant efforts of the Company's technical staff to follow the world trend in the development of new methods in the manufacture of rubber goods and the use and application of new materials. The Company's sales turnover and cost of goods sold during the year have recorded impressive rise and the profit has shown a welcome, albeit modest, increase, after two years of successive fall.

The gross profit (before providing for depreciation, taxation and bad debts) of the Company, which had shrunk from the record level of Rs. 146.54 lakhs in 1951 to Rs. 120.96 lakhs in 1953, has registered an increase of Rs. 5.92 lakhs to Rs. 126.88 lakhs in 1954. The net profit for the year works out to Rs. 58.63 lakhs, representing an increase of Rs. 3.25 lakhs over that for the previous year, in contrast to the decline of Rs. 11.25 lakhs noted in the previous year. The addition to reserves has been raised from Rs. 24 lakhs to Rs. 30 lakhs, thus restoring partially the cut effected last year from Rs. 39 lakhs to Rs. 24 lakhs. The dividend on ordinary shares has been comfortably maintained at 15 per cent. for the fourth year in succession.

The salient features of the Company's results for the year under review are compared with those for the previous three years in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	13,70.34	12,57.95	12,97.48	14,18.78
Other income	3.26	4.90	5.03	3.25
Cost of goods sold	11,20.51	10,22.19	10,66.03	11,82.28
Selling and other expenses ..	1,19.71	1,13.20	1,04.07	86.12
Debenture interest	6.50	6.50	6.50	6.50
Gross profit	1,26.88	1,20.96	1,25.91	1,46.54
Provision for—				
Bad debts	0.30	0.30	0.30	0.80
Depreciation	30.20	27.78	25.93	38.34
Taxation	37.75	37.50	33.05	48.06
Net profit	58.63	55.38	66.63	59.34
To reserves	30.00	24.00	39.00	32.00
Dividends—				
6% preference (tax free) ..	1.80	1.80	1.80	1.80
6% preference (loss tax)	1.77	1.77	1.77	1.77
Ordinary	24.00	24.00	24.00	24.00
	(15%)	(15%)	(15%)	(15%)
Carry forward	11.89	10.82	7.01	6.78

The sale proceeds show an increase of Rs. 1.12 crores, in contrast to the decline of Rs. 1.61 crores in the previous two years. This improvement has occurred, despite further reductions in selling prices; this shows that the production must have been considerably high. The rise in production is also reflected in the increase of Rs. 98 lakhs in the cost of manufacture. The upward trend in "selling and other expenses" noted in the past several years persisted during the year under review with a further rise of Rs. 6.51 lakhs; the aggregate rise during the past three years alone is Rs. 33.59 lakhs. Such mounting expenses have been responsible for the relatively modest expansion in profit, as compared with the rise in turnover. As a result, the ratio of profit to turnover has gone down further, as will be seen from the following comparative profit margins in relation to turnover for the past three years:

	(Per cent.)		
	1954	1953	1952
Before taxation ...	7.0	7.4	7.7
After taxation ...	4.3	4.6	4.8

The provision for depreciation has been stepped up again from Rs. 27.78 lakhs to Rs. 30.20 lakhs, in consonance with the further additions to fixed capital expenditure during the year. The provision for taxation has also been raised, but it is still less in relation to the profit. This is due to the fact that last year's provision included certain exchange losses on Pakistan assessments for previous years.

The Directors have transferred Rs. 30 lakhs to the general reserve, as against Rs. 24 lakhs in the previous year, "in order to provide the resources necessary for the expansion of the business and the increase of employment." Such a large addition, together with the increase of Rs. 1.06 lakhs in undistributed surplus, has considerably strengthened the reserves and surpluses which stand at Rs. 190.89 lakhs, as against the paid-up capital of Rs. 230 lakhs, notwithstanding the fact that only as recently as in April, 1951, a sum of Rs. 60 lakhs was capitalised out of the reserves. Debenture stock is unchanged at Rs. 130 lakhs, as against which there is a redemption fund of Rs. 16 lakhs. Provision for taxation stands at Rs. 5.75 lakhs. There has been an increase of Rs. 50.12 lakhs in current liabilities to Rs. 231.87 lakhs, of which bank overdraft accounts for a rise of Rs. 40.39 lakhs, reflecting the increase in working capital requirements, and sundry creditors for Rs. 10.03 lakhs, which is again the result of greater volume of production.

There has been an addition of Rs. 29.70 lakhs to Rs. 483.18 lakhs in the gross block, of which addition to plant and machinery alone accounts for Rs. 20.61 lakhs. The gross block has been written down to Rs. 174.65 lakhs. The debenture redemption fund has been raised by Rs. 4.04 lakhs to Rs. 16 lakhs, of which Rs. 15.77 lakhs are invested in 2½ per cent. Government of India Loan 1961 (at cost); the market value of the same is Rs. 15.85 lakhs. The current assets aggregate Rs. 597.86 lakhs, representing an increase of Rs. 80.16 lakhs, of which stock inventories (at or below cost) at Rs. 395.81 lakhs, account for Rs. 33.22 lakhs, sundry debtors for Rs. 41.40 lakhs (at Rs. 179.52 lakhs, after providing Rs. 10.41 lakhs as reserve for bad debts); these increases reflect the higher level of production and turnover. Cash balances also have advanced by Rs. 5.58 lakhs to Rs. 20.06 lakhs. The current assets, at Rs. 597.86 lakhs, exceed the current liabilities and provision for taxation by a huge margin of Rs. 360.24 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 38-2 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 4 per cent. per annum, free of tax. This low level of return reflects the confidence of investors in the Company's affairs and in its managers.

RYAM SUGAR COMPANY

In accordance with the resolution passed at the extraordinary general meeting of the Ryam Sugar Company Ltd. held on 31st March, 1955, Messrs. Begg, Sutherland & Co., Ltd., the Managing Agents of the Company, have given up their office on receiving a compensation of Rs. 2.5 lakhs, in terms of the agreement entered into with the General Fibre Dealers Ltd. representing the majority shareholders of the Ryam Sugar Company. As and from the 1st inst. the Company is being managed by a Board of Directors. Also, in accordance with the arrangements made by Messrs. Begg, Sutherland & Co., Ltd., and the British India Corporation Ltd. with the General Fibre Dealers Ltd., the latter firm has authorised the Directors of the Ryam Sugar Company to pass on to the shareholders of the Company its firm offer to purchase their shares in the Company. The terms of the offer are as follows:

(1) The price payable for each ordinary share will be Rs. 20; (2) the price payable for each preference share will be Rs. 10; (3) in all cases the purchases at the above prices will include any dividends which may be declared in respect of the period ended 30th June, 1955; and (4) the offer is conditional on its acceptance on or before 31st May, 1955, and on due delivery of the relative transfers and share certificates on completion of each purchase.

(Concluded from next column)

lakhs. The increase of Rs. 2.09 lakhs in the provision for depreciation reflects the large additions to the gross block made during the half-year. The provision for taxation has been reduced from Rs. 7.50 lakhs to Rs. 6.75 lakhs, while that for cesses has been raised from Rs. 1.10 lakhs to Rs. 1.84 lakhs. The allocation to general reserve has been doubled from Rs. 2.50 lakhs to Rs. 5 lakhs. In addition, the Directors have created a capital reserve by providing Rs. 25,854 out of the profit.

The financial position of the Company as seen from its latest balance-sheet is impressive. The reserves and surplus aggregate Rs. 133.33 lakhs, as against a paid-up capital of Rs. 120 lakhs. The provision for taxation and cesses stands at Rs. 27.49 lakhs and the current liabilities at Rs. 212.34 lakhs. There has been an addition of Rs. 12.22 lakhs to the gross block during the half-year, bringing the total fixed capital expenditure to Rs. 566.20 lakhs. The written down value is, however, only Rs. 195.39 lakhs. The current assets amount to Rs. 297.77 lakhs, exceeding the current liabilities and provisions by Rs. 57.94 lakhs.

The Rs. 200 fully paid-up shares of the Company are being currently quoted at Rs. 514 *cum-div.* On an *ex-div.* basis, the shares give a yield of 6 per cent. per annum, free of tax.

BENGAL COAL DIVIDEND MAINTAINED

DESPATCHES HIGHEST FOR FIVE YEARS

THE Bengal Coal Company Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) is surely one of the largest and oldest units of the coal industry in India. Despite many difficulties and uncertainties surrounding the industry, the Company has gone ahead with its developments plans and is reputed to possess the deepest coal mining shafts in India, having sunk to depths exceeding 2,000 feet. It is technically equipped to increase raisings with very little extra effort and thus counteract the rising costs. But it has not been producing as much as it could, because of the inability of railways to provide the extra transport necessary for moving the increased output. The result is that the margin between costs and statutorily fixed selling prices has been progressively narrowing down.

These conditions are duly reflected in the financial results of the Company for more than two years. During this period, the profit has considerably shrunk from the level witnessed in preceding years. Thus, the gross profit, which amounted to Rs. 52.76 lakhs for the half-year ended 30th April, 1952, has shrunk to Rs. 37.35 lakhs for the six months ended 31st October, 1954. Though the profit for the latest half-year (the one ended 31st October, 1954) is a little more encouraging than that for either of the two immediately preceding half-years, when it stood at more or less the same level of Rs. 30.45 lakhs, it is short of that of Rs. 42.90 lakhs earned in the half-year ended 30th April, 1953. It discloses a decline of as much as Rs. 15.41 lakhs as compared with the profit for the half-year ended 30th April, 1952. Similarly, the net profit for the half-year under review, at Rs. 13.94 lakhs, while comparing favourably with Rs. 9.42 lakhs for the previous six months and Rs. 9.79 lakhs earned a year ago, shows a drop of Rs. 1.62 lakhs and Rs. 6.95 lakhs, respectively, as compared with that for the half-year ended 30th April of 1952 and 1953. This shows that the general conditions under which the coal industry has to operate have not shown any material improvement from what the Chairman of the Company described in his address at the last general meeting.

It is, therefore, not surprising that the Directors have chosen not to restore even partially the cut in the distribution to shareholders effected in two successive stages from 20 per cent. per annum paid for the half-year ended 31st October, 1952, to 15 per cent. per annum for the six months ended 31st October, 1953. The Directors propose to repeal this distribution of 15 per cent. per annum for the six months under review, notwithstanding the slight improvement in profit noted above.

The welcome increase in the profit of the Company for the half-year under review is mainly due to the improvement in despatches. Despatches (including purchased coal) show an increase of 161,051 tons and 98,820 tons over those during the previous two half-years, respectively, and at 1,416,790 tons, they constitute a record since the half-year ended 31st October, 1949. Such an encouraging rise in despatches does not mean that the Company's raisings have gone up correspondingly. On the other hand, the output for the half-year under review is lower by 16,228 tons than that in the previous six months, though it represents an increase of 23,233 tons over that for the corresponding six months of 1953. An explanation for the larger despatches is to be found in the increase in the quantity of coal purchased and the substantial reduction in stocks.

The following comparative table shows the trend of Company's financial results for the past four half-years:

(In lakhs of rupees)

	For the half-year ended			
	31-10-54	30-4-54	31-10-53	30-4-53
Sale proceeds	322.01	282.14	322.50	315.33
Other income	5.33	3.94	5.30	11.26
Stocks	9.02	22.72	19.24	23.91
Coal purchases	24.84	19.36	21.75	23.85
Freight, shipping charges and commission	99.69	88.84	110.80	107.38
Other expenses	151.76	155.92	160.11	161.52
Gross profit	37.35	30.45	30.47	42.90
Provision for—				
Managing Agents' commission	1.67	1.37	1.32	2.29
Depreciation	13.15	11.06	12.16	11.20
Taxation and cesses	8.59	8.60	7.20	13.85
Net profit	13.94	9.42	9.79	15.56
To reserves	5.25	2.50	2.50	7.50
Dividends—				
4½% preference	0.33	0.33	0.33	0.33
Ordinary	7.50	7.50	7.50	8.75
	(D. 10% +B. 5% p.a.)	(D. 10% +D. 5% p.a.)	(D. 10% +B. 5% p.a.)	(D. 10% +B. 7½% p.a.)
Directors' commission	0.08	0.08	0.08	0.09
Carry forward	6.07	5.30	6.29	6.91
	Tons	Tons	Tons	Tons
Raisings	1,162,401	1,178,629	1,139,168	1,214,582
Despatches (including purchased coal)	1,416,790	1,255,739	1,317,970	1,307,870

Reflecting the rise in despatches is the increase of Rs. 39.87 lakhs in sale proceeds and a decline of Rs. 13.70 lakhs in stocks. Purchases of coal have gone up by Rs. 5.48 lakhs and freight, shipping charges and commission paid by Rs. 15.85 lakhs. There has been a decline of Rs. 4.16 lakhs in other expenses, of which colliery expenses account for Rs. 2.35 lakhs and salaries and wages for Rs. 1.70

(Continued in previous column)

COIMBATORE COTTON'S PROFIT SLIGHTLY LOWER

DIVIDEND, HOWEVER, RAISED

THE Directors of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Coimbatore) have declared a dividend of 25 per cent. for the year ended 31st December, 1954, which compares very favourably with 20 per cent. paid for the previous year. This increase follows a similar step taken by the Directors last year also when the distribution to the shareholders was enhanced from 9 per cent. paid for 1952. Thus, for the second year in succession the dividend has been raised and by doing so the Directors have restored it to the level of 1945. It must, however, be noted that during the intervening years—in 1947 to be exact—the capital of the Company was doubled by the capitalisation of part of the reserves. The latest dividend, therefore, represents a distribution of 50 per cent. on the original capital and exceeds the previous highest of 40 per cent. paid for 1943 on the old capital.

The aforesaid increase in the dividend for the year under review is not, however, commensurate with the trend of profit. In fact, the Company's gross profit for the year under review shows a decline of Rs. 1.36 lakhs to Rs. 13.06 lakhs. It may be recalled that the Company earned a gross profit of Rs. 14.42 lakhs for 1953, in refreshing contrast to the loss of Rs. 1.18 lakhs suffered in 1952. The net profit for the year amounts to Rs. 4.11 lakhs, as against Rs. 6.42 lakhs for the previous year and a loss of Rs. 1.85 lakhs for 1952. The distribution of a record dividend for the year under review, when the earnings are less than the record levels seen in earlier years, may appear anomalous, but it must be noted that the distribution of the aforesaid dividend takes up only Rs. 3 lakhs, and it cannot be said that it is beyond the capacity of the Company. The financial position of the Company is sound enough to permit the payment of such a dividend.

The salient features of the Company's results for the year under review are presented against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sales of yarn and stocks ..	78.15	67.18	74.65	96.65
Other income	0.53	0.35	0.32	0.26
Opening stocks of yarn and cotton consumed	52.39	42.43	66.54	69.34
Expenses	18.23	10.70	9.61	10.70
Gross profit (+) or loss (—) ..	+13.06	+14.42	—1.18	+16.87
Managing Agents' remuneration	1.95	1.66	0.67	2.26
Provision for—				
Depreciation	3.08	4.35	..	2.80
Taxation	4.20	1.97	..	5.40
Net profit (+) or loss (—) ..	+4.11	+6.42	—1.85	+6.91
To reserves	0.84	2.69	..	4.50
To bonus to staff	..	..	1.00	..
Dividend	3.00	3.40	1.08†	1.50
	(25%)	(20%)	(9%)	(12½%)
Carry forward	0.02	..	—1.33	1.52

† Paid out of dividend equalisation reserve.

The sale proceeds of yarn and the value of closing stocks show an increase of Rs. 10.97 lakhs, thus reversing the downward trend noted in the previous two years. Similarly, opening stocks of yarn and cotton, staple fibre, stores, etc., consumed have risen by Rs. 9.96 lakhs, in striking contrast to the decline of Rs. 24.11 lakhs in 1953 and of Rs. 2.80 lakhs in 1952. Of the rise of Rs. 2.53 lakhs in expenses salaries and wages alone account for Rs. 2.24 lakhs. The rise in sale proceeds and stocks has, thus, been more than offset by the increases in raw materials consumed and expenses. It will be noted that the provision for depreciation has been reduced by Rs. 1.27 lakhs to Rs. 3.08 lakhs, while that for taxation has been raised by Rs. 2.23 lakhs to Rs. 4.20 lakhs. It is the increase in provision for taxation that accounts for the larger decline in net profit than that in gross profit. A sum of Rs. 83,940 has been transferred to the general reserve which had not received anything in the previous year. Whereas in the previous year the dividend equalisation reserve had been strengthened by Rs. 1.08 lakhs and a provision for contingencies had been created by the transfer of Rs. 1.60 lakhs, neither of these reserves has received any credit this year.

The reserves and surplus of the Company as on 31st December, 1954, aggregate Rs. 20.65 lakhs, supplementing a paid-up capital of Rs. 12 lakhs. The provision for taxation stands at Rs. 7.88 lakhs and current liabilities at Rs. 9.36 lakhs. The gross block of the value of Rs. 30.86 lakhs has been well written down to Rs. 6.20 lakhs. The current assets amount to Rs. 43.68 lakhs, of which stock-in-trade accounts for Rs. 13.98 lakhs, cash for Rs. 1.99 lakhs and investments for Rs. 18.46 lakhs (including Rs. 18 lakhs representing fixed deposits in joint-stock banks). Thus, the liquid assets held by the Company more than adequately cover the current liabilities and the provision for taxation.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 285 *ex-div.* On this basis, the dividend for the past year gives a yield of 8.8 per cent. per annum, free of tax.

Points From The Chair

A Serious Blow to Banking Structure

"I WOULD like to make a passing reference to another matter which has a bearing on the future development of this and other banks in the private sector. You can guess that I refer to the Central Government's decision, as notified by the Finance Ministry a few weeks ago, to establish a State Bank of India and to acquire control of the Imperial Bank of India in the process. It has also been suggested that a number of other quasi-State Banks be absorbed in the new State Bank. Whatever the merits of the Government's decision are, we, as a continuing member of the private sector, are of the opinion that it is a serious blow to India's banking structure which has been built up to considerable strength over a long period of years. We believe that what it is apparently hoped to achieve by this step could have been accomplished equally well by banks in concert or individually under a Government-sponsored scheme or plan for the penetration of credit institutions into the interior of the country supported by subsidy and/or short-term guarantees against abnormal losses in the initial stages. Although the position in this regard is still very obscure it would appear to be desirable for the private banking sector to undertake a collective study of the changing conditions so that where expediency demands, a redesigning and readjustment of policies may be effected."

DR. N. N. LAW,
United Bank of India Ltd.

Amendment of the Constitution

"The proposed amendments to Article 31 of the Indian Constitution in respect of the deprivation of the right to property and of the compensation payable to persons, whose rights to property are affected and the drastic changes introduced by the Select Committee making compensation not justiciable and including industrial and agricultural property also within the scope of the amendment, have produced panic among all property-holders and investors. They certainly tend to make the right to property guaranteed by the Constitution illusory. The wisdom of this step is to be seriously doubted at a time when our country has not yet solved the problems of production of absolute self-sufficiency in food and other cereals and of the raising of the standard of living and the increase in the national income. It is sure to produce disastrous effects on the general economy of the country. While it may satisfy the advocates of the ideologies bordering on communism, it is certainly not helpful for the practical realisation of our objective of the establishment of a Welfare State here. At any rate, it will have a deleterious effect on the deposits in banks and on investments in general. As the Scheduled and non-Scheduled banks in the country are at present the main source of supply of credit to the organised trade and industry in our country, it will seriously affect their progress also."

K. BALASUBRAMANIA IYER,
Indian Bank, Ltd.

Private Sector Slowly Elbowed Out

"...when we turn to the industrial and financial spheres, the picture is not so reassuring. In the remaining period of the first Five-year Plan and under the second Five-year Plan which is under preparation, the tempo of development is to be accelerated and it has been announced that the private sector should play an important role. Indeed, this sector has upto now taken the initiative, organised and managed and developed large industries, but under the present industrial and fiscal policies of Government, this very sector is being slowly, but surely, elbowed out. If the recommendations of the Taxation Enquiry Committee are to be fully implemented—and taking the example of the last Budget, future Budgets will possibly be based on this pattern—the outlook for the private sector is extremely gloomy. If taxes absorb all the surpluses in businesses and industrial establishments, how will there be any capital left for private enterprise? With acute scarcity of capital and little or no incentive left, it is difficult to foresee what will remain of the so-called private sector."

MANEKLAL PREMCHAND,
Industrial Investment Trust Ltd.

Impact on Cigarette Industry in India

"Unfortunately, the recent budget contains measures that will materially reduce the purchasing power of the middle classes. It has also made some changes in the cigarette excise duties, which, at crtain levels, have been greatly increased. The combined effect of these measures will be profound and it will not be possible to make any reasonable assessment of their impact on the cigarette industry for some time to come. I also referred at considerable length in last year's statement to the further heavy burden that has been imposed on the cigarette industry in recent years in the shape of sales taxes and other local impositions. Everything that I said last year applies with even greater force today. This burden, which, as I explained last year, has to be met out of profits and cannot be passed on to the consumer, continues to increase in an alarming fashion."

D. S. BARRON,
Godfrey Phillips, India, Ltd.

COMPANY MEETINGS AND DIVIDENDS

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Darbhanga, 20th April, 1955. Transfer books remain closed from 9th to 20th April, 1955, both days inclusive.

DUNLOP RUBBER CO., (INDIA) LTD. Annual General Meeting, Calcutta, 25th April, 1955. Dividend: Re. 1-8 per share.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 25th April, 1955. Dividend: Rs. 12-8 per share. Transfer books remain closed from 29th March to 25th April, 1955, both days inclusive.

SWAN MILLS LTD. Annual General Meeting, Bombay, 26th April 1955. Dividend: Rs. 20 per share, payable on 27th April, 1955. Transfer books remain closed from 29th March to 26th April, 1955, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay, 27th April, 1955. Dividend: Rs. 16 per share, payable on 28th April, 1955. Transfer books remain closed from 29th March to 27th April, 1955, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 28th April, 1955. Dividend: Rs. 8 per share, payable on 29th April, 1955.

MINERALS AND MERCHANDISE LTD. (Promoter: Mr. G. D. Sharma.) Business: Mining, smelting and refining. Authorised capital: Rs. 5,00,000. Private company. Address: 325, Kalbadevi Road, Bombay 2.

PROFIT OF CALICO MILLS SHRINKS

SAVAMALAI ESTATES PRUNES DIVIDEND

Ahmedabad Manufacturing and Calico Printing Co., Ltd.

THE directors of the above Company (Agents: Messrs. Karamchand Premchand Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December, 1954.

During the year, Egyptian cottons were dearer and cloth prices lower than in 1953. There was some loss of production due to labour difficulties which have since been resolved. New finishing processes were added, but due to technical difficulties, the Company was unable to take full advantage of these processes. These difficulties have since been overcome and the benefit of making a varied range of textiles of superior quality including organdie and santorising, has begun to accrue. The working of the Chemical Division was satisfactory and the Government's permission to install a plant in Bombay has been received.

Post-war E. P. T. refunds amounting to Rs. 1,54,768 for the balance of 1945 and 3 months of 1946 after deducting income-tax and corporation tax were received in 1954 and were credited to machinery fund.

The accounts for the year show that the profit amounts to Rs. 60,17,655 (Rs. 71,18,203) which together with Rs. 21,45,183 (Rs. 22,19,005) brought forward from the previous year's account, makes a sum of Rs. 81,62,838 (Rs. 93,37,208) available for appropriation. From this sum, the directors have transferred Rs. 35,00,000 (Rs. 35,00,000) to depreciation fund, Rs. 11,00,000 (Rs. 15,00,000) to fund for payment for taxes on income and Rs. 25,000 (Rs. 50,000) to contingency reserve fund and have paid Rs. 5,082 (Rs. 3,822) as donations. The directors further recommend the payment of dividend on 'A' cumulative first preference shares at 4½ per cent. free of income-tax on 1,600 shares of Rs. 125 each absorbing Rs. 9,000 (Rs. 9,000), payment of dividend on Diamond Jubilee cumulative second preference shares at 4½ per cent. (subject to tax) on 16,000 shares of Rs. 50 each absorbing Rs. 36,000 (Rs. 36,000), payment of dividend on cumulative third preference shares at 4½ per cent. (subject to tax) on 38,666⅔ shares of Rs. 50 each absorbing Rs. 87,000 (Rs. 87,000), payment of a final dividend of Rs. 10 (Rs. 10) per share free of income-tax on 1,00,000 ordinary shares, together with the interim dividend at Rs. 8 (Rs. 8) per share absorbing Rs. 18,00,000 (Rs. 18,00,000) and carry forward to the following year's account Rs. 16,00,756 (Rs. 21,45,183).

Buildings, plant and machinery, stock-in-trade and stores have been insured against fire risk. Standing charges and profits have also been insured. Insurance is not taken for (1) Workmen's compensation, (2) Certain items in which the risk of loss by not insuring is nil or negligible and (3) New buildings under construction and new plant under erection.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,54,12,213	Block ...	4,24,88,718
Reserves ...	1,11,66,203	Stock-in-trade	96,29,937

Rs.	6,98,45,396	Rs.	6,98,45,396

Savamalai Estates Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Peirce, Leslie and Co., Ltd., Kozhikode) submitted the audited accounts of the Company for the year ended 30th November, 1954.

Acreage.—The Estate was resurveyed during the year and showed a slight increase in the total acreage from 671.04 to 671.74 and there are some alterations in the mature and immature areas.

After providing for depreciation and all charges except taxation, the accounts showed a profit of Rs. 1,21,637 (Rs. 2,06,217) to which was added the balance brought forward from last year of Rs. 1,01,620 (Rs. 94,443), making a total of Rs. 2,23,257 (Rs. 3,00,660). From this sum was transferred to taxation reserve Rs. 41,658 (Rs. 2,300) and interim dividend for the year 1953-54 at 10 (10) per cent. Rs. 36,678 Rs. 36,678), leaving a balance of Rs. 1,44,921 (Rs. 1,74,976). Out of this sum the directors paid a final dividend of 15 (20) per cent. absorbing Rs. 55,017 (Rs. 73,356) and carried forward Rs. 89,904 (Rs. 1,01,620).

The Company's general reserve stands at Rs. 2,00,000. The taxation reserve of Rs. 41,796 includes a sum of Rs. 38,875 to cover the Madras Agricultural income-tax.

Development.—Expenditure during the year was Rs. 33,286 and represents amount spent on upkeep of immature areas and cost of opening and planting the 1954 arabica new clearing of 25 acres.

Coffee.—The crop of cwts. 2,203-1-12 (cwts. 2,906-1-16) was delivered to the Coffee Board and has been valued at Rs. 2-11 (Rs. 2-4) per point which works out at approximately Rs. 139-12 (Rs. 117.06) per cwt. for robusta and Rs. 204-4 (Rs. 151.58) per cwt. for arabica. Payments received to-date amount to Rs 2-11 (Rs. 2-1) per point. The 1954-55 crop is estimated at 165 tons and present indications are that this will be harvested.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,66,780	Block ...	5,45,249
Reserves ...	2,50,000	Stock-in-trade ...	65,736

		Cash ...	1,80,874
Rs.	8,70,040	Rs.	8,70,040

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November, 1954.

After providing Rs. 1,50,000 (nil) for taxation and transferring Rs. 50,000 (nil) to general reserve there is a balance of Rs. 2,03,538 (Rs. 2,48,535) at the credit of profit and loss account, from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 5 (Rs. 6) per share Rs. 90,000 (Rs. 1,08,000) leaving Rs. 78,538 (Rs. 1,05,535) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week up to 10th July, 1954. From 12th July, 1954, working hours were increased from 42½ hours to 45 hours and again from 45 hours to 48 hours per week from 18th October, 1954. Throughout the period under review 12½ per cent. of the total looms remained sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Block ...	37,22,029
Reserves ...	32,31,234	Stock ...	22,53,947

Profit and loss account ...	78,538	Investments	45,642
		Cash ...	6,054
Rs.	77,31,885	Rs.	77,31,885

Jubbulpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1954.

The schedule of units sold and revenue set out herein indicates that satisfactory progress has been maintained.

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st March, 1952	8,537,639	11,70,070
30th September, 1952	9,626,474	10,74,752
31st March, 1953	9,677,159	11,91,490
30th September, 1953 ...	10,663,476	11,90,024
31st March, 1954	10,110,661	13,41,740
30th September, 1954 ...	10,930,412	12,50,517

After making adequate provision for liabilities and setting aside Rs. 30,000 (Rs. 25,000) to development and extensions account, a balance of Rs. 1,17,509 (Rs. 1,14,006) including Rs. 28,506 (Rs. 23,887) brought forward from the previous half-year remained available, and this amount, the directors disposed of by paying a dividend at the rate of 8 (8) per cent. per annum, free of income-tax, for the half-year which absorbed Rs. 89,982 (Rs. 89,982) and carried forward to next half-year Rs. 27,527 (Rs. 24,024).

Accounts in brief were as under:—

Colaba Land and Mill Co., Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. V. J. Pilani, Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1954.

During the year, revenue from land and property amounted to Rs. 3,40,240 (Rs. 2,44,833). From this sum is deducted the mill loss of Rs. 2,77,521 (Rs. 12,83,292), leaving net profit for the year, subject to depreciation Rs. 62,719. The total loss of the Company at the year amounts to Rs. 33,25,720 (Rs. 33,88,439).

During the year, the strike which continued towards the end of the previous year was called off as a result of a settlement arrived at with the Rashtriya Mill Mazdoor Sangh on behalf of the workers and work was resumed from 6th January, 1954. However, labour unrest continued for some time resulting in loss of production, low production and poor quality. As the quota of Indian Cotton allotted to the mill by the Textile Commissioner, was insufficient to keep the mill running and as no further quota was given in spite of the directors efforts, the mill had to utilise foreign cotton for manufacture of yarn which fetched unremunerative prices. There was a fall in the prices of cloth while the manufacturing costs were mounting up. On account of these factors the directors regret that the Company was not able to show better results.

Control on production and reservation of certain varieties for the handloom continued during the year. The Cotton Textile Export Promotion Council was formed by the Government to inspect cotton textiles meant for export and to build up India's export trade. The Employees' State Insurance Scheme was inaugurated on the 2nd October, 1954 resulting in payment of increased contributions.

Further additions to the dyeing and bleaching machinery of the value of Rs. 2,52,068 have been made in order to make the processing department complete and up-to-date. No provision has been made for depreciation and for payment of bonus to workers for the year 1954. The land department yielded a profit of Rs. 3,40,240 (Rs. 2,44,833) subject to depreciation.

The Government is still retaining 14 plots in scheme 'A'. Scheme 'B' is fully developed. In scheme 'C' the Government is still retaining 10 plots. Two plots vacated by the tenants during the year have been leased out for 99 years. The proceedings relating to the Company's claim for compensation in regard to the acquisition of land in Scheme 'A' by the Government of Bombay for the purpose of a Municipal School and a fire brigade station have been concluded and the Award of the Special Land Acquisition Officer is expected.

Godfrey Phillips, India, Ltd.

The directors of the above Company (Chairman: Mr. D. S. Barron, C.I.E., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The Company made a net profit after provision for taxation, depreciation and all other charges, of Rs. 3,85,189 (Rs. 9,96,198). To this sum was added the balance brought forward from last year of Rs. 15,43,326 (Rs. 13,38,984). A sum of Rs. 35,013 (Rs. 57,537) was deducted representing short provision for bonus in the year 1953. After adding provision for taxation no longer required of Rs. 25,261 (Rs. 2,47,369) there was a total sum of Rs. 19,18,763 (Rs. 25,25,014). Out of this sum the directors transferred to reserve for gratuities Rs. 67,000 (Rs. 60,000), leaving a balance of Rs. 18,51,763 (Rs. 23,65,014). From this amount the directors paid a dividend on the preference shares at 5½ (5½) per cent. per annum, absorbing Rs. 1,21,688 (Rs. 1,21,688), paid a dividend on the ordinary shares at 10 (17½) per cent. per annum, absorbing Rs. 4,00,000 (Rs. 7,00,000) and carried forward to next year Rs. 13,30,075 (Rs. 15,43,326).

Broach Electric Supply and Development Corporation Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1954.

During the year, the total units of energy sold amounted to 1,411,860 (1,340,506) and the revenue from energy sold amounted to Rs. 4,83,846 (Rs. 4,73,941). The number of consumers increased from 3,583 in 1953 to 4,081 in 1954.

The marked improvement in the plant capacity situation enabled the lifting of practically all restrictions on supply of energy, other than for motive power purposes. This is reflected in the increased sales, as also in the higher number of consumers served.

In the middle of the year under review, the directors, after a careful study of the operating results, decided to sanction reductions in the rates for supply of energy that were fixed by the Government of Bombay, consequent on a detailed investigation of the Corporation's operations by a Rating Committee appointed by Government, pursuant to provisions of the Electricity (Supply) Act, 1948. The rate reductions which were made effective from 1st August, 1954, covered practically all classes of consumers, and were supplemented by a discount for the prompt payment of bills.

The profit and loss account shows that the revenue from sales of energy amounts to Rs. 4,83,846 (Rs. 4,73,941) and revenue from other sources Rs. 31,919 (Rs. 27,646), making a total gross revenue of Rs. 5,15,765 (Rs. 5,01,587). After deducting all charges including depreciation and taxes of Rs. 4,05,509 (Rs. 3,98,777) the net profit amounts to Rs. 1,10,256 (Rs. 1,02,810). Compared with the figures for the preceding year, the revenue from sales of energy reflected an increase of only Rs. 9,905 against the increase in energy sales of as much as 131,354 units. However, the increase in expenses has been quite moderate due to the rigid economy observed in operating and other costs, with the result that the net profit for the year at Rs. 1,10,256 was Rs. 7,446 higher than that for the preceding year. Adding to the net profit the amount carried forward from the preceding year, as also the amounts representing excess tax provision during previous years, adjustment of debenture issue expenses and the transfer from general reserve, and deducting therefrom the various statutory and other necessary provisions as set out in detail in the appropriation account which accompanies this report, the net balance available for distribution amounted to Rs. 53,640 (Rs. 57,164), which the directors disposed of by paying a dividend on shares at As. 12 (As. 12) per share (7½ per cent.) free of income-tax absorbing Rs. 53,026 (Rs. 53,026) and carried forward Rs. 614 (Rs. 4,138).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,07,020	Block ...	14,97,733
Debentures ...	1,51,300	Stores, tools, etc.	77,515
Reserves ...	1,39,040	Other assets	52,665
Depreciation reserve ...	7,18,012	Debts, deposits and advances ...	89,507
Provision for taxation ...	43,322	Investments	20,228
Liabilities ...	1,68,216	Cash ...	1,89,876
Profit and loss account ...	614		
Rs.	19,27,524	Rs.	19,27,524

Nasik-Deolali Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: The Rajputana Textiles (Agencies) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The balance of the authorised 6 per cent. (taxable) first mortgage debenture issue, namely Rs. 2½ lakhs out of the total issue of Rs. 10 lakhs, was offered for subscription during the year. The proceeds will be necessary to pay for the new generating set, the extension of mains and the strengthening of the distribution system.

During the year, the total units of energy sold were 4,592,279 (4,088,895) and the revenue earned from this source was Rs. 12,36,941 (Rs. 11,22,445). The number of consumers at the end of 1954, stood at 7,409, as against 6,348 in 1953. The sales of energy and the revenues derived therefrom show satisfactory improvement, consequent on the increase in the number of consumers served. The improvement in the plant capacity position enabled the Company to freely comply with all requisitions for power, and the only restriction which now applies is in respect of motive power loads which are restricted to off-peak periods.

The profit and loss account shows that the revenue from sales of energy amounts Rs. 12,36,941 (Rs. 11,22,445) and revenue from other sources Rs. 49,189 (Rs. 41,019) making a total gross revenue of Rs. 12,86,130 (Rs. 11,63,464). After deducting all expenses and charges including depreciation and taxes amounting to Rs. 11,33,662 (Rs. 9,77,982) the net profit amounts to Rs. 152,468 (Rs. 1,85,482). Although the total gross revenue shows a satisfactory increase as compared with the preceding year, the operating expenses and other charges show a proportionately higher increase, with the result that the net profit is lower. There was an increase in the provision for depreciation as also in the debenture interest, but the main increase was in the operating expenses such as fuel oil and stores, and efforts were directed towards improving the power house economy and the efficiency of the plant. The revenues were affected by the reduction in the rate for lighting by one anna per unit with effect from 1st August, 1954. The directors felt that the basic rate for lighting purposes could be reduced in view of the anticipated increase in sales, which it is now expected will materialise in the current year. Adding to the net profit the amount brought forward from the preceding year, the adjustments in respect of write-off of debenture issue expenses and previous bonus provision, as also the sum transferred from the general reserve fund, and deducting from the total, the several appropriations as well as the ad-interim dividend paid on 31st July, 1954, the balance available for disposal amounted to Rs. 68,484 (Rs. 75,518) which the directors utilised in payment of a final dividend on preference shares at the rate of Rs. 3-8 (Rs. 3-8) per share which together with the interim dividend of Rs. 3-8, made Rs. 7 (Rs. 7) per share and absorbed Rs. 3,500 (Rs. 3,500), a final dividend on ordinary shares at the rate of Rs. 5 (Rs. 5) per share, which together with the interim dividend of Rs. 5 (Rs. 4) made Rs. 10 (Rs. 9) per share and absorbed Rs. 58,420 (Rs. 58,420) and carried forward Rs. 6,564 (Rs. 13,598).

Accounts in brief were as under:—

Rs.	40,95,723	Rs.	40,95,723

Kuardi Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1954.

After meeting all expenses, providing Rs. 5,350 (Rs. 5,350) for depreciation and including the debit balance of Rs. 34,300 (credit of Rs. 3,411) brought forward from the last account, there was a balance of Rs. 41,320 (debit of Rs. 34,300) at the debit of profit and loss account, to be carried forward to the next account. During the year 31,120 tons of coal were raised and 22,723 tons despatched as compared with 21,954 tons raised and 18,264 tons despatched during the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,240	Block ...	6,31,099

		Debts, deposits and advances ...	2,71,653
		Investments ...	2,95,000
		Cash ...	6,258
		Profit and loss account ...	41,320
Rs.	13,77,164	Rs.	13,77,164

Lakurka Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. H. V. Low and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th April, 1954.

After meeting all expenses, providing Rs. 19,650 (Rs. 35,311) for depreciation and including the credit balance of Rs. 1,683 (Rs. 13,549) brought forward from the last account, there was a balance of Rs. 34,755 (Rs. 61,683) at the credit of profit and loss account and from this the directors paid a dividend of As. 4 (As. 8) only per share free of income-tax which absorbed Rs. 22,500 (Rs. 45,000) and transferred a sum of Rs. 10,000 (Rs. 15,000) to general reserve fund, leaving a balance of Rs. 2,255 (Rs. 1,683) to be carried forward to the next account. During the year 71,849 tons of coal were raised and 56,729 tons despatched as compared with 79,863 tons raised and 64,369 tons despatched during the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	5,71,281
Reserves ...	11,76,413	Stock of coal	3,27,291
Provision for taxation ...	22,597	Stores and spare gear	64,613
Liabilities ...	3,89,386	Debts, deposits and advances ...	6,65,960
Profit and loss account ...	34,755	Investments	8,38,634
		Cash ...	55,372
Rs.	23,23,151	Rs.	23,23,151

Brushware Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submitted the audited accounts of the Company for the year ended 30th November, 1954.

The results for the year, after making the usual provisions including provision for taxation, but before allowance for depreciation, showed a profit of Rs. 8,958 (Rs. 5,510) to which was added a provision for taxation no longer required Rs. 3,500 (nil) making a total of Rs. 12,458 (Rs. 5,510). From this sum was deducted depreciation amounting to Rs. 6,000 (Rs. 5,000) leaving a balance of Rs. 6,458 (Rs. 510). To this was added the carry forward from the previous year Rs. 9,513 (Rs. 19,003) leaving at credit of profit and loss account a sum of Rs. 15,971 (Rs. 19,513). This balance, the directors disposed of in payment of a dividend of As. 8 (Re. 1) per share, free of income-tax, for the year, ended 30th November, 1954, absorbing Rs. 5,000 (Rs. 10,000) and carried forward Rs. 10,971 (Rs. 9,513). The dividend on the ordinary shares complies with the requirements of section 23A of the Indian Income Tax Act, 1922.

While the value of brush sales during the year 1954 exceeded that of the previous year, the high cost of manufacture, coupled with rising prices of raw materials, resulted in a loss on the primary activity of the Company, brushmaking. Having regard to the poor trading results and to the fact that the net profit is less than the Company's investment income, the directors consider it prudent to recommend only a dividend to shareholders of five per cent.

The managing agents have given this unsatisfactory position careful consideration and with the approval of the directors have engaged an experienced firm of industrial consultants to carry out a survey of the Company's factory with a view to effecting a reduction in manufacturing costs.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,000	Block ...	16,537
Reserves ...	3,10,000	Stock-in-trade	1,15,316
Provision for taxation ...	6,700	Stores and spare parts	90,990
Liabilities ...	20,505	Debts and advances ...	73,679
Profit and loss account ...	13,971	Investments	1,55,209
		Cash ...	1,445
Rs.	4,53,176	Rs.	4,53,176

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Manufacture of Water Pipes

A WATER pipe manufacturing factory is to be set up in Chavara in Travancore-Cochin under the Indo-Norwegian Development Project. The engineer who will supervise the erection of the factory has already arrived from Norway and the machinery is expected soon.

• • • •

Export of Tapioca

The suggestion for the removal of disparity in freight rates between tapioca and maize products is under the consideration of the Government. The free licensing period of exports of tapioca flour, tapioca starch and its products has been extended from 31st March, 1955 to 30th June, 1955. The ceiling of 400 tons on individual shipments of tapioca flour, etc., has also been removed.

—Agriculture Minister

Rice Prices

The Government of India feels that the economic price for rice is Rs. 11 per maund. The question of purchasing rice has not arisen because the price has not gone down below that level.

—Deputy Minister for Food and Agriculture

World Bank Loan to Trombay Power Project

The agreement for a loan of $16.2 million for the Trombay Thermal Project was signed between Tatas and the World Bank on 19th November, 1954. The loan is available for drawal till 30th June, 1958, the closing date. The loan will be declared effective after the fulfilment of certain formalities. Withdrawals can be made from the loan after it is declared effective. From the effective date or from a date 60 days after the date of loan agreement, whichever is earlier, a commitment charge of ¾ per cent. on the principal amount of loan not withdrawn becomes payable. The rate of interest on the loan is 4½ per cent. per annum and is payable on the amounts withdrawn, while interest and other charges are payable half-yearly on 15th April and 15th October each year. The repayment of the principal will commence on 15th October, 1958, and the last instalment would be paid on 15th October, 1974.

—Finance Minister

Estate Duty

A total amount of Rs. 51,19,620 has been collected as estate duty upto the end of February, 1955. Bombay has collected the highest amount (Rs. 33,95,582).

• • • •

Decimal Coinage

The Government of India will take a decision in the near future on the proposal to decimalise Indian coinage. An inter-departmental committee has been set up to study the implications of the metric system of weights and measures and decimalisation of currency. The proposal is also being examined by the Planning Commission. It is not, however, possible to indicate when the system will be introduced in India. All but two State Governments which were consulted in the matter have agreed to the proposal.

—Minister for Revenue and Defence Expenditure

U.S. Technical Aid

Four projects will be undertaken during the current year under the Indo-American Technical Co-operation Programme. These are: Rihand valley development, improvement of power facilities in Rajasthan, Madras city power plant expansion, and training of construction equipment operators and mechanics. The amounts allotted to the aforesaid four projects are $2.9 million, $3.8 million, $2.9 million and $460,000, respectively.

• • • •

Government-Labour Relations

The question of evolving a standard for labour and management relations in Government industrial and commercial undertakings is under the consideration of the Planning Commission.

—Deputy Minister for Irrigation and Power

Mica Price

The Government of India has received representations from the Indian mica industry that the U.S. Government should give the same increase in price for Indian mica as they have given for Brazilian mica. The matter is under Government's consideration. It has been ascertained that, on representations from the Brazilian Government, the U.S. Government has established different ceilings for Brazilian and Indian mica with effect from January, 1955. Generally, dollar prices for Brazilian mica are 20 per cent. higher than for Indian mica in most grades, though, in a few cases, prices for Indian mica are higher. The U.S. Government is, however, reported to have stated that prices are based on negotiations with individual contractors. Commercial importers state that the Brazilian preferential exchange rate gives the producer some extra margin.

—Minister for Natural Resources and Scientific Research

Development of Highways

About 66 per cent. of the amount allocated for the development of national highways in the first Five-year Plan has been utilised so far. There is likely to be a 5 per cent. shortfall in the utilisation of the entire allocated amount during the Plan period. This is due to the time taken by the preliminary investigations connected with the construction of bridges and acquisition of land for the construction of new lengths and widening of existing roads.

—Deputy Minister for Railways and Transport

Notices

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE TO DEBENTUREHOLDERS

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Holders of Debentures of the above-named Company constituted by the Trust Deed dated the 26th April, 1944, and made between the Company on the One Part and SHRI VISHNU HARI DALMIA, SAHU SHRIYANS PRASAD JAIN and SHRI M. K. ROY as Trustees of the Other Part will be held at the Registered Office of the Company at Dalmianagar on Saturday the 30th April, 1955, at 12 noon, for the purpose of considering and, if thought fit, passing an Extraordinary Resolution assenting to the following modifications in the conditions contained in the Debentures, namely:—

(a) That the time for repayment of the principal moneys secured by the said Debenture Trust Deed be postponed from 30th April, 1955, to 30th April, 1965.

(b) That the rate of interest on the Debentures be increased from 4½ per cent. per annum to 5½ per cent. per annum with effect from 1st May, 1955, as proposed by the Company and recommended by the Trustees of the said Debenture Trust Deed and empowering the Trustees with a view to effectuating such modification to concur with the Company in executing a Supplemental Trust Deed in terms of the draft which will be submitted to the Meeting.

(c) The principal indenture shall be construed as if the following clause is added thereto and numbered as clause 1A:

"The Company shall always have the option of issuing further Debentures ranking *pari passu* with the already issued series of Debentures as to charge on the mortgaged assets and on such terms as to rate of interest and on other terms as may be decided by the Company at the time of issue subject to the condition that the total amount of the face value of all such Debentures issued by the Company shall not at any time exceed 33⅓ per cent. of the cost of the mortgaged assets."

This Notice is issued pursuant to the provisions contained in Clause 2 of the Third Schedule to the said Debenture Trust Deed.

Debenture-holders are further informed that the Company's Managing Agents, Messrs. Sahu Jain Ltd., have agreed to purchase at par all such Debentures as are offered to them upto 30th April, 1955. Interest in respect of coupons falling due on 30th April, 1955, will be paid directly by the Company to the Debenture-holders. Any Debenture-holder who is not agreeable to the above proposal and desires payment of his Debentures, may at his option deliver the same against payment to Messrs. Sahu Jain Ltd. either at Dalmianagar (Bihar) or at 11, Clive Row, Calcutta, on any working day during business hours upto the said date.

DALMIANAGAR,
Dated this 26th day of March, 1955.

By Order of the Board,
A. K. JAIN,
Chairman.

NOTIFICATION OF SALE

MESSRS. J. THOMAS & CO., LTD., WILL sell by public auction, unless previously disposed of by private treaty, at their office at 8, Mission Row, Calcutta 1, on the 28th April, 1955, at 12 noon, under instructions from the owners, the Jorehaut Tea Company, Ltd., 17, St. Helen's Place, London, E.C. 3; Murmuria Tea Estate (including Hattichungie Division) in one lot as a going concern as from the 1st January, 1955.

For conditions under which the Tea Estate will be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estate intending purchasers should apply to J. Thomas & Co., Ltd., 8, Mission Row, Calcutta 1, Orr Dignam & Co., Solicitors, 29, Netaji Subhas Road, Calcutta 1, or James Warren & Co., Ltd., 31, Chowringhee Road, Calcutta 16.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR
(SOCIETE ANONYME)

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday the 17th May, 1955, at 12 noon, for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1954.
2. To elect a Director.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business which may properly be transacted at the Meeting.

Notice is also hereby given that the Register of Members will be closed from the 4th May to the 17th May, 1955, both days inclusive.

By Order of the Board,

FOR SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME)
FOR GILLANDERS ARBUTHNOT & CO., LTD.,
K. R. FETTES,
Managing Director,
Agents.

CALCUTTA, *11th April, 1955.*

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of the Members of Jessop and Company, Limited, will be held at the Registered Office of the Company on Friday, the Sixth day of May, 1955, at 11 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1954.
2. To declare a Dividend.
3. To re-elect Directors.
4. To re-appoint the Auditors.
5. To transact any other business of an Ordinary General Meeting.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *25th March, 1955.*

A Member entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him. A Proxy appointed specifically for this Meeting must be a Member of the Company.

The Ordinary Share Transfer Registers will be closed from 18th April to 6th May, 1955, both days inclusive.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ended 31st March, 1955.

The Preference Share Registers will be closed from the 20th to the 30th April, 1955, both days inclusive. Payment will be made on or after the 1st May, 1955, to those Preference Shareholders whose names are on the Company's Register on the 30th April, 1955, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, *11th April, 1955.*

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the Shareholders of the Company will be held on Saturday, the 30th April, 1955, at 11 a.m. at the Registered Office of the Company, at Dalmianagar (Bihar) to adopt the Directors' Report and the audited Statement of Accounts for the year ended 31st July, 1954, to declare dividends at Rs. 6 per share on "A" Class Preference Shares, Rs. 5 per share on "B" Class Preference Shares and Rs. 1-8, i.e., 15 per cent. per share on Ordinary Shares without deduction of tax, for the year ended 31st July, 1954, to elect a Director, and to appoint Auditors for the current year.

The Share Transfer Books of the Company will be closed from the 23rd April, 1955, to 30th April, 1955, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, *11th April, 1955.*

THE WEST COAST ELECTRIC SUPPLY CORPORATION, LIMITED

INTERIM DIVIDEND

NOTICE IS HEREBY GIVEN THAT THE Directors have declared:

(a) an interim dividend at 5 per cent. free of income-tax on the Ordinary shares for the half-year ended 30th September, 1954;

(b) half-yearly dividend on Preference shares at 2·5/8 per cent. less tax.

The Share Transfer Books of the Company will be closed from 25th to 30th April, 1955, both days inclusive.

The Dividend Warrants will be posted on or after 1st May, 1955, to those Shareholders whose names stand on the Register of Members as on 24th April, 1955.

(By Order of the Board)
CHANDRIE & CO., LTD.,
Managing Agents.

MADRAS, *7th April, 1955.*

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-Second Ordinary General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4.15 p.m. (S.T.), on Thursday the 5th day of May, 1955, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1954.
2. To declare a Dividend and a Bonus.
3. To elect two Directors in the place of those who retire by rotation, but are eligible for re-election and offer themselves accordingly.
4. To appoint Auditors for the ensuing year and to fix their remuneration.

T. RYDIN,
Managing Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, *4th April, 1955.*

The dividend and bonus when declared will be payable at the Central Bank of India Ltd., Bombay and Calcutta, on and after the 14th day of May, 1955, to those shareholders whose names stand on the Register on the 12th day of May, 1955, and warrants will be posted in due course to each shareholder at his registered address.

MONEY LESS STRINGENT

(From Our Own Correspondent)

BOMBAY, *13th April*

After remaining consistently stringent for several weeks, conditions in the short-term money market eased a little early in the week under review, with the tempo of demand slackening somewhat. Though this was attributed to holiday influences, conditions after the holidays did not, however, become stringent again. On the other hand, they were a little more comfortable from Monday onwards, thanks to an influx of funds from Calcutta and other centres. Though funds were still readily usable during morning hours and many banks were borrowers from the Reserve Bank, during closing hours a number of them was left with some surplus funds.

There was, however, no perceptible decline in interest rates. Inter-bank call money was still done at 3 per cent. though, after clearing hours, it was on offer at 2¾ per cent. Short-term deposits continued to fetch 3 per cent. for one to six months. House money was bid at 3 per cent.

The resumption of sale of three months' Government of India Treasury Bills this week brought an offer of just Rs. 1 crore, as against an invitation for a like amount. This compares with Rs. 1.05 crores offered week before last. Evidently, there must have been only one bidder, presumably the Imperial Bank. Usually, when there is none to take up the Government's offer, this Bank is prompted by the Reserve Bank to put in the tender for the required amount. The average rate of accepted tenders remained unchanged at Rs. 2-9 per cent. per annum. In the circumstances just mentioned, this is only as it should be. Tenders for Rs. 1 crore have been invited for next week also, despite the lack of demand for these Bills, as is clearly evident from this week's results.

For the second week in succession, notes in circulation have recorded a sharp expansion, the week to which they refer being the one ended 8th April, 1955. The Reserve Bank's statement for that week shows a rise of Rs. 31.18 crores in notes in circulation; this compares with the rise of Rs. 14.50 crores recorded in the previous week. Notes held in the Banking Department have declined by Rs. 2.83 crores, so that the total notes issued are higher by Rs. 28.35 crores. This is covered on the assets side by an increase of Rs. 25 crores in foreign securities and of Rs. 3.35 crores in rupee coin. The increase in the latter apparently reflects the handing over of more "rupee coin" by the Government to the Bank. Generally, the Government gives the Bank rupee coin in a round sum of Rs. 5 crores. Assuming it was so in the week under review, the Bank must have put into circulation Rs. 1.65 crores by way of one-rupee coin, so that the total addition to currency circulation during the week must have been of the order of Rs. 32.83 crores.

In the Banking Department, a decline of Rs. 7.21 crores is noted in Central Government deposits and of Rs. 31.43 crores in deposits of other Governments. Deposits of banks, too, have dropped by Rs. 1.32 crores. Cash balances have shrunk by Rs. 2.84 crores, accompanied by a decline of Rs. 23.81 crores in balances held abroad. This fall in balances held abroad is in distinct contrast to the rise of Rs. 14.62 crores in the previous week. But it is due to the addition made to foreign securities in the Issue Department. Ways and means advances to Governments are up by Rs. 74 lakhs, while a sharp decline of Rs. 17.19 crores is noted in other loans and advances, of which as much as Rs. 10.32 crores is accounted for by the reduction in bank's outstanding borrowings from the Reserve Bank against usance bills. Fresh borrowings by banks against usance bills have been to the extent of Rs. 2.13 crores during the week.

The consolidated statement of position of Scheduled banks for the week ended 1st April, 1955, discloses a rise of Rs. 7.64 crores in demand deposits, as compared with that of Rs. 2.23 crores in the previous week. Time deposits have declined by Rs. 35 lakhs. Inter-bank borrowings also have gone down by Rs. 1.24 crores. Borrowings from the Reserve Bank and the Imperial Bank show increases of Rs. 83 lakhs and Rs. 1.50 crores, respectively. Advances have gone up by Rs. 3.18 crores, inland bills purchased and discounted by Rs. 3.18 crores and foreign bills purchased and discounted by Rs. 3.59 crores. No notable change is seen in investments. Cash on hand and balances with the Reserve Bank together account for a drop of Rs. 15 lakhs and money at call and short notice for Rs. 2.29 crores. Balances with other banks are up by Rs. 84 lakhs.

There was no change for the better in the listless conditions that had been prevailing in the Gilt-edged market in the previous weeks. There was scarcely any investment support and the turnover was poor. 3 per cent. 1957 had some stray enquiries at Rs. 99-4. 3 per cent. 1958 was on offer at the unchanged rate of Rs. 99-3. Very small business was put through in 3 per cent. 1959-61 at Rs. 97-5¼. 3 per cent. 1963-65 had sellers at Rs. 93-10 and 3 per cent. 1964 at Rs. 93-9. 3 per cent. 1966-68 was unchanged at Rs. 90-7 and 3 per cent. 1970-75 at Rs. 86-15. 3 per cent. 1986 Conversion Loan was marked down by As. 3 to Rs. 80-6, even at which rate there were sellers. 3½ per cent. 1961 National Plan Bond picked up an anna to Rs. 99-9 and a fair amount of business was done at that rate. 3½ per cent. 1964 N.P. Loan was sold at Rs. 98-8.

In the foreign exchange section, the rupee U.S. dollar rates were steady, while sterling in foreign centres continued to be strong. Thus, in New York, spot sterling gained ¼ cent. to $2.79.11/16—2.79.13/16. Forward sterling three months advanced from $2.78 7/16—2.78 9/16 to $2.78⅞—2.78⅞ and transferable sterling from $2.76½—2.76¾ to $2.76¾—2.77¼.

GOLD STRONG

(From Our Own Correspondent)

BOMBAY, *13th April*

The most outstanding development of the week under review in the bullion market was the sharp rise in the price of gold, ready gold recording an increase of Rs. 3-8 per tola and forward Rs. 2-6. Although silver was in the background, with narrow movements, the undertone in this section also was firm, as witness the rise of Re. 1 in ready and Re. 1-14 in forward.

The sharp rally in gold was due to scarcity of floating stocks and brisk and sustained demand, particularly from Calcutta. Naturally, this state of affairs was availed of by the bulls to have a complete sway over the market and exact as much backwardation charges from the bears as possible, even though they were compelled by that action to pay heavy margin. The widening of backwardation charges, however, frightened the bears to cover their sales, with the result that the upward trend in gold prices got strengthened further.

It will be remembered that last week bulls were forced to pay a margin of Rs. 7 per tola on their outstanding purchases of gold in *Chaitra* delivery contract, in terms of by-law 33-D, as the next succeeding forward contract (*Vaisakh*) was quoting lower by more than As. 12. As the week progressed, this gap widened to Re. 1-8 at the close of business on Saturday. Accordingly, in terms of the above by-law, the second slab of margin, namely, Rs. 25 per tola, came into operation against the bulls. The *Chaitra* settlement, however, ran out on that day. Nevertheless, they had to pay margin at the rate of Rs. 7 per tola on their outstanding purchases in the *Vaisakh* delivery contract from Monday onwards, as the next succeeding forward contract (*Jeth*) was quoted on that day As. 13½ below the *Vaisakh* delivery.

In silver, although the interim injunction restraining the Bullion Board from imposing special margins under by-law 33-A obtained by a member was dissolved early in the week, the court having dismissed the case, these margins were not applied to the *Chaitra* delivery contract, because it is stated that the graded margins under by-law 33-D were operative and margins under both by-laws could not operate simultaneously. The bulls continued to pay margin under by-law 33-D on their outstanding purchases in *Chaitra* delivery contract at the rate of Rs. 500 per bar until the expiry of the contract, as backwardation charges stood at Rs. 2-10 to Rs. 2-14. Although the backwardation charges in the *Vaisakh* delivery contract stood at Rs. 2-14, the bulls were not required to pay a margin of Rs. 500 per bar on their outstanding purchases in *Vaisakh* settlement, as the daily closing rate was not above the opening rate for the settlement. Thus, the official starting rate for *Vaisakh* was Rs. 163-13, but the closing rate today was Rs. 163-12 that is an anna less. Thus, by manipulating the market in such a way as to keep the daily closing rate below the official starting rate, the bulls have managed to escape payment of margin and to exact, at the same time, as much *badla* as they could.

To revert to the trend of prices, Silver for forward delivery (*Chaitra* settlement) opened the week at Rs. 164-7 and after touching a high of Rs. 166-2, closed on Monday at Rs. 165-8, when the settlement ran out. Business for the *Vaisakh* settlement began at Rs. 161-14 and closed for the week at Rs. 163-12. *Jeth* delivery contract opened at Rs. 159-4 and advanced to close at Rs. 161 today.

Ready silver (.996 mint) hardened from Rs. 165-11 to Rs. 167-2 before closing at Rs. 166-12. The floating stocks of silver are estimated at 1,900 bars. The daily average offtake was 15 bars.

Gold for forward delivery in *Chaitra* settlement advanced from Rs. 93-3 to Rs. 94-7 before the settlement ran out at Rs. 94-5 on Saturday. *Vaisakh* settlement rallied from Rs. 92-4 to Rs. 94-15 today and closed at Rs. 94-10. *Jeth* settlement rose from Rs. 91-11 to Rs. 93-10 at the close today.

Ready gold had commanded a premium of Re. 1-12 over the *Vaisakh* settlement early in the week, but the premium widened to Rs. 2-1 at the close today, reflecting the shortage of floating stocks. The floating stocks are reported to be 10,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In London, silver was maintained at the previous week's closing rates, namely 75½*d.* for spot and 75¼*d.* for forward. Gold on the other hand, suffered a loss of a penny to £12 10s. 8½*d.* after having touched £12 10s. 10½*d.* In New York, silver was unchanged at 87 cents per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	13-4-55	Highest	Lowest	6-4-55

COTTON STILL WEAK

(From Our Own Correspondent)

BOMBAY, *13th April*

At long last, Government of India has announced an additional export quota for cotton. The quota amounts to 100,000 bales of cotton of staple length 1" and below. Of this quantity, 35,000 bales shall, it is stipulated, be exported from Saurashtra ports. The quota applies to both old and new crop cottons. Although the export quota release has been received very favourably, it has failed to have a steadying influence on the cotton market which continues to be sluggish. Perhaps, this suggests that the market had discounted the release long back. There is also some dissatisfaction over the earmarking of 35,000 bales to be shipped from Saurashtra ports. A section of the trade, however, believes that the Government will grant more export quotas of short-staple cotton.

The cotton futures market presented dull conditions during the week under review. Thanks to profit-taking and absence of support, turnover was greatly restricted and values fluctuated narrowly, the general tendency being downwards. I.C.C. May began the week at Rs. 546, as against Rs. 550-8 last week-end, and declined to Rs. 544-8 the same day. It, however, recovered to Rs. 550 on Saturday following resistance at low levels. There was, however, a setback early yesterday but, towards the close, recovery was in evidence as a result of buying support induced by export quota announcement. Today, again, the contract staged a retreat to Rs. 543-12 on account of poor demand and profit-booking. I.C.C. August opened lower at Rs. 560-8, as against Rs. 565-4 and after receding to Rs. 559-8 yesterday, it recovered to Rs. 554-8 but was marked down at Rs. 554 today before finishing at Rs. 555. The spread between the two contracts narrowed from Rs. 14-12 on the 6th inst. to Rs. 11-4 today on heavy liquidation in the August contract by prominent bull operators.

The trend of prices during the week under review is indicated below:

		6-4-55	*High*	*Low*	13-4-55
I.C.C. *May*	...	Rs. 550¼	552¼	543¾	543¾
I.C.C. August	...	Rs. 565¼	564¼	554	555

The spot market also presented a dull appearance, on account of slackness in mill demand and poor trade support. Wagad, Berars and Kapadwanjs evoked some enquiry. There was little export business, except for a small quantity of Bengal and Oomra *deshi*. In the foreign section, Pima cotton attracted some interest. There were also moderate enquiries for Egyptians.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 560; Berar *Jarillas* Rs. 590; Khandesh Rs. 575; Vijay Rs. 700; Oomra *deshi* Rs. 540; Moglai Rs. 515.

The procedure for the import of U.S. cotton was announced by the Joint Chief Controller of Imports, Bombay, on Tuesday last week. The procedure lays down that, instead of import licences, importers will be granted sub-authorisations. A bank guarantee in prescribed form has also to be attached with the application for sub-authorisations. No contract entered into before 29th March, 1955, will be eligible for being financed under the sub-authorisations. To start with, sub-authorisations will be issued against the F.O.A. authorisation of $3 million for contracting period upto 15th May, 1955, and final delivery date, 15th June, 1955.

The cheerful note presented by the Karachi cotton market last week proved a short-lived affair. Decontrol of indigenous mill-made cloth prices and reduction of 50 per cent. in excise duty on coarse cloth failed to improve sentiment. Mill demand remained considerably restricted. Export offtake was also negligible, the actual shipments of cotton from Karachi during the six months ended March, 1955, being not more than 432,462 bales, as against 753,615 bales in the same period last year. Consequently, cotton prices suffered a precipitous fall. N.T.R.G. for May delivery which was quoted at Rs. 66-7 per 82 lbs. on the 4th inst. was hammered down to Rs. 61 yesterday. Spot cotton prices also suffered a sharp break. Yesterday's quotations for spot cotton at Karachi are given below:

Sind *deshi* Rs. 59; Punjab *deshi* Rs. 52; 4F roller Rs. 55-12; S.G. Rs. 59-12; Punjab roller Rs. 60-8; S.G. Rs. 64-8; 289F N.T. Sind S. G. Rs. 66-8; 289F Punjab roller Rs. 64; S.G. Rs. 69.

The Alexandria cotton market ruled quiet. Export business continued to be slow. Over £2 million worth of Ashmouni and Giza 30 cottons are reported to have been sold to France at the price discount of 6½ per cent. officially allowed. It is said that India, Germany and Italy made small purchases of cotton, mostly of Karnak and Giza 30 varieties. Spot market premiums for Karnaks were easy. Ashmouni and Giza 30, however, registered some improvement, owing to the tendering of large quantities of cotton to the Government. If the present rate of tenders were maintained, a shortage of free supplies of Giza 30 and higher grades of Ashmouni, it is feared, would soon be felt.

Easy conditions prevailed in the Liverpool cotton futures markets this week. This was due to fears of a U.S. cotton export subsidy in the next season which were accentuated by the non-commital statement of the U.S. Secretary of Agriculture. Selling pressure ensued as a consequence and prices stagged a retreat. The fall would have been more marked but for trade calling and some buying of new crop positions by the U.S. interests. The latest available quotations from the market are: May-June 30.52d.; July-August 30.01d.; October-November 29.45d.; December-November 29.40d.

The New York cotton market ruled quiet during the week under review too. Traders continued to be cautious with regard to large commitments, as they preferred to await further developments on export subsidy question. Slow demand for textiles in the domestic market and absence of any keen demand for cotton from abroad also served as

a damper. Even the report that the U.S. Senate had voted down the Bill proposing to raise the 1955 cotton acreage allotment failed to influence the market. Cotton prices, as a result, tended to decline.

The official estimate of the probable carryover of U.S. cotton on 1st August next has been revised upwards from 9.6 million bales to 10.2 million bales. Estimates of exports for the current season have been reduced to 4.5 million bales. Trade circles, however, continue to believe that exports will not exceed 4 million bales.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(*In cents per lb.*)

	12-4-55	5-4-55	28-3-55
Spot	34.20	34.25	34.30
May	33.46	33.61	33.66
July	33.67	33.81	33.90
October	33.86	33.84	34.01
December	33.93	33.94	34.09

STAPLE FIBRE YARN REACTS AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 13*th April*

The forward section of the staple fibre yarn *market presented a rather curious trend during* the week under review. Thus, distant delivery (May contract) yarn was quoted at a discount over the near delivery (April contract), a phenomenon which is quite contrary to the general tendency in the market. Market men attribute this state of affairs to a bull squeeze in April position. This is somewhat surprising, considering that there is no *shortage of goods at all in the market. Indeed, it* is said that the bull squeeze may not persist for long and it is bound to be loosened sooner or later. There are already indications which point to such a trend. Today, for instance, some bulls tried to unload their holdings and, consequently, staple fibre yarn prices staged a retreat.

Staple fibre yarn (40 x 2)* for April delivery opened the week steady at Rs. 577 and, after advancing to Rs. 584 on Monday, gradually receded to finish at Rs. 580-12. May delivery moved up *from Rs. 775-8 to Rs. 679-8, but relapsed to* Rs. 576-12 at the close today. Over the week, spot prices of yarn (40 x 2) registered improvement. Hirjis and Pankajas rose by an anna each to Rs. 2-14 and Rs. 2-15, respectively. New Greats gained half an anna to Rs. 3-2. Citys were higher by a like amount at Rs. 3-4. Sitarams improved by three pies to Rs. 3-1. Among foreign yarns, Auroras were fully maintained at Rs. 3-15-6. Fujis, however, receded by half an anna to Rs. 3-14-6.

Listless *conditions* prevailed in the rayon yarn market this week. Operators evinced little interest in fresh business, as they were not still sure whether or not the extension of the ban on imports of yarns ranging from 101 to 160 deniers would cover 120 and 150 deniers, the imports of which are allowed on the basis of 10 per cent. and 25 per cent. licences, respectively. Turnover was, *therefore, small and prices fluctuated* within narrow limits. Rayon yarn (150D) for April delivery moved irregularly between Rs. 730 and Rs. 733 and finished at Rs. 732. In the spot section, 120 Italy dropped an anna to Rs. 4-2. 150 Japan which had gone down from Rs. 4-4 to Rs. 4-1-6 on Friday recovered to Rs. 4-3-6. 120 Japan and 150 Italy moved narrowly and finished the week at Rs. 3-14-6 and Rs. 3-14, respectively, same as last week. Among indigenous yarns, National Rayons 150 Bt. Hanks I Grade were fully maintained at Rs. 3-10-6.

The bearish note depicted by the cotton yarn market in the past few weeks persisted during the week under review also. Renewed pressure of sales from several upcountry mills and weakness in raw cotton prices induced selling pressure and cotton yarn prices suffered an all-round decline. The decline was in marked evidence in the case of 20 count yarns, Maduras, Raghuvamshis and Seksarias receding by As. 4 each to Rs. 17-4, Rs. 16-8 and Rs. 15-8, respectively. Moderns lost As. 2 to Rs. 16-8. Among 10s, Podars eased by an anna to Rs. 13-3. Elphinstones were quiet at Rs. 13-2. Among 30s, Maduras slipped from Rs. 21-8 to Rs. 21-6. Simplex were unaltered at Rs. 21. Transactions in 60s were put through at lower levels. Elphinstones dropped Re. 1-4 to Rs. 49-4. Moderns decreased by As. 4 to Rs. 58-4 and Srirams by As. 2 to Rs. 55-8. Among 80s, Elphinstones shed As. 2 to Rs. 58-8. Finlays and Moderns were quiet, the former at Rs. 69 and the latter at Rs. 62. Among 40 counts, Seksarias declined by As. 4 to Rs. 22-8. Gokaks and Seksarias were unaltered at Rs. 24-12.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	13-4-1955	6-4-1956
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. April	732 0	731 0
120 Japan (per lb.)	3 14½	3 14½
150 Japan (per lb.)	4 3½	4 4
120 Italy (per lb.)	4 2	4 3
150 Italy (per lb.)	3 14	3 14
Staple fibre yarn—		
40 x 2 April	580 12	577 0
40 x 2 May	676 12	678 0
Suleo (per lb.)	3 15½	4 3½
New Greats (per lb.)	3 2	3 1½
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	13 4	13 4
20s Raghuvamshi	16 8	16 12
30s Maders	21 6	21 8
40s Seksaria	22 8	22 12
60s Modern	58 4	58 12
80s Elphinstone	58 8	58 10

GROUNDNUTS EASY

(*From Our Own Correspondent*)

BOMBAY, 13*th April*

A notable development of considerable significance to the working of the local seeds market is that the Bombay Oilseeds Exchange has submitted to the Forward Markets *Commission a proposal* to permit certain amendments to the by-laws of the Exchange. These amendments are evidently designed to bring the by-laws of the Exchange in conformity with the provisions of the Forward Markets (Regulation and Control) Act.

One of the amendments, proposed by the Exchange, seeks to provide a system of graded margin on net open positions in hedge contracts. The graded margin, as suggested by the Exchange, is as follows:

On the 1st 15,000 *candies*—Rs. *nil* per candy;
On the next 10,000 candies—Rs. 1 per candy;
On the next 10,000 candies—Rs. 2 per candy;
On the next 10,000 candies—Rs. 3 per candy; and
On those in excess of 45,000 candies—Rs. 4 per candy.

It is provided that it shall be permissible to any concerned member to set off the whole or any part of the deposit by way of margin against any amount due to him under the balance sheets sent in by him in respect of such settlement. It is further provided that, in respect of any deposit made by a member under this by-law on the previous inward payment day, it shall be permissible to such member to adjust the same, or any part thereof, in the balance-sheet sent in by him in respect of any subsequent settlement.

The amendment seeks also to do away with the *hitherto prevalent fortnightly settlement* and replace it by a weekly settlement. It further makes it incumbent on the part of the members to maintain a record of their daily transactions and also submit a statement of such transactions to the market authorities along with their returns to the clearing house. These changes, it is stated, are intended to check initially speculation in hedge contracts. But it is feared that, as the rates of margin are small, the proposed system might not result in any substantial reduction in unhealthy speculation. These proposals will, however, come into effect *only* after they have been accepted by the Commission and are gazetted. They will be applicable, at the outset, to transactions in castorseeds, in which hedge trading is permitted.

Apart from this, there was no important development in the market. The oil and oilseeds market exhibited a mixed trend. The groundnut section ruled easy, while the castorseed section was steady. The performance of the linseed section turned *out* to be better on good demand for linseed oil from the U.K. and the Continent at £89, as against £87. The *kardi* section came in for good support, while *nigers* lacked enquiry.

Bold ready, in the groundnut section, declined from Rs. 20-4 to Rs. 19-10. April-May delivery lost As. 6 to Rs. 19-10 and June-July As. 5 to Rs. 20-9. Kandesh quality was, however, quiet at Rs. 20-6. Groundnut oil *ex*-mill was lower by an anna at Rs. 10-14. May and June deliveries were done at Rs. 10-15 and Rs. 11, as against Rs. 11 to Rs. 11-1, respectively.

In the linseed section, Bold ready improved from Rs. 20-4 to Rs. 21. April-May delivery hardened by As. 10 to Rs. 20-10 and June-July by As. 5 to Rs. 20-5. Small Sutna gathered As. 12 to Rs. 19-8. Linseed oil moved up by As. 5 at Rs. 12-11.

May futures, among castorseeds, opened quiet at Rs. 71-2. After fluctuating between Rs. 72-4 and Rs. 70-10, it closed at Rs. 71-9. In the ready section, Madras quality gained As. 4 to Rs. 14-2. Castor oil First Pressure put on an equal amount to Rs. 9, while Commercials lost As. 2 to Rs. 8-2.

Among others, *kardi* Bold ready hardened by As. 8 to Rs. 11, while *niger* Madras quality lost As. 12 to Rs. 15-12.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	13-4-1955	6-4-1955	29-3-1955

FURTHER FALL IN SUGAR

(*From Our Own Correspondent*)

BOMBAY, 13*th April*

As in the previous week, the sugar market depicted an easy trend during the week under review too. The easiness was due to reports of a reduction in the selling prices of factories in Uttar Pradesh for good medium grain sugar to Rs. 28 per maund. The Union Food Ministry's move to open more centres for the sale of German sugar at Rs. 29-7 per maund also acted as a damper. Some selling was, therefore, in evidence in this market and prices generally continued their downward march.

In the spot section, large grain indigenous sugar was quoted at Rs. 92-Rs. 101 per bag, as against Rs. 92-Rs. 102 last week. Small grain sugar was quiet at Rs. 89. Among foreign sugars, Cuban sugar receded by Rs. 2 to Rs. 89-12 per bag of 250 lbs. German sugar dropped Re. 1-8 to Rs. 80 per bag of 220 lbs. Deals in British refined sugar were put through at Rs. 83 per bag of 224 lbs., as against Rs. 83-4. Czechoslovakian sugar was done at Rs. 85-Rs. 87 per bag of 220 lbs., as against Rs. 88 French sugar, however, proved an exception and improved from Rs. 82-Rs. 84 to Rs. 82-Rs. 85 per bag of 220 lbs.

In the forward section, *Vaisakh* delivery was quiet at Rs. 83. *Chaitra* delivery was squared up at Rs. 83-12.

Arrivals of indigenous sugar into the market during the week under review amounted to 6,400 bags.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

PEPPER REACTS AT CLOSE

(*Messrs. Parekh & Co.*)

BOMBAY, 13*th April*

Malabar black pepper witnessed a welcome break in the dullness that persisted during the last two weeks. Active conditions were noticed. Prices at Alleppey improved from Rs. 925 to Rs. 1,000 under pressure of buying by the exporters who are reported to have sold sizable quantity to Russia. The U.S.S.R. is reported to have bought so far 800 to 900 tons. Informed sources, however, report that Russia may buy a further quantity of about 600 tons, thus making a total of 1,500 tons as against 2,000 tons bought last year. At the end of the week, however, prices reacted and earlier improvement proved shortlived. At the time of writing there are sellers at Alleppey at Rs. 975. April *shipment, after touching $0.40, improved to $0.43,* while May and June shipments, after having touched $0.39½ and $0.39, improved to $0.42½ and $0.41½ respectively. The present attitude of growers is to sell rather freely in the neighbourhood of Rs. 1,000 and to show resistance whenever the prices decline to about Rs. 900.

The position of the Indian market is uncertain at present and will remain so until the attitude of Singapore sellers of Sarawak pepper is more fully known as there are conflicting reports as to the size of Sarawak crop this year.

The outturn of the crop from Tellicherry area being poor, the total production of Malabar black pepper is expected to be not more than 18,000 tons. Taking India's home consumption at a conservative figure of 6,000 tons, the exportable balance of about 12,000 tons is considered not heavy and as such any improved enquiries from U.S.A. and other consuming countries during the fall are likely to lift up the Indian prices provided Sarawak and Lampong do not prove in the meantime aggressive sellers.

Following are today's nominal quotations: Ready Rs. 125 per Bengal maund; and June Rs. 845-55 per candy of 5¼ cwts.

WHEAT PRICES RECEDE

(*From Our Own Correspondent*)

HAPUR, 11*th April*

Foodgrain prices ruled quiet to easy this week and wheat *dara* prices which earlier had improved to Rs. 12-8 per maund in mid-session, due to poor stock position caused by depletion of old stocks and meagre new crop arrivals which were hardly sufficient to meet the day-to-day requirements, declined again to Rs. 11-12 today following increased arrivals of about 500 maunds. Arrivals were mostly from smaller markets and local arrivals are likely to increase shortly, as harvesting has almost been completed and reports of increased yield are being received. The fine farm quality is quoted at Rs. 13-8 per maund. The stock with the trade is as yet negligible and a fall in prices is anticipated with increase in arrivals. Prices in other centres have also tended to fall. In Punjab the price declined by As. 8 to Rs. 11-12. In Akola, wheat is now quoted at Rs. 25 to Rs. 30 per bag. In Madras, wheat is quoted at Rs. 12-12 per maund and in Siwan, at Rs. 15-3 per maund.

The Government of India is anxious to check a further fall in prices and a conference of Food Secretaries of the wheat-producing States of India finalised plans for purchasing wheat on Government account wherever the rates fall below Rs. 10 a maund. As a further step to create internal demand, the Government of India has decided that the export of 'fines' should not be confined to products of imported wheat.

Last week's steadiness in gram prices was shortlived and rates sagged by As. 4 to As. 6 per maund to Rs. 6 for local quality and to Rs. 6-10 for Punjab quality. New crop arrivals were small and local stock is now estimated at one *khati*. Rice prices slightly declined and the prevailing rates are: Basmati Rs. 25, *raiajwayan* Rs. 18, *raimunia* Rs. 20 and coarse Rs. 11-8 per maund. Barley and *bejhar* prices eased by As. 2 each to Rs. 5 and Rs. 4-12 per maund, respectively. *Arhar* stocks are estimated at 3 *khatis*. Peas prices also continued to be depressed in pattern with the general trend in foodgrain prices. Peas *dara* is quoted at Rs. 4-12 and white quality at Rs. 5-8 per maund. *Daily* arrivals increased to about 800 maunds and, with fairly good offtake mostly to Bihar, the local stock has gone down to 2 *khatias*. *Arhar* prices too declined fractionally by As. 2 to Rs. 6-4. The prices of pulses also declined in other parts of the country. In Madras, peas was quoted at Rs. 18-8 per bag, as against Rs. 19 last week-end and, in Calcutta, the prices continued to be unchanged at Rs. 7-8 per maund, while there was slight improvement in prices in Assam from Rs. 10-10 to Rs. 11 per maund. The all-India first estimate of *rabi* pulses (other than gram and *tur*) for 1954-55 puts the current year's area at 9,486,000 acres, as against the corresponding adjusted estimate of 10,039,000 acres last year, representing a decrease of 6 per cent. in area over last year. Other pulses recorded a quiet tendency and the prevailing rates are:—*Urd* Rs. 8-10, black Rs. 9-12, *moong* Rs. 6-8 to Rs. 8 and masoor Rs. 5-8.

Pulses futures recorded a steady tendency during the week and peas *jeth* is today quoted at Rs. 4-13, *arhar jeth* at Rs. 5-13, and *ura baisakh* Rs. 9-7, as against Rs. 4-11-6, Rs. 5-11-6 and Rs. 9-7, respectively on Monday last.

SUGAR DEPRESSED

(*From Our Own Correspondent*)

HAPUR, 11*th April*

The sugar market continued to rule depressed during the week under review. Indeed, the market was *in a state of nervous anxiety*. Mills were anxious to dispose of their stocks on reports of appreciable increase in overall production and the move of the Government to lighten its stocks of imported sugar as was evidenced by the reduction in the sale price of East German sugar. Stockists, too, were reported to be following a very cautious policy. As a result of all these factors, trading was on a very small scale. Mills in East U.P. have almost closed their season, but the supply of cane in West U.P. is still enough and the season is expected to be prolonged. The prevailing mill delivery rates are:—*Jaswant* Rs. 29, Simbhauli Rs. 29-4, Mowana Rs. 29-4, Daurala Rs. 30-12, Amroha Rs. 28-4, Bijnore Rs. 28-6, Mansoorpur Rs. 30-12 and Rampur Rs. 32, retail Rs. 33-8, *khandsari* Rs. 21 to Rs. 25.

The last week-end's steadiness in the ready *gur* market continued this week also and prices were quoted at Rs. 9-12 to Rs. 10-4 per maund. The fact that arrivals have increased to 1,000 maunds with an improvement in prices shows that the producers have a stock with them which they will push in the market at a favourable price. There was good demand from outside centres and the local stock ran down to about 107,000 maunds including 46,000 maunds of *gur* owned by the State Government. Stocks at this time last year was about 38,000 maunds only. The State Government was hitherto purchasing a very small quantity at the floor price of Rs. 10-4 per maund, but the State's Chief Minister has hinted that the Government would not be able to give price support for long.

Gur prices in markets in the South are also continuing unchanged at Rs. 11-4 to Rs. 12 per maund in Baramati, at Rs. 7-8 to Rs. 9-8 in Ankamaund in Baramati, at Rs. 7 to Rs. 9 in Aklouze, at Rs. 7 to Rs. 11 palli, at Rs. 7 to Rs. 9 in Akloure, at Rs. 7 to Rs. 11 in Shrirampur and Coopergaon, and at Rs. 11-4 in Akola.

The futures section also recorded a steady tone in *pattern* with better ready prices and *gur baisakh* is now quoted at Rs. 8-14-9, *Asar* at Rs. 9-8 and *Phagun* at Rs. 9-9, as against Rs. 8-10-6, Rs. 9-7-6 and Rs. 8-12-6, quoted on Monday last. The fall in the *phagun* section is accounted for the fact that the sowings for the next season have considerably increased.

TEA DUSTS SLIGHTLY DEARER

(*Messrs. Forbes, Ewart and Figgis, Ltd.*)

COCHIN, 7*th April*

Approximately 475,000 lbs. were on offer in dust sale 'G' which was held on Tuesday, 5th April. There was good demand for natural dusts and these types were fully firm and occasionally slightly dearer. Best liquoring dusts met with some competition and must be quoted half to one anna dearer. Milled dusts met a very poor demand and the few types which sold were considerably easier. There was some competition for black, grainy Middle East descriptions.

London Market—No sale this week.

Colombo Market.—Limited demand. Considerably lower rates. Plain liquoring and poor leaf neglected. Heavy withdrawals.

Calcutta Market.—*Export.*—21,600 packages. Fair demand at much lower rates, irregularly As. 4 to As. 6 easier. Few black leaf types strongest features.

Dust.—23,000. Fair demand at easier rates. Strongest feature medium Assam powdery types. Heavy withdrawals of residue grades.

Export Quota.—Substantial business has been done in special licence at 65 pies per lb. and there are still sellers from North India. 1955-56 export rights are quoted at 96 pies buyers with offerings limited.

Forthcoming Auctions.—Dust sale 'H' will be held on Tuesday, 19th April.

HESSIAN PRICES WELL MAINTAINED

(*From Our Own Correspondent*)

CALCUTTA, 12*th April*

The expectation that Argentina would soon enter the market and cover its requirements of hessian for this year was a factor which made quotations for hessian steady, despite lack of moderate business for export during the week under review. In fact, business had been so dull in recent weeks that, when the stock figures are announced, they would show an increase as at the end of last month. Argentina's stocks of hessian are running low and, because prices have been declining, the present is considered an opportune moment for it to call for tenders. In heavy goods, business was continued to be effected with Australia and West Africa, but prices registered further falls.

Ready hessian 40" 10 oz. opened last Tuesday at Rs. 45-7 and profit-taking saw the rate recede to Rs. 44-15. Forward position was quoted As. 8 lower at Rs. 45. On Thursday, the ready position recovered to Rs. 45-1. The market was closed on Friday and Saturday on account of Easter, and yesterday, the rate was fully easy at Rs. 44-11, as speculators who had bought early in the week in expectation of a call for tenders from the Argentine, were disappointed over the delay. The eight oz. was lower yesterday at Rs. 35-12. In the heavy goods section, prices eased, with the ready B. twills being offered yesterday at Rs. 121-4, as against Rs. 125 in the beginning of the week. The decline in the price level is indicative of the present difficulty to maintain prices high.

The fall in the prices of jute goods was not reflected in raw jute. *This was principally due to* the uncertainty of forward trading in Pakistan, and sellers to Indian mills have worded the contracts in such a way so that, if exports from East Bengal were not possible, then the sellers would be at liberty to deliver Indian jute instead. Mills were in the market for a fair quantity of raw jute. Latest quotations, which do not show much change either way from those of a week ago, are given below:

	Middles Rs. a.	Middles Rs. a.	Bottoms Rs. a.	Bottoms Rs. a.
Pakistan:				
Northern	38	8	34	8
District	39	0	35	0
Indian:

Western	35	8	32	8
Jungli	35	0	32	0
Orissa	38	0	35	0
Uttar Pradesh	35	0	32	0
Bimli f.a.q.	...		31	8
Pucca bales 1st marks			207	8

METALS LOOK UP

(*From Our Own Correspondent*)

CALCUTTA, 12*th April*

Conditions in the metal market during the week under review were steady. Prices were maintained at higher levels and consumers were content to buy day-to-day requirements only. The decision of the U.S. Government to divert as much as 17,500 tons of copper, meant for stockpile, to industry, is a measure of the present tightness in world supply. American producers have increased their selling price by 3 cents to 36 cents per lb. Advices from the London Metal Exchange, however, showed some easiness, spot falling by £23 to £341 a ton and forward by £20-5 to £333. New York prices also gave way, both spot and three months' delivery being lower by 1¼ cents and 1-3/5 cents, respectively. This was evidently due to proposed diversion of metal meant for Government to private industry. Despite all this, locally electrolytic copper was difficult to be located even at Rs. 260. Wire bars were priced even higher. Pointing to reports that Peru would be in a position to export considerable quantities of copper, consumers hope that India would be able to obtain some quantity from this source.

Another strong feature was electrolytic zinc, which was taken from Rs. 62-4 to Rs. 63-4. Some quantity changed hands, but the improvement was due to *firm advices from London and New York*. The upward trend in the local market would be continued, if prices were to reach the replacement-cost level. Lead changed hands in moderate quantities, and the price scored a fractional gain to Rs. 73-4 but *for moderate arrivals*, tin should have gained more than this week's improvement from Rs. 475 to Rs. 475-8. Conversely speaking, it should be said that the strong conditions in Singapore, London and New York prevented the local quotation from a drastic fall.

LINSEED QUIET

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 11*th April*

A somewhat quieter tendency prevailed in the linseed market during the week and prices registered a small decline. Demand from crushers was rather limited even at lower levels. Sellers showed keener interest owing to better arrivals from upcountry, but activity was poor. Little activity was recorded in the oil section and shippers were operating rather cautiously, despite some enquiries from overseas.

Latest quotations are: Ready Rs. 15-4 and April-May Rs. 15-2 per maund.

FAIR DEMAND FOR TEA

(*From Our Own Correspondent*)

CALCUTTA, 11*th April*

Offerings of tea during the export sale held last week aggregated 21,600 packages. These were end-of-season teas. There were, however, a few bright liquoring lots. As prices were mostly lower, there was a fair demand. Keen competition was offered to tippy teas, as well as black leaf teas, prices of which advanced. There was also strong support to stylish B.P.S.s and whole-leaf grades. There were no quotations.

On Tuesday last, 23,200 chests of dusts were offered in the internal sale. Although prices were lower, there was moderate demand. Despite a fall by As. 4 to As. 6, the end-of-season residue teas had to be withdrawn heavily. C.T.C. Assams lost As. 3 to As. 4. Commons and Dooars were lower by As. 2 to As. 3. Grainy medium Assams showed the least decline, being lower by only As. 1 to As. 2. Thus, best Assam C.T.C's were quoted at Rs. 2-15 to Rs. 3, medium Assam grainy dust Rs. 2-5 to Rs. 2-5-6 and medium Dooars at Rs. 2-2.

Leaf offered in the internal sale on the following day amounted to 13,300 chests. Conditions were better in this section, and demand was satisfactory. Prices of teas with clean black leaf appearance, whole leaf grades and B.P.S.'s gained fractionally. Despite good demand, residue types lost As. 2. Low quality C.T.C. Assams were difficult to be pushed. There were no quotations.

HIDES STEADY

(*From Our Own Correspondent*)

KANPUR, 10*th April*

During the week under review, the hides and skins market ruled steady. Traders drew relief from the fact that Mr. Nehru is not so much set against the question of cow slaughter. Mr. Nehru's remarks in Parliament had a sustaining effect on the market. Weekly arrivals were up to average. The local tanners were the main purchasers.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 300 and 3rd grade Rs. 140 to Rs. 150 per score; wet salted buff 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat skins 1st grade Rs. 225 and 2nd grade Rs. 125 per 100 pieces; sheep skins Rs. 260 to Rs. 300 per 100 pieces.

KIPS FIRM

(*From Our Own Correspondent*)

MADRAS, 11*th April*

Kip prices have ruled firmer, due to good clearance of stocks by several shippers. Prices for lightweights have increased by As. 2 per lb. and U.K. importers have followed the market. Top marks continue to attract attention and higher prices have been obtained from U.K. dressers. Medium weights remain unchanged and heavies are firm. Arrivals have met with good clearance and tanners have been keen to buy raw stocks at higher prices.

Market for tanned goat has ruled firmer and prices advanced by As. 2 per lb., while sheep declined by an anna per lb. for adulterated qualities.

Notices

THE BENGAL FLOUR MILLS COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Ordinary General Meeting of the Company a dividend at 30 per cent. per annum for the half-year ended 31st December, 1954.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th April*, 1955.

THE BELSUND SUGAR CO., LTD.

NOTICE

THE ANNUAL ORDINARY GENERAL MEETING of Shareholders will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta-1, on Monday, the 25th *of April*, 1955, at 3 p.m., for the purpose of receiving the Directors' and Auditors' Report for the year ended 30th September, 1954, passing the Accounts, declaring Dividend, electing Director and Auditors in place of those retiring and transacting any other business that may be brought forward.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 11*th April* to 25*th April*, 1955, both days inclusive.

The Dividend Warrants will be sent to Registered Shareholders.

By Order of the Board,
BANGUR BROTHERS LTD.,
G. L. BANGUR,
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, 31*st March*, 1955.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.C.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. B=Company has Debentures. N=Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12 for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus.

(f) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

(k) Investments

(a) For seven months ended 31st March, 1954.

MARKET GOSSIP

(*Concluded from page 715*)

training, storage, survey, analysis, settlement of disputes and for dissemination of information. He then went on to say:

"The need for hedge trading in oils has now increased owing to Government's policy (1) in permitting exports of oils and not of oilseed and (2) encouraging crushing of oilseeds in growing areas. We are, however, firmly of opinion that there should be an entirely separate organisation in charge of hedge trading in oils, as existing trade terms of oilseeds and oils differ considerably and it would be cumbersome for any single organisation to deal with both oilseeds and oils."

The Commission, it is to be hoped, will take these factors into account before it recognises any trading body for purposes of carrying on forward trading in oils and seeds.

It is very likely that, in the course of the next few weeks, a new International Tea Agreement will come into force, taking the place of the Agreement which expired on 31st March, 1955. It is believed that the Governments of the main producing countries—India, Ceylon, Indonesia and Pakistan—are considering the draft of the new Agreement and that a final decision will be reached very soon. There is much speculation regarding the main terms of the Agreement and, in particular, those in respect of the provisions regarding extension of tea areas. The fact that world production is not keeping pace with world consumption has given rise to a feeling, both in India and outside, that, for the next few years at any rate, there need not be any restrictions on new planting or the restrictions may be less severe than they have been so far. There is every possibility that the new Agreement will respect this feeling by giving complete freedom of action to the participating countries in this regard. The following comparative study of planted acreages on 31st March, 1953 and 1954 of the various countries concerned shows that the increase has not been considerable in any of the countries covered by the Agreement; indeed, in one of the countries, Indonesia, the planted acreage has actually decreased by about 2,000 acres:

	31-3-1953 Acres	31-3-1954 Acres
India	787,370	789,442
Pakistan	73,376	74,366
Ceylon	572,008	574,250
Indonesia	193,520	191,400

It is believed that extension of tea planting in the countries that were outside the Agreement, particularly in East Africa, has been much greater than in the countries covered by the Agreement. All attempts to bring East Africa within the last Agreement failed and it is very doubtful whether that country would participate in the new Agreement. Pakistan came into the last Agreement after a great deal of persuasion and it is to be hoped that it will not change its mind now.

• • • •

Although it is possible that the provisions in regard to new extension may be withdrawn from the Agreement, it is felt that the countries covered by the Agreement may continue to impose some restrictions on new planting within their own territories. That would be by way of a safeguard against indiscriminate extension, which, if not checked, may have serious economic repercussions on the countries concerned. As it is, there has already been a considerable amount of unauthorised extensions of tea acreages in India and that is likely to be the case with the other countries as well. As far as control over exports is concerned, it is thought that the new Agreement will have practically the same provision as the old one as this is considered to be quite essential. Any large increase in export allocations cannot be contemplated without serious repercussions on the world market and the restrictive provisions must, in the opinion of many, continue for some more years.

The Directors of the National Rayon Corporation have decided to recommend the payment of a dividend of Rs. 10 per share for the year ended 31st December, 1954, thus stepping it up by a rupee from the maiden dividend of Rs. 9 paid for 1953. This decision conforms very nearly to the indication given in these columns last week. But some in market circles were expecting a still higher dividend. To this extent, it can be said that the Directors' proposal falls short of market expectation. There is, however, no reason for any sense of disappointment, for even at the current high rate of Rs. 200-8 the Company's shares offer a yield of 5 per cent. per annum. As we shall show presently, the dividend has been fully earned and it has been increased only after setting apart a handsome amount for general reserve.

• • • •

The performance of the Company during the past year has been very impressive. The gross profit of the Company amounts to Rs. 115.27 lakhs, which, as compared with that (Rs. 93.17 lakhs) for the previous year, shows a rise of Rs. 22.10 lakhs, thus maintaining the upward trend for the third year in succession. It will be interesting to note that the profit has very nearly doubled since the Company went into production four years ago. For the year 1951, the first year of production, the Company's profit amounted to Rs. 58.35 lakhs. After providing Rs. 7.08

CENTRAL BUDGET RECONSIDERED

THE concessions which Mr. C. D. Deshmukh, Finance Minister, Government of India, has had to make in his taxation proposals, adumbrated in the budget for 1955-56, reflects in a way the theoretical nature of some of the recommendations of the Taxation Enquiry Commission. There is no doubt that, had the Finance Minister introduced a few more of the radical suggestions of the Commission, as, for instance, a ceiling on individual income, he would have had to make still larger modifications in his budget. There is a limit up to which taxes can be raised without impairing the incentive for more production. That limit is undoubtedly low in India, a relatively underdeveloped country as compared with the other countries in the West. If that limit were exceeded, as, indeed, they were, the law of diminishing returns would begin to operate and the economy, instead of moving forward, would slip backward. The force of this elementary economic law was sought to be minimised by the Commission and the Finance Minister. They evidently thought that the disincentive effect of heavy taxation was being exaggerated and that people were bound to work and produce, irrespective of the level of taxation they were asked to bear. That this assumption is an exaggeration is proved by the reliefs given by Mr. Deshmukh. The Government enjoys such an overwhelmingly large majority in both Houses of Parliament that there was nothing to prevent Mr. Deshmukh from getting his taxation proposals passed without any modification, if he had so desired. The fact that he did not do so shows that he had the common sense to realise that his proposals would turn out to be the proverbial last straw on the camel's back. The reputation of a Finance Minister lies in making the camel move on and not in burdening it to such an extent as to make it collapse.

The reliefs that he has given in the rigour of his earlier proposals are by no means very substantial. They are just sufficient to give the psychological satisfaction to those whom he sought to tax more that he has been considerate towards them. The manufacturers of cotton textiles, woollen goods, paper, electric batteries, etc., will no doubt be grateful to him for what he has done in regard to excise duty on their goods. The chief executives of business concerns and industrialists will also feel grateful to him for the relief he has given in the taxation of perquisites. The psychological effect of subjecting to tax perquisites, such as entertainment allowance, conveyance, servants, free passage for home leave, etc., on the enthusiasm and enterprise of genuine managerial staff and top executives is, perhaps, far more adverse than an increase in the direct tax on their income, because the denial of these comforts will make them sullen. The object of taxing perquisites is to prevent certain abuses which are resulting in loss of revenue to the Exchequer. But the consequences of this measure appear, as Mr. Deshmukh has now discovered after a thorough enquiry, to be far more serious than the small gain which the State is supposed to derive.

If Mr. Deshmukh has yielded some ground, it is not because he wants to do business men a favour but because he realises that, by keeping taxation at a high level, he would be taking undue risks at a time when the country is in need of large-scale industrial development. We have already explained what would have happened if he had not changed his attitude towards perquisites. India certainly has no plethora of trained workers and skilled executives. The country's progress in the sphere of industry, trade and finance would slow down, if the intelligentsia were not kept in good humour. Their voting power is practically negligible; so politically they may not be very important. But their contribution to production and to the progressive growth of national economy is immeasurable, at any rate in the present set up. It is, therefore, necessary to keep them contented. And it is this necessity that has compelled Mr. Deshmukh to tone down the rigour of his measure. Similarly, if he had not reduced the excise duties on various goods as he has done, especially in regard to textiles, he would have retarded the progress of industrial production and aggravated the unemployment problem. In fine, the *raison d'etre* for his alterations in the budget proposals has been the larger interests of the country.

The main concession given by Mr. Deshmukh relates to cotton piecegoods. The major part of this concession was announced on 21st March, 1955. This was in the form of a reduction of 6 pies in the excise duty on coarse and medium counts. He has now followed this up with a further concession; the duty on superfine counts has been reduced from As. 2-6 to As. 2 per square yard. But the duty on fine counts has been raised by a quarter anna to As. 1-3 per square yard. Besides this, the basis for the handloom cess of three pies has been changed from linear to square yard, a charge which has meant an additional burden to this industry. Thus, within a month and a half, the excise duty on cotton fabrics has been altered three times, causing considerable hardship to mills and traders. Could this hardship not have been avoided? If only Mr. Deshmukh had paid some thought to the consequences of his original proposals, stepping up this duty steeply, we dare say, he could have spared the interests concerned of all the hardship. When this question was raised in Parliament, his explanation was as follows:

> "When one has to broaden the taxation by imposing a large number of new excises, the difficulty one feels is that one has to act on information already in one's possession. Because, if one started to collect details and particulars, one would give rise to speculations in markets. Therefore, this has to be determined always in the light of observations of members of the House, of representations that may be received and so on and so forth."

This explanation does not hold good, at least in regard to cotton textiles and woollen

protect the paper industry against the indirect competition which it is experiencing from imported newsprint.

The sugar industry's case for relief has been totally ignored by the Finance Minister. The excise levied on this commodity is doubtless heavy, being as much as 14 per cent. of the selling price. Besides this, the industry has to pay a heavy cess of As. 3 per maund of cane crushed. This tax is so large in its incidence that it is a misnomer to call it a cess; really speaking, it is a State excise. As was pointed out in our last issue, in the face of rising production, consumption of sugar is falling and, consequently, stocks are accumulating with the factories. This development is due to severe competition from low-priced *gur* which is not subject to any of these tax burdens. The Finance Minister has failed to respond to the plea for a relief in the excise burden from the footwear industry either. This is also an industry where the small units and cottage units enjoy special privileges. By subjecting these organised industries to heavy excise duties and exempting small producers from such burden, the Government is discouraging economic utilisation of raw materials and penalising efficient manufacturers.

KANUNGO COMMITTEE REPORT

AT the annual meeting of the Bombay Millowners' Association, held on Wednesday, Mr. J. C. Burns, Deputy Chairman of the Association, discussed, in the course of his address, the practicability of the Kanungo Committee's recommendations in respect of the future expansion of textile industry. Mr. Burns's observations deserve wider notice, for they raise certain issues of far-reaching significance to India's textile economy. If the Government's textile policy is going to be shaped in accordance with the Committee's recommendations, then it is certainly necessary that both the Government and the public ought to know the serious defects in these recommendations.

Mr. Burns did not bring to his task any excessively critical sense. He was not so much concerned with the broader issue of mills *versus* handlooms as with the more immediate issue, namely, whether the Committee's proposals could be successfully implemented. In other words, he did not choose to question the Committee's basic assumptions. Thus, he did not enquire whether it was right or necessary that there should be a ban on all further expansion of the weaving side of the mill industry; such a ban is contemplated by the Committee. Nor did he enquire whether it was right or feasible that one section of the textile industry, namely, the handloom sector, should be continuously kept alive through reservation of markets, heaping tax and other burdens on the mill industry. The Committee could not have obtained the services of a more fair-minded critic to review its work. If Mr. Burns nevertheless found the Committee's work wanting, it is surely time the Government gave it some serious thought.

Briefly, the Committee's recommendation is that India's cloth production should be increased from the present level of 6,600 million yards, consisting of mills' production of 5,000 million yards and handloom production of 1,600 million yards, to 8,200 million yards before 1960 to meet the needs of the internal market, estimated at 7,200 million yards on the basis of the *per capita* consumption of 18 yards, and also the need for maintaining exports at the level of 1,000 million yards. The Committee has further urged that all this increase, namely, an increase of 1,600 million yards, should take place in the handloom and powerloom sector; the mill industry's output should be pegged at around the current level. Finally, in the Committee's view, the increase in cloth production should be accomplished by effecting improvement in the handloom and powerloom sector of India's textile economy. Clearly, this implies rapid expansion of the handloom industry, for an increase of 1,600 million yards in its output means a 100 per cent. increase.

The question is whether the handloom industry can deliver the goods, even if one concedes that the cotton supply position and the spinning industry will improve fast enough to supply the handlooms with the yarn they need. Mr. Burns, on his part, doubted whether the handloom industry would be able to increase its production to the extent envisaged by the Committee. He said: "I cannot help feeling doubtful in this respect: First, because of the finance required for the conversion, secondly, because of the size and scope of the organisation required to implement the recommendations, and lastly, because of the fact that these hand-powerlooms will introduce competition into the handloom industry itself and the non-powerloom may find it impossible to compete."

These are weighty reasons for questioning the practicability of the Committee's recommendations. As regards finance, the total amount estimated to be required for additional textile production is of the order of Rs. 70 crores; about Rs. 36 crores will be required for machinery, Rs. 22 crores for working capital, and Rs. 12 crores for the conversion of handloom into powerlooms and the installation of new semi-automatic handlooms. It must be remembered that the problem is not solved even with the finding of the finance that is needed for re-equipment of the handloom industry and the spinning side of the mill industry. What is necessary is that this finance should be made available in time and to the units which are in a position to utilise it to the maximum advantage. The Committee's suggestions for utilising co-operative institutions for carrying out the conversion of the handloom into technologically superior looms and for creating a special agency for increasing the spindleage are, as Mr. Burns remarked, "much less easy of implementation than they might appear at first glance." Again, assuming that the necessary technological transformation does take place in certain spheres of the handloom industry, there will still be the problem of the efficient powerloom *versus* the inefficient handloom. It is not as if the exit of the mills from the arena of conflict will stop all conflict. Only, such conflict will then assume a new shape.

If the handloom industry fails to reach the production target set for it, there is bound to be considerable suffering for the consumer. He will then be unable to obtain all the cloth he needs. Indeed, the *per capita* consumption of 18 yards, assumed by the Committee, probably errs on the low side. Any significant improvement in living standards, which must follow the implementation of the second Five-year Plan, may conceivably increase the demand for cloth beyond the 18-yard level. Should this happen, the failure of handloom industry to reach the target would be even more keenly felt than if the *per capita* consumption were held at the 18-yard level. In such a context, it is not inconceivable that the Government will first block the export outlet as an answer to the demand for larger supply of cloth for the internal market. Since textile export markets, unlike tailor-made clothes, cannot be made to order, such a measure would mean the loss of these markets won at considerable cost. It would also mean the loss of precious foreign exchange which, as Mr. Burns pointed out, is "so essential to India" in its efforts at industrialisation. If the Government does not find a wholesale ban on exports a feasible proposition, it would probably keep a limited ban on exports and introduce all the war-time measures of textile control, from which the industry has only recently won its release to the lasting satisfaction of the consumer. In either case, it is by no means a pleasant prospect to contemplate.

Whichever way the Committee's report is looked at, it appears to us that, despite its helpful approach to the textile problem, it is vitiated by the over-riding consideration that the handloom industry should be kept alive at any cost. Not only are positive incentives to be provided to this sector but its competitor, the mill industry, should be both prevented from growing and made to carry all manner of fiscal burdens from which the handloom industry should be exempt. Besides the fact that it implies a lack of sound economic logic, it does not possess even the elementary virtue of practicability, in that it may not enable the country to reach significantly higher levels of textile output. This is particularly deplorable, because it involves a very heavy burden on the consumer and means very low prices for the Indian cotton grower.

PUNJAB NATIONAL BANK

THE history of the Punjab National Bank, which entered its diamond jubilee year last week, synchronises with the history of Indian banking itself. To have started a bank in 1895 was itself an achievement for which the founders of the Punjab National will be long remembered by their countrymen. To have steered it through the stress and strain of these sixty years is certainly an even more glorious achievement. But the crowning glory of it all is that the Bank has carved for itself an honoured place as one of the country's "Big Five."

Judged by the hoary traditions of British or Continental banking, the sixty-year period through which the Punjab National has passed might well appear a brief episode. In the West, the adage, "Men may come and men may go, but the banks go on for ever," sums up the enduring traditions which banking institutions have built up. But, in India, where organised banking can boast of neither ancient origin nor smooth progress, the story of the Punjab National's progress has all the enchantment of a romance.

It is not difficult to imagine what the conditions must have been in 1895 when a few brave men in Lahore decided to start the Punjab National. Popular distrust of banks and banking, which persists even today in remote Indian villages, must have been rampant. Many must have regarded banks as not so safe as gold to put one's money in, though not so dangerous as moneylenders to borrow from. This, surely, is an attitude that is hardly conducive to progress of banking, for a bank's lending capacity is directly dependent upon the deposits it is able to command. It is in the times in which this attitude persisted that the Punjab National was born. Its humble origin, with a paltry Rs. 20,000 as capital, proved no handicap, thanks to the farsightedness, courage and financial acumen of a long and illustrious line of chairmen, managers and other officers. Among the external factors which aided its growth, mention must be made of (*a*) the growing prosperity of the Punjab, based on its network of canals, (*b*) the development of the *swadeshi* sentiment, and (*c*) the general improvement in Indian economy.

This, however, does not mean that the Bank did not have its share of trials and tribulations. The early years were no doubt smooth sailing. From a mere Rs. 20,000, the Bank's capital had grown to Rs. 1.66 lakhs at the turn of the present century. Before 1913, it had grown to Rs. 10 lakhs and the Bank's deposits to Rs. 1.63 crores. The years 1914-18, the period of the First World War, were critical ones for the banking industry; nearly 95 banks closed their doors. But the Punjab National survived it. The years 1921-26, aptly described as the "golden period" for the Punjab National, witnessed the rise in deposits to Rs. 8 crores. Then came the Great Depression which was to bring the world economic machine almost to a halt. Through ruthless economy in expenditure, the authorities pulled the Bank out of the crisis. From 1932 there was steady revival. This process was accelerated by the war boom (1939-46), during which the deposits increased to Rs. 62 crores and the number of branches to 281. But the Partition brought with it a great deal of undeserved suffering to the Bank which had served both India and the areas that were later to form Pakistan with distinction and devotion. In 1949, the Bank's deposits had again shrunk to Rs. 42 crores. The transfer of the Bank's head office from Lahore to Delhi, months in advance of the fateful decision to cut the country into two, proved to be a wise decision in retrospect. The Bank survived the Partition crisis, too. In 1951, it took over the Bharat Bank Ltd. Its Board was strengthened by the coming in of Mr. Shriyans Prasad Jain in 1953 and of Mr. Shanti Prasad Jain in 1954. The confidence of the public in the Bank is reflected in the growth of deposits which have rapidly risen to Rs. 75 crores, a record in the Bank's history.

Such, in brief, is the story of the Bank's progress. In associating ourselves with the many men, who have paid a well-deserved tribute to the Bank and offered their best wishes for its future and who have rightly recognised the Bank's national character, we cannot resist the temptation to draw an obvious lesson. The Bank's progress, impressive as it has been, could not have taken place in a regimented economy. It is only when banks are allowed to function under a system affording a reasonable amount of freedom and scope for healthy competition that the authorities can take correct decisions and take them promptly enough to avert crises, so that the institutions which they serve continue to render useful service. Again, it is only under such a system that men like Lala Yodh Raj and Mr. B. N. Puri can spring from the ranks, from the lowest rungs of the official ladder, and move on to positions of vantage and authority where they can bring to bear on policies a wisdom born of ripe experience. Once that system is abolished, banking will become a handmaid of political adventurists and, sooner rather than later, cease to be a means of national service. Those who study world economic history will come across many instances to support our warning.

MISGIVINGS ABOUT COMPENSATION

BONUS SCRIPS—DYES INDUSTRY—TUBES FOR CYCLES—TEXTILE EXPORTS

THURSDAY, 5 P.M.

MARKET GOSSIP

THE Share Markets are hesitant. The welcome modifications made by Mr. Deshmukh in the taxation proposals have failed to evoke any fresh enthusiasm. The speculators who were long in iron and steel shares have been liquidating their holdings. Their patience has been sorely tried. The Government has not obliged them by announcing its decision on the retention prices for steel. Further, some of them are said to have fared badly in bullion and cotton; this must have induced them to cut short their commitments in shares. Since yesterday, there has been a slight resistance to the downward pressure and Indian Irons and Tata Ordinaries have managed to close a little above the lowest levels touched during the week. For all that we know, this may be due more to short covering than to buying by bulls. Textiles, which had remained neglected in recent weeks, have been in the limelight for the last two days. Reports of good offtake of cloth for domestic consumption at slightly higher prices and the steadiness of the cotton market, coupled with the concessions in the excise duty on cloth, may have engendered a feeling of optimism, but it is too early to say how the textile industry will fare in the coming months of this year. Overseas advices about cloth are not quite cheerful and, in the first quarter of this year, India's cloth exports have declined by 40.4 million yards or 17 per cent., as compared with those in the corresponding quarter of 1954.

• • • •

All sorts of reports are circulating in the market regarding the retention prices for steel. While all reports seem to be unanimous that an increase in prices will be granted by the Government, "how" and "when" are the two questions on which there is no agreement. We think that our earlier information that the Government will not take a decision before the Tariff Commission gives its verdict still holds good. This means that the news may not break on the market before the monsoon sets in. During the past few years, steel shares were in their best form when the monsoon was on. Whether they will do so during the coming monsoon remains to be seen, but it is significant that the Government's decision on this vital issue to steel producers is likely to be taken just at that time.

• • • •

As to the question "how," it is widely believed that the Government may hedge the increase in prices with a condition that the resulting higher profits should not be utilised for paying more dividend and for swelling the Managing Agents' commission. If that were to be so, how could the companies pay higher dividends? And, if dividends are not to be increased in the foreseeable future, how can the market value of shares go up? It is true that the resources of the companies will expand and loans taken by them for financing expansion can be easily repaid. But, thereafter, what certainty is there that the industry will not be nationalised? Indeed, one object of the Government's stipulation that no part of the increase in retention prices should be used for paying more dividends may be to see to it that market prices of the companies' shares do not get inflated, so that it may not have to pay large compensation to shareholders. The Home Minister has, of course, clearly stated that it is not the intention of the Government to pay full market price by way of compensation whenever a property is nationalised for a public purpose. Nonetheless, the Government will have to take some basis for determining the quantum of compensation and market value of shares can be one of them. The Government will thus be interested in seeing that market value of shares of companies belonging to key industries does not get unduly inflated.

• • • •

It will be interesting to recall here the tactics adopted by the Government to nationalise the Imperial Bank. Early in 1948, the Government announced its decision to nationalise the Bank. For six years, it did not do anything about it. On the contrary, it made certain statements from time to time which, when carried to their logical conclusion, implied that it was not keen on taking over the Bank. Despite these statements, the fear of nationalisation lingered and the shares did not gain very much in value, the increase in the dividend level from 14 to 16 per cent. notwithstanding. And, when the shareholders pleaded with the Government to take the year preceding February, 1948, when it announced its decision to nationalise the Bank, as the basis for determining compensation, they got a negative reply. The basis taken, as readers are aware, was the average market value of the Bank's share for one year preceding the Government's final decision. What certainty is there that a future Government will not follow these tactics in regard to other concerns also?

• • • •

Are we unduly exaggerating the possibilities in the future? May be we are. But then consider the demands that are being made by some politicians that insurance be nationalised and Mr. Deshmukh's non-committal reply to them. The question was raised in Parliament even last week. A Congress member from Travancore-Cochin expressed himself in favour of nationalising insurance and advised the Government to establish an Insurance Corporation on the same lines as the State Bank of India. He felt that the public would have more confidence in a Government owned and controlled insurance Company. An independent member, Mr. Tulsidas Kilachand, however, opposed this suggestion and cogently argued the case against nationalisation. What did Mr. Deshmukh say in reply? He said: "We are considering this question and trying to form a view. Nothing could be gained by my entering into a detailed discussion here in the present context." Why should the Government consider the question at all, if its intention is not to nationalise insurance companies? It is obvious that the Government is seriously considering nationalisation of this service either in part or in full. This is the second time that Mr. Deshmukh has spoken thus on this question since the commencement of 1955. When he first made this remark in Madras early this year, insurance shares heavily slumped and have not recovered the ground very much since then. A few more threats of this nature by the Government's spokesmen will be sufficient to keep the market value of insurance companies' shares at a depressed level, until it finally makes up its mind. And when it does so, it will, perhaps, come forward and say that it will pay compensation on the basis of the average market value for one year preceding the date of its announcement. But this would be a period throughout which the shares had remained at low levels, thanks to the threats of nationalisation uttered by official spokesmen.

• • • •

Take the case of coal, another industry on which the sword of Damocles is hanging. For years, this industry has been asking for a fair price for its product, but the Government has turned a deaf ear to this plea. The result is that the vast majority of coal companies are working on a meagre profit, paying modest dividends. Even when the whole market is in a buoyant mood, coal shares remain friendless. In the context of the Government's present attitude towards the private sector, would it be very uncharitable if one were to allege that the Government is deliberately pinning the coal industry down, so that it could take over the coal mines for a song?

• • • •

The share market seems to have entirely missed the striking remark made by Mr. Deshmukh regarding bonus shares. Answering a complaint in Parliament that the Government was unduly delaying sanction to applications for issue of bonus shares, Mr. Deshmukh said that the applications had to be kept pending till a decision was taken on the Taxation Enquiry Commission's report. There were proposals, he said, that some sort of tax should be levied on the issue of bonus shares which were after all created out of reserves on which the full tax had not been paid to the Government. It had to be decided, he added, at what stage this capital could be subjected to some tax. Mr. Deshmukh revealed that the Government had not yet been able to reach a decision on the various complicated problems involved and it might take some time. But if any one were in a hurry for a decision, the only answer would be, he remarked, rejection of the application. It should also be realised, he stressed, that delay in answer could not be said to be affecting trade or industry, because the reserves were already there and were being utilised for the same purposes to which it could be put after the issue of such bonus shares. These remarks of Mr. Deshmukh clearly show that the Government has not yet accepted the Taxation Commission's conclusion that there was no case for taxing bonus shares. Following this view of the Commission, the public had taken it for granted that there would be no tax on issue of bonus shares and that it was only a question of time for the Government to give the green signal to those companies which had sought its permission to capitalise a part of their reserves. This view now seems to be wrong; the uncertainty still continues and none knows when it will end.

• • • •

Mr. T. T. Krishnamachari, Minister for Commerce and Industry, revealed in Parliament on Friday last that the much-talked of target of 6 million tons for steel industry had been reduced to 4.5 million tons, though subsequently it might be expanded to that figure. The main reasons for this downward revision of the target seem to be (*a*) the possibility of railways not being able to expand to the extent required for handling the traffic that will arise, (*b*) the necessity to prepare in advance the capacity for using the steel that will be produced, and (*c*) the absence of adequate engineering capacity to fabricate at least some of the equipment needed for putting up steel factories of the magnitude contemplated. Remarking that 4.5 million tons of steel meant the haulage of about 36 million tons of other materials, Mr. Krishnamachari candidly admitted that "it is a problem that baffles the best brains of the country." It will be interesting to know the effect of this reduced target on the various projects for the expansion of steel output that had been agreed to before. Whose programme will be cut? Will it be that of Tatas, or the Russian or the British schemes?

• • • •

Another interesting piece of information was given by Mr. Krishnamachari in Parliament. It related to the programme for the establishment of a full-fledged dyestuff industry, including the manufacture of intermediates. He said that the Government had before it three concerns which would start production of dyestuffs and intermediates and that it proposed to utilise the technical assistance that had been offered by a friendly country. The Government was trying to sound all the dyestuff producers, in order to regiment and streamline production on a large-scale. Questioned by some members about the country which was ready to offer technical assistance to India, the Minister said: "The expert we are getting is from a country which has no interest in dyestuff manufacture in India. He is not from a country from which any of the participants come." When pressed by some to disclose the name of the country which was willing to spare an expert, he added: "That is about as much as I can say at the moment."

• • • •

This cryptic remark of Mr. Krishnamachari has led to a certain amount of speculation in Bombay chemical circles. Some feel that the Minister must be having Russia in his mind; Russia, we are told, now has the advantage of dye experts from East Germany and Czechoslovakia. But our enquiries reveal that this surmise is not correct. The country referred to is Italy. Recently, Dr. Nagaraja Rao, Government's Industrial Adviser, had been to this country and had talks with its big group of chemical and dye manufacturers, namely, the Montecatani. An expert, or a team of experts, from this group is expected to arrive in India shortly. He will visit some of the factories started for manufacturing dyes such as Atul Products Ltd. and Associated Research Laboratories, Poona, and submit a scheme to the Government for the developent of dyestuff industry. It is believed that the scheme will be designed to use the waste gases of oil refineries and steel factories.

• • • •

A notable example of Indo-British co-operation is to be found in the organisation of India's cycle industry which has received all support and guidance from British cycle manufacturing firms. A well-known unit in this industry is T.I. Cycles of India, Ltd., Madras, which had made commendable progress, thanks to the technical assistance rendered by Tube Investments Ltd., Birmingham. It would now appear that the British firm is considering a proposal to start a factory in the neighbourhood of Madras for the production of precision tubes used in the manufacture of cycles. This was revealed by Sir Ivan Stedeford, Chairman and Managing Director of Tube Investments Ltd., in the course of a Press conference, at Madras, last week. He said that the total outlay on the factory would be about Rs. 2 crores and, if everything went well, the proposal would materialise in two years. A notable feature of the proposal is that, if it were implemented, it would not only help develop India's cycle industry but also assist the development of several other industries. Such a factory, when it is established, would be able to meet the growing demands of industrial India for precision engineering tubes. The tubes produced by this company can be used in railways, aircraft and automobiles, as well as other industries and trades.

• • • •

Sir Ivan pointed out that the kind of tube used in the manufacture of bicycles was a high precision tube and had to be made out of very high quality steel. In England, the T.I. Ltd. were the pioneers in the production of this class of tubes and they were making them for the last 30 years. They could claim to be experts in the line and they were making their own machines for the manufacture of such tubes. He said: "With all the knowledge behind us, we are interested in the possibility of starting a factory in India for the manufacture of these tubes. If we do so, with 30 years of experience in the production of cycle tubes, I think it will be a foregone conclusion that it will not be long before, as in the case of bicycles, India will produce under the management here the same quality of bicycle tubes as are being produced in England." Sir Ivan revealed that a final decision had not been taken on this proposal which required further consideration.

• • • •

Significantly enough, he added that, if India really wanted foreigners like them to come and help establish new industries, he felt there should be sufficient encouragement or at least there should be no discouragement. The recent speeches of India's Prime Minister had allayed the fears of foreigners, he said. He expressed the view that more categorical statements of the kind should be made to make the position clear for the people abroad.

• • • •

A factor, which is of considerable importance to the prosperity of textile industry is the trend of exports. From this point of view, it is gratifying to note that exports have improved month after month in the first quarter of this year. They were 58.2 million yards in January, 68.1 million yards in February and 68.2 million yards in March this year. Thus, during the first quarter of 1955, exports aggregated 192.5 million yards. The cumulative total is, however, well below the export level in the first quarter of 1954 when it was 232.8 million yards. This is due to lower offtake by the Asian and African markets. Among India's principal markets, Aden absorbed 13.72 million yards as against 25.93 million yards in the first quarter of 1954, Burma 8.01 million yards as against 10.12 million yards, East Africa 12.90 million yards as against 21.44 million yards, West Africa 11.74 million yards as against 17.91 million yards, Sudan 17.97 million yards as against 18.28 million yards and Australia 10.85 million yards as against 16.68 million yards. Analysing the trends in export trade, the latest issue of the *Bulletin* of the Cotton Textiles Export Promotion Council points out that the main reason for the decline is the "increasing inroads of Japan in the markets of Asia and Africa, and the U.K.'s determined efforts to augment exports to Australia and New Zealand."

RESTRICTED TRADING IN SHARE MARKET

SUPPORT TO TEXTILES

(From Our Own Correspondents)

BOMBAY, 21st April

BARRING some speculative buying enquiries for textile shares, activity on the Stock Exchange continued to be at a low ebb during the week under review. Due to lack of fresh incentives, and the weakness of steel shares, dealings were meagre and fluctuations were narrow. The undertone was, however, steady, in the absence of any discouraging influences.

The somewhat encouraging trend in textile shares was assisted by favourable advices from the cloth market and the reduction in excise duties on superfine cloth, announced by the Union Finance Minister in Parliament on Monday this week. Steel shares which appeared to be somewhat steady in the earlier part of the week came in for considerable pressure during the past two days. A leading operator in Calcutta is reported to have unloaded a substantial part of his holdings in Indian Irons. Though the general expectation is an increase in retention prices with a special 'load' in them, in view of the expansion plans of the two main steel producers, there seems to be another section which doubts whether the two steel producers would be entitled to the special 'load' in retention prices for rehabilitation purposes when the Government has already granted the development rebate. Anyway, in view of the uncertainty about this question, there was an inclination to lighten the commitments. Further, heavy commitments in bullion by one of the leading operators is also said to be the reason for his selling in Indian Irons. Tata Steels met with nervous liquidation in sympathy.

The sharp recession noted on Thursday last week in Tata Ordinaries persisted on Friday also with a further drop from Rs. 235-12 to Rs. 234-8 on end-of-account, considerations. The new account, however, witnessed a better trend and the shares revived to Rs. 236-12 on Tuesday. But the heavy unloading at higher levels brought the quotation down to Rs. 232-4 yesterday. On replacement buying, there was an improvement to Rs. 233-4 at the close. Indian Irons moved between Rs. 34-15½ and Rs. 34-12½, before receding to Rs. 33-14 yesterday. Today, however, they were a shade better at Rs. 33-15½.

Textile shares provided the feature of the week on revival of speculative attention. Bombay Dyeings firmed up from Rs. 466-14 *cum-div.* (dividend Rs. 20) to Rs. 458-12 *ex-div.* Kohinoors hardened by Rs. 2 to Rs. 315 and Century advanced from Rs. 378-12 *cum-div.* (dividend Rs. 22) to Rs. 367-12 *ex-div.* Central Indias were, however, dull at Rs. 126. Finlays were unchanged at Rs. 260, as also Gokaks at Rs. 215. India United Ordinaries, after soaring from Rs. 10-11 to Rs. 12-10 on reports that the holdings of the Managing Agents were to be auctioned privately at Rs. 20 per ordinary share for the purpose of reconstituting the managing agency, reacted sharply to Rs. 11-13½. Laxmis attracted support and went up by Rs. 6-4 to Rs. 506-4. New Citys advanced by Rs. 3-2 to Rs. 144-6 and New Greats by Re. 1 to Rs. 150. Shree Niwas shed Re. 1-4 to Rs. 233-12, while Simplex were marked up by Rs. 4 to Rs. 153-8. Standards were quiet at Rs. 340-10, a drop of Rs. 3-2 over the week. Svadeshis disclosed no change at Rs. 194-8, as also Tata Mills at Rs. 53-4. Vishnus picked up Re. 1-4 to Rs. 116-4.

A marked rise in Imperial Bank shares was the highlight in the banking section, following the official announcement of the compensation for the shares. In the Bill to nationalise the Imperial Bank, introduced in Parliament on Saturday last, the compensation to be paid on the fully paid shares and partly paid shares is Rs. 1,765-10 and Rs. 431-12-4 per share, respectively. Because of the big gap between this price and the market price, there were enquiries for these shares, and the fully paid-ups rose by Rs. 102-8 to Rs. 1,680 and the partly paid-ups by Rs. 12 to Rs. 408-12. Bank of Indias fell by Re. 1-8 to Rs. 146-12 on lack of support. Central Banks were quiet at Rs. 49-12 and their new shares at Rs. 51-8. Punjab Nationals were done at Rs. 43-12 *ex-div.* United Commercials shed a fraction to Rs. 44-4.

In the insurance section, New Indias revived by Rs. 2-4 to Rs. 52-4, presumably in expectation of getting higher compensation in the event of nationalisation. The Finance Minister announced in Parliament on Saturday last that the Government was considering the question of nationalisation of insurance companies and was trying to form a view. Orientals, however, dropped Rs. 25 to Rs. 7,225. Empire of Indias were marked down by Rs. 25 to Rs. 675 and British India Generals by As. 3 to Rs. 13-10.

Electricity shares showed a mixed pattern. Tata Hydro group disclosed a better tone with a rise in prices, Andhra Valleys moving up by Rs. 7-8 to Rs. 1,412 and Tata Powers by Rs. 6-4 to Rs. 1,497-8. Tata Hydros were a shade better at Rs. 146-8. Ahmedabad Electrics eased from Rs. 111-4 *cum-div.* (dividend Rs. 4) to Rs. 106-4 *ex-div.* and Bombay Suburbans by Re. 1-9 to Rs. 122-8. Surat Electrics continued to improve with a further rise of Re. 1-9 to Rs. 129-6. Amalgamated Electrics were done at Rs. 10-13. *ex-div.* (dividend As. 6), as against Rs. 11-4½ *cum-div.* a week ago.

In the miscellaneous section, sugar shares were prominent with sharp rises. While Belapurs were dull at Rs. 311, Phaltans improved by Rs. 3-8 to Rs. 120-8 and Walchandnagars by Rs. 3-2 to Rs. 225-10. Cement shares were uninspiring, A.C.C. moving between Rs. 181-4 and Rs. 178-12, before winding up at Rs. 179. Digvijays were put through at Rs. 179-12. Among shipping shares, Scindias, after an improvement from Rs. 15-3½ to Rs. 15-9½, fell to Rs. 15-6. India Steamships dropped from Rs. 7-10 to Rs. 7-7. Great Eastern Shippings were quiet at Rs. 16-1. In the engineering and mining group, Alcocks revived from Rs. 261-4 to Rs. 267-8, but reacted to Rs. 263-12. Premier Constructions were in demand and rose by Rs. 2-8 to Rs. 163, on reports about issue of bonus shares. Shivrajpurs were neglected and dropped Re. 1-4 to Rs. 74-8. Indian Coppers were quiet at Rs. 3-8, while B.B. Petrols were steady at Rs. 3-4½. Among other miscellaneous industrials, Bombay Burmahs had an early rise from Rs. 468-2 to Rs. 474-6, but the gains were almost erased when the shares closed at Rs. 468-12. Their New shares shed Rs. 2-8 to Rs. 171-4. B.I.Cs met with some support and added As. 2½ to Rs. 8. Killick Industries were steady at Rs. 173-8, as also National Rayons at Rs. 200-8. Tata Chemicals eased by As. 2½ to Rs. 14-13½ and Tata Oils, on lack of support, shed As. 4 to Rs. 39-12. Wimcos were in demand and rose by Rs. 2-8 to Rs. 205.

• • • •

Calcutta Stock Exchange

CALCUTTA, 20th April

The week under review was an uneventful one for the Calcutta Stock Exchange. Due to lack of fresh incentives trading was dull. The market was closed on Thursday and Friday on account of year-end for the Bengali business community and Bengali New Year, respectively. Saturday witnessed quiet trading, and the reopening of business on Monday did not show any better tendency. Excepting in Teas, a somewhat steadier tone was in evidence in other sections on Tuesday. Today, all the sections were a shade easy, and the small recovery made yesterday was lost.

Optimistic expectations of new retention prices for steel, which should be effective as from 1st April, was the principal cause for maintaining speculative Indian Irons without a major decline. It is expected that the new prices would take into consideration the need for more funds for the steel industry for expansion. Reports have suggested that the Government is considering certain proposals in this regard, and the stock market is enthusiastic over this matter inasmuch as more funds for development of the steel industry in the private sector, which, although will not benefit shareholders of the companies for the time being, will bring about greater activity in other engineering and allied industries. Tea shares were involved in profit-taking. Prices of this beverage have been falling during auctions of recent weeks, and there are sufficient reasons for a forecast of further falls in the new season's sales. First and foremost is the expected increase in production.

Jutes were lethargic, and liveliness would seem to await Argentina's support to the jute goods market. The tax concessions announced by the Finance Minister on Monday relating to cotton and woollen fabrics, paper, electric bulbs, fans, and batteries, and perquisites of company personnel, did not have any effect on miscellaneous industrial shares.

Sectionwise, Indian Irons declined from Rs. 35-6 to Rs. 34-11 on Saturday. On Monday, there was a recovery to Rs. 34-15 which was maintained yesterday. Today, however, there was a sharp recession to Rs. 33-15. A striking feature was provided by the early rise from Rs. 17 to Rs. 18-1 in Texmacos, but the rate was put down at Rs. 17-9 today. Indian Standard Wagons lost from Rs. 138 to Rs. 135, but recovered to Rs. 137. At Rs. 22-11, Indian Galvanizings were lower by As. 6, while Jessop & Cos. gained by one point to Rs. 35-15 *ex-div.* Richardson & Cruddas were supported at Rs. 17-10.

Although tea shares recorded several transactions, the trend of prices was definitely downwards. Dhelakhats gave way from Rs. 23, to Rs. 22-1, and, at Rs. 33-8, East Indias disclosed a loss of one point. Methonis, after reaching a high of Rs. 35-12, receded to Rs. 33-12, but subsequently recovered to Rs. 34-8. On the other hand, Bormahjans hardened from Rs. 25-8 to Rs. 26-5. Other shares that registered recession included Hasimara, Hansquas, Hattikhiras, Ledos, Nagaisurrees, Tezpores, Teloijans and Bishnauths.

Sugar shares once again provided features. Carew & Cos. were raised from Rs. 13-8 to Rs. 15-12, but today gave way to Rs. 13-6. Dharbhangas were crossed at Rs. 17-2.

A few features were provided in the miscellaneous section. Ralliis India recovered from Rs. 37-8 to Rs. 39-8. Moderate support was provided to Calcutta Tramways which, as a result, gained from Rs. 16-10 to Rs. 17-11. Rohtas Industries were fractionally higher at Rs. 24-11. Niccos were shown attention at Rs. 24-1. Orient Papers were lifted from Rs. 26-13 to Rs. 27-9, while India General Navigations were easy at Rs. 92. Martin Burns were put through at Rs. 22-14 and Indian Coppers were quiet at Rs. 3-8.

• • • •

Madras Stock Exchange

MADRAS, 20th April

The performance of the Madras Stock Exchange turned out to be disappointing during the week under review. Trading in almost every section was characterised by extremely sluggish conditions, with the result that there was hardly any noteworthy fluctuations in prices. The dull conditions in the textile section were attributed to unfavourable overseas advices. Plantings too fared no better. Teas and rubbers disclosed very little activity. So also coffees. The miscellaneous section proved no exception to the generally dull trading conditions.

A notable feature of the week under review was the decision of Textool Co., Ltd. to issue 4,000 shares of Rs. 100 each to the shareholders, as on 30th April, 1955, in proportion to 2 new shares for every 3 shares held. The Neelamalai Tea and Coffee Estates Ltd. declared an *interim* dividend of 10 per cent. for the year ended 30th June, 1955. The dividend for the year 1954 was 17½ per cent. As against these gratifying features, a disquieting aspect of the week was the adoption of the resolution to take the Mysore Gold Mining Company into voluntary liquidation at a meeting of the Company held on the 18th inst.

Among textiles, Coimbatore Cottons lost Rs. 3 to Rs. 282 and Vijayakumars Rs. 6-8 to Rs. 93-8. Ranga Vilas eased by Re. 1-8 to Rs. 62. Lakshmis 'A' (Rs. 25 paid up) suffered a loss of As. 4 to Rs. 72-12. Travancore Rayons were lower by an anna and a half at Rs. 14-4½ *cum-div.* Metturs, however, gathered Re. 1 to Rs. 319-8 and Janardhanas Rs. 5 to Rs. 83. Radhakrishnas (Rs. 100 paid up) gathered Rs. 2 to Rs. 220 *cum-div.* Cauveri Spinnings put on As. 2 to Rs. 9-4. Bangalore Woollens, however, lost Re. 1-8 to Rs. 448-8 and Buckinghams As. 8 to Rs. 156-8.

Teas, among plantings, lacked support. Halleyburias eased from Rs. 28 to Rs. 27-8. Coorg Teas were lower by As. 2 at Rs. 9-5 *ex-div.* Devasholas were quiet at Rs. 26 and Devons at Rs. 17-12. United Nilgiri Teas were neglected at Rs. 295 and Emerald Valleys at Rs. 7-11½. Udayagiris, however, advanced by As. 8 to Rs. 20-8 and Highlands by an anna to Rs. 16-2.

Rubbers too fared no better. Peninsulars lost As. 2 to Rs. 15-14, Cochin Malabars and Kallas were slightly lower at Rs. 7-7½ and Rs. 5-7½, respectively. Malankaras were colourless at Rs. 27, Mercaras at Rs. 6-7 and Sheveroys at Re. 1-9. Valkundams, however, improved by Re. 1 to Rs. 24-6 *cum-div.* and Nilamburs by As. 4 to Rs. 12-12.

Among coffees, Coffee Lands were unchanged at Rs. 16-12 while Consolidated Coffees put on an anna to Rs. 19-2. Mysore Coffees and Kadur Coffees were quiet at Re. 1-10½ each. Puthutotams were lower by an anna at Rs. 4-10, while Amalgamated Coffees moved up by As. 4 to Rs. 7.

In the miscellaneous section, Aluminium Industries declined by As. 4 to Rs. 19-2. Mysore Chromes suffered a loss of an equal amount to Rs. 4-8. Ralliis were lower at Rs. 37-8, as against Rs. 38-8. Brumtons, however, improved by As. 6 to Rs. 7-10 and Mysore Tobaccos by As. 4 to Rs. 10-12. Andhra Cement 'A' were quiet at Rs. 136-8 and 'B' at Rs. 13-14. Parrys were dull at Rs. 4-12. Textools were unchanged at Rs. 110 and Mysore Gold at Rs. 3-8½.

PUNJAB NATIONAL BANK

A special supplement of 8 pages is issued free with this number of Commerce *to commemorate the Diamond Jubilee of the Punjab National Bank.*—ED.

Notice

NOTIFICATION OF SALE

MESSRS. J. THOMAS & CO., LTD., WILL sell by public auction, unless previously disposed of by private treaty, at their office at 8, Mission Row, Calcutta 1, on the 28th April, 1955, at 12 noon, under instructions from the owners, the Jorehaut Tea Company, Ltd., 17, St. Helen's Place, London, E.C. 3; Murmuria Tea Estate (including Hattichungie Division) in one lot as a going concern as from the 1st January, 1955.

For conditions under which the Tea Estate will be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estate intending purchasers should apply to J. Thomas & Co., Ltd., 8, Mission Row, Calcutta 1, Or Dignam & Co., Solicitors, 29, Netaji Subhas Road, Calcutta 1, or James Warren & Co., Ltd., 31, Chowringhee Road, Calcutta 16.

NEWS IN BRIEF

THE Travancore-Cochin State Assembly passed into law last week, the Travancore-Cochin Agricultural Income-tax (Amendment) Bill.

The 162-year old *zamindari* system was abolished in West Bengal on 15th April, 1955. The system had been introduced by Lord Cornwallis in 1793.

The all-India second estimate of linseed for 1954-55 puts the current year's area at 2,572,000 acres, as against the adjusted second estimate of 2,535,000 acres for 1953-54.

Under the Community Programme in India, 11,886 miles of *kutcha* roads and 1,145 miles of *pucca* roads were constructed up to the end of December, 1954.

Upto the end of 1954, contributions from people in cash, labour and kind aggregated about Rs. 7.48 crores under the Community Development and National Extension Schemes, while the Government spent Rs. 13.48 crores.

India and Pakistan have evolved an agreed procedure for the transfer of bank accounts under the Banking Agreement of 1949 and the bulk release of lockers and safe deposits under the Movable Property Agreement of 1950 between the two countries.

The Andhra State will have a separate Industrial Finance Corporation, as soon as the formal sanction of the Central Government is received. All the preliminary work in connection with the formation of the State Corporation has been completed. The necessary legislation will be introduced in the Legislative Assembly meeting in June next, after the formal sanction is received.

The nineteenth annual session of the Indian Roads Congress will be held at Srinagar (Kashmir) from 18th to 25th June, 1955. More than 300 highway engineers from all over India are expected to attend. Mr. H. P. Matharani, Consulting Engineer (Road Development) and Joint Secretary to the Government of India, Ministry of Transport, will preside over the Congress.

The Governments of India and the U.S. have signed four operational agreements, involving total U.S. assistance to the extent of $720,000. The Government of India's total contribution to these joint projects amounts to Rs. 4,12,61,200. The projects covering the agreements are agricultural economics research, determination of soil fertility and fertiliser use, trades training and ground-water irrigation.

The output of electricity during November, 1954, by 674 public utility power stations in India aggregated 653.8 million k.w.h., of which 534.6 million k.w.h. were sold to ultimate consumers. As compared to October, the electricity output increased by 29.5 million k.w.h. The corresponding figures of output and sale for November, 1953, are 554.3 million k.w.h. and 455.7 million k.w.h., respectively and for November, 1939, 216.6 million k.w.h. and 181.5 million k.w.h., respectively.

The Bill to amend the Travancore-Cochin General Sales Tax Act has been referred to a select committee. The Bill seeks to abolish sales tax on handloom products and levy an enhanced rate of sales tax on certain varieties of mill-made goods. The Bill also contains a proposal to introduce a single-point system of sales tax on cash crops like ginger, cardamom, lemon-grass oil, turmeric, pepper and copra. There is also a provision to set up an appellate tribunal for the disposal of sales tax cases.

The Government of India will soon set up a national rice commission under the Food and Agriculture Ministry. The Commission will promote national and international action with respect to production, conservation and consumption of rice in close collaboration with the International Rice Commission. Subjects under the purview of the Commission will include stepping up of production of rice, improvement in the quality of rice, mechanisation of rice production and reduction of losses through improved operational methods, etc.

The Indian Central Oilseeds Committee has recommended to the Government of India the establishment of an Export Promotion Council for oilseeds and vegetable oils at an early date for promoting the export trade of vegetable oils and oilseeds. The Committee has also recommended that export duty on de-oiled groundnut cake as well as groundnut cake from expeller be reduced and a more liberal quota of linseed cake should be allowed in view of the reported large accumulation of stocks in India.

The Lok Sabha has passed the Sea Customs (Amendment) Bill, with a few amendments. One of the clauses which have been further amended relates to the burden of proof in the case of goods seized. The new clause provides that where goods were seized "in the reasonable belief" that they were smuggled goods, the burden of proof would fall on the person from whose possession they were seized. This applies to gold, gold manufactures, diamonds and other precious stones, cigarettes, cosmetics and any other goods which the Central Government may by notification in the official *Gazette* specify.

The President has given his assent to the Assam Acquisition of Land for Flood Control and Prevention of Erosion Bill, 1955, and the Saurashtra Agricultural Debtors' Relief (Amendment) Bill, 1955. The former Bill replaces the Assam Acquisition of Land for Flood Control and Prevention of Erosion Ordinance, 1955, which had been promulgated to provide for speedy acquisition of land for development measures in connection with flood control or prevention of erosion. The latter Bill aims at including in the Saurashtra Agricultural Debtors' Relief Act, 1954, provisions for compensatory payments to *girasdars* or *barkhalidars* for charges on the acquired properties.

The Government of Bombay has exempted small-scale industrial units in the City and Island of Bombay employing less than 50 persons from the enforcement of the housing policy of the Government. At present, one of the conditions for grant of building permits for extension of the existing industrial undertaking or establishment of new ones is that the concern should provide accommodation for housing 40 per cent. of the labour to be employed in the new construction or 40 per cent. of the additional labour employed, as a result of the proposed extension, if such labour exceeds 20 persons in number. In view of the difficulties experienced by small-scale industries and on the advice of the State Advisory Council of Industries, the Government has exempted the industrial units employing less than 50 persons from the operation of this policy.

The Government of India has set up a committee to investigate into the working of the diamond mining industry in Vindhya Pradesh State and to submit recommendations for its improvement. The terms of reference of the Committee are to make a detailed investigation into all aspects of the diamond mining industry in the State since the coming into force of the Mineral Concession Rules in October, 1949, with particular reference to "(1) the system of raising contractors, (2) the existing arrangements for the sale of diamonds by auction at Panna, (3) the feasibility of introducing co-operative form of organisation for shallow mining and (4) the improvement of security arrangements, so that there is no leakage of revenue that accrues to the State from this industry." The Committee has been asked to submit its report not later than 1st June, 1953.

With a view to implementing the Government of India's policy to purchase indigenous wheat at the minimum price of Rs. 10 per maund and in consultation with the Government of India, the Government of Bombay is contemplating to start purchases of wheat at Dholka in Ahmedabad District, Idar in Gabarkantha District, Palanpur in Banaskantha District, Patan in Mohsana District, Dohad in Panch Mahals District, Cambay in Kaira District, Nandurbar in West Khandesh District, Niphad in Nasik District, Bijapur in Bijapur District and Annigeri in Dharwar District at Rs. 10 per maund for delivery at local godowns. Only white variety of wheat of the new crop and of fair average quality will be purchased from cultivators. Wheat below fair average quality will not be accepted.

From Abroad

The total income of Canadian labour reached an all-time peak of $11,910 million during the year 1954. This represents an increase by 2 per cent. over that in 1953.

A contract of £11,500,000 has jointly been secured by a British and a French firm for building a new 580-mile pipeline to link the oilfields of Abadan with Teheran, the Persian capital.

The U.S. foreign aid programme will be carried on by the State Department, after the Foreign Operations Administration (F.A.O.) goes out of existence in June. The formal order for the shift will be issued in a few days.

Norway has decided to float, in co-operation with the World Bank, a $15,000,000 loan in the United States capital market. It is understood that, in addition to this, the World Bank will grant Norway a direct loan of $25,000,000, or an equivalent amount in other currencies.

The output of crude steel in the U.K. in March, 1955, was at an annual rate of 20.53 million tons, as against 20.49 million tons in the previous month and 18.96 million tons in March, 1954. The output in the first quarter of 1955 was at an annual rate of 20.29 million tons, as against 18.77 million tons in the corresponding quarter of the previous year.

While the imports of tea of the U.K. for consumption declined further during February, warehouse and customs stocks rose appreciably, and prices fetched at London auctions continued their downward trend. According to the International Tea Committee in London, tea imports of the U.K. for consumption were at a low of 38,450,000 lbs. net in February, 1955, as compared with 39,950,000 lbs. in February, 1954.

The rapid expansion of Aden, as a result of the opening of a new 5,000,000-ton-a-year oil refinery operated by the British Petroleum Company, is indicated by the fact that, during the year ended 31st March, 1955, just over 5,000 steam and motor vessels of over 200 tons called at Aden port. This is the first time that the annual turnover of shipping has exceeded the 5,000 mark, and represents a total tonnage of 22,500,000. In addition, during the same period about 1,600 *dhows* and smaller craft also used the port facilities.

PERSONAL

MR. M. M. Bowman, General Sales Manager of the Standard-Vacuum Oil Company, has retired after thirty years of service in India.

Mr. W. Jenkins, who recently retired from the Board of Directors of Messrs. W. H. Brady and Co., Ltd., Bombay, sailed for the U.K. on Thursday this week.

Dr. J. C. Ghosh, who recently resigned his office as Vice-Chancellor of the Calcutta University, has been appointed a member of the Planning Commission.

Mr. R. F. Barley and Mr. Haji Mohd. Hamza have been elected Chairman and Vice-Chairman, respectively, of the Tanners' Federation of India for 1955.

Mr. G. D. Somani, M.P., has been elected Chairman of the Millowners' Association, Bombay, for the year 1955. Mr. J. C. Burns has been re-elected Deputy Chairman of the Association.

Dr. M. S. Thacker, Director of the Indian Institute of Science, Bangalore, is likely to be appointed Secretary to the Central Ministry of Natural Resources and Scientific Research in succession to the late Dr. S. S. Bhatnagar.

Mr. R. G. Saraiya, a prominent industrialist of Bombay, who was appointed Chairman of the Bombay State Road Transport Corporation in July last, will continue for another term. The non-official members of the Corporation are Messrs. B. D. Akki, S. A. Amin, Dalatrao S. Desai, Chimanlal Manilal Parikh and P. K. Sawant.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 26th April

Tea Restriction Scheme

The Dutch Indies tea growers' meeting at Bandeong and Batavia have agreed to restrict Dutch Indies production by 8,500,000 pounds, compared with the 10,000,000 pounds stipulated by Ceylon and British Indies growers. The scheme has thus been ratified by all British and Dutch interests in India, Java and Ceylon, and it is expected that some form of limitation of output will be adopted by gardens in Northern India which are not members of the Indian Tea Association. The scheme, it should be explained here, provides for a total reduction on last year's crop of about 57,200,000 lbs. as under:

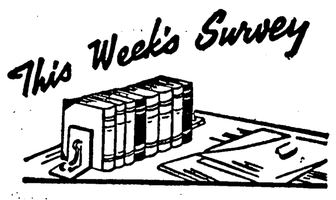
	Lbs.
Northern India	32,500,000
South India	4,000,000
Ceylon	11,200,000
Java Sumatra	9,500,000
	57,200,000

In Northern India, gardens will be restricted on a scale varying between 3 per cent. and 15 per cent. of the average crop for the last three years based on the average price obtained over the same period, gardens which make the finest tea being assessed at 3 per cent. and those which make the commonest tea at 15 per cent. Considering the fact that stocks of all tea in the United Kingdom on 31st January last stood, approximately, at 283 million lbs., against 251 million lbs. twelve months ago, a reduction of 57 million lbs. in output this year should very coonsiderably ease the stock position at Home, provided, of course, consumption shows no diminution.

According to reports from Bonn (West Germany), the final agreement for the building of a pilot steel plant in Pakistan has been signed between the German firm of Krupps and the Pakistan Government. The plant is estimated to cost about £18,400,000 and will entail the construction of pipelines to bring natural gases from about 200 miles away and the installation of a plant for the enrichment of inferior ores. The Government of Pakistan will finance upto 75 per cent. of the cost. It hopes to secure foreign assistance under the Colombo Plan and from the World Bank.

A new post-war record for the volume of material handled, showing the healthy state of the United Kingdom wool textile industry, was set up by the Bradford Conditioning House during March, 1955. For the first time, the monthly total for tops, wools, noil, wastes and yarns exceeded 10,000,000 lbs. (the actual total was 10,273,239 lbs.). This compares with 7,688,671 lbs. in February, 1955 and 9,473,167 lbs. in March last year. The Conditioning House set up another record during March, 1955, carrying out 27,586 tests, as compared with 21,167 in the previous month and 25,654 in March, 1954.

The U.S. Senate voted, on the 15th inst., increased appropriations for the United Nations expanded technical assistance programme and other international activities. The appropriation measure now goes to conference with the House, to reconcile differences between the Senate and the House versions. As approved by the Senate, the measure provides $945,412,835 for all purposes, an increase of $8,225,400 over the total in the House version of the measure. The appropriation applies chiefly to expenditures for the remainder of the fiscal year ending 30th June, 1955.



ENCOURAGING PRIVATE ENTERPRISE

THE view that greater opportunities lie ahead for private enterprise in the field of economic development and much more could be done in this direction if greater encouragement were given to such enterprise by the State was expressed by Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, in the course of his address before the nineteenth session of the Economic and Social Council of the United Nations held in New York the other day. An important step in this direction, as he said, is the proposed International Finance Corporation. It may be recalled that this Corporation, which will be an affiliate of the World Bank, was first proposed by Mr. Black in 1951. After having been discussed several times in the U.N., the proposal was finally approved by the U.N. General Assembly in December last. The draft charter has now been prepared by the World Bank and sent to its 56 member-Governments for their approval. The Corporation will come into operation when 30 member-nations, the aggregate subscriptions of which would be at least $75 million, out of the total capital of $100 million, accept the Charter.

The Corporation, as is now well known, is intended to work directly and intensively in the field of private enterprise. Its purpose will be both to find and provide capital for private undertakings of economic value to member-countries. Though it will be affiliated to the World Bank, it will be entirely separate and distinct from the Bank. The Charter gives this body more freedom than that now possessed by the World Bank. Also, its functions differ from those of the World Bank, in that, while the Bank insists on the guarantee of the Government of the member-country concerned before a loan is granted, the I.F.C. will lend its funds without such guarantee. Another notable feature of the I.F.C.'s functions is that, contrary to earlier expectations, it will not invest its funds in capital stock. It will provide, in effect, venture capital by investing, for instance, in securities which will give the Corporation a right to participate in the profits of the enterprise and which, when sold to private investors, would be convertible into capital stock. The I.F.C. will not assume management responsibility. It will be under an obligation to revolve its funds by selling its investments to private investors as opportunity offers.

The success of the Corporation, as Mr. Black very rightly said, would be judged, not primarily by the amount or profitability of its own investments, but by the extent to which it generated an increase in the flow of private capital. The I.F.C. would "supplement and not substitute for private investment." As far as financing is concerned, the Corporation, he said, would regard itself as the last resort, not the first. It would not invest in projects where the private interests concerned were not carrying a full share of the investment. It would have authority to invest in private agricultural, financing and commercial undertakings, but its main emphasis is likely to be on industry. Mr. Black felt that the Corporation would be an effective clearing house to bring together investment opportunities, private capital and experienced management.

Expressing his views on the scope for private investment, Mr. Black said that investors were gaining confidence in the prospects of economic development and he believed that this trend should be encouraged by creating positive inducements for more private capital to come forward, internationally and domestically. He, however, frankly admitted that, if private capital had to play this constructive role on a broad scale, it required "certain attitudes and practices by all concerned." Evidently, he does not find the attitudes and practices of some countries and investors conducive to a proper functioning of private capital. To quote what he said:

"Private business men going abroad, for example, must conduct their affairs on proven principles of sound business—on a sense of responsibility to the community, to their workers and to their customers. Their enterprise must benefit the host country as well as themselves. And I believe this concept is fully accepted by the great majority of present-day business men who are investing overseas. At the same time, countries which desire the benefits of private capital must do those things which attract and which do not repel it. A grudging tolerance is not sufficient. Upon occasion we read announcements to the effect that a country is willing to 'allow' private capital to come in. But certainly private capital does not come in when it is 'allowed'; it comes in when it is encouraged. Primarily, Governments must, by deed as well as word, show private capital that it is welcome.

"The opportunities for development that lie ahead of us are vast. They are also varied, and they are complex. There is no simple formula to convert aspirations into achievements. A nation's resources cannot be successfully developed by Government decree—nor by the efforts of any one segment of private enterprise. Progress is a joint product. And economic advance requires an effective partnership of public and private endeavour—it requires both public funds and private capital, both wise public policies and energetic private initiative. The Bank itself represents such a partnership. I think our record indicates that, given goodwill and common sense, this kind of partnership can produce results."

It is to be hoped that these words of the World Bank President will have the desired effect in all those countries where private capital is badly needed but decried and all impediments placed in the way of such enterprise in playing its role in economic development.

A MILLOWNER'S PLEA

A pertinent warning that Mr. Neville N. Wadia, the outgoing Chairman of the Millowners' Association, Bombay, gave, when he addressed the annual meeting of the Association held on Wednesday this week, was that the proposed amendment to section 23A of the Indian Income-tax Act would adversely affect a large number of companies in different ways. Mr. Wadia said that several genuine public companies, particularly those engaged in industry, would be forced to pay a higher dividend or a penal tax. Such would, he declared, undermine their financial stability and retard their expansion. And he added: "A year ago, they would have gained an anna in tax on the amount undistributed. Such an important change in their position will not benefit Government, labour or shareholders in the long run."

There is considerable force in these observations of Mr. Wadia, as also in his view that the new clauses in the Company Law Bill, as introduced by the Select Committee, would strike at the very root of the managing agency system. Emphasising the vital role which the system had all along been playing in the country's economy, Mr. Wadia averred that, up to now, the industrial development of India had been based on this system and the public had been encouraged to share the risk of new ventures, because managing agents were prepared to back them with their resources. One of the most important advantages of the managing agency system was that the services of the few who had experience in running industries could be utilised for more than one concern. Proceeding, he remarked: "That it is dangerous to change horses in mid-stream none will deny, much less so when the form of the other horse is yet unknown." In the considered opinion of Mr. Wadia, if it is sought to prevent concentration of too much power, a law on the lines of the recent enactment against monopolies and cartels in Great Britain would surely serve the purpose.

The retiring Chairman of the Bombay Millowners' Association also warned against the dangerous consequences of the latest amendment to the Constitution. The amendment, he felt, placed in the hands of an unknown Government of the future a weapon which could destroy our democracy, if used ruthlessly. Indeed, the Chairman feared that this added uncertainty might make the investing public "undesirably cautious" and would thus slow down the pace of development in the private sector and hinder the co-operation which had been coming from abroad.

Mr. Neville Wadia made a few interesting remarks on the second Five-year Plan. Pointing, in particular, to the huge capital outlay expected to be provided by the private sector—half of the total anticipated outlay of Rs. 5,600 crores is to be provided by this sector—Mr. Wadia declared that there was clearly no room for dispute between the public and private sectors. What was required was utmost co-operation between the two sectors. An important suggestion which he put forward in this connection relates to the creation of a liaison body between the Government and the industry. Such a body, according to him, could do much to remove misunderstandings and keep the private sector fully informed of what was expected of it. It would be invaluable in advising the order in which it was desirable to establish new industries and help expedite their erection. Mr. Wadia appealingly pleaded when he asked: "Now that the good ship 'State' is fully armed, cannot its guns be turned away from the merchantmen and its course set to guide the ever-expanding convoy to the haven of plenty for all?" Will the authorities listen to this plea?

Mr. Wadia touched on the latest award of the Labour Appellate Tribunal which cost the Bombay mills Rs. 3.5 crores. He thought that it was a rare occasion when either of the parties was satisfied with its decisions. Incidentally, Mr. Wadia revealed that an agreement had recently been reached with the Rashtriya Mill Mazdoor Sangh, designed to set up panels comprising representatives of the Association and the Union from which could be selected persons from both sides who would try to settle a number of points without recourse to the courts. The success of this new move, which deserves to be widely welcomed, will be watched with interest. If it were to prove successful—and we sincerely hope it will—there is no reason why this method cannot, as Mr. Wadia rightly said, be extended to cover all labour disputes.

WORLD POPULATION

World's population, according to the forecast made in the U.N. *Demographic Yearbook for* 1954, published in New York on Thursday last week, is expected to register a steady increase in the coming years. The forecast is based on two distinct trends in population growth, namely, longer life and fewer deaths in infancy. Incidentally, the total population of the world as at the end of 1953 is estimated at 2,547 million.

Several striking features about the recent changes in world population, it is reported, are revealed in the *Yearbook*. Among these, three stand out most prominently. First, the world birth rate has been declining since it touched the peak in the year 1946-47, although it is still above the pre-war level. The most striking change is in Japan where the birth rate has declined perceptibly. During 1953, for instance, the number of births per thousand population in Japan was 21.5, as against 34.3 in 1946-47, which represents a fall of 37 per cent. About 35 per cent. of the countries reporting account for a birth rate exceeding 34 per thousand, as compared with a rate of 25 in the industrialised countries. It is, however, stated that information for Asia and Africa is sketchy. Secondly, there has been a continuing trend towards a lower still-birth ratio. In Ceylon, for instance, the still-birth rate in 1953 was 40, as against 66 in 1938. Thirdly, life expectancy has increased considerably, thanks partly to a reduction in infant mortality and general death rate and partly to world-wide improvements in health conditions. Generally speaking, deaths from tuberculosis continue to decrease, while those from heart disease and cancer are higher.

Another highlight of the *Yearbook* relates to density of population. Central Europe has the highest population density, the number of persons per square kilometre (1 kilometre = about 5 furlongs) being 129. South Central Asia comes next with a density of 94, followed by Southern Europe with a density of 83. By Continents, the population density is 82 people per square kilometre for Europe, 51 for Asia, and 8 for the Americas and 7 for Africa.

The *Yearbook* also furnishes interesting data with regard to the trend of migration of population. There has been a moderate recession in migration which had touched the post-war peak during the years 1949 to 1951. The U.K. had the highest emigration rate in 1953; about 155,000 Britons settled abroad. In the same year, it had the third highest immigration rate; it received 78,000 people from overseas. The U.S. received the maximum number of immigrants in 1953—a total of 189,000 persons—while Canada came next with 169,000. Australia received 75,000 immigrants. The number of persons who emigrated from Italy during 1952 (the latest available figure) was 131,000. Most of them went to Argentina.

INDO-PAKISTAN RAIL TRAFFIC

Although political and economic relations between India and Pakistan have not been as happy as one would wish, it is, indeed, gratifying to note that the two countries should have reached an amicable agreement at least on one issue, that of resumption of railway traffic. Under the agreement, which is the outcome of the Indo-Pakistan railway conference held at Karachi recently, the railway traffic between the two countries will be resumed on the Sind-Jodhpur and Gandasinghwale-Ferozpur routes with effect from 1st June next. It will be recalled that the traffic on the Lahore-Amritsar route was resumed last year. Similarly, the movement of goods to and from West Bengal to Assam through East Pakistan will commence from 1st May, 1955. It is also decided to run a through train between Calcutta and Lahore.

The resumption of goods traffic between West Bengal and Assam through East Pakistan is of vital importance to the economy of Assam, in that it would ensure cheaper and quicker transport. As readers are aware, since the Partition, Assam has been adversely affected by lack of proper transport facilities. Thanks to the refusal of the East Bengal Government to allow goods traffic between West Bengal and Assam to pass through its territory, a large part of the traffic is handled by steamers and the balance by the Assam rail link or by air. This has resulted in considerable cost and inordinate delay in the movement of goods. What is worse, the traffic is often dislocated during the monsoon which incidentally coincides with the movement of tea crop. With the resumption of rail communication *via* East Bengal, the cost of transporting tea from Assam estates will be reduced. There will also be a saving in the cost of coal. Because of limited transport, the tea gardens in Assam have been obliged to use expensive local coal which is generally considered to be unsuitable for their purposes. The jute industry will be the other beneficiary. Raw jute grown in Assam can be moved to the jute mills in West Bengal more quickly. All these advantages of the resumption of rail traffic between Assam and West Bengal *via* East Bengal will, however, be nullified, if adequate attention is not paid to the question of simplifying customs formalities and eliminating pilferage. It is to be hoped that the authorities on both sides of the border will examine this question in right earnest.

BRITISH BUDGET

Britain's latest Budget for 1955-56 presented to Parliament on Tuesday this week places the aggregate revenue yield at £4,844 million on the basis of the existing taxation. The expenditure is expected to amount to £4,562 million, leaving a surplus of £282 million. This surplus compares with the actual surplus of £433 million and the budgeted surplus of £10 million for 1954-55. In view of the "considerable" surplus for 1955-56, the Chancellor of the Exchequer has announced several tax concessions. A cut of 6d. in the standard rate of income-tax (9s. in the pound) paid on higher incomes and of 3d. in the rates on lower incomes is proposed to be made. The reduction in the standard rate of income-tax is to be supplemented by increasing the personal allowances. Adjustments are also contemplated in income-tax which will remove 2.4 million people from tax liability. Another important proposed tax concession is the cut in the purchase tax by half, that is, from 50 per cent. to 25 per cent. on textile piecegoods. These tax concessions would slash the nation's tax bill by £158 million.

WORK OF COMMERCE AND INDUSTRY MINISTRY

ENGINEERING INDUSTRY TO RECEIVE FILLIP

From A Special Correspondent

NEW DELHI, 19*th April*

IT was generally expected that, in the course of his reply to the debate on the demands for grants for his Ministry, Mr. T. T. Krishnamachari, Commerce and Industry Minister, would gradually unfold his plans towards further improvement of the work of his Ministry and the possible future development of industries during the next 12 months. Instead, his reply turned out to be one of sarcasm, derision, ridicule and that of gliding over important points raised by some members of Parliament. He must have, perhaps, felt that as the main work for the current fiscal year and the policy that his Ministry would be following had already been outlined in the Annual Report of the Ministry circulated to the members of Parliament a few days before, it was not necessary to dwell on this important point. It is stated in this booklet that the Ministry will be setting up several panels and development councils whose principal task would be to formulate development programmes for inclusion in the second Five-year Plan. It will be remembered that, in 1953, three Development Councils were set up, namely, heavy chemicals (acids and fertilisers), internal combustion engines and power driven pumps and bicycles. In 1954 another Development Council was set up for the sugar industry. In February this year, two more Development Councils, one for heavy electrical industries and another for light electrical industries were constituted. The former will deal with units engaged in the manufacture and production of electric motors and machinery and equipment for the generation, transmission and distribution of electric energy (excluding house service meters and panel instruments). The latter will deal with units engaged in the manufacture and production of telephones, telegraph apparatus and wireless communication apparatus, electric lamps, electric fans, batteries, dry cells and storage, radio receivers and house service meters and panel instruments. In March, 1955, another Development Council was established for pharmaceuticals and drugs. Thus, seven Development Councils have already been set up and, of these, some are working. Besides, three more Development Councils are proposed to be set up in the coming months. They are: art silk textiles, woollen textiles and heavy chemicals (alkalis).

DELHI LETTER

Special Surveys

Special surveys of certain industries are also to be undertaken, for example, cotton textiles, dyestuffs, printing machinery, etc. A survey party has already been examining the position in respect of the machinery in the cotton textile mills. The Commerce and Industry Ministry is hoping that the expansion schemes in regard to the increase in the production of cement, iron and steel, aluminium, soda ash and fertilisers are expected to make good progress during the year. At the same time, the Ministry is anxious to ensure fuller utilisation of the existing capacity in the engineering industries in the light of the recommendations made by the Engineering Capacity Survey Committee. In the cottage and small-scale industries section, the proposal is to establish Industrial Estates and Central Workshops in selected areas for making available certain essential facilities and technical services to the small *entrepreneur*. Special efforts are proposed to be made to encourage exports of handicrafts through exhibitions in foreign countries and also by setting up an organisation for promoting and financing exports. In the sphere of foreign trade, it is proposed to set up more Export Promotion Councils and to assist the export trade by framing rules for drawback of duty on raw materials utilised in the export of more of manufactured articles.

Mr. Krishnamachari was in an apologetic mood in regard to the rationalisation of textile industry. He did not reveal as to what he proposed to do with the recommendations of the Kanungo Committee Report on the Textile Industry; nor did he tell the members of Parliament as to the manner and method by which he proposed to put into practice his earlier motto "Rationalisation without Tears," He merely attempted to defend the appointment of the survey party for investigation into the state of the machinery in textile mills. He stated that, with Government freely licensing spinning units, he was interested in evaluating the future needs of the proposed new spinning mills and also in ascertaining the requirements for replacement of machinery in case of old or worn out textile mills in the country, especially as a number of uneconomic units were working at present. In other words, he wanted to have an idea as to whether the indigenous textile machinery industry would be capable of producing the quantum of machinery needed to rehabilitate the existing textile mills and also to meet the requirements of the proposed spinning mills, without at the same time sacrificing the quality of production which should be on par with the best in the world. This type of investigation was, according to the Minister, further necessary with a view to framing a rational policy in regard to the imports of textile machinery and also for the manner in which the indigenous industry should be expanded with a view to catering to the needs of the country in the coming years.

Machine Tool Industry

From this, he went on to state that a recent survey undertaken to examine the position of the machine tool industry revealed that, although way back in 1952 there were misgivings among private machine tool producers about the possibility of the Jalahalli factory impinging on their sector, the position now was that the capacity was not adequate. He revealed that the Government would have to set up not merely one but two or three machine tools factories in order to take up the slack that now existed in regard to the production of machine tools in the private sector. In other words, the survey revealed that there was considerable scope for the private sector to augment the production of machine tools in the country.

The Minister also informed Parliament that the idle capacity with the engineering industry was practically *nil* at the present time, in view of the fact that the industry had been working with full capacity during the last few months. This state of affairs was also due to the implementation, from time to time, of the many interim recommendations of the Committee by the Government of India. He observed in this connection: "In the structural industry, the order books of all the big structural factories are fully booked for the next 6 to 12 months. We are planning for many things in the second Five-year Plan and one of the things that the Railway Ministry is planning is to get about 22,000 wagons a year, which is nearly twice their demand at the present moment. And, the maximum capacity of structural firms, including new firms which have been set up, is less than 12,000 wagons a year."

With a view to filling up the gap in the engineering industry, Mr. Krishnamachari stated that he was planning to set up three units with forging and foundry capacity, fairly big, and to which any person who was a manufacturer could go and give his designs and be sure that the design would not be used for some other purpose. If the private industry was ready to build up this industry in different parts of the country, it was well and good; otherwise, the Government would, he added, undertake this venture either of its own accord or in co-operation with the private sector, if the latter was willing to work with Government.

Automobile Industry

The Minister also referred to the progress of the automobile industry and to the necessity of strengthening the structure of the dyestuff industry. In regard to the former, he pointed out that the Hindustan Motors had been able to achieve an indigenous content of 65 per cent.; the Premier Automobiles had very nearly reached the 50 per cent. level in regard to their truck; the Standard Motor Company was keeping up to its schedule. He also informed the House that the manufacturers of motor cars had agreed to effect an initial reduction of about 7½ per cent. in the prices. He further stated that steps would be taken shortly to protect the spare parts industry. In regard to the dyestuff industry, he told the House that Government would be utilising the technical assistance that had been offered by a friendly country for furthering the prospects of this industry. It is expected that three concerns would shortly be starting production of dyestuffs, as also intermediates. The Minister hoped to obtain self-sufficiency in regard to soda ash within a very measurable distance of time, since the Government had licensed three new factories and had also encouraged the expansion of the existing factories. Strangely enough, he did not touch on the proposed work of the National Industrial Development Corporation fathered by him.

Mica Insulating Bricks

Insulating bricks and shapes are used in the construction of furnaces as backing material. The heat conductivity of these bricks is low and when a layer of such material is placed behind a furnace wall, heat losses would be reduced and thermal efficiency would appreciably improve. Vermiculite bricks are one type of insulating material and are generally used in moderate temperature furnaces. These may also be used for such purposes as low temperature heat insulation and in refrigeration units. Uptil now, good quality vermiculite has not been found in India and this material is imported into this country at a cost of nearly Rs. 500 per ton. About 500 tons of vermiculite are now consumed in the country, but it is expected that, with the industrial development of the country proceeding apace, the demand for this type of insulating material will greatly increase.

The cost of vermiculite bricks is rather high. With a view, therefore, to replacing vermiculite with an indigenous material, the Central Glass and Ceramic Research Institute, Calcutta, has recently developed a process by which insulating bricks comparable in properties and performance to vermiculite bricks can be made from waste mica. This is evident from the following technical data:

Comparison of Mica and Vermiculite Bricks

	Bulk density lb./cu. ft.	*Crushing strength* p.s.i.	*Conductivity* B.T.U.
Low density type—			
(*a*) Mica bricks ..	40	80	0.915
(*b*) Vermiculite bricks.	37	70	0.930
High density type—			
(*a*) Mica bricks ..	44	150	1.38
(*b*) Vermiculite bricks.	47	125	1.35

It is stated that the performance trials for thermal insulation of mica bricks conducted on both laboratory and industrial furnaces have yielded highly satisfactory results. Even after continuous use for one year, their insulating value is reported not to have deteriorated in the least. The use of such bricks on a muffle furnace is reported to have resulted in a fuel saving of 30 to 40 per cent.

India is one of the largest producers of mica in the world, and huge quantities of mica waste whose disposal is a problem, are available as raw materials for this industry. The main operations involved are those usually practised in ceramic industries, namely, grinding, mixing, pressing, drying and heating, etc., and no elaborate equipment is required. We are told that the process, which is covered by Indian Patent No. 48667 and has been established by pilot plant experiments, can be easily worked in existing refractory manufacturing plants.

ROURKELA BEGINS TO TAKE SHAPE

Rourkela, where the one-million ton steel plant to be set up in co-operation with the German Combine of Krupp-Demag is to be located, is beginning to take shape. Already, 10,000 men and women are working at the site where the township is to be built and in the brick-fields. Long strips of land are being acquired for use as brickfields. About a score of houses being built in the first sector of the township have risen above the plinth area. Two small diesel generating sets have been erected and are in commission. Another set with a higher capacity is to be installed shortly. Of the 10,000 persons now working at Rourkela, about 6,000 are those who will be displaced by the acquisition of land. It is estimated that only 2,350 families will be affected by this acquisition, which means that the majority of able-bodied men and women amongst the persons to be displaced have already found employment. The Development Officer of Hindustan Steel Limited has already taken a census of the population to be displaced, with the purpose of finding employment for all of them if possible, and training those who have the necessary qualifications, as skilled workers. Meanwhile, the Government of Orissa has selected an area to rehabilitate the displaced.

The progress of detailed proving of iron ore is proceeding satisfactorily. On the average, the ore contains above 60 per cent. of iron. The drilling party is now moving to the southern section and it is hoped that drilling will be completed before the rains. Approach roads to the ore deposits have been constructed.

FINANCING INDUSTRIES IN INDIA

PRESENT POSITION AND PROSPECTS ANALYSED

THE first Five-year Plan for the development of Indian economy has to run only a year more and it is but natural that Government and private industrialists should devote their attention to the formulation of the second Five-year Plan. Though no final decision has been taken by the Planning Commission on the amount to be spent during the second Plan period, the panel of economists set up by the Planning Commission is reported to have suggested that the total expenditure should be of the order of Rs. 5,600 crores, to be shared by the public and private sector in the proportion of 60 per cent. and 40 per cent., respectively. In other words, the outlay of the public sector would be about Rs. 3,400 crores and that of the private sector Rs. 2,200 crores. This is over Rs. 1,000 crores more than the estimated amount to be spent on the first Plan by the public sector and Rs. 750 crores more by the private sector.

While there is a section of public opinion which considers that the aforesaid target for the second Five-year Plan is too low, there is another section which feels that the private sector would not be able to reach even the above target of its own accord, because of the limited resources available within the country. It is, therefore, but appropriate and timely that the problem of financing industries in India should have been chosen by Mr. M. A. Master, ex-General Manager of the Scindia Steam Navigation Company, Ltd., as the subject of his address to the first All-India Conference of Management Executives held in Bombay last week-end. Mr. Master's analysis of some of the important aspects of this problem, in the light of the experience of the first Five-year Plan and the recent developments in the Government's policy with regard to private enterprise, makes very interesting reading.

First Five-year Plan

The target fixed in the first Five-year Plan for the public sector is about Rs. 2,249 crores and that for the private sector Rs. 1,450 crores. The total internal resources available to the public sector during the period of the Plan have been estimated at Rs. 1,260 crores (in the five years from 1951-52 to 1955-56) or an average of Rs. 250 crores per annum. Even during the year 1955-56 when a development expenditure of Rs. 792 crores has been visualised, the Taxation Enquiry Commission has estimated a shortfall of Rs. 320 crores in that year, after taking into consideration the sum of Rs. 150 crores available from external sources. Thus, according to the Commission, not more than Rs. 320 crores would be available to the public sector for financing the projects from internal resources in 1955-56. This is an important matter which, in the opinion of Mr. Master, should be borne in mind while considering the study of financing industries in the private sector. So far as the private sector is concerned, it is expected to raise Rs. 613 crores during the first Plan period for the purpose of meeting the expansion of the industrial capacity, modernisation and replacement, working capital and current depreciation not covered by income-tax allowances. This works out to about Rs. 120 crores per annum.

Coming to the second Five-year Plan, the estimate of Rs. 5,500 crores for both public and private sectors is realistic in Mr. Master's opinion. The share of the private sector in this target is placed at Rs. 2,000 crores. As Rs. 613 crores were provided for organised industries in the private sector under the first Five-year Plan, it is not unreasonable, according to Mr. Master, to say that about Rs. 1,000 crores will be required to meet the needs of organised industries in the next Plan. The question, however, is how to raise this finance. Are the people willing to invest in the private sector?

In answering these posers himself, Mr. Master said that, when profit motive was deprecated by the powers-that-be, people were not likely to invest their savings, unless they were assured of a reaasonable dividend on their investments. While people were assured by the Government that it had no desire to nationalise existing industries, on the ground that it had neither the resources nor the personnel required for that purpose, the threat of nationalisation was always there. Mr. Master quoted the instances of the air transport and road transport services where the assurances of the Government had not been honoured. The latest instance wherein the people's faith in the Government's assurances has been shaken is the nationalisation of the Imperial Bank of India, on the ground that it would help the development of rural economy. In addition, the Government's action in amending the Constitution has given the investing public a rude shock. Without mincing words, Mr. Master gave expression to his views on the Constitution Amendment Bill. He said:

> "The fundamental right of property guaranteed by the Constitution will be abrogated when the Bill becomes the law of the land. We are told by the Prime Minister that property is not a goddess whom the people should worship. He has added that there is nothing sacred or divine about that fundamental right. It is not divinity that troubles the suffering humanity. It is the music of the belly which no mortal can ignore to hear. Their property is their milch cow which gives nourishment to their children and keeps them alive. That is the reason of their deep and abiding attachment to their property right. The Prime Minister has again and again given assurances, both inside and outside Parliament, that no property will be taken away without compensation. If that is the intention of Parliament, it is difficult for the layman to understand why no provision for compensation is to be found in either section 31 (2-a) or section 31 (*a*). If the Bill, as amended by the Select Committee, becomes the law of the land, the question of compensation cannot and will not arise even if Tata Steel Limited was to be amalgamated with the Hindustan Steel Limited on the ostensible ground of public interest. A wise Government will not ignore these psychological factors. They play an effective part in human life—political, social and economic."

Spirit of Co-operation will be Shaken

While the Prime Minister had sought the co-operation of the people in building up a new India, Mr. Master points out that the spirit of co-operation was likely to be shaken to its very foundation by the threat of nationalisation and the abrogation of the fundamental right of property. These developments, Mr. Master said, would have a psychological effect on the will to invest in the private sector. They would make the people hesitate in investing as freely and readily in private enterprise in the future as in the past. This does not mean that investments in the private sector will cease altogther. What Mr. Master wanted to convey was that the existing difficulties in raising new capital would be considerably enhanced by the aforesaid developments.

Mr. Master went on to examine the sources from which the private sector finds its finance and the extent to which each source could provide the required funds in future. The first source is equity capital from the savings of the people. These savings form the common pool for both the public and private sectors. With the increase in both direct and indirect taxation, Mr. Master said, the volume of this pool was bound to become thinner and thinner. As the public sector would have the first claim to draw upon this common pool for its own requirements, the private sector would have to depend upon the residue that might be left after the public sector had satisfied its needs. Moreover, the private sector could not raise any fresh capital or even utilise corporate savings without the permission of the Controller of Capital Issues. Quoting from the Taxation Enquiry Commission's report, Mr. Master pointed out that the increase in paid-up capital of public companies declined from Rs. 18.94 crores in 1946 to Rs. 8.99 crores in 1951. Even during the years 1951-52 and 1952-53, when the effect of the Korean war boom conditions were still there, the amount of equity capital raised by the private sector did not exceed Rs. 11 crores on an average. Mr. Master thought that this amount was not likely to increase in the coming years for reasons mentioned above.

The second source is borrowings by way of debentures and loans from the public, banks and investment institutions. In this connection, Mr. Master commended the three recommendations of the Shroff Committee, namely, (1) the formation of a consortium or syndicate by the leading banks in India in co-operation with the insurance companies for underwriting or investing in new issues of shares and debentures of industrial companies, wherever they were satisfied about the soundness of the projects; (2) liberalisation of remittance facilities for banks; and (3) liberalisation of section 27 of the Insurance Act so as to enable insurance companies to release a substantial amount for long-term investment in the private sector. The implementation of these recommendations would, in the opinion of Mr. Master, lead to an increase in the available amount of equity capital and facilitate the issue of debentures. The formation of the Industrial Credit and Investment Corporation of India would also help in raising long-term finance by way of equity capital, debentures and borrowings.

In this connection, Mr. Master also welcomed the formation of the National Industrial Development Corporation which is "conceived mainly as an instrument of Government for securing a harmonious development of industries in both the private and public sectors." He, however, made a strong request to the Government to state the nature and the extent of finance which this co-operation would provide for the expansion of the existing and the creation of new industries in the private sector. The Industrial Finance Corporation of India also has, in recent years, been a source of good help in providing fairly large sums of long-term finance by way of loans to a number of industries in the country, but Mr. Master desired that it would have to make a substantial increase in the amount of maximum loan that could be given to any company at present, as also liberalise the terms and conditions of the granting of the loan, if it were to render effective and fruitful service to the private sector.

Loans from Government and World Bank

Loans from the Government and the World Bank constituted another source of finance for the private sector. The Government of India has so far given or sanctioned loans and special advances to the tune of Rs. 30 crores to the steel industry, Rs. 3 crores to Atul Works and Rs. 15 crores to the shipping industry. Proposals have been submitted by the shipping industry for loans aggregating Rs. 80 crores to enable it to double the target of 6 lakh tons (g.r.t.) in the second Five-year Plan. There is every possibility of the loans being sanctioned. The World Bank has sanctioned a loan of Rs. 13 crores to the steel industry, Rs. 5 crores to I.C.I.C. and Rs. 8 crores to the Tata Hydro-electric Companies for the Trombay Thermal Project. While appreciating the Government of India's policy of providing finance by way of loans to the private sector, and acknowledging that the World Bank loans constitute substantial help, Mr. Master expressed the view that still larger amounts should be given by way of such loans, in order to make good the dwindling share of the private sector in the common pool.

The last important source from which the private sector derives its finance is corporate savings, that is, undistributed profits of companies. These savings play a very important part in the expansion of industries in the West. According to the Taxation Enquiry Commission, the retained profits of companies in India to the extent of Rs. 69.3 crores were utilised for financing expansion of 492 companies during the post-war years 1946-51. No data is available for the amount of retained profits utilised for financing capital expenditure during the period of the first Plan. Though these corporate savings form an important source, Mr. Master was of the opinion that it would not be possible to rely on these to any great extent for the further expansion of Indian industries. The new industries would take several years before such savings could be built up, provided they were allowed to earn substantial profits. Further, with the amendment of section 23A of the Income-tax Act, a number of companies would be forced to distribute 60 per cent. of their profit.

Summing up the whole position, Mr. Master said that, while the Taxation Enquiry Commission recognised that the maximum rate of investment in the public sector should be attained in a manner consistent with maintaining and strengthening the incentive to the private sector to step up its own rate of investment, the incentive to the private sector was being weakened, instead of being strengthened. Commenting on a recent remark of India's Vice-President that "in spite of the great achievements of free enterprise, it (free enterprise) had produced power-hungry and money-mad people," Mr. Master observed in all humility:

> "It will be rightly agreed that wherever such people exist, they will deserve the condemnation of all right-thinking men. It is, however, a cruel irony of fate that, while the Government are bent upon removing the concentration of economic power from the hands of the capitalists, they are actually encouraging the concentration of such economic power amongst the politicians and the ruling race. It will be a sad and fateful day for India, if the people will be made to share the growing belief that the industrialists are devils and politicians are angels. One should not, however, forget the vital truth of history that when economic power is wedded to political authority, its ambition will know no bounds, and when ambition overruns ability and integrity, it may spell disaster for the country."

GOVERNMENT TO TAKE OVER THE IMPERIAL BANK

BILL INTRODUCED IN PARLIAMENT

As was anticipated by us, the Government of India has been fairly quick in implementing its final decision to nationalise the Imperial Bank of India, announced on 20th December, 1954. It has already taken the first step in this direction. A Bill for taking over the Bank and establishing a State Bank of India was introduced by Mr. Chintaman D. Deshmukh, Finance Minister, in the Lok Sabha on Saturday, 16th April, 1955. That Parliament fully endorses the Government's decision was evident from the warmth with which it greeted the introduction of the Bill; Mr. Deshmukh, we are told, was loudly cheered when he rose to introduce the measure. This is striking evidence of the fact that the criticisms levelled against the Government—mostly by the spokesmen of finance, trade and industry—are not shared by the vast majority of the House.

In the first place, the Imperial Bank of India will be taken over by the Reserve Bank of India by paying compensation to its shareholders, as mentioned in the Bill. Later, the Reserve Bank will float the State Bank of India and transfer to it all the assets and liabilities of the Imperial Bank. This may be followed by an expansion of the State Bank brought about by an absorption of certain State associated banks. For this, a separate Bill will be introduced later. The Reserve Bank will always hold a minimum of 55 per cent. of the share capital of the State Bank of India, the balance being offered to the public. To begin with, the shareholders of the Imperial Bank will be given preference while allotting the shares of the State Bank of India. The shareholders of the Imperial Bank have full freedom to exercise this option.

The Bill provides for compensation to the shareholders of the Imperial Bank at the rate of Rs. 1,765-10 per fully paid-up share and Rs. 431-12-4 per partly paid share. The compensation will be given in Central Government securities, but shareholders are entitled to claim payment in cash up to the first Rs. 10,000.

As readers are aware, the Government's decision to take over the Imperial Bank and convert it into the State Bank of India is in pursuance of one of the recommendations of the Rural Credit Survey Committee, popularly known as the Gorwala Committee, which was asked to go into the question of credit needs of agriculturists and others in rural areas.

The Imperial Bank came into existence on 27th January, 1921, by the amalgamation of three Presidency Banks—the Bank of Bengal (established in 1806), the Bank of Bombay (established in 1840) and the Bank of Madras (established in 1843). It has an authorised, issued and subscribed capital of Rs. 11.25 crores divided into 225,000 ordinary shares of Rs. 500 each. The paid-up capital is only Rs. 5,62,50,000 consisting of 75,000 fully paid-up shares and 1,50,000 partly paid shares with Rs. 125 called up and paid up. Thus, the old Presidency Banks are, in effect, assuming a new name and new responsibilities after an interval of 34 years.

The Reasons

The following is the statement of objects and reasons of the Bill:

"The Reserve Bank had appointed in August, 1951, a Committee of Direction for conducting an all-India rural credit survey. The general report of the survey embodying the Committee's recommendations was received last year. The report makes comprehensive recommendations relating to numerous aspects of the problem of rural credit. One of the important recommendations and an integral part of the solution of the rural credit problem propounded by the Committee is the setting up of a State Bank of India as one strong integrated State-partnered commercial banking institution with an effective machinery of branches spread over the whole country for stimulating banking development by providing vastly extended remittance facilities for co-operative and other banks and following a policy which would be in effective consonance with national policies adopted by the Government without departing from the canons of sound business. Such a State Bank of India is envisaged as coming into being by the amalgamation of the Imperial Bank with certain 'State-associated' banks. On 20th December, 1954, the Government announced that they accepted in principle this recommendation of the Committee and that they had decided as the first step towards the setting up of such an institution, to assume effecive control over the Imperial Bank. This Bill seeks to give effect to this decision."

Minimum Shareholding

Suitable provisions are made relative to the acquisition of the undertaking of the Imperial Bank, the taking over of its business and staff, the payment of compensation to shareholders, the setting up of an appropriate machinery for the governance of the State Bank, the business which the Bank may and may not transact, etc. It is contemplated that the Reserve Bank will always hold a minimum shareholding of 55 per cent. in the paid-up capital of the Bank. By virtue of this holding and the composition of the Board of Directors of the Bank as well as by virtue of the power, to give directions in matters of policy involving public interest vested in the Central Government, it is provided that the general working of the State Bank shall be responsive to and in consonance with Government policies while the autonomy of the institution in its day-to-day working will be fully maintained. Amendments necessary to the Reserve Bank of India Act, 1934, and to the Banking Companies Act, 1949, consequentially to the establishment of this institution, have been provided for in Schedules III and IV to the Bill.

Important Features of the Bill

The following are some of the more important features of the Bill:

The general scheme is that the Imperial Bank should be taken over as a going concern from a day to be notified in this behalf by the Government as the "appointed day." On the "appointed day," the undertaking of the Imperial Bank, including all its assets and liabilities and all other interests and rights and obligations of whatever kind, will be transferred to the State Bank. All officers and employees of the Imperial Bank (except the Managing Director, the Deputy Managing Directors and other Directors) shall from that day hold corresponding office for the same tenure and on the same conditions as previously with the State Bank. (There is provision, however, about remuneration and terms and conditions to be subsequently altered by the State Bank.)

Compensation Formula

On the "appointed day," all shares in the capital of the Imperial Bank shall be deemed transferred to the Reserve Bank. The Reserve Bank will pay to every shareholder compensation based on a certain formula. A provision has been made for fixing the amount of compensation in the Bill itself (*vide* Schedule I). The amount mentioned is arrived at on the basis of the average market value over the previous 12 months' period prior to 20th December, 1954. The particulars about cash payment and payment in Government promissory notes are laid down as previously decided by the Government.

The provision for compensation is similar to that adopted when the Reserve Bank was nationalised and is in conformity with the announcement made on 20th December, 1954.

Compensation would be payable up to the amount of the first Rs. 10,000 in cash if so desired by the shareholder in terms of the Government announcement in this behalf. The issued capital of the State Bank will stand allotted initially to the Reserve Bank in lieu of the shares of the Imperial Bank that it would take over and compensate. Of this shareholding, the Reserve Bank will be authorised to dispose of up to 45 per cent. to private parties. That is to say, a minimum of 55 per cent. of the shareholding in the State Bank will always be held by the Reserve Bank of India. In the disposal of 45 per cent. of the shareholding to private parties a preferential position in the allotment of shares is accorded to the former shareholders of the Imperial Bank.

Management

The management of the State Bank will be vested in a Board of Directors which will be composed of:—

A Chairman and a Vice-Chairman to be appointed by the Central Government after consultation with the Central Board in that behalf;

Not more than two Managing Directors to be appointed by the Central Board with the approval of the Central Government;

Six Directors to be elected by the shareholders other than the Reserve Bank;

Eight Directors to be nominated by the Central Government in consultation with the Reserve Bank;

One (official) Director to be nominated by the Central Government; and

One Director to be nominated by the Reserve Bank.

Apart from the Central Board, there will be a limited number of Local Boards corresponding to an equal number of Local Head Offices. The Central Office of the State Bank will be in Bombay and three of the Local Head Offices will be at Madras, Calcutta and Bombay, the remaining being at such places as the Central Government in consultation with the Central Board of the State Bank may determine.

List of Business

Detailed provisions have been laid down as to the business which the State Bank may transact and the business which it may not transact basing these largely on the regulations of the Imperial Bank which at present govern like matters in that institution. Provision is, however, made for the State Bank acquiring or holding shares in the capital of other banking companies and forming or conducting any such banking companies as its 'subsidiaries.' This provision is intended primarily to enable the State Bank to take over as subsidiaries in suitable cases the State-associated banks to be integrated with it.

Section 34 includes a provision designed to facilitate the amalgamation of other banking companies with the State Bank. This provision is intended to facilitate the amalgamation of such units with the State Bank.

A provision has been made whereby the State Bank is under obligation to open 250 branches according to a programme to be approved by the Central Government in consultation with the Reserve Bank in this behalf as suggested in the Rural Credit Survey Report. An integration and Development Fund will be maintained by the State Bank into which shall be paid the dividends payable to the Reserve Bank on its shareholding of 55 per cent. in the State Bank. The amount of this fund is to be applied for meeting losses incurred on losing branches established in pursuance of the relevant provision.

First Schedule

The following is the First Schedule to the Bill laying down the terms of compensation for the transfer of shares of the Imperial Bank to the Reserve Bank:

1. In this schedule, "shareholder" means any person who immediately before the appointed day is registered as the holder of a share in the Imperial Bank.

2. As full compensation for the shares in the capital of the Imperial Bank which, by reason of this Act, are transferred to and vested in the Reserve Bank, the Reserve Bank shall pay to every shareholder, in the manner set out hereinafter, an amount calculated at the rate of Rs. 1,765-10 per share in the case of a fully paid-up share and Rs. 431-12-4 per share in the case of a partly paid-up share.

3. Notwithstanding the transfer of the shares in the capital of the Imperial Bank to the Reserve Bank, any shareholder who immediately before the appointed day is entitled to the payment of dividend on the shares of the Imperial Bank held by him shall be entitled to receive from the State Bank—

(a) All dividends accruing due on his shares in respect of any half-year which ended before the appointed day and remaining unpaid.

(b) Dividends calculated at a rate to be specified by the Central Government in respect of any period immediately preceding the appointed day for which the Imperial Bank has not declared any dividend.

4. (1) The compensation provided for in this schedule shall be given in Central Government securities, and the form of such securities and the value thereof, computed with reference to their market value, shall be such as the Central Government may, by notification in the *Gazette*, specify in this behalf:

Provided that where the amount of such compensation is not an exact multiple of the value of the Government security as so notified, the amount in excess of the nearest lower multiple of such value shall be paid by cheque drawn on the Reserve Bank.

(2) Notwithstanding anything contained in sub-paragraph (1), any person who is registered as the holder of a share in the Imperial Bank on the 19th day of December, 1954, shall, if he applies in writing in this behalf to the Reserve Bank before the expiry of one month from the appointed day, be entitled to be paid, by cheque drawn on the Reserve Bank, any compensation payable to him up to the first Rs. 10,000.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

WORLD BANK'S LENDING OPERATIONS

DEVELOPMENT LOANS AGGREGATE $1,500 MILLION

By Prof. B. R. Shenoy

The International Bank for Reconstruction and Development, popularly known as the World Bank, is, like the International Monetary Fund, a co-operative organisation of member-nations. Both institutions have an identical membership of 56 countries. They are sister organisations, often referred to as "Bretton Woods Twins." Both were the outcome of the United Nations Monetary and Financial Conference of 44 nations assembled at Bretton Woods, New Hamphire, in July, 1944. Except for the U.S.S.R., Liberia, and New Zealand, all other nations present became members of the Bank. Its Articles of Agreement were formally accepted by 30 countries on 27th December, 1945. Six months later, on 25th June, 1946, the Bank formally commenced operations. The first loan was advanced to the Credit National of France in May, 1947, the amount advanced being $250 million. Three other reconstruction loans followed in August of the same year, the borrowing countries being the Netherlands, Denmark and Luxembourg.

If you hail a taxi-cab in Washington and ask to be taken to the International Monetary Fund, the chances are that the taxi-driver would not know where to go. Ask the same man to take you to the World Bank. He would put no further questions and would proceed to 1818 H Street. Both institutions are housed in the same building. But, somehow, the Bank is better known. It is also probably, generally better liked by the member-countries. At least that seems to be the common impression. The framers of the Articles of Agreement of the two institutions seem to have anticipated this relative popularity. The Articles provide that a country may, if it so preferred, be a member of the International Monetary Fund alone. But a country joining the Bank had first to join the Fund.

The reasons probably lie in the obligations of membership of the two institutions. Membership of the Fund involves several restrictive commitments in the sphere of domestic policy. Members cannot engage in competitive exchange depreciation. To ensure this, alterations in the agreed exchange rate beyond a limit of 10 per cent., are permissible only after consultation with the Fund. The continuance of exchange restrictions after the period of post-war transition requires annual consultation with the Fund. This involves a review of the member's monetary, fiscal, and economic situation and policies. Members may not engage in gold or exchange transactions at premium prices or otherwise permit disorderly exchange practices. Even so access to the Fund's resources is subject to restrictions and close scrutiny of the borrower's economic position and prospects.

The obligations of membership of the Bank are light by comparison. The Bank does not concern itself with the internal monetary or economic policies of members. Such concern is limited to countries who are debtors of the Bank or have applied for a loan. In all cases, the Bank's interest is primarily restricted to the successful execution and working of the projects financed by the Bank, and the ability of the debtor to discharge its loan repayments according to the agreed schedule. Otherwise membership obligation is limited to the immediate payment of 2 per cent. of the subscription in gold or U.S. dollars, and certain commitments regarding the payment of the rest of the subscription.

The purpose of the Bank, as its name indicates, is to finance reconstruction and development. The Articles of Agreement require the Bank to give "equitable consideration to projects for development and projects for reconstruction alike." The resources of the Fund cannot be availed of for these purposes. They are meant to be utilised only to meet the short-term payments difficulties of members. The magnitude of the finance required and the risks involved were so great that private capital could not be expected adequately to fulfil the needs. It was, therefore, recognised that an international investment institution like the World Bank, the risk of whose operations could be shared by member-nations roughly in accordance with their economic strength, was a post-war necessity. The Bank is not conceived as a rival to other international lending agencies, official and private. It was rather meant to supplement the funds available from these sources. By its example it was hoped that it would point the way to private capital which may seek international avenues for investment. Under the Articles of Agreement the Bank could guarantee such investment. The Bank, however, has not so far invoked its statutory function as a guarantor of private loans.

The loanable resources of the Bank are much smaller than the resources of the International Monetary Fund. The Bank, however, has not had to decline a loan application for want of resources. The gross total loanable funds of the Bank are somewhat over $2,000 million or about 54 per cent. of the gold and convertible currency resources, and about 25 per cent. of the total resources, of the Fund. On the other hand, the total loans of the Bank far exceed the total loans of the Fund. The loan disbursements are less by $500 million, being about $1,500 million. The total loans of the Fund were under 14 per cent. of its resources.

The loanable resources of the Bank are drawn from four sources. The first is subscription by members towards the Bank's capital. Generally, the amount of this subscription approximates to the amount of the members' quota in the Fund. But only 2 per cent. of the subscription is immediately payable. This must be done in gold or dollars. 18 per cent. of the remaining subscription is payable in the currency of the members. The use, for lending, of this part of the subscription, however, requires the approval of the member concerned. The total of the capital subscription, including releases under 18 per cent., amounted to $926 million as on 30th September, 1954. This remains the largest part of the loanable funds of the Bank. But its relative importance has been on the decline.

The second source of the Bank's funds consists of borrowings by the Bank from the capital markets of the world. The Bank has borrowed from the U.S., Canada, U.K., and Switzerland. Switzerland, it may be noted, is not a member of the Bank. But Swiss francs being required by the Bank's borrowers, the Bank borrowed from the Swiss capital market. The total capital, excluding premium receipts, raised under this head amounted to $850 million as on 30th September, 1954. The relative importance of the resources raised by loans has been growing. The expectation is that, in due course, it will account for the largest part of the Bank's resources.

The third source is the sale proceeds of the loan bonds representing member-country borrowings from the Bank. The bonds are sold with or without the Bank's guarantee. The demand for these bonds is a measure of the confidence of the investors in the soundness of the Bank's loans, though, in part, it also reflects the trust in the financial stability of the Bank's debtors concerned. Most of the purchasers of the bonds are institutional investors, primarily banks and insurance companies. The bonds are of varying maturity. In some cases (e.g., certain loans to the Netherlands, Belgium and Japan) certain private interests participated with the Bank in making the loans. In essence these operations amount to private capital being canalised for investment in member-countries through the mediation of the Bank. Part of the loans made to most of the borrowing members have been sold in this manner, the amounts sold in the case of India being $12½ million as at 31st October, 1954. Including repayments of capital by borrowers, the resources raised under this head amounted to $193 million.

The net earnings of the Bank constitute the fourth source of its loanable funds. Unlike the International Monetary Fund, which suffered a loss of about $8 million in seven years of its operation, the World Bank has been consistently making profits. Excluding the statutory commis-

DEVELOPMENT OF HANDLOOM INDUSTRY

CONDITIONS REGISTER DISTINCT IMPROVEMENT

ONCE again, the problems relating to handloom industry figured prominently on the floor of the Lok Sabha last week. The opportunity was provided by the Commerce and Industry Ministry's demands for grants. As usual, the protagonists of the handloom industry criticised the Government for not having taken adequate and proper steps to develop this sector of the cotton textile economy. In fact, some members went to the extent of saying that the Government's policy had almost tolled the death-knell of the handlooms. To quote a Communist member from Andhra:

"People dependent on handlooms are suffering great hardships. Unemployment is increasing among them and they do not have any alternative means of livelihood. All this is the result of the unkind and unrealistic policy of the Commerce and Industry Ministry which is biased towards the mill industry. The Government must immediately render full help to the handloom industry, so that it may survive. The first thing should be to give cheap yarn to the handloom weavers. To ensure a steady supply of yarn, the Government should establish its own spinning units. The percentage of reservation of *saris* and *dhotis* to be produced by handlooms should be increased and the cloth for turbans for military personnel should be taken exclusively from handloom products."

The foregoing extract will clearly reveal that, in their anxiety to earn the political support of the handoom weaver, some legislators do not hesitate to exaggerate and put forward fantastic proposals calculated to inflict serious injury on the country's economy. The view that the handloom industry continues to be confronted with a depressed state of affairs is clearly exaggerated. Thanks to the several active steps taken by the Central Government and the liberal financial assistance granted by it, the conditions of the handloom industry have registered a distinct improvement. A review of the work done by the regional offices of the Central Marketing Organisation of the All-India Handloom Board, made at the second conference of the officers in charge of these regional offices, held at Bombay on Friday last week, revealed that considerable progress had been made by the States in implementing the various development schemes, as a result of which the conditions of weavers had imprved, production had gone up, and there was increase in the earnings of weavers. Indeed, Mr. Nityanand Kanungo, Union Deputy Minister for Commerce and Industry, claimed, during the debate, that, in the sphere of handloom and *khadi*, the achievement was creditable. The statistics cited by the Minister reveal that production of handlooms has gone up from 1,100 million yards in 1952 (and 1,200 million yards in 1953) to 1,330 million yards in 1954. The rise in output has been accompanied by larger off-take. In Madras State, for instance, the sales of handloom cloth by co-operatives alone are now reported to be at the average rate of Rs. 27 lakhs per month, as against Rs. 21 lakhs some time ago.

Government Assistance

As already stated, the handloom industry has received assistance on a very substantial scale from the Government. Since 1953, more than Rs. 6 crores have been sanctioned out of the Handloom Cess Fund for various schemes of development. The Government gave, during 1954, more than Rs. 2.33 crores as loans in the form of share and working capital for co-operatives. There are 188 sales depots functioning in different States, besides 16 mobile sales vans. Assistance has also been given to co-operatives for the establishment of common processing plants for dyeing, calendering and finishing, for supply of improved equipment, for research and designing, etc. Further mention may be made of the scheme for giving subsidy (varying from 9 pies to 18 pies in the rupee) on sales of handloom cloth by co-operative societies and approved fair-price shops (in Bombay where handloom cloth has to meet with keener competition, the subsidy is As. 2). Two new measures taken during the year 1954-55 also deserve mention. One is the conversion of three handloom factories in Madras State into industrial co-operative workshops where workers would also be members of the co-operative societies and would thus share in the profits. It is proposed to form further industrial co-operatives depending on the experience gained in these schemes. The second scheme relates to housing subsidy to weavers' colonies run by co-operatives of the type that exists in Yemmiganur in Andhra State. For each house, the Centre will give an outright grant of 25 per cent. and a long-term loan of 50 per cent. If the cost of the house is over Rs. 5,000, the grant and loan will be restricted to Rs. 1,250 and Rs. 2,500, respectively. Assistance will be given for setting up central workshops in the colony for certain processes.

All these are in addition to the measures taken by the Government for ensuring adequate supplies of yarn to the handloom industry. The average quantity of free yarn actually supplied to the industry every month during 1954 was substantially higher at 82,000 bales, as against 73,000 bales in the previous year. During 1954, the Government sanctioned Rs. 10 lakhs each to the spinning mills in Andhra and Madras States to be run by handloom co-operatives. A third co-operative spinning mill is being planned in Orissa.

To revert to the debate in the Lok Sabha. Intervening in the debate, Mr. Kanungo referred, in particular, to the criticisms of the report of the Textile Enquiry Committee of which he was Chairman. Mr. Kanungo did not think that the House would like the bulk of the population engaged in the handloom industry to be content with a pittance of wages. If the condition of the weavers was to be improved, they must, he emphasised, be given efficient tools and facilities for producing more and cheaply. In this connection, he made it clear that the Committee's recommendations sought merely to prevent the type of development where the self-employed labourer would degenerate into a wage slave. Mr. Kanungo struck a most realistic note when he said that to stop modernisation was not only illogical but would mean stagnation and regression of small-scale industries.

STANDARDS FOR TEXTILES

The Indian Standards Institute has published three standards which prescribe method for determination of relaxation shrinkage of woven fabrics containing wool, simple methods for identification of common commercial textile fibres and methods for determining the desizing efficiency and the relative efficiency of amylolytic enzymes. The first and the third standards are tentative. All the three standards have been prepared by the I.S.I.'s Textile Chemistry Sectional Committee.

The first standard has been prepared, with a view to meeting the need for determining relaxation shrinkage of woven fabrics containing wool. The methods described in the second standard are simple, and are applicable to fibres of vegetable and animal origins as also to manufactured fibres. They are expected to be especially useful to organisations with limited testing facilities. The third standard has been prepared to meet the need for determining the desizing efficiency and the relative efficiency of amylolytic enzymes which are extensively used in the cotton textile industry for desizing in preference to desizing by 'rot steeping' or acid steeping. Methods for evaluating the desizing efficiency of three types of enzymes, namely, malt extracts, pancreatic diastases and bacterial diastases have been prescribed in this standard.

The minimum limit of purchase of handloom cloth, for which rebate is admissible, has been reduced from Rs. 5 to Rs. 2. This decision has been taken by the Government of India on the recommendation of the All India Handloom Board. All the State Governments have been asked to implement the decision immediately.

RATIONALISATION OF COTTON MILLS

A DEFINITE OFFICIAL POLICY WANTED

ALTHOUGH more than seven months have elapsed since Parliament gave its stamp of approval for the introduction of rationalisation in the cotton mill industry, the Government of India has still not taken any steps to implement the resolution. Provoked naturally by this inordinate delay, Mr. Sarottam P. Hutheesing, the retiring Chairman of the Ahmedabad Millowners' Association, urged the Government, in the course of his address at the annual meeting of the Association held at Ahmedabad last week, to announce, without further delay, a "definite policy" on this vital issue. The enunciation of such a policy has assumed special significance in the present context of the imperative need for raising the productivity of labour employed in cotton mills, in order to make cloth cheaper for consumers in the country and to enhance the competitive ability of Indian goods in overseas markets. The attempt made in some quarters to thwart rationalisation by creating the bogey of mass displacement of labour are indeed deplorable. The entire problem, as Mr. Hutheesing rightly said, requires a dispassionate and unbiased approach by all the concerned parties in the larger national interests.

Mr. Hutheesing commended the Textile Enquiry Committee's approach to the question of rationalisation. In his opinion, the implementation of the recommendations regarding rehabilitation and installation of automatic looms would have far-reaching effect both on the earnings of workers and on the quality of the product. He, however, considered that the 20-year period of spread-over as suggested by the Committee was a long one, particularly when the industry had not sufficient opportunity in the past to replace the worn-out machinery and plant due to their non-availability during the war and post-war years and also to lack of necessary finances. If the target of exports laid down by the Kanungo Committee were to be achieved, it was essential, Mr. Hutheesing declared, that the rehabilitation of old and obsolete machinery was effected at a quicker pace and that installation of automatic looms increased at least three-fold to enable the industry to produce better quality cloth both for export and for the home market.

Rapid Rehabilitation

There is considerable force in these observations. Even Mr. T. T. Krishnamachari is fully aware of the need for a rapid rehabilitation of the cotton mill industry. Replying to the debate on the demands for grants for his Ministry, Mr. Krishnamachari said in the Lok Sabha last week that "quite a lot of our textile mills were working with worn-out machinery." Indicating that the Government was freely licensing spinning units and that mills were not able to get the machinery from local manufacturers, the Minister observed: "The textile survey recently ordered is to find out the exact state of the machinery and their needs in future, so that the manufacture of such machinery, or imports if necessary, can be planned."

To revert to Mr. Hutheesing's address. He was critical of the Textile Enquiry Committee's opposition to the increase in the loomage of composite mills. The Committee, he declared—and rightly so—ought to have recommended such an increase at least in the case of uneconomic units when it was the intention of the Government to put such units on an efficient basis. He thought that the increase in looms would be so very negligible that there would be no appreciable rise in the overall output of cloth. Mr. Hutheesing was also critical of the Committee's suggestion for continuing the existing reservation of fields of production for handloom industry. The Committee, he felt, should have appreciated the difficulties of a large number of mills having wider width looms which, due to restrictions on production, had become unremunerative; the position had become all the more difficult with the levy of excise duty on square yard basis.

Incidentally, the retiring Chairman of the Ahmedabad Millowners' Association appealed to the Government to revise the basis of the excise duty from specific rate to *ad valorem* rate. In his considered opinion, excise duty would be fair and equitable if it were levied on *ad valorem* basis. For, otherwise, the incidence of duty would work out higher on low-priced goods than that on higher-priced goods, other things remaining the same.

MILL STOPPAGES IN LANCASHIRE

EMPIRE COTTON AGAIN EXCEEDS THE ONE-MILLION-BALE MARK

From A Special Correspondent

MANCHESTER, 12*th April*

MANCHESTER LETTER

IMMEDIATELY before Parliament dispersed for the Easter recess there had been high hopes in Lancashire that the Government would make known its future policy towards the cotton trade. Mr. Thorneycroft, President of the Board of Trade, however, had to admit that such far-reaching issues were involved that it would not be practicable to make a statement before the adjournment. "Other Governments as well as ours are affected," he said, "and we must weigh the issues fully before reaching a final decision. We are giving serious study to the whole subject in all its implications."

From the local viewpoint it is unfortunate that the case for cotton should have been presented at a time when political uncertainties have exceeded the shadows cast over the industrial scene. Yet if confirmation were needed of how serious the situation is in Lancashire the official figures of mill stoppages for Easter should have provided a clear-cut answer.

From a survey undertaken by the Ministry of Labour it has been ascertained that more than 300 spinning and weaving mills have decided to extend their normal holiday stoppage —and 176 of them closed down for the whole of this week. Altogether over 50,000 operatives are affected by these developments, which underlines the gravity of the current state of trade.

If it could be assumed that these drastic steps would bring some swift alleviation of the position there would be less grounds for pessimism, but it would be idle to pretend that these stoppages—widespread as they are—will do more than scratch the surface of the problem. Order lists have been shrinking for so long and are now so thin that without a sudden and unpected revival in demand more interferences with output must soon become inevitable.

Too Much Cotton

Not only is the Lancashire cotton trade awaiting news from London as to what the British Government proposes to do to assist the industry but information from the United States is also urgently required to remove existing uncertainties. The American Government's deliberation in announcing its surplus cotton supplies policy may well prove the greater burden for Lancashire to carry in the long run.

Mr. Benson, the United States Secretary for Agriculture, is being pressed on all sides to formulate plans for the disposal of the abundance of raw cotton now proving such a drag on world markets. Latest information, however, is that no official plans are likely to be announced for another two months. This delay is bound to have a further depressing tendency on trade in yarn and piecegoods, not only in Lancashire but in other areas where cotton goods are produced.

From the American viewpoint the biggest obstacle to expanding cotton exports is held to be the inadequacy of dollar earnings on the part of the main cotton importing countries. In addition, many areas of the world are now growing supplies of cotton in larger quantities than ever before which compete with the American staple.

The latest estimate of the cotton carryover in the United States is at least 10,500,000 bales at the end of the current season, whereas only four years ago the surplus was less than 2,500,000 bales. The increase in available supplies can to some extent be attributed to the high support prices ruling in the United States which are now being condemned on all sides.

Damaging Confidence

Although the American Administration is obviously loath to make any early pronouncement about its future cotton policy, the matter has been taken up by the British Government. In the final debate in the House of Commons before the Easter recess, Mr. Low, Minister of State, Board of Trade, said that representations had been made to the American Government pointing out the serious damage to confidence which had already resulted from uncertainty as to the future trend of cotton prices. He agreed that the price of United States cotton was being kept artificially high by the support policy and that the world price of cotton was above the economic price of production in some countries.

The recent statement on behalf of the American Government that it would seek to avoid any undue disruption of world prices in disposing of its surpluses is at least an encouraging assurance, but it is difficult to see how the imposition of an export subsidy could fail to have unfortunate effects on goods already held. The attitude of buyers in restricting their purchases of the raw material and processed goods can be readily understood.

One of the effects of this prevailing mood of caution is that stocks of raw cotton held in this country are now very much smaller than for a long time past. According to figures quoted in the House of Commons barely 250,000 bales are in private hands, excluding mills and stocks afloat. The Raw Cotton Commission still holds about 55,000 bales, but a large proportion of all stocks is long-staple cotton. In January, total supplies were equivalent to about 18 weeks' consumption, whereas before the war stocks were normally available to meet the requirements of the mills for at least six months ahead.

New Crop Records

Once more the Empire's cotton fields have provided bigger crops than ever before. In 1954, a new record was established, according to the annual report of the British Cotton Growing Association, when production reached 1,226,600 bales. This was an advance of 172,600 bales on the previous best figure in 1951, and brought the average crop in the five years from 1951 to 1954 inclusive to above the 1,000,000-bale mark annually.

Nor was last year's increased production due to a spectacular rise in output in any particular country, although generally favourable weather conditions were encountered. The report describes the advance as "the result of the steady effort made in encouraging increased production and the provision of better seed for planting, also marketing facilities, following the strengthening of agricultural and other departments which has taken place in the post-war period."

Output from the Anglo-Egyptian Sudan, at 498,500 bales, was second only to the peak 1951 crop of 526,600 bales, while Uganda contributed almost 400,000 bales. Tanganyika for the first time produced over 100,000 bales, whereas the previous best from this area was 77,800 bales. Even better results were obtained from Nigeria, where the crop of 143,200 bales was 30,000 bales above the 1952 high level, and nearly three times as much as before the war.

Among the minor cotton growing countries the progress made by Aden is quite remarkable. From a bare 100 bales produced in 1949, the crop was raised to nearly 10,000 bales in 1951. After a setback in the following year output reached 10,400 bales in 1953, but last year the growth was doubled at 21,700 bales, and the report forecasts a further substantial increase in 1955.

Empire crops are now a very different proposition to the tiny yields achieved fifty years ago when the Association was beginning its pioneer efforts. The current report refers to the financial resources now available after years of high cotton prices for developing growing facilities and the substantial sums which can be used to cushion the price to the African farmer in the event of a general fall in cotton values.

Fresh Manpower Fall

Lancashire cotton spinning mills suffered their biggest manpower setback since June, 1952, in the final week of March. The Cotton Board has announced that the mills lost 520 full-time and 180 part-time operatives. In the first three months this year the spinning labour force has fallen by more than 3,000. A total of 2,336 full-time and 720 part-time workers have left the industry.

With fewer operatives at work, output of cotton and rayon yarn fell slightly in the week ended 26th March. Production aggregated 19,010,000 lb., compared with 19,080,000 lb. in the previous week and 20,690,000 lb. in the corresponding week last year.—*All Rights Reserved.*

SUBSTITUTE FOR WOOL FABRICS

The American Army's statement that there is no substitute for all-wool fabrics is the result of long and intensive research from which the consumer can readily benefit. This is the view of Senator Joseph C. O'Mahoney of Wyoming. According to Senator O'Mahoney, the inherent qualities of wool cannot be satisfactorily duplicated in fabrics with even a small degree of synthetic content. As far as the Army is concerned, wool is still the essential fibre for uniforms, and nothing can be substituted for it. Apart from the factors of service, comfort, and appearance, which are paramount in both military and civilian fabrics, wool offers important advantages in the manufacture of fabrics and clothing. When synthetic fibres are mixed with wool in any appreciable quantity, the resulting fabrics have not been found satisfactory in the manufacture of uniforms. It has been discovered that synthetic mixtures tend to melt under the needle in the high-speed machinery needed to produce Army uniforms. The higher the percentage of synthetic fibres, the more rapid the rate of burning.

TRENDS IN FREE WORLD COTTON CONSUMPTION REVIEWED

IMPORTANCE OF TEXTILE EXPORTS

THE production of cotton, like that of all other commodities, is determined by consumption. From this point of view, it is certainly gratifying to note that there has been a significant increase in the free world's cotton consumption in the last two or three years. Thus, in 1953-54, it was estimated at 27 million bales (of 478 lbs. each), as against 25.9 million bales in 1952-53 and 25.2 million bales in 1951-52. As regards the current season, the available data on cotton consumption are too inadequate to hazard a guess. But the International Cotton Advisory Committee points out, in the course of its latest review (March review) of the world cotton situation, that "by and large, aggregate free world cotton consumption to the end of December was very slightly ahead of the corresponding period in 1953-54."

The following table gives the free world's cotton consumption in 1934-35 to 1938-39 (average), in the 1952-53 and 1953-54 seasons:

Cotton Consumption

(In 000 bales of 478 lbs.)

	1934-35 to 1938-39 Average	1952-53	1953-54
Free World Total	22,270	25,900	27,000
Of which			
Canada	268	271	300
U.S.	6,464	9,461	8,580
Belgium	357	371	432
France	1,203	1,160	1,332
W. Germany	1,195	1,073	1,224
Italy	665	864	876
Netherlands	244	295	324
U.K.	2,741	1,564	1,812
India	3,036	3,875	3,768
Japan	3,441	2,005	2,568

The details relating to cotton consumption in the current season, as already stated, are incomplete. They are available only upto the end of November, 1954. In the following pairs of figures, the consumption of cotton in the first four months of the current season in some of the leading cotton consuming countries is compared with that in the corresponding period of the 1953-54 season which is given in brackets:

(In 000 bales of 478 lbs. each)

U.S. 2,893 (2,986); Canada 113 (109); U. K. 615 (590); France 439 (422); W. Germany 425 (402); Italy 265 (267); Netherlands 110 (107); Belgium 190 (180); Japan 718 (860); India 1,277 (1,226).

It will be seen from the figures given above that cotton consumption is currently running at below last year's levels in Japan and the U.S. In Japan, the fall in consumption is attributed to curtailment of yarn production undertaken in the interest of more remunerative export prices and the restoration of a better balance between supply and offtake. Plans are now under way, it is stated, to extend production restrictions to the weaving section of the industry. Indeed, a return to the war-time system of production and marketing controls is reported to have been advocated by the Cotton Spinners Association. Other factors in Japan's textile situation are the uncertainties in the sphere of cotton textile exports, substantially increased stocks of both yarn and cloth and payments difficulties in the import of raw cotton.

As regards the U.S., cotton consumption, as a reference to the figures given above will show, was lower in the beginning of the current season than in the corresponding period of 1953-54. But increased cotton consumption during the second quarter of 1954-55 counterbalanced to a large extent the decrease during the first quarter, so that aggregate consumption has almost caught up with last season.

Outside these two countries, consumption in most instances is at a higher level this season. In Western Europe, it is estimated that consumption over the first four months increased by 100,000 bales, of which an increase of 50,000 bales took place in the U.K. and W. Germany. Since the turn of the year, the French industry has been adversely affected by the less favourable export situation and the decline in domestic textile demand. An encouraging trend is disclosed by W. Germany, Canada and India. Summing up the trends in cotton consumption, the Committee says: "On balance, it presently appears that aggregate consumption in these main countries may remain at last season's level." Elsewhere, however, it is estimated that consumption could increase by 400,000 bales. The estimated level of consumption in 1954-55 in some of the minor cotton-consuming countries with their consumption in 1953-54 within brackets is given below.

(In 000 bales of 478 lbs. each)

Pakistan 650 (430); Turkey 325 (275); Korea 225 (150); Argentina 430 (400); Colombia 150 (133); Mexico 350 (330); Hongkong 225 (204); Iran 85 (70).

To the cotton-growing countries, particularly to the cotton-exporting countries, the level of world cotton consumption is of very great interest, for it is this level that generally determines the market for raw cotton. Discussing the relationship between consumption and exports of cotton, the Committee observes:

"There is normally a very close relationship between cotton consumption and exports. Thus, last season, both consumption and exports set new records for the post-war period. To be more exact, however, it is consumption in net importing countries that determines the volume of exports. This explains why, despite the expectation of a further increase in free world consumption this season, cotton shipments are not likely to increase. The increase in cotton consumption will be in net exporting countries, including the U.S. In view of the significantly lower consumption in Japan, aggregate consumption in net importing countries is not likely to be any higher than last season."

An interesting line of enquiry is to investigate the relationship between cotton consumption and textile exports. Free world cotton consumption, as pointed out at the outset, increased from about 22.3 million bales in pre-war years to 26.0 million bales in 1952-53 and still further to 27.0 million bales in 1953-54. The level of textile exports has, on the other hand, been well below pre-war levels. Textile exports aggregated 6,200 million square yards per annum in 1934-38 (average), but fell to 5,500 million square yards in 1950. Despite some recovery in 1951 to 5,750 million square yards, they fell to 4,700 million square yards in 1952 and 1953. In 1954, there was again some recovery to 5,180 million square yards, but they will still be a thousand million yards below the pre-war average. Commenting on the divergence in the trends of cotton consumption and textile exports, the Committee points out that "textile exports have become less important as a determining factor in the level of cotton consumption."

Textile Exports

The Committee has pursued this line of enquiry by calculating the proportion of cotton, represented by textile exports, to total mill consumption. In 1934-38 (average), mill consumption was 21.8 million bales per annum and textile exports, expressed in raw cotton equivalent, were 3.1 million bales. This means that about 14 per cent. of the cotton consumed was exported in the form of finished textiles. In recent years, this has fallen to 10 per cent. Thus, in 1954, mills consumed 26.7 million bales but cotton textile exports, expressed in raw cotton equivalent, aggregated 2.6 million bales. This can be explained by the fact that many of the cotton-producing countries use more cotton than formerly so that they are less dependent on foreign sources for their textile needs. Some of them have actually turned out to be exporters of piecegoods. This has the effect of reducing textile exports but increasing the level of cotton consumption.

Fluctuations in cotton textile exports are, therefore, of only minor importance in explaining changes in free world cotton consumption. A decline of 10 per cent. in textile exports means a drop of only one per cent. in aggregate cotton consumption. If textile exports do not serve as a very reliable index of cotton consumption, they are important in explaining the geographical distribution of raw cotton consumption. The ratio of textile exports, expressed in their raw cotton equivalent to total cotton consumption, varies from country to country. In 1954, it was as high as 37 per cent. in Netherlands, 30 per cent. in Japan, 25 per cent. in Belgium, 21 per cent. in the U.K. and in Germany, 14 per cent. in India and 5 per cent. in the U.S. The level of cotton textile exports is thus extremely important in Western Europe and Japan. If this level declines, the consumption of raw cotton will also decline. But, all the same, trends in textile exports have lost something of their former importance as a guide to cotton consumption.

T. M. TAGG,
Manager.

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at 31st December, 1954, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta Branch and report that :—

(a) We have obtained all the information and explanations which we have required ;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches ; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

Chartered Accountants.

BOMBAY, 26th March, 1955.

SUGAR STOCKS ACCUMULATE WITH MILLS

GOVERNMENT URGED TO REVISE IMPORT POLICY AND REDUCE EXCISE DUTY

IT was only last week that we referred in our Market Gossip columns to the repercussions of the Central Government's policy with regard to sugar imports and the recent increase in excise duty on the indigenous sugar industry and trade. We alluded, in particular, to fears regarding heavy accumulations of stocks with the mills. That these fears are not at all exaggerated is clearly borne out by the disquieting reports emanating from the sugar producing centres of North India. A Press message from Lucknow, for instance, avers that the sugar industry in Uttar Pradesh is facing what the millowners call the "crisis of accumulated stocks." The sugar mills, it is said, have been able to sell so far barely 20 per cent. of their output in the current season, the remaining 80 per cent. lying unsold in factory godowns. The aggregate quantity of sugarcane actually crushed by the factories up to the end of March, 1955, is estimated at over 7.3 million tons, as against 5.4 million tons during the entire season 1953-54. About 700,000 tons of sugarcane, it is said, are still to be crushed. The majority of mills, excepting about 17 factories in the Eastern District which have closed, is continuing crushing operations. On the basis of the average recovery of 9.56 per cent., the total production of sugar amounts to about 696,000 tons. Excluding the quantity sold, the stocks lying unsold with the mills are stated to amount to as much as 556,000 tons. The sugar millowners fear that the carry-over of sugar at the end of the current season would amount to over 366,000 tons. Incidentally, the total sugar production in Uttar Pradesh in the current season is expected to amount to over 800,000 tons as against 560,030 tons in 1953-54.

The heavy accumulation of stocks with the sugar mills is attributed to low level of demand in the country which, in turn, is said to be due to three factors. First, the price of *gur* has suffered a steep fall making *gur* relatively more attractive than sugar. *Gur* of high quality is now quoted in the Hapur market at Rs. 9-12 to Rs. 10-4 per maund, as against Rs. 14-4 to Rs. 15 a year before. In many other parts of India, the price of *gur* is still cheaper. Near Belapur and Kolhapur, it is as low as Rs. 7-8 per maund. Consequently, consumers are said to have switched over to *gur* from factory sugar. Secondly, the imposition of an extra excise duty on Indian sugar has aggravated this trend. The reduction in demand for factory sugar is indicated by the persistently downward trend in prices. The retail price at which sugar is being sold in the Hapur market is Rs. 33-8 per maund, which is practically the same as that prevailing prior to the upward revision of the excise duty announced on 28th February, 1955. Thirdly, the Union Food Ministry's action in storing imported sugar in centres like Nagpur, Akola, Ahmedabad, Indore, etc., and selling it in these centres at the same price as those prevailing at ports has acted as a curb on the upcountry dealers' tendency to lay by stocks before the monsoon. These dealers feel that, since the Government is doing the stocking, it is unnecessary for them to tie down their monetary resources in sugar stocks. Moreover, the very knowledge throughout the country that there is plenty of sugar this year has led to leisurely offtake by consuming centres.

Uncertainty in Sugar Markets

The sugar millowners of Uttar Pradesh are, naturally enough, very much perturbed over heavy accumulations of stocks resulting in a drop in prices. They are finding it difficult to effect fresh sales of sugar, owing to the uncertainty prevailing in the sugar markets. A large number of dealers who had made purchases of sugar but had not taken delivery yet are understood to be trying to back out under some pretext or other. Efforts are being made by sugar dealers to persuade the mills to reduce their delivery rate, so that the total loss consequent on the fall in sugar prices may be shared between them and the mills. A few mills are reported to have already agreed to this proposal, in order to give relief to their old customers. It is thought that it will take considerable time for the conditions in the sugar markets to become normal.

In view of the persistence of the weakness in sugar markets, the sugar millowners of Uttar Pradesh have made a representation to the Government of India urging the latter to abolish the extra excise duty on Indian sugar and also to reconsider its sugar import policy. A six-man deputation of factory-owners recently waited upon Mr. C. B. Gupta, Uttar Pradesh Industries Minister, with a view to seeking the support of the State Government for the measures they have suggested to the Centre. The deputationists assured the Minister that the sugar factories would crush in the current season "every maund of sugarcane offered to them, so that the cane growers might not suffer as a result of the crisis." The reaction of Mr. Gupta to the points raised by the sugar millowners are, however, not known.

It is not the sugar industry in Uttar Pradesh alone that is confronted with a crisis. For the industry in Madhya Bharat also is faced with a like situation. According to the Secretary of the Madhya Bharat Sugar Mills Association, the sugar mills are not in a position to compete with imported sugar, due to increased excise duty, high cost of production and low recovery. Further, the Government of India has decided to import about 300,000 maunds of German sugar into the State and sell it at Rs. 29-7 per maund. The Government is not charging railway freight for the movement of sugar from Bombay docks to various places in the State and is selling sugar in Madhya Bharat depots at the ex-Bombay dock price of Rs. 29-7 per maund. The Secretary has, therefore, appealed to the Union Government, in the course of a telegram addressed to it, either to discontinue further despatches of sugar to Madhya Bharat or to raise the selling prices of imported sugar by adding railway freight.

Plea Fully Justified

The plea for the reduction in the excise duty on sugar put forward by the industry is fully justified. The increase in the excise duty on sugar amounts to 50 per cent. over the rate prevailing before 1st March, 1955. Such a high incidence of tax is not, as Mr. S. G. H. Davis, Chairman of the East India Distilleries and Sugar Factories Ltd., rightly remarked at the recent annual meeting of the Company, calculated to be of benefit either to the cane grower or to the industry. Substantiating this contention, Mr. Davis observed: "Sugar prices have remained at more or less the same level as before the increase in duty, indicating consumer resistance, with *jaggery* as a cheap and ready substitute for sweetening material. It would appear then that the burden of the additional excise duty has to be carried by the industry indefinitely, unless the Government of India deem fit to withdraw the increase or reduce its incidence as a result of representations now being made. I may mention in passing that one result of the increase in excise duty is to nullify, on present sugar prices, the advantage the cane growers would have under the special system of bonus payments they have hitherto enjoyed."

The upward revision in excise duty on sugar was also criticised by Mr. Gulabchand Hirachand, a prominent sugar millowner of the Deccan. In his speech at the last annual meeting of the Walchandnagar Industries Ltd., Mr. Gulabchand said that sugar was one of the most highly taxed commodities in the country in the form of excise duty, cane cess and sales tax. "I cannot help wondering," he declared, "how a Government whose declared policy it is to raise the standard of living of the masses, could consistently go on heaping fresh burdens on such primary necessities as cloth and sugar, which must in the end make them dearer for the consumers." Further, Mr. Gulabchand reiterated the complaint regarding the heavy incidence of cane cess. He regretted that even the sugar industry's reasonable request to use a greater part of the income from this source directly for improving sugarcane cultivation and providing better transport conditions in the factory areas had fallen on deaf ears. The industry had failed, too, to obtain any relief from the steep increase in water rates for both flow and lift irrigation. Mr. Gulabchand criticised also the tendency on the part of the income-tax authorities to fix the price of cane delivered for crushing to the manufacturing side somewhat arbitrarily, "so as to minimise profit on the agricultural operations of the sugar companies and to inflate that on the manufacturing side."

There is considerable truth in the aforesaid observations of Mr. Davis and Mr. Gulabchand. Now that the sugar industry is faced with the grim problem of heavy accumulation of stocks, there is need for stepping up the demand for indigenous sugar. One of the surest ways of bringing about such enlarged demand is to reduce the incidence of tax.

NEW SUGAR MILLS IN MADRAS

The Central Government has granted licences for the establishment of four new sugar mills in the State of Madras. Of these mills, one with a daily cane crushing capacity of 400 tons is to be started near Tiruvannamalai in N. Arcot district; another with a capacity of 800 tons is to be located near Pettaivaithalai in Tiruchirapalli district, a third with a 1,000-ton capacity is to be located in Vadapathimangalam in Tanjore district and the fourth with a capacity of 800 tons is to be started in Kuliannoor in S. Arcot district. In addition, an application for starting a 600-ton factory on a co-operative basis near Vellore in N. Arcot district is pending with the Government of India.

Incidentally, the sugar deficit of Madras State is estimated at about 50,000 tons per annum. The Government of Madras has now decided to examine if and to what extent the deficit in sugar supplies can be met by expanding the existing units and by the output in the four factories for which licences have already been issued.

The all-Pakistan final estimate of sugarcane crop for the season 1954-55 places the area at 1,017,000 acres, as against 962,000 acres in the final estimate of last season, which represents an increase of 5.7 per cent. The aggregate yield of sugarcane for the season is estimated at 12,275,000 tons, as against 12,629,000 tons in the corresponding estimate of the previous season, or a decrease of 2.8 per cent.

COMPOSITION AND FUNCTIONS OF COAL BOARD

NEED FOR REORGANISATION

THE composition and the functions of the Coal Board have, of late, come in for a good deal of criticism. The colliery owners have been insisting that the reconstitution of the Coal Board and a re-definition of its functions will go a long way towards arresting the deteriorating conditions of the coal industry. The main grievance against the Coal Board is that its Chairman is a non-technical person and that he is burdened with too many responsibilities; he has to do responsible duties of the Coal Commissioner, as well as those of the administrative head of the State collieries. It is also complained that, frequently, there is a certain degree of arbitrariness in the decisions taken by the Coal Board. It is true that the private sector in the coal industry can participate in the Coal Board's deliberations, but this can be done only through the medium of advisory committees, the advice of which is not mandatory and, therefore, liable to rejection.

The concentration of the functions of the Coal Commissioner and the head of the State collieries in a single official has, it is stated, created an anomalous position. It is complained that, in settlement of disputes between the State and private collieries, the Coal Commissioner has generally been partial towards the former. It is pointed out, for instance, that, although large quantities of brick-burning coal have accumulated at the pitheads of private collieries, the Coal Commissioner has failed to allot a fair share of wagons to these collieries. Ironically enough, the Commissioner, it is stated, has allowed a major portion of the demand for brick-burning coal not only from Government projects but also semi-Government projects to be met by State collieries and allotted top priority for the supply of wagons to transport such coal. Commenting on the present set-up of the Coal Board, Mr. J. W. N. Baldock described the Board, in his presidential address at the last annual general meeting of the Indian Mining Association, as a "pale shadow of the National Commission, which the Indian Coalfields Committee of 1946 recommended as an overall authority for the coal industry."

Whether all these criticisms are justifiable or not, it would appear that the Coal Board, as at present constituted, has lost the confidence of private colliery owners. It will be recalled that the Coal Board is a statutory body set up under the provision of the Coal Mines (Conservation and Safety) Act, 1952 (XII of 1952). The Act, and the rules framed thereunder in 1954, give the Coal Board enormous powers relating to control of production and despatches of coal. These powers include pegging of coking coals of individual collieries and initiating measures for the promotion of stowing, washing and blending. Besides, the Board is authorised to control grading, opening, closure and/or abandonment of mines, as well as working of mines, including depillaring operations.

Indeed, the powers of the Board cover virtually every aspect of the industry commencing from the opening of a mine or opening a new seam upto the time coal reaches the consumer. There is a chain of controls running through every operation of the industry. Coal is a basic industry, upon the healthy development of which rests the progress of a number of industries for which coal as fuel accounts for a major portion of the cost of production. It is, therefore, necessary that the responsibility for the progress of the industry should vest in an efficient and impartial body. Any arbitrary action may result in short-term benefits but, in the long run, its effects may turn out to be fearfully adverse. Consequently, measures affecting such a basic industry as coal should be taken after consulting all the interests affected.

The consensus of opinion among private colliery owners is that the Coal Board should be an independent body, and that its chief should not hold any additional office as the Coal Commissioner or as the head of State collieries. The Board should be under the chairmanship of an independent person of the status of a High Court Judge and include representatives of the private sector. These are not extravagant demands. The Government must recognise that private enterprise has an honourable part to play in this sector. It cannot play such part unless the Government holds the scales even between the public and the private sectors, and avoids giving the impression that it favours its own sector at the expense of the private sector.

COAL STATISTICS

The output of coal in collieries in India increased from 3,155,419 tons in January, 1955 to 3,248,578 tons in February, 1955 according to official statistics released by the Chief Inspector of Mines in India. The despatch of coal, however, amounted to 2,502,267 tons, as against 2,672,013 tons in the preceeding month. Coal stocks at pitheads increased from 3,511,921 tons at the beginning of the month to 3,782,888 tons at the close of the month. During the month under review 839 collieries were working, with an average daily employment of 367,255 workers.

INDIAN TEA STATISTICS

PER CAPITA CONSUMPTION IN INDIA LESS THAN HALF POUND

THERE would appear to be a tendency among the general public to be carried away by the statement that 1954 was a prosperous year for the Indian tea industry. Such a statement leads to a misconception that all is well with tea producers, and that the entire benefit of the prosperity is reaped by them. It is not generally realised that there are others also who have been sharing in this prosperity. We do not have in mind the workers alone who too have derived immense benefit from the boom in prices of tea. We have also in mind the Government and the country as a whole. A close study of the maiden issue of *Tea Statistics* 1954, published by the statistics branch of the Indian Tea Board, will bear this contention. These statistics show that the rise of about 31 million lbs. in the output of tea in India has raised the foreign exchange earnings of the country by over Rs. 28 crores despite a decline of nearly 51 million lbs. in exports, and has brought about an increase of over Rs. 8 crores (in 1954-55) in the revenue earned by the Central Government by way of customs and excise duties on tea.

The aforesaid publication is the first of its kind issued by the Indian Tea Board, intended to be a concise book of reference for various statistics connected with the tea industry and trade of the world, with special emphasis on those of India. Accordingly, the publication gives detailed information regarding the Indian tea industry, along with some essential statistics relating to the major producing and consuming countries of the world, so that a co-ordinated study of international position of the industry is possible within a small compass. The Indian Tea Board proposes to make this publication an annual feature. We warmly welcome this decision by the Board as it serves a very useful purpose. There is by no means a plethora of statistical publications on tea in this country. The few that are available are the products of private enterprise. It is true that the International Tea Committee publishes an *Annual Bulletin of Statistics*, but it comes rather late in the year and is not quite comprehensive. In any case, India being the largest producer of tea in the world, it is but fair that it should have its own source of statistics relating to this popular beverage. The Indian Tea Board, therefore, deserves to be complimented on this thoughtful enterprise. Some of the figures given in the bulletin are provisional, but these do not in any way affect the general trend.

Area and Output

The statistics given cover the position of tea up to the close of last year. It places the total output of tea in this country during 1954 at 638.50 million lbs., as against 607.74 million lbs. in the previous year and 613.35 million lbs. in 1950. In 1951, the production rose to 629.20 million lbs., but declined to 614.51 million lbs. in 1952 and still further to 607.74 million lbs. in 1953. The area under cultivation of tea as on 31st March, 1954, was 789,441.67 acres, having been extended from 785,584.24 acres two years before. The figure for 1953-54 is, however, provisional. A State-wise distribution of the area and output reveals that Assam possesses the largest area under this commodity with 386,096.94 acres producing the largest quantity, namely, 339.39 million lbs., as against 385,459.36 acres in the previous year when the output aggregated 316.41 million lbs. West Bengal comes second with an acreage of 196,603.64, as against 196,339.73 in 1952-53 and an output of 160.46 million lbs., as compared with 160.34 million lbs. in 1953. The area under tea in Madras and Coorg as on 31st March, 1954, extended to 85,867.92 acres from 84,917.59 acres a year before, and the production rose from 63.41 million lbs. to 67.75 million lbs. Travancore-Cochin produced in 1954 58.60 million lbs. out of 83,514.11 acres, as compared with 55.45 million lbs. out of 83,358.81 acres. The trend of production in various States during the past five years shows that, while in all main tea producing States the output has grown sizably, that in West Bengal has suffered a marked contraction of over 19 million lbs. This decline compares with the increase of more than 25 million lbs. in the total production of all States.

The number of tea gardens as on 31st March, 1954, was 6,310, as against 6,262 a year before and 6,240 two years ago. Madras and Coorg possess the largest number, with 2,872 gardens, Travancore-Cochin 1,136, Punjab 912, Assam 789 and West Bengal 296. It will be noted that Assam, the largest tea producing State, has got a smaller number of gardens than Punjab which produces only 2 million lbs. of tea.

Despite higher production, the quantities of teas sold at different auctions were lower in 1954-55 than in the previous year. The total quantity sold in Calcutta during the past year aggregated 261.13 million lbs., as against 272.94 million lbs. in 1953 and 286.12 million lbs. in 1952. Of this, sales for export amounted to 167.72 million lbs., a decline of 20.75 million lbs. from those in 1953-54 and of 49.90 million lbs. from 1952-53. Sales for internal consumption reveal an increase from 68.50 million lbs. in 1952-53 to 84.47 million lbs. in 1953-54 and 93.41 million lbs. in 1954-55. A quantity of 29.14 million lbs. was sold at Cochin auctions during 1954, as against 33.31 million lbs. in 1953 and 25.20 million lbs. in 1952. Of this quantity, export sales accounted for 22.15 million lbs. and sales for consumption in India for 6.99 million lbs., as compared with 28.96 million lbs. and 4.35 million lbs., respectively in 1953. Sales of Indian tea at London auctions, which had successively gone up from 53.57 million lbs. in 1951 to 212.77 million lbs. in 1953, declined to 190.42 million lbs. in 1954. While North Indian tea accounted for a decline to 162.37 million lbs. from 187.39 million lbs. in 1953, to which level it had gone up from 41.36 million lbs. in 1951, South Indian tea sales had kept up the upward trend from 12.21 million lbs. in 1951 to 25.38 million lbs. in 1953, with a further rise to 28.05 million lbs. during the year under review.

The decline in sales for export at Calcutta and Cochin and those sold in London was obviously due to the cautious releases of export rights by the Government of India in order to see that internal markets did not run short of tea, if too much were exported. Thus, the Government permitted an export allotment of 133.5 per cent. of the standard exports for the year 1954-55, as against 135 per cent. permitted under International Agreement. This represented a quantity of 464.91 million lbs. which, together with the unutilised export quota brought forward from the previous year, gave a total export quota of 474.99 million lbs. As against this, the actual exports under licence up to the end of December, 1954, amounted to 355.67 million lbs.

'Per Capita' Consumption

It is not, however, possible to judge whether such larger sales for internal consumption really increased the level of consumption in India, in the absence of comparative figures. The Tea Board's bulletin, however, places the quantity of tea consumed in India during 1953-54 at 175.68 million lbs. which, on the basis of a population of 367.55 million, works out to a *per capita* consumption of 0.48 lb. or less than half-a-pound, as against 0.69 lb. in the U.S. and nearly 10 lbs. in the U.K. Such a ludicrously low level of consumption in India, which is the largest producer of tea in the world having a vast population, shows that much is left to be done by the Tea Board to increase the consumption at home. Even if the home consumption is raised to 2 lbs. per head, which is only about one-fifth of the *per capita* consumption in the U.K., the present level of production in this country will have to be stepped up considerably to meet the internal demand alone, not to mention the needs of export markets. From this, readers can well imagine the enormous scope for increasing production of tea in India.

The quantity of tea exported from India during 1954 aggregated 450.41 million lbs., representing a decline of 50.58 million lbs. from that (500.99 million lbs.) in 1953, and an increase of 35.57 million lbs. over that (414.84 million lbs.) in 1952. The U.K. was the main importer with 327.29 million lbs. to its credit, as against 355.25 million lbs. in 1953. The U.S. was the second largest importer with 32.16 million lbs. (that is, less than one-tenth of the quantity taken up by the U.K.), an increase of about 2 million lbs. over the previous year. The total value of Indian tea exported during 1954 was Rs. 131.28 crores, as compared with Rs. 103.10 crores in the previous year and Rs. 80.91 crores in 1952. It will be noted that, though the quantity exported was less dur-

(*Continued on page* 811)

JUTE STOCKS IN MARCH HIGHER

PRODUCTION RECOVERS

THERE was a sharp rise in the stocks of jute goods as at the end of March, 1955, as compared with those a month earlier. According to statistics published by the Indian Jute Mills Association, the stocks at the end of March, 1955, were at a high level of 94,473 tons, as compared with 82,858 tons, an increase of 11,615 tons at the end of the previous month. This is the highest level touched since February, 1954, when the stocks stood at 95,417 tons. A variety-wise analysis reveals that the stocks of hessian goods rose from 26,668 tons in February, 1955, to 33,976 tons in March, 1955, that is an increase of 7,308 tons. The stocks of sackings were higher by 4,027 tons at 58,932 tons and others by 280 tons at 1,565 tons. This is the fourth month in succession that sacking goods have risen and the third consecutive increase in hessian stocks. The stocks are well above the mills' monthly production capacity under the present working hours' agreement.

Over the past four months, hessian stocks have increased by 10,644 tons and sackings by 13,910 tons and others by 247 tons, thereby making a total of 24,810 tons. The continuous increase in stocks is chiefly due to lack of overseas enquiries. The expectations of a sizable demand from Argentina have not yet materialised. Another factor responsible for the accumulation of stocks is the fall in shipments occasioned by labour troubles in Calcutta port. A third factor is the increase in production in the month under reference. It is true that February is a short month and that the output in March, a month of 31 days, should be higher than in the preceding month. But the actual rise has been much more than that warranted by this factor. It may be noted here that, in January which is also a month of 31 days, the production was perceptibly less than in March, 1955, as we shall presently show.

The following table gives the stocks of hessians, sackings and other varieties as at the end of March, 1955, as compared with those at the end of the two preceding months, as also at the close of March, 1954.

	As on			
	31-3-1955	28-2-1955	31-1-1955	31-3-1954
Civil				
Hessian	33,739	26,393	23,776	29,298
Sacking	58,723	54,696	51,018	60,607
Others	1,565	1,285	1,157	1,005
Total ..	94,027	82,374	75,951	91,000
Government				
Hessian	237	275	233	290
Sacking	209	209	200	710
Others	Nil	Nil	Nil	15
Total ..	446	484	442	1,015
Grand total ..	94,473	82,858	76,393	92,015

After a decline for two consecutive months, the output of jute goods recovered once again in March, 1955. Thus, the output during the month under review was 89,258 tons, as against 81,879 tons in February, 1955, and 83,852 tons in January, 1955. The output in March, 1954, was 75,586 tons only. The bulk of the increase is accounted for by sackings, which rose by 4,413 tons to 50,844 tons. Hessian production advanced from 32,143 tons to 34,776 tons and others from 3,305 tons to 3,638 tons. The total production during the nine months of the season, namely, 1954-55 amounted to 750,467 tons, as against 644,357 tons in the corresponding period of the 1953-54 season.

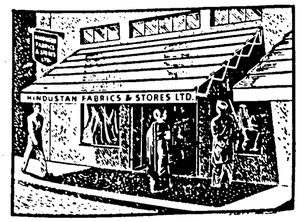
The table below gives the output of the chief varieties of jute manufactures during each of the three months ended March, 1955, as also during March, 1954:

	March, 1955	February, 1955	January, 1955	March, 1954
Civil				
Hessian	34,766	32,001	32,206	34,328
Sacking	50,884	46,421	48,342	37,830
Others	3,638	3,305	3,022	3,120
Total ..	89,238	81,817	83,660	75,278
Government				
Hessian	10	52	68	11
Sacking	10	10	124	284
Others	Nil	Nil	Nil	13
Total ..	20	62	192	308
Grand total ..	89,258	81,879	83,852	75,586

your shop's new face

AJAX COLLAPSIBLE AWNING

An attractive shop-front attracts customers. Create a new, inviting face to your shop with an AJAX Collapsible Awning. Made of strong aluminium alloy panels fitted to pantographic arms, it is easy to erect, and draws attention by its beauty—and the front drop panel serves as a signboard as well. No fabrics to tear — no dyes to fade. Ajax Awnings can be installed over show windows, terraces, hotel promenades and cinema entrances, — in fact, wherever protection from sun or rain is required.



The AJAX AWNING is a Brazilian invention. It is manufactured in India by:

JAYANAND KHIRA & CO. LTD.,

Sole & Exclusive Licensees for India, Burma, Ceylon, Kothare Bldg., Sandhurst Bridge, BOMBAY.

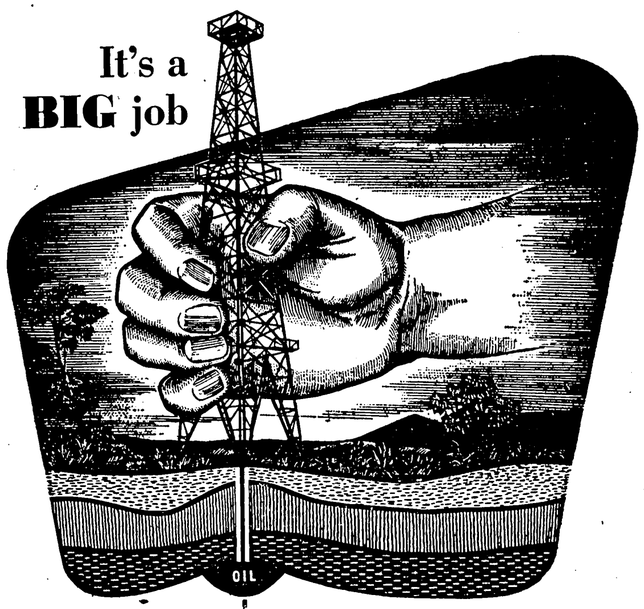
It's a BIG job



looking for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil ? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

IRRIGATION AND POWER PROJECTS

THEIR PROGRESS SO FAR REVIEWED

THAT an improvement in the low living standards of the majority of people in India is dependent chiefly on provision of adequate irrigation and power is axiomatic. It is true that, in the initial years of the first Five-year Plan, several handicaps, including the lack of proper technical personnel, led to defective planning in certain cases, thereby delaying the execution of the irrigation and power projects. It is also true that there were glaring instances of embezzlement of funds by dishonest officers in charge of such projects as the Damodar Valley and the Hirakud. But it is gratifying to note that, subsequently, some of these obstacles were removed and steps were taken to expedite the execution of the projects in an orderly way. This is clearly evident from the address of Mr. Gulzarilal Nanda, Minister for Irrigation, Power and Planning, in the Lok Sabha, while opening the debate on the demands for grants for his Ministry, as well as from the annual report of the Ministry for 1954-55. Some idea of the magnitude of expenditure in the second Five-year Plan, now under preparation, was also given by Mr. Nanda.

It will be recalled that a sum of Rs. 729 crores has been earmarked for expenditure by both the Centre and the States on irrigation and power projects, under the Five-year Plan. Of this, the well-known major irrigation and power schemes account for Rs. 615 crores and the minor irrigation schemes for Rs. 114 crores. The total allocations works out to 32.5 per cent. of the entire outlay under the Plan.

Out of this outlay, the original provision for multi-purpose projects, which are Centrally financed, was Rs. 174 crores. Subsequently, additions were made to the extent of Rs. 50 crores. Thus, the total works out to Rs. 224 crores. But even this sum is likely to be exceeded. For the actual expenditure during the 3 years 1951-54 alone was as much as Rs. 129 crores. The revised estimates for 1954-55 is Rs. 53 crores and the budget provision for 1955-56 is Rs. 59 crores. Accordingly, the total comes to Rs. 241 crores, as against the provision of Rs. 224 crores, an increase of Rs. 17 crores.

Percentage of Expenditure

The percentage of actual expenditure to the sums earmarked for multi-purpose projects, which stood at 14.9 in 1951-52, increased to 18.8 in 1952-53, 24.1 in 1953-54 and to about 24 in 1954-55. The budget provision for 1955-56 is about 26 per cent. Thus, the total performance will be about 107.8 per cent. of the planned estimate.

The provision for new schemes in the first Five-year Plan was a little more than Rs. 30 crores. Of this, the expenditure during the first three years was a little more than Rs. 1.60 crores and the revised estimates for 1954-55 on several of these schemes came to about Rs. 4.2 crores. The budget provision for 1955-56 is Rs. 26 crores. Thus, the total comes to Rs. 31.8 crores.

Regarding expenditure by the States, the original provision was Rs. 294 crores. Later additions amounted to Rs. 67 crores. The total thus comes to Rs. 361 crores. The actual expenditure during 1951-55 is estimated at Rs. 243 crores, which represents 67 per cent. of the total expenditure. It will be noted that, whereas the total expenditure by the Centre is running ahead of the target set under the Plan, that by State Governments is lagging far behind. This feature is common to all the development projects under the Plan and clearly shows that, if development is to take place according to the Plan, the State Governments should be more energetic than they have been.

So far as the physical targets are concerned, the total area planned to be brought under irrigation, including minor irrigation, was 29 million acres, while the total power to be generated was 2.23 million kw. As compared with the position in 1950-51, these targets represent an increase of 8.5 million acres or 56 per cent. in respect of irrigation and 1.1 million kw. or 65 per cent. in respect of power. The new area irrigated upto March, 1955, was 4.9 million acres, that is, 58 per cent. of the planned area. It is estimated that, by the end of the Plan period, as much as 7 million acres, or 87.5 per cent. would be under irrigation. The capacity of power projects executed upto the end of March, 1955, was 700,000 kw., that is, 64 per cent. of the planned targets. It is anticipated that, by the end of the planned period, the entire target of 1.1 million kw. capacity will be achieved.

So far as the progress of a few important projects are concerned, it is said that work at Bhakra-Nangal is proceeding satisfactorily. With its 680 feet high dam, which is the highest straight gravity dam in the world, and the vast network of canals extending over 2,000 miles, the Bhakra-Nangal Project is the largest multi-purpose project in India. The Bhakra dam is being constructed across the river Sutlej in a natural gorge just before the river enters the plains. The Nangal dam is located 8 miles downstream and will form a balancing reservoir to take up diurnal variations of water released from Bhakra and thus ensure steady supplies. There will be two power houses on the Nangal canal, each containing 2 units of 24,000 kw. The power house at the Bhakra dam will have one unit of 90,000 kw.

The construction work on the Project was started in 1946. The Nangal dam and Nangal Hydel Channel have been completed. The Bhakra main line and branches were opened for non-perennial irrigation in July, 1954. The power house at Ganguwal was put into commission for commercial purposes in January, 1955. The work on power house No. 2 is in an advanced stage and is expected to be completed by the end of 1955. At Rupar, the headworks have been completed, except for the installation of gates and gearing. Earthwork and masonry work on the remodelling of Sirhind canal and branches have also been completed except for work below water in the main line.

According to the present programme of construction, the Project is scheduled to be completed by the end of 1959, when perennial irrigation will start. On the completion of the Project, an area of 5.86 million acres will be under irrigation by the main irrigation network of Bhakra canals, 3.72 million acres of additional area under Sirhind canals and 0.53 million acres by the Bist Doab canal. The entire 5.86 million acres will, however, not receive irrigation. Some areas are high and some uncultivable. It is estimated that only 4.64 million acres can receive the direct benefits of canal irrigation and that, on an average, 3 million acres will be under crop each year. The Project, when fully developed, will help produce 1.13 million tons of additional wheat and other foodgrains, 0.8 million bales of cotton, 0.5 million tons of sugarcane, 0.1 million tons of pulses and oilseeds.

According to the latest project report, which is being finalised, the Project is estimated to cost about Rs. 157 crores. An expenditure of Rs. 100 crores was incurred upto the end of December, 1954. A provision of Rs. 22.28 crores has been made in the budget estimate for 1955-56. The Project is being executed jointly by the participating States of Punjab, P.E.P.S.U. and Rajasthan. Interest-bearing loans are being advanced by the Central Government to the three participating States to meet the entire expenditure on the Project.

Hirakud

The first stage of the Hirakud Project was begun in 1948; after some initial difficulties, the work on this project has been gathering momentum. The Project will be substantially completed and power and irrigation water made available by August 1956. With the completion of the first stage, there will be additional production of paddy to the extent of 4.5 million maunds. The revised estimate for Stage I of the Project is Rs. 70.78 crores. An expenditure of Rs. 37.95 crores (excluding liabilities to the extent of Rs. 5.82 crores upto the end of December, 1954) was incurred upto the end of January, 1955. A provision of Rs. 17.38 crores has been made in the budget for 1955-56. Interest-bearing loans are advanced by the Government of India to the Government of Orissa to meet the entire cost of the Project.

In regard to the Damodar Valley Corporation, the Bokaro thermal station, with an installed capacity of 1,50,000 kw., and the Talaiya hydro-electric station, with an installed capacity of 4,500 kw., have been brought under commercial operation. The Konar dam has been completed and the under-sluice gates are expected to be installed by June, 1955. The progress on the Maithon dam is, however, behind schedule. This has affected the programme for Panchet hill dam also for its execution is dependent largely on the equipment to be released from Maithon.

At Tungabhadra, the dam on the Mysore Andhra side has been completed, except for the installation of shutters, which, too, is in progress now. The dam, including the spillway shutters and the operations' bridge, is expected to be completed by December, 1956. On the power side, the dam power house is expected to be completed by June, 1956 and the canal power house by December, 1956, in accordance with the original programme.

Chambal Project

The Chambal Project is a multi-purpose project of the States of Madhya Bharat and Rajasthan. The original estimated cost of the Project, according to the Project Report prepared in 1952, was Rs. 49.30 crores. The revised estimate amounts to Rs. 71.69 crores. The first stage of the Project is estimated to cost about Rs. 48 crores and comprises:

(a) Construction of Gandhisagar Dam across the Chambal at the boundary of Madhya Bharat and Rajasthan, to create a reservoir having a gross capacity of 5.73 m.a.ft. and live storage of 5.06 m.a.ft. (Rs. 8.90 crores);

(b) a power station at Gandhisagar Dam (Rs. 5.00 crores);

(c) high tension transmission lines to a length of 772 miles (Rs. 8.54 crores); and

(d) construction of a barrage across the Chambal, above Kotah City, with irrigation canals taking off on both sides of the river (Rs. 25.59 crores).

The Project is being executed jointly by the States of Madhya Bharat and Rajasthan. The completion of Stage I will provide irrigation to an area of 14 lakh acres in the two States and generate 69,000 kw. of power (installed capacity). Excavation of foundations for the Gandhisagar Dam was started in 1953. Preliminary arrangements, such as construction camps, access roads, collection of tools and plants, etc., are well under way.

Rihand Dam

The Rihand Dam Project comprises the construction of a concrete gravity dam across the Rihand River, near the village Pipri in U.P. The Dam will be 3,004 ft. long and 271 ft. high above the river bed. The power house at the base of the Dam is designed to house 6 generating sets of 40,000 kw., one of which will be a stand-by. 132 kv. and 866 kv. transmission lines to Allahabad, Mirzapur, Sultanpur, Banaras, Mau, Gorakhpur, etc., will be constructed to make available Rihand power to the eastern parts of Uttar Pradesh. The estimated cost of the Project is about Rs. 45 crores. One of the main uses of the power will be for pumping water from 4,000 tube-wells for the irrigation of 16 lakh acres in the U.P. and 5 lakh acres in Bihar. Large-scale industrial developments, such as production of aluminium, caustic soda and chlorine, paper, textile, fertilisers, plastics, are expected to take shape in the neighbourhood of the Dam site as raw materials are available there. A part of the power generated will be given to Vindhya Pradesh for the development of cottage industries and for domestic use.

Preliminary work on the scheme, which started as early as December, 1947, was slowed down in October, 1949, owing to the urgent need at the time for concentrating effort on short-term food producing schemes. The tempo work was resumed in October, 1951. Extensive drilling of the foundation rock and detailed investigation, including sub-surface exploration of the quarry for concrete aggregate, have been completed. Land has been acquired for the construction of the colony at the dam site and at Mirzapur. Work of excavation of abutments of the Dam, switchyard and spillway is in hand. Permanent buildings have been constructed at Mirzapur. The civil works on the project are expected to be completed by 1960.

The second Five-year Plan, which is under preparation, is expected to provide for irrigating about 15 million acres and for additional power to the extent of 3 to 3½ million kw. This order of expansion is likely to entail an expenditure of about Rs. 1,100 crores. This is inclusive of a spillover of Rs. 322 crores on account of projects in the first Five-year Plan. Uptil now, 39 investigated schemes for irrigation and 89 investigated schemes for power, which are estimated to cost together about Rs. 429 crores, have been received by the Planning Commission for inclusion in the Plan. Mr. Nanda is of the considered view that, having regard to the target of doubling the irrigated area of the country in 15 years, the State Governments have not made adequate progress in investigating the necessary sites and the area. This is, indeed, a sad commentary on the enterprise of our State Governments.

NEW PRODUCTS AND PROCESSES

New Plastic Made From Sawdust

SAWDUST, which is usually considered a waste product of the lumber industry, may soon be used for making a number of plastic products. According to Mr. Kenneth H. Brockschmidt, Plastics Engineering Company of Sheboygan, Wisconsin, sawdust combined with small quantities of powdered resin can easily be moulded into a cheap and useful plastic. Sawdust plastic can be used for making chair seats, salad bowls, toys, heals for women's shoes, and croquet and bowling balls.

Aureomycin Helps X-Ray in Treating Cancer

The use of one of the antibiotic "wonder drugs" to increase the benefits of X-ray treatment against certain kinds of cancer is reported in the United States. Dr. Charlotte P. Donlan, a radiologist at George Washington University, Washington, says that the new method "offers possibly a more effective method of attack" against seriously advanced cancers. Whether the antibiotic, aureomycin, enhances the effects of irradiation by making the treated cells more sensitive to the rays, or whether the drug's benefit is due to direct attack on infection is not yet known.

Service Tray

An inventor from Vienna has designed a new type of service tray, which makes it possible to serve customers in snack bars, restaurants, etc., quickly with complete meals. Each course is on a separate dish and the tray holds the various types of plates and bowls. Food is kept hot and protected against dust or bacteria. The new type of tray is well fitted for self-service restaurants, hospitals, homes, etc. The tray can be made of plastic material, is very light in weight, can be easily cleaned, is acid-resistant, and excellently suited for mass-production.

Largest Radio Telescope in U.S.

The largest radio telescope in the United States, a giant dish-shaped radiation-receiving instrument 60 feet in diameter, will be built soon at the Harvard University Observatory near Cambridge, Massachusetts. It will be used to record and study the radio radiations that are constantly reaching the earth from outer space. Radio astronomy, as this type of study is called, is only about 20 years old as a science. It has given astronomers a new "eye" with which to learn more about the sun, and the structure of the Milky Way galaxy of which the sun and its planets are a part. The largest radio telescope now in use in the U.S. is 50 feet in diameter and is operated by the Naval Research Laboratory at Washington.

Ethylene Dichloride

Ethylene dichloride, a synthetic organic chemical is employed for numerous commercial and industrial purposes. In India, its chief use at present is as a grain fumigant but it can also be used for a number of other purposes like domestic fumigation, solvent extraction of oil cakes, concentration of vitamins A and D in shark liver oil vapour phase, degreasing of metal articles, industrial dry cleaning, solvent for lacquers, etc. Exact information about the present requirements for ethylene dichloride is not available but it has been estimated that roughly 1,000 tons of ethylene dichloride and similar materials are being imported annually. This demand will increase as other uses for the material are developed. In foreign countries besides chlorine, the main raw material, ethylene is obtained from natural gas or catalytic cracking of petroleum products; ethylene is however not available in India to any appreciable extent.

Investigations have been successfully conducted at Shri Ram Institute for Industrial Research, Delhi, under a scheme of research sponsored by C.S.I.R., to utilise ethyl alcohol as a raw material for obtaining ethylene and chlorinating it to ethylene dichloride. The crude ethylene chloride obtained is purified in the usual manner. The predominant features of the process are (i) the use of fluidised bed reactor for generation of ethylene from alcohol and (ii) an efficient chlorinator working at 90-95° F. without local heating. Both these make the process economic. A chief advantage of the process is the extension in the use of chlorine, a surplus product of the Indian alkali industry, to new fields. The process (covered by Indian Patent No. 51958) has been worked on a laboratory pilot plant of approximately 100 lbs. a day capacity with an efficiency of 95-96 per cent. conversion. The material produced is of a high standard of purity. The plant and equipment required can be easily fabricated in India with a minimum of special materials.

Compact Device Makes and Seals Bottle Caps

In response to the demand for a complete self-contained, compact machine to make aluminium caps, apply them to bottles and seal them firmly, a new rotary sealer has been developed by a British firm. It has met with immediate success, and installations have been made in bottling plants in Britain, Sweden, Western Germany and elsewhere. The rotary sealer is so designed that it can be installed in any existing conveyer track to cap and seal filled bottles coming from the bottle-filling machine, and to return them to the conveyer for transmission to the labelling or crating machine. It will accept and cap a wide range of bottle sizes. Several models of the rotary sealer are available, giving a varied rate of output up to a maximum of 15,000 bottles per hour.

Atom Used in Dental Research

Radioactive energy may prove a useful tool in modern dentistry, according to U.S. scientists. At the University of Michigan's School of Dentistry, Dr. Joseph T. Hartsook and his associates are studying the teeth of animals to determine how calcium hydroxide, a substance which dentists use to seal the pulp of diseased tooth, is absorbed. The study is being made with the aid of radioactive isotopes, one of the most useful peaceful products of atomic energy. Radioactive isotopes emit radiations, which can be detected wherever they are. Thus, by mixing them with calcium hydroxide and placing the mixture in a tooth, the action of the calcium hydroxide and placing the mixture in a tooth, the action of the calcium hydroxide can be studied. Dr. Hartsook says: "By tagging the calcium hydroxide with radioactive isotopes, we hope to find out what kind of interplay goes on between the paste-like substance and the cells of dental pulp."

Laboratory Machine Speeds Analytical Work

The American Cyanamid Company, a U.S. chemical manufacturing concern, has perfected a laboratory machine which has completed in 4½ years a job that would have taken one person 165 years to accomplish. The machine isolated eight components from the hormone substance ACTH, which is used for the treatment of arthritis. One component was found to be the most powerful as a curative agent, and its isolation may help to bring about a more effective treatment for arthritis.

New "Gun" Will Help Nuclear Research Worker

Engineers in Britain are constructing a new "gun" with a barrel 100 yards long. It is, however, not a weapon but an important new tool for the nuclear research worker. Known as a proton linear accelerator, it will be used to speed up the protons of hydrogen with which atoms are bombarded and split. The "gun's" bombardment will produce mesons, sub-atomic particles about which present knowledge is incomplete. The "gun," which is being built at the U.K. Atomic Research Establishment at Harwell, will employ an electrical potential of 600,000,000 volts to make the protons travel at a speed of 95,000 miles a second. Its use will provide 1,000 times more mesons than are now available at Harwell.

Ship Protected Against Water Friction

A special rubber-like preparation is now being used to protect the bow and the rudder of the U.S. ocean liner "United States," the speediest passenger ship on the North Atlantic run. The preparation is needed because the ship's speed is so great that paint will not stay on her bow and other surfaces exposed to severe water friction. On its record-breaking maiden voyage in 1952, it crossed the Atlantic Ocean in three days, 10 hours, 40 minutes, at an average speed of 35.59 knots. The protective preparation was developed by the DuPont Company, a U.S. chemical concern. Its performance to date has been highly successful, and the U.S. Lines, owners of the "United States," predict that its future use on ships of all nations should save shipping concerns millions of dollars a year.

TITLE TO LIFE POLICIES

AGENTS' RESPONSIBILITY FOR EFFECTING NOMINATION OR ASSIGNMENT

IN few countries is the time lag between the occurrence of a claim on an insurer and its settlement greater than in India. Although Indian insurers are by no means unaware of the importance of prompt settlement of claims, and many of them do take particular care to settle the claims promptly enough, there are many factors, beyond their control, which render such settlement a difficult problem. The peculiar inheritance laws in this country, the ignorance of law on the part of the policyholders and their heirs, the proverbial laws delays and the innate tendency on the part of insurers to play for safety first are only some of the factors that make the settlement of claims, in the event of the death of policyholders, a somewhat prolonged affair.

These issues were discussed in a symposium on "Title to Life Policies," organised by the Indian Life Assurance Offices Association, at the Insurance Conference, held at Madras. Several papers of technical interest were read at this symposium. The strictly legal aspects of the subject were very ably dealt with by Dr. J. P. Contractor of the New India Assurance Company, Ltd. Mr. H. D. Suri of the Bharat Insurance Company, Ltd., and Mr. T. S. Krishnamurthy of the United India Life Assurance Company, Ltd. The settlement of claims is not only a legal problem but a human problem. From this point of view, the paper read by Mr. R. S. Datar of the Western India Life Assurance Company, Ltd., deserves notice, because the author chose to discuss the issues against the background of conditions in an average Indian home.

A Will to Cover Policies

There will be little difficulty for insurers if the policyholder dies leaving a will that covers his policies, for the insurer can, then call upon the claimant to produce a probate or letters of administration with the will annexed, or a succession certificate. But, in this country, as Mr. Datar points out, the number of persons who leave a will do not probably form more than one per cent. If a policyholder dies leaving behind his duly constituted nominee or assignee, then also there will be little difficulty for the insurers in respect of payment of claims. But there is a lamentable neglect on the part of policyholders in effecting assignments or nominations. As Mr. Datar observes: "Sometimes lack of prudence, sometimes over-confidence in the durability of one's own life, sometimes the tendency to put off things out of sheer idleness, and very often complete ignorance, coupled with the want of sufficient instruction from the Insurance agent or the insurer, has been preventing people from effecting nominations or assignments in respect of their policies." The result is that, in the majority of death claims, it is found that the policyholder has left behind no will and has effected no assignment nor nomination. It is these claims that cause "most of the headaches for the insurer."

In such cases, it is, of course, open to the insurer to demand a succession certificate or letters of administration. Only, it will be extremely difficult for the claimants to produce it. Also, it creates a sense of frustration in the claimants. Mr. Datar, whose paper reveals an intimate knowledge of an average Indian family, describes a typical case. He says:

"To illustrate, let us assume that a gentleman X who belongs to the average class of policyholders in this country dies leaving behind a widow A, some children and two or three brothers. A and her children have then to seek shelter either with one of her brothers-in-law or with her own father. These relatives, though they readily give to the unhappy family a temporary shelter under their own roof, are not quite willing to run about or spend money for obtaining the succession certificate or the Letters. They have their own preoccupations and are themselves living from hand to mouth. Sometimes, out of selfish motives, they just try to put off the thing. A, the widow, being not literate enough and being without the necessary financial means, is not in a position to look after this job. Thus, years pass before anything is done about it. Moreover, the story does not end there. The delay caused has further repercussions by way of an unfavourable impression about the utility of insurance on the mind of the average man in the street. 'What's the good of it?' he begins to ask. He may not be right in his judgment, but the fact is that he does start thinking in these terms, and it hardly needs to be added that this, in its turn, tends to affect adversely the business interests of the insurer."

In view of the difficulties mentioned above, some insurers have resorted to the practice of demanding consent letters and indemnity bonds. This does not work in all cases. If the deceased policyholder had been a member of a joint Hindu family, it would be necessary for the claimant to produce consent letters from the father or brothers of the deceased. These relatives may not be willing to give such letters, for they have "an eye on the money" themselves. Or, they may have the fear that the widow may remarry and the amount may thus pass into the hands of her second husband. From this point of view, the Madras High Court's decision in *M. Venkata Subba Rao* vs. *Lakshminarasamma* takes a liberal view of the rights of natural claimants to the policy amounts that become payable by an insurer on the death of the policyholder who had been a member of a joint Hindu family. Their Lordships observed:

"In our opinion, having regard to modern social conditions and the growth of individual consciousness in marked contrast to the more corporate outlook of an earlier day, the general presumption must be that, when one of the members of a joint family insures his life, the amount of the policy belongs to the assured as his separate property and does not become a joint family asset."

Hindu Family

It seems to us that Mr. Datar is correct in predicting that, if a case of this kind came up before other High Courts, a similar view is likely to be taken by the judges. The Hindu joint family is gradually breaking up. It is, therefore, unlikely that the High Courts will ordinarily treat the policy of an individual member of the family as a joint asset. Mr. Datar says:

"In view of all this, therefore, I feel that, in dealing with claims falling under this class, an insurer should show more boldness and pay up the claim amount to the heirs on intestacy of the deceased policyholder. At least, a beginning should be made with cases that do not involve large amounts."

Insurers will welcome the Government's attempt at codifying the Hindu Law, for the contemplated measure will perhaps lessen the chances of disputes in succession. But the question about succession under Muhammadan Law will still remain unsettled. Mr. Datar, therefore, rightly emphasises that Parliament will do well "to lay down a special line of succession for purposes of life policies applicable uniformly and irrespective of the personal law to which the deceased policyholder may be subject." The line of succession may be clearly defined, in order to give effect to the primary intention of a person in taking out a policy, namely, to provide for those who are financially dependent on him. He says that "it would be proper to assign the top places in the list to the widow, sons and unmarried daughters."

All these difficulties would cease to exist if the policyholders leave a will or effect assignments or nominations. It is the duty of insurance representatives to impress upon policyholders the need for effecting nomination or assignment in good time in order to avoid legal complications at a later date. A wholesome practice, which is gradually coming into vogue, is to get the name of the nominee incorporated in the text of the policy at its very inception. When this practice becomes universal, there will be little or no chance of disputed succession. Meanwhile, the agents should see that, in all the policies they help to place there is no neglect on the part of the policyholders to effect assignment or nomination.

PANDYAN INSURANCE

A modest increase of Rs. 1 lakh to Rs. 19.52 lakhs in the net premium income is disclosed by the report and accounts of the Pandyan Insurance Company, Ltd. (Manager: Mr. S. C. Rawlinson, Madurai, Madras State), for the year ended 31st December, 1954. The improvement in the Company's marine business is responsible for the increase in the total premium income. The fire premium income declined slightly from Rs. 9.02 lakhs to Rs. 8.81 lakhs, whereas the marine premium income improved from Rs. 6.46 lakhs to Rs. 8.65 lakhs. There was, however, a setback in the Company's miscellaneous department which yielded a premium income of only Rs. 2.06 lakhs as against Rs. 3.05 lakhs in the previous year. The dividend has been maintained at 15 per cent.

The claims experience of the Company shows a mixed pattern. In the fire department, the claims ratio was slightly lower at 28.5 per cent. as against 29.8 per cent. in 1953. A more welcome decline occurred in the miscellaneous department, where it was 30.3 per cent. in 1954, as against 53.1 per cent. in the previous year. In the marine department, the ratio was somewhat higher at 18.1 per cent. as compared with 12.7 per cent. in 1953. Reserve for unexpired risks has been maintained at 100 per cent. level in the marine department and 50 per cent. level in the miscellaneous department. In the fire department, it is gratifying to note that a small additional reserve of Rs. 75,000 over and above the usual 50 per cent. level for the reserve for unexpired risks has been created.

All the three departments worked on a profitable basis. The underwriting profits in the fire, marines and miscellaneous departments were respectively Rs. 1.82 lakhs, Rs. 1.42 lakhs and Rs. 1.34 lakhs, as against Rs. 1.98 lakhs, Rs. 2.44 lakhs and Rs. 30,000 in 1953. These profits, together with the income from interest and dividends (Rs. 4.68 lakhs) and from other sources of income, make in all Rs. 9.26 lakhs. After providing Rs. 1.37 lakhs for depreciation and Rs. 3.03 lakhs for taxation and after meeting certain items of expenditure (not applicable to any particular account), there is a balance of Rs. 4.27 lakhs, which, together with the balance carried forward from the previous year, makes Rs. 4.64 lakhs as the sum available for appropriation. The transfer to general reserve absorbs Rs. 1.5 lakhs and the payment of 15 per cent. dividend Rs. 3 lakhs, leaving a balance of Rs. 13,866 to be carried forward to current year's account.

The financial position of the Company is very sound. Besides a capital of Rs. 20 lakhs, the Company has reserves and funds aggregating Rs. 64.84 lakhs, inclusive of fire fund (Rs. 5.16 lakhs), marine fund (Rs. 8.66 lakhs) and miscellaneous fund (Rs. 1.03 lakhs).

HEALTH INSURANCE

A detailed memorandum setting forth the defects and shortcomings of the working of the Health Insurance Scheme in Bombay was submitted last week by the Indian National Trade Union Congress to the Government of Bombay. A deputation also waited on the Minister for Labour, Mr. Shantilal Shah. The memorandum complained against the inadequate number of panel doctors, particularly in Thana, Dombivili and Kalyan areas and the shortage of diagnostic centres. It stated that panel doctors refuse to enrol workers living in Ambernath, Kalyan and Thana in order to avoid paying visits to them. Great inconvenience is caused by the fact that doctors refuse to attend to insured persons outside the hours fixed for the purpose. The workers have to lose the wages for that day, in order to avail themselves of medical benefit. Similarly, the workers are able to avail themselves of the use of diagnostic centres only during certain hours.

Both hospitalisation arrangements and treatment, according to the memorandum, are inadequate. Chemists often refuse to give certain drugs prescribed by hospital and panel doctors on the ground that they are not included in the approved list. Sometimes, workers who are involved in serious accidents, are not admitted in hospital without accident report from employers. The deputation stressed that, unless the Scheme was made more liberal than at present, it would not be popular with the workers. It made a number of suggestions for improving the working of the Scheme. These included: (1) Appointment of a Medical Board to assess permanent disability to workers from injuries in accidents; (2) appointment of a public relations officer; (3) extension of the sickness benefit period of 56 days or increase in the rate of sickness benefit from one-half to three-fourths of the daily wages, and (4) provision for a rebate in the contribution made by workers if they do not find it necessary to avail themselves of any of the benefits during the year.

ESTATE DUTY POLICIES

The Estate Duty Act exempts, as is well known, insurance policies for amounts not exceeding Rs. 50,000 taken out by any person, liable to duty, for the express purpose of paying the duty on his estate, though the amount of the policy is agreeable with the rest of the estate for purposes of determining the rate of the duty. Insurers are already issuing policies to meet the needs of those who intend providing for the payment of estate duty. In this connection, the Central Board of Revenue proposes to issue two new rules, the draft of which has been published in the *Gazette of India Extraordinary* dated 26th March, 1955. The first rule provides that, where a policy of insurance is taken out for the express purpose of paying estate duty or where an existing insurance policy is assigned to the President of India for the purpose of paying estate duty, such insurance policy should within one month of the date on which it is taken out or assigned, be deposited with the Commissioner of Income-tax (who is also the Controller of Estate Duty) within whose jurisdiction the insured resides. The second rule requires the insurers to furnish to the estate duty authorities particulars about these policies within one month after they are taken out or assigned to the President of India. The particulars to be furnished by the insurers are: (1) the number of new policies taken out for the purpose of payment of estate duty, together with the names and addresses of the assured and the amount payable under such policies and (2) similar information in respect of existing policies assigned to the President of India.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN:
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:
38, BISHOPSGATE, LONDON, E.C. 2
Branch: 28 Charles II St., Haymarket, London S.W.1.

OUTLOOK FOR CO-OPERATION IN INTERNATIONAL TRADE

RESULTS ACHIEVED AT THE RECENT GENEVA CONFERENCE ANALYSED

By Eric Wyndham White

EXECUTIVE SECRETARY OF THE GENERAL AGREEMENT ON TARIFFS AND TRADE

THE periods immediately following the two major wars of the present century have been marked by the efforts of Governments, through international co-operation, to remove the economic and social causes which had led to the political frictions which touched off the flames of war. Although on each occasion nationalism has, in many directions, been accentuated—and in the aftermath of the Second World War this is even more true than in the inter-war period—the appalling consequences of modern warfare have quickened the desire to find co-operative means for what are, for a time at least, sharply recognised as the deep underlying forces which led the peoples of the world into internecine conflict. As the memory of active hostilities recedes, so does the initial fervour and enthusiasm for genuine and constructive international collaboration.

The aftermath of the Second World War has followed this pattern, despite the crushing burdens of post-war reconstruction. An impressive structure of international organisations and agreements was built up in the first few years after the war, producing a group of alphabetically designated institutions before which any but the initiated may feel somewhat bewildered.

Lesson of Inter-war Period

The lesson of the inter-war period had deeply impressed upon peoples' minds the fundamental importance of combating economic isolationism and so, side by side with the purely political organisations and agreements, there were evolved a formidable array of economic and social institutions directed towards this end. Operating under the broad co-ordinating authority of the United Nations, through its Economic and Social Council, there were established a number of so-called "specialised agencies" dealing with problems of food and agriculture, health, labour, education, science and culture and, of particular importance, the big three economic institutions—the International Bank for Reconstruction and Development, the International Monetary Fund and the ill-fated International Trade Organisation which did not progress beyond the drafting of its charter. Running through the work of all these agencies were certain fundamental principles. It was conceived that, through international action and co-operative policies, there should be a maximum development of the productive resources of the world, whether in agriculture, mining or industrial production, that this increased production of wealth should be distributed more freely, and that access to the world's resources should be equal for all and free from arbitrary barriers and discriminations. The creation of international credit institutions and programmes of economic development would also contribute towards directing a share of this new wealth into developing the resources and raising the standards of living in vast areas of the world whose populations were living at intolerably low standards, as compared with those of the more fortunate places.

The high hopes which were placed in these institutions and agreements were doomed to relative disappointment. The problems of post-war reconstruction were so great that all the resources of Governments were absorbed in the struggle for recovery. These difficulties were in turn accentuated by the emergence of menacing political conditions which have become familiarly known as "the cold war."

The negotiations in 1947-48 for establishing the International Trade Organisation were brought to a conclusion at the stage when optimism was giving way to disillusionment and disappointment. The complicated and wide-ranging Havana Charter for the International Trade Organisation did not, therefore, find the basis for enthusiastic public support as it might have done somewhat earlier. This was particularly true in the United States without whose active participation an International Trade Organisation could play no effective role.

Stability in Field of Customs

It says much for the vision and perseverance of the architects of the International Trade Organisation that, whilst they were constructing in a very elaborate way, they took the precaution of laying the foundations for a more modest structure for international trade co-operation in the form of the General Agreement on Tariffs and Trade. This began its life as the result of tariff negotiations in Geneva in 1947 between 17 countries widely representative of the main geographical areas of the world and including the most important trading countries. These countries negotiated between themselves a vast number of tariff concessions which were later extended in a series of subsequent conferences, notably at Annecy and Torquay. These tariff negotiations covered a very large percentage of the world's trade. They established, and the General Agreement on Tariffs and Trade has maintained until this day, a stability in the field of customs tariffs which has made an important contribution to the economic recovery which we have witnessed during the last few years. But, if this is the most distinctive achievement of the G.A.T.T., it is, perhaps, even more significant that, in order to give reality to these tariff concessions and to prevent them from being nullified or counterbalanced by other action in the field of commercial policy, they were surrounded by a series of rules on commercial policy. These rules have become a world-wide international code, governing the relations of some 34 countries which between them do four-fifths of the world's trade. The corner-stones of this code are first the principle of most-favoured-nation treatment, secondly, the elimination of all forms of discrimination, and, thirdly, the acceptance of the principles of consultation and friendly settlement of trade questions in place of the jungle law of unilateral action and retaliation. The Agreement also seeks, in addition to the lowering of customs tariffs, to remove other barriers to the free flow of trade, in particular, the dismantling of the use of import quotas as an instrument of national protection. On these various matters, I shall have more to say at a later stage.

G.A.T.T. From Modest Beginnings

The G.A.T.T. started from modest beginnings. The original membership increased from the 17 in 1948 to the present number of 34, together with Japan which, although not yet a full contracting party, is negotiating for accession, and whose trade relations are meanwhile governed by the General Agreement in respect of 23 countries which are contracting parties.

The contracting parties to the General Agreement meet together from time to time in regular sessions in the course of which differences arising out of the G.A.T.T. code are discussed, consultations take place and disputes between the contracting parties are settled through the mediation of the *contracting parties*—that is, the member-Governments acting as a body. As these regular sessions have succeeded one to another, they have come to constitute a vital international institution which, though lacking the legal attributes of an organisation, has through its effectiveness and realism become an essential part of the international structure. In fact, it has been well said that, if the G.A.T.T. did not exist today, it would be necessary to invent it.

International conferences cannot work, unless there is an international secretariat or staff to prepare, arrange and service the meetings and to ensure continuity of action. Consequently, the G.A.T.T. has established a small secretariat to perform these functions. It is another of the distinguishing features of the G.A.T.T. that its organisation is small and its budget modest, in sharp contrast to the substantial budgets of most of the other post-war institutions. The charge of "swollen bureaucracy" that has been levelled at many of the post-war international organisations can hardly be applied to the G.A.T.T. secretariat. This is an element of strength, since it cannot seriously be asserted that the G.A.T.T. is wasteful of public funds nor that the taxpayer does not get real value for his money.

Universal Character of G.A.T.T.

So far, I have sketched in the broadest outline the origin and development of the G.A.T.T. Having survived this period of experiment and trial, the member-Governments decided at their eighth session in Geneva in October 1953 to undertake a review of the Agreement and of its operation since 1947. Their purpose in doing so was to see to what extent the Agreement itself should be amended or its administration modified so as to contribute more effectively to the attainment of its objectives. The object of the review was, therefore, a constructive one. It was to take advantage of the lessons to be derived from the period of experiment and trial in order to equip the G.A.T.T. to play what had come to be recognised as an essential part in the world of the future. Even so the review was clearly a hazardous undertaking. It involved throwing open to re-discussion and re-negotiation delicate balances of interest which had been arrived at through lengthy and difficult negotiations. This review would take place at a time when the seller's market which had prevailed in the post-war years had given way to a more competitive buyers' market and where the stresses and strains of the struggle for world markets were beginning to assert themselves again. Moreover, the G.A.T.T. was still a young and tender plant. It was still a new thing for Governments to have accepted firm and detailed obligations in the sensitive field of commercial policy. The G.A.T.T., because of its universal character, includes in its membership countries of the most diverse economic interests, and their agreement upon a code of obligations of universal application involves peculiar difficulties. In particular, there was a growing restiveness amongst those countries which are in an early stage of economic development at continuing to accept limitations on their freedom in the field of commercial policy which they feared might impede the attainment of their economic development.

O.T.C.

It is, therefore, with a sense of solid achievement that we can contemplate the results of the Review of the General Agreement on Tariffs and Trade which was concluded in Geneva on 4th March of this year. Not the least important of these results is the agreement for the establishment of an Organisation for Trade Co-operation. The primary purpose of this Organisation will be to administer the General Agreement. Its terms of reference, however, empower it to sponsor other international agreements in the field of trade to facilitate consultation on trade questions, to sponsor international trade negotiations and to study problems of international trade and commercial policy and make recommendations on these matters. The Organisation, therefore, whilst providing on a permanent basis for a more effective administration of the General Agreement, has also a dynamic aspect through which, in the light of experience, the area of international collaboration in the whole field of trade and commercial policy can be extended and broadened.

I would now like to outline some of the trends which were manifested in the discussions we have had during the past four months. In the first place, I would like to refer again to the different economic conditions which existed when the Review took place, as compared with those existing at the time when the Agreement was first negotiated. At that time, most of the parties to the Agreement were still suffering acutely from the economic difficulties consequent upon the war. The most characteristic of these difficulties was that most of them were finding it impossible to earn the foreign exchange, particularly dollars, to finance their import requirements from abroad. In other words, most of the contracting parties were suffering acutely from balance-of-payments difficulties. The Agreement recognised this fact by allowing a wide escape from the rule forbidding the use of import quotas, by permitting quotas to be maintained in order to safeguard a country's balance of payments. Moreover, the Agreement also admitted that if its balance-of-payments position obliged a country to maintain restrictions on imports, those restrictions might be administered in a discriminatory manner, when the situation required, subject to certain qualifications and conditions. The comprehensive ban on the use of import quotas was, therefore, relatively easy for many countries to accept at a time when it seemed that they would be for a very long time, perhaps an indefinite time, in balance-of-payments difficulties, and, therefore, able to profit from the exception provided for this purpose. That situation had materially changed by the time the review of the General Agreement was undertaken. Some of the major trading countries such as the United Kingdom, Germany and Benelux were by then in a position where they could envisage that at no distant date their balance-of-payments difficulties

would have been resolved and they would be in a position to restore the convertibility of their currencies. However, in order to accept the risks of convertibility it was important that these countries should feel that they would have safeguards against the use by other countries of quantitative import restrictions against the exports of the convertible countries. For these near convertible countries, therefore, the strengthening of the rules against the use of import quotas and the strengthening of the machinery for enforcing these rules was an important condition of their return to convertibility.

Convertibility

On the other hand, the possibility of an early return to more normal monetary conditions, accompanied by stricter rules relating to use of quantitative restrictions and stricter enforcement of these rules, raised serious problems for many countries who, behind restrictions maintained for balance-of-payments reasons, had been affording incidental protection to domestic industries. These countries felt that the sudden withdrawal of these restrictions, which is, in fact, required by the G.A.T.T. rules as soon as the balance-of-payments difficulties are resolved, would create serious economic and social problems for them by exposing a number of important industries to foreign competition which, without a period of adjustment, they would not be able to withstand. This problem was particularly acute in the field of agriculture. This, of course, was no surprise. For some years, a measure of regional convertibility of currencies had been introduced into Europe through the European Payments Union, and consistent with G.A.T.T. doctrine, the European countries through the Organisation for European Economic Co-operation, had been progressively removing quantitative restrictions maintained by them on their trade with their European partners. But the O.E.E.C. had found that it was not practicable to apply a code of liberalisation which goes as far as the doctrine of the G.A.T.T. and that they, therefore, required the liberalisation of trade only on a percentage of total imports. The O.E.E.C. also required a lesser effort in certain sectors of production which are particularly sensitive, and notably in the agricultural sector. It was, therefore, to be expected that, when a similar problem arose in the broader field of the G.A.T.T., the same difficulties would be experienced.

It has been argued in some quarters that economic and social realities in effect render it impracticable to apply the same rules regarding import restrictions to agricultural as to manufactured products and that the former have to be treated on a separate footing. This is a doctrine which could hardly find recognition in any international trade agreement. It would be hard, indeed, to ask countries which depend on the export of agricultural and primary products to accept limitations on their freedom to protect their industrial production whilst at the same time offering them no safeguards against restrictions against their own exports. Moreover, it is difficult to see, on economic grounds, how the effects of uneconomic use of resources and inefficient production are not as large in the field of agriculture and primary production as they are in manufacture. This is not to deny the special arguments that there are for maintaining agricultural production but it has yet to be demonstrated that the arbitrary use of quota restrictions is the only—or necessarily the best—way of achieving this objective.

The solution found by the contracting parties to this problem is typical of the practical approach which has marked their activities over the years. The objective of the G.A.T.T. is that quantitative restrictions shall be dismantled as rapidly as possible after the financial difficulties giving rise to them are overcome. If this objective can best be achieved by giving a period of grace to enable the countries experiencing so-called "hard-core" problems to make the necessary adjustments to enable them to get rid of restrictions, then this seems a better method of proceeding than to admit reserved percentages of trade or other exceptions to the generality of the rules of the Agreement. It has, therefore, been agreed that if countries in dismantling their restrictions are, in connection with particular industries, confronted with this sort of problem, the rules of the G.A.T.T. will be waived for a limited period of time provided certain conditions are satisfied, so as to afford these countries time for adjustment.

A problem of a somewhat different character was presented by the agricultural problems of the United States. In that country, there is legislation which requires the President in certain circumstances to impose fees and import restrictions on agricultural imports in circumstances where such action would not be justified by the G.A.T.T. The occasions on which such actions have been taken in the past have been relatively limited, but they have involved conflicts with the obligations of the United States under the General Agreement. Moreover, the existence of supported agricultural prices in the United States, which are often well above the world market prices, has a tendency to attract abnormal imports from abroad thus increasing the problems of maintaining the supported prices and increasing the large stocks of agricultural products which, under the agricultural programme, have to be purchased at support prices by the United States Administration. In order to regularise its position under the G.A.T.T., the United States Government sought at the review session for a waiver of obligations which would enable the President to comply with the requirements of United States legislation without being in breach of the G.A.T.T. A waiver on these lines, subject to provisions for consultation with the Governments likely to be affected, was in fact agreed to. This case again emphasises the difficulty of reconciling the necessities of agricultural protection with the requirements of a sound international trade policy, but again I do not think that it is an argument for suggesting that agricultural policy must be excluded from the purview of international trade rules. There are many special elements in the United States position which led the contracting parties to come to their decision. The vast expansion of United States agricultural production during the Second World War, in order to meet the heavy demand which the world made on United States agricultural production in the early post-war years, is one important factor. Secondly, the measures which the United States may be called upon to take under its legislation are not in essence measures designed to protect inefficient production so much as measures made necessary by the maintenance of artificial price levels for the sale of domestic production. It is clear that the policy of the contracting parties will be to consider these problems as they may arise on a case-by-case basis and to give such flexibility to the rules of the Agreement as will command the collective support of the member-Governments in each case.

In the result, the rules relating to quota restrictions on imports have been reaffirmed and provision has been made for their more effective enforcement as soon as conditions exist for the dismantling of the widespread restrictions which are now maintained for balance-of-payments reasons.

Regional Discrimination

In the same way, as there have been protagonists of regional action as against universal action in the political and military fields, the same arguments are often put forward regarding economic co-operation. As far as the economic field is concerned, it has never seemed to me that these ideas should be in conflict. It is, I think, clear that the ultimate basis for economic co-operation must be world-wide and that regional action should be directed towards the attainment of the objectives of universal co-operation. Within this framework, however, there is ample room for constructive regional activity provided that this does not degenerate into regional discriminatory trade blocs. Some of the warmest protagonists of regional co-operation, particularly as it has been so admirably demonstrated in the O.E.E.C., feared that if the G.A.T.T. were strenthened and more effectively applied, particularly in restraining discrimination, it would be difficult to continue the intimate regional collaboration which has enabled the level of trade among European countries to be restored to a much higher level than would have been possible in the absence of regional discrimination. The discussions on the review of the G.A.T.T. appear to have dissipated most of these fears. If the financial conditions for the general application of the policy of non-discrimination come about, the advantage of discrimination, whether national or regional, would also disappear, and regional co-operation could concentrate on other constructive aspects of economic development and action which would contribute to the general welfare of the international trading community. If, however, these hopes for the restoration of normal trading conditions are disappointed and a case can be made that, owing to unexpected circumstances some measure of discrimination on a regional basis would in fact, be more favourable to maintaining the level of international trade than the strict enforcement of the rule of non-discrimination, there would be sufficient flexibility in the administration of the G.A.T.T. rules to enable such arrangements to be sympathetically considered.

Underdeveloped Countries

I should like to say also a few words about the position of the underdeveloped countries. As I said earlier, some of these countries have felt that the G.A.T.T. is for them an unbalanced bargain. They consider that the advantages which primary producers derive from the Agreement are slight and that they do not compensate the underdeveloped countries for abandoning their freedom to use restrictive devices of any kind they judge necessary to assist their economic development. They have also felt that the exceptions admitted to the rules of the Agreement admitted in favour of underdeveloped countries were less extensive and generous than those admitted for fully developed countries to use quantitative restrictions when in balance-of-payments difficulties. This whole problem was carefully examined prior to the Review Session and, after extensive consultation with the Governments concerned, a new approach to the problem of underdeveloped countries was worked out. It involves abandoning the negative approach to the problem and substituting, therefor, a positive one. It recognises that countries in an early stage of economic development which are, therefore, in a position to afford relatively low standards of living for their people should have certain facilities for the development of new industries. These should consist, in the first instance, of a greater flexibility in the use of the import tariff for this purpose. Secondly, it is recognised that countries which are developing rapidly are likely to encounter chronic balance-of-payments difficulties particularly when the economies of these countries are mainly dependent upon the export of primary commodities subject to violent price fluctuations. It is recognised, therefore, that these countries have a special need for flexibility in the use of quantitative restrictions for balance-of-payments reasons. Finally, it is recognised that even these facilities may not always afford to these countries a reasonable chance for establishing new industries and it was, therefore, agreed that, if no protective measures permitted by the Agreement are feasible and practicable, the country concerned can apply for permission to deviate from the rules and if this permission is granted, to proceed with impunity, or if the permission were refused to proceed nevertheless on the condition that other countries could restore the balance of the contract by being released from equivalent obligations.

This new doctrine coupled with provisions for consultations when there is a serious decline in the offtake of primary products, and provisions for certain flexibility in tariff negotiations, should go far to meet the difficulties which the Agreement has presented for the underdeveloped countries.

These were the main themes of the G.A.T.T. Review. I have only been able to touch on them lightly and many subsidiary but important matters such the extension of the rules against export subsidies I have not had time to touch at all.

Outlook

Now, what can be said by way of summary of the outlook for co-operation in world trade? We can take stock, in the first place, of what has so far been achieved. As far as my own organisation is concerned, the achievement is solid, indeed, in the field of tariff reduction, unprecedented. In this connection, those who are engaged in business will, no doubt, be particularly impressed by the contribution which the G.A.T.T. has made to stability in trading conditions. Less well known is the success which has been achieved and the new techniques which have been evolved for the friendly settlement of disputes. This, too, is of great and direct practical importance to the trading community. The principal trading countries have clearly manifested their desire to continue and strengthen international trade. It has become clear that the best basis for such co-operation is a code of clearly defined rules and obligations which are however, administered with flexibility and realism. It is also clear that progress must be achieved by stages and that the modest and realistic approach which has characterised the work of the G.A.T.T. is more likely to be productive than the more elaborate and ambitious approach which characterised the working out of the Havana Charter for an International Trade Organisation. Finally, and perhaps most important of all, none of these efforts can be successful, unless there is constant and strong support from all sectors of public opinion in all countries.

INDIA'S FOREIGN TRADE DURING 1954

ADVERSE BALANCE NARROWS DOWN

ONE of the most satisfactory features of India's economy during the calendar year 1954 was the distinct improvement in its foreign trade. Despite an increase of Rs. 6 crores in total imports aggregating Rs. 587 crores, the adverse balance in 1954 narrowed down from Rs. 49 crores in 1953 to Rs. 24 crores. The reduction in adverse balance thus was rendered possible by a marked fall of Rs. 31 crores in imports of foodgrains and a notable rise of nearly 6 per cent. in exports, the aggregate value of such being Rs. 563 crores, which compares favourably with Rs. 532 crores in the previous year. What is more, the terms of trade also were in favour of India, the index number of which (that is, the ratio of export price index to import price index) in 1954 being 98.0, as against 92.4 in 1953. This was the net result of a rise in the export price index and a fall in import price index. The index number of average unit of declared values for exports on sea- and air-borne account (Base 1948-49=100) during the first 11 months of the year stood higher at 111.9, as against 111.2 in the corresponding period of 1953. The average index for import values in the same period was 114.5, which compares favourably with 115.3 a year before. In other words, the country earned more on its exports, while it paid less for its imports. From the quantum index point of view also, the terms of trade were decidedly in favour of India. While the average export quantum index during the period January-November, 1954, was lower at 111.2, as against 116.0 in the same period in 1953, the average import quantum index moved up from 85.5 to 88.3.

In spite of a general fall in price levels during 1954, exports from India showed an increase both in quantity as well as in value. Tea and jute were, as usual, the most important export commodities and accounted for 40 per cent. of the total export earnings. Timely steps were taken by the Government to remove licensing restrictions on exports. A number of commodities, including coal tar pitch, handloom cloth, etc., was either decontrolled or placed under open general licences. Again, commodities such as chrome ore, kyanite, tyres and tubes, and indigenously manufactured drugs and medicines were placed on the free licensing list. Some items which were prohibited for export during 1953, such as rice, pulses and coal tar, were licensed for export during 1954. Exports of groundnut oil which had been banned from the middle of 1953 to the middle of 1954 were again resumed when internal prices returned to normal. Export quotas in respect of raw cotton, H. P. S. groundnut kernel, castor oil, etc., were liberalised in the last quarter of 1954 when it was found that there was noticeable improvement in this supply. Steps were also taken by the Government to adjust export duties. Thus, the export duty on groundnut oil was first brought down from Rs. 350 to Rs. 225 per ton on 1st September, 1954, and was further reduced to Rs. 100 on 4th November. The export duty on castor oil was reduced from Rs. 300 to Rs. 125 per ton. The *ad valorem* duty on black pepper was also slashed from over Rs. 100 to Rs. 15 per cwt. When the flow of manganese ore began to slow down, the export duty of 15 per cent. *ad valorem* was abolished. With a view to augmenting the sendings of cut and polished precious stones, the export duty on these was reduced from 20 per cent. to 5 per cent. Export duties on certain varieties of raw cotton were also revised in the direction towards the close of the year.

The cumulative effect of all these factors was the encouraging performance on the export front during the year under review. The improvement in exports (on sea- and air-borne account) was shared principally by tea, the exports of which earned for India as much as Rs. 130.8 crores, as against Rs. 102.6 crores in 1953. It is interesting to note that this improvement in value was recorded despite a reduction in the quantum of exports, from 502 million lbs. to 447 million lbs. Earnings from exports of jute manufactures were also higher by Rs. 10.9 crores at Rs. 121.4 crores, on account of the increase in the quantity shipped from 748,000 tons to 843,000 tons. The value of cotton piecegoods exported, too, registered an advance from Rs. 62.4 crores to Rs. 66.4 crores. But the extent of the rise in value was only a little over 6 per cent., as against the increase of as much as 30 per cent. in the quantity actually exported which, during 1954, was 861 million yards, as compared with 658 million yards in the previous year. This was the result of world-wide decline in cotton textile prices reflecting the growing competition in international textile market. Another important item of export which registered a rise in value, notwithstanding a fall in quantum, is lac. Thus, while the quantity actually shipped was lower by 59,000 cwts. at 527,000 cwts., the value was higher by Rs. 1.8 crores. In the case of vegetable oils and raw wool, both the quantum and the value of exports were higher. Although the quantity of raw hides and skins exported during 1954 remained the same (at 13,000 tons), their value spurted from Rs. 5.9 crores to Rs. 6.8 crores, on account of higher prices earned in export markets.

In distinct contrast to the encouraging general trend, the performance of manganese and raw cotton was none too happy. The value of manganese ore exports fell appreciably from Rs. 36.5 crores to Rs. 12.7 crores, following reduced shipments which amounted to only 894,000 tons, as against 1,658,000 tons. Similarly, raw cotton fetched only Rs. 8.5 crores, as against Rs. 20.0 crores, consequent on the decline in the quantity exported from 257,000 bales to 155,000 bales. Despite a sizable rise in the quantum of pepper exports (from 229,000 cwts. to 283,000 cwts.), the aggregate value of spices (mainly pepper) was lower at Rs. 13.5 crores, as against Rs. 16.6 crores. The position in respect of mica was similar; the quantum of exports was better by 97,000 cwts. at 330,000 cwts., but their value was marked down from Rs. 7.9 crores to Rs. 6.5 crores. Thanks to reduced shipments of tanned hides and skins (amounting to 460,000 cwts., as against 525,000 cwts., their earnings receded from Rs. 25.0 crores to Rs. 21.4 crores.

A notable aspect of India's export trade during 1954 was the change in the order of commodities in the list. Tea enjoyed the pride of place as the biggest earner of foreign exchange. In the previous year, this commodity had stood second. Jute goods were pushed down from the first place to the second place. Cotton piecegoods retained their third position. The next four places in order of importance were occupied by hides and skins (tanned), vegetable oils, spices (mainly pepper) and manganese. The order in the previous year was manganese, hides and skins (tanned), raw cotton and spices.

The quantity and the value of the most important items of exports during 1954, as compared with the two previous years, are shown below:

Exports

(Value in crores of rupees)

	1952	1953	1954
Jute manufactures	162.4	110.5	121.4
Tea	80.2	102.6	130.8
Cotton piecegoods	61.5	62.4	66.4
Manganese	32.9	36.5	12.7
Hides and skins (tanned)	17.2	25.0	21.4
Raw cotton	24.6	20.0	8.5
Spices (mainly pepper)	22.8	16.6	13.5
Fruits, vegetables (mainly cashewnuts)	16.7	14.3	11.9
Tobacco	14.8	11.9	11.1
Vegetable oils	24.1	9.4	14.9
Mica	9.0	7.9	6.5
Lac	9.2	7.5	9.3
Raw wool	8.6	6.5	8.1
Coir manufactures	7.2	6.0	6.0
Hides and skins (raw)	5.9	5.9	6.8
I. Food group	146	153	183
II. Raw materials and semi-manufactures group	143	116	102
III. Manufactures group	294	242	256

Quantum of Exports

Items	Unit	1952	1953	1954
Tea	Mill. lbs.	413	502	447
Cashew kernels	000 cwts.	531	573	543
Pepper	000 cwts.	254	229	283
Tobacco	Mill. lbs.	96	78	74
Raw cotton	000 bales*	297	257	155
Lac	000 cwts.	658	586	527
Mica	000 cwts.	307	233	330
Manganese ore	000 tons	1,412	1,658	894
Hides and skins—raw	000 tons	15	13	13
Raw wool	Mill. lbs.	39	24	29
Cotton piecegoods	Mill. yds.	598	658	861
Jute manufactures	000 tons	737	748	843
Coir manufactures	000 cwts.	1,220	1,476	1,466
Hides and skins—tanned	000 cwts.	402	525	460
Vegetable oils	000 cwts.	2,710	1,166	1,384

* 1 bale=392 lbs.

On the import side, the Government of India relaxed several restrictions on imports of essential items and liberalised, on a controlled basis, a wide variety of imports. The scope for the "newcomers" scheme was enlarged and supplementary licences over the prescribed quotas were issued for commodities not directly competing with indigenous production and by liberal licensing of several other commodities. O.G.Ls. Nos. 35, 36, 37 and 38 were issued in supersession of the earlier ones, but the items on the O.G.Ls. were not substantially modified.

Thanks to the adoption of a liberal import trade control policy, the total value of goods and commodities imported into India (on sea- and air-borne account) during 1954 was larger at Rs. 563.79 crores, as against Rs. 544.54 crores in the previous year. The important items which contributed to the rise in the value of imports were (the figures in brackets indicate the extent of the rise): Non-ferrous metals (+Rs. 6.9 crores), vehicles (+Rs. 8.5 crores), mineral oils (+Rs. 60 lakhs), iron and steel (+Rs. 2.3 crores), and dyes and colours (+Rs. 36 crores), raw cotton (+Rs. 7.5 crores), and chemicals, drugs and medicines (+Rs. 6.3 crores). The rise in the imports of several industrial raw materials reflects the higher level of industrial activity and production in the country during 1954. Further, the prices of imports were by and large lower than in 1953. In some cases, they were below the pre-Korean war level. The volume of imports, therefore, was greater than the figures of value indicate. Another striking development in the import trade was the further fall in imports of foodgrains, owing to satisfactory food position. During 1954, these imports amounted to only Rs. 48.4 crores, as against Rs. 84.5 crores. Imports of machinery and millwork were also lower at Rs. 81.5 crores, as against Rs. 87 crores, electrical goods at Rs. 10.8 crores, as against Rs. 15 crores, and cotton manufactures at Rs. 2.6 crores, as against Rs. 3.3 crores. The following table indicates the trend of imports (commodity-wise) during the last three years:

Imports

(Value in crores of rupees)

	1952	1953	1954
Foodgrains	208.1	84.5	48.4
Mineral oils	84.4	86.0	86.6
Raw cotton	115.4	50.0	57.5
Machinery and millwork	94.6	87.0	81.5
Chemicals, drugs, medicines, etc.	30.5	24.4	30.7
Iron and steel	25.5	23.0	25.3
Vehicles (excluding locomotives)	85.0	23.2	31.7
Dyes and colours	12.5	15.8	19.4
Electrical goods	12.9	15.0	10.8
Cutlery, etc.	15.9	14.8	17.9
Non-ferrous metals	20.3	16.7	23.6
Paper, etc.	12.6	12.6	13.6
Cotton manufactures	5.4	3.3	2.6
Other yarns and textile fabrics	9.4	12.6	15.0

The U.K. and the U.S. continued to be India's principal buyers and suppliers during 1954, as will be seen from the following statement which shows the geographical distribution of trade during the last three years:

Geographical Distribution of Trade

(Value in crores of rupees)

	1952	1953	1954
Main Importers of Indian Goods—			
U.K.	125.7	147.5	174.2
U.S.A.	115.5	94.2	88.5
Australia	23.4	16.0	22.7
Burma	23.5	20.3	16.4
W. Germany	12.5	10.3	14.6
Japan	25.3	25.9	16.0
Canada	12.7	18.9	15.0
Argentine	4.5	20.9	15.7
Ceylon	19.9	17.6	17.5
Aden	9.0	8.7	7.3
Singapore	16.1	9.3	7.0
Nigeria	6.5	8.0	8.6
Netherlands	10.3	6.3	9.9
France	6.0	5.3	5.3
Main Suppliers to India—			
U.K.	149.3	140.6	143.9
U.S.A.	273.9	90.5	72.3
W. Germany	24.5	28.8	24.5
Egypt	20.1	21.7	22.0
Burma	21.1	18.2	44.0
Italy	11.6	21.0	20.8
Australia	16.1	26.9	14.3
Japan	13.7	10.5	16.6
Bahrein Islands	17.8	17.6	21.3
Saudi Arabia	15.3	18.4	17.4
Netherlands	12.6	10.9	13.4

The foregoing figures reveal that, from the export angle, the U.K. turned out, as in the previous year, to be the best customer for India's products. Its share in the total value of export trade was higher at 31.7 per cent., as against 28.2 per cent. in 1953. W. Germany, Canada and the Netherlands also purchased more from India than in the previous year. On the other hand, the offtake of Indian goods by the U.S. suffered a fall, its share in the total receding from 16.2 per cent. to 15.3 per cent. Likewise, Burma, Japan, Argentine, Aden and Singapore also imported less from India. Ceylon and France maintained their imports from India more or less at the previous year's level. The distribution of this country's imports by countries of origin reveals that the U.K. occupied the first place, its percentage share in the total being 24.5 in 1954 as against 24.7 in 1953. There was a spurt in imports from Burma; as a result, this country's share in India's imports rose to 7.5 per cent. from 3.2 per cent. in the previous year. W. Germany, Egypt, Japan, Bahrein Islands, Saudi Arabia and the Netherlands were the other countries which sent out more goods to India. There was, however, a considerable decline in imports from the U.S., Canada and Australia, due chiefly to a fall in imports of wheat. The percentage share of the U.S. in India's import trade in 1954 was lower at 12.5, as against 15.7 in 1953.

EFFICIENCY IN INDUSTRIAL PRODUCTION

SOME TIPS TO MANAGERS

By L. Ploskal

MANAGING DIRECTOR, SCIENTIFIC MANAGEMENT (INDIA) LTD.

THERE is no doubt that efficiency is the most precious asset, any man or woman must possess, if he or she is to be successful. Efficiency is, first of all, a mental attitude which generates a tremendous amount of creative and co-ordinating energy directed towards a given target. If you study the history of great industrial and commercial concerns, you invariably find that efficiency is the foundation of their greatness.

In my opinion, wealth is created by efficient production, efficient distribution and efficient maintenance of existing values. There is no formula for individual and national prosperity—but efficiency. There are many cases of lucky speculations—however, speculation may increase some values but can hardly build up prosperity.

Productivity in industry is determined by two sets of factors: modern technical equipment and efficient production methods. To install new machinery is a long-term policy necessitating huge investments. Efficient production methods can be introduced within a few weeks at practically insignificant cost. More than that: these initial expenses bring rich returns in a very short time—expressed in months, not years.

There is no doubt that the highest productive intensity has been achieved in U.S.A. Their production methods have been carefully and thoroughly studied from all possible angles. About six years ago, the Anglo-American Productivity Council was formed and many productivity teams toured U.S.A. and Great Britain and critically analysed the reasons of American productivity. Their reports constitute a highly important contribution towards the practical solution of the productivity problems.

Human Factor in Industrial Production

It is extremely interesting that the unanimous conclusion arrived at is that, in the last analysis, the human not the technical factor is decisive in production. The attitude of the American unions and workers towards efficient production methods is constructive and encouraging, since they are well aware that their own standard of living is dependent on it.

In the U.S.A., a contract between a union and a single company is common. Sometimes, the factory pays union representatives to handle union business on the spot. If unions are willing to co-operate in incentive schemes and specific workloads, they have the right to see that workloads are reasonable and that incentives have the proper chance to operate.

The problem of active and mutually fruitful co-operation between management and labour is of vital and fundamental importance not only for the workers and industries concerned, but for the whole country. If one appreciates that all forms of production consist of labour expenditure in some form or other, it will be readily seen that not only the willing co-operation but also the correct estimation of labour, is of paramount importance for the economic and social stability of the country.

Management Duties and Responsibilities

The prosperity of every industrial and commercial undertaking depends on the efficient management. What is management? This question may seem to you rather silly—because you visualise automatically yourself—if you are the manager and your answer is simple: management—that's me—of course. If you are not in that fortunate position your answer is equally simple: management—that old B or M—accompanied by some adjectives. Generally, we may say that "management is a human process—you manage men and women—not chairs, typewriters, machines."

What are the duties and responsibilities of a general manager? They fall into five categories: (i) planning; (ii) implementation; (iii) co-ordination; (iv) leadership and (v) control.

Planning: To manage a factory is an extremely complicated and responsible job: it requires, first of all, careful and experienced planning. In principle, scientific management is based on comparison of achieved results with planned targets. An industrial enterprise is a living organism, composed of many forces moving in different directions. The term "force" is not meant in a physical sense, but describes forces affecting production in a positive or negative way. A slump in demand is definitely a negative factor—therefore a hostile force, so are also idle machines, high expenses, lack of co-operation and, naturally, any kind of inefficiency.

Planning is absolutely necessary on a small private scale as well as on a national level. I myself have had more than 20 years' experience in planning. Before the World War II, I was employed by one of the largest international combines in the world, which controlled about 25 foreign companies and about 10,000 retail shops all over the world. Twice a year, every department worked out its target for the next six months. The sales forecasts at home and abroad formed, naturally, the basis of the whole production plan for the purchase of raw materials, installation of new machines, etc. The targets were, at the same time, yardsticks of efficiency. If the results in any department were not satisfactory, a careful and ruthless analysis revealed all the shortcomings which had to be removed. Not only the targets but also methods to reach them must be planned, otherwise all the planning will be useless.

Co-ordination: To reach the planned targets, the general manager must co-ordinate interpersonal relations and production methods. He may be compared to the conductor of an orchestra—he must co-ordinate all the individual efforts of each musician.

Leadership and morale: A dynamic and powerful personality, just and honest, cannot fail to inspire his staff and workers to co-operate willingly and loyally—if not enthusiastically—to reach the targets. Successful leadership is one of the highest qualities to be achieved.

Control: Control means checking of actual performance against the targets. Without proper control, checking efficiency is bound to fall very low.

Now, if a manager asked me what advice I would give him, my answer would be this:

1. *Plan*: Modern industrial production is unthinkable without planning. A well-thought-out plan ought to be the target on which all the energies of the factory should converge.

2. *Direct—Co-ordinate—Compare—Control*: Carefully selected sets of charts will make your responsible and difficult task easier. Control facts and trends.

3. *Improve*: There cannot be any progress without continuous improvements. Improve relentlessly and energetically: this is the surest way to success and prosperity. If, for example, you manage to increase your output and sales by 1 per cent. a week—or a month—what a tremendous benefit your company and your employees will reap in one year.

4. *Cultivate and Reward initiative*: By encouraging creative thinking, you release new energies which will assist you in solving many difficult problems.

5. *Install Incentive schemes*: The work of each employee is doubly stimulated: by self-interest and by a spirit of competition.

6. *Use Scientific Costing System*: A scientific costing system is the backbone of modern industrial calculations. It reveals any wastage and defects at the very moment of their occurrence.

7. *Pay special attention to plant maintenance*: Plant maintenance is very often sadly neglected. A small initial effort can easily prevent many costly repairs.

8. *Do not try to save money on the progress and efficiency departments*: It would be too costly for your company.

9. *Use trained experts*: They cost nothing because they take only 10 per cent. of the profit they have earned for your firm.

10. *Infuse enthusiasm and cheerfulness*: They are the best tonics and lubricants for co-operation.

Time and Motion Studies

Frank Gilbreth, an American, is the founder of the Time and Motion Economy. He became known as the "Motion Study Man." At 14, he began to carry a stop watch in his waistcoat pocket and it shaped his career. It brought him fame and fortune. It is a fact, that there is no waste of any kind in the world, that equals the waste from needless, ill-directed and inefficient motions and the resulting unnecessary fatigue. The basic ideas of time and motion economy are as follows: each operation is carefully analysed and dissected into its basic motions or elements, which are measured by stop watches and the time noted on Time Study sheets. The average figure for every basic motion is then carefully compiled out of 15—40 data. After deducting allowances for fatigue, relaxation, personal needs, etc., the final figure represents the Standard Time for the basic motion in question. If the operation, under consideration, is divided into, say, seven elements or basic motions, then the Standard Time for the whole operation is the total of seven basic motions. The Standard Time is the standard of measurement of labour cost and a scientific basis for the price calculation of final products.

To sum up:

1. Motion studies analyse microscopically the relevant elements of each operation;

2. Motion economy is concerned with the selection of the most economical methods to perform the operation in question;

3. Time studies establish standard times for each basic operation.

The time and motion economy is usually linked up with incentive schemes, the advantages of which must be clearly evident to the workers, as otherwise a great deal of friction can hardly be avoided.

Incentive Schemes

The aim and object of each incentive scheme is to reward extra output expressed in the time saved. If, that is, the standard time for a certain job is say, 24 hours, but the work has been finished in, say, 18 hours, then six hours or 25 per cent. of the standard time has been saved. Now the question arises: should the workers receive reward for the whole of the time saved or should they share it with the employer in an agreed proportion, say 50/50 or 2/3: 1/3, 2/3 for workers. When 50 per cent. share was, agreed, then the workers would receive for 18 hours' work 21 hours' pay and 22½ hours' pay in case of a 2/3: 1/3 agreement. If the whole time is given to them they would obtain 24 hours' pay for 18 hours' work. Increased output is highly beneficial to the factories, because the percentage of overheads is reduced and the machines better utilised.

Costing System

The backbone of any industry is a scientific costing system which reveals any inefficiency or wastage during the production at the very moment of its occurrence. The profit and loss account, produced at the end of a period, does not disclose these defects.

Office Efficiency

I should like to stress another fact, which is not generally appreciated: namely, that the *industrial output depends on Office Efficiency.* The office can play a vital part in increasing the industrial output. Management needs facts and figures—quickly, accurately and cheaply. Only this production can be planned and controlled. To give this service the office must be efficient—with the right staff, the right machinery and equipment. It is *an established fact that the Effectiveness of Management is the greatest single factor in European and American Industrial Supremacy. Plans without control are anæmic—controls without plans chaotic.*

Efficient management is based on facts and their trends. Graphs will present complicated data in a simple form without forcing the manager to study long rows of dull figures. If systematically worked out, the graphs inform the management in a precise way, whether the planned targets have been reached and if, not, why, and who was responsible for the failure; they register and measure idleness of machines and men; they point out to the sore spots in the financial position of the company, etc.

Charts ought to be selected and combined with a view of forming a control system of the main factors affecting production, distribution, administration and financial position. By graphic comparisons of results achieved and targets set, complicated problems are presented in an extremely simple and clear way, so that vigorous steps to deal with the difficulties can be taken immediately.

I regret to say that quality control is often neglected in Indian industry and I should like to give you the following tips for efficient quality control:

1. The quality control must be economical: neither too much nor too little.

It is easy to determine the amount and costs of quality control in industry: it is obvious that the costs should be smaller than the corresponding value gained by the improved quality of finished products plus the decrease in rejections and rework.

2. Quality control in modern industry consists of process control and inspection of finished goods.

The object of process control is to detect and eliminate the causes of defective work. Its practical application varies from plant to plant.

3. It is essential to keep classified records of defects and errors in production.

Record only important data and avoid inflated paper work. These figures, entered and summarised on special "Analysis Sheets," point out the causes of defective work resulting in wastage of time, material and inconsiderable financial loss.

4. Examine carefully your "analysis sheets" to find out the roots of faulty work and departmental errors.

Defective work is usually caused by a variety of factors, such as carelessness, insufficient supervision, faulty tool design, poor quality of raw materials, etc.

5. Take energetic steps to remove the causes of rejections and rework.

6. Apply simple but effective methods and procedures in your departments to ensure efficient quality control.

7. Infuse a sense of responsibility in your staff.

Unless your employees are fully responsibility-conscious, impartial and as well, aware of the importance of their work—a great deal of their effort is likely to be wasted. Half measures are of no use.

8. Keep records of improvements achieved and of money saved. It is most encouraging to see good results from one's work.

9. Install a generous incentive scheme for your department.

You and your staff should participate in the savings brought about by efficient work. It will be most beneficial for the whole production.

10. Spare no efforts to make all employees of your plant quality-conscious.

Consider it as your patriotic duty which, in addition, will bring you extra rewards.

To sum up: Efficiency pays immediately high dividends, not only to the shareholders—but also to the staff and workers. Efficiency conscious management is the highest asset any mill or factory can possess.

Notice

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 31st March, 1955.

Payment will be made on 1st May, 1955, to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,

A. H. FORSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, *13th April*, 1955.

SETBACK IN EARNINGS OF FINLAY GROUP MILLS

PROFIT OF GOLD MOHUR LOWEST SINCE 1940

A SETBACK of varying degree in the profits of all the three textile mills under the management of Messrs. James Finlay & Co., Ltd., Bombay, namely, the Finlay Mills Ltd., the Gold Mohur Mills Ltd. and the Swan Mills Ltd., for the year ended 31st December, 1954 is disclosed by the latest accounts of the respective companies. The extent of decline is, however, not uniform in all the cases, the drop being smallest in the case of the Swan Mills and largest in the case of the Gold Mohur. Thus, the gross profit of the Finlay has fallen from Rs. 22.60 lakhs for 1953 to Rs. 17.67 lakhs, that of the Gold Mohur from Rs. 19.93 lakhs to Rs. 8.13 lakhs and that of the Swan from Rs. 26.38 lakhs to Rs. 24.82 lakhs.

The slight improvement in the profit of the Finlay, noted a year ago, when it rose from Rs. 21.90 lakhs to Rs. 22.60 lakhs, has been more than offset by the decline in 1954, thus restoring the downward trend that commenced in 1951 when the profit was Rs. 31.21 lakhs. Thus, in the course of the past three years, the profit of the Finlay has suffered a decline of Rs. 13.54 lakhs or over 43 per cent. and, at Rs. 17.67 lakhs for the year under review, it is the lowest for the past five years. In the case of the other two mills, the decline has been continuous for the past three years, the Gold Mohur being the worst sufferer with a fall of Rs. 23.16 lakhs or nearly 74 per cent., that is from Rs. 31.39 lakhs to Rs. 8.13 lakhs. It may also be added here that the past year turned out to be the worst year for this Mill since 1940. The profit of the Swan Mills has dwindled from Rs. 45.39 lakhs for 1951 to Rs. 24.82 lakhs for the year under review, the lowest level since 1949. The net profit of Finlay for the year 1954 amounts to Rs. 6.86 lakhs, as compared with Rs. 8.33 lakhs for the previous year. The Gold Mohur has earned a net profit of Rs. 2.88 lakhs, a decline of Rs. 5.36 lakhs over the year. The net profit of the Swan has been marked down from Rs. 9.73 lakhs to Rs. 7.05 lakhs.

Nothwithstanding this setback in the earnings, the dividends of all the three companies have been maintained at the previous year's levels, Finlay paying 16 per cent., Gold Mohur 12½ per cent. and Swan 20 per cent. It may be recalled that Finlay reduced the distribution to the shareholders last year from 20 per cent. paid for the preceding two years to 16 per cent., following the capitalisation of Rs. 10 lakhs and the issue of one share for every four shares as capital bonus in September, 1953. *This is the fourth year in succession for* which the dividend of Gold Mohur is repeated, after the capitalisation of Rs. 25 lakhs in August, 1951 and the issue of one share for every share held as capital bonus. The Swan Mills had enhanced the dividend level from 25 per cent. paid for 1951 to 30 per cent. the following year, but had to cut it to 20 per cent. after the issue of bonus shares in the ratio of 1 :-2 by the capitalisation of Rs. 12 lakhs in September, 1953. The maintenance of the dividend by all the three companies for the year under review has been rendered possible by the large undistributed surplus brought in from the previous year. Both Finlay and Gold Mohur have not added anything to the reserves; this is the third year in succession for which Finlay has not strengthened the reserves. A sum of Rs. 2 lakhs has been added to the rehabilitation and development fund of the Swan Mills.

A fairly broad picture of the Companies' progress during the past three years is provided by the synopses of their profit and loss accounts published at the bottom of this page.

A welcome improvement is noted in the sale proceeds of all the three companies after two years of successive recession. The rise in sale proceeds in the case of the Finlay Mills is mainly accounted for by cloth sold, which has gone up from Rs. 136.93 lakhs to Rs. 144.40 lakhs. The increase of Rs. 7.15 lakhs in other income of this company is due to larger receipts from bleaching, mercerising and dyeing charges. Of the increase of Rs. 20.52 lakhs in expenses, cost of cotton consumed accounts for Rs. 1.55 lakhs, stores, spares and chemicals for Rs. 7.57 lakhs, mill salaries and wages (including dear food allowance) for Rs. 9.52 lakhs. Provision has been made in the accounts for the year under review for the increase in dearness allowance from May, 1953 to December, 1954 amounting to Rs. 5.33 lakhs, and the additional bonus (Rs. 1.16 lakhs) payable for the year 1952 in accordance with the Award of the Labour Appellate Tribunal.

Sale proceeds of cloth of the Gold Mohur Mills have risen by Rs. 18.46 lakhs and those of waste by Rs. 1.71 lakhs, while those of yarn have declined by Rs. 1.87 lakhs. The cost of cotton consumed has gone up by Rs. 15.89 lakhs, dyeing, bleaching and mercerising charges by Rs. 6.14 lakhs and mill salaries and wages by Rs. 5.05 lakhs, while stores, spares and chemicals account for a decline of Rs. 1.77 lakhs. The increase in dearness allowance from May, 1953 to December, 1954 and the additional bonus payable for 1952, as per the Award of the L.A.T., have cost the Company Rs. 5.40 lakhs.

The increase of Rs. 63.58 lakhs in sale proceeds of the Swan Mills is mainly accounted for by the increase of Rs. 62.39 lakhs in sales of cloth. This has been offset by the rise of Rs. 48.99 lakhs in cotton consumed, of Rs. 3.93 lakhs in dyeing, bleaching and mercerising charges and of Rs. 9 lakhs in mill salaries and wages, of which the aforesaid award of the L.A.T. accounts for Rs. 4.75 lakhs.

The following summaries of the latest balance-sheet of the three Companies disclose their sound financial position:

	As on 31st December, 1954		
	FINLAY	GOLD MOHUR	SWAN
	Rs.	Rs.	Rs.
Capital	50,00,000	50,00,000	35,00,000
Reserves and surplus	65,22,338	49,56,413	66,33,229
Provision for taxation ..	11,73,367	6,28,984	10,63,901
Liabilities	86,87,729	23,87,645	71,26,486
Gross block	1,05,11,445	80,35,526	1,17,43,921
Less—Depreciation	71,58,296	48,29,387	70,22,715
Net block	33,53,149	32,06,139	47,20,206
Stock-in-trade	61,80,002	77,85,415	88,41,871
Stores, spares, etc.	16,77,155	8,39,425	10,29,109
Debts, deposits and advances..	13,21,784	14,05,022	37,62,777
Investments	4,00,410	81,000	71,500
Cash balances	37,06,132	1,56,040	5,063
Total .. Rs.	1,66,38,632	1,34,73,041	1,84,28,516

It will be observed that the reserves and surplus of all the Companies stand at impressive levels and the current liabilities and provisions for taxation are more than adequately covered by current assets. All the three Companies have made substantial additions to the gross block, Finlay accounting for Rs. 17.24 lakhs, Gold Mohur for Rs. 13.01 lakhs and Swan for 17.66 lakhs. These, coupled with large stock-in-trade, have evidently brought about a shrinkage in the cash balances of Finlay from Rs. 54.87 lakhs to Rs. 37.06 lakhs and of Gold Mohur from Rs. 32.61 lakhs to Rs. 1.56 lakhs. In the case of Swan not only the cash balances have dwindled by Rs. 4.85 lakhs but there has been borrowings from banks to the extent of Rs. 42.91 lakhs.

The Directors report that the rehabilitation of the spinning, machinery of the Finlay Mills continues and 8,500 new spindles, together with the necessary preparatory machinery, have been received and are under erection at present. The new mixing room and blow-room machinery of the Gold Mohur Mills and the Swan Mills have been installed and are now in operation. 6,500 new spindles with the necessary preparatory machinery have been received for the Gold Mohur Mills and are being erected.

The Rs. 100 paid-up shares of Finlay are being currently quoted at Rs. 260 *cum-div.*, Gold Mohur at Rs. 187-8 *cum-div.* and Swan at Rs. 335 *cum-div.* On an *ex-div.* basis, the shares give a yield of 6.5 per cent., 7.1 per cent. and 6 per cent. per annum, free of tax, respectively.

The Directors of the Orient Paper Mills (Agents: Birla Brothers) have decided to issue 50,000 preference shares of Rs. 100 each forming part of the unissued capital of the Company. The shares will be issued at par for cash and will carry a fixed cumulative preferential dividend of 5½ per cent. per annum, tax-free. They will be redeemable at par at any time at the option of the Company on giving three months notice, but not before 31st March, 1957.

On the increased capital of Rs. 50 lakhs raised by the capitalisation of Rs. 10 lakhs out of the reserve fund.
On the increased capital of Rs. 36 lakhs raised by the capitalisation of Rs. 12 lakhs out of the reserve fund.

VASANTA MILL RAISES DIVIDEND LEVEL

SMART RISE IN PROFIT

THE directors of the Vasanta Mills Ltd. (Managing Agents: Messrs. R. K. Shanmugham Chetty and Bros., Coimbatore) have declared a dividend of 15 per cent. for the year ended 31st December, 1954, as against 12 per cent. paid for the previous two years. It may be recalled that the dividend had been raised to 12 per cent. two years ago in four successive stages from 5 per cent. paid for 1948. By enhancing the dividend level for 1954, they have restored it to that paid for the years 1944, 1945 and 1946 and that on a greatly enhanced capital. It will be recalled that the ordinary capital of the Company was trebled in 1947 from Rs. 7 lakhs to Rs. 21 lakhs by the capitalisation of Rs. 14 lakhs, so that the dividend for 1954 represents 45 per cent. on the old capital, exceeding the previous highest of 30 per cent. paid for 1943. The latest increase in the dividend is in consonance with the notable improvement in the earnings of the Company for the year under review and has been decided upon only after setting apart a sizable amount to reserves.

The gross profit of the Company for 1954 amounts to Rs. 18.58 lakhs, exceeding that for the previous year by Rs. 6.05 lakhs. This increase compares very favourably with that of Rs. 4.01 lakhs noted last year. Notwithstanding the rise of Rs. 10.06 lakhs in the course of two years, the profit for 1954 is fractionally lower than that of Rs. 18.67 lakhs for 1951. The net profit, which had risen from Rs. 3.95 lakhs for 1952 to Rs. 4.58 lakhs for the following year, has further appreciated to Rs. 6.46 lakhs for the year under review. Out of the net profit, the Directors have set aside Rs. 3 lakhs to the general reserve which had not received anything last year. The Directors had, however, transferred a year ago Rs. 99,475 to the reserve for contingencies and Rs. 1 lakh to the reserve for replacement and renovation of machinery, both of which have not been strengthened further.

The following comparative table, giving the summaries of accounts for the past four years, provides an idea of the Company's progress since 1951:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	160.57	131.50	140.88	173.89
Raw materials consumed ..	118.07	95.08	112.54	131.58
Manufacturing and other expenses	30.55	23.81	20.10	22.24
Gross profit	18.58	12.58	8.53	18.67
Managing Agents' commission..	1.88	0.90	0.55	1.20
Depreciation	4.73	3.55	2.52	4.85
Taxation	6.00	3.50	1.50	6.00
Net profit	6.46	4.58	3.95	7.31
To general reserve	3.00	..	0.50	2.00
To other reserves	..	1.99	0.50	3.78
Dividends—				
Preference	0.28	0.28	0.28	0.28
Ordinary	3.15	2.52	2.52	2.10
	(15%)	(12%)	(12%)	(10%)
Carry forward	0.30	0.28	0.50	0.39

The rise in sale proceeds, raw materials consumed and expenses indicate a larger production, brought about by the expansion in the Mill's spinning capacity. The Directors' report states that the spinning plant was expanded during the year by the addition of 4,000 spindles, bringing the spindleage capacity of the Mill to 37,704.

The balance-sheet of the Company as on 31st December, 1954, discloses a sound financial position. Even after the capitalisation of Rs. 14 lakhs in 1947 and the issue of two ordinary shares for one share held as capital bonus, the reserves and surplus aggregate Rs. 30.30 lakhs, and supplement a paid-up capital of Rs. 25.50 lakhs. The reserves are made up of a general reserve of Rs. 15.50 lakhs, a reserve for replacement and renovation of machinery of Rs. 11 lakhs, a dividend equalisation reserve of Rs. 3 lakhs, a contingency reserve of Rs. 2 lakhs and an investment depreciation reserve of Rs. 50,000. There is a provision of Rs. 6.30 lakhs for taxation. The current liabilities aggregate Rs. 22.22 lakhs. There has been an addition of Rs. 7.66 lakhs to the gross block during the year, bringing the total value of the block to Rs. 56.92 lakhs up to the end of the year. The aforesaid increase in fixed capital expenditure is evidently on account of the expansion programme taken up during the year, referred to earlier. The gross block stands written down to a book value of Rs. 20.11 lakhs. The current assets amount to Rs. 66.32 lakhs, represented by stock-in-trade to the extent of Rs. 39.30 lakhs, stores and spares Rs. 3.36 lakhs, book debts Rs. 8.79 lakhs, investments Rs. 7.24 lakhs and cash Rs. 7.63 lakhs.

In accordance with the expansion programme, the Directors have placed orders for a further 5,880 spindles. These are expected to be received and to go into full production before the end of the current year. The Directors consider that this expansion will make the Mill a sound economic unit.

The Directors have also taken up the construction of 32 tenements for accommodating the workers of the Company, taking advantage of the financial assistance offered by the Union Government under the Subsidised Industrial Housing Scheme. These tenements are expected to be completed before the end of June, 1955.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 230 *cum-div.* On an *ex-div.* basis, the shares give a yield of 7 per cent. per annum, free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 25th April, 1955. Dividend: As. 12 per share. Transfer books remain closed from 11th to 25th April, 1955, both days inclusive.

JAYSHREE TEXTILES LTD. Annual General Meeting, Calcutta, 26th April, 1955. Transfer books remain closed from 13th to 26th April, 1955, both days inclusive.

RADHA KRISHNA MILLS LTD. Annual General Meeting, Peelamedu, 27th April, 1955. Dividend: Rs. 16 per ordinary share and Rs. 8 per "B" ordinary share. Transfer books remain closed from 20th April to 10th May, 1955, both days inclusive.

DEORIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 28th April, 1955. Transfer books remain closed from 19th to 28th April, 1955, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Half-yearly General Meeting, Calcutta, 30th April, 1955. Dividend: *Nil*. Transfer books will remain closed from 28th to 30th April, 1955, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar (Bihar), 30th April, 1955. Dividend: Re. 1-8 per share. Transfer books remain closed from 23rd to 30th April, 1955, both days inclusive.

BARAREE COKE CO., LTD. Half-yearly General Meeting, Calcutta, 4th May, 1955. Dividend: As. 11-1/5 per share. Transfer books remain closed from 21st April to 4th May, 1955, both days inclusive.

KAMARHATTY CO., LTD. Half-yearly General Meeting, Calcutta, 4th May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 20th April to 4th May, 1955, both days inclusive.

KANKNARRAH CO., LTD. Half-yearly General Meeting, Calcutta, 4th May, 1955. Dividend: Rs. 4 per share. Transfer books remain closed from 20th April to 4th May, 1955, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 4th May, 1955. Dividend: Re. 1-8 per share. Transfer books remain closed from 18th April to 4th May, 1955, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 5th May, 1955. Dividend: Rs. 11 per share (includes bonus of Re. 1), payable on or after 14th May, 1955. Transfer books will remain closed from 25th April to 12th May, 1955, both days inclusive.

SHAHJAHANPUR ELECTRIC SUPPLY CO., LTD. *Annual General Meeting*, Calcutta, 6th May, 1955. Dividend: As. 8 per share. Transfer books will remain closed from 29th April to 6th May, 1955, both days inclusive.

JESSOP & CO., LTD. Annual General Meeting, Calcutta, 6th May, 1955. Dividend: Re. 1-8 per share. Transfer books remain closed from 18th April to 6th May, 1955, both days inclusive.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME) (GONDALPAR MILLS). Annual General Meeting, Calcutta, 17th May, 1955. Transfer books will remain closed from 4th to 17th May, 1955, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Dividend of Re. 1-8 per share, for the half-year ended 31st December, 1954.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of As. 8 per share, for the half-year ended 30th September, 1954. Transfer books will remain closed from 25th to 30th April, 1955, both days inclusive.

COMPANY REGISTRATIONS

GROVESONS LTD. (Managing Director: Mr. Brijmohan Amarnath Grover.) Business: Engineers, founders, smiths, mechanists, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 4th Floor, Advani Chambers, Sir P. Mehta Road, Bombay-1.

DARUVALA BROS. LTD. (First Director: Mr. B. V. Daruvala.) Business: Importers, exporters and dealers in drugs, medicines and chemical and pharmaceutical products. Authorised capital: Rs. 5,00,000. Private company. Address: Shroff Mansion, Princess Street, Bombay-2.

ELECTRO ENGINEERING CO., LTD. (First Director: Mr. J. F. Selwyn.) Business: Electric engineers and contractors, mechanical engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Sea View Building, 1st Pasta Lane, Colaba, Bombay No. 5.

DHANSAR ENGINEERING CO., LTD. (First Director: Mr. R. P. Agarwalla.) Business: Merchants, etc. Authorised capital: Rs. 5,00,000. Public company. Address: 24, Netaji Subhas Road, Calcutta.

QUESTION HOUR IN PARLIAMENT

Penicillin Manufacture

ABOUT 32 items of raw materials are required for the manufacture of penicillin. Out of these, only 12 items are being imported. The estimated cost of all the materials imported will be Rs. 27 lakhs per year. Two of these materials can possibly be replaced by indigenous production.

• • • •

Synthetic Oil Plant

Three international firms are being contacted for the preparation of project reports on the proposed synthetic oil plant.

• • • •

Fertiliser Factory

It has been decided that the proposed fertiliser factory in the Bhakra Nangal area should have a capacity of about 200,000 tons of ammonium nitrate per annum. Certain preliminary steps towards the implementation of the decision to set up the factory have already been taken and work on the project is expected to be started as soon as technical and other details are settled after examination of the final report of the Fertiliser Production Committee. These details will be settled only after examining the final report of the Fertiliser Production Committee, and no reliable estimate of the total cost of the project can be given at this stage.

—Production Minister

Financial Assistance to Nepal and Sikkim

The Government proposes to give Rs. 1,66,31,000 exclusively as a grant to Nepal and Rs. 55 lakhs to Sikkim during the current financial year. The amount to Sikkim includes Rs. 9.75 lakhs as part of a loan of Rs. 21 lakhs to be given for the construction of an aerial ropeway in Sikkim. This loan is required to be treated as a 15-year loan recoverable at the rate of Rs. 2 lakhs per annum payable by the Sikkim Durbar one year after the completion of the project.

—Prime Minister

Remittances by Foreign Firms

During 1954, Rs. 1,922.02 lakhs were remitted from India to foreign countries by foreign firms and companies, including banks, on account of profits, as compared with Rs. 1,667.29 lakhs in the previous year. In 1954, Rs. 59.39 lakhs were invested by foreign firms and companies in India, as against Rs. 153.60 lakhs in 1953. These figures do not include remittances individually of less than Rs. 20,000, as such onward remittances were not reported to the Reserve Bank. The figures do not also include investments in the form of goods, plant and machinery, nor do they include capital issued for the services rendered by foreign firms or reinvestment of profits in India.

• • • •

Russian Aid

India has not been offered any financial aid by Soviet Russia recently.

—Finance Minister

U.S. Loan to India

About $25 to $30 million are being utilised for purchase of wheat and cotton out of the $45 million loan from the U.S. It is expected that the entire quantity will be received during the current financial year.

• • • •

Industrial Schemes

The number of industrial schemes, in which Indian firms are required to pay royalties to foreign firms for technical know-how, sanctioned by the Government of India in 1954, is 39. The royalty so far paid amounts to Rs. 44.56 lakhs which include payments made in respect of arrangements entered into in earlier years also.

—Minister for Revenue and Civil Expenditure

Import Duty on Antibiotic Drugs

The amount of revenue derived from customs duty on import of antibiotic drugs during the period April, 1954 to January, 1955, was Rs. 63,34,115. Out of this, Rs. 26,91,861 had been derived on account of customs duty on the import of penicillin, while the remaining amount of Rs. 36,42,254 was on account of import duty on other antibiotics, such as streptomycin and so on. The amount of revenue derived from customs duty on import of surgical instruments in the same period was about Rs. 11 lakhs.

• • • •

Hali Sicca Currency

The *Hali Sicca* currency has ceased to be legal tender with effect from 1st April, 1955. The total amount of the currency that has not yet been withdrawn and may have remained with the members of the public is of the order of Rs. 6.49 crores as on 1st April, 1955.

—Minister for Revenue and Defence Expenditure

Jeep Spares Manufacture

Within the next four years, India will be able to manufacture 70 per cent. of the components of jeeps. The report of the firm, to which a manufacturing licence was granted in November last, on the measures it has taken to implement its programme for the manufacture of jeeps is due in May and is being awaited.

• • • •

Soap Export to Burma

There has been a decline in India's share in the soap trade in Burma, due to the withdrawal of preferential tariffs. The average annual imports of soap to Burma in the past three years show that India does not enjoy the position of the principal supplier of soap. (The diminution of India's share in the soap trade in Burma is due to the curtailment in export of Lever Brothers—Mr. T. T. Krishnamachari.)

• • • •

Futures Market for Shellac

The Forward Markets Commission is looking into the question of having a regulated futures market for shellac. The Union Government has turned down the recommendation of the Bihar Shellac Enquiry Committee that export of seedlac and shellac on consignment should be stopped. The Government does not consider it necessary to interfere with the normal trade practices. Exporters are free not to export on consignment account, if they find that such exports have not proved to be advantageous. In a buyer's market, the Government does not want to take the responsibility of stopping spot sales. The question of introducing quality control is also under consideration.

• • • •

State Trading

The Government has not decided as a policy not to enter the export trade in any commodity.

• • • •

Assistance to Silk Industry

Financial assistance amounting to Rs. 7.68 lakhs has been given by the Central Government to Mysore State for the promotion of silk industry during the year.

• • • •

Zinc Factory

The question of establishing a zinc factory should be taken up only after the ore output has reached the required target of 1,000 tons daily. This is the view of the Committee which was formed to examine the question of the establishment of a zinc factory in India. But today the output is only 300 tons. All the requirements in respect of zinc are met at present from imports from foreign countries.

—Deputy Minister for Commerce and Industry

• • • •

Flood Control

It is proposed to establish a river research station in Assam for the study of rainfall data, with a view to controlling floods. Reconnaissance survey for selecting a suitable site has been made and other details are being worked out by the Assam Government. The detailed scheme, when ready, will have to be accepted by the Planning Commission for inclusion in the Plan before it can be implemented.

—Deputy Irrigation Minister

State Insurance

The amount paid as cash benefits on account of sickness, maternity, disablement and dependents benefits during 1953-54 under the Employees State Insurance Scheme was Rs. 19,23,167. A sum of Rs. 11,28,611 was spent on medical benefits. The employees' contribution during the period in areas where the scheme was implemented was Rs. 15,15,949. The contribution of employers in other areas was Rs. 1,61,27,644.

—Deputy Minister for Labour

Taming of Ravi River

The Governments of India and Pakistan have agreed that the Deputy Commissioners of the border districts concerned should explain to their counterparts in the other country the object of the works undertaken by either country along the Ravi and along other rivers near the boundary. It has also been agreed that the Executive Engineers of the two sides should meet and discuss the plans with a view to causing the least inconvenience to the residents of villages on the other side whenever protective works are proposed to be undertaken.

—Parliamentary Secretary to Minister for External Affairs

Output of Gold and Iron Ore

About 240,794 ozs. of gold were produced in India during 1954. The total production of iron ore amounted to 3.73 million tons.

• • • •

Manganese Deposits

A low grade manganese deposit has been discovered in Sunakania Hill in Baud area in Orissa.

• • • •

Oil and Gas Division

The nucleus of the Oil and Gas Division has started work in the Jaisalmer area in Rajasthan. The Division will be manned by Indians, but foreign experts will also be employed whenever necessary. The equipment required for prospecting and drilling is being obtained.

—Minister for Natural Resources

Employment Situation

The average number of vacancies notified to employment exchanges during the first two months of 1955 was 21,242 as against 19,990 per month in 1954. The number of employment-seekers on the live registers of exchanges decreased from 609,780 at the end of December, 1954, to 605,933 at the end of February, 1955. These figures may be signs of an improvement in the situation, but it is not possible to draw any final conclusions from them just yet.

—Labour Minister

Silk Industry

The silk industry has been helped for a long time, but it has not shown any improvement. In fact, because of constriction of imports, the demand for silk goods has suffered. During 1954, the Mysore silk industry showed a slight improvement and, if this trend is maintained, it will perhaps go to meet one-third and one-half of silk requirements.

—Commerce and Industry Minister

AMALGAMATED COALFIELD REPORTS HEAVY ACCUMULATION OF STOCKS

CAMBODIA MILL SKIPS OVER DIVIDEND

Amalgamated Coalfields, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1954.

The Company's profit for the half-year, after the inclusion of Rs. 21,441 (Rs. 20,589) brought forward and Rs. 79,455 (*nil*) stores depreciation written back was Rs. 4,67,469 (Rs. 3,29,454). After making provision for taxation Rs. 1,93,558 (Rs. 85,000) there remained a sum of Rs. 2,73,911 (Rs. 2,44,454). Out of this amount the directors placed to machinery replacement and development reserve Rs. 1,25,000 (Rs. 1,00,000) paid a dividend at the rate of 10 (10) per cent. per annum, free of income-tax, absorbing Rs. 1,27,500 (Rs. 1,27,500) and carried forward Rs. 21,411 (Rs. 16,954).

Capital expenditure on development, mechanisation and buildings totalled Rs. 3,74,006 for the half-year. A sum of Rs. 1,25,000 has been placed to development reserve towards the cost of sinking and equipping new pits at Eklehra and Rawanwara Collieries.

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
30th September, 1954 ...	4,01,400	3,77,585
31st March, 1954 ...	3,90,636	3,82,889
30th September, 1953 ...	3,74,537	3,92,351

Production figures were again up but due to transport difficulties and the glut of small coal on the market, heavy stocks of slack and dust coals accumulated at all collieries. During the half-year 10,000 tons of these stocks had to be written of as unsaleable due to weathering and spontaneous combustion.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	26,60,000
Reserves ...	20,75,000	Stock of Coal	3,35,196
Provision for taxation ...	2,15,000	Stores ...	13,73,739
Liabilities ...	28,68,512	Debts, deposits and advances ...	30,94,864
Profit and loss account ...	21,411	Investments	1,12,500
		Cash ...	1,53,624
Rs.	77,29,923	Rs.	77,29,923

Cambodia Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Coimbatore) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The result of the Company's working for the year after allowing Rs. 1,90,633 (Rs. 1,59,341) for depreciation was a loss of Rs. 87,744 (profit of Rs. 6,19,837). The unappropriated profit brought forward was Rs. 39,657 (Rs. 93,399) from which was deducted dividend paid on cumulative preference shares at 7 per cent., free of income-tax, for the year ended 31st December, 1954 Rs. 7,000 (Rs. 7,000). The net debit balance carried forward is Rs. 55,087 credit of Rs. 39,657 after providing Rs. 2,60,000 for taxation, Rs. 2,50,000 for involuntary unemployment to labour, transferring Rs. 6,579 to reconstruction and development reserve and paying ordinary dividend at 7½ per cent. free of tax, absorbing Rs. 1,50,000.

The main reason for the adverse trading result was the difficulty of procuring raw cotton suitable for the coarse counts of yarn which are a feature of the mills production, at anything other than very high prices. Additional factors which contributed to the loss were the Arbitration Award on the bonus question for 1952 and 1953 which imposed a heavy liability on the company over and above the amount which had already been reserved and paid out, and the payment of compensation to waste pickers arising out of the 1948 Tribunal Award.

The directors inform that considerable progress has been made in implementing the Rehabilitation Scheme. The intermediate frame and drawing frame have now arrived and the yarn conditioning machine is due very shortly. Fifteen new carding engines, the vacuum card stripping plant and a shirley opener for the blowroom are expected to be installed during the course of the year. These developments will further increase the efficiency of the preparatory machinery and should lead to reduced production costs.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	14,41,186
Reserves* ...	19,45,319	Stock-in-trade ...	31,57,990
Liabilities ...	23,55,774	Stores and spare parts	1,86,111
		Tools, etc. ...	18,426
		Debts, deposits and advances ...	12,46,993
		Investments	2,35,197
		Cash ...	95,190
Rs.	64,01,093	Rs.	64,01,093

*Reserves are shown after deducting a sum of Rs. 55,087 standing at the debit of profit and loss account.

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September, 1954.

The Company's profit for the half-year, after the inclusion of the amount brought forward of Rs. 22,304, was Rs. 3,89,073. After making provision for taxation of Rs. 1,50,756, there remained Rs. 2,38,317. Out of this amount the directors placed to development reserve Rs. 1,00,000 paid a dividend at the rate of 15 per cent. per annum, free of income-tax, absorbing Rs. 1,18,125 and carried forward Rs. 20,192.

Output and despatches of steam and other grades of coal for the last three periods are as follows:—

	Raisings Tons	*Despatches* Tons
Half-year ended 30th September, 1954	2,15,388	2,11,473
Seven months ended 31st March, 1954	2,51,508	2,52,289
Half-year ended 31st August, 1953	2,14,306	2,16,775

Raisings were maintained at previous levels. In order to maintain future production, plans are well advanced for developing the lower seams at Chandametta Collieries and orders for the necessary plant and equipment have already been placed. To provide the necessary finance a further Rs. 1,00,000 has been placed to development reserve.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	12,50,000
Reserves ...	14,00,000	Stock of coal	1,09,487
Provision for taxation ...	4,81,000	Stores ...	7,39,707
Liabilities ...	14,79,277	Debts, deposits and advances ...	17,56,943
Profit and loss account ...	20,192	Investments	4,07,240
		Cash ...	6,92,092
Rs.	49,55,469	Rs.	49,55,469

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

The profit and loss account shows a balance of profit of Rs. 1,10,253 (Rs. 1,40,735) to which has to be added the balance brought forward from the previous half-year, of Rs. 31,068 (Rs. 36,826) and excess profits tax post-war refund received Rs. 22,927 (*nil*) Rs. 53,995 (*nil*) and the directors have transferred from by-product stock reserve account the sum of Rs. 25,000 (*nil*), making a total of Rs. 1,89,248 (Rs. 1,99,561). Out of this sum there has been written off for claims considered irrecoverable Rs. 362 (*nil*), provided for depreciation Rs. 30,565 (*nil*) provided for taxation Rs. 40,000 (Rs. 65,000), provided for doubtful debts Rs. 13,881 (*nil*) and paid dividend previously forfeited Rs. 55 (*nil*), leaving a balance available for disposal of Rs. 1,04,386 (Rs. 1,34,561), which the directors recommend should be dealt with as follows:—

In payment of a dividend on the share capital of 7 (7) per cent. without any deduction for income-tax paid by the Company, absorbing Rs. 84,000 (Rs. 84,000), leaving a balance to be carried forward to the next account of Rs. 20,386 (Rs. 50,561).

Manufacture and despatches during the half-year were as follows:—

	Manufactured Tons	*Despatched* Tons
Coke	23,187 (31,988)	23,638 (29,791)
Tar and pitch	971 (1,309)	900 (1,495)
Sulphate of ammonia	210 (369)	197 (503)
	Gallons	Gallons
Benzol	4,007 (6,407)	6,422 (8,094)

The Works had to be shut down in May, 1954, for overhaul of plant and machinery and this accounts for the substantial fall in the production of coke and by-products as compared with recent half-years. At the time of writing this report, production has recovered to some extent and it is hoped that gradually normal production will be restored but in view of current labour conditions this may take some time. Despatches suffered in consequence of the fall in production and on account of irregularity in the supply of wagons. Relations between management and labour at the Works were satisfactory throughout the half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	3,32,000
Reserves ...	8,38,299	Stock of coal, coke and by-products, etc. ...	3,79,523
Provision for taxation ...	3,46,324	Stores ...	8,45,167
Liabilities ...	6,06,734	Debts and advances ...	13,86,089
Profit and loss account ...	20,386	Investments	800
		Cash ...	68,164
Rs.	30,11,743	Rs.	30,11,743

Shahjahanpur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1954.

The revenue account shows a profit on the year's working of Rs. 73,093 (Rs. 88,391) and after deducting from this arrears of depreciation Rs. 5,415 (Rs. 5,414), gratuity to retired employees Rs. 1,313 (Rs. 383), expenditure during construction written off Rs. 741 (*nil*), provision for taxation 1955-56 Rs. 15,951 (Rs. 33,000), reserve for deferred taxation Rs. 8,700 (Rs. 14,700) and appropriation under the Electricity (Supply) Act, 1948 Rs. 3,721 (Rs. 3,657), there is a credit balance of Rs. 37,252 (Rs. 31,236). After adding to this Rs. 5,882 (Rs. 27,279), the balance brought forward from last year, and Rs. 6,309 (Rs. 12,866), being the amount transferred from reserve for tariffs and dividends control in accordance with paragraph II (2) of the sixth schedule to the Electricity (Supply) Act, 1948, and also Rs. 10,451 (*nil*) on account of provision for taxation in respect of the previous year no longer required, there is a balance of Rs. 59,894 (Rs. 71,382) at credit of profit and loss account, which the directors recommend be disposed of as follows:—

Pay a dividend at 5 (5) per cent. for the year ended 30th September, 1954, without any deduction of income-tax paid by the Company Rs. 45,500 (Rs. 45,500) and to carry forward the balance of Rs. 14,394 (Rs. 5,882 after transferring to general reserve Rs. 20,000).

A continuous supply of energy was maintained throughout the year, and a small increase in the number of units sold was recorded as compared with the previous year. Information has been received from the State Government that a bulk supply of electricity can be made available to the Company within a period of two months. Details with regard to the tariff that would be applicable and the method of supply are under discussion. The Company's future prospects are considered good.

The number of units of electricity sold during the year was 22,24,801 as compared with 22,05,213 in 1952-53 and 20,68,878 in 1951-52. The number of consumers connected to the Company's System at 30th September, 1954 was 2,009 representing a connected load of 2,433 kw. as compared with 1919 with a connected load of 2,420 kw. at the close of the previous financial year. These figures include bazar lighting consumers numbering 99 as against 101 at 30th September, 1953.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,10,000	Block ...	7,31,684
Reserves ...	2,72,300	Stores, tools, etc. ...	2,66,241
Provision for taxation ...	44,004	Other assets	26,268
Liabilities ...	3,11,719	Debts, deposits and advances ...	1,58,021
Profit and loss account ...	59,893	Investments	3,17,393
		Cash ...	98,909
Rs.	15,98,516	Rs.	15,98,516

Braithwaite & Co. (India) Ltd.

The directors of the above Company (Secretary: Mr. Y. S. Tayal, Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1954.

After making provision to the extent of Rs. 9,00,000 (Rs. 9,00,000) to meet the Company's liability in respect of income-tax and super-tax, transferring Rs. 4,00,000 (Rs. 4,00,000) to general reserve and after providing for depreciation and other sundry charges, the profit for the year amounted to Rs. 6,94,084 which compares with the profit last year of Rs. 6,04,189. This profit together with the amount of Rs. 1,52,392 (Rs. 1,14,182) brought forward from last year's accounts, leaves a sum of Rs. 8,46,477 (Rs. 7,18,371) which the directors recommend be dealt with as follows:—

In paying a dividend for the year ended 31st December, 1954, of Re. 1-2 (Re. 1) per share Rs. 6,36,726 (Rs. 5,65,979) and in carrying forward Rs. 2,09,750 (Rs. 1,52,392).

Prospects remain good. The Company celebrated its Silver Jubilee on the 28th February, this year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,61,853	Block ...	13,34,848
Reserves ...	33,30,700	Erection plant, tools and tackle ...	2,32,963

		Investments	21,92,303
		Cash ...	29,27,580
Rs.	1,29,62,649	Rs.	1,29,62,649

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 20*th April*

Comfortable conditions were witnessed in the short-term money market during the week under review. The slight easing of the stringency noted last week would appear to have persisted this week also. The seasonal demand for funds did not appear to have abated to any marked extent, though it was not as keen as it was a few weeks ago. The influx of funds reported last week proved to be a great relief to the market. However, during the week under review, one of the leading Scheduled banks, which was the main supplier of funds to the market last week, is reported to have utilised a considerable portion of its surplus funds for purchasing Government securities. Nevertheless, borrowers were able to get their requirements in full.

Inter-bank call money was done at 2¾ to 3 per cent. with borrowers over. Short-term deposits were in demand at 3 per cent. for one to six months.

The weekly tenders for three months' Government of India Treasury Bills brought a better response this week than in the previous one, in that the amount offered aggregated Rs. 1.51 crores, as against Rs. 1 crore last week. The larger tenders did not, however, bring about any decline in the interest rate, the average rate of accepted tenders having remained unchanged at Rs. 2-9-0 per cent. per annum. Tenders for Rs. 1 crore have been invited for next week also.

There has been a further expansion in notes in circulation during the week ended 15th April, 1955, but it is only a fraction of that noted in the previous two weeks, the exact rise being Rs. 2.56 crores. Disclosing this, the Reserve Bank's statement for that week shows a rise of Rs. 7.32 crores in notes held in the Banking Department, thus nearly offsetting the decline of Rs. 7.51 crores in the previous two weeks. The total notes issued, therefore, recorded an increase of Rs. 9.88 crores. This is covered by a rise of Rs. 10 crores in foreign securities and a decline of Rs. 12 lakhs in rupee coin. In the Banking Department, deposits of the Central Government have declined by Rs. 2.43 crores, following the drop of Rs. 7.21 crores in the previous week. Deposits of other Governments, which had fallen by Rs. 31.43 crores a week ago, have further declined by Rs. 5.84 crores. Deposits of banks have risen by Rs. 5.54 crores. Balances held abroad have dwindled by Rs. 10.60 crores. Loans and advances to Governments are lower by Rs. 88 lakhs, while other loans and advances have gone up by Rs. 3 crores. Outstanding loans and advances to Scheduled banks against usance bills, which disclosed a fall of Rs. 10.32 crores in the previous week, have risen by Rs. 6.43 crores. Fresh advances against these bills aggregate Rs. 10.84 crores. Investments are lower by Rs. 1.11 crores.

The Scheduled banks' statement for the week ended 8th April, 1955, as compared with that for the previous week, reveals no notable variation in demand deposits, while time deposits are up by Rs. 2.52 crores. Inter-bank borrowings have risen by Rs. 3.50 crores, while borrowings from the Reserve Bank are down by Rs. 16.57 crores and those from the Imperial Bank by Rs. 1.66 crores. A decline of Rs. 5.32 crores is noted in advances, while an increase of Rs. 2.55 crores has occurred in inland bills purchased and discounted and of Rs. 1.36 crores in foreign bills. Investments are lower by Rs. 1.94 crores. Cash-on-hand and balances with the Reserve Bank are together higher by Rs. 4.51 crores, balances with other banks by Rs. 60 lakhs and money at call and short notice by Rs. 4.43 crores.

The Gilt-edged market disclosed slightly better conditions during the week under review, in that there were some enquiries for popular issues and a fairly good volume of business was put through, though this was not reflected in prices. 3 per cent. 1986 Conversion Loan recovered on bear-covering by As. 6 to Rs. 80-12. A good volume of business was done in 3½ per cent. 1961 at Rs. 99-9. 3½ per cent. 1964 attracted enquiries at Rs. 98-7½, but the market quotation was Rs. 98-8, at which rate the Reserve Bank continued to be a seller.

In the foreign exchange section, the rupee disclosed some strength in terms of the U.S. dollar, the banks' selling rate moving down from Rs. 479½ to Rs. 478½ per $100 and the buying rate from Rs. 475½ to Rs. 474½ per $100. Sterling continued to rule strong in terms of the dollar, but towards the close was marked down fractionally. Thus, in New York, spot sterling, after rising from $2.79-11/16—2.79-13/16 to $2.79⅞—2.79⅞, declined to $2.79⅝—2.79⅞. Forward sterling (three months) advanced from $2.78⅝—2.78⅞ to $2.78¾—2.78⅞, before closing at $2.78½—2.78⅞. Transferable sterling rose from $2.76⅞—2.77⅛ to $2.77⅛—2.77⅜.

FAIR DEMAND FOR TEA DUSTS

(From Our Own Correspondent)

CALCUTTA, 19*th April*

During the internal sale held last week, tea dusts offered aggregated 17,444 packages. Although prices were easy, there was fair demand. C.T.C. Assams declined by As 2, and poor liquoring teas by As. 3 to As. 4. Fibrous residue teas were available at rates lower by As. 4 to As. 6. There was a fractional decline in the prices of medium Assams, commons, and Dooars with clean leaf and useful liquors. The quotations were: Best Assam C.T.C. Rs. 2-13, medium Assam grainy dust Rs. 2-5, and medium Dooars Rs. 2-1-6.

BULLION QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, 20*th April*

The bullion market disclosed quietly steady conditions during the week under review, with fluctuations confined to a markedly narrow range, in distinct contrast to the sharp movements witnessed in the previous weeks. The movements in gold, in particular, which had been hectic in the preceding week, were very restricted on account of the demand having slackened considerably. The small quantity of arrivals and the continued shortage of floating stocks, however, kept the sentiment intact. This is reflected in the further widening of the premium of ready gold over the forward from Rs. 2-1 to Rs. 2-6.

In silver, the bulls were in no mood to relax their hold on the market, as witness the widening of the backwardation charges from Rs. 2-14 to Rs. 3.

The week under review was not, however, devoid of any new developments. Business in the *Ashad* delivery (third settlement) contract began on Friday last in gold and on Saturday in silver. On Saturday, the closing rate for gold in this settlement (at Rs. 91-5½) was above the official opening rate of Rs. 91-4 and was Re. 1-2 below the closing rate for the *Jeth* delivery contract (the second settlement), that is, the immediately preceding contract. Under by-law 33-D, margin is applicable on the outstanding purchases in *Jeth* delivery contract, if that contract is regarded as a current contract. Opinion on the definition of current contract, however, would appear to have differed and the Board could not come to a decision on the question of imposing margin in respect of *Jeth* settlement. Even legal opinion seems to differ on this point. One legal lummary considers that only the *Vaisakh* delivery contract can be treated as the current contract, the other contracts being succeeding contracts, and as such margin will be applicable only on the outstandings under that settlement. Another lawyer says that, since business has been permitted in all the three forward contracts simultaneously, all of them should be considered as current contracts. But since *Ashad* delivery contract has no succeeding contract, the question of applying margin does not arise. As the other two contracts are having succeeding contracts and backwardisation charges are quoted over As. 12, margins, according to him, are applicable to *Vaisakh* and *Jeth* settlements. Margin is already applicable in *Vaisakh* and the dispute is, therefore, only in respect of *Jeth* settlement. The dispute is likely to be referred to the Advocate-General for a verdict.

To revert to the market trend. Silver for forward delivery in *Vaisakh* (9th May) settlement declined from Rs. 163-12 to Rs. 162-10 on Monday, but revived to Rs. 163-8 at the close today. *Jeth* silver was marked down from Rs. 161 to Rs. 159-14, before closing at Rs. 160-8. Business for *Ashad* settlement opened at Rs. 157-13 and at the close today was done at Rs. 158-6.

Ready silver (.996 Mint), after reacting from Rs. 166-12 to Rs. 165-10, improved to Rs. 166-12. The floating stocks of silver are estimated at 1,800 bars. The daily average offtake was 20 bars.

Gold for forward delivery in the *Vaisakh* settlement tended to decline early in the week from Rs. 94-10 to Rs. 93-8, but revived to touch a high of Rs. 94-15 yesterday. Today, however, it closed at Rs. 94-11. *Jeth* gold softened from Rs. 93-10 to Rs. 92-7, but hardened to Rs. 93-5 at the close. Business in *Ashad* settlement opened at Rs. 91-8 and closed for the week at Rs. 92-5.

Ready gold disclosed a gain of As. 6 over the week, when it closed today at Rs. 97-1. The floating stocks are reported to be 10,000 tolas. The daily average arrivals were 3,000 tolas and the offtake was 3,500 tolas on an average.

In London, silver suffered a drop of ½d. per fine ounce early in the week, but held its ground subsequently, spot silver quoting 75½d. and forward silver 75¼d. Gold was marked down from £12 10s. 8½d. to £12 10s. 7d. In New York, silver remained unchanged at 87 cents.

The following comparative table shows the trend of the market during the week under review:

	20-4-55	Highest	Lowest	13-4-55

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 18*th April*

Generally firm conditions prevailed in the linseed market and fairly good enquiries were noted. Trading was rather poor, owing to scarcity of ready goods and firm advices from the centres. Keen enquiries from crushers and lack of sufficient supplies resulted in higher price levels. The oil market was active and prices advanced appreciably. Good demand from shippers covering against previous sales resulted in some business, whilst enquiries from overseas were fairly good. The latest available quotations for April-May delivery is Rs. 15-14 per maund.

FORWARD COTTON IRREGULAR

(From Our Own Correspondent)

BOMBAY, 20*th April*

The cotton market has still not picked up strength. In fact, it continues to be sluggish. Despite the release of a further export quota of 100,000 bales of cotton, speculative sales have not disappeared. Exporters of cotton are rather critical of the Government's announcement. It had been expected that the Government would permit a limited export of cotton stapling over ¾". But the additional quota of 100,000 bales consist of only cotton stapling ¾" and below of any crop. There is also the further restriction that 35,000 bales should be exported from Saurashtra ports. It is pointed out by leading sections of the trade that the additional quota would only swell the quantity of unused quotas, estimated at 130,000 bales. Overseas enquiries have been few in recent weeks and the high export duty of Rs. 150 per bale is considered to be influencing foreign interests to fill in their requirements with only a minimum of Indian cotton. If export prospects were to improve, there should, it is emphasised, be a reduction of at least 33⅓ per cent. in the export duty on cotton. The need is said to be all the greater in view of the downward trend in prices of outside growths. Attention is further drawn to the slump in world textile market, improvement in the production of short-staple cotton in he U.S., and easy trend in the Egypt, Sudan and East African cotton markets.

After presenting a somewhat steady trend in the earlier sessions of the week under review, the futures section of the cotton market witnessed a relapse towards the close on Monday which gathered further momentum yesterday and today. The initial steadiness was due to higher upcountry as well as local spot advices. Rumours of the formation of a bull syndicate also influenced the sentiment of operators favourably. There was professional support on a large-scale, besides continued covering by shorts. Cotton prices, therefore, tended to improve. The upward trend was, however, halted on Monday. The increase in excise duty on fine cloth and conversion of the basis of additional cess from linear yard to square yard were interpreted bearishly. Advices from the spot market were also not encouraging. Selling pressure ensued and cotton prices suffered a fall which persisted yesterday and today too.

I.C.C. May contract commenced the week higher at Rs. 544, as against Rs. 543-12 last week, and, after improving to Rs. 554 on Monday, declined to Rs. 547-8 today, before finishing at Rs. 549-12. I.C.C. August opened at Rs. 555. It gradually rose to Rs. 561 on the 18th inst. Thereafter, it drifted lower, the closing rate today being Rs. 559-4. The spread between the two contracts narrowed down from Rs. 11-4 last week-end to Rs. 9-8 today, owing to switch-over operations by bear operators from May delivery to August contract.

The trend of prices during the week under review is indicated below:

	13-4-55	*High*	*Low*	20-4-55
I.C.C. May Rs. ...	543¾	554	544	549¾
I.C.C. August Rs. ...	555	561	552½	559¼

In the spot market, prices of domestic staple styles advanced moderately from the seasonal lows of last week, on account of a revival in mill demand. Kala Wagad, Kalyan, Vijay and Surti cottons evoked particular attention. There were limited enquiries for 320F and 216F. Among foreign styles, there was moderate demand for Egyptian Karnak and Giza 90, mainly from Ahmedabad mills. No fresh purchases were reported in Sudans or East Africans.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 560; Berar Jarillas Rs. 600; Khandesh Rs. 560; Vijay Rs. 710; Oomra *deshi* Rs. 550; Moglai Rs. 520.

The Karachi cotton market depicted a steady tone during the week under review. The steadiness was aided by slight improvement in offtake by domestic mill and overseas interests. Cotton prices, as a result, tended to look up. N.T.R.G. for May delivery was quoted yesterday at Rs. 62-15 (in Pakistan rupees for 82 pounds weight), as against Rs. 61 a week before. The latest available quotations from the spot cotton market at Karachi are:

Sind *deshi* Rs. 59; Punjab *deshi* Rs. 51-8; 4F Roller Rs. 57-15; S.G. Rs. 61-15; Punjab Roller Rs. 62-7; 289F N.T. Roller Rs. 65-5; 289F N.T. Sind S.G. Rs. 70-7; 289F Punjab Roller Rs. 65-15; S.G. Rs. 70-15.

In the Alexandria cotton market, demand continued to be moderate, being confined mostly to Karnaks. The premiums for spot Karnak Fully Good and above were about 250 Liverpool points more than the official support prices. Giza 30 and Ashmouni, however, were on offer at small discounts. Thanks to poor offtake, cotton is reported to have commenced moving in volume into the hands of the Egyptian Cotton Commission. The bulk of the deliveries made so far is accounted for by Giza 30 and Ashmouni varieties. The premiums for entitlement currencies are maintained at their recent high levels, which, it is said, fetch overseas buyers paying in those currencies attractive discounts. Notwithstanding this, demand has not registered any increase, since comparable outside growths are on offer at greatly reduced prices. In addition, the possibility of the U.S. cotton exports being subsidised in the ensuing season is also stated to have discouraged large purchases of Egyptian cotton.

The selling price of Egyptian Cotton Commission (cotton graded good, good to fully good and fully good) are: Karnak 77.77T, 76.27T and 80.77T; Menouf 67.77T, 71.77T and 75.77T; Giza 30 65.90T,

68.90T and 71.90T; Ashmouni 59.90T, 62.90T and 65.90T.

Despite uncertainty regarding the U.S. Government's cotton export policy for the next season, the Liverpool cotton futures market was active during the week under review. This was attributed to enlarged enquiries for yarn and cloth. The expectation that the Chancellor of the Exchequer would cut the purchase tax on textiles (the expectation has proved correct, with Mr. Butler's announcement of the cut in the budget statement presented yesterday) also enthused the interests of operators. Buying support ensued as a consequence and cotton values registered handsome gains. The latest available quotations from the market are: May-June 30.94d.; July-August 30.40d.; October-November 30.12d., and December-January 30.07d.

Conditions in the New York cotton futures market were distinctly bearish this week. Intermittent heavy liquidation in near-bys kept prices at depressed levels. Mill demand was insufficient to hold up values. The continued slow activity in home and export markets acted as a damper. There was extensive switching from near-by May to later months. At a meeting of the New York Cotton Exchange held the other day, the members voted to send back to the Board of Managers for further consideration the proposal to change the base of the futures contract of middling 15/16" to middling 1" cotton.

Yesterday, the U.S. Department of Agriculture offered to sell about 150,000 bales of its surplus cotton. The purpose of the offer, it is said, is to meet the needs of American consumers and exporters for grades and qualities now in short supply in regular market channels. This cotton will be sold either at 105 per cent. of parity plus handling charges or at the American market price, whichever is higher. Department officials say that, for most grades of cotton, the market price is lower than the 105 per cent. parity price. It is the first time since last autumn that the Agriculture Department has offered to sell any of its surplus cotton. The Department is holding about 1,750,000 bales. Department officials say that their offer should prevent any further price increases because of short supply.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-4-55	12-4-55	5-4-55
Spot	33.95	34.20	34.25
May	33.16	33.46	33.61
July	33.41	33.67	33.81
October	33.76	33.86	33.84
December	33.90	33.93	33.94

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 20th April

Steady conditions prevailed in the sugar market during the week under review, in distinct contrast to the easy trend witnessed in the previous week. Two factors were responsible for the steadiness. First, the Central Government decided to sell East German sugar in destination centres at a higher price of Rs. 30-8 per maund, as against the previous rate of Rs. 29-8. Secondly, there was a slight rise in ex-mill quotations of sugar in the Bombay-Deccan, following rumours of a possible delay in the next release of indigenous sugar for sale in the free market. These factors induced some buying support and prices were fully maintained. These developments have, however, not imparted any strength to sugar markets in U.P. and Bihar. The ex-mill rates in these States are as low as they were a week ago.

In the forward section, *Vaisakh* delivery improved by As. 4 to Rs. 83-4. Business in *Jeth* delivery began at Rs. 83 and the quotation has been nominal at this level throughout the week.

Among imported sugars in the spot section, British refined sugar hardened by As. 12 to Rs. 83-12 per 224 lbs. German and Czechoslovakian sugars were unaltered at Rs. 80 and Rs. 85-87 per 220 lbs., respectively. French sugar was, however, quoted lower at Rs. 81¾-84¼ per 220 lbs., as against Rs. 82-85. Among indigenous varieties, medium grain was done at Rs. 88-89 and large grain at Rs. 92-100.

The Government of India has modified the f.o.r. destination system for the sale of imported sugar. As against the earlier decision to issue East German sugar at the same price as that prevailing in Bombay port, namely, Rs. 29-8 per maund, it has now been decided to charge a higher price of Rs. 30-8. The stations in which the modified f.o.r. system operates include Ratlam, Indore, Ujjain, Jaipur, Jodhpur, Ahmedabad, Nagpur, Poona and Akila. It is reported that the Union Food Ministry proposes to open more depots at every one of these stations, in order to facilitate distribution of imported sugar to all the areas served through these centres.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

RAYON YARN QUIET

(From Our Own Correspondent)

BOMBAY, 20th April

The rayon yarn market ruled quiet during the week under review. The bearish trend was due partly to large arrivals of imported yarn and partly to the sale of 1 million lbs. of yarn by the National Rayon Corporation Ltd., Bombay. Stockists were eager to lighten their commitments, while buyers were somewhat reserved in anticipation of a further fall in prices. Consequently, quotations for rayon yarns slided downwards. In the forward section, 150D April contract receded from Rs. 732 to Rs. 730 yesterday before recovering to Rs. 731 today. Among spot yarns, 150 Japan dropped As. 2½ to Rs. 4-1. 120 Japan and 150 Italy fell by an anna and a half each to Rs. 3-13 and Rs. 4-0-6, respectively. 150 Italy eased by half an anna to Rs. 3-13-6. Among indigenous yarns, National Rayons 150 Bt. cones I grade declined by 4½ pies to Rs. 3-6-1½ and II grade by 3 pies to Rs. 3-5-9. Bt. hanks I grade eased by 3 pies to Rs. 3-10-3.

In distinct contrast with the bearish trend of the rayon yarn market, the staple fibre yarn section depicted a fully steady note. This was attributed to the continued bull squeeze in April position. Staple fibre yarn (40×2) for April delivery forged ahead from Rs. 580-12½ last week-end to Rs. 585 on Monday, but reacted to Rs. 582-8 today. May delivery firmed up by Rs. 6-4 to Rs. 583 on the 18th inst. Today, however, it slipped to Rs. 578-12. Foreign yarns (40 x 2) in the spot section registered gains, Auroras and Fujis advancing by half an anna each, the former to Rs. 4 and the latter to Rs. 3-15. Indigenous yarns (40×2) also tended to look up. New Greats and Kohinoors put on half an anna each to Rs. 4-2-6 and Rs. 3-4-9, respectively.

Trading in the cotton yarn market remained dull. As a result of poor offtake of yarn, operators were not keen on fresh business. Turnover was, therefore, greatly restricted and values fluctuated narrowly, the general tendency being downwards. Cotton yarns of 40 counts were the worst sufferer. Seksarias dropped As. 8 to Rs. 22. Gokaks gave way from Rs. 24-12 to Rs. 24-8. Moderns lost As. 2 to Rs. 24-10. Among 60s, Elphinstones receded by As. 4 to Rs. 49. Raghuvamshis finished As. 2 lower at Rs. 53-4. Among 10s, Elphinstones slipped by an anna to Rs. 13-1. Moderns were quiet at Rs. 13-4 and Podars at Rs. 13-3. Deals in 20s were limited, Maduras being quoted at Rs. 21-7 and Simplex at Rs. 21. Yarns of 20 counts and 80 counts, however, proved an exception and their prices were fully maintained at more or less last week's levels. Among the former, Moderns were done at Rs. 16-8, Maduras at Rs. 17-4, Centurys at Rs. 15-14 and Seksarias at Rs. 15-8. Among 80s, Moderns received special buying support and strengthened by As. 8 to Rs. 62-8.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	20-4-1955	13-4-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. April	731 0	732 0
120 Japan (per lb.)	3 13	3 14½
150 Japan (per lb.)	4 1	4 2½
120 Italy (per lb.)	4 0½	4 2
150 Italy (per lb.)	3 13½	3 14
Staple fibre yarn—		
40 x 2 April	582 8	580 12
40 x 2 May	576 12	576 12
Aurora (per lb.)	4 0	3 15½

60s Modern	59 0	58 4
60s Elphinstone	58 8	58 8

PEPPER DULL

(Messrs. Parekh & Co.)

BOMBAY, 20th April

During the entire week dull conditions persisted in Malabar black pepper. In the absence of any new incentive, Alleppey fluctuated within a narrow range of Rs. 975 and Rs. 962½. There was no noteworthy fresh buying, as exporters fully covered their requirements against their sale of 1,000 tons to the U.S.S.R., which is to be lifted by the s.s. *Rita* due to arrive at Cochin at the end of this month or in the beginning of May. There was no notable enquiry from U.S.A. which, after paying $0.42 for April shipment, is reported to have withdrawn asking for concession in price. In view of the stiff attitude of Indian growers, exporters are not in a hurry to cut their price to meet the U.S.A. buyers, as they are expecting some fresh buying by U.S.S.R. on the arrival of the s.s. *Rita*. Nor are they in a mood to sell blank as nothing is definitely known regarding the size of the coming Sarawak crop.

A noteworthy feature of the market is the meeting of Indian exporters at Cochin at which the question that came up for discussion was whether India should not decide against exports of pepper after the 15th May during the monsoon on the usual A.S.T.A. terms, as it involves risk of detention and heavy penalty for faulty arrivals and insect infestation. Nothing is so far definitely decided but the majority of the exporters are in favour of such joint action. The recent wholesale detention of shipment of Finger Turmeric in U.S.A. on account of mouldy arrivals, frightened exporters who fear that the F.D.A. may become very strict while inspecting the shipment of pepper during the coming monsoon. If no way out is found in time, we fear deadlock conditions in the export market, though unity of action is not so easy where there is diversity of interests. It is only when all exports, whether on sale or on consignment, are stopped, except on condition that detention due to mould and insect infestation be on buyer's account, that the contemplated move on the part of the Indian exporters can bear any tangible result.

Following are today's nominal quotations: Ready delivery Rs. 125 per Bengal maund, and June delivery Rs. 840-50 per candy of 5¼ cwts.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 20th April

A notable development of the week under review is the approval by the Forward Markets Commission of the amendments to the by-laws of the Bombay Oilseeds Exchange, to which reference was made in this report last week. Forward trading in castorseeds September delivery commenced on the 18th inst., according to the new by-laws which introduced, for the first time, a system of margin on outstanding business.

The oilseeds market, which ruled rather comparatively dull early in the week, later exhibited a firm trend. Linseed led the market, following firm foreign advices for linseed oil at as high as £93 per ton, as against £90 a week back. The performance of the groundnut section too was encouraging. This was attributed to reduced arrivals of the seed and expectations of fresh quota for H.P.S. groundnuts. The castorseeds section too ruled firm. Advices from the U.K. and the Continent were steady at £78 and the U.S. at 9.5c. The *kardi* and *niger* seed sections also looked up in sympathy with the rest. As a result, business done was sizable and prices firmed up and disclosed sizable gains over the week.

Bold ready in the groundnut section advanced from Rs. 19-10 to Rs. 20-8. April-May delivery gathered As. 10 to Rs. 20-4 and June-July As. 9 to Rs. 21-2. Khandesh quality hardened by As. 8 to Rs. 20-14. Groundnut oil, ready delivery, improved from Rs. 10-14 to Rs. 11-2½. May and June deliveries changed hands at Rs. 11-3 and Rs. 11-4, as against Rs. 10-15 and Rs. 11, respectively, at the end of last week.

The U.K. has figured as a consistent buyer of linseed oil. This chiefly explains the firm trend in the linseed section. Bold ready advanced from Rs. 21 to Rs. 22-11. April-May delivery was higher by Re. 1-12 at Rs. 22-6 and June-July by Re. 1-6 at Rs. 21-11. Linseed oil put on As. 8 to Rs. 13-3.

Castorseed, May delivery opened at Rs. 71-10 as against Rs. 71-9. After fluctuating between Rs. 73-14 and Rs. 71-2, it closed at Rs. 73-8. September delivery opened on the 18th inst. at Rs. 76-6. After declining to Rs. 74-12, it moved up to Rs. 78-2, before closing at Rs. 78. Ready Madras was enquired higher at Rs. 14-8, as against Rs. 14-4. Castor oil Commercial gained As. 2 to Rs. 8-4. First Pressure too improved by a similar amount to Rs. 9-4.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	20-4-1955	13-4-1955	5-4-1955
	Rs. a.	Rs. a.	Rs. a.

FOODGRAINS BEARISH

(From Our Own Correspondent)

HAPUR, 18th April

The downward trend in foodgrain prices continued. In accordance with its price support policy and with a view to stabilising the prices of foodgrains at reasonable levels, the Government of India has agreed to advance Rs. 12 crores to wheat producing States for purchasing wheat on their account wherever the market rate falls below Rs. 10 per maund. The wheat *dara* prices at Hapur, which had declined last weekend to Rs. 11-12, as against Rs. 12-8 per maund a fortnight ago, further eased to Rs. 10-12 today. The fine farm quality is quoted at Rs. 11-12 per maund. Daily arrivals have increased, amounting to 1,200 maunds, and all the arrivals were fully absorbed, the purchase being mostly done by millers from Delhi. Stocks with the trade is negligible. Rice prices eased further on the reported decision of the Government of India to auction about 250,000 tons of rice by the end of June. This is due to heavy stock position of rice with the Government, aggregating about 1.6 million tons, some of which is fast deteriorating. An earnest effort is being made to export 200,000 tons of rice to Britain and the Near East countries. Heavy quantities of rice at a subsidised rate is being sent to Bihar and Orissa.

Gram prices continued to be depressed. Desi quality was quoted at Rs. 6 and Punjab quality at Rs. 6-10 per maund. Arrivals of new crop are still small and the stock is just one *khati*. Barley and *bejhar* prices improved fractionally, due to increased seasonal demand, and are quoted at Rs. 5 and Rs. 4-12 per maund, respectively. *Bejhar* stock here is 3 *khaties*. The *jowar* prices were weak at Rs. 5-8 per maund. As *jowar* prices fell below the uneconomic level of Rs. 4 per maund in some parts of the State, the State Government has begun purchasing this commodity at Rs. 5-8 per maund in eastern districts of the State to give price support. Ready peas prices also eased by As. 3 per maund for dara quality to Rs. 4-13 and for white quality to Rs. 5-12 per maund. Daily arrivals have increased to 2,000 maunds and, due to considerable offtake, the stock is still 3 *khaties*.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 18th April

Sugar prices continued to be depressed on reports of accumulations of heavy stocks with factories in Uttar Pradesh and Madhya Bharat. Cheapness of imported sugar also added to the bearish trend. The sugar mills are anxious to liquidate their stocks, but the traders are still following a wait and watch policy, on expectation of a heavy fall in prices of sugar. Sugar factories in U.P. attribute the rise in unsold stocks to the glut in supplies as a result of heavy imports and diversion of consumption from sugar to *gur* following the sharp decline in the prices of *gur*. The official sources in New Delhi now expect that the total production of sugar this season will amount to 1.4 million tons, thus showing an increase of 400,000 tons over last year's production. The latest mill delivery rates are; Jaswant Rs. 29-2, Simbhauli Rs. 29-4, Mowana Rs. 29-2, Daurala Rs. 30, Amroha and Bijnore Rs. 28-4, Mansoorpur Rs. 30-8, Rampur Rs. 31-8, retail Rs. 33-8, *khandsari* Rs. 21 to Rs. 25.

After presenting a steady trend in the earlier sessions of the week, the *gur* market developed easiness on reports that the State Government which had purchased about 200,000 maunds in these western districts of the State was anxious to dispose of its stocks. The ready *gur* prices declined from Rs. 9-10 to Rs. 10 per maund last week to Rs. 9 to Rs. 9-8. Arrivals have again increased to 1,000 maunds daily. There are some reports of several kolhus again crushing cane, as the factories have not arranged to take delivery. The local stock is estimated at 104,500 maunds, including about 47,000 maunds owned by the State Government.

Gur prices in the South, on the other hand, continued to be almost at last week's level, due to diminishing stocks. The estimated stocks there are: Baramati 500,000 *behals*; Sholapur district 350,000 *behals*; Shrirampur and Belapur 600,000 *behals* and Coppergaon 350,000 *behals* and Kolhapur 300,000 *behals*.

The futures section of *gur*, however, ruled a shade steady on expectation of exports and the latest prices on Monday are: *Gur baisakh* Rs. 9-1-4½, *asar* Rs. 9-11 and *phagun* Rs. 8-10-3, as against Rs. 8-14-9, Rs. 9-8 and Rs. 8-9 on Monday last.

JUTE GOODS RALLY AT CLOSE

(From Our Own Correspondent)

CALCUTTA, 19th April

Jute goods ruled quiet in the early part of the week under report, but became lively during the week-end, following substantial business in heavy goods for export. In sympathy, hessians advanced fractionally. Earlier, prices dropped on reports that stocks of goods held by mills as at the end of March were substantially higher at 94,400 tons, as against 82,900 tons in February. Of the increase of 11,500 tons, as much as 7,200 tons were hessian. Sacking accounted for a rise of 4,000 tons and other constructions for 300 tons. This is the fourth consecutive month since mills' stocks have begun to increase, and the stocks as at the end of last month represent the production of about five weeks. Such heavy accumulation is attributed to inadequate buying by overseas countries, which apparently consider that, despite the recent fall, present prices are higher. Support from Argentina has not yet come for hessian, and that principally accounts for the huge accumulation in hessian. Production of all constructions aggregated 88,900 tons, so that demand—both internal and external—should have been for 77,400 tons only. Demand for hessian from burlap manufacturers in America is being kept low, presumably to depress the market. This contributed only to a fractional fall in prices this week, as stockists expected that Argentina would enter the market at any time.

Ready B. twills were earlier quoted at Rs. 120-4, June goods at Rs. 117-8 and May position at Rs. 118-8. As business with foreign countries was expected, these rates advanced to Rs. 122-2, Rs. 119-4 and Rs. 120-12, respectively. Over the week-end, business was, in fact, done in heavy cees, Cubans, B. twills and Liverpool twills with overseas countries. This pushed the ready position further to Rs. 123-10. June goods to Rs. 120-12 and May goods to Rs. 122. Yesterday, the ready position rose further to Rs. 124-8. Shipping during the current month is expected to be moderate and stocks as at the end of this month should show a satisfactory decline. In sympathy with heavy goods, hessian was steady with prices registering a small fractional rise. The 10 oz. 40" opened last Tuesday at Rs. 44-8 and steadied around Rs. 44-12 towards the close. Business was put through. Yesterday, there was a further gain to Rs. 45, with the eight oz. quoting at Rs. 36-2.

Raw jute prices were steady and tended to rise. The uncertainty caused about movement of further supplies from East Pakistan arising from the detention of raw jute in flats in Khulna has encouraged local stockists to keep reserved. Movement in Khulna is held up, since the Pakistani authorities are delaying the issue of export licences. This is refraining dealers in East Bengal from entering into further commitments to Indian mills. In the meantime, the need for mills to replenish supplies is becoming acute. For this reason, they are unable to reduce prices of jute goods. Foreign buyers are watching the situation and they appear to be hopeful of a further fall in prices of jute goods. How this can happen is difficult to say, as, without a decline in raw jute prices, mills would be put to losses, if they sought business in goods at rates lower than those existing at present. This was the cause why, earlier in the week, no business in goods was transacted. Latest quotations for raw jute are given below (figures in brackets relate to rates prevailing last week):

(Per maund)

	Middles Rs.	Bottoms Rs.
Pakistani—		
Northern	39 (38-8)	35 (34-8)
District	39-8 (39)	35-8 (35)

METALS GENERALLY EASY

(From Our Own Correspondent)

CALCUTTA, 19th April

The feature of the metal market, during the week under review was the decline in the price of electrolytic copper from Rs. 265 to Rs. 260. At one time, the quotation was as low as Rs. 255. This was due to easy advices from the London Metal Exchange. New York prices also registered a fall, following the release of the metal from Government's stockpile. The reported withdrawal of the labour strike in a Chilean mine did not have any perceptible influence in arresting the declining trend in the American markets. There were stray official enquiries for ingots in the local market. The fire-refined copper was priced at Rs. 215.

Mercury was quoted at Rs. 1,228 a flask, but interest was insignificant. Tin, which opened at Rs. 475, closed lower at Rs. 474. Lead was steady at Rs. 74 and electrolytic zinc at Rs. 63-8. Some local shortage was feared in lead. There were rumours that the U.S. would continue to purchase zinc and lead for stockpile even after 30th June.

HIDES LOOK UP

(From Our Own Correspondent)

KANPUR, 17th April

During the week under review, the trend of prices in the hides and skins market was upward. This was due to scarce supplies and stronger demand. The wholesale traders concerned are apprehensive over the persistent demand for banning cow slaughter. They feel that the demand would substantially and adversely affect supplies of cow hides in future. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 300 and 3rd grade Rs. 140 to Rs. 150 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 290 and 2nd grade Rs. 250 per 100 pieces; sheep skins Rs. 225 to Rs. 170 per 100 pieces.

SLOW TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, 18th April

Trading in kips was slow, due to Easter holidays and also to the Madras prices being too high in relation to buyers' ideas. Arrivals were of usual volume and clearance was fair-sized, but prices ruled firm. There was patchy demand for cow calf superior tannages only. Owing to U.S.A. buying, the buff calf market was strong. Arrivals of buffs, as also of tanned cow inferior fifths, were poor. The tanned skins market was firm, due to shippers' active buying in the local market. There were several enquiries for tanned goat skins from overseas.

BANKING

(Concluded from page 774)

5. (1) Any shareholder to whom compensation is payable under this schedule may apply to the Reserve Bank before the expiry of three months from the appointed day for the transfer to him of shares in the State Bank in lieu of such compensation, and for the purposes of such transfer the value of each share of the State Bank shall be such as may be determined by the Reserve Bank in this behalf.

(2) If on receipt of an application under sub-paragraph (1), the Reserve Bank, in its discretion, decides to transfer any shares to applicant, it shall issue to the State Bank a warrant in the prescribed form directing it to transfer in favour of the person specified in the warrant such number of shares as may be specified therein out of the shares standing allotted to it under sub-section (1) of section 5, and the State Bank shall be bound to comply with such warrant.

(3) A warrant issued by the Reserve Bank under this paragraph shall not be liable to duty under the Indian Stamp Act, 1899.

6. (1) The Reserve Bank may, if it decides to transfer, in pursuance of paragraph 5, more than 2,53,125 shares, require the State Bank to issue to it such further shares as may be necessary to secure that it holds not less than 55 per cent. of the issued capital of the State Bank, and the State Bank shall, without prejudice to the provisions contained in sub-section (3) of section 5, comply with such requirement on the Reserve Bank subscribing Rs. 100 for each share.

(2) No share issued to the Reserve Bank at par under this paragraph shall carry dividend at a rate higher than four per cent. per annum.

BANK OF MADURA

The working of the Bank of Madura Ltd. (Secretary: Mr. P. S. Viswanathan, Madurai) during the year ended 31st December, 1954 has resulted in a profit of Rs. 1,13,319, which is very nearly the same as that (Rs. 1,14,939) earned for 1953. With the surplus of Rs. 662 brought in from 1953, the amount available for appropriation is Rs. 1,13,981. Out of this sum, the Directors have transferred Rs. 1 lakh to the reserve fund, which had received Rs. 1.15 lakhs in the previous year, and Rs. 12,500 to the investment reserve, as against Nil last year, leaving a surplus of Rs. 1,481. No dividend has been paid this year also; this is the fourth year in succession for which the shareholders have had to go without any return.

The capital of the Bank is unchanged at Rs. 11.25 lakhs, as against which there are reserves aggregating Rs. 2.64 lakhs, including the allocations from the profit for 1954. Deposits, which had gone up from Rs. 192.93 lakhs to Rs. 205.03 lakhs as at the close of 1953, have further advanced to Rs. 226.31 lakhs. This expansion is lendable resources has been accompanied by a rise in advances (including money at call and short notice) from Rs. 122.71 lakhs to Rs. 129.33 lakhs. The ratio of advances to deposits, however, has slided down from 59.8 per cent. to 57.1 per cent. At the same time, investments have been strengthened from Rs. 67.63 lakhs to Rs. 84.67 lakhs, the market value of which is Rs. 83.86 lakhs. Cash balances have, however, dwindled from Rs. 28.59 lakhs to Rs. 25.03 lakhs, but, thanks to the addition to investments, the total liquidity ratio has gone up from 46.9 per cent. to 48.5 per cent.

NATIONAL AGRICULTURAL CREDIT FUND

A Bill to amend the Reserve Bank of India Act, 1934, was introduced by the Union Minister for Revenue and Expenditure in the Lok Sabha on 18th April, 1955, as a part of the integrated solution of the rural credit problem. The object of the Bill is to invest the Reserve Bank with certain specific responsibilities calculated to enable it to play its dual role in the reorganisation of the co-operative structure and in enlarging and facilitating the supply of rural credit through it. The Bill seeks to carry out the recommendations of the Committee of Direction appointed by the Reserve Bank in August, 1951, for conducting an all-India rural credit survey.

The Bill provides for the setting up of a National Agricultural Credit (Long-term Operations) Fund by the Reserve Bank. The amount in the fund will be applied exclusively for the making of loans and advances to State Governments for subscribing to the share capital of co-operative credit societies, for the making of medium-term loans to State co-operative banks for agricultural purposes and for the making of long-term loans and advances to Central Land Mortgage Banks.

It is also provided that a second fund called National Agricultural Credit (Stabilisation) Fund should be set up by the Reserve Bank, the amount therefrom being applied exclusively for the making of medium-term loans and advances to State co-operative banks to enable them to convert short-term credit into medium-term credit whenever necessary owing to drought, famine or other like calamities.

Notice

THE UNITED FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-third Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 3-55 p.m. on Wednesday the 4th May, 1955, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the half-year ended 30th November, 1954.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors.

The Transfer Register will be closed from the 27th April to the 4th May, 1955, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

CALCUTTA, 31st March, 1955.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N—Nominal quotation. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicates the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus.

(b) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

(k) Investments.

(e) For seven months ended 31st March, 1954.

SECTION 23A COMPANIES

EXPLAINING the changes proposed in Section 23A of the Indian Income-tax Act in the Lok Sabha on 18th April, 1955, Mr. C. D. Deshmukh, Union Finance Minister, observed:

"I now turn to a very important matter—Section 23A. In regard to this, I have seen a mass of criticism in the Press and I have received a large number of representations from the business community, in general. This section of the Act is a complicated one and I must explain in a little detail the implications of the amendment and of the changes I now propose.

"Under the income-tax law, when three or four persons carry on business as a firm, the profits of the firm are, at the end of the year, distributed among the various partners in terms of their partnership and the tax is levied on each of these individuals according to the personal rates applicable to each of them on the income so received. If, however, the same business is carried on by a company of which these persons are the members, the tax on the profits of the business is imposed not on the individuals but on the company itself. If Section 23A did not exist, it would be possible for the company to pay tax on its profits at company rates of tax which are much lower than the tax payable on high personal incomes and retain the balance in the accounts of the company. The fund of the company, being completely in the control of these few persons, can be utilised for their own personal expenditure by showing them as loans and advances from the company, and the business activities of these persons can also be continued in the name of the company. By trading in the name of the company, these persons would, therefore, be in a position to carry on their activities without paying their appropriate taxes. It is the object of Section 23A to prevent this unjustifiable advantage to persons who have controlling interest in companies. The section requires that, where a company is in the control of a few persons, it must distribute 60 per cent. of its profits as dividends, so that super-tax can be collected from the richer shareholders. In order that the company may not build up limitless reserves, the section also requires that, when the reserves of the company exceed the share capital or the cost of the assets, whichever is greater, it should not be permitted to build up any more such reserves and should distribute its entire future profits.

"The question, therefore, is what is the kind of company to which such provision should apply? Up to now, it has been applied to companies of which less than 25 per cent. of the shares has on the last day of the accounting year of the company been held by the public. This provision has been evaded in many ways, particularly by temporarily transferring, on the last days of the accounting year, some of the shares to certain nominees who are then claimed to be the members of the public. It is now proposed that the provisions of this section should apply to companies where less than six persons hold or have a controlling interest in 50 per cent. or more of the shares. In other words, the scope of the section is being widened, and more companies will be required to distribute at least 60 per cent. of the distributable profits as dividends, and more of the richer shareholders of these companies will be required to pay super-tax on such dividends.

"There are also other changes such as that the burden of the tax for non-distribution of the required percentage will be placed on the company and not on the shareholders, that account will be taken of certain expenses actually incurred but not allowed for income-tax purposes, that capital created out of the reserves by the issue of bonus shares will not be regarded as capital for the purpose of determining whether the hundred per cent. rule should apply, etc.

"Apart from minor criticisms, the main argument against this provision is that it is an impediment to the ploughing back of profits. This is not wholly correct, because, once the reserves are actually converted into fixed assets of the company, there is no impediment to the gradual building up of fresh reserves up to the value of the new assets. There is no doubt, however, that, by enforcing the distribution of profits, we shall regulate both the rate and the maximum of the reserves that can be built up. And, to that extent, the criticism has some point in it.

"In this connection, I should like to mention that, when the reserves of a company are in the control of a few persons, it does not necessarily follow that they will either be ploughed back into the industry or even be otherwise properly utilised. We have many cases of the misuse of such reserves. Further, the building up of such reserves without payment of the taxes at the personal rates of the real owners of such reserves leads to concentration of wealth and of economic power in a few hands. So long, therefore, as there is no control over the disposition of reserves and so long as other means cannot be found of preventing the concentration of wealth in a few hands, some restrictions, the House will agree, must remain on the reserves that

SOME THOUGHTS ON NATIONALISATION OF IMPERIAL BANK

THE expeditious manner in which the Government is implementing the programme for nationalisation of the Imperial Bank of India and for widening the powers of the Reserve Bank to render financial assistance to co-operatives is an unmistakable indication of its earnestness to provide credit facilities to rural areas. Both the measures—the State Bank Bill and the Reserve Bank of India Act Amendment Bill—have received the overwhelming support of Parliament; indeed, there was scarcely any dissenting voice, and the Government was warmly congratulated on its decision to take over the Imperial Bank. This should serve as an eye-opener to our business men, now living in their own little world, with little contact with the masses. The days when they could confine themselves only to their business without caring for anything else, leaving their philosophy to be nursed and protected by professional politicians, are gone.

Many business men, in their capacity as chairmen of banks, insurance companies and industrial concerns, criticised the Government's decision to nationalise the Imperial Bank. Several shareholders of the latter Bank cried hoarse a few weeks back, at a special meeting of theirs convened for considering this very issue, and declared at the top of their voices that the compensation offered by the Government was unfair and inadequate. Yet, who cared? There was not a single member in Parliament to support their stand. On the contrary, there were many who criticised the Government on the ground that the quantum of compensation was generous; some even described it as over-generous. Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, who piloted the Bill in the unavoidable absence of the Finance Minister, Mr. C. D. Deshmukh, who was indisposed, was almost apologetic in defending the terms of compensation. The impression created by his remarks on this subject is that the shareholders of the Imperial Bank ought to be grateful to the Government for the compensation which they will now get. The business men and shareholders, who vainly protested against the Government's decision, forgot that the vast majority in Parliament does not think the same way as they do. It is thus obvious that, if private enterprise is to have an honourable place in the scheme of development and is not to be simply tolerated as something to be eliminated as early as possible, those who are in it must seriously endeavour to find a place for themselves in the field of politics.

So far as the formation of the State Bank is concerned, there is every justification for it in theory. The rejuvenation of rural economy will not be possible, unless credit facilities in rural areas are expanded. The problem is very urgent, because, in many parts of the country, agricultural credit is extremely difficult to be had, as the traditional sources which supplied it have either become reserved or gone dry. The various legislations seeking to protect agricultural debtors from the claims of creditors, as well as land reforms, have made the cost of credit heavy and reduced the availability of credit. The vacuum that is thus being created must be filled in quickly. One of the reasons for the sharp fall in prices of agricultural commodities this year is the inadequate supply of finance in rural areas. There is no point in trying to revive individual credit; it is neither feasible nor desirable. The expansion of institutional credit is the only alternative. Since commercial banks have not been able to rise to the occasion for a number of reasons, State intervention in this sphere has become inevitable.

The Gorwala Committee, which went into this question in great detail, has come to the conclusion that the co-operative method, in spite of all its defects, is the only one by which credit can be carried to rural areas. It has suggested an integrated scheme under which co-operative banking is to be fostered through active State participation in the movement and through the assistance of a strong commercial bank having a net-work of branches throughout the country. The chief function of this bank will be to provide remittance and exchange facilities to co-operative banks along with others, besides providing the usual banking services in the collection of bills, safe custody of drafts, etc. It is for this purpose that the Committee chose the Imperial Bank and other State-associated banks, the minor editions of the Imperial, its justification for selecting them being that they were all sponsored and sustained by the State for a long time. The Government's moral right to acquire these banks in order to direct them to work in a particular direction, as dictated by the current needs of the country, is beyond doubt and one has only to read the cogent arguments advanced by the Gorwala Committee to feel convinced of this.

The establishment of a well-integrated commercial bank, having large resources and branches all over the country, may turn out to be a good thing in many other respects, too. Such a bank can be of great assistance to other commercial banks also. Mr. Guha gave the welcome assurance that the new State Bank of India will continue to render the same assistance to commercial banks as is being given by the Imperial Bank now. It can offer more remittance facilities than it is able to do now, as it will have more branches. Through it, the Reserve Bank can exercise effective control over credit supply and interest rates throughout the country. With the authority of Government behind it, the State Bank will be able, in course of time, to infuse confidence among the people in the new areas where it is expected to operate to place their savings with it in the form of deposits. Thus, more deposit resources can be brought into the banking system. There is a special provision in the charter of the State Bank for absorbing other commercial banks on a voluntary basis. This will enable it to take over small and uneconomic banks, thereby minimising the chances of bank failures, which are a hindrance to the spread of the banking habit. Again, if the establishment of a State Bank were to result in all these advantages and in strengthening the rural economy, the private sector, too, would stand to benefit from it, in that the prosperity of trade and industry is dependent upon a healthy rural economy and a sound banking system. Admittedly, this must have been the reason why Mr. G. D. Birla, one of India's foremost business men, welcomed the recommendations of the Gorwala Committee and advocated their effective implementation. But all these gains can be realised only if the State Bank is worked efficiently and the assumption that the co-operative method can be successfully applied in the rural areas proves correct. There are serious doubts on both the points.

The power which the State Bank of India will have for doing good can also be used for keeping a tight grip over the private sector. Considering the fact that this Bank is being brought into existence just at the time when the Government's economic policy has been given a socialistic tinge and the responsible spokesmen of the Government have been repeatedly stating that the public sector must dominate the private sector, the misgivings among business men that the State Bank might very well be used for this purpose are not unjustified. It is well to remember, in this connection, that, by nationalising the largest commercial bank, together with some of the well-known State-associated banks, the Government will bring under its command nearly half the banking sector. Out of the total deposits with Scheduled banks amounting to Rs. 942 crores as at the close of 1954, the combined share of the Imperial and the 10 State-associated banks was about Rs. 342 crores, or a little over 36 per cent., the share of the former alone being Rs. 231.36 crores or 24.5 per cent. If to this were added the deposits with the Postal Savings Bank (Rs. 118.56 crores as at the end of 1954), it would be seen that, in the very near future, the public sector in the field of banking would hold the whip-hand over the private sector. Through the State Bank, the Government can effectively dictate the interest rates and discriminate between public and private undertakings, or between one private undertaking and another, in the matter of providing credit. Since the Board will consist predominantly of Government nominees, there will be plenty of scope for practising favouritism on political grounds. It is quite conceivable that a business man who does not support the party-in-power may not get from the State Bank credit facilities or get them only in part, even though he may be fully creditworthy. Such a possibility is not pure figment.

MISCEL

The Imperial Bank has been accused of similar practices in the past. For proof, if any were needed, one should read the instance given by Dr. Pattabhi Sitaramayya, Governor of Madhya Pradesh, in the course of his tribute to the Punjab National Bank Ltd., published on page v of the supplement to the last issue of this Journal.

The danger of economic power being utilised for retaining political power, which, ultimately, will lead to autocracy, is also one of our grounds for opposing the entry of State into the co-operative movement, however desirable it may be on other grounds. The risk is, indeed, very great, as co-operative method is to be applied to a far larger sphere of the community's activity than at present. It is not suggested here that this danger is imminent; the danger is a long-term one and all lovers of true democracy—there are many in the present Congress Party, the foremost among them being our distinguished Prime Minister himself—will do well to appreciate the necessity for introducing some corrective forces that will neutralise it.

There is a fear that, when the State Bank concentrates its attention on the opening of more branches in rural areas—there is a statutory obligation that it should open 400 branches in a period of five years—it will not be able to devote the same attention to commercial banking as the Imperial is doing at present. While this fear is not groundless, it need not necessarily materialise for three reasons. In the first place, the State Bank's main function is to act only as a channel for remitting funds. It is true that it may have to provide advances to co-operative banks, but it can easily draw against such advances from the Reserve Bank. Secondly, it will be able to function in the sphere of rural credit only if the other recommendations of the Gorwala Committee for strengthening the co-operative movement are effectively implemented. This will take more time than is generally believed. Thirdly, when it expands its sphere of operations in the country, its deposits too will expand, especially as money incomes in the interior are expected to increase, thanks to large doses of developmental expenditure. Given efficient management, therefore, the State Bank can discharge its new duties, without suffering any setback in its commercial banking activities.

Another doubt that is raised is whether business men themselves will be keen on banking with the State Bank, as they may fear that the Government will pry into their secrets or that their affairs will be discussed in Parliament. The latter fear is an offshoot of the treatment meted out by Parliament to the Industrial Finance Corporation. It is gratifying to find that, in order to allay such fears, a specific provision has been made in the charter of the State Bank imposing an obligation on the Bank in regard to the fidelity and secrecy of the affairs of its constituents. Mr. Guha drew the particular attention of Parliament to this aspect of the Act and averred that the House must be prepared to respect this provision if the commercial character of the Bank were to be maintained. It is evidently with a view to avoiding the risk of Parliament wanting to probe into the business secrets of the Bank and minimising Government interference that the ownership of the Bank has been vested in the Reserve Bank of India. The auditing of the Bank, it is noteworthy, will be done by private auditors and not by the Comptroller and Auditor-General. If the latter does it, his report will have to be placed on the table of the House and is liable to be debated. This is a sensible safeguard, though it is a double-edged weapon.

DECIMAL COINAGE

TIME and again, the subject of decimal coinage and metric system of weights and measures comes up for discussion in this country. Neither India's coinage nor its system of weights has any rational or scientific basis. Many changes have taken place in India's coinage system during the period preceding the firm establishment of British rule all over the country, though the system of weights and measures has shown, perhaps, greater resilience to change. The need for placing both the systems on a more scientific basis has, however, been felt for a long time now. A more insistent demand has been for the introduction of a uniform system of weights and measures. Such a demand was again made last week in the Lok Sabha by means of a private resolution which, in an amended form, was subsequently adopted.

The demand for placing India's coinage system on a scientific basis has generally taken the form of a plea for the introduction of decimal coinage. The chief advantages of a decimal system, it is now generally conceded, are facility in calculation and ease in learning by school children. Even those who oppose the change themselves admit that the decimal system is more scientific. Only, they are opposed to the change, because, in the transitional stage, it is likely to create some hardship. This was the stand that was taken by Gandhiji in 1946 by when the Government had already mooted the proposal for decimal coinage. He said that it was scientific and yet manifestly against the interests of the poor. He was afraid that the traders would exploit the ignorance of the peasants who might be cheated in transactions involving new coinage. This argument did not carry conviction to many sections. Even the present Prime Minister, Mr. Nehru, who was then out of the Government, expressed himself in favour of decimal coinage. In any case, it seems unwise to rely now on the arguments which might or might not have held good a decade ago in order to oppose the introduction of decimal coinage.

That the difficulties of the transitional stage may be easily exaggerated is clear from the fact that, in certain Indian States, notably in Hyderabad, both the indigenous and the "British" Indian coins circulated freely without causing any confusion. Further, the change-over is likely to be easier now than in the past, thanks to an increase in literacy and the development of the means of communication, such as transport agencies, and the increase in the informal means of education, such as the Press and the radio. Such change-over will also be facilitated by the financial integration of the country that has already taken place. Above all, the Indian peasant, contrary to urban belief, is both shrewd and adaptable. He might be pound foolish. But penny wise he is. And decimalisation applies only to "pennies," the coins of smaller denominations. In fact, it is advisable to carry through the reform now, since there is still a large non-monetised sector, rather than postpone it to a later date when the extension of the monetary sector will perhaps render the change more difficult. Finally, by implementing the change, India will have fallen in line with many of the leading countries of the world, such as the U.S. and France, and with some countries nearer home, Ceylon, for instance.

Although the concept of decimal originated in this country, it has not been extensively used for coinage or for other purposes. In 1945, when the Central Government first mooted the proposal for decimal coinage, it was widely welcomed. However, in view of certain influential opposition, the ranks of which included no less a person than Gandhiji, it was decided to circulate the Bill. Nothing was done about it afterwards and the Bill lapsed. The present Government's attitude is favourable to the introduction of decimal coinage. In this attitude, the Government has been influenced by the views of the Planning Commission which, after an objective examination of the whole issue, has unreservedly expressed itself in favour of the change. Explaining the Government's attitude, the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, said that it had been decided to introduce both decimal coinage and metric system of weights and measures, that the coinage reform would precede the reform of weights and measures, and that the entire change would be spread over a certain period of years—a "reasonably short" period.

The details of the Government's decision on decimal coinage are not known at present. The present system is governed by the Indian Coinage Act which will have to be suitably amended in the event of a change-over to decimal system. Presumably, the Government will adopt the original proposal (first mooted in 1945) to divide the rupee into 100 cents. It had then been decided that the present half-rupee and quarter-rupee should continue as at present; only they would represent 50 cents and 25 cents, respectively. The other coins, according to that proposal, would be 10-cent, 5-cent, 2-cent and 1-cent pieces and possibly ½-cent piece too. The existing 2-anna, one-anna, ¼-anna and ⅛-anna coins had no counterparts in the scheme. This was the original proposal.

There is no reason why the same proposal should not now be adopted. The introduction of ½-cent piece, however, is not necessary, for the pie coins have gone into oblivion, following the war-time and post-war inflation. No coin less than ¼ anna is freely in circulation. Apart from the general opposition to decimal coinage, as such, the only serious objection, which was then raised against the proposal, was that it did not retain the nomenclature of annas and pies, to which the Indian public had become habituated. This objection cannot be sustained. A decimal system means a change. It would be difficult to build the present nomenclature into the new system. Also, in the transitional period, it would cause a great deal of confusion, if the terms "annas" and "pies" were retained in the new system. It is better to bid good-bye to these worthy coins and not to have any nostalgic feelings for the traditional annas and pies.

It is well to recall what the Government had to say, exactly a decade ago, in defence of the proposal for decimal coinage which unfortunately never came into effect. It emphasised that the present system was "by no means ideal for purposes of calculation and accounting." It added: "The basis for the suggestions now made is that modern trade and commerce demand quick and simple methods of computation and that, in this respect, there is nothing to compete with the decimal system as evidenced by the fact that it has gradually displaced all other forms in most countries of the world (India, Great Britain and certain Empire countries being the most important exceptions). To give a few examples, Ceylon, China, Iraq, Palestine, Malaya, the Netherlands East Indies and Thailand all now have a decimal coinage and it is arguable that India too should fall into line with the modern practice that has found such general favour."

The Government of that day, of course, realised that the introduction of a new system of coinage would have adverse reactions in the initial stages, since all rates and prices would have to be quoted on the new basis, and there would be additional work in the matter of fixation of new rates and issue of new railway tickets, stamps, etc. It was also realised that both the systems would have to be in operation during the initial period. It was, however, believed that the "probable confusion" in the transition period would, to some extent, be mitigated by a wide distribution of slips of paper setting forth the arithmetical relation between the two types of coinage. "The initial difficulties involved," the Government went on to say, "are inherent in any radical change in the coinage and must be faced, if India desires to have the advantages of a simplified and rational system of coinage." These observations, made a decade ago, are as true today as then. It is, therefore, to be hoped that the Government will not, on grounds of initial difficulties, hold up a reform which is already overdue.

The reform of weights and measures through the introduction of metric system is more difficult to implement than decimal coinage. It was first proposed as far back as in 1870 by a far-sighted British civilian, one Mr. Stratchey. For many long years since then, it was treated as a mere academic proposal. In 1949, a sub-committee of the Indian Standards Institution, under the chairmanship of Mr. J. C. Ghosh, recommended the change-over to metric system of weights and measures. It advocated a gradual change-over to the new system which, it thought, should be spread over a period of ten to fifteen years. Mr. T. T. Krishnamachari revealed that, when he assumed office in 1952, he initiated discussions on the subject. The Planning Commission, to which it was referred, welcomed the change. Encouraged by this response from an impartial expert body, he has appointed a committee (Chairman: Mr. N. Kanungo), consisting of departmental representatives and experts, to consider not merely the phasing of the programme for the change-over to the new system but also the type of legislation necessary to implement it.

The entire question should be examined very minutely by technical experts. The contemplated change is, as already stated, more difficult to implement than reform of coinage. For one thing, coinage has already been standardised for the whole country, so that the transfer to a decimal system involves only one change. Weights and measures have not been so standardised. There are many systems of weights and measures in the country, varying not only from State to State but also from district to district, so that the supplantation of all these systems by the metric system would imply several changes. Secondly—and this is a more important consideration—the change affects the whole range of engineering industry. Because of India's traditional connection with Britain, current specifications for machinery in this country are in "lbs." and "inches." In the ordering of spare parts, and in matters relating to re-equipment and modernisation, an abrupt change might cause considerable confusion. The change-over, if it is found technically advantageous, should necessarily be implemented over a period of years which would be sufficiently long to facilitate smooth transition.

INTEREST RATES IN MANY PARTS OF WORLD TENDING TO HARDEN

STERLING STRONG—OUTLOOK FOR NICKEL

THURSDAY, 5 P.M.

MARKET GOSSIP

SLIGHTLY steadier conditions have come to prevail in the share markets. There has been a sizable unloading in the steel section by tired bulls, as a result of which the technical position of this section has improved to some extent. Leading textile shares have been fairly well supported on encouraging reports from the domestic cloth market. It is said that profits of mills in the first quarter of this year have been good and that, with the cost of living in Bombay and Ahmedabad receding and with cotton prices stabilising at lower levels, the mills should be able to fare well in the coming months. Sugar shares are at a discount, thanks to disquieting news of falling prices and rising stocks. The turnover, however, has been small. The immediate trend of the market depends upon the Government's decision on retention prices for steel. Since we referred to this question last week, there have been dogmatic reports in a section of the daily Press that the Government has granted an increase of Rs. 54 to Rs. 60 per ton to the T.I.S.Co., while no decision has been taken in regard to the price payable to the I.I.S.Co. Our enquiries reveal that it is premature to say anything definite on this question, as the Government has not yet made up its mind. Currently, the management of T.I.S.Co. is busy on its plan for expansion and its spokesmen will have further discussions with the Government either this week-end or early next week.

• • • •

The Lok Sabha has endorsed the Bill for converting the Imperial Bank of India into the State Bank of India. From the speech of Mr. Guha, Minister for Revenue and Defence Expenditure, it is clear that the ten State-associated banks also will be taken up one by one. It is not necessary to pass separate legislation for absorbing them, if they agree to come in voluntarily. It would appear that most of them, especially the Bank of Mysore, the Travancore Bank, the Hyderabad State Bank, and the Bank of Saurashtra, have agreed to merge themselves with the State Bank of India. The three banks in Rajasthan have also been persuaded to walk into the parlour and it looks as though they will not be able to hold out much longer. The position of the Bank of Baroda, the biggest of all the State-associated banks, is still not very clear. At one time, the authorities were inclined to leave it out of the scheme, but they seem to have changed their minds since then, for, if it were exempted, the State Bank of India will have to open as many as 50 branches in Western India most of them in the same centres where the Bank of Baroda already has branches. The chances of this Bank remaining outside the scheme now appear to be slender. It would appear that Mr. B. Venkatappiah, Executive Director of the Reserve Bank and one of the architects of the integrated scheme for expansion of rural credit, is being tipped as the chief of the State Bank of India.

• • • •

After remaining comfortable for nearly two weeks, the short-term money market has been experiencing a slight pull during the last two or three days, though this is not reflected in the inter-bank call rate which is unchanged at 2¼ per cent., to which level it had declined from 3 per cent. the week before last. There are, however, more borrowers at this rate than there were last week. There has been a slight broadening of demand for funds; this is partly due to the month-end requirements of industries. It is also stated that there has been a depletion of funds, as some banks are reported to be suppliers to Calcutta and Madras where money is fetching higher rates. There are, however, no definite indications for ascertaining whether the seasonal demand for funds has begun to taper off and whether money rates will go up again. The latest Reserve Bank's statement, however, shows that banks are still keen borrowers of funds against usance bills. Be that as it may, the experience of the last two or three seasons has shown that the short-term money rates in India cannot go beyond 3 per cent., so long as the Reserve Bank continues to supply funds to banks against usance bills. This is in refreshing contrast to the trend of money rates in other countries where they have been steadily hardening since the beginning of the year.

• • • •

Indeed, there are sufficient indications of a world-wide movement towards dearer money and credit restrictions. The rise in Bank rates of a few countries since the commencement of the year and the hardening of interest rates for commercial paper in the U.S. during the past few weeks are taken as clear manifestations of this trend. In distinct contrast to the reductions made by a fairly large number of leading commercial countries in their Bank rates during 1954 (very few countries raised the Bank rates during the past year), four leading commercial countries have already raised their Bank rates within a short period since the beginning of 1955. The U.K. raised its Bank rate twice within a span of hardly a month; towards the close of January, 1955, it was raised from 3 to 3½ per cent. and again in the last week of February from 3½ to 4½ per cent. Norway put up its Bank rate from 2½ to 3½ per cent. in the middle of February. Sweden increased it from 2¾ to 3¾ per cent. only a few days ago. In the U.S., the Federal Reserve Bank of Kansas City raised its discount rate to 1¾ per cent. two weeks ago. As against these increases, there has been a cut in Bank rate only in one country so far; Canada lowered it from 2 per cent. to 1½ per cent. in February.

• • • •

Canada made a reduction in its Bank rate because this rate was higher than the open market rates which had taken a downward trend during the previous six months. In the U.S. on the other hand, the recovery in business and the slight tightening of the Federal Reserve monetary policy which began towards the close of last year resulted in a perceptible hardening of interest rates. Barring a break early in March, on account of the Treasury's refinancing operations resorted to in February, there has been a continuous rise in these rates and the rise has been somewhat steeper during the past few weeks. Thus, the U.S. Treasury Bill rate, which had been quoted at 1.088 per cent. early in February, rose to 1.231 per cent. in the first week of March and to as high as 1.652 per cent. in the second week of April. In line with this trend, the rates for commercial paper have been stepped up by ¼ per cent. to 1⅜ per cent. for 30-90 day paper and 2¼ per cent. for six months. Thus, the open market rates were pushed up above the rediscount rates of the Federal Reserve Banks, which had remained unchanged at 1½ per cent. since April, 1954. In the American market, unlike in London, it is possible, on account of certain rediscounting conventions, for these rates to stand above the official rate, without any undue pressure from the Federal Reserve Banks. But the official policy would appear to have been changed now and there is a possibility of a general rise in interest rates. In fact, the Federal Reserve Bank of Kansas City has, as already noted, been the first to step up its rate.

• • • •

Discussing these trends in world money markets and the main reason therefor, "Lombard," the well-known columnist of the Financial Times, London, observes:

"The main reason why the rise in the U.K. rate is being accompanied by upward movements in other countries would seem to be that the inflationary tendencies which played such a large part in producing the switch in British monetary policy are proving to have their counterpart abroad. Both Norway and Sweden have discovered in recent months that, owing in part to the large proportion of their resources they have been devoting to capital development, they are faced with a situation wherein demand is likely to move well ahead of supply. Similarly, although U.S. officials have argued that the rise in the American Bank rate has been made for technical reasons rather than to achieve an economic objective, there is no doubt that its basic explanation lies in the recent upsurge in economic activity leading to the creation of an inflationary situation. For the technical adjustment had become necessary because the existing American Bank rate had been left out of line with other short-term rates by the rise in the latter during the past few months. And the reason why market rates have been rising is to be found in the fact that, in other aspects of its monetary control policy, the U.S. Administration had been pursuing tactics which were clearly designed to bring about a rise in market rates by making credit less plentiful."

• • • •

The high interest rates in Britain and on the Continent are making themselves felt on American banks too. Thus, the New York City banks have raised the rate of interest they pay on foreign banks' deposits from 1½ per cent. to 1¾ per cent. They have done this with a view to arresting the withdrawal of balances by foreign banks. The firm trend in the money market is having its reaction on the Canadian money market, too, where tighter conditions have again come to prevail with a hardening of short-term money rates. It remains to be seen whether the Canadian Bank rate also will be forced up.

• • • •

In the face of this world-wide movement towards dearer money rates, the strength of sterling is certainly remarkable. So long as London was the only dear-money centre, short-term funds from other parts of the world, notably from the U.S., would flow to London, imparting fresh strength to sterling. But the margin between the money rates in London and those in the U.S. has narrowed, so that the transfer of short-term funds from the U.S. to London is not as profitable as it once was. Thus, the margin, which, was till recently as high as 1 per cent., is now only about ¼ per cent. Despite this, the quotation for sterling against the dollar has firmed up. Ready sterling is now quoted higher at $2.79.13/16-15/16 as against $2.79¼-½ early this month and $2.78⅞-¾ early in March. Indeed, this movement would have acquired even greater strength had it not been for the intervention of the Bank of England. The Bank, it is stated, has sold dollars against sterling in the exchange market. This it could do easily enough. The official market has had an opportunity to gain dollars, thanks to encouraging exports of such sterling commodities as rubber, tin and cocoa to the U.S. Indeed, such exports are one of the main reasons for the strength of sterling. Again, the overseas buyers of British goods are less chary of postponing payments by obtaining credit in London, the cost of borrowing in London having gone up through the increase in the Bank rate. A notable feature of the market for sterling is that transferable sterling is firmer than at any time in the past twelve months. Thus, it is quoted at $2.77.3/16-5/16, as against $2.76¾-¼ early this month and $2.75¾-⅞ early last month. The British authorities are, however, keen on seeing that the margin between transferable sterling and official sterling does not widen so far as to encourage commodity shunting to the detriment of the sterling area's earnings of dollars. With this end in view, they have had to sell dollars against transferable sterling, though such sales are far less than the dollar gains through exports of sterling commodities to the U.S.

• • • •

The prospects for the mill industry, with which the value of textile scrips is intimately connected, are being rendered uncertain by the Government's erroneous attitude towards this industry. Last week, Mr. J. C. Burns, the Deputy Chairman of the Bombay Millowners' Association, pointed out, in effect, how the policy, recommended by the Kanungo Committee, of freezing mill output at current levels was wrong in principle and likely to prove unworkable in practice. The Committee, as is well known, has recommended the continuation of the present policy of reservation of certain fields of production for the handloom industry. A reference to these two features of the Committee's report was made this week by another spokesman of the mills, Mr. T. V. Baddeley, Vice-Chairman of the Svadeshi Mills Co., Ltd., who, in the absence of the Chairman, Mr. A. D. Shroff, presided over the annual meeting of the Company. Referring to these recommendations of the Committee, he said: "I cannot comprehend how the country's industrial development will be served by restricting the normal efficient growth of the largest organised Indian industry which will be the case if these recommendations are accepted."

• • • •

An equally important but more immediate issue is the Government's attitude towards modernisation and re-equipment. If the Government were to permit the mills freely to carry through rationalisation and modernisation schemes, it would help bring down production costs and thereby enable the mills to pass on the benefit to all. This is particularly important for mills which have a surplus labour force which they cannot retrench because of labour laws and which they cannot employ usefully because of the Government's unhelpful attitude towards expansion and modernisation. This is the kind of problem which the Svadeshi Mills, along with several other mills in the country, faces today. Referring to this issue, Mr. Baddeley said: "This problem of surplus labour can be satisfactorily solved without economic hardship, if we are allowed, whilst rationalising, to increase our productive capacity and thus gainfully employ the excessive labour force on our hands. I regret to state that, in view of the Committee's recommendation, even this simple measure will now be denied to us and we are, therefore, caught unfortunately in a policy which increases our costs without giving us any freedom to apply the right remedies." Surely, both the shareholders and the workers are bound to suffer through the adoption by the Government of a policy which in effect, prevents mill managements from putting their house in order.

• • • •

A notable departure from the past tradition is that the dividends are to be paid "without deduction of income-tax" as against a "free-of-income-tax payment," made till now. Thereby hangs an interesting question in income-tax law. The change is not voluntary, for the management has been compelled to make it. Explaining the need for the change, Mr. Baddeley said:

"In vew of higher depreciation charges for tax purposes, payment of dearness allowance in respect of past years, and similar charges, it is likely that the Company will not be liable to pay any income-tax for the year 1954. Therefore, the dividend will not come out of taxed profits for the year. The tax authorities have adopted the stand that in such circumstances, although the dividend is deemed to be paid out of past taxed profits, it is not a tax-free dividend and renders the shareholders liable to tax thereon. We consider that this stand is not correct, but the question can only be settled by an authoritative ruling by the Courts which can only be given in the assessment proceedings of an individual shareholder and not in the Company's assessment proceedings."

Since a similar situation is likely to occur in respect of other companies too, the Court's ruling on the issue, should it be raised by any shareholder, will be awaited with interest.

• • • •

India's needs of nickel are quite considerable, but no economically workable deposits are known to exist in this country. Its entire requirements of this metal are, therefore, met by imports. In 1950 as many as 1,177 tons were imported. In the following year, they rose to 1,461 tons. Owing to conditions of scarcity created by the Korean war, India's offtake of nickel in 1952, however, dropped suddenly to 463 tons. But, with the cessation of hostilities in Korea, the supply position in the free world improved and, in 1953, imports rose sharply to 1,798 tons. The imports take the form of nickel pallets, coin blanks, alloy ingots, alloy scraps, alloy sheets and other sorts. In view of this dependence on foreign supplies, those engaged in the non-ferrous metals trade and industry as well as Government which needs nickel for coinage purposes, will be interested to know the present position of, and future prospects for, this important metal. Accordingly, the observations made by Dr. John F. Thompson, Chairman of the International Nickel Co. Inc., in his address to the shareholders of the Company at their annual meeting held in New York on the 27th inst., will be read with interest.

• • • •

With the free world supply of nickel at a record 390 million pounds and with a reduction in the demand for defence production, Dr. Thompson is of the opinion that the supply of nickel for civilian consumption would improve, though complete

(Continued on page 859)

EQUITIES CONTINUE TO BE SLUGGISH

ACTIVITY THINS DOWN

(From Our Own Correspondent)

BOMBAY, 28th April

TRADING on the Stock Exchange continued to be sluggish during the week under review also. Barring a few select counters in textiles which hardened on good enquiry, fluctuations were very narrow and the volume of business was small due to a thinning down of speculative activity. Besides, holiday influence and end-of-account considerations also contributed to restrict the activity on the Exchange. Furthermore, the delay in the eagerly awaited announcement regarding an increase in retention prices of steel chilled the enthusiasm of the operators. There was a report in a section of the Calcutta Press to the effect that the Government had decided to give an interim increase of Rs. 54 per ton in *the retention prices for the Tata Iron and Steel* Company, but this did not have any effect on Tata Ordinary shares, as this report lacked official confirmation. Nevertheless, Tata Ordinaries displayed a steady tone with a tendency to recover, but the upward movement was checked by the weakness of Indian Irons.

The market remained closed today on account of a *Jain* festival.

In the steel section, Tata Ordinaries hardened from Rs. 233-4 to Rs. 236-12 on Tuesday, but fell back to Rs. 234-12 at the close yesterday, due to selling pressure induced by the weakness of Indian Irons. Indian Irons edged forward from Rs. 33-15½ to Rs. 34-4½, before reacting to Rs. 33-15 on unloading by a prominent bull operator.

Activity in textile shares was mostly on a selective basis and fair gains were recorded by popular counters over the week. Bombay Dyeings came up *from Rs. 458-12 to Rs. 468-2, but shed a part of the* gain when they closed yesterday at Rs. 463-12. Centurys rallied from Rs. 367-12 to Rs. 377-12 on good speculative enquiry, but profit-taking pulled them down to Rs. 374 yesterday. Kohinoors moved between Rs. 315 and Rs. 318-4 before closing at Rs. 315-4. Central Indias were featureless at Rs. 126-4. Ahmedabad Advances received attention and gained Rs. 8-12 to Rs. 131-4. Edward Mills advanced by Rs. 2-8 to Rs. 262-8, Finlays by Rs. 4 to Rs. 264-8 and Gokaks by Rs. 2 to Rs. 217. Indu Ordinaries were quiet at Rs. 11-11½. Khataus picked up Re. 1-4 to Rs. 168-12 and New Greats Rs. 2 to Rs. 152. Phoenix were marked up by Rs. 5-10 to Rs. 112-8 and Shree Niwas changed hands Re. 1-4 better at Rs. 235. Simplex moved in a narrow groove and finished As. 8 better at Rs. 154. Standards moved up by Rs. 3-2 to Rs. 343-12, Svadeshis by Rs. 2-12 to Rs. 197-4 and Swans by Rs. 3-12 to Rs. 340. Tatas were steady at Rs. 53-12 and Vishnus were done Re. 1-14 higher at Rs. 118-2.

Bank shares had a easy spell, with a marking down in quotations of leading banks. Imperial Fully Paids shed Rs. 15 to Rs. 1,665 and Partly Paids Rs. 3-12 to Rs. 405. Central Banks declined by Rs. 2-8 to Rs. 47-4 and their 'A' shares by Rs. 2 to Rs. 49-8. Bank of Indias were quiet at Rs. 146-4, while Bank of Barodas disclosed no change at Rs. 104-8 ex-div., as also Punjab Nationals at Rs. 43. United Commercials, however, gained a fraction to Rs. 44-12.

Insurance shares were steady with small appreciation in values of select counters. Orientals advanced by Rs. 100 to Rs. 7,325 and New Indias by Re. 1 to Rs. 53-4. Indian Mercantiles changed hands As. 8 better at Rs. 45. British India Generals were held at Rs. 13-10, Empire of Indias at Rs. 675 and Industrial and Prudentials at Rs. 42-8.

Activity in electricity shares was restricted and price variations were small. Ahmedabad Electrics were stagnant at Rs. 106-4, while Amalgamated *Electrics gained Re. 1 to Rs. 10-14. Bombay Subur*bans showed no change at Rs. 122-8, whereas Surat Electrics were lower by As. 10 at Rs. 128-12. The Directors of Surat Electricity have decided to maintain the final dividend for 1954 at Rs. 4-8 per share, making the total dividend for the year Rs. 7 per share, the same as for the previous year. Andhra Valleys declined by Rs. 5 to Rs. 1,405 and Tata *Powers by Rs. 5 to Rs. 1,492-8. Tata Hydros was* dull, but steady, at Rs. 147.

The weakness of sugar shares on apprehensions about the prospects for the industry due to accumulation of stocks and higher production was the main feature of the trading in the miscellaneous section. Belapurs, after advancing from Rs. 311 to Rs. 314-4, dropped precipitously to Rs. 306-8. Walchandnagars declined from Rs. 225-10 *cum-div.* to Rs. 206-4 *ex-div.* (dividend: Rs. 16). Phaltans shed Re. 1-8 to Rs. 119 and Bhopal Sugars As. 2 to Rs. 13-4. Cement shares were featureless, but the undertone was steady. A.C.Cs. gained a fraction to Rs. 179-4 and Digvijays to Rs. 180. In the shipping group, Scindias attracted some attention and were marked up by As. 4 to Rs. 15-10. Great Eastern Shippings were maintained at Rs. 16-1, while India Steamships were quiet at Rs. 7-5½. Engineering and mining shares were mainly listless. Alcock Ashdowns were lower by Re. 1-4 at Rs. 262-8 and Premier Constructions by Re. 1-8 at Rs. 161-8. Josts Engineerings were steady at Rs. 94. Larsen and Toubros changed hands a fraction higher at Rs. 13-4. Shivrajpurs eased from Rs. 74-8 *cum-div.* (dividend: Rs. 9) to Rs. 65-4 *ex-div.* Indian Coppers were maintained at Rs. 3-8. B.B. Petrols were steady at Rs. 3-5½ on encouraging corporate news.

Among miscellaneous industrials, Bombay Burmahs (old) fluctuated between Rs. 470-10 and Rs. 466-4, before closing at Rs. 467-8. British India Corporations were firm with a rise of As. 10 to Rs. 8-10 on interested outside buying. Killick Industries picked up Re. 1-8 to Rs. 175, while National Rayons were uninspiring with a small loss of Re. 1-4 to Rs. 199-4. Tata Chemicals reacted from Rs. 14-13½ to Rs. 14-6½. Tata Oils were quiet at Rs. 39-12. Hindustan Motors gained ground from Rs. 8-9 to Rs. 9, on support from interested quarters. Wimcos were in request, but sellers were scarce. Consequently, they moved up by Rs. 3-2 to Rs. 208-2.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 27th April

Although a firm note was in evidence on the Calcutta Stock Exchange after early dullness, business was at a low ebb. The report, not yet officially confirmed, that the retention price for T.I.S.C.O. has been raised to Rs. 385 a ton from Rs. 331 has caused jubilation in market circles. *Although no information is yet available regard*ing the new retention price for Indian Iron and Steel Company, Ltd., and the Mysore Iron and Steel Company, it is expected that these producers would also get the benefit of the increase. The present prices granted to these concerns are Rs. 378 and Rs. 384 per ton respectively, which are higher because of Government's recognition that costs of production for these producers are higher than that for Tatas. On the same principle, Indian Irons and Mysore Irons should get higher retention prices. Trading in Indian Irons was cautious this week, and the loss that occurred early last week, following the heavy unloading of a needy operator, was not fully made good. This would perhaps have to wait for definite news regarding the retention prices.

Sectionwise, engineerings evoked keen interest, and with a broadening of activity, prices forged ahead. Texmacos were again a feature and were taken to Rs. 18-14, the week's gain amounting to one point. Richardson and Cruddas hardened to *Rs. 19-8 from Rs. 17-7. Indian Galvanisings were* fractionally higher at Rs. 23-2, as against Rs. 22-10 a week ago. Jessop & Cos., after remaining unchanged for major part of the week, spurted to Rs. 36-3 yesterday. Indian Irons were done around Rs. 34.

In jutes, selected attention raised the prices of a few shares. Other counters moved down. In the former group was included Birlas which at Rs. 19-7 gained nearly a point, while Ganges improved to Rs. 107 from Rs. 104. Nuddeas were fractionally higher at Rs. 56, Barnagores remaining unchangned at Rs. 178. Anglo-Indias at Rs. 218 lost 4 points, and Deltas sagged to Rs. 251 from Rs. 255. Indias were pulled down to Rs. 194 from Rs. 204. Howrahs changed hands today at Rs. 29-14 as against Rs. 29 last Thursday.

Although the list of transactions declined in the tea section, selected shares made some recovery. From Rs. 49-12, Bishnauths recovered to Rs. 52-8, but subsequently lost to Rs. 50-12. The star feature was *provided in the rise in Brahmaputras to* Rs. 11-3 from Rs. 10. Batelis were fractionally *higher at Rs. 24-8. New Dooars, although lower at* Rs. 626, were steady. Nambburnadis were taken earlier at Rs. 26-4 as against Rs. 25-4 previously, but subsequently lost the gain in its entirety. *Dhelakhats hardened to Rs. 22-2 from Rs. 21, Rani*cheeras to Rs. 28-14 from Rs. 28-8, and Bokhahats *to Rs. 23-12 from Rs. 23-8.*

In the miscellaneous section, too, provided some features. Thus, B.I. Corporations at Rs. 8-9 strengthened by As. 9. Rohtas Industries were taken to Rs. 25-4 from Rs. 24-8, and Rallis India to Rs. 43-8 from Rs. 39-12. Fractional gains were recorded in F. & C. Oslers at Rs. 17-8, Niccos at Rs. 24-4, Martin Burns at Rs. 23-2, Calcutta Landing and Shippings at Rs. 15-2, and Metal Corporations at Rs. 8-11. From Rs. 27, Orient Papers moved to Rs. 27-12 but finished at Rs. 27-6. Titaghur Papers were steady at Rs. 44.

Among sugars, Carew & Cos. receded from Rs. 15-6 to Rs. 11-14, thus losing almost the recent gains. Today, however, the rate recovered to Rs. 12-11. On the other hand, Champarans hardened to Rs. 30-6 from Rs. 29-6.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 27th April

The dull trading conditions witnessed on the Madras Stock Exchange last week persisted this week. There was very little business worth mentioning, with the result that price movements were confined to narrow limits. Textiles came *in for stray enquiries on lack of overseas as well* as domestic demand for cloth. In plantings, teas were colourless. This was partly due to technical *reaction after a continuous rise for a long* time in the past. The performance of rubber shares were also discouraging, while coffees ruled better. Miscellaneous scrips proved no exception to the generally colourless trend.

A notable feature of the week in an otherwise dull market was the declaration of a dividend of 25 per cent. by The Anandan Rubber Co., Ltd., and The Udayagiri Rubber Co., Ltd., for the year ended 31st December, 1954. The dividends of the Companies for the previous year were 10 per cent. each.

The Nilgiri Tea Estates have repaid the outstanding debentures of Rs. 4 lakhs. The Company has also issued 6 per cent. Indian Union income-tax-free debentures of Rs. 500 each for Rs. 12.50 lakhs and the debentures have already been allotted. Besides, as many as 84,375 shares of Rs. 10 each will be issued at par. The existing preference shareholders will be given 100 new ordinary shares for every 200 preference shares held by them. The ordinary shareholders will be allotted 100 new ordinary shares for every 100 ordinary shares held.

Textile scrips came in for sporadic enquiry. Cambodias put on As. 4 to Rs. 11-15 and Maduras As. 7 to Rs. 46-2. Pankajas rallied Re. 1 to Rs. 52. Bangalore Woollens, however, lost Rs. 3-8 to Rs. 445 and Venkatesas Rs. 3 to Rs. 117. Buckinghams disclosed a loss of Re. 1 at Rs. 155 and Coimbatore Spinnings Re. 1-8 at Rs. 72. Mettures were unchanged at Rs. 319-8 and Premiers at Rs. 152-8.

Teas lacked support. Chandramalais lost As. 2-6 to Rs. 6-3-6 *and Parksides As. 4 to Rs. 24-4 cum-div.* Periakaramalais were lower by an anna at Rs. 8-1 and Twyfords by As. 10 at Rs. 25-8. Coonoor Teas were quiet at Rs. 31-8 *ex-div.* and Emerald Valleys at Rs. 7-11½. Highlands, however, put on As. 2 to Rs. 16-4.

Rubbers too were wanting in enquiry. Cochin Malabars eased by an anna and a half to Rs. 7-6 and Kallas by an anna to Rs. 5-6. Teekoys were lower at Rs. 9-1, as against Rs. 9-2. Be Bes were dull at Rs. 4-10½ and Rajagiris at Rs. 16-1. Malankaras, however, put on As. 8 to Rs. 27-8.

Coffee Lands, among coffee scrips, rallied As. 5 to Rs. 16-15 and Consolidated Coffees As. 6 to Rs. 19-6. Mysore Coffees lacked support at Re. 1-10½, Kadur Coffees at Re. 1-10½ and Puthutotams at Rs. 4-10.

Andhra Cement 'B', among miscellaneous scrips, lost As. 2 to Rs. 13-12 and India Steel Rolling Mills an anna to Rs. 12-13. Mysore Chemicals and Fertilisers declined from Rs. 10-10 to Rs. 10-6 and Mysore Chromes from Rs. 4-8 to Rs. 4-4.

INDIAN INDUSTRIES FAIR

The Indian Industries Fair will be held in New Delhi from 29th October to 15th December, 1955. Organised by the Federation of Indian Chambers of Commerce and Industry and supported by the Government of India, the Fair will be the biggest of its kind ever held in the country so far. Already 13 foreign countries, including the United States, the United Kingdom, East and West Germany, the U.S.S.R., China, Poland, Czechoslovakia, Rumania and the Netherlands, have responded to the invitations extended by the Federation to participate in the Fair.

At a time when India is planning industrialisation on a vast scale, it is essential that the industrialists and Government officials should make a thorough study of the design, quality, performance and technique of capital goods manufactured by advanced industrial countries. As the proposed Fair provides facilities for an on-the-spot study of foreign capital equipment, it will serve a useful purpose from this point of view. The Fair aims at presenting a comprehensive picture of the economic progress achieved so far by India and forecast the possible prospects. It will also help promote economic relations between India and foreign countries by interchange of ideas in industrial and commercial fields.

Notice

THE VISHNU COTTON MILL LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Friday the 20th May, 1955, at 4-30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1954.

(2) To sanction the declaration of a Dividend.

(3) To confirm the appointment of Mr. G. R. B. Hall and Mr. A. A. S. Rae as Directors.

(4) To elect Directors in place of Sir Chunilal V. Mehta, K.C.S.I., and Mr. Jaisinh Vithaldas who retire by rotation but being eligible offer themselves for re-election. Mr. Jaisinh Vithaldas is interested as a partner in the firm of Cotton Buyers to the Company.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
of THE VISHNU COTTON MILL LIMITED,
For THE BOMBAY COMPANY LIMITED,
R. L. COGHLAN,
Managing Director,
Secretaries, Treasurers and Agents.

BOMBAY, 21st April, 1955.

NEWS IN BRIEF

NEARLY 2,600 new goods wagons, all manufactured within the country, were delivered to the Indian railways during January, 1955.

The total shipping tonnage of vessels that entered Indian ports was nearly 2 crores N.R.T. (Net Registered Tonnage) during 1953-54.

The production of ammonium sulphate at the Sindri Fertiliser Factory during April-September, 1954, amounted to 135,000 tons, as against 128,000 tons during the corresponding period in 1953.

Thirty-nine industrial schemes were sanctioned by the Government of India during 1954 in which Indian firms were required to pay royalties amounting to Rs. 44·6 lakhs to foreign firms for technical "know-how."

A group of Chinese engineers will pay a visit to India shortly, at the invitation of the Government of India in co-operation with the Indian mills concerned, with a view to studying the manufacture of paper pulp.

About one million acres of land will be brought under a new method of paddy cultivation in the Madras State. The new method evolved by the Madras Agricultural Department is claimed to be a definite improvement over the Japanese method.

The Government of India proposes to undertake a survey of the prospective areas in search of oil, with a view to increasing domestic output and reduce imports as far as possible. The scheme for exploration of oil will be undertaken over a period of five years at a cost of Rs. 8.5 crores.

The first phase of the Damodar Valley Corporation scheme will be substantially completed by June, 1957. In regard to the projects included in the second phase, namely, Balpahari, Bermo, Bokaro and Ayar, the Corporation has been asked to send proposals, so that they may be included in the second Five-year Plan.

The Planning Commission has approved of a programme of expansion of steel production in the Mysore Iron and Steel Works at Bhadravati from the present level of 25,000 tons to 100,000 tons, including stainless, tool and alloy special steel. The cost of the programme is estimated at about Rs. 12 crores.

The all-India final estimate of *kharif* pulses, other than tur, for 1954-55 puts the current year's area and production at 14,935,000 acres and 1,497,000 tons, as against the partially revised estimate of 15,192,000 acres and 1,543,000 tons for last year. This shows a decrease of 257,000 acres or 1.7 per cent. in area and 46,000 tons or 3.0 per cent. in production over last year.

During December, 1954, 679 public utility power stations in India generated 680.8 million kw.h. of electricity, of which 558.0 million kw.h. were sold to ultimate consumers. The corresponding figures for December, 1953, are 594.8 million kw.h. and 486.8 million kw.h., respectively, and those for December, 1939, 236.2 million kw.h. and 198.4 million kw.h., respectively.

The Madras Government will establish an agricultural research station with a 430-acre farm in the Lower Bhavani Project region. The research station will be the biggest of its kind in India and will conduct research in the production of cotton, groundnuts and millets and will also study other agricultural problems peculiar to the region served by the Lower Bhavani. The scheme is estimated to cost Rs. 2.50 lakhs.

A new method of manufacturing good quality washing soaps from non-edible oils, such as *neem, karani* and *undi* oils, has been evolved by the Village Industries Research Laboratory, Poona. The Industries Ministry to which the method has been communicated, is expected to consult industrial experts before adopting it for commercial production. It is claimed by the Laboratory that the process is very simple and economical.

The output of gold in India was on the decline during the latter half of 1954. From 21,702 ounces produced in June, 1954, the output declined to 17,872 ounces in December, 1954. This is in contrast to the rising trend in the first half of the year, when the output rose from 19,289 ounces in January to 21,702 ounces in June. The average monthly production in 1953 was 18,585 ounces and in 1952 it was 21,105 ounces.

The total number of voters, according to the 1954 electoral rolls, was about 182,019,123. Of these, 142,389,779 belonged to Part A States, 34,640,709 to Part B States and 4,988,635 to Part C States, according to a written reply to a question given in the Lok Sabha this week. The statement showed that the total number of voters at the time of the first general election was 173,213,635, the number of voters in Parts A, B and C States being 135,762,925, 32,585,163 and 4,865,547, respectively.

The Kashmir Government has decided to mechanise and expand its handloom silk weaving factory at an estimated cost of about Rs. 3 lakhs to provide employment for about 600 workers. Dobby and Jacquard powerlooms are being imported from abroad. The factory will specialise in the manufacture of brocades and floral design fabrics. In this connection an officer will be deputed to Surat to undergo three months' training. Some weavers are also being brought from Surat. The mechanisation scheme is expected to solve the unemployment problem among labourers in Kashmir.

The total merchandise trade of India on private and Government accounts during March, 1955, amounted to Rs. 99.48 crores, of which exports (excluding transit trade of Pakistan) accounted for Rs. 45.92 crores and re-exports for Rs. 77 lakhs. Imports aggregated Rs. 52.79 crores. Exports of treasure amounted to Rs. 19 lakhs and imports Rs. 50 lakhs. The merchandise import is exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figure and excluding the figure for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 6.07 crores.

A review of the river valley projects recently completed or now being executed or under consideration is contained in a pamphlet published by the Central Board of Irrigation and Power. The pamphlet meets the demand for a publication which would embody the salient points of all such projects from the layman's point of view. Classified as leaflet No. 3 in the Board's Popular Series, it gives information available up to August, 1954, being the 4th and revised edition. The Board believes that the pamphlet will keep the public in touch with the activities of the Central and State Governments in the field of harnessing the water wealth of the nation and rouse interest to ensure early and proper utilisation of the benefits from river valley projects as and when they become available.

The national income of India was Rs. 10,600 crores in 1953-54, as compared with Rs. 9,860 crores in 1952-53 and Rs. 9,990 crores in 1951-52. This is revealed by the second issue of the annual paper on national income just released by the Central Statistical Organisation. The *per capita* income worked out to Rs. 283.9 in 1953-54 and Rs. 267.4 in 1952-53, as against Rs. 274.5 in 1951-52. The estimates for 1952-53 were based on the detailed method of estimation followed for the earlier years. The estimates for 1953-54 are, however, based on partial material and are subject to revision. The national income in 1952-53 showed a decline of Rs. 130 crores or 1.3 per cent. relative to 1951-52. If the necessary adjustments were, however, made for the price levels in the two years, an increase in real terms of 3.9 per cent. in 1952-53 over 1951-52 would be indicated as *compared with* an increase of 4.5 per cent. between 1952-53 and 1953-54. The corresponding increase in *per capita* income in real terms would be 2.5 per cent. and 3.3 per cent., respectively. On the whole, between 1949-49 and 1953-54 the *per capita* income rose by some 8 per cent. at constant prices.

* * * *

From Abroad

Dutch retail tea prices have been further reduced by 6.10 cents per 100 grammes (6.2d.-10.3d. per pound), after a cut of 2.12 cents on 17th March, 1955.

Swedish commercial banks raised on the 21st inst. their interest rates by 1 per cent., following the increase in the Riksbank's discount rate by 1 per cent. to 3½ per cent. on the 18th inst.

The Pakistan Government has announced an export allotment of 30 million lbs. of tea for the year ending 31st March, 1956. The Pakistan Tea Licensing Committee, Sylhet, will allot quotas to individual tea estates which will carry export rights without restrictions as to destination.

The U.S. has plans to build its first atomic-powered ship. The new ship will not require refuelling "for scores of thousands of miles." The projected ship is regarded as another part of the American programme for peaceful uses of atomic energy. Specifications for the vessel are being developed by the Atomic Energy Commission and the Maritime Administration.

The first trade fair of the atomic industry will be held in Washington from 26th to 30th September, 1955. The Fair, which will be held, in conjunction with the *Atomic Industrial Forum's* autumn meeting, will have as its theme, "Marketing the Products of Atomic Energy." The Fair will demonstrate the extent to which peaceful atomic energy and its associated products and services have advanced as a sector of the industrial economy.

The French Ministry of Finance has decided to extend facilities to French residents for the sale of securities held abroad and the employment of the proceeds for the buying of other securities of the *currency or country concerned.* The facilities also apply where foreign companies increase capital. Although the decision affects only capital holdings and the prohibition of speculative transactions remains, it reflects the relatively easier foreign exchange position of France.

The U.S. Department of Commerce has announced that it will ease restrictions against the export of unpublished technical information by excluding certain types of scientific and educational material from licensing controls. The department intends to drop licensing requirements for scientific information "not directly and significantly related to design, production and utilisation in industrial processes," and for material used for "instruction in academic institutions and laboratories."

Krupps of West Germany have announced that they are now making titanium, the new metal which is indispensable for jet engines and supersonic rockets. As a result, Krupps have become the first Western firm outside Canada and the United States to make titanium, which combines the lightness of aluminium with the resistance qualities of the best stainless steel. At present, the metal costs fifteen times as much as the best stainless steel. The combined production of Canada and the United States is only 3,000 tons a year.

The U.S. Atomic Energy Commission (A.E.C.) has invited private industry to submit proposals to finance, build and operate an engineering test reactor, which the Government would use on a contract basis. The proposed reactor will provide certain radiation facilities which the A.E.C. will need by 1957 for the development of cores, fuel assemblies and other components of reactor projects both for defence and civilian power purposes. The A.E.C. estimates that it will cost bttween $10 million and $15 million to build the reactor desired.

The Ceylon Government has reduced the export duty on tea from Re. 1.30 to Re. 1 per lb. with effect from 22nd April, 1955. This cut in duty restores it to the level from which it had been raised to Re. 1.30 on 21st January last. While announcing the increase in duty in January, the Finance Minister had said that it would not affect consumers at home or abroad, but would be borne by producers. But, since February onwards, the tea buyers in the U.K. suddenly developed a stiffening attitude and prices began to decline. The Ceylon Government has, therefore, been obliged to yield to consumer resistance and effect a cut of 30 cents per lb. in the export duty.

PERSONAL

MR. Jawaharlal Nehru, Prime Minister of India, returned to New Delhi on Thursday this week, after attending the Asian-African Conference at Bandung.

Mr. G. H. Middleton, C.M.G., Deputy High Commissioner for the United Kingdom in India, who had been to the U.K. for consultations, returned to New Delhi on Saturday last.

Mr. Naval H. Tata, Mr. Ratilal M. Gandhi and Mr. S. K. Nevatia have been elected President, Chairman and Vice-Chairman, respectively, of the Central Organisation for Oil Industry and Trade.

Mr. W. A. B. Iliff, leader of the World Bank Mission, which recently toured the Indian side of the Indus Basin in connection with the Indo-Pakistan canal water dispute, left New Delhi for Washington by air on Tuesday.

Mr. J. K. Doshi has been elected Chairman of the Bombay Regional Council of the Institute of Chartered Accountants of India. Messrs. M. P. Chitale, V. B. Haribhakti and S. G. Argade have been elected Vice-Chairman, Secretary and Treasurer, respectively.

Mr. P. Thapar, Secretary to the Union Ministry of Food and Agriculture, and Dr. S. R. Sen, Economics and Statistical Adviser in the Ministry, will represent India at the twenty-first session of the F.A.O. Council meeting to be held in Rome in June next.

Mr. Lalji Mehrotra, a former President of the Federation of Indian Chambers of Commerce and Industry, will lead the Indian delegation of over fifty leading business men to the Fifteenth Congress Session of the International Chamber of Commerce to be held at Tokyo from 15th to 21st May next.

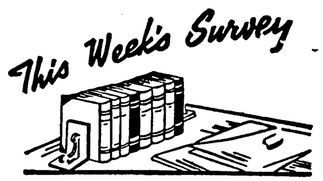
"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 3rd May

British Trade with India

In view of the persistent cry for a boycott of British goods—a slogan with a political background—it is interesting to note what Mr. T. M. Ainscough, who has just returned from England to his post at Calcutta as H. M. Senior Trade Commissioner in India and Ceylon, said before the Royal Society of Arts in London in mail week. Speaking of the Indian market for British goods and the best methods of meeting and overcoming the difficulties of unrestricted and vigorous competition from foreign competitors, Mr. Ainscough said that he was firmly convinced that the difficulties Great Britain experienced sprang from purely economic causes. The remedies were those of rationalisation of production and marketing that could only be applied by the manufacturers and merchants themselves. Mr G. M. Gillett, Parliamentary Secretary, Department of Overseas Trade, speaking from the chair, said that the difficulties confronting British trade in India were similar to those which presented themselves in the Dominions and other markets where formerly the United Kingdom had much less competition to meet. Anxious to develop their industries, the Dominions put up protective tariffs, not only against other nations of the world, but against British goods as well. The remedies Mr. Ainscough proposed for improving the British Indian trade had their application to other parts of the Empire. He entirely endorsed Mr. Ainscough's regrets that there had been a newspaper campaign in Great Britain which tended to exaggerate the seriousness of the political position in India. There was an intimate relationship between great political issues and the condition of industry. It was extremely important that those who were responsible for circulating news in the Press should seek to give sound and proper information free from exaggeration, in view of the prejudicial effect of false or highly coloured statements not only upon the relationship between different peoples, but also upon British industries.



BANDUNG CONFERENCE

IT is hardly surprising that, in the *communique* issued by the organisers of the Bandung Conference, in which 29 Asian and African nations participated, the discussion of the basic economic issues of these countries should stand out prominently. It is true that the political complexion of the Governments of these countries varies greatly. Some of them are communist—China, for instance—some profess socialist ideals—India, for instance—while some have no desire to label themselves—Ceylon, for instance. But the basic problem is economic everywhere. The Governments' chief concern is to implement such measures as will raise the low living standards in these areas. The problem is as old as it is difficult to solve. Only, a welcome feature of world conferences is that increasing attention is being given to the problem of economic development of the Asian and African regions.

The decisions at the Bandung Conference, however, deserve special notice for they reveal what the backward countries themselves feel about the task ahead. In international gatherings sponsored by the Western countries, it is the voice of the sponsors that generally prevails. This voice is no doubt sympathetic to the claims of backward countries. But it is difficult not to notice a certain paternalistic—or even patronising—attitude on the part of the sponsors towards these countries. This might be pardonable, considering that the aim of the sponsors is certainly commendable, namely, to raise the living standards of the backward regions. But this could be more easily achieved if the underd[illegible]d countries themselves real[illegible] [illegible]d cause of their backs by realised the nature [illegible]iate remedial [illegible] awardness, and the appro[illegible] adopted. [illegible] measures that deserve to be [illegible]

[illegible] the Bandung Conference provided an opportunity precisely for such introspection. The result, as is only to be expected, is all to the good. The Asian-African Conference, according to the *communique*, recognised the "urgency" of promoting economic development of the region. There was general desire for economic co-operation to the mutual benefit of the participating countries. These countries agreed to provide technical assistance to one another to the maximum extent practicable in the form of experts, trainees, pilot projects and equipment for demonstration purposes. They also contemplated exchange of know-how and establishment of national and, where possible, regional training and research institutes for imparting technical knowledge and skills in co-operation with the existing international agencies.

Unlike some spokesmen of Iron Curtain countries, who, in their incurably suspicious mood, look upon financial assistance from U.N. bodies as a clever device by the West to keep the underdeveloped countries in bondage, the Asian-African Conference recognised that the assistance that is being received through international or bilateral arrangements had made a valuable contribution to the implementation of their development programme. The Conference recommended the early establishment of a special U.N. Fund for economic development, the allocation by the World Bank of a greater part of its resources to Asian-African countries and the early establishment of an International Finance Corporation which should include in its activities the undertaking of equity investment and encouragement and promotion of joint ventures among Asian-African countries in so far as this will promote their common interest.

Although the conference emphasised the need for mutual co-operation among the countries of this region, it stated that such emphasis did not "preclude either the desirability or the need for co-operation with countries outside the region, including the investment of foreign capital." But it must be admitted that mere assertion of the desirability of, or need for, foreign capital cannot possibly induce it to come into this region on any significant scale. What is necessary is the creation of a climate in which such capital will feel a sense of security. Foreign investors must be induced to realise that this region offers attractive facilities for investment. This implies that the countries should not adopt discriminatory laws to the detriment of foreign interests. It also implies the adoption of helpful fiscal policies. Indeed, such policies would assist the flow of foreign capital as well as the mobilisation of domestic capital.

In view of the damage that is frequently inflicted on the economy of this region by violent fluctuations in the prices of, and trade in, the region's staple export commodities, the Conference did well to emphasise the "vital need for stabilising the commodity trade in the region." The principle of enlarging the scope of multilateral trade was accepted though it was recognised that some countries would have to resort to bilateral trade agreements in view of their prevailing economic conditions. It recommended that collective action be taken by participating countries for stabilising international prices of, and demand for, primary commodities through bilateral and multilateral arrangements. It was also decided that they should, as far as possible, adopt a common approach to such questions when they come up for discussion in international bodies. The Conference stressed the need for diversification of export trade for processing (as far as practicable) of raw materials before export, for intra-regional trade fairs and for exchange of trade information. Surely, there is scope for improvement in every one of these spheres. It should thus be possible to increase the intra-regional trade of this region to the benefit of participating countries. From this point of view, the Conference did well to agree to the appointment of liaison officers in participating countries for the exchange of information on matters of mutual interest.

The Conference agreed that encouragement should be given to the establishment of national and regional banks and insurance companies. It felt that exchange of information relating to oil, such as remittance of profits and taxation, might finally lead to the formulation of a common policy. It attached considerable importance to the development of shipping. It expressed con[illegible]cern at the frequent increases in freight rates by shipping companies. Here, the fault seems to lie, to a considerable extent, with the accusers. Very often, the reason for the rise in freight rates to certain ports in this region is the delay in the turnround of ships caused by strikes and go-slow tactics adopted by dock labour and the evil of pilferage at certain ports. If the situation in the ports improves and the authorities do not flinch from adopting measures that would make it easier for shipowners to serve the ports, the freight rates are bound to decline.

Finally, the Conference emphasised the particular significance of the development of nuclear energy for peaceful purposes and welcomed the initiative of the powers concerned in offering to make available information regarding such uses of atomic power. It urged the speedy establishment of an international atomic energy agency with adequate representation for Asian-African countries. This is a field in which the Western countries can certainly render real service to the underdeveloped countries. Among the Western countries, the U.K. has taken the lead in the development of atomic power for peaceful uses. It is to be hoped that, when Britain's present nuclear power plans are fully implemented, that country will be able to help organise nuclear power stations in the Asian-African region.

The decisions of the Conference on the economic issues of the Asian-African region, as stated above briefly, differ neither in content nor in approach from the resolutions that generally find favour with the various specialised bodies of the United Nations. This is not to suggest that the Bandung Conference is not without its significance. Indeed, the Conference has done a signal service in emphasising the economic issues, for it is an effective vindication of the belief of the free nations that it is only when these issues are settled that political freedom will have a meaning for the teeming millions of this region.

TEXTILE LABOUR WAGES

A notable feature of the deliberations of the seventh session of the Indian National Textile Workers' Federation, held in Sholapur this week, is the adoption of a resolution demanding the revision of the minimum wage of textile labour, so as to bring it in line with the concept of minimum wage as embodied in the report of the Fair Wages Committee. The session felt that the wages should be such as to encourage workers to accept higher responsibilities and exert greater effort. The resolution urged the fixation of wages in terms of the existing prices, thereby obviating the need for a separate dearness allowance. In this connection, it emphasised the need to take immediate steps to revise the working class cost of living index, in the light of the changes that have taken place during the last 30 years in the workers' mode of living, education and social progress, as well as in the average size of the family and house rent. Broadly speaking, the session called for an overhaul of the entire wage structure by determining the differentials over the minimum wage, taking into consideration such factors as skill, responsibility, training, workload, hazards, working conditions, average production and the automatic nature of the work involved.

There are no two opinions that the worker should be assured of at least the "living wage," which according to the Fair Wages Committee represents a standard of living that provides not merely for a bare physical sustenance of the worker and his family but also for the maintenance of health and efficiency, a certain measure of frugal comfort and some insurance against death and old age. While the lower limit of the fair wage must obviously be the minimum wage, the upper limit is to be set by the capacity of the industry to pay. But, between these two limits, the actual wage in any industry must depend on the productivity of labour, the prevailing rates of wages in other industries, the level of national income and distribution, and the place of the industry in the economy of the country.

There has been a growing volume of opinion that a substantial portion of the dearness allowance paid to workers, if not all, should be integrated with the basic wage, as "the cost of living index is not likely to come down to pre-war levels." This view has also been supported by the Planning Commission. It accepted the recommendation of the Gadgil Committee that 50 per cent. of dearness allowance admissible to the Central Government servants drawing a basic pay upto Rs. 750 per month should be amalgamated with their pay and suggested that similar benefit should be extended to workers in the private sector also. The workers' demand for merging at least a portion of the D.A. with wages is, therefore, fully justified.

The Conference adopted a few other important resolutions. Of these, mention may be made of the one which called upon the Government to revise the standards and priorities adopted by the Labour Appellate Tribunal in the determination of the quantum of bonus. By another resolution, it referred to the need for labour participation in management in such matters as purchasing, production and selling and asked for facilities for workers getting full knowledge of the "inside working" of the industry at every stage.

Both the demands are of a highly controversial nature. The demand for labour participation in management is a subject on which employers in this country have yet to speak out their minds, while there are conflicting opinions on the question of payment of bonus to labour. While some feel that there is need to do away altogether with bonus and introduce instead a reasonable scale of wages, others still believe in the outmoded system of bonus. Be that as it may, there is no denying the fact that many of the disputes in recent years have arisen out of differences on the question of determination of the quantum of bonus to be paid to workers.

IMPORT OF SILK FABRICS

There is much force in the plea for allowing imports of silk fabrics on some quota basis, which Mr. Babubhai M. Chinai, President of the Silk Merchants' Association, Bombay, put forward in the course of his address at the annual general meeting of the Association held on Monday last. Thanks to the imposition of a complete ban on imports, consumers have not been able to secure adequate quantities of quality silk fabrics, and that at a reasonable price. The production of silk fabrics by the indigenous industry is reported to be at a very low level. Indeed, the progress made by the silk industry has been none too happy. Even Mr. T. T. Krishnamachari deplored, in the course of his speech in the Lok Sabha the other day, that, although the silk industry had been helped for a long time, it had not shown any improvement; in fact, because of constriction of imports, the demand for silk goods had suffered.

The continuance of the import embargo on silk fabrics does not seem to be justified. Mr. Chinai did well, therefore, to warn that, if imports of silk piecegoods were not allowed, persons who had been habitual consumers of silk fabrics

would take to rayon goods and that, in the long run, the interests of the silk industry and trade would greatly suffer. The warning is quite timely and pertinent. It is to be hoped that the Government would pay heed to it and allow imports of silk piecegoods on a quota basis. Such a course would be doubly beneficial. Besides relieving the supply position, it would induce, as Mr. Chinai rightly remarked, the indigenous industry to take necessary steps to improve the quality of their product.

Mr. Chinai's plea for liberalising imports of raw silk is also justified. There is a wide gap between indigenous output and the total demand in the country. The quantity of raw silk actually produced is now at an annual rate of not more than 2 million lbs., as against the estimated requirements of 3 million lbs. and the self-sufficiency target of 8 million lbs. The quality of silk, too, is said to be still not up to the mark, being no higher than the international 'D' grade. What is worse, raw silk prices are ruling very high *vis-a-vis* those in other silk producing countries like Japan and Italy. The handloom and *jari* weaving industries are, therefore, finding it difficult to meet the normal requirements of their basic raw material at an economic price. Although attention has been drawn to this aspect time and again, it is a pity that the Government should still refuse to relax restrictions on imports of raw silk. Evidently, the Government feels that free imports of raw silk would adversely affect the indigenous sericulture industry. This fear is no doubt a legitimate one. No serious damage to this industry would, however, be caused, if the Government were to allow imports of raw silk to the extent of the gap in domestic supplies.

To revert to Mr. Chinai's speech. Mr. Chinai urged the Government to revoke its decision to effect imports of raw silk through the Central Silk Board and to allow imports through normal trade channels. This plea, too, is fully justified. Instances are not wanting to prove that attempts at monopolising imports and distribution of goods have proved a failure. Apart from the basic objection that such a system of trading interferes with the fundamental right of private interests, it will, as Mr. Chinai pertinently pointed out, adversely affect the interests of consumers. Surely, trade is not the legitimate sphere of any Government department or a specially-sponsored agency. Mr. Chinai minced no words when he said that "in principle, such trading is a negation of the recognition of private enterprise as the basis for the organisation of the trading activities."

RAILWAY-SHIPPING CO-ORDINATION

Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, reiterated that the Government of India had under consideration a proposal to constitute a shipping committee to enquire into the problem of rail-ship competition and suggest measures for developing each as a complement to the other. The need for such a co-ordination committee, it may be recalled, was emphasised by Mr. Lal Bahadur Shastri, Minister for Railways, when he presented the Railway Budget in February last. In fact, the constitution of such a committee would satisfy a long-felt demand of shipowners.

The main task before the committee will be to enquire into the allegation of the shipowners that the freight charged by railways for bulk carriage of goods, such as coal, is so low that it is impossible for shippers to compete with it. They have further pointed out that railway freight bears no relation to cost of transport, with the result that the transport of certain commodities by railways are virtually subsidised by the higher freight charged on other commodities or by other means. They point out that there were 35 to 40 shipments of coal per month by coastal vessels in 1948-49, when the railways were faced with wagon shortage, whereas there are now only about 13 shipments following improvement in the railway wagon situation. This decline in the transport of coal by ships is attributed to extremely low rates charged by railways for transport of coal. It has, they complain, resulted in short-carriage by the shipping companies and, consequently, financial losses for a number of them.

The mere reservation of coastal trade to shipping, according to shipping interests, is not enough but coastal shipping should also be assured of sufficient cargo, if it is to develop on sound lines. It would appear that shipowners are demanding an assurance by the Government to take steps to see that at least 2 million tons of coal are transported by coastal ships. Otherwise, there will be, it is feared, no incentive on the part of shipowners to modernise their fleet and acquire new tonnage.

The carriage of coal is not, of course, the only aspect of the problem of rail-ship competition. In any attempt at solving the problem, one should remember that railways and shipping are the two sides of the same coin. It would be wrong to favour the prosperity of the one at the cost of the other. Both the systems of transport should receive the Government's attention and support. How to ensure the economic use of these systems will be the main problem before the proposed Co-ordination Committee.

INDUSTRIAL DEVELOPMENT

Sir Eric Coates, leader of the British Steel Mission, now in India exploring the possibilities for participation of the United Kingdom in the erection of a steel plant in India, warned last week that there was a possibility of industrial development in India "going out of balance." India today faces, according to him, the danger of embarking upon too many projects which might make basic adjustments difficult, if not altogether impossible. He rightly holds that what is essential at present is a proper marshalling of the country's natural resources, namely, mineral, water and, above all, labour in the best possible manner in order to obtain the maximum utility. He points out as an instance that, while the erection of a steel plant is a simple proposition, the question of ensuring a steady supply of fuel and other raw materials at the steel plant is a big problem in itself. This requires marshalling up of the resources required which, in its turn, presupposes planning in that direction also side by side with that for the erection of the steel plant. He has clearly stated that the first requisite in this connection is increasing the output of coal. It is gratifying to note that the Government of India has asked the Coal Commissioner to submit a plan, in consultation with the Planning Commission, for a steady increase in the output of coal in the second Five-year Plan.

It is again noteworthy that Sir Eric expressed the view that there is urgent need for expanding transport facilities, particularly railways. Pertinently enough, he says: "You must streamline your expansion in advance of the coming load." Transport is vital to the progress of all industries, to steel in particular. The target of steel production is no doubt now being fixed lower than originally. Thus, Mr. T. T. Krishnamachari, Commerce and Industry Minister, recently averred that the country's steel production target in the second Five-year Plan would be lower at 4.5 million tons, as against 6 million tons as originally estimated. Even so, the increase in steel production would demand an enormous increase in transport facilities. At the same time, it would require, as Sir Eric emphasised, other adjustments to be made. Thus, it would be necessary to give a fillip to such engineering industries as use steel, so that the increased steel production could be rapidly absorbed.

AGRICULTURAL STATISTICS

Many complaints, both against the inadequacy and the inaccuracy of Indian statistics, have for long been made by the public in this country. Although attempts have been made to improve methods of collection of statistics as well as to extend their coverage, there is no doubt that the data are not always very correct. This is particularly true of agricultural statistics, for they are collected at the village level where their collection is in the hands of men who have never been trained for their job.

In recent years, there has been a welcome awareness of the consideration that if Indian statistics are to be improved the problem should be tackled at the lower levels of District administration. Both the Technical Committee on Co-ordination of Agricultural Statistics in 1949 and the conference of State Ministers of Co-operation and Agriculture in 1953 laid great stress on adequate training for the primary reporting agencies. A concrete step has now been taken with the organisation by the Ministry of Food and Agriculture of a three-month course of training in agricultural statistics, in Delhi. The first batch of 21 revenue and land record officials from nine States have now completed this course.

These officials, it is stated, will form the nucleus of a scheme which is designed to ensure the collection of reliable agricultural data on a uniform standard throughout the cou[illegible] of Under this scheme, the officers who have [illegible] been trained will in their turn organise br[illegible] training courses for primary reporters in co[illegible]venient batches at the headquarters of the

MR. REDDY ON MANAGEMENT OF PUBLIC UNDERTAKINGS

NO SEPARATE CORPORATION FOR RURAL CREDIT

From A Special Correspondent

NEW DELHI, *26th April*

A NUMBER of subjects of considerable economic importance cropped up during the week in Parliament. The passing of the Finance Bill clause by clause led to interesting discussions on many problems of current interest. Earlier in the week, the Finance Minister, Mr. C. D. Deshmukh, announced a number of concessions, particularly in regard to Central excise duties. The total tax reliefs aggregated Rs. 8.88 crores, resulting in an increase in the revenue gap from Rs. 8.47 crores to Rs. 17.35 crores. Generally speaking, it is suggested that the imposition of so many indirect taxes only eight weeks ago and their withdrawal or modification as the case may be within a short period, indicate that the Finance Minister has been somewhat hasty in his decisions and that he has been able to realise that, in an underdeveloped country like India with low consumption habits, taxation of consumption has to be carried out cautiously. Hence, even the recommendations of the Taxation Enquiry Commission have to be studied very carefully and implemented in a manner that will not create any disequilibrium in the economy of the country. During the debate, the Finance Minister reviewed at length the implications of section 23A of the Income Tax Act and pointed out that the main motive of amending that section was to tighten the loopholes, in order to prevent tax evasion by directors of small companies. Unfortunately, Mr. Deshmukh could not participate in the proceedings owing to indisposition and the burden of replying to the debate on the Finance Bill during subsequent days fell on Mr. M. C. Shah, Minister for Revenue and Civil Expenditure.

DELHI LETTER

Public Companies

Another subject of importance on which Government policy was enunciated related to the management of companies in the public sector. Mr. K. C. Reddy, Minister for Production, stated that Government did not consider it necessary or correct, purely for the sake of theoretical uniformity, to convert an undertaking from the departmental to the company form of management regardless of the circumstances and the requirements of the case. He added that, if it was found that it would be advantageous to change to the company form of management for specific reasons, for example, if a large and rapid expansion had to be effected under a more flexible pattern of management, the matter would be examined again and a decision taken on merits.

According to the Production Minister, three organisations, namely, Government salt sources, State collieries and National Instruments Factory were still being managed departmentally. They were all old activities of Government which were well organised even before independence. The State collieries and the National Instruments Factory, Mr. Reddy continued, were really service departments. As regards the Government salt sources, he said that there was no advantage which a company was expected to have in preference over the present pattern.

State Bank of India Bill

The consideration of the State Bank of India Bill seeking to constitute a State Bank for India and to transfer to it the undertaking of the Imperial Bank of India and to provide for other related matters was another subject of importance that came before Parliament this week. The Bill was moved by Mr. A. C. Guha, Minister for Revenue and Defence Expenditure. Mr. Guha announced that the proposed State Bank would open 400 branches in rural India which would work in close co-operation with co-operative banks and warehousing societies. These banks would not only cater to agricultural credit but would also serve the interests of small-scale and cottage industries. According to Mr. Guha, the Government had no intention *at present* to encroach on private commercial banks. It is unlikely that statements such as this will allay public apprehension regarding nationalisation of banks. On the other hand, such statements will continue to create a certain amount of misgivings about Government's industrial and financial policies, especially when many leading spokesmen of the party-in-power have been making unwarranted and provocative statements which cannot stand even bare scrutiny. It is, therefore, necessary that in matters like this, the Government should unequivocally declare its policy for another 25 years at least, so that the private sector could go on with its plans for industrial expansion. Otherwise, it is difficult, nay impossible, for the Government to achieve the optimum economic activity in the country during the second Five-year Plan.

Non-official Resolutions

Among the non-official resolutions that came up for discussion during the week, two were subjects of great economic importance. These were: (i) the establishment of a Central Agricultural Finance Corporation with branches all over the States to provide credit facilities for agricultural operations in the country and (ii) the introduction of uniform weights and measures throughout the country based on the metric system. In régard to the former, the Government spokesman did not favour the idea of a central body, but stated that the Government was keenly conscious of the need for improving the rural credit structure. According to him, with the implementation of the land reforms and also that of the important recommendations of the Rural Credit Survey Committee, there would be a definite improvement in regard to the availability of money for agricultural purposes.

The chances of implementation of the other non-official resolution with some modifications, namely, the introduction of metric system in regard to weights and measures as well as coinage, appear to be bright. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, made certain weighty pronouncements on this subject. He informed the House that the Planning Commission was already in favour of introducing decimal coinage and the metric system of weights and measures. He also stated that the Finance Minister would shortly introduce legislation for decimal system of coinage which would precede the introduction of uniform weights and measures. He told the House that a committee under the chairmanship of Mr. Kanungo, Deputy Minister for Commerce and Industry, had been set up for standardisation of weights and measures.

Metric System and Decimal Coinage

The efforts to introduce the metric system and decimal coinage in India have a long history. In fact, it was nearly 90 years ago that the first step was taken in this direction. In 1867, this question was considered from all angles and the then Government of India was fully convinced of the beneficial results that the adoption of this system would confer on the country. The moving spirit behind this reform was one Col. R. Strachy, a good and scholarly Englishman, who advocated the adoption of this system with great fervour and reason. In 1870 and 1871, the Government passed the necessary legislations but the implementation of these Acts was deferred on account of the unhelpful attitude taken by the then Secretary of State for India. The latter opposed the move, apparently on account of some pressure from some railway companies which were not well disposed towards this reform due to some ulterior motives. These railway authorities, perhaps, thought that the adoption of this system would entail considerable expense to them.

The whole scheme was thus pigeonholed, although some thoughtful economists, administrators and politicians made some attempts to focus the attention of the public to this much needed reform. They were convinced that the metric system was best suited to India, especially as India happens to be the birthplace of the decimal system and as it is from this country the idea has spread to many distant countries. The credit for the adoption of the metric system doubtless belongs to France. At the present time, more than 75 per cent. of the countries in the world have adopted the metric system, largely due to the inherent superiority of this system over others. Nearer home, Ceylon and Malaya have adopted the decimal system in regard to coinage.

(*Continued on page 859*)

FRUITS OF PROSPERITY

MR. BUTLER'S BUDGET

From Our Own Correspondent

LONDON, *23rd April*

OF course, the surprising thing about Mr. Butler's pre-election Budget is that, after all the talk of balance of payments difficulties and indeed the references in the Budget speech to the deterioration of the position as compared with a year earlier, there should be no apparent additional steps taken about what may be the major problem facing the new Government. In short, this seemed to be a purely domestic Budget paying lip service to the needs of the export trade through the proposals to give income-tax reliefs.

LONDON LETTER

The background for the tax concessions was the astonishingly high surplus in the year just closed of over £430 million, as compared with an estimate of a budget which would only just balance. The surplus arose through the receipt of an extra £100 million on income-tax and surtax (these revenues now produce over £2,000 million) and another £100 million on customs and excise. Total budet revenue at £4,700 million was, therefore, £200 million higher than the previous budget estimate. On the expenditure side, the actual defence bill turned out at more than £100 million under the estimate and the expenditure on the Civil Departments showed a similar gain. The Government, therefore, spent £4,300 million, about £200 million less than they had allowed for.

The Chancellor had this year to reckon with an estimated expenditure slightly greater than that allowed for a year ago. The national debt charge on interest is going to be higher because of higher money rates, and the Civil Departments are also going to spend more. The total comes to £4,562 million. But, on the revenue side, Mr. Butler saw the prospect of a still larger income amounting to £4,844 million. He had, therefore, a prospective surplus of £282 million and his Budget gives away about half of this—his excuse for not giving away more than this being that the capital expenditure bill which does not come into the normal Budget figures is going to be somewhat higher and he does not want to encourage undue spending.

Much play has been made with the relief to the Lancashire cotton industry by remitting purchase tax on household textiles and cotton piecegoods, but this concession is not going to cost the Chancellor more than £2 million—a small price to pay for such an important election county. The rest of the money goes on straightforward income-tax concessions designed primarily to help the family man. The allowance for married people is increased by more than for single people and the allowance for children is also appreciably raised to the not inconsiderable figure of £100 per child. But the major concession is in the reduction of the standard rate of income-tax by 6d. to 8s. 6d.

And it is here that his opponents hope to make political capital out of the budget; for, they say, the greatest gain goes to corporations and to large incomes for obviously the people who were in the lower tax brackets and who do not pay the standard rate (and this applies to most wage earners in the country) do not benefit from this substantial cut of over 5 per cent. which is what it amounts to. But the Chancellor, who has his eye on the marginal vote, has no doubt reckoned that the gain to the middle income classes will make them look at this as a Budget in their interests and the Chancellor's Party as the one which they should support.

The other line on which the Chancellor is vulnerable to attack is that his Budget has paid inadequate attention to the balance of payments difficulties. There ought, say his opponents, to have been more tax benefits for earned incomes than for investment incomes—to which the Chancellor replies that this country must increase its investments and therefore investors must have encouragement. Equally, he says, he could not reduce indirect taxation which naturally falls most heavily on the lower income earners without increasing consumption and increasing the country's import bill. Labour's answer to that is that the only sure way of directing the economy towards the export industries is by control of resources and that financial devices by themselves cannot achieve the necessary objectives. So both Parties go to the country sure that the Budget is in their favour and we must wait some weeks before we know whose judgment was right.—*All Rights Reserved.*

AMERICAN LETTER

PRESIDENT'S WARM SUPPORT TO O.T.C.

ANOTHER WAGE SPIRAL IN THE OFFING

From Our Special Correspondent

NEW YORK, *21st April*

THERE is great popular interest in the United States about the discussions at the Asian-African Conference in Bandung, Indonesia, where Prime Minister Nehru of India plays such an important part. The papers here have reported faithfully also on the statements of Red China's Premier Chou En-lai and of Ceylon's Prime Minister Sir John Kotelawala's remarks demanding that Mr. Chou disavow Communist imperialism.

Coupled with these developments in Indonesia, there has been generated here an undertone of fear over the imminence of another outbreak of shooting in Asia. There are endless discussions in print whether or not the outlying islands off Formosa should or should not be abandoned. In the absence of any clear-cut line either from the White House or Congress, an atmosphere of uncertainty has been allowed to generate. The only constructive thing which can be said about it is that it has put up the prices of stocks which are concerned with defence industries on the various securities exchanges in the United States.

Foreign Economic Policy

In the foreign trade field, President Eisenhower has submitted to Congress one of the important phases of his foreign economic policy. He asked approval of U.S. membership in the 34-nation Organisation for Trade Co-operation which was formed last month at Geneva, Switzerland. The O.T.C. is basically a mechanism for applying fair practices in international trade.

It seeks to discourage artificial restrictions on trade, such as discriminatory tariffs. It is the new administrative organisation for the General Agreement on Tariffs and Trade, usually called G.A.T.T., which has been in existence for eight years.

The President said O.T.C. was an example of free nations working together in the economic field comparable to N.A.T.O. in the military realm. If the U.S. were to refuse to join, he said, it "would strike a severe blow at the development of co-operative arrangements in defence of the free world."

Another development in the same field was an indication by the International Bank for Reconstruction and Development of the proposed establishment of the affiliated International Finance Corporation. If this new company should work as planned, it may have a value to the world's capital markets far in excess of its own contribution. The Charter for the new concern has been submitted by the World Bank to the U.S. and 55 member-Governments for acceptance. The new company which would take some time to get going would have an initial capital of $100 million in U.S. dollars and gold, of which Washington would contribute $35,168,000. The Corporation would make fixed-interest loans and debt security investments in private venture capital enterprises, chiefly in the so-called underdeveloped countries.

Rediscount Rate Raised

On the domestic scene, the most dramatic development of last week was an increase of the rediscount rate of various Federal Reserve Banks from 1½ to 1¾ per cent. It served notice on the economy that the credit and fiscal authorities do not want the present business boom to get out of hand.

The current level of high activity is supported by extraordinarily high automobile production which in turn has led to a consistent steel output of about 95 per cent. of capacity in recent weeks and, also, by better than expected consumer spending as well as by a housing boom which continues unabated.

As indicated in previous despatches, the auto boom has two basic reasons. One is that retail sales in this field have picked up much more than was anticipated. Another is that the industry is presently negotiating for a new contract with its trade unions. The principal agreements in the industry between management and labour expire between 31st May and 30th June, 1955.

The big issue this time is the guaranteed annual wage for workers. Fearing that a prolonged strike may ensure, output has been stepped up to assure a backlog of car inventory.

Many informed individuals believe management may give in and agree to the guaranteed annual wage in the end. This would have incalculable repercussions.

The next labour contracts up for renegotiation are those of the steel workers. If the auto unions get that concession, the steel industry can hardly refuse similar arrangements. This brings up the inevitable question how far such arrangements can be carried. Are seasonal farm workers going to get the same privilege, or painters, plasterers, bricklayers and electrical workers? In other words, where does the guaranteed annual wage end and what price social security—as desirable as the aims may be? But can a free enterprise system stand the strain?

Ford Stock to be Sold

Another piece of interesting information which has intrigued U.S. business and financial quarters is that Ford Motor Company here is about to issue stock to the public for the first time in its 51 years of existence and, thus, it will become obligatory to issue its first public financial statement.

The stock to be sold is that of the Ford Foundation, now worth about $800 a share. It is expected to be split ten-to-one and marketed at about $60 a share. Earnings last year are estimated at about $6 a share which would conform to the General Motors ratio of share prices of about 10 times earnings. However, the stock is non-voting and, unless the rules are changed, it cannot be quoted on the New York Stock Exchange.

The Ford Foundation is a philanthropic organisation which contributes to many worthy causes. The decision to sell its holdings, or at least the major part of it, seems to stem from the desire to diversify the risk. The Ford family would retain control by holdings of some 130,000 voting shares.

On the general news scene, one of the great medical triumphs of the century was confirmed last week. The anti-polio vaccine, developed under the leadership of Dr. Jonas E. Salk of the University of Pittsburgh, was tested and found to be "safe, effective and potent."

Thus, millions of vaccinations are in the offing which represent a boost to the pharmaceutical and chemical industries, but mankind is now on the road to conquering one of its dread scourges, the crippling, killing poliomyelitis, or infantile paralysis.

The outcome of the peace treaty with Austria and of the British elections are being awaited here with some suspense.—*All Rights Reserved.*

The Federal Reserve Board of the U.S. has raised the margin on stock purchases from 60 per cent. to 70 per cent. This action has been taken consequent on the continued sharp increases in the use of credit in the steadily rising stock market. It may be recalled that early in January this year the Board raised the margin from 50 per cent. to 60 per cent., but, despite this action, the use of credit continued to increase, so that the Board has increased the margin again.

The U.K. Government has lent its support for the establishment of a new international trade body, the Organisation for Trade Co-operation (O.T.C.), proposed recently by 34 nations at Geneva. These nations, which are members of the G.A.T.T. have agreed to set up the O.T.C. after a four-month review of the working of G.A.T.T. The proposed amendments to G.A.T.T. worked out at Geneva and the setting up of the O.T.C. are expected to improve and strengthen appreciably G.A.T.T.'s value as an instrument to facilitate the expansion of international trade.

Notice

INDUSTRIAL FINANCE CORPORATION OF INDIA

KEELING ROAD, NEW DELHI.

NOTIFICATION

IT IS HEREBY NOTIFIED THAT THE SHARE Register of the Corporation will be closed and the registration of transfers suspended from the 16th June, 1955, to the 30th June, 1955, (both days inclusive).

V. R. SONALKER,
Managing Director.

25th April, 1955.

PAKISTAN NOTES

SETTING UP STEEL PLANT

AGREEMENT WITH GERMAN FIRM

A VITAL deficiency in Pakistan's industrial set-up would be filled, if the factory for manufacturing steel, the blue-print for which has been prepared by the Pakistan Industrial Development Corporation (P.I.D.C.), were established. An agreement for the erection of a pilot plant was signed at Essen (W. Germany) last week by Mr. Ghulam Faruque, General Director of the P.I.D.C., and the representatives of the West German firm of Krupps. The firm will act as the consulting engineers for the project. It is already reported to be preparing to commence deliveries of machinery to Pakistan.

The proposed steel factory will be located at Kot Adu on the Indus, north of Karachi. Natural gas at Sui in Baluchistan—about 200 miles from Kot—will be piped to Kot and also to the industrial area of the Punjab around Lahore. The gas will be utilised to drive the turbines of a 120,000-kilowatt electricity works to be built at Kot. More electricity is expected to be available later from a new Indus dam planned near Kot. Already tenders have been invited for the supply of 40,000 tons of steel piping necessary for the long pipeline.

The aggregate annual capacity of the pilot steel plant is estimated at 55,000 tons. After the pilot scheme is completed, the capacity of the steel works will be increased to 300,000 tons per annum. This stage is expected to be reached in about two and a half years' time.

Evacuee Bank Accounts

It is gratifying to be told that India and Pakistan have at last amicably settled all outstanding problems relating to movable property of evacuees and bank accounts. This is the result of the Indo-Pakistan Conference held at Karachi recently. The Indian delegation to the Conference was led by Mr. Mehr Chand Khanna, Union Minister for Rehabilitation, while Pakistan's delegation was led by Sardar Amir Azam Khan, Pakistan's Minister for Refugees and Rehabilitation. The two delegations held a series of discussions on the questions of transfer of bank accounts under the Banking Agreement of 1949 and the bulk release of lockers and safe deposits under the Movable Property Agreement of 1950. An agreed procedure for effecting such transfer has been evolved.

The decisions are subject to ratification by the Governments of the two countries. An Implementation Committee consisting of two or three representatives of each country is being set up for the overall supervision of the implementation of the decisions taken in respect of movable evacuee property, evacuee claims and the Banking Agreement. This Committee is to meet once a month in each country.

Cotton Research

The U.K. Government has agreed to supply Rs. 6 lakhs worth of equipment for Pakistan's Cotton Research Institute. The aid is being given under the Technical Co-operation Scheme of the Colombo Plan. The equipment will be for testing the suitability of new cotton-growing areas for assessing the value of different methods of cultivation, for developing new varieties, and for maintaining the purity of established types.

The Pakistan Cotton Research Institute is regarded as a vital adjunct to the expanding cotton textile industry. At this Institute, samples of cotton will be processed to determine their spinning properties, fibres and yarns will be lifted, and research will be carried out in such selected fields as utilisation of cotton crop by products and biological studies of insect menace.

Sugar Mill for E. Bengal

The Pakistan Industrial Development Corporation is reported to have completed the preliminary work on the construction of a new sugar mill at Mahimaganj, Rangpur, in East Bengal. The proposed mill will have a daily cane-crushing capacity of 54,000 maunds. The machinery and equipment required for the mill which have already been shipped from Germany are scheduled to reach Chittagong by July next.

The aforesaid mill is one of the two mills which the P.I.D.C. proposes to set up in East Bengal on the recommendations of the E. Bengal Provincial Industrial Advisory Council for making the Province self-sufficient in sugar.

PROGRESS OF CO-OPERATIVE MOVEMENT

SOME UNSATISFACTORY FEATURES HINDER GROWTH

THOSE who are concerned with the reorganisation of the Co-operative Movement in India will find much food for serious thought in the *Review of the Co-operative Movement in India* 1950-52, just released by the Agricultural Credit Department, Reserve Bank of India. The appearance of the *Review* is timely, in that the data on the growth of co-operation in India should prove to be of valuable assistance particularly to Members of Parliament, who are now required to examine several legislative measures calculated to expand co-operative credit in India. Its chief utility lies in the insight it gives into the present position of the co-operative credit structure, the activities of the different types of co-operative institutions and their shortcomings, co-operative production and marketing and the role of State aid and State control in the reorganisation of the Co-operative Movement.

In several directions, the *Review* makes encouraging reading. The data reveal that the progress made by co-operative societies in India during the years 1950-52 was by no means inconsiderable, as will be clear from the table below:

Year	No. of societies	Membership (Lakhs)	Working capital (Rs. crores)
1949-50	173,090	125.61	233.10
1950-51	181,190	137.15	275.85
1951-52	185,650	137.92	306.34

It will be seen that, as between 1949-50 and 1951-52, the number of societies in India rose from 173,000 to 186,000, that is a rise of 7.3 per cent. In the same period, their membership increased from 125.61 lakhs to 137.92 lakhs, the increase in this case being 9.8 per cent. In the case of working capital, however, the improvement was marked, in that it advanced from Rs. 233.10 crores to Rs. 306.34 crores, representing thus a rise of 31.4 per cent. This overall progress is attributed to implementation of schemes of reorganisation and development in the areas of former princely States and in other regions.

Another feature of the Movement during the two-year period under review relates to the manner in which it was geared to the requirements of national economic policy. Thus, co-operatives played a notable role in the Government's policy of increasing agricultural production, by undertaking provision of credit, supply of seed, fertiliser, etc. There was also a shift in the lending policies of certain land mortgage banks in favour of productive loans. Efforts were made by co-operatives to enter the field of large-scale mechanised industry, too, as witness the starting of a co-operative spinning mill in the Madras State and a sugar mill in each of the States of Bombay and Madras. Co-operatives helped the State in its work of rehabilitating groups of people placed in an economically disadvantageous position such as refugees, handloom weavers, ex-toddy tappers.

Agricultural Credit Societies

As in the past, agricultural credit societies still form a large proportion of the total number of co-operative societies, though their predominance declined slightly from 69 per cent. of the total to 64 per cent. in the period under review. This slight reduction is attributed to an increase in the number as well as in proportion of agricultural societies in the three years ended 1951-52. But there was a marked rise in the working capital of agricultural credit societies which rose from Rs. 35.22 crores, in 1949-50, to Rs. 46.82 crores in 1951-52. An analysis of the composition of working capital shows that the dependence of societies on borrowings from central financing agencies became more pronounced during the years mentioned above. This is reflected in the table below:

(In crores of rupees)

	1949-50	1950-51	1951-52
Owned funds	15.29	17.26	19.21
Deposits	3.92	4.29	4.23
Other borrowings	15.99	19.40	23.37

The table above reveals that, while the requirements under aggregate working capital were steadily rising, the societies were not able to make a proportionate addition to their owned funds or deposits. Thus, at the end of 1951-52, deposits were larger at Rs. 4.23 crores only, as compared with Rs. 3.92 crores at the end of 1949-50. Expressed as a percentage of working capital, they show a fall from 11 per cent. to 9 per cent. during the period. On the other hand, the proportion of other borrowings rose from 45 per cent. to 50 per cent. Commenting on this important feature, the *Review* observes—and this needs to be underlined as it relates to one of the fundamental weaknesses of the co-operative Movement in India—as follows: "The increasing dependence on borrowings from financing agencies for working funds throws into relief the fact that the primary objective of co-operative credit movement, viz., the promotion of thrift and savings, has largely remained unfulfilled in practice."

The financing agencies, particularly apex and central banks, in their turn, had to resort to increased borrowing elsewhere. Although the amount of share capital and reserve funds of these agencies rose in 1950-51, their proportion to total working capital showed little change at 11 per cent. Their deposits registered an upward movement in 1950-51, but the trend suffered a reverse in the following year in the case of apex banks, and remained more or less stationary in the case of central banks. This was due to the fact that the period under review witnessed tight conditions in the money market. The financing agencies sought to meet their demand by borrowing from the Reserve Bank of India. The *Review* observes: "While the demand for funds from the Movement tended to rise in step with the growing scale and diversity of its operations, two features presented themselves in regard to the supply of such funds; on the one hand, credit from the Reserve Bank for the financing of seasonal agricultural operations and marketing of crops showed signs of becoming more freely available and, on the other, efforts to retain existing deposits and to add to them proved increasingly hard."

High Rates of Interest

Apart from the lack of adequate owned funds, the Movement continues to suffer from other unsatisfactory features. Interest rates, for instance, are very high in certain regions. They are as much as 12 to 15 per cent. in U.P., 12½ per cent. in West Bengal, and 12 to 19 per cent. in Vindhya Pradesh. In certain other States, however, relatively lower rates are charged. It is 6¼ per cent. in Madras and 6¼ to 10-15/16 per cent. in Bombay. It is common knowledge that even these rates are considered to be high from the point of view of the borrowing capacity of the cultivator, while the financing agencies, for their part, complain that the rates charged by them are not remunerative. Their failure to attract deposits at low rates, the inadequate volume of their transactions and the high rate at which the financing banks provide them with funds are responsible for the high rates charged by the financing agencies on loans to rural societies. Of course, funds of considerable magnitude made available by the Reserve Bank at 1½ per cent. per annum on agricultural loans have contributed towards lowering the rates of interest, but such outside assistance can hardly be expected to prove a permanent remedy for cheapening rural credit. It should be achieved by the institutions in three ways, (a) by expanding their transactions, (b) by augmenting their deposits through mobilising rural savings, and (c) by rationalising and strengthening the central financing agencies.

For a considerable time now, the enlargement of multipurpose societies in preference to single-purpose credit societies has been an accepted policy of State Governments. There has, as a result, been an increase in the number of these societies from 29,525 in 1949-50 to 39,930 in 1951-52. Their membership too has risen from 15 lakhs to 21 lakhs. Similarly, the working capital of these societies has advanced from Rs. 7.55 crores to Rs. 13.33 crores. But the bulk of their funds has come from Central financing agencies rather than from their owned resources. A point to be noted is that the multi-purpose idea gathered momentum under conditions created by war. It prospered, because these societies handled controlled commodities during the war. With the removal of controls and the return to competitive trading, the favourable conditions under which they flourished disappeared. Their non-credit business declined and, consequently, their incomes dropped. They are now struggling to adapt themselves to the changed conditions. The *Review*, therefore, is quite pertinent when it observes that "the aim of covering through these societies the entire social and economic life of the cultivator remained unfulfilled." It traces the poor progress of multi-purpose societies to the limited resources, the absence of competent technical personnel, lack of assistance from some financing agencies and disloyalty of most members of the societies. These drawbacks should be tackled first, if the multi-purpose societies are to play their role in the rehabilitation of rural society.

Role of State Aid

Last but not the least of the weaknesses of the Co-operative Movement in India is the undue importance attached to the role of the State in the reorganisation of co-operative credit. Three broad principles underlie the contemplated expansion of the credit movement. First is the acceptance of a pyramidal pattern of credit structure, with the apex institution at the top, the central or district banks at the middle, and primaries at the base. The second principle is based on strengthening the institutions at each level in respect of finance as well as organisation through internal reform as well as external assistance from the State and the Reserve Bank in various forms. Provision of adequate trained personnel to these institutions forms the third plank. The point is that the responsibility for putting these three principles into practice is laid on official shoulders, and where officialdom predominates, red-tapism and rigid practices are bound to appear and these, in their turn, would render the whole Co-operative Movement an artificial agency rather than a democratic organisation enjoying freedom to develop on lines most suited to its growth in different parts of the country. It is this sense of feeling which often makes one doubt the advisability of making the Co-operative Movement a full-fledged State-sponsored activity.

GRINDLAYS BANK LTD.

In distinct contrast to the experience of Indian Scheduled banks during the past year, the profit of Grindlays Bank Ltd. (General Manager in India: Mr. A. Simpson) for the year ended 31st December, 1954, has suffered a shrinkage of Rs. 3.39 lakhs, that is, from Rs. 4.51 lakhs to Rs. 1.12 lakhs. This decline shows that the downward trend noted in the previous two years has persisted, the profit having dwindled from Rs. 13.14 lakhs for 1951 to a mere Rs. 1.12 lakhs for the year under review.

The following comparative table brings out clearly how the profit of the Bank has dwindled during the past three years:

(In lakhs of rupees)

	1954	1953	1952	1951
Interest and discount earned ..	80.15	84.89	85.34	83.11
Commission and Exchange ..	25.98	27.27	26.13	30.10
Interest paid	7.77	8.44	6.76	4.74
Expenses	47.23	48.24	47.54	45.29
Depreciation and repairs ..	0.06	0.99	0.06	0.06
Profit	1.12	4.51	9.14	13.14

The decline in the main sources of earnings, namely, "interest and discount" and "commission and exchange," as also in interest paid, indicates that the Bank's turnover must have declined during the year under review. Expenses of the Bank, which had gone up by nearly Rs. 3 lakhs in the previous two years, have dropped by only Rs. 1 lakh.

The balance-sheet of the Bank as on 31st December, 1954, discloses an expansion of Rs. 36 lakhs to Rs. 9.89 crores in its deposits, thus more than offsetting the decline of Rs. 25 lakhs noted in the previous two years. There were no outstanding borrowings from other banks as at the close of 1953, but at the end of 1954, they amounted to Rs. 3 lakhs. Bills for collection (contra item), which had fallen by Rs. 2.11 crores in the previous two years, have declined further by Rs. 41 lakhs to Rs. 78 lakhs. Acceptances, endorsements and other obligations have also dropped from Rs. 1.65 crores to Rs. 1.64 crores.

On the assets side, the Bank's advances have receded by Rs. 1.82 crores to Rs. 4.67 crores. Of these advances, loans, cash credits and overdrafts have declined from Rs. 5.40 crores to Rs. 3.48 crores, while bills purchased and discounted have risen from Rs. 1.09 crores to Rs. 1.18 crores. Investments (shown at below market value) have been strengthened from Rs. 3.09 crores to Rs. 3.86 crores and cash balances and money at call from Rs. 1.37 crores to Rs. 1.86 crores.

FINANCIAL RESULTS OF LLOYDS BANK

UPWARD TREND IN PROFIT MAINTAINED —PART OF RESERVES CAPITALISED

A VERY high level of business activity, as reflected by the rise in advances and the strengthening of the holdings in British Government securities, have been the main factors responsible for the further improvement in the earnings of Lloyds Bank Ltd. (Chairman: Sir Oliver Franks, London), for the year ended 31st December, 1954, notwithstanding the rise in operational costs. The profit of the Bank has recorded an increase of £102,291 over that for 1953 to £2,186,072, thus maintaining the upward trend since 1946. It must, however, be noted that the extent of rise in profit for 1954 is less than that (£119,116) noted a year ago and falls very much short of the increase (£148,807) recorded in 1952. Thus, the pace of increase in the Bank's profit has slowed down in recent years and this is attributable to no less a cause than the mounting administrative costs.

With the undistributed surplus of £555,780 brought in from 1953, the profit available for appropriation amounts to £2,741,852, as against £2,502,023 in the previous year. The Directors have transferred £500,000, same as in the previous year, to the general reserve, but have raised the allocation to the reserve for future contingencies from £300,000 to £500,000. The dividend on the 'A' shares has been raised from 14 per cent. to 15 per cent. (less tax), by stepping up the interim dividend from 6 per cent. to 7 per cent., the final one being maintained at 8 per cent. It may be recalled that the dividend on these shares had been raised last year from 12 per cent. to 14 per cent., by enhancing the final distribution from 6 per cent. to 8 per cent. The distribution of the dividend on the 'A' shares has taken up £1,185,769 and that on the 'B' stocks has absorbed £39,526, leaving a surplus of £516,557 to be carried forward.

Besides the increase in dividend, the holders of 'A' shares have since the close of the year, received another 'gift' by way of an increase in the paid-up value of the shares from £1 to £1 5s., thereby reducing the uncalled liability from £4 to £3 15s. per share. This has been done by capitalising a sum of £3,593,239, being part of the sum standing to the credit of the general reserve. The Directors say that the unpaid balance of £3 15s. per 'A' share could be called up only in the event of liquidation of the Bank. This means that, for all practical purposes this liability has been eliminated, because it is unthinkable that this 278-year old bank would ever be wound-up. The elimination of that part of the liability on the shares which could be called up at any time at the option of the Directors is in line with modern practice. The Directors have also announced their intention to recommend in due course a dividend of 12 per cent. for the current year on the 'A' shares in their new form. This will represent an equivalent of 15 per cent. on these shares in their old form, that is with a paid-up value of £1 each. This is, of course, subject to profits being maintained during the current year. In other words, the distribution to the 'A' shareholders will be maintained, profit permitting. The aforesaid intention of the Directors to pay a dividend of 12 per cent. on the increased capital was announced long before the British Budget for 1955-56 was presented. Under the Budget proposals the shareholders will stand to benefit by the reduction in the standard rate of income-tax, so that the net return to them will be more than what they have received for the past year.

The reserves of the Bank as at the close of 1954 amount to £17 million. Following the capitalisation of a sum of £3.59 million, the reserves have since been reduced to £13.41 million, but this decline has been made good to some extent by the transfer of £1.09 million (£1,093,239 to be precise) from the contingency account to the general reserve, thus bringing the total reserves to £14.5 million. The Bank's deposits (including contingency accounts) have swelled by £41.27 million to a fresh record level of over £1,244 million. After two years of successive decline, the Bank's liability for acceptances, endorsements, guarantees and other obligations (contra item) has staged a sharp rise of £36.27 million to £131.05 million. It, however, falls very much short of that at the close of 1951. On the assets side, loans and advances have recorded an increase of £12.21 million, in refreshing contrast to the decline of £20.80 million in 1953 and £32.12 million in 1952. Thus, the increase in loans and advances has not made good even the decline witnessed in 1953. The Bank's holdings of British bills of exchange have fallen from £6.82 million to £3.10 million. There has, however, been an increase in the holdings of British Government Treasury Bills from £234.60 million to £248.91 million. Dominion, Colonial and Foreign Bills stand reduced from £5.74 million to £2.78 million. The Bank's investments in Government securities have been strengthened by £14.47 million to £424.52 million. Of these, investments in British Government securities aggregate £377.81 million and are all redeemable at fixed dates, the majority maturing within 10 years. The market value of these and other quoted investments as on 31st December, 1954, was higher than the book value. Cash balances have been maintained at a slightly higher level.

The working of the Indian branches of the Bank during the year ended 31st October, 1954, has resulted in a profit of Rs. 16.39 lakhs, representing a sharp fall of Rs. 10.17 lakhs from that earned in the previous year. Income from "interest and discount" has gone up slightly from Rs. 126.37 lakhs to Rs. 126.80 lakhs, while that from "commission and exchange" has suffered a small decline from Rs. 34.63 lakhs to Rs. 33.94 lakhs. The outgo by way of interest paid on deposits and borrowings has gone up from Rs. 37.64 lakhs to Rs. 41.85 lakhs and expenses (other than depreciation on Bank's property) have risen from Rs. 92.74 lakhs to Rs. 98.77 lakhs.

The Bank's deposits as on 31st December, 1954, show an expansion of Rs. 2.30 crores to Rs. 39.80 crores. Inter-bank borrowings have grown from Rs. 40 lakhs to Rs. 1.49 crores. Loans, cash credits and overdrafts have risen from Rs. 14.26 crores to Rs. 15.06 crores, bills purchased and discounted from Rs. 2.41 crores to Rs. 2.54 crores. Investments have been strengthened from Rs. 19.91 crores to Rs. 20.44 crores and are shown at or under market value. Cash on hand and balances with the Reserve Bank and other banks aggregate Rs. 3.32 crores, as against Rs. 3.16 crores a year ago. Money at call and short notice amounts to Rs. 2.60 crores, as against *nil* at the close of 1953.

The following comparative table brings out the salient features of the Bank's balance-sheet as at the close of the past four years:

(In thousands of £'s sterling)

	As on 31st December			
	1954	1953	1952	1951
Capital	15,810	15,810	15,810	15,810
Reserve fund ..	17,000	16,500	16,000	14,800
Undistributed surplus ..	617	556	418	597
Deposits	1,244,306	1,203,039	1,163,011	1,169,647

SWEDEN RAISES BANK RATE

An increase in the Swedish Riksbank's discount rate from 2½ per cent. to 3½ per cent., effected on the 19th inst., was one of a series of anti-inflationary measures adopted by the Swedish Government this month. The other measures included the decision (a) to issue a 24-year loan of an unspecified amount, bearing interest at 4½ per cent. per annum, (b) to enhance the rate of tax on company incomes, and (c) to draw up a plan for encouraging voluntary savings.

Following the rise in the Bank rate, commercial and savings banks in Sweden decided to raise their rates of interest on both deposits and loans by 1 per cent. on an average.

MODIFICATIONS IN CLOTH EXCISES

REACTION OF MILLOWNERS

FOR the second time since he first presented his budget proposals for 1955-56, the Union Finance Minister has modified the excise duties on cotton fabrics. Moving for consideration the Finance Bill for 1955-56 in the Lok Sabha on Monday last week, the Finance Minister announced four important changes. First, the classification of cotton fabrics into four categories, namely, coarse, medium, fine and superfine, as it was prior to 1st March, 1955, has been restored. The definition of fabrics has also been suitably modified, taking the average count of the yarn as the basis for classification, instead of the count of the warp yarn only. In other words, the average counts of the aforesaid four categories of cloth are (a) up to and including 16s. (b) 17s to 34s both inclusive, (c) 35s to 47s both inclusive and (d) 48s and above. Secondly, the original proposal in the Finance Bill of taxing superfine cloth at As. 2-6 per square yard has been changed to As. 2 per square yard, as the former is considered to be too heavy. Thirdly, the duty on fine cloth has been raised from 12 pies to 15 pies per square yard, which, in terms of linear yard, is roughly equivalent to what it was before 1st March, 1955, that is, 18 pies per yard. Fourthly, the handloom cess of three pies per linear yard which was being collected on fabrics of cotton (as also on artificial silk and woollen cloth) is converted into a cess of three pies per square yard. This will bring the unit for assessment of the cess in line with that for the basic excise duties.

The Finance Minister's decision to enhance the excise duty on fine cloth and to calculate handloom cess on the basis of square yard and not linear yard is, indeed, regrettable. These two changes will raise the tax burden on the cotton mills to the extent of Rs. 1.6 crores and Rs. 1.4 crores, respectively, or Rs. 3 crores in the aggregate. This is not a small burden, considering that the purchasing power of people is getting restricted. It is reported that the mills are finding it difficult to sell their production of fine and superfine cloth, owing to consumer resistance. In these circumstances, it will be difficult for the mills to pass on the incidence of excise duty to consumers by a straight increase in prices. Unless, therefore, the Finance Minister reduces the excise duty, the mills are likely to find themselves in a serious plight. That there is no exaggeration whatever in this view will be evident from the setback to production of fine cloth. The quantity of this variety of cloth actually produced during the calendar year, for instance, was substantially lower at 476 million yards, as against over 838 million yards in the previous year. The downward trend in output would appear to have persisted in the current year also.

Excise on Superfine Cloth

Although the Finance Minister has reduced the excise on superfine cloth by half an anna, the incidence of duty that actually falls on it is more than that prevailing prior to the presentation of the Budget statement on 28th February, 1955, as will be seen from the following table:

Excise duty (including handloom cess) on superfine cloth with an average width of 47"

(In pies)

New excise tariff as announced on 18th April, 1955, on square yard basis ...	27
In terms of linear yard, the above rate of duty works out to	33¼
Pre-budget duty on linear yard basis ...	33
Net increase in the rate per linear yard over pre-budget level	2¼

Indeed, the incidence of excise on superfine cloth is, as Mr. J. C. Burns, Deputy Chairman of the Millowners' Association, Bombay, stated, in the course of his speech at the annual meeting of the Association held in Bombay last week, "still extremely heavy." Assuming that the average width of superfine cloth is approximately 47, the excise duty (including the handloom cess) on cloth the ex-mill price of which is As. 12 per linear yard equals, Mr. Burns estimates, as much as 24.48 per cent. The following figures as cited by him will give some idea of what excise means:

Ex-mill price (Annas per yard)	*Excise* (Per cent.)
12	24.48
14	20.98
16	18.36
18	16.32
20	14.69
22	13.35
24	12.24

According to Mr. Burns, the largest proportion of superfine cloth sells between As. 12 and Re. 1-8 per yard, so that the incidence of excise on this category remains high and averages no less than 17.2 per cent. On a total quantity of about 312 million yards of superfine cloth, the excise (including handloom cess) is estimated to yield Rs. 5.73 crores, as against the total amount of Rs. 28.4 crores expected to be received from excise on all varieties of cloth during 1955-56.

Incidence Very Heavy

Mr. Burns put forward a strong plea for sympathy for the superfine section of the Indian cotton mill industry, which, he said, produced goods which were a necessity in this country with its hot climate. And he added that, in no circumstances could superfine cloth be called a luxury article. Elucidating this point, Mr. Burns observed:

"The name 'superfine' is in a sense an unfortunate one. It appears to suggest a luxury article, which, in a country today advocating austerity, detracts from the merits of superfine. There are four varieties of cloth, as classified by the Textile Commissioner—coarse, medium, fine and superfine. These descriptions refer to the fineness or diameter of the threads used in their construction. In a country with a warm climate, fine cloths become more of a necessity than a luxury and, in the summer season, superfine cloths are worn by all classes and sections of the population. India has a tradition for fine cloths and led the world in the manufacture of fine fabrics. Indian muslins were world famous at a time when the world generally clothed itself with the coarsest of weaves. But today, on the basis of the tendency to regard superfine as a luxury, this section of the industry is subjected to an excise which seems out of proportion. I would not wish to appear ungrateful for the reduction announced on Monday afternoon (18th April, 1955)—far from it—but I would, nonetheless, like to point out that the incidence of excise on superfine is still extremely heavy."

There is considerable force in these observations of Mr. Burns. It is, however, doubtful if the Finance Minister will be willing to make any further modifications in excise duty.

When a clause-by-clause debate on the Finance Bill took place, Mr. N. V. Gadgil criticised the Government for having reduced the excise duty on superfine cloth and alleged that the Government had yielded to pressure groups from Ahmedabad mills which account for a large proportion of this variety of cloth produced in this country. Mr. T. T. Krishnamachari intervened in the debate and declared that, if the Government had not been courageous enough to make the changes in the taxation proposals it did, industries would have been ruined, a view remarkably similar to the one expressed by this journal when it commented on the budget proposals. Mr. M. C. Shah, who replied to the debate on behalf of Mr. Deshmukh, characterised the insinuation of Mr. Gadgil, a member of the ruling party, as being the voice of a desperate person. Dismissing the charge as wholly untrue, he said that, despite the reduction in the rate of duty, the reduced duty was somewhat more than the one prevailing before the Budget day, as a result of the change in the unit basis for purposes of both the excise duty and the handloom cess. He was really very effective when he added that the duty on fine cloth, which was produced in rather great quantity by the Ahmedabad mills, was first proposed at one anna and then revised to one anna and three pies. As was pointed out by us last week, the changes made in the taxation proposals were dictated not by any desire on the part of the Government to do the industrialists a favour but by the realisation that they were necessary in the larger interests of the country.

WOOL PRICES

The downward trend in wool prices would appear to have been arrested, although the average price for the current season (1954-55) is expected to be lower by 11 per cent. as compared with the previous year. Wool prices in the next few months, the Australian Bureau of Agricultural Economics states, will be maintained at their present levels. In support of this view, the Bureau points to the increase in consumption. According to it, one important factor is the likelihood of a rise in the demand for wool in America during 1955. The continued steadiness of raw wool prices should assist American manufacturers to rebuild trade stocks which are at a low level. The improvement in retail sales, new Government orders for wool textiles, and reorganisation of mills are the other pointers to a healthier market for wool in the U.S.

The fall in wool prices that has been in evidence in the past year or so is attributed to the tendency among manufacturers at all stages of the woollen industry, especially in America and the U.K., to adjust their buying only to meet orders already in hand. This has resulted in the carrying of smaller stocks than usual. The stable wool prices at the existing lower levels, it is, however, felt, will have a beneficial effect on the wool market, in general, in that they will induce manufacturers and wholesalers to place forward orders and rebuild stocks.

TEXTILE TRADE IN O.E.E.C. COUNTRIES

A scheme for liberalising trade in printed textiles in the countries of the Organisation for European Economic Co-operation (O.E.E.C.) has been evolved by Prof. Wisselink, of the University of Rotterdam. The scheme envisages immediate abolition of import duties on printed textiles, if necessary, at the same time maintaining or re-introducing a provisional quota system. It also envisages control over export rebates and special fiscal facilities. The scheme was discussed by the delegates to the last annual meeting of the International Federation of Textile Printers held at Scheveningen. The decisions taken at the meeting are, however, not made known.

Prof. Wisselink considers that the present half-way position in the European liberalisation of printed textiles is untenable, especially for small countries. In his considered opinion, the creation of one big free West European market is essential, since it is the only way to achieve a considerable increase in production runs and a cut in cost prices. To quote him: "Only the creation of one big European market, together with close co-operation between West European textile industries, will enable Western Europe to compete successfully with India, the U.S., Japan and the U.K." Prof. Wisselink estimates that the O.E.E.C. countries have a total over-capacity of 700 million metres of textiles that have to be sold in the world market.

HANDLOOM INDUSTRY

The Government of India has decided to strengthen the Central Marketing Organisation for Handloom by having two headquarters—one for the northern zone and the other for the southern zone—each having four different regional offices. This information was furnished by Mr. V. Nanjappa, Textile Commissioner and Chairman of the All-India Handloom Board, at the meeting of the Board's Standing Committee held in Bombay recently. Referring to the schemes for developing the handloom industry, Mr. Nanjappa disclosed that the total expenditure incurred by the Governments of 12 States which had supplied figures till the end of March, 1955, was Rs. 2.57 crores, out of a total amount of Rs. 6.43 crores sanctioned. The Central Government, it is said, has agreed to provide a sum of Rs. 5 crores for the development of the industry during 1955-56 which, together with the unspent balances of the previous year, would make available Rs. 8 crores to the State Governments for expenditure in the current financial year.

The Standing Committee considered, among other things, a scheme for the training of employees of weavers' co-operative societies and apex bodies and subsidy for the running expenses of production-cum-sales societies and yarn distribution societies. The Committee decided that the All-India Handloom Week should, in future, be held in the first fortnight of February each year.

LOANS TO SPINNING MILLS

Replying to a question in the Rajya Sabha, the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, said the other day that, while the Madras Government had drawn a loan of Rs. 10 lakhs sanctioned for the spinning mill at Tirunelveli, the Andhra Government had not yet drawn the loan of an equal amount for the mill at Guntakal. He added that the loan to the Madras Government was recoverable in five years and the first instalment was recoverable in November, 1954. Replying to a further question on the subject, Mr. Krishnamachari said that the State Governments had been told that they were responsible for repayment of the loans to the Government of India.

STABLE COTTON PRICES VITAL TO FUTURE OF CLOTH INDUSTRY

WORKERS' WAGES RAISED

From Our Special Correspondent

MANCHESTER, *19th April*

MANCHESTER LETTER

IT has been an important week so far as political developments in the United Kingdom are concerned. Industry as a whole is vitally affected by moves to hold a General Election on 26th May while uncertainty over what the Chancellor of the Exchequer may do in his Budget has also been a contributing factor.

At least it is now known that the prospect of a new Government will be relieved by the end of next month, although many of the other current uncertainties may well be prolonged. At the time of writing the Budget proposals are still a secret but there has been more than usual interest in Lancashire about the Chancellor's statement this year. The view has been gaining ground in the cotton industry that at long last something will be done to deal with the now universally condemned purchase tax. In fact, it has been suggested that a reply to the deputation which visited Sir Winston Churchill last month has been deliberately withheld in order not to anticipate the Chancellor's statement.

It has been frequently stressed that lack of confidence about the future is the basic cause of Lancashire's troubles. They cannot be cured or even eased until not only the cloth import problem is resolved. It is essential also that some degree of stability in raw material rates is obtained and this can only come from appropriate action by the authorities in the United States to gain control over the surplus supplies of cotton which exist.

Conflicting advices continue to be received from across the Atlantic about the probable measures to be taken in this connection. Mr. Benson, Secretary of Agriculture, who at first was quoted as saying that plans would not be formulated for another two months, has later given an indication that no subsidy is contemplated.

The very fact that such contradictory statements are being made leads inevitably to wider fluctuations in prices. The Liverpool market, no less than New York, has been influenced by these reports and rapid changes in values only add to the confusion of the already burdened cotton trader who is trying to assess future prospects.

Strength Amid Weakness

However dismal the prospects for the cotton trade may seem at the moment, it is as well to remember that there are compensating factors in the situation—although they may be few in number. If such a position had been reached perhaps 20 years ago, firms engaged in all branches of the industry would have been far more vulnerable than they are at present. Both individually and collectively the cotton trade in Lancashire has gained undreamed-of strength in the intervening years.

Some indication of the general experience of the trade can be obtained from comparing financial results announced by cotton spinning and weaving companies during the first three months of the year with previous figures. Taken as a whole, 19 spinning and weaving concerns announced financial statements during the first quarter of 1955 and their average profits have shown an increase from nearly £47,000 to over £61,000. The fact that the dividend paid, at 17 per cent., has been reduced by more than 1 per cent. is perhaps a recognition of the forbidding shape of things to come.

Allowing for the obvious backdating of all such results, which cover preceding periods when trade has varied, it is not likely that similar returns will be received from other textile companies for at least some months to come. Unless there is a sudden change in the situation, however, those firms the books of which are made up towards the end of the year may well begin to reflect the current stagnation.

Power to Recover

How long this already extended phase of slackness within the industry will persist cannot yet be gauged, but both spinners and weavers are now far more able to withstand adversity than they have ever been in the past. It is true that assets can be drained away by a prolonged era of bad trade, but it is equally a fact that Lancashire has not dissipated her resources over the prosperous decade through which the industry has passed since the war.

For example, the credit balances available for the 120 spinning and weaving firms covered by a special analysis at the end of last year amounted to nearly £16,500,000, giving an average of over £137,000 per company. In addition, the 12 leading combines carried forward almost £6,000,000 to their current accounts, an average of nearly £500,000 each.

Such financial strength was entirely absent before the war when many cotton companies had been struggling against serious difficulties ever since the slump in the 1920's. These credit balances, too, are only a small part of the main picture which is represented by assets and reserves totalling many millions of pounds.

Wages Matters

More than 40,000 workers in the British textile finishing industry have received wage increases as a result of variations in the cost of living index figure. The increases became operative from the second Friday in April, it was disclosed in Manchester.

The cost of living payment for adult male workers on time rates was increased from 26s. 7d. to 28s. 5d. weekly, giving a total payment of £6 8s. 5d. The payment for women workers was raised from 19s. 4d. to 20s. 8d. making a weekly rate of £4 9s. 2d. The increases operate under a cost of living agreement between employers and the trade union.

An application for a wage increase of 15s. weekly has been tabled on behalf of maintenance mechanics and electricians in Lancashire cotton spinning and weaving mills and in finishing works. The two unions involved in the claim—the Amalgamated Engineering Union and the Electrical Trades Union—will negotiate with spinning and weaving employers *jointly but* separate discussions will take place with employers in the finishing section.

Maintenance workers in spinning and weaving received a wage advance of 2½d. an hour, increasing the basic weekly rate to £8 14s. 5d. in October. The last pay award made to maintenance men in the finishing section was almost 12 months ago.

Lancashire Trade Missions

Tribute to the work of the Lancashire textile mission which recently visited India to explore the prospects for raising exports of British cotton goods to the Indian market has been paid at a meeting of the Manchester Chamber of Commerce.

Mr. H. E. Pardoe, the President, said some time must elapse before a detailed report could be made available by the delegation leader, the Hon. Angus D. Campbell.

"This is being keenly awaited, but meanwhile the Manchester Chamber and the industry generally must feel a deep sense of gratitude for the competent manner in which they have conducted their investigations, which it is hoped will lead to improved conditions for exports to the Indian market," said Mr. Pardoe.

The good wishes of the Chamber were also expressed to Mr. T. Gray Hill, who will be leading a Lancashire textile design mission to Japan on 30th April. The visit to Japan reciprocates the Japanese mission to Britain last October as a result of Lancashire complaints of "piracy" of British designs.

U.S. Interest in Lancashire

Heads of a number of U.S. firms will visit Lancashire this summer to see at firsthand the opportunities for expansion North-West England has to offer to American industry.

The visits will form part of business missions to Britain by U.S. industrialists, Mr. G. S. F. Ritson, Director of the Lancashire and Merseyside Industrial Development Association, said when he returned to Manchester after a tour of key American cities. A full report on the tour will be given to the General Council of the Association later this month.

In the four weeks he spent in the United States Mr. Ritson visited New York, Philadelphia, Boston, Chicago, Detroit, Cleveland and Pittsburg, contacting new firms and communicating with others which have already shown some interest in opening out in Lancashire.

"Getting them over here is essentially a long job, however," said Mr. Ritson. "But I am hopeful there might be developments from contacts I made in Boston and Pittsburg."

Mr. Ritson's visit was part of the Development Association's bid to attract a wider range of industry to Lancashire and so minimise the risk of unemployment which stems from over-dependence on the cotton trade.—*All Rights Reserved.*

VALUE OF MARKET RESEARCH IN PROMOTING USES OF COTTON

SIGNIFICANT RESULTS SEEN IN U.S.

BEING the leading cotton-growing and cotton-consuming country in the world, the U.S. is naturally interested in increasing the uses of cotton, so that the growers and all the interests connected with the marketing of cotton might benefit through such an increase. Much interest is naturally evinced in that country in "promotional" programmes which are designed to extend the consumption of cotton. A necessary basis for such a programme is the knowledge of the various uses to which cotton is put. The National Cotton Council of the U.S. has for some time now been engaged in research into the uses of cotton. An article on this aspect of the Council's activities by Mr. M. K. Horne, Chief Economist of the Council, which appears in the latest issue of the *Cotton and Allied Textile Industries*, the official organ of the International Federation of Cotton and Allied Textile Industries, Manchester, will be read with interest in this country which ranks next only to the U.S. as a cotton-growing and cotton-consuming country.

From the point of view of cotton men, a welcome feature of the trends in textile consumption in the U.S. is that the consumption of cotton has increased by 50 per cent. to nine million bales (of 478 lbs. each), as compared with 1930. This is the more remarkable because other consumer goods, such as automobiles and electrical conveniences, are also competing with textiles and also because cotton has had to yield ground to rayon in certain industrial uses; in tyre cord manufacture, for instance, rayon has displaced cotton to the tune of 50,000 bales. The increase in the consumption of cotton, in the face of those adverse factors, is attributed to "striking gains" in the clothing and household uses of cotton. Not only has there been a total increase in consumption, which must take place anyway in a country with a growing population and rising living standards, but there has been an increase in *per capita* consumption of cotton goods as well. Mr. Horne remarks that this gain for cotton is clearly the "work of quality improvement and sales promotion."

Market Research

Mr. Horne defines market research as an "orderly, systematic investigation and analysis of our end-use markets, such as the bag market and the carpet and rug markets." The U.S. National Cotton Council's market research programme, it is stated, consists of two parts. The first part, or what might be called the quantitative part, consists in measuring the size of each important end-use market. In sheets, shirts, towels and so on, they determine the quantity of cotton consumed annually and the quantity of each competing material consumed. These estimates, which are made year after year, give the total size of each of the markets and cotton's relative position within the market.

The second part of the programme is qualitative in nature, in that it seeks to determine why cotton is gaining or why it is losing in each market. He adds:

"We are constantly enquiring as to why cotton sells or fails to sell. What does the consumer like about it, and what does he dislike about it? What can be done that will cause the consumer to like our products better and to buy more of them? We explore the significance (1) of specific qualities, (2) of merchandising methods, and (3) of price in our effort to arrive at the best possible method of expanding consumption. The first part is obviously statistical in its nature, while the second part calls for projects of several types. We use polls of consumer opinion. We employ special surveys of end-use markets whenever these are made timely by any circumstance which seem to raise either a special danger or a special opportunity for cotton products. Most of all, we rely on periodic interviews with the leading retail executives of the country, to keep us informed and up to date on our market position with respect to the final consumer."

All this information is supplied to appropriate agencies which utilise it for promoting the use of cotton. Thus, the Sales Promotion Division of the Council uses it to form judgment as to what markets are useful for cotton and what markets need special promotional effort. The Technical Department studies this research information and supplies it to the agencies that are engaged in textile research, design and engineering. Information about the place of cotton in national economy is also supplied to the public, the administrators and the legislators. The dissemination of such information, it is stated, has proved "valuable in combating legislation that would discriminate against our products."

The author, however, recognises that market research could be easily overdone. Such research, he points out, is not an end in itself. A major portion of the budget of an organisation devoted to increased consumption of any article should be spent on promotion rather than on market research. At the same time, one should not underestimate the value of market research. Some textile executives question the value of market research, for they feel that they themselves know their markets well enough. Mr. Horne concedes that the textile executive knows a great deal about his markets. Even so, market research may shed some new light on those markets. Thus, the executive may know all about the immediate market which he serves "without necessarily knowing all about his ultimate market (that is, the final consumer's reaction to various end products of that cloth)." Market research will reveal why the final consumer buys a certain type of dress or drapery or automobile seat cover. Secondly, market research tends to give a more objective picture of the market situation; it eliminates the "human equation, the prejudice that we find (or at least suspect) in every human being." Thirdly, it aids judgment. Explaining this, Mr. Horne says:

"It is to the third point that I would give the greatest emphasis. There is a wealth of experience to prove that market research can increase the value of any man's knowledge, judgment, and intuitions. The broader a man's knowledge and vision becomes, the more he sees the wisdom of checking his viewpoint against the findings of objective research. Market research is surely not a substitute for business judgment—quite the opposite. It is an instrument for expanding the value of a business man's judgment, insights, and 'hunches'... Market research is helpful in cutting down the risk of mistakes and in reducing indecision as to programmes that ought to be undertaken."

The proof of the pudding is in the eating; market research must produce some tangible result. Can such research show any important gain to its credit? It can. Mr. Horne points out that, in the last decade, the Council realised that there was a possibility of developing large markets for all-cotton rugs or carpets. Through effective promotion, quality improvements, new merchandising methods, a new market for some 200,000 bales was developed. Again, cotton had lost heavily to rayon in men's sports shirts. It is now steadily regaining this market. By emphasising cotton's washability, resistance to hard wear and comfort, cotton goods are finding more extensive use in "informal wear." Finally, the Council is now "use-testing an experimental automobile seat cover which has been developed to embody just the qualities which market research has found to be most in demand." Thus, its market research programme supplies the Council with significant information about trends in the use of cotton and provides the necessary guidance for formulating the correct promotional campaign.

COIMBATORE MARKET COMMITTEE

The Annual Report for 1954 of the Coimbatore Market Committee, Tirupur, South India (Chairman: Mr. S. M. Kalidas), continues to be an informative document. Besides cotton, this centre handles groundnut and tobacco crops. As regards cotton, the Committee places the 1953-54 crop at 120,000 bales as against the official estimate of 97,000 bales. The total quantity of cotton marketed in the district during 1954 amounted to 150,000 bales. inclusive of arrivals of 30,000 bales from neighbouring districts as against 100,000 bales in 1953. The consumption of cotton by the Coimbatore mills during 1954 was about 187,000 bales consisting of about 87,000 bales Cambodia and Karungani, about 70,000 bales other Indian varieties and about 30,000 bales foreign cotton. Exports of cotton from the district to other centres in India amounted to 50,000 bales, and the year-end stocks of 18,000 bales.

As regards the 1954-55 crop, the Committee estimates the land under cotton and the yield at 375,000 acres and 100,000 bales respectively. The land under cotton consists of 137,000 acres of irrigated area and 40,800 acres of unirrigated area under Cambodia cotton and 5,000 acres of irrigated area and 133,000 acres of unirrigated area under Karungani cotton and 55,930 acres under M.U. 1 variety. Thus, the total area under Cambodia cotton is placed at 178,300 acres as against 109,750 acres in 1953-54 and the land under Karungani cotton at 140,770 acres, as against 125,250 acres in the previous season. The area under M.U. 1 is 55,930 acres, as against 45,000 acres in 1953-54. There has thus been an increase in the area under each of the three varieties of cotton. Despite the increase in acreage the crop, it is stated, is likely to be less than the 1954-55 season, since it has been adversely affected by the unfavourable weather conditions which prevailed during the period following the sowing of cotton. Unlike in the previous year, there have been no attacks of boll-worm.

The Committee has continued to publish the daily market reports which are so useful to the trade. The publication of monthly bulletins has been resumed with effect from January, 1955. An interesting feature of the work done by the Committee in 1954 was the publication of three leaflets in Tamil for the benefit of growers. In one leaflet the growers were urged to utilise the services of the regulated markets for selling their commercial crops. Another leaflet gave an imaginary conversation between two growers on the benefits of regulated markets, while the third leaflet described at some length the manifold advantages of regulated markets. It would appear that the Committee has submitted to the State Marketing Officer, Madras, a *kumni* song in Tamil—*kumni* is a rural tune—bringing out the advantages of regulated markets. We heartily commend this feature of the Committee's work to the attention of the authorities of all regulated markets in India.

After all, the problem of persuading the farmers to utilise the services of regulated markets is the same in all parts of India. They must be convinced that these markets offer them advantages which they can never derive in other centres. In this connection, the Committee makes certain interesting observations. The growers in the Coimbatore area, it is stated, are aware of the advantages of regulated markets. Nevertheless, they, in their "dire need for money," choose to sell their produce at their doors, to the agents of mills and traders, who pay cash and transport the produce in their lorries. It is only when credit facilities are provided, the Committee points out, the growers would be attracted to the regulated markets. Such facilities, the Committee rightly holds, are the *sine qua non* of regulated marketing of agricultural produce.

IT-9468

INTERNATIONAL FINANCE CORPORATION

SALIENT FEATURES OF ITS CHARTER

IN our last issue, a brief reference was made to the draft charter of the International Finance Corporation, which will be an affiliate of the World Bank. The draft Charter, or Articles of Agreement, has been circulated to all countries which are members of the Bank and is now ready for acceptance by member-Governments. Attached to the Charter is a memorandum explaining its main features. The next step will be for those Governments which desire to join the new organisation to take whatever legislation or other action that may be required to accept membership and to subscribe their respective share of the I.F.C.'s capital.

In a letter forwarding the Charter to member-Governments, Mr. Eugene R. Black, President of the World Bank, observes:

"The Executive Directors have devoted several months to the formulation of the proposed Articles of Agreement and explanatory memorandum and have approved them for submission to Governments. Although the Executive Directors' action has not committed Governments to join the International Finance Corporation the various views expressed by Governments have been carefully considered and fully discussed. It is my opinion that the proposed Articles of Agreement afford a most satisfactory framework for the esablishment and functioning of the new institution. I therefore recommend the proposed Articles of Agreement for early and favourable consideration ...

The basic objective of the Corporation is to further economic development by encouraging the growth of productive private enterprise in member-countries, particularly in the less developed areas, thus supplementing the activities of the International Bank for Reconstruction and Development (popularly known as the World Bank). In carrying out this purpose, the Corporation will:

(a) in association with private investors, assist in financing the establishment, improvement and expansion of productive private enterprises which would contribute to the development of its member-countries by making investments, without guarantee of repayment by the member-Government concerned, in cases where sufficient private capital is not available on reasonable terms;

(b) seek to bring together investment opportunities, domestic and foreign private capital, and experienced management; and

(c) seek to stimulate, and to help create conditions conducive to, the flow of private capital, domestic and foreign, into productive investment in I.F.C. member-countries.

Membership in the Corporation will be open to Governments which are members of the World Bank. The I.F.C. will have an authorised capital of $100 million, available for subscription by members in amounts proportionate to their subscriptions to the capital of the Bank. Subscriptions will be paid in gold or United States dollars. The authorised capital is divided into 100,000 shares of $1,000 each.

The United States would be the largest shareholder in the Corporation; its subscription would amount to $35,168,000. The United Kingdom would be the next largest shareholder, with a subscription of $14,400,000. The following list shows the capital available to some of the important countries:—

Countries	*In thousands of U.S. dollars*	*Countries*	*In thousands of U.S. dollars*
United States ..	35,168	Japan ..	2,769
United Kingdom ..	14,400	Australia ..	2,215
China	6,646	Italy	1,994
France	5,815	Indonesia ..	1,218
India	4,431	Brazil	1,163
Germany	3,655	Pakistan ..	1,108
Canada	3,600	Sweden ..	1,108
Netherlands ..	3,046	South Africa ..	1,108
Belgium	2,492	Denmark ..	753

The Corporation will come into being when at least 30 Governments have subscribed at least $75 million to its capital.

The I.F.C. will be affiliated with the World Bank in the following ways:

(a) Membership in the Bank will be a prerequisite to membership in the Corporation.

(b) Each Governor of the Bank representing a Government which joins the Corporation will become a member of the Board of Governors of the new institution.

(c) The I.F.C.'s Board of Directors will be composed of those Executive Directors of the Bank who represent at least one Government which joins the I.F.C.

(d) The President of the World Bank, who is Chairman of the Bank's Executive Directors, will also be Chairman of the Corporation's Board of Directors.

The Corporation will, however, be an entity separate and distinct from the Bank. The assets of the two institutions will be kept entirely separate, and the Corporation is prohibited from borrowing from the Bank.

The new institution will have its own President. He will be appointed by its Board of Directors on the nomination of the Chairman. Subject to the policy direction of the Board and the Chairman, the President will be responsible for the conduct of the Corporation's business.

The Corporation will make its investments without governmental guarantee. It will be authorised to make both fixed-interest loans and investments of other kinds. It may, for instance, buy securities which would give the Corporation a right to participate in the profits of an enterprise and which, when sold by the I.F.C. could be converted by the purchasers into capital stock. The Corporation itself, however, will not be authorised to invest in capital stock; nor will it assume responsibility for managing the enterprises in which it invests.

The I.F.C.'s charter gives it more latitude in financing private enterprise than the World Bank has. The Bank may lend to private borrowers only with a governmental guarantee; this has deterred both private *entrepreneurs* and governmental sponsors from seeking loans for private projects. Secondly, the Bank makes only fixed-interest loans, whereas the type of financing required for the establishment or expansion of a private enterprise is often venture capital as well as fixed obligations.

The Corporation will have authority to invest in any kind of productive private enterprise, including agricultural, financial and commercial undertakings; but its main emphasis is likely to be on industry. In addition to its financing operations, the I.F.C. will serve as a clearing house to bring together investment opportunities, private capital and experienced management.

In the case of an *entrepreneur* looking for capital and for technical skills from abroad, for instance, the Corporation would seek to interest investors outside the country who would be able to provide management experience as well as capital. Conversely, in the case of an *entrepreneur* interested in establishing or expanding an operation abroad, the Corporation would seek to recruit domestic capital and local partners in the country of investment.

In either case, the Corporation itself might invest in the enterprise. But it would do so only if it were satisfied that the private interests concerned were contributing a full share of the funds required, and that the remaining requirements could not be met from other private sources on reasonable terms. The Corporation will supplement, and not substitute for, private investment; as far as financing is concerned, it will regard itself as the last resort.

The Corporation will seek to revolve its funds by selling its investments to private investors whenever it can appropriately do so on satisfactory terms. The Corporation will be authorised to raise additional funds by selling its own obligations in the market, but it is not likely to do so in the early years of its operations.

Enterprises in which the I.F.C. invests will not, by reason of that investment, have any special status under domestic laws and regulations. Although the Corporation itself will have substantially the same privileges and immunities as the World Bank, its charter does not exempt it from applicable foreign exchange regulations on the transfer of earnings and of repayments of principal on its investments. In this respect, the I.F.C. will be in the same position as private investors generally.

a topic of current interest

An entry in the meter-man's book—to appear later as your electricity bill. And an item of expenditure however small should be economically justified. It's at this point, when you're working out costs, that we tell you about the economics of Philips Fluorescent Lighting. As a factor in raising output and maintaining a high level of production the value of adequate and correct lighting is now increasingly appreciated. Philips Fluorescent Lamps and Fittings give an ample supply of even, diffused, glare-free light. Add to these advantages the factor of economy in running charges: Philips Fluorescent Lamps give over three times more light, for the same amount of electricity, and last many times longer than incandescent lamps. All in all, with Philips Planned Fluorescent Lighting you get the most efficient lighting with the greatest economy.

CANE CULTURAL OPERATIONS IN U.P.

GOVERNMENT TO GIVE COMPENSATION TO CULTIVATORS

THE Uttar Pradesh Government's move to intensify the varietal, manurial and cultural operations in the sugarcane fields is a step in the right direction. This is part of the soil and zonal extension scheme. The Government proposes to pay compensation to those cane growers who permit it to try out such operations on their plots. The amount of compensation, which will be given in the form of free supply of manure, fixed at Rs. 150 per acre in the case of varietal trials and Rs. 200 per acre for manurial trials. Incidentally, it is said that about 30 varietal and 24 manurial trials are conducted on an average in cultivators' fields during a year.

The aforesaid decision seems to be a sequel to the lack of sufficient response and support from the sugarcane growers to the varietal, manurial and cultural operations, thanks to the financial loss involved. The operations are tested under the actual conditions of the growers' fields and, since these require many additional operations which do not conform to the normal practice, the sugarcane cultivators are very reluctant to carry them out. In order that trials may prove of value, they have also to be laid out according to statistical designs. This involves a further loss to the cultivators, as some land has to be left out without crop as plot and block boundaries. Besides, in all manurial experiments, a non-manure plot has to be provided along with the treated plots which too causes financial loss to cultivators.

Progress in Cane Cultivation

The need for intensifying development of sugarcane in Uttar Pradesh cannot be overemphasised. Although Uttar Pradesh is the major centre of the Indian sugar industry and accounts for more than 50 per cent. of the total sugar output, the sugar industry in the State has all along been in a none too happy position. For the progress in the primary stage of sugar industry—that is, cultivation of cane—has lagged behind that in the manufacturing stage—that is, production of sugar. Not only has the yield of cane per acre been very low but the quality of the cane also has been relatively poor, as compared with other sugar-producing States. Thus, the average quantity of sugarcane raised on one acre of land in the U.P. during 1953-54 was not more than 11.2 tons, as against 28.3 tons in Madras, 26.2 tons in Bombay and 17.1 tons in Mysore. Similarly, the recovery of sugar from cane in the U.P. was as low as 9.87 per cent., which compares unfavourably with 11.76 in Bombay, 10.82 in Hyderabad, 10.20 in Mysore and 10.06 in the Punjab.

A brief reference may be made to some of the results of research carried out in manurial and cultural operations at the important research stations in Uttar Pradesh during 1952-53. Experiments conducted at the Shahjanpur research station reveal that Co.S.510 has shown excellent performance in regard to both cane yield and juice consistently for three years. This variety is reported to be quite satisfactory in almost all zonal centres. The highest yield derived from the sugarcane variety under normal irrigation treatment among six other varieties is 42.3 tons (1952-53). Green manure for Co.453 varieties has resulted in stepping up the average yield of cane by about 6.6 tons per acre. The practice of soaking the setts in plain water for 24 hours before planting, it is claimed, will improve germination further and thereby raise the final yields. The placement of fertilisers at 6" depths has led to slightly higher uptake of nitrogen. In juice quality and fibre-content, Co.S.510 and Co.S.430 have been found to be more suitable for sugar manufacturing. An experiment carried out in order to observe the effect of fungicides on the resistance of varieties against red-rot has indicated that pre-sowing fungicidal treatments do not provide any appreciable protection against red-rot infection. The average loss of weight due to attack by termite is estimated at 29.8 per cent., by top borer at 23.6 per cent., by stem borer at 17.6 per cent. and by root borer at 9 per cent. The percentage loss of sugarcane juice on account of termite, top, and stem and rot borers is found to be 0.78, 0.48 and 0.01, respectively.

The sugarcane research carried out at the Muzaffarnagar station reveals that, of the 11 varieties tried, Co.S.469 has proved to be the outstanding as regards both yield (32.2 tons) and recovery (12.5 per cent.). The mixture of ammonia sulphate, groundnut cake and farmyard manure—each 40 lbs.—has given a per-acre yield of 27.3 tons of cane.

The standard varietal trial conducted at the Gorakhpur research station has shown that 30 to 50 per cent. more yields can be obtained from Co.S.443, Co.S.430, Co.S.517, Co.S.416 and Co.S.511 than the standard variety Co.453. Application of superphosphates has not shown any effect on cane yield or juice quality.

PLIGHT OF U.P. CANE GROWERS

A plea to the Government of Uttar Pradesh not to allow any sugar mill in the State to close till it has crushed all the cane supplies available in its area was put forward by the Executive Committee of the U.P. Co-operative Cane Unions' Federation in the course of a resolution adopted at a meeting held in Lucknow recently. The plea is based on the ground that a large quantity of sugarcane is standing in the fields in the different parts of the State and, unless suitable arrangement for its disposal is made, an appreciable quantity of cane would be lying unsold with the growers, causing considerable hardship. The Committee requested the Government to see that the entire standing crop of the cane growers is supplied to the sugar mills at the minimum price fixed by the Central Government. To quote it: "There should not be any objection on the part of the sugar mills to pay the minimum price fixed by the Government, as the cane this season is very healthy and the recovery is far better in comparison to previous years."

The anxiety of the U.P. cane growers over the surfeit of sugarcane supplies is understandable. But it will not be fair to compel the sugar mills to purchase all the cane that is available at the fixed minimum price, unless the Government guarantees the mills a fixed fair price. The profit margin of sugar mills has already fallen perceptibly, thanks to the heavy incidence of excise duty on sugar and to the marked fall in prices. What is worse, the sugar mills are reported to be facing the grim problem of disposing of the accumulated stocks. As was indicated in these columns last week, as much as 80 per cent. of the sugar produced in the current season is still lying unsold with the sugar mills. In these circumstances, how can the mills be asked not to cease crushing until they finish all the cane available in their area, unless the Government comes forward with some assurance to the mills in regard to the disposal of sugar at profitable rates?

SUGARCANE PESTS

One of the disquieting aspects of sugarcane cultivation in India is the great damage that is being caused by pests. The Agricultural Departments of the State Governments and the research laboratories have no doubt endeavoured to evolve methods to deal with these pests. But the problem as such has not been completely tackled. This is probably because adequate and proper attention has not been paid to the adoption of such measures as are introduced in the other leading sugar producing countries of the world. It is, for instance, stated that Hawaii has achieved considerable success in the matter of fighting the pests. Much significance is, therefore, attached to the proposed visit to Hawaii of Dr. E. S. Narayanan, Head of the Division of Entomology of the Pusa Institute, who has left for Washington under the T.C.A. programme to study work on biological control of insects in the U.S. During his stay in Hawaii, Dr. Narayanan is expected to study the methods adopted there for controlling sugarcane pests.

ACCIDENTS IN COAL MINES

DEBATE IN RAJYA SABHA

THE introduction in the Rajya Sabha recently of a non-official resolution calling upon the Government of India to take such measures as would assure, to the extent humanly conceivable, safety of working in collieries and to provide for deterrent punishments to those violating the safety provisions under the Coal Mines Safety Regulations, gave an opportunity to the members to discuss problems relating to working conditions in collieries. Although the resolution moved by Mr. S. Banerjee was rejected, Mr. Khandubhai Desai, Union Labour Minister, accepted the spirit behind it and gave categorically the assurance that the new regulations which were being finalised would be issued shortly. He revealed that the views of employers, workers and State Governments on the new regulations were being studied. The Government was awaiting the reports of Courts of Enquiry appointed to go into the recent mine accidents and, if necessary, would constitute, after the receipt of their reports, a committee to enquire into the general question of accidents.

Mr. Desai admitted that courts were not awarding deterrent punishments to those disobeying the safety regulations with the result that the offenders had been let off lightly. The Centre had, he disclosed, invited the attention of the State Governments to this question and suggested the appointment of special magistrates fully acquainted with the technical problems of working in collieries and having powers to award deterrent punishment to offenders. In the meantime, the Labour Minister stated that the Government was taking all possible steps to increase the frequency and the extent of inspection by strengthening the Directorate of Inspection.

It is common knowledge that coal mining is still one of the most dangerous occupations in the world. As pertinently pointed out in the I.L.O. report on "Safety in Coal Mines," published in 1953, "civilisation still depends on coal; it is unthinkable that the men who provide it should be needlessly killed or multilated." In the words of the United States Bureau of Mines: "Coal is one of the most important of all basic materials, not only in industry, but in all phases of modern life; without it, many industries could not function, hence the welfare of the industry as a whole is of prime importance to the life of the entire community and, in fact, the entire world."

Accidents in collieries in India have been latterly on an upward trend. As disclosed by Mr. Khandubhai Desai, the rate of fatal accidents declined from 1.36 in 1,000 in 1940 to 0.72 per 1,000 in 1950. Since then, it has gone up slightly. It was 0.90 per 1,000 in 1951, 0.91 in 1952, 0.97 in 1953 and 0.98 in 1954. The accidents in 1950 in Japan, it will be interesting to mention here, were 1.86 per 1,000, in the U.K. 0.83, in France 1.10, in the U.S. 2.15, in Canada 3.19 and in South Africa 1.66. It is said that the increase in accidents in India since 1950 is due to the inclusion of the collieries that were in the former Princely States; these collieries had not been taken into account in the statistics of accidents and inspected properly in the initial stages. The inspections in 1954 were, however, larger, being as many as 7,200, as against 6,469 in 1953, 5,978 in 1952 and 5,467 in 1951.

It is generally accepted that all responsibility for the prevention of accidents cannot be imposed on any individual in an undertaking. Accident prevention is virtually a task that requires the co-operation of all concerned, including Government, employers and employees. Safety in coal mining cannot be successfully promoted by legislation alone. There must not only be a means of securing the enforcement of legislation efficiently, but also safety activities of other kinds, such as research, education, training and propaganda. It is needless to add that much remains to be done in Indian mines. The workers themselves have to acquire safe working practices, as a number of accidents are caused by human failings, such as ignorance, lack of or improper training and faulty follow-up of the workers' initial training.

The demand for coal might increase by more than a third during the second Five-year Plan, according to Mr. K. C. Reddy, who stated in Parliament on the 22nd inst. that schemes for increasing the annual output to meet the increased demand were being drawn up by the Coal Commissioner, in consultation with the Planning Commission, for the consideration of the Government of India.

(Sd.) A. SIMPSON,
General Manager in India.

We have audited the foregoing Balance Sheet of the Indian Branches of Grindlays Bank Ltd., as at 31st December, 1954, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta, Madras, Delhi, New Delhi and Simla Branches and report that:—

(a) we have obtained all the information and explanations which we have required

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 29th March, 1955.

OUTLOOK FOR INDIAN TEA INDUSTRY

CONCERN OVER CONSUMER RESISTANCE AND INCREASING BURDENS

A NOTE of warning against drawing a rosy picture of the prospects for the tea industry was struck by Mr. B. K. Banerjee, Chairman of the Indian Tea Planters' Association, Jalpaiguri, in the course of his address at the annual general meeting of the Association held a few days ago. Mr. Banerjee was at pains to show that one bumper year did not justify the drawing of a rosy picture, because such prosperity was bound to be temporary. Mr. Banerjee was, however, not alone in taking a sober view of the industry's prospects, as it was only a month ago that the Chairman of the Indian Tea Association cautioned that the prosperous conditions would prove less permanent than was generally expected. This growing concern about the outlook for the industry is evidently born of the fear that high prices might bring problems and reactions which would "stick like the demon on the industry, just as the old man did on the shoulder of Sindbad the Sailor," even though the prices might decline.

The first and foremost of these problems and reactions is the consumer resistance to prices beyond a certain level. The steady decline in tea price at the London auctions from the peak of 7s. 1.09d. per lb. for North Indian tea, touched on 20th January, 1955, to 5s. 1.05d. at the sale on 31st March, 1955, is taken as an ominous portent. Beyond a certain price level, the consumer either cuts down his consumption or changes over to a cheaper substitute. After all, as Mr. Banerjee pointed out, tea is not an essential food, but a fashionable drink which becomes a necessity by continued habit. "There are teas which are cheaper to the consumer abroad than Indian teas," Mr. Banerjee said, "and there are also other beverages which are competing with tea; so, if Indian tea becomes too costly, the consumer has a wide range of cheaper substitutes to turn to."

Keen Competition

As an instance of how India and Ceylon, which share the bulk of the finance for tea propaganda by the U.S. Tea Council, are being slowly squeezed out of the field, because of the high price of their teas, by countries offering cheaper tea, Mr. Banerjee quoted some figures of imports of tea by the U.S. The quantity of tea imported by the U.S. increased from 86.8 million lbs. in 1951 to 115 million lbs. in 1954. Up to the year 1953, the countries which derived the largest benefits of the expansion of the U.S. tea market were India, Ceylon and Indonesia, Ceylon having the lion's share. In 1954, the Tea Council countries were able collectively to increase their exports by only 1.4 million lbs. or 20 per cent., while countries outside the Tea Council were able collectively to increase their exports by 67 per cent. Thus, British Africa and other African countries were able to step up their exports to the U.S. from 2.78 million lbs. in 1953 to 5.72 million lbs. in 1954. Similarly, Formosa shipped 4.80 million lbs., as against 1.87 million lbs. and others 5.4 million lbs., as against a mere 1.42 million lbs. Japan, which exports green tea, improved its position by sending 3.6 million lbs., as compared with 3 million lbs. Among the Tea Council countries themselves, Indonesia gained by 3.6 million lbs., thereby pushing up its exports to the U.S. by 32 per cent. over 1953; India raised its exports by only 9 per cent., while Ceylon's exports fell by 13 per cent. Thus, Ceylonese tea fetching the highest price in 1954 got "the hardest knock" in the American market. In the U.K. also, following the rise in tea price to peak levels in January this year, there was a fall in sales by 5 to 10 per cent., big buyers reduced their dealings and the grocers stayed fresh purchases. There was also a cut in price by blenders. A stalemate in auctions developed, followed by a dramatic drop in prices, and nobody can say at what level prices will stabilise themselves. Mr. Banerjee, therefore, expressed the industry's anxiety over the London auctions which draw about 50 per cent. of the world's exports and have a vital bearing on the prospects for tea trade in every country.

The high prices for tea naturally provide an incentive to over-production. "For a commodity like tea, the consumption of which cannot be speeded up at will," Mr. Banerjee observed, "unlimited production is a positive menace." In this connection, he pointed out how Indonesia and a few other countries had expanded or were expanding their production and said that, in any estimate of the prospects for the industry in 1955, allowance must be made for more tea which the price incentive would bring into the markets. Mr. Banerjee also indicated the possibility of cheaper Chinese tea being imported into Britain for being blended with Indian and Ceylonese tea. The conclusion of contracts worth £4 million by two British businessmen in Canton recently for the purchase of Chinese tea is very significant.

The high level of prosperity for tea in the past one and a half years has brought in its wake heavy burdens on the industry such as higher export duties, customs cess and the application of the Plantation Labour Act, 1951, imposing statutory obligations for labour welfare. In pursuance of a tripartite agreement in February, 1955, there has been an *ad hoc* increase of 16 per cent. in the wages of workers with effect from January, 1955, pending a revision of minimum wages by the statutory Minimum Wages Advisory Committee. The obligations under the Plantation Labour Act which became effective from 1st April, 1954, are, according to Mr. Banerjee, calculated to increase the annual *capital* cost of the estates by about As. 5 per lb. of tea manufactured in the first three or four years and about As. 4 per lb. in the next eight years, besides a *recurring* cost of about As. 3 to As. 4 per lb.

Summing up the whole position, Mr. Banerjee observed:

"The enhanced export duty and wage bill and the expenses for implementation of the Plantation Labour Act are elements of costs which the consumer beyond our borders, who absorbs 75 per cent. of our total production, has to pay to get his cup of tea; so long as he pays a price which will enable the industry to meet cost of production inclusive of all these elements and a reasonable profit for the producers, there will be no cause for anxiety. Unfortunately, tea markets are influenced by so many factors, some of which I have already dealt with, over which we of the industry, or even our Government, have no manner of control, that the burdens which the industry has attracted as the offshoot of its phenomenal prosperity in 1954, may break its back even under a price recession less serious than of 1952."

While welcoming the sliding scale of export duty introduced in the last Budget, Mr. Banerjee suggested that consistent with the principle of less price, less duty, the Government should amend the sliding scale by starting with a minimum slab of As. 2 (instead of As. 4) and also for a minimum price up to which the tea would attract no export duty.

Transport Difficulties

Besides the aforesaid problems common to all tea planters, there are problems peculiar to North Bengal planters, the chief of which is the transport difficulty arising from the limited capacity of the Assam Rail Link and from the bottlenecks of the wagon ferry at Bhagalpur and Mokameh and of transhipment points at Sakrigate-Manihari crossing and at Dhubrighat. Giving an idea of the magnitude of the transport problem, Mr. Banerjee said:

"I may say that the North Bengal gardens require 120,000 tons of coal for a season's manufacture; it is necessary that 70 per cent. of this, or 84,000 tons, should be at the gardens by May, 1955. This works out to a target of 4,200 tons per week. During 11 weeks, from 1st January to 22nd March, 1955, the gardens are supposed to have received about 11,000 tons by both the routes or 1,000 tons per week; thus the performance has been no more than 25 per cent. of the target. As regards cement, fertilisers and tea garden stores, our necessity was an average wagon space of 800 tons per month for the first five months of the year. Our reports are that it has not been possible to effect 50 per cent. of this monthly movement target in the first three months of 1955. The estates have booked orders against permits for cement and iron and steel materials and these should have reached the gardens, preferably by March this year to be of use in building labour houses and hospitals, factory extensions etc. So also the fertilisers which must have been applied to the tea bushes by now to have the optimum result in this year's crop. Delayed arrival of these goods would upset the programme for which they are needed and might lead to huge financial loss for the estates."

Mr. Banerjee also made a reference to the International Tea Agreement which expired on 31st March, 1955. He was of the view that the International Tea Regulation Scheme had a wholesome effect on the tea markets of the world duirng the last quarter of a century and, therefore, strongly urged the Government of India to try to give a fresh lease of life for five years. He was, however, opposed to the continuation of the restriction on replanting and new extensions, because it was absurd that regulated countries would accept a self-denying ordinance of expanding tea market by propaganda at their cost and of propping up prices by applying a brake to their own production, only to give the unregulated countries unlimited scope to step up their production to meet the increasing demand for tea.

INDIAN TEA INDUSTRY IN 1955

Indian tea production in 1954 reached an all-time high level of 638.5 million lbs., representing an increase of just over 5 per cent. over the previous year's figure of 607.75 million lbs. While the increase was not particularly large in North India, it was very significant in South India, where the crop was 8 million lbs. more than in the previous year. Exports of Indian tea in 1954 amounted to a little over 450 million lbs., as compared with 501 million lbs. in the previous year, but the total value of the tea exported in 1954 was about Rs. 270 million in excess of the value of tea exported in 1953. This was no doubt due to the unusually high prices realised in 1954, as compared with 1953. An index of this high price realised for export teas in 1954 may be seen in the fact that, whereas the average price realised in the London auctions during 1954 was 5s. 3d. a lb., that realised during previous year was only 3s. 6d. The price in the internal market also reached high levels in 1954, despite the fact that, after deducting actual exports from the total crop, there was as much as 188 million lbs. available for local consumption.

Production trends during the first three months of 1955 show that the South India crop is quite good and comparable in quantity with that of the corresponding period of last year. In fact, the production in February this year exceeded that of 1954 by about 2 million lbs. The North India crop prospects are not yet known since the season there starts only in April. However, as a very rough estimate, we may consider that the all-India crop of 1955 may reach at least a total of 630 million lbs.

Imports of tea into the United Kingdom and the U.S.A. during 1954 amounted to 327 million lbs. and 41 million lbs. respectively, representing an increase of 12 million lbs. and 4 million lbs., respectively, over those of the previous year. It is difficult to speculate for the time being on the extent of imports of Indian tea into the U.K. in 1955 but judging from price trends and purchase indications it is improbable that the figure would exceed, or even equal, that of 1954. This may not be the case with imports into the U.S.A., where there has been a distinct and steady increase in tea consumption in the past two years and where Indian tea is believed to have established a firm market. But export figures from other producing countries show that, in 1954, Ceylon and Indonesia exported to the United Kingdom proportionately much larger quantities than was done by India; and, while Ceylon exports to the U.S.A. were smaller, Indonesian exports to the U.S.A. were considerably larger, as compared with 1953.

It is too early to make a forecast of world production and consumption in 1955. World production in 1954 was considerably more than that of 1953, largely because of the greater output in India and Ceylon. We may assume that this increase, as well as the increase in Indonesia (the third largest tea producer), will maintain itself in 1955. What we do not know, and cannot guess, is the expected increase in world consumption, though the general impression appears to be that consumption will be large enough to absorb the production and there will be no surplus worth mentioning. Estimates of consumption are always difficult to make: even in India, we have no clear estimates of annual consumption and various figures ranging between 170 and 195 million lbs. have been put forward.

The policy of the Government of India appears to be to see that there is no chance of any shortage of tea within the country. This is considered to be essential, so that prices to the local consumer are kept as low as possible. There is no question of exporting anything by starving the internal market, which it is probably the Government's intention to explore and expand as much as possible.

It is now fairly generally recognised that Indian tea prices are on the downward trend and that there is no prospect of these going up again during the remainder of this year. The levy of State agricultural taxes and the implementation of the provisions of the Plantation Labour Act and other legislation will definitely reduce profit margins to something much less than those of 1954. Nevertheless, there is no reason to assume that the overall position and prospects for the Indian tea industry during 1955 will be unsatisfactory.

THE U.P.A.S.I.

A Press Note issued by the United Planters' Association of Southern India describes the main features of the recent reorganisation of the Association. State Associations of planters of Madras, Travancore-Cochin, Mysore and Coorg have now been set up and these bodies will look after plantation affairs in their own territories, and the U.P.A.S.I. will function as the central co-ordinating and advisory body for all plantation problems of South India. The main committees of the U.P.A.S.I. will be composed almost entirely of representatives of the State Associations. The former Product Committees of the U.P.A.S.I. dealing with the affairs of the different crops of tea, coffee and rubber have been abolished and their functions have been handed over to a newly formed Planting Committee. The former South India Estate Labour Relations Organisation has now been merged with the U.P.A.S.I. and labour problems will now be dealt with by the new Executive Committee. The U.P.A.S.I. headquarters will continue to be in Coonoor.

AIR-INDIA INTERNATIONAL MAKES GOOD BEGINNING

OUTLOOK DEPENDS UPON ABILITY TO INVEST LARGE SUMS ON FLEET RENOVATION

THE report on the working of the Air-India International Corporation during the first accounting period ended 31st March, 1954, published towards the close of last week, bears a pleasing appearance. Both in get-up and presentation of particulars, the Report beats its predecessors issued when the Corporation was under the management of the private sector. The form in which the accounts are presented and the method followed for explaining the progress of the Corporation, and its future programme, are quite satisfactory, being in accordance with the best traditions of the enlightened section of the private sector.

It will be recalled that, although the organisation was formally constituted, under the Air Corporations Act, 1953, on 15th June, 1953, it took over, as a going concern, the assets and business of Air-India International Ltd. only on 1st August, 1953. Consequently, the Report covers only the financial results of the Corporation for the eight months of the year ended 31st March, 1954. The activities of the Corporation, however, are covered up to 31st December, 1954. While the balance-sheet and the profit and loss account of the Corporation are analysed elsewhere in this issue, it is proposed to refer here to the operational activities and other connected matters.

The Corporation has made a good beginning. It has completed the initial task of organising itself into a compact and efficient operating unit, with its own flying equipment, ground facilities and personnel. It has completed the first stage of considerable expansion of its fleet and operations with no more than normal teething troubles and has spread its wings to the Far East, firmly laying the foundations of successful operations in that area.

The fleet taken over by the Corporation on 1st August, 1953, consisted of four Lockheed Model 749A Constellation aircraft. There was no change in it during the eight months under review. Today, however, the Corporation's fleet consists of three Constellations (excluding the *Kashmir Princess*, which was lost this month), five Super Constellations and one Dakota.

Three Routes

Air-India International operates on three routes, namely, India-United Kingdom, India-East Africa and the Far East. In October, 1953, a tourist class was introduced in the U.K. route at a substantial reduction on first class basis. This development is an important landmark in the history of air transport, in that it recognised "both the demand for cheaper transportation at some sacrifice of space, comfort and other amenities and the ability of modern aircraft to provide it at the necessary reduction in cost. It is intended to tap the much wider passenger market which cannot afford the cost of the standard on luxury services." Commenting on this innovation, the Report observes:

"A tourist class on scheduled air transport services was first introduced on the domestic routes of the United States of America in 1951. The experiment was a complete success and was extended to the North Atlantic in 1952, and to the Far East and the Pacific in October, 1953. While the introduction of tourist services on international routes has tapped an important new source of traffic, it has created special problems for the smaller carriers. Whereas large carriers operating multiple frequencies with large fleets are able to run separate first class and tourist services, small carriers owning small fleets are compelled to provide first and tourist accommodation in the same aircraft. This necessitates substantial modifications to cabin interiors and the provisions of separate compartments and passenger amenities. To provide this mixed configuration, A.-I.I's 40-seater Constellation aeroplanes were converted so as to offer 34 tourist seats in one compartment and 16 luxury seats in the other. This conversion, including the manufacture of high density tourist seats, was effected entirely in the Corporation's own workshops at Santa Cruz at considerable saving of expenditure and foreign exchange. The new Super Constellation aircraft purchased by the Corporation lend themselves much better to the provision of separate tourist and luxury accommodation as they are not only of greater size but are divided into a number of separate cabins and are equipped with toilets fore and aft. Tourist services on the Corporation's routes have, on the whole been a success and have accounted for a good part of the increase in passenger traffic. They have not appreciably affected the demand for standard air passages and are a welcome source of additional traffic to fill the expanded capacity offered by the Corporation."

The Corporation proposes to commence, next month, an India-Tokyo service in the Far East, by extending the service which now terminates at Hongkong. It also proposes to introduce a luxury service from Bombay to London with effect from 9th May, 1955. Another proposal is to include Beirut, Prague and Zurich on its Bombay-U.K. flight.

The growth of the Corporation's operations during the eight months ended 31st March, 1954, and estimates for 1954-55 and 1955-56 are as follows:

	1953-54 (Actuals)	1954-55 (Estimates)	1955-56 (Estimates)
Hours flown	8,800	14,700	23,600
Miles flown	2,145,000	3,665,000	5,905,000
Capacity ton-miles offered ..	11,551,000	22,052,000	44,124,000

In terms of ton-mileage flown, the Corporation is today already the seventeenth on the list of 65 International carriers which are members of the I.A.T.A. Considering the rising tempo of India's economic activities, the Report says: "We see no reason why it (the Corporation) should not in time become one of the leading airlines in the world." Proceeding, the Report remarks: "We believe that it has an important role to play in the future Five-year Plans and we hope that such a role will be assigned to it and that funds will continue to be made available for the expansion of its fleet and engineering facilities."

Spare Capacity

As already said, the Corporation has a fleet of Constellation and Super Constellation aircraft and a Dakota. This leaves little or no spare capacity for further expansion. A correct assessment of future events and prospects, particularly where the international nature of operations adds to the uncertainties, are difficult to make. Subject to this qualification, the Report makes the following observation regarding the outlook:

"We are in the relatively fortunate position of being able to assume that the successive Five-year Plans will provide a substantial and continuous expansion in trade and travel between India and other countries. Furthermore, as international traffic curves have since the war shown a steady and continuous rise, we may assume, without undue risk, that substantially the same rate of annual increase over our routes will continue for some years more. Finally, the development of tourist services and the probable introduction in a few years of 'coach' or third class services, provide further support for the conclusion that we should plan for a continued expansion of our fleet and organisation in the coming years if we are to carry a fair share of the growing traffic, and particularly if, as we believe desirable, we are expected one day to extend our operations across the Atlantic and/or the Pacific to the American Continent."

An important problem facing international air operators is the need for constant change in the aircraft arising from the rapid pace of technological progress in aviation and the incessant pressure of competition within the aircraft manufacturing industry and the air transport industry alike. In keeping with this need, the Corporation may have to change its plans for acquiring Comet Mark III's in favour of turbo-propellor aircraft, the latest type of plane. Such changes place a heavy financial burden on air operators, which makes it very difficult for underdeveloped countries like India to hold their position successfully, from the financial angle, in the field of international air transport. Questioning the necessity for such quick change of aircraft, the Report observes:

"While technological progress no doubt brings great benefits with it, we believe that, in a public utility service which is financially as marginal as air transport, the price being paid for the extra speed and comfort provided by new generations of aircraft brought out in quick succession is disproportionate to the benefits accruing to the travelling public. Furthermore, we fear that in the pursuit of higher speed and range, the criteria of stamina and trouble-free operation and, therefore, of low-cost maintenance are being sacrificed. The air transport industry, particularly in the international field, is itself partly to blame for the state of affairs. It is now 35 years old, and the time has come for it to lay greater emphasis on lower costs of operation and regularity than on glamour and sensational performance. There would seem to be much force in the view of those who consider that what both the industry and the travelling public require are *less complicated* and finicky and more rugged and durable, and, therefore, more economical aeroplanes and engines, even at some slight sacrifice in performance."

This is an international problem which can be solved only through understanding among all the world operators. Till then, India has to do what its competitors do. The Directors of Air-India International are fully alive to this. Thus, they candidly admit:

"Pending a more realistic approach to the problem, and, if we wish to remain in business, we have no option but to keep abreast of the rest of the industry and constantly to renovate our fleet: for only thus can we continue to hold our own with the leaders of the industry in this acutely competitive business and to retain the patronage of the travelling public which is our life blood."

This would involve constant renovation of fleet and improvement of its service conditions, requiring large capital expenditure from time to time. The Government must be ready for such expenditure and provide large sums for this purpose in its development plans. Herein comes the importance of the Corporation's appeal to the Government for assigning to it an appropriate role in the Five-year Plans.

OWNERSHIP OF MANGANESE MINES

It is, indeed, gratifying to hear from Mr. K. D. Malaviya, Minister for Natural Resources and Scientific Research, that nationalisation of manganese mines was not, in the existing circumstances, a practical proposition. Opposing a non-official resolution urging State-ownership of manganese mines, the Minister asserted that there were many more important sections of the industrial sector in the country which deserved to be nationalised. He was of the considered opinion that the exploration of oil resources, the establishment of a synthetic petrol project, the generation of power and the utilisation of nuclear fission for the production of electricity were a few among the important sections of the industry which should be in the public sector. He averred that there was no desire on the part of the Government of India to encourage foreign enterprises at the cost of Indian enterprises in this sector. The Government's policy was that no lease of prospective licences should be given to any foreign concern in the future, if Indian talent, capital and technical skill were available. Nevertheless, he admitted that there could still be stray cases of foreign investments. So far as the foreign concerns already engaged in mining operations were concerned, they had to be allowed to carry on till the expiry of the existing agreements. Incidentally, he revealed that, as regards the conversion of the ore into ferro-manganese, the Government was proceeding cautiously as excessive conversion of this ore into this alloy might not be an economic proposition. The Government was actively considering as to what should be the quantities of ferro-manganese to be manufactured in the country.

Moving his resolution, which was later withdrawn, Mr. R. K. Malaviya of Madhya Pradesh alleged that the two foreign interests which controlled primarily the mining operations in his State, made enormous profits at the cost of labour. The profit margin of these firms, he said, was as high as 300 per cent. They had declared a dividend of 50 per cent. for the year 1953. As a result of the wide margin of profit, latterly there had been a mushroom growth of small producers. This state of affairs presented, he said, a striking contrast to the treatment meted out to workers, inasmuch as a male worker was given a daily wage of only Re. 1-2 and a female worker As. 14. These rates, he felt, were the lowest as compared with those prevailing in other industries.

MADRAS STATE ON HEAVY ELECTRICAL PLANT

The Government of Madras, it is reported, has submitted a memorandum to the Centre making out a case for the location of the proposed Rs. 50-crore heavy electrical plant in the State. It is stated that the existence of a large number of trained personnel and a number of engineering and technical institutions to train more persons, if need be, not to speak of the progress of electrification of rural and urban areas in the State, are all factors in favour of locating the factory in the State. Such a step will, it is stated, also help the State meet its claims in the matter of industrial development. It is expected that this subject will be discussed at the ensuing meeting of the National Development Council scheduled to be held in New Delhi early in May.

NEW PROGRAMME FOR ACCESS TO NUCLEAR DATA

The U.S. Atomic Energy Commission has announced a new programme under which organisations or individuals can obtain access to non-military atomic energy technological data for private purposes. The plan simplifies and supersedes the provisional arrangements for industrial participation which formerly made restricted data in the field of reactor technology available under three distinct types of agreements. Under the new programme, non-military information classified as confidential may be made available to any person who can show that the information sought is for use or application in his business, profession or trade.

NEW PRODUCTS AND PROCESSES

K.L.M. Experiments With Electronics

WITH the aid of tiny electronic devices, each no larger than a hazelnut and weighing only one gramme, it is expected that in future it will be possible to save weight and space as well as electric power on board aircraft. This is because such devices (called "transistors") may be able to replace practically all of the tubes now used in aircraft radio equipment. Two of these transistors were recently put into service by K.L.M. which is now carrying out tests with them on a limited scale. The development of the transistor has been made possible through the knowledge of nuclear physics acquired in recent years, for the construction of this midget instrument is very closely connected with our knowledge of the structure and behaviour of the atoms. The heart of a transistor consists of a particle of germanium about the same size as the head of a pin. The manufacturing process is still in the stage of laboratory production, and the transistor has not yet been perfected.

Universal Truck Loader

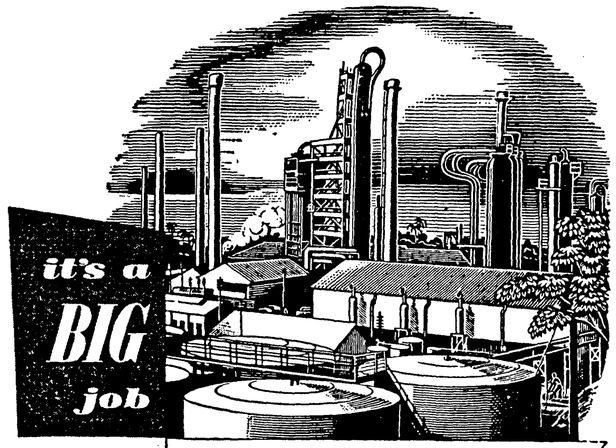
Unloading of a truck is usually carried out by tipping the body of the truck which, owing to the height from which the goods such as bricks are falling, causes a high percentage of breakage. A well-known Austrian industrialist has developed a new and very practical device for the loading and unloading of trucks which is unexpensive, easy to be assembled to the truck and of very simple operation. Moreover, the savings of labour, time and handling material achieved by the new device are, it is stated, so high that they easily cover the expenses in a few weeks. The new loading device consists mainly of a slanting surface which prolongs the platform of the tipped car down to the ground. After the unloaded goods have glided smoothly down to the lower border of the chute, the truck is slowly moved and, while the chute moves away with the truck, the goods glide to the ground without any detrimental jolts. By means of special attachments, loads of all kinds can be loaded or unloaded easily and quickly with the help of a pulley driven by one of the rear wheels of the truck lifted by a roller jack. This makes drawing up of loads up to 1.5 tons and unloading of loads very easy and eliminates all risks.

Automatic Blind Flying System for Link Trainers

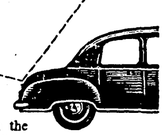
For the first time in the history of civil aviation, technicians have succeeded in adapting the Zero Reader so that it can be employed in the Link Trainers, the mock-up aircraft in which pilots practice instrument landing on the ground. This is the outcome of prolonged experiments made by K.L.M. technicians at Schiphol Airport, Amsterdam. The Zero Reader is a very important aircraft instrument. It has been used in aviation for several years past and it is of the greatest assistance when landing in bad visibility. K.L.M. started experimenting with a Zero Reader for the Link Trainer, because there was none available on the market and the blind-flying system installed on the aircraft could not be adapted for practical use in the Link Trainer. In all probability K.L.M. now possesses the only Link Trainer in the world (an American F-45 Link Trainer) equipped with a fully automatic blind-flying installation. Since the Zero Reader performs various additional functions in the air, and this would impose too much of a burden on the Link Trainer instructor, the system had to be made almost entirely automatic. In spite of numerous technical difficulties, in the course of the years the original hand-operated apparatus has been developed into an ingenious automatic device which works very accurately. K.L.M. has decided to construct two more of these Zero Reader installations for its Link Trainers during the coming months.

Detection of Metal Objects in Saw Timber

An instrument for the purpose of detecting metal objects in saw timber is a new Norwegian item which has attracted much interest. Naturally, it is the wood working industry which is primarily interested in this detector. It is a well-known fact that nails and other metal pieces which grow into the saw lumber cause considerable damage and economic loss within the sawmill industry. It is also assumed that the wood-pulp industry will utilise the detector as well. The instrument is constructed and developed by Teknisk Union, a Norwegian technical consultant firm. During the experimental period, this organisation collaborated with Brække Bruk, a Norwegian sawmill firm. The nail detector is based upon the same principle as the mine detector, i.e., changes in a magnetic field are registered when a metallic object comes within the field. The described detector consists of two main parts; the registering apparatus and a ring. The latter component is partly submerged in water and is connected with the registering apparatus through a watertight cable. Tests were conducted for four weeks and during this period, 23,000 logs were sawn. Cases of "nail sawing" were non-existent during the entire period. As many as 146 logs were removed because they contained in-grown nails and other metal pieces. Savings resulting from elimination of lost working time were computed in conjunction with the tests and the analysis shows that the initial investments are returned within a relatively short period. Following the preliminary tests at Brække Bruk, the firm of Teknisk Union conducted similar tests in co-operation with the Swedish sawmill firm, Kosta Sagverk. The results here were equally satisfactory. A number of instruments are presently in use at Scandinavian plants. In addition, several detectors were sold recently and will be put to use shortly. The firm—Teknisk Union—is presently developing a hand detector which is to indicate the exact location of metal objects in logs. Furthermore, experiments aiming at production of a low-cost instrument are presently being conducted.



turning oil into petrol



The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

WORKING OF HEALTH INSURANCE IN 1952–53

DIRECTOR-GENERAL ON TASK AHEAD

THE Employees State Insurance Corporation has, in accordance with the provisions of the Employees State Insurance Act, 1948, published the annual report and audited accounts for the year ended 31st March, 1953. It is certainly deplorable that the Corporation should take two years for the publication of its accounts for the year 1952-53. But it must be admitted that the Corporation has made up for the delay by giving many details regarding the working of the Corporation. It is nevertheless to be hoped that the Corporation will hereafter publish its reports expeditiously.

During 1952-53, the total income of the Corporation aggregated Rs. 1.71 crores, inclusive of Rs. 8.56 lakhs being the grant-in-aid from the Central Government and Rs. 1.62 crores being the income from contributions. Expenditure aggregated Rs. 28.46 lakhs, so that the excess of income over expenditure was Rs. 1.43 crores. The large excess of income over expenditure is presumably due to the fact that, while contributions from employers were collected from many regions in the country, the Scheme was implemented during the year under review only in two centres, namely, Kanpur and Delhi. Since the operation of the Scheme was limited to two centres only, the Administration gives the impression of being top-heavy. Thus, out of the total expenditure of Rs. 28.46 lakhs, the salaries and allowances of the staff of the Corporation amounted to Rs. 15.29 lakhs as against Rs. 10.09 lakhs in 1951-52. The total amount of benefits paid was Rs. 4.46 lakhs, inclusive of the sickness benefit of Rs. 3.50 lakhs. The capitalised payment for the permanent disablement and dependents' benefit fund and the payment of the Corporation's contribution to State Governments absorbed Rs 1.52 lakhs and Rs. 1.45 lakhs, respectively.

Liquid Assets

The Corporation's balance-sheet, as on 31st March, 1953, shows, as is only to be expected of an organisation still in its infancy, a high proportion of liquid assets. The following is the summary of the Corporation's balance-sheet:

Liabilities	Rs.	Assets	Rs.
Reserves and other funds	2,00,378	Block ...	9,66,755
Loans from Central Government	2,48,678	Deposits and advances	59,932
Other Liabilities ...	1,006	Investments	82,55,595
Income and expenditure account ...	1,25,42,332	Cash ...	37,10,112
	Rs. 1,29,92,394		Rs. 1,29,92,394

The statistics regarding the working of the dispensaries show that in Kanpur over 5.9 lakh persons attended them, while in Delhi over 3 lakhs utilised the services of the State Insurance dispensaries. Sickness benefit was paid to 18,225 persons in Kanpur and to 4,775 persons in Delhi. The Director-General of the Corporation observes, in the course of the annual report, that their experience of the working of the Scheme is "still very limited both in time and extent." But the incidence of cash benefits in this limited period, he says, has been found to be "considerably more favourable than was assumed in the actuarial estimates for these benefits." This experience, limited as it is, cannot, of course, form a guide to the future. It is nevertheless encouraging to be told that there was practically no evidence of any attempt to take undue advantage of the benefit provisions of the Scheme.

Complaints

The authorities of the Corporation, it is again satisfactory to note, are continuously alive to the need for improving the services of the Corporation. The complaints against the medical benefit aspect of the Scheme are stated to be of three kinds. First, there were complaints of the shortage of stocks of medicines in certain dispensaries and lack of cordial and sympathetic behaviour on the part of the doctors and other staff. These complaints were largely redressed during the year under review. Secondly, there were complaints about the lack of facilities of specialist treatment and hospitalisation. The authorities have taken up this matter with the State Governments. Thirdly, there was a general demand for the extension of the benefits under the Scheme to workers' families. Referring to this demand, the Director-General observes: "The financial implications of the proposal for the extension of medical care to families need most careful consideration not only of the Corporation which has to see that it can meet its share of these costs out of the contributions prescribed in Schedule 1 to the Act which will ultimately come into force but also on the part of the State Governments who will have to find one-third of all costs of medical care from their resources."

Need for Co-operation

It is admitted that the progress made so far "cannot, by any means, be said to be satisfactory," but the foundation for the extension of the Scheme in other parts of the country has been laid. The Director-General has stressed that, since the Scheme represents a "venture with which many interests are concerned," the co-operation of all parties is essential for its successful working. The attitude of the State Governments, employers and workers towards the Scheme, it is stated, has "generally been very helpful." The task which lies ahead of the Corporation, it is recognised, will continue to be "strenuous" as the work of implementing the Scheme all over the country is by no means an easy one. But, if the fullest co-operation of all interests is forthcoming, it should be possible to extend the Scheme all over the country within a "reasonable period."

FIRE INSURANCE IN U.S.

The operations of 100 fire insurance companies in the United States, according to the statistics published by the Spectator, Philadelphia, show that the decade 1944-53 witnessed an underwriting profit of 2.84 per cent. In the decade 1935-44, the ratio was 2.88 per cent. and it dropped steadily until the 1938-47 decade when it amounted to an underwriting loss of 0.93 per cent. The decade 1939-48 registered a loss of 0.42 per cent. The following decade 1940-49 showed considerable improvement with an underwriting profit ratio of 1.46 per cent. Since then, the ratio has continued to improve.

One hundred casualty companies for the decade 1944-53 had an underwriting profit ratio of 2.6 per cent. The casualty profit ratio has been declining. In the decade 1938-47 it was 5.0 per cent. In the following two decades, it stayed at 4.6 per cent. In the 1941-50 decade, the ratio fell to 4.2 per cent. and to 3.2 per cent. in 1942-51 and 2.6 per cent. in 1943-52.

HEALTH INSURANCE IN HYDERABAD

In Hyderabad, to which centre the Health Insurance Scheme is being extended this week, about 18,000 factory employees are expected to benefit through the operation of the Scheme. The Scheme will come into effect in Hyderabad, Secunderabad, Samat Nagar and certain other suburbs. It may be mentioned here that the Scheme is now in operation in seven centres in the Punjab, Kanpur, Delhi, Bombay, Nagpur, Coimbatore and four centres in Madhya Bharat.

Two local offices, it is stated, have already been established in Hyderabad. A pay office has also been established for the purpose of paying cash benefits to insured workers. Three full-time dispensaries have been set up. Arrangements have also been made for insured persons to get medical benefit at nine more dispensaries.

NATIONALISATION OF INSURANCE

MR. TULSIDAS KILACHAND ON ITS DANGERS

NOTHING is more symptomatic of the cavalier manner in which even major issues are decided by the Government without taking into account the repercussions of such an action on the existing interests than the Finance Minister's statement that the question of nationalisation of insurance is now under the active consideration of the Government. Replying to the debate in the Lok Sabha on the Finance Ministry's demands for grants, held on 16th April, 1955, in the course of which Mr. Tulsidas Kilachand, the well-known Bombay industrialist and member of Parliament, questioned the propriety and the need for nationalising insurance, Mr. C. D. Deshmukh, Finance Minister, observed: "We are considering this question and are trying to form a view. Nothing could be gained by my entering into a detailed discussion in the present context."

Surely, Mr. Deshmukh, with his extensive knowledge of public finance, now fortunately supplemented by years of experience in managing the national purse, cannot be unaware of the gravity of the issues involved in nationalisation of insurance. He ought to know too that such a major question could not be merely settled at the departmental level. In any democratic country, it would be considered a question on which a straight mandate from the people should be obtained. The least that one would expect the Government to do is to have the question examined by competent experts and leaders of public opinion. Even this method, of course, provides no guarantee that the Government will go by the opinion of an expert and impartial body, considering that civil aviation was nationalised, despite the verdict of the Rajadhyaksha Committee. But one would expect the Government to have the question examined at length so that the interests concerned could have an opportunity to express their views. A departmental examination can hardly do justice to so vital an economic and social issue as nationalisation of insurance.

Per Capita Insurance

Nationalisation of insurance is, as we pointed out in these columns a few weeks earlier, neither necessary nor desirable. A similar view was expressed by Mr. Tulsidas Kilachand who, in the course of his speech in the Lok Sabha, explained why insurance was best left under the care of private enterprise. He pointed out how life and general insurance had made great headway in the U.K., the U.S. and other industrially advanced countries where insurance was under private enterprise. The per capita life insurance in India was only Rs. 26, as compared with Rs. 1,840 in the U.K. and Rs. 9,200 in the U.S. Again, in the U.K. the premium income of general insurers was Rs. 678 crores, as against Rs. 21 crores in India. He added:

"We have yet to travel a long way to reach the pre-eminent position enjoyed by companies in other advanced countries. In my opinion, this outstanding position has been achieved in those countries as the business has all along been and continues to be managed as a private enterprise. I, therefore, believe that, in our country also, private enterprise should be allowed to continue to manage this business rather than work it through a Government scheme."

Mr. Tulsidas drew the attention of the House to the fact that a substantial portion of the assets of Indian insurers was invested in Government and semi-Government securities. He further pointed out that the shareholders of insurance companies, unlike the shareholders in other companies, were entitled to participate only to a limited extent in the profits of the companies. Thus, shareholders of insurance companies, as is well known, are allowed to receive only 7½ per cent. of the total surplus. He added: "I do not believe, therefore, that the Government stand to benefit to any great extent by having control of investments of a nationalised insurance industry." He also pointed out how the attempts made by the authorities in the U.K. to develop the Government-sponsored Postal Insurance had not been successful.

As regards general insurance business, Mr. Tulsidas did well to emphasise how the peculiar character of this business was not conducive to its being administered by the State. He said that the risks in general insurance business were distributed amongst insurance companies all over the world. Indian companies in

(Continued in previous column)

(Concluded from next column)

their transactions with foreign insurers were both giving and receiving business. At the same time, many Indian general insurers were extending their operations in foreign territories. Nationalisation of insurance would stifle these activities. Indeed, even the report to the effect that there was a possibility of insurance being nationalised in this country made the foreign insurers cautious in the exchange of insurance business with Indian insurers and discouraged Indian insurers from expanding their activities. This adversely affected Indian insurers and also India's balance of payments.

Finally, Mr. Tulsidas rightly urged that what Indian insurance needed was not nationalisation but the very antithesis of nationalisation, larger freedom from State interference. In particular, he cited the working of the Code of Conduct for general insurers which had not eradicated malpractices in the field. He pleaded for restoration of the "normal working" of the insurance machinery. It is to be hoped that the Government will eschew all thoughts of nationalisation, or even of further control on insurance, and instead adopt a positive, helpful and constructive approach to insurers, so that insurance could be rendered a more efficient means of national service, functioning under the care of an enlightened private enterprise.

DUNLOP RUBBER CO. (INDIA), LTD.

MR. CECIL STACK'S REVIEW

THE Twenty-ninth Annual General Meeting of the Dunlop Rubber Company (India) Ltd. was held in Calcutta on 25th April, 1955. Addressing the shareholders, Mr. Cecil Stack, Managing Director, said:

"The Directors' report and accounts for the year 1954 have been in your hands for some time, and with your permission I will take them as read.

"I should like to preface my remarks this year by referring to a change in our Board of Directors. Sir Satyendra Nath Roy, who has been a Director since 1948, resigned his seat on the Board for reasons of ill health. His wide knowledge, experience and astute judgment have been of great help to us and I would like to express our sincere appreciation of the valuable service he has rendered to the Company, also the hope that it will not be long before he will be well again.

The Year's Trading

"The year under review has generally been a satisfactory one. The volume of sales of all our products was higher compared with the previous year. In terms of production, and using our principal raw material, crude rubber, as the basis, we exceeded 1953 by 18 per cent. On the other hand, total sales in value increased only 9 per cent. This difference is largely explained by the reduction made last year in our selling prices of tyres for passenger cars, trucks and buses, motor cycles, cycles and animal-drawn vehicles.

"Our consumption of crude rubber in 1954 was the highest since our factory commenced production in 1936 and this is indicative of the progress made by the rubber manufacturing industry as a whole, which, in my opinion, can be regarded as evidence of the sound manner in which the industry has been allowed to develop. The increasing expansion of India's economy, the implementation of the Five-year Plan and the emphasis to be placed on industry in the second Five-year Plan all help to accentuate the growing importance of our own particular industry. The development of mechanisation in agriculture as well as the expansion of industry as a whole will make demands which rubber manufacturers will only be able to meet by expanding their output and by producing a wider range of articles.

"With the exception of cycle, there was no overall shortage of tyre stocks throughout the year under review, but difficulties associated with the distribution of our products continued to be experienced as the result of transport bottlenecks and inadequate availability of railway wagons.

"The net profit for the year was Rs. 96,37,915, as compared with Rs. 92,88,299 for 1953, but, because of the selling price reductions already referred to, the ratio to turnover has declined in 1954 from 7.4 per cent. to 7 per cent. before taxation and from 4.6 per cent. to 4.3 per cent. after taxation.

Products

"Our technical staff work in close contact with the world-wide group research establishments of the Dunlop Rubber Company, Ltd., the benefits of which are fully available to your Company. In this way we are able to keep abreast of all new developments, such as the tubeless car tyre, the introduction of which during the year was an outstanding achievement. This tyre is the most important development since the advent of balloon tyres in 1922. It provides added protection against punctures and bursts. It also retains the air much better than the conventional tyre, thus maintaining a more constant air pressure and so reducing tyre wear. With all its advantages it costs no more than a conventional cover and tube of the same size.

"In the truck and bus range our Trakmaster tyre, introduced only the year before, became so popular that it proved impossible to meet the demand. More equipment is now in use which will help to remedy the situation.

"Our sales of pneumatic tyre equipment for animal-drawn vehicles were well in excess of any previous year; likewise, our sales of tractor and aero tyres. In addition, the continued rapid expansion of India's bicycle manufacturing industry helped us to break the record set the year before in our production and sales of cycle tyres and rims.

"In line with tyres, sales of all our other products advanced substantially. The intensity of our sales efforts, supported by sustained publicity, has popularised Dunlopillo Latex Foam Cushioning throughout the country.

"The remarkable progress made in our industrial transmission belting business in the previous year continued throughout 1954, and our conveyor belting, the manufacture of which only commenced in 1953, is already being used on the major hydro-electric projects as well as in mines, power stations, steel works and numerous factories where the inexpensive handling of large quantities of materials is vitally necessary. Our industrial Vee belts and fan belts also continue to sell in increasing quantities and as the result, we were able to reduce our selling prices.

"During the year, we commenced the manufacture of pneumatic tool, welding and high pressure braided hoses by the lead press moulded process. This type of hose in long lengths had not formerly been made in India and I am glad to say that our hoses are already proving popular wherever there is a demand for them.

"This overall expansion of our manufacturing activities contributed in no small measure to the fact that, in 1954, rubber manufacturers consumed approximately 4,000 tons of rubber more than India produced. That the deficit this year is expected to be over 5,000 tons should encourage the rubber planting industry in South India to make serious efforts to increase their production.

Raw Materials

"The raw materials supply position was satisfactory throughout 1954, but delays in the clearance of shipments through the Calcutta Port, due to labour troubles, caused anxiety at certain times. There were no significant changes in prices except of crude rubber of which we were allowed to import part of our requirements, because indigenous supplies were insufficient. Prices ranged between Rs. 84 and Rs. 150 per 100 lbs., as compared with the controlled price for local rubber of Rs. 138.

Profit and Loss Account

"As I have indicated earlier, the net profit for the year was Rs. 96,37,915 and, after deducting the charge for taxation, the balance of profit available for disposal is Rs. 69,45,891, as compared with Rs. 62,39,833 for 1953. The Directors are recommending the same rate of ordinary dividend as for 1953, that is 15 per cent. which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 30 lakhs to general reserve, as against Rs. 24 lakhs last year. This will increase general reserve to Rs. 1 crore 68 lakhs as shown in the balance-sheet. The total amount transferred to reserves during the last 10 years was Rs. 2 crores 45½ lakhs. These appropriations represent shareholders' profits retained and fully employed in the business. I would like to stress here the great need for such conservation of the financial resources of the Company. In addition to the funds required for development and expansion schemes, the Company is continually striving to improve the standard of living conditions for its factory employees by providing more residential, hospital, educational and other welfare facilities. During the last ten years the Company has spent over Rs. 80 lakhs on buildings for this purpose and very considerable additional expenditure, depending on the continuing prospects of the Company, is planned for the next three years. The Company's housing estate at present accommodates just over 3,700 persons representing employees and their families, and this number will continue to rise over the next three or four years, if, as we hope, the resources are available to complete our plans.

Balance Sheet

"The additions to fixed assets during the year amounted to Rs. 30 lakhs, consisting mostly of plant for expansion and rehabilitation. The amount of depreciation written off in 1954 was Rs. 30,20,000, as against Rs. 27,78,000 in 1953.

"Stock inventories at Rs. 3,95,81,000 are Rs. 33,22,000 higher than at the close of the previous year. This was due mainly to increased production, raw material prices having remained fairly stable throughout the year. Sundry debtors are up by Rs. 41,40,000 as a result of the greater sales turnover. Bank and current balances are also higher than last year, making the total increase in current assets Rs. 80,15,000. The net working capital increased by approximately Rs. 68 lakhs during the year, which is partially reflected in the closing bank overdraft of Rs. 128 lakhs, as compared with Rs. 88 lakhs at the end of 1953.

Employee Relations

"During the past year, we have striven further to extend and improve our social amenities for employees. The 64 new staff flats constructed in 1953 were all allocated and occupied in 1954, the building of new quarters for the watch and ward staff was commenced, as well as additions to the existing facilities for sport, and the survey work was put in hand for the construction of a further 100 married operatives' quarters. Thus, we endeavour to maintain our high reputation for working conditions and general labour relations, which have remained consistently good throughout the year. Staff and operatives have continued to exert their best endeavours and have contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in expressing warm thanks for their loyal and faithful service."

Consumption of natural and synthetic rubber in the U.S. during March 1955 reached an all-time high level of 134,987 tons, compared with 118,613 tons in February and 109,769 tons in March, 1954. Consumption of natural rubber in March was 57,933 tons as against 51,004 tons and 53,709 tons respectively. America consumed 77,054 tons of synthetic in March (67,609 tons in February and 56,060 tons in March last year).

The ratio of use of natural to synthetic was little changed at just under 43 per cent.

U.S. stocks of natural rubber at 31st March were 98,216 tons and those of synthetic 141,372 tons.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks, the Balances with, and Cheques in course of collection on, other Banks in the United Kingdom and Ireland, the Balances with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches—the Eastern Branches accounts being brought in as at the 31st October, 1954. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31st December, 1954, and the Profit and Loss Account gives a true and fair view of the profit, ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet and Profit and Loss Account of the Bank and the annexed accounts of The National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948, applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

8 Frederick's Place, E.C. 2, 18th January, 1955.

PRICE WATERHOUSE & CO., Chartered Accountants.

PROTECTION TO INDUSTRIES IN INDIA

ITS HISTORY AND ACHIEVEMENTS

By M. D. Bhat, I.C.S.

CHAIRMAN, TARIFF COMMISSION, GOVERNMENT OF INDIA

[The history of tariff protection, the functions of the present Tariff Commission, the principles under which tariff protection is granted to industries and the responsibilities expected of a protected industry to the country, in general, were explained by Mr. M. D. Bhat, I.C.S., Chairman of the Tariff Commission, with a masterly grasp of facts, in his address to the All-India Conference of Management Executives, recently organised by the Bombay Labour Bureau. We reproduce on this page the text of Mr. Bhat's address, as it gives a connected, concise and up-to-date account of the progress of tariff protection in India, and will, therefore, serve as very useful reference material for business men and students of economics interested in this subject.—ED.]

FROM very early times, commercial contact and intercourse had existed between India and countries in the West, and Indian products, such as precious stones, pearls and silk were exchanged for products of those countries. With the discovery of the sea route to India, direct contact was established between India and Britain and large quantities of Indian calicoes, muslins and chintzes were exported by British traders to their country by ships. Customs duties on goods imported by sea by these and other traders were levied by the rulers of Indian territories where goods from foreign countries were landed. The duties were low and did not generally exceed 5 per cent. of the value of goods. The industrial development of India up to this time was on the same level as that of more advanced countries in Europe. Forces were, however, operating in Europe at this time which culminated in the Industrial Revolution in the middle of the eighteenth century. The discoveries made between 1760 and 1820 brought about great changes in the economic life of the people in Europe, especially in Britain. In India, however, the industrial organisation remained almost unaffected. It was only about a century later, that is, between 1850 and 1855, that the first cotton mill and jute mills and coal mining industry were established in India. The railway was also introduced in India about this time. Although the foundation of modern industry, which relies on machines and power to operate machines was laid in 1850, India's position in subsequent years was transformed to that of supplier of raw materials to Britain and other countries in exchange for their manufacture.

Fiscal Commission of 1921-22

For nearly 60 years thereafter, and in fact upto the end of the First World War, hardly any progress was made in establishing other industries. The policy of Government during this period was that of *laissez faire* and the demand made by Indians for active assistance by Government towards industrialisation of India remained unheeded. The *Swadeshi* Movement of 1905 stimulated cottage industries and encouraged the promotion of a few new industries of modern type, but due to various reasons, including lack of support from Government, they came to grief. One important industry, viz., iron and steel, was, however, started in the early years of this century. The First World War brought home to Government the necessity of establishing key industries But very little was done in the way of starting large-scale and basic industries and the few industries that grew up during the war years languished subsequently because they could not face competition from industrially advanced countries. Pressure from industrialists and prominent Indians in the Legislature led to the appointment of a Fiscal Commission in 1921-22. The Commission in its report stressed the advantages of development of Indian industries and recommended a policy of discriminating protection. It also recommended the appointment of a Tariff Board as an integral part of the scheme. These recommendations were adopted by Government in 1923 and the history of industrial protection in India may be said to have commenced from that year.

Triple Formula

The triple formula for the grant of protection as laid down by the Commission was (i) possession of natural advantages, such as abundant supply of raw materials, cheap power, sufficient supply of labour or large home market, (ii) industry was not likely to develop at all or not likely to develop rapidly without protection, and (iii) industry must be one which would eventually face world competition without protection. These conditions were rather exacting and narrowly interpreted in their application. The industry had first to be established and secondly it had to prove that it possessed certain natural advantages. The possession of raw materials was considered to be an essential condition for grant of protection to an industry and in two cases in which one of the important raw materials was not available in the country, Government refused to grant protection, although it was recommended by the Tariff Board. New industries or industries in embryo were excluded from the scope of protection. Further, some of the ancillary recommendations made by the Commission rendered the application of the triple formula more rigorous. Even then, it is remarkable that considerable progress was made by some of the important industries during the inter-war period. In many countries industrial production showed a heavy decline during the period of great depression which started in 1929, but, in India, the output of principal industries, namely, steel, cotton piecegoods, sugar, match and paper showed a marked increase. The favourable position was largely due to the fact that during these years, the effect of the policy of protection had begun to manifest itself. Other industries, such as sericulture and plywood and tea chests, also benefited from the protection granted to them.

The machinery and procedure of *ad hoc* Tariff Boards were, however, found to be dilatory and the policy of discriminating protection was considered by the industrial and commercial bodies to be generally unsatisfactory and inadequate. A dynamic policy for an underdeveloped country was demanded by them. The Second World War revealed how ill-equipped India was to make any large-scale industrial contribution to war effort. It disclosed the deficiencies and gaps in her industrial structure. At the same time, under the stress of war conditions and in some cases with the active help of Government, a number of new industries grew up. Due to the difficulties of importing the latest type of machinery from abroad, most of them were equipped with old and improvised machinery. With the cessation of hostilities, it was feared that these industries would be exposed to severe competition from foreign countries. As Government had given an assurance in 1940 to some of these industries that, if they were conducted on sound lines, they would be protected after the war from unfair competition, they appointed a Tariff Board in November, 1945, to examine the cases of war-time industries for protection and assistance.

The conditions laid down by Government for grant of protection were: (i) that the industry was established and conducted on sound business lines, (ii) that, having regard to the natural or economic advantages enjoyed by the industry and its actual or probable costs, it was likely to develop sufficiently to be able to carry on successfully without protection, or (iii) that it was an industry in which it was desirable to grant protection or assistance and that the probable cost of such protection or assistance to the community was not excessive. These conditions were undoubtedly more favourable than the conditions laid down by the Fiscal Commission in 1922 but, nevertheless, they ruled out the possibilities of developing potential industries for which the country possessed natural advantages. Even in highly industrialised countries like the U.K., the U.S.A., Germany and Japan, tariff protection was granted to new industries, sometimes along with other measures of assistance, such as subsidies, import restrictions, etc. Protection was essential for industries manufacturing machinery, precision tools, etc., which were of a highly technical nature and which required large investment of money. The capital required for such industries was not likely to be forthcoming, unless conditions of security were created by an assurance of protection. Many war-time industries were, however, protected by Government on the recommendation of the Tariff Board by converting the then existing revenue duties into protective duties at the same or higher rates.

Fiscal Commission of 1949-50

With the advent of independence, Government felt it necessary to review their tariff policy and appointed a Fiscal Commission in 1949 to report on (a) the future policy which they should adopt in regard to protection to and assistance of industries, and the treatment and obligations of the industries, which might be protected or assisted, (b) the machinery required to implement such a policy, and (c) any other matter having a direct bearing on the effective implementation of this policy. The Fiscal Commission divided industries broadly in two groups: (1) those included in plans approved by Government, and (2) those not included in plans

LLOYDS BANK LIMITED—*(Continued)*

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited, dated 31st December, 1954, and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1954, with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

CALCUTTA, 23rd March, 1955.

PRICE WATERHOUSE & CO., Chartered Accountants.

PROFIT AND LOSS ACCOUNT OF THE INDIAN BRANCHES FOR THE YEAR ENDED 31st OCTOBER, 1954.

W. T. O. PARKER, General Manager (Eastern Branches).

proved by Government. The first group was subdivided into three categories: (i) those required for defence and strategic purposes, (ii) basic and key industries, the products of which were indispensable to other industries, and (iii) other industries whose development was desirable in the national interest. The Commission recommended that industries in the first category should be established and maintained by giving necessary protection whatever the cost might be. As regards industries in the second category, they expressed the view that, as their development was in the national interest, protection should be given to them. In regard to the industries in the third category, and the industries in the second group, that is, industries not included in plans approved by Government, the Commission suggested that the case of each industry should be examined by the Tariff Authority and, if it was satisfied on examination that protection was justified, protection should be granted. The Commission further recommended that a permanent Tariff Authority called the Tariff Commission should be set up.

Tariff protection was accepted by the Fiscal Commission primarily as a means to an end and as one of the instruments for promoting economic development of the country. The new policy of protection to industry as recommended by the Commission was implemented by Government by enacting the Tariff Commission Act of 1951. The Tariff Commission was constituted under this Act in January, 1952, not merely to look into claims of industries to protection or assistance, but also to serve as an after-care organisation, so that no protected industry would suffer at any stage of its development. The setting up of a permanent Tariff Authority has also made it possible to formulate long-range views, to accumulate experience and to build up an efficient body of experienced officers.

Duties and Functions of Tariff Commision

The Commission, being a statutory body, is free from interference of the executive or influence from pressure groups. The duties and functions of the Commission are wider than those assigned to the post-war Tariff Board and include enquiry into and report on: (i) claims of industries to protection or assistance; (ii) prices of commodities, whether protected or not; (iii) action to deal with dumping and abuse of protection; (iv) effects of protection on the general level of prices in the country; (v) effects of tariff concessions under trade or commercial agreements on the development of specified industries, and (vi) tariff anomalies. The Commission is empowered to enquire into claims to protection of not only established industries, that is, those which are in actual production, but also of embryonic industries, that is, those which have not started production, but which are likely to do so if suitable protection is granted to them. Except in cases of grant of initial protection and fixation of prices of commodities where the Commission can act on a reference from Government, it can start enquiries and submit reports to Government on its own initiative. The Commission is free to decide the duration of protection according to the requirements of each industry and enjoys wide discretion both in regard to the general principles relating to fixation of tariffs and principles relating to obligations of protected industries. In order to safeguard the interests of the consumers, the Commission is required under the Act to investigate at prescribed intervals into the working of the protected industry with particular reference to the cost of production, scale of output, quality of the product and prospect of future expansion and to submit its report to Government.

The Commission enjoys a quasi-judicial status, and, while it functions as an independent body in assessment of facts and formulation of its conclusions and recommendations, it has to submit its report to Government. In this respect, the Commission acts as an advisory body, because the conclusions reached by it are not the result of any application of law to facts as is the case with judicial pronouncements, but an appraisal of facts in the light of economic principles. The principles which should be kept in view in making enquiries have been laid down in the Tariff Commission Act. According to these principles, actual costs have to be worked out in the case of representative units of the industry and an estimate of their future costs of production has to be made. A comparison is then made between the fair ex-works price of the product estimated for the industry as a whole with the c.i.f. price or landed cost without duty of the corresponding imported product and, on the basis of this comparison, the quantum of protection required by the industry is assessed. Freight disadvantage and allowance for prejudice are added to the fair ex-works price before the comparison is made, in cases in which it is established from evidence that it is necessary to take those factors into account.

Difficulties are sometimes experienced in arriving at the value of fixed assets or fixed capital of representative units. Fixed assets are generally assessed on their original book value and depreciation is calculated at income-tax rates, though, in some cases, special depreciation has been allowed to enable the industry to build up additional reserves. Another important issue relates to return on capital. The present practice is to allow generally a rate of return varying from 8 to 10 per cent. on the gross block, that is, the original value of the fixed assets. Interest on working capital is allowed usually at 4½ per cent., i.e., 1 per cent. higher than the Bank rate, the working capital being taken to be equivalent to usually three to six months' cost of production of the industry.

Work Done by Tariff Commission

Since the policy of discriminating protection was adopted by Government in 1923, 108 cases of industries which had applied for protection or assistance were examined by the Tariff Board and Tariff Commission. In 63 cases out of these, protection was granted and in the remaining cases their claims to protection were rejected. Of these, 19 industries have since been deprotected. The 44 industries which are enjoying protection today include metallurgical industries like aluminium, non-ferrous metals, alloy tool and special steels; engineering industries like bicycles, cotton textile machinery, electric motors; chemical and allied industries like soda ash, stearic and oleic acid, and sheet glass; food industries like preserved fruits, cocoa powder and chocolates and sago; and textile industries like sericulture and art silk fabrics. A study of the progress made in production since the industry was granted protection reveals that over a fairly wide range of the country's industrial economy, protection has made a distinctive contribution to promoting development.

Forms and Methods of Protection

The purpose of protection is to promote domestic production by counteracting, overcoming or preventing foreign competition, either by diminishing the power of the foreign competitor by creating against him a barrier of defence or by strengthening domestic resources. There are various methods of granting protection. Levy of import duties, grant of subsidies, restriction of imports, pooling of indigenous and imported products and fixation of import quotas are some of the well-known methods. Each method has its own advantages and disadvantages and these are weighed by the Tariff Commission before any method or a combination of two or more methods is considered suitable for any industry. Generally speaking, tariffs have been mainly employed for giving protection to industries. In addition to this, assistance is sometimes given to industries by administrative measures. Restrictions on imports were first introduced during the last world war and have since been continued on balance of payments considerations. Some of the industries protected by tariffs have received additional measure of protection as a result of these restrictions.

Results of Protection

The policy of protection followed by Government during the last 30 years or so has greatly benefited Indian industries. Despite the limitations of the protective policy explained earlier, not only have the protected industries been stabilised, but many allied and subsidiary industries have been established during this period. These industries have also provided employment to large numbers of persons and helped to develop skill and technique among the workers. Industries like cotton textiles, sewing machines, etc., have also succeeded in developing export markets. A criticism is sometimes made that all this has taken place at the cost of consumers. As has already been pointed out, in several cases, the grant of protection involved a mere conversion of revenue duty into equivalent protective duty and in such cases protection did not oridinarily impose any additional burden on the consumers. Where, however, the original rate of duty was enhanced for the purpose of granting protection, an additional burden was imposed on the consumers, but it is difficult to estimate precisely the extent of this burden. Taking a long-range view of the national economy, the cost involved temporarily could not be said to be excessive. It was a sacrifice which had to be made to insure future advantages.

Role of Industrial Management

Indigenous industries have certain advantages as well as disadvantages in comparison with corresponding industries in foreign countries. The advantages may arise from such factors as availability and lower cost of raw materials, lower wages and proximity of large centres of consumption. The disadvantages, on the other hand, may arise from such factors as higher cost of plant, machinery and equipment, lack of technical know-how, lower output per worker, long and costly transport and small volume of demand. In these and other matters, the role of industrial management is most important. The management must exploit the advantages to the utmost and lessen the extent as well as duration of the disadvantages as much as possible. It must avoid waste and exercise economy in every possible way and continuously strive to reduce the cost of production, to maintain the highest standard of quality of the industrial product, to adopt technological improvements introduced in foreign countries and to expand and diversify production. It is generally observed that little attention is paid to research and to maintenance of a proper system of cost accounting. The importance of research and cost accounting from the point of view of removing deficiencies in plant, machinery and equipment, in processing, in organisation and in effecting economies cannot be stressed too strongly. India has large resources of raw materials and they can be economically exploited if adequate encouragement is given by the consuming industries. The management must, therefore, encourage the development and expansion of feeder industries by using their products as far as possible.

Labour has a significant contribution to make to the industrial development of the country. While workers are entitled to favourable consideration of their legitimate demands, the community which ultimately bears the burden of protection has a right to expect that, by identifying themselves with their employment, workers will be able to achieve the maximum output. The management, on the other hand, should create a climate in which stable and cordial relations would be maintained between it and labour so that by close co-operation both could fulfil the obligations which they owe to the community on account of the burden imposed on it by protection.

Although India has made considerable progress in establishing new industries and in expanding and diversifying production of old industries during the last 30 years or so, it is still far behind the industrially advanced countries of the world. There are several gaps in the industrial set-up of the country, particularly in the field of manufacture of different types of machinery. The policy followed by the Government envisages rapid industrialisation in both public and private sectors. Towards this objective, both public and private sectors have to direct their efforts. The Five-year Plan has already achieved a great measure of success in increasing agricultural production. Industrial production has also increased during the last four years of the Plan. As the standard of living of the masses improves with the implementation of the current and the next Five-year Plans, the domestic market for industrial products is bound to expand progressively and protection may be relied upon to play its part in accelerating the process of industrialisation to meet the growing demand in the country.

ELEVENTH SESSION OF E.C.A.F.E.

DELIBERATIONS AND CONCLUSIONS

AFTER deliberating for eleven days, the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E) concluded its eleventh session on 7th April, 1955. One of the highlights of the session was the debate on the economic situation in Asia. The debate revealed a sense of sober satisfaction among the delegates in regard to the general progress made in the spheres of agriculture and industry, as well as in the formulation and, to some extent, the implementation of development programmes. Concern was, however, expressed about the pace of advance in the region which, it was said, was still much slower than what was necessary. Indeed, it was stated that advances in Asian economic development were hardly keeping abreast of the population growth of about 1.5 per cent. per annum. "Most of the countries of the region," to quote a report issued at the end of the conference, "find themselves nearly a decade after the end of the war with a real income per head of the population either lower than before the war or barely at pre-war levels, despite strenuous efforts made to increase output and to raise living standards."

What is the above state of affairs due to? The one common explanation given is that the pace of economic development in the E.C.A.F.E. region has all along been hindered by lack of adequate financial resources. This is no doubt a very difficult problem. But even more disquieting are certain basic weaknesses of Asian economies. Mention, for instance, may be made of the instability of the still predominantly agricultural economies and their dependence on the fortunes of a small number of raw material exports. Again, foreign exchange earnings and budget revenues have been declining since the Korean boom, while Governments are attempting to maintain or even increase their development expenditures. The region's international balance of payments, as a consequence, is unsatisfactory.

Improving Living Standards

Despite these difficulties, the Governments of the Asian countries continue to proceed with great determination with their economic development programmes. Export promotion measures are being adopted to enhance exchange earnings. In the search for export outlays, bilateral payments arrangements have been concluded, although multilateral trade and payments arrangements are accepted by most of the countries of the region as desirable ends. There is in the region a "burning desire" to improve living standards through economic development. It is felt that "more elaboration" is required in the techniques applied for the programming of economic development. The E.C.A.F.E. Secretariat has, accordingly, been urged and authorised to devote more of its resources (1) to an appraisal and promotion of economic development, (2) to the promotion of measures for international co-operation, and (3) to the provision of advisory services to Governments. With a view to enabling the Secretariat to carry out this task, an Economic Development Section has been set up in the E.C.A.F.E. Secretariat.

The economic progress, though significant, has not yet lifted Asian incomes and food consumption above pre-war levels. In fact, the present tendency is said to be towards economic stagnation. If this is to be prevented, there is an imperative need for a much larger measure of assistance—capital and technical. The E.C.A.F.E. Survey estimates the aggregate capital requirements of the region (excluding Japan and Mainland China) at $5,000 million per annum, against which the amount of foreign capital now being made available is of the order of only $1,000 million. Incidentally, it is stated that several countries are endeavouring to attract private capital from abroad, but the actual inflow has been small and, in some cases, there has actually been a net outflow. The need for larger foreign economic aid was impressively brought out at the recent annual region of the E.C.A.F.E. The representatives from the various non-Asian countries were one in recognising the fundamental needs of the region and in readily responding to the plea for more assistance, but there were differences in the approach to the region's problems and in the interpretation of the current economic situation.

In the considered opinion of the E.C.A.F.E., a large part of the resources should be devoted to activities designed to strengthen economic co-operation both among Asian countries and also with countries in other parts of the world. Projects of this character, as planned or already initiated, have been incorporated in the Commission's work programme and priorities for 1955-56. Confidence is expressed to the effect that other concrete opportunities for regional co-operation would emerge in due course and be brought to the attention of the Commission.

The details of the discussions held at the recent annual session of the E.C.A.F.E. reveal that international commodity agreements for wheat and sugar are considered as measures which would defeat the instability of agricultural raw material reports. Hope was expressed that the Commission on International Commodity Trade recently established would produce good results. Reassuring was the statement of the U.S. delegation that agricultural surpluses would not be dumped and would not unduly disrupt world markets.

Balanced Economic Development

Great emphasis was laid on achieving a balanced economic development with due recognition being given to the importance of agriculture. This is only as it should be, considering that agricultural surpluses are essential to provide the foreign exchange required for the purchase of machinery and equipment for industry. Attention was drawn, in particular, to the need for implementing such of those development projects as would utilise the vast human resources. In this context, the progressive development of cottage and small-scale industries and introduction of community development programmes along the lines of traditional self-help methods of co-operation as was being done in India was recommended. Much emphasis was also laid on the need for promoting increased trade within the region and for ensuring greater regional co-operation in fields like rice, iron ore, coal, etc. One of the proposals made was that, in view of the present difficult rice situation, the E.C.A.F.E. should bring the representatives of supplying and consuming countries together for discussions about long-term solutions of difficulties arising from current rice surpluses.

Human Resources

Attention was focused on the vast human resources in the region, on the one hand, and the shortage of trained personnel as one of the major obstacles to more rapid economic development, on the other. The importance was stressed of awakening the consciousness of the masses so that they would "accept" immediate sacrifice for future economic progress.

Keen interest was shown in the possibilities of the use of atomic energy for peaceful and industrial purposes, and the view was expressed that Asian countries should watch developments closely, lest they should "miss the bus again."

The Conference felt that the time had come to give closer attention to programmes of economic development and planning. The E.C.A.F.E. Secretariat was, therefore, authorised to proceed with "continuing" projects and activities on a high priority basis, "providing, in particular, for a periodical view of these plans and their implementation in the countries of the region." It was, however, stressed that these studies should be devoted to techniques of economic programming and should not infringe upon the national prerogatives.

Concern was expressed over disparities in freight rates. The Secretariat was asked to undertake a study of this problem. It was felt that a study of the railway freight rates should be made, since this question was of importance to the landlocked countries. The Secretariat was also asked to initiate a study on the promotion and improvement of public communication systems for domestic and commercial purposes, and the establishment of telecommunication facilities for industry.

The U.N. technical assistance activities were highly commended. The share of the E.C.A.F.E. region in the expanded programme of the U.N. during 1955 was estimated at 35 per cent. Shortage of finance, it will be recalled, had caused the 1953 programme for Asia to fall slightly short of the $6 million originally earmarked, to $5.88 million or 33.1 per cent. of the world total, to be precise. The number of experts whose services were made available during 1953 was 680 and the fellowships aggregated 374.

Problems of the rice-producing countries came up for discussion on several occasions. Burma and Thailand, in particular, were concerned over the continuation of the buyers' market, despite price reductions on the part of exporters. They also voiced anxiety over the increased competition from other foodgrains, especially wheat, and tendencies at self-sufficiency among rice-consuming countries. India and Ceylon, as well as other rice-consuming countries, on the other hand, defended their policies of self-sufficiency as a protection against the recurrence of rice prices in excess of the purchasing power of the consumer countries. India pointed out that it was producing rice at a cost lower than the lowest price of imported rice and offered to meet, under the auspices of the E.C.A.F.E. and the F.A.O., to discuss problems of rice-exporting and rice-importing countries.

Type of Economic System

Some discussion took place on the type of economic system suited for this region. India, Burma and Indonesia stressed the socialist character of their constitutions while recognising, at the same time, the importance of private capital. Ceylon announced its determination to follow a policy in favour of strengthening the private sector.

Inter-Regional Trade Co-operation

As requested by the Economic and Social Council, the Conference considered the question of inter-regional trade co-operation. Various opinions were voiced concerning the possibility of trade consultations to be organised by the E.C.E. and the E.C.A.F.E., similar to those taking place from time to time under the auspices of the Economic Commission for Europe. Such trade consultations, if agreed on, might bring together within the framework of the United Nations trade experts from countries participating in the work of the E.C.E. and the E.C.A.F.E. Following informal consultations, India, with the support of the U.S., moved a resolution in which the concept of trade consultations between interested countries on specific problems was endorsed in principle, though it was felt that methods and procedures should be more fully explored. It was also held that the consultations should not exclude member-countries of the U.N. other than those participating in the work of the regional commissions. Finally, the Indian resolution, adopted unanimously, referred the whole matter back to the Economic and Social Council (beginning in Geneva in July).

Cambodia, Ceylon, Japan, Laos and Viet Nam, which were until recently associate members of the E.C.A.F.E., attended the Tokyo Conference for the first time as full and equal members of the Commission. The total membership of the Commission now comprises 21 full members and three associated members (Hongkong, Malaya and British Borneo, and Nepal).

The next session of the E.C.A.F.E. will be held in India.

U.S. AID TO COLOMBO PLAN COUNTRIES

"U.S. assistance to the countries of the Colombo Plan—like that provided by Canada, Australia, New Zealand and the United Kingdom—is bilaterally given and bilaterally received. The U.S. contribution, in other words, is the sum total we do in the various countries of the area to promote the economic development of those countries." In these words, Samuel C. Waugh, U.S. Assistant Secretary of State for Economic Affairs, explained in a recent speech how the United States is assisting the Colombo Plan nations to advance their economies.

Since the plan began in 1951, member-countries outside South and South-East Asia have authorised expenditures of $1,092 million from their own resources for projects in benefiting countries. Almost half of this total has come from the United States in the form of grants for development assistance and technical co-operation programmes, special loans and grants for wheat to meet emergency situations, credits by the U.S. Export-Import Bank and the exchange of scholars and teachers under special legislation for this purpose.

Of the total U.S. grant assistance extended since the programme began, over 30 per cent. was used to improve and utilise agricultural and natural resources. About 20 per cent. of the total assistance went to supplying commodities to meet such urgent situations as threatened famine conditions in Pakistan. The development of communication and power facilities utilised 16 per cent., while 12 per cent. of the technical co-operation and development assistance money was allocated to industry and mining projects.

Health and sanitation projects received 10 per cent. and approximately six per cent. of the funds was used to assist in the establishment of community development programmes designed to raise the level of productivity and living conditions in rural areas. The programmes for improving educational facilities and the training of administrators took five per cent.

DEVELOPMENT COUNCIL FOR PHARMACEUTICALS

REDUCTION IN PRICES OF DRUGS URGED

THE need for developing the pharmaceutical industry in India on a sound footing can hardly be overemphasised. On the industry depends, to a great degree, the health of the people which, in turn, is the source of energy and capacity required for productive work. This observation may be somewhat jarring to the ears of some, because prevention is better than cure. But sickness has not been banished even in the richest countries of the world and so drugs that cure mankind of physical afflictions are vital to the health of any nation. Unfortunately, the pharmaceutical industry in India is still in its infancy. Out of a total of 1,643 pharmaceutical factories, as many as 1,568 are small-scale units. Many of them, according to the Pharmaceutical Enquiry Committee, are situated in insanitary places and their equipment is antiquated and inadequate, and they lack technically qualified staff to supervise the manufacture of drugs. Besides, they have no laboratories to check the quality of raw materials or finished products. Preparation of sub-standard drugs in these units is not uncommon and what is more disquieting is that most of the drugs are priced high and beyond the reach of the common man. Difficulty is being experienced regarding lack of proper collection, storage and marketing of certain varieties of raw materials.

The weaknesses of the pharmaceutical industry were highlighted at the first meeting of the Development Council for the industry, set up in February last at New Delhi, held on the 21st inst. The meeting was addressed by both Mr. T. T. Krishnamachari, Minister for Commerce and Industry, and Rajkumari Amrit Kaur, Minister for Health. The speeches give us an indication of the problems facing the Council and the suggestions made therein merit full consideration by the industry.

Mr. T. T. Krishnamachari made a pointed reference to the high price of drugs and pharmaceuticals and suggested some kind of Governmental control to check this trend. He deplored the tendency among producers of drugs and pharmaceuticals in this country to follow the American pattern of high margins of profits. He characterised this tendency as "unadulterated exploitation" by those who possessed scientific knowledge of manufacturing these products. It was, therefore, appropriate that the Minister should remind the Council of its duty to help the people who were ailing, especially the poor, by bringing down the prices of drugs and pharmaceuticals to their purchasing capacity. In this task, he promised the fullest support of the Government to the Council.

While profiteering deserves to be condemned, it is necessary to bear in mind that the pharmaceutical industry, if it is to serve the people well, should be encouraged to build up sufficient reserves for being expended on research and discovery of new medicines and drugs. Just imagine how much money the I.C.I. or the Glaxo Laboratories are spending and have spent on this score. Such expenditure, it is needless to add, does not yield immediate results and the cost of a new medicine should not be considered only in terms of the present block account but also by taking into account the enormous sums spent on research that led to the discovery of that medicine. If a rigorous control on profits of some of the world-renowned fine chemical companies had been exercised, the discovery of such well-known drugs as penicillin and paludrine might not have taken place. In saying this, it is not suggested that the Minister was wrong in his criticism. What is sought to be said here is that genuine and progressive-minded manufacturers of drugs should not feel discouraged in their attempts to establish a strong and sound pharmaceutical industry as a result of any measures taken to eliminate wanton profiteering.

Rajkumari Amrit Kaur, Union Minister for Health, inaugurating the Council, expressed the hope that "the Council will devise ways and means of setting up speedily an efficient pharmaceutical industry in India, which will not only be in the interests of the country's economy but also help in developing an efficient pharmaceutical trade and profession in India." She drew the attention of the Council to the various recommendations of the Pharmaceutical Enquiry Committee and was confident that, if implemented, they would go a long way towards putting the industry on progressive lines. She called for the initiation of necessary steps to develop the industry in order to make the country independent of imports from outside. This was, she said a matter of great importance and one which should receive top priority at the hands of the Council.

Commenting on the latest amendments incorporated in the Drugs (Amendment) Bill passed recently by Parliament, the Health Minister said that they were necessary to bring the rule-making power under the Central Government and to make punishments for the manufacture, sale and distribution of spurious, sub-standard and misbranded drugs more stringent. She considered that they would result in a tightening of the control over standard of drugs.

With a view to establishing uniformity in standards of production and inspection, the Enquiry Committee had made certain specific recommendations. One of them was that every manufacturing unit should maintain minimum scales of equipment, accommodation and staff. The Health Minister said that steps were being taken to implement the suggestion by introducing suitable changes in the Drug Rules. Referring to centralisation of Drug Standard Control, the Minister said: "The Central Health Council considered this recommendation and wisely decided that the production of drugs and pharmaceuticals should be brought under the control of the Central Government. The question of making suitable amendments in the Drugs Act in the light of the decision taken by the Central Health Council is being examined. The main results of centralisation will be to bring about uniform standards of licensing of pharmaceutical factories under the Drugs Act and better co-ordination between the working of the Drugs Act and that of the Industries (Development and Regulations) Act."

Rajkumari Kaur then stated that the supply position in respect of essential drugs was more satisfactory and that prices of drugs were on the decline, as was evident from the fact that the cost of antibiotics, vitamins, supra drugs, etc., had registered an appreciable fall as compared with the prices prevalent in 1948 and 1949. Pleading for self-sufficiency in drugs, she said:

"While framing our import policy, the capacity of indigenous production is kept in view, so that there may be an incentive to the development of our home industry. It is gratifying to note that the latter has made considerable headway in recent years. The statistics compiled by the Pharmaceutical Enquiry Committee reveal that the sale value of drugs made in India is to the tune of about Rs. 34.7 crores, while that of imported drugs is about Rs. 12 to Rs. 14 crores annually. The capital involved in the home industry is approximately Rs. 23.64 crores. The bulk of imported drugs comprises antibiotics, vitamins, sulpha drugs, glandular products and special preparations such as dental and other anaesthetics. The attention of the indigenous industry must be drawn towards the latter classes of drugs. We must all think now in terms of becoming self-sufficient in the matter of our drug supply."

Adverting to the terms of reference to the Council and, particularly, to the research problems of the industry, the Minister said:

"The terms of reference of this Development Council cover all aspects of the industry. The Council is representative of various interests affecting the industry and trade and I am confident that its suggestions will be invaluable for Government in planning its development and making a serious attempt from all angles to place it on a self-sufficient basis within the least possible time. The work relating to the research in drugs, the development of medicinal plants and the production of basic chemicals is already under the consideration of Government and the various scientific bodies sponsored by Government. In addition to this, every large unit in this country or a number of units combined together should form research and testing centres of their own for the benefit of the industry."

Incidentally, the Health Minister did well in uttering a warning to the medical practitioners against the tendency of becoming agents of the manufacturers of patented medicines. She remarked:

"What is more important is that the industry should create confidence in the minds both of the consumer and the medical profession. The medical profession should extend the hand of co-operation to the industry and try to support indigenous products in preference to foreign articles, particularly proprietary articles. It hurts me considerably to see a large amount of money being utilised for the import and production of proprietary drugs which can easily be compounded by our own chemists on the prescriptions of medical practitioners. Medical practitioners must keep up the art of prescription writing and should not encourage the use of patent and ready-made expensive formulations. You will remember that this very aspect was stressed by me at the time of the inauguration of the Pharmaceutical Enquiry Committee when I said that it was a sorry state of affairs to notice that the medical profession was beginning to lose the art, as it were, of writing prescriptions and thereby falling back on patent medicines for their patients. It should, on the other hand, be the duty of the profession to eliminate from the minds of the public the unnecessary importance attached to patent and proprietary drugs. As you are all aware, the sale of patent medicines has of late been on the increase in India due to advertisement. My Ministry has already taken steps to regulate advertisements of drugs in the lay Press and to ensure that unnecessary claims made on their behalf are controlled. The rules under the Drugs and Magic Remedies (Objectionable Advertisements) Act have come into force from the 1st of April, 1955, and it is hoped that this legislation will reduce the evil effects of self-medication by the general public."

One of the reasons for the unduly expensive medical treatment in India is the mechanical prescription of patent medicines by medical practitioners. Any measures devised by the Council to check this tendency will be of immense benefit to the sick people the bulk of whom is beyond the reach of these medicines.

DEVELOPMENT OF ALKALI INDUSTRY

Of the many Development Councils so far established, the one set up for heavy chemicals (alkalis) will have a tough time in tackling the problems facing the industry. For this industry generally is suffering from a series of shortcomings. Its progress has not been uniform. The producers have started manufacturing secondary products and the development of primary products has been neglected. As these latter need large investments and as the former has not been quite a success, capital is not flowing in sufficient quantities to establish large units which alone can produce primary products on an economic basis. And for this the industry has for long been claiming advance protection for almost all its products. The industry is also experiencing difficulty in respect of railway freight, supply of wagons, etc. These difficulties will have to be considered by the Development Council which is expected to draw up targets for the industry in the second Five-year Plan. In fact, Mr. Nityanand Kanungo, Deputy Minister for Commerce and Industry, stated, while inaugurating the meeting of the Council, that it should draw up targets for soda ash, caustic soda, chlorine and its products, calcium carbide and other chemicals.

Emphasising the importance of the task before the Council, the Deputy Minister pointed out that the growth of many industries was dependent on the development of alkali industries. For instance, soap, rayon, dyestuffs, aluminium, textiles, matches, sugar, plastics and others all consumed alkalis in large quantities. The targets which might be fixed for these items would become practicable, he said, only if there was a corresponding increase in the production of the basic alkalis.

Reviewing the recent development in the field of heavy chemicals industry, Mr. Kanungo observed that three new factories for the manufacture of soda ash with a total capacity of 520 tons had been licensed under the Industries Act and were expected to be set up soon. The two existing units had already expanded their capacity to 260 tons per day. In regard to caustic soda, 10 new schemes were expected to be completed within the next two or three years, raising the capacity from about 42,000 tons to 106,000 tons. There were, besides, 12 units already in existence. Even with all this expansion, the demand in the country would not, he said, be fully met and there was scope for further development. In this context, he sought the advice of the Council in regard to future plans.

In this industry, too, as in the case of pharmaceuticals, the cost of production is very high. Mr. Kanungo, therefore, did not lose the opportunity to emphasise the need for lowering costs. In this connection, he reminded the Council that the alkali industry had been given tariff protection and that it enjoyed a sheltered market because of the operation of the import control. Nevertheless, he considered it important that such vital raw materials should be available to the other industries which consume them at the lowest possible price. He felt that production in India should cost no more than that in any other country.

RAILWAY LABOUR TRIBUNAL

Mr. Sankar Saran, who constitutes the one-man tribunal for adjudication of disputes between the railway administration and labour, is holding the preliminary sitting of the Tribunal in Bombay. The disputes referred to the Tribunal relate mainly to the redistribution of grades of various categories of staff, application of revised scales of pay for certain categories of staff, with effect from 1st January, 1947, including payment of arrears, admissibility of officiating pay to staff working in the higher grades without the imposition of any minimum time limit, and conditions governing workshop leave of short duration. The first dispute regarding the redistribution of grades is of great importance to the staff of the railways which employ nearly a million workers with a large number of grades. The main task of the Tribunal at this sitting is to frame issues arising out of the written statement of the demands submitted by the National Federation of Indian Railwaymen.

The appointment of a Tribunal was, it will be noted, envisaged under the permanent negotiating machinery set up by the Government of India in December, 1951, which provides that, if after a discussion between the Railway Board and the Federation, agreement is not reached on any matters of importance, such matters may be referred to a tribunal consisting of an equal number of representatives of labour and the Railway Board with a neutral chairman. However, both the Federation and the Railway Board agreed that, in this case, a one-man tribunal, consisting of Mr. Sankar Saran, would do and that both of them should represent their cases to him.

TRADE WITH Japan THROUGH
BANK OF TOKYO LTD.
(FORMER YOKOHAMA SPECIE BANK)
The only foreign exchange bank in Japan licensed under the Foreign Exchange Bank Law, offering complete banking service through its branches all over Japan and overseas, and well equipped to give full and accurate business information.

RESULTS OF TWO TATA GROUP MILLS

PROFIT OF SVADESHI LOWEST SINCE 1940—TATA MILL RAISES DIVIDEND

THE working of cotton textile mills in India during 1954, judged from the results of many of the mills which have been analysed in these columns in recent weeks, has clearly proved that the benefits of freedom from distribution and price controls enjoyed by the industry throughout the year were neutralised to *some extent by the continuance of production* control, which restricted the manufacturing potential of the industry by not permitting it to change the range and type of production to *satisfy the varying seasonal and market requirements.* Another adverse factor was the fall in prices of cloth in the face of an increase, in excise duties. The financial results of the Svadeshi Mills Company, Ltd. and the Tata Mills Ltd., both under the management of Tata Industries Ltd., Bombay, for the year ended 31st December, 1954, bear further evidence of the aforesaid trading conditions.

The gross profit of the Svadeshi Mills amounts to Rs. 11.98 lakhs, recording a decline of Rs. 11.15 lakhs from that (Rs. 23.13 lakhs) for the previous year, thus more than counteracting the increase of Rs. 5.78 lakhs noted a year ago. What is more, the year's profit represents the lowest earned since 1940. The gross profit of the Tata Mills, however, has been maintained at the previous year's level, the exact profit for the year being Rs. 9.73 lakhs, as against Rs. 9.70 lakhs for 1953, and a loss of Rs. 2.30 lakhs for 1952. If the Company has not suffered any setback in the earnings, it is obviously due to the benefit of the *modernisation programme* carried out during the year. The net profit of the Svadeshi Mills amounts to Rs. 8.31 lakhs, as compared with Rs. 12.44 lakhs for 1953, and that of the Tata Mills Rs. 3.40 lakhs, as against Rs. 4.12 lakhs for the previous year.

The dividend on ordinary shares of the Svadeshi Mills has been halved from 16 per cent. to 8 per cent., but it is being paid on a higher capital raised during the year by the capitalisation of Rs. 25 lakhs from the reserve fund. It must also be noted that even for the payment of this lower dividend, the Directors have had to draw a part of the amount required from the dividend equalisation fund. The dividend of the Tata Mills has, on the other hand, been raised to 10 per cent. from 6 per cent. paid for 1953, to which level it had been enhanced last year from 4 per cent. paid for 1952. It may be noted, in this connection, that the dividends of both the Companies for the year under review are being paid *without deduction of income-tax*; this means that the dividends are taxable at the hands of the shareholders, whereas in respect of the previous years they were tax-free in their hands. This change is due to the fact that there is no tax liability for the Companies, thanks to the advantage of initial depreciation allowance and the incidence of taxation on the dividends has, therefore, to be borne by the shareholders at the rate applicable to them on the basis of their total income.

A bird's-eye view of the performance of the two Companies during the past year can be had from the table published at the foot of this page.

It will be observed that, while the sale proceeds and consumption of raw materials have shown a decline, expenses have risen by Rs. 8.02 lakhs in the case of the Svadeshi Mills and Rs. 8.33 lakhs in the case of the Tata Mills. In the case of the Svadeshi Mills, the rise in expenses is accounted for mainly by the increase of Rs. 2.21 lakhs in salaries and wages and Rs. 3.21 lakhs in stores and fuel. The cost of the extra dearness allowance in respect of the period May, 1953, to December, 1954, and bonus for the year 1952 under the award of the Labour Appellate Tribunal amounts to Rs. 9.18 lakhs, thus reducing the Company's profit to that extent. The Directors estimate that an additional burden of Rs. 4.43 lakhs per annum has to be met by the Company from January, 1955, so long as the cost of living index remains over 350. The Directors add that the Company was again handicapped by too low a quota of Indian cotton to meet its full requirements and, as a consequence, high-priced foreign cotton had to be used which reduced the profits appreciably.

The increase in expenses of the Tata Mills is accounted for mainly by the rise of Rs. 3.68 lakhs in salaries and wages and Rs. 2.52 lakhs in repairs and renewals. As a result of the award of the L.A.T., the Company has been called upon to pay Rs. 7 lakhs as extra dearness allowance for the period May, 1953, to December, 1954. So long as the cost of living index remains above 350, the Company will have to bear an additional burden of Rs. 4.20 lakhs a year from January, 1955, onwards. So far as the bonus for 1952 is concerned, the Company has represented to the Industrial Court claiming that no bonus is payable to the workers as the Company incurred a loss for that year. The case has not yet been decided. The question of bonus for 1953 is also before the Industrial Court. As in the case of the Svadeshi Mills, the quota of Indian cotton to the Tata Mills was inadequate to meet its full requirements and foreign cotton had to be used which reduced the Company's profit to some extent.

The financial position of the two companies can be judged from the following synopses of their latest balance-sheets:

	SVADESHI Rs.	TATA Rs.
LIABILITIES		
Capital	1,15,00,000	32,50,438
Reserves and surplus	63,70,141	50,08,006
Debentures	..	39,00,000
Provision for taxes	..	44,200
Liabilities	5,75,466	94,26,693
	1,26,02,246	
ASSETS		
Gross block	2,11,10,783	1,64,79,133
Less—Depreciation	1,02,23,292	48,92,129
Net block	1,08,87,491	1,15,87,004
Stock-in-trade	1,12,26,517	69,12,454
Stores and spares	13,14,610	15,48,381
Debts, deposits and advances ..	24,91,576	13,37,957
Investments	49,69,178	2,81,645
Cash	10,58,479	1,11,046
Total ..	2,29,47,853	2,17,28,337

In pursuance of the Companies' plans for the reorganisation and renovation of the mills, machinery of the value of about Rs. 31.94 lakhs was installed during the year by the Svadeshi Mills and of about Rs. 21 lakhs by the Tata Mills. In addition, machinery awaiting installation at the end of the year amounted to Rs. 11.65 lakhs in the case of the Svadeshi Mills and Rs. 4.41 lakhs in the case of the Tata Mills. With the installation of new spinning frames, the spinning department of the Tata Mills was able to achieve considerable economies in working, thereby augmenting the profits of the Company.

The Rs. 100 fully paid-up shares of the Svadeshi Mills are being currently quoted at Rs. 196 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 4.25 per cent. per annum (taxable). The Rs. 25 paid-up shares of the Tata Mills are being currently placed at Rs. 54-4 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 4.83 per cent. per annum (taxable).

WIMCO'S PROFIT LOWEST SINCE 1947

A decline in production on account of strikes in some of the factories and intense competition from low-priced cottage products have had an adverse effect on the earnings of the Western India Match Company, Ltd. (Managing Director: Mr. T. Rydin, Bombay), for the year ended 31st December, 1954. Thus, the gross profit of the Company for the year amounts to Rs. 90.98 lakhs, representing a decline of Rs. 9.16 lakhs from that for the previous year. Though this shrinkage may not be serious, it should be noted that this is the second year in succession in which a fall in profit has occurred, the drop in the previous year being Rs. 5.90 lakhs. The aggregate decline of Rs. 15.06 lakhs in the course of the past two years has brought the profit of the Company to the lowest level since 1947.

The net profit, at Rs. 41.47 lakhs, shows a decline of only Rs. 1.56 lakhs from that for 1953, due to lower provision for depreciation, as explained below. Despite this small setback, the addition to the reserves has been raised from Rs. 4.56 lakhs to Rs. 6 lakhs and the distribution to the shareholders has been maintained at 11 per cent., made up of a dividend of 10 per cent. and a bonus of 1 per cent. This has been rendered possible by the absence of any allocation to gratuity. This is the sixth consecutive year for which the return to shareholders is being maintained.

The progress of the Company during the past three years is reflected in the following comparative table giving the salient features of the profit and loss account:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Gross sale proceeds ..	10,28.19	11,09.81	11,85.11	11,94.80
Other income	10.21	11.09	15.88	6.91
Closing stocks	27.28	41.57	27.10	24.05
Purchases of finished goods	0.29	0.01	2.20	14.95

	(D. 10% +B. 1%)	(D. 10% +B. 1%)	(D. 10% +B. 1%)	(D. 10% +B. 1%)
,, gratuity	..	4.08	..	3.27
,, extra commission to Managing Agents ..	4.20	4.08	4.61	4.12
Carry forward	5.29	4.28	4.21	2.86

† On the increased capital of Rs. 2.75 crores, raised by the capitalisation of Rs. 55 lakhs in November, 1953.

The Directors report that, during the year under review, strikes occurred in the Company's factories at Calcutta and Madras and production was lower than in the previous year. Sales also were lower in 1954, being been "adversely affected by intensified competition from the low-priced products of subsidised cottage manufacturers." Reflecting these, are the decline of Rs. 71.12 lakhs in sale proceeds, Rs. 14.29 lakhs in closing stocks, Rs. 42.69 lakhs in excise duty and Rs. 49.87 lakhs in expenses. The substantially lower provision for depreciation is explained by the Directors in their report as follows:

"In this year's accounts, depreciation has been calculated differently from previous years. Your Directors have thought it preferable now to introduce the 'straight line' system, whereby each accounts year will bear the same amount of depreciation for each asset until such asset has been completely written off within its expected lifetime. In the past, we wrote off in the accounts ordinary depreciation, initial depreciation, etc., to the full extent allowed by the Income-tax Department in their assessment. To the extent that the amount of depreciation allowed by the Income-tax Act in this year's assessment (as well as in the future) exceeds our book depreciation, the consequent tax advantage taken, as it were, in advance, is being provided for in our books. The tax advantage to be derived from the recently introduced development rebate is being treated in the same way."

This also explains the increase in the provision for taxation from Rs. 30.65 lakhs to Rs. 34.45 lakhs, which includes provision for deferred taxes on depreciation and development rebate.

The Company's factory at Shahdara in Pakistan, which was reopened early in 1953, worked satisfactorily during the year under review and the profit earned by the Company in Pakistan has been included in the year's accounts. The Pakistan authorities desire that the Company's interests in Pakistan be converted into a Pakistani company. In fact, it was on the condition that a Pakistani company would be established within two years that the lease of the Shahdara factory was renewed.

The paid-up capital of the Company remains unchanged at Rs. 275 lakhs, after the capitalisation of Rs. 55 lakhs in November, 1953. The reserves and surplus aggregate Rs. 80.54 lakhs. The reserve for taxation amounts to Rs. 133.41 lakhs and current liabilities aggregate Rs. 141.89 lakhs. The Company has made additions to the extent of Rs. 48.62 lakhs during the year to the gross block, which a depreciation fund of Rs. 153.96 lakhs has been built up. The current assets amount to Rs. 492.34 lakhs, exceeding the current liabilities and taxation by Rs. 217.04 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 205 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 5.67 per cent. per annum, free of tax.

AIR-INDIA INTERNATIONAL

The operations of the Air-India International Corporation during the eight months from 1st August, 1953, to 31st March, 1954, the first accounting period after the nationalisation of the former Air-India International Ltd., have resulted in a gross profit of Rs. 34.30 lakhs, as compared with Rs. 36.22 lakhs earned during the year ended 31st December, 1952, the last year of the Company's operations under private enterprise. After making a provision of Rs. 22 lakhs (as against Rs. 38.36 lakhs set aside for the 12 months ended December, 1952) for depreciation, the profit works out to Rs. 18.30 lakhs, as against a loss of Rs. 2.14 lakhs. This profit has been arrived at without making any provision for payment of interest on capital of Rs. 94.88 lakhs provided by the Government. (The question of charging a fixed rate of interest on the Government's share of the capital is dealt with exhaustively by the Board of Members of the Corporation in its report, to which a reference will be made later on.)

After setting aside Rs. 5.25 lakhs for deferred taxation and Rs. 6 lakhs for interest on bonds to be issued to Air-India International Ltd., the Board has decided to appropriate the balance of Rs. 7.05 lakhs thus: to write off goodwill Rs. 10,000, transfer to insurance fund Rs. 2.10 lakhs, transfer to reserve fund Rs. 4.50 lakhs and carry forward Rs. 0.35 lakh.

The revenue earned by the Corporation from carriage of traffic, including mail and charter

Points From The Chair

Egypt's Economy

"ALL these efforts have inspired the country with a sense of definite progress. This progress, however, must not let us lose sight of the two fundamental conditions governing the tasks that lie ahead, namely, the stability of our currency and the maintenance of confidence. For, despite the achievement of a balanced economy, the danger of inflation may loom once more, if the ordinary budget receipts and savings fail to finance the large development projects together with the permanent social services and recourse is made to an expansion in the note circulation. Sooner or later, the cost of living would inevitably rise as a result of excessive increase in the money supply over a number of years, and the purchasing power of our currency, which the Government has laboured to maintain during the past two years, would be threatened. This would bring a great deal of distress to the majority of the population since salaries and wages normally lag behind the steadily soaring cost of living. Fortunately, the authorities are fully aware of all such dangers."

ALY SHAMSY,
National Bank of Egypt.

Export Duty on Tea

"I would also like to question the wisdom of an export duty on tea, which, though no doubt justifiable at the price of the commodity we have recently seen, does in effect give all other producing territories, who have either a small or perhaps no export duty at all, a direct incentive to attract capital away from India and elsewhere. Where ample land and labour is available, as in Africa, the result may be highly expensive some years hence. We all know that, if at any time tea production exceeds consumption, inevitably the selling price will fall below the cost of production, to all except the cheapest producers and it will then probably be found that the export duty will be maintained, while the actual producer is selling his product at a loss."

G. H. MANSFIELD,
Travancore Tea Estate Co., Ltd.

Re-insurance Overplayed

"One of the dominating factors in our market is the enormous lines subscribed by insurance units of varying strength. I cannot believe that it is healthy for enormous lines to be written by units of the market whose financial resources cannot be compared with the amount of their subscriptions. It is obvious that these lines can only be absorbed with the aid of very extensive reinsurance contracts. Reinsurance is a necessary part of our business, but it would appear as if the use of reinsurance has been overplayed. I may be on dangerous ground in making this statement, but there have been pointers already in the market which show that my criticism may not be unfounded."

HON. R. M. PRESTON,
Marine Insurance Co., Ltd.

(*Concluded from previous page*)

revenue, amounts to Rs. 235.07 lakhs, of which earnings from passengers alone account for Rs. 163.24 lakhs, mails for Rs. 44.60 lakhs and cargo and excess baggage for Rs. 26.30 lakhs. The cost of operations has taken up Rs. 71.10 lakhs. Salaries, wages and provident fund have absorbed Rs. 46.30 lakhs, traffic and passenger service expenses Rs. 30.43 lakhs, maintenance and engineering Rs. 20.46 lakhs and other expenses Rs. 30.42 lakhs.

The total assets of the Corporation, as on 31st March, 1954, amount to Rs. 654.39 lakhs. Since the close of the year, the Corporation has undertaken further commitments of about Rs. 530 lakhs in respect of capital expenditure and for ground facilities, equipment and spares required for expanding operations. The capital of the Corporation stands at Rs. 478.97 lakhs, of which a sum of Rs. 284.09 lakhs represent the net value of the assets and liabilities taken over from Air-India International Ltd. under the Air Corporations Act, 1953, subject to adjustment, the balance of Rs. 194.88 lakhs representing amounts received from Government against capital requirements.

The report of the Corporation suggests that the Government desires to treat this amount as loan capital, instead of equity capital, and charge a fixed interest on it against the profit. The Board of the Corporation has pointed out that this policy is unrealistic, because of the peculiar nature of air-transport operations. The present profit of the Corporation is not, and cannot be expected, for some years, to be sufficient to provide a return on the whole of the funds invested in it. The result of such a policy would be, the Board observes, that a recurring artificial loss would be created, which in any case would have to be met by a subsidy or further loans. The interest on such subsidy or loans would merely aggravate the next year's adverse results. In a memorandum submitted to the Government, the Chairman of the Corporation is said to have made a strong recommendation that, in keeping with a directive in the Act requiring the Corporations to be operated as business concerns and on business lines, the Government should apply to its financing the same general principles as apply to Government-owned joint stock companies. He has also made specific proposals, with which the other Members of the Corporation have expressed general agreement, applicable to both the Corporations, which, in the case of Air-India, would result in Government earning a return only out of profit, if any.

COMPANY MEETINGS AND DIVIDENDS

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 2nd May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 26th April to 2nd May 1955, both days inclusive.

UNITED FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 4th May, 1955. Transfer books remain closed from 27th April to 4th May, 1955, both days inclusive.

METHONI TEA CO. LTD. Annual General Meeting, Calcutta, 6th May, 1955. Dividend: Rs. 4-8 per share (includes interim dividend of Re. 1 paid on 28th February 1955). Transfer books remain closed from 29th April to 6th May, 1955, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 13th May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 30th April to 13th May, 1955, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 16th May, 1955. Dividend: Re. 1-4 per share (includes bonus of As. 8 per share), payable on and after 23rd May, 1955. Transfer books will remain closed from 5th to 21st May, 1955, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 17th May, 1955. Transfer books will remain closed from 3rd to 17th May, 1955, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting Bombay, 23rd May, 1955. Dividend: Rs. 14 per share, payable on or after 1st June, 1955. Transfer books will remain closed from 3rd to 23rd May, 1955, both days inclusive.

ORIENT PAPER MILLS LTD. Dividend of As. 8 per share, for the half-year ended 30th September, 1954.

GIELLE TEA CO., LTD. Interim dividend of Re. 1 per share, for the year ended 31st December, 1954. Transfer books remain closed from 26th April to 2nd May, 1955, both days inclusive.

PAHARGOOMIAH TEA ASSOCIATION LTD. Second interim dividend of Rs. 2 per share, for the year ended 31st December, 1954.

KILLICK INDUSTRIES LTD. Interim dividend of Rs. 4 per share, for the year ending 30th June, 1955, payable on and after 27th May, 1955. Transfer books will remain closed from 6th to 20th May, 1955, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Final dividend of Rs. 26-4 per ordinary share, for the year ended 31st December, 1954, payable on 23rd May, 1955. Transfer books will remain closed from 4th to 18th May, 1955, both days inclusive.

VISHNU COTTON MILL LTD. Dividend of Rs. 4 per share, for the year ended 31st December, 1954, payable on 25th May, 1955. Transfer books will remain closed from 6th to 20th May, 1955, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Dividend of Rs. 10 per share, for the year ended 31st December, 1954, payable on 10th June, 1955. Transfer books will remain closed from 16th May to 9th June, 1955, both days inclusive.

PREMIER CONSTRUCTION CO., LTD. Dividend of Rs. 7 per share, for the year ended 31st December, 1954, payable on 16th May, 1955. Transfer books will remain closed from 13th April to 2nd May, 1955, both days inclusive.

TRAVANCORE RAYONS LTD. Dividend of As. 10 per share, for the year ended 31st December, 1954. Transfer books remain closed from 26th April to 10th May, 1955.

COMPANY REGISTRATIONS

BANGUR LAND DEVELOPMENT CORPORATION LTD. (First Director: Mr. B. Bangur.) Business: To purchase, take on lease, acquire any lands, buildings, etc. Authorised capital: Rs. 1,00,00,000. Public company. Address: 14, Netaji Subhas Road, Calcutta.

OSLER PROPERTIES LTD. (First Director: Mr. S. B. Mehta.) Business: To acquire by purchase, lease or otherwise land, building, etc. Authorised capital: Rs. 1,00,00,000. Public company. Address: 12, Old Court House Street, Calcutta.

MODY COMPANY (EXPORTS) LTD. (First Director: Mr. K. L. Modi.) Business: Manufacturers, importers, exporters and dealers in all kinds of goods, hessian, jute, etc. Authorised capital: Rs. 10,00,000. Public company. Address: 67-B, Netaji Subhas Road, Calcutta.

RADICE & CO. (INDIA) LTD. (First Director: Mr. L. W. Radice.) Business: Buyers, sellers and dealers in mica and other minerals. Authorised capital: Rs. 10,00,000. Public company. Address: 7, Chittaranjan Avenue, Calcutta.

SREE JAGADAMBA TEA CO., LTD. (First Director: Mr. N. M. Dani.) Business: Cultivate tea, coffee, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Block 97, Fifth Floor, Stephen House, Calcutta.

PATNI TRADING CO., LTD. (First Director: Mr. B. L. Saraogi.) Business: Dealers, balers, etc., of jute, flex, hemp, etc. Authorised capital: Rs. 5,00,000. Public company. Address: P-17, Kalakar Street, Calcutta.

BLUE STAR ENAMELWARE CO., LTD. (First Director: Mr. E. P. Master.) Business: Manufacturers and dealers in all kinds of iron enamelware products, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 49, Stephen House, Calcutta.

MINEREX (INDIA) LTD. (First Director: Mr. K. S. Janakiram.) Business: Prospecting and Surveying of minerals, ores, etc. Authorised capital: Rs. 5,00,000. Public company. Address: 1B, Southern Avenue, Calcutta.

QUESTION HOUR IN PARLIAMENT

Foreign Investments

OUT of a total projected investment of Rs. 105 crores on new industrial units licensed under the Industries (Development and Regulation) Act, 1951, the approved foreign investment amounts to Rs. 28 crores, inclusive of Rs. 23 crores on account of the oil refineries.

—*Commerce and Industry Minister*

Trade with China

During 1954, India's exports to China were valued at Rs. 1,77,12,000, while imports from China were of the order of Rs. 94,41,000. The commodities exported included jute manufactures, tobacco, spices, mica, lac, oils (other than linseed), drugs and medicines, and machinery. Indian imports during the period included raw silk, raw hides, spices, drugs and medicines, oils, chemicals, instruments and appliances. It is too early to evaluate the results of the Indo-China Trade Agreement. The friendly trade relationship established as a result of these contacts has borne fruit, especially in the matter of exports of Indian tobacco.

—*Deputy Commerce and Industry Minister*

Baraset-Bashirhat Light Railway

The Government has no intention of nationalising the Baraset-Bashirhat Light Railway. It has come to the conclusion that the acquisition of the old and obsolete assets of the Railway is not justified, as that railway cannot meet the present and future traffic needs of the area.

• • • •

W. Coast Road Development

The Union Government has decided to spend Rs. 5.5 crores to improve the 640-mile West Coast road from Bombay to Cape Comorin, excluding the portion lying in Goa. Apart from improving practically the entire length of the road, a number of stream crossings is to be bridged. The work will be completed by the end of the second Five-year Plan period.

• • • •

Rail Safety Device

A programme of introducing the lock and block arrangements as a safety measure on all railways at a cost of Rs. 5 crores is in hand. The introduction of this safety device will take a few years. This will minimise the chances of train collisions.

—*Deputy Minister for Transport and Railways*

Provident Fund Act

The Government of India is considering a proposal to extend the Employees' Provident Fund Act of 1952 to all industries employing more than 10,000 people. At this stage, I am not in a position to give the House the list of industries which will be covered by the Act.

—*Labour Minister*

Mining Regulations

Revision of the mining regulations and strengthening of inspectorates are under the consideration of the Government. A museum of safety, health and welfare is also being set up in Bombay as part of the Central Labour Institute. It is not correct to say that accidents in mines are increasing. In 1953, the death rate per thousand workers in mines was 0.65, as against 0.77 in 1951. In factories, the death rate was 0.09 in 1951, as against 0.10 in 1949. Regulations under the Indian Mines Act will be finalised very soon.

• • • •

Provident Fund Act

Data in respect of well established industries are being collected and a final decision will be taken shortly on the industries that will come within the purview of the Employees Provident Fund Act. The Government will consider the question of extending the Act to the plantation industry.

—*Deputy Labour Minister*

Soil Conservation

During 1954-55, the Government of India sanctioned a subsidy of Rs. 4,36,655 and loans of Rs. 19 lakhs to the various States for soil conservation schemes.

• • • •

Central Agricultural Service

The question of constituting a Central Agricultural and Animal Husbandry Service is under consideration. This will be a Central Government service and not an all-India service.

—*Minister for Agriculture*

Air Corporations

The Indian Airlines Corporation's operating losses during the year 1954-55 amount to Rs. 55.66 lakhs, while depreciation and interest on bonds and borrowings amount to Rs. 44 lakhs and Rs. 15.93 lakhs, respectively. The total losses thus are estimated at Rs. 115.59 lakhs. The Corporation's total revenue for the year is estimated at Rs. 680.60 lakhs. With regard to the introduction of Skymasters for the night airmail services, larger traffic and mails are expected to make the service economic in due course.

—*Deputy Communications Minister*

Godavari Survey

The survey of Godavari Valley has indicated the possibility of finding deposits of coal in that area. Drilling operations in the Godavari coalfields in Andhra State are now under contemplation. A detailed mapping of the coalfields in Singareni, Kothagudlem and Tandur areas in Hyderabad has been completed. The Geological Survey of India is not conducting any gold prospecting operations in Malabar.

—*Minister for Natural Resources*

DUNBAR AND BOWREAH COTTON MILLS REMAIN OFF DIVIDEND LIST

SHARP DECLINE IN PROFIT OF RAMNUGGER

Dunbar Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

The account shows, without providing for depreciation, a profit of Rs. 1,18,455 (loss Rs. 3,27,568) which has to be deducted from the debit balance brought forward from the last account, namely, Rs. 10,45,860 (Rs. 5,24,085), leaving a net debit balance of Rs 9,27,405 (Rs. 12,51,654, after providing Rs. 4,00,000 for taxation in respect of previous year). The directors recommend that this should be carried forward to the next account.

Export business during the half-year was satisfactory. Double shift operations were started from 19th October, 1954, partly in spinning and fully in the weaving sections.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	19,00,000	Net block ...	29,54,776
Reserves ...	25,17,571	Stock-in-trade ...	48,37,463
Provision for taxation ...	2,32,337	Stores and spares, etc.	6,55,430
Liabilities ...	59,43,417	Debts, deposits and advances ...	11,40,376
		Investments	55,250
		Cash ...	22,626
		Profit and loss account ...	9,27,404
Rs.	1,05,93,325	Rs.	1,05,93,325

Bowreah Cotton Mills, Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

The account shows, without providing for depreciation, a loss of Rs. 2,96,055 (Rs. 5,92,891) to which has to be added the debit balance brought forward from the last account, namely, Rs. 18,86,726 (Rs. 9,68,728), making a total debit balance of Rs. 21,82,781 (Rs. 17,46,619, after providing Rs. 1,85,000 as additional provision for taxation in respect of previous year). The directors recommend that this should be carried forward to the next account.

The Mills could not work fully on double shifts, owing to power and labour difficulties. The labour adopted go-slow tactics which ultimately culminated in an illegal strike lasting from 21st December, 1954 to 8th January, 1955. These had their cumulative detrimental effect upon the results for the half-year.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	18,00,000	Block ...	29,23,189
Reserves ...	22,71,793	Stock-in-trade ...	35,41,140
Provision for taxation ...	33,178	Stores and spares ...	11,01,252
Liabilities ...	66,83,774	Debts, deposits and advances ...	9,43,201
		Investments	48,603
		Cash ...	48,579
		Profit and loss account ...	21,82,781
Rs.	1,07,88,745	Rs.	1,07,88,745

Ramnugger Cane & Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August, 1954.

Crushing operations started on 5th December, 1953, and continued up to 4th March, 1954. During this period, the total quantity of sugarcane milled was 1,398,985 maunds with an average recovery of 10.05 per cent., as compared with 2,101,143 maunds and 10.33 per cent., respectively during the previous season. The total crush was made up of 1,015,726 maunds of cane from the Company's own farms and 383,259 maunds of cane purchased from cultivators. The corresponding figures for the preceding season were 1,436,653 maunds and 664,490 maunds, respectively. The sugarcane crop, having been severely affected by drought and later by floods, suffered heavily both in yield and in quality. These adverse weather conditions, in fact, affected the cane crop all over India, particularly in Bihar, East U.P. and West Bengal. The total production of sugar in the country, consequently, recorded a fall of 23.84 per cent., as compared with the previous year's figures.

The minimum price of sugarcane payable by factories was increased from Re. 1-5 per maund to Re. 1-7 per maund for gate deliveries. The special additional excise duty of Re. 1-6 per cwt. of sugar imposed in the previous year was discontinued. In accordance with the policy announced by the Government at the beginning of the season, 25 per cent. of the factory's production was requisitioned at an ex-factory price of Rs. 27-2 per maund for I.S.S. Grade E. 27.

The Company imported 8,328.4 tons of raw sugar from Cuba to be refined at the factory. Refining operations commenced on 3rd August, and a quantity of 2,085 tons was processed by 31st August, 1954. This was an entirely new venture, and the results obtained in regard to the recovery and to the quality of refined sugar were very satisfactory. The total quantity of sugar thus refined was allowed to be sold in the free market.

The total production of molasses was requisitioned by the State Government for supply to distilleries in West Bengal. The price of molasses thus requisitioned was reduced from Re. 1-6 to Re. 1 per maund with effect from 25th March, 1954.

The profit, after deducting all working charges and commissions, and after providing Rs. 2,97,420 (Rs. 1,54,877) for depreciation and Rs. 1,20,000 (Rs. 5,05,000) for taxation, amounts to Rs. 3,07,005 (Rs. 6,89,510). Adding the amount brought in from last year, namely, Rs. 95,198 (Rs. 1,61,652), the total available for appropriation is Rs. 4,02,203 (Rs. 8,51,162). The directors recommend that this should be dealt with as follows:

In payment of a cumulative preference dividend at 6 per cent. per annum, without any deduction in respect of Indian income-tax or Bengal agricultural income-tax paid by the Company Rs. 24,000 (Rs. 24,000); in payment of a dividend on the ordinary shares at 15 (20) per cent. per annum without any deduction in respect of Indian income-tax or Bengal agricultural income-tax paid by the Company Rs. 2,48,973 (Rs. 3,31,964), to be transferred to reserve for replacements and extensions Rs. 1,00,000 (Rs. 2,00,000) and to be carried forward Rs. 29,230 (Rs. 95,198, after adding Rs. 2,00,000 to general reserve).

Refining of raw sugar for the season 1954-55 was completed on 14th November, 1954. The factory started crushing on 21st November, 1954. Supplies of cane from the Company's farms and from cultivators have, so far, been better than last season's. According to present estimates the total crush this season is expected to be 23 lakh maunds, as against 1,398,985 maunds crushed in the previous season.

The Government of India have fixed a minimum price of Re. 1-7 per maund for cane. As in the past two years, the Government will not exercise any statutory control on the price or on the distribution of sugar, but they have stipulated that 25 per cent. of the factory's production must be kept in reserve at their disposal in case of need. The excise duty on sugar has been increased from Rs. 3-12 to Rs. 5-10 per cwt. with effect from 1st March, 1955. The industry has lodged a protest as it is felt that the incidence of the increase of 50 per cent. in duty will fall largely on the industry itself.

Shree Krishna Gyanoday Sugar Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July, 1954.

After providing Rs. 2,19,570 (Rs. 6,03,382) depreciation the account shows a net profit of Rs. 3,98,138 (Rs. 8,65,149) to which is added balance brought forward from last year Rs. 3,337 (Rs. 4,188) making a total of Rs. 4,01,475 (Rs. 8,69,337). This amount the directors recommend to be appropriated as follows:—

Payment of dividend without deduction of income-tax on 6,000 "A" class preference shares at Rs. 6 per share Rs. 36,000 (Rs. 36,000), on 12,000 "B" class preference shares at Rs. 5 per share Rs. 60,000 (Rs. 60,000) and on 2,00,000 ordinary shares at Re. 1-8 (Re. 1-8) per share, i.e., 15 per cent. Rs. 3,00,000 (Rs. 3,00,000) and the balance of Rs. 5,475 (Rs. 3,337 after providing Rs. 3,70,000 for taxation and transferring Rs. 1,00,000 to general reserve) to be carried forward.

The working results of the two factories during the 1953-54 season were as under:—

	Cane crushed Mds.	Sugar produced Mds.	Recovery Per cent.
Hathwa ...	1,505,570	146,703	9.74
Lauriya ...	1,741,073	169,757	9.75

The crush has improved during the current season. Hathwa and Lauriya factories have closed with a total crush of 3,252,000 mds. and 2,742,000 mds. cane with a recovery of 10.1 per cent. and 10.6 per cent. respectively.

The improvement achieved in the quality of sugar produced at Hathwa, due to changing of the factory into carbonation process has been satisfactory. The 2' gauge tramway line intended for the transport of sugarcane from interior of the cane areas to Hathwa factory has been completed for a distance of about 14 miles and has been actually utilised during the current season for transport of sugarcane. This tramway line is, however, further to be extended for a distance of about 5 miles during the coming off-season. It is hoped that in the next crushing season substantial quantities of sugarcane would be transported by this tramway line and the cane which generally used to reach the factory after 4-5 days would now be received on the day of purchase itself and crushed in the factory the same day resulting in higher recovery. The Government has also decided to allow us to deduct from the cane price, transport charges on the cane that would be purchased from centres served by this tramway line and these transport charges would cover up the cost of running and maintenance of the tramway line. It is hoped that during the crushing season 1955-56, the factories at Hathwa and Lauriya would crush at least 50 per cent. cane over that crushed in the season 1954-55, due to increased plantation of sugarcane in the areas of the two factories.

The production of power alcohol and spirits during the year under review, at 903,122.9 bulk gallons, as compared to 782,984 bulk gallons in the previous year, was the highest ever since the start of the distillery. The financial results of the working of distillery have, however, not been satisfactory for the reason that the price of power alcohol still continues to be uneconomic and the Government have not so far increased the same despite ceaseless representations. The Government appear now to appreciate the position and the price of power alcohol is expected to be increased.

The Company has started refining of imported raw sugar during the year 1954-55. The directors have also taken Guraru Sugar Factory on lease and this factory is being worked for refining raw sugar exclusively from 9th January, 1955. This coupled with increased production of sugar from sugarcane during the crushing season 1954-55 makes the prospects of profit for the year 1954-55 better.

Tide Water Oil Co. (India), Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October, 1954.

After providing for depreciation and having brought in the debit balance of Rs. 55,639 (Rs. 53,424) from the previous half-year, there is a debit balance on profit and loss account of Rs. 70,248 (Rs. 50,315), which the directors recommend be carried forward.

Despite very considerable reduction in the special allowance, as compared with the previous half-year, the increase in the debit balance on profit and loss account is Rs. 14,609 only. The directors are hopeful that the results for the current half-year will show more completely the benefits of the new arrangements referred to by the directors in their report accompanying the accounts for the half-year ended 31st October, 1953.

Jessop and Co., Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. S. S. H. Sitwell, Calcutta) submit the audited accounts of the Company for the year ended 31st October, 1954.

In view of the current events it will be of interest to record that Jessop and Company was started in about 1788 as an Indian Company by Henry and George Jessop, and was located on the site still occupied by the Head Office of the Company. In 1902, this Indian limited company sold its interests to a private London company which was formed under the name of Jessop and Company Limited. The business, however, remained solely in India and continued in this manner until 1932. At that time an Indian private limited company was again formed, which was solely owned by the London company. Later in 1941, this Indian company was converted to a public limited company, and shares were made available on the Calcutta market in increasing quantities until by 1947 some 56 per cent. of the total number were so placed. The London Company continued to hold the remaining shares until a few weeks ago, when these were sold to Indian interests. Thus, after nearly 170 years the shares of the Company are now entirely on the Indian market and the Company may be considered to be wholly Indian owned. This change will not affect the Company's affairs which will be conducted in the same manner as heretofore.

During the year under review, the Company's works were fully employed and the future prospects are encouraging. The import section of the Company's business, however, continued to be handicapped by licence difficulties and affected by growing competition. In view of the increasing requirements of the Company for liquid finance for its working and future expansion, the directors recommend that the dividend on the ordinary shares be maintained at 15 per cent., or Re. 1-8 per share, free of income-tax, and that Rs. 8.75 lakhs be transferred to reserves.

The net revenue for the year amounts to Rs. 16,86,193 (Rs. 15,46,628) after setting aside Rs. 3,00,000 (Rs. 2,82,958) for managing directors' commission, providing Rs. 10,10,000 (Rs. 10,00,000) for taxation and writing off bad debts Rs. 80,208 (*nil*). Adding the balance brought forward from last year Rs. 2,96,744 (Rs. 2,90,116), the available for distribution is Rs. 19,82,937 (Rs. 18,11,744). Out of this sum the dividend on the 5 per cent. cumulative preference shares (free of income-tax) absorbs Rs. 50,000 (Rs. 25,000). The directors recommend the following further appropriations: Transfer to special reserve Rs. 4,75,000 (Rs. 4,75,000), transfer to general reserve Rs. 4,00,000 (Rs. 2,50,000) and dividend on the ordinary shares of 15 (15) per cent., free of income-tax, Rs. 7,65,000 (Rs. 7,65,000). The balance to be carried forward to next year amounts to Rs. 2,92,937 (Rs. 2,96,744).

Accounts in brief are as under:—

Rs.	2,76,58,931	Rs.	2,76,58,931

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

After providing Rs. 30,680 (Rs. 11,761) for depreciation and Rs. 38,500 (Rs. 6,000) for taxation, the accounts show a balance of Rs. 1,32,644 (Rs. 2,51,323, including Rs. 1,82,604 being the E.P.T. refund) at the credit of the profit and loss account. The directors recommend the payment of a dividend of As. 8 (As. 8) per share, absorbing Rs. 70,411 (Rs. 70,411) and leaving a balance of Rs. 62,233 (Rs. 56,112, after transferring Rs. 1,25,000 to the general reserve) to be carried forward.

Freight earnings were higher than in the two previous half-years. Conditions in the Port of Calcutta continue to be difficult.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	14,08,220	Block ...	25,97,764

Profit and loss account ...	62,233	Cash ...	5,13,836
Rs.	43,94,644	Rs.	43,94,644

Modern Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. N. Sirur and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st October, 1954.

The result of the Company's operations during the year shows a profit of Rs. 6,36,790 (Rs. 2,57,648) after charging off Rs. 3,68,046 (*nil*) in respect of increase in dearness allowance payable to workers from 1st May, 1953 to 31st October, 1954 and the additional 5 per cent. bonus for 1952 under the recent Labour Appellate Tribunal Awards. This profit of Rs. 6,36,790 (Rs. 2,57,648) together with Rs. 12,177 (Rs. 24,034) brought forward from the previous year's account, makes a total of Rs. 6,48,967 (Rs. 2,81,682). From this sum, the directors have allocated to depreciation on buildings Rs. 65,000 (Rs. 65,950) and depreciation on machinery Rs. 5,26,250 (Rs. 1,88,032), leaving a balance of Rs. 57,717 (*nil* after providing Rs. 27,700 for taxation) to which the directors propose to add by transfer from the reserve fund (which has already been taxed in previous years) Rs. 1,80,000 (Rs. 5,95,000), making a total of Rs. 2,37,717 (Rs. 5,95,000), to be disposed of as under:—

Pay a dividend of Rs. 5 (Rs. 5) per share on 44,261 ordinary shares of Rs. 50 each for the year ended 31st October, 1954 Rs. 2,21,305 (Rs. 2,21,305) and to carry to next year's account Rs. 16,412 (Rs. 12,177) after setting apart Rs. 3,61,518 to balance of depreciation on machinery.

The Labour Appellate Tribunal, Bombay, modified the Award of the Bombay Industrial Tribunal by granting an increase in the quantum of bonus for the year 1952 and also enhanced the dearness allowance payable to the workers on a sliding scale ranging from 5 per cent. to 10 per cent. with retrospective effect from May, 1953. As a result of this modification, the additional burden amounting to Rs. 3,68,046 has considerably reduced the year's profits. In order to enable the payment of a dividend of Rs. 5 per share, the directors have decided to transfer from the reserve fund (which has already been taxed in previous years) a sum of Rs. 1,80,000 to the profit and loss account of the year under report. No provision has been made in the accounts of the year under report, for bonus for the calendar year 1953 in respect of which a dispute is pending before the Bombay Industrial Tribunal.

The directors report, that as recommended by the Millowners' Association, the Company has become a member of the Bombay Textile Research Association and paid a sum of Rs. 18,375 as the first instalment of entrance fee of Rs. 73,500 to the Research Association. The directors have taken this step after careful consideration, as in their opinion, the work of the Research Association will be beneficial to the textile industry as a whole. The balance amount will be paid in three further instalments, two during the Company's current accounting year and the final one in December, 1955.

Accounts in brief are as under:—

Bengal Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

The profit for the half-year (including items relating to previous half-years), after providing for taxation and depreciation was Rs. 3,45,028 (Rs. 2,41,103) to which was added the balance brought forward of Rs. 67,309 (Rs. 35,086), making a total of Rs. 4,12,336 (Rs. 2,77,895). The directors have transferred Rs. 90,000 (*nil*) to tax contingency reserve and Rs. 50,000 (Rs. 1,00,000) to general reserve leaving a balance of Rs. 2,72,336 (Rs. 1,77,895) available for distribution which they recommend be dealt with as follows:—

Pay a dividend on 1,20,000 shares at 30 (17½) per cent. per annum, absorbing Rs. 1,80,000 (Rs. 1,05,000) and carry forward Rs. 92,336 (Rs. 72,695).

Profits from milling approximated to those of the previous half-year and the directors' recommendation to increase the dividend rate has been made possible only as a result of exceptional receipts.

In their last report the directors drew attention to the necessity of building up a reserve against the extra tax burden of future years arising from special tax allowances granted now. It has been calculated that the Company is short reserved by Rs. 90,000, hence the transfer of this sum to tax contingency reserve.

Although there was a sustained demand for all the company's products during the half-year, systems of controls introduced by the Government of India in September prevented the mills manufacturing to capacity. These controls were removed in March, 1955. A licence was granted towards the end of 1954 to purchase indigenously grown wheat and this, combined with the imported wheat issued by the Government of India, permitted the Company to improve its otherwise lower milling production.

The private importation of wheat has not been allowed but the Company is continuing its efforts in this direction. Considerable improvements have been carried out in the mills, enabling the Company to manufacture at even more economical levels.

Accounts in brief are as under:—

Bengal Jute Mill Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Soorajmull Nagarmull, Calcutta) submitted the audited accounts of the Company for the year ended 30th June, 1954.

The gross profit amounted to Rs. 19,71,479 (Rs. 18,46,832). After providing Rs. 2,12,210 (Rs. 2,72,998) for depreciation and Rs. 4,73,932 (Rs. 3,53,121) for interest, commission allowance and other expenses there was an available balance of Rs. 12,85,338 (Rs. 12,20,713) to which was added the amount brought forward from the previous year of Rs. 2,45,983 (Rs. 4,28,770) making a total of Rs. 15,31,321 (Rs. 16,49,483). From this was deducted provision for bad and doubtful debts and advance Rs. 50,000 (Rs. 2,50,000) and reserve for taxation (income-tax, super-tax etc.) Rs. 6,25,000 (Rs. 5,36,000) leaving a balance of Rs. 8,56,321 (Rs. 8,63,483).

The directors disposed of this balance by paying a dividend of 5½ per cent. per annum on 10,000 redeemable cumulative preference shares for the year ended 30th June, 1954 (free of income-tax) Rs. 55,000 (Rs. 55,000), by paying a dividend on 4,45,000 ordinary shares of Re. 1-2 (Re. 1-4) per share (free of income-tax) for the year ended the 30th June, 1954 Rs. 5,06,230 (Rs. 5,62,500) and carried forward Rs. 2,95,071 (Rs. 2,45,983).

Accounts in brief were as under:—

Travancore Rubber and Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Aspinwall and Co. (Travancore) Ltd., Alleppey) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The balance of Rs. 15,94,191 (Rs. 11,98,103) in profit and loss account, carried to appropriation account, bears income-taxes amounting to Rs. 6,04,008 (Rs. 4,27,700) and depreciation Rs. 98,977 (Rs. 92,635) leaving a carry forward to the balance sheet of Rs. 8,92,756 (Rs. 6,78,477).

Controlled rubber prices remained unchanged throughout the year, and improved results are wholly attributable to more profitable tea working.

Rubber.—Crops slightly exceeded the previous years figure, although non-tapping on Sundays applied throughout the year. Estate expenditure and average sale prices are compared below:—

	Crop.	Estate expenditure.	All-in cost.	Average sale price.	Net profit.
	lbs.	cts. per lb.	cts. per lb.	cts. per lb.	cts. per lb.
1951 ..	10,94,201	55.50	87.18	120.09	32.91
1952 ..	10,89,098	64.55	90.63	124.46	33.83
1953 ..	9,89,722	64.91	98.49	129.27	30.78
1954 ..	10,03,214	64.10	98.55	129.40	30.85

With consumption of rubber in India exceeding production the Company has had no difficulty in disposing of its crop expeditiously. It is conservatively estimated that a crop of 10,15,000 lbs. of rubber will be collected during 1955.

Tea.—Crop slightly exceeded the previous year's harvesting in spite of a 10-day strike on one division. The sale average of Rs. 2-6-9 per lb. is a record. All-in cost below shows a marked rise of which 13 95 cents per lb. is accounted for by increased tax liabilities, and 11.87 cents per lb. by export quota purchases which enabled the Company to take advantage of good export prices on an increased proportion of crop.

Comparative figures of tea crops, cost and revenue for the last four years are given:—

	Crop.	Estate expenditure.	All-in cost.	Average sale price.	Net profit.
	lbs.	cts. per lb.	cts. per lb.	cts. per lb.	cts. per lb.
1951 ..	11,28,758	118.89	166.90	197.78	88.88
1952 ..	12,11,543	123.19	144.47	158.21	10.54
1953 ..	11,50,696	122.75	160.26	186.22	25.96
1954 ..	11,53,752	128.68	195.26	241.23	45.97

For 1955 a crop of 12,50,000 lbs. of tea is estimated at an Estate expenditure of 133.86 cents per lb. Although the market today is lower than at the end of 1954, yet useful prices continue to be paid for the well-made black teas produced by this Company.

The Company's acreage under tea is 1,886.98 and that under rubber 3,459.67.

Weather conditions of the year under review were not particularly favourable to harvesting of either tea or rubber, though end of the year rains have usefully protected the early months of the current year against drought conditions.

After having deducted the interim dividend of 5 (2½) per cent. and preference dividends paid, the total amount available for disposal was Rs. 8,96,425 (Rs. 7,59,669) which the directors disposed of by payment of a final dividend on the paid up ordinary capital of 10 (7½) per cent. Rs. 4,10,000 (Rs. 3,07,500), transfer to non-executive staff retirement fund Rs. 40,000 (Rs. 30,000), transfer to rubber replanting reserve Rs. 67,500 (Rs. 67,500), transfer to dividend equalisation fund Rs. 50,000 (Rs. 50,000), leaving to be carried forward Rs. 3,28,925 (Rs. 3,04,669). The total dividend paid was 15 per cent. as against 10 per cent. in 1953.

SOME BOMBAY LABOUR ACTS

OBJECTS OF PROPOSED AMENDMENTS

THE main subjects discussed at the recent meeting of the Bombay State Labour Advisory Board related to the proposed amendments to the Workmen's Compensation Act, the Bombay Industrial Relations Act, the Industrial Employment (Standing Orders) Act, and the Industrial Disputes Act. The Government of Bombay had proposed to amend the Workmen's Compensation Act some time ago, but did not proceed with it, as there was a prospect of the Centre introducing a legislation for the whole of India. But this prospect has receded and the Bombay Government does not wish to wait any more. The amendments mainly seek to extend the Workmen's Compensation Act to (1) cover more workmen, (2) increase the quantum of compensation and (3) secure expeditious payment of compensation.

The amendments to the Bombay Industrial Relations Act and the Industrial Employment (Standing Orders) Act provide for the removal of certain disparities between them. Whereas the former Act applies to all concerns employing 20 or more persons, the provisions of the latter apply only to establishments employing not less than 100 persons. Again, under the former Act, the model standing orders, as notified by the Government, apply to all concerns in a particular industry till standing orders for each individual concern are certified. But the model standing orders prescribed under the Industrial Employment (Standing Orders) Act serve only as a model, with the result that till standing orders for an establishment are certified under that Act—and this takes a considerably long time because of the very large number of standing orders to be certified and the detailed procedure to be gone through—the workers are left in a state of uncertainty for want of standing orders applicable to them. In order to remove these disparities, it is proposed that the Central Act should be applied to all establishments employing at least 50 workers and that provision should be made for the application of model standing orders, notified under the Act, to all establishments till standing orders for each individual establishment are settled. Thereafter, it will be open to the employer or workmen concerned to apply for modification of the model standing orders according to the needs and requirements of each case.

The proposed amendment to the Industrial Disputes Act, 1947, provides, *inter alia*, for the termination of the service of a workman on the ground of absence on account of ill health, provided his absence exceeds six months in the aggregate during the preceding 12 months and requires the employer to give notice to the prescribed authority of his intention to effect lay-off. It is also proposed that the quantum of compensation should be determined by the authorities under the Payment of Wages Act and they should be treated as "wages."

It is true that the employers concede that there are certain technical defects in the Acts referred to above and that these defects should be remedied. But they are averse to any drastic changes in the content of the Acts, which increase the financial burdens of the employers. In fact, their main grievance against the proposed amendments to the Workmen's Compensation Act is that they increase the financial burden of the industries, the finances of most of which are already in a difficult situation.

So far as the amendment to the Industrial Disputes Act is concerned, the employers contend that the prescription that the employer should give notice of intention to effect lay-off is not justifiable for occasions to lay-off arise suddenly. One difficulty the Government has to face, in this connection, is the determination of the quantum of compensation arising from lay-off or retrenchment due to the workmen. As the determination of these amounts has given rise to several contentious issues which cannot be properly decided, it is proposed that such determination should be made by the authorities appointed under the Payment of Wages Act and that, for this purpose, compensation payable under the Industrial Disputes Act should be defined as "wages," as defined under the Payment of Wages Act. There appears to be little opposition to this provision.

As regards the amendments to the Bombay Industrial Relations Act and the Industrial Employment Standing Orders Act seeking to remove the disparities between the two Acts, the employers, we find, are not opposed to them.

Notices

THE LAKHSHMI COTTON MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixtieth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday the 18th May, 1955, at 4.30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1954.

(2) To sanction the declaration of a Dividend.

(3) To confirm the appointment of Mr. R. E. Forrester as Director.

(4) To elect Directors in place of Mr. D. M. Khatau and Mr. R. E. Forrester who retire by rotation but being eligible offer themselves for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors
of THE LAKHSHMI COTTON MFG. CO., LTD.,
For THE BOMBAY COMPANY, LIMITED,
R. L. COGHLAN,
Managing Director,
Secretaries, Treasurers & Agents.

BOMBAY, 20*th April*, 1955.

CALCUTTA, 19*th April*, 1955.

DEMAND FOR GILT-EDGED WIDENS

(*From Our Own Correspondent*)

BOMBAY, 27*th April*

Conditions in the short-term money market remained fairly comfortable during the major part of the week under review. Towards the close, however, there were signs of a depletion of floating funds on account of an increase in demand for money. Though most of the banks were able to get their requirements, some of them had to seek aid from the lender in the last resort. Inter-bank call money among larger banks was bid at 2½ per cent. with borrowers over. Smaller Indian banks were borrowers up to 3 per cent. Short-term deposits were at 3 per cent. for one to four months, and for longer periods up to six months the rate was 2½ to 3 per cent.

Offers at this week's sale of the Government of India Treasury Bills were on a smaller scale than in the previous week, the total amount offered aggregating Rs. 1.10 crores, as against Rs. 1.51 crores last week. The average rate of accepted tenders, however, rose by 5 pies to Rs. 2-9-5 per cent. per annum, after having remained unchanged at Rs. 2-9 per cent. for three weeks. Tenders for Rs. 1 crore have been invited for next week also.

After three weeks of successive rise aggregating Rs. 48.24 crores, notes in circulation have declined by Rs. 9.19 crores during the week ended 22nd April, 1955. The Reserve Bank's statement for that week discloses an increase of Rs. 9.71 crores in notes held in the Banking Department, following the rise of Rs. 7.32 crores in the previous week. The consequent increase of Rs. 52 lakhs in total notes issued has been covered by a similar rise in rupee coin. In the Banking Department, deposits of the Central Government have dwindled by Rs. 2.27 crores. This is the third week in succession when the Central Government's deposits have shown a decline, the aggregate fall during the three weeks being Rs. 11.91 crores. Deposits of other Governments have, on the other hand, shown an increase of Rs. 6.10 crores, in contrast to the decline of Rs. 37.28 crores in the previous two weeks. Deposits of banks, which had risen by Rs. 5.54 crores in the previous week have gone down by Rs. 2.18 crores. On the assets side of the Banking Department, balances held abroad have recorded a decline of Rs. 5.12 crores. No notable variation is seen in loans and advances to Governments, while other loans and advances have risen by Rs. 1.21 crores. There have been further large borrowings by Scheduled banks against usance bills to the extent of Rs. 8.22 crores during the week under review; this follows a rise of Rs. 10.84 crores in these borrowings in the previous week. The outstanding borrowings, however, show an increase of only Rs. 1.48 crores. A decline of Rs. 2.49 crores is noted in investments.

The consolidated statement of position of Scheduled banks for the week ended 15th April, 1955, discloses a sharp rise of Rs. 6.63 crores in demand deposits and Rs. 1.83 crores in time deposits. Inter-bank borrowings have also risen by Rs. 1.15 crores and borrowings from the Reserve Bank by Rs. 3.58 crores. Borrowings from the Imperial Bank have declined by Rs. 1.88 crores. For the second week in succession, advances have recorded a drop, the decline during the week under review being Rs. 7.25 crores. Inland bills purchased and discounted have also fallen by Rs. 1.18 crores and foreign bills by Rs. 8 lakhs. Investments are up by Rs. 19 lakhs. Cash on hand and balances with the Reserve Bank have improved by Rs. 1.78 crores and money at call and short notice by Rs. 5.52 crores.

The Gilt-edged market presented very steady conditions during the week under review. There was a keen demand for many securities and values appreciated all round. The volume of business also enlarged and the turnover could have easily been more than what it actually was had sellers been readily forthcoming. 3 per cent. 1957 put on an anna to Rs. 99-5, there having been buyers even up to Rs. 99-5½. 3 per cent. 1958 also rose by an anna to Rs. 99-4. 3 per cent. 1959-61 was in demand an anna better at Rs. 97-7. 3 per cent. 1963-65 picked up an anna to Rs. 93-11. 3 per cent. 1964 was wanted at Rs. 93-10, an anna higher than in the previous week. A rise of As. 2 to Rs. 90-9 is noted in 3 per cent. 1966-68 and of an anna to Rs. 86-15 in 3 per cent. 1970-75. 3 per cent. 1986 Conversion Loan gained an anna to Rs. 80-13. There were keen enquiries for 3½ per cent. 1961 National Plan Bonds and a large parcel of these securities changed hands an anna higher at Rs. 99-10. 3½ per cent. 1964 National Plan Loan was unchanged at Rs. 98-8, though there were buyers at Rs. 98-7½.

There was hardly any change in the rupee-U.S. dollar rates during the week under review, the banks' selling rate having been maintained at Rs. 478½ and buying rate at Rs. 474½ per $100. Sterling, on the other hand, continued to gain strength in terms of the dollar. Thus, in New York, the spot sterling rose from $2.79-11/16—2.79-13/16 to $2.79-13/16—2.79-15/16 and forward sterling (three months) from $2.78½—2.78¾ to $2.78-11/16-2.78-13/16. Transferable sterling appreciated from $2.77¼—2.77½ to $2.77-3/16—2.77-5/16.

LINSEED EASY

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 25*th April*

After a firm opening, a small reaction set in in the linseed market towards the close and prices were marked down slightly. Advices from the centres were somewhat easier and arrivals were slightly better. Crushers were buying cautiously at somewhat lower prices and the activity in the local market was reported on a small scale only. The oil section was generally quieter and activity was on a small scale. Buyers were showing a more cautious attitude. Latest available quotation is April-May Rs. 15-4 per maund.

BOOMLET IN BULLION

(*From Our Own Correspondent*)

BOMBAY, 27*th April*

Conditions akin to a boomlet prevailed in the bullion market during the week under review. Prices of both silver and gold appreciated sharply under strong spell of speculative buying and bear-covering. There was a broadening of demand for silver in the ready section, too, resulting in a further depletion of already depleted stocks. This strengthened the hands of bull operators who had the control of the market even before. Though there was an increase in the arrivals of gold during the latter part of the week, the demand continued to be on the high side, with the result that the bullish enthusiasm was well preserved. Consequently, ready silver touched yesterday a high of Rs. 171-3 per 100 tolas, the highest level seen since 1st May, 1954, and ready gold reached a peak of Rs. 98-2, a level not seen since March, 1952. Today, however, there was a sharp reversal of the upward trend, consequent on heavy profit-taking and the imposition of margin in gold in *Jeth* settlement.

The dispute over the definition of current contract, referred to in these columns last week, was settled this week, following the receipt of the Advocate-General's opinion on the question. According to the Advocate-General, the words "current forward contract" in the by-law 33-D(1)(a)(i) of the Exchange mean a contract for any of the settlements which are current and the words "next succeeding contract" are only relative terms. He is stated to be of the view that, when the Board permits forward transactions for three settlements, the margin is applicable to all the settlements which have succeeding contracts, provided the conditions under which margins are leviable in terms of the by-law are fulfilled. Accordingly, margin is applicable in gold in respect of the outstanding purchases in gold in *Vaisakh* and *Jeth* settlements, which, as we stated last week, were quoted As. 12 more than the succeeding contracts. At a meeting of the Board of Directors held today, a resolution calling upon the bulls to pay the margins on their outstanding purchases in gold in the aforesaid two settlements was passed.

Silver for forward delivery in *Vaisakh* settlement, after remaining quiet early in the week, rallied to Rs. 165-7 on Saturday. The attempts of bulls who had been trying to keep the daily closing prices for this settlement below the official opening rate for it, in order to avoid payment of a margin of Rs. 500 per bar, because the backwardation charges had already crossed Rs. 2, were frustrated when the bears themselves came forward on Saturday to cover their purchases and pushed up the closing price to Rs. 164-6. The bulls were, therefore, obliged to pay a margin of Rs. 500 per bar in terms of the by-law 33-D(1)(a)(i). This, however, did not check the upward trend in prices and forward silver in the *Vaisakh* settlement rose to 167-7 yesterday. Though there was a decline today, the backwardation charges widened to Rs. 3-2 in the morning. This would have attracted a margin of Rs. 2,500 per bar, if the closing quotation today had stayed at over Rs. 3 above the closing rate for the *Jeth* settlement, but the bulls managed to bring down the closing to Rs. 165-14, a rate only Rs. 2-15 above that for the *Jeth* settlement.

Jeth silver advanced from Rs. 160-9 to Rs. 164-12, before closing at Rs. 162-15 today. *Ashad* silver rose from Rs. 158-6 to Rs. 162-10, but closed today at Rs. 160-11.

Ready silver (.996 Mint) hardened from Rs. 166-12 to Rs. 171-3, but the closing was lower at Rs. 169-10. The premium for ready over forward widened from Rs. 3-4 towards the close of the previous week to Rs. 3-12. The floating stocks of silver are estimated at 1,700 bars. The daily average offtake was 30 bars.

Gold for forward delivery in *Vaisakh* settlement advanced from Rs. 94-11 to Rs. 95-6 on Saturday. After a temporary reaction to Rs. 94-11 on Monday, it rose to touch a high of Rs. 96-2 yesterday, before finishing at Rs. 94-15 today. As the closing rate today was above the official opening rate for this settlement and stood at Re. 1-9 over the closing rate for the next succeeding forward contract (namely *Jeth*), the second slab of margin —Rs. 25 per tola—under by-law 33-D(1)(a)(i) was enforced on the outstanding purchases in *Vaisakh* settlement.

Ready gold gained from Rs. 97-1 to Rs. 98-2, but almost the entire gain was wiped out today when it closed at Rs. 96-15. The premium for ready over the forward narrowed from Rs. 2-6 to Rs. 2. The floating stocks of gold are reported to be 10,000 tolas. The daily average arrivals were 3,500 tolas and the offtake, too, was no more than 3,500 tolas on an average.

In London, silver remained unchanged at 75½*d.* for spot and at 75¼*d.* for forward. Gold, however, declined from £12 10*s.* 8*d.* to £12 10*s.* 6½*d.* per fine ounce. Silver price at New York was kept unchanged at 87 cents.

The following comparative table shows the trend of the market during the week under review:

	27-4-55	Highest	Lowest	20-4-55
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FORWARD COTTON RALLIES AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 27*th April*

A notable event of the past week in so far as the cotton market is concerned was the fixation of room-rates for the I.C.C. May contract by the Room-rates Committee of the East India Cotton Association on Monday last. The rates for some of the more popular styles now fixed, as compared with those fixed for the February contract on 24th January, 1955, are given below:

Variety	'On' Rates in rupees I.C.C. May	I.C.C. Feb.
Jarilla 13/16"	45	65
Jarilla 27/32"	75	90
Jarilla 7/8"	110	115
Buri American 7/8"	120	125
Gavrani 7/8"	120	125
Surti 7/8"	210	170
Vijay 25/32"	120	120
Vijay 13/16"	140	140
Kalyan 25/32"	120	—
Western 13/16"	30	50
Kumpta 7/8"	140	140
Jaydhar 7/8"	150	150
Laxmi 7/8"	200	165
216F 7/8"	190	175
L.S.S. 13/16"	85	120

The foregoing room-rates have met with general approval of the trade. They are considered to be quite reasonable, in that they compare favourably with rates quoted in the spot market. It is believed that there may not be many appeals against the rates. Nevertheless, market circles expect less tenders against the maturing contract. This expectation is based on two considerations. First, since the room-rates are lower than the currently ruling prices, operators will prefer to sell their holdings in the spot market at higher prices, instead of tendering them against the contract, as that may involve a certain amount of risk. It is pointed out that traders having a sale will be inclined to switch over to the next settlement by paying the *badla* Such switch-over operations from May delivery to August contract have already started taking place. They are partly responsible for the narrowing of the spread between the two contracts from Rs. 9-8 on Wednesday last to Rs. 3-8 today. Secondly, there is the possibility of a large number of tenders being rejected, what with reports of deterioration in the quality of current season's cotton crop in several areas.

Although the room-rates are thus not calculated to encourage tenders, the immediate reaction to the announcement of these rates was a recession in prices. Thus, I.C.C. May contract, which had advanced from Rs. 549-12 last week-end to Rs. 557 on Monday, was quoted yesterday at Rs. 552-4; at one time, it was even lower at Rs. 552. Apparently, the smart rise preceding the fixation of rates had discounted the differences fixed. The bulls almost withdrew support and even lightened their commitments in May. There was also persistent bear pressure. Today, however, a distinct recovery was in evidence. The recovery was aided by frantic covering by shorts and speculative bull support induced by firm advices from spot section and cotton piecegoods market, as also by renewed reports regarding deterioration in quality of cotton in several producing areas. Not only were yesterday's losses completely made up, but today's closing rates were higher than those a week before.

I.C.C. May contract opened the week higher at Rs. 550, as against Rs. 549-12 last week-end. Following bull support and covering by bears, the contract gradually moved up to touch Rs. 557 on Monday. The upward trend was halted yesterday when the market turned distinctly easy. The easiness was due to reports of a fall in the basis of practically all the leading varieties in the spot market which followed fixation of lower room-rates. The May contract was lower at Rs. 552-4 at the close yesterday. It, however, picked up strength today following revival of bull support, and finished at Rs. 563¾, after seeing a high of Rs. 566. The August contract improved from Rs. 559-4 last week-end to Rs. 565-8 on the 25th inst. After receding to Rs. 558 yesterday, it recovered to Rs. 569½ today. Towards the close, it was a shade lower at Rs. 567.

The trend of prices during the week under review is indicated below:

	20-4-55	*High*	*Low*	27-4-55
I.C.C. May	Rs. 549¾	566	548	563¼
I.C.C. August	Rs. 559½	569½	558½	567

In the spot market, domestic staple styles were in regular demand. Enquiries were particularly keen for Wagad. Vijay also elicited support, on account of the growing scarcity of good quality lots. Among exportable styles, limited business was reported in Oomra *deshi* and Zodas. There was good enquiry for Gezira L styles of the 1953-54 crop which resulted in fair turnover for prompt shipment, while new crop S and L grades remained neglected, despite their prices being considerably lower than the reserve rates. Ahmedabad mills purchased small lots of Egyptian Karnak for near shipment. There were no transactions in U.S. or East African cottons. No interest was evinced by traders in U.S. (F.O.A.) cotton, as mills were not inclined to make any commitments at current prices.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 560; Berar Jarillas Rs. 620; Khandesh Rs. 570; Vijay Rs. 725; Oomra *deshi* Rs. 565; Mogial Rs. 535.

Importers of raw cotton of staple length 1-1/16 inches and above from the U.S. should inform their

suppliers that the transaction is being financed by the Foreign Operations Administration, Washington, according to the procedure announced in Bombay on Saturday last by the Joint Chief Controller of Imports. The relevant procurement authorisation numbers and the special provisions affecting the suppliers in carrying out the transaction should be made known to the supplier. No contract entered into before 4th April this year will be eligible for being financed under this sub-authorisation. Contracts must be made on or before 15th October, 1955. Another condition attached to the import of long-staple cotton from the U.S. is that at least 50 per cent. of the linear tonnage, 50 per cent. of the tramp tonnage and 50 per cent. of the tanker tonnage should be shipped on U.S. flag vessels. No contract should cover reginned, loose or pickery cotton except when a contract is limited solely to such cotton. Purchase in the U.S.A. can be made freely at the prevailing U.S. market price.

The steady tone depicted by the Karachi cotton market last week gathered further momentum during the week under review. Following renewed enquiries from mill interests and foreign purchasers, operators evinced much interest in fresh business. The syndicate of seven cotton shippers formed recently is reported to have made sizable purchases. The Karachi market, it is stated, is at present supported by speculators who are holding fast to their purchases, as they believe that there is paucity of tenderable cotton against N.T. May delivery. Consequently, prices of cotton continued their upward march. In the forward section, N.T.R.G. May contract advanced from Rs. 62-15 on Tuesday last week to Rs. 63-14 (for 82 lbs. weight) yesterday.

The latest available quotations from the spot cotton market at Karachi are: Sind *deshi* Rs. 59; Punjab *deshi* Rs. 51-8; 4F Roller Rs. 58-14; S.G. Rs. 62-14; Punjab Roller Rs. 62-14; S.G. Rs. 67-14; 289F N.T. Roller Rs. 66-14; 289F N.T. Sind S.G. Rs. 61-8; 289F Punjab Roller Rs. 66-14; S.G. Rs. 71-14.

Buoyant conditions were witnessed in the Alexandria cotton market this week. There was enlarged demand from the U.S. and India, mainly for Karnak, the spot premium for which improved by 50 penny points per lb. Quotations for Ashmouni and Giza 30 were fully maintained. Total tenders to the Government up to the 16th inst. aggregated about 75,000 bales. Entitlement premiums also continued to be steady at high levels. Russia is reported to have purchased 15,000 bales of Karnak recently. There are rumours that large deals are being negotiated with Poland and China. Plans to increase Egyptian cotton exports to China, it is stated, were discussed at meetings between the Egyptian and Chinese Premiers at the Asian-African Conference at Bandung.

Cotton circles in Sudan are expecting a drastic downward revision in the reserve prices. The expectation is based on lack of bids at successive auctions. At the recent auction of Sudanese cotton at which 14,000 bales were offered for sale, there were no buyers at all. Although many shippers are reported to be now offering Gezira new crop 'S' and 'L' at attractive discounts below the reserves, no sizable business seems to have been put through. The Sudan Government is considering the sale of cotton on a barter basis, should it prove to be in the public interest. Disclosing this in Parliament, the Sudan Minister for Finance and Economy stated the other day that the Government had facilitated sale of cotton by long-term contract, instead of short-term contracts. He revealed that his Ministry and the Gezira Cotton Scheme Board had sent missions to study conditions in the European and American markets. The Minister expected good demand for Sudan cotton from the U.K. where stocks were becoming low. While the marketing of new crop cotton has thus been held up, the Gezira Board, it is said, has succeeded in liquidating some of its old crop stocks. India has been a buyer of the 'L' grade for prompt shipment.

The Liverpool cotton futures market ruled quiet this week, notwithstanding some measures of relief to the textile industry announced in the Budget. Trading was slow. Owing to hedge selling and reports of heavy *May tenders in New York*, values tended to look down. The latest available quotations from the market are: May-June 31.04d.; July-August 30.24d.; October-November 29.99d.; December-January 29.92d.

The New York cotton futures market remained steady during the week under review, in distinct contrast to the bearish trend prevailing last week. Thanks to replacement buying by trade and commission houses, cotton values registered improvement.

The U.S. Department of Agriculture is expected to announce shortly its decision with regard to cotton export subsidy for the next season. An indication to this effect was given by the Secretary on Tuesday last week. A section of cotton trade expects that export subsidies are unlikely and that surplus stocks would be liquidated by continued acreage control. Another section, however, points to a recent report which avers that the Department of Agriculture is considering a proposal to reduce price support for cotton and to increase acreage allotments. Incidentally, it is said that the next season's crop is to be supported at 90 per cent. parity and changes, if any, will apply only to the 1956-57 cotton season.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	26-4-55	19-4-55	12-4-55
Spot	34.35	33.95	34.20

October	33.91	33.76	33.86
December	34.02	33.90	33.93

RAYON YARN FULLY STEADY

(From Our Own Correspondent)

BOMBAY, *27th April*

Induced by reports of acute scarcity of tenderable quality yarns, the rayon yarn market ruled fully steady during the week under review. Even reports regarding discount offers by overseas suppliers—to the extent of 3 to 5 per cent.— on popular varieties and expectation of others following suit were completely overlooked. Bulls lent good support to the market and rayon yarn values tended to look up. In the spot section, 120 Italy moved up by As. 3-6 to Rs. 4-4. 120 Japan and 150 Japan spurted by an anna each to Rs. 3-14 and Rs. 4-2, respectively. 150 Italy gathered half an anna to Rs. 3-14. Among indigenous yarns, National Rayons 120 Bt. cones II grade picked up an anna and a half to Rs. 3-14-6 and 1 grade were higher by 15 pies at Rs. 3-15. 150 Bt. cones II grade was fully maintained at Rs. 3-5-9. Rayon yarn (150D) for April delivery rallied Rs. 2 to Rs. 733.

The question of permitting forward business in a few more varieties, in addition to the present 150 deniers, is reported to be under the consideration of the Yarn Merchants' Association and Exchange Ltd. Details are now being worked out and a final decision is expected to be taken in a few weeks' time.

The staple fibre yarn section also depicted a fully steady trend this week. Better demand from important consuming centres, particularly in Gujerat, the U.P. and the Punjab, was responsible for the trend. As a consequence, staple fibre yarn prices registered improvement. Staple fibre yarn (40×2) for April delivery rallied Re. 1-8 to Rs. 584. May delivery strengthened from Rs. 578-12 to Rs. 581. Among foreign yarns (40 x 2), in the spot section, Auroras hardened by an anna and a half to Rs. 4-1-6. Shincos were fully maintained at Rs. 4-3. Among indigenous yarns (40×2), New Greats rose by half an anna to Rs. 3-3. Seksarias gained three pies to Rs. 2-15-9. Kohinoors were steady at Rs. 3-4-9, Sitarams at Rs. 3-1-3 and Century Specials at Rs. 3-1-6.

The cotton yarn market too ruled distinctly steady this week, in contrast with the bearish trend presented in the past few weeks. The chief factor which imparted steadiness was withdrawal of sales at low prices by several South and North Indian mills. Another helpful factor was the report of encouraging advices from overseas consuming centres—Aden, Hongkong, Singapore and Ceylon. The prices at which consumers in these centres were ready to buy Indian cotton yarn were said to yield a sizable return to exporters. Improvement in offtake also influenced the sentiment of operators favourably. Buying enquiries for cotton yarn, therefore, broadened and prices forged ahead. Sixty count yarns were particularly in the limelight. Among them, Finlays firmed up by Rs. 2 to Rs. 61. Raghuvamshis advanced by Re. 1-4 to Rs. 54-8. Moderns spurted by a rupee to Rs. 60. Yarns of 40 counts were also well supported, Seksarias gaining As. 8 to Rs. 22-8 and Gokaks As. 4 to Rs. 24-12. Among 80s, Moderns were fully maintained at Rs. 62-8. Deals in 30 count yarns were put through at more or less last week's levels. Cotton yarns of 10 counts, however, proved an exception and suffered a fall in prices for want of support. Podars receded by As. 5 to Rs. 12-14. Moderns lost As. 4 to Rs. 13 and Elphinstones As. 3 to Rs. 12-14. Twenty count yarns were also neglected. Seksarias slided down by As. 6 to Rs. 15-2 and Centurys by As. 5 to Rs. 15-9. Raghuvamshis eased by As. 4 to Rs. 16-4. Moderns were lower by As. 2 at Rs. 16-4.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

OILSEEDS DULL

(From Our Own Correspondent)

BOMBAY, *27th April*

At last, the expectation of the market operators that the Government would announce a fresh quota of H.P.S. groundnuts has materialised. According to a Press Note issued by the Ministry of Commerce and Industry, on the 26th inst., the Government of India has decided to issue a quota of 15,000 tons of H.P.S. groundnuts for export till end of July, 1955 by established shippers and co-operative societies of growers and groundnuts.

Barring this, there was no development worth mentioning in the oilseed and oil market during the week. Even the announcement of H.P.S. quota did not have any perceptible effect on the trend of prices in the groundnut section, as it had already been discounted. In significant contrast to the firm conditions witnessed last week, the linseed section put on a cheerless appearance. This was attributed to profit-taking at the higher levels and a recession in export demand. The *niger* and *kardi* seed sections proved no exception to the generally dull trend witnessed during the week under review. Price movements were, therefore, limited to narrow levels. The undertone was, however, steady.

Both sellers and buyers were generally reserved in the groundnut section. Bold F.A.Q. eased from Rs. 20-8 to Rs. 20-4. April-May delivery was quiet at Rs. 20-4, while June-July delivery suffered an anna to Rs. 21-1. Khandesh quality, however, put on As. 6 to Rs. 20-10. Groundnut ready was fractionally lower at Rs. 11-2. On the Continent, groundnut oil remained unaltered at £96 per ton. H.P.S. had enquiries from the U.S. at 14 cents per pound.

The rains in Madras and other Southern districts have been widespread and heavy. It is said that the rains have benefited greatly the standing groundnut crop in South and North Arcot districts. They have also hastened the sowing of groundnut crop in Pollachi and Salem.

The output of the *vanaspati* industry, a chief consumer of groundnut oil, in March, 1955, was 22,000 tons. This brings the total output in the first quarter of this year to about 57,000 tons, as against 63,000 tons in the corresponding period of the previous year. The decline thus of about 6,000 tons is substantial. Nevertheless, it would appear that the manufacturers are not much perturbed about it. Now that the prices of vegetable oil have declined to reasonably low levels, it is expected that it would be possible in future to deliver to consumers *vanaspati* at prices cheaper than now.

Bold ready, in the linseed section, declined from Rs. 22-11 to Rs. 22-4. June-July delivery eased from Rs. 21-11 to Rs. 21-8. Linseed oil disclosed a loss of As. 3 at Rs. 13. It was quoted in the U.K. between £92 and £93 a ton, as against £93 a week back.

May futures, in the castorseed section, opened at Rs. 73-10, as against Rs. 73-8. Later declining to Rs. 72-8, it recovered to close at Rs. 72-14. September delivery changed hands at Rs. 77-14, as against Rs. 78. Subsequently, it fluctuated between Rs. 78-6 and Rs. 76-12, before closing at Rs. 77-4. Madras quality gathered As. 2 to Rs. 14-10. Castor oil First Pressure eased from Rs. 8-10 to Rs. 8-3, while Commercial quality was quiet at Rs. 8-3. Castor oil Commercial was quoted in the Continent at about £80 per ton and in the U.S. at 9.5 cents per lb.

Among others, *Kardi* Bold gained As. 4 to Rs. 11-12, while June-July delivery was quiet at Rs. 12-2. Niger F.A.Q. was eventless at Rs. 12-2.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, *27th April*

During the earlier part of the week Malabar black pepper ruled quiet with small business passing as New York was making purchases in small lots. Alleppey remained quiet but steady at Rs. 975 while garbled hovered round about Rs. 170. Turnover in garbled at Cochin was reported very poor, in view of some settlement troubles in March and April delivery.

In the later part of the week, all primary markets showed improvement under pressure of buying by exporters who were reported to have sold further quantity of 600 tons to Russia. Business in ungarbled at Alleppey was reported done at as high as Rs. 1,000. Purchases of about 2,000 tons by Russia and China have made the position of Indian pepper healthy, the total export from November, 1954, to March, 1955, having reached the figure of 8,000 tons (this figure is inclusive of the quantity to be shipped to U.S.S.R.). As a result, growers are now reported to be in a comfortable position and are not likely to press sales below Rs. 900, even if U.S.A. continues to take small quantity for the coming two months or so. America, after trying in vain to buy Malabar black at price below $0.40, is reported at present to be in the market and has bought April shipment at $0.43. Locally there are buyers for May shipment at $0.43 and June at $0.42½ with sellers reserved. Future of pepper is now solely dependent upon the attitude of Sarawak where the new crop will soon begin to move.

Bears in India and elsewhere are expecting lower prices as they think that Sarawak growers being generally weak holders will press sales on the market during June and July. But everything depends upon the prospects of new crop of Sarawak which are so far not so favourable as expected earlier.

In the delivery section, business is reported to be poor. Following are today's nominal quotations:—Ready Rs. 125 (as against Rs. 123 a week ago) per Bengal maund and June Rs. 870-80 (Rs. 840-50) per candy of 5¼ cwts.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, *27th April*

The sugar market presented a steady trend during the week under review too. The steadiness was due to the delay in the normal monthly release of indigenous sugar for sale in the free market. Reports of an improvement in *ex*-mill prices of sugar in the North and the South also imparted strength to the market. Consequently, there were good enquiries for sugar and prices were fully maintained.

Sugar for *vaishak* delivery improved from Rs. 83-4 to Rs. 83-6 per bag. *Jeth* delivery gathered an anna to Rs. 83-1.

In the spot section, medium grain indigenous sugar advanced by a rupee to Rs. 89-90. Large grain was fully steady at Rs. 92-100. Small grain was quoted at Rs. 88. Among foreign sugars, German and Czechoslovakian sugars were throughout steady at the last week's levels of Rs. 80 and Rs. 85-87 per 220 lbs., respectively. French sugar was quoted today at Rs. 82-84 per 220 lbs., as against Rs. 81½-84½ a week before. British refined sugar, however, slided down by As. 8 to Rs. 83-4 per 224 lbs.

Arrivals of indigenous sugar into the market this week were slightly higher, being 7,900 bags, as against 7,500 bags in the previous week.

The normal monthly release of indigenous sugar for sale in the free market, which was due on Saturday last, has still not been announced and, as a result, the *ex*-mill prices in the North and the South have, as already stated, tended to look up. The President of the Indian Sugar Mills Association has urged the Union Food Ministry to suspend the release for some time, with a view to checking the downward trend in prices of indigenous sugar. The position in the Bombay-Deccan area is, however, entirely different, in that practically the entire quantity of sugar so far released has already been sold out. The sugar mills are reported to be finding it difficult to find storage facilities for the sugar already produced and still being produced. It is understood that the mills have made a representation to the Food Ministry to release a reasonable quota of sugar for sale in the free market. Such, it is pointed out, would not only solve the problem of storage but also meet the local demand in their areas and thereby help check any upward trend in prices of sugar.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

SAGGING TENDENCY IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, *26th April*

Quiet conditions were in evidence in the jute markets during the week under review. Prices of raw jute moved down fractionally, while those of jute goods were affected noticeably. Argentina continued to keep away from the market. This was contrary to expectations of speculators, who had bought heavily earlier. The order from Argentina is unusually delayed, but there is a feeling in the market that speculators are responsible for this. For, with even a hint of coming business from overseas countries, speculators have been buying and raising prices. Such a tendency has retarded prices of raw jute from falling, and manufacturers of jute goods have perforce to maintain prices at the higher level. Under such a situation, it is a safe guess that substitutes are continuing to make inroads into the fortunes of Indian jute goods in foreign markets.

However, judging from current trends of burlap consumption in the United States, it is possible that offtake by that country would improve. During the month of March, consumption was 71 million yards as against 65 million yards in February. Consumption during the three months ended March amounted to 198 million yards, which was 1 million yards higher than that for the corresponding period last year. There is no surprise in the fact that purchases for export to America are just nominal now, as that country buys for stock only after August. It is high time now, however, that buying of hessians on behalf of Argentina commenced. The interests of the jute industry would be served well, if marketing of jute goods were completely taken away from speculators, and should be left to mills themselves.

Jute goods had a steady start this week, with ready hessians 40" 10 oz. standing at Rs. 44-13 and B. twills at Rs. 123-12. The forward positions were priced at Rs. 44-10 and Rs. 121 respectively. Speculators were active, and bear covering imparted a firm tone. However, business with foreign countries was insignificant. Prices, therefore, gave way, forcing down prices of raw jute also. However, the falls were not proportionate, and mills, were the losers and raw jute stockists the gainers. Prices of jute goods, thus, went on losing, and by the week-end, ready 40" 10 oz. hessians at Rs. 44-3, had lost ten annas, and June goods moved down to Rs. 44-3 from Rs. 44-10. B. twills, at Rs. 119-8, were lower by Rs. 4-4, and the forward position sagged to Rs. 118 from Rs. 121. In heavy goods, business continued to be done with foreign countries on a moderate scale especially in Liverpool twills and cornsacks. Since Monday, the rates have been maintained at the week-end levels.

As stated, there was a fractional fall in the prices of raw jute. Mills bought some quantity of the old crop. Assam bottoms old crop gave way to Rs. 34 from Rs. 35-8. Sellers of new crop were reserved, and no offers were put forward. To set matters right, mills changed their buying policy, and sent out ideas that they would buy old and new crops together. However, sellers remained unmoved. This was apparently due to the uncertainty caused by the ban in East Pakistan, according to which, forward business can be entered into only if prices contracted are not lower than the quotations prevailing at the time of entering into the contract. Generally, at this time of year, forward commitments are made at a discount. The fact that such business is not done has cheered up the sentiment of stockists of indigenous jute here. They are hoping that prices would move up. However, with the present dullness in the jute goods markets and with foreign buyers reluctant to enter into commitments even at the present rates, it is difficult to believe that raw jute prices, if moved further, would be supported by buyers.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 25th *April*

The foodgrains market ruled easy during the week under review also. The rice section, however, depicted a steady note. Wheat prices were today quoted below Rs. 10 per maund for *dara* quality, despite the fact that the State Government had, under instructions from the Centre, geared up its machinery to purchasing wheat at Rs. 10 per maund. The fine quality is quoted at Rs. 10-8 per maund. Daily arrivals mounted to 2,000 maunds. Arrivals were absorbed well. The State of U.P. is having a bumper wheat crop and it is estimated that this year's surplus will be about 100,000 tons.

In Punjab, wheat prices have also declined and a further fall is expected with the beginning of new crop arrivals within a week there. In Madhya Pradesh and Bihar, the wheat prices continue unchanged. The rice prices recorded small gains due to better trade enquiry and rice exports from India will commence again after June for a period of four months, as, out of a target of 200,000 tons, not even 50,000 tons have so far been exported. The demand for India rice is now reported to be increasing in the U.K. and the Middle East countries. The latest rates of rice here are: Rice *basmati* Rs. 26; *raimunia* Rs. 21; *ramajwayan* Rs. 19; and coarse Rs. 12 per maund.

The coarse grain prices continued depressed during last week at Rs. 6 to Rs. 6-8 per maund for gram and Rs. 4-12 and Rs. 4-8 per maund for barley and *bejhar*, respectively. Arrivals of new crop have begun, but the stock with the trade is still very meagre, being one *khati* of gram and 4 *khaties* of *bejhar*. *Jowar* prices continue depressed and the State Government has been purchasing *jowar* at the floor price of Rs. 5-8 per maund in East U.P. and Madhya Pradesh Government has also begun purchasing *jowar* in order to give price support.

In contrast with the general fall in foodgrains prices, pulses disclosed a hardening tendency and peas *dara* improved to Rs. 5 per maund and white quality to Rs. 6 per maund. Daily arrivals have increased to about 1,500 maunds but trade demand from outside is satisfactory and due to good offtake, the stock is now 6 *khaties*. *Arhar* prices were unchanged at Rs. 6 per maund and arrivals of new crop have begun in small quantities, averaging 25 maunds daily. Other pulses recorded a steady tone and the prevailing rates are: *Urd* green Rs. 10; black Rs. 11-4 to Rs. 12-4; *moong* Rs. 6-12 to Rs. 7-8; and *massor* Rs. 5-10 per maund.

The pulses also registered a firm tone and prices advanced in all sections with an appreciable rise in *urd biasakh* quotations. Peas *jeth* is today quoted at Rs. 4-15-4; *arhar jeth* Rs. 6-0-6 and *urd biasakh* Rs. 11, as against Rs. 4-12-3, Rs. 5-12 and Rs. 9-10, respectively, on last Monday 18th April. The rise in *urd biasakh* is mainly attributed to poor stock position and due to coming delivery date.

POOR DEMAND FOR TEAS

(Messrs. Forbes, Ewart and Figgis Ltd.,)

COCHIN, 21st *April*

The offerings in Sale No. 8 which was held on Tuesday, 19th April, amounted to 1,300,000 lbs. Quality showed a distinct falling away and there were far too many teas of poor leaf appearance on offer. These teas will always fail to find favour with buyers, particularly on a declining market. At this sale, buyers showed a marked preference for clean, black, well-made teas and these sold at a considerable premium over the flakey, open, fibrous types. From the outset there was a poor demand and sweet liquoring low medium brokens and fannings were As. 3 to As. 4 lower. Medium and good medium teas sold at rates which were As. 4 to As. 6 easier. Best liquoring teas opened firm, but weakened towards the close, buyers followed quality closely and these types must be quoted easier. Whole leaf teas sold well at rates which were fully firm and often dearer. The following are the quotations:—

	1955 Rs. a. p.	1954 Rs. a. p.
Low-grown Travancore B.O.P.	2 2 0	2 9 0
Medium Travancore B.O.P. ...	2 3 6	2 10 0
Anaimallais B.O.P.	2 8 0	2 13 6
Best liquoring Nilgiri B.O.P.	3 8 6	3 6 0
Well-made black leaf O.P. ...	3 0 6	2 12 6

London Market.—Sale of 18th April, 1955:—Weak demand. Withdrawals considerable. Teas sold marked decline of fully 2d.

Sale of 19th April, 1955:—Where quality was maintained, price unchanged. Others 2d. to 3d. lower.

Colombo Market:—Fair demand. Gulf types slightly lower rates. Few best types saleable. Sharp decline. Others neglected. Bulk of sale withdrawn.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. *P.O.*=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotation. s.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period.] In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

MARKET GOSSIP

(*Concluded from page 815*)

satisfaction of all civilian requirements is not possible. The free world production capacity for nickel, according to him, is expected to increase, by 1958, to at least 450 million pounds. The increase in his own Company's annual productive capacity, since the year prior to Korea, is stated to be over 40 million pounds, while its deliveries in all forms in 1954 set a record at 282 million pounds.

* * *

The adverse effect of Government stockpiling and defence requirements on the civilian consumption of nickel seems to be cause for concern to Dr. Thompson. These two between them accounted for 40 per cent. of the total free world supply of nickel in 1954. While stockpiling is expected to continue, the scheduled intake for this purpose is likely to be lowered; and, after satisfying defence requirements, the supply of nickel for civilian consumption is expected to be more this year than last year. Although this is encouraging, he sees in the high percentage of absorption of nickel by the Government (for stockpiling and defence purposes) a source of danger to the nickel industry itself. Explaining why he feels that way, he says:

"The Company's mangement feels today, as it always has, that adequate defence preparedness is impossible without a healthy nickel-consuming civilian industry. The value of such an industry was clearly demonstrated twice within the last 15 years, during World War II and during the Korean conflict. Today, however, Government stockpiling and defence requirements have, of necessity, weakened a part of this important market by restricting the amounts of nickel available for civilian purposes. Many manufacturers, in the fear that relief would be long delayed, have been endeavouring to eliminate nickel in new design plans for their products. If this situation continues, it can only have consequences detrimental to the security of the free world. In times of national emergency, it is necessary not only to possess the required strategic materials, but it is equally necessary to have the trained manpower, technical knowledge and facilities to use them most effectively."

Dr. Thompson does not stop with this. He reverts to this subject once again after reviewing, in some detail, his Company's policy of fair and equitable treatment to all its consumers in the distribution of nickel. He avers that the insufficiency of the limited supply for civilian purposes remaining under existing conditions is not only a present handicap to its customers but a potential harm to its long-range business. For it impairs the development and expansion of markets for nickel and weakens the nickel-consuming industries in overseas countries.

* * *

Incidentally, Dr. Thompson gives an idea of the uses to which nickel can be put, and the data furnished by him are interesting. Thus 36 per cent. of total nickel consumption in 1954 was in the production of nickel alloy steels including stainless steels. Malleable nickel and non-ferrous alloys absorbed 30 per cent.; electroplating 16 per cent.; high temperature and electrical resistance alloys 7 per cent.; cast irons 4 per cent.; and catalysts and magnetic alloys 1 per cent. each. Miscellaneous applications accounted for the remaining 5 per cent.

SURVEY

(*Concluded from page 819*)

taluka or revenue circles. The success of the whole attempt at improvement of agricultural statistics depends upon the adequacy of the training which the primary reporters receive. It is, therefore, to be hoped that the officers trained in Delhi will be able to organise such training course. They should preferably be conducted in Indian languages. The District Collectors should be asked to exercise special care to see that the courses are properly organised and the candidates benefit from such training.

DEVELOPMENT OF TOURISM

The six-year plan for the development of tourism in India would, when implemented successfully, go a long way towards promoting the tourist industry. It is bound to increase the number of tourists visiting India, thereby increasing the country's foreign exchange earnings. Already, the number of tourists visiting India has been on the uptrend. It has advanced from about 20,000 in 1951 to 25,448 in 1952, 28,060 in 1953 and 39,333 in 1954. Although reliable figures

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XC. No. 2306 BOMBAY, 7 MAY, 1955 PRICE Rs. 1/8

MISGIVINGS OF SUGAR INDUSTRY

THE observations made by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, and Mr. P. A. Gopalkrishnan, Joint Secretary to the Union Ministry of Food and Agriculture, at the meeting of the Development Council for Sugar Industry held at New Delhi last week, provide a pleasant revelation, namely, that the Government—the Food and Agricultural Ministry, to be precise—can no longer be regarded as being ignorant of the problems of the sugar industry. On the contrary, it seems to have a complete understanding of the problems in all their details and can be trusted not to be misled by any vested interests, of which there are plenty not merely among sugar millowners, but also among workers, growers of sugarcane and State Governments. Such close acquaintance with the industry's affairs certainly augurs well for its future. This industry is one of those which are now destined for a prolonged period of control by the State and, if the Government is aware of the strong and weak points of these industries and knows how to tackle them, it will make their working easier. The sugar industry has suffered enough in the past, owing to amateurish handling of controls by the officials. It is, therefore, heartening to find evidence that this will be a thing of the past and that the officials and Ministers have gathered enough experience through the hard, albeit expensive, way of trial and error.

At the same time, it must be said that the mastery which the Government is gaining over the art of administering economic controls, in general, and control over the sugar industry, in particular, gives rise to a disquieting thought. Emboldened by the experience which it has gained, the Government might, one of these days, virtually nationalise the industry. There may be no firm basis for this misgiving at present, but it cannot be ruled out as being totally groundless. Apart from the change in the economic philosophy of the Government, two pointers are there to visualise the way in which the wind may blow in future years. One is the recommendation of the Taxation Enquiry Commission that the Government should set up a special committee to examine a proposal that sugar, along with a few other industries, might be made the subject of fiscal monopoly. This has been regarded by sugar millowners as an implied threat of nationalisation. The creation of fiscal monopoly may, in effect, prove worse than outright nationalisation, inasmuch as the owners of the industry may be reduced to the status of a wage earner, with no guarantee of the safety of, and a fair return on, their capital. The Government has already gained experience in selling sugar by reserving the imports to itself. It now knows how to store sugar, where to store it, and how to sell it. If it continues to do this business for two more years, as it well may, it will have achieved a fair amount of proficiency in sugar business. It will be interesting to note, in this connection, that nearly a third of the sugar consumed during the 1953-54 season was procured and sold by the Government and a slightly smaller proportion of consumption will be met by it during the current as well as the next season.

The second pointer is the establishment of new sugar factories through co-operative societies, with the State and Central Governments taking up substantial shares in the capital of these societies. This is doubtless State entry into the field of sugar manufacture through the back door. It may be true that the Government's intention in helping promotion of sugar co-operatives is not so deliberate as all that, but the ultimate outcome of this step may be what we fear. In any case, a clear statement from the Government clarifying its intentions, at least in regard to the recommendation of the Taxation Enquiry Commission, is called for, in order to dispel the misgivings of the industry. The earlier this is done the better, for this particular misgiving has not yet gained wide currency among sugar mill-owners. When it gains currency, it will affect fresh investment in the industry so essential for its expansion. Already a few of the millowners, who have realised the implications of the Taxation Enquiry Commission's recommendation, have decided not to engage in substantial capital expenditure until the Government's intentions in regard to creation of fiscal monopoly are clearly made known. Both Dr. Punjabrao Deshmukh and Mr. Gopalkrishnan know the necessity for further investment in sugar industry. We are sure that they realise that, so long as the aforesaid uncertainty lasts, such investment will be retarded. They should, therefore, endeavour to allay this apprehension as early as possible.

Now that the Government's knowledge and experience of sugar industry have improved, any failure on the part of the industry to put its house in order and to behave scrupulously will hasten the day of nationalisation. The industry must not, in its own interest, give rise to the impression that suggestions made by it are designed to feather its nest. It must be careful particularly when putting forward suggestions which are likely to result in higher prices for consumers. The suggestion that the Government should cancel or re-sell sugar that has already been bought in foreign countries but not yet shipped to this country falls within this category and the industry should not press this idea too hard. For, if the suggestion is accepted and if, in the next year, sugar supply falls, leading to higher prices, the industry will be accused of having played a nasty trick on the innocent Government. The industry should not take the worthless risk of earning this odium.

It is not suggested here that no advice should be given to the Government. Let the industry by all means help the officials to understand the position, but the responsibility for taking decisions should be left to the officials themselves. If it feels

the Government will be able to repurchase the sugar, which it is now advised to re-sell, in case the necessity for it arises next year, without any loss. Be that as it may, the quantity of foreign sugar that is yet to arrive, namely 223,000 tons, is scheduled to reach this country only after the monsoon, thereby giving plenty of time for domestic producers to dispose of a good part of their stocks. In view of all this and of the wide swings in consumption and production during recent years, the Government's desire to play for safety and the consequent reluctance to cancel the unshipped purchases of foreign sugar is quite understandable. The Government, however, must give all possible assistance to the sugar industry to store its surplus stocks and to commence production in the next season in good time. It must also protect the industry against any loss that may occur on these stocks owing to a fall in prices. It is gratifying to find that Mr. Gopalkrishnan is fully alive to this need, as witness the following quotation from his speech at the meeting of the Development Council:

"Reports from most parts of the country indicate that ex-factory prices for standard quality sugar are ruling in the neighbourhood of Rs. 28-8 per maund. This is a rockbottom price, which ensures only a small margin of profit to most factories and probably different amounts of losses to the others. Any further fall in prices, although it might be welcome to consumers, would be undesirable as long as the cost of production remains what it is. To the extent that costs cannot be reduced, maintenance of an appropriate level of prices is absolutely necessary for the survival of the industry."

It is to be hoped that the Government will not swerve either in spirit or in letter from the undertaking implied in the aforesaid remark of its Joint Secretary.

A notable feature of this sugar season is that production has gone up without any significant increase in the acreage under sugarcane. This has been possible because of the special efforts made by the Union Agricultural Ministry, in co-operation with the State Governments, to increase the per-acre yield of sugarcane by application of more fertilisers. As Dr. Punjabrao pointed out with justifiable pride, this experience illustrates most pointedly the ample scope that exists for increasing the average yields of sugarcane. But the distinguished Minister was a little too optimistic when he inferred from this experience that it would not be necessary for pursuing the policy laid down by the late Mr. Kidwai for shifting factories suffering from unsuitable location to areas ideally suited for growing sugarcane. Mr. E. P. Moon, Adviser to the Planning Commission, who went into this question, found that as many as 20 factories were unsuitably located. Even he seems to admit that only some of these factories can be left undisturbed by proper development of cultivation of cane in their areas of operation.

While it should be possible to improve the average yield of cane per acre by application of fertilisers, more irrigation, etc., there is no gainsaying the fact that, climatically, the tropical areas in the Deccan and South India are more suited for growing sugarcane than the sub-tropical North. The average yield of cane in Bombay and Madras States, for instance, is 28.2 tons and 21.1 tons, respectively, whereas it is only 10.4 tons in the Gangetic area. The same trend is revealed by a study of the average yield in some select farms in all these States where all possible care is taken to step up production on a scientific scale. As against only 60 tons in U.P., the select farms in Bombay and Madras yielded 127 and 94 tons, respectively, during 1953-54. Thus, if the effort and money that are spent to improve the economics of the unsuitably located factories in North India are diverted to the Deccan and South, the results achieved would be far greater than otherwise. While, of course, every effort must be made to improve the yield of cane and the quality of cane grown in Uttar Pradesh, Bihar and other North Indian States, it will be ridiculous to try to perpetuate, by all possible means, the units rendered uneconomic due to locational defect, instead of shifting them to proper sites. To do so will amount to following a policy of least resistance. In any case, in any scheme for expansion of the sugar industry, high priority and preference should be given to the tropical zones. And, if the State Governments in these zones are slack in creating the necessary conditions, the Centre should intervene and persuade them to follow a policy that will be conducive to the establishment of sugar factories in their areas. It is needless to add that, if the Centre fails to do this, it will aggravate the already lopsided growth of the sugar industry.

Although the policy of shifting unsuitably located sugar factories advocated by Mr. Kidwai has not yielded spectacular results—the State Governments are to be principally blamed for this, because they were not co-operative—it has served at least one good purpose. It has induced some sense of responsibility among the State Governments, cane growers and factory workers where these factories are situated. The threat of removal of these factories to some other State has made all of them climb down and take, or promise to take, the measures necessary for economic working of these factories. The workers have promised to be reasonable in their demands; the cane growers are willing to ensure regular supply of cane to the factories and take to intensive cultivation; and the State Governments, for their part, have agreed to see to it that the workers and cane growers keep their promises. It will thus be noted that Mr. Kidwai's policy has not been without commonsense or purpose behind it. The Union Minister for Agriculture would be making a mistake, if he were to give up that policy; he would actually be throwing away an effective weapon for bringing the indifferent States and cane growers, as well as the bullying workers, to their proper senses.

The Development Council deserves to be complimented on rejecting the suggestion for setting up sugar refineries put forward as part of the plan for raising production in the country. We are not one of those who believe that consumption of sugar will not expand rapidly in the coming years. If all the plans for the development of India are executed according to schedule, there will be a marked expansion in the demand for white sugar. But this demand can and should be met by developing the indigenous sugar industry and not by importing sugar, either raw or refined, for ever. As we have pointed out on a number of occasions ere now, the expansion of the domestic sugar industry will be one of the quickest and ideal ways in which gainful employment can be provided for a large number of people in rural areas.

POWER POLITICS IN KANPUR

It is unfortunate that, after 19 years of comparative industrial peace, Kanpur, the nerve-centre of the U.P. textile industry, has been afflicted by a major industrial strife. The majority of the 46,000 textile workers have struck work, under the leadership of the *Suti* Mill *Mazdoor Sabha*, with effect from the 2nd inst., as a protest against rationalisation schemes introduced in certain mills and for redressal of certain other grievances. Ironically enough, the sponsors of the strike are the very persons who, in the course of their memorandum to the Committee appointed in 1938, under the chairmanship of Dr. Rajendra Prasad, now President of India, pleaded for the introduction of rationalisation in the cotton textile industry. Again, a few of these sponsors are the very persons who signed the Nimbkar Committee Report justifying the introduction of the scheme of rationalisation. Further, at the Tripartite Conference held last summer at Naini Tal, it is these very labour leaders who gave their unmixed blessing to the principles of operational reforms in the industry. It was this acceptance that led to the appointment of a seven-man committee, including three labour leaders, in order to find ways and means of applying the principles of these reforms to individual mills in Kanpur. And now, these labour leaders have gone back on their commitments.

At the time of writing, there appears to be hardly any prospect of a settlement between the employers and employees in respect of the main demands in dispute. While the *Sabha* is determined to have its vital demand conceded by fighting to the last, the employers too are in no mood to yield to the threats of labour. The chief demand of the *Sabha* is that the Government should constitute a special tribunal under section 3 of the U.P. Industrial Disputes Act, consisting of a High Court Judge and two eminent economists, to enquire into the various aspects of rationalisation. The *Sabha* has called upon the Government to abide by its decision that, no rationalisation scheme which would lead to unemployment would be sanctioned. Further, it has demanded that, if any work-load were to be increased, the workers should get wages at par with those obtaining in Bombay. Besides, no worker should be subjected to increased work-load, unless he consented or the *Sabha* gave its consent on behalf of the workers collectively. The *Sabha* has listed a number of interim demands which, it says, must be accepted before it agrees to appear before the Tribunal. The main demands are:

(a) As regards rationalisation schemes already enforced by millowners, the *status quo* should be strictly observed, with effect from 25th May. This means cancellation of retrenchment measures enforced by the Muir, Cawnpore Textiles, Cawnpore Cotton and Swadeshi Mills.

(b) Workers of Lalimli, who at present hardly get work for two days in the week, should get at least 15 days' wages in a month irrespective of the period of lay-off in a given month.

(c) Substitute workers who report for duty but are returned for want of work should get at least As. 8 per day as compensation on the days they cannot be put to work. Such compensation is paid in Bombay textile mills.

(d) Retirement gratuity obtaining in the British India Corporation group of mills should be enforced in all the Indian-owned mills as well.

(e) Wage-cuts of workers for their absence on May Day, 1953, and *Shahid* Day, should be restored.

(f) Bonus equal to one week's basic wage for every year since 1952 should be given to workers of all those mills which have refused to give bonus. For the future, three months' basic wages should be recognised as bonus due at the end of every year.

(g) Recognition should be given to the *Surti* Mill *Mazdoor Sabha* and formation of works committees or trade councils be expedited.

Clarifying the position of employers, the Employers' Association of Northern India has alleged that the *Sabha* has made too much capital out of "fancied" grievances of labour in the textile industry. A few of these grievances are already subject matters of consideration by the conciliation boards and the adjudication machinery of the State. These matters, having become *sub judice*, at the instance of labour, cannot now be brought to figure in the list of grievances.

There is no gainsaying the fact that the present plight of the cotton textile industry in U.P., as witness the closure of a number of mills in Agra, Hathras, Lucknow, Banaras and Kanpur, following their uneconomic and inefficient operation, is deplorable. The need of the hour is to place the industry in the State at par with that in Ahmedabad and Bombay. In fact, the industry's demand is for permission to organise its production on the lines on which textile production has been organised in Ahmedabad and Bombay for several years now. As the Employers' Association points out pertinently enough, this request is "not to feather the employers' nest but in order to stand by its commitments to the Government and the public of the State to maintain the employment potentials unimpaired and to sustain the economy of the State in the manner expected and vouchsafed to this industry."

The present strike is costing the country dear. In terms of production, it means a loss of one million yards of cloth every day. The loss of one day's production in these mills deprives 90,000 persons of their share of cloth for one year, on the basis of a *per capita* consumption of cloth of about 12 yards. Thousands of cotton growers, who earn their livelihood by supplying cotton to Kanpur mills, have been hit hard by a further fall in the price of cotton. A large number of handloom weavers who obtain cotton yarn from Kanpur mills will suffer a depletion in the supply of yarn available to them. A considerable number of middle class people, who earn their livelihood by working for the textile mills of Kanpur as agents, dealers, shopkeepers, suppliers of stores, etc., will also suffer a great deal if the strike is prolonged.

Now that the Government of U.P. has decided not to interfere with the dispute, the burden of settlement of the dispute has fallen upon the employers and employees. Unfortunately, the real struggle behind the scene is between the *Suti* Mill *Mazdoor Sabha* and the I.N.T.U.C. The *Sabha* consists of the Communist, Praja Socialist and other political groups which constitute a united opposition to the Congress in the political field. It also consists of a few well-known labour leaders who are Congress men and who, till recently, held key position in the Kanpur branch of I.N.T.U.C. Apparently, the *Sabha*, the membership of which is no more than 3,000, is trying to capitalise the present situation in order to emerge as the sole representative of Kanpur textile labour. In these circumstances, there is little likelihood of a compromise, unless the trade union leaders responsible for the strike rise above politics and view dispassionately the economic problems facing the textile industry in Kanpur.

ORIENTAL LIFE MUTUALISATION SCHEME

UNREST AMONG BANK STAFF—REACTIONS TO COMPANIES BILL—TREND OF WORLD SUGAR

THURSDAY, 5 P.M.

MARKET GOSSIP

THE Bombay Stock Exchange will soon erase from its boards a share which has enjoyed the distinction of being the highest-quoted scrip, namely, the Oriental Life. Now that the Directors of the Oriental—or to give it its full name, the Oriental Government Security Life Assurance Co., Ltd.—have initiated the formal proceedings to give effect to their much talked of decision to convert their company, the biggest of India's life assurance companies, into a mutual office, its shares will cease to be quoted on the Stock Exchange in the near future. The place of this scrip will probably be taken up by the debentures that will be issued by way of compensation to the shareholders. It had been known for sometime now that the ranks of mutual insurers would be strengthened by the addition of the Oriental. The details of the scheme had not, however, been disclosed to the public, though forecasts had appeared in these columns from time to time. Under the scheme, which has now been made available to shareholders, the 3,000 shares of Rs. 200 each of the Company will be converted into 3,000 debentures of the face value of Rs. 8,800 each, carrying interest at the rate of 4 per cent. per annum. The figure of Rs. 8,800, the Chairman, Sir Cowasjee Jehangir, Bart., states in his circular letter to the shareholders, represents "the intrinsic value of the share and is a proper and equitable figure as between the shareholders on the one hand, and the policyholders on the other."

• • • •

This figure, it is further stated, has been arrived at by "capitalising at a fair rate of interest the approximate dividend which the shares would earn in future out of the 7½ per cent. of the surplus which are likely to be disclosed from time to time at future triennial valuations of the Company, having regard to the business at present written by the Company and its future likely prospects." Dividends on insurance companies, it may be mentioned here for the benefit of those who are uninitiated into the mysteries of insurance law, are payable out of the 7½ per cent. of the surplus disclosed at any valuation; the rest of the surplus is allocated to policyholders. For 1952, 1953 and 1954, the Company has paid a dividend of Rs. 175 per share, free of income-tax, as against Rs. 125 in each of the three previous years. The shares are currently quoted in the neighbourhood of Rs. 7,450, at which level the yield works out to 2.3 per cent. The yield promised on the debentures is, however, higher at 4 per cent. But then the yield is only one of the factors that have to be taken into consideration. The Company's shares have been greatly fancied by the investors for their intrinsic worth. In 1946, they had touched an all-time high of Rs. 8,600. In 1949, when all shares were down, they had declined to Rs. 4,000. Thereafter they recovered and at one time last year stood at the high level of Rs. 8,025.

• • • •

To revert to the Oriental's mutualisation scheme. Until redemption, the debenture-holders have the right to elect their directors to the Board of the Mutual Company. At the outset, the number of such directors will be five but this number will go on dwindling until the debentures are paid off. For every reduction of 600 in the number of outstanding debentures, the number of debenture-holders' directors will diminish by one. The Board will consist of twelve directors, of whom three will be elected under the provisions of section 48 of the Insurance Act, five by the debenture-holders and the remaining four directors by the members of the Mutual Company, that is, by the policyholders again. The scheme provides, in accordance with section 49 of the Insurance Act, that the interest to be paid on the debenture for the three years succeeding any valuation shall not exceed 10 per cent. of the surplus disclosed at that valuation. In the event of any shortfall, it will be made good and paid out of the higher surplus (if any) that may be revealed in the subsequent valuation. The scheme further provides that 15 per cent. of the surplus at any valuation will be utilised to pay interest on debentures and the balance carried to a sinking fund. At the end of 20 years, all the debentures shall be redeemed, though the Company has the option to redeem all the debentures at the end of 10 years, and if this right were not exercised, it could be done so at the end of 15 years. Commending the scheme to the acceptance of shareholders, the Chairman observes:

"The scheme is a just and equitable one between the shareholders on the one hand and the policyholders on the other, and the shareholders get for each share a debenture the face value of which represents the intrinsic value of the share, and which carries a fair rate of interest for this type of security. It will be noticed that the debentures are not made a charge on the Company's assets, which is not necessary for, having regard to the assets and position of the Original Company, the debentures will be paid off with interest as provided in the scheme, and there can be no doubt about it."

• • • •

The scheme, after it is approved by the shareholders at the meeting to be held on 15th June next, will be submitted to the Central Government. Under section 6c of the Insurance Act, the Central Government, if it is satisfied that the scheme is reasonable, will accord its sanction. Against this decision, it is open to any aggrieved shareholder to prefer an appeal to the High Court within 90 days of the order sanctioning the scheme. It is believed that the Central Government will not withhold its sanction to the scheme, as the informal consent of the Finance Ministry has already been secured by the Company's Board of Directors.

• • • •

There have been no outstanding developments in the share market this week, excepting heavy liquidation in Indian Irons which has brought the value of that share to nearly Rs. 33. Tata Ordinaries have been irregular, their value fluctuating between Rs. 235 and Rs. 238, with considerable resistance at the lower level. Market circles have now taken it for granted that an increase of Rs. 50 to Rs. 60 per ton in the retention price for the Company will be granted by the Government, that the Company's plan to double its production under the second Five-year Plan has been finalised and that this plan has received the support and blessings of the Government. They are, however, anxiously waiting to see whether any strings are attached to the increase in the retention price, whether the Company has been successful in getting any assurance from the Government giving immunity against nationalisation and if so for what period.

• • • •

For the second week in succession, leading textile shares have been well supported. Centurys were the hot favourite, while Bombay Dyeings and Kohinoors enjoyed limited turnover. Among the backbenchers, New Greats shot up Rs. 10 to Rs. 162 due to some buying by a few influential operators. There are rumours that the management of this Company is likely to change hands in the near future. Similar rumours were there in the past, but nothing came out of them. There is no reason to believe that it will be different this time.

• • • •

The Government of India has been quite sensible in reducing the import duties on cotton goods, both British and non-British. This is a sequel to the representations made by the British Government that India's import duties were prohibitive. The manner in which the duties have been reduced is in line with our earlier anticipations. The reduction has set at rest an ugly controversy that had risen in both the countries, a controversy that nearly threatened to disturb Indo-British trade relations. In material terms, it may mean very little either to India or Britain, but it has yielded a large psychological gain. The Government in Britain is pleased with India's gesture, while its counterpart in India is happy that it has been able to accommodate Britain, its best customer, without having to embarrass its domestic manufacturers. That the share market has well received this development is evident from the absence of any setback in the value of textile shares. This is only as it should be, for the reduction in duties is not likely to be accompanied by any large imports. On the contrary, India's gesture to Britain has averted the possibility of the British Government placing restrictions on imports of Indian cotton goods into the U.K.

• • • •

The bullion market is heading for a crisis. The bears have been badly caught and are being forced by the bulls to pay heavy penalty in both gold and silver for carrying forward their commitments. As against floating stocks of 10,000 tolas of gold and 500 bars of silver, total outstanding sales (or purchases, if you like, because there can be no sale unless there is a purchase) are said to be of the order of 80,000 tolas and 1,500 bars. It is noteworthy that such a large turnover in the current settlement has taken place, despite the heavy margins which the bulls have had to pay. All this is rank speculation, but it will be ridiculous on the part of the Government to intervene at this stage. The bears and bulls must be allowed to fight out their battles to the bitter end. The consequences of this battle will not harm the general public in any way.

• • • •

The work of the Bank Award Enquiry Commission is now progressing rapidly under the chairmanship of Mr. Justice P. B. Gajendragadkar, who has taken the place of the late Mr. Justice Rajadhyaksha, and the report of the Commission is expected to be submitted to the Government of India by the end of next month. The peace between banks and their workmen, which prevailed for a short time after the workmen had agreed to co-operate with the Commission, has, however, again been disturbed over the question whether the increment of basic pay and consequential increase in dearness allowance which have become due to bank workmen from 1st April, 1955, are to be added to the total emoluments, which the workmen are getting at present, or whether they can be set off against the temporary adjustable allowance which forms part of their total emoluments. It will be recalled that the Government order of 24th August, 1954, modifying the Decision of the Labour Appellate Tribunal has provided that "where, by reason of this Decision as modified by the Central Government by its order dated 24th August, 1954, becoming enforceable, the monthly emoluments inclusive of all allowances of any employee of a bank are less than what he in fact received or would have received in the normal course for the month of March, 1954, the reduction in the emoluments shall not be given effect to at once, but shall be spread over a period of three years from the date on which this Decision as modified becomes enforceable, so that on the completion of one year from the date this Decision as modified becomes enforceable, the monthly emoluments of the employee are reduced by one-third of the difference between the emoluments he in fact received or would have received in the normal course for the month of March, 1954, and the monthly emoluments to which he is entitled under this Decision as modified, and on the completion of two years, the monthly emoluments are reduced by a further one-third of such difference and so on."

• • • •

According to the aforesaid provision, the total emoluments of bank workmen at present are made up of basic pay *plus* allowances *plus* temporary adjustable allowance. The contention of the workmen is that the increment in basic pay and increase in dearness allowance which have become due from 1st April, 1955, cannot be set off against the above temporary adjustable allowance and must be added to the total emoluments which they are getting at present. The Indian banks, on the other hand, maintain that they can be set off against the temporary adjustable allowance and that the total emoluments need be increased only if and to the extent that the increment of basic pay and the increase in dearness allowance are greater than the temporary adjustable allowance. In support of this view, they rely upon clause 5 of the Government Order mentioned above which states that no change in paragraphs 285 to 292 of the Sastry Award is called for. It is reported that these banks have taken counsel's opinion in the matter and that the opinion supports the above view. It is also reported that the Government of India holds the same view, but that it cannot issue any statement on the subject, first, because interpretation of a statute or a statutory order of Government can be given only by a relevant court of law and, secondly, because it does not wish to be considered as taking any side in the present controversy. It is further reported that bank workmen are trying to make the banks accept their contention by conducting daily demonstrations in Bombay and a number of other cities in India and by resorting to a pen-down strike daily for two or three hours in Calcutta. A pen-down strike hampers the work of a bank more than an ordinary strike, because, whereas during an ordinary strike, when the workmen are away, officers can do the work of the workmen at least to some extent, they cannot do so during a pen-down strike when the workmen remain seated in their chairs but refuse to do any work. Indian banks have acted on their above view in making payments to their workmen for the month of April 1955, and have not increased the total emoluments of the workmen where there has been enough temporary adjustable allowance for the set-off of the increment in basic pay and increase in dearness allowance. It is reported, however, that the Exchange banks in Calcutta have increased the total emoluments by the increment of basic pay and increase of dearness allowance that have become due from 1st April, 1955, but have called these additional emoluments a temporary advance to be adjusted when effect is given to the directives that will be given by the Bank Award Enquiry Commission. These directives, as approved by Government, will be given retrospective effect from 1st April, 1954. Meanwhile, bank employees are said to have decided to go on a token strike all over India sometime next week.

• • • •

The future of joint-stock enterprise, in which the stock exchanges in the country are greatly concerned, will be largely determined by the Companies Bill. This Bill, in the form in which it has emerged from the Select Committee, is not calculated to inspire much confidence among large-scale investors. The many restrictive clauses which the Select Committee has proposed will impose not a little hardship on company managements. It is true that for some time now business men were aware of some of these provisions. Those who knew the composition of the Select Committee, which contained only two representatives of trade and industry, had lost all hope of seeing the Committee take a less dispassionate view of the role of private enterprise. Even so, it will be widely regretted that the Committee has not taken note of the many closedly reasoned representations made by representatives of the business community.

• • • •

The Committee has made many major changes in the Draft Bill. Among these mention deserves to be made of the provisions relating to managing agents, for this will affect the very basis of joint-stock enterprise in India. Most joint-stock units—nearly 75 per cent. of them—are managed by managing agency firms. It is this system which has been the main target of the Committee's axe. Thus, the Central Government is given power to notify that all companies engaged in any industry or business specified by it shall have no managing agent. In any case, there will be no managing agents from 15th August, 1960; the Government has powers to grant exemptions from the operation of this rule. The Committee has also decided that no person should be a managing agent for more than ten companies after 15th August, 1960, when all managing agencies, except those that have been renewed with the consent of the Government, come to an end. In order to prevent evasion of this requirement, persons closely associated with the managing agent of a company will be treated as the managing agent of that company for the purpose of reckoning the number of ten. But, in calculating this number, a private company, which is neither a subsidiary nor a holding company of a public company, an unlimited company, an association that does not work for profit are, of course, excluded. That the Committee has attached the greatest importance to conformity with the clause restricting the maximum number of companies that may be managed by a person is clear from the fact that a heavy penalty, namely, a fine of Rs. 1,000 for each day on which, and in respect of each company for which, a person acts as managing agent for more than ten companies has been provided.

NARROW MOVEMENTS IN SHARES

SELECT TEXTILES IN FAVOUR

(From Our Own Correspondent)

BOMBAY, *5th May*

TRADING on the Stock Exchange continued to be lifeless again this week also. The trend of prices was indecisive and the range of fluctuations was narrow. There was absolutely no enthusiasm on the part of speculative operators to lend support to the market. There were several factors which restrained activity. The delay in announcement of retention prices of steel, made the operators weary. The major changes made by the Joint Select Committee in the Company Law Amendment Bill in regard to the system of managing agents caused further uneasiness. The move made by some members of the Congress Parliamentary Party to have a reduction in the compensation to be paid to the shareholders of the Imperial Bank, the assurance given by the Prime Minister and Finance Minister that the principle of compensation at market value accepted in the case of the Imperial Bank would not govern future State acquisitions and that henceforward compensation would have to be only "just and fair" in consonance with the latest amendment of the Constitution, were viewed with concern. The reduction of import duty on British textiles was also a deterrent factor. Besides, in Calcutta, sentiment remained depressed under the cumulative influence of selling pressure in Indian Irons sharp fall in jute goods and weakness of tea shares. This, in its turn, subdued the tone of the local market. Conditions were thus not conducive to active trading. The reports that the Chairman and Vice-Chairman of the Tata Steel would leave for the U.S. on 12th May for discussions on the financial aid for the Company's expansion programme gave rise to fresh hopes that the retention price would be announced in a few days' time. But this had no appreciable effect on prices.

In the steel section, Tata Ordinaries staged an improvement in the earlier part of the week from Rs. 234-12 to Rs. 238-4, but reacted to close at Rs. 235-12 today. Indian Irons edged forward from Rs. 33-15 to Rs. 34-5 before finishing As. 10 lower at Rs. 33-5.

Select counters in the textile section attracted attention and prices recorded fair gains. Bombay Dyeings moved between Rs. 461-4 and Rs. 466-14 before closing at Rs. 464-6. Kohinoors came up to Rs. 317-12 from Rs. 315-4 and finished at Rs. 315-8. Centurys received considerable speculative support and rallied by Rs. 10-8 to Rs. 384-8. New Greats, Lakshmis, Shree Niwas and Standards were the other counters which were in the limelight, New Greats recording a gain of Rs. 11 to Rs. 163, Lakshmis Rs. 26-4 to Rs. 532-8, Shree Niwas Rs. 3-2 to Rs. 238-2 and Standards Rs. 21-4 to Rs. 360.

The weakness of Barodas, which dropped by Rs. 3-8 to Rs. 101, was the main feature in the banking section. Centrals made a recovery of Re. 1-8 to Rs. 48-12 and their 'A' shares Re. 1 to Rs. 50-8. Imperial Fully Paids picked up Rs. 15 to Rs. 1,680, while Bank of Indias were steady at Rs. 146-8.

On reports that the scheme of mutualisation would be considered by the shareholders of the Oriental at a meeting to be held on 15th June next and be forwarded to the Central Government, the shares gained Rs. 140 to Rs. 7,450. New Indias, on the other hand, shed Rs. 2-4 to Rs. 51.

In the miscellaneous section, sugar shares were fairly steady, Belapurs being done at Rs. 307, Phaltans at Rs. 118-12 and Walchandnagars Rs. 2-8 higher at Rs. 208-12. On news that the dividend has been raised from Rs. 6 to Rs. 8-8 per share, Digvijays spurted from Rs. 180 to Rs. 186-12, but reacted to close at Rs. 181-4. Scindias were quiet at Rs. 15-8¾ and Great Easterns at Rs. 15-15. Alcock Ashdowns gathered Re. 1-14 to Rs. 264-6, while Premier Constructions were dull at Rs. 161. Larsen and Toubros hardened from Rs. 13-4 to Rs. 13-13. The Company has maintained the dividend at Re. 1 per share of Rs. 10 for the year 1954 and this is the sixth consecutive year for which the dividend is being maintained at this level. Shivrajpurs were steady at Rs. 65-8, while Indian Coppers were featureless at Rs. 3-7. B.B. Petrols gained As. 1½ to Rs. 3-6½. Bombay Burmahs (old) were quietly steady at Rs. 466-4, while B.I.Cs reacted from Rs. 8-10 to Rs. 8-3¼. National Rayons found support to go up by Rs. 2-4 to Rs. 201-8, while Wimcos dropped Rs. 3-2 to Rs. 205.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *4th May*

A livelier trend was in evidence on the Calcutta Stock Exchange during the sessions till Monday. Factors such as the Finance Minister's gestures in reducing the new excise duties as well as his decision to tax perquisites of company officials in each case, more or less, on its merits, reports of increasing industrial production, and the expectation of an early announcement regarding new retention prices for steel, helped broaden enquiries and made operators active. However, a note of caution was in evidence during the two sessions, yesterday and today, following the report from New Delhi giving details of the changes proposed by the Joint Committee of the Lok and Rajya Sabhas, to whom the Company Law Amendment Bill had been referred.

If the changes incorporated by the Joint Committee in the Bill are accepted by Parliament, that would control the system of managing agency in such a way that it would be difficult for the agencies to function. The mending that is being aimed now may as well bring about the end of the system. The market is particularly interested in this subject, since the great part of the development the country has to its credit has been the work of companies which are directed by experienced personal as managing agents. The activity in the market is cautious, because of the new changes proposed.

Textiles remained quiet, and operators were waiting for the official announcement which was made yesterday and which revised the import duties on certain classes of textiles as a gesture to Lancashire. Elgin Mills were steady and at Rs. 18-5 accounted for a rise of As. 11. Kesorams were unchanged at Rs. 26-8, whereas Cawnpores declined to Rs. 8-14 from Rs. 9-1 and Dunbars to Rs. 198-8 from Rs. 200.

Coals were a little better, and the best feature was provided by Central Indias rising to Rs. 7-13 from Rs. 7-2. Western Bengals hardened to Rs. 7-7 from Rs. 7-4, while Khatras Jherriahs crossing at Rs. 48-4 were lower by As. 11. From Rs. 11-4, South Karanpuras were shifted to Rs. 11-14, Standards remaining quiet at Rs. 17-12. Pench Valley gave way to Rs. 23 from Rs. 23-3. Burrakurs could not go beyond Rs. 13-5 after opening at Rs. 13-1.

The weak nature of the jute goods market was fully reflected in jutes, where, however, Howrahs were a singular exception to the general trend of the section. The quotation opened at Rs. 29-14 last Thursday and had risen to Rs. 30-12 by the week-end. On Monday, the gain was fully maintained, but on Tuesday the rate sagged to Rs. 30-5. Nationals hovered at about Rs. 34-6 for most part of the week but closed lower at Rs. 33-15. Nuddeas were maintained at Rs. 56. Champadanies recovered to Rs. 173 from Rs. 171, but Budge Budges were pulled down to Rs. 190 from Rs. 194. Ganges were two points lower at Rs. 106, while Lansdownes at Rs. 132 regained three points. Gourepores lost to Rs. 336-8 from Rs. 337-8. Chitavalsahs to Rs. 14-6 from Rs. 14-9, and Dalhousies to Rs. 140 from Rs. 149.

Although there were no impressive rises in engineerings, prices were steady. Richardson and Cruddas were bought at the higher rate of Rs. 18-7 but subsequently receded to Rs. 18-1. Indian Galvanisings were an outstanding feature for the spurt to Rs. 23-11 from Rs. 23-2. Jessop & Cos. were shown keen interest, which improved the rate to Rs. 36-10 from Rs. 36; but subsequently there was a sagging tendency which saw the quotation give way to Rs. 36-2. Braithwaites hardened to Rs. 24-6 from Rs. 23-11. Indian Irons were dealt with around Rs. 34. Kumardhubis were steady at Rs. 11-9. Texmacos, although fractionally lower at Rs. 18-4, were steady.

Among sugars, Champarans were raised to Rs. 31-5 from Rs. 30-8. Carew & Cos., after regaining to Rs. 13-2 from Rs. 12-9, fell to Rs. 12-2. Bairampores encountered support at Rs. 9-9 as against Rs. 8-5 previously.

Miscellaneous industrials provided some features. A strong counter was Indo-Burma Petroleums, which, following the news of the declaration of dividend of 30 per cent. for the year ended December last, as against 20 per cent. for 1953, reached a high of Rs. 150, a gain of 27 points. Subsequently, profit-taking reduced the gain to Rs. 147 at which rate, however, the quotation was fully steady. Another feature was provided by Rohtas Industries hardening to Rs. 26-2 from Rs. 25-7. Martin Burns were better at Rs. 23-7 as against an opening of Rs. 23-2. From Rs. 25-1, Indian Cables were raised to Rs. 25-9. Titaghur Papers were marked As. 3 higher at Rs. 44-3.

After remaining steady early, teas were pulled down as offerings began to increase and not sufficient buying support was forthcoming. East Indians lost to Rs. 28-8 from Rs. 30-8, Hantaparas to Rs. 342 from Rs. 365, and Hasimaras to Rs. 45 from Rs. 48. Earlier, Brahmaputras hardened to Rs. 10-15 from Rs. 10-9, but moving down to Rs. 10-10 were nevertheless steady. At Rs. 15-4, Brooke Bonds were lower by Rs. 1-14. Duffaghurs were hammered down to Rs. 49-14 from Rs. 52.

• • • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *4th May*

For the third week in succession, the performance of the Madras Stock Exchange turned out to be discouraging. In fact, there was a general wave of selling pressure. Under the leadership of tea scrips, most of the others declined and recorded sizable losses over the week. The decline in the tea scrips was due to prospects of good crop. The cut in the retail price of tea leaves in the U.K., following accumulation of heavy stocks, was another contributory factor. Rubber and coffee scrips ruled almost easy in sympathy with the tea scrips. The miscellaneous scrips proved no exception to the generally dull trend. Business transacted was limited to a narrow range.

A notable feature of the week was the declaration of a dividend of 25 per cent. each by the Anandam Rubber Co., Ltd., and the Udayagiri Rubber Co., Ltd., for the year ended 31st December, 1954. The dividend for the previous year was 10 per cent. each. The directors of the Tropical Plantations Ltd. have announced a dividend of 20 per cent. for the year ended 31st December, 1954, as against 12 per cent. in the previous year. The directors of Rane (Madras) Ltd. have decided to hold an extraordinary general meeting on 21st May, 1955, to sub-divide the existing shares, both ordinary and preference, into ordinary shares of Rs. 5 each. After this, they propose to issue new shares. Regarding the issue of new shares by The Nilgiri Tea Estates Ltd., referred to last week, it is decided to put through all transfers of shares received by them upto 11th May, 1955, so that such holders are entitled to apply for the right shares and post to such transferees applications and renunciation forms immediately. The Company will also accept renunciation letters from shareholders till 20th May, 1955.

OUTLOOK FOR INVESTMENT

A bright future for equity investments in India was forecast by Mr. V. Rangachari, the retiring President of the Madras Stock Exchange Association Ltd. Addressing the annual general meeting of the Association, held last week in Madras, Mr. Rangachari said that India was now "on the threshold of an industrial revolution, the like of which this country had not experienced before." The harvests of the first Five-year Plan and the even greater adventure to be embarked under the second Five-year Plan for the uplift of the economic and social conditions of our vast population would, in his opinion, provide sufficient opportunities for the wise investment of our funds and our talents. If they did not, he failed to see what else would.

Mr. Rangachari did not, however, fail to draw attention to some of the developments during the past twelve months which had shaken the faith of the investors, namely, the Avadi Resolution adopting the socialistic pattern of society, nationalisation of the Imperial Bank of India and the amendment to Article 31(*a*) of the Constitution. He said it was premature to predict whether the welfare State could be attained through socialistic policies. But he voiced the concern of the stock markets over its implications. He rightly averred that the stock markets would continue to feel fettered by fears of hasty or ill-conceived implementation of the ideal of welfare State. As regards the State Bank of India, Mr. Rangachari said that future experience alone could show how far it would be possible for the State Bank to achieve the twin objectives of retaining its predominant position in the commercial field and at the same time extending its operations on the rural side and how much money would flow into the State Bank by way of rural deposits. Referring to the amendment to the Constitution, Mr. Rangachari pointed out that it was disquieting that this amendment proceeded from the apprehension that the Courts might not interpret the law according to the intentions of the makers.

Another important development of particular concern to investors in Madras, on which Mr. Rangachari dwelt at length, was the levy of agricultural income-tax on plantation crops by the Governments of Madras and Mysore. He said that the assumption that a flat rate of tax on the income of plantation companies could not be regressive in its incidence ignored the material difference between industrial concerns and plantation companies. Thus, while industrial concerns were able to plough back a substantial portion of the profit by means of depreciation and other allowances, so as to enable them to modernise and expand their plants and machinery every few years, planting companies got little depreciation benefit. If, therefore, a large portion of their profits were taxed away, as at present, they could retain nothing for replanting old areas and opening up new ones. Plantations were at a further disadvantage. For, they had not only to contend against the fluctuations in commodity prices but also against variations in the crop harvested, which could be great, particularly with a fruit crop likely coffee. The implications of these, it would appear, have not been fully appreciated by the Government as witness the meagre concessions given in the shape of allowance for replanting expenditure. The Government seems to have been carried away by the temporary prosperity enjoyed by the industry. But the position has changed considerably and the industry is again facing anxious times, particularly in tea.

EXPORT DUTY ON TEA

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 3-6-6 per lb. for the month of May, 1955, as against Rs. 3-8-9 per lb. for April and Rs. 4-3 per lb. for March. On this basis, the export duty will be As. 8 per lb., being the same as that for the previous month. The reason for the duty remaining unchanged, despite a slight fall in the price basis, is that the rate of duty is the same for any basis price which falls within the slab between Rs. 3-4 and Rs. 4 per lb. Accordingly, the export duty will be lower only if the basis falls below Rs. 3-4 per lb.

NEWS IN BRIEF

EXPORT of wheat products, such as *atta, maida, sooji* and *rawa* obtained from indigenous wheat has been permitted by the Government of India.

The Government of India has decided to allow free licensing of exports of copper utensils and copper artware to all permissible destinations, other than the Portuguese possessions in India.

The Coke Oven Plant at Sindri, which started operation on 1st September, 1954, has already reached the production target of 600 tons per day, making Sindri self-sufficient in regard to its coke requirements.

The Bombay Senate has approved of a scheme to start a course in business management to be conducted by the School of Economics and Sociology. The course will be open to junior business executives already in employment and diplomas will be awarded to successful candidates.

The Mysore Legislative Assembly has passed a resolution seeking to fix the maximum salary of a Government officer at Rs. 1,000 per month and requesting the State Government to appoint a Committee to evolve a salary structure removing the existing disparity in salaries.

An official delegation from the Reserve Bank of India will pay a visit to Kashmir in the middle of this month on a study tour to examine the working of co-operatives in the State. The delegation will suggest various measures for developing the co-operative movement in the State.

Talks between India, Pakistan and the World Bank on the Indus water dispute will be resumed at Washington on the 12th inst. The World Bank's award on the dispute will be the basis for further talks. It is expected that the talks will enable the parties concerned to reach some sort of a settlement in the near future.

The Union Government has been licensing freely, with effect from 30th April, the export of indigenous maize starch to all permissible destinations, except the Portuguese possessions. Licences will be granted on shipping bills to manufacturers as well as non-manufacturers of maize starch till the end of September, 1955.

The Madhya Pradesh Government has assured the cultivators in the State that it would buy wheat from them, if the price of approved quality wheat falls below Rs. 10 per maund. The State Government has already selected 28 centres where arrangements for the purchase of wheat would be made.

The British Steel Mission to India, led by Sir Eric Coates, has returned to London. It is reported to have favoured, in its preliminary report, Durgapur in Bengal as the site for the third steel plant, because of its "decided advantages" over the other sites. The Mission will, however, study in detail the claims of other sites in the Bengal-Bihar industrial belt before making its final recommendations.

The Travancore-Cochin State Government is considering a proposal to establish a factory for the manufacture of steel poles under the second Five-year Plan. The factory will be the first of its kind in India and will be established near Cochin, with a capital of Rs. 50 lakhs. It is expected to turn out 300,000 poles a year. The Government hopes to get the necessary technical assistance from Germany.

India is not likely to become self-sufficient in arecanut before 1966-67, that is before the end of the third Five-year Plan, according to Dr. Punjabrao Deshmukh, Minister for Agriculture, as arecanut plant takes eight to ten years to bear fruit. It is, however, a conservative estimate, but the target is likely to be reached earlier than that. Efforts are being made to increase production both by intensive and extensive cultivation.

The Government of India has stopped the sale of imported wheat in Calcutta and Bombay with effect from 2nd May, 1955. This step is stated to be one of the important measures which the Government is taking to provide further support to the price of wheat in internal markets. This step is expected to increase the demand for indigenous wheat by at least 60,000 tons per month.

The Mysore Legislative Council has passed a resolution, after discussing the report of the Committee which went into the question of the working agreement entered into by the Government with the Kolar Gold Fields mining companies in 1949, urging the Government to take such measures as it may consider necessary in the interests of the State. The State Legislative Assembly, it may be noted, had earlier adopted a resolution approving the recommendations of the Committee.

Five operational agreements have been signed in New Delhi between the Governments of India and the United States involving the total U.S. assistance to the extent of over $1.28 million. The Government of India's total contribution to these joint projects exceeds Rs. 2.2 crores. The projects covered under these agreements are: (1) assistance to technical educational institutions; (2) live-stock improvement; (3) ground-water exploration; (4) flood control, and (5) modern storage of foodgrains.

The Licensing Committee of the Government of India has granted a licence to a private concern to start and run a ferro-manganese factory in Srikakulam district, Andhra State. The factory will be started in collaboration with a foreign firm, at a cost of Rs. 1.5 crores. It will be capable of manufacturing 30,000 tons of ferro-manganese per annum. Several places in Srikakulam and Visakhapatnam Districts are said to contain manganese ore and this will be utilised to manufacture ferro-manganese, the surplus of which, after meeting the country's requirements, can be exported.

Experiments at the Indian Veterinary Institute, Izatnagar, have shown that cow-dung can be used as a poultry food. The Institute, which carried out a systematic search for cheaper sources of proteins, found that cow-dung has male and female hormones and can be profitably used as proteinous diet for hens. Washed and dried cow-dung, when given to hens, increases their egg-laying capacity; washings of cow-dung when mixed with normal food and given to chickens induce quicker growth accompanied by a better development of combs and wattles.

A Bill to provide for the establishment of river boards for the regulation and development of inter-State rivers and river valleys has been introduced in the Rajya Sabha. According to the statement of objects and reasons of the Bill, before giving any advice to State Governments in regard to regulation or development, a Board will try to secure agreement among the State Governments both with respect to the measures to be undertaken and with respect to the sharing of financial liability involved in undertaking such measures. Another Bill to provide for the adjudication of disputes relating to waters of inter-State rivers and river valleys has also been introduced.

From Abroad

Hungary has signed an agreement to buy 50,000 tons of Egyptian cotton valued at £850,000 (Egyptian). This agreement follows those made with the Soviet Union and Rumania.

China, which had to import most of its requirements of paper until a few years ago, has started exporting newsprint to Viet Nam, India and other countries. China produces 30 varieties of paper, including insulating paper, cement bag paper and fibre sheets.

At a meeting held last week in London, shipowners from 16 countries passed a resolution urging that aid by Governments, direct or indirect, towards the development and operation of national air services should be progressively eliminated as rapidly as practicable.

Negotiations for Japan's full entry into G.A.T.T. are going on smoothly. Japan has won the support of 21 member-nations and, if its application is backed by 23 countries, it would automatically be admitted. Britain is one of the countries which is opposed to Japan becoming a full member for domestic reasons.

France proposes to subsidise exports to French Union territory, for the first time, in an attempt to recapture its dwindling markets for textiles in Indo-China. France no longer enjoys special preference in that market where sales have fallen. These losses partly explain the recession in the French textile industry which has developed this year after a two-year period.

Australia's production of crude steel during 1954 amounted to 1.65 million tons, as compared with 1.28 million tons in 1953, or a rise of about 29 per cent. This trend is in refreshing contrast to the decline of 5.1 per cent. in the total world production. No other country in the world has shown a proportionate increase in crude steel production even remotely comparable to that of Australia.

The Norwegian Parliament voted another £250,000 last week to the Norwegian technical aid project in India. In previous years, the Norwegian Parliament had voted altogether £1,500,000 to this project. The project is designed to help fishing communities in Travancore-Cochin, by improving catching and distributing methods and by raising health standards.

The difficulties, which occurred recently over one of the biggest Russian contracts signed last year covering an export order for about £7 million worth of British textile machinery, are reported to have been resolved. The settlement, however, still "leaves in jeopardy" several million pounds worth of orders for British goods for which Russia negotiated last year.

India will get 98,000 tons of steel under an agreement signed in New Delhi recently by the U.S. and Indian Governments. The U.S. will contribute about $11 million towards the project. India's cost will be approximately $1,260,000 mainly to cover transportation and inland handling. The agreement forms part of the overall U.S. technical and economic aid for India's development.

The Brazilian Government proposes to continue its policy of supporting cruzeiro coffee prices in the 1955-56 crop year. Unofficial estimates place the new crop at 16 million to 17 million bags, which, together with the carryover, will make available between 21 million and 22 million bags for export during the next crop year. This is expected to result in a fall in prices.

One of West Germany's leading manufacturers of detergents, the Rel-Chemie Company of Boppard on the Rhine, is considering licensed production of synthetic detergents in India and Japan. The Company has already floated a corporation in Brazil for the production of detergents. Half of the capital for the Brazilian venture will be provided by the German company and the remainder by Brazilian interests.

PERSONAL

MR. E. Royston and Mr. J. K. Srivastava have been elected Chairman and Deputy Chairman, respectively, of the Employers' Association of Northern India, Kanpur.

The Earl of Home, Secretary of State for Commonwealth Relations, U.K., will visit India, Pakistan and Ceylon on his return journey from a visit to Australia and New Zealand during the British Parliament's summer recess.

Mr. N. D. Gulhati, Joint Secretary to the Union Ministry of Irrigation, has left for Cairo, *en route* to the U.S. Mr. Gulhati is leading the nine-man Indian delegation at the Indus water dispute talks to be resumed at Washington on the 12th inst.

Mr. H. Subramaniam of Messrs. Chitra and Co., stock and share brokers, Madras, and Mr. K. Venkataraman of Messrs. Venkataraman and Co., have been elected President and Vice-President, respectively, of the Madras Stock Exchange Association Ltd. for the year 1955-56.

Mr. Hollister, a lawyer, has been selected by President Eisenhower as the head of the International Co-operation Administration, the new agency for foreign aid, which will replace the present Foreign Operations Administration on 1st July, 1955.

Mr. A. C. Ramalingam, J.P., has been re-elected President of the Institute of Secretaries, Bombay, for the year 1955. The other members of the Council of the Institute are: Messrs. C. C. Sutaria, A. D. Tarkas, J. B. Tijoriwala, V. G. Ghate, E. R. V. Raghavan, I. S. Mehta, C. J. Gambhirwala, H. A. Bharucha, P. L. Kapadia, and M. De Melo.

Mr. A. D. Calhoun, Vice-President of the First National City Bank of New York, New York, has arrived in Bombay in the course of his tour of the Far Eastern countries and India. He has already visited the Far Eastern countries and will pay a visit to Colombo and Karachi before leaving for New York.

OBITUARY

Mr. T. V. Sundaram Iyengar

We regret to record the demise of Mr. T. V. Sundaram Iyengar, founder of Messrs. T. V. S. and Sons, well-known motor dealers and transport operators in South India, in Kodaikanal on Thursday last week. Mr. Iyengar was 78 at the time of his death. He was the pioneer in the motor transport industry in South India and started a bus service in Madura District in 1912. In 1923, he established the firm of Messrs. T. V. Sundaram Iyengar and Sons Ltd., which now operates a large number of buses and lorries under the name and style of Southern Roadways Ltd., besides many depots and service stations. The bus and lorry service established by Mr. Iyengar has earned a reputation for its punctuality, efficiency and courtesy. Mr. Iyengar was a very progressive employer, keenly interested in the welfare of his employees.

"COMMERCE" 1930

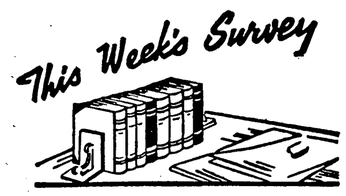
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *10th May*

Bank Rate Reduction

Mr. Philip Snowden seems to be quite pleased that the Bank of England rate has again fallen. He explains the further drop from 3½ to 3 per cent. as a direct result of his bombshell Budget. For our own part, we cannot, we regret, regard this extended Bank rate declension as a cheerful reflection of the existing industrial position. It would have been much better, we think, if a sustained demand for financial accommodation had imparted a firm tone to money rates; whereas, on the contrary, the Bank rate declension suggests a protracted period of cheap money, the result of the comparatively low level of discount rates abroad, a recession in trade activity, and a decline in commodity prices. Although a still further reduction in the British Bank rate is considered improbable at the moment, yet we shall not be surprised, all things considered, if a reduction to 2½ per cent. takes place within the ensuing three months. Opinion in financial markets is admittedly an erratic pendulum, having a tendency towards extremes; but it would be foolish to close our eyes to market tendencies; and in the monetary situation of today the tendency is undoubtedly downwards. In spite of Mr. Snowden's boast, we beg leave to submit the postulate that the Governor of the Bank of England made his declension decision not under the influence of budget considerations, but because of the exigencies of the international monetary situation as a whole; and it is more than likely that the reduction in the rate was influenced largely by the Wall Street slump.

The Government of India has placed a £200,000 order for eight large cranes of varying sizes with a British firm of railway-plant manufacturers. The firm has gained the contract in the face of keen competition from firms all over the world. It is expected that the order, one of many from India, will be completed by the end of 1956 or early in 1957. The contract for the cranes is part of the Indian Government's programme for the re-equipment of its railways.



CAPITAL AND EMPLOYMENT

ANY dispassionate analysis of the problem of employment—rather of unemployment—in the country will be widely welcomed, considering that the discussion of this issue, more than of any other, is apt to be clouded by sentiment, if not by passion too. It was precisely such an analysis that Mr. K. C. Mahindra, Chairman of the Indian Aluminium Company, Ltd., attempted in his comprehensive address at the annual meeting of the Company. Mr. Mahindra, who, with characteristic self-revelation, said he was not of the "gloom and doom" tribe of business men, tried to clear the cobwebs of shibboleths and half-truths that have grown around this topic. This is a task which was well worth doing, for many errors in economic policy have been committed under the ostensible guise of providing more employment. And Mr. Mahindra has done it well indeed.

The first thing to remember about unemployment is that it cannot be solved without some check on population. Mr. Mahindra rightly held that the country should adopt "long-term measures for restricting the birth rate." In the absence of such measures, even if the country reached the target of 12 million new jobs, which the Government has in view, it would not solve the problem. The next thing to remember is the consideration that unemployment is a "direct co-efficient of the productivity of the nation." The countries with a high man-hour output have a higher level of employment and of wages. Emphasising that people should work more intensively than at present, Mr. Mahindra pointed out how the average American, though he works 15 per cent. fewer hours, has roughly 50 per cent. more purchasing power than he had 25 years ago. This has been possible because capitalism has placed in the hands of men tools for increased production; capitalism has, as Nicolai Lenin, whom Mr. Mahindra quoted approvingly, said, "created a productivity unknown under serfdom."

How have these higher plateaus of productivity, with all the accompanying advantages of higher wages, more leisure, and better amenities, been reached in the West? The answer must be sought in the technological revolution that has taken place in those countries. In India, as Mr. Mahindra pointed out, many advocates of handicrafts and cottage industries "seem to believe implicitly that the closing of all factories would provide employment for a large number of people and that there would be no shortage in the production of goods and articles." Obviously, they do not realise that their policy is bound to result in economic stagnation, if not in economic deterioration.

Surely, what the country needs is a bold programme of industrialisation that will utilise the best that science can offer. It is true that the implementation of such a programme would imply a high rate of capital formation as well the ability to know and use technical advances. It is also true that technical know-how has to be borrowed from abroad. Indeed, it is being done even now, though not from the right sources. This is true particularly of some Government-sponsored deals. Drawing attention to this defect in State-owned projects, Mr. Mahindra said: "For steel we have gone to Russia, for shipbuilding to France, for machine tools to Switzerland—all very amiable arrangements, but Russians are not reputed to have the most modern technology in steel operations, nor the French in shipbuilding, nor the Swiss in machine tools manufacture. Must we import antiquated practices in our haste to install industrial facilities in the country?"

Some schemes for economic improvement need more capital than others. In this connection, Mr. Mahindra made the very pertinent suggestion that the Government might implement such labour-intensive schemes as housing, slum-clearing, roads and communications, irrigation and hydro-electric projects and leave the other schemes, which are merely capital-intensive, to the private sector. This would seem to provide an eminently workable basis for the demarcation of the economic sphere into private and public sectors. It also fits in with the generally accepted view that while public utilities are best administered by the State, industries and services with a high risk element are best left to the care of private enterprise.

UNEMPLOYMENT INSURANCE

One of the important subjects on the agenda of the 14th session of the Indian Labour Conference to be held at Bombay next week relates to the desirability of introducing unemployment insurance scheme in place of the present provisions for lay-off and retrenchment compensation. It is believed that this item has been placed before the Conference at the instance of the All-India Manufacturers' Organisation (A.I.M.O.), Bombay.

It would appear that the proposal to institute an unemployment insurance scheme is a sequel to the difficulties experienced by industries, particularly the medium and small-scale industrial units, as a result of heavy compensation prescribed for lay-off and compensation under the Industrial Disputes (Amendment) Act, 1953. The A.I.M.O. itself has criticised these compensation levies as being heavy in their incidence. The lay-off compensation, as is well known, is equal to 50 per cent. of the total of basic wage and dearness allowance and is payable for 45 days in a year. This period of compensation is liable to be extended without limit even if the lay-off continues for reasons beyond the control of the management, when there is no agreement to the contrary between an employer and his workers. Compensation, in the case of retrenchment, is payable at the rate of 15 days' average pay for every completed year of service or any part thereof in excess of six months. Since such legislation had not been anticipated, many concerns, the A.I.M.O. points out, had not made any provision for payment of compensation. Retrenchment compensation, according to it, is particularly heavy as this requires payment for the entire period of previous years of service of the retrenched workers. Further, no distinction has been made between large-scale units, on the one hand, and small-scale units, on the other. All the units covered by the Indian Factories Act, irrespective of their resources and capacity, have been treated alike for purposes of this law.

This is not all. Even the retrenchment of a small number of workers, consequent upon rationalisation of the methods of production, which is of benefit to the factory concerned, has not been differentiated from the cases of substantial or wholesale retrenchment of workers due to the closure of the factory either partially or wholly, on account of such difficulties as shortage of electric power, irregular supply of raw materials, lack of railway transport, competition from imports, etc., which are beyond the control of the management. Such units, it is rightly held, actually need monetary aid for resuming their normal working. Consequently, the A.I.M.O. holds that any additional burden by way of retrenchment compensation will make it altogether impossible for them to carry on, thereby defeating the very object of the Government to promote employment opportunities and encourage medium and small-scale industries. Accordingly, it has suggested that the burden of compensation should be borne equally by the workers, who are the sole beneficiaries, employers and the Government. It has advocated the institution by the Government of a compulsory insurance scheme to cover the risks of lay-off and retrenchment, the premium being payable by Government, employers and employees in equal proportion. There is no doubt that the unemployment insurance scheme, advocated by the A.I.M.O. is an improvement over the present scheme of compensation and would provide an effective and practicable solution to the problem of payment of compensation to retrenched workers.

DEVELOPMENT OF CHEMICAL INDUSTRY

The tale of progress of the Indian chemical industry in 1944, narrated, in some detail, by Mr. Mohanlal T. Shah, President, Bombay Branch of the Indian Chemical Manufacturers Association, at the annual meeting held at Bombay on Monday last, makes impressive reading. The industry has every reason to be proud of its achievements in the year. In its history the year will stand out as an important landmark in that it witnessed a series of developments of outstanding significance. Thus it saw the birth of two Development Councils, one for heavy chemicals and the other for pharmaceuticals. A high power committee was appointed in the year for the location of additional fertiliser plants. Steps were initiated to implement the various recommendations of the Pharmaceutical Enquiry Committee which submitted its report last year. Action was also taken to establish a fertiliser-cum-heavy water plant at Nangal during the year.

Progress was recorded in other directions too. Chemical production as measured by the index figure rose from 517.7 in 1953 to about 610 in 1954. Out of 137 items manufactured, the output of all but 37, recorded an increase during the year. New production capacity was established in several basic chemicals and production commenced in several new lines. Special attention was paid to long-term problems of the industry. Attempts were also made to start the manufacture of chemotherapeutics and dyestuffs. A scheme for the manufacture of sulphuric acid from gypsum and pyrites made progress. Production of sulphuric acid and caustic soda reached new high levels in the year under review. The first plant for the production of acetic acid, calcium carbide and ammonium chlorine commenced regular operations. There was also increase in production of drugs and pharmaceuticals.

The picture thus presented is, indeed, encouraging, but this should not give room for any complacency. For, as we have emphasised ere now, in spite of this progress, only the fringe of the problem has been touched. The industry is not only still undeveloped but is facing many handicaps retarding its growth to full dimensions. Mr. Shah's emphasis on the urgency for eliminating the handicaps must be said to be both timely and appropriate, as the industry has a great role to play in the second Five-year Plan period. The chief reason for the progress of the industry not being commensurate with the needs of the country is shortage of capital. This is an industry the capital cost of which is generally higher than that of other industries owing to the high rate of obsolescence of capital equipment. Additional investment is needed for the education of scientists and chemical engineers and for setting up laboratories for research and experiment. Thus, the capital needs of this industry are large and, if on top of this, the capital market is tight, the magnitude of this difficulty of the industry can be easily imagined.

Apart from shortage of capital, non-availability of electric power at cheap rates has also arrested the growth of the chemical industry. In this connection, Mr. Shah's fear of Bombay losing its leadership in the field of chemical industry may be considered as genuine. For, if the State Government does not come forward with bold schemes for generating and supplying electric power, the chances are, as he says, that the industry may migrate to the Punjab, Bihar or Bengal where the prospects of getting power easily are brighter, thanks to the large river valley projects, such as Bhakra Nanal and Damodar Valley which are nearing completion. He thinks that provision of cheap power, tariff protection and financial assistance in the shape of loans and grants are quite essential, if the State is to produce or expand, under the second Five-year Plan, production of nitrogenous and phosphatic fertilisers, caustic soda and bleaching powder, ferro-manganese, ferro chrome, phosphoric acid and phosphates. Mr. Shah, however, feels gratified at the recent steps taken by the State Government for increasing the supply of power through the execution of the Koyna Hydro-electric Project, and the Trombay Power Jog electric power generators in Mysore.

The mere availability of power is not enough. What is equally important is its cost. Power must be made available at cheap rates, if the chemical industries using it are to work economically. For, as Mr. Shah says, power accounts for a major share in the cost of production of chemicals. In the opinion of Mr. Shah, the power rate should not be more than half anna per unit for producing caustic soda electrically and quarter anna per unit for producing phosphorus economically, a raw material for safety matches, phosphor copper and phosphates used in medicines, tooth pastes, rust-resisting compositions, etc. He adds further that, if power is cheap, acids and alkalis could be produced cheap, and these, in their turn, help concentration, purification, and reaction of enormous quanties of monozite and other products for securing materials such as uranium or thorium for generating atomic energy for peaceful purposes. He quotes the latest view prevailing in the U.S. that it would pay to produce nuclear energy in places where the cost of coal is more than $10 per ton. In Bombay State, the cost of coal at factory sites is about Rs. 45 per ton, which, in terms of U.S. dollar is equivalent to

about $10. Mr. Shah, therefore, considers it advisable to formulate schemes for generating atomic energy as a source of power to the regions in the West Coast of Bombay which are far removed from Indian coal mines. This argument sounds convincing.

U.S. TARIFFS

It is gratifying to note that the U.S. Senate Finance Committee has at last approved of President Eisenhower's recommendations for a liberalised foreign trade programme. The Bill embodying these recommendations, it will be recalled, was first moved in the Congress in January last. Having been approved by the House of Representatives, it came before the Senate Finance Committee. Before giving its consent, the Committee made some amendments to the Bill. As approved by the Committee, the Bill seeks to extend the Reciprocal Trade Agreements Act for three years with effect from 12th June, 1955, and give the President authority to reduce tariffs at the rate of 5 per cent. per year for three years, that is, by 15 per cent. during that period, in return for similar advantages in foreign markets. None of the so-called commodity amendments to protect specific products from foreign competition by the use of import quotas or higher tariffs has been adopted. The Committee has, however, accepted a compromise proposal designed to forestall such amendments when the Bill reaches the Senate shortly.

The U.S. Senate's decision on the programme recommended by President Eisenhower will be awaited with considerable interest the world over. Any impartial observer of trends in world trade in the past few years will readily admit that it is the high level of tariff wall and the cumbersome customs regulations maintained by the U.S. and several other countries that have all along been the biggest stumbling blocks in the way of an expanding and multilateral system of world trade. Despite the repeated emphasis laid, ere now, on the need for lowering U.S. tariffs and simplifying customs procedure as a means of strengthening the economy and security of the non-dollar areas of the free world, the progress actually achieved in this direction has been none too satisfactory. It is doubtful whether the Bill, as now passed by the Senate Finance Committee, will meet with the approval of the Senate. The doubt arises from the host of demands for protection from individual industries. There is also a general movement to restrict the scope of the Bill either by limiting the President's power to ignore the recommendations of the Tariff Commission or by renewing the existing Act for less than three years asked for. Drawing attention to these possibilities, the *Financial Times* (London) observes:

"If these two groups of interests can make common cause, the Administration may have difficulty in getting the Bill through. Both parties too are more or less united on the general question of regaining the legislative initiative for Congress. Democratic opinion is divided on the Presidential request for approval of U.S. participation in the Organisation for Trade Co-operation (which is to replace the G.A.T.T.) and a similar request about membership of the new International Finance Corporation will complicate matters still further. The Trade Bill is certain to be contested bitterly on the floor of the Senate, and it is likely to be passed in a satisfactory form only if the President is willing to throw the full weight of his prestige behind it. He will have to exert further pressure during the next two or three weeks, if the Bill is to go through substantially unamended."

Viewed against this background, it will be appreciated that President Eisenhower's renewed plea for Congressional enactment of the Administration's trade programme is, indeed, commendable. The rejection of the programme, Mr. Eisenhower has clearly warned, will constitute a serious setback to the U.S. hopes for global peace. And he minces no words when he declared: "Either we foster flourishing trade between the free nations or we weaken the free world and our own economy." Equally commendable is the plea of Mr. Pink, Chairman of the Citizens Conference on International Economic Union—a private organisation—for support to two Congressional Bills, one to extend the U.S. Reciprocal Trade Agreements Act and the other to ratify U.S. membership in the Organisation for Trade Co-operation (O.T.C.). The plea is based on the need to preserve the General Agreement on Tariffs and Trade (G.A.T.T.) and prevent international trade warfare. The ratification of the O.T.C. membership by the U.S. is regarded as an essential prerequisite for operating the revised G.A.T.T. machinery. The O.T.C., it is said, would interpret trade agreements, conciliate disputes and grant waivers where necessary. Incidentally, it is interesting to note that the 34 signatories to the G.A.T.T., including the U.S., together account for 80 per cent. of world trade.

WOES OF LAMP PRODUCERS

The Government's attitude towards the lamp manufacturing industry in India appears to be not as helpful as it should be. The State can help the industry in many ways, but the experience of lamp manufacturers shows that such help is not readily forthcoming. According to Mr. B. K. Rohatgi, Chairman, the Indian Lamp Factories Association, Calcutta, they are finding it difficult to get their samples tested at the Government Test House. It is stated that this institution not only charges a high rate but also causes delay in submitting the reports on its tests. If this charge is true, the Government must take prompt steps to enhance the utility of the Testing House.

Further, Government Departments do not appear to pay adequate attention to the question of placing orders for special types of lamps. For Mr. Rohatgi observes, in the course of his address at the annual meeting of the above Association held at Calcutta on 28th April, that orders are denied to the manufacturers even when the lamps are according to specifications. He, therefore, suggests that the Indian Standards Institution should lose no time in laying down the specifications for Indian lamps, so that they may facilitate the removal, once for all, of doubts regarding the quality of different lamps produced by the industry.

Considerable hardships are being experienced by the industry on account of the manner in which the State Governments make payments for lamps purchased by them. Not only are delays caused in payments but no sales tax is paid even on those purchases which are not exempted from sales tax laws. This attitude is regrettable indeed. The Development Council for light engineering industries, on which lamp manufacturers are also represented, should take up this question with the Government.

Railway bottlenecks too seem to contribute their own quota to the troubles of the lamp manufacturing industry. According to Mr. Rohatgi, at some stations goods are accepted at the goods shed and wagons are allotted after a long time and when the goods are despatched no previous intimation is given to either the consignor or the consignee. In certain other centres, bookings are suddenly opened or closed without notice. Complaints similar to these have been made by other industries also in the past. Railways will do well to adopt some suitable procedure to avoid the irregularities pointed out by Mr. Rohatgi.

Lamp manufacturers see in the new excise duties on electric lamps at the specific rates, as levied by the Finance Minister in his modified Finance Bill for 1955-56, another source of difficulty. It is feared that this would increase the price by about one anna for lamps upto 100 watts, As. 4 for lamps from 150 to 300 watts and As. 8 for those of 500 watts and above. As the industry is already suffering from surplus capacity, the imposition of this additional burden is expected to aggravate the situation further.

Mr. Rohatgi is of the opinion that the current 12½ per cent. restriction on production of the industry should be continued in 1955 also. For, he considers that the total internal production during 1954 was short of the total restricted capacity of the industry by about 5 million pieces, in spite of an increase of 15 per cent. in the output of lamps and of 1 million kw. in that of electricity.

The President of the Indian Lamp Factories Association thinks that there is need for caution in estimating the demand for lamps in the country. He estimates the total demand for all sorts of lamps during the next five years to be 40 million lamps, taking into account the demand on account of increased power supply and expansion in housing and industrial activities. This demad does not, however, include the miniature lamps. In this context, he suggests that the Government should restrict rigidly the importation of these lamps, as the industry is able to satisfy the internal demand.

58/3

RISE IN REAL "PER CAPITA" INCOME

It looks as though the pace of economic development in India has been more than commensurate with the rate of population growth. During the year 1953-54, for instance, the national income of India (at 1948-49 prices) was higher by 4.5 per cent. at Rs. 9,950 crores, as compared with the previous year, while population registered a rise of only 1.3 per cent. to 373.37 million. These calculations are based on the estimates made by the Central Statistical Organisation in the second issue of its annual paper on national income. The increase, in real terms, of 4.5 per cent. in the national income during 1953-54, compares favourably with 3.9 per cent. in 1952-53. The corresponding increase in *per capita* income in real terms also compares favourably being 3.3 per cent. during the year under review, as against 2.5 per cent. in 1952-53. The *per capita* income of an Indian (at constant prices) was Rs. 266.5, as against Rs. 258.1. The estimates for 1953-54, we are told, are based on partial material and are subject to revision, while those for 1952-53 are based on the detailed method of estimation followed for the earlier years.

A comparison of the figures of net national output at current prices presents a somewhat different picture. Thus, the national income of India during 1953-54 is estimated at Rs. 10,600 crores, as compared with Rs. 9,860 crores in 1952-53, which represents a rise of 7.5 per cent. The *per capita* income works out to Rs. 283.9, as against Rs. 267.4.

The following table indicates India's net national output at current and constant prices during the last four years:

	1950-51	1951-52	1952-53	1953-54 (Prelimi-nary)
Net output (in crores of rupees)—				
At current prices ..	9,530	9,990	9,860	10,600
At 1948-49 prices	8,850	9,160	9,520	9,950
Per capita net output (Rs.)—				
At current prices	265.2	274.5	267.4	283.9
At 1948-49 prices	246.3	251.7	258.1	266.5
Index number of net output (1948-49=100)—				
At current prices	110.2	115.5	114.0	122.5
At 1948-49 prices	102.3	105.9	110.1	115.0
Index number of per capita net output (1948-49=100)—				
At current prices	107.4	111.2	108.3	115.0
At 1948-49 prices	99.8	101.9	104.5	107.9

The latest official figures relating to national income throw some interesting light on capital formation and finance in the public sector, as also on the Government's share in national expenditure during the first two years of the Five-year Plan. These are given below:

	1950-51	1951-52	1952-53
Government capital formation and finance (in crores of rupees)—			
Surplus on current account and maintenance provision	190	280	170
Borrowing at home	50	Nil	70
Borrowing abroad	10	70	80
Extra-budgetary receipts and adjustment for cash balances	20	—50	80
Gross capital formation on current account	270	300	300
Government share in national expenditure (percentage)—			
Current expenditure on commodities and services (Government administration)	5.6	5.5	5.8
Administrative capital expenditure..	1.0	1.0	1.2
Enterprises capital expenditure ..	1.6	1.8	1.7
Net national expenditure at market price	100.0	100.0	100.0

It will be seen from the foregoing figures that the gross capital formation on Government account during the first two years of the Five-year Plan was very low, being no more than Rs. 300 crores per annum. The Government's share in the generation of the net product also stands low; during 1952-53, the contribution made to the net domestic product of the country on Government account was a bare 8.7 per cent.

ECONOMIC ASPECTS OF BANDUNG

BUDGET DEFICIT MAY BE MUCH GREATER

From A Special Correspondent

NEW DELHI, 3rd May

DELHI LETTER

THE proceedings and conclusions reached in the historic Bandung Conference attracted considerable attention both inside and outside Parliament this week. Members of Parliament were inclined to assess the results of this important Asian-African Conference in the political and economic spheres in the coming months. It is conceded that this Conference reflects the political emergence in world affairs of over half the world's population.

It is generally admitted that greater political cohesion will naturally lead to intimate economic relationship between these powers in the coming years. From the point of view of economic strength, the countries which assembled at Bandung recently are backward, despite substantial natural and potential resources. Their foreign trade is limited, being confined to exports of some essential raw materials, foodgrains, etc. The necessity to improve the economic conditions in these countries as early as practicable was fully recognised by almost all the leading statesmen of this part of the world. Hence, during the Conference week, economic and cultural issues were referred to separate committees and their reports were finally adopted by the committee of the whole Conference.

As a result of India's leading role in this Conference, the responsibility of this country in influencing and moulding the economic policy of the participating countries will become greater in the coming years. Generally speaking, the flow of international trade is greater among neighbouring countries than between nations separated by long distances, but this factor is not much pronounced in the foreign trade of many Asian and African countries. This is because many of these countries had long been or still is under the political subjugation or control, as the case may be, of some leading Western powers. India, for instance, has long been having intimate trade connections with the U.K. which happens to be not only the best customer for India's products but also the leading supplier of manufactured goods. Indonesia has also good economic relationship with Holland because of long political bondage with the latter. Even today, Holland happens to head the list in the import trade of Indonesia. The U.S.A. has long been enjoying the lion's share in the trade of the Philippines and, for many years, the goods manufactured in the U.S.A. were allowed into this Island free of duty. Similarly, the foreign trade of Burma, Malaya, Ceylon, etc., is greatly with the U.K., while that of Viet Nam and the former Indo-China was until recently controlled by the French Government. The political subjugation and control have long been very much pronounced in regard to many countries in Africa. Almost all the leading West European powers have long ago divided this huge African Continent amongst themselves. While the U.K. tried to push its goods and manufactures through the adoption of Imperial Preference, France was trying to restrict the imports of manufactured articles of other countries into the territories under its control in Africa. Even today nearly 50 per cent. of exports of France are being sent to the colonies controlled by it. The vast mineral oil resources of the Middle East are now controlled by the U.K. and the U.S.A. which has come into this field in recent years.

Another factor that should be borne in mind is that the economic prosperity of many of these countries is dependent on a very few commodities. Any sharp fluctuations in their prices and any change in the pattern of demand, either uncontrolled or regulated, have important repercussions on the prosperity of the vast humanity inhabiting this part of the world. Rice and rice products, for instance, are nearly responsible for more than 80 to 85 per cent. of Burma's export trade. Similarly, rice, rubber and mineral products for Cambodia-Laos-Viet Nam, tea, copra and allied products and rubber for Ceylon, tea, copra, rubber, tin (and tin ore) and petroleum and products for Indonesia, rubber and tin for Malaya, raw jute, raw cotton, raw wool and hides and skins for Pakistan, abaca (unmanufactured), coconut products and sugar for the Philippines, rice and rubber for Thailand, tea, jute goods, cotton manufactures, spices, etc., for India, long-staple cotton for Egypt, etc.—all these commodities occupy places of importance in the export trade of the countries mentioned against them. As stated above, the main customers for these commodities are Europe and the U.S.A. and, in consequence, any change in the economic conditions in this part of the world has been affecting considerably the fortunes of the Asian-African countries. Again, the scientific and technological advances, as, for instance, the manufacture of synthetic rubber by the U.S.A. and Canada, have also been exercising unhealthy repercussions on the economy of the Far Eastern countries, inasmuch as the substitution of artificial rubber for natural rubber has been restricting the consumption of the latter, with adverse effects on the prosperity of natural rubber producing countries.

The diversification of foreign trade of these countries is necessary, in order to impart a certain amount of stability to their economies. In almost all these countries, perhaps with the exception of India, Japan and some other nations, there is absence of entrepreneurial skill and managerial personnel, not to speak of technical and skilled personnel to man the industries. The problem has to be tackled from scratch. Private capital is shy and risk capital almost non-existent. Hence, the Governments of these underdeveloped countries will have heavy responsibilities to discharge, particularly in raising the living standards of their people. It is, therefore, encouraging that the Bandung Conference has proposed the establishment of a special United Nations Fund for economic development. With capital from this fund, the Governments might begin to set up some processing industries for which raw materials are readily available in their countries. Among the assembled nations, India has been making rapid progress, as also China with the help of Soviet Russia. Japan is perhaps the only country with high industrial traditions. In the Middle East, Turkey too made notable progress in recent years, while Egypt is now making efforts to improve its economy in a number of directions. There is considerable scope for these countries to develop shipping, banking, insurance, etc., with a view to bringing about a rapid economic development of their people. Technological institutions will have to be established for promoting technical education. In all these, the scope for India, occupying as it does a pivotal geographical position, to play a leading part is considered good.

Only last week it was suggested here that, as a result of the changes in the Finance Act due to many concessions afforded by the Finance Minister, the budget deficit of the Central Government for 1955-56 would increase by about Rs. 8.88 crores to Rs. 17.35 crores. As matters stand, the deficit is expected to increase further by about Rs. 20 to Rs. 25 crores in the coming months. For instance, the budget estimate of export duties on tea is placed at Rs. 30 crores for 1955-56, as against Rs. 19 crores in the revised estimate for 1954-55, and Rs. 11.62 crores being the actuals for 1953-54. Higher realisations from this tax were expected to result on account of the introduction of the slab system of export duty. Some time before the budget, the duty was raised to As. 10 per lb. and since prices of tea were then ruling very high in the export markets of the world, it was presumably thought by the Government that, as a result of the operation of the slab system of export duty, the collections from this tax would swell to such an extent as to yield Rs. 30 crores to the Treasury. The latest trend of tea prices in the London market, however, suggests that the high prices of tea are not likely to be maintained in the coming months. Already, the rate for Indian common tea in London has come down to 4s. 6d. per lb. and, if the decline were to persist for some time more, the export duty will have to be brought down from As. 8 to As. 6. In such an event, it will be doubtful whether the Government will get a total revenue of about Rs. 16 crores in 1955-56, as against the estimated figure of Rs. 30 crores. This apart, there is a proposal to restrict the imports of sugar, in which case the revenue from this item will also decline. In all, it is likely that the total yield from these two items alone will decline by about Rs. 20 to Rs. 25 crores, taking up the budget deficit well above Rs. 40 crores for the current year, unless there is a corresponding increase in the yield of other taxes.

POLICY AND POLITICS

LABOUR PARTY MANIFESTO

From Our Own Correspondent

LONDON, 30th April

LONDON LETTER

TO the surprise of nearly everyone not closely connected to the inner circles of Labour Party policy making, the manifesto published on the eve of the election has come as something of a shock. It had been generally assumed that the Labour Party had been without a policy throughout its years of opposition and that this election had come before it had realised that it had to have something more positive than mere opposition with which to appeal to the electorate. The first warnings came in the budget debate, when to the surprise of both sides of the House, Mr. Gaitskell succeeded in attacking the Chancellor's budget for distributing his benefits mainly to those who needed them least. This line of attack was made to look much more reasonable than Mr. Butler had anticipated it could be and it is already clear that the Conservatives are no longer placing a major reliance on the budget to win the extra votes they need for a larger working majority. Their line is to show that freedom from controls has given the economic system in the country a chance to expand fruitfully but they are vulnerable in the face of the rumblings of an uneasy balance of payments.

The Socialist attack will show that the free economic paradise can work for a time, but it is no substitute for that degree of control over the economy which is necessary if it is to expand continuously.

Indeed, their manifesto "Forward with Labour" takes its boldest line in the field of planning and public ownership. The Opposition have apparently passed through the phase at which they had qualms about further nationalisation: They know that the nationalised industries have been praised in private by both sides for the work they have done in increasing investment and advancing technical efficiency in their various fields. Labour have thus been emboldened to repeat that they will re-nationalise iron and steel and road transport and, further, that they will nationalise a part of the profitable chemical and machine-tool industries. They are also prepared to make a new approach to the problem of farm support. The present Government has leaned towards implementing the guarantees to producers through the mechanism of a free market, making up through deficiency payments to producers as a whole the gap between what the market pays and the guaranteed price. But producers are very control-minded and the Socialist Party has definitely decided to back them wholeheartedly in the formation of Producer Boards, which, they say, must be designed to protect the consumer as well as the farmer. This admirable objective they will find more difficult to achieve than to enunciate.

The consumer is also going to be looked after through the establishment of a Consumers Advisory Service which will be a watch-dog against shoddy goods, unscrupulous trade practices and poor food standards. If necessary, the Labour Party would be prepared to reintroduce price controls but they are at great pains to rebut any charge that they would reintroduce rationing. Whether they would, in fact, be able in the distributive trades to control both prices and quality without paying out Government money or allowing producers to charge excessive prices and without rationing remains to be seen, but neither their own past experience nor that of the present Government has been happy in this respect. No one, indeed, in the distributive field has found it easy to do without the spur of competition but there are admitted inefficiencies in retailing and the manifesto can certainly make political capital out of it.

Naturally, great changes on the domestic financial front are promised. The receivers of earned income would benefit in comparison with the receivers of investment income and apparently a new Labour Chancellor would be expected to tax capital gains. The Opposition believe that adjustments in the tax system, coupled with further nationalisation and positive control over investment, will encourage higher production. "Fair shares" is to be the slogan under which prices are to come down, industrial production and exports are to increase, and the balance of payments is to be put right and long-term prosperity ensured.—*All Rights Reserved.*

COMPANIES BILL TOO COMPLICATED

DISSENTING MINUTE OF MR. TULSIDAS KILACHAND AND MR. G. D. SOMANI

THE Joint Select Committee Report on the Companies Bill was presented to Parliament on Monday, the 2nd inst. The Report is by no means unanimous, there being as many as seven minutes of dissent. We give below a long extract from the dissenting minute jointly submitted by two Members of Parliament belonging to the business community, namely, Mr. Tulsidas Kilachand and Mr. G. D. Somani, wherein they have clearly explained the complexities of the Bill:

The Joint Committee have made many major changes in the Draft Bill, some of which are of a fundamental nature. The more important of the new provisions are those relating to managing agents and secretaries and treasurers; those requiring greater details to be given in balance-sheets and profit and loss accounts, and filing of balance-sheets of private companies with the Registrar; those affecting the qualifications, rights and duties of directors; those providing for investigation of the ownership of companies and giving increased powers to the Central Government in respect of appointment of inspectors; and those tightening up the provisions relating to prospectus. The Bill in its present form is prolix, instead of concise; complex, instead of simple and intelligible; and restrictive and rigid, instead of flexible. It is mainly on the issue of these objectionable features of the Bill we differ from the majority view.

The existing Companies Act has about 300 sections. The Draft Bill contained 612 clauses, whereas the Bill as it has emerged from the Joint Committee contains about 690 clauses. Even the revised U.K. Companies Act is shorter, and includes 462 sections. Moreover, there are many instances of loose drafting, especially in clauses 2(2), 4, 51A, 131, 189A, 223, 272A and 420. There are many provisions which add to the complexity of the Bill. Probably, clauses 2(2), 5A and 6 defining "associate," and "relative" and "persons in accordance with whose directions or instructions the directors are accustomed to act" are the ones that are chiefly responsible for the complexity of the Bill. The meaning of the term "associate" has been made more comprehensive, and now includes a number of persons, firms and corporations, who were not regarded as "associates" at all in the Draft Bill or in the existing law. The third term will lead to arbitrary interpretations. Complications will also arise owing to such provisions as liability of promoters for omission of relevant facts from prospectuses, even where such omission is of an immaterial nature, or gives an impression to shareholders less favourable than that which they would otherwise have got. Other provisions which are unnecessary in our opinion are: independent auditing by qualified auditors of private companies; filing of balance-sheets of private companies with the Registrar; and the filing of the draft of the managing agency agreement (before the agreement is signed) with the Registrar along with the memorandum and articles. The margin of time in the existing Act for raising the minimum subscription before allotting shares has been reduced from 180 days to 120 days. We think this will cause the abortion of many new enterprises, as in India the capital markets are not highly developed and other conditions are not as favourable as in other countries. At the same time, it will not afford a commensurate benefit to subscribers. The provision in the Bill allowing persons who are not members to attend and vote at company meetings, and to speak in the meetings of private companies, is a dangerous provision, as it will enlarge the scope of professional mischief-mongers. The provision in one of the schedules to disclose the secret reserves of a company, in its published accounts is unnecessary, and it will create confusion and might lead to embarrassing demands on the management from shareholders and other demands that are inconsistent with the present policy of the Government to encourage corporate savings.

Retrospective Effects

The complexity of company management would certainly increase if this Bill is enacted, as it contains many clauses which have a retrospective effect, and which would cause disturbance in existing rights and liabilities of shareholders and others and create embarrassing situations. Especially objectionable in this respect are the clauses relating to the voting, dividend and other rights of shareholders, and investments of a company in excess of the prescribed limit. Prevailing share values are based on existing rights of shareholders, and if these rights are disturbed changes in share value would occur, resulting in undeserved losses to some and windfalls to others. According to clause 356, investments made after 1st April, 1952, and before the commencement of this Act, which are in excess of the prescribed limit, and which do not get the requisite approval in a general meeting of the Company and of the Government, are required to be sold off within two years. This may lead to heavy losses to the companies affected, particularly if there is no ready market for such shares.

Over and above these complexities, there are many needless prohibitions and restrictions in the Bill. The absolute prohibition against the issue of equity shares with differential rights in respect of voting, dividends, etc., does not seem to us to be advisable in the prevailing circumstances. Similarly, the prohibition to appoint associates as buying and selling agents on commission basis in India irrespective of the fact that their business connection with managing agents or secretaries and treasurer is remote, and irrespective of the fact that they may be the best qualified parties, may not necessarily operate to the benefit of the company. Clause 74 prohibits the redemption of preference shares from sale proceeds of the company's property. We do not see why a company should not be allowed to redeem its preference shares out of the sale proceeds of its unwanted property. Similarly, we are unable to understand why clause 73 prohibits the application of, or writing off of, premiums received on shares to or against items other than those laid down in the clause, especially the writing off of premiums against revenue losses. In many instances, even minute details which should best have been left to the company to work out, are sought to be regulated by law.

Needlessly Heavy

There are many instances of restrictions being needlessly heavy. For instance, the appointment of managing agent or associate as selling or buying agent outside India requires a special resolution instead of an ordinary resolution. Similarly, loans to companies under the same management in excess of specified limits also require a special resolution, instead of an ordinary resolution. There is no reason why a special resolution, instead of an ordinary one, is necessary for the appointment of certain persons connected with managing agents as directors, especially as the right of managing agents to nominate ex-officio directors is limited to one-third of the Board or two persons, whichever is less. Under clauses 287A and 287B, an increase in the remuneration of directors is subject to Government approval, although the fixing of such remuneration in the first instance is not subject to their approval. Similarly, Government approval is necessary whenever there is a change in the constitution of managing agents, not only when such change is of a material nature, but also when such change is of no consequence at all, as, for example, when a nominal or infinitely small fraction of the shareholding is transferred.

Joint-stock companies have been the most important form of industrial and commercial organisation in all democratic countries during the last century, and, indeed, the number of joint-stock companies and the value of their paid-up capital in any country may be regarded as a rough index of its industrial and commercial development. As the company law of a country has an important bearing on its economic development, its provisions should be conducive to the promotion of joint-stock companies, their efficient and honest management and healthy growth. In our view, the present Bill contains many provisions which are needlessly restrictive rather than helpful, and complex and ambiguous rather than simple and intelligible. This will hinder rather than facilitate promotion of companies, and make their day-to-day administration rigid and difficult, especially for smaller parties who cannot afford either to employ legally qualified staff or to pay heavy fees to legal experts. In India, the companies tend to be smaller in size than in advanced countries such as the U.K. and the U.S.A. Moreover, in the interest of industrialisation, especially in the countryside, it is necessary that more and more companies should come into existence, and, to this purpose, the Company Law should be made simple and flexible, in order to make its operation easy for promoters and organisers in the countryside. If the present complex and restrictive character of the Bill is retained, it may discourage the formation of small companies, especially in the countryside, and cause the conglomeration of companies in large cities, such as Bombay and Calcutta, where expert legal advice and other facilities are available. In our opinion, the cumulative effect of the Bill, if passed, on economic growth will be, to say the least, not salutary.

Another important feature of the Bill to which we would draw attention is that the Government have acquired powers—listed in Appendix A—some of which are unnecessary in our opinion, which will restrict the scope of the formation of healthy traditions so necessary for the growth of human institutions. It is our conviction that most of the malpractices in the past have been due not to imperfections in the law itself, but due to the laxity and lack of vigilance on the part of the administration. We are, therefore, of the view that, in order to carry out their responsibilities under this Act, the Government should create a special department under the Finance Ministry, staffed by top-ranking administrators and legal experts, to cope with the work. Wherever the Government wish to delegate the powers to other persons or authorities, they should take care to see that such persons are of the highest calibre, in no case below the rank of a joint secretary, and that such authorities have adequately qualified and experienced members and staff.

Revolutionary Change

The most revolutionary change brought about by the Joint Committee is the incorporation of a provision authorising the Government to prohibit, by notification, the managing agency system in any industry. Although the Company Law Committee and other responsible bodies had recommended that the managing agency system should be mended rather than ended, certain powerful political elements have been obsessed with the idea of gradually abolishing it. The Joint Committee have added a provision authorising the Government to do away with managing agents in any industry, allowing the appointment of secretaries and treasurers in their place.

The problem which neither the Joint Committee nor the Government have solved is that of an alternative form of managerial organisation to replace managing agents. That the system is indispensable in the present circumstances is proved by the fact that the Joint Committee have found it necessary to allow in notified industries the appointment of secretaries and treasurers, whose functions, powers and terms of appointment differ only slightly from those of managing agents. We are of the view that it is not advisable to abolish the managing agency system merely because of the abuses to which it has been subjected

PAKISTAN NOTES

TEXTILE IMPORTS FROM U.K.

CESS ON TEA RAISED

PAKISTAN will be importing from Britain, within the next few months, $5.2 million worth of cotton yarn and piecegoods. An agreement to this effect was signed between the Governments of the two countries on 29th April last. The payment for British cotton textiles will take the form of supply of raw cotton by the U.S. to Britain. Disclosing this in the British House of Commons, Mr. Peter Thorneycroft, President of the Board of Trade, stated the other day that the arrangement was part of a grant of aid to Pakistan by the U.S. from which the U.K. would benefit. Incidentally, it may be noted that Pakistan has also contracted to purchase $1.5 million worth of textiles from W. Germany.

With the aforesaid arrangement, the earlier move of the Pakistan Government to buy cotton textiles worth $9 million from India under the U.S. Aid Programme is likely to be shelved. Sometime in February, 1955, it will be recalled, the Government of Pakistan made enquiries for lowest price quotations of *saris*, voiles, shirtings, and other fine and superfine varieties of cloth produced by Indian mills. The enquiry was the result of the extension of the U.S. Aid Programme to Pakistan. Under this proposal, payment for textiles supplied by India to Pakistan was to take the shape of American raw cotton. This proposal was not, however, viewed quite favourably by Indian cotton textile interests. This was so for two reasons, namely, satisfactory cotton crop and prospects of India getting a large quantity of American cotton under a separate Foreign Operations Administration aid programme.

Tea Cess Raised

The Government of Pakistan has enhanced the rate of cess on tea produced in and issued from tea factories from Re. 1-8 to Rs. 2 per 100 lbs. The proceeds of the cess are to be utilised by the Pakistan Tea Board for purposes which include promotion, sale and consumption of Pakistan tea in the country, organisation and assistance of research connected with the tea industry, and generally adoption of such measures as may appear advisable in the interest of the tea industry. The Government considers that the increase of cess is negligible and that it will not, therefore, result in any upward trend in the retail price of tea.

U.S. Industrial Mission

The U.S. Foreign Operations Administration is expected to send an industrial survey mission to Pakistan towards the end of this month. The mission is being sent at the request of the Pakistan Government. It is to consist of six or seven senior industrial and engineering experts of a leading firm of consultants. These experts will be assisted by other experts who will also visit Pakistan for short periods. The mission will be staying in Pakistan for about a year during which it will study methods of augmenting industrial output and make recommendations regarding future industrial expansion, besides exploring ways and means of attracting more U.S. private capital for Pakistan's industries.

River Board for E. Bengal

An *ad hoc* sub-committee, with Lieut.-Col. T. M. Oag, Director of the Central Engineering Authority, as Chairman, has been set up by the Government of Pakistan to report on the proposal for setting up an Inland Waterways Board in East Bengal for better administration and improvement of inland water transport. The Committee will examine the desirability and practicability of bringing under a single authority all the functions pertaining to the administration of inland water transport and the maintenance of navigable waterways which are at present dealt with by different departments of Central and Provincial Governments.

RESERVE BANK AMENDMENT BILL PASSED

TWO FUNDS FOR RURAL CREDIT

THE Reserve Bank of India (Amendment) Bill is awaiting the assent of the President, now that both the Houses of Parliament have passed the measure. This Bill, along with (a) the State Bank of India Bill at present before the Rajya Sabha, and (b) another Bill to be sponsored by the Ministry of Food and Agriculture for establishing a National Warehousing Development Fund, will form the trio to accord legislative sanction necessary for dispensing rural credit under the integrated system evolved by the Rural Credit Survey Committee appointed by the Reserve Bank of India. The expeditious manner in which the Government is attempting to implement the recommendations of this Committee indicate, among others, (a) the earnestness of the Government to provide financial assistance to rural areas as quickly as possible, and (b) the faith of the Government and the Reserve Bank of India in the efficacy of the Co-operative Movement as an agency for distributing credit. These indications are welcome in that the object of the Government's action is both noble and ambitious. But mere legislation provides no guarantee for success. It must be supplemented by adequate funds, well trained staff and an overhauled administration to handle the job efficiently.

Now to the debate on the Reserve Bank of India (Amendment) Bill. One striking feature of it in both the Houses was the general agreement among the members on the objective of the measure. One of the objects of the Bill is to authorise the Reserve Bank of India to set up two funds, namely, (a) the National Agricultural Credit (Long-term Operations) Fund, and (b) the National Agricultural Credit (Stabilisation) Fund. The Central Government proposes to credit the Long-term Operations Fund with Rs. 10 crores, as against only Rs. 5 crores recommended by the Rural Credit Survey. The main purpose of this Fund is to make loans and advances to State Governments in order to enable them to subscribe, directly or indirectly, to the share capital of co-operative credit societies and to make loans and advances to central land mortgage banks. The Stabilisation Fund is intended to stabilise the co-operative credit system, by ironing out fluctuations in its fortunes arising from farmers' temporary inability to repay the loans taken by them. The balances standing to the credit of this Fund will be utilised exclusively for making medium-term loans and advances to State co-operative banks to enable them to convert short-term credit into medium credit wherever necessary. Experience has shown that, whenever natural calamities such as drought, excessive rains, floods and famines, etc., occur collection of loans from farmers by co-operative societies has not been possible. Consequently, these societies, in their turn, fail to repay their loans to co-operative banks. It is in order to meet such emergencies that provision has been made to establish the Stabilisation Fund. To begin with, the Reserve Bank is to provide at least Rs. 1 crore to this Fund.

The Bill has also a provision to amend the definition of a "co-operative credit society." This definition widens the scope for, and operation of, the Reserve Bank of India in granting loans to co-operative credit societies.

Another important clause of the Bill seeks to remove the obligatory provision of the Reserve Bank to maintain an office in London. The removal of this provision enables the Reserve Bank either to maintain or abolish its London office, if it finds that such action is necessary.

Inadequate Funds

One of the common criticisms of the Bill during the debate was that the amount provided for both the Funds was inadequate. This criticism was, however, ably met by Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, in the course of his reply to the debate. He pointed out that out of the sum of Rs. 5 crores provided under sub-section 4A of section 17 of the Act, for loans to co-operative banks, it was possible for the Reserve Bank to advance only Rs. 20 lakhs. "So it is no use," he added, "putting a bigger sum unless we can set up the appropriate machinery to utilise the sum." He further stated that the section referred to above set a maximum of Rs. 5 crores to the loan which the Bank could give to co-operative credit societies. But now the Bill did not put any such maximum. On the contrary, it put a minimum below which this contribution should not go. He added that, while the Credit Survey Committee had recommended an initial credit of only Rs. 5 crores to the Long-Term Operations Fund, the Government, as stated already, had raised it to Rs. 10 crores. He assured the House that the Government would not be niggardly in this matter. It was, he said, earnest in helping co-operatives for providing agricultural credit.

Some members of Parliament were of the view that the Reserve Bank's inspection of the apex and central banks was not effective, and that these institutions were not co-operating with the Reserve Bank. Replying to this point, Mr. Guha said that co-operation was a State subject. Technically speaking, the Reserve Bank had not got any authority over the Co-operative Movement. But almost all co-operative organisations had agreed to work under certain directions of the Reserve Bank. They had voluntarily agreed to submit themselves to inspection by the officers of the Reserve Bank. The Reserve Bank had been issuing directives and instructions to the co-operatives and the latter had been doing everything to implement these instructions and directives, subject to their capacity to implement them. The Reserve Bank had also started, he continued, some school for training the personnel to man the co-operative organisation, and in that respect also the co-operative institutions of the different States had been co-operating with the Reserve Bank.

Multi-purpose Idea Excluded

A member in the Lok Sabha suggested that the definition of co-operative credit societies should be extended to cover multi-purpose societies also. Even the Deputy Speaker pointed out that the multi-purpose societies did the work of selling, marketing, etc., and gave loans also. If it was purely credit, the purpose might not be served. He, therefore, wanted to know the reason for excluding these multi-purpose societies from the scope of the Bill. Answering the query, Mr. Guha stated that the Bill before the House was intended only for co-operative credit societies and not for other types of co-operatives. He said that functions such as marketing and selling would be covered by the warehousing and marketing boards that would be set up under a separate legislation. For the purpose of assisting these boards, there would be, he said, the Co-operative Development Fund. The legislation for this purpose would be sponsored, he declared, by the Ministry of Food and Agriculture.

A few questioned the wisdom of State Governments associating themselves with the Co-operative Movement. They doubted the efficacy of the idea of the State taking 51 per cent. share, which was itself against the very principle of co-operation. They averred that the share capital should come from the people themselves. Replying to this criticism, the Minister said that State partnership had been suggested by the Gorwala Committee, because the co-operative organisation was abnormally weak as the rural economy itself was weak. Without help from the State, it was, he remarked, not possible for the rural economy properly to develop and enable the co-operative organisation to function effectively. The Committee itself stated that certain units which were not so very strong might combine against the opposing forces, but the combination of those very units could not have an effective existence or function against the forces which were very strong. The disparity between rural economic forces or co-operative organisations and the opposing forces was so wide that, without some support from the State it was not possible for the co-operative organisations to develop. That was why, he said, it had been suggested that there must be State partnership for the development of co-operative organisations. The Bill was intended to make such State partnership possible.

There was some discussion on the rate of interest at which loans would be granted to peasants by the co-operatives, as the Reserve Bank advanced loans to the latter at as low a rate as 1½ per cent. The Minister apprised the House that, about two years ago, the rate was somewhat high and the Reserve Bank had been asking the co-operative banks to reduce the rate. He thought that, generally speaking, the rate was fixed more or less at 6¼ per cent. In some States, a higher rate existed, but he felt that it would be brought down to near about 6¼ per cent.

HINDUSTAN COMMERCIAL BANK LTD.

A further setback in the financial results of the Hindustan Commercial Bank Ltd. (Managing Director: Mr. Kishen Chand Puri, Kanpur) is disclosed by its audited accounts for the year ended 31st December, 1954. The profit of the Bank, which had declined to Rs. 2.60 lakhs in 1953, after having steadily risen from Rs. 1.54 lakhs for 1949 to Rs. 4.80 lakhs for 1952, has dwindled further to a low of Rs. 71,759 for the year under review. This profit includes a sum of Rs. 20,585 transferred from the reserve for taxes. This is the lowest profit earned by the Bank since its inception in 1943.

With the sum of Rs. 15,160 brought in from the previous year, the profit available for appropriation is Rs. 86,919, out of which the Directors have utilised a sum of Rs. 70,000 for writing off bad debts, as against Rs. 2.56 lakhs utilised last year for a similar purpose, as well as for writing off furniture and stationery in respect of Pakistan branches. The above appropriation leaves Rs. 16,919 to be carried forward.

The following comparative table clearly brings out the Bank's progress during the last three years:

(In lakhs of rupees)

	As on 31st December			
	1954	1953	1952	1951
Capital	125.00	125.00	125.00	125.00
Reserves	15.48	16.41	15.20	15.20
Deposits	422.98	434.68	450.83	497.88
Borrowings from other banks ..	95.50	121.57	102.00	84.75
Advances	283.04	309.98	308.47	310.86
Investments	291.15	289.73	289.43	289.66
Cash	54.36	67.45	71.02	86.02
Balance-sheet total	710.29	759.26	783.73	810.29
Ratio to deposits of—	%	%	%	%
Advances	66.9	71.3	68.4	62.4
Investments*	46.2	38.7	41.6	41.1
Cash	12.8	15.5	15.7	17.3

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

The downward trend in the deposits of the Bank noted since 1946 has persisted during the year under review also, with a decline of Rs. 11.70 lakhs, as compared with Rs. 16.15 lakhs in 1953. With this shrinkage, the total drop in the Bank's deposits since 1946 amounts to Rs. 9.39 crores. The rise in borrowings from other banks noted at the end of 1953 has been reversed, with a decline of Rs. 26.07 lakhs in this portfolio. Advances, which had shown a small increase at the end of 1953, have declined by Rs. 26.94 lakhs. Investments (at book value) show a slight increase of Rs. 1.42 lakhs. Of the total investments, as much as Rs. 244.33 lakhs represent holdings of Government securities and shares of the Industrial Finance Corporation. Their market value stands at Rs. 225.84 lakhs. The bulk of these securities mature within ten years. Shares and debentures of joint-stock companies amount to Rs. 46.81 lakhs, the market value of the same being Rs. 35.60 lakhs. Cash balances have shrunk by Rs. 13.09 lakhs, thus maintaining the downward trend for the third year in succession.

CO-OPERATION IN MONETARY AFFAIRS

ACHIEVEMENTS OF I.M.F.

By Prof. B. R. Shenoy

THE International Monetary Fund is a co-operative organisation of 56 member-countries. The Fund's operations, functions and activities are governed by the Articles of Agreement and the By-laws and Rules and Regulations framed in terms of the Articles. The Articles of Agreement came into force, upon its signature by representatives of 30 countries, on 27th December, 1945. The first meeting of the Executive Directors was held in Washington, the headquarters of the Fund, on 6th May, 1946. The Fund opened its doors for exchange transactions on 1st March, 1947, and the first loan was advanced to France on 8th May of that year, the amount being $25 million.

India is the fifth largest member of the Fund, the other four in the order of their importance being the U.S., the U.K., China and France. India's subscription, the equivalent of $400 million, is a little over 4½ per cent. of the total capital of the Fund, or quotas as it is called, the subscription of the U.S. being somewhat over 31 per cent. The largest five members account for 62 per cent. of the Fund's quotas which aggregate an equivalent of $8.90 billion. Russia is not a member, though she had participated in the deliberations of the United Nations Monetary and Financial Conference at Bretton Woods in July, 1944. If Russia had decided to join, India would not have been one of the big Five. With the withdrawal of Poland in March, 1950 and the exit of Czechoslovakia on 2nd January, 1955 (because she was expelled from the World Bank), Yugoslavia is the only communist member of the Fund. The People's Republic of China is not a member; as in the United Nations, Formosa is.

Borrowers

If we exclude repayments, India is the fifth largest borrower from the Fund, the other four in the order of the amounts borrowed being the U.K., which raised $300 million, Brazil, France, and Japan. The total gross borrowings from the Fund amounted to $1.16 billion. As a result of repayments amounting to $46.7 million, the net amount of the loans outstanding against India as at 30th September, 1954 to $53.3 million. Viewed from the amounts outstanding, the largest debtor of the Fund today is France, Brazil is second, Japan third and India fourth.

The management of the Fund vests in a full-time Board of 16 Executive Directors and 16 Alternates. Each of the Big Five, which includes India, nominates one Executive Director and one Alternate, the remaining 22 seats being filled by election by the remaining 51 members. But the quota and the number of votes of Belgium (and Luxemburg), Canada, Germany and Netherlands being large enough to elect a place on the Board they have their own independent Directors and Alternates.

The main purpose of the Fund, as stated in the Articles of Agreement, is threefold. First, to maintain orderly exchange arrangements, to avoid competitive exchange depreciation, which had been the cause of much damage during the inter-war period and to provide for exchange rate alterations through international consultation; secondly, to facilitate balance in international payments at maximum levels of trade, employment, and real income; and, finally, to assist in the speedy re-establishment of free multilateral convertibility of currencies, that is, to terminate the regime of bilateralism and exchange restrictions which hamper the growth of world trade and the most effective international division of labour and specialisation in production.

Success of the Fund

How far has the Fund succeeded in attaining these objectives? In assessing the achievements of the Fund, one general consideration should be borne in mind. It is a co-operative organisation of sovereign nations. Though certain penalties, as, for example, denial of the use of Fund resources, exercise of exchange discrimination by members and, ultimately, expulsion, exist in the Articles of Agreement for breaches of conduct *vis-a-vis* the Fund, in practice, almost the only weapon in the armoury of the Fund for normal 'peace-time' use is persuasion. When powers of inducement and coercion are lacking and acceptance of decisions rests mainly on goodwill, decisions may often lack point and force.

In the sphere of orderly exchange arrangements, though competitive exchange depreciation has been happily absent, multiple exchange rates exists over wide parts of the world and the Fund's efforts, aimed at unification of the rates, have not been attended with significant success. The episode of the initial attitude of the Fund on transactions in gold at premium prices, the response of certain gold producing countries to this attitude, and the ultimate turn which the Fund attitude took has not added to the prestige of the Fund. There have been other instances of the failure of the Fund fiat to run and the fiat being amended to conform to the least common measure of agreement.

The Articles of Agreement of the Fund had envisaged that the exchange and payments restrictions would begin to be lifted within three years after the date of the commencement of operations, and that such restrictions may be an exception, rather than the general rule, after five years. But, though world production is about one-half and world trade about one-third above the pre-war levels, payments restrictions, within the meaning of the Fund Articles, exist today in 45 member-countries. Since the spring of 1954, with the general improvement in the payments position of most parts of the world, however, restrictive exchange and trade practices, including discrimination against dollar imports, have been considerably reduced and modified. This may be said to constitute a move towards general convertibility.

Dollar and Gold Reserves

The dollar and gold resources of the Fund amount to about $3,896 million. But, notwithstanding the widespread post-war dollar scarcity, the gross total dollar loans of the Fund as at 30th September, 1954, amounted to $957 million, or less than one-fourth of the gold and dollar resources. Since 1950, with the general improvement in the payments position of the world, repayments have exceeded fresh borrowings, except for 1953, when fresh borrowings exceeded repayments. As a result, as at 30th September, 1954, the outstanding loans amounted to $558 million, or about 6 per cent. of the total gold and currency resources of the Fund. The gross amount of the loans was under 14 per cent. of these resources. Hampered as the Fund is by practical limitations in other spheres of activities, it has not been very active even as a lender of scarce currencies in a background of hard currency scarcity. The bulk of the burden of meeting this scarcity has been borne by the foreign aid programme of the U.S.

Nevertheless, for these limitations, the Fund has played a useful part in post-war international financial affairs. The successful emergence of the Fund from the Bretton Woods Conference was in itself an achievement and a measure of the willingness of nations to co-operate in monetary affairs, considering the failures of past monetary conferences beginning with the Paris Conference of 1867. Acceptance of the principle of international co-operation in monetary and exchange affairs is an established fact.

The Fund offers a convenient venue for annual gatherings of Ministers of Finance and/or Governors of Central Banks of 56 nations for useful contacts, exchange of views, and may be for taking important decisions on regional and bilateral problems unhampered by publicity and speculation.

Stand-by Credit

The Fund's decision of 13th February, 1952, to extend renewable stand-by credit to members, for example, in connection with programmes for maintaining or achieving convertibility, indicates flexibility of approach to the problem confronting member-countries. Belgium was the first country to avail itself of this arrangement, in June, 1952, for $50 million. Finland, Mexico and Peru followed. In the case of Peru and Mexico, the amount of the credit granted involved waiver of the condition that a member may not borrow more than 25 per cent. of its quota in a 12-month period.

In terms of its scheme of March, 1952, the Fund has been arranging for the purchase or sale of gold with a saving in transport cost at a nominal fee of 1/32 of one per cent. from each partner to a completed transaction. Buyers and sellers inform the Fund of the place and amount of the gold, required or available for sale, and the Fund matches buyers with sellers without gold being moved. The total transactions effected under this scheme amounted to $298 million as at 30th April, 1954.

The Fund has a large body of competent technical staff, some of the members being of international reputation. The Fund makes available to member-countries their technical know-how and also the benefit of the knowledge which a study of diverse problems and conditions in member-countries necessarily brings with it. During the year ended 30th April, 1954, 54 staff members visited 41 member-countries for informal exchange of views on current problems and policies, for consultations for the removal of exchange restrictions, and for furnishing technical assistance. The staff of the Fund is international, a total strength of 434 persons being drawn from 38 countries. An international civil service, besides contributing to the concept of world unity, benefits the Fund by pooling together the diversity of their experiences and also benefits the countries concerned through the new experience of world problems which their nationals are able to gain.

Restrictive Measures

In the sphere of domestic policy of member-countries the Fund has taken the stand that restrictive monetary and fiscal measures are an essential pre-condition for a solution of the world's payments difficulties. Inflation has been the primary cause of payments deficits. Payments equilibrium at a high level of international trade, domestic production and employment cannot be attained without monetary and price stability. In the absence of these measures of reform at home, it would not be possible to liberalise import restrictions and embark upon a programme of convertibility, though success of convertibility would also require a revision of the tariff and customs regulations by the U.S. and liberal dollar credit by the U.S., Canada, and the International Monetary Fund. This Fund attitude has latterly exerted increasing influence in the shaping of the monetary and fiscal policies of member-countries.

HYDERABAD STATE FINANCE CORPORATION

The experience of the Hyderabad State Finance Corporation in its lending operations during its first working year does not seem to be quite dissimilar to that of a number of other State Corporations. During the period ended 31st March, 1955, the Corporation received 38 applications for an aggregate loan of Rs. 95.15 lakhs. They came from a variety of industries such as bobbins, ceramics, chemicals, cotton ginning, electric supply, glass, light engineering, oilseeds crushing, rice-flour mills, tanneries, textiles, tobacco and cigarette manufacturing, etc. The largest number of applications from any industry was nine for a total loan of Rs. 35.8 lakhs; these applications came from oilseeds crushing concerns. Four textile mills wanted accommodation to the tune of Rs. 12.50 lakhs. A laminated products manufacturer wanted Rs. 7 lakhs. Four applications from rice mills were for a total loan of Rs. 8.3 lakhs. One cigarette factory applied for Rs. 8 lakhs.

Out of the 38 applications, as many as 20—which had together applied for a total loan of Rs. 51.48 lakhs—succeeded in getting loans up to Rs. 38.56 lakhs. Besides, the Corporation agreed to subscribe for 7 per cent. first mortgage debentures of Rs. 7 lakhs out of a total sum of Rs. 10 lakhs issued by a cotton mill in the State. Including these debentures the total accommodation sanctioned amounted to Rs. 48.56 lakhs. Of this, the total amount actually paid out to the borrowers was Rs. 26.4 lakhs. The causes for the disparity between the amount sanctioned and the amount actually disbursed included non-maturity, during the year, of commitments for which the loans were sought, non-arrival of machinery for which orders had been placed, the practice of making payments only after the expenditure is incurred in respect of putting up buildings, and defects in title deeds.

Of the remaining 18 applications, 11 for a sum of Rs. 21.35 lakhs were either rejected or withdrawn. One application for Rs. 10 lakhs was under investigation while six for an aggregated loan of Rs. 12.32 lakhs were pending investigation.

The Corporation charges interest on its loans at 6¼ per cent. per annum subject to a rebate of ½ per cent. for prompt payment of interest and instalments of principal.

After payment of expenses of administration and other charges, excluding taxation, the net profit earned during the year amounted to Rs. 1.91 lakhs. Of this amount, the Directors have earmarked Rs. 54,800 for income-tax. A sum of Rs. 15,000 has been allocated to reserves. The balance of Rs. 1.21 lakhs is proposed to be utilised for payment of dividend to the shareholders of the Corporation at the rate of 3½ per cent. per annum, requiring a sum of Rs. 3.21 lakhs. As the payment of dividend is guaranteed by the State Government, the balance of nearly Rs. 2 lakhs is to be made up by a subvention from the Government.

PROTECTION TO STARCH INDUSTRY

QUESTION OF CONTINUANCE UNDER SCRUTINY

WITHIN eight months from now—on 31st December, 1955, to be precise—tariff protection to the Indian starch industry will expire. The question of continuing protection beyond that date is currently being examined by the Tariff Commission. A public enquiry into the question was held in Bombay on Friday last week; the enquiry was opened by Mr. M. D. Bhat, Chairman of the Tariff Commission.

The starch industry, it will be recalled, was first granted protection in April, 1948, when, on the basis of the former Tariff Board's recommendation, the Government of India converted the revenue duty of 18 per cent. *ad valorem* into a protective duty at the same rate and fixed the period of protection up to 31st March, 1950. In 1949, the period was extended by two more years. The protective duty on starch was then raised to 20 per cent., the revenue duty of 18 per cent. on imported farina was changed into a protective duty of 20 per cent. *ad valorem*, and a protective duty of 20 per cent. *ad valorem* was levied on imported sago flour. The period of protection was subsequently extended upto 31st December, 1954, and the protective duty on starch, farina and sago flour was raised to 30 per cent. *ad valorem* (exclusive of surcharge). It was further extended up to the end of the current calendar year in accordance with the Indian Tariff (Third Amendment) Act, 1954.

Opening the public enquiry, Mr. M. D. Bhat briefly traced the history of the starch industry. The review reveals that the industry came into existence in 1938, when two factories were set up, one in East Punjab and the other in Gujerat. Owing to keen competition from imports, the industry did not make any headway. In 1942, imports of starch were prohibited, with the result that a number of factories was started in different parts of the country. In the following year, however, the Government banned production of starch from wheat, thanks to shortage of foodgrains. In 1944, the Government imposed control on manufacture and price of maize starch. The supply position of indigenous maize continued to be difficult till 1953. Since then, it has greatly improved. During this period, imports of maize were allowed, so that indigenous production of starch was not hampered. As supplies of starch were still unsatisfactory, the textile mills were asked in 1953 to use tamarind kernel powder to the extent of 33⅓ per cent. of their total requirements of the sizing material. The order was, however, withdrawn towards the end of 1954 when maize was freely available. There has since been a marked reduction in the price of maize starch. During 1954, the bulk of the country's requirements of starch was met from indigenous sources and the industry is now able to maintain and expand its production of starch mostly from indigenous maize.

Present Position

There are at present 11 starch factories, of which six are in regular production. The remaining five work spasmodically and are now closed down. The installed capacities and the actual rates of output of the six units working are given below:

(In tons)

	Installed capacity	Actual output		
		1952	1953	1954
Anil Starch Products Ltd.	21,000	1,657	7,255	13,238
Maize Products Ltd.	14,618	2,154	6,860	11,333
Bharat Starch and Chemicals Ltd.	13,860	1,415	4,508	6,439
Sukhji Starch and Chemicals Ltd.	4,320	N.A.	665	3,844
Gwalior Maize Products	3,000	N.A.	N.A.	N.A.
Narendrasinghji Industrial Corporation	1,500	N.A.	N.A.	N.A.

N.A.—Not available.

It will be seen from the above figures that the quantities of starch actually produced by the first-mentioned four factories has registered distinct improvement in the last two years, although they still fall short of the actual capacities. Along with improvement in output, the quality of the product, too, is reported to have generally improved. While this is gratifying, one hears several complaints made by consumers. The Millowners' Association, Bombay, for instance, points to defects such as lack of consistency in quality, inability to make a homogenous mixture, variation in physical appearance from white to cream in colour, unsatisfactory keeping quality and inclusion of foreign matter in starch powder. Some of the importers state that indigenous starch is not of uniform quality, that it has low viscosity, that its ash content is higher and that its solubles are higher. Incidentally, it may be noted that no standards have been laid down by the Indian Standards Institution for maize starch. Drawing the industry's attention to the defects in quality, Mr. Bhat emphasised that, although the starch industry had made considerable progress during the period of protection, it must continue its efforts at improving the quality of its products. He also urged the industry to explore all possible ways of lowering its cost of production, so that "it may be able to increase its competitive strength and achieve a greater measure of stability."

As regards the domestic demand for starch, estimates vary widely—from 30,000 tons to 70,000 tons per annum. The Textile Commissioner has estimated the demand for all kinds of starch at about 50,000 tons, while the Ahmedabad Millowners' Association places the estimate of the textile industry's requirements alone at 50,000 tons. On the basis of the figures relating to domestic output of maize starch and imports of all kinds of starch in the past six years, the total quantity of starch available for consumption works out to an annual average of 32,235 tons. This figure, however, does not include production of tapioca starch and tamarind kernel powder used by textile mills during the years 1953 and 1954.

Suitable Raw Material

The most suitable raw material for the manufacture of starch is maize, an important cereal crop grown in India. The total production of maize is estimated at 2.5 million tons, the area devoted to this crop being 8.5 million acres. The per-acre yield is much less than that in the U.S. It is, however, said that steps are being taken to raise the yield by using improved varieties of seed. The quantity of maize required for producing about 50,000 tons of maize starch is 80,000 tons, or less than 100,000 tons which represent just 4 per cent. of the total production of maize.

The starch industry, according to Mr. Bhat, has asked for continuance of tariff protection mainly on the ground that it is still not in a position to compete with industries in foreign countries where production is carried on a mass scale. One of the units, however, feels that no protection is needed, since, in its opinion, no foreign manufacturer is able to supply starch at the price at which indigenous starch is being sold at present. Besides continuance of protection, the starch industry has pleaded for free exports of all by-products—gluten, brass, oilcake and maize oil—which, it is said, would help the industry to consolidate its position. But a leading importer would appear to feel that the starch industry needs no more protection and that, in any case, the ban on imports is not justified. For he says that the industry is now in a position to stand on its own legs.

PRODUCTION CONTROL ON CLOTH

PLEA FOR ABOLITION

THE restrictive provisions under which the cotton textile industry continues to operate were highlighted by Mr. N. H. Tata, Chairman of the Tata Mills Ltd., in his speech at the annual general meeting of the Company's shareholders held in Bombay on Friday last week. He referred, for instance, to the ban on the manufacture of certain types of remunerative coloured check cloth and the fixation of quantitative quotas on production of *dhotis*. As if this was not enough, the Government imposed an additional excise duty of 3 pies per yard on all varieties of mill cloth produced and sold in India, including coarse cloth used by the masses. More recently, the Government imposed quantitative restrictions on production of printed cloth, too.

All the aforesaid restrictive provisions, as readers are aware, are born of the Government's anxiety to better the lot of the handloom weavers. In fact, this anxiety has been allowed to grow to such an extent that the authorities would seem to have almost lost sight of the real economic issues involved. There is no exaggeration whatever in the statement of Mr. Tata that to create new jobs and foster handloom and cottage industries at the expense of a large organised industry such as cotton textiles would be a case of robbing Peter to pay Paul and that such a policy cannot last without disastrous effects on the economy of the country as a whole. "There is," to quote him, "a growing disposition on the part of our Governments—both at the Centre and in the States—to ignore the technological developments and advantages of large organised industries. The Government has been laying particular stress on the growth and development of the handloom and *khadi* industries, and is actively assisting the revival of cottage and small-scale industries." Although the pursuit of this policy in a vast and overpopulated country like India, where there is need for more employment opportunities, is quite understandable, it is, as Mr. Tata pertinently remarked, necessary to maintain a judicious balance between the large- and small-scale industries. He felt that it was great folly on the part of the Government to ignore the legitimate needs of the cotton mill industry which contributed substantially to the national well-being.

Export Duty

Mr. Tata made a brief reference to the reduction in the export duty on coarse cloth from 10 per cent. to 6¼ per cent. He was sorry that the reduction had practically no effect on exports; actually, the rate of exports of coarse cloth in the current year had been lagging behind the level of the previous year. Mr. Tata was strongly of the opinion that, if the Government were keen on achieving the export target of 1,000 million yards, it should forthwith abolish the export duty on coarse cloth. Otherwise, he was afraid that cloth exports during 1955 would be lower than those in the previous year.

The Chairman of the Tata Mills criticised the proposed decisions of the Government to do away with the Appellate Labour Tribunal. He said that it was the misconceived notion of workers that these Tribunals were used by employers against the interests of workers which had apparently led to the decision. Mr. Tata no doubt admitted that the Appellate Tribunal's machinery was cumbersome to a point, but added that the great stabilising force of a codified case law on the subject which emanated from such a high Tribunal should not be lightly done away with. He urged the Government to consider once again the matter dispassionately before taking a final decision on such a vital issue merely on sentimental grounds to appease workers.

Speaking about his own mills, Mr. Tata gave an account of the reorganisation programme. He stated that there was still substantial renovation to be done in the carding, fly frame, and dyeing and finishing sections. This, Mr. Tata declared, would be contingent upon the management's ability not only to find the money required but also to make labour agree to rationalisation.

The scheme of the Governments of Madras and Mysore to set up a wool processing centre at Vanimangalam in North Arcot District, Madras, has been approved by the Government of India. The total cost of the scheme is estimated at Rs. 11,30,000. A third of the cost will be borne by the Union Government and the balance will be shared equally by the Governments of Madras and Mysore.

COTTON ELECTORS URGED TO SUPPORT LABOUR CANDIDATES

BUDGET PROPOSALS DISAPPOINT LANCASHIRE

From A Special Correspondent

MANCHESTER, *26th April*

MANCHESTER LETTER

THE plight of Lancashire's textile industry is being made a General Election issue. The Legislative Council of the United Textile Factory Workers' Association—the "Cotton Workers' Parliament"—has decided to table an emergency resolution for their annual conference opening at Morecambe later this week calling on cotton electors to "support the Parliamentary Labour Party in its defence of Lancashire."

The resolution which has been put forward by the Weavers' Amalgamation, biggest union in the industry, "highly appreciates" the efforts made on behalf of the cotton industry by Labour M.Ps. "It notes the constant pressure brought to bear on the Government by Labour members in Parliament over the past year and believes that their continued pressure will compel the Government to act effectively in Lancashire's interest," adds the resolution.

Tax and Price Policy

To say that Lancashire traders were disappointed with Mr. Butler's Budget proposals would be a vast understatement. Whether many had been buoyed up by false hopes of the abolition of purchase tax on textiles or not, there had been a feeling within the industry that more would be done than just the halving of the tax on certain types of textile goods.

While the general lowering of direct taxation should increase spending power, despite the Chancellor's appeal for savings, evidence is not lacking that such increased expenditure is liable to favour purchases of other goods rather than clothing. The proposals as they stand, however, do little to assist the trade from its current state of stagnation.

Purchase tax, and particularly the application of the "D"-scheme, has been a brake on the development of new cloth constructions for so long, and so many rational statements had been submitted pointing this out, that it was widely felt that the case for its abolition would receive favourable consideration. The present adjustment of the tax does nothing to change the basic principle and merely maintains its unfortunate effect.

The "Purchase tax must go" cry has been taken up by Sir Alfred Roberts, General Secretary of the 50,000-strong Cardroom Workers' Amalgamation. "There is no other industry which is so badly handicapped by purchase tax as the textile industry," Sir Alfred said in his quarterly report.

There was general agreement that Lancashire's export trade must depend to a large extent in the future on the production of high quality cloths, but quality goods could not be produced effectively and efficiently for export alone. They must depend on home demand if they were to be anything more than speculative. The Report said:

"Purchase tax and the 'D' scheme have either debased quality or have so reduced demand for quality materials that many of our best export lines have now disappeared. The effect of purchase tax on our exports is in sharp contrast to the experience of some of our foreign competitors who receive practical encouragement to export by their Governments, in some instances in the form of export subsidies."

"No Nationalisation" Call

Lancashire mills should "fight like tigers" to maintain their exports of several hundred million yards of cotton cloth annually, according to Sir Raymond Streat, Cotton Board Chairman. But, he warned, not all the mills and machinery in use in 1951—the post-war boom year—would necessarily be needed to meet future demand.

"On the contrary, while we should never acquiesce in any further decline in the volume of the cotton industry's production, we should hope to achieve the required output on fewer machines in fewer mills," he told the annual luncheon meeting of the Preston Chamber of Commerce.

Sir Raymond hit out at advocates of a nationalised cotton industry. "Today there is occasional talk in some circles of reorganising the industry by a plan made centrally," he said. He added:

"That is being done in coal, which has been nationalised. I am convinced that in cotton the better conception is that the aim in view should be accomplished by individual decisions by individual companies. Those who have the stomach and the nerve for the future competitive struggles will decide to stay in. Those who feel otherwise and think it best so to act, will stop their mills whilst they can do so without loss. These units making individual decisions can almost always outwit the heavy-footedness of centralised decisions and that is what our agile foreign competitors would do."

Scheme for Imports

An instruction to British textile importers that they should import foreign cloth only for processing and subsequent re-export was suggested by Mr. Cyril Lord, head of a 16-mill Lancashire textile group, as the solution to Lancashire's problems of short-time working and shortening order books.

This order could be issued without any contravention by the Government of international obligations, Mr. Lord told a Press Conference in Manchester. But for the importation of 266,000,000 yards of foreign cloth last year—half of it from India—Lancashire would have balanced her production.

"Mr. Butler has said that our imports will have to be restricted. I think the first thing he should restrict is unnecessary imports such as these fabrics," he said. "I can't possibly see that we would be affecting any standing arrangement if we gave an internal instruction to our importers that they could only import to re-export."

Mr. Lord urged that the Government should stipulate that re-exported cloth should not be stamped "British." Exported fabrics should be marked with the name of the country of origin and be stamped "Processed in Britain."

Empire Crops

New high records for Commonwealth cotton crops were set up in 1954, Golden Jubilee year of the British Cotton Growing Association, Lord Derby, the President told the annual meeting at Manchester.

The total cotton produced in the countries with which the Association was concerned reached 1,226,600 bales—16 per cent. greater than the previous best. For the first time production had averaged more than 1,000,000 bales a year over a five-year period. Most of the countries contributed to this achievement, with record crops from Nigeria, Tanganyika Territory and Aden and second highest production from the Sudan and Uganda.

"There may in the coming years be considerable fluctuations in the quantities produced, due to climatic conditions, but there is no reason to anticipate any general lowering in the level of production," said Lord Derby.

"There was every probability that calls for further capital expenditure in the near future would amount to substantial sums. In Nigeria, where the Association had the responsibility of ginning and baling the whole crop, the outturn this year would probably exceed 180,000 bales, which was three times the quantity that would have been considered a good crop prior to the war.

Lord Derby added: "To handle that quantity efficiently means more buildings and machinery, as well as more staff and housing, for we cannot expect Governments to encourage African farmers to grow more cotton without our being in a position to process it for export."—*All Rights Reserved.*

Competitors in world markets in cotton goods are arising in many places where even a few years ago such a development would have appeared unlikely. Third only to India and Japan as suppliers of cloth to Britain last year were the mills of Hong Kong and the rising trend of imports from that Colony has lately been most marked. According to a survey of the situation, there are now 13 cotton spinning mills in Hong Kong, all equipped with the latest technical devices. In operation are 214,000 spindles worked in three eight-hour shifts over 24 hours. Some 45,000 more spindles are expected to be in use within the next few months.

Raw cotton supplies reach the Colony from the same sources which provide the basic raw material for other textile producing countries. The range of counts spun is still relatively low, normally from 10's to 42's, but output from the mills is running at about 72,000,000 lb. per annum with scope for considerable expansion. On the weaving side, several spinning mills have looms installed and these, together with other machinery in independent sheds, make a total of around 6,000 looms in the Colony. The cloths produced are mainly sheetings, shirtings and drills, although fair quantities of small wear are also woven. In addition to exporting fabric to the United Kingdom, the Hong Kong mills are also shipping goods to Pakistan, Indonesia, Australia and East and South Africa. No textile printing is carried on in the Colony but cloth dyeing and finishing works are in operation and yarn dyeing has lately been introduced.

VALUATION OF COTTON STOCKS

APPELLATE TRIBUNAL'S SUPPORT FOR ESTABLISHED ACCOUNTING PRACTICE

AN interesting question in accounting practice in relation to the valuation of cotton stocks by mills was decided by the Appellate Tribunal in the case arising out of the appeal by the mills in Madhya Pradesh against the decision of the Adjudicator. Mill managements, accountants and managers in mills, as well as auditor firms in this country, will no doubt be happy, at least relieved, to note that, after an examination of the relevant issues, the Appellate Tribunal upheld the existing practice of valuing cotton stocks at market price, thereby setting aside Adjudicator's decision questioning this practice.

Since cotton is the most important raw material for the cotton mills and also accounts for the major portion of the cost of production of cloth, all mill managements naturally exercise considerable care in buying cotton at a time when its prices are low. Indeed, if the mills exercised such prudence it would frequently make all the difference between a modest profit and a heavy loss. But cotton is notoriously susceptible to violent fluctuations in prices. Even the most prudent of mill managements may find that its best judgment has been belied by actual trend of prices and that the prices of cotton, at the time of the preparation of the balance-sheet, are well below the prices which it has paid. Established accounting practice, as is well known, is to value the cotton stocks, for purposes of balance-sheet, at cost or market price whichever is lower. This practice has, of course, been approved by auditors, who, according to section 145 of the Indian Companies Act, have to certify that the balance-sheet exhibits a "true and correct view of the state of the company's affairs according to the best of their information and the explanation given to them and as shown by the books of the Company."

It is this time-honoured practice that came to be questioned by the Adjudicator in the dispute between the Nagpur Mills and their workers. It would appear that several mills had to face the situation arising out of the fall in cotton prices in the year 1951-52, one of the two years to which the bonus dispute referred. The mills concerned showed a loss of Rs. 16.33 lakhs, which represented the difference between the higher prices at which cotton had been bought and the prices which prevailed at the time of the presentation of the balance-sheet. The Adjudicator raised an objection to this practice and proceeded to convert the loss shown by the mills into a profit of Rs. 1.66 lakhs.

The Adjudicator held that it was improper to take into account the market value of the existing raw materials at the year-end, instead of their cost price, and that this method of accounting was artificial and could not be allowed to be adopted in determining the question of bonus. The mills, on the other hand, contended that this was the principle and practice of accounting which had been followed by them all along and that it conveyed a true picture of their financial position as on the date of the balance-sheet. Discussing this issue, the Appellate Tribunal said:

"It is not in dispute that the mills have all along adopted this practice for the valuation of stocks for the purposes of their balance-sheets, and there is, therefore, no adverse inference to be drawn from the fact that they have adopted the system in the balance-sheet of this particular year, and in effect the mills contend that what they had done is perfectly legitimate and reflects in the balance-sheet the true financial position of the year. The price of cotton had fallen by the end of the year and the market value of the stock had accordingly decreased, and that fact was duly indicated in the balance-sheet in the same manner as had been done in the previous years. But the Adjudicator takes the view that it would be improper to take the market price of raw materials into account instead of their cost price, apparently because the Adjudicator thought that this system of accounting would not be sound, unless the fall in price of raw materials resulted in a corresponding fall in the price of manufactured articles: and he relies for this decision on a statement in Batliboi's book on 'Advanced Accounting.' We cannot see how the passage which has been quoted supports the conclusion of the Adjudicator whereby he has converted a shown loss of Rs. 16.33 lakhs into a profit of Rs. 1.66 lakhs."

Proceeding, the Appellate Tribunal observed that the mills' balance-sheets had been duly audited, and the mills were to frame their balance-sheet in accordance with law and with established practice in such matters. The Tribunal conceded that there might be some ground for complaint if the concerns had "suddenly changed over to a different system of valuation of stock." Accordingly, it held that there was "no impropriety involved in taking the market price of the stock where the market price is lower than the cost price," and further, that the Adjudicator was "in error in his approach to the matter."

The Tribunal next turned its attention to the Adjudicator's argument that the mills could adopt the accounting practice they did only if the price of the manufactured articles had declined. It pointed out that it was difficult to understand this argument in the context of the grant of bonus, for, if the price of the manufactured article remained at a higher level, it would go towards augmenting the profits of the year and of reducing the loss occasioned by the decline in the price of cotton. And the price of the manufactured article would produce a larger profit out of which the workers could claim bonus. The Tribunal, therefore, rejected the Adjudicator's view that the loss figure shown was "artificial."

In effect, the Appellate Tribunal has upheld the validity of the accounting practice of the mills in valuing their cotton stocks for purposes of balance-sheet, under which the stocks are valued at cost or market price, whichever is lower. This is an effective vindication of a practice which is as old as it is correct.

IMPORTS OF COTTON

During the current season (that is, 1954-55 season), actual imports of cotton have been far less than the quantity permitted to be imported. Thus, during the period 1st September, 1954 to 16th April, 1955, actual imports were only 2,51,765 bales of 400 lbs. each, as against 4,44,659 bales being the quantity licensed. The sources of supply of the cotton which has actually arrived are: Egypt (72,063 bales); East Africa (85,909 bales); Peru and other parts of sterling area (3,999 bales)—total of sterling area cotton 1,81,418 bales; U.S. 70,222 bales; Mexico 125 bales—total of dollar area cotton 70,347 bales.

MEETING OF DEVELOPMENT COUNCIL FOR SUGAR INDUSTRY

ESTABLISHMENT OF REFINERIES OPPOSED

SEVERAL decisions of outstanding importance to the sugar industry were taken by the Development Council for Sugar Industry at its meeting held in New Delhi on Tuesday last week. The decisions covered practically all the aspects of the sugar industry, including the agricultural side. Considerable significance is attached to these decisions, which is only as it should be. Now that the Government of India is formulating the second Five-year Plan, it would be very helpful if the Council could, as Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, rightly remarked, in the course of his address at the meeting, give the Government a comprehensive picture of what possibly could be included in the Plan about the development of the sugar industry, in order to make up the shortfall and introduce economy and better technology in the industry.

One of the most important decisions taken by the Council was that a joint committee of the Council and the Indian Central Sugarcane Committee be formed to formulate a development programme for sugar industry in the second Five-year Plan. It will be recalled that the Planning Commission had asked the Council some time ago to estimate the country's sugar requirements at the end of the next Plan and to suggest methods of achieving the target. At its last meeting—held on 15th December, 1954—the Council recommended a production targct of 2.25 million tons, to be attained by raising the installed capacity from 2.0 million tons to 2.5 million tons. The two questions which had been under the Council's consideration for some time and which were discussed at last week's meeting were: (1) should the rise in installed capacity be achieved by expanding the existing units or installing new units or partly by establishing raw sugar refineries? and (2) should sugar output be stepped up by shifting or rehabilitating the factories unsuitably located lying idle due to inadequate cane supplies?

Refineries

The Council expressed itself against the setting up of refineries to cover the additional capacity fixed for the second Plan. The opposition was on the score that the cost of establishing a refinery would almost be the same as that required for setting up a sugar mill. It was, therefore, felt that the starting of sugar factories in areas where cane was available or where it could be grown should be one of the methods to raise sugar production. The opposition to refineries also stemmed from two other considerations. First, if and when sugar prices slumped, the contingency of sugar mills not being able to pay a fair price to cane growers would arise. Secondly, refineries had to depend on imported raw sugar to refine it into crystal sugar.

In the first Five-year Plan, the Planning Commission had emphasised the desirability of fuller utilisation of the existing installed capacity of the sugar industry. Mr. E. P. Moon, Chairman of the Expert Committee appointed for the purpose at the Council's first meeting in August, 1954, presented an interim report to the Council last week. According to the report, the replies to the Committee's questionnaire indicate that 16 factories are lying idle and 20 are unsuitably located. If proper measures are taken to develop cane cultivation in their areas of operation, there will be no need, according to Mr. Moon, for some of these factories to be shifted. The Council decided to appoint a subcommittee to suggest measures to encourage employment of technically qualified persons in the sugar industry. The Council felt that the technical efficiency of the sugar mills was on the lower side *vis-a-vis* the more advanced sugar-producing countries of the world. This, we are told, is due to the fact that, since a large number of persons holding technical posts does not possess the requisite qualifications and training, they are not able to initiate improvements in factories and tackle the special engineering and manufacturing problems.

Grading and Inspection of Sugar

Yet another important action taken by the Council was the constitution of a standing Advisory Committee to review, every year in the light of existing circumstances, the position regarding the variations in the volume of production of different grades, changes in consumer preferences and actual prices ruling in the market. This Committee, it is said, is to be entrusted with the work of (a) determining the degree of whiteness of sugar standard and (b) advising on the preparation and issue of standards. The decision to appoint this Sub-committee followed the presentation of the report of the Sub-committee (Chairman: Mr. R. C. Srivastava) on inspection for ensuring correct grading of sugar. The Committee has recommended a system which aims at reducing the expenditure on inspection work and the number of disputes between the mills and the merchants about the quality of sugar to the minimum. A suggestion has been made that such disputes should be referred for settlement to a committee of arbitrators, consisting of the representatives of the interests concerned. As the scheme for grading and inspection will promote orderly marketing of sugar and will be in the interest of the trade, industry and consumers alike, the Committee opines that the expenditure on the staff to be appointed by the Government for working it should be met out of the sugar excise fund and not by levying an extra charge on sugar. The Committee has further recommended adoption of certain price differentials for various grades of sugar, taking I.S.S. D.28 as the basis.

The Council accepted the reports of the Expert Committees set up for (a) utilisation of the by-products of the sugar industry by establishing subsidiary industries and (b) introduction of a uniform system of chemical control and reporting of technical data by the industry. It also decided to recommend that a Government-sponsored delegation should be sent to the important cane-producing countries of the world, in order to study the developments abroad. The Council was informed by Sardar Lal Singh that the Sub-committee, appointed to devise a system for making payment for sugarcane on the basis of its quality, would submit its report within a month. The existing system of payment according to weight, Sardar Lal Singh said, did not provide any incentive either to cultivators to grow better varieties of cane, improve agricultural practices and deliver freshly harvested cane to the mills, or to the factories to develop their technical efficiency.

A Tricky Matter

The series of problems facing the Indian sugar industry were lucidly outlined by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, in his inaugural speech, and by Mr. P. A. Gopalkrishnan, Joint Secretary to the Central Food and Agriculture Ministry and Chairman of the Council. Dr. Deshmukh urged the Council to evolve something which would help the Government to stabilise both production and distribution of sugar, because, otherwise, every interest, in its turn, suffered losses without any proportionate gain to any other interest. Sometimes it was the sugarcane growers, sometimes it was the millowners, and almost always it was the consumer who had to pay heavily for all this. Characterising the matter of sugar production and consumption, as a tricky matter, he said:

"You must be remembering very well how from a burdensome surplus of over 200,000 tons of sugar we almost overnight faced a fairly long period of acute scarcity wherein black market and high prices were rampant for a long time. When we calculated our figures of consumption, my mind was not very free from doubts altogether and I think, to a certain extent, this will probably be illustrated in the course of this year. Of course, these are factors which can explain easily this shifting from surplus to deficit and from deficit to surplus, and we can easily reason out the situation. But I would like you to be reminded that, without much increase in the acreage, we are likely this year to produce more sugar than we did in any preceding year. This illustrates most pointedly the ample scope that exists for increasing our average yields of sugarcane. In the middle of a season, we made a short drive and arranged for the supply of larger quantities of fertilisers to the cultivators and mills. . . . Apart from this drive for better cultivation and increased yields, the situation demanded that there was need to bring about expansion in the existing units and licensing the establishment of new factories in areas where adequate quantities of sugarcane were available."

From the estimates of sowing this year, Dr. Deshmukh hoped that the next season would also be a very good one and that we might look forward to still larger production of sugarcane. He categorically stated that, despite patent difficulties, we should not discourage increased production not only of sugarcane but also of sugar, *gur* and *khandsari*. For he said that our *per capita* consumption was miserably low, as compared with the other advanced countries of the world; our yields also had similarly much scope for expansion. In view of these, Dr. Deshmukh remarked: "Our ideal must be not to limit production but one of producing all the products in larger quantities so as to be able to distribute it at prices which would be within the purchasing capacity of our people."

Sugar Imports

The Minister for Agriculture admitted that imports of foreign sugar cost valuable currency which India could ill afford to spare. But he justified imports on two grounds. First, the Government had to prevent prices from shooting up and to ensure that everyone got this energy-giving substance in the quantities required by him. Secondly, the Government did not want to give a chance to a section of people who were against removal of controls to complain about prevalence of higher prices and black market.

Dr. Deshmukh referred to the problem of finding a suitable solution to sugar factories which were not properly situated. He was against the shifting of such factories. In his opinion, the mere cause of insufficiency of sugarcane was not incapable of solution by the commonsense method of propaganda and cultivation. The Minister could safely guarantee that, with little more attention, no factory needs be declared unsuitably located merely for this reason, because "we can double the average production in that area and, if we can do so, all the needs of that factory are likely to be fully satisfied."

Immediate Problems of Sugar Industry

Presiding over the meeting, Mr. P. A. Gopalkrishnan emphasised at the outset that, although the main concern of the Council was the development of the sugar industry in its long-range aspect, it could not afford to ignore the immediate problems which had a vital bearing on its future development; the immediate problems were falling demand for sugar and slumping prices, on the one hand, and a bumper production and prospects of a heavy carry-over, on the other. Indeed, Mr. Gopalkrishnan warned that, unless these immediate problems were solved in a manner satisfactory to the industry and the consumer, the future growth of the industry might be seriously jeopardised.

With regard to the question of sugar prices, Mr. Gopalkrishnan alluded to reports from most part of the country that the ex-factory price of standard quality sugar was ruling at Rs. 28-8 per maund. He considered this as a rockbottom price which ensured only a small margin of profit to most factories and probably different amounts of losses to others. Any further fall in prices, though welcome to consumers, would be undesirable as long as cost of production remained what it was. To the extent that costs could not be reduced, maintenance of an appropriate level of prices was absolutely necessary for the survival of the industry. Touching on the Government's policy in this respect, Mr. Gopalkrishnan claimed that both the fixation of selling prices for imported sugar and the policy of releasing indigenous sugar from factories were aimed at maintaining a level of sugar prices in the country "which is fair to the industry and the consumer."

No Cause for Alarm

The Chairman of the Development Council for Sugar Industry was rather disappointed at the symptoms of alarm exhibited in certain quarters as regards the prospects of sugar production in the current season. Ever since sugar was decontrolled, the Government, he said, had found it necessary to import large quantities of foreign sugar to supplement home production. And he asked: Why should anyone be alarmed in these circumstances, if internal production tends to go up? On the other hand, we should, he pointed out, regard increased production as an occasion for rejoicing; in spite of an enormous rise in the consumption of crystal sugar, higher domestic output was making the country less and less dependent on imports. In this connection, he indicated that there was still enormous scope for expansion of the industry and increase in output. In support of this contention, he said that, although the average sugar production in India had registered an unprecedented increase —30 per cent.—during the first four years of the Five-year Plan, the country had to import large quantities of foreign sugar. Mr. Gopalkrishnan, therefore, wanted the prospect of a bumper sugar production in the current season and a large carry-over to be regarded not with alarm but with a sense of relief. Elucidating this point, he observed:

"If we are left with a carry-over of between 500,000 tons and 600,000 tons at the end of 1955, we may not have to import any sugar in 1956. This is, of course, on the assumption that the production in 1956 will be as good as in the current year. But can anyone who knows the Indian sugar industry say with confidence one year or even a few months in advance what the production is going to be in a particular year? So much depends upon weather conditions and a proper distribution of rainfall. Last year, with an area under cane only slightly less than in the current year, we were able to produce only 1,000,000 tons of sugar. This year, the production is going to be about 50 per cent. more. With these fluctuations in production, we should not get panicky when production goes up in a particular year, but conserve and use the carry-over in the succeeding year or years when the production may not come up to the same level."

Nevertheless, Mr. Gopalkrishnan did not minimise the financial and storage problems which inevitably went with bumper production and a large carry-over, as witness his statement that, with all the godowns in the country bulging with foodgrains, the problem of sugar storage had become extremely difficult. He urged the Council to tackle this problem satisfactorily, in view of the projected expansion of the industry and the programme for further increase in production. He suggested preparation of an inventory of godown space available for storing sugar both in factory premises and in the big centres of consumption. He also wanted the Council to draw up a programme for constructing more godowns to meet the requirements of expanding production.

Mr. Gopalkrishnan made a brief reference to a general statement made by one of the subcommittees of the Council that, unless *gur* prices were also maintained at a reasonable level in conformity with the minimum price for cane paid by factories, fluctuations in production and consumption of sugar and *gur* would continue to be as violent as at present. He was of the view that, if there was a single factor, other than weather, which was more responsible than others for the intensity of these fluctuations, it was the level of *gur* prices which ruled from season to season. If these fluctuations were to be reduced to reasonable dimensions, it would be necessary, according to Mr. Gopalkrishnan, to evolve a correlation between *gur* and sugar prices.

CO-OPERATIVE SUGAR MILLS FOR PUNJAB (I)

One more State to apply the co-operative method to the sugar industry is the Punjab(I). Already, two co-operative sugar mills have been sponsored by this State Government—one at Rohtak and the other in the Jullundur Division—and these are scheduled to commence production in the ensuing (1955-56) season. Both units have a share capital of Rs. 1 crore each, of which an aggregate of Rs. 40 lakhs worth of shares are reported to have already been sold to cane growers. The shares have been subscribed largely by small cane growers. The State Government has decided to invest "a substantial amount" in the enterprises. The balance of the fund required is to be arranged as loans from such financial institutions as the Industrial Finance Corporation. Besides giving financial assistance, the Punjab Government has taken the initiative to place orders with a well-known British firm for the necessary plant and machinery which are expected to be actually installed by October next. Before placing orders, a committee of experts, it is said, had examined tenders from several British, German, Japanese and Czechoslovakian firms.

The idea of the co-operative pattern for the sugar industry in the Punjab will be carried a stage further with the State Government's implementation of a proposal for setting up four or five more sugar factories during the second Five-year Plan period. Disclosing this at a Press Conference in Chandigarh, Chaudhri Lehri Singh, Punjab Minister for Co-operatives, said the other day that the proposed factories would have a daily cane-crushing capacity of 1,000 tons each with scope for further expansion. Indeed, he claimed that they would be the largest co-operative industrial units in the country. According to the Minister, the State Government was considering Hansi, Gurdaspur and certain other towns for the location of the factories.

WANTED—A LONG-TERM PLAN FOR COAL

GOVERNMENT MUST CLARIFY ITS POLICY SOON

THE Indian Collieries Union (I.C.U.), Katrasgarh (Bihar), has submitted to Mr. K. C. Neogy, member of the Planning Commission in charge of industry and transport, a memorandum on long-term planning for the coal industry. The Union has estimated the demand for coal to rise to as much as 70 million tons by 1960 and this, it states, can be met by planning for an annual increase of five to six million tons from now onwards. It, however, fears that such an increase will not be possible, unless the industry is assured of transport facilities in the first instance. It further contends that the removal of the present system of control over production will also go a long way towards helping the industry to hit the target of 70 million tons by 1960. The Union has arrived at the target of 70 million tons to be reached by 1960 as follows:

	Million tons
Output in 1954	36.7
Extra coal required for three new steel plants and for additions to the existing plants (4.5 million tons)	11.0
Normal yearly increase in total consumption in private sector of different industries	5.0
New thermal plants and power stations	2.0
Additional requirements of coal for manufacturing 2 million tons additional quantity of soft coke	3.0
Additional requirements for brick burning	3.0
New industries both in public and private sector	5.0
Additional requirements for foreign export if both coal and wagons are available as stated above	1.0
Colliery consumption at the rate of 10 per cent. on the additional quantity	3.0
Total	69.7

It is true that production of coal in 1954 at 36,773,605 tons was 926,707 tons higher than that in the previous year. It was also higher by as much as 551,075 tons over the previous record touched in 1952. The record of despatches in 1954 was also gratifying in that the improvement was slightly better than the raisings. At 31,946,972 tons, the despatches were higher by 1,286,253 tons over those in the previous year. Even as compared with the record despatches of 31,093,387 tons in 1952, they were higher by 850,585 tons. There is, however, no gainsaying the fact that the credit for improvement in despatches goes chiefly to the railway authorities who ceaselessly endeavoured to supply more wagons for collieries for despatches of coal. The authorities succeeded not only in arresting the downward trend in the supply of wagons but in lifting it up. The supply of wagons in the later half of 1954 was, on an average, as many as 100 wagons more per day than those in the corresponding period of the preceding year.

Does this mean that there is nothing to worry about the future of the transport situation? Certainly not, for the simple reason that instances are not wanting to prove that even today maldistribution of wagons is leading to accumulation of stocks at various pitheads. The fact that, more often, empty wagons have been moving in certain areas for lack of indents, while in certain other areas there has been a shortage of wagon supply, discloses lack of planning in the distribution of wagons for transporting coal. These shortcomings, however, pale into insignificance as compared with the task involved in moving a coal output of 70 million tons, a quantity which represents an increase of 90.7 per cent. over the present output. If coal production is to reach this target in a period of five years, there is no doubt that there will have to be a tremendous increase not only in the number of wagons now being supplied to the industry, but also in the number of locomotives and railway track mileage.

The Indian Collieries Union points out that the transport bottleneck problem cannot be solved merely by increasing the wagons, locomotives, line capacity and/or by improvement of major junctions and yard capacities, for there is a great need for toning up the administrative efficiency of the Eastern Railway authorities which has been deplorably poor. It alleges that not only have the authorities been circumventing the orders of the Railway Board, but that they have, for reasons best known to themselves, withheld the legitimate information requested by those trade interests that are concerned with coal transport. The Union has characterised the recently introduced transport rationalisation scheme as faulty and unwise. It reiterates the oftrepeated complaint that, in the matter of allotment of wagons, the State collieries are still being favoured in preference to private collieries.

In order to increase the present output of 36.7 million tons to 70 million tons, it will be necessary to open up not only new seams but also new collieries. According to one estimate, there will be need for opening about 200 new collieries, each with a production capacity of at least 10,000 tons of coal per month. This requires heavy investment which in turn calls for better incentives to colliery owners and the relaxation, if not the entire removal, of restrictions on opening or reopening mines, whether it be of coking or non-coking coal.

The biggest obstacle to investment in the coal industry is, however, the threat of nationalisation. It will be recalled that, in the course of a reply to an interpellation in Parliament, Mr. K. C. Reddy recently stated that a proposal to bring progressively new coal prospecting and opening of new mines within the direct responsibility of the State was under consideration. But, as regards the acquisition of existing mines, the position is still very uncertain. Dealing with this question, the Indian Collieries Union observes as follows:

"The Union would impress upon the Commission the fact that, coal being a wasting asset, all mines necessarily require continuous development to maintain even their existing level of output, not to speak of increasing the same, and also require long-term planning and a large capital outlay and as such a much longer period of life if one is to get any return out of such costly developments. Besides the question of nationalisation, the amendment to the Constitution on the question of payment of adequate compensation, if and when mines are acquired by Central or any State Government, has further complicated the situation. In order to achieve fully the object of a planned development of this industry, it is absolutely necessary for the Government to remove the present feeling of uncertainty about the industry's future from the minds of mineowners and to assure the private sector that it would be given a definite period of life for at least 25 years."

Under the Government's industrial policy of 1948, the coal industry is immune from nationalisation only for three more years. As this time limit is drawing near and as the industry is urgently in need of advance planning for expansion, it is high time the present state of uncertainty was removed. The Government must soon come forth with a clear enunciation of its policy on this industry.

OIL-COAL BLEND FOR RICHER GAS

Gas from a big new oil refinery at Altona, Victoria (Australia), will be used to enrich black coal gas for the State's domestic, commercial, and industrial use. The Gas and Fuel Corporation was expected to complete the laying of an eight and a half mile pipe-line from the refinery to its gas works last month. The refinery gas will ultimately be used to enrich brown coal gas, when the Corporation's plans for supply of this product from coal are completed. The pipeline from the refinery to the gas works, now nearing completion, has been coated with two layers of coal-tar enamel to prevent corrosion. Fibre glass was impregnated in the first layer to give greater strength, and after the second layer had been applied, the pipe was wrapped in asbestos felt. The line is broken up into insulated sections, about 1,500 feet in length, to limit stray electric currents which contribute to corrosion. These currents come from nearby train or tram lines.

PROSPECTS FOR TEA INDUSTRY

CONSUMPTION IN INDIA WILL BE A CONTROLLING FACTOR OF WORLD PRICES

THE Indian tea industry enjoyed the most prosperous season during 1954, in which "prices reached heights which could not have been foreseen by even the most sagacious prophets" in the industry. As we pointed out in these columns last week, the boom conditions have not brought about any sense of complacency among the planters; on the other hand, they are more worried than anybody else over the consequences of high prices for tea. The boom has brought home to the planters, as well as to the traders, that it also "brings its troubles which are in some cases more difficult to overcome than those brought by a slump." Very high prices naturally attract increased duties, taxes and larger demands from labour, thereby resulting in a rise in the production cost of tea. It is much easier to raise the costs than to lower them, as was proved in 1952. It will not also be easy to cut wages in adverse conditions or to persuade the Government to remove the duties and taxes imposed during prosperous conditions.

Besides the aforesaid factors, which have an important bearing on the future of the tea industry, the delicate balance between the world supply and consumption, which has been responsible for the violent fluctuations during the post-war period, is one of the uncertain factors in assessing the future of the industry. In this context, the reports of the two leading firms of tea brokers, Messrs. J. Thomas & Co., Ltd., Calcutta, and Messrs. Forbes, Ewart and Figgis Ltd., Cochin, for the year 1954, in which an attempt has been made to assess the outlook for 1955, will be read with interest.

Messrs. J. Thomas and Co. admit that the task of looking ahead over the next twelve months is difficult because of the speed with which the situations affecting the tea market change nowadays. The examples of the years 1952, 1953 and 1954 showed that the prophesies of both the pessimists in 1952 and the optimists in 1953 and 1954 were confounded. Nevertheless, the firm enumerates the various factors which are likely to affect the trend of the market in the coming season.

The output of tea by the major producing countries of the world during 1954 amounted to 1,195.8 million lbs. which was 52 million lbs. above the previous record level reached in 1951. In addition to this increase by the major producing countries, the minor producing countries, such as Japan, Iran, Mozambique and others are also expected to have produced more tea than before. Notwithstanding this increase in production, price of tea shot up last year. The upward trend in output is expected to continue during 1955 too. The North India tea gardens have endeavoured to procure as much manure as will produce the maximum crop they can possibly manufacture. South India and Ceylon are also capable of producing larger crops than the previous year's record levels. Pakistan and East Africa are the two other countries which are expected to produce more tea to meet their own internal requirements and to export more. Accordingly, Messrs. Thomas and Co. expect the production of tea in the leading producing countries during 1955 to be at least as large as that manufactured in 1954 and very likely larger. "In order to assess the market for the coming season," the firm adds, "it must be considered whether the world consuming public are able to absorb an increased amount of tea or whether any increase in production over the present world tea crops will flood the market and again produce slump conditions as in 1952."

The next important factor on which the future of the tea industry depends is, therefore, the level of world consumption. No country, according to Messrs. Thomas and Co., would appear to have settled down from the turmoil of the Second World War to enable the tea buyers and blenders to assess accurately either the number of people drinking tea, their individual financial capacity, or their *per capita* tea consumption. "At times, various figures are produced and published which show that world consumption in all countries is rising to a degree which still makes it seem level or even in excess of world production," the firm adds, "but what these figures probably show in reality is not actual consumption, but a temporary absorption of tea due to stock-piling." Unlike in pre-war years, dealers and blenders, we are told, are unable financially to hold stocks of tea sufficient to keep the world tea market stable and prevent the price of packet tea fluctuating as it has done recently. The stocks held by small grocers and individual tea drinkers all over the world constitute an unknown factor, so that the primary distributor is not able to assess how much tea is being actually drunk and how much is being stock-piled by his clients. It is the hidden stock figure that forms the delicate balance between world production and consumption and has been responsible for the violent fluctuations in prices during the post-war years. Messrs. Thomas and Co., therefore, observe that the tea markets of the world are likely to continue to fluctuate to the detriment of the whole trade until the *per capita* consumption in all countries can be more accurately assessed. They go on to say: "At the present time, nobody seems to be in any way certain whether or not there is an excess of tea being manufactured in relation to world consumption. It is, therefore, impossible for the major producing countries to gauge what their crop outturn should be, since any major increase takes some time to achieve as in any agricultural product."

No doubt, the world consumption of tea is rising, but what is difficult to assess is whether it is rising in consonance with the rise in world production. Moreover, the price of tea is an important controlling factor. The popularity of tea over other beverages has been kept up so long, because it is still the cheapest drink: "Should, however, the price of tea ever get so high as to bring coffee or any of the other many excellent beverages on offer to the public into competitive range," the firm warns, "then the tea consumption both in the U.K. and in all other countries might very soon fall."

Summing up the position, Messrs. Thomas and Co. observe:

"We consider that it is probable world production has now reached a stage when it must at least equal world consumption. It would, therefore, seem advisable, remembering that there are many acres of young tea which will shortly be coming into full bearing, that the machinery for the voluntary crop regulation scheme which came into being in 1952 should be kept as a safeguard against another sudden and disastrous slump such as took place in that year.

"The fact that world production may have at last reached that debatable figure of world demand should not necessarily forecast a sign of bad times for the tea industry. On the contrary, it is to be hoped that this situation will render the big blending and distributing houses able to procure tea at prices economic both to themselves and to the producer and, at the same time, enabling them to hold stocks of tea on their own account large enough to meet any sudden demand from their consuming clients.

"We base our forecast for 1955 on this hope and, although we anticipate a lower market than the extraordinary boom which took place in 1954, we think good and economically very satisfactory prices will be paid for well-made and desirable tea, while, perhaps, the buyers in auction may be enabled to serve their public by neglecting ill-manufactured and stalky grades, thus improving the blends of tea put out to their clients. Prices should rise to very satisfactory levels when the second flush quality teas are on offer in Calcutta, but there will probably be a recession in September when the quality of tea on offer deteriorates. The extent of this price recession will depend on the amount of tea manufactured to the end of August when the announcement of this crop figure is made in early September. Should, however, world auction prices of tea be too dear to enable world tea buyers to hold adequate stocks, it is our fear that the tea market may fluctuate somewhat violently to the detriment of the whole trade for several years to come."

Messrs. Forbes, Ewart and Figgis are also of the view that the production of tea this year would be maintained and possibly exceed the level of 1954. So far as South Indian crop is concerned, prospects are considered good, provided adverse weather conditions are not experienced in the coming months. The firm feels that world production must be increased if the shortage of 1954 is not to be repeated. Referring to consumption, it draws attention to the increased tea drinking habit in India. "India is drinking very much more of the tea she produces," it says, "so much so that the internal consumption in India now figures largely as a controlling factor of the world price of tea." Substantiating this statement, the firm observes:

"During the past eight to ten years, consumption has been doubled from 90 million pounds per annum to the present-day figure of approximately 180 million pounds per annum. The average crop for the past eight years, including 1954, is 602 million pounds, as against a crop figure of 560 million pounds for 1947—an increase of 42 million lbs. Consumption in India is increasing rapidly and at a far greater pace than the increase in production of tea. India now consumes nearly 30 per cent. of its production—how long will it be before 50 per cent. or more is consumed? Will production catch up with this increase? Not unless drastic and immediate action is taken to plant new areas of a considerable acreage. If this is not done, the amount of Indian tea available for sale to export markets will yearly diminish with a corresponding falling off in India's foreign trade balances."

The prospects for 1955 are considered by the firm as not entirely unsatisfactory and it expects that this year the market will stabilise at a level which proves economical to the consumer and gives a fair profit to the producer.

JUTE GOODS DESPATCHES SLACK

MIDDLE EAST COMPLAINS AGAINST MALPRACTICES

FOR sometime now, the Indian jute industry has been passing through a somewhat uneasy time. A part of this uneasiness may be traced to the behaviour of prices of both jute goods and raw jute. During the past one month, while the prices of jute goods have staged a marked decline, there has not been a corresponding fall in those of raw jute. B. twills which were quoted at Rs. 126-8 per 100 bags on 28th March last are at present quoted at Rs. 114-12 (2nd May). Hessians 40"×10 oz. have, during this period, drifted down from Rs. 44-8 per 100 yards to Rs. 42-11. But, in the case of raw jute, as disclosed by the movement in the price for Assam bottom, the trend has been steady. Thus, Assam bottom moved narrowly between Rs. 33 and Rs. 34-8 per maund during the whole of April, although the rate was marked down a little to Rs. 31-8 on the 2nd inst. Besides the fall in prices of jute goods in the face of steady prices for raw jute, shipments of jute goods last month was disappointing. In the first 25 days of April, despatches of hessians aggregated 18,450 tons, as against 21,800 tons in the same period of the preceding month. Similarly, shipments of sackings dropped from 23,000 tons to 20,900 tons. The decline in April shipments is believed to be due, in the main, to non-materialisation of orders for hessians from Argentina. The total U.S. offtake in April is yet to be known, though in March the demand for hessians was on a relatively lower scale. It is believed that the U.S. purchases in April must have been more than in the preceding month. As far as sackings are concerned, the quantity of goods lifted by Australia, Burma and the Middle East would appear to be not encouraging.

While on this subject, it is quite appropriate to recall here the complaints of the Middle East consumers against Indian jute goods which were made to the Goodwill Mission of Indian business men that visited the Middle East countries at the beginning of this year. This Mission was led by Mr. M. P. Birla, now Chairman of the Indian Jute Mills Association, and was sponsored by the Government of India. Mr. Birla is reported to have stated that the present trade practices in jute goods are creating a bad name for India, as jute shippers from Calcutta are stated to have defaulted often. The experience of Syrians in jute transactions with India has been so unsatisfactory that they are thinking of making arrangements for bulk handling of their cereals. On investigation of these complaints, the Mission found that they were directed against firms which were new to the jute trade. The Mission has, it is stated, advised the Middle East importers to deal with only such shippers as have evolved a form of contract with provision for payment of compensation in cases of non-shipping.

The Mission has recommended that the Government of India should insist on a contract providing for payment of compensation in cases of default. It considers that this should be done, although the Middle East market for jute goods is a small one. "Unless this is done," says the Mission, "it would be very risky to maintain and expand the Indian market for jute goods in these countries. The necessity for taking effective measures early is all the greater, as all these countries may be expected to increase their agricultural output under their development programmes, thereby creating a bigger demand for jute goods." It is to be hoped that the Government will take necessary action to prevent the malpractices so that India may establish a sound reputation for just and fair dealings with the merchants in the Middle East region.

FLAG DISCRIMINATION IN SHIPPING

RIGHTS OF YOUNG MARITIME NATIONS MUST BE RECOGNISED

By Dr. Sudhir Sen

IN the history of world shipping, few issues have been so potent in generating international ill-will as the one that has come to be known as "flag discrimination." The connotation of these ill-chosen words was nebulous even when they first came into vogue soon after World War I. It has grown more so with the passage of time, thanks to the strenuous attempts made by some of the leading maritime nations to apply to them an increasingly elastic meaning. Today, with the best of intentions, we are unable to know where flag discrimination begins, and where it ends.

The very attempt to treat these words as if they could, like rubber, be stretched almost to any length has invested them with a certain explosive quality. A second factor has contributed even more decidedly to that unfortunate end. With the arbitrarily extended meaning, these words have come to be used mostly as a tool of propaganda. Behind the loud campaign against flag discrimination as carried on by the leading maritime countries of Europe, one can easily detect the thinly veiled motive to stabilise the *status quo* in world shipping, and thereby to perpetuate the supremacy which they now enjoy.

And this is, perhaps, the worst feature of this artificial campaign—the palpably disingenuous motives of its self-appointed crusaders; the sanctimonious role which they have now come to play; their vociferous plea for the "freedom of the seas," accompanied by a strenuous endeavour to keep them as their closely guarded preserves; the crusaders' zeal employed mainly to thwart the legitimate aspirations of other maritime nations to build up their merchant navies. They indiscriminately level the charges of flag discrimination against almost any State measure to promote national shipping, on the ground that it violates the sacred principle of free competition on the high seas, except when such measures are taken by their own Governments. Such charges seldom fail to boomerang, for almost inevitably they evoke prompt and sharp retorts, usually in the shape of an unanswerable *tu quoque*! No wonder that, in such a situation, flag discrimination should have become a prolific parent of mutual recrimination.

Debate Between Two Giants

For some time past, we have been witnessing an interesting debate between the two giants of the shipping world on the application of the so-called 50-50 rule. There was a chorus of protest from British shipowners, when 250,000 tons of coal purchased by Britain in the U.S.A. under an *ad hoc* agreement were brought under this "50 per cent. American ships" rule. For example, the U.K. Chamber of Shipping, at its seventy-eighth annual general meeting held on 24th February last, passed a resolution expressing the "consternation" with which the British shipping viewed the application of this rule to a transaction of this nature.

Speaking in support of this resolution, Mr. L. G. Dann made the following homely but significant remarks: "If you give a pair of crutches to a cripple, the cripple can hardly demand that you send them by registered post and not by Carter Paterson. He should gratefully accept the gift. If, on the other hand, you offer to help him to acquire crutches and you stipulate how they are to be transported, he has the right to object and to decline the help on your terms." In short, the British thesis has been that, even if the application of the 50-50 rule were justified in the case of gift cargo or aid cargo, it would be unwarranted to extend it to trade cargo.

While our interest in this debate is essentially academic, it would be pertinent to make two comments. First, no useful purpose can be served if the extension of the 50-50 rule to trade cargo is branded as flag discrimination—it can at best express the resentment of one party without convincing the other, generate heat without throwing much light on the rights and wrongs of the case. And, secondly, the 50-50 rule as advocated by the U.S.A. was not suddenly gotten from the blue, but had almost four decades of history behind it. The Cargo Preference Act of 1954, which applied this rule to all Government cargoes, was the culmination of the forces that had been at work all these years. In short, America, too, has a case that cannot be summarily brushed aside, and, in any case, no solution of the problem can be reached through a refusal to understand and appreciate the viewpoint of the other party.

The American Case

What, then, is the American case? It rests, above all, on the bitter lesson learnt in two world wars—how easily the overseas trade of the nation can be jeopardised and its security endangered in times of war, unless it possessed an adequate merchant marine of its own. "It is high time we repaired our mistake and resumed our commercial independence on the seas," said President Wilson, exactly 40 years ago, in his third annual message to the Congress. "For, it is a question of our independence," he continued. "If other nations go to war or seek to hamper each other's commerce, our merchants, it seems, are at their mercy. . . . We must use their ships, and use them as they determine. We have not enough ships of our own. We cannot handle our own commerce on the seas. Our independence is provincial and is only on land and within our own borders."

Since then, America has been exerting herself, though somewhat fitfully, to "repair the mistake" of her overwhelming dependence on foreign flag ships. The Merchant Marine Act of 1920 prescribed in unequivocal language that the U.S.A. "shall have a merchant marine of the best equipped and most suitable types of vessels sufficient *to carry the greater portion of its commerce and to serve as a naval or military auxiliary in time of war or national emergency* ultimately to be owned and operated by the citizens of the United States and it is hereby declared to be the policy of the United States *to do whatever may be necessary to develop and encourage the maintenance of such a merchant marine. . .*" (our italics).

Mandate Reaffirmed Again

This mandate was again reaffirmed by the Congress, almost in equally strong language, in the Merchant Marine Act of 1936: "For the national defence and development of its foreign and domestic commerce, the U.S.A. shall have a merchant marine sufficient to carry *its domestic water-borne and a substantial portion of its overseas commerce* and to provide shipping service *on all routes* essential for domestic and overseas commerce *at all times*: capable of serving as a naval and military auxiliary in time of war or national emergency; owned and operated under the U.S. flag by U.S. citizens *as far as practicable*; composed of the best equipped, safest and most suitable types of vessels, constructed in the U.S.A. and manned with a trained and efficient citizen personnel." And to foster the development and to encourage the maintenance of such a merchant marine was the declared policy of the U.S.A.

Yet it is a known fact that the last war again caught the U.S.A. largely unprepared. The disaster was averted through a gigantic national effort directed to build new ships at breakneck speed. What could be more natural than for an impatient American public to demand that the unmistakable mandates given by the Congress in 1920 and 1936 must be implemented forthwith, that a repetition of the experience of the last two world wars must be averted at all costs? The changed political climate of the post-war world, with the threat of another war hanging ominously on the horizon, has no doubt given a powerful impetus to that demand.

The genesis of the Cargo Preference Act goes back to 1915 when President Wilson cried out in anguish, "We have not ships enough of our own," or in any case to the Merchant Marine Act of 1920. What is surprising is that its implementation has been delayed so long. Besides, in view of the declared policy of the U.S.A., even this Act has, if anything, shown moderation in two directions: Whereas the Act of 1920 had laid down that "the greater part" of the U.S. overseas commerce should be carried in U.S. vessels, the Cargo Preference Act has restricted the proportion to 50 per cent; and even this 50 per cent. is to be applied, not to the entire export-import trade, but only to the Government-financed or controlled cargo.

You may call this flag discrimination if you like. But, in American eyes, the step is dictated by inexorable logic; it is also looked upon as unimpeachable in principle. During and immediately after the war, the U.S.A. had, more than once, emphasised her determination to carry at least 50 per cent. of her trade in her own bottoms and for this purpose to build and maintain a merchant fleet of 17 million gross tons. This policy was criticised by the British interests and others, although Britain, too, had already declared that she must continue to serve the world with a large and efficient mercantile marine. This criticism evoked a sharp reply from a leading official of the Maritime Commission. "If American ships can provide a service that obtain half of the traffic on an average over all routes where American commerce moves, such a share of the business can hardly be deemed unreasonable or be the basis for a charge that America is encroaching on some holy ground that is the peculiar heritage of any particular nation."

Case of India

We have recapitulated the salient facts relating to the "50-50" Act passed by the U.S.A., because they have a special relevance to the younger maritime countries, including India. In defending her right to build up her merchant fleet to safeguard her commerce and to serve as the second line of defence, America was, in effect, also upholding the rights of the underdeveloped maritime countries. For much of the arguments used by her in this controversy also apply to them almost with equal force.

There are solid reasons why a country like India must do her utmost to build up an adequate mercantile marine as fast as possible. First, shipping is a valuable industry with a high potential for creating employment and income; India, with her geographical location on the Indian Ocean, her 3,000-mile long coastline and her long tradition as a sea-faring nation, is particularly well suited to develop this industry. Secondly, shipping is very often an essential prerequisite for developing national trade. To promote her own commerce, especially with the countries of the Middle East, Africa and South-East Asia, India must have her own shipping service. She can ill afford to continue her one-sided dependence on foreign shipping lines for her own commerce since their natural interest lies in promoting the trades of their own countries, and not of others. Thirdly, economic history is littered with examples to show how well-established conferences have mercilessly exploited their monopolistic positions. From the national angle, the only possible safeguard is to own and operate a sizable fleet. There is no other means to curb the greed of shipping monopolies. Fourthly, overseas trade carried in foreign bottoms has imposed a heavy drain on India's limited foreign exchange resources. This cannot go on indefinitely, much less so at a time when she must earn and husband her foreign exchange with great care to implement urgent national plans. Lastly, as with other nations, a merchant navy is indispensable as the second line of defence—to carry essential goods across the seas in times of national emergency, in order to keep the wheels of the economy running with reasonable smoothness. Indeed India's need for an adequate mercantile fleet is greater today than ever before. Without it, her economy will, in time of war, become virtually a hostage to belligerent countries; and her policy of non-alignment with power blocks and non-entanglement in war will tend to become illusory.

The crusaders against flag discrimination have deprecated the tendency on the part of the young maritime countries to build up and operate "uneconomic fleets"; and they have felt themselves called upon to forestall this tendency by every possible means. In assuming that the fleets would be uneconomic, they, however, overlook some elementary economic considerations.

First, so far as India is concerned, it cannot be denied that she enjoys very substantial natural advantages for developing her shipping industry. There is no reason why, after a reasonable period of time, she should not be able to compete, on an equal footing, with the leading maritime nations of the world. Her entire coastal shipping is now looked after exclusively by Indian shipowners, although not long ago there were over-confident cynics who were prone to dispose of the idea of coastal reservation as a costly illusion. And what has happened on the coast can no doubt be repeated some day in the overseas field as well. It is not a question of ability, but of opportunity; and, even if some extra price has to be paid to support an infant

industry in its early stages, it will be amply compensated in due course.

Second, it is easy to exaggerate even this initial extra price. The losses due to the failure to develop overseas commerce in the absence of national shipping, the exorbitant rates that have to be paid frequently to foreign shipping even in times of peace, and far more so in times of war owing to the inevitable scramble for tonnage, would far outweigh this extra price.

And *third*, since the merchant navy is a naval or military auxiliary, it is entitled to the same treatment as the defence services. The only respect in which it differs from these is that the merchant navy has a peace-time economic role to perform so that it can largely pay its way. But because it is much less of a burden on the national exchequer than the other defence services, we cannot insist that shipping must pay its way one hundred per cent. both in peace and war.

Historical Reason

If there is overwhelming justification for building up a vigorous national shipping, there is also an historical reason why this industry deserves special treatment at this stage of India's economic development. It is true that, even during her colonial regime, India succeeded in making significant progress with many of our industries. But the degree of progress achieved was far from uniform—it was largely the accidental result of the struggle against political obstacles that stood in the way. It is a well-known fact that for Indian shipping the struggle was particularly hard, bitter and long-drawn-out, that the progress was far to slow and painful; the result is that we are now faced with a far bigger leeway in this field, so that a correspondingly bigger effort will be needed to make it up.

The infant shipping industry of a country like India cannot grow without active support from the State. But shipping is a *floating factory*; it has to compete on the high seas with the ships of other nations; no protective wall can be erected around it as in the case of land-based industries. That is why assistance to shipping can be given only in such forms as subsidies, tax concessions, loans at concessional rates of interest, reservation of State cargo to national vessels, coastal reservation, and similar other measures.

Is it discrimination to adopt such measures to promote national shipping? No more so than would be tariff protection given to a land-based infant industry; no more so in the case of India than in the case of other countries; no more so today than they were in the past when the leading maritime nations employed them extensively and treated it as their right to do so. Indeed, it would be discrimination if what were then considered as legitimate rights are now branded as discrimination against others; and it would be discrimination against ourselves if we were not to exercise similar rights in defence of our legitimate self-interest. The younger maritime nations will need substantial State assistance, because they are late-comers in the field; because they have to acquire tonnage at a time of soaring prices; because they have to compete with established shipping lines that have piled up large financial resources through generations of successful shipping; and, lastly, because world trade is dominated by powerful conferences that resolutely pursue a blocked-door policy.

Blocked-door Policy

This last point is particularly important. The Chairmen of the two leading Indian shipping companies have, more than once, expressed their resentment that, though members of the India-U.K.-Continent Conferences, they have, in spite of repeated representations, been hitherto refused entry into the supplementary sister conferences on the same route, for example, Colombo-U.K., U.K.-Colombo, Aden-U.K., U.K.-Aden and other conferences. Is it discrimination against a new entrant like India to deny her entry into these conferences? No; it is far worse than that; it is as good as an attempt to throttle the shipping of a weaker nation. Such blocked-door policy of the entrenched conferences often leaves the non-member maritime nations often with no other alternative than to adopt the policy of cargo reservation for national ships. It is the real parent of the 50-50 Act which the conferences themselves so readily repudiate.

All this shows how far we have travelled from the International Maritime Convention, passed through the League of Nations in 1923, urging that there should be no preferential treatment to national ships as regards berthings or other facilities, port dues, light dues, etc. In that restricted meaning, the stand against flag discrimination was perfectly legitimate. But trouble began almost in the same year when the Congress held in Rome under the auspices of the International Chamber of Shipping, passed a resolution pleading for "equal opportunity to all ships under all flags in all parts of the world," and opposing any attempt to restrict the carriage of goods or passengers between different countries to vessels sailing under the flag of any nation as being "contrary to international comity and disastrous to international commerce."

The Convention on the Inter-Governmental Maritime Consultative Organisation, or I.M.C.O., of 1948 also recognised that "assistance and encouragement given by a Government for the development of its national shipping and for purposes of security would not in itself constitute discrimination." This was a wise decision, but, unfortunately, its value was whittled down by an elastic proviso that "such assistance and encouragement is not based on measures designed to restrict the freedom of shipping of all flags to take part in international trade." The net effect of this proviso is that the membership of the I.M.C.O. may easily become an obstacle to the promotion of national shipping. This explains why India, along with a large number of under-tonnaged maritime countries, has so far refused to join the I.M.C.O.

The resolution of the U.K. Chamber of Shipping passed in February last, not only expressed its "consternation" over the application of the 50-50 rule by the U.S.A., but also registered its "equal concern" over the growing tendency of other countries to support their mercantile marines by requiring a proportion of imports and/or exports to be shipped in national flag tonnage; and, in furtherance of its declared policy of opposing flag discriminatory practices wherever they are met, it resolved to renew its efforts to bring all such practices to an end. A resolution like this has become almost an annual ritual at the shipping conferences organised by the maritime nations of West Europe.

Rigidity of British Shipping Outlook

The monotonous persistence with which British shipping has been passing these resolutions underlines, above all, the psychological difficulty it has been experiencing in adjusting itself to the changed political and economic climate of the mid-twentieth century. The way British industry, in general, and British industry in India, in particular, have adjusted themselves to the altered conditions of the post-war world has evoked wide admiration even among Indian nationalists. But British shipping, to judge from the rigidity of its outlook, seems to have remained an exception so far. Yet how much it has to gain from a frank recognition of the rights of underdeveloped maritime countries to promote their shipping! It will not only help create a most favourable atmosphere of mutual goodwill, but will also yield solid economic benefits in other directions. Her shipyards will receive increasingly large orders from the younger maritime nations. Moreover, with her unchallenged supremacy as the centre of world shipping and her network of brokers and agents, owners and charterers, underwriters and average adjusters, naval architects and classification societies, superintendents and surveyors, clubs and solicitors, and the Baltic Exchange, she will be called upon to render specialised services on a much larger scale than in the past.

On the other hand, the continuation of the indiscriminate cry agaist flag discrimination is likely to achieve the opposite result. It has certainly been instrumental in inducing Indian shipping circles to study with much greater attention what measures other maritime countries have taken in the past and are taking now to help their own national shipping. The painstaking research with which they are now digging out facts is well illustrated by the special number of the *Indian Shipping*, the journal of the Indian National Steamship Owners' Association, which has just been brought out on the question of Flag Discrimination. The mass of facts brought together in this issue will serve as an eye-opener to the Government as well as to the public in India. It unmistakably reveals the fact, which has long been known to Indian shipowners, that *our Government, far from doing too much, is not doing enough even today for our own shipping.*

Three Steps Essential

To end the present futile controversy over flag discrimination three steps are essential: to restore to these ill-fated words the limited meaning in which they were first used, that is, inequality of treatment at ports; to recognise the rights of underdeveloped maritime nations to build up adequate merchant fleets; and to allow them to take whatever measures they consider appropriate to achieve this objective, subject to a scrupulous avoidance of discriminatory treatment at ports. There is no reason why the reservation up to 50 per cent. of national cargo for national ships should not be permitted. After all, this will still leave a generous margin of national trade to be carried in the bottoms of the leading maritime nations.

TEXMACO

Boiler & Heavy Engineering Division ● Ring Spinning and Drawing Frames

TEXMACO

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

TEXTILE MACHINERY CORPORATION LIMITED
BELGHURRIAH, 24-PARGANAS, WEST BENGAL.

IRON AND STEEL IN ASIA AND THE FAR EAST

SCOPE FOR DEVELOPMENT EXAMINED

By V. M. Subramanian*

THE combined iron and steel production of the countries of Asia and the Far East is very small, amounting to less than 5 per cent. of the world total. Present Asian consumption, though larger than production, is also very low. Steel consumption potentialities of the Asian countries are, however, very considerable. The *per capita* consumption of steel is about 545 kilogrammes in the United States, 300 kilogrammes in the United Kingdom, and about 130 kilogrammes in Western Europe, while in Asia and the Far East it is less than 5 kilogrammes. The region abounds in resources of essential raw materials. Some of these are favourably located (for example, India and China), while others are available in substantial quantities but require further preparation and treatment before they can be utilised. In a number of the underdeveloped countries, the known iron ore deposits are richer than those of some of the industrial countries of Europe.

It is needless to say that the distinguishing feature of the industrialised countries is not the extent of their iron ores, but the degree to which they are able to utilise the iron ores which are available to them. The ratio of pig iron production in most of the industrialised countries to the world production exceeds the corresponding ratio of iron ore reserves, whereas the reverse is true in underdeveloped countries of the E.C.A.F.E. region. The United Kingdom has about 2.5 per cent. of the probable iron ore reserves (iron content) of the world, whereas it produces about 8.3 per cent. of the world production of pig iron. The United States has about 6.4 per cent. of the world probable ore reserves, whereas it produces about 49.6 per cent. of the world production of pig iron. India has about 21.0 per cent. of the probable world iron ore reserves but its production of pig iron is only about 1.3 per cent. of the world production. The corresponding figures for iron ore for the Philippines and Indonesia are 1.8 and 0.2, respectively, whereas the production of pig iron is *nil*.

Continental Countries

It will also be interesting to note that France has to import over half its metallurgical fuel and that Germany has always been dependent upon imported ore. Before the war, when Germany was producing 20 million tons of steel, more than two-thirds of its ore was imported. Belgium relies almost entirely on imports for its ore supplies. Luxembourg produces neither coking coal nor coke. Italy is entirely dependent on imported coal. Sweden also depends upon imported coal. Large imports of iron ore are a feature of the United Kingdom's raw material supplies. It will thus be seen that, while some countries have more than enough coal and others have more than sufficient iron ore, there is no country which is independent in respect of both of these key materials.

The most heavily populated underdeveloped countries, China and India, which account for almost two-fifths of the world population, are, however, endowed with enough iron ore for large-scale modern iron and steel industries. Most of the other countries of the region have adequate iron ores to support a modern steel industry. A number of these have more iron ore than they are likely to use domestically within the foreseeable future, and are thus in a position to eport iron ores without impairing their own steel-making potentialities.

In Asia, three quarters of the known coal reserves (outside the U.S.S.R.) are in China, and the bulk of the remainder is in India. If these reserves of iron ore and coking coal were fully utilised, both these countries would be able to plan for an iron and steel production five times the existing capacity thus paving the way for an all-round industrial development. Both the Philippines and the Republic of Indonesia have deposits of iron ores with 45 to 50 per cent. of iron content, totalling about a thousand million tons in each country. Both of these countries possess coal deposits but probably only relatively small quantities of coking coal. The Philippines also has petroleum, coke and Indonesia, oil, Indo-China has large high quality coal deposits and anthracite and reservse of possibly 100 million tons of good grade iron ores. South Korea has large reserves of ore with 40 per cent. iron content and smaller reserves with 55 per cent. iron content. It has huge reserves of anthracite. Burma has deposits of iron ore and coal. Further surveys are likely to indicate larger and better reserves. Thailand has reserves of several million tons of good iron ore. Pakistan has reserves of iron ore and coal but coking coals have not yet been found. Reserves of natural gas have been recently discovered. Oil also is available.

It is apparent, therefore, that the iron and steel making capacity of Asia and the Far East might be very much expanded and might be extended to countries otherwise lacking the prerequisite complement of raw materials, by the development of trade in iron ore and coal within the region even assuming that only the well established coke blast furnace method of iron making will be adopted.

Transport Requirements

The total transportation requirements for steel produced on such a basis and delivered to markets in Asia and the Far East would be less than those involved in steel delivered from the United States or Europe. The cost of transporting finished steel produced in industrialised countries to markets in the E.C.A.F.E. region is a very substantial part of the total cost of the delivered steel.

The foregoing facts are, of course, based on the assumption that pig iron would be manufactured by the coke-blast-furnace method.

Recent technical developments have opened up a number of important possibilities for iron and steel production in the underdeveloped areas of the E.C.A.F.E. region substituting for high grade coking coal other fuels and energy sources which may be available to them, such as inferior coking coals, non-coking coals, hydro-electric power, petroleum, charcoal and natural gas. Other technological developments also permit the creation of iron and steel works in locations where large-scale markets do not at present exist, where adequate transportation facilities are absent or where iron ore deposits, fuel and energy sources are available but not on a scale sufficient to support large-scale operations. With an alternative smelting process, capital requirements may be substantially reduced because a smaller plant is feasible.

New Processes

Many processes which do not require coking coal have now been developed among which may be mentioned the Krupp-Renn process, the Sturzelberg process, the Basset process, the Wiberg process, the Hoganas process, the Tysland-Hole furnace, and the low-shaft furnace, operated with or without oxygen, using briquetted carbon and ore fines. In addition to economical considerations, investigations will have to be made in every case on the chemical as well as the physical characteristics of the ore and tests on pilot plants done before a definite choice of method or combination of methods can be made.

The low-shaft furnace at Liege has a great future, as recent experiments have revealed the possibility of its use with or without oxygen and with a wide variety of raw materials and fuels, even including lignites. The main advantages are a smaller capital and production cost and the possibility of using a more plentiful and less costly fuel and of the smelting of ore-fines and the production of a rich gas. Many countries in the E.C.A.F.E. region including Burma, the Philippines, Indonesia, Pakistan and Thailand may find this method eminently suitable.

The Sturzelberg process was developed in Germany to process the purple ore, obtained during the process of producing sulphuric acid from pyrites. The purple ore is a ferric oxide with about 42 per cent. iron and a high quantity of zinc and sulphur. The process yields iron of a very high quality and valuable metal oxides as by-products. Any type of coal can be used, even lignite. The process is not affected by the sulphur content of ore and coal.

The Basset process operating in Denmark produces pig iron in a rotary kiln with a highly basic slag with a basicity of about 3.0. This slag remains solid during the process and forms nodules which can be used for cement production. High sulphur raw materials including pyrite cinders and ore fines can be used. The silica content of the ore must be low and the ore must be fairly rich.

The high sulphur coals and the fairly rich ores with low silica content of Pakistan, Thailand and the Philippines could possibly be worked in the basic rotary kiln of the Sturzelberg type or the Basset type. Though the Sturzelberg process produces pig iron of an excellent quality, it should be borne in mind that the cost of production is rather high.

The high sulphur South Arcot lignites and the Salem ores of South India can be utilised for production of pig iron in a basic rotary kiln.

In the Philippines, the high phosphorus high grade iron ores in Camarines Norte and the bituminous non-coking coals of near-by Linguan coal mines in Bataan Island offer a suitable combination for the Sturzelberg process. The high phosphorous pig iron may be blown directly into steel in the basic Bessemer.

Wiberg Process

The Wiberg process uses carbon monoxide and a little hydrogen for the gaseous reduction of iron ore. Low grade fuels may be used without the sulphur and phosphorus in the fuel getting into the sponge iron. The ores must have a sufficient mechanical strength and should be fairly rich with an iron content above 60 per cent.

The Hoganas sponge-iron process uses a very rich concentrate which is packed in layers with coal in ceramic containers. These are fired in a furnace in a manner similar to that used for firing refractory bricks. The iron is exceedingly pure and can be used for the production of high quality steel.

The Wiberg process and the Hoganas process may find application in countries with fairly rich iron ores but no coking coal and with small markets for iron. It is claimed that the Wiberg process can be used even without electrical energy.

The German Humboldt low-shaft furnace process is based on the direct smelting of fine ore, fluxes and non-coking coal in the form of briquettes for the production of pig iron. Any type of fuel can be used. The capital cost and operation cost are lower than those for a corresponding blast furnace.

The ore-coal briquette method may find application in certain locations of Burma, the Philippines, and Indonesia. The low-shaft furnace will form an ideal combination with the open hearth furnace as the rich gas from the former can be utilised in the latter.

The high phosphorus laterites of Jubbulpore, India, with a high content of fines, when reduced with the coal from South Rewa by the ore-coal briquettes smelting method, would yield a pig iron suitable for conversion in the basic Bessemer.

India

As there is a great shortage of good foundry iron in India, the ore-coal briquettes process could be very profitably adopted for utilising the huge surplus of cheap ore fines and non-coking coals and cheap slack. Non-coking coals in India are generally lower in phosphorus whereas the Indian coking coals are characterised by a high phosphorus content, which excludes their application for the making of standard grade ferro-manganese with phosphorus below 0.35 and hematite pig iron.

The high grade below phosphorus and low sulphur iron ores of the Tavoy District in Burma and the medium to high volatile Thelndaw coals of the near-by Mergui District may offer a suitable combination for the Humboldt process or the Liege low-shaft process.

The high phosphorus hematites of Camarines Norte, in the Philippines, when reduced with the coal from the near-by Linguan mines in Bataan Island in the Humboldt low-shaft furnace or the Liege international furnace will yield a pig iron suitable for conversion into steel in the basic Bessemer.

The Bukit Ranggal iron ores of South Sumatra in Indonesia, and the coals of South Sumatra, offer a combination for the Humboldt process or the Hoganas or the Wiberg process.

Malaya has very large reserves of high grade iron ores in Pahang, Trengganu, Perak, Johore and Kelantan. These can be smelted in the Humboldt low-shaft furnace or the Liege type furnace with the Batu Arang coals. The Hoganas and Wiberg processes also may be found suitable.

The Krupp-Renn process can utilise highly siliceous ores as well as ores with a high titanium content. Low-grade iron ores in powdery form and a low content of sulphur and phosphorus in the ore and fuel are desirable for the acid Renn process. Any type of solid fuel can be used, even those of inferior quality and with a high ash content. High sulphur raw materials necessitate further treatment. This process may be employed for the utilisation of some of the low-grade ores found in Thailand, Pakistan, Burma and Indonesia, where the quality of coal available is also poor.
