The Salem magnetites and South Arcot lignites of South India offer a favourable combination. The magnetites require preliminary treatment. The fuel with a rather high sulphur content yields on low temperature carbonisation a coke with more than 1.0 per cent. sulphur. The luppes obtained with this fuel would require several slag flushings and renewals in the electric steel furnace or defollowed by finishing in the open hearth furnace. sulphurisation in a special pre-melting furnace This would also permit finishing in a basic converter if the iron is high enough in phosphorus. The low iron and high phosphorus laterites and the clay iron stones of Bengal-Bihar could be converted into high phosphorus luppes by using coal from Raniganj.

The medium grade, low sulphur iron ores of Ceylon may possibly be reduced in an acid Renn

He recently visited France, Belgium, Britain, Sweden, West Germany and Austria, to study some of the latest iron and steel manufacturing techniques.*

NEW PRODUCTS AND PROCESSES

Chicken Feed in Crumbs

A FACTORY at Deft (the Netherlands) has put on the market a new form of chicken feed which combines the advantages of mealy and granular food. This food is supplied in the form of crumbs, in two compositions; one for young chickens of 0 to 6 weeks, the other for chickens 7 to 13 weeks. Older chickens can change over to normal poultry food. This chicken feed need not be mixed. It does not raise a dust and is not sticky, so that nothing is left in the bag. It can be scattered into the feeding boxes without spilling and can easily be picked up by the young chickens as soon as they are twenty-four hours old; it does not stick to their bills. When this food is used, neither the drinking water nor the feeding boxes are soiled by scraps of food caking on the walls of the boxes and turning sour.

Electrical Resistance Heating

A new grade of nickel-chromium alloy for high temperature furnace resistors, known as Brightray H, has been developed as a result of extensive work carried out in the research laboratories of the Mond Nickel Company, Limited. Brightray H is a modified composition of the well-known 80/20 nickel-chromium alloy and is intended for use as a heating element in electric resistance furnaces where the elements operate in the temperature range 1100-1250° C. Having proved successful in several metallurgical heat treatment furnaces and for the high-temperature firing of pottery, the new alloy has been put into production at the Birmingham Works of Henry Wiggin and Company Ltd., and is now available in the form of rod, wire and strip.

Oxidation resistance of the new alloy at temperatures above 1100° C. is better than that of the standard 80/20 nickel-chromium alloy. Laboratory tests on strip 0.88 mm. thick by 14 mm. wide and on rod heated continuously in air to 1250° C. gave lives of over 1,000 hours. This shows a considerable improvement over the life which can be obtained with the standard 80/20 nickel-chromium alloy in similar conditions. The specific resistance of Brightray H at room temperature is 126-130 michrohms/sq. cm./Cm. This increases by 3.6 to 4 per cent. as the temperature is raised to about 450° C. and decreases by 6 to 9 per cent. between 450 and 900-1000° C. As the temperature is further increased, the specific resistance rises slightly but up to 1300° C. remains less than the value at room temperature.

Temperature °C.	*Approx. Specific Resistance michrohms/sq. cm./Cm.*
20	126-130
500	130-136
1,000	122-127
1300	124-126

The density at 20° C. is 7.8-8.1. Brightray H does not embrittle in service and has high strength and improved oxidation resistance even at high operating temperatures.

Artificial Photosynthesis

For the first time in history, scientists have been able to make food the way plants do. It is a discovery that, potentially, could provide a new food source for mankind. The plant process which the scientists have succeeded in duplicating is photosynthesis. This is the process by which plants use sunlight to make carbohydrates from carbon dioxide, water and soil minerals. Scientists characterise it as the most important chemical action in the world and the basis of all life. The first achievement of complete photosynthesis outside of living plant cells was announced recently in Berkeley, California, to the American Association for the Advancement of Science by a group of University of California plant physiologists. They have succeeded in duplicating to a certain degree the complete process of splitting water into hydrogen and oxygen and "fixing" carbon dioxide to produce starches and sugars, using the energy of light. This is what nature does in plants, but more efficiently. According to Dr. Daniel I. Arnon, the achievement "brings nearer the day when man, after mastering the secrets of the processes in green cells, will reduce his age-long dependence on crop plants for food and energy."

Photosynthesis in nature depends on extremely minute particles found in the cells of leaves, which contain the green pigment, chlorophyll. These particles, or "chloroplasts," can be isolated from the leaves. In the past, it has been possible to use these isolated chloroplasts in the laboratory to duplicate the first part of the photosynthetic process, the splitting of water into oxygen and hydrogen. Previous attempts to duplicate the second and more important process—the combining of hydrogen and carbon to produce starches and sugars—have failed. It had been assumed that something else contained in the plant cell was essential. The second step has now been achieved, however, and a series of organic compounds has been produced on a small scale.

The process of making starches and sugars chemically is extremely complicated and not as yet entirely understood. Presumably, the substances known as enzymes, which are governors of physiological activity, are necessary. The present experiments demonstrate the important fact that these substances are contained within the chloroplast, rather than supplied by some other part of the plant cell. "These experiments demonstrate," Dr. Arnon said, "that the chloroplast is a remarkably complete photosynthetic unit capable of carrying out the principal reactions of photosynthesis outside the living cell. "The importance of the work lies in the firm hope it gives of elucidating the detailed mechanisms of photosynthesis. Then the day would be nearer when man could devise his own photosynthetic reactions by the energy of the sun. . . . Should this prove attainable, it would usher in an era of unlimited abundance for the benefit of all mankind."

ASSOCIATED STONE INDUSTRIES (KOTAH) LTD., RAMGANJ MANDI

SPEECH OF SARDAR DALJIT SINGHJI

THE Ninth Annual General Meeting of the Shareholders of Associated Stone Industries (Kotah) Ltd., held on the 23rd April, 1955, at Ramganj Mandi, Kotah District (Rajasthan), was presided over by Sardar Daljit Singhji, Chairman of the Company. Addressing the shareholders at the meeting, the Chairman said:

"GENTLEMEN,

"I deem it a great privilege in welcoming you all here, this afternoon, and presenting the directors' report and the audited statement of accounts of your Company together with the auditors' report for the year ending 30th September, 1954. These have already been circulated, and it is hoped that you have gone through them.

"On looking at the aforesaid reports, you will agree with me that the result of working of the Company is quite satisfactory and that the financial stability of the Company is quite sound.

"Although there has been a fall in the sales as compared to the previous year and the profits have also registered a slight decrease, the progress attained in all major spheres is such that any concern can be proud of. This progress has been largely due to the harmonious relations between the labour and the management. The employees and the labourers have given unstinted co-operation in the working of the Company and let me hope that these relations will continue to remain so. The management has also discharged its duty towards labour by providing all the amenities that the Company can afford. Recently, a swimming pool and a garden have been provided for the employees of the Company. A housing scheme for labour is also under preparation, and if the necessary financial assistance from the Central and State Governments is forthcoming, it will be given concrete shape in the near future.

"The most important and serious problem confronting the Company is the problem of wagon supply. This shortage of wagon supply is the real cause for the fall in sales and profits in the year under report. The huge accumulated stock of flooring stones lying in the railway yard, awaiting transportation has led to blocking of huge capital. The immensity of this problem will be obvious when it is realised that at present the stocks of stone so accumulated measure about 1½ crore sq. ft. and are of the value of Rs. 40,00,000 at market value. The accumulated stocks will require 4,500 wagons for clearance.

"It is the age of planning. In the national plan for reconstruction, housing occupies a central place and the flooring stone industry is of utmost importance if our housing plans are to succeed, as desired by our leaders. It is really surprising that the importance of transport facilities in giving necessary encouragement to this industry is lost sight of. We hope the authorities concerned will realise the urgency of the situation and do the needful in the matter before it is too late.

"Instead of there being an increase in the number of wagons supplied to the Company, there has been an unfortunate gradual fall every year in the supply of wagons. Moreover, this supply of wagons is mostly made in the monsoon season. This uneven distribution in wagon supply creates serious problems for the Company's dealers, who have to block their large capital in one season and face the consequential financial difficulties. Our demand that throughout the year a daily quota of 10 wagons should be fixed for the Company is a very modest and reasonable demand and I hope it will be accepted by the railway authorities.

"In case the situation regarding the wagon supply is permitted to deteriorate, I may warn, in unmistakable terms, that unfortunate results will follow. The Company may in these circumstances be forced to bring down the production and curtail the number of employees and labourers. This will not only lead to depriving of hundreds of men of their means of livelihood with all the dire consequences, but also cause loss of revenue to the railways and the Government of Rajasthan to the tune of several lakhs. I thus appeal to the authorities to be considerate and without delay formulate a policy regarding the regular and systematic supply of wagons in adequate number to the Company.

"The management also deserves credit for putting the Kotah Stone on the industrial map of India by their organised efforts. I may also mention here that in the true traditions of our country, the Company has been helping charitable causes, by awarding scholarships, providing medical relief and organising eye and surgical camps.

"Before I conclude, gentlemen, I, on behalf of you all and myself, thank our Director-in-charge, Shri Hiralal M. Parikh, for captaining the ship of industry with remarkable skill and ability. Thanks are also due to Shri J. D. Kora, the energetic Manager and Secretary of the Company, for his sincere efforts in achieving all-round progress of this concern and also the officers, staff, the labour and the customers for their sincere co-operation. I also thank our auditors and legal advisers for their valuable guidance.

"Thanking you all, once again, I now commend for your approval the resolution to adopt this report and accounts."

PROBLEMS OF MARINE INSURANCE

BRITISH SPOKESMAN ADVOCATES CAUTIOUS UNDERWRITING POLICY

SOME plain words of advice exhorting British marine insurers to adopt cautious underwriting practices were uttered by Mr. C. H. Johnson, Chairman of the Liverpool Underwriters' Association, at the annual meeting of the Association. British marine insurers have established a record of service which is well worth emulation by insurers in any part of the world. If impartial observers like Mr. Johnson find it necessary to exhort them to be cautious, then it should be clear that marine underwriters in other parts of the world are doubly in need of such advice.

Marine insurance is international in character. And the advice, which Mr. Johnson gave, has therefore a world-wide significance. It certainly applies to this country in which marine insurers have by no means been very prosperous. Claims experience is not as comfortable as one would wish. It is, however, true that one should not measure the worth of that experience with reference to a year or two, for the history of marine insurance shows that years of favourable experience may be followed by years of heavy losses. All the same, the words of advice of caution are not out of place.

Marine Profit

Even in the short run, it is not clear that marine underwriters are writing profitable business. Discussing the 'profit' aspect of marine insurance, Mr. Johnson said:

"Unfortunately, in marine insurance, the punishment does not always adequately fit the crime—some underwriting adventurers are saved by their overriding commissions. Despite published marine underwriting profits—not all of them earned in the same underwriting year—is it true that underwriters are making money? I believe that, if each section of our business could be costed as are manufactured goods in order to fix a proper sale price, we should find that large sections of hull and cargo businesses are not paying."

The reason why marine underwriting turns out frequently to be an unprofitable venture is that the underwriters sacrifice quality at the altar of quantity. As Mr. Johnson said, there is the incentive to write a large premium income. He said: "To some underwriters it may be the lure of a low expense ratio, to others it may be a mistaken idea of prestige, whilst some may be under pressure from those who sit in authority over them." He emphasised that, although the view might be "unpalatable," a definite policy of restriction would encourage underwriters to write more selectively and also strengthen their determination to eliminate bad accounts and so enhance the possibility of making an underwriting profit.

Competition

Proceeding, Mr. Johnson deplored the conditions of unbridled competition that prevailed in the insurance market. He did not, of course, suggest that marine underwriters should not be courageous. Only, he emphasised that courage could often be more effectively shown through an insistance upon a "fair contract than in blindly assuming large liabilities for too little premium." He added: "A lot of money has been lost in underwriting for lack of the courage to say No." He recognised that, "inevitably there must be competition to act as a natural check upon excessive rates." At the same time, it should be "reasonable." Explaining the place of competition in the sphere of insurance, he said:

"Competition is the natural rivalry found in all healthy business; it has led in the past to greater efficiency and is one of the safeguards to policyholders. Fair competition does not exclude co-operation between underwriters. No individual action, however, sound from the underwriting point of view, can effectively stem unbridled competition such as one meets with today. Expediency in meeting competition nullifies underwriting experience and leads to the substitution of hope for judgment, the former appearing to spring eternally in the breasts of underwriters. Rate-cutting does not call for either intelligence or skill but this disease is as catching and almost as devastating in its effect as myxamatosis! Even the most rabid rate-cutter will concede that, in these days of keen competition, a reduction in rate on one account or one class of business almost inevitably leads to reduction being demanded elsewhere; assured or their brokers generally have an uncanny sense of finding out when their competitors obtain more favourable insurance cover, and are not slow to demand similar favourable treatment, even where the experience of their accounts may not justify any similar concessions.

"The general reluctance to jeopardise the retention of any account is due largely to the individualistic attitude of some underwriters whose competitive inclinations have forced the pace against any sense of discretion. They reserve to themselves the right to make any rate necessary to keep an account, irrespective of results or conditions. Consideration of present-day market conditions is too often assumed to concern only the two parties to the marine contract—the assured and the underwriter—overlooking the brokers, whose potent influence, I fear, generally depresses rates and broadens conditions. On the other hand, let me say frankly that the responsibility for a weak market does not rest upon the brokers. One cannot stress too emphatically that, if all underwriters stood by agreements and in other matters used normal discrimination, they have the power in their own hands to say what shall or shall not be done."

Reinsurance

Marine insurers the world over are greatly indebted to the British insurance market for the reinsurance facilities it offers and without which the insurers would hardly be able to carry the wide range of risks involved in marine insurance. Reinsurance facilities are, however, open to abuse. In Mr. Johnson's view, they are being abused. He said that the "prostitution of reinsurance as is seen today is aggravating many of the problems facing the market." He warned that this "indiscriminate support of reckless underwriting here and overseas may ere long have a boomerang effect." Pleading for caution in the acceptance of reinsurance risks, he said:

"Original underwriting companies are encouraged to underwrite on unsound lines at rates which, when further reduced by heavy deductions, are hopelessly inadequate to their reinsurers. The overriding commission which they retain gives them an eminently satisfactory rate on their low retentions. The facility with which reinsurance treaties are accepted, with unduly generous terms, suggest that many underwriters do not realise that they are providing the sinews of war to their competitors as well as encouraging the abuse of the proper function of reinsurance."

Suggestions

Since insurers in many parts of the world look to the British insurance market to provide them the support and the guidance they need, it is of utmost importance to the underwriters in all countries that the British market must be healthy and strong. From this point of view, Mr. Johnson made a few constructive suggestions. He stressed the need for setting up of a central bureau or clearing house with the object of collating underwriting and claims data for the use of the market. He added:

"Either through such a central body or preferably, through our existing underwriting organisations, underwriters could have as their targets:

"(1) (a) The "pooling" of British market experience and the exchange of information with other national underwriting associations; (b) recording of business showing bad results.

"(2) (a) The investigation of risks with a view to their elimination or reduction by co-operation with the assured, carriers and other third parties in whose care the goods may be during transit; (b) continuous surveys of experimental shipments designed to find out when and where damage or loss occurs; (c) representations to shippers of improved methods of packing and, also, to carriers where they should take more care in carriage and handling.

"(3) (a) Reduction of claims costs, surveys, adjustment. (b) Collection and assimilation of the vast amount of information acquired by cargo surveyors at underwriters' expense about damage of various types to all classes of goods, both raw materials and manufactured goods, all too rarely made available to underwriters. (c) Marine claims settling agents and their surveyors could be used to gather information about the conditions of various commodities on outturn at destination.

If the suggestions made above were implemented, there is no doubt that there would be a welcome improvement in the claims experience of marine insurers. It should be clear that, if insurers joined together and studied their common problems, they would be able to achieve better results than what they could, if they acted individually.

INSURER'S INVESTMENT

An interesting question as to whether the money spent by an insurer in constructing an imposing building was an extravagant expenditure came up before Mr. G. K. Damodara Rao, Additional Judge, City Civil Court, Madras, who held that it did not constitute extravagant or imprudent expenditure. The case arose out of a representative suit filed by two policyholders of the United India Life Assurance Company, Ltd., praying for a permanent injunction to restrain the Company from expending any moneys belonging to the policyholders' trust fund for the construction of the proposed 14-storey building in the city. The plaintiffs contended that the trust deed of the Company provided that the policyholders' fund should not be vided under the trust deed. In 1939, the Directors amended the Articles of the Association of the Company which enabled them to make such investments of trust funds as provided in the amended Articles. The plaintiffs' contention was that the Directors had no right to amend the Articles of the Association and, since the policyholders were the true beneficiaries of the trust fund, their consent should be taken before amending the Articles. They further argued that, since the Company already possessed a big building, the proposed construction would be an "extravagant and unwise investment." On behalf of the Company, it was contended that the plaintiffs' rights were restricted by the terms of the policy contract and that the plaintiffs had no other interest in the Company.

The Judge, after analysing the evidence in the case, held that the trust deed was intended not for making policyholders beneficiaries but to create a fund to satisfy the claims of policyholders. The fact that a direct claim against the trustee was prohibited and they had only to look to the Company for payment negatived the plaintiffs' claim that they should be regarded as beneficiaries. As regards the argument that a new building was unnecessary, he said:

"I am not in the least satisfied that the proposed investment on an imposing building on Mount Road for a very progressive insurance company, which now bids fair to compete with the leading insurance companies in India, is an imprudent and extravagant investment. On the other hand, I would even state that the proposed building would enhance the reputation of the Company and double its business and the imposing edifice will not only be a standing monument infusing confidence in the minds of the policyholders, both present and future, but will also afford them such security financially which such an imposing building is bound to give."

Emphasising that the Company proposed to spend Rs. 60 lakhs on the building, as against Rs. 87 lakhs which the management had been permitted to invest in other than "approved investments," the Judge held that the proposed investment was not extravagant and did not also offend the provisions of section 27A of the Insurance Act. He pointed out that it was also of some importance to note that the Controller of Insurance who had been apprised of the proposed investment, had not objected to it. Accordingly, he dismissed the suit.

INSURANCE ACT AMENDED

Last week, the Lok Sabha passed the Insurance Act (Amendment) Bill, which seeks to empower the Central Government to apply such of the provisions of the Insurance Act as it thinks desirable to the insurance business carried on by the Government. The Bill amends suitably section 118 of the Act. This section, as it stands at present, does not permit the application of the Act to Government-sponsored insurance business. It would appear that this has resulted in the denial to the policyholders of the Post Office Life Insurance Fund of the rights of assignment or of transfer of policy or of nomination. The original nominations made by policyholders are irrevocable whereas in the case of private insurers the policyholders can change the nominations. The Bill seeks to remedy this defect by empowering the Government to apply any provision of the Insurance Act to any Government-sponsored insurance business.

In the course of the debate, a member from West Bengal pleaded for extending Postal Insurance to the common man until the Government nationalised the insurance industry in the country. Replying to the debate, Mr. B. R. Bhagat, Parliamentary Secretary to the Finance Ministry, said that Postal Insurance had been extended recently to the employees of the Government-sponsored commercial and industrial undertakings. He did not think that it would be practicable for the Government to extend Postal Insurance to the public at this stage, as the "proposition was beset with administrative difficulties."

COMPTOIR NATIONAL D'ESCOMPTE DE PARIS

(FRENCH BANK)

(Incorporated in France with Limited Liability)

BALANCE SHEET OF INDIAN BRANCHES AS AT 31st DECEMBER, 1954

CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.
1. Capital— Deposited with Reserve Bank of India under Section 11 (2) of the Banking Companies Act 1949, Government Securities of the face value of Rs. 20,50,000 included in investments on the opposite side.	Not applicable

Manager for India.

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National d'Escompte de Paris, as at 31st December, 1954, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the audited returns of the Calcutta Branch, and report that :—

(a) we have obtained all the information and explanations which we have required ;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches ; and

(d) in our opinion books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 30th March, 1955.

INDIAN ALUMINIUM COMPANY, LIMITED

CASE FOR INDIA'S INTENSIVE INDUSTRIAL PROGRESS PRESENTED

MR. K. C. MAHINDRA ON OUTLOOK FOR ALUMINIUM

PRESIDING over the Seventeenth Annual General Meeting of the Indian Aluminium Company, Ltd., held at Calcutta on Wednesday, 27th April, 1955, Mr. K. C. Mahindra, Chairman, emphasised the need for intensive industrialisation of the country without relaxing the efforts on the agricultural front. At the same time, he urged the planners to remember that mere increase in production without a corresponding increase in consumption would not add to the strength of India's economy. He called upon industrialists and business men to serve the Government by offering their disinterested and expert advice "whether it is heeded or not." He said: "Confidence in business sector has to be regenerated in Delhi." As regards the immediate outlook for the aluminium industry, he expressed "restrained optimism." The industry was still in a nascent stage and low prices and considerable development were necessary to win markets which, in turn, would result in larger and lower cost production.

The following is the text of Mr. Mahindra's speech:

"The year just ended was the second successive year in which the Company has suffered a loss on its operations. This result is no doubt as disappointing to you as it is to me, particularly in view of the fact that the market demand for aluminium in the past year has been relatively good and sales of the Company's products, amounting to almost Rs. 2 crores, were the highest achieved in any year.

"As has been briefly stated in the Directors' report accompanying the audited accounts sent to you, the main factors responsible for our not being able to make any profit were the highly competitive market conditions during the greater part of the year and the loss of metal production due to inadequate power supply to the Company's Alupuram smelter.

"Until recently, imported aluminium sheets and circles were being offered in India at prices which bore no relation to the level of prices in their respective home markets; for instance, circles from the U.K. were being quoted as low as £222 per ton, and circles from Japan at £215 per ton c.i.f. Indian port. Such prices would hardly cover the full cost of production, and can only be explained in the light of surplus fabricating capacity in their respective countries, and the vital need, in the case of Japan, to earn foreign exchange for its national economy. In the face of this severe competition, the prices that the Company could obtain for its products were quite unremunerative, but, with better market conditions, prices are now improving and I look forward to profitable trading conditions during the current year.

Outlook

"However, the outlook for the immediate future must be one of restrained optimism. The aluminium industry is still a nascent industry, and low prices and considerable product development are necessary to win markets which in turn will bring larger and lower-cost production. Our customers may rest assured that we do not seek high prices, but only reasonable prices, and that we look to increasing consumption of aluminium, on the basis of favourable quality, service and prices, as the source of future prosperity for our industry.

"At practically every annual meeting, I have had occasion to speak on the subject of power supply to our Alupuram Works. I regret having to refer to it again and the distress it has caused to us in respect of our past year's operations. Under our agreement with the Travancore Government, power supply should have been increased to 14,000 kw. by March, 1947, but, after long delay and repeated postponements, the Government finally intimated that the additional power would be made available to Alupuram Works from 1st June, 1954. The expansion of the smelter to 5,000 tons annual capacity was accordingly completed by 1st June, but it was not until 18th February, 1955, that full power was made available, almost nine months after the revised agreed date for the supply. This delay in receiving full power supply resulted in the loss of over 1,000 tons of metal production at the smelter, which had to be replenished owing to our commitments by purchases of imported and indigenous metal at considerably higher cost. However, the plant is now operating at full capacity and we are assured that there will be no need for any interruptions in full power supply in the future. I hope this ends the unhappy chapter in our relations with the Travancore-Cochin Government and that future co-operation will not be marred by recrimination over past events.

"The expansion of the Company's smelting facilities at Alupuram and rolling facilities at Belur, started in 1953, has now been completed. The extrusion plant located near the smelter at Alupuram has also come into operation. The new equipment at Belur can roll coils of lesser thickness and greater lengths, required for the manufacture of foil. Sheet over six feet in width can also be rolled for the needs of the transportation industries. A corrugating machine turns out roofing and siding sheets for pre-fabricated constructions—dwellings, offices, storage godowns and grain bins. The extrusion plant at Alupuram is designed to produce a variety of shapes, tubes and sections for structural or architectural applications.

Scope for Aluminium

"By making aluminium available in an increasing variety of semi-fabricated forms and at the same time providing other manufacturers with technical help so that they can design and fabricate numerous finished products where aluminium can be suitably used, the Company is trying to promote the use of aluminium in all applications where it has proved its superiority over other materials. It is a pioneering effort, but, in this virgin field, the potentialities for growth for this young metal are great indeed.

"One relieving feature of this year's Finance Bill, giving effect to the Central Government's budget proposals, is the provision for a development rebate of 25 per cent. of the cost of new plant and machinery installed after 31st March, 1954, which will be deductible from business profits for tax purposes. Particularly welcome to us is the fact that the Company will obtain this benefit for the entire plant and machinery involved in the recent Alupuram and Belur expansions. The Government has also under consideration the recommendation of the Taxation Enquiry Commission for a tax-holiday for six years for certain industries of national importance, and, if this proposal is accepted and the concession extended to the aluminium industry, it would constitute a substantial encouragement for further expansion of production facilities which are still quite inadequate for the country's needs.

Smelter at Hirakud

"During the past year, the project to build a smelter at Hirakud has been under active consideration, and your Directors have had consultations with the major shareholders in regard to its financing. The complex issues involved require further examination before a decision can be reached, and, in the meantime, the position in regard to the date when adequate firm electric power will be available from the Hirakud power stations will also have been clarified.

"In my address to you last year, I stated that the problem of chronic and enforced idleness amongst millions in this country cannot be resolved, unless we adopt long-term measures for restricting the birth rate. Too many mouths to feed will remain a standing menace to the target of abundant economy toward which all our plans are directed.

"During the year, the Finance Minister prescribed the goal of providing 12 million new jobs by 1961 but did not tell us how to reach it. It cannot be too strongly emphasised that unemployment remains a direct coefficient of the productivity of the nation. While in the matter of population, this productivity needs to be restrained, in the matter of work, every effort should be exercised to make people work more intensively if we are to arrive at a sensible solution of this chronic problem. Today, the average American, though he works 15 per cent. fewer hours, has roughly 50 per cent. more purchasing power than he had 25 years ago. This remarkable advance is almost entirely a result of the fact that national productivity, which may be defined as average output per man-hour, has shown an average annual increase since 1930 of more than 2 per cent. a year. The most important requirement for increasing productivity is the 'will to realise it—not only the desire for it but the hope for it and the optimism about it—packed by resourcefulness and incentiveness and coupled with the willingness to sacrifice to accumulate capital.' I am tempted to give another quotation—'In the last analysis, productivity of labour is the most important, the principal thing for the victory of the new social system. Capitalism created a productivity unknown under serfdom.' In our present tolerant receptive mood for things and ideas flowing out of the Russo-Chinese zones, I commend this quotation from the pen of Nicolai Lenin.

India Skidding Back

"In the adoption of modern technological methods of production, what do we find in actual practice? The call for support of handicrafts and cottage industries comes from various quarters, but I do not see there any recognition of the fact that efforts in this direction have so far been clouded with the illusion of primeval simplicity and provide support for backwardness and inefficiency. We seem to be skidding back in time. Even the Prime Minister has stated, perhaps in an unguarded moment, that 'we could remove the unemployment problem in India today by breaking down all the factories in India.' He added, however, that, 'although everybody will be working, their average income will go down and that there will be trouble.' Yet some very sincere advocates of what has come to be known as the Sarvodaya theory of economics, have taken issue with the Prime Minister on the statement that the average income will go down. They seem to believe implicitly that the closing of all factories would provide living for a larger number of people and that there would be no shortage in the production of goods and articles. Their theory seems to be that, if the factories were to close down, everyone now compelled to remain unemployed, would be inspired to take to some work or other and we would have more production as a matter of course!

Industrialisation

"The case for intensive industrialisation in India lies in a bare recital of the facts of the situation today. In temperate zones, where rainfall is uniform throughout the year, one arable acre will support one person. India has only three-quarters of an arable acre per person and unpredictable rains. By a combination of research and agricultural credit renovations, Japan was able to increase in pre-war years its standard of living cumulatively by 3 per cent. every year. This, however, necessitates the development of manufactures side by side in an increasing measure and over the years Japanese economy became a typical export economy in order to sustain the increasing standard of living. Likewise, with similar emphasis on intensive upgrowth of our agricultural economy, India would need to develop her manufactures, inclusive of ever-widening the volume and the sphere of our exports.

"Domestic capital formation in India is running about Rs. 20 *per capita* or $4 annually, as compared with $130 for U.K. and $385 for U.S. Another worthy comparison is the average deposits per head:—In India Rs. 25, in U.K. Rs. 1,636 and in the U.S.A. Rs. 4,493. We have, however, been told that finance is no problem and we may accordingly ignore this slack. But an important factor which usually escapes the attention of planners is what may be called the consumption element. More and more production is asked for but, unless consumption keeps pace, such production will not add to the strength of our economy. Lord Beveridge, in his classic thesis on unemployment in Great Britain, has attributed the growth of unemployment, principally to chronic or recurring deficiency of total demands for the products of industry. He comes to a valid conclusion that State policy should be one of socialising demand rather than socialising production. Only recently, our Prime Minister stated that the most important consideration must be what could be done for providing fuller

employment because mass production of commodities would not raise the standard of living unless there was mass consumption which means that the mass, as a whole, must have greater purchasing power.

"We accordingly come to the theme of social justice. There is a cry for redistribution of wealth and for taking the spending power away for the rich unto the hands of the poor. In the latest fashioning of society into socialistic pattern, the well-known classic method has been preached and partly accepted by the Government, namely, to intercept the flow of wealth before it reaches private pockets. No one appears to have stopped to compare the virtues of levelling up, instead of the levelling down which the present socialising process has done.

"It still remains true that general purchasing power must increase, in order to be able to absorb increased production. It is generally recognised that a more than liberal treatment of the working class is necessary but it is not at all necessary to demolish the carefully nurtured plant of industrial content in the hope of replacing it by a full-grown tree transplanted from elsewhere.

Government Needs Guidance

"One fact of the unemployment problem is the maximum utilisation of resources available in the country. Direction no doubt must come from the central planning authority. It is agreed that Government actions, its decrease, its engagements should provide the maximum propulsive push to development, but, in the designing of such a movement, business men can play a leading part and I would like to submit that initiative in this direction should come from individuals—men of experience and knowledge, ungrugingly and with no personal motives, should come forward to assist. We have the sorry spectacle of Government planners in their zealous search for technical collaboration becoming a ready prey to over-eager talk from questionable interests. For steel, we have gone to Russia, for shipbuilding to France, for machine tools to Switzerland—all very amiable arrangements, but Russians are not reputed to have the most modern technology in steel operations, nor the French in shipbuilding, nor the Swiss in machine tools manufacture. Must we import antiquated practices in our haste to install industrial facilities in the country? Business men must take a share of the blame for such happenings and should proceed now to initiate actively the promotion of safeguards for the future. Then again in the pattern of development is it not wise for Government to concentrate on projects of the maximum labour-employing type and leave the capital-intensive schemes for the private sector to develop? Government has had long experience and has the necessary personnel and organisation to develop intensively the housing programme, the slum clearing projects, the roads and communications, the large irrigation and hydro-electric multiple works—all these provide employment to the largest number of people, per rupees of investment. To the private sector may be left such schemes where heavy capital investment is involved proportionately to the number of people who will receive employment.

"Full employment is not a ridge but a plateau where there should be considerable room for manœuvre. Here is where cumulative business experience can be most helpful. I do not belong to the 'gloom and doom' tribe of business men. If Government in its collective wisdom has restricted the free play of economic forces which we, as business men consider detrimental, we should in our turn attempt, honestly and convincingly, to persuade Government of the error of its ways; such should be the democratic concept of behaviour. We have failed to do so, because of our sectional interests. Appeals have been made for a closer liaison between Government and private industry. In the present atmosphere no number of advisory or consultation bodies will supplant the honest, true-to-fact recitals of arguments for or against certain policies and procedures and I suggest that we as men of experience should provide such a service to Government irrespective of whether it is heeded or not. Confidence in the business sector has to be regenerated in Delhi and I submit that through service, service on a national level and inspired by the national ideal, we can recapture the trust and the ear of our legislators. The vista of our industrial horizon presents a glorious opportunity and 'all are needed by each one; nothing is fair or good alone' (Emerson).

"In conclusion, I would like to express, on your behalf and mine, our appreciation of the loyal services rendered by the employees of the Company during the course of another difficult year."

EUROPEAN COMMUNITY OF COAL STEEL

A TRULY INTERNATIONAL GOVERNMENT

THE European Coal and Steel Community is an attempt to circumvent the economic consequences of the political division of Europe. This fragmentation had created a state of affairs in which the closing of the frontiers and the narrowing of the markets were seriously impeding the economic development of Europe. It was found that the European countries could not maintain a level of economic existence suited to the modern world within the limits of their political frontiers. The price which Europe was paying as a result of these conditions can be vividly realised by considering the following facts:

In 1913, the six countries at present forming the Community, namely, Germany, Belgium, France, Italy, Luxembourg and the Netherlands, were producing among them almost as much steel as the United States and six times as much as Russia. But, in 1952, the same six countries had come down to half the American production and hardly more than that of the Soviet Union. In the 23 years between 1929 to 1952, the American steel production had increased by two-thirds, and that of the Soviet Union had increased seven times, while the production of the six countries had been raised by only one-fifth. The creation of a great internal European market had become necessary in order to give to the Europeans an opportunity to regain their place and play their proper role in the modern world.

The European Community of Coal and Steel is the first organisation of the federal type in Europe. It is founded on the pooling of all the resources in coal and steel of the countries already mentioned within a common market, subject to a common administration and regulated by common institutions acting in the interest of the whole Community. It has broken with the conventional system of international organisations, in which the representatives of the member-States act according to their respective national mandates and often exercise a veto. The Community, on the other hand, is a supra-national body, formed by a fusion of the national sovereignty of the constituent States and charged with the duty of looking after the common interests and enforcing common regulations.

The Mission of the Community

The main objects of the Community are, first, to maintain a common market for the two products of coal and steel, which by reason of their importance in human society can furnish a starting point for European unity; secondly, to raise the standard of living by encouraging an economy of expansion through competition, which, given the size of the market, will make possible a lowering of the cost of production; thirdly to ensure continued production at the highest possible level and to safeguard employment.

The industrial hub of Western Europe has the form of a triangle, of which each side measures about two hundred miles in length. It covers the coal of the Ruhr, north France and Belgium. It is delimited in the south by the coal and iron deposits of Lorraine, the Sarre and Luxembourg. In spite of its relatively small area this territory produces about 60 per cent. of the coal and 70 per cent. of the ferrous minerals of the Community.

Not a single country within the Community is self-sufficient. Germany produces only about half the iron needed by her furnaces; France buys one-third of her coal and half her coke, most of which come from the Ruhr; Belgium and Luxembourg export two-thirds of their production to the world market, but they in their turn are dependent on the minerals from Lorraine and the Ruhr. In order to reach full development, each country has to share its resources with the other countries.

The territory of the Community extends over 1,300,000 square km. with 160 million consumers, and its resources amount to 6 per cent. of the total production of the six countries and 15 per cent. of the industrial production, employing 1,750,000 individuals. In order to create the common market, all the restrictions on commercial exchange on the territories of the six nations have had to be abolished. The Community has had to eliminate about 1,500 miles of land frontiers which formerly separated the six countries. Within the territory of the Community, all restrictions in regard to exchange, tariffs and customs have been abolished. Every European consumer of iron and coal is now free to buy his coal and steel anywhere within the Community, as it suits his interest, and he is assured that he will not be subject to discriminatory treatment. As a result, the internal exchange of goods within the Community has increased markedly and steel and coal production has reached its highest figures yet in 1954.

Organs of the Community

The treaty which set up the Community (signed on 18th April, 1951) is valid for 50 years and it has created the following organs for the functioning of the Community:

(1) *The High Authority*: This is composed of nine members and is the executive organ of the Community. Its President is appointed by the common consent of the States Members, and this body which may be called a European Government confined to steel and coal, takes decisions which become immediately operative within the territory of the six countries. Its function is to create and maintain the common market by doing away with the customs barriers and encouraging free movement of goods within the Community.

(2) *The Consultative Committee*: It is composed of 51 members, representing the workmen, consumers and merchants, and the producers in equal numbers. Its function, as its name implies, is to advise the High Authority in all matters when decisions affecting the Community are taken.

(3) *The Common Assembly*: It is, so to say, the parliament of the Community. It is composed of 78 members elected by the legislatures of the countries concerned, and its purpose is to maintain the democratic character of the Community by controlling the action of the High Authority. The Assembly can overrule the latter by adopting a motion of censure by a two-thirds majority, after examining the annual report which the High Authority submits to it. The Assembly meets at least three times a year, and its seat is at Strasbourg.

(4) *The Court of Justice*: The tribunal, consisting of seven judges, has the power to confirm or annul the decisions of the High Authority. All disputes in connection with the interpretation of the treaty are dealt with, not by the national Governments concerned, but by this body. The judgments of the Court are obligatory on individuals, corporations, Governments and even on the High Authority.

(5) Last of all, there is the *Council of Ministers*, which is constituted by the Ministers concerned of the six countries. Its function is to co-ordinate and harmonise the activities of the High Authority with those of the Governments of the countries of the Community. It is a co-ordinating organisation and not one of supervision.

In short, the Community is founded and it works on the principle of a truly international Government.

Steelmaking furnaces in the United States produced 9,979,000 net short tons of ingots and castings in March, the third highest monthly total on record and 2,700,000 tons more than in March 1954. Last month's output was exceeded only in March and May 1953. Trade sources report, meanwhile, that the steel upsurge is accelerating rather than abating. *Iron Age* magazine predicts that production, which has reached 95 per cent. of capacity in recent weeks, will reach a peak of 98 per cent. this year. All-time output records may be set in the next few weeks, the magazine says. Even a dip in automotive demand, if it should come, is causing little apprehension among steel makers, in view of the rising demand from other industrial consumers.

THE HINDUSTAN COMMERCIAL BANK, LIMITED

DIRECTORS' REPORT TO SHAREHOLDERS

GENTLEMEN,

The Directors beg to submit the audited Balance Sheet as at and the Profit and Loss Account for the year ended 31st December, 1954.

The profit for the year including the balance of Rs. 15,159-15-0 brought forward from the last year and after providing for all working expenses and depreciation, etc., amounted to Rs. 86,918-14-6. Your Directors have decided to make the following appropriations therefrom :—

	Rs. a. p.
1. Amount utilised for writing off of Bad Debts	70,000 0 0
2. Balance to be carried forward to next year's account	16,918 14 6
Total .. Rs.	86,918 14 6

The business of the Bank during the year under review continued to be satisfactory.

The Bank's branches at Mauranipur and Dehra Dun have since been closed down as the same were found to be unremunerative.

The Directors express their gratitude to the Bank's Constituents and Shareholders for their continued confidence and support.

The Directors have examined the list of Accounts drawing their special attention, as received from the Auditors and are of opinion that the Accounts mentioned therein are either not bad or doubtful or have either been written off and that the Bank holds adequate provision for them as much as is considered necessary.

According to the Articles of Association of the Bank, three Directors, viz.,

1. Sir Padampat Singhania, Kt.,
2. R. R. Kedar Nath Khetan, and
3. S. R. Sardar Gurbaksh Singh,

retire by rotation from the Board and are eligible for re-election.

You are requested to appoint Auditors for the current year and to fix their remuneration.

For and on behalf of Directors,

PADAMPAT,
Chairman.

KANPUR, 29th March, 1955.

BALANCE SHEET AS AT 31st DECEMBER, 1954.

CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.
1. Capital—

MOVE TO ADOPT METRIC SYSTEM OF WEIGHTS AND MEASURES

SUGGESTIONS OF I.S.I. COMMITTEE RECALLED

[The adoption by Parliament of a private member's resolution recommending the adoption of a uniform system of weights and measures has led to a revival of public interest in the introduction of metric system of weights and measures, and in the allied subject of decimal coinage. Both these reforms have been accepted in principle by the Government of India which has set up a Central Committee under the chairmanship of Mr. N. Kanungo to implement them. The article on this page gives an interesting account of the genesis and the progress of the movement for the introduction of metric system of weights and measures.—ED.]

EVEN in the nineteenth century the question of standardising weights and measures in India received a great deal of attention from successive Governments, Central and Provincial. The work of the Committee appointed by the Government of India in 1867-68 is worthy of special mention. It recommended the adoption of the English standard of weights and measures; but on a strong note of dissent by Col. Richard Strachey, himself an engineer and an administrator, with which two other members agreed, official opinion swayed in favour of the metric system and the Government of India passed the Indian Weights and Measures Act of 1870 which defined the kilogram as the standard of weight. This Act did not receive the sanction of the Secretary of State as it was considered to be too drastic. A modified Act equating the seer to the kilogram—Act XXXI of 1871—also remained a dead letter. Thereafter, the metric system seems to have gone out of favour and in 1889 the Measures of Length Act was passed fixing the Imperial yard and its sub-divisions as the primary units of length. This Act is still current.

In 1914, another committee, after an extensive survey of the diversity of weights and measures in the country, recommended that a uniform system should be adopted throughout India. As regards the system, two members recommended a combination of the English and Indian systems while the third member put in a strong note of dissent advocating the adoption of the metric system. No immediate legislative action was taken following this report and it was only in 1939 that the Standards of Weights Act (Act IX) of 1939 was passed repealing the Act of 1871. This new Act prescribed the weights in terms of the tola-seer-maund series and the grain-pound-ton series. Since the enforcement of the Weights and Measures Act was in the hands of the Provinces, some of them passed the necessary Acts incorporating the provisions of the Central Act. These included Bihar, Bombay, Madras, Orissa, East Punjab and Uttar Pradesh from the Part A States, Hyderabad, Madhya Bharat, Mysore, Rajasthan and Travancore-Cochin from the Part B States and Bhopal and a few other Part C States. Actual enforcement does not appear to have been particularly effective. The local weights and measures still continue to be used in most of the States, varying from village to village and market to market, causing a lot of confusion in the day-to-day trade in the country.

Since 1939, opinion in favour of the metric system has been steadily growing. The manufacturing sub-committee of the National Planning Commission of 1940 and the Indian Science Congress in 1946 under the presidentship of Mr. Jawaharlal Nehru favoured the adoption of the metric system. In 1946 a Decimal Coinage Bill was introduced by the Government in the Central Legislature.

To investigate this matter more thoroughly and to make specific recommendations to the Government of India about weights and measures, the Indian Standards Institution (I.S.I.) appointed a special committee in May, 1948, with the concurrence of the Government of India and in pursuance of one of the functions of the I.S.I., namely, "to consider and recommend to the Government of India national standards for measurement of length, weights and energy." This special committee consulted all the States and various industrial, commercial and trade interests as well as Government Departments and others connected with the problem, and finally recommended that the best solution to the problem was the adoption of the metric system of weights and measures over a period of 11 to 15 years, preceded by the introduction of decimalised coinage. It recommended three stages for this purpose, namely, a preparatory stage of three to five years in which no extensive changes would be made but large-scale propaganda would be undertaken and gradual introduction of change-over encouraged; a change-over stage of about five years in which the change-over would be effected in the agencies under the control of Central and State administrations and in public life; and a final stage of three to five years when the country would be brought over to the metric system entirely and after which no other system would be regarded as legal. It recommended that decimalised currency should precede the final adoption of the metric system of weights and measures.

As the report of the Sub-committee, which was endorsed by the General Council of the Indian Standards Institution, involved radical

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the Balance Sheet of the Hindustan Commercial Bank Ltd., as at 31st December, 1954, as above set forth and the annexed Profit and Loss Account for the year ended the same date with the books and accounts kept at the Head Office in Kanpur in which are incorporated (a) the returns of the Bank's Branches in India and Pakistan certified by the respective Branch Managers and annexed at the Head Office on the basis of the information with the Head Office, and (b) Statements of Accounts prepared at the Head Office based on the records of the various other branches in Pakistan which were evacuated in the year 1947. Subject to the comments disclosure and adequate provision for Bad and Doubtful debts and the notes appearing on the face of the Balance Sheet, we report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank.

(c) The returns received from the Branch Offices of the Bank have been found adequate for the purpose of audit.

(d) In our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.

(e) The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of Profit for the year according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office, and

(f) In our opinion, Books of Account have been kept by the Bank as required by Section 150 of the Indian Companies Act, 1913.

changes from the existing system, the recommendations had to be studied with reference to their repercussions on each branch of national life including trade and commerce, and the private and public sectors of industry. Doubts were felt in some quarters whether the implementation of the recommendations could be undertaken at this juncture when there were so many urgent demands on Government resources. On the other hand, the advantages of adopting the metric system were also many. There is no uniformity in regard to weights and measures in the country and this leads not only to confusion but also to a great deal of exploitation by the unscrupulous of the ignorant. Moreover, now that India is embarking upon a heavy programme of industrial development, the country has to make a choice between the two major systems of weights and measures which are internationally prevalent. Of these, the metric system is by far the more important and used in scientific and technical research all over the world. The metric system, moreover, has considerable advantages of simplicity from the point of view of mass education. Indeed, as a country which invented the decimal system, it is curious that its use in weights and measures in this country has remained so insignificant. In order to make a proper assessment of the advantages—as well as the difficulties—in introducing the metric system in the country, the Planning Commission on the 30th August, 1954, decided that Mr. Pitambar Pant should undertake a full study of the problem and prepare a memorandum for the consideration of the Planning Commission.

Gradual Transition

Further studies were, therefore, undertaken by Mr. Pant in consultation with the Indian Standards Institution and the Ministry of Commerce and Industry and other Ministries of of Government to ascertain the general opinion of the industry as well as the Central Ministries, on the introduction of the metric system and the cost that it was likely to involve in the public and private sectors. The Ministry of Commerce and Industry, through a circular issued to a large number of industrial units, obtained firsthand information regarding the views of organised industries on the subject and also of the cost that was likely to be incurred by the industry if the metric system was finally adopted. The general conclusion reached on the basis of the replies received from these industrial units is that the metric system could be adopted without much difficulty or adverse repercussions provided the transition is spread over a period of 10 to 15 years. As regards the cost of conversion, it is expected to be of the order of Rs. 1 crore per year over a transition period of 10 years.

After considering Mr. Pitamber Pant's report the Planning Commission has come to the conclusion that the metric system of weights and measures and decimal coinage should be accepted in principle and necessary steps should be taken to introduce them throughout the country. For this purpose it has recommended the setting up of a Central Metric Committee to consider:

(a) the form in which legislation should be introduced;

(b) the phasing of the actual change-over from the present arrangements to the metric system; and

(c) other work connected with the change-over such as education and propaganda.

The Central Committee will function under the chairmanship of Mr. N. Kanungo, M.P. Deputy Minister, Commerce and Industry, and will have the right to co-opt representatives of State Governments as well as experts whose presence on the Committee is likely to prove helpful. The co-operation of the State Governments is of the greatest importance to the success of the scheme, because, constitutionally, while the Centre has the power to prescribe the standards in regard to weights and measures, the actual implementation and enforcement of these standards is a State responsibility.

The lines on which the reform of weights and measures should take place have been broadly indicated by the Special Committee appointed by the Indian Standards Institution to consider the question of national standards for measurement of length, weights and energy (to which a reference has been made above). The Committee reviewed the great diversity of weights and measures prevailing in India. It felt that, in order to facilitate the development of the national and international trade and to put an end to the colossal loss in time and energy caused by this diversity, the weights and measures in use in this country should be standardised. It endorsed the resolution of the Interim Government of India of February, 1947, and recommended that the metric system should be adopted as the standard system of weights and measures. A summary of the Committee's recommendations is given below:

In view of the impending development programmes for the establishment of centrally controlled industrial and technical establishments, the Committee recommended that, as early as practicable, metric standards should be introduced in all the agencies under the control of the Government of India, such as the Railways, the Postal services, the Defence services and other scientific, technical and industrial establishments. As regards the adoption of the metric system of weights and measures in the general public life of the country and in everyday trade activities, the Committee realised that the process would have to be necessarily slow.

Nomenclature

The Committee recommended that in the event of the adoption of the metric system of weights and measures, its international nomenclature be adopted *in toto*. The Committee further recommended that, in the event of the Central Legislature preferring the adoption of Indian or Indianised nomenclature for the corresponding metric units, it was important to avoid the retention of the existing names such as *sair, guz*, etc., as they were liable to lead to confusion in the minds of the public. Mr. B Singh, who represented the Federation of Indian Chambers of Commerce and Industry in the first meeting and then resigned, however, wished it to be recorded that he was not in favour of the adoption of the international nomenclature and preferred the nomenclature suggested in Dr. Verman's report, both for basic units and for multiples and sub-multiples.

The Committee realised that the expenditure required for the change-over to the metric system was likely to be considerable. It therefore recommended that the transition period be extended over a number of years and the actual change-over carried out in three stages as detailed below. The Committee was, however, satisfied that ultimately the standardisation, along the lines recommended, would more than repay the expenditure inevitable in its introduction. Its uniformity would lead to security to the masses in their day-to-day commercial dealings; its simplicity would result in a tremendous saving of time, money and energy in commercial and technical calculations and in education and training of the younger generation; its international character would help stimulate overseas trade; etc.

The change-over to the metric system, according to the Committee, should be carried out in three distinct stages, as follows:

(a) Preparatory stage of three to five years when no extensive changes would be enforced, but intensive education and dissemination of information on the metric system of weights and measures would be carried out and wherever practicable, gradual introduction of the metric system would be encouraged; (b) change-over stage of about five years in which the change-over will be effected in the agencies under the control of Central and Provincial administrations and in public life; and, (c) final stage of three to five years when the country would be brought over to the metric system entirely and after which no other system would be regarded as legal.

Again, the Committee recommended the creation of a central agency for guiding educational activity, for carrying on intensive propaganda to popularise the new system, for co-ordinating the activities of Central, Provincial and State Governments in respect of all the measures connected with the change-over and for acting as a clearing house of all information connected with the subject. This agency may or may not be needed after the third period, since all questions of enforcement will be the responsibility of the Provincial and State units.

The Committee considered the suggestion for specifically providing in Central and Provincial legislation for the mode of sale of different commodities and felt that such a provision would, to a large extent, remove the malpractices at present prevalent in the trade.

As regards decimalised currency, the Committee felt that it would be an advantage if the adoption of decimalised currency preceded the introduction of the metric system of weights and measures. It therefore recommended that the decision of the Interim Government of India for the adoption of the decimalised currency should be implemented as early as possible and also that weights and dimensions of the new coins should be related to the metric system of weights and measures, so as to facilitate propagation of general knowledge of the magnitude of the new units among the public.

With the above objectives in view, the Committee recommended that as soon as possible the Centre should initiate legislation on the subject of weights and measures which, among other things, should provide for the following:

(1) Standards of weights and measures (linear, square, cubic and capacity) based on the metric system.

(2) Nomenclature based on the international basic units and fractions and multiples thereof.

(3) Use of international nomenclature for basic units to be compulsory and universal.

(4) Indian nomenclature for multiples and sub-multiples may be adopted but in all these cases any name applying to a fraction or a multiple should contain the name of the basic unit, for example, 'centimeter' may be termed 'satakmeter', etc.

(5) Schedule specifying commodities of everyday use to be sold on the basis of specific units of either weight, volume, linear measure, square measure or number. A schedule or schedules may be found necessary allowing use of more than one set of units for certain commodities. Some members of the Committee, however, felt that this should form the subject matter of a separate Act.

(6) A model form of legislation for adoption by Provinces and States for the purpose of enforcement of standards. This model, among other things, should include tolerances of weights and measures to be allowed for different purposes. The Provinces and States should be required to adopt this model legislation as such but minor modifications may be permitted, if found absolutely necessary to suit local conditions.

(7) Creation of a central agency for education, propaganda and co-ordination of activities of Central Departments and Provincial and State units in respect of all activities envisaged to be carried out during the three stages of development.

(8) Defining the three stages of change-over and provision for periodic review of the time limits allocated for each.

The following programme of activities for the three stages of development was recommended by the Committee.

Preparatory Stage

(1) The Government of India to introduce the decimal system of currency in which the weights and dimensions of coins should be related to the metric system.

(2) Intensive education and propaganda programme, including the following: (a) teaching in elementary and secondary schools and in technical and engineering institutions, schools to keep samples of all standard metric weights and measures; (b) Press and radio publicity; (c) public speeches and Press conferences by eminent people; (d) publicity films (using mobile cinema wherever possible); (e) popular exhibitions; (f) publication of informative bulletins and pamphlets including conversion tables; (g) free distribution of conversion tables through post offices; (h) public discussions and symposia; (i) publicity through village *panchayats*; (j) the Government to sell to the public standard metric weights and measures at the beginning, later, private parties to produce and sell these units.

(3) All Central and Provincial units to initiate preliminary preparations and estimates of cost of equipment for conversion to the new system.

(4) Wherever regulated markets exist, the authorities controlling them might introduce the use of metric system in their day-to-day operations.

(5) All agencies to initiate designing their new schemes of development on the metric system with the ultimate object of going over to that system entirely at an appropriate stage.

(6) All engineering designs and plans which may be considered necessary to be executed on the basis of foot-pound system to give metric equivalents.

(7) The Centre to establish an official agency for the preparation, deposition and checking of primary, secondary and reference standards.

(8) Planning of enforcement agencies by Provincial and State units wherever they are needed and augmentation of existing agencies for the new task.

(9) If any of the Provincial or State Governments feel ready for the adoption of the model form of legislation suggested by the Centre, they should be free to adopt it during this period.

Change-over Stage

(1) Adoption by all Provincial and State Governments of the model legislation proposed by the Centre; (2) implementation of the planning suggested already; (3) all central agencies to go over to the new system from a red-letter day to be declared by each agency, retaining existing facilities only for replacement of parts of existing machinery; (4) all engineering designs and plans to be based on metric system giving foot-pound equivalents where considered necessary; (5) in everyday public use and for trade purposes, metric system to be gradually and progressively introduced; (6) land records to be changed to the new system at the time of transactions, such as transfer, sale or any other registration of land.

Final Stage

The final stage should be in the nature of a period of grace during which the change-over to the metric system would be finalised and the use of all other systems eliminated from the legitimate activities of all departments, Central, Provincial or State, and from everyday public life. Old land records, however, might remain in the older system of measure until any transaction takes place, when they will have to be changed to the new system. After the end of this period the metric system should be the only recognised system having legal sanction.

INDIA'S BALANCE OF PAYMENTS

MARKED CONTRACTION IN SURPLUS DURING LAST YEAR

THE sizable surplus of Rs. 58.7 crores witnessed in India's balance of payments on current account during 1953 suffered, according to preliminary figures compiled by the Reserve Bank of India, a marked contraction during 1954, to as low as Rs. 3.7 crores. An interesting feature, however, is that this low level of surplus was achieved on a higher level of foreign trade, with both imports and exports registering an increase. An even more welcome feature was the improvement in India's terms of trade which had suffered during the preceding year. In other words, this country was able to get more imports at a lower price, while exports fetched a higher price. Thus, although the surplus on current account was very much smaller than in the previous year, there is every reason to feel satisfied with India's performance on the foreign trade front last year. It is noteworthy that, while the level of world trade rose, as compared with 1953, by 3.6 per cent. only, India's total trade advanced by as much as 5.6 per cent. This is in marked contrast to the trends in 1952 and 1953 when the trade registered a sharp fall of 20 per cent. The table below reveals at a glance the overall position of India's balance of payments in 1954, as compared with that in 1953:

(Rs. in crores)

	1954	1953
(a) Imports	624.5	575.1
(b) Exports	548.8	536.0
(c) Trade balance	—75.7	—39.1
(d) Official donations (net)	+ 5.0	+18.4
(e) Other Government Invisibles (net)	+19.6	+22.0
(f) Private Invisibles (net)	+54.8	+57.4
(g) Total (d+e+f)	+79.4	+97.8
(h) Current account (g—c) (net)	+ 3.7	+58.7
(i) Errors and omissions	+ 8.2	— 2.8
(j) Capital account (net)	+11.9	+55.9

Current Account

It will be seen from the table above that the aggregate imports rose by Rs. 49.4 crores to Rs. 624.5 crores. Exports also rose but by only Rs. 12.8 crores to Rs. 548.8 crores. The adverse trade balance, therefore, widened from Rs. 39.1 crores in 1953 to Rs. 75.7 crores. As the causes for the rise in the adverse trade balance were explained in our issue of 23rd April, 1955, there is no need to refer to them once again here. Suffice it to mention now the salient trends which were responsible for this deficit. The higher imports were the result of an improvement in the availability of goods in foreign countries, the rising tempo of development in India and the Government's liberal import policy. There was, besides, a steep fall in the value of imports on Government account by Rs. 35.2 crores to Rs. 117.2 crores, thanks to curtailment in food imports. On the export front, the increase of Rs. 12.8 crores, as stated above, is significant, in that it contrasts with a steep decline of Rs. 113 crores in 1953. The credit for improvement in exports during the year under review goes to three principal commodities, namely, jute, cotton manufactures and tea, which rose, as compared with the preceding year, by Rs. 12 crores, Rs. 8 crores and Rs. 16 crores, respectively.

As stated earlier, the terms of trade, too, were favourable to India in regard to both export and import prices. This is reflected in the index of net terms of trade (base 1952-53) which rose from 100 in 1953 to 108 in 1954. Between 1953 and 1954, the index of import prices receded by about 3 per cent. to 91, while that of export prices rose by a more or less equal measure to 98.

In marked contrast with the deficit of Rs. 75.7 crores on visible trade account, there was a surplus of Rs. 79.4 crores on account of invisible trade in 1954 (*vide* (*g*) in the table above). This surplus in invisible receipts was, however, Rs. 18.4 crores lower than that in 1953. This fall is due to a decline in the official donations (*d*) from Rs. 18.4 crores to Rs. 5 crores. These donations were chiefly in the form of aid received under the Indo-American Technical Co-operation Agreement, the Colombo Plan and the Ford Foundation. The decline under this head is, it is stated, only apparent as data supplied have not been complete. There was also a small setback of the order of Rs. 2.4 crores in the receipts under the item "other Government invisibles" which amounted to Rs. 19.6 crores, as against Rs. 22 crores in 1953. Private invisibles (*f*) too revealed a fall of Rs. 2.6 crores from Rs. 57.4 crores to Rs. 54.8 crores.

Capital Account

As a result of these variations in the visible and invisible trade transactions, the balance of payments on current account (*h*) showed a surplus of only Rs. 3.7 crores in 1954, as stated at the outset. Corresponding to this surplus, transactions on capital account showed a net investment of Rs. 11.9 crores in 1954, as compared with the net investment of Rs. 55 crores in 1953 (see (*j*) on the table above). An analysis of the relevant figures shows that the balance on capital account is the result of transactions affecting both foreign assets and foreign liabilities. India's foreign exchange reserves, consisting of the foreign balances of the Reserve Bank, authorised dealers and the Government, increased by Rs. 4.1 crores. In respect of net assets on amortisation account, however, there was a reduction of Rs. 6.9 crores, mainly due to repayment of debt by Burma from the proceeds of rice sales to India.

On the liabilities side, there was repurchase of our currency from the International Monetary Fund equivalent to repayment of our short-term dollar borrowing to the extent of Rs. 22.2 crores (*vide* Table 2 given below). Deposits and investments of foreign official and banking institutions, however, rose by Rs. 15.4 crores during the year. Net private capital remittances (both short and long-term) and net imports of Indian currency brought about a further reduction of liabilities to the extent of Rs. 14.8 crores.

Other capital transactions such as the utilisation and repayment of long-term loans from the I.B.R.D., changes in the rupee balances of foreign individuals and in the ownership of portfolio securities increased the country's indebtedness by Rs. 6.9 crores.

The table below shows the net position of assets and liabilities under capital account during 1954:

(Rs. in crores)

	Assets	Liabilities	Net Asset
Private—			
Long-term capital	— 6.8	— 9.4	+ 2.6

NEW PROCESS IN FOOD PRESERVATION IN U.S.

United States scientists have developed a new food preservation process called dehydrofreezing. Apples, apricots, peas and pimientos are now being commercially preserved by this process. Other fruits and vegetables—cherries, peaches, carrots, boysenberries and diced potatoes—have been tested, and will likely be added to the list of commercial products as the new industry expands. The process was developed by the U.S. Department of Agriculture (U.S.D.A.) at its Western Regional Research Laboratory in Albany, California. It provides a means for adequate preservation and, because of the great decrease in weight, resulting from partial dehydration, for economical transportation from producing countries to other nations.

The dehydrofreezing process not only saves space and weight, but also retains the flavour and texture of fresh fruits and vegetables. Ordinary freezing tends to rupture cellular structure; and many frozen fruits and vegetables break down somewhat when thawed for consumption. Cells that have been partially dehydrated, however, are not ruptured so easily by the freezing process.

Dehydrofrozen foods retain approximately half of their original weight and volume. They are reconstituted for use in the home by soaking them in water. Essentially, the dehydrofreezing process consists of (1) conventional preparation of the commodity as for regular canning or freezing; (2) inactivation of enzymes, when necessary, to prevent browning; (3) rapid drying to reduce weight and volume by approximately one-half; (4) packaging and freezing; (5) storage or transportation at 0 degrees Fahrenheit.

Various types of drying equipment can be used, depending largely on the product. For instance, commercial prune-drying equipment has proved suitable for halved apricots, which take three to four hours for dehydration. Apple slices and pimientos can be dried in one hour or less. A continuous rotary drier has been devised by U.S.D.A. to suit the needs of the new process. This drier delivers air through the food by four separate ducts, each with a blower and steam coils. The tendency of foods to stick to the drum of the new machine has been partially overcome by a wire-mesh liner that reduces the area of flat metal surface. Longitudinal wood strips around the inside of the drum assure a mixing rather than a sliding action. A slow rotating speed of four revolutions a minute avoids abrasion.

Pies made from dehydrofrozen apples are delicious—as good as any made from the fresh fruit. In general, apple varieties that are good for ordinary canning or freezing can also be used for dehydrofreezing. The flavour of apricot pies made from dehydrofrozen fruit was found better in baking tests than that of pies made from frozen, dried or canned apricots prepared from the same lot of fruit. Preserves prepared from the dehydrofrozen apricots did not disintegrate during cooking. Dehydrofrozen pimientos have been found superior for use in soups, cheese and meat products. They hold flavour unusually well, and their reduced moisture offers advantage in food manufacturing. After a year of storage at minus 10 degrees Fahrenheit, dehydrofrozen peas were found to be as good as ordinary frozen peas. Colour, flavour and texture were excellent.

Estimates based on the experimental studies indicate that the processing costs of dehydrofreezing are a little higher than in quick freezing. Lower packaging, freezing, storage and distribution costs, however, are expected to result in an overall saving.

U.K.'S FOREIGN TRADE IN JANUARY-MARCH, 1955

The monthly average of the total value of U.K. exports in the first quarter of the current year was £247.3 million, an increase of 10 per cent. over the average for the same period last year. The value of exports in March, 1955, with 27 working days, was, however, slightly above this average and amounted to £260.3 million.

Imports into Britain registered a rise of 23 per cent. in the first quarter monthly average, at £335.5 million, over the average for the same quarter in 1954. The U.K.'s March imports were considerably higher than this average, as they aggregated in value £365.4 million.

The excess of imports over total exports (including re-exports) was £92.4 million in March, as against £77.6 million a month in the first quarter.

The provisional figures published by the U.K. Board of Trade reveal, however, an improvement in the value of exports to North America, during the three months ended March, 1955. The monthly average for the period was £23.7 million, as against £22.4 million a month in the first quarter of 1954. Exports to the U.S. amounted to £15.7 million. The first quarter average of £13.9 million per month was £2 million more than in the same period last year. But exports to Canada, which averaged £9.8 million in the quarter, was about £700,000 lower than that in the corresponding period in 1954.

TAMING VISHWAMITRI

During winter and summer, Baroda's river, Vishwamitri, is just a watercourse, a trickle going down to the sea in a deep gully of silt rich plains of Cambay-Coast, Gujarat. But, during the rainy season, this river becomes a raging flood, spreading its watery tentacles over miles and miles of surrounding territory, causing heavy damage to people in that area. But now that the Government of Bombay has taken over the task of controlling the destructive force of the Vishwamitri, it will no longer be able to cause the recurring damage to life and property.

The Vishwamitri is now being widened by latest modern machinery like Allis Chalmers tractors, bulldozers and scrapers at work under the expert guidance of a specialist in mechanical earth moving. A group of Baroda contractors are seeing to it that by June, 1955, the Vishwamitri would no longer create havoc by rising to the height of 10-20 ft., inundating Baroda and surrounding villages. The river is being given a wide path of her floodwaters now and this has been made possible in a very short time by the use of gigantic Allis Chalmers equipment.

KANKNARRAH AND KAMARHATTY RAISE DIVIDEND LEVELS

PROFITS SHOW NOTABLE IMPROVEMENT

AFTER two half-years of successive setback, the earnings of the Kanknarrah Company, Ltd., and the Kamarhatty Company, Ltd., both under the management of Messrs. Jardine Henderson Ltd., Calcutta, for the six months ended December, 1954, have recorded a notable rise, thanks to the improvement in overseas demand, particularly for sacking goods, noted since April, 1954. The gross profit of the Kanknarrah Company, which had fallen from Rs. 14.19 lakhs for the half-year ended 30th June, 1953, to Rs. 5.57 lakhs for the half-year ended 30th June, 1954, has improved to Rs. 9.69 lakhs for the six months ended 31st December, 1954. Similarly, the gross profit of the Kamarhatty Company, which had receded from Rs. 13.75 lakhs to Rs. 5.74 lakhs in the course of the previous two half-years, has gone up to Rs. 12.80 lakhs for the half-year under review.

The net profit of the Kanknarrah amounts to Rs. 2.40 lakhs, as compared with that of Rs. 1.39 lakhs for the previous half-year and Rs. 2.26 lakhs for the corresponding six months of 1953. The Kamarhatty Company has earned a net profit of Rs. 3.66 lakhs, which represents an increase of Rs. 2.21 lakhs and Rs. 0.94 lakh, respectively, over those for the previous two half-years. Consequent on this improvement in the earnings, the dividends of both the Companies have been raised. Thus, the dividend of the Kanknarrah, which had been maintained at 5 per cent. per annum for the previous two half-years, after having been halved from 10 per cent. per annum paid for the half-year ended 30th June, 1953, has been stepped up to 8 per cent. per annum. The Directors of the Kamarhatty have decided to raise the dividend to 10 per cent. per annum from 6 per cent. per annum paid for the previous two half-years, to which level it had been cut from 12 per cent. per annum paid for the six months ended 30th June, 1953. No addition to reserves has been made in the case of the Kanknarrah Company, while the Kamarhatty Company has transferred to the machinery renewal reserve account a sum of Rs. 2.50 lakhs, of which Rs. 2 lakhs represent the sum drawn from the reserve for derequisition expenses, now no longer required, the relative expenditure having been already incurred.

During the half-year under review, the working hours of the two Companies were raised from 42½ and 45 per week with effect from 12th July and again to 48 hours per week from 18th October, at which level of working the mills still continue to operate. "The offtake of finished goods," the Directors of the two Companies report, "remains fairly satisfactory and stocks, so far, have not risen to any appreciable extent."

Recalling their reference, in their last report, to the extensive floods in North East India and East Pakistan during the last growing season and their effect on supply and price, the Directors observe in their latest report as follows:

"As envisaged in the last report of the Directors, the extensive floods in North East India and in East Pakistan during the last growing season have resulted in an appreciable loss in the quantitative outturn of the present season's crop; quality also has been considerably affected and the higher grades of jute have been in short supply. At the close of the half-year under review, there were substantial doubts regarding the sufficiency of supplies of raw jute and prices rose steeply in the early weeks of the current trading period. It now appears, however, to be generally accepted that supplies will be adequate and prices lately have reacted sharply. While prices obtainable for finished goods have followed the trend of raw material prices, the rise in the latter part of the period under review was not proportionate to the rise in raw jute prices and, once again, at the beginning of the current period, it became practically impossible to effect forward sales of the Company's production at a profit simultaneously with the purchase of raw jute."

A detailed picture of the Companies' results of working during the half-year under review, as compared with those for the previous three half-years, can be obtained from the table published at the bottom of these columns.

It will be noted that, while the sale proceeds for the half-year under review in the case of both Companies are well above those for the half-year ended 30th June, 1953, their gross profits are lower than those earned three half-years before, the shortfall being more perceptible in Kanknarrah. The explanation for this is to be found in the sharp rise in the level of expenses.

The latest balance-sheet of the Kanknarrah Company discloses that the paid-up capital of Rs. 64 lakhs is supplemented by reserves and surplus aggregating Rs. 18.77 lakhs. The provision for taxation stands at Rs. 18.20 lakhs. The current liabilities amount to Rs. 24.08 lakhs. The gross block of the value of Rs. 132.71 lakhs has been written down to a book value of Rs. 33.68 lakhs. The current assets amounting to Rs. 91.37 lakhs exceed the current liabilities and provision for taxation by more than 100 per cent.

The paid-up capital of the Kamarhatty Company amounts to Rs. 59.20 lakhs, as against which there are reserves and surplus aggregating Rs. 29.18 lakhs. The provision for taxation amounts to Rs. 29.47 lakhs and current liabilities aggregate Rs. 20.27 lakhs. The gross block of the value of Rs. 137.52 lakhs has been written down by Rs. 122.62 lakhs. The current assets amount to Rs. 123.22 lakhs and exceed the current liabilities and provision for taxation by a large extent.

The Directors of the Kamarhatty Company have under consideration a scheme for the replacement of some of the obsolete machinery in the Companys' mills. It is proposed to install preparing and spinning machinery of the most modern type and an initial expenditure of about Rs. 35 lakhs is contemplated. To a substantial extent this will have to be found from the Company's own resources in the first instance.

The Rs. 100 paid-up ordinary shares of the Kanknarrah and Kamarhatty are being currently quoted at Rs. 152 *ex-div.* and Rs. 209 *ex-div.*, respectively. On this basis, the latest dividends of these two Companies provide a yield of 5.26 per cent. and 4.78 per cent. per annum, respectively.

LAKSHMI AND VISHNU COTTON MILLS

The difficult trading conditions during 1954 affected the working results of cotton mills in India in a varying degree, though the general trend of profits was downward. For the Lakshmi Cotton Manufacturing Company, Ltd., and the Vishnu Cotton Mill, Ltd., both under the management of the Bombay Company, Ltd., Bombay, the past year was the leanest for many years. The gross profit of the Lakshmi Cotton declined from Rs. 15.87 lakhs for 1953 to Rs. 14.74 lakhs, thus maintaining the downward trend noted since 1951 when the profit amounted to Rs. 37.32 lakhs. At Rs. 14.74 lakhs, the profit is the lowest since 1941. The performance of the Vishnu Cotton was even worse, inasmuch as it suffered a loss of Rs. 1.08 lakhs, in distinct contrast to the profit of Rs. 3.59 lakhs earned in 1953, to which level it had declined from Rs. 31.91 lakhs in 1951. This is the first time since many years that the Company has suffered a loss.

After providing for Agents' remuneration, the Directors of the Lakshmi Cotton have set aside Rs. 7.91 lakhs, as against Rs. 8.06 lakhs, for 1953, for depreciation and Rs. 2.90 lakhs, as against Rs. 2.30 lakhs, for taxation, leaving a net profit of Rs. 2.78 lakhs, as compared with Rs. 4.51 lakhs for 1953. The net profit has been supplemented by a sum of Rs. 1.98 lakhs, being the amount transferred from the engine and machinery fund (Rs. 98,049) and the dividend equalisation fund (Rs. 1 lakh). The amount transferred from engine and machinery fund represents initial depreciation, which had previously been set aside to this fund, on plant and machinery which, for income-tax purposes, has now been totally written off. Notwithstanding this addition, the net profit is not sufficient to maintain the dividend at 15 per cent. paid for the previous two years, after having cut it from 20 per cent. paid for 1951. The Directors have, therefore, pruned it to 13¾ per cent., the lowest level after the ordinary capital of the Company was doubled in 1948 by the capitalisation of Rs. 16 lakhs from the reserves.

The Directors of the Vishnu Cotton have made a provision of Rs. 11.882 lakhs, as against Rs. 6.66 lakhs in the previous year, for depreciation, resulting in a net loss of Rs. 13.08 lakhs, as compared with a loss of Rs. 3.63 lakhs in 1953. This loss has been covered by drawing Rs. 1.03 lakhs from depreciation, renewal and extension fund (now no longer required) and Rs. 12.50 lakhs from the reserve fund. It may be recalled that the previous year's loss of Rs. 3.63 lakhs was covered by the sum of Rs. 2.22 lakhs brought in from 1952 and by Rs. 1.55 lakhs drawn from the reserve for taxation and depreciation, renewal and extension fund. The Directors had also transferred last year a sum of Rs. 2.10 lakhs from the dividend equalisation fund to pay a modest dividend of 4 per cent. for 1953 (as against 7 per cent. for 1952 and 14 per cent. for 1951). This year also, they have had to draw Rs. 2.09 lakhs from the dividend fund to distribute the 7 per cent. (less tax) preference dividend and maintain the ordinary dividend at 4 per cent.

Referring to the trading conditions during the past year, the Directors observe, in their latest reports, as follows:

"Trading conditions were difficult throughout the year, particularly in the first half, and particularly in coarse and medium styles. Production control, especially the restriction on the production of *dhotis* to a small quota, adversely affected the Company's profits. Moreover, as a result of changing fashions, internal demand for many of the mill's traditional styles has contracted, and the Mill has had to look increasingly to export markets to fill the looms. Conditions in the export market were, and still are, very competitive, and the Company is at some disadvantage in this trade, relative to mills in Bombay or in other ports, owing to its mill being situated upcountry."

The following synopses of the Companies' latest balance-sheets (as at 31st December, 1954) disclose their financial position:

	Lakshmi	Vishnu
LIABILITIES	Rs.	Rs.

Total	Rs. 1,70,55,813	1,88,21,560

It may be noted that the reserves of both the Companies stand at the above-noted levels after the capitalisation of Rs. 32 lakhs in the case of the Lakshmi Cotton and Rs. 16 lakhs in the case of the Vishnu Cotton. It will be recalled that, in 1944, the Lakshmi Cotton capitalised Rs. 16 lakhs out of the amount standing to the credit of the reserves. This was utilised to issue 6,400 5 per cent. (taxable) cumulative preference shares of Rs. 250 each as free bonus to the then existing ordinary shareholders in the proportion of one preference share for every ordinary share. In April, 1948, for the second time, a sum of Rs. 16 lakhs was capitalised and issued as bonus (ordinary) shares in the ratio of one share for one share. The Directors of the Vishnu Cotton capitalised Rs. 16 lakhs and issued 16,000 ordinary shares of Rs. 100 each as bonus shares in the proportion of one share for one ordinary share held. The current assets of the two Companies more than adequately cover the current liabilities and provision for taxation. In fine, the financial position of both the Companies is still quite sound, though, a couple of years ago, they had bigger reserves than they have at present.

NEW GREAT INSURANCE

During the year ended 31st December, 1954, the net premium income of the New Great Insurance Co., Ltd., rose by Rs. 5.58 lakhs to Rs. 75.17 lakhs. The premium income from the marine and miscellaneous departments was Rs. 18.78 lakhs and Rs. 14.42 lakhs respectively, which was slightly higher than in 1953, whilst in the fire department it was lower at Rs. 21.18 lakhs. The total premium income from the life department amounted to Rs. 20.79 lakhs, showing an increase of Rs. 3.10 lakhs over last year. The aggregate total of the underwriting reserves in respect of general insurance business at the end of 1954 was Rs. 36.58 lakhs as against Rs. 33.51 lakhs in the previous year. The life fund stood at Rs. 73.21 lakhs as against Rs. 38.92 lakhs in 1953. The net profit for the year, after taking into account the balance carried forward from the previous year amounted to Rs. 2.58 lakhs as against Rs. 2.51 lakhs for the previous year. The Directors have maintained the same sate of dividend as last year, namely Re. 1-4 per share or 6¼ per cent. on the paid-up capital, tax-free.

Points From The Chair

Consumption Should be Raised

"THAT capital formation need not arise wholly through restrictions on consumption and that in India during the last three years, while consumption expenditure has risen by about 9 per cent., capital formation has approximately doubled, is pointed out by a Research Institute in one of its recent studies. This has been a very timely analysis and I hope the authorities will give due weight to the aspect brought to light. Even in the democratic countries of Western Europe where full employment exists, there is today no attempt to restrict consumption in order to generate developmental activity. They aim at achieving development by strengthening productivity which results in cost reduction and higher wages and widening scope for new development. With such a large unemployed population and low level of consumption we need not go in for a policy that even advanced countries do not seem to favour. What is required in our country is large-scale development to create more employment giving more purchasing power to the people and stimulating consumption. There can be more and more production only if there is more consumption. Unless this is aimed at and realised, all that may be done to develop production will not produce the desired results."

SHANTI PRASAD JAIN,
Punjab National Bank Ltd.

Labour Appellate Tribunal

"The Appellate Tribunal had occasions to give decisions both in favour of the workers as well as the employers. This was inevitable when laws are interpreted impartially and justly. But, unfortunately, the workers have seen in it an agency for exploitation by employers for delaying and defeating the judgments of the lower tribunals. This misconceived notion of workers has led Government to revise their views on the subject and we are informed that they propose to abolish the Appellate Tribunal and, instead, set up National and State Tribunals with no right of appeal from one to the other. Whilst admitting that the Appellate Tribunal's machinery was cumbersome to a point, the great stabilising force of a codified case law on the subject which emanated from such a high Labour Tribunal should not be lightly done away with."

N. H. TATA,
Tata Mills Ltd.

Sarvodaya Movement and Unemployment

"In the adoption of modern technological methods of production, what do we find in actual practice? The call for support of handicrafts and cottage industries comes from various quarters, but I do not see there any recognition of the fact that efforts in this direction have so far been clouded with the illusion of primeval simplicity and inefficiency. We support for backwardness and inefficiency. Even the Prime seem to be skidding back in time. Minister has stated, perhaps in an unguarded moment, that 'we could remove the unemployment problem in India today by breaking down all the factories in India.' He added, however, that, 'although everybody will be working, their average income will go down and there will be trouble.' Yet some very sincere advocates of what has come to be known as the *Sarvodaya* theory of economics, have taken issue with the Prime Minister on the statement that the average income will go down. They seem to believe implicitly that the closing of all factories would provide living for a larger number of people and that there would be no shortage in the production of goods and articles. Their theory seems to be that, if the factories were to close down, everyone now compelled to remain unemployed would be inspired to take to some work or other and we would have more production as a matter of course."

K. C. MAHINDRA,
Indian Aluminium Co., Ltd.

Prospects for Coffee Plantations

"At our meeting last year, I told you how the uncertainty about coffee prices was retarding the progress of the coffee industry, and that a wonderful opportunity of taking full advantage of the very high prices in world markets was slipping by because of the Government of India's policy to restrict the export of coffee. I am glad to report that this was partly resolved by their belated, but nevertheless welcome, decision to release up to 9,000 tons of coffee for export. It was unfortunate that the decision could not have been made sooner and that more of the higher quality Arabica Plantation coffee, which fetches a better price abroad, was not exported, but we have nonetheless benefited in a very much better point valuation and this, we hope, may exceed the Rs. 2-11 per point received to date. Another welcome relief came in January this year when the export duty on coffee was reduced from Rs. 62-8 per cwt. to Rs. 21 per cwt. It is reported that about 4,000 tons of coffee will be released for export from the current season's crop and that the Plantation coffee will be exported first, so we could entertain some hope that the coffee industry may yet be allowed to progress forward into the future, were it not for another burden which is now falling upon us and threatens our hard-won prosperity. I refer to the Madras agricultural income-tax, for which we have had to make a provision of Rs. 38,875 in our balance-sheet to meet this levy. We have already had to meet the cost of leave with wages to labour under the Plantation Labour Act, and with other even heavier commitments foreshadowed under this Act, we may soon find it impossible to continue the development of our property at the rate we have planned."

W. W. KILGOUR,
Savamalai Estates Ltd.

COMPANY MEETINGS AND DIVIDENDS

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 11th May, 1955. Dividend: Re. 1 per share. Transfer books remain closed from 2nd to 11th May, 1955, both days inclusive.

NEW SHORROCK SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 13th May, 1955. Dividend: Rs. 35 per share, payable from 26th May, 1955. Transfer books remain closed from 27th April to 18th May, 1955, both days inclusive.

SHORROCK SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 13th May, 1955. Dividend: Rs. 25 per share (includes Golden Jubilee bonus of Rs. 5 per share). Transfer books remain closed from 27th April to 18th May, 1955, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 13th May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 30th April to 13th May, 1955, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 16th May, 1955. Dividend: Re. 1-4 per share (includes bonus of As. 8 per share), payable on and after 23rd May, 1955. Transfer books remain closed from 5th to 21st May, 1955, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 17th May, 1955. Dividend: Re. 1-12 per share (final). Transfer books remain closed from 3rd to 17th May, 1955, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th May, 1955. Dividend: Rs. 33-12 per share (includes interim dividend of Rs. 7-8), payable on 23rd May, 1955. Transfer books remain closed from 4th to 18th May, 1955, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 18th May, 1955. Dividend: Re. 1-8 per share. Transfer books will remain closed from 11th to 18th May, 1955, both days inclusive.

SEEBPORE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 19th May, 1955. Dividend: Re. 1 per share. Transfer books remain closed from 5th to 19th May, 1955, both days inclusive.

VISHNU COTTON MILL LTD. Annual General Meeting, Bombay, 20th May, 1955. Dividend: Rs. 4 per share, payable on 25th May, 1955. Transfer books remain closed from 6th to 20th May, 1955, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting Bombay, 23rd May, 1955. Dividend: Rs. 14 per share, payable on or after 1st June, 1955. Transfer books remain closed from 3rd to 23rd May, 1955, both days inclusive.

CENTRAL DISTILLERY AND CHEMICAL WORKS LTD. Annual General Meeting, Meerut, 24th May, 1955. Dividend: As. 12 per ordinary share and As. 14 per deferred share. Transfer books will remain closed from 11th to 24th May, 1955, both days inclusive.

KHARDAH CO., LTD. Half-yearly General Meeting, Calcutta, 26th May, 1955. Transfer books will remain closed from 12th to 26th May, 1955, both days inclusive.

ANANDAM RUBBER CO., LTD. Dividend of Rs. 2-8 per share, for the year ended 31st December, 1954.

UDAYAGIRI RUBBER CO., LTD. Dividend of Rs. 2-8 per share, for the year ended 31st December, 1954.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Interim dividend of As. 8 per share, for the year ending 30th June, 1955. Transfer books remain closed from 1st to 7th May, 1955, both days inclusive.

QUESTION HOUR IN PARLIAMENT

Pensions to Foreigners

A SAVING of Rs. 10 lakhs a year has resulted from the transfer of the responsibility of paying pensions and other liabilities to persons who had served the British Crown in this country to the U.K. Government. The U.K. is arranging the payment of pensions. India had already given Rs. 224 crores in 1948, but it will get back about Rs. 50 crores and another Rs. 8 crores on account of income-tax. The whole matter is now the responsibility of the U.K. Government.

* * * *

Soviet Aid

The U.S.S.R. has agreed to place at the disposal of the U.S. Expanded Technical Co-operation Administration a sum of Rs. 50 lakhs, of which Asian countries can take advantage for getting experts or equipment. India proposes to send about 18 officials to find out whether there are experts and equipment that can be of use to India. No agreement has been signed by the Government of India with Soviet Russia for aid under the U.N. scheme. There are no prospects of India signing any such agreement, as there is no necessity for it.

—*Minister for Revenue and Civil Expenditure*

Foreign Aid

According to revised estimates, India has received from 1948 to 1954-55 Rs. 40.48 crores and Rs. 6.2 lakhs from the U.S. and the U.K., respectively, as financial aid on a grant basis. During the same period, India gave Rs. 213.73 lakhs to friendly countries by way of financial assistance.

* * * *

Dollar Debts Repaid by Government

The Government of India has repaid dollar debts to the extent of $10.66 million (Rs. 5.13 crores). Dollar grants from U.S. Government are not utilised for repayment of dollar loans. Sterling releases and dollar and other foreign exchange earnings (on trade and other accounts) together constitute our expendable foreign exchange resources. It is not possible to relate the repayments to any one of these different sources. The dollar debts are incurred, taking into account the overall resources available to the Government to meet its developmental and other needs. The unspent sterling balances are not automatically available to Government for its expenditure unless it can find equivalent rupee resources.

—*Finance Minister*

Sugar Position

Sugar production in the current (1954-55) season is expected to be more than 1.5 million tons, as against 1.0 million tons in 1953-54, without any addition to the acreage under sugarcane. In view of the increased production of indigenous sugar, it may not be necessary to import sugar during 1955-56 except for the commitments already made. The total quantity of sugar which the Government has already purchased in foreign countries but which is yet to arrive in India is 223,000 tons. The offtake of sugar from factories during the current season from 1st November, 1954 to 31st March, 1955, was 347,000 tons, as against 528,000 tons in the corresponding period of the previous year. The offtake of imported sugar was, however, 317,000 tons, as against 205,000 tons in the same period last year. Thus the total decline in the offtake of both imported and indigenous sugar during the past five months was 69,000 tons. The stocks of indigenous sugar held by the factories on 31st March, 1955, aggregated 999,000 tons. The stock of imported sugar with the Government on this date was 105,000 tons.

—*Minister for Agriculture*

Nominee System for Salt

The Government has accepted the recommendation of the Commodity Controls Committee that the nominee system for salt should be abolished in stages and has requested the State Governments to implement it. Certain State Governments have abolished the nominee system altogether, while some have agreed to a partial abolition of the system as an experimental measure. The States in which the nominee system has been abolished partially as an experimental measure would review the position after some experience and decide whether the system should be abolished altogether. The nominee system existed partially or wholly in ten States.

—*Production Minister*

Small-scale Match Factories

About 180 small-scale match factories were reported to be working in the country by the end of 1954. The production capacity of these units is difficult to assess, but about 35 per cent. of the total match production in the country is accounted for by them. The small-scale units enjoy preferential rates of excise duty.

—*Deputy Minister for Commerce and Industry*

Indian Steam Road Rollers

The total number of steam road rollers manufactured in the Telco Works so far is 950 and the provisional price per roller is Rs. 37,500. The final price is yet to be fixed. According to an agreement with a manufacturing firm in the U.K., the Government acquires the manufacturing rights in respect of their steam road rollers. A sum of about £100 per road roller is expected to be paid to the U.K. firm for the 950 rollers for exploiting the manufacturing rights. The U.K. firm was manufacturing steam road rollers for all export markets, at the time the agreement was entered into.

—*Commerce and Industry Minister*

NEW SHORROCK MAINTAINS DIVIDEND

FLOODS AFFECT BELSUND SUGAR

New Shorrock Spinning and Manufacturing Co., Ltd.

THE directors of the above Company (Managing Agents, Secretaries, Treasurers and Agents: Messrs. Mafatlal Chandulal and Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The Company has made during the year, the profit of Rs. 28,34,770 (Rs. 29,78,822) to which is added last year's carry forward of Rs. 38,617 (Rs. 1,795) making a total of Rs. 28,73,387 (Rs. 29,80,617). Out of this amount the directors have resolved to appropriate to depreciation fund Rs. 8,25,000 (Rs. 9,00,000), and to provision for taxation Rs. 9,50,000 (Rs. 4,50,000) leaving a balance of Rs. 10,98,387 (Rs. 18,50,000 after setting apart Rs. 5,00,000 to dividend equalisation fund). Out of this balance the directors recommend payment of dividend at Rs. 35 (Rs. 35) per share, free of income-tax, on 31,200 ordinary shares Rs. 10,92,000 (Rs. 10,92,000) leaving a balance to be carried forward to next year's account of Rs. 6,387 (Rs. 38,617).

The Company's properties have been insured against fire, riot and civil commotion risks. Standing charges and profits have also been insured. The Mills worked day and night shifts during the year. The Mills have 51,132 spindles and 864 looms.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,00,000	Block ...	1,14,89,135
Reserves ...	66,61,702	Stock-in-trade ...	27,22,783
Depreciation fund ...	91,35,306	Stores and spare parts	11,42,379
Provision for taxation ...	16,55,613	Debts, deposits and advances ...	43,33,329
Liabilities ...	32,50,725	Investments	36,13,616
Profit and loss account ...	10,98,387	Cash ...	24,00,491
Rs.	2,57,01,733	Rs.	2,57,01,733

Shorrock Spinning and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents, Secretaries, Treasurers and Agents: Messrs. Mafatlal Chandulal and Co. (Ahmedabad) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1954.

The Company has made during the year, the profit of Rs. 15,21,214 (Rs. 17,74,650) to which is added last year's carry forward of Rs. 22,720 (Rs. 8,070) making a total of Rs. 15,43,934 (Rs. 17,82,720). Out of this amount the directors have resolved to appropriate to depreciation fund Rs. 6,50,000 (Rs. 7,70,000), and to provision for taxation Rs. 4,00,000 (Rs. 1,00,000) leaving a balance of Rs. 4,93,934 (Rs. 4,12,720 after appropriating Rs. 2,00,000 to machinery renewal fund and Rs. 3,00,000 to dividend equalisation fund). The directors recommend that this amount appropriated in payment of dividend at Rs. 20 (Rs. 20) per share, free of income-tax, on 19,500 ordinary shares Rs. 3,90,000 (Rs. 3,90,000), payment of Golden Jubilee bonus dividend at Rs. 5 (*nil*) per share, free of income-tax, on 19,500 ordinary shares Rs. 97,500 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 6,434 (Rs. 22,720).

The Company's properties have been insured against fire, riot and civil commotion risks. Standing charges and profits have also been insured. During the year the Mills worked day and night shifts. The Mills have 36,624 spindles and 720 looms.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,52,500	Block ...	78,08,018
Reserves ...	59,00,194	Stock-in-trade ...	30,01,185

Provision for taxation ...	41,979	Debts, deposits and advances ...	14,21,460
Liabilities ...	19,08,027	Investments	5,69,000
Profit and loss account ...	15,43,934	Cash ...	33,29,326
Rs.	1,69,00,434	Rs.	1,69,00,434

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th September, 1954.

The result for the year, after providing for depreciation and Rs. 2,15,854 (*nil*) for labour bonus for the year 1949-50 and 1950-51 showed a profit of Rs. 1,38,925 (Rs. 6,13,792) from which has been deducted for taxation reserve Rs. 10,255 (Rs. 2,90,000) leaving a balance of Rs. 1,28,670 (Rs. 3,23,792). To this amount was added the carry forward from the previous year of Rs. 1,66,138 (Rs. 2,37,248) leaving at credit of profit and loss account Rs. 2,94,808 (Rs. 5,61,041). This sum the directors disposed off as follows:—

Transferred to reserve Rs. 50,000 (Rs. 2,00,000), paid a dividend at As. 12 (As. 12) per share free of income-tax for the year ended 30th September, 1954 Rs. 1,94,902 (Rs. 1,94,902) and carried forward to the next account Rs. 49,906 (Rs. 1,66,138).

The factory commenced crushing on the 23rd December, 1953, and finished on the 6th March, 1954, with a total crush of 1,306,997 maunds of cane as compared to 2,833,894 maunds of cane in the previous year. The main factors contributing to this small crush were the serious effects of the large flood that occurred in the cane area and the diversion of cane to *gur* making. The quality of cane available was normal and the recovery increased to 10.73 per cent. from 10.54 per cent. in the previous year.

The Government of India revised the sugar policy for the year under report by retaining 25 per cent. of the total sugar production of the year for control sales. The cane price was also increased to Re. 1-7 per maund at the factory and Re. 1-5 per maund at out stations. Cane cess was reduced to As. 3 per maund, cane co-operative society commission was maintained at the previous rate of 9 pies per maund of cane. Additional excise duty of Re. 1 per maund levied during the season 1952-53 was removed.

Building and machinery were maintained in good order and necessary additions and alterations were made at the factory.

Season 1954-55—The cane supply during the year is anticipated much more than that of the last year. This year, the Government has not made any change in the cane price though an additional excise duty of Rs. 1-14 per cwt. has been levied since 1st March, 1955, on stock of sugar available with the factory and also on production of sugar since made.

Raw Sugar—In April, 1954, the Government of India for the first time in the history of Indian Trade sponsored a scheme to import raw sugar to be refined in sugar factories during the off-season. The Company, under the above scheme imported 7,919 tons of raw sugar. The refining process was started from the month of October, 1954, and hardly more than one-third of the quantity imported was refined when the crushing season of 1954-55 came in operation and the process was postponed for the off-season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,49,050	Block ...	8,57,845
Reserves ...	5,00,000	Belvita machinery and plant ...	1,21,744

Profit and loss account ...	2,94,808	Debts, deposits and advances ...	57,71,984
		Investments	914
		Cash ...	1,41,570
Rs.	83,53,135	Rs.	83,53,135

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts for the half-year ended 31st December, 1954.

After providing Rs. 92,500 (Rs. 91,000) for depreciation and Rs. 1,34,500 (Rs. 58,000) for taxation and cesses, and after transferring Rs. 30,000 (Rs. 4,310 to capital reserve) to general reserve there remains at the credit of profit and loss account Rs. 89,411 (Rs. 66,956) out of which the directors recommend dividend on 4,000 5 per cent. non-taxable cumulative preference shares Rs. 10,000 (Rs. 10,000), dividend of Re. 1 (As. 14) per share on 40,000 ordinary shares Rs. 40,000 (Rs. 35,000) leaving to be carried forward Rs. 39,411 (Rs. 21,956).

Raisings for the half-year were 65,379 (55,749) tons as compared with 55,705 tons in the previous half-year and despatches 71,646 (60,861) tons as against 63,168 tons.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,80,000	Block ...	11,57,205
Reserves ...	7,36,598	Stock of coal ...	45,986

Rs.	21,23,537	Rs.	21,23,537

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

The revenue account shows a loss of Rs. 1,602 (loss of Rs. 45,544) as a result of the half-year's working, and after debiting and crediting sundry items, there is a gross loss for the half-year of Rs. 52,592 (gross loss of Rs. 81,629). After adjusting this and also Rs. 300, being the amount paid in respect of forfeited dividend, against the balance brought forward from the previous half-year and Rs. 40,000 (Rs. 1,70,000) being the amount transferred from general reserve, and also Rs. 10,734 (Rs. 18,248) on account of sundry adjustments in respect of previous half-years, there is a net credit balance of Rs. 2,485 (Rs. 9,405) on profit and loss account to be carried forward.

The raisings for the half-year under review amounted to 62,220 tons, despatches being 61,393 tons. This compares with 62,554 tons and 65,134 tons respectively for the previous half-year and with 59,771 tons and 50,377 tons respectively for the corresponding half-year in 1953.

For the current year the Coal Board has restricted the output of the Colliery to 77,000 tons selected 'B' coal and 50,000 tons grade II coal. This is the same output as allowed for 1954 and does not, in the opinion of the directors, allow the Colliery to be worked economically. A strong protest has therefore been lodged and it is hoped that this appeal will receive due consideration. The Colliery can easily increase its raisings, and in anticipation of a favourable hearing steps have been taken to increase slightly the raisings for the succeeding half-year which should result in more favourable trading.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	12,54,728

Methoni Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1954.

Tea crop.—A crop of 9,553 (10,037) maunds was manufactured and disposed of, for sale in Calcutta for export 8,662 (9,242) maunds, and for sale in Calcutta for internal consumption 891 (795) maunds. The teas realised an average price of Rs. 3-4-5 per lb. as compared with Rs. 2-0-9 per lb. obtained for the previous season's crop of 10,037 maunds. The Company's export quota for season 1954 was 5,481 maunds.

Area.—No extensions were put out during the year and the area under cultivation remains unchanged at 611.96 acres.

The revenue account shows a profit of Rs. 11,82,056 (Rs. 4,95,432) and after deducting from this staff commission and bonus Rs. 87,807 (Rs. 35,816), managing agents' commission on profits Rs. 23,518 (Rs. 9,880), reserve for taxation Rs. 4,00,000 (Rs. 1,17,000), provision for assam sales tax Rs. 5,000 (*nil*) and depreciation Rs. 72,567 (Rs. 81,264) there is a balance of Rs. 5,93,164 (Rs. 2,51,472) to which is added interest on investments (Net) Rs. 903 (*nil*), profit on sale of machinery Rs. 800 (Rs. 6,600) and post-war refund of excess profits tax (Net) Rs. 1,360 (*nil*) making a net profit for the year of Rs. 3,96,227 (Rs. 2,58,072). After adding to this the adjusted credit balance of Rs. 39,297 (Rs. 6,379) brought forward from the previous year, there is a credit balance of Rs. 6,35,524 (Rs. 2,65,435) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Ad-interim dividend of 10 (*nil*) per cent. for season 1954 without any deduction for income-tax paid by the Company—paid on 28th February, 1955, Rs. 80,000 (*nil*), pay a final dividend of 35 (15) per cent. for season 1954, without any deduction for income-tax paid by the Company (making a total of 45 (15) per cent. for season 1954) Rs. 2,80,000 (Rs. 1,20,000), place to buildings and machinery reserve account Rs. 1,50,000 (*nil*), place to contingencies reserve account Rs. 50,000 (*nil*), place to hail insurance reserve account Rs. 30,000 (*nil*) and carry forward Rs. 45,524 (Rs. 45,435 after placing Rs. 1,00,000 to reserve account).

The estimated crop of tea, for season 1955 is placed at 10,000 maunds, at a total cost of Rs. 12,58,975 excluding capital expenditure amounting to Rs. 78,500.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	14,74,125

Profit and loss account ...	45,524	Investments	2,96,570
		Cash ...	3,56,368
Rs.	30,50,498	Rs.	30,50,498

Assam Match Co., Ltd.

The directors of the above Company (Managing Director: Mr. T. Rydin, Bombay) submit the audited accounts of the Company for the year ended 31st December, 1954.

During the year a strike occurred at the factory at Dhubri and production was lower than the previous year. Sales were also affected by competition from the low-priced products of subsidised Cottage manufacturers and also as a result of floods in Assam, which prevented proper distribution of the Company's matches.

A sum of Rs. 83,666 (Rs. 2,47,196) has been provided for depreciation on buildings and machinery. In this year's accounts depreciation has been calculated differently from previous years. The directors have thought it preferable now to introduce the "straight line" system, whereby each year will bear the same amount of depreciation for each asset until such asset has been completely written off within its expected life time. In the past it was written off in the accounts, ordinary depreciation, initial depreciation, etc. to the full extent allowed by the Income-tax department in their assessment. To the extent that the amount of depreciation allowed by the Income-tax Act in this year's assessment (as well as in the future) exceeds the book depreciation, the consequent tax advantage taken, as it were, in advance, is being provided for in the books. The tax advantage to be derived from the recently introduced development rebate is being treated in the same way. For

1954 a provision of Rs. 3,02,000 (Rs. 5,00,000) has been made for taxation.

The net profit for the year, after providing for depreciation and taxes for 1954 as aforesaid, is Rs. 4,07,965 (Rs. 6,14,515) to which should be added the sum of Rs. 1,34,528 (Rs. 1,35,909), being the balance carried over from last year, making a total of Rs. 5,42,493 (Rs. 7,50,424) which the directors recommend may be dealt with as follows:—

To pay a dividend for the year ended 31st December, 1954, at the rate of 7½ (7½) per cent. per annum (i.e. As. 12 (As. 12) per share) free of income-tax absorbing Rs. 2,25,000 (Rs. 2,25,000), to pay a bonus for the year ended 31st December, 1954, at the rate of 5 (5) per cent. per annum (i.e. As. 8 (As. 8) per share) free of income-tax absorbing Rs. 1,50,000 (Rs. 1,50,000), to set aside for general reserve Rs. 50,000 (Rs. 1,65,896) and to carry forward to next year's account Rs. 1,17,493 (Rs. 1,34,529 after setting aside Rs. 75,000 for dividend equalisation fund).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	35,74,632
Reserves ...	7,75,000	Stock-in-trade ...	4,65,218

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

After providing Rs. 1,67,000 (Rs. 1,85,000) for taxation there is a balance of Rs. 2,76,411 (Rs. 3,08,372) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 24,500 (Rs. 24,500) and on ordinary shares at Rs. 5 (Rs. 7-8) per share Rs. 1,40,000 (Rs. 2,10,000), leaving Rs. 1,11,911 (Rs. 73,872) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 42½ hours per week up to 10th July, 1954. From 12th July, 1954, working hours were increased from 42½ hours to 45 hours and again from 45 hours to 48 hours per week from 18th October, 1954. Throughout the period under review 12½ per cent. of the total looms remained sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	40,59,326
Reserves ...	35,49,623	Stocks ...	29,40,592

Liabilities ...	11,09,599	Debts, deposits and advances ...	4,01,045
Profit and loss account ...	1,11,911	Investments	55,358
		Cash ...	10,587
Rs.	83,96,142	Rs.	83,96,142

Calcutta Jute Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Dayaram and Sons, Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1954.

The gross profits for the half-year under report are Rs. 2,27,091 (loss of Rs. 51,976). After meeting expenses of management and providing for interests, debenture interests, depreciation and managing agents' commission etc. the revenue account showed a net profit of Rs. 39,619 (loss of Rs. 51,976) to which was added the amount brought forward from the previous half-year of Rs. 1,176 (credit of Rs. 3,515), making a total of Rs. 40,795 (debit of Rs. 48,461). This amount, the directors dealt with as follows:—

Paid a dividend free of income-tax on preference shares at the rate of 6½ (6½) per cent. per annum Rs. 19,500 (Rs. 19,500 paid of general reserve) on ordinary shares at the rate of 5 per cent. (*nil*) per annum (As. 4 (*nil*) per share) Rs. 18,685 (*nil*) and carried forward a balance of Rs. 2,610 (debit of Rs. 48,461).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,47,380	Block ...	11,50,979
Debentures	9,00,000	Stock-in-trade ...	12,25,504
Reserves ...	3,16,924	Stores and coal ...	2,76,564
Provision for taxation ...	81,535	Debts, deposits and advances ...	9,66,248
Liabilities ...	9,99,738	Investments	1,500
Profit and loss account ...	40,794	Cash ...	65,576
Rs.	36,86,371	Rs.	36,86,371

N.B.—Figures within brackets relate to the corresponding period of the previous year.

In our issue of 26th March, 1955—*vide* page 589—it was mentioned, under the feature "Company Registrations," that a company by the name of India International Co., Ltd., had been registered with the object of manufacturing, exporting and importing motor cars, etc. The main object of this Company is to deal in liquors and we are informed that the Company has no intention of manufacturing any item.

PUNJAB NATIONAL BANK LIMITED

ONE HUNDRED AND EIGHTH ANNUAL GENERAL MEETING

MR. SHANTI PRASAD JAIN STRIKES A NOTE OF OPTIMISM ABOUT INDIA'S FUTURE

THE One Hundred and Eighth Ordinary General Meeting of the shareholders of the Punjab National Bank Ltd. was held on 12th April, 1955 at the Head Office of the Bank, 8, Underhill Road, Delhi. The following is a summary of the speech delivered on the occasion by Mr. Shanti Prasad Jain, Chairman of the Bank.

The Chairman described the occasion as a momentous one in the history of the Bank; for it was on that day, 60 years ago, that a few enterprising patriotic individuals established the Punjab National Bank. Reviewing, briefly the history of the Bank, he paid glowing tributes to Sardar Dayal Singh Majithia, Lala Harkishan Lal, Lala Lajpat Rai, Babu Purushottam Das Tandon, and other Chairmen and Directors who had made valuable contribution in the building up of the Bank.

Working Results for 1954

Commenting upon the audited balance-sheet and profit and loss account for the year 1954, Mr. Shanti Prasad stated that the working capital of the Bank as on the last day of the year was Rs. 91.16 crores, which represented an increase of Rs. 11.38 crores over the previous year. Deposits aggregated Rs. 75.64 crores, which showed a gain of Rs. 10.33 crores over 1953. The increase in deposits during the year worked out to 15.82 per cent., as against 10.85 per cent. in case of other Scheduled banks. The percentage increase in the number of depositors during the year worked out to 4.71, as against 3.18 in case of other Scheduled banks. This was a testimony of the growing faith and confidence of the people in the Bank and its management.

Loans at Rs. 32.40 crores were higher by Rs. 6.85 crores as compared with the previous year. The percentage of loans to deposits worked out at 42.83, as against 55.80 in case of other Scheduled banks, which fact showed that the Bank could increase its advances further substantially. The Chairman continued that, in order to ensure increased utilisation of Bank's resources in export and import trade of the country, the foreign exchange department of the Bank had been reorganised and expanded.

On the assets side of the balance-sheet, the figures indicated a strong liquid position. Assets in cash, bank balances, money at call and short notice, investment in Government and trustee securities, bills discounted and purchased, totalled Rs. 50,23,67,136 which represented 66.42 per cent. of deposits of the Bank, as against 55.39 per cent. in case of other Scheduled banks.

Speaking about the profits and their appropriation, Mr. Jain said that transactions for the year had resulted in a profit of Rs. 56.86 lakhs including a sum of Rs. 3,10,289 brought forward from the previous year's account, as against a profit of Rs. 41.79 lakhs last year. Out of this profit, the following appropriations were made: Rs. 16 lakhs for taxation; Rs. 12.5 lakhs for contingency reserve; Rs. 40,000 for charity; Rs. 2,47,140 for reserve fund, raising it to Rs. 92.5 lakhs; Rs. 50,000 to staff gratuity account, Rs. 9.5 lakhs for bonus to staff and Rs. 10.5 lakhs for dividend at 12 per cent. per annum to the shareholders. These appropriations left a sum of Rs. 4,99,040 to be carried forward to next year's account.

Speaking about the staff, the Chairman said that the staff on the rolls of the Bank numbered 6,265 on 31st December, 1954. The establishment expenses for the year amounted to Rs. 1,46,59,993 giving an average of Rs. 2,340 as yearly salary paid per head. This figure for the year 1950 was Rs. 1,951 only. The bonus paid to the staff during 1954 was Rs. 9,50,000, as against Rs. 7,50,000 in 1953, Rs. 5,48,462 in 1952 and Rs. 3,77,201 in 1951. In order to give improved and quick service to the constituents, modern banking methods were being studied and a training school had been started at the head office of the Bank to equip the officer staff with better knowledge and broader outlook.

Mr. Jain added that the Bank placed at the disposal of its clients a chain of properly equipped safe deposit vaults. There were 94 safe deposit vaults with 40,568 lockers as on 31st December, 1954, in different branches of the Bank.

The Chairman disclosed on this occasion that the Bank was shortly constructing a modern six-storeyed building to house its head office at the junction of Parliament Street and Asoka Road in New Delhi.

Private Sector in National Economy

Making a few observations about the achievements of Indian economy during the last few years, the Chairman said that efforts in various fields of activity had steadied the economic forces and the disequilibrium and inflationary trends that appeared to gather momentum after independence had been rectified as a result of increased agricultural and industrial production. There had been a gradual fall in prices. The contribution made by the private industrial sector in these achievements was commendable. He continued that, on objectives, there was certainly no difference in this country. The common aim was to create more and more wealth and ensure its equitable distribution. Referring to the Avadi resolution on the socialist pattern of economy, he observed that it was in accordance with the common objectives. The socialistic pattern envisaged in the resolution did not imply State ownership of the means of production, but an economy maintaining efficiency in productive mechanism; and both public and private sectors working to give to the common man increased opportunities for work and higher standard of living within his lifetime. If the socialistic pattern did not generate a rate of developmental activity which gave to the community the desired advancement, the common man would consider it as sentimental philosophy. The people should have minimum requirements of living standards and amenities in respect of medical attention and education, etc. This was outside the means of existing national income. Our national income had to be multiplied many times for which there has to be tremendous all-round activity. As maximum production of goods and services was the need of the times, the country's advancement would be slowed down if instead of doing everything possible to stimulate developmental activity, sluices were built all round. It would be pertinent to recall the strong plea made by the private industrial sector on the eve of the first Five-year Plan that a bolder plan and accelerated pace of development would have been the only method of creating greater employment. However, subsequent events had proved beyond doubt that cautious expenditure caused by fears of inflationary spirals had not been called for. The Chairman said: "We are again at a crucial stage. There must be clear lead; otherwise, we shall find that we have got into the wrong bus to reach the intended destination."

The Chairman did not favour the Taxation Enquiry Committee's recommendations to tax consumption in order to channelise savings for development expenditure. The capital formation need not arise wholly through restrictions on consumption. According to recent studies of a research institute, during the last three years, consumption expenditure had risen by about 9 per cent., while capital formation had approximately doubled. Mr. Jain called the attention of the authorities to this analysis and stated that in Western countries of Europe where full employment existed, there were no restrictions on consumption to create developmental activity.

Unemployment Problem

Speaking about the unemployment problem in the country, the Chairman stated that there was partial unemployment among the agricultural population and large-scale unemployment among the educated. The unemployed also included those who had courage, enterprise, skill and were prepared to take risks, but lacked capital. As the country aimed at broad-based economy, such intelligent unemployed had to be given an opportunity. The State must see that this enterprising section of intelligentsia were equipped with the required capital by the financial institutions of the country.

The Chairman said that much hope had been raised by the appointment of various committees to assist development by giving aid to the private sector. In this connection, he referred to the Shroff Committee and its offshoot, the Handoo Report and the promotion of the Development Corporation which is intended to help the private sector and create an atmosphere conducive to development activity. After the noise that the reports had made, these had been laid to rest. Such reports had no significance unless their intent was fully implemented and given concrete shape. He also referred to the report of the Rural Credit Enquiry Committee which promised to provide credit to the cultivator through the medium of nationalised banks. The extent of the resources that the Reserve Bank would place at the disposal of the nationalised banks was not known and had probably not been worked out. There was also no information about the machinery, through, and the basis on which, the credit would reach the cultivator.

Optimism About Future of Country

Striking a note of optimism about the future of the country, he said that agricultural production would further go up with the completion of various irrigation projects. Industrial production was also sure to keep its upward trend. Although the rate of incrqase in production, statistically, compared favourably with the position in foreign countries, he did not consider it satisfactory and sufficient for meeting the expanding needs of our people.

The Chairman was anxious that the Punjab National Bank should provide credit to industry, trade and consumer in a bigger way. The list of securities for loans was proposed to be enlarged, so that financial accommodation could be extended to small manufacturers after proper scrutiny of their assets. In the internal market the Bank might finance sales on instalment basis which had proved so profitable and useful to American economy.

He further said that, as regards banking habit, the country was indeed backward as compared with other advanced countries. The deposits of our Scheduled banks formed only 78 per cent. of currency in circulation, whereas they were about four times of currency in circulation in the U.K. and the U.S. With the improvement in economic prosperity for which efforts on national scale were afoot, further development of banking would surely take place. In this context Mr. Jain referred to one or two points from the Shroff Committee report. The first was the desirability of making issuance of cheques on a bank without funds a criminal offence. The second point was that of maintaining the secrecy of bank-customer relations. These points, he felt, should receive the attention of the Reserve Bank and the Government for further consideration. Referring to the order of the Government that the funds of quasi-Government institutions, etc., could only be deposited with the Imperial Bank of India, he suggested that the Government should draw a list of approved banks for this purpose instead of prohibiting operations as they had done. Expressing his abiding faith in the economy of the country, he said, "even the most pessimistic must feel optimistic about the future destiny of our country and the material well-being of our people. In this task of building up of our country, may it be the destiny of our Bank to play its rightful part gloriously as it has endeavoured to do during the last 60 years."

Before concluding, Mr. Shanti Prasad Jain thanked all the constituents of the Bank, Directors of the General Board, and local Advisory Committees for their continued confidence and co-operation. Making special mention of the work done by Mr. B. N. Puri, he said: "To our General Manager, Shri B. N. Puri, genuine appreciation is due for his zeal, organising ability and drive. But for his invaluable assistance and the loyal and unstinting labours of the officers and the staff, I would not have been in a position today to report to you, as I have done, about the increasing strength, stability and prestige of your Bank."

MONEY STRINGENT AGAIN

(From Our Own Correspondent)

BOMBAY, 4th *May*

The pull on the short-term money market, experienced towards the close of the previous week, continued to be felt, and that on a greater scale, during the week under review. There was a broadening of demand for money to a more perceptible extent, in the face of a shrinking volume of floating funds, with the result that banks had some difficulty in getting their requirements from the market. Actually, from Monday onwards, they had to pay higher interest rates for their borrowings from the market. Exchange banks, as well as prominent Indian banks, were keen borrowers. Many of them had to seek the assistance of the Reserve Bank.

Inter-bank call money, after being done at 2¾ per cent. up to Saturday, was bid at 3 per cent. from Monday onwards by all sections of banks. Small Indian banks were, however, less keen borrowers. Short-term deposits were in demand at 3 per cent. for one to four months and at 2¾ to 3 per cent. for longer periods up to six months. House money continued to be placed at 3 per cent.

Notwithstanding the reappearance of stringent conditions, the response to this week's sale of three months' Government of India Treasury Bills was somewhat better than in the previous week. The total amount offered was Rs. 122.25 lakhs (against an invitation for Rs. 100 lakhs), an increase of Rs. 12.25 lakhs over the previous week. The average rate of accepted tenders also dropped from Rs. 2-9-5 per cent. to Rs. 2-9-3 per cent. per annum.

A contraction of Rs. 5.37 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 29th April, 1955. This is the second week in succession in which the shrinkage is noted, the decline in the previous week having been of the order of Rs. 9.19 crores. Notes held in the Banking Department have risen by Rs. 5.77 crores, so that the increase in total notes issued is only Rs. 40 lakhs, which is covered by a similar rise in rupee coin. The downward trend in deposits of the Central Government noted in the previous three weeks has persisted in the week under reference also, the precise fall being Rs. 2.09 crores. Deposits of other Governments have risen again by Rs. 4.58 crores. An increase of Rs. 35 lakhs is seen in deposits of banks. On the assets side of the Banking Department, balances held abroad are lower by Rs. 5.04 crores. Loans and advances to Governments have gone up by only Rs. 72 lakhs and other loans and advances by Rs. 30 lakhs. There have been fresh borrowings to the extent of Rs. 4.02 crores by Scheduled banks against usance bills, while repayments have been very little. Investments disclose a fall of Rs. 2.06 crores.

Small variations are disclosed by the consolidated statement of position of Scheduled banks for the week ended 22nd April, 1955. Demand deposits, for instance, are higher by only Rs. 31 lakhs and time deposits by Rs. 66 lakhs. Inter-bank borrowings are lower by Rs. 65 lakhs, while borrowings from the Reserve Bank have risen by Rs. 1.58 crores. Borrowings from the Imperial Bank, on the other hand, have declined by Rs. 1.56 crores. An increase of no more than Rs. 97 lakhs is noted in advances. Inland bills purchased and discounted show a decline of Rs. 66 lakhs, while foreign bills are higher by Rs. 61 lakhs. No worthwhile variation is noted in investments. Cash on hand and balances with the Reserve Bank have together dropped by Rs. 3.27 crores, balances with other banks by Rs. 65 lakhs and money at call and short notice by Rs. 3.36 crores.

The Gilt-edged market continued to present steady conditions, with a broadening of demand from institutional investors. The raising of Reserve Bank of India's selling rates for some securities by an anna, also provided a stimulant. The volume of business also was on an enlarged scale, 3 per cent. 1957 was in demand and hardened by an anna to Rs. 99-6. 3 per cent. 1958 had buyers at last week's rate of Rs. 99-4. 3 per cent. 1959-61 attracted buyers at Rs. 97-7 and 3 per cent. 1963-65 at Rs. 93-11. 3 per cent. 1964 was unchanged at Rs. 93-10, but there were enquiries at Rs. 93-10½. The Reserve Bank raised its selling price of 3 per cent. 1966-68 and 3 per cent. 1970-75 by an anna to Rs. 90-10 and Rs. 87, respectively. 3 per cent. 1986 Conversion Loan gained an anna to Rs. 80-14. 3½ per cent. 1961 National Plan Bond was wanted an anna higher at Rs. 99-11. 3½ per cent. 1964 National Plan Loan had buyers at Rs. 98-8½, although the Reserve Bank raised its price by an anna to Rs. 98-9.

The rupee continued to rule steady in terms of the U.S. dollar, with no change in rates. Sterling disclosed an irregular trend, but the underlying sentiment was cheerful. Thus, in New York, spot sterling, after hardening from $2.79 13/16-2.79 15-16 to $2.79⅞-2.80, reacted to $2.79 11/16-2.79 13/16 on Friday last. There has since been a recovery to $2.79⅞-2.80. Forward sterling (three months) dropped from $2.78 11/16-2.78 13/16 to $2.78½-2.78⅝, before regaining to $2.78⅞-2.78⅞. Transferable sterling closed at $2.77 3/16-2.77 5/16, after being down at $2.76⅞-2.77.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 2nd *May*

Conditions in the linseed market were more or less unchanged during the week under review. Prices were maintained firm, although trading was small. Transactions were very scarce, because supplies were short and millers were reluctant to make purchases at higher levels. Forward trading was almost at a standstill. The oil market was quiet but steady. Prices showed no change, but enquiries were very scarce. Latest quotation is May Rs. 15-4 per maund.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 4th *May*

Hectic fluctuations in prices of both silver and gold, reflecting the trial of strength between the bulls and bears, characterised the trading on the Bullion Exchange during the week under review. Aggressive buying by bulls, coupled with good demand in ready, lifted up the price of both the metals to new high levels, the ready silver touching Rs. 172-1 and gold Rs. 99-4.

The reactionary trend in prices noted on Wednesday last week, following the opinion given by the Advocate-General to the effect that the margin was applicable to *Jeth* settlement also, proved to be a temporary affair and bullish sentiment once again gained strength, despite the announcement by the Board that margin would be applicable to all outstanding purchases in *Jeth* settlement. This was due to reports that some bull operators were likely to bring an injunction against the enforcement of margin on the *Jeth* settlement. These reports proved correct on Saturday, when one of the bull operators filed a suit in the High Court challenging the authority of the Directors of the Bombay Bullion Association to ask for margin on *Jeth* settlement. He also obtained an interim injunction restraining the Board from enforcing the margin till the disposal of the suit. This, coupled with the heavy demand in the ready section, strengthened the hands of bulls and prices soared to new heights on Saturday and the spread between the *Vaisakh* and *Jeth* settlements in silver also widened to Rs. 3-2, that is, over the limit at which a margin of Rs. 2,500 per bar, according to the second slab of margin under by-law 33D(1)(a)(i), becomes payable. Accordingly, the bulls were obliged to pay a margin of Rs. 2,500 per bar on their outstanding purchases of silver in *Vaisakh* settlement. The backwardation charge in gold also widened to Rs. 2-6 on Saturday.

The widening of the backwardation charges did not restrain the bull operators, because they had already been obliged to pay the maximum margin in respect of their outstanding purchases of silver as well as gold in the *Vaisakh* settlement. On the other hand, they were emboldened by the fact that they would not be called upon to pay a higher margin even if the backwardation charges were to widen to any extent. They, therefore, became more aggressive in extracting as much *badla* from the bears as possible. Accordingly, the backwardation charges for silver further widened to Rs. 4-6 on Monday.

On Tuesday, however, the bulls became nervous when the Court dissolved the interim injunction and also dismissed the notice of motion taken by the bull operator in connection with his suit filed earlier. The hearing of the suit was, however, postponed to July next. In view of the dissolution of the interim injunction, the bulls were called upon to pay a margin of Rs. 500 per bar of silver and Rs. 7 per tola of gold on their outstanding purchases in the *Jeth* settlement. There was, therefore, a heavy selling pressure which pushed back the rates by a sizable extent from the peak levels touched on Saturday.

Today, however, prices again disclosed a hardening tendency on resurgence of speculative buying and backwardation charges also widened to Rs. 5-12 in silver and Rs. 2-15 in gold.

Silver for forward delivery in *Vaisakh* settlement opened at Rs. 166-10 and advanced to Rs. 168-5 on Monday. After reacting to Rs. 166-15 yesterday, *Vaisakh* silver closed today at Rs. 168-1. *Jeth* silver touched a high of Rs. 164-12 before closing at Rs. 162-5, as against the previous week's closing of Rs. 162-15. *Ashad* silver opened at Rs. 161-10 and hardened to Rs. 162-8 before finishing at Rs. 159-9.

The opening and closing prices of ready silver (.996 Mint) were Rs. 170-2 and Rs. 170, respectively. The highest level touched was Rs. 172-1.

The floating stocks of silver are reported to be 1,700 bars. The daily average offtake was 20 bars.

Gold for forward delivery in *Vaisakh* settlement opened at Rs. 95-12 and appreciated to Rs. 96-10 on Saturday. After reacting to Rs. 95 yesterday, forward gold steadied up to Rs. 95-6½ at the close today. *Jeth* gold moved up from the previous week's closing of Rs. 93-6 to Rs. 94-4, but finished today at Rs. 92-7½. *Ashad* gold gained strength from Rs. 92-8 to Rs. 93, but wound up today at Rs. 91-1½.

Ready gold rallied from Rs. 96-15 to Rs. 99-4, but retreated to close at Rs. 97. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals and offtake were even at 3,000 tolas.

In London, silver remained unchanged at 75½d. for spot and at 75¼d. for forward. Gold, on the other hand, fluctuated between £12 10s. 6½d. and £12 10s. 4½d., before closing a penny lower over the week at £12 10s. 5½d. Price of silver in New York was stagnant at 87 cents.

The following comparative table shows the trend of the market during the week under review:

FORWARD COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 4th *May*

The firm trend witnessed in the cotton futures market towards the close of last week gathered further momentum during the week under review. The firmness was aided by persistent covering by nervous shorts following strict survey results. Tenders against I.C.C. May contract issued on Monday aggregated not more than 400 bales, a quantity which was less than what the market had expected. These included 200 bales of Kalyan, 100 bales of Vijaya, and 50 bales each of Kumtha and Laxmi. The low level of tenders indicates that, since the room rates are lower than the currently ruling prices, operators prefer to sell their holdings in the spot market at higher prices, instead of tendering them against the contract. There was also renewed speculative bull support induced by firm advices from the cotton piecegoods market and reports of deterioration in quality of cotton in several producing areas. The volume of transactions put through was fairly large, the average daily turnover during the week being more than 40,000 bales. Today's closing quotations were substantially higher than those a week before.

I.C.C. May contract opened the week steady at Rs. 565 and improved to Rs. 567-12 on the same day under the influence of short-covering. The upward trend was somewhat halted on Friday when, on account of offerings from bulls and switchover by a prominent operator, the contract receded to Rs. 559-8. A distinct recovery was once again in evidence on Saturday. There was heavy short-covering induced by reports of lack of any tenders on the first notice day. The sentiment of the market was also influenced favourably by speculative bull support and reports that an appeal lodged against the fixation of tendering differentials had been rejected. Consequently, I.C.C. May contract spurted to Rs. 564-4. The improvement persisted in the three subsequent sessions of the week also, thanks to strict survey results, and the contract touched Rs. 578 today before finishing at Rs. 575-8. I.C.C. August contract opened at Rs. 568, as against Rs. 567 last week-end, and, after declining to Rs. 565 on the 29th inst., gradually moved up to Rs. 579-8 today before closing at Rs. 578. The spread between the two contracts narrowed down further, from Rs. 3-8 last week-end to Rs. 2-8 today.

The trend of prices during the week under review is indicated below:

	27-4-55	*High*	*Low*	4-5-55
I.C.C. May ... Rs.	563½	578¼	559½	575¼
I.C.C. August ... Rs.	567	579¾	565	578

The spot section ruled quietly steady. Little business was done in Kalyan, Wagad and Kala, although there were intermittent enquiries. Lakshmis were neglected, but Jaidhar evoked some interest. Demand for 320F, Navsari certified and Surat certified was somewhat better and their premiums recorded an improvement. There was also fair enquiry for Buri, 0394 and Vijays. Among exportable styles, Oomra *deshi* met with support. Among foreign cottons, East Africans failed to elicit any noticeable support, despite their being offered at Rs. 20 per candy lower than the prices a week ago. No deals were put through in Sudans, Egyptians and Americans. Small transactions were, however, reported in the ready Californian stocks.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 565; Berar Jarillas Rs. 625; Khandesh Rs. 590; Vijay Rs. 750; Oomra *deshi* Rs. 560; Moglai Rs. 525.

Distinctly easy conditions prevailed in the Karachi cotton market this week, in distinct contrast to the steady tone witnessed in the two previous weeks. Demand from mill interests slackened. Overseas enquiries also were poor. Selling pressure was, therefore, in evidence and values of cotton staged a retreat. In the forward section, N.T.R.G. May was quoted yesterday at Rs. 62-14, as against Rs. 63-14 a week before. July contract was quoted at Rs. 61-14. The latest available quotations from the spot cotton market at Karachi are: Sind *deshi* Rs. 58, Punjab *deshi* Rs. 50; 4F Punjab R.G. Rs. 57-4; S.G. Rs. 62-4 to Rs. 64-4; L.S.S. Punjab R.G. Rs. 61-4; S.G. Rs. 66-4; N.T.R.G. Rs. 64-4 to Rs. 66-4; S.G. Rs. 68-4 to Rs. 70-4; 289F Punjab R.G. Rs. 64-12; S.G. Rs. 69-12.

The Alexandria cotton market presented a steady note during the week under review, despite only moderate export sales. Entitlement currencies continued to be firm at their recent high premiums. The stocks of current crop with the Egyptian Cotton Commission at the middle of last month aggregated 72,272 bales. The Commission held, in addition, 48,000 bales of previous season's crop (all Karnak). The estimate of Egyptian cotton crop for the season 1955-56 places the total yield at 9 million cantars, as against the latest private current crop estimate of 7.5 million cantars. Cotton exports from Egypt during the period 1st September, 1954 to 20th April, 1955, amounted to 473,167 bales (720 lbs.), of which purchases made by India accounted for 56,599 bales.

The selling prices (in tallak) of Egyptian Cotton Commission cotton graded good, good to fully good and fully good are: Karnak 73.20, 77.70, 82.80; Menoufi 69.20, 73.20, 77.20; Giza (30) 67.05, 70.05, 73.05; Ashmouni 61.05, 64.05, 67.05.

Another auction of the new (1954-55) Sudan cotton was held at Kampala on Wednesday last week. Offerings by the Lint Marketing Board aggregated 16,000 bales of all qualities. Bids were accepted for 3,800 bales at half penny lower than the rates realised at the previous auction. Although bids for the remaining quantity were lower still, the Board finally decided to accept them. The eleventh auction of the new crop is being held at Khartoum today. Offerings are estimated at 19,357 bales, of which Gezira 'S' accounts for 7,176 bales,

Gezira 'L' for 6,884 bales, Al-Wi 'L' for 897 bales and Nuba Mountains for 4,400 bales.

Induced by reports of improved trading in yarn and cloth, following reduction in the purchase tax on consumer goods, the Liverpool cotton futures market depicted a fully steady note this week and cotton prices generally staged a recovery. The recovery movement may be expected to gather further strength in the ensuing week, thanks to the abolition of purchase tax on textiles, announced by the British Prime Minister, and the reduction in the import duty on U.K. textiles announced by the Government of India. The latest available quotations from the market are: May-June 31.51d; July-August 30.56d; October-November 29.80d; December-January 29.75d.

The New York cotton futures market ruled strong this week too. The most important factor which lent support was trade buying. There was, besides, switching of contracts from near position to July and later positions and cotton prices firmed up. The improvement would have been more marked but for profit-taking, liquidation and hedge selling.

It is understood that the U.S. Senate Agricultural Sub-committee has urged the Government immediately to export about 700,000 bales of surplus cotton held in stock. The Sub-committee is also reported to have recommended adoption of two important steps in order to enable the U.S. farmers once again to get their share of the world cotton market. These are: grant of a cotton export subsidy and a reduction in price support for cotton now set at 90 per cent. of parity. The Sub-committee estimates the U.S. cotton carryover as on 1st August, 1955, at 10.6 million bales, as against 9.7 million bales held on the corresponding date last year.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-5-55	26-4-55	19-4-55
Spot	34.70	34.35	33.95
May	33.95	33.57	33.16
July	33.98	33.70	33.41
October	34.03	33.91	33.76
December	34.09	34.02	33.90

RAYON YARN EASY

(From Our Own Correspondent)

BOMBAY, 4th *May*

The most outstanding development of the week under review in the rayon yarn market was the decision taken by the Bombay Yarn Merchants Association and Exchange Ltd. to resume, with effect from the 12th inst., trading in June-July, 1955, fixed delivery and onward contracts in 150 and 120 deniers rayon yarn on cones. The varieties which will be made tenderable are first quality yarn produced by the National Rayon Corporation Ltd., Bombay, any ticket of first quality Japanese yarn, first and second quality of Snia marks Italian yarn, and yarn of Holland Enka (first, second and claimless quality). In these transactions, a case having a packing of 180 to 220 lbs. will be considered tenderable. The members desiring to take delivery of goods will have to make payment in the Association at the rate of 200 lbs. a case. The members shall have to adjust among themselves their accounts of the difference in weights. The brokerage shall be allowed at the rate of As. 10 per case. The by-laws for transactions with regard to the clearing system, delivery and survey of goods, margin system, slips of statement, time of business, etc., will be the same as those pertaining to transactions in the fixed delivery contracts of 150 denier rayon yarn and 40×2 staple fibre yarn as published on 12th May, 1954.

Since the attention of operators was focussed on the extension of forward business to a few more varieties from the 12th inst., the rayon yarn market ruled dull during the week under review. Turnover was greatly restricted and values of rayon yarn tended to drop. The undertone of the market was easy. In the forward section 150D May delivery receded by Rs. 2 to Rs. 733. In the spot section, 120 Italy and 150 Italy dropped an anna and a half each to Rs. 4-2-6 and Rs. 3-12, respectively. 150 Japan declined by half an anna to Rs. 4-1-6. 120 Japan was quiet at Rs. 3-14-6. Among indigenous yarns, National Rayons 120 Bt. cones I grade advanced by As. 2 to Rs. 4-1. II grades gathered an anna and a half to Rs. 4. 150 Bt. cones I and II grades lost nine pies each to Rs. 3-7 and Rs. 3-6-6, respectively.

In distinct contrast to the easy trend in rayon yarn market, the staple fibre yarn section ruled firm during the week under review. The firmness was the result of renewed encouraging advices from consuming centres. Demand for yarn broadened and a handsome improvement was witnessed in both the forward and spot sections. Staple fibre yarn (40×2) for May delivery advanced from Rs. 582 last week-end to Rs. 591 today before finishing at Rs. 588-8. Business in June delivery commenced at Rs. 582-8 yesterday. After rallying to Rs. 588 today, it closed a shade easy at Rs. 585-8. In the spot section (40×2), Shincos among foreign yarns rallied As. 3 to Rs. 4-6. Auroras gathered half an anna to Rs. 4-2. Among indigenous yarns, Pankajas elicited good support and spurted by an anna to Rs. 2-15-9. Phœnix picked up nine pies to Rs. 2-15-3. Hinds were better at Rs. 3-0-6, as against Rs. 3-0-3.

Irregular conditions prevailed in the cotton yarn market this week. While coarse count yarns were neglected, finer count yarns evoked good buying support. Among 10s, Elphinstones dropped As. 2 to Rs. 12-12. Podars were quiet at Rs. 12-14. Among 20s, Raghuvamshis receded by As. 2 to Rs. 16-2. Maduras lost an anna to Rs. 17-2. Deals in 60 count yarns, however, were put through at higher levels. Finlays and Moderns rose by a rupee each to Rs. 62 and Rs. 61, respectively. Raghuvamshis improved by As. 8 to Rs. 53. Among 80s, Moderns strengthened by As. 4 to Rs. 62-12. Finlays were fully maintained at Rs. 68-8. Among 40s, Moderns gained As. 10 to Rs. 25-4, while Seksarias receded by As. 2 to Rs. 22-6.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	4-5-1955	27-4-1955
	Rs. a.	Rs. a.
Art silk yarn—		
100 D. May	733 0	—
150 Japan (per lb.)	3 14½	3 14
150 Japan (per lb.)	4 1½	4 2
120 Italy (per lb.)	4 2½	4 4
150 Italy (per lb.)	3 12	3 14
Staple fibre yarn—		
40 x 2 May	588 8	581 0
40 x 2 June	585 8	—
Shinco (per lb.)	4 6	4 6
New Great (per lb.)	3 2½	3 3
Cotton yarn (per bundle of 10 lbs.)—		
10s Elphinstone	12 12	12 14
20s Raghuvamshi	16 2	16 4
30s Madura	21 4	—
40s Seksaria	22 6	22 8
60s Modern	61 0	60 0
80s Modern	62 12	62 8

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 2nd *May*

The conditions of the hides and skins market during the week under review were similar to those prevailing in the previous week. Fresh arrivals were a shade lower in volume. Arrivals of small volume of cows were specially noteworthy. The main purchasers were the local tanners. The Madras dealers were interested in lighter cow and goat.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360 to Rs. 400, 2nd grade Rs. 270 to Rs. 350 and 3rd grade Rs. 140 to Rs. 150 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 13 oz. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep skins Rs. 200 to Rs. 250 per 100 pieces.

OILSEEDS BETTER

(From Our Own Correspondent)

BOMBAY, 4th *May*

A notable development of the week under review is the announcement of further changes in the export policy of the Government in respect of oilseeds and their oils and cakes on the 30th April. The chief among them is the decision of the Government to allow free export of cottonseed oil and sesamum oil for shipment up to the end of July with immediate effect. Other notable changes include the abolition of export duty on cottonseed oil and a reduction in the duty on exports of sesamum oil from Rs. 300 to Rs. 75 per ton. Further, the Government has decided to release a small quantity of sesamum seed for export. Exports will be licensed freely for shipment till the end of July. The present level of duty, which is Rs. 150 per ton, is, however, left unchanged.

Notable concessions have been granted in regard to exports of oilcakes. The Government has reduced the duty on decorticated and undecorticated cottonseed oilcakes from Rs. 100 and Rs. 50 per ton, respectively, to a uniform level of Rs. 30 per ton. It has abolished the export duty on nigerseed cake, kardiseed cake and castorseed cake. The duty of Rs. 50 per ton on the remaining cakes, namely, linseed cake, sesamum cake and mustard cake is left unchanged. Except in the case of linseed cake, exports of all the above cakes, will be licensed freely up to ceilings previously announced for shipment up to the end of July. The quota released earlier for export of linseed cake has already been exhausted. It is announced that there will be no change in the levels of duty on groundnut oilcake and meal. A further small quota for export will, it is stated, be released as soon as the export ceilings announced earlier are reached. Shipment against their ceilings will be permitted up to the end of June.

The week under review is also significant for two other developments. The first is the decision of the Government of India to issue fresh export licences for *kardi* and *niger* seeds. These licences, it is stated, will be given for quantities that were not shipped during the validity period of the previous licences, "which are deemed to have lapsed." The shipping bills will be valid for a period of 15 days and will not be extended further. Secondly, the Government has announced the procedure for the export of H.P.S. groundnut quota released on the 26th April.

As a result of these developments, the tone of the oil, oilseeds and oilcake improved considerably during the week. Cottonseed shot up by Re. 1-8 to Rs. 11 per bag. Nigerseed was quoted at Rs. 115 per ton, as against Rs. 99 per ton, a week ago. Castorseed cake shot up by Rs. 7 to Rs. 97 and cottonseed cakes by Rs. 15 to Rs. 125 per ton. Indian cottonseed oil is still the cheapest in world markets, being quoted at £10 per ton below world prices, but it is stated that buyers are still preferring oil from Sudan, Belgian Congo and America, as they consider that the Indian oil is inferior in quality.

Traders in the groundnut section are expecting further announcement of export quota in H.P.S. groundnuts and a reduction in export duty on groundnut oil, which is now Rs. 100 per ton. As a result, groundnut seed Bold F.A.Q. advanced from Rs. 20-4 to Rs. 21-8. June-July gained Re. 1 to Rs. 22-1. Khandesh quality was better by Re. 1-2 at Rs. 21-12. Groundnut oil ready gathered As. 7 to Rs. 11-9.

The Centre has earmarked 5,000 tons of H.P.S. groundnut for export by co-operative societies out of a total quota of 15,000 tons, announced on 26th April. The remaining quota of 10,000 tons for export by established shippers will be allotted at the rate of 45 per cent. of their best exports during any one of the basic years. Established shippers of groundnut during 1949 or 1950 will also receive allotments.

In the castorseed section, May (future) delivery opened quiet at Rs. 72-14. After fluctuating between Rs. 74-6 and Rs. 72-8, it closed at Rs. 72-15. September delivery gained As. 11 to Rs. 77-13, the highest and the lowest touched being Rs. 79-9 and Rs. 76-12, respectively. Among spots, Madras quality put on As. 2 to Rs. 14-12. Castoroil Commercial quality, gained an anna to Rs. 8-5 and First Pressure As. 6 to Rs. 8-10.

The linseed section, however, lacked support. Bold ready lost As. 4 to Rs. 22, while June-July hardened by an anna to Rs. 21-9. Linseed oil eased from Rs. 13 to Rs. 12-14. Linseed oil was quoted in the U.K. at £91 per ton, as against £92 to £93 last week.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 4th *May*

Despite the release of 130,000 tons of indigenous sugar for sale in the free market, the sugar market depicted a fully steady trend during the week under review also. The chief factor which imparted steadiness was scarcity of floating stocks, thanks to absence of arrivals of indigenous sugar into the market in the past few days caused by difficulties in clearing wagons at Wadi Bunder. There was, besides, good demand from merchants.

In the spot section, large grain indigenous sugar spurted by Rs. 2 to Rs. 94-102 per bag. Medium grain advanced from Rs. 89-90 to Rs. 89-93. Small grain was steady at Rs. 88. Among imported sugars, British refined sugar elicited special buying support and rallied a rupee to Rs. 84-4 per 224 lbs. German and French sugars were throughout steady at the last week's levels of Rs. 80 and Rs. 82-84 per 220 lbs., respectively. Czechoslovakian sugar, however, proved an exception and moved down from Rs. 85-87 to Rs. 84-86 per 220 lbs. for want of support.

Sugar for *Vaishak* delivery was fully steady at Rs. 83-6 per bag. The settlement is likely to be squared up around this level. *Jeth* delivery gathered an anna to Rs. 83-2.

The fears regarding a marked fall—to the extent of 300,000 tons—in the consumption of sugar during the current (1954-55) season, expressed in certain circles, would appear to be clearly exaggerated. An indication of this is provided by the fact that the total offtake of indigenous and foreign sugar during the five months ended March, 1955, was lower by only 69,000 tons at 664,000 tons, as compared with the corresponding period of the previous season. Even this fall, it is pointed out, would not have occurred, had it not been for low prices of *gur*, very heavy arrivals of imported sugar at the ports in the beginning of the season, vacillating Government policy with regard to prices and sales, and downward trend in the prices of foodgrains, cotton, oilseeds, and other agricultural commodities.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

JUTE DULL

(From Our Own Correspondent)

CALCUTTA, 3rd *May*

In the absence of fresh incentives, the jute markets were again dull. Support for jute goods from overseas countries was lacking, and Argentina continued to keep away from the market. Prices of both hessians and heavy goods had, therefore, to give way. One redeeming feature was the losses seen in raw jute also. Present trends in the market are a clear indication that foreign buyers of jute goods do not even desire to support the current prices, which, judging from the recent high levels touched, should be considered low. They are also out of proportion to the prices of raw jute, and the profits of mills, if any, would be only marginal. Raw jute must come down to more reasonable levels to enable mills to make prices of finished goods attractive to foreign buyers. That will alone oust the substitutes from the foreign markets. Contrary to earlier expectations, stocks of goods with mills as at the end of the last month would show a further rise, as although business in heavy goods was about average hessians was less active owing to lack of interest shown in America and Argentina.

In view of the uncertainty about future price trends, weak holders who had bought recently in

expectation of Argentina's entry in the market began to unload. This invited the decline in hessian prices, and heavy selling in *fatka* affected prices of heavy goods also. Ready hessians 40" 10 oz. opened at Rs. 44 on Tuesday last. On the following day, the price receded to Rs. 43-14. Mills did some business for the forward position, but buyers were reserved. Soon the ready position recovered to Rs. 44, but activity by speculative elements saw the rate fall to Rs. 43-1 by the week-end. Yesterday, the quotation was easier at Rs. 43, with the eight oz. at Rs. 34-6. In heavy goods, there was more speculative activity, and ready B. twills touched Rs. 116-10 by the week-end as against an opening of Rs. 118-4. At Rs. 116-8, the June position was lower by As. 12. Yesterday, ready B. twills declined further to Rs. 115-4, the week's loss amounting to Rs. 2.

In sympathy with the fall in prices of jute goods, raw jute also gave way. Assam bottoms at Rs. 33 eased by one rupee. Prices of most other constructions also declined, but stockists were inclined to refrain from making offers. Forward commitments in the new crop were entered into but so far the quantity involved has been insignificant. This has been due to the ban in Pakistan against forward sales at lower prices and to the consequent expectation of a rise in prices. It is reported that other overseas buyers approached the Pakistani Government, and have found a solution to this problem. No information is, however, available as to the nature of the solution and the advisability of exporters to India copying the same. But for this uncertainty, raw jute prices in India would have moved down further. There is plenty of jute from the old crop still left in the hands of stockists in both East and West Bengal, and the expectation is that there should be a sizable carryover. The crops in the next season in both the countries should not be lower than the 1954-55 season's.

HEAVY WITHDRAWALS AT TEA AUCTION

(Messrs. Forbes, Ewart & Figgis Ltd.)

COCHIN, 28th *April*

The offerings in sale No. 9 which was held on Tuesday, 26th April, amounted to approximately 1,075,000 lbs. Quality continues to decline and was only evident in a few high-grown invoices, whereas teas of poor appearance continue to be manufactured in greater quantities and sellers are strongly advised to take greater care in their manufacture, as teas of this description meet with very little demand on a falling market. With the weak market prevailing throughout the world, this sale met with a poor demand and prices generally declined by As. 6 and withdrawals were heavy. Only O.P.s and F.P.s were well supported and these sold at around last rates. The following are the quotations:—

	1955	1954
	Rs. a. p.	Rs. a. p.
Low grown Travancore B.O.P.	1 13 0*	2 8 6
Medium Travancore B.O.P. ...	1 15 0*	2 9 0
Anamallais B.O.P.	2 4 0*	2 11 6
Best liquoring Nilgiri B.O.P. ...	2 13 0	3 4 0
Well made black leaf O.P. ...	2 15 6	2 12 6

* Nominal

London Market.—No sale this week.

Colombo Market.—Fair demand. Black leaf sorts declined by 25 cents. Others little enquiry. Bulk withdrawn.

Calcutta Market.—Good general demand. Black Dooars As. 1 to As. 2 dearer. C.T.C. irregular. Medium Assam half to As. 1½ easier. Poorest improved demand.

Export Quota.—The market for special licence has eased and sellers are now available at 39 pies with buyers scarce. New season's quota is quoted at As. 5 nominal and some business has been effected at this level in Calcutta.

Forthcoming Auctions.—Dust sale 'T' will be held on 3rd May and sale No. 10 will be held on 10th May.

As we go to press, Messrs. Forbes, Ewart and Figgis, wire:

"*Dust Sale.*—383,000 lbs. Poor demand. Market has declined irregularly As. 4 to As. 5. Many withdrawals."

METALS MARKED DOWN SLIGHTLY

(From Our Own Correspondent)

CALCUTTA, 3rd *May*

Conditions were steady in the metal market during the week, although prices were a little lower. It would be remembered that the lead for copper prices to go up was taken by the London Metal Exchange. During this week, London registered a fall of £11 per ton in the price of copper, while New York maintained prices firm at previous levels. The fall in London was attributed to lack of buying from the Continent, which had bought sufficient quantities in London earlier. Further, Western Germany was believed to be re-selling in London some quantity from its recent purchases. Another factor for the wide fluctuations in London was that Great Britain had sold 20,000 tons to Rhodesia from Government stocks.

In the local market, the supply of wire bars continued to be tight, but some fresh arrivals are expected. The acuteness of the supply position can well be imagined when it is known that in the quarter ended March imports of copper wire bars and ingots were just above half of the arrivals in the previous quarter. Electrolytic copper cathodes moved down from Rs. 260 to Rs. 250. Tin was a strong feature and, after rising to Rs. 485, closed at Rs. 483. Even at the lower level it was above the replacement cost. This was due to the scarcity of supplies. Now that the replacement cost has been touched, importers would enter into commitments. Mercury was steady at Rs. 1,238, although business passing was poor. The price of lead receded from Rs. 75 to Rs. 74. The supply position should cause anxiety to consumers, as imports during the first quarter of this year amounted to only 1,660 tons, that is 2,870 tons less than those in the last quarter of 1954. In electrolytic zinc also, the price was fractionally lower at Rs. 61-12, as against an opening of Rs. 62-8.

WHEAT RECEDES

(From Our Own Correspondent)

HAPUR, 2nd *May*

Wheat prices continued easy and a further fall was recorded during the week. Wheat *dara* was quoted today at Rs. 9-4 per maund and fine quality at Rs. 10-8 per maund, as against Rs. 10 and Rs. 11 respectively, last week-end. Owing to increase in arrivals of new crop in Delhi and, the Punjab, the mills in Delhi restricted their purchases here and this accounted for a slack demand and consequent fall in wheat prices. Stockists are also hesitant to build up stocks for fear of a further fall in prices and this too acted as a bearish factor. Wheat prices have gone down to Rs. 9-8 in Delhi area, to Rs. 10-4 in the Punjab and Rs. 10-8 in P.E.P.S.U. The Government of India is also anxious to check a further fall in wheat prices and has, therefore, decided to permit exports of wheat products, manufacured out of imported wheat on an *ad hoc* basis to all permissible destinations. The State Government has not yet begun its purchases of wheat on behalf of the centre, but arrangements are being finalised to begin purchases in the U.P. and the Punjab. Daily arrivals here now average about 1,000 maunds and the wheat stock is estimated at 2 *khaties*.

In contrast with the general trend in wheat prices, rice prices continued steady at almost last week's level. Gram prices continued to be depressed being quoted at Rs. 6 today for local quality and Rs. 6-8 per maund for Punjab quality, and arrivals of new crop being still small, the gram stock is 1 *khati*. Barley and *bejar* prices improved by As. 4 to Rs. 5 and Rs. 4-12 per maund, respectively, due to good seasonal demand and *bejhar* stock is now estimated at 3 *khaties*. The State Government is already purchasing *jowar* to give price support to the falling prices at Rs. 5-8 per maund and has so far purchased about 5,000 tons of *jowar*.

Pulses prices continued to rule steady, due to good demand for peas from Madras side, being quoted at Rs. 5 per maund for *dara* quality and upto Rs. 7 per maund for white quality. Daily arrivals average 1,200 maunds and trade stock has increased to 10 *khaties*. *Arhar* prices also ruled steady due to poor stock position and negligible arrivals of new crop. Other pulses continued steady and are quoted at: *Urd* Rs. 10-4 to Rs. 12-4, *masoor* Rs. 7-4 to Rs. 7-12, *masoor* Rs. 5-10. Pulses future section also ruled steady and *urd baisakh* is now quoted at Rs. 11-11, *peas jeth* Rs. 5-1-4½ and *arhar jeth* Rs. 6-1-3, as against Rs. 11, Rs. 4-15-4½ and Rs. 6-0-6, respectively, on Monday last.

FAIR SUPPORT FOR TEAS WITH BLACK LEAF APPEARANCE

(From Our Own Correspondent)

CALCUTTA, 3rd *May*

Steady conditions were in evidence during last week's sale of dusts for domestic consumption. Offerings aggregated 17,700 packages. Commons and Dooars with black leaf appearance received fair support and prices advanced by an anna to As. 2. On the other hand, the best C.T.C. good liquoring sorts of Upper Assam declined by As. 2, although for a time they were irrigular. Medium Assams encountered only poor support and before the sale closed declined by ½ anna to As. 1½. Prices for the residue fibrous teas rose above valuations; these teas were difficult to be pushed in recent sales. The quotations were: best Assam C.T.C. Rs. 2-12 to Rs. 2-14, medium Assam grainy dust Rs. 2-4 to Rs. 2-5, and medium Dooars Rs. 2-2 to Rs. 2-2-6.

FURTHER FALL IN SUGAR PRICES

(From Our Own Correspondent)

HAPUR, 2nd *May*

The sugar markets continued to rule depressed and a further fall was registered in the mill delivery prices of sugar. Dr. Punjabrao Deshmukh, Minister for Agriculture, informed the Lok Sabha that, without any addition to acreage, sugar production in the current season was expected to go up by 50 per cent. as compared with last year and the production was likely to be 1.5 million tons. About 223,000 tons out of the Government purchased stocks, he said, was still to arrive from foreign countries. Sugar producers in India have expressed their great concern over the shrinkage of market for sugar. With a drop of about Rs. 2 per maund for the consumer and with an additional excise duty of Re. 1-6 having burdened the industry, the industry is said to be facing a 'crisis'. The mills on this side are still getting enough cane and the season is expected to last for another fortnight. The latest mill delivery rates are: Jaswant Rs. 29, Simbhaull Rs. 29, Mowana Rs. 29, Amroha Rs. 28-4, Bijnore Rs. 28-6, Rampur Rs. 31 and retail Rs. 32 and *khandsari* Rs. 21 to Rs. 25 per maund.

The last week end's steadiness in ready *gur* prices was maintained this week also and *gur* was quoted at Rs. 9-12 to Rs. 10-4 and the wet quality at Rs. 9 per maund. Daily arrivals averaged 400 maunds and the stock locally is estimated at 103,000 maunds, including about 47,000 maunds owned by the State Government purchased under the price support policy at Rs. 10-4 per maund.

Gur prices in the markets in the South are also ruling steady as the season has nearly come to a close. At Baramati (Poona), the stock is estimated at 450,000 *behalas* and first grade *gur* is quoted at Rs. 11 per maund, while inferior quality upto Rs. 8 per maund. At Akluze (Sholapur), *gur* prices range between Rs. 8 to Rs. 10-8 and stock is estimated at 250,000 *behalas*. In Shrirampur, prices range between Rs. 6-8 to Rs. 10 and at Koppergaon between Rs. 7 to Rs. 10 per maund. At Kohlapur, the stock is estimated at 750,000 *behalas* and demand is good from Bombay, Gujerat and Saurashtra side.

The *gur* futures for *baisakh* delivery side recorded a downward trend on the eve of delivery date and prices from last week-end at Rs. 9-9-10½ sagged to Rs. 9-5-6 quoted today. *Asar* delivery prices also declined to Rs. 9-14-3, as against Rs. 10 quoted on Monday last and *gur phagun* is now quoted at Rs. 9-2, as against Rs. 9-0-3 last week-end.

KIPS RULE QUIET

(From Our Own Correspondent)

MADRAS, 2nd *May*

Trading in kips with the U.K. was quiet, due to the importers' inability to follow Madras prices. Locally, prices were steady. Shippers were interested in buying in all sections. Arrivals were taken up readily and stocks did not accumulate in the Periamet market. Prices would appear to have touched top and were due to register a mild decline, in view of good shipments to the U.K. during the months of March and April.

Arrivals of buff hides were readily taken up by exporters to the U.S.A., and prices rule 2d. above U.K. buyers' ideas. There was patchy trading in cow calf and buff calf premium marks.

In the tanned skins section, prices were steady to weak, due to moderate demand from overseas. Arrivals were cleared by exporters, and there was no clogging of stocks in the market.

Notices

THE KARANPURA DEVELOPMENT COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-eighth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 27th May, 1955, at 10-15 a.m., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 31st December, 1954, electing Directors and Auditors, and for transacting any other ordinary business of the Company.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus.

(1) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

(b) Investments.

(c) For seven months ended 31st March, 1954.

MARKET GOSSIP

(Concluded from page 863)

Further, if a person is found to have contravened this provision, the Government will have powers to choose not more than ten companies in which alone such person should function as managing agent. Another qualification made here is that the right of managing agency cannot be made heritable or devisable by will. If such an agreement has already been entered into between a company and its managing agents, then the Government will decide whether the heir or devisee is a "fit and proper" person to manage the affairs of the company.

• • • •

What alternative for the managing agency system has the Committee in view? Although it has not discussed this issue, it would appear that the Committee favours the institution of "secretaries and treasurers." It has stated that it has no wish to make changes in the system of "secretaries and treasurers" who exercise much the same functions as "managing agents" or "managers" but with this vital difference, that "secretaries and treasurers" have no right to appoint any of their nominees to the directorate. The system, according to the Committee, is free from most of the abuses to which the managing agency system has been subject. Further, the remuneration of "secretaries and treasurers" will, be subject to a maximum of only 7½ per cent., of net profit. Nor can they be appointed as selling or buying agents either by the articles or the agreement between them and the companies, though the board may sanction such appointment.

• • • •

The main question that deserves to be asked, and which will no doubt occur to many observers, is: For whose sake is the system of managing agency being demolished? If it is to serve the interests of shareholders, there is nothing to suggest that there has been a clamour for ending the system. It is true that the system has come in for criticism. But many shareholders realised that the system, with all its faults, had served them well in the past, and if its defects were removed, it would serve them even better. The demand was always for "mending" the system rather than for "ending" it. Thus, even the Bombay Shareholders' Association, which may be generally taken as the watch-dog of shareholders' interests, generously recognised that any sudden termination of the system was undesirable because it would disorganise industrial management. Apart from the consideration that it has, by and large, vindicated itself before the bar of economic history of this country, the system is essentially an outgrowth of India's economic conditions—the absence of an integrated capital market, underwriting firms, holding companies, investment trusts, or syndicates which in advanced countries, provide the capital that is needed for new industries, and also the lack of managerial ability. Since these conditions continue to operate, the system of managing agency, it must be conceded, has not outlived its utility. And yet the Government has thought it fit virtually to destroy the system, to arm itself with enormous powers to decide which of the managing agency firms after 1960, might continue to render service and which of them should be asked to close down. If the Committee's decisions are likely to benefit shareholders, then the shares of managed companies should show at least some immediate rise. But no significant improvement in share values has been recorded. This suggests that the Committee would not be right if it thought that its decisions stem from a consideration for shareholders.

• • • •

It is noteworthy that there has been no tendency, on the part of business men and industrialists, to decry the value of the provisions designed to place limitations on the remuneration of managing agents and of other clauses restricting the powers of managing agents. It is the Committee's decision to end the system that is rightly opposed. This point of view was expressed by Mr. Babubhai M. Chinai, President, Indian Merchants' Chamber, who said: "Enlightened commercial opinion had welcomed the provisions in the Bill designed to vest in the shareholders of the Company greater control over the management in the matter of the remuneration payable to them, in the matter of the powers to be exercised by the managing agents and in regard to several detailed aspects concerning the day-to-day working of the company. But the proposals relating to the future of the managing agency system as such, as they have emerged from the Select Committee, are not such as would strengthen the fabric of joint-stock enterprise in the country in a manner which would enable it to fulfil the role of subserving the programme of planned development."

• • • •

Another ground on which the report has been attacked is that it violates the well-established convention that, at the select committee stage, no major change should take place. Mr. Homi Mody, drew attention to the gravity of this development in an interview to the Press. He pointed out how all these years it had been an accepted principle of legislation that, if any radical changes were made in a Bill, it had to be recirculated for public opinion. This practice had been done away with, so that the legislature functioned without any reference to public opinion. He added:

"The Bill as it has now emerged arms the

Notices

KESORAM COTTON MILLS LIMITED

CIRCULAR LETTER TO THE SHAREHOLDERS

DEAR SIR/MADAM,

At the Extraordinary General Meeting of the Company held on the 29th April, 1955, the following alteration was effected in the Memorandum of Association of the Company:--

"The Capital of the Company is Rs. 2,60,00,000 (Rupees Two Crores Sixty Lakhs) divided into 20,000 Preference Shares of Rs. 100 each and 24,00,000 (Twenty-four lakhs) Ordinary Shares of Rs. 10 each".

The change in the face value of Ordinary Shares involves the subdivision of each of the Company's existing Ordinary Shares of Rs. 20 each into two shares of Rs. 10 each. Holders of Ordinary Shares are, therefore, requested to submit on or before the 15th May, 1955, their Share Certificates to the Registered Office of the Company for subdivision and replacement by Share Certificates bearing the new face value of Rs. 10 each.

Those who hold Ordinary Shares under blank transfer are requested to get their shares registered on or before the 15th day of May, 1955, failing which the existing Share Certificates of Rs. 20 each will be subdivided and issued in the name of the registered holders as on 15th May, 1955.

Yours faithfully,

BIRLA BROTHERS LIMITED,
Managing Agents.

CALCUTTA, *30th April*, 1955.

THE BURRAKUR COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on the 28th April, 1955, the following Dividends were recommended to be paid for the half-year ended 31st December, 1954, on 1st Ordinary Shares—6¼ per cent. per annum, on out any deduction for Income-tax paid by the Company in each case and on 2nd Preference Shares—6 per cent. per annum after deduction of Income-tax paid by the Company.

By Order of the Board,

BIRD & CO., LTD.,
Managing Agents.

Registered in India under Ordinance No. LIV of 1942

DIRECTORS' REPORT AND STATEMENT OF ACCOUNTS FOR THE YEAR ENDED 31st DECEMBER, 1954

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Ordinary General Meeting of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Friday the 27th May, 1955, at 11 a.m.

(1) To receive the Directors' Report and Statement of Accounts.
(2) To sanction the declaration of a Dividend.
(3) To elect three Directors.
(4) To appoint Auditors for the ensuing year.

The Ordinary Share Transfer Books of the Company will be closed from the 13th May, 1955, to 27th May, 1955, both days inclusive.

By Order of the Board,

STEEL BROTHERS & COMPANY, LTD.,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 23rd *April*, 1955.

COMMERCE

SECOND FIVE-YEAR PLAN

WHILE the outlines of the second Five-year Plan are still vague, the overall objectives of that Plan have been determined and clearly stated. The objectives are: (a) An increase of 25 to 27 per cent. in national income during the five-year period, or about 5 per cent. per annum, and (b) provision of employment to 10 to 12 million people during this period. The details of the Plan for achieving these objectives are yet to be worked out, but a broad outline thereof was presented last week to the Standing Committee of the National Development Council, consisting of members and top-ranking officials of the Planning Commission, the Chief Ministers of States and selected Central Government Ministers concerned with the economic progress of the country, and to the members of the All-India Congress Committee which met at Berhampur (Orissa) this week. The broad outline is based on three papers prepared by economic "experts," independent, as well as those connected with the Planning Commission. Briefly, the substance of the outline is this: There will be a total outlay of Rs. 6,300 crores, of which the share of the public sector will be Rs. 4,300 crores and that of the private sector Rs. 2,000 crores; the public sector's share includes Rs. 900 crores of non-development expenditure. Emphasis will be on heavy and capital goods industries, in order to reduce India's dependence on foreign countries for the supply of essential machinery, and on small-scale, cottage and home industries, in order to produce consumer goods and provide employment in rural areas. Not much importance is attached to large-scale factories producing consumer goods. Irrigation and agriculture, too, will receive prominence, but the stress will be on medium-sized projects and regional balance. Rural electrification will also be given high priority. Community Projects and National Extension Service will be rapidly expanded, so as to cover the entire rural area in the country. A determined attempt will be made to rouse people's enthusiasm in these projects and to secure their wholehearted co-operation for making them a tremendous success.

How does this broad picture of the next Plan compare with the current Plan scheduled to end in March, 1956? The 5 per cent. increase desired in national income per year is higher, as compared with the rise at the rate of 3 per cent. per annum registered in the first four years of the current Plan. In fine, under the first Plan, the national income is expected to rise by 15 per cent., as against 11 per cent. expected by the planners in the beginning. In the second Plan, this rate of expansion should be increased by two-thirds. It has been stated by one of the Planning Commission members that, in order to secure this increase, 10 to 11 per cent. of national income will have to be invested. In the first Plan, it was assumed that, to secure an overall increase of 11 per cent. in national income during the five years, 5 to 6½ per cent. of national income will have to be invested. But experience so far suggests that, although national income has gone up by 3 per cent. per annum, or 15 per cent. for the five-year period, the amount invested would be no more than Rs. 2,050 crores, or a little over 4 per cent. of national income, on an average. This does not necessarily mean that the relation between investment and expansion in national income under the second Plan will be in the same proportion as under the first Plan. Favourable weather and existence of large unutilised capacity helped the country to secure a larger increase in national income with a relatively low rate of investment. Under the second Plan, more productive capacity, requiring heavy capital investments, will have to be created, even assuming that Nature will continue to take a benevolent interest in the country. Further, increase in national income will also depend upon the type of investment.

Some of the distinguished economists, who were consulted on this subject, are of the view that, given wise planning and an investment of Rs. 5,600 crores (excluding obviously the non-development expenditure), it should be possible to obtain a rise in national income of 5 per cent. per annum. This assertion rests on the assumption that a sum of Rs. 6,300 to Rs. 6,500 crores can be raised and invested in the five-year period. But the assumption itself is open to doubt for two reasons. In the first place, it bears no relation to one's experience hitherto in regard to the Government's capacity to raise resources and its ability to expend such a large amount. Secondly, the socio-economic policy of the Government is such as to aggravate the difficulty in getting foreign investments, generally sought by all democratic countries to fill the gap between the available domestic resources and the capital needed for development.

It will be recalled that, in the first three years of the first Plan, only Rs. 860 crores, or 40 per cent. of the expenditure proposed over the five-year Plan period, were invested. In the fourth year, completed a month and a half ago, Rs. 541 crores were scheduled to be spent, while, in the last year, an expenditure of Rs. 710 crores is expected to be incurred. It, however, remains to be seen whether all this will be spent. As against this, if the estimated expenditure under the second Five-year Plan is to be realised, the State alone will have to invest at the rate of Rs. 860 crores per annum on an average, that is, Rs. 150 crores more than the amount expected to be expended in the current year (1955-56). None but an incorrigible optimist would say that the present Government would be able to invest such large amounts *judiciously*. The projects chosen for investment are far more difficult than those in the first Five-year Plan. They will take more time and require efficient administrators with knowledge of industrial management and salesmanship. The Government has not got them in sufficient numbers; nor is there any reason to feel that it will be able to get them in time, unless it is prepared to conscript men from the private sector, which will be contrary to the spirit of democratic planning, or import foreigners on a far larger scale than is being done at present.

Equally optimistic will it be to think that the State will be able to divert, on the lines suggested by economic experts, including the Taxation Enquiry Commission, 10 per cent. of national income to investment. The sum and substance of their suggestions is that people should be taxed more, both directly and indirectly. There are serious limitations to the Governments' ability to implement these suggestions. The State Governments have not responded, in the past, to put up the taxes on agriculture and no amount of exhortation by the Planning Commission and the Taxation Enquiry Commission will induce them to take the risk of incurring the unpopularity of peasants. The political factor is an important one and cannot be lightly ignored. By compelling agriculturists to pay more at a time when prices are declining, the Congress Governments in the States may drive them into the hands of left-wingers. In fact, at the A.-I.C.C. meeting last week, a number of State Chief Ministers questioned the feasibility of raising any substantial sums from farmers by way of taxation. The other taxes suggested, such as an increase in direct taxes on middle and upper classes and a wide variety of indirect taxes, are also out of question. The first attempt made by Mr. Deshmukh to implement this suggestion met with failure, as witness his complete re-writing of the budget proposals for 1955-56 about a month ago. It is not denied that the scope for collecting more by way of excises is bound to widen, but for that one will have to wait for quite a few years more. The new industries must be firmly established and allowed to attain the stage of prosperity before they can be subjected to excise duties.

It should not, however, be difficult to obtain a saving of 10 to 11 per cent. of India's national income, if the approach made is different. By the end of the first Five-year Plan, India's national income will be of the order of Rs. 11,000 crores. Ten per cent. of this will mean Rs. 1,100 crores per year and, during a five-year period, it will aggregate about Rs. 6,000 crores, assuming a progressive rise of 5 per cent. per annum in national income. If people are given incentive to save and invest and if the private sector is kept in a buoyant mood, it should be possible to get savings of this order. But what is being

done now by the powers-that-be is to discourage savings by heavy taxation and by denouncing the sanctity of private property. This very policy is also responsible for discouraging the flow of foreign investment and encouraging existing foreign investments to take to wings. It must be conceded that the approach advocated by us is not one under which the public sector can dominate and doctrinaire socialism can thrive. It is an approach under which the role of the State will essentially be that of a friend, philosopher and guide of the people and not that of a business man or feudal lord. It is also based on the conviction that a socialistic Welfare State is not a practicable proposition to an underdeveloped country which subscribes to democracy.

While the emphasis laid on heavy industry is right, the heavy industries will be stillborn, if simultaneous efforts are not made to establish and encourage those industries which can consume the products turned out by the heavy industries. What is the good of increasing the production of steel, if the industries that consume steel are not there or are allowed to languish? What is the good of establishing industries that manufacture plant and machinery, if consumer goods industries, where such plant and machinery can be used, are not allowed to expand or modernise their equipment? Herein comes the contradiction in an economic policy which aims at establishing heavy industries and seeks, at the same time, to meet the increase in the demand for consumer goods mostly through small-scale and cottage industries.

The stress on cottage industries, etc., is based on the theory that it is easier and quicker to provide employment through them. The capital investment required for improving and expanding these industries is relatively small, as compared with that required for putting up large-scale industries. Labour need not be very mobile and concentration of economic power can be easily avoided. The dependence on foreign countries for the supply of machinery can be greatly reduced during the stage of development. The number of people to be employed per machine will be greater. So run the arguments advanced in favour of small industries. These are all perfectly true. But, apart from the contradiction in policy referred to in the previous paragraph, it is well to bear in mind that heavy dependence on these industries to solve unemployment will mean continuation of low living standards for two reasons. First, the wages that can be offered by these industries, even if they are equipped with improved types of machinery, the necessity for which is now conceded by the Congress Party, will be small and insufficient to command the comforts and conveniences offered by the modern world and longed for by people all over the world. And, secondly, the cost of products manufactured by them will be so high that the cost of living, too, will remain high. Besides these two drawbacks, the profits earned by these industries will be so meagre that they will be able neither to meet the cost of replacement nor to pay any taxes to the State. Then, there is the task of organising these industries on scientific lines and making arrangements for the marketing of their products. That this task is a stupendous one is admitted by all the planners. The reorganisation has to be done through the State Governments most of which have shown nothing but indifference all along. Failure on their part to reorganise cottage industries and improve their efficiency may well lead to a shortage of consumer goods and inflation, especially if development expenditure in other spheres takes place according to plan. In saying all this, we do not suggest that there is no place at all for small and cottage industries. What we wish to emphasise is that they can offer only a minor solution to the problem of underemployment and unemployment. It will be wrong to rely on them as a major source of gainful employment and then to try to protect them by artificial means such as restrictions on production of, and imposition of penal taxes on, large-scale units. Once a step is taken in this direction, it will be difficult to retrace it, for many a vested interest will have grown in the meantime. The result will be to render the task of economic development of the country even more complicated and difficult than it is now.

COMMUNITY PROJECTS

THE eyes of Asia and Africa are today focussed on the progress of Community Projects and National Extension Service in India. For two reasons, the two Continents are interested in the working of this twin programme designed to bring light and life to India's rural population. For one thing, they too have, as does India, vast underdeveloped regions, and, in their attempts at developing them, they are facing problems similar to those of this country. For another, they are eager to be benefited by the experience already gained by India in its attempt to rehabilitate rural people who are still following outmoded methods of production and suffering from poverty, illiteracy and disease. The outside attention which these development programmes have attracted is, no doubt, due to the fact that the results so far obtained by organising these programmes have been encouraging to a degree. The remarks of Mr. Chester Bowles, a former U.S. Ambassador to India, on this Indian experiment in village uplift are worth noting. In the course of an article to an Indian monthly, he writes: "In Africa and other parts of Asia, I have seen remarkable progress in village development and rural education, but if all of the similar programmes in the Middle East, Africa and South Asia are put together, they will add up to less than what is going on in India." This compliment is, indeed, flattering, and may lull one into complacency which is not at all warranted by the series of disquieting trends disclosed in the *Evaluation Report* on the second year of working of the Community Projects in India. This *Report* released on the eve of the Conference of Development Commissioners held in Simla early this week, is a candid document and should bring home to the Project Organisers the serious problems that will have to be tackled by them.

Before referring to the disquieting features of the progress of Community Projects and National Extension Service, it will be helpful to record here the results so far achieved by these programmes. The Community Project scheme went into action in India two and a half years ago—on 2nd October, 1952, to be precise. The The National Extension Service was inaugurated exactly a year after. Thus, the two together have been in operation for a sufficiently long period to indicate broad trends of progress. Today both of them cover nearly 100,000 villages in the country. Their main aim is "to set free the creative energies of the people, so that they may build up, through their own efforts and through their own institutions, a richer and improving social life." The administration and leaders of village and other associations have gained considerable experience in the working of these Projects and this has inspired confidence in them for further effort. In many areas, popular prejudice and apathy towards new ideas have waned and today there is more willingness to participate in development programmes than in the past. The peasant, who was once impervious to new processes and new techniques of production, now welcomes knowledge on better cultivation, better education and better industrial techniques. In the areas bordering Community Project centres, there is, it is stated, a growing desire among the people to get the development projects extended to their villages. People have become medical-minded, though they do not still appreciate the importance of hygiene and preventive medicine. All the aptitudes and signs of active community life are in full evidence in the *panchayats* and other bodies. In many places, in the context of expanding life, old feuds and factions have yielded place to co-operation and mutual help. It is this change in outlook of the people that has earned for the Community Projects and National Extension Service a deserving tribute from the Prime Minister. In his message to the Simla Conference referred to above, he said:

"Much has happened in these few years which has led to this result. But, I think the most significant development of these years has been in the domain of Community Projects and National Extension Service scheme. Apart from practical results which have been achieved—and these are both visible and considerable—there is something even more important even though it cannot be measured and weighed. This imponderable factor is the spirit of the people, removal of inertia in thought and action, development of team spirit in national work and sense of partnership of the people in great undertakings."

While this dynamic change in outlook of the masses is by no means a mean achievement, the record of progress in regard to the realisation of the other major objectives of these programmes, such as increased production, provision for more employment and organisation of co-operative effort, does not appear to be as encouraging as it should be. This is attributed to a number of shortcomings. Of these, defects in the administrative set-up stand out prominently. Lack of co-ordination among various departments, we are told, still persists. As a result, progress of project activities has been held up at several points and this, in its turn, has in a few cases weakened the confidence of people in the whole scheme. This lack of co-ordination is not limited to the attitude of departments alone. For it is found in relations between superior officers and the Block level technical officers and between the latter and the development officer at the Block level. Further, the Collector's responsibility for development has been accepted, but, in many cases, the staff under him is not trained. Again, at the Block level, untrained village level workers have been recruited and many of them are unable to interpret correctly even the implications of the programme. The whole movement thus stands exposed to the danger of being enmeshed in bureaucratic controls and compulsion, instead of being the people's effort to raise themselves, aided by official support. If the Community Projects are to function smoothly and succeed, a thorough reorganisation of the administrative machinery is, therefore, necessary.

The aforesaid defects in the administrative machinery has a vital bearing on the future progress of the Community Projects. They call for caution in stepping up the pace of expansion of the Blocks. It is necessary to sound this note of caution because of the Government's desire to cover the whole of India under these projects by the end of 1961. Such a large-scale extension will call for an enormous number of trained personnel which is already in short supply. Even as it is, there is difficulty in recruiting and training the necessary personnel. And if the Government were to proceed with its scheme of extension work, disregarding this bottleneck, the quality of movement would undoubtedly suffer. Again, we are told that the supply lines have failed to keep pace with the present rate of expansion in the programme. Seed, fertilisers, implements, improved strains of breeding cattle, road-making equipment, etc., are all needed for demonstration as well as for normal use. Experience has shown that, for some reason or other, the flow of these supplies fails to materialise just at the time when it is needed. Besides, lack of adequate and satisfactory facilities for storage has come to be felt as a major obstacle to successful distribution of these supplies. Those shortages would be accentuated, if the Projects were extended to new areas indiscriminately.

The progress of Community Project schemes in the sphere of co-operation also leaves much to be desired. Although the multi-purpose type of village society is gaining ground, there is a danger of this society becoming an all-purpose society, utilising its resources for a number of purposes—such as production or construction, etc.—beyond its capacity. Further, it is depressing to note that, in certain States, little attention is being paid for promoting co-operation even in the more familiar channels of rural credit. And, in the areas where co-operation is fairly well developed, the societies are still functioning as the privileged associations of the well-to-do classes, ignoring thereby the needs of people with modest incomes. Owing to a narrow and individualistic interpretation of the nature of credits, membership is restricted to a few selective ones in certain societies. Commenting on this unsatisfactory state of affairs, the *Evaluation Report* says: "It is, therefore, by no means rare to find, in development areas and Blocks, that there are no societies; what few there are have not many members; what members there are cannot get adequate funds, because the financing agencies are working with very meagre resources." We have no doubt that these and other defects in the Co-operative Movement will receive the attention of those engaged in the rehabilitation of the Movement under the integrated credit system envisaged by the Rural Credit Survey Committee.

The contribution of Community Project programmes to the development of village industries is extremely disappointing. The *Report* says that, in the centres selected for evaluation purposes, there have been no noticeable cases of improvement in the position of village craft. Evidence collected in these centres shows that no active programme exists for promoting employment, production, organisation or welfare of village craftsmen. This lacuna is attributed to the prevailing uncertainty of finding a market for the goods and to the rapid changes in the tastes and demands of the people. The *Report* suggests that these two factors need further investigation. We may, however, add here that the Community Project Administration can play an active role in promoting village industries by seeking the assistance of the recently constituted Small-scale Industries Board.

INVESTORS IN INDUSTRIES LIABLE TO BE NATIONALISED WARNED

FURTHER REGIMENTATION OF ECONOMY IN OFFING

THURSDAY, 5 P.M.

MARKET GOSSIP

RELIABLE information trickling from New Delhi indicates that left-wing elements within the Congress Party are forcing the Government to speed up the pace of bringing into existence the Socialistic pattern of society as understood by them and not as propounded by its author, Mr. Jawaharlal Nehru. This danger was envisaged by this journal early this year. We warned Mr. Nehru then that the cry for socialism would become so strong that it would be impossible for him to follow a realistic policy divorced from doctrinaire considerations. The left-wingers have already succeeded in extracting a promise from the Government that the principle adopted by it for payment of compensation to shareholders of the Imperial Bank of India, namely, compensation payable at market value, would not be taken as a precedent when any other undertaking or property is taken over for a public purpose. At the A.-I.C.C. session at Berhampur this week, the same elements raised the demand for nationalisation of many things and stressed the need for wiping out the so-called capitalist class as early as possible. Mr. Nehru, of course, rebuked them for talking in the air and for not being practical. But how long will he be able to resist the pressure from these elements. The Socialists and the Communists are provoking him to move further left by declaring that the Congress Party is paying only lip sympathy to socialism. Before the next General Elections, the Congress Party may, therefore, decide to prove its *bona fides* by socialising a few more industries, trade and services, in order to see that the other parties do not steal their votes.

• • • •

It was only a few days ago that Mr. K. P. Tripathi openly criticised Mr. C. D. Deshmukh for his attitude in the matter of compensation to shareholders of the Imperial Bank. Mr. Tripathi is a member of Parliament and General Secretary of the I.N.T.U.C., which is the labour wing of the Congress Party. He is the right-hand man of the Labour Minister, Mr. Khandubhai Desai, and has so far been successful in holding up the implementation of the Government's resolution on rationalisation of cotton and jute textile industries, a resolution very modest in scope, limiting modernisation of these two industries to a very narrow extent. He, along with a few other members of the Congress Party, is responsible for the drastic amendments to the Companies Bill, whittling down the powers and rights of managing agents and vesting in the Government enormous powers of regulation of joint-stock companies. Here is what this gentleman said on compensation last week:

"The Constitution Amendment Bill, except for some opposition from vested interests, was hailed all over the country. The reason for this was that it made it possible for the Government, without interference of courts, to fix compensation in a discriminatory manner, that is, higher rates for small holders and lower rates for large holders, under a slab system thereby making acquisition of property for social reconstruction a practical proposition. At that time, it was never suggested that, after the Government had taken over power, it will be utilised for adopting a discriminatory policy between agricultural holdings and commercial and industrial holdings. If that were known, there would have been tremendous opposition from agricultural interests. Uptil that time, the slab system of compensation had been applied only to agricultural interests, and it was naturally thought that, after the amendment of the Constitution, this slab system would be extended to acquisition in the industrial and commercial sectors. But the Finance Minister is said to be of the view that the slab system cannot be applied to the commercial and industrial sectors.

"If this position is admitted, it amounts to creating two types of property, agricultural and non-agricultural. The political and economic repercussions of this will be great. The agricultural sector will never accept this inferior position. It will fight back. If it fails, then there will be a scramble for non-agricultural property. Both will be harmful for the nation. Some people enjoy industrial and commercial property because there are others who are content to be on land, and both are regarded as valuable equally. Any difference in the two types will destroy this equilibrium.

"The principle of the higher rate of compensation for the small holder and lower rate for the large holder, as applied in the case of *zamindari* abolition, should be extended to the acquisition of commercial and industrial property as well."

• • • •

It will be difficult for the Congress Governments to resist the suggestion of Mr. Tripathi. In fact, a careful perusal of the speeches of Mr. Pant, Home Minister, on the Constitution Amendment Bill shows that he has already accepted the suggestion in principle. There is thus a great risk in holding large blocks of shares at least in those industries which are liable to be nationalised outright or virtually nationalised. Investors must, therefore, be cautious in buying equities in these industries, unless and until the Government publicly denounces the utterances of Mr. Tripathi and other Congress men like him.

The suggestion made by Mr. Tripathi is, of course, absurd. There can be no comparison of property in the form of shares or land with *zamindari* rights. In almost all cases, *zamindaris* were held by individuals and so there was no practical difficulty in following the slab system of compensation. But industrial and farm properties are held not only by individuals but also by institutional investors, including banks and insurance companies, the assets of which belong to millions of people. If these institutions were to suffer heavy losses due to payment of inadequate compensation in accordance with the principle of slab system for shares of companies taken over by the Government, it is the people in general—depositors, policyholders, shareholders—who will suffer. Is it the desire of the General Secretary of the I.N.T.U.C. that this should happen? Again, investments in shares of industrial concerns and farm lands are from the hard-earned savings of the people. They cannot be compared with *zamindars*, almost all of whom were middlemen and not the real owners of such property. If the State were to expropriate holdings in industries and lands, what incentive will there be for saving and utilising such savings for the development of industries? Surely, there can be no greater deterrent to economic progress than such statements as the one made by Mr. Tripathi. Since this gentleman holds a position of responsibility in the Congress Party, the Government must come forward, without any further delay, with a statement, clarifying its position on this vital question.

• • • •

Now many investors may want to know as to which are the industries that are likely to be nationalised. This is a question for which no categorical answer can be given. If, however, the recommendations made by the economists and planning experts for drawing up the second Five-year Plan can be taken as an indication of what is likely to happen, it is possible to say which industries are likely to be affected. In their memorandum to the Planning Commission, the panel of economists make the following suggestion:

"It may also be found necessary, during the Plan period, to include within the public sector some activities closely related to the present declared scope, such as basic minerals. The proper organisation of coal production in the country and conservation and utilisation of coal resources may also require including that industry in the public sector. Similarly, the special importance that will now be attached to production by small establishments will make it necessary to include not only the generation but also the distribution of electric power fully within the public sector. While we do not recommend any significant extension of the public sector beyond the terms of policy accepted by Government, we must make it clear that there is no objection in principle to such extension. In fact, the limiting factor is one of being able to cope with the administrative burden that would result from such extension. The cost of compensation may also have to be considered. If, however, during the course of the Plan period, circumstances become either more favourable from the administrative point of view, or if it is found that opportunities for monopolistic or quasi-monopolistic exploitation are increasing in the private sector, there should be no objection to a further extension of the public sector. State trading in exports of jute, for example, was recommended many years ago by a representative committee consisting of administrators, business men, etc. In view of the peculiar position of these exports and the methods of trading in them, it is worth examining again whether State trading in jute should not be undertaken.

"We are not in a position to make specific recommendations at this stage, but we would certainly emphasise the need for Government to examine each possibility of extension of the public sector to any important activity where, because of the policy under the Plan or other factors, a group of producers or traders is reaping special advantages."

• • • •

The Economic Divisions of the Planning Commission and the Ministry of Finance seem to have vied with the panel of economists in expressing its views on this subject. In their note to the members of the Standing Committee of the National Development Council they have expressed the need for the State to be prepared to nationalise banks, insurance companies and a section of the trade, in order to bring about a socialistic pattern of society.

• • • •

It will be seen from what has been stated above that coal, electricity, insurance and banking are marked for nationalisation. There is no specific mention of steel in the aforesaid references, but it is also liable to be nationalised after 1958, when the 10-year period of immunity guaranteed by the Government expires. Mention may also be made of gold mining; the Mysore Government is trying to drive a hard bargain with the Kolar Gold Mining Companies and, if the latter were to refuse to yield, nationalisation seems to be almost certain. Prudence, therefore, demands that one should be cautious in investing one's savings in the ordinary shares of companies belonging to these industries, until the Government's mind on this question is clearly known.

All the experts whose advice was sought by the Government for drafting the second Five-year Plan have trimmed their advice to hasten the advent of the socialistic pattern of society. They have cared very little for the impact of their restrictions on the private sector. Nor have they cared to ponder the ability of the State to implement projects which require skill and experience. They have not cared for the implications of their suggestion to the democratic set-up either. They have welcomed the Select Committee changes in the Company Law Bill and approved of the recent amendments to the Constitution. They have advocated more controls on organised industries. They are agreed that small-scale and cottage industries should receive prominence in the production of consumer goods. And, in order to keep these uneconomic units going, they have proposed a number of restrictions on the economic units. In this context, the following extract from the memorandum of the economists will make interesting reading:

"Confining to hand industries all increases in consumption goods during the second Plan period will make it necessary to extend the operation of licensing legislation to include even processing activities. The best way of dealing with the situation would be for all State Governments to bring within licensing and regulatory legislation such establishments carrying out the processing and preparation of primary products and the production of consumer goods as are not covered by the existing Regulation of Industries Act. A number of other regulations on consumption goods industries will follow from the common production plan for machine and hand industries in particular spheres. The division of markets between machine and hand industry is sought to be maintained today in the case of cloth production by a system of excises and subsidies, on the one hand, and reservation of fields, on the other. The principle of reservation may not be so easily applicable to all industries and, in their case, a comparatively stable relation between prices of hand and machine products could be maintained only through excises and subsidies. There may be doubts whether these purely fiscal measures will prove successful; and, if these doubts were justified, other measures may be required to implement effectively a common production programme."

• • • •

On the subject of taxation, the economic experts have gone a step further than the Taxation Enquiry Commission itself. Warmly endorsing the recommendations of this Commission and suggesting their early implementation, the economists go to the extent of saying that an investment of Rs. 4,300 crores by the public sector in the second Five-year Plan would necessitate a much greater fiscal effort than was anticipated by the Taxation Enquiry Commission (which had bargained for an investment of only Rs. 3,500 crores), if significant inflationary effects are to be avoided. They have recommended amendment of the Constitution to remove the present exemption of "articles essential to the life of the community" from the scope of sales tax. This suggestion is based on the view that goods which are consumed by the masses also should be subjected to taxation. They have favoured measures to secure a practical ceiling of incomes through a further steepening of taxes on incomes and wealth, including estate duty. Indeed, they feel that such a course has become an imperative necessity.

• • • •

The Economic Division of the Planning Commission also concurs with the views of University Professors. Endorsing the Taxation Enquiry Commission's recommendation that there should be a ceiling on net personal incomes, it says blandly that "a few steps must be taken in this direction in the second Plan." It further wants "conspicuous consumption" by the well-to-do classes to be curbed by a fairly stiff system of taxes on them and by reducing spendable incomes through direct taxation. It is obvious from these recommendations that all these so-called experts, too, have been influenced by a desire to get into the good books of Mr. Nehru. The very fact that these experts, who want all consumption goods to be taxed, have not advocated re-introduction of duty on salt, an article of common consumption, only goes to prove our inference. It their excuse for not recommending re-introduction of salt duty is that it will be politically impossible, then one should like to know as to why this consideration was not taken into account when proposing taxation of other necessary consumption goods.

• • • •

Viewed against the foregoing background of recent developments, it is not surprising that equity values have been steadily drifting down. Although there is no selling pressure of great magnitude, there is no buying enquiry from investors. There has been a precipitous fell in the value of Bank of Baroda shares owing to fears that, in the event of the Bank being nationalised and merged with the State Bank of India, the compensation offered by the Government might not be adequate. Fear of nationalisation was also responsible for the drop in insurance and electric shares. The Tata Iron and Steel shares have drifted down, as the expected Government announcement regarding the retention prices for the Company has not materialised. Reports from Calcutta say that the Government has agreed to give a provisional increase of Rs. 54 per ton for Tatas and of Rs. 8 per ton for Indian Irons, pending the findings of the Tariff Commission, and that the price receivable by both the Companies will be uniform. This report, however, has failed to cheer up the market, for that very report has it that neither shareholders nor managing agents of companies will derive any additional benefit from this increase for several years to come. Apparently, market circles think that a rise in retention prices, subject to such a condition and in the face of threat of nationalisation after two years, is of no tangible value for investors in the shares of these companies.

EASY TREND ON STOCK EXCHANGE

BANK OF BARODAS SLUMP

(From Our Own Correspondent)

BOMBAY, 12th May

ACTIVITY on the Stock Exchange remained subdued for yet another week. Speculators, as well as investors, were apathetic to do any fresh buying. On the other hand, a growing anxiety to liquidate their holdings was in full evidence. This was because of a sense of disappointment over the delay in the announcement of the steel prices which the market was expecting to be made known early this week. Operators were also worried over the prospects for investment in equities, in the light of the Government's economic policy, as enunciated at the Avadi session of the Congress and reiterated at the A.I.C.C. meeting at Berhampur this week. This fear induced certain institutional investors to unload their holdings. The heavy fall in the shares of the Bank of Baroda and gradual weakening of the electricity shares for some time now are taken as an indication of the investors' apprehension over the inadequate compensation they might get in the event of nationalisation. The general sentiment was, therefore, affected and there was an all-round fall in prices during the week, though they were not very marked.

Steel shares displayed some steadiness early in the week, on expectation of an announcement regarding steel retention price and abatement of selling pressure in Indian Irons from Calcutta. Later on, they ruled quiet on renewed offerings. Tata Ordinaries, after being marked up from Rs. 235-12 to Rs. 237-12, reacted today to a low of Rs. 232-12 and closed at Rs. 233-4. Indian Irons hardened from Rs. 33-5 to Rs. 33-15, but retreated to Rs. 33-9 at the close today.

The textile section also was affected by the general sentiment. Barring Standards and one or two other scrips, the entire section disclosed a downward trend. The selective buying interest noted in the previous weeks dwindled considerably during the week under review. Bombay Dyeings picked up early in the week from Rs. 464-6 to Rs. 468-2, but gradually lost ground to Rs. 461-14 at the close. Kohinoors finished at Rs. 312-4, after gaining strength from Rs. 315-8 to Rs. 317-8. Century shares, which had been keenly bid during the previous three weeks, showed an irregularly lower trend, losing Rs. 3-8 at Rs. 381. Central Indias were dull at Rs. 125-8. Finlays lost Rs. 2 to Rs. 247. Gokaks were featureless at Rs. 217, as also Indu Ordinaries at Rs. 11-3. Mysores gave way from Rs. 121-14 to Rs. 111-4. New Greats, however, gained further ground from Rs. 163 to Rs. 165. But New Unions changed hands Rs. 2 lower at Rs. 30-8. Shree Niwas were quiet at Rs. 237-8 and Simplex at Rs. 153. Standards, which had provided a good feature last week with a rise of Rs. 21-4, moved up further from Rs. 360 to Rs. 363-12, on reports that the scheme to amalgamate the New China Mills Co., Ltd., with the Standard Mills had been approved by the Directors and the scheme will be forwarded to the High Court for sanction. Svadeshis lost Re. 1-8 to Rs. 186-8 and Tatas Re. 1-4 to Rs. 50. Swans put on Re. 1-8 to Rs. 186-8.

For the second week in succession the shares of the Bank of Baroda ruled weak, the decline during the week under review being Rs. 4-4 to Rs. 96-12. This is the lowest level touched since 1940 and compares with a peak of Rs. 352 reached in 1946. The decline was attributed to selling on fears about compensation in the event of the Bank's merger with the State Bank of India. Central Banks were marked down by a rupee to Rs. 47-12 and their new shares by As. 8 to Rs. 50. Imperial Banks attracted some enquiries, the Fully Paids being taken up Rs. 10 higher at Rs. 1,690 and the Partly Paids Re. 1-4 better at Rs. 412-8. Bank of Indias gathered Re. 1-12 to Rs. 148-4. Punjab Nationals were unchanged at Rs. 42-4, while United Commercials picked up As. 4 to Rs. 44-12. Union Banks were done As. 3 lower at Rs. 6-7.

In the insurance section, Orientals showed weakness, dropping from Rs. 7,450 to Rs. 7,340. New Indias were steady at Rs. 51-8. Industrial and Prudentials attracted attention and were picked up Rs. 2-4 higher at Rs. 44-4. British India Generals had enquiries, but the quotation was unchanged at Rs. 13-10. Vulcans gained As. 4 to Rs. 15-4.

An easy trend was noted in the electricity section. The weakness was also due to the imposition by the Government of 33⅓ per cent. cut in power supplies to large consumers in the Southern City of Bombay. Andhra Valleys lost Rs. 10 to Rs. 1,367-8 and Tata Powers reacted from Rs. 1,465 to Rs. 1,450 and their new shares from Rs. 1,142-8 to Rs. 1,135. Ahmedabad Electrics slumped from Rs. 135-5 to Rs. 101-14, but gathered strength to Rs. 105. Their new shares gave way from Rs. 54 to Rs. 51-4. Bombay Suburbans held ground at Rs. 122-8, while Surat Electrics changed hands As. 10 higher at Rs. 129-6.

The miscellaneous section followed the general pattern and values were marked down. In the sugar group, Belapurs lost Re. 1-8 to Rs. 305-8, Phaltans As. 4 to Rs. 118-8, Bhopals As. 4 to Rs. 13 and Walchandnagars Rs. 4-6 to Rs. 204-6. Cement shares showed contrasting trend; A.C.C. dropped Re. 1-4 to Rs. 176, while Digvijays moved up by Re. 1-12 to Rs. 183. In the engineering and mining group, Alcocks ruled easy, giving way from Rs. 264-6 to Rs. 261-4. Premier Constructions were unimpressive at Rs. 160-12. Larsen and Toubros were held at Rs. 13-13¼. Shivrajpurs were done Re. 1-12 better at Rs. 67-4 and Indian Coppers a shade higher at Rs. 3-7¾, while B.B. Petrols were quiet at Rs. 3-6¼. Among shipping shares, Scindias were quiet, dropping from Rs. 15-8½ to Rs. 15-5¼. India Steamships were dull at Rs. 7-5½ and Great Easterns at Rs. 15-15. In the other miscellaneous industrial group, Bombay Burmahs were on offer, losing Rs. 6-4 to Rs. 460, consequent on the decline in tea prices and postponement of two auctions at London. Killick Industries were just steady at Rs. 170-8 and National Rayons at Rs. 200-12. Tata Chemicals met selling pressure and lost As. 10½ to Rs. 14-0½. Tata Oils shed As. 4 to Rs. 39-8 and Wimcos As. 15 to Rs. 204-1.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, 11th May

In the absence of any incentives, trading on the Calcutta Stock Exchange was featureless during the week under review. There was a decline in the number of transactions, although buyers supported selected counters offered at lower levels. The main contributory factors were the weakness in the commodity markets, and the delay in the announcement of new retention prices for steel. The report by the Parliamentary Joint Committee on the Company Law Amendment Bill continued to affect sentiment, and it is difficult to see how, in the light of the changes proposed by the Committee, both investors and operators can do business in the market with confidence.

Offerings in teas increased, and the fall in prices in the tea auctions in Calcutta and London depressed sentiment. At lower levels, support was forthcoming. But as soon as the demand was satisfied, the lower trend resumed its course again. Jute shares fully reflected the weak conditions in the goods market. Reports of substantial increases in stocks of goods with mills as well as unconfirmed rumours of a reduction in the working hours of mills kept sellers busy and buyers idle. The volume of transactions in this section declined very noticeably. Engineering shares were steady at the lower levels, but Indian Irons were on occasions pulled down. Selected miscellaneous industrials received buying support.

Textiles were maintained at previous levels. The expectation that the revision in the import duties of British textiles is not likely to affect the Indian industry aided sentiment. Elgin Mills were held steady at Rs. 18-4, while Bengal-Luxmis at Rs. 40-8 added a gain of As. 8. Kesorams spurted to Rs. 27-4 from Rs. 26-12, and Dunbars were firm at Rs. 232.

Only meagre interest was shown to coals. Central Indias improved to Rs. 8-1 earlier from Rs. 7-12, but declined to Rs. 7-10 subsequently. Burrakurs were steady at Rs. 13, while Dhemo Mains were pulled down to Rs. 8-9 from Rs. 8-14. At Rs. 11-12 Raneegunges were lower by As. 3, South Karanpuras remaining unchanged at Rs. 11-12. Equitables lost to Rs. 31-10 from Rs. 32. East Indians were enquired at Rs. 29-8.

Jutes lacked strength. Howrahs were dealt in at rates between Rs. 29-4 and Rs. 30-9, today touching the lower level of Rs. 29-4. Kinnisons sagged to Rs. 186 from Rs. 191. However, Gourepores remained unchanged at Rs. 336-8, while Megnas were steady at Rs. 100. Ganges were quiet at Rs. 103-8. Earlier, Nationals recovered to Rs. 34-4 from Rs. 33-8 but on Monday gave way to Rs. 33-12 and today to Rs. 33-11. At Rs. 288 Cheviots lost several points. Champdanies weakened to Rs. 162 from Rs. 170.

Engineerings accounted for a few features. At Rs. 268, Burn & Cos. recovered by Rs. 5. From Rs. 18-4, Texmacos gave way to Rs. 17-7 but recovered to the opening level, at which rate the scrip was fully steady. Jessop & Cos. were firmly held at Rs. 36, and at Rs. 24 Indian Galvanizings registered a further fractional improvement. From Rs. 33-6, Indian Irons recovered to Rs. 34, but again lost to Rs. 33-9 and quoted today at Rs. 33-11. There was no change in Richardson and Cruddas at Rs. 18-1.

Earlier, teas touched low levels, at which stage buying support was afforded to the more popular counters. A recovery was then made. From Rs. 44-12, Hasimaras were hammered to Rs. 43-12; but were afterwards taken to as high as Rs. 48-12. The rate fell to Rs. 45-14 yesterday but again recovered today to Rs. 46-14. Tezpores improved to Rs. 31-10 from Rs. 29-12. Hantaparas, after being lower at Rs. 332, hardened to Rs. 344. Similarly, Sonai Rivers at first gave way to Rs. 21 from Rs. 24-6 but, thereafter realised Rs. 23-8. Duffla-ghurs were raised to Rs. 48-6 after being lower at Rs. 46-15.

Miscellaneous industrials were steady. Although the number of transactions declined in conformity with the general trend, there were a few features on interested buying. Thus, Indian Cables were raised from Rs. 25-7 to Rs. 27-4. Indo-Burma Petroleums continued to draw in support at the improved rate of Rs. 147. Titaghur Papers were fractionally better at Rs. 44-6, and Orients put on a few annas at Rs. 27-10. Martin Burns were shifted to Rs. 23-9 from Rs. 23-5. Rohtas Industries rallied from Rs. 23-15 to Rs. 24-3, while Rallis India receded from Rs. 39 to Rs. 39-12.

• • • • •

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 11th May

The Madras Stock Exchange ruled extremely easy this week. In fact, there was a general wave of heavy selling pressure and, consequently, a fall in the prices of a number of scrips. This trend was predominant in tea shares, thanks to discouraging support at Cochin tea auctions and lack of orders for tea leaves from the U.K. Rubbers and coffees ruled easy, in sympathy with tea scrips. Textiles, too, lacked support. Miscellaneous scrips proved no exception to the generally easy trend. Naturally, the volume of business done on the Exchange was limited.

There were a few important dividend announcements during the week under review. The Nenmeny Rubber and Produce Co., Ltd., for instance, declared a dividend of 15 per cent. for the year ended 31st December, 1954, as against 7½ per cent. for the previous year. Tharmarapally Rubber Co. have announced a dividend of 30 per cent. for the year ended 31st December, 1954, the same as in the previous year. The Balanoor Tea and Rubber Co. Ltd., and Devon Tea and Produce Co., Ltd., have recommended a dividend of 15 per cent. each for the year ended 31st March, 1955. The dividend for the previous year was 12½ per cent. in each case. The Andhra Cement Co., Ltd., has maintained the dividend at 10 per cent. for the year ended 31st December, 1954.

Sectionwise, among textiles, Bangalore Woollens lost Rs. 5 to Rs. 435 and Buckinghams Rs. 2 to Rs. 151-8. Coimbatore Pioneers were lower by Rs. 2-8 at Rs. 220. Dhanalakshmis suffered a loss of Rs. 2 at Rs. 268. Mettura, however, improved to Rs. 325 to Rs. 340 and Pankajas from Rs. 53-8 to Rs. 55.

Among teas, Devasholas declined by Re. 1 to Rs. 24-4 and Coorg Teas by Re. 1-1 to Rs. 8-2. Highlands receded by As. 10 to Rs. 15-4 and Nilgiri Teas by As. 14 to Rs. 13-8 cum-right. Nonsuch Teas eased from Rs. 33-12 to Rs. 31-8 and Talyar Teas from Rs. 13-2 to Rs. 12-8. Peermades were done lower by Rs. 3-4 at Rs. 38-4.

In the rubber section, Kailas lost As. 3½ to Rs. 5 and Malankaras As. 8 to Rs. 26-12. Pullangodes were down by As. 3 at Rs. 3-10 and Rajagiris by As. 4 at Rs. 15-13.

Among coffees, Coffee Lands disclosed a loss of As. 2 at Rs. 16-14 and Consolidated Coffees As. 6½ at Rs. 19-8. Amalgamated Coffees, however, gained As. 6 to Rs. 8.

In the miscellaneous section, Aluminium Industries suffered a loss of As. 2 to Rs. 19. Rallis declined from Rs. 41-8 to Rs. 40-4 and Spencers from Rs. 17-6 to Rs. 17-2. Mettur Chemicals were down by As. 2 at Rs. 6-8 and F.A.C.Ts by an anna and a half at Rs. 4-14½.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 23rd May to 21st June, 1955, both days inclusive.

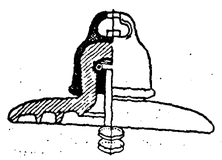
By Order of the Board,

B. K. SHAH,

General Manager.

BOMBAY, 12th May, 1955.

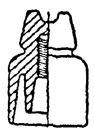
HIGH AND LOW TENSION INSULATORS WITH FITTINGS AND ALL ELECTRIC TRANSMISSION LINE MATERIALS



ORIENT TEXTILE ENGINEERS LIMITED

24, Netaji Subhas Road

CALCUTTA-1



NEWS IN BRIEF

THE Saurashtra Government proposes to start 13 more power-houses in the State by the end of this year, under the rural electrification scheme.

The preliminary report of the British steel mission regarding the location of the third steel plant is expected within ten weeks, according to the Union Minister for Commerce and Industry.

India's exports to the Soviet Union increased from Rs. 36 lakhs in 1953 to Rs. 2.52 crores in 1954. Imports from the Soviet Union increased from Rs. 44 lakhs to Rs. 1.13 crores during the same period.

The Experts Committee set up by the Planning Commission to examine the West Bengal Government's scheme for the establishment of a coke oven plant at Durgapur is reported to have found the place suitable for the purpose.

A two-year tobacco extension service will be organised by the Government of India in the Guntur District, Andhra, which is the largest centre for the production of Virginia cigarette tobacco in India. The cost of the scheme will be Rs. 1.50 lakhs.

An all-India survey of the textile industry, including an enquiry into the working of the uneconomic units, will be launched shortly by the Government of India. A special bureau under a director is being set up by the Textile Commissioner for this purpose.

The output of iron ore in India during March, 1955, amounted to 376,061 tons, as compared with 369,915 tons in February, 1955. Despatches aggregated 271,917 tons to iron and steel plants and 54,720 tons to the export market. Stocks at the end of the month were reported to be 989,585 tons.

The Government of India has decided to give additional licences to established importers and actual users of aluminium ingots, bars, etc. who might have booked firm orders against licences already granted to them. The additional licences are to enable them to obtain extra supplies as and when they are on offer.

The Union Government has decided to licence freely the export of sesamum seed and sesamum oil to all permissible destinations, excepting the Portuguese possessions in India, up to the end of July, 1955. The export of sesamum seed will be licenced subject to a maximum of 250 tons per shipper from all ports taken together.

The Madhya Bharat Government has decided to invest Rs. 1 crore in buying wheat in such of the organised markets in the State where the price of standards quality falls below Rs. 10 per maund. Purchase of wheat on behalf of the Government has already begun in some of these markets where prices have fallen below Rs. 10 per maund.

The all-India second estimate of small millets for 1954-55 puts the current year's area and production at 12,199,000 acres and 2,029,000 tons respectively, as against 12,030,000 acres and 1,984,000 tons in the corresponding estimate for 1953-54. This shows an increase of 169,000 acres or 1.4 per cent. in area and 45,000 tons or 2.3 per cent. in production over 1953-54.

Electricity generated by 684 public utility power stations in India during January, 1955, was 665.8 million kw.h., of which 545.2 million kw.h. were sold to ultimate consumers. The output decreased by 15 million kw.h., as compared to December, 1954. The corresponding figures for January, 1954, are 580.7 and 478.0 million kw.h. and for January, 1939, are 210.9 and 176.6 million kw.h., respectively.

Large quantities of limestone deposits, suitable for the manufacture of Portland cement have been found to exist near Jaggayyapeta, Krishna District, Andhra State. It is estimated that roughly 269 million tons of limestone will be available for conversion into cement from this area. As large quantities of cement would be required for the Nandikonda and various other projects proposed to be undertaken by the Government during the first and second Five-year Plan periods, the discovery of limestone deposits within reasonable distance from the Nandikonda project is of great significance.

The Indian Airlines Corporation has announced that, with effect from 16th May, 1955, the new Delhi-Bombay feeder service via Agra, Gwalior, Bhopal, Indore and Aurangabad will commence operating to a thrice-weekly frequency. The newly arrived Herons will be utilised on the route. The service will leave Delhi on Mondays, Wednesdays and Fridays and return back from Bombay on Tuesdays, Thursdays and Saturdays. This is the first route in India to be operated by the four-engined Heron aircraft. It will provide an air connection to the residents of Agra, Gwalior, Bhopal, Indore and Aurangabad with Delhi and Bombay.

The Planning Commission is reported to have agreed to study the Madras Government's scheme to deepen the Palk Straits Channel, connecting the Bay of Bengal with the Indian Ocean. The scheme, if implemented, will enable coastal vessels and international liners to cross direct either way without having to go round Ceylon. This will reduce the length of the voyage by about 300 miles. The cost of the scheme is estimated at Rs. 3 crores and shipping firms, particularly coastal vessel companies, may be asked to share the cost of the scheme. The Madras Government has suggested that this scheme may be taken up as an integral part of the coastal shipping and port development plans under the second Five-year Plan. This will also automatically help the development of Tuticorin port and arrest soil erosion at Dhanushkodi.

From Abroad

China has agreed to buy crepe rubber from Ceylon at a price higher than the world market price. The price has not yet been fixed.

The cotton crop of Egypt for 1954-55 amounted to 7,746,260 kantars (of 99.05 lbs. each), an increase of 664,391 kantars over the previous year.

Iraq is reported to have set up a jute mill in Baghdad with the assistance of Pakistan and two more will be established shortly. Turkey and Egypt also have asked for Pakistan's assistance in establishing jute mills.

A new joint-stock company formed in Egypt with a capital of £500,000 will manufacture 600 railway wagons and carriages per annum. First of its kind in Egypt, the company is due to start production next year.

Almost half of the increase in the national income of Norway since 1905 is due to industrial expansion. Industry now provides a livelihood for a third of the population and contributes 40 per cent. of the national income and 80 per cent. of the total export earnings.

An agreement has been reached between Britain and the U.S. on the arrangements for the expenditure of over $70 million of aid on imports of American surplus commodities. This amount will be provided out of funds voted by the U.S. Congress last year, but so far Britain has received only about $1 million in the form of cotton.

A £60-million trade agreement between China and private Japanese business men was signed on 4th May. The agreement replaces the one signed two years ago and provides for the exchange of goods worth £30 million each way during the next 12 months. Payment will be made in cash in sterling.

The U.S. Senate has approved President Eisenhower's "no-tariff" trade Bill. The Bill extends the tariff reducing Reciprocal Trade Agreements Act for three years and authorises new selective cuts of up to 15 per cent. in import duties. The Bill is claimed as the keystone of the President's programme for expanded world trade.

The Norwegian Government has appointed a committee to investigate the question of securing representation of employees on the managing boards of certain industrial companies. The Committee has been asked to make recommendations in the form of a Bill to be presented to Parliament next year.

The Netherlands Bank has been authorised to grant incidental permission for the public issue of foreign debentures on the Netherlands capital market. Hitherto this had only been possible for Belgian and Luxemburgian issuers. A condition incumbent on these issues is that the funds resulting therefrom shall be transferred via the European Payments Union (E.P.U.).

Nearly 7,000 jute looms are expected to be in production within two months' time in East Bengal. Their output, amounting to 200,000 tons of jute products, are valued at Rs. 25 crores. Nine mills of varying capacity are, it is stated, using 1.2 million bales of raw jute to manufacture gunny cloth, gunny bags, twists and yarn, twin canvas and other types.

The Foreign Operations Administration proposes to give $2.5 million to Pakistan for expansion and modernisation of its air transport system over a period of three years. Under this programme, Pan American Airways will send a team of experts to Pakistan to work with Pakistan personnel in all phases of airline operation both in the air and on the ground.

The European Coal and Steel Pool High Authority has announced a reduction of its tax on coal and steel production in the Pool from 0.9 per cent. to 0.7 per cent. from 1st July next. The levy is used for administrative costs, for sponsoring research and to build up a loan fund for Pool industries. The Authority's guarantee fund from the levy at present amounts to about $75 million.

The Roan Antelope and Mofulira Mines in Rhodesia have offered to sell copper at a fixed basic price of £280 per ton c.i.f. U.K. to U.K. consumers who are willing to instil a degree of stability into their resale prices for copper and brass products. This price is effective from 9th May and will remain fixed for at least 30 days from that date, subject thereafter to variation at 24 hours' notice. In the event of variation, the adjusted price will again remain fixed for a definite period.

A survey of investment intentions in the U.S., conducted by the McGraw-Hill Publishing Company recently, shows that American business corporations will spend a record amount on new plant and equipment during the current year. The earlier survey made by the Company in the autumn of 1954 showed that manufacturing industries intended to cut their investment in 1955 by 7 per cent. from the 1954 level, while now they expect to increase their capital outlays by 3 per cent. over 1954.

PERSONAL

MR. Clifford C. Taylor, Agricultural Attache to the U.S. Embassy in New Delhi, left for the U.S. on Saturday last.

Sir Alexander Clutterbuck, the outgoing High Commissioner for the U.K. in India, is due to sail from Bombay for the U.K. on the 15th inst.

Mr. Seijiro Yoshizawa, Director-General of the World Economic Research Institute, Tokyo, has been appointed Ambassador of Japan to India.

Mr. J. C. Mathur, I.C.S., Secretary to the Government of Bihar, Education Department, has been appointed Director-General, All-India Radio, New Delhi.

Mr. N. Govindarajan, seniormost member of the Union Public Service Commission, has been appointed Chairman of the Commission, vice Mr. R. N. Banerjee who retired on 9th May, 1955.

Mr. R. G. Saraiya, Chairman of the Bombay State Road Transport Corporation, is leaving for Tokyo on the 14th inst. to attend the 15th Congress of the International Chamber of Commerce to be held there from the 15th to 21st inst.

Mr. M. R. A. Baig, until recently India's Minister in the Philippines, has been appointed as officer on special duty in the Union Ministry of External Affairs. He is expected to take over the post of Chief of Protocol in August or September next from Mr. I. S. Chopra.

Dr. John Matthai, a former Finance Minister, Government of India, and at present Vice-Chancellor of the Bombay University, has been appointed Chairman of the Board of Directors of the State Bank of India to be set up under the State Bank of India Act recently passed by Parliament.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 17th May

The Salt Campaign

Now that the campaign against the Salt Act has been given up by the Indian *satyagrahis*, it is worthwhile to enquire into the incidence of this tax, the source of supply, and the extent of demand for this indispensable article of everyday use. Let us begin with the refutation of the statement that salt production in India is a Government monopoly. Some thirty per cent. of the total consumption is imported, thirty-five per cent. is manufactured by licensees, subject to a payment of excise, and thirty-five per cent. is produced by or for sale to Government. The United Kingdom took the leading place in supplies of imported salt before the war. Her share in the pre-war year was 22.5 per cent., but this was reduced in 1928-29 to 11.2 per cent. Aden and Egypt are now the principal sources of supply, the former providing in 1928-29 one-third of the total and Egypt 18.6 per cent. The total quantity imported was nearly 615,000 tons. Bengal took about 67 per cent. of this total, for it is a market which prefers fine white crushed salt. The sources at which salt is produced for sale by Government are the Khewra mines in the Punjab, the Sambhar Lake and subsidiary sources in Rajputana, and the large factory at Kharaghora, on the edge of the Lesser Runn of Cutch. In addition, there are several monopoly factories for the manufacture of "bay" salt in Madras and one in the Bombay Presidency. In the areas dependent on the first two sources, the practice of the country is to buy salt by weight and not by measure. The salt issued is of uniform quality, and is sent out at cost price, generally on indents received for issues by rail. The system has the advantage that it facilitates large-scale production, which, in the case of salt, conduces greatly to the cheapening of cost, that it eliminates the private profits of the manufacturers and to some extent that of the dealers, and that it enables the Government to regulate the supply to meet the demand and to place a reliable article on the market at cost price plus duty.

MERGER OF D. A. WITH BASIC WAGE

IT is hardly surprising that one of the main subjects on the agenda for the fourteenth session of the Indian Labour Conference, which commenced at Bombay today, is the merger of dearness allowance with basic wage. For there has of late been a growing volume of opinion that a substantial portion of the dearness allowance paid to workers to neutralise the rise in cost of living should be merged with the basic wage, as there are little prospects of the cost of living index retreating to the pre-devaluation level, let alone the pre-war level. This view has been endorsed even by the Planning Commission. It will be recalled that, while accepting the recommendation of the Gadgil Committee that 50 per cent. of the dearness allowance admissible to the Central Government servants drawing a basic wage upto Rs. 750 per annum should be amalgamated with the basic wage, the Commission had suggested the extension of the recommendation of the Committee to workers in the private sector, too. The Government of India has already implemented the recommendation of the Gadgil Committee in so far as its employees are concerned.

There are few who can dispute on dispassionate and logical grounds that a portion of the dearness allowance should be merged with the basic wage. Normally, an allowance should be only a small percentage of the basic pay. Ironically enough, this is not so in the case of dearness allowance. In fact, in some cases, dearness allowance is even more than the basic wage of the workers. As is common knowledge, this is essentially due to the fact that the basic wage has remained in many cases stationary at pre-war levels, while the living costs have shot up to more than three times the pre-war level. Small wonder that, on account of this abnormal position and as the rise in the cost of living index has almost come to stay, the demand for the absorption of a part of the dearness allowance has gathered momentum and there is a ring of justice in it.

Assuming that the merger of a part of the dearness allowance with the basic wage is a foregone conclusion, the most important point to be determined is the level at which the basic wage should be fixed. It will be recalled that, as early as 1947, the Central Pay Commission, which enquired into the structure of pay scales of civil servants, recommended that the basic wage of Central Government employees should be determined on the basis of a cost of living index at 160 to 175 points, taking into consideration the cost of living index in 1939 as 100. The scales of dearness allowance recommended by the Central Pay Commission were worked out on a slab system with the cost of living index at 160 as the base. The Fair Wages Committee (1948) endorsed the basis adopted by the Central Pay Commission and accordingly felt that the basic wage should be fixed in relation to the cost of living index number of 160 to 175, on the assumption that the index in 1939 was 100. On the other hand, the Gadgil Committee, which submitted its report on 4th October, 1952, considered that the cost of living index was not likely to recede to the level anticipated by the Central Pay Commission. Consequently, it suggested that, taking the pre-war level to be 100, the cost of living index at the level of 265 to 284 should be made the basis for fixing basic wages.

The Industrial Tribunals have so far not followed any uniform policy in regard to the determination of basic wages and dearness allowance. The Bombay Industrial Court has fixed the basic wage of cotton textile workers on the basis of the cost of living in pre-war years. The Industrial Tribunal (Bank Disputes), 1950, fixed the basic wages on the cost of living index number for 1944, that is, 258. The Minimum Wages Act, 1948, provides that the minimum wages which might be fixed under the Act might consist of a basic rate of wages and a special allowance variable with the cost of living index number and the cash value of concessions in respect of supplies of essential commodities, or an all-inclusive rate allowing for the basic rate, the cost of living allowance or the cash value of the concessions. The actual wage rate fixed by the various State Governments do not, however, show any uniformity, as, in some cases, dearness allowance has been fixed separately, while in others a consolidated wage has been fixed.

One of the arguments adduced by employers against the merger of a portion of the D.A. with the basic wage is that it would lead to increased rates of payment of provident fund, etc. It was because of this opposition that no decision could be taken on this issue at the eleventh session of the Indian Labour Conference held in August, 1951. Now that the Employees' Provident Funds Act, 1952, which applies to six major organised industries, is proposed to be extended to a number of others as a next step, this argument hardly holds good. The ultimate objective, it may be noted, is to extend this Act to all industries. The scheme framed under the Act, which now applies to cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles (cotton, jute and woollen), provides for a contribution of 6¼ per cent. of the total of basic wages and dearness allowance each by the employers and the employees. The Government has now proposed to extend the scope of the Act so as to apply to those industries which employ 10,000 workers or more. They are (1) heavy and fine chemicals, including artificial manure, (2) matches, (3) edible oils and fats, (4) printing presses, (5) tea factories, (6) rice, flour and dal mills, (7) sugar factories and refineries, (8) glass and glass products, (9) leather products, (10) tanneries and leather finishing, (11) cotton ginning and baling, (12) rubber and rubber products, (13) electricity generating, transforming and distributing stations, (14) glass and glass works, (15) coir and rope works, (16) automobile repairing and servicing workshops and (17) pottery, china and earthenware. These industries certainly cover practically all the industries in the private sector. In fact, the question of extending this Act to all these industries is also scheduled to be discussed at this conference. It is also proposed to examine the possibilities of extending the scope of the Act to plantations, mica, manganese, iron ore, gold and limestone mines, in course of time, and, if possible, commence the collection of the relevant statistics now alone.

RAISING ADMINISTRATIVE EFFICIENCY

No other single factor has hampered the pace of implementation of development plans so much as the lack of sufficient sense of urgency, attention and vigour on the part of the ministries and the executive departments concerned. Viewed thus, the efforts made by the Organisation and Methods Division of the Cabinet Secretariat since its inception in March 1, 1954, to improve administrative efficiency in all branches of the Central Government are, indeed, commendable. The three important tasks to which the Division has addressed itself are: (1) To make all concerned conscious of the prevailing inefficiency and of the need and scope for improvement; (2) to find out facts and to see what actually is wrong and where to locate the causes which adversely affect speed and quality of work; and (3) to devise and apply appropriate remedies. In the discharge of these tasks, the Division has already met with considerable success. That there is no exaggeration whatever in this statement will be clearly evident from a perusal of the first Annual Report of the Division (1954-55) placed on the table of the Lok Sabha on Tuesday last week.

With a view to finding out the real causes for the delay in implementing development plans, the Division carried out detailed case-studies of 22 cases selected by the ministries themselves. It was clear that the delay in all these cases was, as stated at the outset, almost due to lack of sufficient care, attention and vigour on the part of the ministries and the executive departments concerned. Very little blame, if any, could be attached to the Finance Ministry. But it was clear that almost all the spending ministries did tend to exaggerate their demands in anticipation of a cut by the Finance Ministry. This, in turn, aggravated the tendency on the part of the latter to assume such exaggeration and to prune in every case irrespective of its real merits. If this vicious circle is to be broken, then the officials of the spending ministries and the officers of the Finance Ministry must develop personal contacts and get their difficulties ironed out by direct talks, instead of through files.

The case-studies carried out by the Division disclosed quite a good number of causes of delay. Mention, for instance, may be made of delays in the examination of proposals, passing of orders by officers, and in the movement of papers and delays caused by reference of proposals to the Finance Department with inadequate details, repeated queries about matters of detail, examination of proposals by technical officers in attached offices, and disinclination on the part of finance officers to accept estimates furnished by administrative ministries. Mention may also be made of delays arising from inadequate inter-departmental consultation and lack of co-ordination, selection and recruitment of personnel by the Union Public Service Commission, and difference of opinion between the Central and State Governments on matters of detail and financial liability.

The Division has done well to call upon the ministries to provide statistical returns showing the speed of disposal of papers and to reinstitute, on a firm and effective basis, two other controls—a weekly check on the outturn of work by the dealing assistants in the section and a monthly statement of cases pending for more than a month. A regular scrutiny of these returns by the appropriate officers will be very useful in that it will keep up the flow of work and speed up inter-departmental references. Incidentally, the returns will serve to draw attention to good or bad work by the individual members of the staff, thus facilitating a proper appraisal of merit for purposes of promotion. Another welcome step taken by the Division relates to the process of "lowering the decision-taking level, which today is too high everywhere," through adequate delegation of authority to the section officer.

The Division has also taken steps to promote closer collaboration between the officers of the administrative ministries, the executive officers and the officers of the Finance Ministry. Decisions were recently taken to introduce certain changes in the existing system of budgetary and financial control and advice, and to provide an internal financial machinery within the administrative ministries on the British pattern. Surely, this arrangement should enable the ministries to make better use of their own delegated authority and to apply financial canons to proposals which have to be referred to the Finance Ministry. Further, the Division has introduced several procedural reforms to correct the more glaring faults common to all ministries. Steps have been also taken to eliminate unnecessary movement of papers between officers and accumulation of arrears in many ministries.

The foregoing account will clearly show the useful role which the Organisation and Methods Division has been playing. Indeed, it is no exaggeration to say that the establishment of this Division has justified itself fully. It is to be hoped that the State Governments will emulate the example of the Centre and set up similar bodies. It is common knowledge that the administrative efficiency in the Secretariats of State Governments is at a low level and there is urgent need for enhancing it.

SOVEREIGNTY FOR WEST GERMANY

The emergence of West Germany as a sovereign State, following a proclamation ending the Occupation Statute by the three Allied occupying powers on the 5th inst., is expected to give a strong fillip to the resurgence of that country into a full-fledged economic political power. For this act restores to Germany an important measure of freedom in the economic and political field. Germany now is free to resume normal diplomatic relations with Soviet Russia and other East European countries and to conclude commercial and other treaties with them.

The area which is now West Germany (excluding West Berlin) comprises only 52.1 per cent. of the territory of the former Reich in 1937 (excluding Austria but including the Saar Basin). But, in the first year after the collapse on 8th May, 1945, of the Nationalist Socialist Dictatorship, even this reduced area, instead of being allowed to function as a single unit, was cut into three occupation zones, each isolated from the other. It was not until the end of 1946 that the British and American occupation zones were merged into a "combined economic area"; the French zone was joined to this area a year and a half later, in mid-1948, after the drastic currency reform. Now has come the next important step, namely, complete freedom to that part of Germany which was fortunate enough to fall into the hands of the democratic Western powers.

Looking back over the decade since the collapse of the Nazi dictatorship, the change that has taken place in the war-devastated economy

of the country is highly creditable. In 1946, the industrial output of the combined economic area was only about one-third of the 1936 level. Since then, there has been an astonishing recovery. Taking 1936 as the base, the index of industrial production in October, 1954, was 192.1, as against 172.6 a year before and the average of 113 for 1950. A comparison of other economic indices, as compared with 1950, discloses the following picture:

	1950	1954
National income (in million R.M. or D.M.)	71,521	105,296 (a)
Employment (in 000 persons) ..	13,903	16,831 (b)
Cost of living (1938=100) ..	156	170 (c)
Retail prices (1938=100) ..	172	179 (c)
Exports (in million R.M. or D.M.)	8,362	17,719 (d)
Imports (in million R.M. or D.M.)	11,373	15,353 (d)
Gold and exchange reserves (in million D.M.)	4,894 (f)	10,773 (e)
Interest rates:		
Discount rate	6%	3%
Loan rate	7%	4%

(a) Estimate, (b) September, (c) October, (d) January to October, (e) end of December, (f) end of 1952.

West Germany has made such tremendous recovery since 1951 in particular that it has been able to compete effectively with Britain and other European countries in the world markets and to relax import restrictions to a much greater extent than other European countries; indeed, it has expressed its readiness to introduce full convertibility. Now that Germany has regained a far greater measure of freedom in the economic and industrial field, there is no doubt that its economic record in the future will be better still.

Despite the freedom it has obtained, West Germany has given certain assurances regarding air traffic, the use of atomic energy and deconcentration of industry. In the field of development of atomic energy, it has agreed to limit the manufacture and import of energy to 3,500 grammes of nuclear fuel per year for the next two years. It has also agreed to limit the capacity of atomic power plant to 10 megawatts for two years. There will, however, be no limitations thereafter. All indications are that after this period, W. Germany will speed up its plans for the development of atomic energy in such a manner as to catch up with the progress already made by Britain and the U.S. The restrictions relating to decentralisation and deconcentration of industry will, however, prevail until the process is completed by the Federal Government. But this, it is stated, will largely be a matter of formality in all cases excepting a few, such as Krupps and Flicks, the assets of which have to be disposed of. A mixed committee has been set up to grant extension of time for the completion of the formality. This means that cartels and industrial concentrations can be allowed to go on with the consent of the Allied powers in cases where their presence is considered absolutely necessary.

The sovereignty of West Germany will not, however, be complete until the unnatural boundary between West and East Germany is obliterated. The reunification of these two areas can only be achieved by peaceful means and with the willing consent of the Soviets. Until this is accomplished, there are hardly any prospects of political contentment for the Germans who are a strong-willed nation and who regard the perpetuation of the unnatural separation as a national dishonour. Again, reunification alone can assure the people of the Soviet occupation zone freedom from want and liberty of thought. Reunification of the two parts of Germany is necessary for the integrated development of the country's resources on sound economic lines. More than anything else, peace on this planet will be in peril so long as this nation is kept in two parts, and that under two differing ideologies. It is to be devoutly hoped that Providence will bestow on the statesmen of the world the frame of mind necessary to unite the two Germanys into one and to give unfettered freedom to Germans to decide for themselves the type of government they want.

RAJASTHAN WOOL INDUSTRY

The prospects for wool producers in Rajasthan would certainly be bright, if the efforts of the State Government to develop the industry on a sound and solid footing succeed. The Government has drawn up a development programme for wool to be included in the second Five-year Plan. The programme envisages an aggregate capital outlay of Rs. 3.8 crores, the bulk of which—Rs. 2.8 crores to be precise—is to be accounted for by the public sector. The implementation of the programme is expected to result in an overall increase of 20 per cent. in

PERILS OF SOCIALISING INDUSTRY

By "Rudderbar"

IN every field of human endeavour, all worthwhile achievements have been the fruit of individual genius. We are standing too close to our own times to distinguish the truth of this statement in relation to modern progress. Nevertheless, when our history comes to be written, the names of individuals, many probably presently unknown to the public but who have benefited humanity in various ways, will assuredly adorn the pages and that, too, when Presidents, Ministers, and politicians, who today monopolise the world scene, may long have been forgotten. Turning to the past, the list of such men is endless. Consider, for example, the contribution to the science of surgery made by Lister and Pasteur, to locomotion by Stephenson and the Wright Brothers, to communications by Graham Bell and Marconi, and these, great names though they are, represent a mere random selection from the galaxy available. Nor should those be forgotten whose genius flowered in the fields of industry, commerce and transportation. Henry Ford, for example, one of the pioneers of mass production, and the early promoters of railroads, steamship companies and chain stores. However much we may deplore certain aspects of the industrial age, however distasteful may have been some of the methods employed, it can hardly be denied that these men conferred immense benefits on present generations and particularly with regard to the raising of living standards for great masses of people.

Easy and swift communications, cheap and safe transportation, a multiplicity of cheap manufactured goods, the better raising and distribution of food and other items, too numerous to mention, were the fruits of private enterprise. In most instances, moreover, and even in the case of concerns which are today gigantic in scope and complex in their organisation, it is not necessary to go very far back in time to trace their origins to single individuals. These were men of great imagination and drive, who, starting often from small beginnings, built up great enterprises. Nor did India lack men of vision and determination, as, for example, the house of Tatas bears witness today. These things are surely worth pondering by those who profess to believe that only the State can supply the material needs of the people today.

It is, of course, undeniable that many a great business was erected on a labour force working under the most inhuman conditions. One need only study the early history of industrialism in Great Britain, which, incidentally, gave rise to Karl Marx and his doctrine, to realise just how bad those conditions were. What is, perhaps, not realised, however, is that the times themselves were harsh. Servants of the State were little or no better off, as witness the appalling conditions of service that used to prevail in those days in the police and armed forces. Be that as it may, we have travelled very far since those bad old days and few would deny the vast transformation which has taken place, partly, no doubt, by social legislation, but mainly on account of the humanising influence of modern ways, themselves the result of higher living standards.

Whilst the benefits—and the drawbacks—of private enterprise under a capitalist system are available for all to study and criticise, comparable results of a system of complete State ownership and control are practically inaccessible, and those which do emerge from behind the iron and bamboo curtains are obscured by a smoke screen of propaganda. Nevertheless, the Government, in its wisdom, has announced its intention of promoting a Socialistic pattern of society, with the accent on State ownership and control of industry. The implication is, therefore, that much now within the private sector will pass into the keeping of the State and, whatever views may be held on this trend of affairs, all will desire to see a successful outcome of the policy for the sake of the nation.

Success, however, will not attend the public ownership of industry, unless a considerable improvement of present methods is forthcoming, because, judging by present results, those concerns which have already been acquired by the State are hardly likely to hasten the advent of prosperity and the welfare State. Consider, for example, our domestic air transport. Nationalised in 1953, this industry, in its first year of working, has cost the taxpayer Rs. 127 lakhs, and its second financial year, now nearing completion, is likely, so it is understood, substantially to increase this deficit. It is interesting to note that, in its last year of working under private enterprise, when it received a subsidy of Rs. 39 lakhs, the industry registered an aggregate loss of Rs. 12 lakhs, or, taking the subsidy into account, Rs. 51 lakhs. Not only, then, has the total loss been more than doubled under State ownership, but the whole deficit has to be borne by the public exchequer instead of the comparatively small amount formerly paid as subsidy.

These figures speak for themselves but they do not tell the whole tale. The workers, who were loud in their welcome of nationalisation, are now by no means happy. They are, in fact, learning the hard way that, whilst there is scope for collective bargaining with private enterprise, one cannot argue, with any hope of success, with a Government. They are learning, too, the dangers of monopoly in their line of employment. And, lastly, but not perhaps of least importance, they are learning that the more impersonal relations between management and employee which presently prevail are not to their liking.

Why should the mere fact of nationalisation bring about such unsatisfactory results? It is, I suggest, largely a question of direction and management. In private enterprise, the manager of a large company is one whose ability, knowledge of the industry, sense of responsibility and quality of leadership have been carefully assessed, probably over a long period of time. The Board consists of men, the majority of whom have wide experience of industry and commerce. If the manager fails, and many good subordinates fail when placed in top executive posts, he becomes an expensive liability and is replaced. In State-owned concerns, if the practice to date is to be taken as accepted policy, both direction and management are placed in the hands of civil servants, who, however excellent their qualities, seldom have any knowledge of the working of commerce and industry and, almost never, any specialised knowledge of the particular industry for which they are made responsible.

A very exceptional man may be able partly to offset this grave initial handicap and, by the exercise of his personality, contrive to drive a team of experts chosen from the industry itself. To achieve this, however, he must have one quality *in excelsis*, the ability to read and judge men. The policy of the Government in selecting civil servants for these posts is, doubtless, based on some such expectation. The failure of the policy to date lies in the overoptimistic assumption that civil servants are exceptional men. Mere academic achievement required for entry into the civil service is no guarantee of personality or character and early training in the sphere of Government administration, although a lifelong asset to the civil servant employed in his proper role, can be a positive drawback in the world of commerce.

Some of the spheres in which civil servants have been employed as managers of State-owned undertakings are highly technical and, indeed, of such a nature as positively to require some knowledge and background of the particular industry concerned. These include aircraft manufacture, shipbuilding, air transport, and the production of articles ranging from fertilisers to locomotives. In all cases, those selected to manage these industries are, doubtless, able and conscientious men, but it would be asking a lot of Providence to expect such exceptional qualifications as would counterbalance their lack of experience of commerce and industry.

If it is, indeed, the intention of the Government, in its pursuit of a Socialistic pattern of society, to absorb into the public sector many of the industries now established under private enterprise, some change of policy in regard to management and direction of these concerns seems to be given first priority. Without inspired leadership and expert direction and management, the handicaps which, in any event, beset a State-owned undertaking—I refer to the bureaucratic methods which inevitably creep into such undertakings and eventually sour management/employee relations and kill all enthusiasm—will be insuperable. If the present distrust of proven leaders in the private sector persists into the future and the country is deprived of the benefit of their knowledge and experience, then, inevitably, the results of State-ownership will follow the same pattern as has been exemplified in the case of air transport; heavy losses will be incurred and the promotion of the welfare State, far from being hastened, will remain a very idle dream.

AMERICAN LETTER

ECONOMIC TRENDS IN UNITED STATES

CURRENT YEAR MAY TURN OUT TO BE BEST BOOM YEAR UNLESS STRIKES OCCUR

From Our Special Correspondent

NEW YORK, 6th *May*

THE business boom continues in the United States. Increase of margin requirements for the purchase of listed stocks from 60 to 70 per cent. and the raise of the re-discount rate from 1½ to 1¾ per cent., designed to curb activity and speculation in securities, have had little, if any, effect up to this point.

Sales of new automobiles and the building of new homes, commercial buildings and local Government expenditures for highways, schools and other public construction have been the chief sustaining factors of the high levels of production and consumption,

All the depression talk which was so prevalent a year ago has disappeared and there is wide praise for the monetary policy of the Administration which was at least in part responsible for the reversal of trend.

Politically, this means, of course, that, aside from the great personal popularity of the President, the chances for the Republicans generally are pretty good.

In the Democratic Party, there are at this time two major contestants to run for the Presidency next year. They are Adlai Stevenson, who was defeated by Eisenhower in 1952, and Governor Averell Harriman of New York, who was elected to that post by a very narrow margin of votes.

Both men are good friends, both are extremely wealthy and both have no ulterior motive but ambition. Stevenson, as head of the Party, has the first choice. Both men, I know, would support one another through their political machines.

It is now conceded that Stevenson may not want to commit himself too soon and risk a second defeat at the hand of Eisenhower, unless the political and economic climate changes. He may also decline to run. In both events, Harriman would undoubtedly be the candidate, according to the present political constellation.

For him a defeat would not be quite so serious as for Stevenson. Besides, he was a strong supporter of Franklin Delano Roosevelt and he served in his shadow in various posts. His accomplishments were adequate, but they were by no means regarded as brilliant. Mr. Stevenson, on the other hand, is a witty man of considerable brain. Since a large segment of the electorate is always suspicious of brains, it may be that Harriman's chances at the polls are better than Stevenson's. Both are gentlemen who do not need the job. Both are well meaning and they would be running out of personal ambition plus *pro bono publico*.

Corporate Earnings

First quarter corporate earning reports of United States business and industry show in most cases gains in sales and earnings, as compared with the first three months of 1954, according to a tabulation of 818 statements by First National City Bank.

A factor in increased profits was the continued substantial enlargement in the capital investment of corporate enterprise. The combined net income of the reports at hand, showed a figure of about $2,500 million, an increase of 27 per cent. over the first quarter of 1954.

The number of companies reporting increases over a year ago exceeded those with decreases by a ratio of better than three-to-one. Working capital of the corporations under review was also increased.

Retained earnings and depreciation allowances still constitute the major sources of capital expansion funds, with new stock and bond issues providing minor though significant portions.

Among the manufacturing industries making sharp recoveries were textiles and apparel, iron and steel, automobiles and parts, chemicals and cement-glass-stone products. Many manufacturers are predicting that new high records set in the first quarter and the future outlook may mean that 1955 will be the best in their industries.

Labour Situation

One uncertainty in the picture revolves around the outcome of present negotiations between management and labour for wage contract renewals in the automotive industry. The main issue is the annual guaranteed wage. Some informed people believe the industry, now riding on the crest of a boom, will give in to these demands in one form or another. However, there remains much opposition to such measure.

The thinking of the antagonists was clearly represented in the current issue of *Guaranty Survey*, published by Guaranty Trust Co. of New York. The Bank says, in the final analysis, it is not the employer who hires labour and pays wages. It is the consumer.

The publication suggests "while the aspiration is easy to understand, a guaranteed wage is impossible to meet, because the demand for labour is determined by the demands for the products of labour and, in a free society, this cannot be guaranteed by anyone."

After this question has been settled in the automobile industry, possibly before the end of the month, the same question will rear its ugly head in the steel industry. There remains an outside chance of major strikes which may disrupt production schedules seriously and negate all present predictions that 1955 may be the biggest boom year ever.

No material change is expected in the money market picture. A fiscal and credit policy of mild restraint is still in evidence, driving interest rates fractionally higher and bond prices slightly lower against the background of a consistently strong stock market. The big problem is the real estate boom which in several sections of the country has resulted in over-building. The very easy mortgage terms are now in the process of being tightened so that this situation is apt to correct itself in due course.

Rubber Plants Sold

Another notable development was that the Washington Government took last week $81,595,072 in cash for three Texas rubber plants and thereby completed, substantially at least, the sale of the Federally-owned rubber industry to private interests. The transfer completed a week-long series of contract signing covering twenty-four plants from New England to California. This is in line with the policy of the present Administration to get out of business which can be run better and more efficiently by industry.—*All Rights Reserved.*

(*Concluded from next column*)

and knitware and thus save themselves the expense of a staffed exhibit.

The group which shows least diminution from its former glory is the jewellery and silverware group, dominated more than ever this year by Smiths who boast that they are the largest makers and exporters of clocks and watches in the world.

But pottery and glassware which should be one of the great sections of the Fair and which is an important export industry has shrunk to an insignificant group of stands among which only the Royal Crown Derby stands out. Another industry in which this country is predominant, the making of scientific and optical instruments, has withered away even more dramatically, and although what is shown is of interest it cannot claim to be even faintly representative of the vast group of manufacturers engaged in the trade.

So much for London. At Castle Bromwich, Birmingham, the Fair shows little change from past years. Its interest does not lie in *decor* or imaginative design but centres rather in the massed products of over a thousand firms whose names are household in the Midlands and the North and who cover the engineering, electrical, building, heating, and hardware industries, making products from ball-bearings to Bailey bridges. Some of the products are too large to be housed in the 2,000 ft. long hangars and are shown outside. Such are the structural, agricultural, mining and contractors equipment which form an impressive display. But the Birmingham exhibition, following the pattern of previous years, has continued to attract its high quota of overseas buyers.—*All Rights Reserved.*

B.I.F. STRIKES CRISIS

LEVEL OF PERFORMANCE LOW

From Our Own Correspondent

LONDON, 7th *May*

LONDON LETTER

THIS year, the fortieth anniversary of the British Industries Fair, the internationally famous London Exhibition, has struck a crisis. Ever since its foundation, till this year, Government Departments—either the old Department of Overseas Trade or the Board of Trade—have been responsible for running this vast shop window of light industry. Heavy industry has always been exhibited at the Birmingham section of the Fair and that has continuously been run by the Birmingham Chamber of Commerce. But this time it was decided to run the London section commercially and to put it in the hands of a new company formed for the purpose and in which the London Chamber of Commerce participated. The level of performance was low.

The result has not been happy and obviously the organisers have a great deal to learn. In the first place, the Fair had become increasingly notable for magnificent design in its *decor* and general lay-out, but this year obviously the money wasn't there for such expenditure, and *decor* has been left entirely to individual exhibitors only one of which—British Celanese, the rayon producers—rose to the occasion with a stand that was a gardener's fantasy, textiles and clothing mingling with trees and curious and metallic shapes. But it was a stand that caught the eye and demanded further investigation and that is surely the purpose of Fair *decor*.

This year, also, the Fair has been entirely housed in one of London's two great exhibition halls—Olympia—instead of extending into both, and textiles, which were usually an exhibition in themselves, are confined to a relatively small section of the Fair. Gone, too, is the extensive Commonwealth section in which all the countries of the Commonwealth, great and small, illustrated their principal industries. All that is left is a small Colonial group and only Pakistan of the Commonwealth countries has an exhibit which, however, is much less splendid than usually shown.

Just as the exhibitors are less, so the attendance of buyers and public has fallen, too. The reduction is less noticed among the overseas buyers whose numbers for the first few days of the Fair were about two-thirds of last year but who have come from Australia, Canada, India, New Zealand and South Africa in largest numbers, and among the European countries principally from France and Germany. Home buyers are down to about one-half as many as last year, and even the public attendance is less than usual despite the extended hours of admission.

The trouble is that a Fair of this nature loses its appeal if it is not widely representative of the industries concerned. Buyers are not going to trouble to come from distant countries nor even from other parts of Great Britain to see the exhibits of an unrepresentative group of firms which still leaves them with the necessity of finding out what other firms in the trade have to offer before they can place their orders. Another year of the Fair being run in this way will put an end to it. However, it is proposed that next year the Fair should be run at two different times of the year—in the early months for the seasonal trades who have to get ready through the year with their orders for the following autumn, for example, textiles, fancy goods, jewellery, cutlery, stationery, pottery and glassware. That will leave the scientific goods, packaging machinery, office appliances, and offshoots such as boats and caravans for exhibit at the traditional time. We must suspend judgment until we see how this works out. But it will certainly no longer be quite the same Fair as in the past.

This year, although the textile group has been reduced in size, it still remains the largest single exhibit and is dominated by the synthetic fibres. I.C.I. exhibit their terylene and ardil. Then there are British Nylon Spinners, Courtaulds with viscose rayon, and British Celanese with acetate rayon. All of them show a trend towards combining the man-made fibre with a natural fibre. There are few firms of note beyond the giants of the man-made fibre industry and the great names of Yorkshire ad Lancashire are absent. Some firms have taken the opportunity of having small shop windows in glass cases to show their specialities in hosiery

PAKISTAN NOTES

SCOPE FOR FOREIGN CAPITAL

U.S. COMMERCE DEPARTMENT ON LIMITATIONS

PAKISTAN does have much to offer—both real and tangible—to foreign investors in that country. This is the conclusion which the U.S. Department of Commerce has arrived at in its report on investment conditions in Pakistan—the report is the outcome of the enquiries conducted during 1953—issued recently. In saying so, the Department is, of course, not unaware of some of the disturbing trends in Pakistan's economy. In fact, it is fully conscious of them, as witness its special warning to the foreign *entrepreneur* to base his calculations on certain major premises in regard to Pakistan. In this context, it enumerates a series of major deterrent factors—both long-term and short-term—which inhibit the flow of private foreign capital into Pakistan.

The long-term factors, deterrent to potential investors, are summed up thus: the economy is predominantly agricultural, and industry, though gradually increasing in importance, still accounts for less than one per cent. of the national income. Incidentally, it is stated that, out of a total population of 75.8 million, 22 million are economically active, though probably less than one million are employed in organised industries. Besides, there is a crippling shortage of power. Skilled labour is at a premium, in spite of widespread unemployment. The market is restricted by the low *per capita* income of the population and the present rate of domestic capital formation is quite inadequate to the country's needs. Explaining the short-term factors, the Department alludes to the far-from-satisfactory contemporary financial situation, marked by a serious decline in foreign exchange reserves and recurrent inflationary pressures. Negotiations to obtain Government approval to invest in Pakistan are found to be both protracted and costly. Taxes—corporation and individual—are high. In trading activities, it is necessary to employ a large percentage of Pakistanis.

Against this background, the U.S. Commerce Department sets the strong determination of Pakistan to diversify their economy by industrialisation which is seen as something more than "an enthusiastic expression of national pride." Attention is also drawn to the recognition by Pakistan's leaders of the need to associate private foreign investment with domestic enterprise, the growing understanding by officials of the value of foreign co-operation, the aptitude of many Pakistanis to acquire industrial skills after adequate training, and the element of flexibility in applying controls over the issue of foreign capital.

The review of the industrial progress of Pakistan since its birth, as made by the U.S. Department of Commerce, reveals that progress has been most rapid in the field of cotton textiles and that the country is now more or less self-sufficient in respect of coarser grade cotton cloth. The aggregate output of cloth which was just 88 million yards in 1948 rose to 237.7 million yards in 1953. The improvement in output followed a notable expansion in the size of the industry. By 1954, there were 44 mills with 724,334 spindles and 10,475 looms, as against 17 mills with 177,417 spindles and 4,824 looms in 1947.

In the field of jute goods manufacture, progress, it is said, has been steady, notwithstanding lack of adequate power supply. By 1954, there were under construction in East Bengal 11 jute mills with 6,250 looms, of which 1,500 looms were already in operation. When all the 11 mills work satisfactorily, the production of jute will be at the rate of 200,000 tons per annum, of which 160,000 tons are expected to be available for export.

In the sphere of heavy industry, Pakistan has five cement factories, of which four are situated in the western wing. Their combined production was estimated at 596,000 tons in 1952, as against the development programme requirements of 1 million tons annually. Additional capacity is being installed. While Pakistan's annual consumption of sugar is about 300,000 tons, production in 1953 amounted to 83,000 tons. The country has also initiated steps to expand the small steel industry; steel ingot output in 1953 was 10,419 tons, as compared with 6,865 tons in 1952 and 2,881 tons in 1951. This falls far short of the country's annual requirements of iron and steel which are estimated at 350,000 tons. The gap will still remain large even taking into account the present rated capacity of 30 rolling mills (not all of which are in regular operation) which is no more than 80,000 tons. German interests are collaborating with the Pakistan Industrial Development Corporation in planning and developing steel resources. Large-scale manufacture of paper is being developed at Karnafuli in East Bengal.

Nevertheless, the U.S. Department of Commerce feels that there is still much to be done before Pakistan approaches self-sufficiency in some of the basic ingredients of industrialisation. According to the Department, the number of manufacturing establishments (excluding mines) employing 20 or more workers and using power during 1953 was 1,800, of which the Punjab accounted for 821, East Bengal for 415, Sind for 258, Karachi Federal capital area for 255, the N.W.F.P. for 35 and Baluchistan for 16. Over the whole field of manufacture, the textile industries predominate and there are 525 establishments engaged in the various branches of cotton and jute manufacture. Of these, more than three-fifths are engaged in cotton ginning and pressing. About 63 jute press houses and 1 mill were working in East Bengal at the end of 1953. Food manufacturing (other than beverages) accounts for 386 factories, more than half of which being engaged in rice milling, and there are 117 tea producing concerns.

From the assessment of the extent of foreign capital invested in Pakistan made by the U.S. Department of Commerce, it is gathered that there has been little U.S. private investment in Pakistan. In contrast, there is a considerable number of well-established British firms, as well as the participation of British capital in industrial enterprises such as chemicals, drugs, textiles and metal products. The position with regard to foreign investments in Pakistan as at 31st August, 1952 was as follows:

Country	*No. of companies*	*Issued capital (Lakhs of rupees)*
U.K.	... 51	12,28
U.S.	... 2	17
India	... 14	3,31
Other countries	... 38	5,71
Total	... 105	21,47

In a situation in which the need for much greater capital formation and investment is widely conceded, the Department thinks that there is little to particularise the fields in which foreign capital would be the most useful and, presumably therefore, specially welcome. But, in common with all the new nation States of Asia, Pakistan policy is, it is said, inevitably conditioned by such factors as the historical past, religious and racial susceptibilities, and a feeling that the Moslems of the sub-Continent have hitherto been slow to take advantage of modern industrial and financial techniques. "It appears clear," says the U.S. Department of Commerce, "that foreign capital will not be equally welcome in all fields in Pakistan." The foreign investor, for instance, will be discouraged in purely trading and commercial pursuits, but he may expect to receive encouragement in new manufacturing industries, "particularly those which are desired for immediate and rapid establishment or expansion."

ACTIVITIES OF BOMBAY STATE CO-OPERATIVE BANK

PROGRESS IN 1953-54 REVIEWED

IN view of the important role assigned to co-operative institutions for dispensing rural credit under the proposed integrated scheme, hereafter increasing attention will be paid to the activities of leading co-operative banking institutions. For the operations of these institutions, which are closely linked with village finance, not only reflect the prevailing economic conditions of the rural areas but also reveal their strong points as well as their weaknesses, as agencies for reorganisation of agricultural credit. A review of the latest Administration Report, namely, that for 1953-54, of the Bombay State Co-operative Bank Ltd., for instance, will provide one with an idea as to the problems facing this Bank, the leading co-operative central financing agency in the State.

The Bombay State Co-operative Bank is an apex institution and caters to the banking needs of the Co-operative Movement in the State. It functions as a balancing centre for co-operative institutions in this State as also in other States. During 1953-54, its paid-up share capital rose by Rs. 48,000 to Rs. 60.47 lakhs, inclusive of Rs. 26 lakhs contributed by the Government of Bombay. The new shares (value being Rs. 50 each) were allotted to co-operative institutions at a premium of Rs. 10 per share, the premium being credited to the Reserve Fund. The total membership of the Bank was 10,016 of which co-operative institutions formed 57.4 per cent. as against 56.9 per cent. in the preceding year, the rest being individual members. The share capital held by these institutions accounted for 70.4 per cent. of the total, as against 69.7 per cent. in 1952-53, excluding the share capital held by the Government.

The Bank's by-laws provide for admission of B class members, that is, persons who are (a) members of primary societies, (b) parties to proceedings under the State Debtors' Relief Act, and (c) creditworthy agriculturists. These members have no right to participate in the management of the Bank, but are eligible to borrow from the Bank moneys against pledge of valuables or agricultural produce or for raising crops. The membership of this class was 3,408 in 1953-54.

Deposits Drop

During the year under review, the Bank's total deposits dropped by Rs. 27.12 lakhs to Rs. 911.81 lakhs. This was due to (a) recession in commodity prices, (b) loss of business due to removal of control on essential commodities and rationing of foodstuffs, (c) diversion of savings from the co-operative organisation to the business freed from controls, (d) outflow of funds kept with co-operative institutions for contributions to the National Plan bonds and for purchases of post office cash certificates induced by attractive facilities, (e) opening of branches by commercial banks in the area served by the Bank, and (f) the closure of the Bank's branches in certain districts of the State.

An analysis of the types of deposits with the Bank discloses a fall of Rs. 46.44 lakhs in fixed deposits from societies. But deposits from individuals rose by Rs. 6 lakhs in the year under review. The current and savings deposits of societies showed a rise of Rs. 2.44 lakhs, while those of individuals were lower by Rs. 30.33 lakhs. Deposits excluding call deposits were lower by Rs. 57.47 lakhs. Call deposits, on the other hand, rose by Rs. 30.33 lakhs. The overall decline in deposits was partly due to the closing of five of the branches in North Satara and Ahmedabad Districts which accounted for a reduction in deposits amounting to Rs. 30.5 lakhs.

Borrowings Rise

The Bank's borrowings during the year under review stood at Rs. 130.90 lakhs as against Rs. 123.93 lakhs in the preceding year. Of these, advances from the Reserve Bank for its own use amounted to Rs. 25 lakhs and for the use of other central financing agencies Rs. 99.4 lakhs, as compared with Rs. 50 lakhs and Rs. 67.43 lakhs respectively in 1952-53.

The total advances of all types to societies and individuals, including bills discounted, aggregated Rs. 572.76 lakhs or Rs. 39.71 lakhs more than those in 1952-53. During the year, 2,838 applications were received from agricultural credit and multi-purpose societies and 323 from non-credit and non-agricultural societies. Of these, 49 belonging to the former and 76 to the latter were rejected. The amount of agricultural credit granted was Rs. 317.71 lakhs. Advances for non-agricultural and non-credit purposes amounted to Rs. 135.27 lakhs. The percentage of advances to total working capital was 46.21, as against 43.37 in 1952-53. Out of the total outstandings under all types of advances (Rs. 572.76 lakhs), unauthorised arrears amounted to Rs. 67.47 lakhs which compared very favourably with the arrears of Rs. 101.59 lakhs in the previous year. The improvement was due to special action taken by the Department Officers under the State Co-operative Societies Act.

The total gross income for the year amounted to Rs. 24.39 lakhs, as against Rs. 25.24 lakhs for the previous year. The fall in income is attributed to lower yield of interest on investments and loans. On the other hand, the total management expenses at Rs. 20.40 lakhs were higher by nearly Rs. 1.47 lakhs over those in the previous year at Rs. 18.93 lakhs. The increase was on account of the revision of pay scales and allowances of the staff. The net profit was, therefore, lower at Rs. 3.99 lakhs, as against Rs. 6.31 lakhs in 1952-53. The ratio of expenses to gross income was 83.6 as compared with 75. Commenting on the fall in the net profit, the Report observes: "During the last three years, the ratio of expenses to gross income has tended to increase from 70 per cent. in 1951-52 to 83.6 per cent. during the year under review, which accounts for the sharp fall in the net profit of the Bank. Owing to the rise in the amounts locked up with societies in liquidation and larger provision for overdue interest with some of the industrial societies, as also to the higher cost of borrowed funds, the net profit of the Bank dropped from Rs. 6.31 lakhs last year to Rs. 3.99 lakhs for the year under review."

Dividend Cut

The distribution to shareholders for 1953-54 was reduced from 5 per cent. to 4 per cent. by cutting the bonus part of 1 per cent. At the annual general meeting of the Bank held in September last, it was decided to pass over the bonus to shareholders and to reduce the bonus to staff from two months' salary to one month, in view of the fall in profits.

The lending rate to agricultural societies is, it is stated, limited to 4½ per cent., that is 1 per cent. higher than the Bank rate under the integrated scheme of agricultural credit, irrespective of the cost of funds. As against this, the average borrowing rate for deposits and loans was higher by 0.13 per cent., while the net cost of borrowed funds, including management expenses, was higher by 0.31 per cent.

A notable feature of the Bank's activities is its vigorous attempts at providing production credit to agriculturists. An attempt was made in 1953 to measure the extent of credit requirements of the entire agricultural industry in the Bombay State. The survey estimated the total seasonal agricultural credit for the cropped acreages of different crops at Rs. 108 crores. As against this, the production finance advanced by co-operatives was Rs. 12 crores only. If the institutional credit organisation is ultimately to replace the private agencies, at least half of Rs. 108 crores should, the Report says, be provided by the institutional credit organisation. There are 34,600 villages in the State. Of these, only 15,000 are served by 10,600 agricultural credit and multi-purpose societies, with a total membership of 8.87 lakhs. On this basis, the average loan per member works out to Rs. 126—a sum not at all adequate for production finance, considering the commercial crops, such as cotton, sugarcane, tobacco and potatoe grown in the State—requiring enormous sums for cultivation, seed, manuring, etc. This poor progress of co-operative credit has prompted the Bank to launch experiments on new schemes for providing credit for agriculturists. Of these schemes, its experiments in giving crop loans have evoked considerable attention. In giving these loans, factors such as the past performance of the borrower, insistence on sale of produce through marketing societies, proper assessment of crop acreages, fixation of different scales of finance based on productivity of the soil, introduction of improved methods of cultivation, and the financial and administrative efficiency of resources of the local society properly to administer the crop loan system are taken into consideration. The system has not yet been uniformly tried in the State, but it is considered to be full of great possibilities of developing rural credit on a scientific basis and has been commended for adoption by the Rural Credit Survey Committee of the Reserve Bank of India. This subject deserves further systematic study by the leading co-operators, as well as the officials of the Departments of Co-operation.

BILL FOR DECIMAL COINAGE

A Bill to amend the Indian Coinage Act, 1906, designed to bring in the decimal coinage system, was introduced in the Lok Sabha on the 7th inst. by Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, as previously indicated by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari. The main feature of the Bill is the elaborate provisions contained in it, for converting annas and pies into cents.

Under the provisions of the Bill, the present rupee will continue to be the standard coin and remain unaltered. The rupee is now divided into 16 annas and each anna into 12 pies. But, according to the Bill, the rupee is proposed to be divided into 100 cents and there is provision for issuing fresh coins in denomination of cents. The rupee, half rupee and quarter rupee will be equivalent to 100 cents, 50 cents and 25 cents respectively, and will be legal tender in payment or on account accordingly.

For some time to come, the existing coins of different denominations will also contine to circulate and provision has been made for conversion of these coins into cents. Thus all coins issued under the authority of the Act in any denomination of annas, pice, and pies will be legal tender in payment, or on account, at the rate of 16 annas, 64 pice or 192 pies to 100 cents calculated in respect of any such single coin or number of coins tendered at one transaction to the nearest cent, or where the cent above and the cent below are equally near, to the cent below. All references in any enactment, or in any notification, rule or order under any enactment or in any contract, deed, or other instrument to any value expressed in annas, pice and pies will be construed as references to the value expressed in cents converted in the manner mentioned above.

The statement of objects and reasons appended to the Bill says that modern trade and commerce demand speed and simplicity in the method of computation and the decimal system is admirably suited for the purpose. The decimal system has already displaced all other systems in advanced countries. Public opinion in India also has all along expressed itself in favour of the decimal system.

A Bill on the subject was introduced in 1946. It was, however, not proceeded with, owing to the unsettled financial and political conditions after Partition. The Government now feels—and rightly so in our opinion, as witness our remarks in the course of a leading article a fortnight ago—that the present is the opportune time for the change-over in the coinage system.

It may be mentioned here that it will take some time for the new coinage to come into force. Of course, the proposed Bill has a provision empowering the Government to fix the date on which the new coinage system can be put into effect. For this, the Bill should be passed by both the Houses and then receive the assent of the President. As the Lok Sabha was adjourned *sine die* on the day the Bill was introduced, it could not be proceeded with. It is, therefore, natural to expect that it will be taken up for consideration in the ensuing autumn session. Meanwhile, the Government also should get the new coins minted in the required quantities so that they may be ready for circulation on the day to be fixed by it. For these coins, the Government need not depend on foreign countries, as it has, in the Alipore Mint, one of the most up-to-date mints in the world capable of turning out the required quantity of new cupro-nickel coins needed under the decimal system.

BANK OF KARNATAK LTD.

The working of the Bank of Karnatak Ltd. (Managing Director: Mr. L. D. Nadgir, Hubli), during the year ended 31st December, 1954, has resulted in a profit of Rs. 22,697. With the sum of Rs. 410 brought forward from 1953, the amount available for appropriation is Rs. 23,107, as against Rs. 23,065 a year ago. Out of this, the Directors have transferred Rs. 5,000 to statutory reserve fund, which had received Rs. 4,600 last year, and Rs. 1,000 to provision for depreciation on investments, as against Rs. 500 provided a year ago. After making a provision of Rs. 8,000 (Rs. 8,500) for taxation, the Directors have distributed a dividend of 2½ per cent. less tax, the same as for 1953, absorbing Rs. 9,061 (Rs. 9,055), leaving Rs. 46 to be carried forward.

The Bank's reserves as at the close of 1954 amount to Rs. 29,000. The deposits aggregate Rs. 18.86 lakhs, an increase of Rs. 3.55 lakhs over the year. Advances (including bills purchased and discounted) account for Rs. 11.66 lakhs, investments (at cost) for Rs. 5.11 lakhs and cash balances for Rs. 7.48 lakhs. The Bank's entire investments are in Government and Trustee securities, the market value of the same, as on 31st December, 1954, being Rs. 4.90 lakhs. The advances bear a ratio of 61.8 per cent. to deposits and investments and cash balances 66.7 per cent.

U.S. ECONOMIC AID PROGRAMME

MR. STASSEN COMMENDS INDIA'S GREAT EFFORTS

THE emergence of the U.S. as the generous donor to the war-ravaged and economically underdeveloped countries is certainly the most striking development in recent world history. Of late, however, there has been strong opposition within that country to the continued performance of such role. Many far-sighted Americans, no doubt, agree that, in the interests alike of democracy and their own security, the U.S. should be prepared to bear the financial burden implied in aiding economic recovery and development in other countries. At the same time, many influential voices have been raised in protest against such aid on the ground that it compels the American taxpayer to pay too heavy a price. Further, they argue that the countries, by constantly looking to the U.S. for eleemosynary aid, lose that self-reliance which forms the ultimate basis for all economic development.

It is a compromise between these two trends in American public opinion that is found in President Eisenhower's message to the U.S. Congress, asking for authorisation of mutual security aid for the next fiscal year. Emphasis is thus laid on self-reliance of the recipient countries, on loans rather than grants. But the larger issues of protection for the democratic way of life have not escaped attention. A notable feature is that the programme, he has recommended, proposes no economic aid for the original Marshall Plan countries, obviously because these countries are no longer in need of such aid. There is a welcome shift in emphasis from these countries to the Asian region. Justifying this change, Mr. Eisenhower pointed out that free Asia contains 770 million people, one-third of the world's population. He added: "Most of them are citizens of newly independent States. Some have been engaged in recent war against communists. All are threatened. Capital is very scarce. Technical and administration skill is limited. Within the area, however, abundant resources and fertile lands are ready for development."

The "major responsibility" for economic progress, he did well to stress, must lie with the countries themselves. His point was that at best, foreign capital, as well as foreign aid, can only launch or stimulate the process of creating "dynamic economics." He defined the U.S. role as the role of a country that has the "capacity, the desire, the concern to take the lead in friendly help for free Asia." He visualised three forms of such aid. The U.S. could assist in providing and mobilising capital for useful and constructive development. It could encourage private industry to join with the people of free Asia in building their private industry. It could advise on the means by which a free nation builds upon the initiative of independent farmers to achieve a steady advance towards better standards of living, in contrast to the mounting failures of collectivist agriculture.

Quantum of Aid

For the fiscal year 1955-56, commencing on 1st July next, Mr. Eisenhower recommended for congressional approved funds aggregating $3,530 million for the mutual security programme. Of this amount, $712.5 million is for economic programmes, including $172 million for continuation of technical co-operation programmes, $175.5 million for special programmes, $165 million for development assistance, $200 million for the special President Fund for Asian Economic Development, and $100 million for worldwide contingency fund. He also requested $1,000 million for defence support which serves both economic and defence purposes and $1,717.2 million for military assistance and direct forces support. The total amount asked for next year is about the same as was requested for the current year, though it is about $800 million more than the Congress finally granted. The sum, requested for purely military purposes, is below last year's levels. Thus, the President has requested for $1.7 billion for military assistace as against $2.5 billion he asked last year and just under $2 billion that was voted. He suggested that the Congress might enact broad rules for the use of the $200 million fund for Asian development through loans and grants. He added: "To help assure the most effective use of these funds, this appropriation should be available for use over a period of years." He said: "Wisdom and economy in their use cannot be achieved through speed." It may be, however, wondered whether a fund of so small a magnitude, especially when it is spread over a number of years, could achieve at all any really significant results in a continent of the size of Asia.

Explaining the pattern of expenditure under the mutual security programme, Mr. Eisenhower pointed out that, based on the experience of the past two years, nearly 75 per cent. of the dollars appropriated under the programme would be "immediately spent within the U.S. for commodities, services, machinery and other items." The commodities will include food, cotton, coal and other goods for which the U.S. capacity or surplus supply most readily matches requirements. He indicated that approximately $350 million of agricultural products were expected to be used in the fiscal year 1955-56. This would include a "significant" export of major surplus crops. Shipments under the Mutual Security Programme, he further explained, would be "in addition to but co-ordinated with sales of surplus agricultural commodities for foreign currencies under the Agricultural Trade Development and Assistance Act." The rest of the dollars, that is, 25 per cent.—will also aid the recipient countries. Thus, the offshore procurement contracts assist in establishing a defence production base in key points of the world, besides providing the dollars the countries need for buying the needed goods from the U.S.

Some administrative changes have been proposed by the U.S. President. The affairs of the Foreign Operations Administration will be transferred to the Department of State, except for certain military aspects which will be transferred to the Department of Defence. "This transfer to permanent departments of the Government," he said, "will reflect the significance of this programme as an integral part of our foreign policy." The International Co-operative Administration, he said, would be a new semi-autonomous unit within the Department of State. Its Director will report to the Secretary of State and give, on the latter's behalf, supervision and direction to the mutual security operations.

Philosophy Behind The Aid

In conclusion, Mr. Eisenhower re-stated, in a particularly fascinating manner, the political and economic philosophy of the aid programme. He said: "The other free nations need the U.S. and we need them, if we all are to be secure. Here is a clear case of inter-woven self-interest." He further said that the U.S. economy "cannot be strong and continue to expand without the development of healthy economic conditions in other free nations and without a continuous expansion of international trade." He added: "Neither can we be secure in our freedom, unless, elsewhere in the world, we help to build the conditions under which freedom can flourish by destroying the conditions under which totalitarianism can flourish—gross poverty, illiteracy, hunger and disease." Here is the main argument for international co-operation of the kind that will induce the economically advanced countries to initiate, and the underdeveloped countries to profit by, a well-co-ordinated programme of economic assistance.

Exactly a fortnight after President Eisenhower's message to the U.S. Congress, both the Secretary of State, Mr. Dulles, and the Foreign Operations Director, Mr. Harold Stassen, urged the U.S. Senate Foreign Relations Committee to authorise the $3,530 million Mutual Security Programme recommended by President Eisenhower. Both expressed their full faith in the belief that an increase in Asia's economic strength could be another effective resistant to communism. Mr. Dulles drew the attention of the Committee to the fact that the President's Fund for Free Asia was designed to stimulate the development of economic strength and co-operation in the area. Referring to the suggestion that the U.S. superiority in modern weapons had lessened the need for Allied support, Mr. Dulles characterised it as a dangerous misconception. He added that the U.S. needed the support of other free nations just as the latter needed that of the U.S. "The peoples of these nations, their territories, their farms and factories, their mines and scientific and technical skills," he remarked, "all are priceless assets in the hands of the free. But, under communist control, these human and material sources would be harnessed and used against the U.S." Continuing, he emphasised that the U.S. could not rely exclusively upon any single weapon or technique. He considered that his country's technological advantages must be reinforced by other means of defence, both military and non-military. This view is quite sound, in that the superiority in modern weapons is not guaranteed to last for ever; for history has full of examples to show as to how progress in scientific research has rendered obsolete today what was considered yesterday to be the most progressive in technological development. There is, therefore, force in Mr. Dulles's contention that superiority in modern weapons was not a product of any special magic, and that one could not rely exclusively upon any single weapon or technique. He considered the U.S. superiority as part of "our overall technological capacity, and is a composite of various human skills, mineral resources, laboratories and factories, trained military personnel, bases and other facilities many of which are freely made available by our friends and allies."

While thus Mr. Dulles stressed as to why the U.S. needed the support of other nations, including Asian countries, Mr. Stassen strove to show how world security and stability centred in Asia. Asia, to Mr. Stassen, was a focal point of present Communist pressure. Funds were needed under the Mutual Security Programme "to meet the defence support and direct forces support needs of countries in the area."

Mr. Stassen's Remarks

The use of the funds authorised under the Programme is not, however, limited to provide defence support alone. It is intended for aiding the economic development of the region also. This is evident from Mr. Stassen's remarks on the aid to be given to India under the Programme. The tribute paid by him to the way in which this country is struggling to improve its standard of living is noteworthy. He said: "The 370 million people of India are now engaged in an effort, unprecedented in history, to wage a successful struggle against disease, poverty, illiteracy and general economic distress, under

IMPORT DUTY ON COTTON GOODS REDUCED SUBSTANTIALLY

BRITAIN APPRECIATES INDIA'S GESTURE

A BRIEF reference to the reduction in the import duty on cotton textiles, announced by the Union Finance Minister in Parliament on the 3rd inst., was made in our Market Gossip columns last week. It is now proposed to survey here the details of this decision. The reduction in import duties applies to both British and non-British cotton textiles. As against the import duties varying from 60 to 80 per cent. *ad valorem* on cotton piecegoods of British manufacture hitherto existing, the duties have now been cut to 25 per cent. *ad valorem plus* the excise duty on superfine fabrics and the handloom cess payable by domestic producers. The excise duty on superfine fabrics is As. 2 per square yard, the highest duty that is levied on Indian mill-made piecegoods. The handloom cess is 3 pies per square yard, so that the total excise duty payable is As. 2-3 per square yard. This duty, according to Sir Anthony Eden, British Prime Minister, is roughly equivalent to 5 per cent. *ad valorem*. In other words, the relief for British textiles is of the order of 30 per cent. on the variety mostly in demand in India. The scheme of preferential duties under the Indo-British Trade Agreement will continue, the non-British textiles paying a higher duty varying from 45 to 65 per cent. *ad valorem* (in addition to the excise duty and handloom cess as against 100 per cent. *ad valorem* duty hitherto). The revised rates will be in force for a period of one year, after which the whole position will be re-examined by the Government of India in the light of its effects on the indigenous cotton mills.

For purposes of record, the extent of the cuts in the rates of standard and preferential import duties (excluding excise duty and handloom cess as indicated in the footnote to the table) on the different varieties of piecegoods, British and non-British, is indicated below:

(Per cent. *ad valorem*)

Variety	British manufacture		Non-British manufacture	
	Old	Revised	Old	Revised
Grey piecegoods (excluding bordered grey chadars, *dhotis, saris* and scarves) ..	65	25†	100	60†
Printed piecegoods and printed fabrics	60	25†	100	65†
Piecegoods not otherwise specified	60	25†	100	65†
Printed sateens including Italians of sateen weave, velvets and velveteens, and embroidered all-overs ..	80	25†	100	45†
Others	75	25†	100	50†

† Besides the duty at these rates, the excise duty leviable for the time being on superfine cotton fabrics, together with the handloom cess of 3 pies per square yard, will also have to be paid.

The reduction in India's tariff duty on cotton textile imports is a sequel to the representation made by the British Government and the Lancashire millowners to the Government of India. It was early in 1953, it will be recalled, that the Central Government raised the import duties on cotton textiles to very high levels on revenue considerations, from roughly 18¾-21¼ per cent. to 60-80 per cent. *ad valorem* on British and to 100 per cent. on non-British. There was, however, some relaxation in the quota restrictions on imports which had been introduced for balance of payments considerations. As the duty was prohibitively high, the relaxation of quotas had no effect. On the contrary, imports actually declined from 5.3 million yards in 1951 and 4.3 million yards in 1952 to 3.9 million yards in 1953 and still further to 3.8 million yards in 1954. While thus, imports from the U.K. shrunk, India's exports of cloth to the U.K. recorded a sharp increase in recent years. Thus, in 1954, India exported 125.19 million yards, as against 20.35 million yards in 1953, 5.77 million yards in 1952 and 89.12 million yards in 1951. The bulk of these exports were re-exported by Britain after processing and finishing, while a part of it was consumed in the domestic market. This led to competition with Lancashire mills in their own home markets. It is said that, in 1954, something like 60 million yards of Indian cloth were consumed in Britain itself.

These trends, namely, the fall in imports of British cotton goods into India and the rise in India's exports of cotton goods to the U.K., coupled with a general slackening of orders for British cotton goods from other parts of the world, roused the anxiety of Lancashire millowners about their future. The British textile workers, too, were concerned by this development. Both employers and employees brought considerable pressure on the U.K. Government and carried on a strong agitation for arresting these disturbing trends. The British Government in turn urged the Government of India to revise the textile import policy. In October, 1954, the quantitative restrictions on Lancashire textiles were removed. This measure, however, did not result in any improvement in cloth exports from Britain to India. The U.K. Government again represented to the Indian Government pleading for a reduction in import duties on the ground that they were prohibitive. Attention was also drawn to the fact that Indian textiles were not at all subject to any import duty in the U.K. Following on a visit to India of Mr. A. R. W. Low, British Minister of State at the Board of Trade, early this year, arrangements were made for a mission from the Lancashire textile industry to visit India. The mission, led by Mr. Angus Campbell, visited India last month. After surveying the position, the mission came to the conclusion that, with the heavy import duties and range and quality of Indian production, it was impossible for Lancashire to compete in the Indian market. It, therefore, requested the Union Government to offer equitable terms of trade to enable Lancashire to compete evenly in the Indian market. The Government examined the whole problem in close consultation with the leading millowners' associations and was satisfied that the reduced duties as set out earlier would not cause any damage to the indigenous textile industry.

Two Considerations

Two important considerations, it would appear, weighed with the Government of India in taking the decision to reduce import duties on textiles. First, the duties which were primarily levied for revenue purposes had failed to provide any sizable yield and their scaling down would give better results. Secondly, it is in India's interests to nurse British goodwill. Apart from the sizable market in the U.K. itself, Indian cotton goods are in demand in the colonial markets, too. If these markets are to be retained, it is necessary to be on good terms with the British Government. For the British Government's counter-move could be imposition of a quantitative control or import duties on Indian textiles, or both, which would surely lead to a reduction in Indian exports to the U.K. and its colonies. This, in turn, will aggravate India's problem of disposing of its textile production.

The reduction in import duties on textiles has been widely welcomed by both the Indian millowners and the traders. A section of textile interests, however, has criticised the measure as being one capable of inflicting serious injury on the indigenous industry. The criticism is clearly exaggerated. For the rise in cloth imports into India from the U.K. as a result of tariff cut would be negligible, the quantity that may actually be expected to be imported being not more than 15 to 16 million yards. Similarly, there is no justification for the fear that Japan would stage a come-back in the Indian textile market, inasmuch as the Government always possesses emergency powers to deal with the flooding of imports into India. Moreover, the reduced duties are subject to a review after a year.

Reactions in U.K.

The Indian Government's gesture by way of tariff cut on textile imports has been appreciated by practically all sections in the U.K. Mr. Herbert Morrison, Deputy Opposition leader in the British House of Commons, for instance, said the other day that "we welcome the action of the Indian Government." Alluding to this, Sir Anthony Eden, the British Prime Minister, stated in the House of Commons that "that is something about which we can all agree." Characterising the present preference in favour of British exports as substantial and important, Sir Anthony dcelared: "These arrangements will result in a welcome opportunity for increased trade." The British Press, too, has hailed India's action in good spirit. Commenting on the tariff cut, *The Times* (London), for instance, observes:

"The (British) Government have been wise in seeking to help the Lancashire cotton industry not by creating new barriers to international trade, but by a lessening of the existing restrictions. The Indian tariffs on imports of cloth from Britain had been set at a crippling level. The concession now made by the Indian Government has called for courage, because they, like the British Government, have their own 'Lancashire' opinion to deal with. The concession is substantial in scale and should help to open the Indian market to more textiles from Lancashire and Northern Ireland, which still also enjoy a preference in India. The change made plus the complete removal of purchase tax, which was only halved in the Budget, gives the kind of relief which is healthy, namely, encouragement to seize trading opportunities and to take the steps of reorganisation and re-equipment for which there is still plenty of room and which will make the Lancashire industry more uniformly competitive."

In so far as the textile millowners and workers of Lancashire are concerned, although the Indian Government's decision has been welcomed, greater emphasis is being laid on the need for regulating cloth imports into Britain. The mere tariff cut, it is pointed out, would do little to solve Lancashire's problems and build up mill order books again. "The real problem facing Lancashire is," to quote an official of the Cotton Spinners' and Manufacturers' Association, "the increasing volume of Indian cloth reaching Britain." Mr. William Roberts, President of the United Textile Factory Workers' Association, goes even to the extent of saying that "what we should like to see is a quota on Indian cloth imports into Britain, calculated on the average imports over a number of years." This plea has not found favour with the British Government, as witness the clear statement of

REACTIONS TO INDIA'S TARIFF CUT ON TEXTILE IMPORTS

DOWNWARD TREND IN CLOTH EXPORTS

By Our Special Correspondent

MANCHESTER, *3rd May*

MANCHESTER LETTER

THERE is much talk in the air in Lancashire at the moment about a revival of redundancy, in view of the critical situation which has developed over the past 12 months. Because vocabularies differ, the words used may not always be identical, but, in the end, they all add up to some kind of proposal to deal with surplus plant.

Two significant speeches have been made in the past few days dealing with this topic. In the first, Sir Raymond Streat made a singularly outspoken address to the Preston Chamber of Commerce, in which he looked ahead to the future. The size of Britain's cotton industry required for a balanced national economy, he said was one able to produce the great bulk of the requirements of the home market and still cater for an export trade of several hundred millions of yards. "Not all the machinery or all the mills we had in 1951 will rightly be needed to produce that volume of goods in future years," he went on. "Without accepting any further decline in the volume of the cotton industry's production we should hope to achieve the requisite yardage on fewer machines in fewer mills."

Without actually using the word redundancy, Sir Raymond called for "the consolidation of productive capacity in modernised mills." Such a development, he believed, would be necessary in other textile producing countries. Just as Britain was the first to introduce factory industry so we became the first country to deal on a large-scale with fully mature industries which needed consolidation and modernisation. Sir Raymond, however, rejected any idea of a centrally-made plan on the lines of nationalisation. He felt that the aim could be accomplished by individual decisions by individual companies. In his words: "Those who have the stomach and the nerve for the future competitive struggles will decide to stay in. Those who feel otherwise will stop their mills whilst they can do so without loss."

Unions and Shifts

The second important contribution to current problems came from the trade union side. Mr. William Roberts, President of the United Textile Factory Workers' Association, opened its annual conference by appealing for joint action to cope with the situation. He observed that the suggestion of concentrating the mills in more efficient units with increased modernisation and shift work was originally put forward in the Working Party Report. But, he added, from the time the report was issued to the time when the effect of the 1952 recession was felt, there was little effort inside the industry to face up to the potential dangers to trade.

Mr. William Roberts bluntly told the unions that no solution could be provided by a shorter working week on single shifts. He declared: "Lancashire is alone in working the single-shift system. Our competitors in Europe who operate two shifts experience similiar difficulties in facing competition from Japan, India and other low-wage earning countries, so it should be clear that we cannot hold our own without a more serious approach to the question of productive hours."

Indian Tariff Cut

Early comment among Lancashire cotton traders on the announcement that Indian import duties were to be lowered was to the effect that the relief was welcomed but would not make any material difference to the position. Shipments of British cotton goods to India are at present running at around 3,000,000 yards annually and even an improvement to 10 or 15 million yards would do little to reduce the huge gap which exists between trade in the other direction.

Both employers and union leaders warn that the tariff cuts would do little to solve Lancashire's problems and build up mill order books again. On behalf of the Cotton Spinners' and Manufacturers' Association, a spokesman said: "These reductions will, in effect, enable more Lancashire cloth to enter India, but the real problem is the increasing amount of Indian cloth coming into Britain." Mr. William Roberts, President, United Textile Factory Workers' Association, said that Lancashire would appreciate the Indian duty cuts, because they made the position fairer, Indian cloth entered this country duty-free. He said: "I don't think it is going to make a great deal of difference to Lancashire's exports, however. What we should like to see is a quota on Indian cloth imports into Britain, calculated on the average imports over a number of years."

Mr. H. E. Pardoe, President of the Manchester Chamber of Commerce, describe the tariff reductions as a tribute to the work of the Lancashire textile mission which recently visited India. "It is a trimuph for two-way negotiations in trade. If half a dozen other countries would follow suit Lancashire mills would probably be busier," he said.

No Quality Drop

Lancashire's efforts to increase mill efficiency must not be made at the expense of quality, Mr. William T. Winterbottom, President of the Master Spinners' Federation, said at Bolton when he was installed as President of the Textile Institute. Today, with textile industries established in most countries, the quality of British textiles remained unequalled, but Lancashire now faced competition from low wage cost countries with whom she could not compete on a price basis alone.

He told the annual meeting of the Institute: "We are continually exhorted to increase our efficiency by various means, such as new machinery and work study methods and, while it is essential that we should do everything in our power in this direction, we must at no point sacrifice quality."

Mr. Winterbottom said that trading conditions operating today made it more than ever necessary that technical efficiency in the cotton industry should be at the highest possible level. "The work needed to make and keep our industry competitive is high, but there are ample rewards. The textile industry has never had more to offer to those who are prepared to make themselves competent in its service."

Lancashire-Pakistan Deal

Orders worth nearly £2,000,000 for cotton yarn and cloth have been obtained for Lancashire mills as a result of a three-way barter scheme announced by the President of the Board of Trade. American aid to Pakistan was first offered in the form of raw cotton, but the Pakistan mills are well supplied with raw material. The scheme involves the manufacture of cotton goods by other countries and shipment of the finished fabrics to Pakistan. Already Germany and other Continental textile mills have signed agreements to make these supplies for Pakistan. The orders obtained will help to keep Lancashire machinery running at a time when many firms are finding progress very difficult.

Mr. James Ainsley, Secretary of the Manchester Chamber of Commerce, welcomed the news, describing the scheme as "an important agreement which should be of considerable help to Lancashire exporters." Special licences, he said, would be issued by the Pakistan Government to importers qualified to operate the plan. Interested textile merchants will be kept advised of the arrangements, Mr. Ainsley added, and dealers in Pakistan are expected to notify their British contacts what type of goods they want very shortly.

Imports Up—Exports Down

Earnings from cotton goods exported from the U.K. during the first three months of 1955 at £28,696,267 were about £1,400,000 lower than last year, but were slightly in excess of the 1953 totals. Imports, however, cost considerably more, being £7,424,877, as against £4,905,066 last year and £2,945,691 in 1953.

Cloth exports in March were nearly 10,000,000 square yards lower than 12 months ago, being 53,825,000 square yards worth £6,896,400. The corresponding figures last year were 63,774,000 yards valued at £7,935,927. Yarn shipments amounted to 3,573,330 lbs., valued at £1,553,526, as against 3,459,857 lbs. worth £1,436,370 in March, 1954.

The following table shows recent quarterly comparisons:

(Cloth in sq. yards; yarn in lbs.)

	Exports		Imports
	Cloth	Yarn	Cloth
1954			
1st quarter	176,756,000	11,174,000	50,010,000
2nd ,, ...	166,249,000	10,164,300	55,080,000
3rd ,, ...	151,035,000	9,004,900	72,840,000
4th ,, ...	142,644,000	10,044,700	88,840,000
1955			
1st quarter	165,814,000	10,667,800	99,341,000

Among the chief consuming countries of Lancashire-made piecegoods, Australia and

WORLD MARKET FOR TEXTILES, 1938-53

DECLINE IN CONVENTIONAL TEXTILES BEING OFFSET BY MAN-MADE FIBRES

THE G.A.T.T. Trade Intelligence Unit has prepared a paper on the world market for textiles, 1938-53. The Paper is based on annual data for 1938 and 1948-53, on the consumption of raw cotton, rayon (both staple fibre and filament) and raw wool for 86 countries and territories, as well as the trade of these countries and territories in yarns, tissues and other manufactures in respect of each of the three main fibres. The extensive nature of these data makes it possible to gain a comprehensive view of the structural changes that have occurred in the world's textile industry and trade since the war.

The course and the results of the analysis based on these data, and on certain additional statistics which have been specially collected, are summarised below:

World consumption of the three fibres taken together (which may be considered as an approximate index of textile production) *increased significantly less since pre-war than the world's total industrial output.* The latter stood since 1948 continuously much higher than in 1938, until in 1953 it nearly reached twice the pre-war volume. World textile production, while also exceeded the pre-war level in 1948, failed to rise uninterruptedly, showing a substantial decline in 1952, and, in 1953, though well above the preceding year, it was only 28 per cent. higher than before the war.

The fluctuations in the industrial consumption of individual fibres show wide differences in post-war years. In 1953, cotton consumption was 17 per cent. and wool consumption about one-fifth above 1938, while rayon consumption had grown even more than the world's total industrial production and was at well over twice the pre-war level.

The Textile Crisis

There are substantial *differences in the way in which the* 1952 dip in total fibre consumption, sometimes referred to as "*the textile crisis,*" *reflected itself in the consumption of each fibre.* In cotton, there hardly was any actual decline, but rather an adjustment after the strong increase in 1951. Rayon consumption in 1952 was more severely affected but established a new record in 1953. Wool consumption, which reached a post-war peak in 1950, fell even below the 1948 level in 1951 and 1952 and recovered only partly, though vigorously, in 1953.

The so-called "*textile crisis*" of 1951-52 *appears,* upon closer analysis, to be nothing more than the *perfectly plausible result of market responses,* as far as production developments are concerned.

The differences in both the amplitude and the timing of the "crisis" noted in the preceding paragraph are essentially the result of demand conditions as determined by income and price levels. Western Europe and North America (which comprise the largest part of the world's textile production) depend for the disposal of their textile output in varying degrees upon markets in the industrial and the non-industrial regions, respectively. The dependence upon the outside (i.e., the non-industrial) world is least for wool textiles, intermediate for cotton textiles and highest for rayon goods. On the other hand, *income* levels and hence the demand for imported goods of all descriptions, including textiles, in the non-industrial regions depend mainly upon the proceeds of primary products exported, and those proceeds, after reaching a maximum in 1951 as the result of the Korean boom, fell precipitously in 1952. It is this fall in income in primary producing regions which accounts for the moderate fall in cotton textile exports from, and hence the production in, the industrial countries and for the larger fall in rayon goods exports and hence production, both of which occurred in 1952 while the effects of the Korean boom were being liquidated.

The *prices* of textile products generally moved in sympathy with the prices of their raw materials. As a result of the spectacular increase in the price of raw wool in 1950-51, the price of wool textiles rose in 1951 to nearly 50 per cent. above 1949. Raw cotton prices rose less, and the price of cotton textiles in 1951 was only 20 per cent. higher than in 1949. The price of rayon goods was hardly affected by the Korean boom, in spite of the large increase in the prices of cellulose. Hence, it is the increase in the price of wool textiles—most of which are sold in the markets of the industrial world—which caused production to fall already in 1951. Cotton textiles, the price of which rose far less, but which depend more than wool textiles upon markets in the primary producing regions, so far from declining in 1951, rose substantially, because of the high income levels in those regions and in spite of such price increase as there was. Rayon textiles, finally, the sale of which depends most on incomes in primary producing regions and the price of which was affected least, fell like cotton textiles in 1952, only more so. It is thus a combination of price movements and of income changes in industrial and non-industrial regions, respectively, which accounts for the different course of "the textile crisis" in respect of each major fibre.

It follows from the preceding analysis that *international trade in textiles was affected far more heavily than production by the "crisis."* Though lower in relation to pre-war, the volume of world textile exports rose twice as fast from 1948 to 1950 as the volume of world exports of all commodities. In 1951, there was a halt in this extraordinary increase, followed in 1952 by a severe slump to a level even lower (by 8 per cent.) than before the war. In 1953, there was a recovery both in world exports, which had fallen only slightly in 1952, and in world textile exports. As a result of this movement, however, the ratio of exports to production in 1952 and 1953 was no smaller, as compared with pre-war, in respect of textiles, than it was for all commodities. It, therefore, appears that the year 1953 may, in spite, or even because of, the "textile crisis," well be chosen for comparison with pre-war as far as structural changes are concerned.

Closer analysis of the *origin of world exports* reveals the presence, in respect of cotton and rayon, of a relatively small, though widening group of *major exporting countries.* In wool, by contrast, the group of major exporters was unchanged. Briefly stated, the position is as follows:

In 1938, about 14 per cent. of world output of *cotton goods* (measured by raw cotton consumption) was exported. Six countries (Belgium, France, Italy, the United Kingdom, the United States and Japan) produced about half (49 per cent.) of the total, and their net exports were 71 per cent. of the world aggregate. In 1953, the six countries still produced almost the same proportion of the total as before the war, but their exports had fallen to 58 per cent. Two new countries (Germany and India), with 15 per cent. of world production now, had exports representing 13 per cent. of the world total.

Rayon Goods

In 1938, 20 per cent. of world output of *rayon goods* entered international trade. Four countries (France, Italy, the United Kingdom and Japan) had about 50 per cent. of world production and 76 per cent. of world exports. In 1953, world production had increased by 114 per cent. since 1938, and 16 per cent. of it was exported. The four countries, which predominated in world trade before the war, produced in 1953 only 31 per cent. of the world total and accounted for 55 per cent. of world exports. Three new countries (the Netherlands, Switzerland and the United States), represented 33 per cent. of world output, with their combined exports supplied 21 per cent. of all trade.

In 1938, the proportion of world production of *wool textiles* that was traded internationally was 16 per cent. Four countries (Belgium, France, Italy and the United Kingdom), representing about one-third of production, accounted for one-half of world exports. In 1953, when world production was higher by nearly a quarter, the same four countries still represented one-third of the total. But, in trade, their share had risen from 49 to 67 per cent. of world exports. This increased concentration of exports upon the traditional supplying countries creates a situation wholly different from that in the markets for cotton and rayon textiles. In the international wool textile market, there have been no new competitors.

The total *value* of textile exports from nine major supplying countries (i.e., all those which have been mentioned in the preceding paragraph, except India for which comparable data are lacking) in 1953 had risen somewhat less above 1938 than the value of international trade as a whole. Nevertheless, world trade in textile products still accounted for nearly 5 per cent. of total world exports (against 5½ per cent. in 1938). However, there was a large shift in the destination of textile exports from the nine countries. In 1938, their bulk—about 71 per cent. of value—was directed to the non-industrial regions. In 1953, that share had fallen to 58 per cent. Within this reduced share, the United States and France (on account of her dependencies) were the only suppliers that showed relative gains, mainly at the expense of Japan and Germany. Within the increased share destined to the industrial world, the importance of the United States also rose, but the principal gains were made by European countries (mainly Belgium and the Netherlands). Their combined gains were as large as the United Kingdom's losses—the share of Japan being small and unaltered.

Geographical Shifts

As a counterpart to the shift in the destination of exports from the major countries, there were fundamental *geographical shifts in the production of textiles.* In ten exporting countries (i.e., all those mentioned above, including India) the production of textiles, taking the three fibres together, stood in 1953 about one-quarter above 1938. In the rest of the world, it had risen 85 per cent. above pre-war. However, the development between 1938 and 1953 in the two categories of countries—the exporting and the importing areas, respectively—was entirely different, also as regards the timing. Between 1938 and 1948, there was an increase in the exporting countries of only 6 per cent. but, in the rest of the world, it was 52 per cent. Since 1948, the rate of growth in production has been only slightly higher in the importing areas than in the exporting countries—22 and 17 per cent. respectively, from 1948 to 1953.

However, owing to the much faster growth in population, the quantum of textiles available per caput hardly varied in the importing areas, whereas in the exporting countries, where population grew much less—largely because of territorial changes—it rose by nearly one-fifth. A study of *the position in major importing areas* brings out several significant features of the world situation:

In the first place, the *development of cotton textile production in Latin America* has genuinely replaced more than 60 per cent. of the cotton textiles which in 1938 were imported by that area. Secondly, the large increase in imports of rayon goods into Asia (other than Japan and India) and Africa accounts for nearly the whole (83 per cent.) of the increase in the net exports of such goods from the ten major exporting countries. Finally, both the total quantum of wool textiles exported by the ten countries, and the distribution of these exports among the areas in the rest of the world, was, in 1953, the same as in 1938.

In 1953, the *world consumption of raw cotton, and hence the production of cotton goods,* exceeded the 1938 level by 15 per cent. whereas rayon output had risen 114 per cent. At the same time, however, world exports of raw cotton had *fallen* 21 per cent. and of dissolving pulp—the main raw material in rayon production—they had risen only 30 per cent. by volume. This failure of trade in raw materials to rise in anything like the same proportion as production is due to the geographical redistribution of the cotton and rayon textile industries. In both these branches, production has moved closer to the sources of the raw material, as well as the markets, for their respective products.

Trade in Raw Materials

The *increase in the world's cotton textile production* between 1934-38 and 1953 has taken place entirely outside those areas, that is, Western Europe and Japan, which imported all of their raw cotton. In the remaining parts of the world, that is, the United States, India and the "rest of the world," cotton textile production rose by 36 per cent. between 1934-38 and 1953. But the raw cotton imports of these three areas were almost exactly the same in those two periods. Their net exports of raw cotton, on the other hand, fell in correspondence with the decline in net imports by Western Europe and Japan.

In respect of *rayon and dissolving pulp production,* two tendencies are at work: on the one hand, rayon output is rising fast in countries where dissolving pulp is already being produced (that is, Austria, Canada, Finland, Norway and Sweden); on the other hand, dissolving pulp is increasingly being produced in countries where rayon output is already well established (for example, the United States, Germany and Italy).

Hence the *difference in the rates of growth as between rayon and cotton textiles* has had but a mitigated repercussion upon the volume of international trade in corresponding raw materials. On the other hand, that volume has declined mainly because of the geographical redistribution of textile production. But that effect has been smaller upon trade in raw cotton than upon trade in *dissolving pulp;* the geographical distribution of cotton textile production—an old established industry which develops only slowly—has offered fewer opportunities than the young and fast growing rayon textile industry to move closer to both the market for its products and the sources of its raw material.

There is no reason to expect that this tendency towards a falling volume of trade in raw materials will be reversed or even halted, especially if rayon itself should, as may well be thought, in future suffer increased competition from wholly synthetic fibres. Production of these, however, is not likely to develop outside the economically more advanced countries, on account of the heavy investment called for. There may, therefore, in the longer run, be some compensation for the reduced volume of trade in the conventional textile raw materials, and in the corresponding textiles, through intensified trade in both yarns and tissues produced out of man-made fibres.

The composition of trade in textiles has changed substantially since pre-war, not only as regards its distribution as between products made of the three main fibres, but also within each fibre, as between yarns, tissues and other manufacturers. In respect of both cotton and wool products, the volume of trade in yarns fell more than trade in tissues while trade in other manufactures increased. (In respect of rayon, the opposite development occurred, with yarns rising more than tissues while other manufactures lost ground.) It would thus appear that the development of textile production in the less industrialised regions has on the whole diminished their demand for yarns more than for tissues, particularly in respect of cotton manufactures where the shift from yarns to tissues in international trade is particularly pronounced.

Yarn Trade

This development has also been accompanied by a *change in the export prices of both cotton yarn and cotton tissues* by the major suppliers to non-industrial destinations. On the average, the cotton yarns destined to the non-industrial regions were in 1953 more highly priced than those traded among the major exporters, while, in 1938, their prices had been equal to all destinations. Cotton fabrics, on the other hand, which in 1938 had a much lower average price in exports to the non-industrial regions, had by 1953 nearly reached the same price, irrespective of destination. The geographical redistribution of cotton textile production appears to have diminished the demand in the less advanced countries particularly for lower grade products, a tendency which is likely to continue.

Contrary to expectations, the shift in the composition of international trade in cotton manufactures from yarns to tissues has failed to influence significantly the *composition of the stock of equipment in respect of spindles and looms.* Although no explanation can be offered for such a highly technical phenomenon, the main feature brought out by the statistical information available is the entirely different level of the ratio of spindles to looms in major exporting countries, as compared to the rest of the world. There is much room for technical research in this direction.

The omission involved in leaving unexplained what is obviously an important and fast developing phenomenon may, however, be tolerated in the context of the present investigation since the statistics available on international trade in textile machinery do not permit sufficiently uniform distinctions between types of equipment. *While relatively unimportant in comparison with trade in textile products and in textile raw materials, world exports of textile machinery have grown in value more rapidly than either of these two large sectors of world trade.* In volume, the increase is comparatively even greater since the price level of textile machinery in 1953 was only twice as high as in 1938, while the prices of textile products and textile raw materials were at about three and four times, respectively, the pre-war level. The total volume of exports by the eight most important supplying countries may be estimated to have increased by 1953 to more than twice the pre-war level. Of the total, only one-quarter was before the war accounted for by exchanges of textile machinery among the main producers. In 1953, this proportion exceeded one-third. While exports to industrial destinations rose three-fold in volume from 1938 to 1953, supplies to other destinations went up by 60 per cent. only.

In view of the tendencies discussed, and even allowing for the probability that wholly synthetic fibres will continue chiefly to be produced in the older industrial countries, the *prospects for an increased volume of international trade in textile machinery appear to be favourable,* for the same reasons which seem to justify the expectation that trade in textiles, and in textile raw materials may continue to decline.

BANKING

(Concluded from page 923)

a democratic form of government. The eyes of all Asia and, in fact, of all the world are focussed on this great effort, and are comparing it closely with the claims of progress being made by another great neighbour to the East under totalitarian rule."

Mr. Stassen next referred to the overwhelming success of the Andhra elections in defeating communist forces. He characterised this success as real progress and thought that, in order to make the progress a continuous one, there must be an increase in the momentum of economic development. In this process of increasing it, the U.S. proposed, he said, "to play a marginal but important role." During the current year, India received Mr. Stassen told the Foreign Relations Committee, a higher percentage of its aid on a loan basis than any other country under the Mutual Security Programme. He anticipated that a major part of the assistance proposed for the fiscal year 1955-56 could be furnished on a similar scale. So far, there are no indications that the Committee would oppose this demand for assistance to India. The total economic aid to India for 1955-56 contemplated by the U.S. Administration is $85 million. This may not be as much as India needs. All the same, it is welcome, for it will reduce the strain on the people who have to shoulder an enormous burden in their task of securing a rapid rise in living standards. The marginal relief provided by friendly foreign countries will make all the difference between economic development with stability and with inflation.

AMERICAN OVERSEAS FINANCE CORPORATION

A new company for financing exports of capital equipment from the United States has received preliminary authorisation from the U.S. Federal Reserve Board to proceed with its organisation. The proposed company, American Overseas Finance Corporation, is being sponsored by the Chase-Manhattan Bank. It is regarded as a pioneer project for enlisting export capital from private investors in a field in which Government agencies have predominated.

American Overseas will have a capitalisation of from $15 million to $25 million. Chase has been arranging with the U.S. Export-Import Bank, the Government's foreign trade lending institution, for official guarantee of some of the company's future loans. The Export-Import Bank reportedly will guarantee 25 per cent. of the credits granted by the company, which will finance exports with "medium term" credits of six months to five years.

Under present plans, the company will finance up to 60 per cent. of the sales price. Of the remaining 40 per cent. half is to be covered by a down payment by the overseas buyer and half will be held by the American seller. The funds will be used almost exclusively to cover shipments of capital equipment to aid in the economic development of other countries.

ACTIVITIES OF WORLD BANK

The International Bank for Reconstruction and Development reported a net income of $18.6 million for the nine-month period ended 31st March, 1955, compared with $15 million for the corresponding period ending 31st March, 1954. This income was placed in the supplemental reserve against losses on loans and guarantees, and raised the reserve to $115.4 million. Loan commissions amounted to $9.9 million and were credited to the Bank's special reserve, increasing that reserve to $58.9 million. Total reserves on 31st March, 1955, were $174.3 million.

Gross income, exclusive of loan commissions, was $43.8 million, compared with $37 million for the corresponding period in 1954. Expenses, including interest on bonds and expenses of bond issuance, aggregated $25.2 million.

During the nine-month period, the Bank made 13 loans amounting to $254.4 million in Austria, Australia, Belgium, British East Africa, Ceylon, Colombia, El Salvador, Finland, India, Mexico and Peru. These loans increased total loans signed by the Bank to $2,168.9 million. Disbursements on loans were $188.7 million, bringing the total disbursements to $1,594.2 million.

Principal repayments received by the Bank amounted to $120.6 million, which included $113.1 million of prepayments made on loans to the Netherlands and Iraq. Total principal repayments to the Bank, including prepayments, were $137.1 million on 31st March, 1955. In addition, $56.4 million of borrowers' obligations which had been sold by the Bank were paid on or before maturity.

During the period the Bank sold or agreed to sell $63.3 million principal amount of loans—$62.5 million without the Bank's guarantee and $800,000 with guarantee. On 31st March, 1955, the total of loans sold or agreed to be sold amounted to $168.1 million, of which $109.6 million were sold without the guarantee of the Bank.

The total of Bank bonds outstanding on 31st March, was $8.38 million. During the last quarter, the Bank redeemed $10 million of the 2 per cent. Serial Bonds of 1950, Can.$700,000 of the 4 per cent. Ten Year Canadian Dollar Bonds of 1952, and Sw. Fr. 3.5 million of the 2½ per cent. Swiss Franc Serial Bonds of 1950. In March, 1955, the Bank agreed to sell Can.$15 million of 3¼ per cent. Ten Year Canadian Dollar Bonds dated 1st April, 1955, with settlement arranged for 19th April, 1955.

COTTON YARNS

OF ALL DESCRIPTIONS

FOR HANDLOOM, POWERLOOM AND HOSIERY FACTORIES

MADURA MILLS COMPANY LIMITED

DECCAN SUGAR MILLS' CONTRIBUTION TO PROVIDENT FUND

INDUSTRIAL COURT'S DECISION SET ASIDE

THE decision of the Labour Appellate Tribunal of India at Bombay on the appeals preferred by the employers and workers of seven Deccan sugar companies owning eight factories against the award of the Bombay Industrial Court is a typical compromise favourable to employers on some issues and unfavourable on a few others. On the main issue, namely, provident fund, the decision has gone against the workers, whereas it has been favourable to them in regard to housing for temporary and seasonal workers. On gratuity, the workers of only two companies have been lucky. On the question of retention allowance for the off season, the *status quo* has been maintained.

Considering the series of stresses and strains to which the sugar industry in the Bombay Deccan has all along been subjected, it is, indeed, gratifying that the Labour Appellate Tribunal has set aside the award of the Industrial Court for an upward revision in the contribution of employers to provident fund. The Tribunal's decision to this effect was made known on Monday last week. Following this decision, the employers' contribution to the provident fund will be 8¼ per cent. of the basic wage only, and not 8½ per cent. of the total emoluments of workers as ordered by the lower Court. This decision does not, however, affect the contribution of employees which, as the workers themselves have desired, would remain at 8½ per cent. of the total emoluments.

The Appellate Tribunal's decision is applicable only to seven sugar companies which were involved in the Industrial Court's award. The Walchandnagar Industries Ltd., one of the biggest factories in the Deccan, was not a party to this, as it had no dispute with its workers on these issues. The seven companies are the Belapur, the Phaltan, the Kolhapur, the Changdeo, the Godavari, the Maharashtra and the Brihan Maharashtra.

The chief consideration which weighed with the Tribunal in deciding to reduce the employers' contribution was that, while fixing the rate of contribution, the Industrial Court had acted under a misapprehension. Further, the Tribunal characterised the contribution at 8½ per cent. of the total emoluments as "extremely high." Incidentally, the Tribunal observed that a half-hearted attempt was made on behalf of labour to support a rate of contribution based on the total emoluments and that such a contribution was contemplated neither in the demands put forward by labour nor in the explanations of these demands as contained in the statements filed by them before the Adjudicator.

A Comparison

It may be mentioned here, for purposes of comparison, that, under the Employees' Provident Fund Act, 1952, which has been made applicable to cement, cigarette, engineering, iron and steel, paper and textiles, the employers' contribution to the fund is fixed at 6¼ per cent. of the basic wages and dearness allowance payable to employees. The employees are required to contribute the same amount as contributed by the employers. However, if they so desire and if the scheme so permits, they can contribute more, subject to a maximum of 8½ per cent. of their basic wages and dearness allowance. It will be noted that, under the aforesaid decision, the Deccan sugar factories have been required to pay at a higher rate, namely, 8½ per cent. but only on the basic wage.

A welcome feature of this dispute is the readiness of workers to contribute 8½ per cent. of their total emoluments, even though the employers will be contributing less. It is welcome, because it reflects the readiness of workers to save, and the country now needs more savings. It is, however, to be hoped that workers will not dissipate these savings by drawing advances against their contributions.

Payment of Gratuity

The Tribunal has rejected the appeal of the workers' unions with regard to gratuity except in the case of two companies, Belapur and Phaltan. The workers had put forward two demands. First, every employee should be paid a gratuity at the rate of one month's wage per year of service to be calculated at the last rate of his wage. Secondly, the gratuity should be paid even before the completion of five years' service in case of dealth, retrenchment or termination of service due to reasons beyond the control of the employee. While on these demands, the Adjudicator had refrained from making any order and had postponed it "because of the uncertain financial position of the companies resulting from the fact that the minimum wage has been raised ... and the standardisation of the wages in the industry has still to be done." The Tribunal, after examining the statements of accounts submitted to it by the Companies, would appear to have come to the conclusion that the aforesaid demands of workers were not justified. It has, however, made an exception by granting gratuity equal to 15 days' basic wage to workers of the Belapur Company, Ltd., and the Phaltan Sugar Works Ltd., as these, in its opinion, are in a position to bear the additional burden of a gratuity fund. The payment of gratuity by these two Companies is to be subject to the following conditions:

(1) On the death of an employee while in the service of the Company or on his becoming physically or mentally incapable of further service, gratuity should be paid to the disabled employee or, if he is dead, to his heirs or legal representatives or assignees;

(2) on voluntary retirement or resignation of an employee after 15 years of continuous service;

(3) on termination of service by the company after five years of continuous service; and

(4) no gratuity in case of dismissal for misconduct.

The decision of the Tribunal to discriminate against two factories may sound flattering to their management, but it is a costly flattery. It is, indeed, suprising that the learned judges on the Tribunal should have shown such discrimination in giving their verdict. The exception is justified by the Tribunal on the ground of capacity to bear the burden of a gratuity fund. But what is this capacity due to? The answer is not far to seek. It is due to the efficient and honest working of the mills and wise husbanding of resources during times of prosperity. By asking the more efficient sugar mills alone to bear the additional burden of gratuity fund, the Tribunal has only placed a premium on inefficiency and imprudence.

Retention Allowance

An important decision of the Industrial Court which has been upheld by the Appellate Tribunal relates to payment of retention allowance to workers during the off season. The Court had directed the sugar companies to pay to every seasonal skilled and semi-skilled worker a retention allowance of 25 per cent. and 10 per cent., respectively, of his consolidated wages on his re-employment in the next season; the payment was to be made in two equal instalments, the first within one week from the date of re-employment and the second within one month of the first payment. Both the workers and the managements were dissatisfied with this direction and filed appeals against it. The workers demanded a retention allowance of 50 per cent. to skilled employees and 25 per cent. to semi-skilled and unskilled workers, while the managements were opposed to the payment of the allowance. The Tribunal has rejected the plea of the workers for an increase in the quantum of retention allowance and its extension to unskilled labour, although it has clearly stated that the higher retention allowance that is now being paid by certain factories should be continued. The Tribunal's reasons for the stand it has taken are as follows:

"The retention allowance is intended to tide workers over the off season. The allowance made for this purpose should not be unreasonably burdensome. As regards the unskilled workers, they are of the agricultural class and, since what is the off season for the factories is the agricultural season for them, they should have comparatively little difficulty in finding employment and cannot make a grievance that, during this period, they are not employed by the sugar companies. This, in fact, is the reason which is given by the workers themselves for distinguishing between unskilled workers, on the one side, and skilled and semi-skilled, on the other. The contention that there should be no distinction between the different categories of labour is answered by the distinction made in the combined demand; it is more difficult for the skilled people to find suitable employment during the off season than for the semi-skilled."

Conceding the principle of a retention allowance during the off season, the Tribunal points to the recommendation made by the Sugar Factories Labour (Wages) Enquiry Committee (1947), appointed by the U.P. and Bihar Governments. In this connection, it alludes to the apprehension of the sugar mills that the direction to pay retention allowance may be regarded as requiring the mills to re-employ those persons when they present themselves for re-employment regardless of whether or not the companies require their services. In its opinion, the direction as made by the Adjudicator is not capable of such misconstruction. All that it provides for, it says, is the payment of retention allowance if the worker is re-employed.

Provision of Housing

Another important decision of the Industrial Court which the Appellate Tribunal has upheld but with some modifications "so as to lessen the burden on the companies" relates to provision of housing for temporary and seasonal workers. The sugar factories have been directed to provide all such workers who come for work from a distance of more than three miles with housing accommodation consisting of a living room, a kitchen and a verandah covering a total area of 312 sq. ft. Where, however, workers are unmarried or are not accompanied by their families, community provision may be made for them giving each one of them at least 120 sq. ft. The quarters should be located in a place which is free from flooding in an ordinary monsoon season, or the plinth should be sufficiently high. The walls of the quarters may be of mud plaster and the roofs should be of corrugated iron or asbestos sheets or some such non-inflammable substance.

It will be interesting to note here that the management of the Belapur Company, Ltd., has already provided housing accommodation for almost all its permanent employees and expects that it will be able in the near future to provide quarters for all of them. These employees include factory and farm staff. Housing in the case of the former is *pucca* with brick walls and wooden roofs-*cum*-C.C.I. sheets or asbestos sheets, and that for farmer workers is *katcha*.

To revert to the Labour Appellate Tribunal's award. The Tribunal has not given any decision in regard to hours of work, as it feels that no question of law is involved and that appeals are not maintainable. The Industrial Court had directed that no agricultural workers should be required or allowed to work in excess of 54 hours a week. The sugar mills opposed the fixation of any limit and the Kolhapur Sugar Mills' workers sought a reduction of the limit fixed.

QUALITY STANDARD FOR "GUR"

The Indian Central Sugarcane Committee of the *Gur* and *Khandsari* Sub-committee has recommended to the Union Government fixation of a minimum standard of quality for *gur* for each region and each important *mandi*. Such standards, it is pointed out, would need to conform to the demands of internal consumers and of foreign markets in case of exports. The need for laying down quality standards assumes special significance in regard to a commodity such as *gur* the quality of which varies widely. The quality depends mainly on the chemical composition of cane juice and the method of boiling and clarification adopted. Emphasising the importance of making *gur* cleaner and presentable in appearance, the Sub-committee has indicated various types of furnaces and *bels* suitable for different regions. It has also suggested that immediate trials of bulk storage of *gur* should be carried out, with a view to finding out the best method of handling and storing *gur* in large quantities.

In the sugar economy of India, the *gur* sector occupies the most important place. Out of the total production of sugarcane, as much as 60 per cent is converted into *gur*. During the season 1953-54, the aggregate *gur* output in India amounted to 2.57 million tons. The development of *gur* industry is, therefore, regarded as being of vital importance to cane growers.

ECONOMICS OF LOW-GRADE COAL

ARE WASHERIES ESSENTIAL?

LAST week we dealt with certain problems pertaining to the development of the coal industry, as mentioned by the Indian Collieries Union (I.C.U.) in its memorandum to the Planning Commission. The subjects covered were the threat of nationalisation and rationalisation of coal mines. This week we propose to deal with the development of low-grade collieries, the reserves of which are virtually unlimited. The biggest obstacle in the way of developing these collieries is a certain amount of prejudice against the utility of low-grade coal, the ash content of which is higher than in high-grade coal. There are some who argue that, if these collieries are to be assured of a dependable future, the establishment of central washeries, where the low-grade coal is washed and made easily usable, is very essential. There are a few others who feel that, as the capital cost of such washeries is heavy, the best remedy lies in asking the coal consumers to change their boilers in such a manner as to permit the use of low-grade coal. Which of the alternatives is desirable is, however, a highly debatable question.

It is well known that low-grade coal can be used for the manufacture of soft-coke and for brick burning. It can also be used as fuel in a number of small industries. According to Dr. H. H. Koppers, an eminent German fuel technologist, even coal with 35 per cent. or 40 per cent. ash content can be successfully used for commercial purposes by dust gasification. Recalling this observation, the I.C.U. observes that the Coal Board's formula that "coal with more than 35 per cent. ash content is not at all useful for commercial purposes" is wholly incorrect.

Mr. Robert Foot, a well-known authority on washing coal, points out, in his paper on "The characteristics of the Empire coals and their bearing on the industrial potential of the Empire," read at the fourth Empire Mining and Metallurgical Congress held in the U.K. in July, 1949, that, "in most Commonwealth countries, methods of cleaning coal have been adapted from those developed from coal in the U.S. and the U.K. which have favourable washability characteristics." He is of the opinion that "if the greatest advantage is to be derived from Commonwealth coal of poor washability, much research and development will be required in order to devise methods of cleaning adapted to their particular characteristics." In other words, it is necessary to ensure that washeries suitable for washing low-grade coal should be established. But, as their establishment requires heavy investment, the I.C.U. favours changes in the types of boilers of coal consuming industries, which would enable them to make use of low-grade coal, instead of installation of central washeries.

A reference is also made in the I.C.U. memorandum to the advantage taken by the competitors of soft coke of the prejudice that exists in the minds of consumers against the quality of soft coke. To substantiate its charge, it quotes the following extract from the Report of Dr. C. Forrester:

"Competitors of the soft coke industry have attempted to make capital out of the presence of much ash in soft coke. But investigation of the point has actually shown that the presence of a reasonably large amount of ash is actually an advantage. Moderately high ash soft coke gives a more moderate fire that lasts longer due to the blanketing effect of the ash, which incidentally retains the heat from the surrounding red-hot coke and gives an ideal source of heat for most coking purposes. Furthermore, the fire lasts longer with one stoking—an economical advantage of great direct appeal to the housewife."

In view of the above observation, the I.C.U. urges that the present restriction on the manufacture of soft coke from ungraded coal, with ash content of over 35 per cent. should be withdrawn.

EXPORT PROSPECTS FOR AUSTRALIAN COAL

Good prospects exist for the export of Australian coking and gas-making coal to Japan, Hong Kong and Singapore, according to an Australian trade delegation which conducted a survey of Asian markets in December last. Australia's coal stocks are now higher than at any time in its history, and the industry fears that establishments of new oil refineries in the various States will lessen local demand. Commenting on the delegation's report, the Minister for National Development, Senator W. H. Spooner, has indicated that Japan would be interested in taking coal from the New South Wales South Coast, if it could be landed at a competitive price. Deposits there have been classified by the Japanese as coking coal. There is also a possibility of supplying superior gas-making coal to Hong Kong and Singapore. These markets were held by Australia until World War II.

FUTURE OF WORLD TEA INDUSTRY

INFLUENCE OF PRODUCING COUNTRIES GROWING

TEA is no longer a luxury-beverage of a few; it has become an indispensable necessity for the masses in many countries. Developed over a period of hundred years, it has turned out to be an international commodity. It is grown in underdeveloped areas of the world, but finds its largest consumers in the advanced countries. Since the close of World War II, there has been a rapid increase in the consumption of tea in the producing countries themselves and, what is more, the rise has been more rapid than in the major consuming countries, thanks to the improvement in the standard of living of the people of these countries. Examining this trend, in the course of an illuminating article in the latest (April, 1955) issue, the *N.B.I. Review*, published by the National Bank of India, draws attention to the introduction of a "fresh element," namely, the new economic policies of the four major producing countries. This new element has brought about a shift in the tea industry's centre of gravity from the West to the East. The policy decisions, in so far as they affect production, will be made more and more in the producing countries themselves. The consuming countries, except as buyers, the *Review* avers, are likely to exercise a diminishing influence upon the affairs of the industry.

Elaborating this view, the *N.B.I. Review* says that, since the attainment of independence, the four main producing countries have developed a distinctive attitude towards the great plantation industries which figure so prominently in their national economies. Having recognised the immense value of tea in their export trade, they have conceded the need for keeping the consuming market in good countenance. However, the *N.B.I. Review* points out, "the conditions on which producers may operate are now primarily designed to fit into national, social and fiscal policies rather than to harmonise with the needs or preferences of overseas markets. The Governments of the major producing countries have brought the tea industry under closer supervision than heretofore, but the policies and objectives followed by them are not necessarily identical and vary according to the importance of the part played by tea in their export trade. In India, for instance, tea is only one of the constituents of the export trade; in Ceylon, it is the major item of export, in Pakistan it helps to diversify the economy of East Pakistan; and in Indonesia, the small indigenous grower, whose production may or may not be "estate controlled," figures more prominently than elsewhere.

It is not possible to guess yet, the *Review* says, how far the policies of these Governments will weaken the "supra-national" cohesion acquired by the industry as a whole following the International Tea Regulation Scheme of 1933. It may well be that some Governments, hard-pressed for revenue or for other reasons, will be tempted to put their own interests before the welfare of the tea industry as a whole. If, therefore, the collective wisdom and strength of the tea industry is to be preserved intact, opines the *N.B.I. Review*, the new nation States of South Asia will need to exercise a measure of caution.

The *N.B.I. Review* also draws attention to the rising trend of consumption everywhere and nowhere more rapidly than in the producing countries themselves, all of which have recorded a welcome improvement in the standard of living of their people. Thus, consumption in India and Pakistan, which had stood before the war at about 80 million lbs., rose to 202 million lbs. in 1954. The U.K. consumed more than 500 million lbs. in 1954, as compared with 464 million lbs. in 1953. The consumption in the U.S. advanced from 108 million lbs. to 115 million lbs. between 1953 and 1954. Over a longer period, namely, from 1948 to 1954, world consumption rose from 1,038 million lbs. to 1,279 million lbs. This compared with the average of 983 million lbs. in 1934-38. Over the same period, world supply increased from 1,028 million lbs. to 1,300 million lbs., as against an average of 981 million lbs. in 1934-38. The excess of production over absorption in 1954 was, thus, no more than 21 million lbs., a quantity which is microscopically small as compared with the figures of total production and consumption. The production has, therefore, to be stepped up, in order to keep a reasonably comfortable relationship between supply and demand, so that the fortunes of the industry can be stabilised.

What then are the chances of stepping up production to keep pace with the ascending curve of demand? Answering this poser, the *N.B.I. Review* points out that tea production cannot be automatically put into top gear as in some industrial processes. Tea bushes require time to grow. "In Northern India," it goes on to say, "a good deal of young planting of four or five years ago is expected to come into bearing soon. Heavier yields are likely to be obtained from the increasing resort to hedge planting; but the added yield is understood to be purely fortuitous in the early years of a bush life and there is no guarantee that it will continue. Given reasonable weather, Indian production will almost certainly exceed soon the 650-million-lb. mark." Pakistan also has plans to increase production. Indonesian production, which had fallen from the average of 165 million lbs. in 1934-38 to 30 million lbs. in 1948, progressively rose to 103 million lbs. in 1954 and further recovery depends on the establishment of law and order in the plantation districts and the restoration of confidence, so that large producers may have some incentive to go ahead. The addition of another 40 million lbs. to Indonesia's output, according to the *N.B.I. Review*, would make a vast difference to the somewhat precarious world supply-demand relationship.

The *N.B.I. Review*, however, observes that taxation, labour and other policies of some of the producing countries have not been positively encouraging to new planting in recent years. Referring to the taxation of tea industry, it makes the following pertinent observations:

"Tea is now a heavily taxed commodity and it is necessary to say a word about this aspect of the industry's affairs. Sir John Kotelawala's statement in January that the producer and not the consumer pays the export duty was literally quite correct, but, in the context of record high prices, it was also not a little disingenuous. In so far as the Governments of the producing countries cannot tax the foreign consumer directly, they must, and in actual fact do, collect the export duty from the local producer. But the real point is how much of the duty is passed on in the final price to the housewife overseas. Quite clearly the proportion of export duty passed on to the ultimate consumer will vary according to the supply position. If supplies are tight and prices are high, consuming markets will be willing (though reluctant, as recent events have shown) to bear the whole incidence of the export duty. When supply is markedly in excess of demand, the consumer will be less willing, and in a free market certain forces will quickly operate to transfer the burden elsewhere. Either the duty must be absorbed into production costs proper or be spread over the producing, distributing and other sections of the industry, or it must be reduced or perhaps even abolished altogether."

In this context, it welcomes the slab system of export duty introduced in India, as buyers know where they stand when auction prices rise or fall, and urges the need for other producing countries making similar adjustments, particularly as production costs are tending to become more rigid under the impact of minimum wage agreements and higher local taxation.

The *N.B.I. Review* also draws attention to the growing but natural desire on the part of the Government of India and Ceylon, which account for more than 75 per cent. of the world tea production, to bring tea under closer control and establish marketing and other facilities nearer home than heretofore. Thus, Ceylon auctions are being held in Colombo for some time, instead of in London. In India also, there is a desire to divert more export tea auctions from Mincing Lane to Calcutta and Cochin. It is stated that, in the next two years, an additional 50 million lbs. of export tea is to be so diverted. However, India may be in a less favourable position in developing auctions in its domestic markets than Ceylon. For Ceylon developed them during a period of prosperity when difficulties, which might ordinarily be experienced, were not encountered. India proposes to expand local auctions at a time when prices have receded from their peak and producers may even be running into a period of surplus rather than shortage. In such circumstances, the *N.B.I. Review* points out, the value of an alternative outlet for Indian tea will be correspondingly greater.

(*Concluded from next column*)

be quite optimistic as indicated by the table below:

	In lakh bales 1954-55
Supply—	
Opening Stocks:	
With mills in India	11.32
Carry forward in India	7.00
Carry forward in Pakistan	15.00
Total ...	33.32
Jute crop:	
In India	35.00
In Pakistan	46.00
Mesta crop:	
In India	7.00
Total ...	121.32
Distribution:	
Mill consumption in India	60.34
Domestic consumption	1.00
Exports from Pakistan	35.00
Mill consumption in Pakistan	7.00
Total ...	103.34
Carryover at end of season	17.98

The estimated surplus of about 1.8 million bales at the end of June next contrasts with an expected deficit of 2.7 million bales in respect of India alone early in the season. Besides, the new crop reports from the various jute-growing areas disclose that conditions are satisfactory and that the weather both in India and Pakistan is very favourable for the cultivation of the crop. All these indicate that mill production is not likely to be hampered for want of raw jute either at the close of this season or early the next one.

SUPPLIES OF RAW JUTE

MILLS FAVOURABLY PLACED

IT is now increasingly becoming clear that the early fears of a shortage of raw jute towards the end of the current season are unlikely to prove correct. On the contrary, a gradual improvement in supplies is disclosed by the latest figures covering the first nine months of the current season. Thus, purchases by the I.J.M.A. mills of raw jute during July-March, 1954-55, aggregated 4.47 million bales. This was 935,000 bales more than the purchases during the same period of the 1953-54 season. Again, there was an increase of 548,000 bales to 4.5 million bales in the receipts at mill godowns in the nine-month period of this season. Further, stocks of raw jute held by the mills at the end of March this year, at 1.38 million bales, were more or less the same as those exactly a year before. This fairly comfortable position is due to larger arrivals of the raw material into Calcutta during the period. The total imports of raw jute into the city and mill stations in the nine months ended March, 1955 aggregated 4.7 million bales, 500,000 bales more than the imports in the same period of the preceding season. Most of this improvement was shared by indigenous jute, the arrivals of which rose from 3 million bales to 3.7 million bales. Arrivals from Pakistan, on the contrary, declined from 1.2 million bales to 958,000 bales.

The fall in the supplies of raw jute from Pakistan during the period becomes significant when it is noted that the trade estimates of the Pakistan jute crop for 1954-55 season reveal a rise of nearly 1.9 million bales, as compared with the Pakistani official crop forecast placed at 2.7 million bales. Ordinarily, the better supply position should have induced higher despatches of raw jute from Pakistan to India. But thanks to the restrictions placed on trading by the East Bengal Government, exports have tended to decline. Thus, Pakistan's total exports during July-December, 1954, amounted to 2.4 million bales only, whereas, during the same period of 1953, they were higher at 2.6 million bales. For some months now it will be recalled the Pakistani authorities have been very scrupulous in passing jute for export. There is a ban on "forward sales at a discount" and the ban is being vigorously enforced. The authorities have virtually stopped the export of cross jute and habi-jabi. The result has been that consumers of jute on the Continent, in the U.K. and India have found it difficult to procure their requirements of jute from Pakistan. An outcome of this difficulty was the visit of a delegation from the U.K. to Pakistan for conducting negotiations with the Pakistan authorities on various points connected with the jute trade. The delegation was headed by Mr. H. Burton Pirie of D. Pirie & Co., Ltd., Dundee, and on its return submitted a report (22nd April last) to the members of the Dundee jute industry.

According to the Report, full and frank exchange of views took place between the delegation and the Ministry of Commerce, the State Bank and the Government of East Pakistan. The delegation was, it is stated, greatly encouraged by the very friendly response received from all quarters in Pakistan and, as a result of consultations, a much greater degree of mutual confidence and understanding of each other's problems was established. The points on which agreement was reached concerned trading licences, remittances, forward trading and minimum prices. The Report observes that the Pakistan Government showed a most realistic attitude in resolving the difficulties which overseas buyers had experienced. The Delegation's main task was to clear up the uncertainties and misunderstandings which had arisen during the present season, in order that the future marketing of the jute crop might proceed smoothly without any interruptions as in the past.

While thus a way has been paved for the smooth passage of jute from Pakistan to the U.K., there is no indication that similar facilities would be provided for despatches of raw jute to India. The position still bristles with difficulties, as so far no concerted approach seems to have been made by importers in this country. This is because the stocks with mills are stated to be comfortable and that they do not wish to place orders for Pakistan jute at their current prices which are considered to be relatively high, as compared with the prices quoted for jute goods. Besides, trade estimates of overall supply and distribution of raw jute this season appears to

The mill industry is the mainstay of millions of cotton growers in the country. It buys the bulk of the cotton produced by them. On an average, it consumes annually about 38 lakh bales of Indian cotton besides some 7½ lakh bales of imported cotton. The value of all cottons, Indian and foreign, consumed by the industry in one year is estimated at Rs. 200 crores. It is also a large consumer of fuel, electricity and lubricants, valued at Rs. 11 crores.
A number of ancillary industries, producing dyes and chemicals, mill stores, sizing and packing materials, are also supported by it. The value of such goods consumed by the industry is estimated at Rs. 26 crores. The industry also gives employment to a vast army of men engaged in cotton, yarn and cloth trades and in the transport services. It supplies all the yarn required by the handlooms which produce annually 1,200 to 1,500 million yards of cloth.
In short, the number of the industry's beneficiaries is so large and its influence on the Indian economy is so all-pervasive that any precise assessment of its importance to the country is almost impossible.

RISING COST OF RIVER VALLEY PROJECTS

FREQUENT REVISIONS DUE TO LACK OF BASIC DATA

IT is only natural that frequent upward revisions of the estimates of the cost of hydro-electric and irrigation projects should cause considerable concern to the Centre and the States as it would upset all calculations about the economics of these projects. This is especially so, when the revised estimates exceed the original estimates by crores of rupees. It is said that the revised estimates of six projects, namely, the Bhakra-Nangal, the Hirakud, the Damodar Valley, the Kosi, the Chambal and the Rihand Projects, have raised the total cost of these projects from about Rs. 324 crores to as much as Rs. 477 crores. This represents an increase of over Rs. 150 crores, or 46 per cent. over the original estimates.

It is admitted that there will always be a certain amount of uncertainty in regard to costs of big multi-purpose projects, the execution of which is spread over a number of years. It has particularly been very difficult to closely predict the construction costs in recent years, as the changes are dictated by unpredictable variations in costs of labour and raw materials. This is so not merely in India and other underdeveloped countries, but also in the industrialised West. The index of construction cost in the U.S., for instance, remained fairly normal prior to 1914-15 in between 90 to 100. It shot up rapidly during the war and immediately afterwards to a peak of about 275. Suddenly, it broke downward to 165 in the bottom of the brief depression in 1921-22, from which it recovered quickly to a level of about 210, or over double the pre-war level. This level continued for about 13 years excepting for a deep dip during the Great Depression of 1931-33. With the approach of the Second World War and its defence preparations, as well as during and after the war, the index again shot upward at a steep angle, stabilising temporarily in 1948-49 at about 480. Then, it moved abruptly to 520 in August 1950. Since then, there have again been abrupt changes.

Erratic Fluctuations

It is evident that such erratic fluctuations in basic construction costs introduce a big element of speculation into all estimates of costs of projects which take a long time for completion. Much of it is due to world-wide influences. The progressive rise in prices during a period of years may lead to the general belief that the true cost has increased. But it may not be so. It may be due to depreciation of money value. So, even the appraisal of benefits of the projects, which are estimated to accrue over the long-range future, is a difficult job.

According to a memorandum relating to cost of river valley projects in India placed on the table of the Lok Sabha on the 7th inst., excluding modifications in estimates necessitated by expansion in the scope of projects, the main reason for the upward revision has been a general lack of basic data relating to rates of important items of work of the projects. Increased cost of materials and the devaluation of the rupee have also accounted for the increase in estimates. The Rates and Costs Committee, set up in February, 1954, is examining the rates of major items of work prevalent on the various river valley projects, with a view to preparing a comprehensive schedule of rates to be adopted as a basic schedule for projects, with such modifications as may be necessary for local conditions, and a standard analysis for the main items. Again, in consultation with the Comptroller and the Auditor-General, the Committee has also been asked to make recommendations on stores accounting rules, P.W.D. forms, etc., to be adopted for large projects. The report of the Committee is expected to serve as a comprehensive manual for the future guidance of those engineers who will be entrusted with the task of preparing project estimates for river valley projects.

Another important reason for a general lack of basic data is due to shortage of technical personnel. With the inclusion of additional schemes and the consequent increase in the tempo of work anticipated during the next 15 years, the need for taking steps to make a realistic assessment of the technical manpower position in the country is essential. An attempt was made by the Centre to collect the necessary information in the various States, but the response was not satisfactory. A Technical Personnel Committee was, therefore, appointed in July, 1954, under the chairmanship of Mr. W. X. Mascarenhas, Chief Engineer, Bombay, to go into the question. The report of the Committee is expected to be received by the Government shortly.

It is to be hoped that the reports of the Rates and Costs Committee and the Technical Personnel Committee, along with that of the Construction Plant and Machinery Committee already before the Government, will go a long way towards minimising the fluctuation in the cost estimates of the projects. It will be recalled that the recommendations of the Construction and Plant Machinery Committee, appointed in September, 1953, to examine the efficient operation and the maintenance of plant and machinery used in river valley projects were first considered in the Engineers' Seminar at Roorkee in July, 1954, and later by the Co-ordination Board of Ministers on 14th October, 1954. The recommendations of this Committee are expected to make for considerable economies by increasing the output of mechanical equipment and lowering operational costs.

DEMAND FOR BHAKRA-NANGAL POWER

It would appear that the earlier fear that there might not be sufficient demand for all the power that could be produced by the Bhakra-Nangal Hydro-electric Project when it is completed has now proved groundless. In fact, there has already emerged the anxiety that there might be a substantial deficit in power supply in the Bhakra-Nangal area. It is said that the proposed fertiliser-*cum*-heavy-water plant at Bhakra alone will consume as much as 150,000 kw. This is more than half of the capacity of the Bhakra-Nangal hydel projects. It may be mentioned here that the Bhakra, with its four electricity units, will generate about 200,000 kw. in a normal year and Nangal about 96,000 kw. according to present plans. This means that, after meeting the needs of fertiliser-*cum*-heavy-water plant, there will be a supply of only 146,000 kw., a quantity not considered adequate for serving the requirements of other industries in this area. Consequently, the desirability of installing two more generating units at Bhakra is being examined.

BHADRAVATI TO PRODUCE STAINLESS STEEL

Addressing a Press Conference recently, Mr. H. Siddaveerappa, Minister for Home and Industries, Government of Mysore, disclosed that the Planning Commission had just approved of a Rs. 15 crore-plan of the Mysore Iron and Steel Works for the expansion of its present output of 25,000 tons of steel to 100,000 tons in the second Five-year Plan. The most important product that will be manufactured under the expansion scheme, to be finalised shortly in consultation with an American firm of specialists, is the manufacture of stainless steel which is now imported. Mysore had, he said, rich deposits of chromite and this was the main raw material required for the manufacture of stainless steel. Stainless steel is used not only in the manufacture of utensils but also surgical and scientific instruments, etc.

The expansion scheme also provides for an increase in the output of ferro-alloys from 4,000 tons per year to 30,000 tons per year. It is also proposed to set up an additional cement plant, with a capacity of 300 tons per day, at a cost of Rs. 1.6 crores. It will be recalled that only recently the capacity of the cement factory at Bhadravati was increased from 60 tons a day to 260 tons a day. A committee to investigate into the question of the location of the site for the establishment of this plant will be constituted shortly. The present source of raw material for cement production is Bhadigund mines, the reserves of which are just sufficient to supply the requirements of the existing cement factory at Bhadravati. As such, the proposed factory is expected to be set up either at Hosadurga or near Chicknaikanahalli where sufficient quantities of the raw material for cement exist.

PLASTICS AS BUILDING MATERIAL

Extensive testing of new building material went hand in hand with building activity in Germany after a normal living standard had been restored. Without exaggerating, it may be said that the Grobbaustelle *Deutsche Bundesrepublik* have gathered experiences which are unlikely to find their equals elsewhere. Though plastics may not be able to compete with the usual building material they have found good prospects when compared with coloured metals, light metals, or other relatively expensive building material on account of their special qualities. There are scarcely any new premises in Germany in which plastics have not been introduced to a considerable extent. Plastic lamps and plastic floors justify the term "from top to bottom."

Steel tubes covered with a shrinkable skin of Vinyl-plastic provide dirt-resisting door handles agreeable in use. Doors have often received panels made of safety glass with fine inlaid wire. Banisters are provided with soft plastics, the bars covered with shrinkable plastic tubes. Lamps largely consist of organic glass shapable in various ways. Tableplates are being manufactured of tasteful plastics in layers which are very infugitive. Pillars in halls are often panelled with bright plastics. Armchairs have artificial leather coverings, their stuffing being made of foam rubber.

Also building insulations, for instance, stopping of surface water very often consists of plastics in the way of foils. Vinyl-plastic tubes have been introduced in water-supply, when muddy soil or huminacidiferous foundation will exclude iron tubes, or when water has to be absolutely free of taste (springs) or when acidiferous waste water is to be drained. After the war, the plastic spattle floor has met with very much favour in Germany. It might be called tinned floors. They have largely been applied in building dwellings. As it depends a lot on preventing spattle substance from being changed, certain prescriptions regarding quality have been introduced in Germany. Properly laid out spattle floors have proved very good indeed.

Also plates covered with soft Vinyl-plastic are being applied. Generally the plates are welded into large surfaces. The edges of steps, the spaces on each side, and the ledges are connected by welded covers. Soft profiles of Vinyl-plastic adapt any bends through warm shaping. Banister covers being heated with an infra-red apparatus are able to adapt any bends.

Great experience in the way of plastics has been gathered in the lines of lighting and illumination. German experts will gladly place these experiences at the disposal of international expert circles. The large Plastics Fair taking place in Düsseldorf from 8th October to 16th October this year, the second big German plastics fair after the war will offer opportunities to meet with the latest German experiences in plastics in the building line, and also provide possibilities for discussions with German experts. It cannot be doubted that building must be carried on in a very different way in our modern time of jet planes and atom power. Düsseldorf will show one how to apply the latest achievements of material technique.

"SHORTHAND" BY MACHINE

Free secretarial services will be available to overseas buyers at the British Industries Fair at Olympia, London, where, at the kiosk of the Office Appliance and Business Equipment Trades Association in the National Hall, there will be an efficient staff to deal with urgent business with the minimum delay. The girls on duty will be using the Palantype method of machine shorthand, which is becoming increasingly popular in all parts of the world because of the advantages it offers in legibility, accuracy and transcription. The machine has 29 keys, and records speech phonetically on a band of automatically-moving paper, a series of keys being struck as a chord to express each syllable. The operator, who sits with the machine on her knees, can follow the proceedings around her as her fingers move by touch across the noiseless keys.

A single reporter can easily operate the machine at high speeds over long sessions without undue fatigue, and, as the notes are printed, they are equally legible whether taken at high speeds or slowly. Also, being based on phonetics, the machine can easily be adapted to almost any language with which the operator is familiar. Lengthy reports can be completed speedily with the help of transcribers, who, because only the ordinary letters of the alphabet are used instead of complicated symbols, can quickly learn to read the stenotyped script. This advantage is rapidly being appreciated by employers with extensive businesses. Sometimes at important conferences, when verbatim reports are required quickly for publication, a steady outflow from a team of reporters enables the transcription to be ready within three-quarters of an hour of the words being spoken.

The Palantype machine was patented in Britain in 1939, but, because of war-time manufacturing difficulties, it did not come into general use until 1946, when it was one of the first non-essential products involving the use of steel to be given a licence for manufacture, and today it is still made by the same firm. Although similar machines have been widely used in France, Holland and the United States for some time, the Palantype system has proved so efficient during the past nine years that it is already being taught in six countries and operated in 17 languages. These include Afrikaans, Czech, Danish, English, French, German, Hausa, Hebrew, Italian, Norwegian, Polish, Portuguese, Russian, Serbo-Croat, Spanish, Swedish and Welsh.

The Palantype College in Holborn, London, is the main centre for teaching the system. A general secretarial training, with Palantyping substituted for written shorthand, is given there to small classes of men and women, many of whom learn to operate the machine in more than one language. At present students from 20 different countries attend the college for instruction. They come from all over Europe—from Austria, Denmark, Finland, France, Germany, Italy, Norway, Portugal, Sweden and Switzerland—from various parts of Africa, including Kenya and Uganda, Nigeria and Sierra Leone; from the Seychelles and India, and from Canada and the United States of America. In addition, there have in the past been students from Argentina, Barbados, Brazil, China, Fiji, the Gold Coast, Greece, Holland, Iceland, Indo-China, Israel, Jamaica, the Philippines, Spain, Tanganyika, Trinidad, South Africa and Yugoslavia, among other countries.

Fully qualified Palantype operators find their way into secretarial employment, but many attain the higher standard required of the verbatim reporter and get jobs keeping the records of committees, courts and certain overseas Parliaments; while others travel the world reporting important conferences, or find work with the United Nations.

NEW PRODUCTS AND PROCESSES

Fighting Tooth Decay

A RESEARCH group, headed by the co-discoverer of streptomycin, Dr. Albert Schatz, has developed a new method to isolate microbes that might be the cause of tooth decay. As a result, it is stated that, for the first time, it is possible to isolate directly from tooth cavitie the bacteria destroyer of keratin, a protein supporting tooth enamel.

Yeast From Tree Sugars

A yeast made from tree sugars, called torula, is being manufactured by the Charmin Paper Mills of Green Bay, Wisconsin, and the Red Star Yeast and Products Company of Milwaukee. The yeast, a by-product of papermaking, is being produced in a new plant with a capacity of 6,000 tons a year, which the manufacturers say will be the major American source of the product. Torula is already being used in animal and poultry feeds and in pharmaceutical preparations. Its use in human food has so far been limited. It was produced initially in Europe during World War II as a vitamin and protein supplement.

Hydraulic Pedal-Operated Sausage Stuffing Machine

An engineering works at Deventer (the Netherlands), which has for some years past supplied the home market with a simple but very handy sausage stuffer, now also offers this article for export. This machine has no motor drive, but is operated by means of a pedal with hydraulic transmission. As the machine leaves both hands free, one man can make all sorts of sausage. The cylinder capacity is 20 or 30 litres (4.4 or 6.6 gal.). As the transmission is hydraulic, no gear wheels are required, so that the machine is noiseless and wear is reduced to a minimum. A handy construction of the machine between the meat cylinder and the compression cylinder prevents the leakage of oil into the meat. Breakage of casings is reduced to a minimum. Four stuffing horns are supplied with this sausage stuffer. Thanks to its simple design, the initial cost of the machine is low.

New Rolls Royce and Bentley Models

Rolls Royce Ltd., has announced the production of two entirely new models. These are the Rolls Royce Silver Cloud, which will replace the Silver Dawn, and the S. Series Bentley which will replace the B7 model. Both cars share the same completely new engine, chassis and body work and the only difference between them lies in the fact that each model retains its own famous design of radiator grille. The engine is of 4,887 c.c., a developed version of the 4,850 c.c. power unit fitted to the Bentley Continental in 1954, and is coupled to the Rolls Royce automatic gearbox. Four years of design work and testing, have gone into the production of these saloons, which are capable of well over 100 m.p.h. (160 k.p.h.) Interior fittings have the mark of craftsmanship. Each half of the backrest of the full width seat is adjustable independently for rake to suit driver and passenger. The ventilation system is of a new design and keeps both windscreen and rear window clear. Other features include a wider view both ahead and astern, wider seats with ample room for five, and a larger and more conveniently shaped luggage boot.

Power Engines

Worthington Corporation Harrison, N.J. (U.S.A.) has announced a completely new line of Power Engines. According to W. E. Wechter, Manager of the Corporation's Engine Division, the new engines, known as the SW 14 line, are a high pressure turbo-supercharged, four-cycle design, rated from 1,360 to 5,000 hp at 450 rpm. Largest of the new line is a 16-cylinder V-engine, which will develop twice as much power as present diesels of the same weight and dimensions which have been previously built for similar services. According to Mr. Wechter, the new SW 14 engines have many outstanding features, which are based on many years of field experience, research and testing. The SW 14 line was developed as a result of more than ten years' study of market requirements for both direct drive and electric power generation, particularly for applications in private and public electric central stations; water works; sewage disposal plants; petroleum and chemical plants; mining, quarry and cement plants; gas and oil pipelines; irrigation and drainage projects; industrial power plants; dredges; radio and radar stations. The tri-power arrangements permit use of the new engines as oil diesel, dual fuel diesel, or spark ignition gas. The manufacturer claims its new SW 14 engine to be the only low speed, heavy duty, high pressure turbo-supercharged engine in the United States designed and built for a capacity exceeding 200 psi bmep. It is extremely simple and devoid of complicated turbo-charging control systems. One of the unique features built into the new SW 14 line is inter-changeability of major parts between the in-line and the V-engines, such as cylinders, heads, rods, pistons, bearings, fuel injection equipment, etc. When an in-line engine is installed today, for example, with a view toward adding a V-engine at a later date, the user is not confronted with stocking many different spare parts to service both engines during periodic overhaul.

TRAVANCORE RAYONS LIMITED

MR. A. R. RAMANATHAN OUTLINES PROGRESS AT ANNUAL MEETING

THE Ninth Annual General Meeting of the Travancore Rayons Ltd. was held on 3rd May, 1955. Addressing the shareholders at the meeting, Mr. A. R. Ramanathan, Chairman of the Company, gave a brief account of the Company's working during the past year and its expansion plans on hand. The following are extracts from his speech:

"The results of 1954 have shown a good improvement, maintaining the progressive upward trend in the business of the Company. There has been a smart rise in the net profit from about Rs. 15 lakhs for 1953 to Rs. 22,30,664-9 for the year under review, after writing off depreciation of Rs. 23,59,464-4-10. As you are all aware, in view of the 'initial' and other special depreciation allowed to us, the profits of the Company have not become liable to income-tax assessment so far. Such a position cannot obviously continue for long. The book value of the assets will become almost nil for income-tax purposes much sooner than according to our balance-sheet method. This means that in the years to come, our income-tax liability will be much higher than what it would normally be. To meet this position smoothly and without any dislocation, your Directors have, with prudent foresight, conserved a portion of the profits by transferring a sum of Rs. 12,75,000 to 'deferred taxation reserve.'

"Out of the balance of profit of Rs. 9,97,094-9-11, a dividend of 5 per cent. on the preference shares, absorbing Rs. 2,49,970, and a dividend of 6¼ per cent. on the ordinary shares, absorbing Rs. 6,24,002-8, have been recommended, leaving a sum of Rs. 1,23,122-1-11 to be carried forward. Although your Directors could have improved further the distribution to the ordinary shareholders, they have advisedly adopted a conservative policy in the interest of a steady future, and the need for ploughing back into the business as much of the profits as possible, to meet our expansion programmes.

"The expansion plans envisaged are being put through with the least interruption to current production. The six new spinning machines have been erected, and they are expected to go into production by about the middle of this month. An additional quantity of 1.8 tons of rayon yarn per day will be available to the market very shortly. The rayon yarn market was fairly stable during the last year. I believe, the healthy, balanced atmosphere now prevalent will continue and that the rayon spinning and weaving industries will work hand in hand in the interest of the well-being and stability of both, with the full knowledge that excessive imports of rayon yarn is to the advantage of neither.

"As regards transparent film, the second plant has already begun functioning from 7th March, 1955. It is expected that it will be able to reach its peak capacity of four tons a day in the course of a month or two. The machinery for the moisture-proof plant has also arrived, and the erection of the same is likely to be completed in June-July, whereafter your Company will be able to convert a part of the production into the moisture-proof heat-sealing variety.

"The market for transparent film was very active during the period under review and continues to be so, indicating the great popularity of this packaging medium and the consequent increase in demand. Although, in the recent past, the demand for this product outstripped supply, we have endeavoured to satisfy all genuine demands to the best of our ability, at steady and reasonable prices.

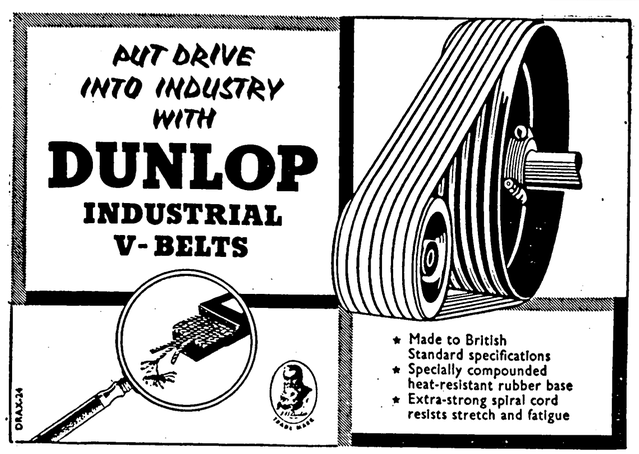
"The liability to the Travancore-Cochin Government has been further reduced by Rs. 12.5 lakhs, to Rs. 61.5 lakhs, and the block account has been substantially increased by about Rs. 42 lakhs, through investments in new plant and machinery.

"It is expected that the demand for rayon yarn will be more than doubled by the second plan period. I hope, chemical pulp plants too will be established, with a view to eliminating the industry's precarious dependence on foreign sources for wood-pulp—the main basic raw material. The Travancore-Cochin State would be ideal for the location of one of such plants. But before launching on these, it is highly essential that conclusive tests are made on pilot-plant scale to establish beyond doubt the indigenous raw materials best suited for the purpose. Your Directors are giving due consideration to this matter, in conjunction with the Travancore-Cochin Government, with a view to utilising the Eetta bamboo available in the forests of North Travancore. In addition, varieties of soft wood available in the Nilgiris could also be considered.

"In keeping with our role under the second Five-year Plan, it is the intention of your Directors to consider carefully the second phase of your Company's expansion, after successfully consolidating the first phase of the expansion now under way.

"As your Directors' report has indicated, it has been decided that, in grateful memory of our late Founder-Chairman, a life-size statue of his be erected in the factory. A sum of Rs. 1,50,000 is also being contributed to a Trust Fund created by munificent donations and contributions by the companies in which the late Chairman was interested, for providing special training facilities in foreign countries for deserving candidates.

"In fulfilment of a wish, which the late Founder-Chairman had in mind in the period preceding his tragic demise, the Managing Agents are going ahead with plans to put up, near the factory, a well-equipped and modern hospital known as the 'M. Ct. M. Chidambaram Chettiar Memorial Hospital.' This will serve the employees of the factory and also the citizens around. The cost is expected to be about Rs. 2½ lakhs, and the amount will be donated by the Managing Agents."



NATIONALISATION OF INSURANCE

WILL THE PUBLIC BENEFIT BY IT?

By K. A. Pandit, B.Sc., F.I.A. (London)

NATIONALISATION of Insurance is again being talked about, particularly in view of the declared objective of the Congress and the Government to set up a socialistic pattern of society. The general thinking has been focussed more on this question, because insurance and banking are twin industries and, if steps have been taken towards nationalisation of the one (though in part), the other may be nationalised soon after. The Congress objective, however, is not tied down to any dogma. The welfare of the society is the main purpose. Thus, it has been repeatedly clarified by the Congress spokesman, as also at Government level, that there is not going to be any wholesale socialisation but that the industries will be controlled and that both the public and private sectors will be allowed to work for the common good.

Thus, in the light of the above clarification, it may be supposed that insurance or banking may not be nationalised wholesale. Even if a public sector is set up in these industries, the private sector may be allowed to work so long as it continues to serve the interests of the nation. But this does not eliminate the threat of nationalisation altogether. It cannot be said at what stage the insurance industry would be found incapable of advancing the national interests and nationalisation resorted to. It will, therefore, be opportune to examine whether it will be beneficial in the larger interests of the nation to nationalise insurance and whether, by nationalisation, the insurance industry will be placed on a better footing.

Not Yet Fully Developed

Insurance in this country has still a long way to go before it can fully cater to the needs of the people. Big national plans have been launched by the Government to increase the *per capita* income and to provide employment to the largest number of people in the shortest time. With such expansion programmes, it is certain that insurance needs will increase and the business will have to be made more widespread. The *per capita* insurance of our country is also very low, as compared with the U.S. or the U.K. Thus, the principal task before us is to see that insurance is expanded and popularised more and more. The question is, who will do this? Will the privately managed industry be competent to expand the business Or will it be necessary to set up a nationalised industry?

It is generally known that life insurance business in this country has to be sold. A large agency force has to be employed for canvassing the business and the commissions paid amount to about 30 to 50 per cent. of the new premiums. According to statistics available, about 280,000 agents were found employed in this business in the year 1953. The business is very rarely demanded direct.

Now, in this set-up of the business, a nationalised industry, offering uniform insurance benefits at uniform rates can never succeed. Even by maintaining this agency force, it is unthinkable that nationalised insurance can expand business, since there is no free demand. People are not insurance-minded.

Competition is Necessary

For popularising insurance and spreading it more and more, what is necessary is healthy competition among agents. There should be more and more companies offering benefits at competitive rates through a network of agency force set up all over the country. For this purpose, there should be a large number of healthy units working independently and efficiently. Thus, a privately managed industry is indispensable, if the main objective is to raise the *per capita* insurance of the people.

There is no doubt that insurance business has increased in the past few years and every year the scope is getting enlarged. This, however, has not been achieved without keen competition among a few well managed companies. The experience of the past one year clearly shows what healthy competition for business could achieve. The business of some companies expanded by 100 per cent.

Thus, in the interests of the nation, private enterprise in insurance should remain. In fact, more and more companies should be encouraged to work in the villages and try to see that no earning member of a family remains without insurance. This is the task before us and any hasty step on the part of the Government to nationalise will kill all incentives and put the clock back.

At the same time, it will not be out of place to consider the possibility of a State-managed insurance industry which may undertake to accept insurances of Government employees or other semi-Government institutions. Even at the present stage, there are a few Government-sponsored Insurance Funds run by the States. They may be merged together and a bigger unit set up. But, at the same time, private insurers, too, will have to be fully encouraged.

No Tangible Benefit to the State

It is sometimes argued that nationalisation of insurance will place at the hands of the Government large funds for investment in the National Plans and thus be helpful in finding the additional finance necessary for the execution of the Plans. There is not much weight in this argument. Under the Insurance Law, investment up to 50 per cent. has to be compulsorily made in Government and other approved securities. Thus, even without nationalisation large proportions of the funds are available for investment in Government obligations. Even out of the balance 50 per cent., it can be shown that only small proportions are available as free investment. According to the *Insurance Year Book*, 1954, published by the Controller of Insurance, the following percentages show the proportions invested by companies in different categories:

	Per cent.
Government and other approved securities ...	49.0
Municipal and Port Trust securities.	5.9
Mortgages on property.	4.6
Loans on policies.	7.4
Loans on stocks and shares and other loans	0.7
Debentures of companies	4.6
Preference shares.	3.6
Ordinary shares.	6.3
Land and house property	5.5
Agents' balances, outstanding premiums. ...	4.9
Deposits, cash and stamps	5.3
Miscellaneous	2.2

It will be seen that, in addition to the Government securities, 7.4 per cent. is invested as loans on policies, 4.9 per cent. as agents' balances and outstanding premiums, 5.3 per cent. as deposits and cash, 2.2 per cent. miscellaneous, total 19.8 per cent.

Thus, about 20 per cent. has been invested in the business itself for the purpose of conducting the same.

The balance available is 30 per cent., half of which is invested by the Companies in equity capital which, it will be readily conceded, is nothing but supplying capital for financing private enterprise, the national objective. Thus, it is wrong to say that the nationalised insurance will place more funds at the hands of the Government for financing the Plans.

Very often, it is said that insurance in this country is not properly managed by companies and that the earlier it is nationalised the better. This, I think, is merely a hasty method of generalising opinions, formed by viewing some bad managements. No doubt, there may be some companies which are still not being managed properly. But their number is very small and fast disappearing. On the other hand, there is a large number of companies, commanding a substantial volume of business, which are being managed in the best manner possible. In the past decade, many companies have consolidated their positions and it can be stated, without fear of contradiction, that insurance in the hands of a large number of them is quite safe.

Moreover, with the controls exercised by the Government over investments and management expenses, it is certain that, in a very short time, it will be seen that almost all companies are properly set up and the business worked on healthy lines. I would, therefore, say that this threat of nationalisation should be removed by the Government at the earliest, by making an assuring statement, so that there may arise possibilities for the formation of more companies either proprietory or mutual. Even on a co-operative basis, insurance is bound to develop.

People May Suffer

Lastly, from the point of view of services to the public, I do not think nationalised insurance industry will be helpful. Today, the insurance industry, through its network of agents, offers insurance policies at the very doors of the people. For a single proponent very often, there is an approach from a number of agents from different companies and he has a wide choice at his command. In nationalised insurance, it is doubtful if this type of service would be available at all. Perhaps, a stage may come when the agency force may be entirely eliminated and the proponents required to wait in queues at the Government Offices for their proposals being accepted.

In addition to the above facility, free competition among insurers has brought about such conditions that a number of alternatives is offered to policyholders before their policy lapsed. Some companies offer automatic paid-up policies, whereas some offer extended benefits and so on. Can it be supposed that State-owned Insurance Corporation will be able to make business so elastic and helpful to the public? I doubt very much.

In conclusion, I would only say that this matter of nationalisation of insurance should be dispassionately and thoroughly considered by the Government from the standpoint of public good. The companies should also be prepared to allow the Government to start a State-managed industry offering insurance to Government employees only and prove by efficient management that they are able to serve the public better. This will surely show in the long run what private enterprise can do.

The North British and Mercantile Insurance Company, Ltd., of the U.K., proposes to expand its activities in the U.S. For this purpose, the Company, along with three of its American subsidiaries, is negotiating to buy all the capital stock of the Central Surety and Insurance Corporation of Kansas City for $9.25 million. If the deal is put through, the North British will secure a share in the U.S. accident business, which is the main field of operations of the Central Surety. The purchase price includes a premium of $2.75 million above the policyholders' surplus, or book value, which was nearly $6.50 million at the close of 1954. This premium covers the Central Surety's goodwill, management, personnel and agency organisation. The 145-year old North British and Mercantile has got offices in India also, doing life, fire and miscellaneous business.

CANARA MUTUAL ASSURANCE COMPANY LTD.

COMMENDABLE PROGRESS DURING 1954

MR. B. VAIKUNTA BALIGA'S SPEECH AT ANNUAL MEETING

THE Twentieth Annual General Meeting of the Canara Mutual Assurance Company, Ltd., was held at Udipi on 30th April, 1955. In the course of his address to the policyholders (which was read by Mr. M. D. Kamath, a Director of the Company, in the unavoidable absence of the Chairman), Mr. B. Vaikunta Baliga, Chairman of the Company, outlined the progress made by the Company during the past year. He also referred to some of the recent developments which have a bearing on insurance business as a whole, of which the most important was taxation. While welcoming the decision of the Government to raise the exemption limit allowed to income-tax payers for insurance premiums, Mr. Baliga regretted the Government's refusal to concede the demand of mutual insurers for exemption from payment of income-tax.

The following is the full text of Mr. Baliga's speech:

"FRIENDS,

"The year of 1954 began with great hopes and has ended with greater hopes for 1955. Scanning through the twelve months of 1954, we find that it has been a very good year for the world, in general, and for India, in particular, because it has several highly satisfactory achievements and historic events to its credit both in the political and in the economic field. The cold war has ended during the last year and in its place a situation has developed in which there is a keen desire for peaceful co-existence among the nations of the world. India's relations with the other countries of the world and its neighbours has improved considerably. In the economic sphere also, 1954 was a year of progress with tangible and definite results to its credit and this has been well reflected by the affairs of the 'Canara Mutual' also.

"During the year, proposals of the aggregate value of Rs. 1,02,73,700 were received by this Company. Out of these, as also cut of the proposals pending on hand at the beginning of the year, a business of Rs. 88,29,450 resulted in new policies. The premium income and income from interest and other sources amounted to Rs. 20,15,646 and Rs. 3,59,479-6-5, respectively. Calculated as per rule 25 of the Insurance Rules, the ratio of expenses of management to the premium income comes to 12.76 per cent. The life fund at the close of the year stands at Rs. 1,06,49,229-12-11. The net addition to the life fund during the year is Rs. 12,69,185-10-7. The investment reserve fund stands at Rs. 3,54,400 and is quite sufficient for meeting the fluctuation in the values of Government securities and other investments. The following statement indicates the progress made by the Company in recent years:

Year	Premium income	Net income from interest and other sources	Life fund at the end of the year
	Rs.	Rs.	Rs.
1948	14,57,550	1,11,190	42,10,975
1950	16,78,012	1,71,813	61,91,192
1952	17,55,933	2,44,999	82,48,569
1954	20,15,646	3,59,479	1,06,49,229

Attractive Bonus

"During the year under review the results of the fifth valuation of the Company were out and you already know the excellent bonus declared by the Company. This has been hailed as most unique from all quarters and it has attracted not only more business in the existing organisation but has also brought in new persons from other areas where we had no representation so far. The premium rates of the Company were reduced on all new policies issued from 1st April, 1954. Dr. A. V. Baliga became a Director of the Company on 27th October, 1954. His presence on the Board has inspired the agents to work with more vigour. On account of the attractive features and the intensive efforts put forth by our Chief Agents for South India, The Commercial Corporation of India Ltd., and Messrs. Ratilal & Co. of Ahmedabad, our newly appointed Chief Agents for Saurashtra, Gujerat and Cutch, since September, 1954, and also the members of our field force under both these Chief Agents, there was, during 1954, a rise of about 76 per cent. in the business over 1953.

"During this year, viz., 1955, we have also been able to open a branch at New Delhi and have appointed Shri Ramchandra H. Kubba as our Branch Manager and we are confident that the branch will progress satisfactorily.

"The year that we passed through was also a year of unprecedented competition at various levels. One or two Indian insurers reduced their premium rates drastically. This was followed by a number of other insurers and then the Government intervened and the drastic reduction in premiums, which had been offered at the expense of insurance agents, was slightly modified. A short time thereafter some insurers introduced staff insurance tables which was done again at the expense of agents and so the premium rates in those cases became very low. Once more the Government had to intervene and get the premium rates under the said staff tables raised to a certain workable level. As a result of this keen competition and other practices, the insurance business has been affected. But I am happy to say that our Company has shown substantial progress in its new business figures for 1954 without even introducing such staff tables. It is evident, therefore, that the interests of the policyholders of this Company are quite safe and well guarded in the hands of the Board of Directors.

Taxation

"Referring to other matters that have got a direct bearing on our business, I have to mention the report of the Taxation Enquiry Commission which has discussed at some length the important question of taxation of insurance companies and the taxation proposals of this year's Budget of the Central Government. The Commission's report also gives an indication of the pattern of taxation that will be adopted for the years to come. The Commission's recommendations and their supporting arguments are, therefore, of vital importance. Taxation has a significant part to play in the progress of any industry and it is more so in the case of insurance, because the investments of insurers are mostly regulated by the Central Government and its Statutes. While the Commission was gathering information to arrive at certain conclusions, the Indian insurers, through their associations, had represented to them that the exemption limit allowed to income-tax payers for insurance premiums paid by them should be raised. And, as a result, the Commission recommended an increased limit which has been incorporated by the Ministry of Finance in its recent Budget proposals. An income-tax payer can, therefore, avail now of the benefit of abatement of tax on insurance premiums upto a total of one-fifth of his income subject to a maximum of Rs. 8,000 a year, instead of the former limit of one-sixth of his income subject to a maximum of Rs. 6,000.

"The mutual insurers in India had represented to the Taxation Enquiry Commission that they, like co-operative insurers, should be exempted from payment of income-tax. But seeing that mutual and co-operative insurers wert almost alike in the matter of the structure of their companies, the Commission recommended the withdrawal of the exemption from income-tax enjoyed by the co-operative insurers, instead of extending it to mutual insurers also. This is really a regrettable turn of events, because both mutual and co-operative insurance companies are non-profit-making institutions and formerly both were exempt from payment of income-tax. During the war period the Government had somehow roped in mutual insurers for purposes of income-tax and now on the pretext of making no discrimination between similar institutions, they have accepted the recommendations of the Taxation Enquiry Commission and placed co-operative insurers on a par with mutual insurers and taxed both. In other countries, like the U.K., the U.S. and Canada, mutual insurers are exempt from income-tax and in one of these countries when the Government tried to tax mutual insurers by fresh legislation, cases were filed by the aggrieved insurers against the said measure and the Courts there held that it was not a laudable object of the Government or the Legislature to have attempted to tax mutual insurers by declaring as profit what was really not profit and this decision made the said legislation ineffective. We shall have, therefore, to pursue further and persuade the Government to exempt both the mutual and co-operative insurers from income-tax.

Nationalisation

"The cry for nationalisation of insurance which was first raised in 1947 is being echoed from time to time; but it is now clear that nationalisation of insurance companies can do no good either to the country, or the Government or the public. The principle of mutualisation appears to have progressed and one more proprietory insurance company, and that too the biggest among the Indian insurers, has received the blessings of the Government to mutualise itself. This is actually going to be the second such conversion and it is expected that this movement of voluntary mutualisation of proprietory insurers will gain further momentum.

"The problem of State and Central Governments entering into unhealthy competition with the Indian insurers is still there. Probably, it will take some time before it becomes possible for the Indian insurers to persuade successfully the Central and the State Governments to desist from encouraging, subsidising or experimenting with such schemes at the expense of the taxpayer.

"Selection and training of agents is a subject that deserves the special attention of insurers in India, because the better the selection and training of agents, the greater will be the business that they secure and the better will be the morale of the Indian insurance world. As selection standards are raised and training is imparted to the selected ones, the double purpose of building up of public goodwill and removing the ill-will caused by some of the less competent agents in the past will be very well served. In this regard, I am glad to report that the Indian Life Assurance Offices Association is trying to prepare an aptitude index test for insurance agents suitable for Indian conditions on the lines of a similar test prepared by the Life Insurance Agency Management Association of America. The Indian Association is also evolving a suitable syllabus for the purpose of training insurance agents in India. This is a step in the right direction and, with such effective attempts at raising the standards of insurance agents, there is no reason why we, in India, should not have a very healthy and prosperous community of insurance agents working all over the country and producing very satisfactory results.

"Finally, I once again wish to point out that the future of this Company is very bright because of its various attractive features, the best among them being its incorporation as a mutual company and the next being its excellent bonus record, efficient and able management. Let me express my sense of gratitude to you all, the policyholders, who are the owners of this Company and whose number is ever on the increase. I have no hesitation whatsoever in requesting you to recommend this Company to your relations and friends. To my colleagues on the Board, I express my sincere appreciation for all the assistance and advice so willingly given in the working of the Company. Let me also congratulate the Managing Director, Sri T. R. A. Pai, for all his pains and upright efforts which have resulted in the creation of an unlimited goodwill for this Company and placed it so high in the Indian insurance world. Our thanks are also due to the Chief Agents, The Commercial Corporation of India Ltd. and to the newly appointed Chief Agents, Messrs. Ratilal & Co., and the field force for their excellent and encouraging work during the last year. The Company's achievements reported here and elsewhere have become possible on account of the loyal support and able services rendered by our staff-personnel and to them I have every pleasure to convey our sense of appreciation."

COMMERCIALISM ON RAILWAYS

SOME FEATURES OF RATING POLICY

By J. E. Castellino

HISTORICALLY, all the world over, heterodoxy has always been anathema, but, fortunately, the rebel, who thinks ahead of his time, is later hailed as the spear-head of progress. Traditionally again, the duly constituted authority must regard as sacred and inviolable the views held and the opinions expressed in the past and it is only the impact of irrepressible forces that can compel a change in outlook and provoke a reorientation in policy. After all, it is inevitable that, in the course of years, brick after brick of precedent should be added to the well of knowledge which hems in the Government official; and a fissure can only be effected by wise and constructive criticism. By a strange fate, India, which is the home of traditionalism, is today recognising that the time is overdue when every policy has to be judged, to be tested, analysed and readjusted to the needs of the day. Age-old lines of action no longer evoke respect, unless, day in and day out, their validity stands justified by the prevailing circumstances.

Right from the inception of railway transport in India, the opinion has been field that railways are a commercial undertaking. In fact, in that famous minute of Dalhousie, the commercial justification is as strong as, if not stronger than, the military and administrative requirements of modern means of transport. Now and then, in response to reasoned representations from merchants and industrialists or from traders' associations, a change in policy, even in outlook, is engineered, the merciless flaying in the Press, often based on inadequate knowledge and generally characterised by incorrect appreciation of local conditions, serving to focus attention. But never in the history of the railways in India has anyone ever dared to suggest that our railways are run not as a commercial undertaking but as an instrument for social justice and economic progress.

Heavy Responsibility

The claim, however, puts on the administration a heavy responsibility, for it is difficult, in a Welfare State, where the largest of all undertakings is directly managed by the Government, to dissociate from its policy measures which have a socialistic tinge. The most notable example is the lack of profiteering, a measure which is euphemistically known as cutely and promptly reacting to market conditions and justified as ordinary commercial practice; more positively, the grant of concessions, let us say, to school children or nurses or associations is again a policy which cannot be fully defended on strictly economic grounds.

Commercialism, therefore, as interpreted by railways does not have the same connotation as that placed on it by mercantalist enterprises. Here, the contagious influence of India's acceptance of a "mixed economy" is quite apparent, but, if the wind is mercifully tempered to the shorn lamb, it is equally necessary that every aspect of rating should be tested in the crucible of existing economic processes, so that, when the sun of prosperity shines, the sweet-smelling hay of reserves may be legitimately garnered and wisely stored against the proverbial rainy day. On this account, a few factors which project themselves for active consideration with the recent advances in the knowledge of railway working are being analysed, so that the country may be prepared to accept a radical change in policy. It is not that the administration is old-fashioned or wooden-headed; it is the people that is not yet ripe for reform; it is the climate that is still unfavourable to such a complete upheaval.

Strictly, if the railways are to be run as commercial undertakings, there can be no place in the budget for a contribution to General Revenues. Government, of course, is entitled to obtain, on its investment of Rs. 800 crores on railways, a fair adequate return. Commercialism demands that this should be treated in the nature of bank charges for advances and the railways cannot be considered solvent unless this amount is regularly paid. It is equally apparent that, as in commercial enterprises, adequate provision should be made for maintenance, for depreciation, and for future development. These are, however, high policies in which "politics" may be involved. What is our interest is a practical study of rating problems.

Does commercialism justify the same level of charges, throughout this vast country? At once a cat is cast among the pigeons. If cost of operation and if value of service are the twin guiding principles of rating, how can there be, in a country of vastly varying geographical features and staggering stages of economic development, any uniformity in the scale of charges? There are sections where passenger traffic predominates; there are sections where coal makes almost the whole contribution; there are hill-sections and river-basins; there are railways in the vicinity of the coalfields; there are areas where the traffic is in one direction, for one part of the yard, and in the other direction, at another period. In fine, there is an endless variety of traffic requirements and of operational costs. How, in the sacred name of economics, can a fixed scale of charges be justified?

Passenger Traffic

Equally assailable is the practice in respect of passenger traffic. To the pocket of an upper class traveller, it makes not the slightest difference whether he enjoys the luxury of a berth at night or suffers the indignity of sharing it with others, during the day; the price of his ticket is the same! Quite patently, the value-of-service principle is violated. But is the sanctity of the cost-of-service principle honoured? Surely, it cannot be argued that it costs the railways the same whether a berth is used to accommodate one person or three? The railways, all over the world, realise the economic need for discriminating between the day and the night traveller: for a "sleeper," an additional fee is payable. Even in this country such a practice is becoming recognised: the third class passenger can now stretch his tired limbs in comparative comfort by paying a surcharge for sleeping accommodation.

In another direction, the law of supply and demand is violated, even though, in a sense, it is honoured. A fixed charge for a special train, to be run at any time of the year and at any period of trading activity, is an economic anomaly: it ignores all considerations of seasonal demands, traffic peaks, track availability, staff requirements, and such factors which considerably affect costs of service. It is accepted that concessions offer rich dividends when capacity is idle: the "day" and "half-day" excursion specials are evidences of commercial policy, properly applied. But how can a predetermined charge for a special train be justified? In a sense, however, economic justice is obtained even in this country; the applicant for a special train does not obtain his requirements, at times of brisk traffic. But this is a left-handed compliment to the rules of commercialism.

Here, then, is the core of the perennial complaint, loudly but incorrectly voiced by the people—incorrectly because the specific instances do not always justify it. Not for a day have the railways of India been really worked on strictly commercial lines. The procedure in Government offices casts a restraining influence; the fear of undue discrimination infuses caution; the rules of accounting kill the exercise of initiative; the whole set-up renders impossible individual decisions, suited to the needs of the moment. Is there no escape from this octopus of official procedure? Cannot modern scientific development provide some lubricant for Governmental machinery? Is the heavy hand of bureaucracy allergic to antiseptic elbow grease?

To deny free but restrained play of economic forces is to invite disaster. Progressively, Governments have been compelled to apply commercial principles to, and adopt trade practices in, the operation of transport services. For example, shipping corporations have wide powers to vary the charges for the cargo, in accordance not only with the trend of traffic but even with the requirements of a particular ship. Similarly, in air transport, off-season fares are part and parcel of the schedule. For charter services—which correspond to special trains—the charges vary according to the law of supply and demand: it would be fantastic to expect them to be fixed and unalterable. In principle, therefore, even as a matter of procedure in Government Departments, there is nothing to prevent railway administrations from adopting ordinary commercial methods in the fixing of rates and fares. Why then, is the schedule of charges so rigid? How has it come to be so uniform?

It would be unfair to attribute this state of affairs to the usual forces which affect affairs of State! Before the railways of India came under the ægis of Government, they were privately managed. True, during those days, there was a measure of freedom. As recent as 1942, the basis of fares varied: the then East Indian Railway carried a third class passenger for two pies a mile! The erstwhile Assam Bengal Railway had an exceptional classification for its two monopolies, jute and tea! There were different scales of charges for coal, depending on the location of the coalfields. All these "peaks and valleys" have been flattened out by the steam-roller of uniformity. Is this economically justified? Does this system reflect adequately the twin principles of railway rating? Can the claim that railways are commercial concerns be properly sustained?

If due regard is to be paid to costs of operation, then, in a country which is a Continent, charges can never be uniform. If the value of service principle has any validity, then the price of transport must vary with the stage of economic development of an area. If the plea of average costs is made, then the inflated mileage principle—which happily still obtains—stands condemned. If the need for stability of charges is stressed, then "commercialism" is a mismomer. It becomes evident that some drastic re-thinking is absolutely necessary—both in the interests of the country's trade and commerce and of its largest undertaking!

There are various directions in which, without undue risk (which incidentally is the *sine qua non* of all commercial activity), the principles of trade and commerce can find application. Within the steel framework of a maximum and a minimum, variations should be permitted, so that charges are co-related to the important factors of supply and demand at any particular time and in any particular region. Very simply, sleeping accommodation must be subject to a fee; excursion specials should be run at prices suited to the season and related to the costs; seasonal demands and one-way traffic must be made not only to meet the full costs of operation plus overheads, but also to contribute handsomely to profits and surplus. As a corrollary, off-season movements and return loads must be carried at concessional rates; and so on. These "economic principles" have been rarely, if ever at all, observed on Indian Railways.

Another Aspect of Rating

There is one more aspect of rating which appears to have been completely shut out from the view of commercial officers. Is not an engine-run a good yard-stick for measuring costs? Alternatively, can it not be considered correct to measure efficiency in terms of trips between marshalling yards and transhipment junctions? In other words, must not scientific rating be closely related to the unalterable features of operation, namely, the fixed run between one engine-shed and another, or between one marshalling yard and another, or between a station and a tranship point?

It is strange that this fruitful avenue should have remained entirely unexplored for such a long period. In a sense, however, the railway systems, in more developed parts of the world, appear to have been propelled into that direction: witness the emphasis on express train-loads, between rail-head distributing centres. But economic thought has not been devoted to this very important aspect of railway rating. Mere distance is, therefore, no index to costs. Once a scale is determined—so much per maund per mile, according to the ordinary rules and practice of classification, the charges must perforce be related, first, to the "economic zone" between two operational points, that is, marshalling yards, and, secondly, to the "uneconomic" distance, which does not conform to the pattern of train working. For example, if the distance of the haul is 300 miles, and if the run between two marshalling yards is 250 miles, then the correct and scientific charge would be made up of X—for 250 miles—plus $\frac{2}{5}$ for 50 miles, plus Y, Y being a surcharge for the uneconomic haulage of 50 miles. If the haul is of 200 miles, the charge would be X for 250 miles minus $\frac{1}{5}$, plus Z, the cost of the uneconomic haulage. There would be endless variations, but scientific calculation of freight charges cannot obviously afford to ignore the geographical and operational factors. Mathematicians will certainly express this formula in better terms, but the idea is clear: mere distance cannot determine the correct charges; it is location of "exchange" points—engine sheds, marshalling yards, etc.—which must influence rating.

Nowhere in the world has scientific attention been focussed on this important factor. The railway's all-pervading role has, to some extent, been modified to the provision of carriage between rail-heads of distribution, where road or river transport has considerably affected costs of operating short-distance services. By the inevitable process of competitive attrition distribution between large towns has come to be the economic sphere of operation, best suited to the railway. Theoretically, however, this conception has not been rationalised; the core of this practice has not been analysed. On the plane of economic thought, the most appropriate yard-stick for measuring costs and for determining economic zones cannot but be provided by the geographical features of railway operation—the points where engines are changed, trains marshalled, crew relieved, transhipment effected, so that there is begun a completely fresh unit of operation.

Scope Immense

What a concept! Here, a "flying saucer" is flung upon the calm waters of rating complacency: what ripples will it cause? The plea is for a reorientation of policies, for a more realistic approach to the problem of costs. The thesis is that "commercialism" on railways is in its infancy; it needs to be developed. The scope is immense. Every day there is a change in the supply-and-demand position; do the railways react to it? Every week, there is a variation in traffic trends; are the railways empowered to vary their charges accordingly? Every month, there is a different ebb-and-flow; is advantage taken of the situation? It is not unusual for empties to be moved to an inter-change point—for inter-railway requirements—when, with a little foresight and initiative, economical use could be made. Are the Rates Officers ever kept informed of the direction of traffic? Does the Commercial Department ever take into account track capacity or wagon availability, when considering requests for special rates? Has the concept of "the economic run" found thought, let alone acceptance?

There are, of course, the traditional arguments against indiscriminate use of powers to vary rates and fares; there is the specious plea of the many advantages of fixity of charges, not only over months but over years; there is the claim of equal treatment to every trader, irrespective of the zone of his activities; there is even the economic argument of the "average cost." But what does all this really add upto? Would any economist seriously suggest that, on the railways of Europe, a uniform basis of charge would be scientific, or at any rate, advantageous both to trade and industry as well as to the railways? Are railway managements so devoid of commercial sense that ordinary trading principles mean nothing? What becomes of the principle of joint costs, or to the mechanism of pricing "main" and "bye" products, in relation to empty running of trains, flow of empties, light engine miles, availability of paths, and such other recognised features of railway operation? Is the Railway Rates Tribunal a mere symbol of authority, not an effective check on abuse of powers?

Bulk Carriage

If, elsewhere in the world, by the pressure of competitive forces, the railways' sphere of influence has been restricted to major movements from one important trade centre to another, if it is increasingly becoming recognised that the most economical haul for railways is bulk carriage from one rail-head to another, if, in future, goods trains will run in whole-train loads as express services between important distribution centres, obviously theory must begin to take account of practice. The elimination of branch line services is another indication of the same economic tendency; long-distance bulk movement is the traffic for the railway.

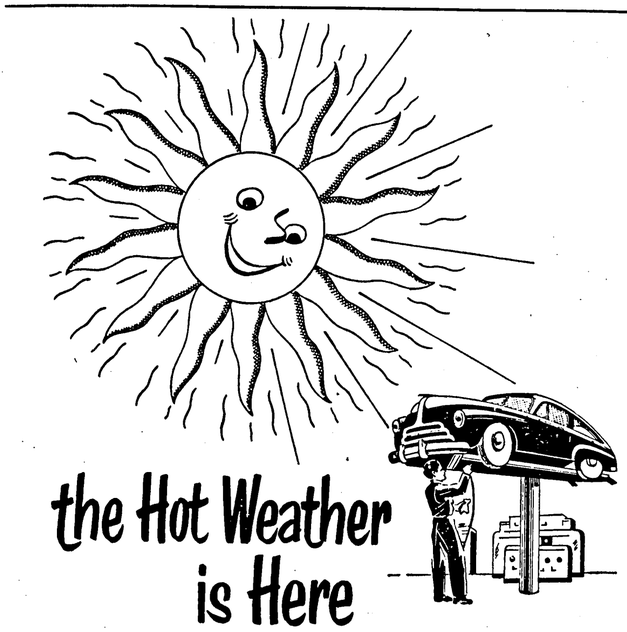
While the term "bulk traffic" needs no further explanation, it is necessary to discuss the concept of long-distance traffic. Mere length of total haul, irrespective of the number and complexity of intermediate halts, can have no significance in an analysis of costs. Just as an economical run for a motor vehicle consists in a fairly uninterrupted movement on top gear over a period of time, so also, on the rails, wagon-miles, and engine-miles and train-miles per day, are the important figures, as they affect costs and indicate efficiency. The rolling stock must roll; then only is its economic purpose fulfilled and expense kept down. If there is a long stoppage at a marshalling yard, or a loco shed, or a tranship point, then obviously costs begin to mount, as "unproductiveness" comes into play. Thus, the most economical run is that between two such operating centres; hence, also, the economic significance of this unit of measurement, and its relationship to the problem of scientific charges.

These are novel considerations, almost revolutionary in their consequences and if this conception of rating has any validity, then some wholesale re-organisation is inevitable, if not in the manner of determining the maxima and the minima, at least in the day-to-day translation of these rating principles into practice. The usual programme for "hurrying up slowly" need no longer cause any anxiety; economic forces will galvanise Government into action. Nor need there be any fears on the administrative plane; where all are blind, the leader must stumble! Timidity will be in evidence, but today discretion is being exercised by railway officers, on various matters, and, with decentralisation of authority, must come greater assumption of responsibility. Against the danger of abuse of power, there is already adequate provision; the utility of the Railway Rates Tribunal can best be tested by permitting railway administrations to show due preference to a particular person or a particular type of traffic or particular movement of goods—it is undue preference which invites mischief under Section 42 of the Indian Railways Act—within the four corners of "Commercialism." In fact, set rules and fixed charges are strange bed-fellows for commercialism, and rubber-stamp decisions are a denial of progress.

Nascent Industries

Long long ago, "commercialism" was defined as earning 17 annas when previously only 16 annas of revenue was obtained. To take full advantage of the market situation is the function of the *entrepreneur;* enterprise has otherwise no meaning. Railway managements may not fully exploit the economic possibilities by holding a pistol to the community, but they must be empowered to serve the country in the best possible manner—a function that cannot be fulfilled under existing rules of procedure and present methods of operation. If nascent industries deserve help by way of concessional rates, then an extra levy from more established concerns is unassailable. If during an economic blizzard, some protection is justified, then at times of brisk trade—and this also embraces seasonal movements of an inelastic nature—freight charges must fully reflect the value of service principles.

More and more, Governments are compelled to incline to the view that, when an enterprise is run by the State—be it a bank, a fertiliser factory, a steel-plant, a pharmaceutical concern and an air service—commercial principles cannot be jettisoned without serious risk of inefficiency. The railways of India are the largest single undertaking in the country: in a sense, the most potent instrument of progress. Can "commercialism" be absent from the railway policy? In the past, monopolistic conditions prevailed; at present, there are heavy restrictions on Road Transport; what is the future to be? More than mere lip-service to the commercial factors of rating will be necessary, if the railways are to fulfil their role in the country's economy.—*All Rights Reserved.*



the Hot Weather is Here

NOW is the time to protect your car against the wear and tear of heat, dust and sand with MARFAK *LUBRITECTION*. Old or new, your car will last longer, run better in *any* weather when it has regular MARFAK *LUBRITECTION* SERVICE—a "system" designed and developed to ensure that your car is lubricated at proper intervals with the correct Caltex lubricants. Lubricants specially manufactured to give maximum efficiency and long service are applied by *chart*—not by chance—by trained automotive mechanics. (The chart is a special diagram or plan of your car showing all lubrication points, grease nipples etc., as well as the correct Caltex lubricant to use and method of application.)

Make an appointment with your friendly CALTEX Dealer today for MARFAK LUBRITECTION SERVICE. You will get quieter operation, smoother riding comfort and longer vehicle life.

U.S. CROP SURPLUSES AT RECORD LEVEL

SHORTCOMINGS OF RIGID PRICE SUPPORT PROGRAMME

[In recent weeks, there has been a persistent demand from a section of public opinion in this country for State support to agriculture to prevent prices of agricultural commodities from going down to uneconomically low levels. Although the Government of India has not introduced a full-fledged programme, it has made a beginning in this direction by giving selective support to certain commodities through State Governments. With finance provided by the Centre, wheat, rice, coarse grains, and gur (brown sugar) are being bought at fixed prices by State Governments in Northern and Western India at selected marketing centres. At present, the magnitude of this operation is only modest, but there is no doubt that, in course of time, the Government will have to devise an integrated, comprehensive policy for preventing wide swings in agricultural prices and that, as a part of this policy, it will have to buy agricultural surpluses and release them to the market in times of scarcity. In this context, it will be useful for India to know the experience of other countries which have programmes for protecting farmers against the vagaries of free market forces, so that it can profit from such experience. With this object in view, we reproduce below a review of the American experience of farm price support programme given in the May, 1955 issue of the Monthly Letter *of the First National City Bank of New York. Incidentally, the author of the review has prefaced the subject matter by briefly reciting the current farm situation in the U.S.*—ED.]

CROP production in 1955, given favourable growing conditions, is expected to approach the bumper harvests of recent years, despite Government efforts to curtail output in the face of mounting crop surpluses. The Department of Agriculture has estimated that 59 principal crops planted or grown this year may total 353.5 million acres, only slightly below 1954. Plantings of 16 leading spring crops are placed at 285.5 million acres, 3.2 million above a year ago. Government restrictions are mostly responsible for reduced plantings of wheat, cotton, tobacco, rice, flaxseed, and sugar beets. On the other hand, several million acres diverted from these crops are being planted to soybeans and feed crops, including restricted corn. Like last year, many farmers, who feed nearly all the corn they produce and are not concerned with price support on that crop, are expected to overplant corn acreage allotments.

Drought and dust-storms have plagued some wheat areas, particularly in the southern and central Great Plains. As a result, the Department of Agriculture cut its forecast of the winter wheat crop as of 1st April to 662 million bushels, 17 million below last December's estimate. Cold weather has caused considerable damage to fruits and vegetables in the south-east. But, with mechanisation and other modern farm technology available to offset adverse weather, it would take a major drought or flood to dampen seriously current prospects for another overall bountiful crop harvest.

Crop Surpluses at Record Level

Welcome as abundant harvests are to farmers, they pose a national problem at a time when crop surpluses are already at record levels. The 1st July wheat carryover is expected to be a record of about a billion bushels, enough to meet domestic requirements for 18 months. The anticipated 1st August cotton carryover of nearly 10.5 million bales, while not a record, is well over a year's domestic consumption.

Since Federal price supports for many farm products have been more attractive than market prices, the bulk of old crop carryovers will be owned by the Government. The Commodity Credit Corporation's investment in farm products at the end of February reached an all-time high of over $7.4 billion, up $1.2 billion over the year previous. Wheat, cotton and corn alone constituted over three-fourths of this investment, with the balance distributed over more than two dozen commodities ranging from tobacco down to honey.

The fantastic nature of this whole business is illustrated by the problem of merely finding storage space, particularly for wheat. Thanks to use of mothballed Government ships, big circus-type tents, and other temporary structures, existing grain storage facilities seem adequate until 1955 crops start to market. However, another large harvest would further aggravate the storage problem, especially if C.C.C. efforts in disposing of present stocks are not too successful.

C.C.C. officials are reported to be considering asking the Congress for $2 billion more borrowing authority, on the ground that the present $10 billion limit may not be enough to meet price support commitments during the coming crop season. Due to a similar situation, the C.C.C. borrowing limit was increased twice last year, first from $6.75 billion to $8.5 billion and later to the current $10 billion.

A Record of Failure

This demonstrates more forcibly than ever the failure of the agricultural price support policies pursued up to now. The piling up of surplus stocks of farm commodities has occurred, despite drastic cutbacks in acreage. For example, wheat acreage was cut nearly 17 million from 79 million acres in 1953 to 62 million in 1954, with a further cut to 55 million scheduled for this year. Cotton was cut 7 million acres, from 27 million in 1952 to 20 million in 1954, with 18 million indicated for this year.

Despite these restrictions, total crop output has held close to levels of post-World War II years when we were sending more wheat and other farm products abroad. The explanation is simple. With high, rigid support prices on basic crops, acreage controls have been offset by (1) heavier fertilisation and other intensive crop practices, and by (2) the shift of diverted acres to non-basic crops (such as soybeans and barley) which, despite lower supports, apparently still are profitable to produce for Government storage. In the case of wheat, many farmers are growing high-yielding, poor-quality varieties that return larger Government cheques at the expense of high-quality wheat needed by flour mills.

The upshot of this policy of high, rigid price supports has been self-defeating. By encouraging surplus production, it has had a continuing depressing effect upon farm prices and incomes. Under this programme net farm income has fallen from $16.8 billion in 1947 to $12 billion in 1954. Although the flexible support programme provided for in the Agricultural Act of 1954 has been denounced by its opponents as "ruining" the farmer, actually no crops have yet been marketed under that programme. The Act becomes effective for the first time with 1955 production. The diminishing effectiveness of high price supports is indicated by the number of farm commodities selling below the support levels.

Strangely enough, in the light of this record of failure, there are still people who advocate a return to the old system. In March, the House Agricultural Committee by a 23 to 11 vote favourably reported out a bill calling for fixed price supports at 90 per cent. of parity on basic crops during 1955-57 in lieu of the flexible support programme enacted last year.

Farmers Fed Up With Controls

Proponents of high price supports have argued that farmers were willing to submit to the controls necessary to maintain the higher prices. Recent reports, however indicate that farmers are becoming more and more fed up with controls and may reject the restriction necessary to bring supplies in line with 90 per cent. of parity supports or something close to it.

Many observers predict that wheat farmers this year may vote down marketing quotas on the 1956 crop. They cite farmers' growing resentment over controls, and the prospect of lower price supports for 1956. Actually, current estimates indicate price supports on wheat, if quotas are approved, ranging between 75 and 80 per cent. of parity. Apparently, the feeling is that farmers will not regard this as sufficient inducement to compensate for controls, and that they may prefer to take their chances with unrestricted plantings and free market prices.

We have referred to the tendency of many corn farmers to disregard price supports and the acreage restrictions that go with them. According to E. Howard Hill, President of the Iowa Farm Bureau, "over half our corn producers chose to give up eligibility for corn loans rather than make an acreage cut last year." Iowa farmers preferred to grow as much corn as they liked—and turn it into marketable meat.

Equally pertinent were remarks by Senator James O. Eastland of Mississippi, leader of the Congressional cotton bloc, before the annual convention of the American Cotton Manufacturers Institute last month. Declaring that mechanised American farms cannot operate under a programme of curtailed acreage and high support prices, he stated:

"Let me stress the fact that a one-third reduction in acreage (referring to the effect of cotton acreage allotments) by no means results in a corresponding reduction in farm operating costs. In fact, very little, if any, reduction takes place in overall costs. The acres taken out of cotton are put into corn, soybeans, grain sorghums or other crops. These acres have to be prepared for planting, then planted, cultivated and harvested.

"Forcing farmers to divert land from cotton to these other crops generally results in a loss which can only be charged to their cotton operation. Cotton farmers are just beginning to realise, for the first time, the very serious effect a smaller volume has on their net income."

Calling attention to the decline in American cotton exports and rising cotton production abroad, Senator Eastland went on to say:

"This trend proves the absurdity of the United States attempt to keep world cotton supplies in balance through production controls in this country. It further proves the absolutely false premise of any farm policy which prevents a farm commodity from meeting its competition."

Price Flexibility Essential

If farmers reject production controls, prices must be allowed enough freedom to perform their function in adjusting supplies to demand. The flexible price support programme enacted by the Congress last year is a big step in this direction.

One of the great weaknesses of attempting to curb overproduction by acreage restrictions is that, by and large, they apply across the board, making no allowance for variations in farmer efficiency, suitability of land, etc. The efficient and inefficient, the good farms and the poor, are cut down alike. There is a minimum of sifting out, and of incentive for farms to be devoted to products for which they are best suited.

We hear a great deal about the drought and dust-storms in certain areas of the west and south-west. The truth is that, for the most part, these areas should never have been taken out of pasture and planted to wheat, and would not have been but for the high prices brought about first by the war and later maintained by Government price supports. As a recent newspaper statement by Grover C. Helm, President of The National Bank of Bloomington, Illinois, put it:

"We are more than ever convinced that the high support prices on agricultural commodities have been one of the causes of the deterioration of the soil in the western and south-western States. Much of the thin land that was used for grazing has now been ploughed up and put into wheat, and, as a result, the high winds during the winter months have blown the topsoil in every direction."

We referred to the tendency of some wheat farmers to concentrate on high-yielding wheat to sell to the Government rather than upon quality wheat for the flour millers. Secretary of Agriculture Benson, in an address before the Pacific Dairy and Poultry Association at Salt Lake City in March, elaborated on this theme and brought out clearly some of the distortions created by high price supports, as follows:

"In talking about this wheat surplus problem, we lump all wheat together—spring and winter—hard and soft—red and white—high protein and low protein. Yet farmers know there can be at least as great a difference between different types of wheat as there is between Holstein and Hereford cattle.

"At a time when we have a record-breaking surplus of wheat in the United States, there is an acute shortage of durum wheat and a tight situation with respect to high protein milling wheat. Flour has been selling at the highest prices since 1920.

"Farmers in some parts of the country have been concentrating upon exceptionally high-yielding wheat, rather than upon quality wheat. Since the grain is produced for sale to the Government at a fixed guaranteed price, rather than for conversion into bread, the sole objective is to grow as many bushels as possible on the allotted acreage.

"Unrealistic price supports have brought about a sharp rise in wheat production outside the area we normally think of as the commercial wheat country. The Corn Belt has become the source of more wheat. So have the grasslands of the southern Great Plains and the dairy regions of the north-east.

"In Illinois, the 1953 wheat acreage was 51 per cent. above the 10-year average. In Michigan, it was up 46 per cent. Even in New York, the increase was 36 per cent. One 'dust bowl' county of eastern Colorado, which reported a mere 5,000 acres of wheat in 1939, had 365,000 acres in this one crop by 1952 as the 'suitcase' farmers and speculators moved in."

What has been the result? As Secretary Benson went on to point out:

"Now, farmers in the low-cost areas where most of our wheat has been produced in recent decades find themselves in the same production strait-jacket as growers in States less favourably suited to efficient wheat production. The man who has been growing quality wheat for the market gets cut back on the same basis as the man who grows wheat for the Government loan."

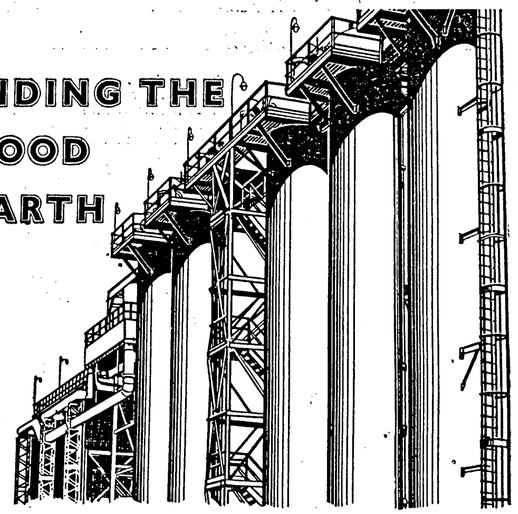
AIDING THE GOOD EARTH



The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

REVIEW OF CUSTOMS PROCEDURES

NEED FOR AN ENQUIRY COMMITTEE

THE mercantile community in India may be said to have won most of its battles in freeing the import control system from unnecessary shackles and avoidable impediments, so that the country's requirements of essential commodities could be imported without much delay. The same cannot be said of its efforts at securing relief from costly customs formalities and cumbersome procedural matters. In the result, the importers and through them the country have not received the full benefit of rationalisation of import controls. Consequently, it was only quite appropriate that the Indian Merchants' Chamber, one of the leading organisations representing the business community in Bombay, should have taken up for discussion the difficulties and problems arising out of customs procedures with Mr. E. Rajaram Rao, Member, Central Board of Revenue (Customs), on the 5th inst.

One of the serious difficulties experienced by importers in this country arises out of the absence of provision for appeal from decisions or orders of customs officials. Under the Sea Customs Act, as it exists today, the only remedy open to those who are aggrieved by the decisions of customs officials is to appeal to the Central Board of Revenue. No provision exists for appeals to an independent appellate machinery. Provision for such a machinery, however, exists in the Income-tax law. This body hears appeals from parties aggrieved by the decisions of the Income-tax officials. The Indian Merchants' Chamber has for long been suggesting the desirability of (*a*) setting up an independent Appellate Tribunal for customs purposes also on the lines of the independent Appellate Tribunal for Income-tax purposes and (*b*) making the necessary provision for the same in the Sea Customs Act. This suggestion was discussed by the Chamber with Mr. Rajaram Rao. It is gratifying to note that the matter is, according to Mr. Rao, now under the active consideration of the Government. It is to be hoped that the Government will expedite its decision and take prompt steps to appoint an independent appellate machinery for customs purposes as early as possible.

Lack of uniformity in assessment of import duties at different ports is another difficulty about which the trading community has been complaining for a considerable time now. The examples given by the Chamber are astounding. Thus, blowers equipped with motors of more than ¼ h.p. were hitherto assessed to duty at the rate of 5¼ per cent. *ad valorem* under item 72(b) of the Indian Customs Tariff. A recent consignment of blowers imported into the Port of Bombay was assessed to duty at 50 per cent. under item No. 73(18). However, at the other ports, consignments of blowers have been assessed to duty, only after separating the motor, at a lower rate, and the blower portion at 37½ per cent. as electrical appliances. Similarly, art silk fabrics in Bombay are subject to a duty based on the market value of these fabrics, while in other ports they are based on the invoice value of the goods. Such lack of uniformity in assessments results in placing the Bombay importer at a disadvantage *vis-a-vis* that of his confrere in other ports. Alluding to this discrimination, Mr. Rao is reported to have agreed, in principle, with the Chamber's suggestion regarding the need for achieving uniformity in assessment, and stated that it was inevitable that there might be difference in the basis of assessment to duty of particular items at the various ports, as the Collectors of Customs had sometimes to use their discretion in determining the classification of articles for purposes of assessment. He, however, added that, whenever instances of such differential basis of assessment were brought to the notice of the Central Board of Revenue, the latter would do the needful in the matter.

Changes in Classification

There have also been innumerable instances where goods belonging to one classification of the customs schedule are treated under another classification under the same schedule and assessed at a higher duty. An instance of this is seen in the case of Sheafer's Crest De Lux fountain pens. These, hitherto allowed to be cleared under the customs item No. 45(3), are now deemed to be cleared under item 61(8). As a result of this, the duty on these pens is now 78¾ per cent. as compared with 30 per cent. formerly. As the pen is not capable of being used for any other purpose than writing, though it is plated with gold, there does not seem to be any justification for a change in the classification of this article. This point, too, was brought to the notice of Mr. Rao. In this context, the Chamber made another suggestion to the effect that, whenever there was a change in the classification of an article, commitments entered into with foreign suppliers prior to the date of the announcement of the change in classification should not be affected by new classification and that goods imported under such commitments should be allowed to be cleared under the old classification. To this Mr. Rao replied that, under the law, customs could not postpone the date of enforcement of a new classification. Further, he said that there were administrative difficulties in allowing clearance of goods imported in terms of prior commitments under the old classification.

The Chamber also drew attention to the recent amendment to the Sea Customs Act, according to which the onus of proof in regard to smuggled goods would be shifted to the importer, and expressed the hope that the Government would take necessary steps to avoid hardship and harassment to *bona fide* persons, while enforcing the new provision. Replying to this suggestion, Mr. Rao drew the attention of the Chamber to the assurance given by the Minister in Parliament that the new provision would be implemented in such a way as not to cause any harassment to *bona fide* persons and stated that the assurances would be observed by the Customs Department both in letter and spirit.

Delay in Chemical Tests

Mr. Rajaram Rao was also apprised of the inconvenience caused to importers by the inordinate delay in the submission of chemical tests on the samples drawn from the imported consignments. In the absence of results of such tests, the exact classification of the imported goods and the import duty cannot be decided. In the case of seasonal goods, particularly, such difficulty is more keenly felt as the traders are likely to be put to financial loss owing to the delay in clearance of goods and to a possible fall in prices during the intervening period. It is true that the importer is allowed the facility to clear the goods, when the classification of the imported article is in dispute, on his executing a bond to pay the difference in duty as subsequently determined on the basis of the chemical test. But the difficulty is that the bonds are required to be countersigned by a Scheduled bank and the Reserve Bank of India. For getting such a countersignature from the Reserve Bank of India, the importers are required to deposit a large sum with the Scheduled bank. This means locking up substantial funds otherwise available for business purposes. Consequently, the Chamber pleaded that the chemical tests should be expedited in the shortest possible time.

The Chamber made another suggestion, that the Government should appoint at an early date an Enquiry Committee, with non-officials represented on it, to scrutinise the customs procedures and formalities required to be observed by importers and exporters and to suggest steps for simplifying them. Mr. Rao replied that the Government would certainly give its consideration to this suggestion.

The Central Government has decided to continue the free licensing of export of castor oil on shipping bills upto the end of August, 1955 to all permissible destinations, excluding Portuguese Possessions in India by (1) established shippers who have already established their basic year exports of castor oil, effected by them during any one of the calendar years 1951, 1952 or 1953, and (2) non-established shippers who are eligible to export castor oil. Exports by others will not be permitted.

PROTECTION TO GLUCOSE INDUSTRY

POOR PROGRESS ATTRIBUTED TO SEVERE COMPETITION

PROTECTION was first granted to the glucose industry in 1948. In that year, the then existing revenue duty of 30 per cent. *ad valorem* was converted into an equivalent protective duty. The protection was for a period of two years ended on 31st March, 1950. Subsequently, the duration was extended up to 31st December, 1953. Meanwhile, in 1951 a surcharge of 5 per cent. was levied, and the duty was consequently enhanced to 31½ per cent. *ad valorem*. The industry's case was once again reviewed in 1953 and protection was, as a result, extended up to 31st December, 1954, and the rate of duty on non-medical glucose was increased from the then existing level of 31½ per cent. *ad valorem* (inclusive of surcharge) to 50 per cent. *ad valorem*. Protection was further extended upto 31st December, 1955, by the Indian Tariff (Third Amendment) Act, 1954. As the protection is thus due to expire at the end of this year, the Tariff Commission has taken up the examination of the industry's case for continuance of protection after that date. As a preliminary to the investigation, the Chairman of the Commission, Mr. M. D. Bhat, opened the public enquiry on the 2nd inst. in its offices at Bombay.

It will be seen from the foregoing account that not only the period of protection has been extended but there has been an increase in the quantum of protection also. Besides this, a section of the industry, namely, liquid glucose, received protection through import restrictions too. For balance of payments considerations, the system of import quotas was introduced in 1953 and changes in the quotas were generally helpful to the industry, in that they ranged from 15 per cent. to 25 per cent. of half of the best year's imports. The point is whether this form of assistance would be continued after the expiry of the present period of protection. That would depend upon the balance of payments position, unless, of course, the Tariff Commission chooses to recommend protection through import controls also. The present position of the industry, as given by the Chairman of the Commission in his initial remarks opening the public enquiry, shows that the industry has a large leeway yet to make up. In this connection, Mr. Bhat observed: "Although the glucose industry has not so far been able to make much headway, it has a future, but its progress and stability would depend, in a large measure, upon the success it achieves in its efforts to maintain the highest standard of quality for its products and to lower its cost of production."

In 1946, the scope of enquiry was limited to liquid glucose. In its report in 1953, the Commission confined the scope of enquiry to non-medical glucose. Since then, it is stated that the Government has granted to three firms licences for setting up plants to produce crystalline glucose. In view of this development, the Commission may have to extend the scope of its enquiry to this product also.

Another difficulty which the Commission is sure to face in its investigations will be in regard to the estimated domestic demand for glucose. In 1953, the Commission estimated the demand for liquid glucose at 3,500 tons per annum. While some producers think that this estimate holds good for the present, others have estimated the demand for liquid glucose at 3,250 tons per annum and for dextrose at 1,950 tons. As the confectionery industry is the principal consumer of liquid glucose, its requirements are of a fluctuating character, estimated variously at between 2,500 and 3,000 tons. There appears to be a certain amount of uncertainty regarding the rated capacity. In 1951, the total rated capacity for manufacturing non-medical glucose was estimated at 5,350 tons in 1952, as compared to 3,600 tons estimated by the Tariff Board in 1947. The present rated capacity of four concerns is placed at 5,450 tons of liquid glucose. Of these concerns, however, one is stated to be having only a pilot plant and another has gone out of production since 1948. The present effective capacity is, therefore, expected to be no more than 3,100 tons. As regards glucose powder, the rated capacity of one firm is 300 tons per shift. But it is reported that permission for manufacturing it has been granted to three new units, with an aggregate rated capacity of 5,300 tons per annum; these are likely to go into production at the end of this year. While deciding the question of continuance of protection, account

CAUTION! Men at work
In the quiet of India's laboratories, much scientific work is being done today that will shape and mould our tomorrow. Research work has already begun on our most pressing problems. In our 11 National Laboratories, established and maintained under the Five Year Plan at a cost of Rs. 4.6 crores, scientists can now work with much more facility than was possible before.
In this work of our scientists, and in the making of the Plan which has made that work possible, paper is indispensable.

Agents.

FORBES BUILDING,
HOME STREET, FORT,
BOMBAY, *7th May*, 1955.

MANCHESTER LETTER

(*Concluded from page* 925)

West Africa remain the best customers. Australia took 29,875,000 square yards, as against 30,231,000 yards last year and Nigeria 17,831,000 yards, as against 17,079,000 yards. Shipments to the Gold Coast increased from 8,403,000 yards to 12,915,000 yards, but business with South Africa slackened from 23,133,000 yards to 15,878,000 yards.

Sales of cotton yarn during the first quarter of the year were widely distributed, such countries as Canada, the Irish Republic, Finland, South Africa and India all taking more than 500,000 lbs. Out on her own is Australia as a consumer with 1,920,956 lbs.

From the table above, it can be seen that imports of cloth into this country are now not far short of two-thirds the volume of exports. Practically 100,000,000 yards of grey and finished fabric reached Britain in the first quarter and the rising trend of arrivals has not been halted.

Chief suppliers of grey cloth remain India, with 43,677,000 yards, as against 25,468,000 yards a year ago. Big advances, however, have been made by Japan, the shipments of which amounted to 27,148,000 yards in the quarter, as against only 2,258,000 yards last year, and by Hong Kong whose mills have already sent 13,127,000 yards, as against 1,736,000 yards, a year ago.—*All Rights Reserved.*

COMMERCE AND INDUSTRY

(*Concluded from page* 940)

would also be taken of this development. Withdrawal or a reduction in the quantum of protection, may affect the plans of these concerns.

A disquieting fact about this industry is the poor rate of actual production in 1953 and 1954 by the two principal producers with a total rated capacity of 3,100 tons. Their total production of liquid glucose amounted to 73 tons in 1953 and 170 tons in 1954. The reasons for this poor performance will also have to be ascertained.

The principal raw material required for the manufacture of glucose is pure starch with a strictly limited content of protein and soluble impurities. Until 1953, the industry was handicapped by high prices of maize starch. In 1953, the price of starch was Rs. 50-8 per cwt. As a result of increase in production, the price has since come down, the latest price being placed at Rs. 20 per cwt. This reduction should help the industry to reduce costs and increase its production.

As regards the quality of liquid glucose, the opinion of some consumers is not favourable to the industry. The defects pointed out by them are that it is not crystal clear and has traces of iron ore and that it is, therefore, not suitable for use in the manufacture of clear boiled sweets. Besides, in some cases, it has colour and smell which imparts off-flavour to the product, while in others the conversion is not properly controlled and the pH is considerably low. Differences between samples and the actual supplies are considered not uncommon.

The industry, however, has requested for continuance of protection mainly on the ground of consumers' prejudice against its products and of severe competition from well established manufacturers in foreign countries who can sell their glucose in India at very low prices. The industry has also asked for a complete ban on the import of liquid glucose and restriction on imports of crystal glucose. It has also requested that starch should be allowed to be imported free of customs duty till there is an improvement in the quality of indigenous starch. Before these demands are conceded, the Commission has to satisfy itself that they are justified by the facts gathered by it.

TRADE WITH MIDDLE EAST

Prospects of exporting Indian manufactured goods to the Middle East countries have been indicated by the goodwill trade mission which recently toured these countries. The mission, in its report, has pointed out that it is possible for India to enter the market for semi-capital goods, like light engineering products, straightaway.

There is a strong competition from West European countries for such manufactured goods. The mission has stated that Indian products could sell only if the prices are lower than European prices. More important than prices, the margins granted by Indian exporters to dealers should ensure proper maintenance and servicing facilities for items like diesel engines, sewing machines, electric motors, irrigation pumps and textile machinerry.

Regarding capital equipment, the mission has observed that at present India is not in a position to enter the Middle East market, but there is no reason why an export market for capital goods should not be developed gradually. The mission has recommended that a delegation of specialists, consisting of the representatives of the various export industries should make a thorough study of the market for semi-capital goods and manufactures to ascertain the exact needs of the countries in the region.

RESULTS OF ROHTAS IMPRESSIVE

GROSS PROFIT AT RECORD LEVEL—DIVIDEND RAISED AGAIN

AN all-round increase in production, except in sugar, thanks to the satisfactory implementation of the proposals for modernisation and expansion, a substantial rise in earnings and a further increase in the dividend level are the outstanding features of the Directors' report and accounts of the Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar, Bihar), for the year ended 31st October, 1954. The gross profit of the Company for the year under review has jumped up to a record level of Rs. 118.85 lakhs from Rs. 84.10 lakhs for 1952-53, to which level it had dropped from the previous best of Rs. 89.09 lakhs earned in 1950-51. The net profit amounts to Rs. 41.20 lakhs, an increase of Rs. 3.76 lakhs over that for the previous year. It, however, falls short of that (Rs. 46.78 lakhs) for 1950-51 by Rs. 5.58 lakhs.

The dividend on ordinary shares has been stepped up from 12½ per cent. for 1952-53 to 15 per cent. This is the third consecutive occasion when the dividend has been raised. It will be noted that the dividend has thus been doubled from 7½ per cent. paid for 1950-51, when the Company returned to the dividend list after a break of four years. By enhancing the dividend level to 15 per cent., the Directors have restored it to the record rate of 15 per cent. paid for 1942-43. It must, however, be noted that, between 1942-43 and the year under review, the ordinary capital has been raised by Rs. 84 lakhs. Thus, the latest dividend represents a distribution of 57 per cent. on the capital in 1942-43.

Expansion in Production

The expansion in production achieved by the Company in its various units during the year under review, as well as during the first five months of the current year, is reflected in the following comparative table:

TABLE I

	Year ended 31st October			Five months ended March, 1955
	1952	1953	1954	
Paper .. .. (tons)	13,644	12,338	16,074	7,793
Cement .. .. (tons)	835,020	802,716	853,238	135,559
Asbestos .. .. (tons)	..	2,029	4,334	1,990
Caustic soda .. (tons)	1,838	1,355	1,604	727
Power .. (k.w.h.)	74,809,508	73,612,150	83,191,000	36,046,730
Vanaspati .. (tons)	..	..	668	2,425
Sugar .. (maunds)	845,222	861,640	182,890	225,761
Sugar recovery (%)	9.50	9.78	9.72	10.07

Referring to the production during the year under review, the Directors make the following observations:

"Improved working and efficiency of the power house have been attained as a result of the modernisation that has been carried out during the year and since, with the installation of an ash-handling plant, change of stokers of the old boilers, reblading of the rotors of the old turbines and modification in the coal handling plant. The production of paper and boards has gone up by 30 per cent. The output of coated boards has doubled. This has been possible through the installation of a second coating plant during the year. The German Yankee Machine into production, but full output is expected to be attained only in the current year.

"Comparing the performance of the last four years, cement has registered a record output. The modernisation of the first cement kiln has been completed since the close of the accounting year and the full effect of the improvement in output and coal consumption will be obtained in the current year. In spite of the stoppage of one of the kilns for about 1½ months for remodelling, the output for the year is expected to exceed last year's. After remodelling, the coal efficiency of the old kiln has come up to the level of the new kiln. The asbestos cement unit has shown significant improvement. Apart from increase in the output of asbestos cement corrugated sheets, which has gone up by 50 per cent., plain and tile pattern sheets have been manufactured and introduced in the market. They have been received well. The manufacture of other useful items such as door frames and shutters has also been undertaken. This unit should soon contribute to the improved working of the Company.

"The *vanaspati* factory which was closed in June, 1952, due to uneconomic working, was restarted and it went into production in the latter part of the year under review. Our popular brands 'Hanuman' and 'Rohtas' are gaining their market quickly.

"With regard to the sugar-factory, the setback has been due to non-availability of adequate sugarcane. Therefore, though the 16-mile-long railway line from Dalmianagar to Nasriganj has been working, full advantage could not be taken. As mentioned in the last report, your Company imported raw sugar for refining under the Union Government's scheme. Results have been satisfactory."

The following comparative table gives an idea of the Company's progress in financial results for the past three years:

TABLE II

(In lakhs of rupees)

	For the year ended 31st October			
	1954	1953	1952	1951
Sale proceeds	6,71.61	5,43.98	6,03.90	4,78.81
Other income	7.53	6.81	5.83	4.45
Stocks	79.52	67.07	83.32	61.11
Raw materials, stores, etc., consumed	4,01.14	3,02.79	3,96.45	2,78.93
Other expenses	1,71.59	1,47.44	1,60.92	1,35.53
Gross profit	1,18.85	84.10	84.68	89.09
Managing Agents' remuneration	8.85	5.60	5.73	6.42
Depreciation	43.80	41.06	39.70	35.89
Taxation	25.00	..	..	..
Net profit	41.20	37.44	39.15	46.78
Transfer from reserves ..	..	..	1.15	23.25
To reserves	15.00	35.00	50.00	1.10
Dividends—				
Preference	5.41	5.41	5.41	15.14
Ordinary	17.10 (15%)	14.25 (12½%)	11.40 (10%)	8.55 (7½%)
Carry forward	4.47	0.78	12.59	33.58

Reflecting the improvement in production noted above is the rise (*a*) of Rs. 127.63 lakhs in sale proceeds to a record level of Rs. 671.61 lakhs, (*b*) of Rs. 98.35 lakhs in consumption of raw materials, stores, etc., to Rs. 401.14 lakhs, and (*c*) of Rs. 24.15 lakhs to Rs. 171.59 lakhs in other expenses. After a break of six years, the Directors have made a provision of Rs. 25 lakhs for taxation. This large provision accounts for the relatively small increase of Rs. 3.76 lakhs in net profit, as compared with that of Rs. 34.75 lakhs in gross profit. The allocation to the general reserve, which had been reduced from Rs. 50 lakhs to Rs. 35 lakhs in the previous year, has been further cut to Rs. 15 lakhs.

The latest balance-sheet shows that the paid-up capital of Rs. 218.76 lakhs is supplemented by reserves and surplus aggregating Rs. 122.17 lakhs. Of these reserves, general reserve alone accounts for Rs. 100 lakhs, the entire amount having been built up out of the profits for the past three years. There is a debenture liability of Rs. 122 lakhs, made up of 10,000 4 per cent. bearer bonds of Rs. 1,000 each, issued in 1946 and repayable on 31st December, 1959, or earlier, and 2,200 6 per cent. bonds of Rs. 1,000 each repayable on 31st October, 1962, or earlier. The aforesaid 6 per cent. bonds are out of the total issue of Rs. 90 lakhs, the balance of Rs. 68 lakhs being lodged with bankers as security against overdraft. The current liabilities aggregate Rs. 225.27 lakhs and provision for taxation Rs. 25 lakhs. Of the above liabilities, loans from banks alone account for Rs. 124.17 lakhs. The gross block of the value of Rs. 699.97 lakhs, including an addition of Rs. 37.63 lakhs during the year under review, has been written down to Rs. 399.15 lakhs. The current assets amount to Rs. 314.06 lakhs and more than adequately cover the current liabilities and provision for taxation.

The further modernisation and development programme of the Company which is on hand is explained by the Directors as follows:

"The programme of modernisation and extension of capacity of the paper and board units and the bamboo pulp and soda recovery plants is going on according to plan. The machinery ordered have started arriving and installations are going on apace. Your Company has further placed order for one more paper machine.

"The increase in the production capacity of the board plant has already been partially achieved. The modernisation of the wet portion of the board plant will be completed by the middle of this year resulting in substantial increase in production. The drier portion expansion will be completed before the end of the year, when full increase, as contemplated, will be achieved. The expectations of your Directors in the stepping up of the capacity and new lines of manufacture must be partially fulfilled by the close of this year and completely by next year, when the total capacity will exceed 52,000 tons of paper and boards.

"To meet the increased requirements of the pulp and paper factories, the capacity of the caustic soda and chlorine plant is required to be augmented. Your Company has, therefore, placed order for the latest type of Mercury cells and electrical equipment, installation of which would reduce power consumption. The plant is expected to go into operation by the end of this year with a capacity of about 5,000 tons of caustic soda and 4,500 tons of chlorine per year."

The trend of production during the first five months of the current year has been encouraging, as will be seen from Table I published above.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 24-3 *ex-div.* On this basis, the latest dividend gives a yield of 6.2 per cent. per annum, free of tax.

TRAVANCORE RAYON'S EARNINGS BETTER

DIVIDEND STEPPED UP

THE maiden dividend of 5 per cent. on ordinary shares paid by Travancore Rayons Ltd. (Managing Agents: Messrs. Emcete and Sons [Travancore] Ltd. Rayonpuram, Travancore-Cochin State) for 1953 has been followed up with a higher distribution of 6¼ per cent. for the year ended 31st December, 1954. This is in consonance with the Company's encouraging performance during the past year, as witness the record production, sales and profit. The gross profit, which had jumped up from Rs. 17.47 lakhs for 1952 to Rs. 40.38 lakhs for 1953, has further risen to Rs. 47.68 lakhs, which exceeds the previous record of Rs. 42.23 lakhs by a handsome margin. The net profit also has established a fresh record with a rise from Rs. 15.56 lakhs to Rs. 22.31 lakhs.

Out of the net profit, the Directors have transferred Rs. 12.75 lakhs to the deferred taxation reserve, in order to meet, without financial or business dislocation, the deferred income-tax liability likely to arise in the coming years. It is with this object in view that they have also transferred the entire sum of Rs. 3.25 lakhs standing to the credit of contingency reserve to the deferred taxation reserve, bringing it to Rs. 16 lakhs. Consequent on this large transfer from the year's profit, the dividend on the ordinary shares has been restricted to 6¼ per cent. The Chairman has justified this modest dividend on the ground that a conservative dividend policy is being pursued in the interest of a steady future and the need for providing funds to meet the expansion programmes.

The Directors observe that the trading conditions during the year were satisfactory. The demand for rayon yarn, they say, was steady and the demand for transparent film was good due to the popularity, which the Company's products have gained in the market, and the increased use to which they are put. It is stated that the transparent film has found new users in this country, particularly the textile industry. The prices for both rayon and transparent film were stable. In addition to these factors, the Government's policy was also helpful in pushing up the Company's sales. The balanced import restrictions of the previous years were maintained during the year under review also, thus affording necessary relief to the indigenous industry. Nevertheless, the recent announcement of an excise duty of 10 per cent. on paper is stated to have put up the cost to the consumer and the effect of this imposition remains to be seen.

The salient features of the Company's working results for the past four years are given in the following comparative table, so as to provide an idea of its progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	161.65	152.97	57.92	104.49
Closing stocks	31.00	40.71	56.15	30.23

Dividends—				
6% preference (tax free)	2.50	12.50‡	0.94§	..
Ordinary	6.24	5.00	..	..
Carry forward	(6½%) 1.22	(5%) 0.41	2.84	4.93

* Deferred taxation reserve.
† Reserve for contingencies.
‡ For five years from 1949 to 1953.
§ For three years from 1946 to 1948.

The balance-sheet of the Company as on 31st December, 1954, discloses that the paid-up capital of the Bank is unchanged at Rs. 149.92 lakhs. Excepting for a sum of Rs. 16 lakhs provided for deferred tax liability, there are no reserves. The current liabilities amount to Rs. 137.75 lakhs, having gone up from Rs. 117.42 lakhs as at the close of 1953. The loan from the Travancore-Cochin Government, secured by 4 per cent. first mortgage debentures, has been reduced from Rs. 44 lakhs to Rs. 31.50 lakhs, excluding interest accrued, as per the modified terms of repayment of the debenture loan agreed upon by the Government. The unsecured loan from the State Government is, however, unchanged at Rs. 30 lakhs. Loans from banks secured by raw materials and stock-in-trade have, on the other hand, gone up from Rs. 11.81 lakhs to Rs. 16.67 lakhs and unsecured loans from Rs. 7.77 lakhs to Rs. 16.67 lakhs. The gross block of the value of Rs. 275.67 lakhs stands written down to a book value of Rs. 175.39 lakhs.

(*Continued on next page*)

Points From The Chair

Training of Agents

"SELECTION and training of agents is a subject that deserves the special attention of insurers in India, because the better the selection and training of agents, the greater will be the business that they secure and the better will be the morale of the Indian insurance world. As selection standards are raised and training is imparted to the selected ones, the double purpose of building up of public goodwill and removing the ill-will caused by some of the less competent agents in the past will be very well served. In this regard, I am glad to report that the Indian Life Assurance Offices Association is trying to prepare an aptitude index test for insurance agents suitable for Indian conditions on the lines of a similar test prepared by the Life Insurance Agency Management Association of America. The Indian Association is also evolving a suitable syllabus for the purpose of training insurance agents in India. This is a step in the right direction and, with such effective attempts at raising the standards of insurance agents, there is no reason why we, in India, should not have a very healthy and prosperous community of insurance agents working all over the country and producing very satisfactory results."

B. VAIKUNTA BALIGA,
Canara Mutual Assurance Co., Ltd.

Incentive—A Prerequisite for Speedy Development

"While on this subject of finding all ways and means of increasing production and employment and improving the standard of living, I would plead for a healthy co-ordination between the public and private sectors. There must be full scope and opportunities for creative abilities and talents, no matter wherefrom they come. Here, I would say a few words on the most maligned 'profit-motive.' In a free economy, incentive is the foremost prerequisite for speedy and dynamic development. There can be no greater incentive than an appeal to the fundamental instinct of man, namely, the urge to own things. I consider this a legitimate and rational concept, on the basis of which many countries of the world have achieved and are achieving phenomenal success and prosperity. Even in Communist countries, the principle of rewards according to efforts is slowly coming to be recognised. Then, I cannot but doubt the wisdom of far-reaching measures aiming at the negation of constitutional protection to private property, institution of constitutional provision regarding company management, elimination of the age-long and proven managing agency system, and so on."

A. R. RAMANATHAN,
Travancore Rayons Ltd.

Growing Free World Demand for Aluminium

". . . . the decision to expand further reflects what appears to be an unrelenting demand for primary aluminium. In many of our markets, aluminium has recently been and is now in short supply. Civilian consumption of our metal in most industrial countries has reached new high levels and, despite increased smelting output by ourselves and others, some shortages have developed. However, to see this situation in correct perspective, it is important to bear in mind that free world production is currently in excess of consumption and that such shortages as exist result from Government purchases for stockpile. We can only speculate as to how long these purchases will continue or what tonnages are currently being channelled to stockpile. The recently announced programme of the U.S. Government to defer or reduce its stockpile purchasing programme during the first half of this year should help meet the increasing civilian demand in the United States."

NATHANAEL V. DAVIS,
Aluminium Ltd.

(*Concluded from previous page*)

Besides the above gross block, machinery under erection accounts for Rs. 42.19 lakhs. The current assets (excluding machinery under erection) aggregate Rs. 87.31 lakhs.

There has been considerable progress in the Company's expansion schemes taken up in 1953. Most of these schemes will be completed by June, 1955. The second transparent cellulose film plant has been functioning since 7th March, 1955, and the production of this machine is being made available to the market. It will reach its peak capacity of four tons per day in a month or two. The moisture-proof plant and the printing and bag-making machines are expected to function by about June, 1955. The six Butterworth rayon spinning machines, now under erection, will also be put into commission by the middle of this month, making available a further quantity of 1.8 tons of rayon yarn per day, bringing the total daily production to 7.3 tons.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 14-6 *cum-div.* On an *ex-div.* basis, the shares give a yield of 4.5 per cent. per annum.

ROYAL DUTCH AIRLINES

At the annual general meeting of shareholders, on 4th May, 1955, the Board of Directors of Royal Dutch Airlines recommended the payment of a dividend of 5 per cent. on the ordinary shares and 4½ per cent. on the cumulative preference shares of the Company for the year. It may be mentioned here that the dividend was 4 per cent. on all shares.

COMPANY MEETINGS AND DIVIDENDS

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 20th May, 1955. Dividend: As. 10 per share. Transfer books remain closed from 14th to 20th May, 1955, both days inclusive.

BOKAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 25th May, 1955. Transfer books will remain closed from 17th to 25th May, 1955, both days inclusive.

KHARDAH CO., LTD. Half-yearly General Meeting, Calcutta, 26th May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 12th to 26th May, 1955, both days inclusive.

ASSAM SAW MILLS AND TIMBER CO., LTD. Annual General Meeting, Calcutta, 26th May, 1955. Transfer books remain closed from 13th to 26th May, 1955, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 27th May, 1955. Dividend: Rs. 12 per share (includes interim dividend of Rs. 2 already paid), payable on 28th May, 1955.

BHULANBARAREE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th May, 1955. Dividend: *Nil*. Transfer books remain closed from 13th to 27th May, 1955, both days inclusive.

BURRAKUR COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th May, 1955. Dividend: As. 10 per share. Transfer books remain closed from 13th to 27th May, 1955, both days inclusive.

ONDAL COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th May, 1955. Dividend: As. 8 per share. Transfer books remain closed from 13th to 27th May, 1955, both days inclusive.

STANDARD COAL CO., LTD. Half-yearly General Meeting, Calcutta, 27th May, 1955. Dividend: As. 12 per share. Transfer books remain closed from 13th to 27th May, 1955, both days inclusive.

CALCUTTA STEAM NAVIGATION CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: Rs. 3 per share. Transfer books will remain closed from 16th to 30th May, 1955, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 3rd June, 1953. Dividend: Rs. 4-8 per share (final), payable on 17th June, 1955. Transfer books will remain closed from 20th May to 3rd June, 1955, both days inclusive.

VICTORIA MILLS LTD. Annual General Meeting, Bombay, 9th June, 1955. Dividend: Rs. 15 per share, payable on 20th June, 1955. Transfer books will remain closed from 27th May to 9th June, 1955, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 9th June, 1955. Dividend: Rs. 10 per share, payable on and from 10th June, 1955. Transfer books will remain closed from 16th May to 9th June, 1955, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 15th June, 1955. Dividend: Rs. 5 per share, payable on 22nd June, 1955. Transfer books will remain closed from 20th May to 14th June, 1953, both days inclusive.

SARUGAON TEA CO., LTD. Interim dividend of Re. 1-8 per share, for the year ended 31st December, 1954.

TROPICAL PLANTATIONS LTD. Dividend of Rs. 5 per share, for the year ended 31st December, 1954. Transfer books will remain closed from 21st to 28th May, 1955, both days inclusive.

ANGLO-FRENCH TEXTILE SOC. ANON. Dividend of Rs. 5 per share, for the year ended 31st December, 1954. Transfer books remain closed from 10th to 22nd May, 1955, both days inclusive.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Dividend of Rs. 15 per share, for the year ended 31st December, 1954.

COMPANY REGISTRATIONS

BENGAL LINE LTD. (First Director: Mr. P. C. Ray.) Business: To purchase, charter, etc., ships. Authorised capital: Rs. 5,00,00,000. Public company. Address: 4, Lyons Range, Calcutta.

SHRI RAMANUJ DAS COTTON (SPG.) MILLS LTD. (First Director: Mr. Hariram Bagrodia.) Business: Spinning, weaving, etc. Authorised capital: Rs. 10,00,000. Public company. Address: 33, Netaji Subhas Road, Calcutta.

RESEARCH CHEMICAL AND GLASS INDUSTRIES LTD. (First Director: Mr. J. S. Gupta.) Business: Manufacturers and dealers in glass tubes, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 22, Prince Answar Shah Road, Calcutta-33.

U.T.C. LTD. (Managing Director: Mr. M. N. Ghose.) Business: Search for, prospect, examine and explore mines, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 25, Circus Avenue, Calcutta-17.

QUESTION HOUR IN PARLIAMENT

Second Five-year Plan

THE draft outline of the second Five-year Plan will be ready by the end of November this year. The draft would be prepared after discussions with the State Governments and the Central Ministries regarding their respective plans. The Plan will be placed before Parliament. The Planning Commission proposes to have meetings with the informal consultative committee of members of Parliament.

—*Minister for Planning*

Cess on Salt Production

The Government of India has decided to exempt small-scale licensed producers of salt working in areas up to 10 acres from the payment of cess. Encouragement of small-scale producers has been the main reason for this decision. The increased production of unlicensed factories in the Tuticorin area had affected the production of licensed factories in that area to some extent and the latter had to suspend production. But, according to information available with the Salt Department, there is no accumulation of stocks with the licensed producers. The Government has given up its proposal to introduce the system of restricting unlicensed production of salt to two and a half acres as it would result in discouraging small producers who have established themselves with great effort. Licensed manufacturers are not experiencing difficulties in regard to transport, while unlicensed manufacturers are not in a better position. On the other hand, the licensed manufacturers are able to send their salt under preferential as well as ordinary traffic, while the unlicensed manufacturers are able to send their salt under "ordinary booking" only. It may be possible and the Government is seriously considering the question of imposing quality control on salt.

—*Production Minister*

Expenditure of Embassies

The official team sent recently for surveying the expenditure of the Indian Ambassies abroad has not come across any major instance of extravagance. The report of the team is confidential and it is neither proper nor is it the practice to place it on the table of the House.

—*The Prime Minister*

Foreign Embassies

The purpose of the team was to make recommendations in regard to fixation of foreign allowances, equipment of embassies, etc., and also to look into the efficiency of foreign missions. The recommendations of the team are now under consideration of the Government. The team consisted of two Joint Secretaries of the External Affairs Ministry and one Joint Secretary of the Finance Ministry. A budget provision of Rs. 1.50 lakhs has been made for the expenses of the team, but the actual expenditure is not yet known.

—*Deputy Minister for External Affairs*

Import of Cotton Textiles from U.K.

During 1954, 3.8 million yards of cotton piece-goods were imported into India from the U.K., as against 3.9 million yards in 1953, 4.3 million yards in 1952, 5.3 million yards in 1951 and 4.7 million yards in 1950. Imports of other cotton manufactures from the U.K. were valued at Rs. 14 lakhs in 1954, Rs. 12 lakhs in 1953, Rs. 19 lakhs in 1952, Rs. 13 lakhs in 1951 and Rs. 3 lakhs in 1950. The imports of cotton twist and yarn in the same year amounted to 1,763,000 lbs., as against 2,061,000 lbs., and 2,516,000 lbs., 135,000 lbs. and 572,000 lbs., respectively. During 1954, 340,000 lbs. of sewing and darning thread was imported from the U.K. This compares with 1,068,000 lbs. in 1953, 732,000 lbs. in 1952, 947,000 lbs. in 1951 and 218,000 lbs. in 1950. There was no import quota for Lancashire textiles for the current year, as licences were valid on currency area basis and not for a particular country. Soft currency licences, he added, could be utilised for imports from Lancashire.

—*Minister for Commerce and Industry*

Art Silk Export

A scientific study section is being set up to examine the export possibilities of art silk by the Export Promotion Council. To capture foreign markets, the Council proposes among other things, to undertake market studies, send out trade delegations, appoint agents and representatives in foreign markets, and conduct propaganda. Specifications of quality and package of goods for export are under preparation in collaboration with the Indian Standards Institute.

—*Deputy Minister for Commerce and Industry*

Appellate Tribunal for Postal Department

A proposal to appoint an Appellate Tribunal in the Posts and Telegraphs Department either on an all-India basis or tribunals or on a zonal basis is under the Government's consideration.

Air Corporations

The number of aeroplanes with the Air Corporations as on 31st March, 1955, was 102, as against 100 a year before and 102 as on 1st August, 1953.

—*Deputy Communications Minister*

TRAVANCORE CEMENT PAYS MORE

VIOLENT FLUCTUATIONS IN PRICES TELL ON KHARDAH JUTE

Travancore Cements Ltd.

THE directors of the above Company (Managing Agents. Essel Ltd., Kottayam) submitted the audited accounts of the Company for the year ended 31st December, 1954.

The accounts show that a profit of Rs. 5,51,405 (Rs. 1,44,898) was made for the year 1954, to which was added the amount brought forward from 1953 of Rs. 2,86,431 (Rs. 3,92,454) making a total of Rs. 8,37,836 (Rs. 5,37,352). From this sum was deducted dividend for 1953 amounting to Rs. 2,50,000 (Rs. 2,50,000) donations amounting to Rs. 917 (Rs. 921) and income-tax refund of Rs. 1,135 (*nil*) leaving an available balance of Rs. 5,88,054 (Rs. 2,86,431). The directors paid a dividend of 6¼ (5) per cent. for 1954, which absorbed Rs. 3,12,500 (Rs. 2,50,000) and carried forward to the next year Rs. 2,75,554 (Rs. 36,431).

The Company proposes to manufacture white cement at the factory.

Since its inception, the Company has been working on maximum capacity. In each year, it has had long periods of reduced production and long periods when it has had to close down completely for want of electricity. This is over now. With the help of our cement, the electricity problem is now solved by our Government. In spite of these difficulties beyond our control, the 50,000 tons-a-year factory has a remarkable record of production. Barring a decline in 1952 to 45,000 tons, the Company's production has risen from 46,000 tons in 1950 to 49,000 tons in 1954.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Khardah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954:—

The revenue account after deduction of all working charges and commission shows a profit of Rs. 8,19,099 (Rs. 8,59,979) to which is added the amount carried forward from the last half-year of Rs. 94,623 (Rs. 3,07,185) making a total of Rs. 9,13,722 (Rs. 11,67,164) after providing for loss on sale of car Rs. 858 (*nil*), taxation Rs. 2,80,000 (Rs. 3,25,000) and depreciation Rs. 2,00,000 (Rs. 1,50,000) there remains an available balance of Rs. 4,32,864 (Rs. 6,92,164), which the directors recommend be dealt with as follows:—

For payment of dividends for the half-year ended 30th September, 1954, without any deduction in respect of income-tax paid by the Company on preference shares at the rate of 6 per cent. per annum Rs. 27,000 (Rs. 27,000), on ordinary shares at the rate of Rs. 5 (Rs. 7-8) per share Rs. 2,70,000 (Rs. 4,05,000), to be transferred to general reserve Rs. 1,00,000 (*nil*) and to be carried forward Rs. 35,864 (Rs. 2,60,164).

The mill worked 42½ hours per week until the 10th July, 1954, and 45 hours per week from the 12th July, 1954, until the end of the half-year, but with 12½ per cent. of the total complement of looms sealed in compliance with the main and supplementary working time agreements of the Indian Jute Mills' Association. The question of working hours was reviewed by the I.J.M.A. in September and in view of the considerably improved overseas demand and the consequent reduction in stocks of finished goods held by member mills, the Association decided to extend the weekly working hours from 45 to 48 as from 18th October, 1954, and this extension has since continued to be in force.

The period under review witnessed violent fluctuations in prices of both raw jute and jute goods. As a large jute crop for the season 1954-55 was generally anticipated at the time, prices were depressed but later when it became evident that the extensive floods in the jute growing areas of North Bengal, Assam and East Pakistan had resulted in an appreciable loss in the outturn of the present season's crop, prices recovered considerably. While the position of raw material supplies still continues to be a matter of controversy, it is now felt that the mills will not be faced with any actual shortage of raw jute, although the carry over at the close of the season will be less than has been the case for some years past. As a result of this shortage aggravated by the now rigid control of exports of Pakistani jute, prices of Indian jute advanced steadily during the latter part of the period under review, the increased cost of the raw material having thus rendered it extremely difficult to trade at a profit. The margin of manufacturing profit therefore continued to be very low, but this notwithstanding the profits for the half-year have been better than that of the period immediately preceding.

The directors report that they are presently negotiating with machinery manufacturers with a view to the purchase of modernisation equipment which will be installed in stages. It is felt that this rehabilitation programme is vital to ensure better working results. In order therefore to provide the necessary finance to meet this heavy capital expenditure, provision has been made by the transfer from profits of an appropriate amount to general reserve account.

Shri Ambica Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Harivallabhdas Kalidas and Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1954.

After providing a sum of Rs. 17,18,000 (Rs. 16,00,000) for depreciation and a sum of Rs. 18,00,000 (Rs. 18,00,000) for estimated taxation the working of the year showed a profit of Rs. 20,68,996 (Rs. 18,95,390). To this amount was added the balance of profit from the previous year Rs. 42,133 (Rs. 1,23,551) making a total of Rs. 21,11,129 (Rs. 20,18,941) out of which, the directors carried to reserve fund Rs. 5,80,160 (Rs. 1,00,000), to gratuity fund Rs. 50,000 (Rs. 75,910) and to investment reserve fund Rs. 13,139 (*nil*) leaving a balance of Rs. 14,67,830 (Rs. 11,41,467) after providing Rs. 1,00,000 for additional depreciation on machinery from which the following dividends were paid:—

Dividend on 5,600 first cumulative preference shares of Rs. 100 each at Rs. 5 (Rs. 5) per share free of income-tax for the year ended 31st December, 1954, Rs. 28,000 (Rs. 28,000), dividend on 7,000 second cumulative preference shares of Rs. 100 each at Rs. 4 (Rs. 4) per share free of income-tax for the year ended 31st December, 1954, Rs. 28,000 (Rs. 28,000), dividend on 57,963 ordinary shares of Rs. 50 each at Rs. 20 (Rs. 18) per share free of income-tax for the year ended 31 December, 1954, Rs. 11,59,260 (Rs. 8,96,454) and carried forward Rs. 2,52,570 (Rs. 42,133).

The directors state that they have not yet been able to carry out the proposals of capitalisation of a part of undivided profits standing to the credit of the reserve fund and the issue of bonus shares as also the consolidation of two ordinary shares of Rs. 50 each into one of Rs. 100 each, as per resolutions of the Extraordinary General Meeting of the Company held on 3rd October, 1954, since the necessary consent of the Central Government has not yet been received in that behalf. The directors, however, hope to receive such consent in the near future.

With regard to the Lal Mills, the directors state that a petition for winding-up of the said mill company has been filed on behalf of the Company in the court of the District Judge at Ahmedabad and the Hon. Court has passed orders accepting the petition and appointing Shri Balkrishna Harivallabhdas, a Director of the Company and a member of the managing agents firm as a provisional liquidator with powers to continue the working of the said mills until an effective order for winding-up is made.

There are 94,116 spindles and 1,733 looms in the mills.

Accounts in brief were as under:—

Jay Shree Tea Gardens Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December, 1954.

After making provision for depreciation, taxation and after making sundry adjustments and allocation of Rs. 15,52,300 (Rs. 10,00,000) to the reserve fund, there remained a balance of Rs. 5,57,001 (Rs. 59,519). Adding Rs. 83,892 (Rs. 24,373) being the amount brought forward from the previous year, there remained a balance of Rs. 6,40,892 (Rs. 83,892) at the [illegible] loss account. The directors paid a dividend on 5,85,690 ordinary shares at Rs. 1 (*nil*) per share free of income-tax Rs. 5,85,690 (*nil*) and carried forward the balance of Rs. 55,202 (Rs. 83,892).

The results of working during the year have been very satisfactory. The depression in the tea market, which set in in 1952, was over and the markets have been continually improving. There was a brisk demand for Indian teas throughout the year. Tea prices touched a peak in the months of December, 1954 and January, 1955 and the export quota rights broke an all-time record when they were sold at 384 pies per lb. The spiralling prices were, however, responsible for creating consumers' resistance in the United Kingdom—the main tea consuming country and this has resulted in sharp decline in tea prices during the last few weeks. The outlook for the current year, therefore, is not very bright specially in view of the continuous rise in the cost of production.

During the year the Company acquired three new estates: two estates namely Merchiston and Invercauled acquired for Rs. 11,05,000 are situated in one group in the Travancore and Cochin State, while the third, adjacent to the Company's existing Nahor Habi Tea Estate, acquired for Rs. 6,50,000, is the Rajabari Division of Messrs. Lukwah Tea Estate. The areas under tea in these estates are approximately as follows:—

Merchiston 489 acres, Invercauld 334 acres and Rajabari 265 acres.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	58,56,900	Block ...	57,00,000

Profit and loss account ...	55,203	Investments	1,95,947
		Cash ...	31,27,048
Rs.	1,35,33,486	Rs.	1,35,33,486

Central Distillery and Chemical Works Ltd.

The directors of the above Company (Managing Agents: Messrs. Krishna Gupta and Devalal, Meerut Cantt.) submit the audited accounts of the Company for the year ended 30th September, 1954.

The working during the year under review has been satisfactory and the net profit during the year, after providing for taxation depreciation, etc. amounts to Rs. 97,703 (Rs. 64,478). Adding to this, the amount of Rs. 8,032 (Rs. 16,783) brought forward from the preceding year, there is a total of Rs. 1,05,737 (Rs. 81,262) at the credit of the profit and loss account. The directors recommend the following dividend free of income-tax for distribution, amongst the shareholders out of the above amount as follows:—

On ordinary shares at As. 12 (As. 12) per share, on preference shares at Rs. 7-5-9 (Rs. 7-5-9) and on deferred shares at As. 14 (As. 14) per share. This will absorb Rs. 48,230 (Rs. 48,230) out of the balance amount, the directors further recommend that a sum of Rs. 50,000 (Rs. 25,000) may be taken to the general reserve account and Rs. 7,507 (Rs. 8,032) may be carried forward to the next year.

The Government of India has been pleased to sanction the extension of the plant from 5 lakh gallons to 12 lakh gallons per annum and the directors are trying to import an efficient unit from abroad. The Industry Ministry appears to be of the view that the Plant should be fabricated in India and further progress will be made in this connection as soon as the general policy is decided. In any case the Company will have to make heavy capital investment in the next year to carry out these extensions.

The economic disposal of spent-wash is still a problem with the Company, as with most of the other distilleries. The Company's products are still retaining their lead in quality and continue to be in demand all over the country.

The term of the present managing agents, Messrs. Krishna Gupta and Devalal expires on October 13, 1955. The Directors have proposed that Messrs. H. G. Gupta and Sons of which Mr. Hans Raj Gupta is the senior partner be appointed managing agents for 10 years.

Accounts in brief are as under:—

STRINGENCY IN MONEY KEEN

(From Our Own Correspondent)

BOMBAY, 11th *May*

There was a heavy demand for funds from banks in the short-term money market during the week under review. As the volume of floating money had already shrunk considerably, the broadening of demand created acute stringency in the market, with the result that banks had to look to the Reserve Bank for assistance on a greater scale than in the previous week. The call for funds by banks was, it is stated, due to heavy drawings by cotton textile mills for purchase of cotton and by sugar factories carrying large stocks.

Inter-bank call money was keenly bid by all sections of banks at 3 per cent. Short-term deposits for one to six months was in request at 3 per cent. House money was also taken up at 3 per cent.

For the second week in succession, the Government of India three months' Treasury Bill rate has declined. The average rate of accepted tenders, which had declined from Rs. 2-9-5 per cent. to Rs. 2-9-3 per cent. last week, has dropped to Rs. 2-9 per cent. per annum this week. The amount offered while the third, adjacent to the Company's existing in response to the usual invitation for Rs. 100 lakhs is also more at Rs. 156 lakhs, as compared with Rs. 122.25 lakhs last week and Rs. 110 lakhs two weeks ago. These results are somewhat anomalous in the context of the growing stringency in the short-term money market, but not inexplicable.

After contracting for two consecutive weeks to the tune of Rs. 14.56 crores in the aggregate, notes in circulation have staged a rise of Rs. 18.49 crores during the week ended 6th May, 1955. Notes held in the Banking Department show a fall of Rs. 20.68 crores with the result that the total notes issued are lower by Rs. 2.19 crores, which is covered by a decline of Rs. 2.15 crores in rupee coin and Rs. 4 lakhs in rupee securities. In the Banking Department of the Reserve Bank's returns for the week under review, the Central Government's deposits have dropped further by Rs. 93 lakhs, bringing them to just over Rs. 50 crores. Deposits by other Governments have dwindled by Rs. 11.78 crores and those of banks by Rs. 1.42 crores. A small rise of Rs. 57 lakhs is noted in balances held abroad. Loans and advances to others than Governments have risen by Rs. 5.04 crores, evidently due to the borrowings by banks against usance bills. There have been fresh borrowings against these bills to the tune of Rs. 14.94 crores during the week, reflecting the renewed stringency in the short-term money market. A substantial part of these borrowings had been repaid during the week itself, as witness the rise of only Rs. 5.10 crores in outstanding borrowings.

Minor variations are disclosed by the Scheduled banks' statement for the week ended 29th April, 1955. Demand deposits are lower by Rs. 1.13 crores, while time deposits are higher by Rs. 1.52 crores. Inter-bank borrowings show an increase of Rs. 49 lakhs. Borrowings from the Reserve Bank are up by Rs. 43 lakhs and those from the Imperial Bank by Rs. 49 lakhs. A fall of Rs. 54 lakhs is noted in advances and a rise of Rs. 90 lakhs in bills purchased and discounted. There has been an increase of Rs. 1.71 crores in investments. Cash on hand and balances with the Reserve Bank are unchanged, while balances with other banks disclose a fall of Rs. 38 lakhs and money at call and short notice an increase of Rs. 1.45 crores.

The Gilt-edged market displayed firm conditions, with an all-round enquiry for securities well sustained. The raising of the Reserve Bank's selling rates for 3 per cent. 1966-68, 3 per cent. 1970-75 and 3½ per cent. 1964 by a further one anna this week was responsible for the continued strength of the market. In the absence of any offerings, the volume of business was at a low level. By stepping up its selling rates for some securities for the second week in succession, the Bank has given a clearer indication to the market that it is preparing the way for the new loan. Keen interest is evinced in the market in guessing the terms of the new loan.

3 per cent. 1957 had enquiries, but the price was unchanged at Rs. 99-6. 3 per cent. 1958 was wanted an anna better at Rs. 99-5. 3 per cent. 1959-61 had buyers up to Rs. 97-9. 3 per cent. 1963-65 put on an anna to Rs. 93-12, as also 3 per cent. 1964 to Rs. 93-11. 3 per cent. 1964 was marked up by the Reserve Bank to Rs. 90-11 and 3 per cent. 1970-75 to Rs. 87-1. 3 per cent. 1986 Conversion Loan was steady at Rs. 80-14. 3½ per cent. 1961 National Plan Bond was well maintained at Rs. 99-11, while 3½ per cent. 1964 was in demand at Rs. 98-10, the Reserve Bank's selling rate this week.

Early in the week, the rupee gained some strength in terms of the U.S. dollar with a drop in banks' selling rate from Rs. 478½ to Rs. 478½ and in buying rate from Rs. 474½ to Rs. 474 per $100. But, today, there was a slight weakening and the initial gain was lost. Sterling displayed some easiness *vis-a-vis* the dollar. In New York, spot sterling dropped from $2.79½-2.80 to $2.79½-2.79¾, three months' forward from $2.78⅞-2.78¾ to $2.78⅞-2.78⅝ and transferable sterling from $2.77.3/16-2.77.5/16 to $2.77½-2.77¾.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 9th *May*

A steady undertone has been observed in linseed and firm prices have been maintained during the week under review. Trading has been small. Upcountry markets have remained firm and despatches to this centre are rather scarce. Enquiries from local mills mainly for ready goods have resulted in a small daily turnover. The oil section has been fairly active and the export demand has been somewhat better; keen enquiries from shippers at better prices have resulted only in a small turnover. The latest quotation is as follows: May-June Rs. 13-8 per maund.

BULLION DECLINES

(From Our Own Correspondent)

BOMBAY, 11th *May*

A bearish trend was in evidence in the bullion market during the week under review, in distinct contrast to the hectic rise noted during the previous weeks. The slackening of the demand in the ready section and tired bull liquidation in the forward were the main factors for the downward trend. The settlement of *Vaisakh* contract which expired on the 7th inst. in gold and on the 9th in silver passed off smoothly, but not without the bulls exacting as high a *badla* as Rs. 7-8 in silver and Rs. 3-6 in gold.

A feature of this week's trading was the widening of the spread between *Jeth* and *Ashad* forward contracts from Rs. 2-12 to Rs. 3-14 in silver and from Re. 1-6 to Re. 1-9 in gold, both in favour of bulls. To some extent, this was brought about by bears themselves, because they were anxious to force the bulls to pay more margins (under by-law 33-D) and thereby weaken their financial strength and hold on to their purchases. But, fortunately for the bulls, the margins under by-law 33-D on the *Jeth* settlement became inoperative automatically as the daily closing prices fell during the week below the official starting rates for this settlement, evidently due to selling by bulls themselves. Thus, the bulls were able to exact higher backwardation charges from the bears without payment of margin.

Silver for forward delivery in the *Vaisakh* settlement opened higher at Rs. 168-4 and, after a further hardening to Rs. 168-14, fell to Rs. 166 on Saturday. There was, however, a sharp rise to Rs. 169 on Monday, before the settlement ran out at Rs. 167-6. *Jeth* silver hardened from Rs. 162-5 to Rs. 162-10 early in the week, but dropped to a low of Rs. 160-1 yesterday. This represents a decline of Rs. 4-11 from the previous week's peak of Rs. 164-12. Today, however, it was a shade better at Rs. 160-7. Over the week, this settlement has lost Re. 1-14. The margin on outstanding purchases in this settlement became inoperative on Saturday, as the closing price on that day crossed below the official starting rate of Rs. 161-9. Since then, the margin has not become operative again. After an initial hardening to Rs. 159-14, *Ashad* silver fell to Rs. 156-6 and closed at Rs. 156-12, as against the week's opening rate of Rs. 159-12.

Ready silver (.996 mint) was marked down from Rs. 170 to Rs. 163-7. The floating stocks of silver are reported to be 1,000 bars. The daily average offtake was no more than 10 bars.

Gold for forward delivery in *Vaisakh* settlement opened at Rs. 95-7 and retreated to Rs. 94-12 on Saturday when the settlement ran out. *Jeth* gold began at Rs. 92-11, but was marked down to Rs. 90-6 before closing at Rs. 90-14. As the daily closing price on Monday fell below the official starting rate of Rs. 91-4, the margin clause became ineffective from that day onwards. *Ashad* gold declined from Rs. 91-5 to Rs. 89-5.

Ready gold moved down from Rs. 97 to Rs. 93. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,500 tolas on an average.

In London, silver disclosed a firm trend, having been marked up from 75½d. to 76½d. for spot and from 75½d. to 76d. for forward. Gold, on the other hand, moved between £12 10s. 5d. and £12 10s. 6d. before closing at £12 10s. 5½d. per fine ounce. Price of silver in New York was unchanged at 87 cents.

The following comparative table shows the trend of the market during the week under review:

	11-5-55	Highest	Lowest	4-5-55

POOR DEMAND FOR DUSTS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 5th *May*

The offerings in dust sale "I" which was held on Tuesday, 3rd of May, amounted to approximately 3,86,000 lbs. There was a poor demand for all types and prices were irregularly As. 4 to As. 5 easier with heavy withdrawals. Milled dusts continue to be neglected and the few types which sold were up to As. 8 easier. Better liquoring black leaf dusts were As. 2 to As. 3 easier.

Export Quota.—Some business was effected in special licence at 42 pies and new quota at 78 pies, but following the news that there would be no decrease in the rate of export duty, the market has eased and special licence is now quoted at As. 3 and new quota at As. 5½ sellers.

Forthcoming Auctions.—Sale No. 10 will be held on Tuesday, 10th May and dust Sale "J" will be held on Tuesday, 17th May, 1955.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd., wire:

"*Sale* 10:—Approximately 1.6 million lbs., of which 70 per cent. withdrawn without bids. Best liquoring teas and black leaf types useful demand at about As. 4 decline, whereas other teas sold prices dropped As. 6 to As. 8. Main interest from internal market."

FORWARD COTTON BUOYANT

(From Our Own Correspondent)

BOMBAY, 11th *May*

Buoyant conditions prevailed in the cotton futures market during the week under review. The driving force was provided by strict survey results and issuance of small tenders against May delivery. Tenders issued on Thursday and Monday aggregated not more than 100 bales and 400 bales, respectively, as against 400 bales on Monday last week. The low level of tenders is attributed to the preference of operators to sell their holdings in the spot market at higher prices, instead of tendering them against the contract and expose themselves to the risk of loss. There was, therefore, considerable nervous short-covering which was accompanied by renewed bull support induced by encouraging advices from the piecegoods market and reports of deterioration in quality of cotton in several producing areas. Consequently, quotations for forward cotton registered a substantial improvement over those prevailing at the close of last week.

A peculiar feature of the price movement in the futures market during the week under review was that the August contract which had all along been commanding a premium over the May contract was quoted at a discount. This was due to transfer of purchases from August to May contract and the consequent selling pressure on the August delivery. This, in turn, was the result of the eagerness of several shorts to buy May, as they had no cotton to tender. As these lines are written, the trend in the futures market remains fully firm. Cotton circles expect that the May contract will advance further in prices, if extensive short-covering follows against the reported overall short position estimated at more than 100,000 bales.

I.C.C. May contract opened the week at Rs. 577-8 and shot up to Rs. 600 on the 6th inst. At this level, profit-taking ensued and the contract receded to Rs. 590-12 on Monday. But, yesterday again, the market picked up strength and the contract moved up to Rs. 598. The improvement persisted today also, although, towards the close, there was a slight setback, the contract finishing at Rs. 595. I.C.C. August opened at Rs. 579-8 and rose to Rs. 590 on Saturday. After declining to Rs. 578 yesterday, it recovered to Rs. 583 today before closing at Rs. 580-8.

The trend of prices during the week under review is indicated below:

	4-5-55	*High*	*Low*	11-5-55
I.C.C. May ...	Rs. 575½	600	577½	595
I.C.C. August ...	Rs. 578	590	578	580½

The spot section depicted a fully steady trend during the week under review. There were renewed enquiries for domestic staple styles. Upcountry advices suggested that mills were interested in purchasing desirable lots of cotton and were offering even higher premiums for popular varieties. Khandesh, Vijay and Moglai met with enlarged buying enquiries and registered improvement in prices. Oomra *deshi* elicited good support from overseas interests. Demand for Bengals was slack and their prices suffered a fall. Among foreign cottons, moderate business took place in Karnak and Giza 30 mainly with Ahmedabad spinners for prompt shipment but at prices considered unremunerative by leading shippers. There was some business in small lots of Californians, East Africans and Sudans were neglected.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 540; Berar Jarilias Rs. 625; Khandesh Rs. 600; Vijay Rs. 775; Oomra *deshi* Rs. 560; Moglai Rs. 530.

A firm trend was in evidence in the Karachi cotton market during the week under review, in contrast to the easy conditions witnessed in the previous week. The firmness was aided by considerably enlarged enquiries from indigenous mills and also from overseas interests. Buying support emerged, as a consequence, and cotton prices registered handsome improvement. In the forward section, N.T. roller May contract was quoted yesterday at Rs. 64-15, as against Rs. 62-14 a week before. Similarly, May contract stood higher at Rs. 63-11, as against Rs. 61-14. The latest available quotations from the spot market at Karachi are: Sind *deshi* Rs. 58; Punjab *deshi* Rs. 50-8; 4F roller Rs. 38-3; 4F S.G. Rs. 63-3; Punjab roller Rs. 62-11; S.G. Rs. 67-11; 289F N.T. roller Rs. 66-15; 289F N.T. Sind S.G. Rs. 71-7; 289F Punjab roller Rs. 66-15; S.G. Rs. 62-11.

It is reported that Egypt recently concluded a barter deal with Russia covering an exchange of 13,900 bales of cotton (Karnak) for petroleum products. It is also reported that about 4,000 bales of Ashmouni and Karnak have been sold to Hungary. These reports would appear to have had no effect on the Alexandria cotton market. For Karnak prices have not only not advanced but have actually been quoted a penny per pound lower in India. The spot premiums of Ashmouni and Giza 30, however, have tended to look up of late, thanks to accumulation of stocks with the Cotton Commission which are not available for sale at present. At the end of April, the stock of these two varieties aggregated 31,744 bales and 50,547 bales, respectively. The premiums for entitlement currencies too have improved and the foreign buyers paying in these currencies, it is stated, get attractive discounts. But this has not stimulated purchases by them. The final estimate of cotton crop (excluding scarto) made by the Ministry of Agriculture places the production higher at 7,567,000 cantars, as compared with 7,082,000 cantars estimated in December last.

An auction of the new (1954-55) Sudan cotton is being held at Khartoum today. Offerings are estimated at 18,178 bales, of which Gezira "S" and "L" varieties account for 14,178 bales and Nuba Mountains for 4,000 bales. The trade response at the auction is expected to be encouraging, owing to downward revision in the reserve prices effected by the Gezira Cotton Board. Until recently, it will be recalled, the reserve prices had been fixed

higher, so much so that there was *no* lack of bids in the previous four consecutive auctions and the offerings had to be withdrawn. Even at the auction held on 27th April, 1955, only 299 bales of G4S out of 16,072 bales of "S" and "L" cotton on offer were sold. It is now estimated that the Sudan Gezira crop will produce 122,000 bales "S" and 136,000 bales "L", as against 125,092 bales and 165,651 bales, respectively, in the previous season.

The recovery in cotton prices noted in the Liverpool cotton futures market last week gathered further momentum during the week under review. It was induced by abolition of purchase tax on cotton goods and reduction in the import duty on U.K. textiles announced by the Government of India. The market put on a more cheerful appearance and cotton values continued their upward march. The improvement would have been more marked but for the absence of any positive statement from the U.S. Government on cotton policy. The latest available quotations from the market are: May-June 32.07d.; July-August 30.87d.; October-November 29.87d.; December-January 29.79d.

The New York cotton futures market ruled strong this week too on renewed trade demand and short-covering. A part of the rise in the price of nearby May was attributed to Liverpool buying against sales of October and beyond. The expectation of better export sales in the near future also imparted strength to the market.

The U.S. Congress has passed the Bill seeking to repeal the provisions of Public Law 480 which requires that privately owned stocks exported against funds made available to foreign countries should be replaced by C.C.C. loan or stocks. The provision had throttled exports to countries against 480 funds, because of the much higher prices that had to be quoted taking into account the cost of redeeming loan cotton. This had made the U.S. cotton too high-priced *vis-à-vis* comparable outside growths, so that the importing countries made little use of the 480 funds allocated to them. With the elimination of the "buy back" provision, it is generally expected that an impetus will be given to exports against 480 funds, particularly to those countries which require shorter staple cottons. The U.S. Department of Agriculture has announced that the loans on the last season's crop of upland cotton, maturing on 31st July next, will be extended up to 1st November next, after which date they will be bought by the Commodity Credit Corporation. The outstanding loans of the 1954 crop extra long-staple will be bought on 1st August, 1955.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-5-55	3-5-55	26-4-55
Spot	35.00	34.70	34.35
May	34.65	33.95	33.57
July	34.19	33.98	33.70
October	34.15	34.03	33.91
December	34.20	34.09	34.02

STAPLE FIBRE STRONG

(From Our Own Correspondent)

BOMBAY, 11th *May*

The rayon yarn market was devoid of any development during the week *under review*. In the absence of any inspiring factors, operators evinced little interest in fresh business. They were more inclined to await developments tomorrow when trading will commence in the new varieties of yarn which are included in the forward list. Transactions were, therefore, very much limited and values moved narrowly. The undertone of the market, however, remained fully steady. Rayon yarn for May delivery fluctuated between Rs. 732 and Rs. 735 before finishing at Rs. 733 same as last week. In the spot section, 150 Japan gathered 3 pies to Rs. 4-1-9. 120 Japan and 150 Italy were fully maintained at Rs. 3-14-6 and Rs. 3-12, respectively. 120 Italy, however, eased by half an anna to Rs. 4-2 for want of support. Indigenous yarns also suffered losses. National Rayons 150 Bt. Hanks I grade dropped nine pies to Rs. 3-9. 120 Bt. cones I grade declined by half an anna to Rs. 4-0-6 and 150 Bt. cones I by three pies to Rs. 3-6-9.

Despite reports of heavy stocks in Bombay and Madras, the staple fibre yarn section ruled strong this week. Good enquiries from consuming centres, particularly Surat and Banaras, lent support to the market and staple fibre yarn values tended to look up. In the forward section, 40×2 May delivery spurted from Rs. 593-8 to Rs. 592, but closed lower at Rs. 589-4. June delivery advanced by Rs. 5-8 to Rs. 591 but closed easy at Rs. 588-4. Prices of spot yarn (40×2) also registered improvement. Kohinoors hardened by an anna and a half to Rs. 3-6-6. Sitarams and Seksarias were better by 3 pies each, the former at Rs. 3-2 and the latter at Rs. 3-0-6. New Greats, on the other hand, failed to receive support and lost half an anna to Rs. 3-2. Among foreign yarns, Sulcos firmed up by As. 2 to Rs. 4-8. Auroras rose by an anna to Rs. 4-3.

The marked improvement witnessed this week in raw cotton prices would appear to have had no effect on the cotton yarn market. Although transactions put through were fairly large, prices were generally a shade easy. Among 80 count yarns, Seksarias dropped As. 4 to Rs. 53-8. Finlays and Moderns, however, were throughout maintained at the last week's levels of Rs. 68-8 and Rs. 62-12, respectively. Among 60s, Finlays fell by a rupee to Rs. 61. Moderns lost As. 4 to Rs. 60-12. Among 20s, Maduras declined by As. 2 to Rs. 17. Centurys receded by an anna to Rs. 15-8. Among 10s, Elphinstones moved down by As. 2 to Rs. 12-10. Podars were quiet at Rs. 12-14. Deals in 40 counts yarns were restricted, in view of shortage of stocks. Thirty count yarns were quiet.

Overseas enquiries for cotton yarn are reported to be very encouraging and it is expected that all licences granted to the mills for export will be exhausted in the near future. Out of the estimated export quota for 15,000 bales of yarn for the second quarter of 1955, licences for 13,000 bales have already been issued.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	11-5-1955	4-5-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. May	733 0	733 0
120 Japan (per lb.)	3 14½	3 14½
150 Japan (per lb.)	4 1½	4 1½
120 Italy (per lb.)	4 2	4 2½
150 Italy (per lb.)	3 12	3 12
Staple fibre yarn—		
40 × 2 May	589 4	588 8
40 × 2 June	588 4	586 8
Sulco (per lb.)	4 8	4 6
New Great (per lb.)	3 2	3 2½
Cotton yarn (per bundle of 10 lbs.)—		
10s Elphinstone	12 10	12 12
20s Maduras	17 0	17 2
30s Maduras	21 4	21 4
40s Seksaria	—	22 6
60 s Moderns	60 12	61 0
80s Seksaria	53 8	53 12

OILSEEDS DULL

(From Our Own Correspondent)

BOMBAY, 11th *May*

The oilseeds market presented rather dull conditions. Despite the decision of the Government of India to continue free licensing of exports of castor oil on shipping bills up to the end of August, 1955, to all permissible destinations, excluding Portuguese possessions in India, there was hardly any movement of prices worth noting in the castorseed section. For there was very little enquiry at the prevailing rate of £78 to £80 per ton of castor oil, Commercial quantity from the U.K. and the Continent. The *groundnut section* ruled slightly easy on lack of demand for the oil both from inland centres as well as overseas markets. The *linseed section*, however, ruled better on expectation of revival of interest in linseed oil from the Continent. The *kardi* seed section lacked support, while *nigers* ruled firm. Business transacted during the week under review was, on balance, small and price fluctuations confined to narrow limits.

In the castorseed section, May delivery opened the week at Rs. 73-1 as against Rs. 72-15. After fluctuating between Rs. 73-3 and Rs. 71-6, it closed lower at Rs. 71-12. Market circles expect a smooth settlement in May delivery contract, as the bulk of the business in this position has been transferred to September. September delivery, which changed hands at Rs. 78-3 early in the week, as against Rs. 76-13 on the previous day, was done today, at Rs. 77-8, the highest and the lowest touched during the week being Rs. 78-7 and Rs. 76-10, respectively. Among spots, Madras quality was almost quiet at Rs. 14-12. Castor oil was dull at Rs. 13-8.

According to the Press Note issued on the 10th inst., established shippers who have already established their basic year exports of castor oil, effected by them during any one of the calendar years 1951, 1952 and 1953, and non-established shippers who are eligible to export castor oil in terms of the notice No. 4613, dated 17th December, 1954, issued by the Joint Chief Controller of Exports, Bombay, will be eligible for export licences.

Bold ready, in the groundnut section declined from Rs. 21-10 to Rs. 21-8. May-June delivery was done lower at Rs. 21-10, as against Rs. 22-1, and August-September at Rs. 22-5 as compared with Rs. 22-10. Khandesh quality eased from Rs. 21-12 to Rs. 21-8. Groundnut oil ready suffered a loss of an anna at Rs. 11-8. June delivery was lower by an anna and a half at Rs. 11-11.

Last week's showers in Madras and a number of other groundnut producing centres in the South have greatly benefited the summer crop. They have also helped early sowing of the winter crop in certain Southern districts.

In the linseed section, Bold ready gained As. 7 to Rs. 22. April-May delivery improved from Rs. 22 to Rs. 22-8 and June-July from Rs. 21-9 to Rs. 22-5. Linseed oil put on As. 6 to Rs. 13-4.

Among others, *kardi* Bold was quiet at Rs. 12, while *niger*, Madras quality, put on Re. 1-4 to Rs. 18.

The Oilseeds Exchange has requested the Government of India to *permit free exports of kardi* and *niger* seeds, and if that is not possible to fix separate ceilings for their exports.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	10-5-1955	4-5-1955	27-4-1955
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	21 8	21 12	20 10

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 11th *May*

The sugar market presented fully steady conditions during the week under review too. The steadiness was due principally to an all-round increase of As. 8 per maund in the ex-mill quotations for sugar. There was, besides, sustained demand from consuming centres. Operators were interested in enlarging their commitments and prices of sugar ruled firm.

Small grain indigenous sugar in the spot section picked up As. 8 to Rs. 88-8 per bag. Medium grain improved from Rs. 89-93 to Rs. 89-94. Large grain was quoted at Rs. 96-101, as against Rs. 94-102 a week before. Among foreign sugars, Czechoslovakian sugar *met with special* buying support and strengthened from Rs. 84½-86 to Rs. 86-88 per 220 lbs. German and French sugars were *fully steady* at Rs. 80 and Rs. 82-84 *per 220 lbs.*, respectively. British refined sugar, however, was a shade easy at Rs. 84, as against Rs. 84-4 per 224 lbs.

In the forward section, *Jeth* delivery hardened by As. 2 to Rs. 83-3 per bag. *Shravan* delivery which had receded from Rs. 87-8 to Rs. 87-4 recovered to Rs. 87-8.

The sugar traders feel that the Union Food Ministry should follow a more liberal policy with regard to the release of indigenous sugar. This view is based on the need for ensuring the consumer adequate supplies of sugar at a fair price. In support of this view, the traders point to the absence of any programme for importing substantial quantities of sugar in the monsoon months and scant supplies of sugar with the Deccan mills. It is, therefore, stated that the major consuming centres have inevitably to look to the U.P. mills for their normal requirements of sugar. Besides liberalising releases, the sugar traders also want the Food Ministry to improve the wagon position, so that the wayside stations will be able to obtain their normal pre-monsoon requirements of sugar in time.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, 11th *May*

During the fortnight under review Malabar black pepper advanced on fairly good demand from New York, particularly for the shipment during the first half of *May*. *New York* is reported to have paid as high as $0.48 for the shipment by named steamers. Broadening of grinders' demand coupled *with reserved* offers from producing countries seem to have forced New York dealers to revise their ideas for the future of pepper.

Prices at Alleppey showed steady improvement from Rs. 1,000 to Rs. 1,087½. Growers in North Malabar and Travancore-Cochin area are reported reserved sellers. They sell only small quantity. At every next sale, they ask for a higher price. A strong undertone is reported with market distinctly in sellers' favour owing to tightness of physical stock as about 12,750 tons of Malabar pepper are reported to have been already marketed during November, 1954 to April, 1955, *for export* and for internal *consumption*. The volume of floating *stocks* at primary markets is reported to be very small. Sellers generally are reluctant to oversell, in view of unfavourable crop reports from Sarawak and Lampong. The impending dock strike at Singapore is also said to be responsible for the present strength in New York, London and India.

The *noteworthy* features of the fortnight were the meeting of the first Convention of all India Pepper Merchants at Bombay and the decision to create an Export Promotion Council for Pepper. The question of detention of pepper shipments to U.S. for the reason of mould and/or infestations was seriously considered from various angles by the Convention, and as a result, a cable was sent to the *President* of the A.S.T.A., at New York, suggesting him to arrange for the incorporation of a clause in the A.S.T.A. contract to cover insurance jointly against the risk of detention by the buyers, but his reply proved unsatisfactory. Consequently, the members of the Convention, before taking any further steps, decided among themselves to create a voluntary pool called "contingent detention deposit risk" as a tentative measure to overcome risks arising out of detention of pepper during the monsoon. Every shipper is required to pay 1 per cent. of the value of his export towards the pool fund. It, however, now remains to be seen how the scheme works out in practice. In view of increased production in Sarawak and Lampong, the monopoly in pepper enjoyed formerly by India has now become past history. Indian exporters should, therefore, think twice before taking any embarrassing steps.

Garbled at Cochin touched Rs. 190, while small business in ungarbled was reported at Rs. 1,100 at Alleppey. May shipment (A.S.T.A.) was reported done at $0.46 while, June shipment changed hands at prices ranging from $0.45½ to $0.46, with reserved sellers.

In the delivery section, June and July deliveries were done at prices ranging from Rs. 910-20 to Rs. 990-1,000. The local daily offtake of pepper for rallment to mofussil was reported good.

Following are today's *nominal* quotations: Ready delivery Rs. 140 per Bengal maund and June Rs. 990-1,000, and July Rs. 990-1,000 per candy of 5¼ cwts.

RAW JUTE PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 10th *May*

In the continued absence of any real buying for export, prices of jute goods tumbled during the week under review. It was due to unloading by nervous stockists of heavy quantities in an attempt to get rid of their holdings, before the price situation worsened. The decline was precipitated by a single operator releasing his huge holdings, and he was reported to be in need of cash for covering his cotton deals in *Bombay*. Prices of raw jute also gave way, but the loss in goods was by far greater. Mills are not showing interest in raw jute, as they have adequate stocks, believed to last for about three months. These stocks had been bought at a time when prices were high, and as such, if mills were to sell goods at the present lower levels, the extent of losses mills would have to suffer could well be imagined. By all means, details of stocks with mills at the end of April, when published, would indicate rises, and this factor had already been taken into consideration in the market. If, however, the figures reveal results worse than the expectations of the market, a further nervousness is bound to prevail in the goods market. The situation is being closely watched by overseas buyers, who do not seem inclined to enter the market in its present lethargic state. If the market returned to steadiness, buying support from the United States and Argentina *could follow*.

There is need in the world for more jute goods, if they are offered to consumers at fair prices. It may be mentioned here that, last year, Dundee mills were able to produce 85 per cent. more goods than before the war. It is reasonable to say that the Dundee mills had also sold all these both for internal consumption as well as for export. With all the advantages India has got over Dundee—cheap labour and availability of raw jute nearer to mills are two of them—Indian mills are finding themselves in a situation where, rather than thinking in terms of increasing production, they are finding it difficult to work plants economically. *During this week*, there was a rumour that mills were contemplating to reduce working hours to 45 hours per present 48 a week, as a solution to reduce the heavy accumulating stocks. Subsequently, information available indicated that this rumour was baseless. However, if the present trend in the market continues, a reduction in production can be only a logical solution.

From Rs. 33-8, Assam bottoms old crop gave way to Rs. 31-8. Other constructions also lost by two points each. Pakistani new crop offers (forward) contained a provision for supply of Indian jute in case sellers failed to supply Pakistani jute. Buyers did not show interest in such conditional offers this week, but hoped that the position would improve. Some business was done in Indian new crop, but for nearer delivery, some premium was paid. However, mills believe that the next crop would be bigger, and that this would bring down prices.

Ready B. twills were being quoted at Rs. 114-6 early in the week. Some enquiries were received from overseas countries. But these were not sufficient to drive away the put towards the downward direction. In addition to this factor, there was the apprehension that as and when the stock figures as at the end of April were announced, prices would further tumble. Before this occurred, however, the *fatka* operators desired to lessen their commitments in an attempt to reduce losses. The number of offers increased, and the ready position sagged to Rs. 112. The July-September goods, at Rs. 108-8, lost as much as Rs. 5-8. At the lower levels, some covering was done, and the ready position recovered to Rs. 114 and the July-September to Rs. 110-8. These prices were maintained subsequently, and rumours of a possible cut in production encouraged prices to remain at that level. However, it was soon known that these reports lacked foundation, and a down-trend set in. As the week was closing, the ready B. twills were priced at Rs. 113-8, i.e., lower by As. 14 on balance. The lower level remained unaltered yesterday.

A similar trend was in evidence in hessians, 40" 10 oz. hessians opened at Rs. 42-15 and shaded to Rs. 42-2. Later on they recovered to close at Rs. 42-12. The 8 oz. hessians were priced at Rs. 34-6.

WHEAT RECOVERS

(From Our Own Correspondent)

HAPUR, 9th *May*

The foodgrains market ruled steady to firm during the week. The Union Government's announcement of new measures for stabilising wheat prices in the internal markets and support to the prices of wheat if they tend to fall below Rs. 10 per maund had the desired effect and the *dara* wheat prices which had touched the lowest level of Rs. 9-4 per maund last week-end improved during the week and were today quoted at Rs. 9-14 per maund. Fine quality was transacted at Rs. 11 per maund. The sale of imported wheat in Calcutta and Bombay has been stopped. This step is expected to increase the demand for indigenous wheat by at least 60,000 tons per month. The limit of purchase by flour mills in Bombay and Calcutta in the internal market has also been doubled by allowing them to buy wheat upto their requirements for the next six months. The purchase of wheat on behalf of the Government has also begun in many markets, including Hapur, but, as the *dara* wheat prices are very near the floor fixed by the Government, the quantity offered for sale to the Government has been very small. Daily arrivals of wheat here average 1,200 maunds and, after a fairly good offtake to consuming centres including Bihar, the stocks have swelled to 5 *khaties*. Wheat prices in the Punjab and P.E.P.S.U. have also recorded appreciable advance, from Rs. 9-8 to Rs. 11 per maund, due to Government purchases and grant of permission to export of Indian wheat products. In the Akola market, in Madhya Pradesh, wheat prices also improved from Rs. 29 to Rs. 31 per bag. In Madras, wheat prices continued unchanged at Rs. 33 to Rs. 35 per bag and at Rs. 12 to Rs. 12-12 per maund in Siwan market in Bihar.

Rice prices also ruled a shade firm, due to poor local stocks, and the latest prevailing prices here are: Rice *basmati* Rs. 26-8, *ramajwayam* Rs. 19, *raimunia* Rs. 20-8 to Rs. 21 and coarse Rs. 12-8 per maund. The coarse grain prices ruled steady, due to good seasonal demand and small arrivals of new crop. The latest prices as on Monday are: Barley Rs. 5-4, *bejhar* Rs. 5, gram Rs. 6 to Rs. 6-6. Stocks: Gram one *khati* and *bejhar* 6 *khaties*. The *jowar* prices also improved due to State Government purchasing. It was quoted at Rs. 5-8 per maund in east U.P. and about 5,000 tons of *jowar* have been purchased on State account. Pulses prices also recorded further gains during the week, *dara* quality improving to Rs. 5-5 per maund and fine quality was quoted at Rs. 7 per maund. Daily arrivals average 800 maunds which are very low as compared with last year and the local stock is now 12 *khaties*, as against 27 *khaties* at this time last year. Outside demand is moderate and some enquiry was also reported for export purposes. Arrivals of new crop of *arhar* are very meagre and the stock is almost *nil*, as against 15 *khaties* last year, and this too has resulted in *arhar* prices being ruling steady. Other pulses continued steady and the prevailing rates on Monday were: Urd green Rs. 10-4, black Rs. 11-12, *moong* Rs. 7-12 to Rs. 8-4 and *masoor* Rs. 6-4 per maund.

The pulses futures ruled firm in line with the ready section and the current quotations are: Peas *jeth* Rs. 5-6-6, *arhar jeth* Rs. 6-6-3, as against Rs. 5-1-4½ and Rs. 6-1-3, respectively, on the 2nd inst. The *bhadon* delivery transactions have also begun in peas and *arhar*. They were quoted today at Rs. 5-8-9 and Rs. 6-5-9, respectively.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 9th *May*

The last week-end steadiness in sugar prices was short-lived and prices ruled quiet during the week under review with the trade having adopted a hand-to-mouth policy. A panic condition had been created due to the abnormally heavy indigenous production expected and heavy imports. In east U.P., most of the mills have closed crushing operations, but in west U.P., due to bumper cane crops and low gur prices, half of the factories are expected to continue their season up to the 15th inst. and even onwards. *Khandsari*, reported good turnover in the producing markets in Muzaffarnagar District, on account of the marriage season demand, and prices recorded small gains. The latest prevailing mill-delivery prices are: Jaswant Rs. 29-2, Simbhauli Rs. 29-4, Mowana Rs. 29-5, Daurala Rs. 30-8, *Amroha* Rs. 29-7, *Bijnore* Rs. 28-8, Mansoorpur Rs. 30-8, Rampur Rs. 31, retail Rs. 32-4 and *khandsari* Rs. 21 to Rs. 26-8 per maund.

Ready *gur* prices continued to rule steady, due to decreasing arrivals averaging 300 maunds daily and fairly good offtake which was greater than daily arrivals. The stocks here have dwindled to 100,000 maunds, including that owned by the State Government. The latest prevailing prices are: *Gur* dry Rs. 9-14 to Rs. 10-4 and wet Rs. 9-7 per maund. Prices of *gur* in the markets in the south have also improved with the closing of the season and dwindling of stocks. Some exports have also taken place from Madras, but the export performance so far has been not very encouraging.

Gur futures ruled quietly easy and the latest quotations are: *Gur, asar* Rs. 9-12-7½, *phagun* Rs. 9-0-4½, as against Rs. 9-14-3 and Rs. 9-2, respectively, last week-end. *Baisakh* delivery was settled at Rs. 9-4-6 during the week.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 9th *May*

There has been no appreciable change in the kip market. Prices rule steady. Arrivals have been on the usual scale and clearance moderate. U.K. buying has been patchy and the market is a shade quiet. Stocks of inferior grade cow hides are scarce and shipments to U.K. have been small in this selection.

The tanned skins market has also remained unchanged, except that light weight goat skins are in great demand.

Shipments during April were: To the U.K.: 3,363 bales tanned cow, 216 tanned cow calf, 70 tanned buff hides, 442 tanned buff calf, 832 tanned goat, 559 tanned sheep and 5 bales dry salted goat; to the Continent: 422 bales tanned goat and 69 tanned sheep; to the U.S.A.: 101 tanned buff hides, 73 tanned buff calf, 86 tanned goat, 20 tanned sheep, 86 dry salted goat and 18 bales tanned snake skins.

HIDES RULE STRONG

(From Our Own Correspondent)

KANPUR, 8th *May*

During the week under review, the hides and skins market ruled strong. Supplies from mofussil sources were ample. The goods coming from the local butcheries were progressively smaller in volume due to the advent of summer. The main purchasers were the local tanners. The Madras dealers were lukewarm.

The latest available quotations are: Wet salted cow, 1st grade Rs. 400 to Rs. 360, 2nd grade Rs. 380 to Rs. 320 and 3rd grade Rs. 320 to Rs. 140 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat skins, 1st grade Rs. 300 and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep skins Rs. 200 to Rs. 225 per 100 pieces.

TEA PRICES MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, 10th *May*

During the internal sale held last week offerings of dusts amounted to 18,200 chests. Although there was a fair general demand, prices eased. This was so because of consumers' resistance to pay higher prices in overseas countries. Especially the cut in London prices had an effect on the local market trend. Prices of teas with a clean black leaf appearance and bright liquors declined by an anna to As. 2, while the residue end-of-season teas were irregular. The good liquoring CTCs were As. 2 to As. 3 easier. The quotations were: best Assam CTC Rs. 2-10, *medium Dooars* Rs. 2 to Rs. 2-1, and medium Assam grainy dust Rs. 2-2 to Rs. 2-3.

Leaf offerings aggregated 1,878 chests, of which 102 chests were of the new season's tea and the remainder of the old. Demand was fair, but prices were irregular. Fannings were very weak. No quotations were given.

SURVEY

(Concluded from page 919)

raw wool output, that is, from about 21 million lbs. at present to more than 25 million lbs. and a rise of 200 per cent. in finished woollen goods. With the anticipated improvement in raw wool production, there will be, it is said, an additional annual income of Rs. 1.20 crores to the State.

The need for developing the Rajasthan wool industry on rational lines is of special significance, considering the vital role which the industry plays in the economy of Rajasthan, in particular, and of India, in general. The different branches of the wool industry provide employment to as many as one million people in the State. Out of the 21 million lbs. of wool annually produced in Rajasthan, which represent about a third of India's total wool clip, about 17 million lbs. are exported, most of which goes to overseas markets, earning a large amount of precious foreign exchange.

The development scheme for the wool industry in Rajasthan, it is claimed, is a very comprehensive one embracing practically all the aspects of sheep and wool industry, such as co-ordination, breeding, extension, research and technical education. It is proposed to start 17 more stud sheep breeding farms in addition to the three farms now in existence. These farms will bring out, on an average, 2,000 rams for distribution purposes annually. With the opening of another 20 stud breeding farms in the private sector, the demands of stud rams for the whole State can be met. Encouragement will be given to operations connected with shearing, grading and marketing of wool, washing, dipping and dozing on community lines. About 160 extension centres, in addition to the 40 already existing, will be set up. It is also proposed to have one wool textiles testing laboratory (at present there are two sheep breeding and research stations and one laboratory) and one woollen technological institute (there is now only one sheep and wool training school). In order to keep an efficient technical and administrative control over all the organisations, a central co-ordinating office will be established. There will be a full-fledged directorate for sheep and wool improvement, a pasture improvement specialist, and an economist to collect, compile and analyse facts and figures on various problems of wool industry.

With the establishment of all the 200 community shearing and extension centres, 2 million sheep will be under controlled breeding and at least 6 million lbs. of graded wool, valued at Rs. 1.80 crores, will be handled. The number of rams produced at the farms will be 2,000 per year, costing Rs. 2 lakhs. The sheep and wool training school will turn out about 50 technicians. The woollen technological institute will turn out 50 artisans and 30 diploma holders every year. Under utilisation centres, a central finishing centre will be able to finish 80,000 yards of woollen cloth per annum. The carding and spinning centres will produce 300,000 lbs. of handspun yarn and 10,000 lbs. of machine-spun yarn. The weaving centres will manufacture 30,000 blankets, 12,000 square yards of druggets and carpets, and 5,000 square yards of tweeds. The central dye-house will be able to dye 24,000 lbs. of yarn annually and the carbonising plant will carbonise 2 million lbs. of burry wool. The 20 breeding farms proposed to be set up in the private sector will produce 2,500 breeding rams, 2,500 mutton lambs and 50,000 lbs. of graded wool every year. The production of felt sheet for industrial purposes and fine worsted cloth is expected to be 360,000 square yards each.

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N—Nominal quotations. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

TELEPHONE INDUSTRY

PROGRESS IMPRESSIVE

By Jagdeesh Prasad

MANAGING DIRECTOR, INDIAN TELEPHONE INDUSTRIES LIMITED

SIX and a half miles east of the city of Bangalore, on the road to Madras, is Duravani Nagar, the telephone city. In 1948, the travellers on this road, after crossing the Krishnarajapuram railway overbridge, came across snake-infested waste land with rocks jutting out and patches of cultivation showing here and there. Today, on this site stands one of India's most modern factories.

The Indian Telephone Industries (I.T.I.), as this factory is called, was the first nationalised industry to be set up in free India. Starting from scratch in 1949, it is today producing 1,000 telephones a week. This number is twice the target originally set for 1955-56. It is also making every week about 600 lines of automatic exchange equipment and one carrier telephone system.

Although the industry was started as a purely Government owned concern, in January 1950 it was converted into a private limited company with the Government of India, the Government of Mysore and the Automatic Telephone and Electric Company, Ltd. (A.T.E) of Liverpool as partners. The Union Government holds about 90 per cent. of the shares; the holding of the A.T.E. is nominal, but, under the 15-year agreement executed in May 1948, it supplies the technical "know-how," etc. The management of the Company is entrusted to a Board of Directors, all of whom except one nominee of the A.T.E. are nominated by the President of India. The government department responsible for the factory is the Ministry of Communications, the Secretary of which is the Chairman of the Board. The managing director is a whole-time employee entrusted with the working of the Company. A number of committees, like the works committee, production committee, suggestion committee and standards committee, function within this organisation to effect improvements.

The factory grounds cover an area of about 370 acres. The main factory consists of eight units each laid out for the production of a particular type of equipment on a product control basis which involves minimum handling of materials. There are over 1,000 machines in use. These vary in size from the small cord binding machines to the 150-ton presses. Included are about 200 German machines which, in most cases, had to be completely rebuilt in the factory. Jigs, fixtures and tools in use number over 9,000. Although initially all of these were imported, many of the tools are now being made in the fine tool room in the factory. Expert tool-makers work in this shop. The jig borers used are correct to a thousandth part of a millimetre. Other machines also are suitable for the precision work required of them. Bakelite moulding presses with the capacity ranging from 27 to 150-ton pressure are installed for making telephone parts and other mouldings for telephone exchange equipment. Sixty-one automatic lathes, capable of turning something like 30 million parts a year, are available. The smaller screws are made on machines which produce two per second. There are other different types of lathes, milling machines; presses (big and small), polishers, grinders, coil winding machines and others too numerous to mention.

The tropical climate is particularly severe on the equipment and so every component has to be properly clothed. The plating shop, remar

VOTERS IN LANCASHIRE WARNED

IT is not surprising that the Labour Party in Britain has launched a determined drive for votes in Lancashire by making wild promises, because Lancashire—the seat of British cotton industry—is a key area in the General Elections to be held on Thursday next. The Labour Party has come out with a promise to carry out, if it were returned to power, a four-point programme for aiding the cotton industry. The four points are: (1) Protection against unfair competition, (2) re-establishment of the Raw Cotton Commission to revive long-term contracts with Commonwealth cotton growers, (3) review of the operation of the "D" scheme as it affects textile goods and clothing with a view to assisting the export trade, and (4) encouragement of higher quality standards of textiles. Here, we are concerned only with the first point of the programme. The implementation of this part of the programme, we are told, will be done through the establishment of a central trading commission which will purchase all imported cotton yarn and piecegoods, with the power to restrict those goods and only those goods which come to the U.K. on the basis of "unfair competition." Negotiations, we are further told, will later be held with the Government of India and the G.A.T.T., with a view to bringing about an agreed code of fair competitive practices in the world's textile trade. The suggestion contains an insinuation that India, which now accounts for the bulk of cotton piecegoods imported by Britain, is indulging in unfair trade practices. While we shall deal with this insinuation presently, it is necessary to warn the voters in Lancashire in advance that they would be greatly disillusioned if they were to think that India would agree to the Labour Party's proposal.

The British Labour Party apparently feels that one of the solutions to the difficulties of the cotton industry lies in imposing restrictions on imports of cloth from abroad, particularly from India. Addressing an election meeting in London the other day, Mr. Harold Wilson, a former Labour President of the Board of Trade, for instance, claimed that every one in Lancashire agreed that quantities of Indian grey cloth coming to Britain were "utterly unreasonable." This is certainly a tall claim, for the processing section of the British textile industry does not support it. Further, the British consumers, with their high sense of patriotism and *swadeshi* spirit, would be the first to refuse to buy Indian cloth, if they were convinced that it was competing unfairly with the cloth manufactured in their own country. Be that as it may, Mr. Wilson then went on to declare that the Indian grey cloth would not be available in Britain at present prices, if it were not for the unfair competition based on Indian raw cotton prices. And he added that these prices represented a cost of production threepence a yard cheaper than that of Lancashire mills which had to buy cotton at prices artificially maintained by the U.S. Government. While welcoming the reduction in Indian tariffs on British cotton goods, he thought that it would not solve either the export or the home market problem of the U.K. cotton industry.

The proposal of the British Labour Party to restrict imports of Indian textiles, it may be noted, is in consonance with the demand for such an action put forward by Lancashire mill-owners and workers alike. This demand is based on the hollow allegation that India is undercutting the British manufacturers in their home market. That this charge is not justified has been admitted by the present British Government. Mr. Wilson's reiteration of the charge is, therefore, mischievous; it is purely an election stunt to mislead British workers who are not aware of conditions in India and who are afraid that their wages would be cut if imports of cloth were to continue on the present scale. Mr. Wilson is very unjust to India by repeating a charge which has been proved to be baseless. He is not right in using India as a bait for attracting labour votes and laying all the blame on this country for the chronic ills of Lancashire. The British cotton industry would be no better even if all the imports of Indian cloth into Britain were to be stopped. On the contrary, such an action would adversely affect Britain's export trade in cotton textiles, for more than half of the Indian cloth imported by that country is processed and re-exported. It would also adversely affect the fortunes of the textile finishing industry as well as workers employed in that industry. Indeed, Indian cloth is, as has been rightly admitted by impartial British observers, instrumental in assisting the British textile industry not only to maintain its export but also to preserve its reputation for producing quality goods.

The real problem of the British cotton industry is not one of meeting competition from imports of cloth from India. On the other hand, it is one of expanding its exports which have tended to decline of late. Instead of agitating for imposition of restrictions on imports of cloth into Britain, those connected with the Lancashire industry should explore ways and means of raising its competitive capacity. Did it ever occur to British cotton magnates that a part of their difficulties is due directly to full, nay, overful, employment in their country? Is it not a fact that, because of this, they have to offer fantastically high wages to their workers? If they are squeezed in between high wages and relatively high prices, which they have to pay for the major portion of the cotton consumed by them, why blame poor India for their difficulties? They ought to blame their stars for it. They must also bear in mind that, if India can be charged with deliberately keeping the price of cotton below the so-called world parity in order to confer a benefit on its mills, Britain, too, can be charged with subsidising all its engineering industries through the policy of two-price system for steel, coal, chemicals, etc. Those who live in glass houses should not throw stones at others.

It is a pity that this aspect has been completely overlooked by the Labour Party in its anxiety to catch votes. There is no exaggeration whatever in the statement of Peter Thorneycroft, President of the Board of Trade, that the Labour Party's proposals would worsen, rather than improve, the textile situation. For any move on the part of Britain to impose restrictions on imports of cloth from India and also from other countries under the guise of a special Government trading agency, which is what the Labour Party proposes to do, is bound to provoke the Governments of other countries to retaliate by raising tariffs and imposing quotas against British textiles. It is needless to add that enforcement of quantitative restrictions on imports is against the spirit of the G.A.T.T. Further, it will amount to a violation by Britain of the Indo-British Trade Agreement of 1939. What is worse, a retaliatory tariff and quota war, which the imposition of quantitative import restrictions would touch off, would not be confined to textiles alone. It would have adverse repercussions on the entire Indo-British trade and, perhaps, on Britain's trade with other countries too. This aspect has been forcibly stressed by a British contemporary, the *Financial Times*, London, as witness its remark that "it (a retaliatory tariff and quota war) could well lead to a return to the beggar-my-neighbour trade policies of the thirties." This is, indeed, a pettinent and wholesome warning which anyone who wants to follow the policy advocated by the British Labour Party would do well to heed. After all, it must be remembered that Britain cannot afford to allow itself to be guided solely by what is good for a section of industry and that, too, a section which is destined to shrink in size, during the coming years, under the pressure of changing pattern of world trade.

The attitude of the Conservative Party to imports of cloth into Britain is realistic, in refreshing contrast to the stand taken by the Labour Party. Taking a constructive view of the problem, the present Government, manned by the Conservatives, was recently successful in persuading the Government of India to readjust the import duties on cloth imported into India at a lower level. It has thereby made it possible for Lancashire mills to step up their exports to India from about 3 million yards per annum in the past year or two to an estimated figure of 15 to 20 million yards per annum in the coming years. Even if these exports amount to no more than 15 million yards, they would be equal to 25 per cent. of Indian cloth consumed in Britain; indeed, the proportion would be higher when viewed in terms of value, because the value of a yard of Indian cloth (mostly coarse and grey medium, semi-finished) exported to Britain is only a fraction of that of Lancashire cloth (mostly fine and superfine, highly finished) brought into India. To this extent, Lancashire mills get some relief and British exports substantial gain. But we do not pretend that this will solve the problem of these mills. As already pointed out, even if all imports of cloth into Britain were drastically reduced, the relief to Lancashire would not be material. It is gratifying to find that the ruling Party in Britain is not only conscious of this but has no hesitation in owning it publicly. As late as on Tuesday this week, Sir Anthony Eden, British Prime Minister, candidly admitted, in the course of a Television Press Conference, that "to stop imports coming from different parts of the Commonwealth raised a very big issue of another character

affecting not only Lancashire but all our export trade." Proceeding, he was honest enough to declare before all British voters that "this is not a decision I would be prepared to take in an election campaign." This remark shows that Sir Anthony is fully conscious of the serious nature of the problem facing Lancashire mills and of the undesirability of making political capital out of it.

Lancashire has for long been regarded in this country as the centre of British cotton mill industry and nothing else. This impression is not correct, for it is a big engineering centre, too. In fact, in the past one year, a large number of workers has migrated from the mills to engineering shops and other avenues of employment, so much so that, at present, cotton mills employ less than 20 per cent. of the total labour force in Lancashire area. Despite the large-scale shift in employment, trade union leaders have taken sides with Lancashire millowners in demanding restrictions on imports of cloth into Britain, evidently because they are afraid that they cannot dictate terms to employers unless employment is maintained in an over-extended state. Admittedly, this must be the reason why they do not relish the argument that workers employed in cotton mills can be more profitably engaged in other industries with a bright future before them. It is, however, needless to add that they are taking a very shortsighted view, for, if their demand for adoption of restrictive trade practices to bring benefit to the cotton industry were conceded, it would provoke reprisals against British goods, adversely affecting the fortunes of other British industries and of the workers employed by them. It is difficult to believe that British trade union leaders are not aware of this simple point.

PLAN FOR AGRICULTURAL DEVELOPMENT

THE outline of the draft programme for development of agriculture to be included in the second Five-year Plan, published this week by the Union Ministry of Food and Agriculture, reveals that this sector is not likely to receive the same priority as it did in the first Five-year Plan. For the total expenditure on agriculture during the next five years, estimated at Rs. 650 crores, represents only 10.3 per cent. of the total outlay of Rs. 6,300 crores on the second Plan, whereas, in the first Plan, about 17 per cent. of the total expenditure of Rs. 2,144 crores was earmarked to this sector. Again, while the total outlay on the second Plan is proposed to be stepped up by about 194 per cent., that is, from Rs. 2,144 crores to Rs. 6,300 crores, the sum allocated to agriculture is to be raised by only 74 per cent., from Rs. 374 crores to Rs. 650 crores. Although agriculture is thus being given a relatively lower priority in the second Plan, it is encouraging to note that the planners have not overlooked the need for securing a substantial increase in agricultural production in order to maintain the tempo of development in the other sectors of the economy at a high level. They have not only set aside larger sums under the various heads, but also fixed higher targets for foodgrains and raw materials essential for increasing industrial production.

The draft programme fixes the target for cereals at 63.5 million tons to be reached by 1960-61. This is 8.5 million tons more than the target set for the first Plan. It is proposed to raise the output of pulses from 10 million tons in 1955-56 to 11.5 million tons in 1960-61. This will make available, it is stated, for every adult 15.5 ounces of cereals and 2.8 ounces of pulses or 18.3 ounces a day, as compared with the average requirements of about 16 ounces a day. The Plan further envisages the sugar production to be increased to 2.25 million tons and that of oilseeds to 7 million tons by the end of the second Plan, as against 1.5 million tons and 5.5 million tons, respectively, in the first Plan. It is pointed out that this will serve to raise the *per capita* consumption of food from its present level of 1,800 calories to 2,250 calories per diem. As it is common knowledge that the diet in India is unbalanced, it is proposed to make provision, in the Plan, for a large supply of supplementary and protective foods such as milk, meat, fish, fruit and vegetables. This emphasis on balancing the diet reflects the anxiety of our planners to provide adequate nourishment to the people in order to improve the general health of the nation.

Equal attention has also been devoted to the need for making available to the country larger supplies of principal raw materials such as cotton, jute, sugarcane and exportable commodities such as tobacoo, pepper and cashewnuts. Thus, the target for cotton production is fixed at 5.5 million bales, as against 4.2 million bales in 1955-56. The increase of 13 lakh bales to be attained during the next five years is intended to raise the output of cloth in the country from the present level of 6,200 million yards to 7,900 million yards per annum. In thus enhancing the target for cloth production, the planners seem to have been guided by the belief that, by 1960-61, the *per capita* consumption of cloth in the country would go up to 20 yards, as compared with 15 yards at present. It is proposed to produce 5.5 million bales of jute per annum by the end of the second Plan period. With regard to exportable commodities, it is proposed to spend Rs. 16 lakhs on tobacco, Rs. 36 lakhs on arecanut, Rs. 51 lakhs on pepper and Rs. 18 lakhs on cashewnut. No indication of the physical targets for these crops is given.

Apart from fixing higher production targets, the planners have laid great emphasis on the development of certain sections of agriculture which had been assigned a lower priority in the first Plan. This is done by allocating substantially large sums to these sections. Thus, in the first Plan, for warehousing, credit and co-operative development, a sum of only Rs. 22 crores had been set aside, but, in the new programme, the amount earmarked for this purpose stands at as high as Rs. 40 crores. This enlarged provision evidently takes into account the arrangements now under progress for the reorganisation of rural credit under the integrated institutional credit system, as envisaged by the Rural Credit Survey Committee appointed by the Reserve Bank of India. Among the other heads of expenditure under the programme, the allocation for dairy development is Rs. 20 crores, as against a mere Rs. 60 lakhs in the first Plan. Likewise, forestry development schemes have been provided with Rs. 16.6 crores, as compared with Rs. 76 lakhs in the first Plan. But the most significant increase is seen in respect of resettlement of landless workers. The expenditure under this head was only Rs. 1.5 crores in the first Plan. In the new programme, it is estimated at as high as Rs. 50 crores. It remains to be seen how this large sum will be spent. Apparently, this is the amount that will be utilised for payment of compensation to owners of land, whose holdings exceed the contemplated ceilings, and for developing fallow and virgin land on which landless workers are to be resettled. Among the other items, fisheries, agricultural research, veterinary education and training and marketing of crops have all been allocated substantially large sums.

The foregoing account is just a brief picture of the tentative proposals for the development of agriculture in the second five-year period. They will be discussed by the Union Ministry for Food and Agriculture with the State Governments and the Planning Commission. It is possible that they may undergo some modifications in the light of these discussions. Certain proposals in the programme, however, give rise to a number of issues, the implications of which require to be carefully considered, so that the Government's economic policies may be suitably modified.

Under the first Plan, the objective has been to overcome the shortages in food and raw materials caused by the war and the Partition. This objective has been more than fully achieved. Opinion, however, differs as to the relative shares of the factors that led to this improvement in production, namely, (a) good monsoons, (b) improved methods of cultivation, (c) additional land brought under cultivation and (d) high prices of commodities resulting from speculative activities in the commodity markets. Besides, the extent of increase in food production due to improved methods yet remains to be assessed, because the average yield is still more or less stationary in almost all crops. Moreover, there is a school of thought in the country which firmly believes that improvement in agricultural production was due, to a considerable extent, to successively good monsoons during the last three seasons. Until, therefore, the country has provided itself with means to meet the irregularities of monsoon, it will be risky to slow down the campaign for increased production of food and vital raw materials.

Then again, there is another important issue, namely, what would be the effect of higher production aimed under the Plan on agricultural prices? As a result of the efforts made under the first Plan, there has already been a considerable decline in prices of agricultural commodities. The average wholesale price index for food articles (Base: 1939=100) for 1954-55 was 339.8, as against 384.4 for the previous year or a decline of 11.6 per cent. The decline in prices will be greater still, if production is stepped up further, unless, of course, the rise in consumption also keeps pace. As it will not be possible to achieve an arithmetical balance between supply and demand and as it is necessary to stabilise prices at reasonable levels with a view to providing incentive to farmers to maintain production according to the Plan, steps must be taken to absorb the surplus and build up buffer stocks. Such stocks will be useful for holding prices down when, for some reason or other, production falls. The establishment of buffer stocks, however, will be possible only if construction of warehouses is given high priority. The main aim, of course, should be to stimulate consumption and this will require adoption of a realistic economic policy which wil facilitate prompt absorption of the increased production of raw material and food. If, for instance, a cotton crop of 5.5 million bales is to be absorbed, then the cotton mill industry must be enabled to consume that cotton. Whether this will be feasible so long as the present policy of restricting the expansion of weaving capacity of mills in favour of handlooms continues is open to question.

FOREST INDUSTRIES

A NOTABLE feature of the three-day session of the Central Board of Forestry, which concluded at Ootacamund on the 15th inst., was the importance given to the problems pertaining to the supply of raw materials to paper, plywood and match industries. It is pleasing to find that the Conference not only admitted that these industries had been finding it difficult to get their raw materials in sufficient quantity and at reasonable prices, but also accepted the suggestions of these industries for solving their difficulties. Thus, the Central Board has suggested that (a) specific forest areas be reserved for the paper industry and long-term leases be granted for working such areas; (b) a rational method of price fixation be adopted; and (c) roads be developed in the forest areas concerned, with a view to facilitating quicker and efficient transport. It has also recommended the establishment of a central co-ordination agency for better marketing of timber and other forest produces both internally and abroad.

The implementation of these welcome recommendations of the Board depends on the attitude of the States, for forests are in the State list. The Central Board, therefore, has requested the State Governments to consider its recommendations sympathetically and devise measures for ensuring the continuity of supplies of raw materials to the industries mentioned, all of which are important. The Central Government, too, has been asked to ensure that these industries were set up with due regard to sustained supply of raw materials and to collect the overall statistics of supplies required by, and available for, them. The Board has further requested the Centre to advise the States regarding the scope for the development of such industries, so that they might plan suitably the exploitation of forests and afforestation.

One of the main reasons for the lack of planned afforestation throughout the country is the absence of co-ordination of policies followed by State Governments. The proposal of the Government of India to constitute a Forestry Commission to co-ordinate such policies, as disclosed by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, in the course of his address to the Conference, is, therefore, most welcome. The Commission, it is stated, will also be entrusted with the task of (1) undertaking technical scrutiny of major working plans, (2) collecting forest statistics, (3) pooling of technical information and (4) carrying out extension work to popularise afforestation measures. It is, however, not clear whether the Commission would be a statutory body with adequate powers to enforce policies, best suited to the nation as a whole. Unless the Commission has such powers, it would be impossible to regulate the activities of recalcitrant States. Further, plans for development of forests and soil conservation must be interlinked as the latter cannot be successfully carried out over large parts of the country without the former. It is proposed to spend Rs. 45 crores in the second Five-year Plan on soil conservation and it would appear that a separate Board would be constituted for the purpose. It is to be hoped that the functions of the Forestry Commission and Soil Conservation Board would not conflict. This is best ensured by drawing up an integrated plan for afforestation and soil conservation.

PROSPECTS FOR IRON AND STEEL SHARES

NEW LOAN LIKELY EARLY NEXT MONTH

THURSDAY, 5 P.M.

MARKET GOSSIP

THE main development of the week so far as the share market is concerned has been the Government's decision on the retention prices for steel payable to the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd. The announcement came at a time when the market had given up hopes of receiving it in the near future. Premature reports indicating the possibility of an increase in retention prices had led to high expectations and disappointment followed when they did not materialise. So keen was the market's disappointment that, when the Government's decision was correctly forecast by the City Editor of the *Statesman* five days in advance, none in the market was prepared to take it seriously. Thus, there was an element of surprise in the timing of the announcement, though there was none in the contents thereof. As the market had discounted the increase in retention prices well ahead of the day of announcement, there was no perceptible reaction to it in the value of the shares of these two Companies. Generally speaking, the Government's decision has had a steadying effect and arrested the sagging trend witnessed last week.

• • • •

Elsewhere in this issue (*vide* page 1007), we have published the full text of the Government's Press note on the subject of steel retention prices. It will be seen therefrom that the following are the salient features of the Government's decision:

(1) With effect from 1st April, 1955, both the T.I.S.Co. and the I.I.S.Co. are to get uniform prices. Hitherto, they were receiving different prices, the Tata Steel getting Rs. 47 per ton less than the Indian Iron.

(2) The uniform retention price is Rs. 385 per ton. This compares with Rs. 331 per ton received by Tatas and Rs. 378 per ton by Indian Irons upto 31st March last. In other words, Tatas get an increase of Rs. 54 per ton and Indian Irons Rs. 7 per ton.

(3) The aforesaid increase in prices is provisional, subject to the findings and recommendations of the Tariff Commission which has been asked to go into the claims of these Companies in detail.

(4) The extra profits made by the Companies as a result of the present increase in retention prices are to be utilised only for development and expansion and not for any other purpose, except with the express permission of the Government.

(5) The colliery block of the steel companies is to be treated as an integral part of their steel block and the Companies should be allowed to recover their actual cost of raising coal in the price of steel. This question was hanging fire all these days, as the Government could not make up its mind.

(6) The perod for which the revised retention prices should remain in force will be decided by the Tariff Commission.

• • • •

The basis on which the Government has fixed the provisional retention prices is not clear. The Government has, however, directed the Tariff Commission that it should fix the uniform price on the basis of the cost of production of the Indian Iron. The uniform price should also be such as would enable both the producers to obtain a portion of their capital requirements for their current and additional expansion programmes from internal resources and to raise the balance from outside. This is, indeed, a generous attitude on the part of the Government towards the steel companies, in refreshing contrast to the parsimonious policy followed by it in recent years. In fact, the Government seems to have gone to the other extreme now. Two years ago, it refused to accept the Tariff Commission's recommendation for a return of 10 per cent. on gross block and fixed the prices on the basis of only 8 per cent. return. But, at present, it has accepted the cost of production of the smaller of the two units as the basis, irrespective of whether or not it means more than a gross return of 10 per cent. on gross block to the bigger producer. It was expected that, as the production of the I.I.S.Co. had been running at a rate much higher than the one assumed by the Tariff Commission for determining the cost of production, there would be no increase in the retention price for Indian Iron. Some even went to the extent of saying that the price for this Company would be reduced. Not only have these expectations been falsified but there has actually been a rise of Rs. 7 per ton in this Company's retention price. This sudden, nevertheless welcome, change in the Government's policy is astonishing. It reminds us, however, of the butcher who fattens his cattle before converting them into meat.

• • • •

There are some in the market who are afraid that the Tariff Commission might cut a part of the increase in retention price given by the Government. This fear is unwarranted, because the Government might not accept any such recommendation from the Commission which is only an advisory body. Further, we have a feeling that the Government must have already consulted the Commission informally before announcing the provisional increase in the retention prices. According to a reliable source, the Commission, which had been proceeding with the matter in a leisurely fashion, had to sit up late nights for a few days and quickly produce an interim report for the guidance of the Minister for Commerce and Industry.

No part of the profit accruing from the increase in retention prices—Rs. 54 and Rs. 7 in the case of the T.I.S.Co. and I.I.S.Co., respectively—can be utilised by the Companies for payment of dividends and bonus to workers. It is not clear, however, whether the commission to managing agents is leviable on the increased profit. The Companies can, of course, utilise a part of the increased profit for stepping up dividend and paying bigger bonus to workers, provided the Government gives its consent. But it is very doubtful whether the Government will agree to such a course. There is, however, nothing to prevent these Companies from paying higher dividends if their profits go up as a result of other causes, such as increased efficiency and higher production of special steels on which there is no price control. The chances of such a development, however, appear to be remote. It will be, in our opinion, safe for investors to proceed on the assumption that, for some years to come, neither of the two steel Companies will be able to increase their dividends.

• • • •

It is true that, as a result of the increase in prices, financially both the Companies will be stronger, after the completion of their development programmes, than they are now. They will have large reserves backed on the assets side by huge assets in the form of up-to-date plant and machinery. But the question is whether the shareholders will be permitted by the Government to have the full benefit of these reserves. Legally, of course, the reserves belong to them. Nevertheless, misgivings are sure to arise in the minds of investors, in view of the Government's lack of respect for the sanctity of the individuals' right to hold property. Then, there is the threat of nationalisation hanging like the sword of Damocles on the industry. Everyone is wondering as to what the Government will do after 1958. It would, therefore, be helpful to investors if the Government and/or the Congress Party were to make its intentions clear. Such a clarification will enable the Companies to raise a part of the finance necessary for implementing their expansion programmes.

• • • •

The Press note issued by the Government discloses that the expansion of Tata Steel's capacity is to be only to the tune of 500,000 tons of finished steel which is appreciably less than the figure indicated by earlier reports. It further reveals that the capacity of Indian Iron and Steel too will be expanded by 100,000 tons. One hears of this expansion for the first time, the impression that prevailed all along being that there would be no change in this Company's programme to expand up to 700,000 tons of finished steel. But, according to the Press note, the I.I.S.Co.'s capacity will be raised to 800,000 tons. Apparently, it is this factor that must have been responsible for the increase of Rs. 7 per ton in the retention price payable to this Company.

• • • •

The strings attached by the Government to the increase in the retention price of steel, coupled with the threat of nationalisation, have greatly reduced the scope for speculation in iron and steel shares. At their current market value, the shares of T.I.S.Co. and Indian Iron yield 4.47 per cent. and 2.9 per cent., respectively. These yields are not attractive enough to evoke fresh investment demand. Further, dividends are not likely to be raised, to any substantial extent, in the foreseeable future. This is another reason why investment demand for these shares will be at a low ebb. And no speculator can succeed as a bull, unless he is reasonably certain that he can unload his purchases on the investors. There is not much room for speculators to exploit the market as bears either, because any substantial fall in the prices of these shares will evoke buying by investors who are prepared to take some risk. Other things remaining the same, therefore, these two popular counters will henceforth have a colourless existence on the Stock Exchange.

• • • •

But will other things remain the same? Ordinarily they should. Speculators, however, are not prepared to let this happen. They are now busy gossipping about the terms on which the T.I.S.Co. will be raising fresh equity capital to finance the expansion programme. One version which seems to be gaining credence is that the Company will issue the new share at the face value of Rs. 75 each, that is, without collecting any premium from the shareholders. It sounds fantastic to be told that a scrip which is commanding a high premium of Rs. 160 will be issued at par. But it is argued that it is not so fantastic, because that is one way of safeguarding the interests of shareholders from the danger of nationalisation at inadequate rate of compensation. If the capital of the Company is doubled and the new shares are issued in the proportion of one for one at the par value of Rs. 75, then the *ex-right* market value of the Company's shares will be only Rs. 155 or Rs. 160, assuming that the dividend on the enhanced capital will be reduced to a level which will give a yield of, say, 5 per cent., free of tax. The underlying idea here seems to be that, in the event of nationalisation, Parliament will not regard a rate of Rs. 160 per share, which is only a little over twice its face value, as an unduly high rate of compensation. Some speculators are, however, arguing that the Company will be able to maintain the dividend on the proposed increased capital too. But this seems unlikely. In any case, all this talk pertains to a development that seems to be a long way off and is, therefore, only of academic importance.

• • • •

In the case of Indian Irons, the hopes of bulls rest on the optimistic expectation that, somehow or other, the Company will be able to increase the dividend from Re. 1 to Re. 1-8 per share. They argue that the efficiency of the Company has greatly increased and that output per worker is higher than in the case of T.I.S.Co. Even assuming that this optimism is fully justified, it would appear to have already been discounted in the current price. On the basis of a dividend of Re. 1-8 per share, it will be interesting to note, the yield will be barely 4.5 per cent., not a high rate considering the uncertain economic policy of the Government.

• • • •

There has been a slight fall in the trade demand for money, though there has been no appreciable change in the short-term rates of interest. Whether this is the beginning of the end of the busy season or a temporary break is not yet clear. But the Reserve Bank has been making preparations for launching the new loan. Market circles believe that the new loan may be announced some time in June, most probably in the first week. As usual, the imminence of a new issue has attracted a sizable amount of buying enquiry for the existing loans from institutional investors and the Reserve Bank has been availing itself of this opportunity to push up the value of all dated loans, one after another. During the last few days, it has put up its selling rates for medium and long-medium dateds by As. 2 to As. 3.

• • • •

From the way in which the Reserve Bank has been operating in the Gilt-edged market, it looks as though the new loan will be a 10-year one, carrying interest at 3½ per cent. and issued at Rs. 98-8. It may be noted that there are no maturities in 1965 so that the problem of repayment will not be difficult. Some say that the year 1967, in which also there are no maturities, may be preferred by the Bank. But this seems very unlikely, for institutional investors are still not in favour of going in for loans maturing after 10 years. Further, for a 12-year loan, the issue price will have to be fixed at a lower level, namely, Rs. 98, if it is to compete effectively with the existing loans maturing in the neighbourhood of that year. The Finance Minister may not relish the idea of issuing Central Government loans at so low a rate as Rs. 98. Another reason for not preferring a loan maturing in 1967 is that the Government may want to reserve that year for borrowings in the coming year. Be that as it may, with the date for the issue of new loan drawing near, some of the insurance companies and banks are no longer interested in buying any of the existing loans. They want to reserve their cash resources for taking up the new issue, because they are pretty sure that they will be pressed by influential sources to subscribe to big blocks of that loan and that they will not be able to resist such pressure.

• • • •

It is now almost certain that, unlike last year, the Centre will borrow from the market only to cover its needs and that the States will be allowed to approach the capital market direct for putting through their borrowing programmes individually. The States, however, will be permitted to tap the market only after the Centre completes its programme.

• • • •

The Bank of India will be completing fifty years of its existence next year. This has already led to a rumour that the Bank, in order to commemorate its Golden Jubilee, will either issue bonus shares at the rate of one share for every five shares held or pay a special dividend of Re. 1 per share. For the past year, it may be noted, the Bank paid a dividend of 14 per cent. per annum or Rs. 7 per share of Rs. 50 each. No confirmation of this rumour was available at the time of writing.

• • • •

Harvesting time continues for tramp shipowners in the North Atlantic markets and it would appear that the best part of the freight rate crops have yet to be reaped. With the number of ships able to present for early loading becoming desparately few, the competition for available space is increasing. As a result, tramp freight rates have shot up to new high levels. The U.K. National Coal Board has re-entered the market for the import of U.S. coal for loadings during May-October, with the result that tramps have been booked at a high rate of 59s. per ton for shipment of coal from the U.S., as against 50s. a month back. The Continental shippers have booked for shipment of American grain to the Continent with the Gulf tramps at rates ranging from $10.25 to $10.75 per ton, as against $9.70 a month ago, on the basis of discharge at Antwerp or Rotterdam. In fact, tramps have been booked even at an enhanced rate of $11.25 for Antwerp for early loading. The U.K. shippers first tried to mark time in the face of this heavier Continental activity, but had to come in; they offered as much as 76s. for loading in St. Lawrence, as against the highest of 67s. touched last month. Although enquiries in the River Plate for tramps for shipment of grain have been limited, the undertone has been firm in sympathy with the strength in neighbouring trade. The Pacific markets also continued to move from strength to strength. Wheat, for instance, was shipped to Japan at $11.90, as against $11.75 early in the month.

• • • •

The trend of freight market in the Far East is comparatively dull, especially in Indian waters, but a steadier tone is developing on the strength of expanding demand for lumber and grain carriers on the Pacific coast. Australian shippers have booked tramps at 117s. 6d. for June loading of bulk wheat *ex-silo* destined to the U.K. This represents a rise of 21s. 3d. per ton on business done only recently. An extra of 12s. 6d. at 127s. 6d. is being paid for home-bound Queensland sugar cargoes.

DULL CONDITIONS ON STOCK EXCHANGE

NEW STEEL PRICES FAIL TO INSPIRE

(From Our Own Correspondents)

BOMBAY, 19th *May*

ALTHOUGH the announcement of an increase in retention prices for the two main producers of steel was long awaited, it failed to evoke any enthusiasm among the operators on the Stock Exchange. On the other hand, the announcement was greeted by the Stock Exchange on Monday evening with a dip in Tata Ordinaries from Rs. 233 to Rs. 231-12 and in Indian Irons from Rs. 33-11½ to Rs. 33-6½. Thereafter, there were feeble recoveries in both the scrips, but there was no air of jubilation.

Activity on the Exchange during the entire week was listless. Speculators' interest was limited and confined to a few select scrips. The already sapped enthusiasm of the operators was further shattered by the publication of the Prime Minister's statement at the recent meeting of the Congress Parliamentary Party that he was interested in acquiring at the right time banks, insurance and mines. Centurys, among textiles, and National Rayons and British India Corporations among the miscellaneous shares were the only counters which enjoyed some support. Price fluctuations were generally confined to a very narrow range and the undertone was quietly steady.

In the steel section, Tata Ordinaries dropped from Rs. 233-4 to Rs. 231-12 on end-of-account considerations. The new account opened at Rs. 232-12, but the announcement of the new retention prices brought them down to Rs. 231-12, as they were not without strings. There was, however, a recovery to Rs. 234-12 yesterday, but the closing today was again lower at Rs. 233-8. After an initial improvement from Rs. 33-9 to Rs. 33-14, Indian Irons dipped to Rs. 33-6½ following the announcement of new retention prices. Hardening to Rs. 33-11, they drifted lower at the close to Rs. 33-8.

The textile section was generally dull, with small declines in most counters. The reports from foreign cloth markets were hardly inspiring to evoke support for these shares. Bombay Dyeings advanced from Rs. 461-14 to Rs. 463-2, but retreated to Rs. 458-12 on Tuesday. After a recovery to Rs. 463-2, they closed at Rs. 460-10. Kohinoors dipped from Rs. 312-4 to Rs. 308-12 before recovering to Rs. 312. Central Indias were quiet at Rs. 125, while Centurys gathered strength from Rs. 381 to Rs. 384-4 before closing at Rs. 382-8. Edward Textiles attracted good attention and gained Rs. 6-4 to Rs. 266-4. Finlays lost Rs. 2 to Rs. 245, Gokaks Rs. 1-8 to Rs. 215-8 and Indu Ordinaries As. 5 to Rs. 10-14. Khataus were, however, well held at Rs. 166-4, while Mysore Spinnings gathered Rs. 2-13 to Rs. 114-1, New Greats Rs. 1 to Rs. 166 and Phœnix Rs. 3-12 to Rs. 118-12. Shree Niwas fell from Rs. 237-8 to Rs. 235. Simplex were dull at Rs. 152-8. Standards were steady at Rs. 363-12, while Svadeshis were marked down by Rs. 3-4 to Rs. 183-4. Swans gained Rs. 1-4 to Rs. 315, whereas Tatas lost As. 12 to Rs. 49-4 and Vishnus Rs. 7-8 to Rs. 128-12.

Notwithstanding the Prime Minister's hint at nationalisation of banks at an early date, bank shares presented a steady front. Barodas were, in fact, very prominent with a rise of Rs. 3-4 to Rs. 100. Centrals were unchanged at Rs. 47-12, while their New shares were quiet at Rs. 49-8. Imperial Fully Paids added Rs. 5 to Rs. 1,695 and Partly Paids Re. 1-4 to Rs. 413-12. It has been announced by the Stock Exchange authorities that dealings in Imperial Bank shares will cease on the Stock Exchange as from 30th May, as a sequel to Government's decision to bring into force the State Bank of India Act, 1955, on 1st July, 1955. All outstanding business in these shares will have to be settled by delivery and payment before 2nd June, so that the buyers will have enough time to lodge the shares with the Bank authorities. The Imperial Bank has announced that the transfer books will remain finally closed from 16th to 30th June, in preparation for the changeover on 1st July. Bank of Indias were steady at Rs. 148-8 and Punjab Nationals at Rs. 42-4 *ex-div.*, while United Commercials were quiet at Rs. 44-8.

Business in the insurance section was meagre, but the undertone was easy, as reflected by the heavy drop in the values of Orientals and New Indias on first fears of nationalisation. Orientals declined by Rs. 90 to Rs. 7,250. New Indias hardened early in the week from Rs. 51-8 to Rs. 52-4, on the announcement of a higher dividend of Rs. 2-8 per share, as against Rs. 2 for the previous year, but fell to Rs. 49-12. Indian Mercantiles had business As. 4 higher at Rs. 45-12. After the previous week's sharp rise of Rs. 2-4, Industrial and Prudentials were stagnant at Rs. 44-4 and Empire of Indias at Rs. 675.

The undertone in electricity shares was easier and most of the counters disclosed fall in prices. Ahmedabad Electrics, however, maintained a steady front at Rs. 105. Bombay Suburbans were unchanged at Rs. 122-8, but their new shares were marked down by Rs. 6-12 to Rs. 118-12. Surat Electrics gained Re. 1-4 to Rs. 130-12 and Andhra Valleys Rs. 2-8 to Rs. 1,370. Tata Hydros (Old) lost As. 12 to Rs. 143-8 and their New shares Re. 1-12 to Rs. 109. Tata Powers shed Rs. 3-12 to Rs. 1,450 and their new shares Rs. 5 to Rs. 1,130.

Barring a few select counters, the miscellaneous section was far from bright. Turnover was small and price variations were narrow, the trend being downward. Despite the shortage of cement in the country, cement shares failed to inspire support. A.C.C. moved down from Rs. 178 to Rs. 175-4, while Digvijays were quiet at Rs. 182-12. In the sugar section, a drop of Rs. 4-8 to Rs. 301 in Belapurs was the outstanding feature. Phaltans, however, picked up Rs. 2 to Rs. 120-8 and Walchandnagars Re. 1-4 to Rs. 205-10. In the engineering and mining group, Alcocks dipped from Rs. 261-4 to Rs. 255. Premier Constructions were done at Rs. 152-8 *ex-div.*, as against Rs. 160-12 *cum-div.* last week. Larsen and Toubros were stagnant at Rs. 13-13½. Shivrajpurs were quiet with a drop of As. 12 to Rs. 66-8. Indian Coppers were steady at Rs. 3-8½, while B.B. Petrols were dull at Rs. 3-5½. Shipping shares were featureless, Scindias dropping As. 3 to Rs. 15-2½; Indian Steamships remained dull at Rs. 7-5 and Great Eastern Shippings at Rs. 15-15. In the miscellaneous group, Bombay Burmahs moved down from Rs. 460 to Rs. 458-2. British India Corporations finished up from Rs. 8-5 to Rs. 9-1½ on support from interested quarters and closed at Rs. 8-15½. Killick Industries were dull at Rs. 170. National Rayons were active, rising from Rs. 200-12 to Rs. 206-4, before closing at Rs. 204-8. Tata Chemicals were just steady at Rs. 14-1, as also Tata Oils at Rs. 39-8. Wimcos had business at Rs. 185 *ex-div.*, as against Rs. 204-1 *cum-div.* last week, the net loss suffered by this scrip over the week being Rs. 8-10. Such a heavy fall in this scrip reflects the investors' loss of confidence in the organised match industry's future owing to the keen competition offered by the heavily subsidised cottage match industry.

• • • •

Calcutta Stock Exchange

CALCUTTA, 18*th May*

Listless conditions were noticed on the Calcutta Stock Exchange during the week in the absence of any fresh development to provide incentives for both operators and investors. There was no reaction in the market to the announcement of higher retention prices for steel. For this was in accordance with earlier anticipations. Also it was clear that the benefit derived by the two major producers would not be passed on to shareholders, as the additional funds had to be utilised for further expansion. Ordinarily, the Prime Ministers' talks in New Delhi over the Kashmir dispute should have aroused interest, inasmuch as better relations between India and Pakistan in the political field should usher in a better atmosphere for holding the trade talks proposed between the two countries on the 26th inst.

Earlier, in the week, teas made an earnest bid to recover. But, later, the general depressed conditions, the fears of a substantial increase in the Indian and Ceylonese crops during this season, the expectations of keen competition in world markets, and the further fall in prices in the Calcutta auction for domestic consumption, resulted in selling pressure. An adequate number of buyers could not be found and prices gave way. Judging from this week's moderate business for export in the jute goods market, jute shares should have recorded a cheerful trend. But this was not so because of the general weakness. Coals were likewise easy. Collieries are not able to execute schemes of conservation, as the installation of washeries would be expensive and, in the face of the recent amendment to the Constitution, this industry is looking forward to Government assurance that the full expenses incurred in connection with any scheme of conservation would be paid back in the event of nationalisation.

Trade circles have greatly regretted the reported reluctance of Bombay textile millowners to supply textile goods to Pakistan in return for American cotton valued at $9 million. Consequently, India has almost lost the Pakistani market for $9 million worth of piece-goods, and the offer would appear to have gone to Japan and West Germany. The plea for the rejection of the offer that India has its own cotton in huge quantities and that imports of American cotton are planned under the F.O.A. aid programme, in addition to the sterling area cotton for which import licences have already been issued, is all beside the point. For the creation of the market in Pakistan for Indian textile goods worth $9 million, additional or otherwise, was dependent on India taking cotton required to maufacture them from the United States.

Coals were easy. Thus, Bengals lost Rs. 14 to Rs. 494. At Rs. 12-9, Burrakurs receded by As. 3. East Indians gave way from Rs. 29-8 to Rs. 29. Equitables were supported to Rs. 30-12 as against Rs. 31-10 previously.

Jutes received poor support and, as a result, quotations receded. Nationals opened at Rs. 33-10 and fell to Rs. 33-2. At Rs. 174, Barnagores were lower by Rs. 2-8. Ganges eased fractionally to Rs. 103-8. Belvederes were pushed back to Rs. 207 from Rs. 211.

Among engineerings, Indian Irons opened at Rs. 33-10 and, after realising Rs. 33-15, receded to Rs. 33-5. Today, a slight upward trend took the rate to Rs. 33-10. Jessop & Cos. fell from Rs. 35-11 to Rs. 35-4. Kumardhubis, on the other hand, were held steady at Rs. 12-4 as against an opening of Rs. 12-1. Texmacos were pulled down to Rs. 17-15 from Rs. 18-3. Earlier, Burn & Cos. at Rs. 272 put on five points, but, subsequently, gave way to Rs. 269.

A strong feature in the miscellaneous section was B.I. Corporations, which, on interested buying, spurted from Rs. 8-2 to Rs. 8-13. Indian Cables were subjected to profit-taking and lost one point to Rs. 26-2. Dunlop Rubbers were supported at Rs. 36-2, as against Rs. 35-10, while Ganges Ropes receded from Rs. 191 to Rs. 188. Rohtas Industries were fractionally lower at Rs. 24, while Rallis India recovered from Rs. 39 to Rs. 39-8. Martin Burns were unchanged at Rs. 23-8.

Shares of paper mills were paid keen attention. Bengals were raised to Rs. 68-4 from Rs. 66-4 and India Pulps to Rs. 257 from Rs. 254. Orients, after being done at Rs. 27-9, receded to close at Rs. 26-14.

There were more offers in the tea section and buyers were difficult to be found. In the process, quotations receded, although, during mid-week, an attempt was made at recovery. Bishnauths were pulled down from Rs. 46-8 to Rs. 43-11, Gairkhattas from Rs. 330 to Rs. 310, Tezpores from Rs. 30-6 to Rs. 29-7 and Dufflaghurs from Rs. 48-2 to Rs. 46-10. After declining from Rs. 220 to Rs. 210, Birparas recovered to Rs. 218. Hansquas finished at Rs. 25-4 after recovering from Rs. 25-12 to Rs. 26-12.

Madras Stock Exchange

MADRAS, 18*th May*

The performance of the Madras Stock Exchange was discouraging this week also. Planting scrips generally lacked support, with teas coming to suffer sizable losses. The lower prices fetched for tea leaves at Cochin auctions and the fear that the dividend declarations for the current year may not be favourable due to the prospects of prices declining further were responsible for an easy trend in the tea section. Rubbers and coffees were able to evoke no more than scattered enquiry. The trend in textile shares was not different in the absence of demand. The fears that the U.K. may restrict imports of Indian textiles seemed to have dampened the enthusiasm of operators in this section. Miscellaneous shares moved in sympathy with the generally dull trend of the market. The list, as a whole, showed losses, on balance, with the exception of a few counters which met with sound selective support.

There were a few notable dividend announcements this week also. The Balasubramaniam Mills Ltd. declared a dividend of 15 per cent., tax-free, for the year ended 31st December, 1954, as against 7½ per cent. for the previous year. Coimbatore Pioneers declared a final dividend of 10 per cent., thereby making a total of 20 per cent. for the year ended 31st December, 1954, as against 15 per cent. for the previous year. The directors of Mysore Chemicals Manufactures Ltd. declared a dividend of 20 per cent. for the year ended 31st March, 1955, as against 12½ per cent. for the previous year. The Mysore Glass and Enamel Works Ltd., however, passed over the dividend for the year ended 31st March, 1955.

Among textile scrips, Bangalore Woollens declined from Rs. 435 to Rs. 427-8. Coimbatore Spinnings were lower by Rs. 2 at Rs. 68 and Rajalakshmis by Re. 1-8 at Rs. 132. Balasubramaniams, (Rs. 40 paid up), however, put on Rs. 2 to Rs. 50 *cum-div.* and 'B' (Rs. 70 paid up) Rs. 3 to Rs. 83. R. C. Ambicas were better by Re. 1 at Rs. 164. Buckinghams were quiet at Rs. 151-8 and Metturs at Rs. 340.

In the tea section, Blue Mountains lost As. 2 to Rs. 3-8 and Devasholas Rs. 4 to Rs. 24. Haileybur las receded by Rs. 8 to Rs. 24. Parkslides were also lower by a similar amount at Rs. 21-8 *ex-div.* Waterfalls declined by As. 3½ to Rs. 3-9. Chandramalais, however, put on As. 2½ to Rs. 5 and Talayars As. 2 to Rs. 12-8.

Cochin Malabars, among rubbers, put on As. 2 to Rs. 7-7-6 and Malankaras As. 4 to Rs. 27. Rajagiris were higher at Rs. 16-1, as against Rs. 15-13 and Kailas at Rs. 5-1, as compared with Rs. 4-15. Bes, however, lost As. 2 to Rs. 4-4 and Teekoys As. 4 to Rs. 8-12.

Coffee scrips also lacked support. Coffee Lands receded by As. 4 to Rs. 16-8 and Puthuthotams by As. 2 to Rs. 4-1. Kadur Coffees were quiet at Re. 1-10½ and Mysore Coffees at Re. 1-10. Consolidated Coffees, however, put on As. 2½ to Rs. 18-11½.

Among miscellaneous scrips, Aluminium Industries eased from Rs. 19 to Rs. 18-12. Rallis dropped by Re. 1-4 to Rs. 39 and Travancore Cements by As. 8 to Rs. 8 *ex-div.* Nundydroogs suffered a loss of As. 7 to Rs. 4-4 and India Cements As. 6 to Rs. 23-10. Bruntons, however, put on As. 2 to Rs. 7-12 and Andhra Cement 'A' Re. 1 to Rs. 137-8 *cum-div.* Textools also put on Re. 1 to Rs. 107 ex-right. Mysore Chemicals and Manufacturers were done at Rs. 19-12 *cum-div.*, as against Rs. 19-8.

NEWS IN BRIEF

THE citizens of Ujjain have strongly protested against the Government of India's decision to have a forward market in cotton at Indore.

The Government of India has decided to permit the export of a further quantity of 5,000 tons of linseed oilcake to all permissible destinations, *excluding the* Portuguese possessions in India, for shipment upto the end of June, 1955.

The Government of India has decided, in consultation with the Board of Trustees of the Coal Mines' Provident Fund, to grant interest to the subscribers of the Fund on their accumulations at the rate of 3½ per cent. during the year 1955-56.

In pursuance of a recommendation by the Planning Commission, the Government of India has decided to set up a panel for formulating schemes for the development of canning industry, with Dr. M. B. Ghatge, Agricultural Marketing Adviser, Ministry of Food and Agriculture, as convenor.

The Union Ministry of Agriculture has convened a conference of representatives of the various States from 26th to 28th May to consider production targets to be fixed for the second Five-year Plan, the contributions that States could make in achieving the same and the financial implications.

The Hyderabad Government has tentatively decided to introduce prohibition in the State. In the first instance, two districts in Marathwada, lying adjacent to Bombay State, will go "dry." The State Government is also considering the extension of the dry belt on the borders with Andhra and Bombay.

One of the several feeder routes planned by the Indian Airlines Corporation was inaugurated on the 16th inst., when the newly acquired 14-seater Heron aircraft landed in Bombay on that day on its first flight on the Delhi-Agra-Gwalior-Bhopal-Indore-Aurangabad-Bombay route. The new service will operate thrice-weekly in the initial stages.

India has agreed to supply to Pakistan immediately 28 broad-gauge railway passenger coaches and underframes with wheels for another 22 coaches. The supply will be made on a 'no-profit' basis. Negotiations for the supply of rolling stock, it may be remembered, were held between Indian and Pakistan railway officials a few weeks ago and India agreed to meet Pakistan's requirements in spite of the rolling stock shortages on its own railways.

The Directorate of Marketing and Inspection, Central Ministry of Food and Agriculture, has brought out a new edition of the report on the "Marketing of Rice in India and Burma," first published in 1941. The new edition incorporates the changes in the marketing conditions of this most important of all food crops in India since 1941, following the momentous changes which have taken place in the country, like the Partition, adjustment of the boundaries of the various States and the imposition of a number of controls.

The Government Precious Instrument Factory, Lucknow, proposes to manufacture industrial jewel stones. An engineer of the factory will shortly be sent to Switzerland for short-term training in this art. Although the raw materials, namely, agate, sapphire and ruby, are available in India in abundance, no attempt has so far been made to manufacture industrial jewel stones which are essential components of such delicate instruments as clocks, watches, water and electric meters; consequently, these raw materials are being exported.

Sulphate of ammonia can now be delivered ex-docks at Bombay on payment of Rs. 345 per ton and moved to any place in the State by the buyers, says a Bombay Government Press Note. The buyers may arrange to transport the goods at their own cost by road, rail or road-cum-rail route. On reaching the centre for which the quantity is indented, the rate and distance rebates admissible and the railway freight from Bombay to the railway station nearest to the centre will be paid to the buyer by the District Agricultural Officer concerned. The cost of transport and handling from the docks to the railway station in Bombay will have to be borne by the indentor.

The Union Ministry of Commerce and Industry is reported to be considering measures to promote the manufacture of machinery and machine tools in India. It is examining the present state of the machinery industry and the manner in which it should progress. Several schemes for the manufacture of boilers, diesel road rollers, jute machinery, blow-room machinery for the cotton textile industry, vehicular diesel engines, etc., are being considered. Proposals for the manufacture of cement machinery in collaboration with foreign firms are said to have reached an advanced stage. A comprehensive survey of the types of machine tools installed in large factories has begun, with a view to assessing the replacement, as well as future, needs of machine tools.

The Government of India has decided to liberalise the licensing policy for the import of carding engines, ring frames and raw accessories which was announced on 15th April. Import of carding engines of 45" will be licensed freely to actual users who have been exclusively using 45" cards. Applications for carding engines of other sizes from persons who have obtained permission to set up new mills to expand their existing factories will be considered on an *ad hoc* basis. Licences for roller and clearer cards and their parts will be granted freely to actual users. Applications for import of ring frames will be considered *ad hoc*. Licences for carding engines and ring frames will be valid for nine months from the date of issue and will not be revalidated after that date.

The total gross sea and land customs revenue collected in the Indian Union during March, 1955, amounted to Rs. 17.16 crores, as compared with Rs. 14.57 crores in March, 1954. Of the total customs revenue collections, import duties accounted for Rs. 13.02 crores (as against Rs. 11.9 crores in March, 1954), export duties for Rs. 3.94 crores (Rs. 2.49 crores) and land customs and miscellaneous for Rs. 20 lakhs (Rs. 18 lakhs). The total gross collection of Union excise duties amounted to Rs. 12.32 crores, as compared with Rs. 9.02 crores. These bring the total customs and excise revenue for the financial year to 31st March, 1955, to Rs. 295.25 crores, as against Rs. 256.23 crores for the previous year. Of this, import duties accounted for Rs. 144.36 crores (Rs. 120.31 crores for 1953-54), export duties for Rs. 41.39 crores (Rs. 38.51 crores), land customs and miscellaneous for Rs. 2.88 crores (Rs. 2.54 crores) and Union excise duties for Rs. 106.62 crores (Rs. 94.87 crores).

From Abroad

Negotiations between Indian and Pakistan representatives on the division of the Indus waters were resumed in Washington on the 12th inst., under the auspices of the World Bank.

West Germany has opened negotiations with Denmark, Sweden and Norway for the reduction of about 250 different rates of customs duties. The negotiations are within the framework of the G.A.T.T.

Coffee-growing countries of Latin America will launch shortly a campaign addressed directly to consumers in an effort to increase coffee-drinking. A preliminary budget of $500,000 has been drawn up.

The Pakistan Government has ratified the agreed formula relating to the transfer of bank accounts and lockers drawn up at the Indo-Pakistan discussions held in Karachi at Ministerial level in April last.

Japan had a favourable balance of about $100 million in its trade with South-East Asian countries during 1954, thus making a remarkable trade recovery. It, however, fears that, in order to maintain this improvement, it will have to face keen competition from India which is rapidly growing as an industrial country in Asia.

The Union of Burma Airways has placed an order for three Vickers Viscount 700-D turbo-prop airliners for delivery in the first half of 1957. Including the initial provision for spares, the order is worth just over £900,000. It brings the total of Viscounts ordered so far to 189.

The U.S. factory workers continue to enjoy record purchasing power and stability in consumer prices, the Department of Labour reports. Average weekly net spendable earnings in March for a worker with no dependent rose to a record high of $62.19, representing a weekly increase of about $3.60 over last year. A worker with three dependents took home an average of $69.47 in March.

Pakistan and West Germany have signed an agreement for the promotion of trade between the two countries. Under the agreement, West Germany has undertaken to issue import licences freely to specified Pakistani commodities. West Germany has also agreed to import nearly 20,000 tons of cotton from Pakistan before June, 1956. The agreement also provides for technical training for Pakistani nationals in German institutions and factories.

A contract under which ten Americans will assist in the setting up of a big cement plant in Gresik, East Java, has been signed in Jakarta. The plant is to be financed mainly through a loan by the U.S. Export-Import Bank. The Indonesian Parliament recently approved borrowing an additional $14 million from the Bank to be used specifically in the construction of the plant. The total cost of the project will be approximately $20 million.

The International Chamber of Commerce estimates foreign investment needs by less-developed countries at about $6,500 million annually for the next 10 or 20 years. In an evaluation prepared for the United Nations Economic and Social Council (E.C.O.S.O.C.), the Chamber emphasises the important contribution that private investment can make towards economic development in conjunction with public investment. It also emphasises that there is considerable competition for the available supply of risk capital.

An agreement has been concluded between the Pakistan Industrial Development Corporation and the German firm, Ageg, for the setting up of a factory to manufacture electrical goods at Lahore at an estimated cost of Rs. 50 lakhs. The factory will be completed in three years and work on it will be undertaken as soon as the agreement is approved by the Pakistan Government. Electrical motors, transformers, switchboards and other electrical appliances are proposed to be manufactured at the factory, thus meeting substantially the electrical requirements of that country.

Talks between India and Pakistan on trade between the two countries will reopen in Karachi on 26th May. The object of fresh talks is to enter into a new trade agreement which expired on 30th June, 1953, since when trade is being carried on through normal channels without a trade agreement. In 1950-51, the total volume of trade between India and Pakistan amounted to Rs. 75 crores, India accounting for 19 per cent. of Pakistan's total foreign trade while the U.K. and Japan accounted for 17 per cent. and 14 per cent., respectively. By 1953-54, India's trade with Pakistan had declined to Rs. 17 crores. While the volume of Pakistan's trade with India continued to fall, that of the U.K. rose correspondingly, so that the U.K. now tops the list of countries trading with Pakistan, handling 22 per cent. of its total trade, as against 17 per cent. in 1950-51.

PERSONAL

MR. M. S. Thirumale Iyengar, Chief Engineer, Hirakud Dam Project, will lead the Indian delegation to the Fifth International Congress on Large Dams to be held in Paris from 31st May to 4th June next.

Mr. Malcolm MacDonald, Commissioner-General for the U.K. in South-East Asia, has been appointed High Commissioner for the U.K. in India, in succession to Sir Alexander Clutterbuck. Mr. MacDonald will take up his new post at the beginning of September next.

Mr. J. R. D. Tata and Mr. J. D. Choksi, Chairman and Vice-Chairman, respectively, of the Tata Iron and Steel Co., Ltd., Bombay, left for the United States on Thursday last week to obtain capital for the Company's expansion programme.

Mr. S. N. Mehta, Development Commissioner, Madhya Pradesh, has been appointed General Manager of the Steel Plant at Bhilai. He has already assumed charge of his office under the Union Ministry of Production.

Mr. E. H. Cattell, Assistant Manager, Lloyds Bank Ltd., Bombay, has been appointed Manager of the Bombay branches of the Bank, in succession to Mr. F. D. Hall, who is proceeding on leave preparatory to retirement.

Dr. J. C. Ghosh, till lately Vice-Chancellor of the Calcutta University, has taken over charge as a member of the Planning Commission. He will deal with planning problems relating to education, health, scientific and industrial research.

Mr. S. Boothalingam, I.C.S., Special Secretary, Union Ministry of Commerce and Industry, has taken over as Secretary of the Ministry, in place of Mr. H. V. R. Iengar, who has proceeded on leave. Mr. B. B. Saksena, Deputy Secretary in the Ministry, has taken over as Joint Secretary.

Mr. Joseph Rucinski, Assistant Director, Department of Operations for Asia and Middle East of the World Bank, has been appointed Director of the Department, in succession to Mr. Francois-Didier Gregh, who has resigned from the Bank to take up appointment in the North Atlantic Treaty Organisation as Deputy Secretary-General for Economic and Financial Affairs.

Mr. Kanwar Sain, Chairman of the Central Water Power Commission, arrived in Bombay on Sunday last after attending a symposium and conference on arid zones held recently at Albuquerque, New Mexico. Mr. Sain also attended a meeting of the Advisory Board of the U.N.E.S.C.O. on arid zones held at Socorro. He later undertook a study of the latest techniques followed by the Weather Bureau for forecasting floods and flood control measures adopted by the U.S. Government.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 24*th May*

Indian Gold Mines' Jubilee

The present year marks the jubilee of three of the famous Indian gold mines—the Mysore, the Nundydroog and the Ooregum. All the three have had good management—the managers of the mines, from the commencement of the present time, being Messrs. John Taylor and Sons of London. During the fifty years of its useful existence, nearly 8,000,000 tons of ore have been crushed at the Mysore mine for a total production of over 6,000,000 ounces of fine gold, the realised value of which is about £26,000,000, while dividends, amounting in the aggregate to £10,244,000, have been paid. The Nundydroog has produced to date over £10,000,000 worth of gold and has distributed dividends amounting to nearly £3,000,000. The first dividend was paid in 1888 and since then the shareholders have received an unbroken succession of dividends varying from year to year in amount, but generally, of a substantial character. As regards Ooregum, the forty tons of ore crushed and the forty-two ounces of gold produced in 1880 have expanded to nearly 4,900,000 tons and 3,080,000 ounces, respectively, while the first dividend of some £24,000 paid in 1890 has been followed by distributions amounting to more than £3,750,000. Incorporated in 1879, as the Ooregum Gold Mining Company of Madras, Limited, the Ooregum can boast of being the pioneer mine of the Kolar Goldfield.

OIL PRICES AND PROFITS

EVER since the publication of the U.S. Federal Trade Commission's report on the working of international oil companies more than two and a half years ago, there has been a feeling that the oil companies of the world have successfully manœuvred to keep oil prices at an extortionately high level. This feeling has gathered fresh strength on account of the wide publicity given all over the world to the distorted versions of the Report of the Economic *Commission for Europe (E.C.E.) on oil prices. Is* this feeling justifiable? "Certainly not," if what Sir Frederick Godber, Chairman of the "Shell" Transport and Trading Company, Ltd., London, says is to be believed. And there is no reason why he should not be believed, because his arguments are convincing. If there is another side to it, then the critics of oil companies must come out with their replies to Sir Frederick's well-reasoned case.

In his customary annual statement, circulated to shareholders, along with the Directors' report and statement of accounts of the Company for 1954 (*vide* pages 984 and 985 of this *issue), Sir Frederick categorically* asserts that the allegation that world oil prices have been kept at an unreasonably high level through the machinery of an international cartel is baseless. It is true that the selling prices are high but they cannot, in his opinion, be lower. Further, they are "not too high for the economic health of the consumer." Prices are high, not because the basic prices quoted by the oil companies are high but because the incidence of taxation, in the shape of sales taxes and excise duties, is prohibitively high. From this, it follows that, if oil prices are reduced by the companies, the *consumer may not be the beneficiary, for the Governments may try to absorb the advantage* of that reduction by stepping up the taxes on oil further. This will doubtless happen in India, where motor cars are regarded as a symbol of luxury and large wealth and not as an item of utility.

Giving an impressive account of the incidence of taxes on oil, Sir Frederick observes that the Shell Company pays as much as three times the net earnings by way of sales and excise taxes. World-wide, these taxes represent one-fifth of the sale proceeds and in Europe one-third. Over half the realisation of the Group from petrol sales in Europe represents sales or *similar other taxes.*

Be that as it may, are the world oil companies making unconscionably high profits? The answer of Sir Frederick here again is an emphatic "no." So far as the "Shell" Company is concerned, its profit for 1954 was £134 million. This represents a return of less than 14 per cent. The Company sold 26,000 million gallons of oil and, therefore, on all operations, that is, on producing, shipping, refining and marketing combined, the profit margin, world-wide, was about 1¼d. per imperial gallon and, even of this, only a small portion of the profit goes by way of payment of dividend. By what standard, he rightly asks, can this return be judged excessive?

What are the prospects of reducing basic prices in the near future? The chances are slender. For the capital expenditure necessary for finding, producing, shipping, manufacturing each extra barrel of oil has risen considerably in recent years. Now that the demand for world energy is expected to rise by 3 per cent. annually in the next 25 years, and a sizable portion of it will have to be met by the oil industry, the capital expenditure is bound to increase. Unfortunately, the financial needs of the industry have outgrown the capacity of the world capital markets to provide them and so they can be met only by retaining in business and appreciable portion of the earnings. The capital expenditure of the "Shell" Group alone in 1954 was £226 million, as against £220 million in 1953, £188 million in 1952 and £164 million in 1951. About two-thirds of these capital outlays has been met from depreciation and other provisions and the remainder from the retained earnings of the Group.

Sir Frederick argues that, in view of the increased capital needed per gallon of output of oil, only a part of such expenditure will yield an added return and, as much of it cannot offer the prospect of any great income, it has to be treated as part of the cost of maintaining the business in efficient condition. In order to drive home the point, it is better to quote him "... much of our capital expenditure," he says, "may be defensive and, consequently, does not offer any great increase of income. The normal test of profit-earning cannot be applied to such investment, which must be treated rather as a cost of maintaining our business than as new investment on which added return can be expected." It will thus be seen that there is very little truth in the allegation that the oil companies have been charging high prices, in order to make huge profits and pay high dividends to shareholders. It will also be clear that the present basic prices of oil and oil products can be reduced only at the cost of future development of the industry.

LABOUR CONFERENCE

The most important subject that came up for discussion at the fourteenth session of the Indian Labour Conference held in Bombay, related to certain amendments, proposed by the Government of India, to the Minimum Wages Act, 1948. It would appear that the representatives of employers and employees agreed to the amendment of section 3(1)(*a*) and 3(1A) of the Act with a view to permitting the omission of the specification of the period within which the minimum wages have to be fixed. They also concurred with the proposal that the minimum rates of wages fixed should continue to remain in operation until revised and notified by the appropriate Government. This requires amendment of section 3(1) (b). The members endorsed the principles of the proposed amendment to section 19 to the effect that records and registers of factories could be seized by Government authorities in the event of irregularities. It was, however, felt that the requirements of the Evidence Act should be kept in view in this connection and the amendments be so drafted in consultation with the Law Ministry as not to cause undue hardship to employers. The Conference also agreed to amend the Act in order to enable the recovery of wages not paid before the prescribed date and to make such non-payment an offence.

It will be recalled that the Minimum Wages Act, as amended in 1954, required fixation of wages for employments in Part I and Part II of the Schedule to the Act before 31st December, 1954. Part I of the Schedule relates to certain unorganised industrial employments and Part II to agricultural employments. So far as employment in Part I of the Schedule is concerned, wage fixation has already been completed in most cases. As regards employment in agriculture (Part II of the Schedule), the intention as embodied in the recommendation of the Planning Commission and subsequently endorsed by the Indian Labour Conference and the Minimum Wages Central Advisory Board has been that wage fixation should proceed on the basis of a phased programme, all areas being ultimately covered within the period of the first Five-year Plan, that is, by 31st March, 1956.

As, under the existing Act, the period during which the minimum wages could be fixed expired on 31st December, 1954, it is not legally possible to fix minimum wages for workers in the specified industries, except in two cases, namely, (1) *in respect of* employment in which the number of workers is less than 1,000 at present, but may become 1,000 or more in future, and (2) in respect of new employments added to the Schedule under section 27 of the Act. In both cases, minimum wages will have to be fixed within one year of such a finding or addition. It is not, however, unlikely that, while wages are being fixed, a certain category might have been inadvertently left out, or a certain unit omitted. It is, therefore, necessary that the Act should be amended in such a manner that it is possible to take continuous action in respect of the types of cases mentioned, even after the time limit expires.

The I.L.O. Convention (No. 26) concerning Minimum Wage Fixing Machinery, 1928, which has already been ratified by the Government of India, also provides that machinery to fix minimum wages, as and when necessary, should be created or maintained by the ratifying member-States. What is needed, therefore, is not a mere extension of time limit for wage fixation but the creation of a standing machinery for fixing wages for the existing scheduled employments as well as others that might subsequently be added. The purpose behind laying down time limit for the fixation of minimum wages having been served to a great extent, the machinery for the future must be of a standing nature. It is to achieve these objectives that the Act is proposed to be amended and there is all the justification for the same.

The Conference also considered the desirability of extending the Employees' *Provident* Funds Act, 1952, to certain additional well-established industries. It was the considered opinion of the Conference that all industries with a total employment strength of 10,000 workers throughout India in factories employing 50 or more persons should be covered. The employers' representatives raised the question of capacity of the industry to pay and desired that employers should also be consulted in this regard before an industry was included in the Schedule. It was considered that there was no bar to the inclusion of seasonal industries in Schedule I of the Employees' Provident Funds Act. *Only the eligibility* qualification should, it was felt, be suitably reduced. It was agreed that an employee who had worked for two-thirds of the number of working days in the preceding season should be eligible for provident fund benefits. The number of working days for a seasonal industry and other details would be determined by the Central Government and incorporated in the Employees' Provident Funds Scheme. The reduction of eligibility qualification in the case of seasonal industries would, it was realised, necessitate the amendment of the Scheme suitably.

The proposal to extend the Employees' Provident Funds Sch*eme is a sequel* to the recommendation of the Planning Commission that the Act should be extended, in gradual stages, during the period of the Five-year Plan to all industries after it had been put on a sound basis in case of industries where it is now applicable. The Act and the scheme framed thereunder are at present applicable to six major organised industries, namely, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles. Section 4 of the Act empowers the Central Government to extend the provisions of the Act to other industries also.

A third important *subject* discussed at the Conference related to child labour and its protection. It was felt that inspection services, including medical inspectorate, should be reinforced for better implementation of protective legislation. Protective laws should be rationalised by providing a uniform minimum age of employment of 14, uniform hours of work, rest interval, weekly rest days and non-employment at night, that is, between 7 p.m. and 6 a.m It was opined that the provision regarding age of employment need not at this stage apply to agriculture and plantation labour. State Governments, it was felt, should be requested to provide such *general* and vocational training and education to children, before they attained the age of employment, as might be practicable. The employers' and employees' representatives agreed to the need for total elimination of child labour and pledged their co-operation for eradicating it. The assurance of employers' representatives expressly included not only labour directly employed by them but also contract labour.

That child labour should as far as possible be prohibited is admitted by one and all. The directive principles of State policy *embodied in* the Constitution enjoin that the State so direct its policy *"that tender* age of children is not abused and that citizens are not forced by economic necessity to enter into vocations unsuited to their ages or strength; that childhood and youth are protected against exploitation, and against moral and material abandonment." Article 24 of the Constitution also says that "no child below the age of 14 years shall be employed to work in any factory or mine or engaged in any hazardous employment." Protective labour legislation in India is generally in conformity with these directive principles. Unfortunately, a study on child labour recently carried out by the Labour Bureau has revealed that, *despite protective* legislation, the evil of employing children persists, and that the worst sinners in this respect are the small-scale and cottage industries, control over which is difficult and scope for evasion enormous. It is high time that child labour was abolished. It is gratifying to note that employers have assured full co-operation to the Government in this task. But this alone is not sufficient. The evil is so widespread that its eradication will not be possible, unless public opinion is mobilised in favour of this reform. All responsible members of the public who come across the evil of child labour must be encouraged immediately to report the matter to any official of the Government, so that he can check up and initiate punitive action against the culprit.

COMMUNITY PROJECTS

The various decisions reached at the four-day conference of Development Commissioners held at Simla last week should doubtless be very helpful for making the Community Projects and the National Extension Service (N.E.S.) as efficient agencies for improving the health of rural India. The most important of these decisions is the suggestion to introduce a phased programme of work in new areas which would be taken up as Extension Blocks or Community Projects. The phased programme consists of four stages. The first one is the pre-extension stage and covers six months. During this period, in the area proposed to be brought under a community scheme, people will be enlightened as to the purpose of the project and their responsibility to achieve the purpose with the assistance of the trained staff. In the second stage, called extension period, proper emphasis would be laid on correlating research with actual field work relating to the different problems of the area. The third period, namely, period of intensification relates to intensive Community Project work in the area. After the area receives attention as Extension Block for a period varying between one and two years, it might be converted into the Community Project area to receive attention under intensive Community Development Programme. The fourth stage is normalisation which will continue on the same level as in the community project area with the trained staff continuing to be in service. The four stages would thus transform a completely untouched area into an improved one in which attention is concentrated on the many-sided development of rural life.

The success of this programme depends on various factors, such as the availability of trained personnel, adequate and timely supplies of materials, the enthusiastic co-operation of the people and co-ordination of the activities of the various departments which are concerned with the development of Community Projects and Extension Service. These factors which have been stressed in the *Evaluation Report* on second year's working of the projects have, it is gratifying to note, received the attention of the Development Commissioners. This is borne out by the other decisions reached at the Simla Conference. The importance of trained personnel, for instance, was recognised through discussions, on the various problems of imparting training to Village Level Workers, Block Development Officers, Social Education Organisers and Subject Matter Specialists. The Conference further felt that it was time they handed over powers regarding approval of schemes as well as their execution to statutory bodies now functioning in the Project areas. It recommended manufacture and introduction of improved varieties of implements in the rural areas. With a view to improving rural housing, the Conference suggested grant of loans on a long-term basis to villagers. It further recommended that *panchayats* might be empowered to levy water rates to enable them to maintain minor irrigation works, while States should be responsible for the maintenance of bigger schemes. It discussed the question of requesting State Governments to implement the policy of consolidation of land holdings as soon as possible, as it was essential for bringing about systematic long-term improvement in agriculture. It was decided that such Development Commissioners of States as have had experience of consolidation work should prepare notes indicating the principles of consolidation and lines on which work had been done by them and supply such notes to the Community Project Administration for circulating them among other States.

INTER-STATE RIVERS

Two important Bills relating to the development of inter-State rivers and river valleys were introduced in the Rajya Sabha, just before it adjourned, by the Minister for Irrigation and Power, Mr. Gulzarilal Nanda. One Bill seeks to establish river boards for the regulation and development of inter-State rivers and river valleys. According to the Statement of Objects and Reasons given in this Bill, the Board will try to secure' among the State Governments agreement both in regard to the measures to be undertaken for developing the river potential and sharing the financial responsibility involved in undertaking such measures. The second Bill seeks to provide for the adjudication of disputes relating to waters of inter-State rivers. It will be recalled that the Government of Madras recently urged the Centre to arrange for arbitration or mediation in regard to its dispute with the Mysore Government over the utilisation of the Palar waters.

The importance of these two Bills will be evident when it is realised that natural resources do not conform to man-made boundaries. Development of inter-State rivers on sound economic lines will be possible only if all the States concerned act jointly, as a chain of connected problems extends from the source to the mouth of each river. In fact, the entire drainage basin of a river system should, as a rule, be treated as the unit of area of operation, in order to assure faster economic progress. If the T.V.A. of the United States has become a model, certainly it is due to the co-operation of the seven States through which the Tennessee River flows. It is easy to imagine the confusion which would follow if one set of engineers, for instance, attempted to develop a river for navigation, another for power and a third for flood control or each one programmed for the development of the river according to its whims within its State without regard to its consequences on the other States. After all, water control is not an end in itself but only a means for the promotion of social welfare of not a part of the people who inhabit the beds of the river in a particular State, but all those who depend on the waters of the river for their sustenance.

For the first time in India, an Indian firm in Calcutta, in collaboration with two British firms, will undertake building of motor and trailer coaches to meet the demand for 104 coaches for the proposed electrification of Calcutta's suburban railways. The coaches are expected to be delivered in 1957, the year in which Calcutta's suburban railways are to be electrified.

Announcing the manufacture of the

NATIONAL DIESEL ENGINE

in India by

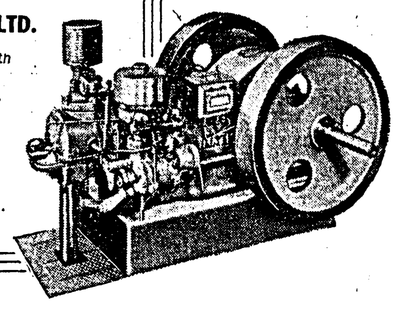
THE INDIAN NATIONAL DIESEL ENGINE CO. LTD.

in technical collaboration and financial partnership with

The National Gas & Oil Engine Co. Ltd.

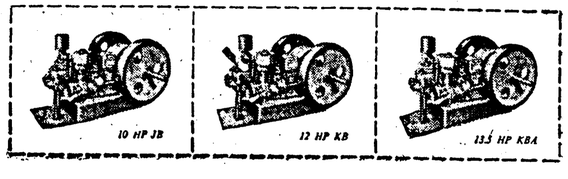
(Ashton-under-Lyne, England.)

Horizontal Diesel engines to the specifications of the well known NATIONAL engines of the United Kingdom are now being manufactured for the first time in India.



WORKS: *P-61, Circular Garden Reach Road, Kidderpore, Calcutta.* REG. OFFICE: *Hall & Anderson Building, Park Street, Calcutta.*

Three models being manufactured:



Secretaries & Treasurers:
MAHINDRA & MAHINDRA LIMITED.

Sole Selling Agents (except for Hyderabad and South India)
Turner, Hoare & Co. Ltd.
APOLLO BUNDER, BOMBAY-1.
Branches: Calcutta • Delhi • Kanpur • Madras • Ahmedabad.

FOREIGN AID FOR INDIA

TREND OF THOUGHTS IN THE CAPITAL

From A Special Correspondent

NEW DELHI, 17th *May*

THE implications of foreign aid in the form of outright grants or as loans at attractively low rate of interest for the purpose of providing additional funds towards the building up of the economy of underdeveloped countries and raising the living standards of their people are being discussed afresh at high levels in Government circles. The occasion for this has been provided by the repeated statements issued by Mr. C. Rajagopalachari during the past few days. Having been acknowledged as an elder statesman of the country and being gifted with an uncanny eye to perceive the future course of probable events many years ahead of their actual happening, his tirade against receiving grants from the U.S.A. or for that matter, from any other country without any *quid pro quo* has a special significance, especially as India has already been displaying an extremely shy attitude to receiving aid in the form of outright grants from foreign countries. Its spokesmen have, from time to time, not tired of declaring that India would be prepared to receive aids from foreign friendly nations without any strings attached to them. In fact, India has been receiving such help only on this condition during the last four years and more.

DELHI LETTER

The total foreign aid of all sorts, including loans from the International Bank, Technical Co-operation Assistance Scheme, grants under Colombo Plan, Ford Foundation Scheme, etc., amounted to Rs. 131.9 crores during the first three years of the Plan period, that is 1951-54. During the fourth year, that is, 1954-55, the budget figure relating to external aid was originally estimated at Rs. 48 crores. In the course of his budget speech in February last, the Finance Minister Mr. C. D. Deshmukh, stated in regard to foreign aid as under:

"For the current year (1954-55) a sum of $60.5 million was authorised by the U.S. Government as development assistance to India. About 50 per cent. of this assistance is being utilised in obtaining agricultural commodities like wheat and cotton. Out of this sum of $60.5 million, the Government of India have agreed that a sum of $45 million or its rupee equivalent should be a loan. The Government of Canada have again offered to provide a further sum of the order of $13 million, the Government of Australia a sum of £2.5 million and the Government of New Zealand a further sum of £250,000. The Ford Foundation, which has been providing assistance for programmes of development, particularly in the field of training, made available an additional sum of $1.1 million. Under the Colombo Plan, we are also providing assistance to neighbouring countries. In the budget for the next year (1955-56), the total sum to be received by us by way of external assistance under the Colombo Plan and from friendly countries is expected to amount to Rs. 74 crores, while we shall be spending on the provision of such aid to other countries approximately Rs. 2 crores. During the current year (1954-55), India obtained two more loans from the International Bank for Reconstruction and Development; a loan of $16.2 million to Tatas for their Thermal Power Project at Trombay and another of $10 million to the recently established Industrial Credit and Investment Corporation of India. This brings the total of loans from the Bank to India to $126.7 million."

Government Chary of Taking Aid

In view of the vehement opinion that is being expressed by some sections of the American public from time to time against the foreign policy pursued by India, the Government of India has already become chary of accepting American grants even if offered without strings. That was presumably the reason why India reduced the free gift voluntarily to about 25 per cent., treating the balance as loan.

According to the latest reports from the U.S.A., the sum provisionally earmarked for India to be given in 1955-56 is $85 million. Out of this sum, $70 million are for economic development and $15 million for technical assistance. Pakistan, which is only one-fifth of India, has been allocated a higher sum of $92 million, that is, $7 million more than the sum meant for India. The sum earmarked for Pakistan is divided as under: $63 million for defence (economic) support; $20 million for direct forces support; and $9 million technical aid. Besides this sum, President Eisenhower proposes that a sum of $200 million will be made available for regional development in the various global areas. All the figures thus far is tentative, as the American Congress has the power to strike out or amend any or all of them.

It may be noted that outright grants by the U.S.A. for the economic development of India have been extremely limited, the total utilised during the first three years of the Plan being only Rs. 22.6 crores, including the money allocated by the Ford Foundation Schemes. The total sum allotted for this purpose was, however, higher at Rs. 84 crores. Whatever may be the reasons for the non-utilisation of funds, one thing is clear, that, out of Rs. 860 crores expended during the first three years, the total outright grants utilised work out to 2.6 per cent. only. Other external loans such as the wheat loan of Rs. 90.4 crores, as also those from the World Bank, carry interest and have to be paid back in the coming years.

The question that is being posed in the Capital is whether India would be able to dispense with outright gifts and direct loans from big powers consequent on the "cold war" between leading world powers. India's policy of non-alignment, the persistence of big powers in conducting experiments with destructive weapons such as atom and hydrogen bombs, etc. "The dangerous dissemination of deleterious matter," according to Mr. Rajagopalachari, has already been fouling the world atmosphere, spreading mysterious diseases among mankind. He has compared this to the apparently innocent spitting in public places by tuberculosis patients who spread the germs of this deadly disease among the people. His argument is that a country receiving outright grants from big powers cannot remain neutral since it has a moral obligation to return it in some way or other. According to him, India can maintain its moral power and newly acquired independence if it refuses such aids and undergoes some sacrifice in maintaining its ideals. It may be mentioned that some countries like Syria has been totally refusing outside help, presumably with a view to maintaining strict neutrality. It is suggested that when Parliament reassembles in August next the question of accepting foreign aid will come to the forefront.

Moral Obligation

The problem is now being viewed from different aspects. It is stated that, during the first few years, underdeveloped countries will have to get capital, plant and machinery, technical know-how, etc., from advanced industrialised nations. Even the U.S.A. has been able to develop its economic strength on account of the continued inflow of capital from the U.K. and other West European countries. It is argued that the U.K. was able to develop its industries and general economy on account of the wealth derived from its colonial possessions, particularly from India, during the eighteenth and nineteenth centuries. In his book *The Discovery of India*, Mr. Jawaharlal Nehru writes, under the caption "The Plunder of Bengal Helps the Industrial Revolution in England," that the cost of transition from a pre-industrialist economy to an economy of capitalist industrialism in the U.K. was paid particularly by the people of India, in the form of famine and death and vast unemployment. He adds: "It may be said that a great part of the costs of transition to industrialism in western Europe were paid for by India, China and the other colonial countries, whose economy was dominated by the European powers." It is, therefore, suggested that the Western industrial nations, including the U.S.A., have a great moral obligation to redeem their debt and come to the help of Asian countries which were instrumental to their present phenomenal prosperity and high living standards. This view is supported by no less a person than Mr. Chester Bowles, a former U.S. Ambassador to India.

Apart from the western world's moral obligation to underdeveloped countries, it is asked as to whether India could afford to give up foreign aid, particularly outright gifts and grants. During the first Plan, the total aid in all forms is estimated at about 10 per cent., out of which nearly 40 per cent. represents wheat loan. During the second Plan, the estimates of foreign aid are placed around Rs. 500 to Rs. 600 crores. It is possible that about Rs. 150 crores can be utilised out of sterling balances which could not be fully utilised during the last two years and more. Out of the balance of Rs. 450 crores, it is possible that Colombo Plan countries might be able to give about Rs. 50 crores. Another Rs. 200 crores might be forthcoming from the World Bank for purposes of development of specific projects. Perhaps, about Rs. 200 crores, mostly in the form of loans, might be had from the U.S.A. Since the planners are thinking of spending about Rs. 6,300 crores during the next Plan period, the contribution from the U.S.A. will come to about less than 4 per cent. of the total outlay. Mr. Rajagopalachari characterised the nature of foreign help as one of convenience which would speed up the pace of development projects. Since the help from the U.S.A. will form a minor proportion of contemplated expenditure under the second Plan, it is claimed that the total refusal of taking any direct aid from this country and other big world powers is not likely to affect the economic progress of India to any material extent. It is, however, possible that people who hold this view might not be averse to taking foreign help if it were offered through the United Nations Organisation. It is likely that the opposition members of Parliament will take up the question of foreign aid and persuade the Government of India not to accept gifts or grants from big world powers, so that India could follow its policy of non-alignment with dignity.

STRIKE WAVE IN BRITAIN

HAVE WORKERS ACHIEVED THEIR OBJECT?

From Our Own Correspondent

LONDON, 14th *May*

ALTHOUGH there has been a crop of strikes in this country in the last few months, they have not so far become an election issue. This is because, while some voices on the right are urging legislation to make strikes in some circumstances illegal, the Conservative Party does not wish to have themselves associated in the minds of the working class voter (on whom the Conservatives depend for much of their support) with any sort of anti-labour policy.

LONDON LETTER

The real problem of unofficial strikes is, in fact, of as much concern to the Labour Party as it is to the Conservatives and, one can say, of as much concern to the Trade Union Movement.

It is, of course, difficult to say on the face of it, whether many of the recent strikes have achieved their object or not. The newspaper strike ended by the men going back to work without their demands being met as a preliminary to immediate consideration by the employers of those demands. The autumn dock strike ended in the same way; while the railway strike threatened in April was also withdrawn at the last minute on the understanding that the locomotive men's request for higher pay differentials would be immediately considered. So, while, in all these cases, the men resumed work as a preliminary to further negotiation, the strike apparently forced immediate consideration of the grievances.

Just recently there has been a tug-boat strike at Liverpool and a coal strike in Yorkshire. The tug-boat men have gone back—this time on their terms; and the Yorkshire strike is somewhat in suspense. In the latter case, the trouble is the dissatisfaction with the method of calculating pay for filling coal into trucks. This dissatisfaction has been widespread and the National Coal Board has been trying to deal with grievances and, indeed, a new and simplified system has been started at some pits. The strikers found cause for dissatisfaction either that they were not consulted in the revised arrangements or that the revised arrangements were not being applied yet at their particular pits. Undoubtedly, irritation at the slow working of the arrangements to put right the grievances and the very poor labour relations which appear to exist between the National Coal Board, the National Union of Mineworkers, and the men working at the pit, are important factors. There are all kinds of contracts between the Coal Board and the miners at different pits, inherited from the days of private ownership to cover all the kinds of jobs which the mine-workers may be called on to do, and to compensate, or not as the case may be, the results of handling different qualities of coal. Most of the miners have gone back, some want something on account before they go back, and it is not clear whether the strike will start growing again or die out.

Dock Strike

Finally, there is another threatened dock strike: This time the result of arguments between two unions. The new National Association of Stevedores and Dockers wants to be recognised by all port employers in the same way as the latter recognise the General and Transport Workers' Union. Recognition has been given in London, and after a threatened strike was given in Manchester. Elsewhere the port employers are afraid that if they recognise the new Union, the Transport and General Workers' Union will come out on strike, but in fact, as they are not recognising the new union, it is calling out its considerable membership and there is every likelihood that, in spite of appeals by the Transport and General Workers' Union, a substantial number of men in the latter Union will join in.

This last story is one for which the Government cannot avoid responsibility. The attitude of the Ministry of Labour is traditionally that it is neutral in trade disputes, whether between unions and employers or between one union and another. It only comes in when both parties appeal to it to do so and they have exhausted the usual conciliation machinery. But while there is a case to be made for the neutrality of the Ministry where the dispute is between unions and employers, it is difficult to see the justification for this attitude when a dispute between rival unions brings the commerce of

(Continued on next page)

INVESTMENT IN BRITISH INDUSTRY

ENCOURAGING POSITION, DESPITE VULNERABLE ECONOMY

By W. Rees-Mogg

WHEN the Bank of England raised the Bank rate to 4½ per cent., with the approval of Mr. R. A. Butler, the Chancellor of the Exchequer, it was taken as a warning that the British economy was outrunning itself. Too many imports were coming in, not enough foreign currency was being earned. A number of reasons has been given for this development, but the basic diagnosis is now agreed.

The immediate cause of the return of this strain on the economy was that everything had been going just a little too well. There were more goods in the shops and more money to buy them. Output was higher and investment was higher. Because output was rising, firms wanted to lay up bigger stocks, and that had a big, and probably temporary, effect on the import bill. In addition, there was a special point of trouble. Britain, like the rest of Europe, had an exceptionally bad harvest and an extra quantity of food, particularly of food for animals, had to be brought in. This is by no means a bad position for an economy to be in. It is not a position of crisis like the economic crisis of the reconstruction period after the war. But it is a situation in which the confidence of industrialists can be tested severely. It is worth taking a second look at the investment position in Britain at a time like this, because one might fear that investment would be affected by the measures taken to check the new economic problem.

Spate of Investment Plans

In 1954 and the first months of 1955, there was a positive spate of new investment plans. Almost every week, one read of a new decision to spend tens, sometimes hundreds, of millions of pounds over a period of a number of years. Some of these plans were made by the nationalised industries. The railways, which had previously been at the back of the investment queue, announced a £1,200,000,000 plan to modernise and re-equip the whole system. That will take 15 years to carry out. Hundreds of millions of pounds are to be spent in the next ten years on the construction of nuclear power stations. The coal industry also has a large capital development plan. The Government plans a major road-building programme. And so on.

All this would not be so satisfactory, if the Government and the State corporations were the only part of the economy in which the level of investment was sufficiently high. This has always been seen as a danger by the City of London, because it is much easier for these bodies to borrow the money they need. There are fortunately no signs that this fear has been justified. Private firms have put in hand their own programmes. The steel companies, most of whose biggest units have been denationalised, have increased their programme for expanding steel capacity. The motor car manufacturers have announced plans for capital expenditure of a very large size. The largest have come from the British Motor Corporation, which is the amalgamation of the Austin and Morris companies, and from Ford and Vauxhall. Vauxhall is the British subsidiary of General Motors. There are also big expansion plans in a number of other industries, including particular chemicals and oil.

New Money for Industry

One sign of this has been a great increase in the number of issues of stock made on the London market. Despite the fact that a number of the largest capital plans were going to be financed from companies' internal resources, from ploughed-back profits, the new money raised by British industry rose from £96,000,000 in 1953 to £197,000,000, in 1954, according to figures compiled by the London *Financial Times*. Figures for new factory building also boomed. By the third quarter of last year, the rate of approval of new factory projects had reached 7,000,000 square feet a month, more than double the rate in the same period a year before.

The investment boom also showed itself in a number of other ways. There was, for instance, a great increase in the demand for steel. Some types of steel ended the year in very short supply and steel imports had to be increased. The machine tool industry was also kept busy and orders are high.

This great expansion in investment has been supported by a great increase in savings. Gross savings are now running at more than £800,000,000 a year. In a recent article, Professor Cairncross, of Glasgow University, estimated that new capital formation in Britain was higher than ever before. He said that it was necessary to go back before the First World War to find a period when the flow of savings bore a higher relationship than now to the national income. It should also be remembered that, in those years before 1914, a large proportion of British saving consisted in the net earnings from foreign investment. Those net earnings do not now exist, as investments have been cashed and debts increased in two world wars.

Signs of Confidence

Both these savings and the investment that flows from them are signs of the confidence of the British in their own economy. Impressive also is the investment in Britain by American companies. Since the war, 40 per cent. of American investment in Europe has been in Britain. That, too, is a sign of confidence.

On what, then, is this confidence based? In the first place, there is a feeling that Britain has made a real come-back economically. The country shows strong signs of internal and external prosperity and is not over-worried by short-term difficulties, by bumps on the road. There is also the encouraging success of technical development programmes which both absorb investment and make it more profitable. British industry ended the war largely obsolete and in some parts technically backward. There had first been the economic stagnation of part of the 1920's and the 1930's and then the total diversion of all resources to war purposes. There has had to be a major effort to re-equip and to modernise. That effort has been made and is continuing.

This, then, is an encouraging position. The productive capacity of Britain has increased and is increasing. The prosperity of the country rests on the solid basis of large investment and a high rate of savings. But it is not a position in which there is any room for complacency. Britain's economy is only ten years away from a state of complete exhaustion. It is still vulnerable to the ebb and flow of world trade. British industry may be in a confident frame of mind, but it is conscious of the difficulties that remain to be tackled.—*Exclusive to "Commerce."*

MARKETING OF BRITISH WOOL

The British Wool Marketing Board has announced details of arrangements for the 1955 home wool clip. Of prime interest to the 120,000 wool growers in the United Kingdom is the schedule of maximum prices for each of about 200 grades of wool. This schedule is based on an overall average price of 54.17d. per lb.

The Board's statement is a pointer to the flourishing state of the wool-growing industry in Britain today. Encouraged by the stability of prices under the marketing scheme, farmers are now aiming at better fleeces in their flocks and a higher standard of preparation of the clip to meet the needs of manufacturers. Under the new financial arrangements between the Board, the National Farmers' Unions and the Government, a figure of 58½d. per lb., including marketing costs, has been guaranteed to the Board for the 1955 clip. Although the increase in the Bank rate may add nearly ½d. per lb. to costs, the Board hopes to achieve further economies in expenses under its own control, and only 4½d. is to be set aside for marketing costs.

Although Britain produces only cross-bred and coarse carpet wools, the home clip now makes a higher average price than the clips of New Zealand and the U.S.A., which contain a proportion of fine mernio wools. During 1953-54, for instance, wool at New Zealand sales averaged 50½d. per lb. (greasy), as compared with 53d. at British sales. This is due largely to the fact that much British wool is sold almost at the point of manufacture, and there are no shipping costs. "Guaranteed prices to wool producers which have been constant at 54d. per lb. (net) during the four years 1952 to 1955," the Board observes, "have had a significant effect on the recent increase in Britain's sheep population. The National Farmers' Unions and the Wool Board regard the new financial agreement with the Government as a helpful mechanism for continued stability and confidence in the sheep industry."

LONDON LETTER

(*Concluded from previous page*)

the country to a standstill. The Minister has got a clear case there for bringing the heads of the unions together and bringing all the pressure he can bear on them to be sensible and to sort out their differences without stoppages of work.

As regards the other disputes, a good deal is heard about agitators but the agitators would be ineffective, if there were no dispute on which they could work and if there were always close relations between union headquarters and local branches. There is, indeed, scope for enquiry into the working of the whole Trade Union system and there again the Minister of Labour cannot avoid responsibility, in view of the high place the unions have now gained in the economy of the country, for insisting that they keep their own houses in order.—*All Rights Reserved.*

BOMBAY STATE FINANCE CORPORATION

MODIFICATION IN LOAN POLICY

STARTED just seventeen months ago, the Bombay State Financial Corporation is slowly feeling its way in providing financial assistance to needy industries in the Bombay State. Such assistance, according to the second annual report of the Directors of the Corporation, covering the year ended 31st March, 1955, amounted to Rs. 68.37 lakhs to 31 applicants. This sum may appear to be rather small, as compared with the total request for loans amounting to Rs. 2.90 crores from 119 applicants. But it is due to many hurdles which the Corporation has to cross, before it can render assistance on an impressive scale. To mention some of the major hurdles. First, the Corporation can hardly afford to be very liberal in sanctioning loans indiscriminately, ignoring sound principles of banking. Secondly, it has itself to acquire sufficient experience regarding the present position of industries in the State, their financial soundness, their method of business, etc., so that it may have an idea as to the extent to which it has to adjust its lending policy in order to make available more and more of its funds to creditworthy, sound and promising industrial ventures. In fact, the loan policy of the Corporation underwent certain modifications—as will be shown presently—during the year under review. Thirdly, the industries needing financial help from the Corporation have also to gain experience regarding the aims of the Corporation, the limitations under which it has to operate, its loan policy, the procedures and formalities which have to be gone through before a loan is actually sanctioned by it, the nature of security acceptable to it, etc. In other words, as the Corporation is still in its initial stages, the intimacy between it and the managements of industry, which is necessary for any expansion of business, has not been established yet as much as needed.

Applications

Of the 31 applications for which loans were sanctioned, 18 were for the aggregate value of Rs. 17.37 lakhs, whose requirements were below Rs. 2 lakhs each. As many as 12 of the remaining 13 applications were for a total loan of Rs. 44.50 lakhs requiring loans between Rs. 2 lakhs and Rs. 5 lakhs. Only one loan was sanctioned for a sum exceeding Rs. 5 lakhs.

Of the 119 applications received by the Corporation, as many as 66, requiring Rs. 128.94 lakhs in the aggregate, were pending investigation. Seventy-three applications for Rs. 40.70 lakhs were disposed of for some reason or other. Some of them were not eligible for loans under the State Financial Corporations Act. A few others failed to submit themselves for a detailed examination of their proposals. Some of them were not technically sound, while others were for amounts less than Rs. 75,000 and, therefore, had to be transferred to the Director of Industries, Government of Bombay, who deals with such applications under the State Aid to Industries Act. The Corporation does not accept applications seeking accommodation for less than Rs. 75,000.

The largest number of applications came from general engineering companies for a total sum of Rs. 74.70 lakhs. Of these, 11 applications for Rs. 20.62 lakhs were approved of. The next largest was from textile mills which accounted for 25 applications for Rs. 38.77 lakhs. Only 6 of them, covering a sum of Rs. 12.70 lakhs, were sanctioned. Twenty-one applications for Rs. 29.11 lakhs came from electricity supply concerns, of which three were successful in getting loans amounting to Rs. 4.3 lakhs. Among other applicants were from concerns engaged in the manufacture of matches, metals, pharmaceuticals, paper, sugar, vegetable oils and others. The purposes for which loans were sanctioned included expansion of existing units and development of new lines of manufacture. Loans were, for instance, granted to four textile concerns for acquiring processing machinery in the form of dyeing, bleaching and printing equipment. Loans were given to develop new lines of manufacture of elastic webbing and velvet and velvetine and allied products. In the engineering group, loans were sanctioned for the expansion of three units of which one is engaged in the production of vital machine tools for mechanical industries. The Corporation has granted loans for the manufacture of new lines in this group, such as hacksaw blades, tested and untested steel chains and patented type of water taps.

The Board of Directors of the Corporation has decided to appoint advisory committees in respect of (a) chemical, (b) engineering, and (c) textile industries for examining the loan applications from concerns engaged in these industries. It is interesting to note, in this context, that the Corporation has had the co-operation of reputed business houses such as Tata Industries, Killick Industries Ltd., A.C.C. Ltd., National Rayon Corporation Ltd. and associations such as the A.-I.M.O. and the All-India Chemical Manufacturers' Association in suggesting names of persons with high technical qualifications and experience to serve on the advisory boards in the three groups of industries mentioned above.

Loan Policy

The year under review is noted for a modification in the loan policy of the Corporation. As a result of the new policy, the Corporation now entertains applications for loans upto Rs. 10 lakhs from industrial concerns in the State. Previous to the change, it had proposed to limit the loan to a single concern to Rs. 5 lakhs only. Secondly, formerly there was no intention to advance loans for working capital. But now, the Corporation advances loans for this purpose upto a limit of Rs. 1.5 lakhs per concern. Thirdly, the Corporation will receive applications for loans amounting to Rs. 75,000 and above (but upto Rs. 10 lakhs) from industrial concerns, those below this sum being entertained by the Bombay Government under the State Aid to Industries Rules. For two to three years more, the Corporation will continue to receive applications from electricity concerns in the State. Thereafter, this work will be undertaken by the Bombay State Electricity Board, which though formed on 6th November, 1954, under the Electricity Supply Act, is yet to organise and raise its own resources for the purpose.

Profit

The working of the Corporation during the year resulted in a net profit of Rs. 2.40 lakhs. Of this, a sum of Rs. 1.06 lakhs has been provided for taxation. After making necessary appropriations for reserves (Rs. 16,000) and writing off of preliminary expenses (Rs. 11,145), there remains a balance of Rs. 1.07 lakhs. The Corporation has requested the Bombay Government to give subvention for the balance of Rs. 2.43 lakhs to make up the guaranteed dividend of 3½ per cent. payable to the shareholders of the Corporation.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

INDUSTRIAL FINANCE CORPORATION ACT

The Government of India proposes to modify the Industrial Finance Corporation Act, 1948, and the State Financial Corporations Act, 1951. The modifications are based on the experience so far gained in operating the Acts, as also on certain recommendations made in 1953 by the Industrial Finance Corporation Enquiry Committee, presided over by Mrs. Sucheta Kripalani. They have been incorporated in a Bill entitled. "The Industrial and State Financial Corporations (Amendment) Bill, 1955." The Bill was introduced in the Lok Sabha on 12th April last, and is expected to be taken up for consideration in the ensuing autumn session of Parliament.

The Enquiry Committee had recommended that the administrative set-up should be remodelled so as to have a full-time paid Chairman to be assisted by a General Manager in place of the present arrangement of an Honorary Chairman and a paid whole-time Managing Director. Agreeing with this recommendation, the Government has incorporated an amendment to this effect in the Bill mentioned above. According to it, the paid Chairman will be appointed by the Central Government in consultation with the Board of Directors of the Corporation. He will receive such salary and allowances as may be determined by the Board with the approval of the Central Government. He is to hold office for a period of three years or until his successor is appointed. He is also eligible for reappointment. He should exercise such powers and discharge such duties as are assigned to him by the Act or as may be delegated to him by the Board. If he feels that circumstances warrant immediate action in respect of any matter within the competence of the Board or the Central Committee, he can take such action as he deems necessary. But, soon after, he should make a written report to the Board or the Central Committee, to that effect. The Government reserves to itself the right to remove the Chairman from office. With the appointment of the Chairman will cease the posts of the Managing Director and Deputy Managing Director.

Provision is made in the Bill for the abolition of the present Executive Committee and for replacing it by a Central Committee, as was suggested by the Enquiry Committee. The Central Committee will consist of (a) a Chairman, (b) two directors elected by the nominated directors, and (c) two directors elected by the elected directors. The Chairman of the Board will be the Chairman of the Central Committee also. A director elected to be member of the Central Committee is to hold office as such for the rest of his term of office as Director of the Corporation for which he is so elected. Subject to such general and special directions as the Board may give, the Central Committee will be competent to deal with any matter within the competence of the Board. The minutes of every meeting of the Central Committee should be laid before the Board at its next following meeting.

The Corporation has been empowered, from time to time, to appoint one or more advisory committees for assisting in the performance of its functions effectively. It may also appoint a General Manager and such other officers and staff as it considers necessary. It has been given powers to appoint more than one director on the Board of Directors of a loanee company. It can not only sell but also lease the property pledged or mortgaged to it.

Doubts have arisen while operating the Industrial Finance Corporation Act as to whether concerns which are not actually engaged but are formed with the object of engaging in the manufacture or processing of goods are eligible for loans from the Corporation. Provision has been made to clarify the intention that concerns which have been formed with the object of engaging in the manufacture or processing of goods are also eligible for receiving loans. A similar change is proposed in the State Financial Corporation Act, 1951, also. In other words, the change widens the definition of "industrial concern" to include those concerns brought into being with the object of manufacturing or processing commodities.

WORLD BANK LOAN TO NORWAY

As briefly reported in this journal recently, the World Bank and the New York investment market have completed a combined operation to lend $40 million to the Kingdom of Norway. The operation consists of an offering of $15 million of Norwegian bonds in the U.S. market and of a grant of a $25 million loan by the World Bank. The proceeds of the $40 million loan will be applied to the foreign exchange costs of capital equipment for the development of the Norwegian economy.

The new bond issue is designated as the "Kingdom of Norway External Loan Bonds of 1955" and is dated 15th April. The loan is divided into four categories according to maturities. Thus it consists of (a) $2.5 million of three-year 3¾ per cent. bonds, (b) $2.5 million of four-year 3¾ per cent. bonds, (c) $2.5 million of five-year 3¾ per cent. bonds and (d) $7.5 million of ten-year 4¼ per cent. sinking fund bonds, due 15th April, 1965. All maturities are being offered at 100 per cent. plus accrued interest. All the bonds are callable for redemption in whole or in part on thirty days' notice at the option of the Norwegian Government. Provision has been made for a redemption premium of ¼ of 1 per cent. for each period of 12 months or fraction thereof from the date fixed for redemption to the respective maturity dates.

For sinking fund purposes, the ten-year bonds are callable on 30 days' notice at 100 per cent. plus accrued interest to the date of redemption. Retirements under the sinking fund are on a semi-annual basis commencing on 15th October, 1960, and on each interest payment date thereafter.

The World Bank loan of $25 million to Norway made currently with the bond issue, is for a term of 20 years and carries interest at 4¾ per cent. including the statutory commission of 1 per cent. A total of $5 million will be amortised on a semi-annual basis in the sixth and seventh years. Amortisation of the remaining $20 million will begin in November 1965.

BENEFITS OF FOREIGN PRIVATE INVESTMENTS

VIEWS OF AN AMERICAN INDUSTRIALIST

MR. H. W. Balooyen, Vice-President of American and Foreign Power Company, Inc., which has large overseas investments in public utilities, says the benefits to a host country of foreign private capital investments appear to be one of the least understood economic topics of our time. This, he says, is indicated by some of the headlines and newspaper stories which heralded the recent publication of the report on foreign capital in Latin America by the U.N. Department of Economic and Social Affairs.

"To the uninitiated," he adds, "it would appear that the U.N. experts had made a startling discovery which reflected no credit on the foreign business firms—particularly American firms—with Latin American investments. U.S. investors actually have taken out more money than they have put into Latin America during the past 25 years! If this is truly a 'little-known situation' as stated in one of our important newspapers, and, of itself, is considered to be cause for alarm, then it is only too evident that we have not progressed very far in our understanding of foreign investment fundamentals. It should be self-evident that a foreign investment by a private company, like a domestic investment, is made in the expectation of profit. It should be equally evident that a company's shareholders will not be satisfied, for long, with a reported profit which does not result in their receiving cash income, in a currency they can use. Why then, should a private company be expected to put into foreign investments over a period of years more than it takes out? And why should the sum total of private companies in the United States with Latin American investments be expected to do so? And, finally, why should it be at all surprising if the return on these investments, on the average, should be somewhat higher than in the United States, when the additional risks attendant upon investments in the less-developed countries are considered?

"Actually, the most surprising discovery in the recent U.N. report is the fact that, with petroleum investments eliminated, the return on U.S. private investments in Latin America in recent years has been approximately the same or somewhat less than could have been earned on similar investments in the United States. The real question, of course, is not whether in a specific year, or over a period of years, the inflow of private U.S. capital has exceeded the outflow of profit remittances. It is not purely a matter of balancing foreign exchange income and outgo, although it can be easily demonstrated that U.S. private investments, by promoting exports and reducing requirements, have resulted in a net gain in dollar exchange for Latin America of very sizable proportions. What is significant is whether these investments, all things considered, have been beneficial to the countries which have received them."

Mr. Balooyen said this matter was placed in its true perspective at a recent U.N. meeting by the U.S. representative, Roger W. Straus. He quoted Mr. Straus' remarks as follows:

"The benefits of private investment cannot be measured simply by looking at its effect on a country's foreign exchange account. ... To appreciate its full contribution we must analyse its whole impact on the domestic economy in terms of such things as the training of local labour, the development of related local industries, the growth of new or existing cities or towns, the production of commodities which otherwise would have to be imported—in short, all the things that go to make up national prosperity and economic strength."

Mr. Balooyen said this point was further developed in an article on foreign investments in the November, 1954, issue of the Commerce Department's *Survey of Current Business*. "This article," he explained, "also placed emphasis on the fact that gains to foreign countries from U.S. private investments should be considered in the light of the contributions made to overall output; and it estimated that 'as much as one-tenth of the value of goods and services produced in Latin America may be accounted for by U.S.-owned enterprises.' The article stated, further, that 'some 25 per cent. of total exports to the United States by foreign countries is produced by U.S. direct investment companies abroad which have developed and made possible this large trade.'

"Some idea of the magnitude of this item may be gained by comparing $900 million, which is one-fourth of Latin American exports to the United States in 1952, with the unusually large net outflow of $336 million on U.S. investment account for that year to which attention is called by the U.N. report. The report placed the net outflow during the 1925-29 period at $100 million per year and, for the 1946-51 period, at $241 million per year. But this still is not the whole story. U.S. companies and their subsidiaries in Latin America make direct payments in income taxes, royalties and other taxes and payments of well over $1,000 million a year. Generally speaking, this represents income these Governments would not get were it not for these private investments. Part of this total represents payment in dollars and part is payment in local currency; but these payments, taken as a whole, have a double effect. They help the national Governments to balance their budgets; and the dollar portion helps in balancing their foreign exchange accounts, supplying part of the funds required for essential imports and for service of foreign investments and loans."

In its approach to the question of whether the service of U.S. private investments in Latin America is imposing an undue burden on foreign exchange resources of the Latin American countries, the U.N. report compared the gross outflow of income to the United States ("transferred investment yields") with exports to the United States, the resultant percentage being labelled "the investment service ratio." Mr. Balooyen pointed out that the U.N. report estimated the investment service ratio on U.S. private investments in Latin America as 19 per cent. for 1952. He said the overall ratio is completely distorted by the inclusion of the relatively high yields from the Venezuelan petroleum industry. If Venezuela's ratio is omitted, he said, the investment service ratio for 1952 would be only 5.5 per cent. Similarly, he said, the gross earnings of U.S. private investments in Latin America, excluding Venezuela, were only 8.7 per cent. in 1952. Comparable rate of return in the United States that year was 10.5 per cent.

"I am sure that it is well understood by our friends in Latin America," concluded Mr. Balooyen, "that the contribution of U.S. private capital cannot be adequately measured by offsetting dollar figures of direct income and outgo. Most of these investments are in basic industry and natural resource development in such fields as mining, petroleum, agriculture, transportation, electric power and heavy industry. Private investments of this type have a catalytic effect on the entire national economy, as they create and stimulate the growth of a wide variety of related and complementary industries, thus creating new sources of national wealth. Furthermore, these investments customarily bring with them the technical skills and administrative experience required for their most effective economic utilisation."

The Netherlands Bank has published a number of regulations involving ampler possibilities for the purchase and sale and the import and export of foreign securities by residents in the Netherlands. The purchase is possible of such foreign securities as are officially listed on the Exchange of the country in whose currency the purchase is made and of those of which the original shares or certificates are listed on the Amsterdam Stock Exchange.

Foreign securities of residents can be exported to all countries, with the exception of Indonesian securities and other foreign securities expressed in Netherlands guilders.

The State Bank of India Act, 1955, which has already received the assent of the President, will come into force from 1st July, 1955, in pursuance of sub-section 2 of section 1 of the Act. As already reported, Dr. John Matthai, a former Finance Minister, will be the Chairman of the Board of Directors of the State Bank.

EXPORT OF INDIAN COTTON YARN

TRADERS URGE REVISION OF POLICY

A VIGOROUS plea for liberalising restrictions on exports of cotton yarn has been put forward by the Bombay Yarn Merchants' Association and Exchange Ltd., in the course of a communication addressed to the Chief Controller of Imports and Exports. It will be recalled that, under the present policy, only a limited quantity of yarn—estimated at 10,000 bales—is allowed for export by mills. The allotment of quotas is made on the following basis:

(1) In respect of composite mills, the unit which actually delivered, during the quarter January-March, 1955, 120 per cent. of obligations fixed under the Cotton Textiles (Control Order), 1948, are permitted to export 40 per cent. of the excess of actual deliveries over 120 per cent;

(2) in respect of purely spinning unit, these mills which delivered in the same quarter one-fourth of the actual quantity delivered by them during 1954 or their obligations fixed under the Order, whichever is higher, are permitted to export 40 per cent. of the excess of actual deliveries above the stated higher limit;

(3) the licensing period for deliveries during January-March, 1955, commenced in April, 1955, while that for deliveries during April-June, 1955, will commence in July next;

(4) the last date for effecting shipment against such allotment is 30th September, 1955;

(5) the different counts of yarn permitted to be exported in relation to the actual quantity and counts of yarn delivered by mills during the relevant period.

When the Government of India announced the above policy in February last, it stated that the policy was designed to help the mills to liquidate their stocks of yarn by providing an incentive to mills to deliver increased quantities of "free yarn." This objective, the Association observes, has not been realised. For, according to it, hardly 10,000 bales of yarn are allowed for export. It is practically impossible for the composite mills to reach the peak figures of their production to the extent of 120 per cent. The spinning mills also are allowed not more than 40 per cent. quotas. Indeed, the Association points out that large stocks of yarn have accumulated with the mills with the result that prices of yarn have suffered a sharp fall. The average price of 20 counts yarn is at present Rs. 15 per bundle of 10 lbs., as against Rs. 16-8 in January and Rs. 16-4 in March, 1955. Two factors are said to have been responsible for such a state of affairs. First, the production of yarn has registered a marked expansion, the monthly rate of output now being about 140 million lbs. On this basis, the aggregate production for the whole of the calendar year 1955 may be estimated at 1,680 million lbs., as against 1,563 million lbs. in 1954 and 1,506 million lbs. in 1953. Secondly, following the Government's decision not to supply yarn to unauthorised powerlooms, these looms have to depend on supplies of rayon yarns.

Competition in Yarn Trade

In support of the plea for an early liberalisation of restriction on cotton yarn exports, the Association has drawn the Government's attention to the keen competition that has already developed in the world cotton yarn market. Citing the instance of Hong Kong, which was once a very important market for Indian cotton yarn, the Association points to the appreciable rise in exports of yarn by other countries to this market, in distinct contrast to the marked fall in exports from India. During the first 10 months of 1954, India exported to Hong Kong a bare 1.65 million lbs. of yarn, as against 5.6 million lbs. in the whole of 1952. In the same period, Egypt exported 5.22 million lbs., as against 1.61 million lbs., and Japan shipped 2.78 million lbs., as against 1.10 million lbs. "There is," to quote the Association, "keen competition *inter se* the exporting countries, and, looking to the statistical reports of the past three years, it will be evident that, if the present restricted policy were persued by the Government, Italy, the U.K., Japan and Egypt would capture the overseas markets." In vew of such competition, as also of the need for maintaining our export trade in cotton yarn abroad, the Association urges the Government to allow more exports. Elucidating this aspect further, it observes: "Exports of cotton yarn in adequate quantities is not only necessary to relieve congestion of stocks and to stabilise prices, but to help establish and develop export markets for yarn in countries like Ceylon, Burma, Indonesia and Siam. It is learned that these countries have cut down their imports of Indian handloom cloth by nearly 80 per cent., in order to encourage and develop their own handloom industry and for which there is a good demand for 20s and 40s cotton yarn. While India is losing her export trade in handloom cloth with those countries and as a consequence of restricted import of cotton yarn from India, these countries have started buying their requirements of yarn from Japan and other countries."

Supply Position Comfortable

In this connection, the Association seems to dispel the fears of the Government that the adoption of a more liberal policy for cotton yarn exports would result in scarcity of supplies for domestic consumption. During the years 1952 and 1953, when the production of yarn was low, India exported 21 million lbs. and 17 million lbs. of cotton yarn, respectively, and no dearth of yarn, it says, was felt either by consumers or traders. The following table gives the statistical position in respect of cotton yarn in the past five years:

(In million lbs.)

	1954	1953	1952	1951	1950
Production	1,563	1,503	1,447	1,292	1,166
Imports	2	2	..	1	3
Total supplies ..	1,565	1,505	1,447	1,293	1,169
Yarn used by mills for weaving cloth	1,039	1,014	934	897	755
Exports	8	17	21	27	84
Supplies of yarn available for handlooms and other consumers	518	474	472	372	320

This view is supported by the remarks of Mr. W. W. Kilgour, Chairman of the Cambodia Mills Ltd. (Coimbatore), made at the annual general meeting of the Company held on 23rd April, 1955. Mr. Kilgour said: "We have read much in the papers about weavers' societies calling for increased supplies of yarn, but the production figures show that the market has been supplied with much more than they can readily consume, so much so that the dealer associations in the States (Madras) have been obliged to call on the Government to permit yarn exports to ease the situation brought about by overproduction. I regret to say that no yarn exports were permitted at all last year and it is only in the past month that Government have realised that there is an exportable surplus, but, in permitting the export of yarn, they have applied such a rigid formula that little advantage may be had from it."

In view of all these considerations, the Association warns that, if liberal exports of yarn were not allowed, the mills and the traders would be subjected to severe loss and the country might miss the chance of regaining its customary markets and developing new markets. The Association also urges the Government to remove discrimination between the mills and the traders in granting export quotas. Under the present policy, only the mills are allowed to export cotton yarn. Such a policy is considered to be highly detrimental to the export trade in general. In support of this view, the Association points out that even the quotas given to mills under the present policy are actually utilised by the mills' trade nominees and the mills only derive the benefit of exports. According to it, it is the traders who bear the risk of price fluctuations. The Association, therefore, emphasises that the Government should immediately revise its cotton yarn export policy in such a way as to permit issue of liberal quotas not only to mills but also to established traders.

DEVELOPMENT OF HANDLOOM INDUSTRY

The All-India Handloom Board has laid down general principles governing the implementation of schemes for the development of the handloom industry. According to these, the State Governments may encourage conversion of throw-shuttle looms to fly-shuttle looms. The entire cost of such conversion will be paid as a grant, subject, however, to a ceiling of Rs. 25 per loom. The Board considers that there is at present no need for conversion to frame looms. The introduction of take-up motion to fly-shuttle looms may be encouraged, the expenses being met from the cess fund as a grant subject to a ceiling of Rs. 70 per loom (for the lever, roller, beams, etc.).

With regard to the provision of warping frames (the type required by Saurashtra), financial assistance will be given in the form of an outright grant from the cess fund. A sum of Rs. 20 per frame is said to be quite reasonable. Wherever there is concentration of looms, one warping frame should be equated with 12 looms, so that the maximum possible benefit may be taken out of such a frame. Wherever there is no concentration, a frame may have to be made available, irrespective of the number of looms. Financial assistance in the form of grant from the cess fund will also be admissible for the provision of slays, the extent of assistance considered reasonable being Rs. 50 each if the slay is required with cloth roller, warp, beam, etc., Rs. 30 each if it is required with cloth roller only and Rs. 25 each if the slay only is required. The Board permits sanctioning of proposals for a limited number of looms with jacquards. The reasonable cost of one such loom is estimated at Rs. 300, of which 50 per cent. is to be given as loan and the remaining as grant.

In the case of self-leasing vertical warping machines, the State Governments have been advised to sanction proposals only for a small number. The cost of the machine—Rs. 500—will be paid as a grant. A grant of Rs. 50 will also be paid to cross border dobby. A grant for the supply of (1) iron reeds and (2) bamboo and cholam reeds will be admissible at actual cost but subject to a maximum of Rs. 20 and Rs. 10 per reed, respectively. The reeds, however, should remain the property of co-operative societies for the use of their members. The average life of a bamboo or cholam reed is estimated at five years. For the supply of varnished healds, a grant of Rs. 20 per set may be sanctioned. The supply of warping drums to primary co-operative societies for the preparation of long warps may be subsidised by grants to the extent of three-fourths of the actual cost of each drum. No assistance will be admissible for warping beams for long warps, as these it is felt, do not constitute a distinctive improvement.

PROSPECTS FOR TEXTILES IN SWITZERLAND

The prospects for Indian textiles in Switzerland are indicated by the Cotton Textiles Export Promotion Council in the course of a review published last week. The Council holds out bright chances of building up a good export market for fabrics used in Swiss embroidery factories, house-hold linen manufacturing firms and processing mills. The special varieties of textiles which are particularly in demand in Switzerland include basic cloth such as grey sheetings, cambrics, etc., materials such as those utilised for conversion into bedsheets, tablecloth, towels and the like, and finer quality mulls, voiles and cambrics used in the embroidery industry. Emphasising the quality aspect, the Council points out that, since Switzerland is a highly competitive market, quality fabrics alone will have chances of success. Incidentally, it may be noted that, although Switzerland has a highly developed cotton textile industry, it does not produce all the cloth it needs to feed the local processing industry. The basic cloth is being imported from the U.K., Germany, Belgium, the U.S. and Japan. While the main demand for fine and super-fine qualities is met by the U.K., Germany and Holland, the requirements of medium varieties are met by Japan and Belgium. Moreover, the indigenous textile industry is not in a position to satisfy the demand of the processors and embroidery mills at an economic price. In order to maintain their competitive position in export markets, they have perforce to use imported cloth. The aggregate imports of such cloth are of the order of 25 million yards per annum.

NEW FORWARD MARKETS FOR COTTON

The Central Government has decided to permit establishment of forward markets for cotton in some other centres, in addition to the East India Cotton Association (E.I.C.A.), Bombay. This decision is a sequel to the recommendation made by the Forward Markets Commission. The Government, however, considers that the opening of the new markets should be done gradually and as a result of experience gained in their working. It accordingly feels that, to begin with, futures markets must be established only at two centres, these being Akola in Madhya Pradesh and Indore in Madhya Bharat, while the E.I.C.A. will continue to provide hedging facilities in respect of all varieties of Indian cotton. Generally, the Akola and Indore Associations will provide hedging facilities only for the locally grown varieties of cotton.

It will be recalled that, by a notification dated 30th July, 1954, the Government of India applied section 15 of the Forward Contracts (Regulation) Act, 1952, to full pressed, half pressed or loose Indian cotton throughout India, except the State of Jammu and Kashmir. Following this application, all transferable contracts for purchase or sale of Indian cotton entered into otherwise, than between members of an association recognised under the Act in this behalf or through or with such members became illegal. The recognition previously accorded by the Government of Bombay to the E.I.C.A., however, continued to remain effective.

FUTURE POLICY FOR COTTON INDUSTRY

MILLOWNERS DISSATISFIED WITH PRIME MINISTER'S ANNOUNCEMENT

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, 10th *May*

THE major event affecting cotton traders has been the long awaited statement by the Prime Minister setting out future policy for the cotton industry. The Prime Minister announced the complete lifting of purchase tax on certain types of non-wool textile goods, including piecegoods and household textiles, but refused to take any action to deal with the growing volume of imports of foreign cloth into the United Kingdom. These measures, he believed, would go a long way towards assisting Lancashire traders in their problems in conjunction with the previously announced reductions in import duties by the Indian Government. The reception in Lancashire, however, was far from favourable.

Concern at the Government's failure to include in its plans to help Lancashire any measure to limit imports of cotton cloth from India and Hong Kong was expressed at a special meeting in Manchester of the Cotton Board's Standing Conference on Overseas Trade Policy. The Conference represents every section of the cotton industry. A statement issued after the meeting noted with "profound dismay" the Government's refusal to take any action whatever on imports of cotton goods which were the matter of greatest concern to the industry. Imports from India and Hong Kong entered Britain duty-free and without limit, and so far this year had continued to increase over the alarming rate of 1954. The statement went on: "Because of the conditions under which they are produced, it is difficult to see any end to their expansion in the home market. In view of the threat which these imports constitute to the stability of the industry, indeed to the existence of the industry at anything like its present size, the Conference feels it would be failing in its duty if it accepted the present Government's decision without protest."

Plea for Control on Imports May be Revived

Representations urging some control of foreign cloth imports will be renewed by industry leaders as soon as the new Parliament assembles after the general election. The statement added that the Conference felt the Government should have imposed some limit on the volume of foreign cloth imported for use in the home market. It pointed out that the industry was not seeking exceptionally favourable treatment but relief from what was described as "the exceptionally unfair burden it carries." On the subject of purchase tax, the Conference welcomed abolition of tax on piecegoods, but said that, as the "D" line would continue on made-up garments, which formed the bulk of the home trade in textiles, the deterrent to the production of quality goods would continue.

Such a shout went up about the further concession abolishing purchase tax on the range of textiles mentioned in the Budget statement that it was not immediately realised how little the goods involved affected the whole picture. No made-up clothing, for example, is concerned in the concession. This, again, is a move in the right direction, but very much more is wanted by the industry before confidence can be regained.

A factor of considerable importance is that numerous traders took the opportunity after the Budget to place contracts in household goods, furnishings and the type of cloths on which the tax was halved. Stocks had been allowed to run down and replenishments were needed. A fortnight later, they found that, had they waited, they would have saved more; meanwhile, their new orders will prove somewhat expensive. This policy of reducing purchase tax by slow degrees is the worst possible method of dealing with the situation, as it prolongs the uncertainty which is already besetting the industry.

The possibility of further concessions cannot be ruled out, as trade leaders have already determined to continue their campaign for complete abolition of the tax after the new Government takes office. Obviously, wholesalers will keep their purchases at a minimum until they observe the outcome of the fresh approach to the authorities.

Manpower Drift

More than 10,000 operatives have left Lancashire cotton spinning and weaving mills in the last 12 months. Manpower figures given by the Cotton Board show that the drift of workers to other jobs, which has increased in recent weeks, had reduced the mill labour force at the end of the first quarter this year to 279,970. A year ago, the number of cotton workers was 290,540. In the five weeks up to 2nd April, the weaving section of the industry lost 1,465 full-time and 210 part-time operatives. In the week ended 23rd April, manpower wastage in spinning exceeded recruitment by 548—the biggest labour setback since the first week of June, 1952. There was a further loss of 80 part-time workers.

The reduction in the mill labour force is having its effect on cloth and yarn production. Output of cotton and rayon cloth during the month ended 2nd April, averaged 54,520,000 yards weekly, as compared with a weekly average of 55,630,000 yards in the previous month and 56,440,000 yards in the corresponding month of 1954. Spinning mills produced 18,520,000 lbs. of cotton and rayon yarn in the week ended 23rd April, as against 13,490,000 lbs. in the previous week and 16,910,000 lbs. in the same week last year when output was curtailed by Easter holidays. Most weeks this year, production has easily exceeded the 19,000,000-lb. mark.

Calculation of Yarn Prices

As the liquidation of the Raw Cotton Commission has neared its completion, there has been a good deal of interest, not only amongst spinners but also in other sections of the trade, as to the method which would be adopted to calculate yarn prices when the Commission's symbol quotations were eventually withdrawn. The basis MENY is shortly to be discontinued and the Commission is engaged in closing its books as far as possible. There will be little surprise within the trade that the Yarn Spinners' Association has decided to carry on basing its calculation for American yarn prices on the suitable delivery month in the New York futures market. Experience during the past year has proved that this method is the most convenient for all concerned, giving stability of price over each day's trading and providing the industry with a firm basis on which to operate.

There may be protests from Liverpool that the market there is suffering from the fact that spinners are more inclined to cover their sales in New York in view of this decision. Yet the narrowness of the facilities offered in Liverpool is an adverse factor, leading to some unnecessary movement in prices when a tight supply position is encountered.

Spinners, in general undoubtedly approve of these arrangements, although there remains considerable dissatisfaction at the absence of suitable facilities for covering purchases of long-staple cotton and outside growths in Liverpool. Pressure is still being exerted on the authorities to introduce an appropriate contract to surmount this difficulty.

Re-equipment Undisturbed

When trade conditions are unfavourable, there is a tendency in some quarters to expect that millowners will begin to restrict their purchases of plant and cut down modernisation plans. Over a lengthy period of depression, this may well be so, but, in the early stages of a difficult trading period, the very problems involved may stimulate re-equipment policies. That such has happened in Lancashire over the past year has been disclosed by Textile Machinery Makers Ltd., whose annual report commented on the fact that orders from the local industry had exceeded those contracted at any other time in the past. Individual reports of mill companies, too, frequently contain references to modernisation plans which are being carried out, involving replacement of machinery and introduction of up-to-date devices.

Even when firms are forced into the position of stopping machinery and putting operatives on short time, advantages can be gained. Opportunity is then taken to make changes in the mills and introduce improvements in the plant. Although there is a limit to what can be done in this connection on a short-term basis, the gains obtained at a later date may well assist the industry to recover from the current recession faster than might now be anticipated.—*All Rights Reserved.*

TRAVANCORE CEMENTS LIMITED

SPEECH OF MR. C. S. LOGANATHAN AT EIGHTH ANNUAL MEETING

ADDRESSING the shareholders of the Travancore Cements Ltd. at their Eighth Ordinary General Meeting held at Kottayam on 5th May, 1955, Mr. C. S. Loganathan, Chairman of the Company, said that, with a reasonable measure of encouragement, there should be no difficulty for the cement industry to reach the proposed target of ten million tons for the industry to be attained under the second Five-year Plan. He was sure that the Company would take its due share of the effort, however small, in the implementation of the target.

The following is the full text of Mr. Loganathan's speech delivered on the occasion:

"GENTLEMEN,

"I have great pleasure in welcoming you to the eighth annual meeting of the Company. The Directors' report and the audited accounts for the year ended 31st December, 1954, have been in your hands for some time and I shall, therefore, with your leave, take them as read.

"Since we last met, a new chapter of history has been made for our country. I refer to the 60th session of the Indian National Congress held at Satyamurthynagar, which resolved to establish a socialistic pattern of society, where the principal means of production are under social ownership or control, production is progressively speeded up and there is equitable distribution of the national wealth. An ideal has to be set before the country, consistent with our traditions and genius, and there cannot be any greater ideal than the one adopted. The motto underlying this resolution is that every one should work hard and produce more, so that there may be enough for distribution amongst all.

"Outside our country, there was the epoch-making Asian-African Conference held recently at Bandung of 29 nations. The primary object of the Conference was to promote mutual understanding and goodwill amongst the different nations of the world. The Conference has been an outstanding success. The resolutions passed at the Conference have influenced tremendously to ease the tension in the East, have set the Western powers athinking and have brought the prospects of world peace nearer than ever before.

"To establish the socialistic pattern of society, some planning has to be done. The first Five-year Plan was evolved under conditions of stress and strain. Further, it was the first attempt ever made. Having seen the fruits of the first planning, the second Five-year Plan is being drawn up with more enthusiasm, greater vigour, fuller confidence and better expectations.

"Unemployment is great in South India and more so in the Travancore-Cochin State. It is growing in proportion every year, and it cannot be left without being tackled. The second Five-year Plan provides for a large capital investment in both private and public sectors, and envisages rapid industrialisation of the country, providing for greater employment. In this, labour is expected to play a vital role and if industrial peace prevails, there will, undoubtedly, be more production of wealth and greater volume of employment.

"Turning to our own cement industry with which we are immediately concerned, we have had to face many trials and hardships in the last few years. The labour cost has been mounting up year after year. On top of it has come the levy of an excise duty of Rs. 5 per ton. From the first of April this year, there has been an increase in the railway freight of nearly 10 per cent. All these have been done without a *quid pro quo* for the industry.

Revision of Prices

"The Tariff Commission went into the question of revision of prices, and submitted their recommendations to the Government. If the Government had implemented their recommendations in full, the position of the industry would have been far happier today. As things are, the industry is not able to make full provision for replacements or additions. The Budget speech of the Honourable Finance Minister this year shows that he is not unaware of these problems. He has granted a development rebate of 25 per cent. of the cost of the new fixed assets in the year of installation of the new plant and machinery instead of the present initial depreciation allowance of 20 per cent. He has also added that this rebate would not be taken into account in calculating the ordinary and double depreciation. Even though the concessions granted fall far short of the requirements of 'industry,' it is gratifying to note that Government do realise the need for relief to industry.

"I feel compelled to say, in this connection, that the cement industry, if it so minds, can do much for itself, in the matter of selling cement in the country. Attempts were made in the past to have a single organisation for marketing of cement internally, but without success. The difficulties in the way of creating such an organisation are not insurmountable. With a little amount of sacrifice from all producers—not more than what a big brother is expected to make for a small brother—a common pool for the marketing of cement can and should be achieved. It is time that the industry and the Union Government give consideration to this question more seriously. This will enable cement to be sold at a uniform price to all the consumers in India, leading to greater consumption; this will avoid maintenance of many selling agencies by different producers, reduce cross transport and relieve shortage of rolling stock, and, above all, help the industry as a whole to take full advantage of the demand for Indian cement in adjoining countries in the Near East.

"The success of implementation of all the projects outlined in the first Five-year Plan is in no small measure due to the cement industry, which was able to reach the target set for it. In the second Five-year Plan, the industry is expected to reach a total production of 10 million tons. With a reasonable measure of encouragement, there should be no difficulty for the industry to reach this target in the period set. Your Company will, I am sure, take its due share of effort, however, small, in the implementation of the target.

"Turning to your own Company, the Directors in their report for last year expressed the hope that as a result of the increase in the price of Rs. 8 per ton for our cement sanctioned by Government with effect from February, 1954, the factory would be in a position to operate with a reasonable profit. You will, I am sure, be gratified to note that the expectation has been fully realised during the year under review. I take this opportunity of assuring you that, given normal working conditions, the results that have been achieved will be maintained in the years to come.

White Cement To be Manufactured

"Your Company, with a view to making its position stronger, proposes to take up the manufacture of white cement at the factory. There are only a few places in the world where the raw materials for producing a real white cement are available. In Travancore, such special raw materials are available, and a white cement of world quality can be produced. It might also be of interest to know that this will be the first plant in the whole of the East to manufacture first class white cement. Supply of machinery and technical assistance has been arranged. We are only waiting for the permission of the Government to go ahead with the scheme.

"During the year under review, the relationship between labour and management has been very cordial. The present satisfactory position of the Company is not a little due to the loyal, untiring effort of the workers and staff, and to the cordial relationship subsisting between the workers and the management. Your Company on its side has always tried to do its best for the employees. The figures given in the balance-sheet should be quite revealing. We trust these conditions of mutual trust and co-operation will continue for ever.

"I now move that the Directors' report and the statement of accounts be adopted."

How banking helps the LEATHER INDUSTRY

INDIA produces more than 60 million hides and skins a year. Raw and tanned leather forms her fourth largest export, valued at Rs. 24.38 crores during 1953/54. The bulk of the shipments of leather are made from Madras. Around Madras, too, is a growing industry of mass-produced footwear.

Banking has greatly helped the growth of the leather industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the leather industry.

We at Palai are proud that so many firms in the leather industry, and indeed leading firms in every field of business and industry in South India, employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

* * * *

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and 2 in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

ROLE OF VILLAGE OIL INDUSTRY IN RURAL ECONOMY

PLAN FOR CO-ORDINATION OF "GHANI" AND MILL SYSTEMS

By M. N. Krishnamurthy

CENTRAL FOOD TECHNOLOGICAL RESEARCH INSTITUTE, MYSORE

[For centuries, Indian villages had been a real abode for a vast population carrying on localised industries, feeding themselves from the products of their own farms and thus enjoying a contented life. With the advent of mechanisation and pressure of population on cultivable land, the villages are no more than a symbol of ancient civilisation and culture. In this article an attempt is made to present some lines of approach to revive one of the essential village industries, namely, the village oil industry.—ED]

INDIA'S economic structure is greatly linked with its rural folk, who constitute about 85 per cent. of the entire population and are living in about 4½ lakhs of villages. The impact of two world wars has wrought a radical change in their socio-economic conditions. With the advent of mechanisation and the trend of industries towards consolidation with fewer and larger concerns, the traditional village industry has now virtually ceased to be a profitable undertaking. The majority of the people eke out their livelihood by agriculture alone, but agriculture provides bare subsistence, in view of the fact that the average holdings are small and cultivation is done almost entirely by human labour. According to the latest estimate, there are over 15 million unemployed and an equal number of under-employed in rural areas. To add to the gravity of the problem there are one and a half million new entrants that swell the employment market every year. In urban areas, about one in four constitutes the educated unemployed. Thus the problem of unemployment in the country is of serious magnitude. Indeed, it is one of the greatest issues facing the Government today.

India has vast natural resources. Perhaps, it occupies the foremost place in the world in the matter of production of oilseeds and other oil-bearing materials. According to the present figures, the production of major oilseeds exceeds 5.5 million tons per annum. By methods of intensive cultivation this output is likely to expand. Over and above this, there is a plan to expand coconut and copra production and a number of minor oil-bearing materials of forest and non-forest origin. Having such potential resources, could we abandon for ever the old traditional village *ghanis* that once had been the most productive tool in exchange for modern expellers? Or would it be worth our while to revive them? This question has arisen in the minds of many prominent persons. The Government of India has set up an expert Committee to go into all the aspects of *ghani* and mill systems of crushing oilseeds and to find a satisfactory formula for both the sectors. It is the aim of this paper to shed some light on the possible approaches to the manifold and intricate problems that are likely to require decisions on the part of industry, Government or the general public. For an adequate appraisal of the future pattern and for deciding as to how *ghani* and other systems of extraction might co-operate to serve the material needs of the country, some picture of the different systems that are in vogue is essential.

Growth of Large-scale Mills

The factors that have contributed to the growth of large-scale mills at the present time are many and varied. To mention some of them: (1) The production of oilseeds has increased; (2) large exports of groundnut, carried on hitherto, were restricted; (3) the production of *vanaspati* increased from 48,000 tons from 9 factories in pre-war period to 2.5 lakh tons from 49 factories in 1954; (4) soap factories have multiplied; and lastly (5) due to increase in population, there has been a general increase in consumption levels of edible and industrial oils. It is roughly estimated that there are at present over 1,000 large oil mills in the country that crush about 2.5 million tons of oilseeds per annum. It is believed that these mills in the country with an invested capital of Rs. 33 crores, provide employment for about 60,000 people with a wage bill amounting to Rs. 4 crores.

Solvent Extraction System

The solvent extraction industry, which entered the world in this century, has already gained wide popularity on account of its high extraction efficiency and superior quality of the meal. In many places in Europe and the U.S.A., especially after the Second World War, a number of oil mills have changed over to pressing combined solvent extraction process. In India, it is believed that there are at present about two or three commercial mills working on this system. The oilcake when extracted with non-toxic solvents is found to be superior as a cattle-feed on account of its protein value. Claims have also been established that the solvent meal, when processed, can be used with complete satisfaction even for human consumption. The extracted oil can either be used as an industrial oil or for edible purposes after some refining.

Village *Ghani* System

The village oil industry is a time-honoured industry and even today it is chiefly carried on in the traditional way. At present, about a third of the total quantity of oils produced is through this village system, consisting of about 4 lakhs of bullock-driven *ghanis*. Statistics on the exact number of *ghanis* working in various States of India is lacking. However, the Madhya Pradesh Government Report says that, in the smaller villages, there are no *ghanis* at work and in bigger villages their number has been reduced to about a quarter during the last two decades. In the opinion of this writer, this statement is more or less true of the rest of India, too. The causes are not far to seek. The village *ghanis* suffer from lack of organisation and inadequate equipment and, what is more, there is a colossal loss of oil in the cake. The wastage is all the more significant when judged from the low nutritional standards of the nation in the matter of edible oils, population growth and need to export oils to earn foreign exchange. Furthermore, as the nutritive value of the cake as a feed for cattle lies in its protein content, the surplus oil in the cake only tend to reduce the nutritive value. It is on this account that, in Europe and the U.S.A., the cakes with high oil content do not command as good a price as cake with less oil content. It is also true that the *ghani*, due to the low crushing pressure and elimination of high temperature cooking, produces a light coloured oil with less free fatty acid content, apart from the obvious defects arising from unhygienic conditions.

Future Pattern

In order to revive the village oil industry, the task will not be easy, unless a comprehensive approach is made between village *ghani* crushing system and the latest solvent extraction system, on the one hand, and the expeller oil mills, on the other. Such a plan may lead to (*a*) the regional development of the areas where the raw materials are plentiful, (*b*) the expansion of local markets, thereby relieving stress on transport, and (*c*) a fall in the price payable by consumers.

The present *ghani* crushing results in production of oilcake of as high an oil content as 13 per cent. About 10 to 12 per cent. of the oil can however be extracted by solvent extraction process. The extracted oil can, of course, find a ready outlet without any prior treatment in the village soap industry since it is one of the important twelve industries marked for intensive development by the Planning Commission. As regards the solvent extracted meal, it is rich in protein value and has a high digestibility co-efficient. It will, therefore, serve as an ideal cattle feed. This need is all the more urgent, since India has the largest cattle population in the world and the largest number supported per acre of pasture land. A large number of them is under-nourished. The milk produced is totally inadequate for the needs of the people. It is on account of this that the solvent extraction industry has a great role to play in India's rural economy.

If *ghanis* and the solvent extraction industry are to work in collaboration, a number of factors have to be taken into consideration. Included among these are the relation between the number of *ghanis* and the optimum capacity of the solvent extraction factory and regular supply of genuine oilcakes from *ghanis* to the extraction centre. Plant economics dictate the necessity of continuous operation all the year round. This calls for adequate storage facilities for *ghani* cake to prevent it from deteriorating during handling. The best way of tackling all these problems is to stimulate a joint enterprise by the *ghani* owners for the establishment of solvent extraction factory. In its initial stages, the necessary finances and technical aid have to come forth from the Government or through some industrial corporation or some international organisation.

In order to establish a stable relation between *ghani* and expeller mills, the only approach that is possible is through rationalisation of raw material and improvement in *ghani* design.

Rationalisation of Raw Materials

For centuries, the Indian folk have been accustomed to use raw oils obtained from village *ghanis*. Particularly, oils such as obtained from coconut, sesame, rape and mustard, on account of their characteristic odour and traditional use, have their acceptance only in their crude state. Groundnut which entered this country in the last century and which is one of the largest crops has very little acceptance as a raw oil for a majority of the population and, till recently, a large proportion of this crop was exported to foreign countries. The oil has acceptance only in the form of *vanaspati* and it is largely because of this industry that the consumption of groundnut oil has been considerably stepped up. Cottonseed oil in crude form is too dark and unpleasant in taste for direct consumption, but in the form of *vanaspati*, this too may find a ready acceptance throughout the country. It would, therefore, be just to reserve the total produce of copra, sesame, rape and mustard, which is more than a third of the total major oilseeds production, together with a certain quantity of groundnut, the raw oil of which may be consumed as such, to the village sector. The oil that is necessarily to be refined before it is used for edible purposes, or industrial oils can come from expellers, since there is a close link between expelling, refining, hydrogenation and soap manufacturing operations. There should also be a ceiling in this sector termed "Expeller-Vanaspati-Soap Combine" to the extent necessary.

There are several minor oilseeds such as safflower, *niger*, *mowrah*, tobacco seed, *karanj*, *neem*, poppy, argemone, etc. that are available in this country. There are other oil-bearing materials like rice bran and maize germ which have vast potentialities. *En masse*, they will contribute a substantial share of production in oils. But their treatment in large mills will not be so economical due to scattered supplies. They can, however, be exploited as small business ventures in village mills, as they yield a fair return to the investors. With National Forestry Programme, minor crops production is likely to expand and what is needed is an organisation for collection of raw materials. There are also ample marginal and waste lands in the villages where cultivation of these crops can be undertaken with much advantage.

Modernisation in *Ghani*

Of late, there has been a considerable amount of interest in revolutionising *ghani* design to make the village a productive centre. In this respect, it would be appropriate if consideration is paid to certain important aspects of design, namely, desirability of handling all kinds of raw materials in small quantities, low cost on plant and maintenance, high grade materials for parts subject to wear and durability of construction and efficiency equal to commercial mills in actual working. Recently, the Madras Cottage Industries Research Institute claimed perfection of a model estimated to cost about Rs. 300 per *ghani*. Its novel feature is its feasibility of installation in any ordinary low-roofed cottage. The mechanical improvements in the shape of extremely short pestle, the ball and roller bearings provided between the pestle and the load beam and the mortar, indicate not only reduced friction but also less effort on the part of the bullock to drive the mill. Further, the model has demonstrated higher oil yield and productive capacity with single bullock power.

If the village oil industry is to cater to a large population, the vegetable oil industry will have to be tackled in its entirety. The best way is to co-ordinate the functions of *ghani* and the solvent extraction, on the one hand, and the "Expeller-Vanaspati-Soap Combine," on the other. The regional institutes for the small-scale industry, with the collaboration of the National Laboratories of the Council of Scientific and Industrial Research, may be entrusted with the task of studying the problem as a whole and plan its development in an integrated way.—*All Rights Reserved.*

FULL EMPLOYMENT OF SUGAR MILLS' INSTALLED CAPACITY

FINDINGS OF EXPERT COMMITTEE

ONE of the most important aspects of sugar manufacture discussed by the Development Council for Sugar Industry at its recent meeting in New Delhi—a detailed reference to the meeting was made in this journal two weeks ago—related to the need for stepping up sugar output by shifting or rehabilitating the factories unsuitably located or lying idle due to inadequate cane supply. The discussions centred round the interim report of the Expert Committee. This Committee, it will be recalled, was constituted by the Council at its inaugural meeting held on 9th August, 1954, with a view to making a thorough examination of the cases of all unsuitably located and idle sugar mills and preparing a plan for their rehabilitation. The Committee is presided over by Mr. E. P. Moon, I.C.S., Adviser, Planning Commission and includes Mr. D. D. Puri, Mr. R. H. Chishti and Mr. Jhunuk Prasad, the last two being Cane Commissioners of Uttar Pradesh and Bihar, respectively.

The Expert Committee held its first session on 30th October, 1954. At this meeting, the Committee felt that for preparing the requisite plan it was necessary to address a communication to all the sugar mills in the country, asking each one of them whether it considered itself to be unsuitably located and what facilities it considered necessary for its rehabilitation at its existing site or for shifting itself to a more agreeable site. The Committee also considered it desirable to ascertain from the idle factories the causes responsible for their closing and the measures required to enable them to re-start operations either at the existing sites or at other suitable sites. A questionnaire was accordingly issued to all the sugar mills. By 13th April, 1955, 85 mills, out of a total of 157 in existence, had replied to this questionnaire. On the basis of these replies, the Expert Committee has drawn up an interim report referred to at the outset.

Location Unsuitable

The preliminary findings of the Committee revealed that 20 out of 85 sugar mills considered themselves to be unsuitably located. Of these, 10 mills (two each in U.P. and Andhra, and one each in Bihar, Madhya Bharat, Ajmer, Saurashtra, Madras and Vindhya Pradesh) have suggested that, if suitable measures were taken to develop cane cultivation in the areas of their operation, there would be no need for them to move out to other suitable areas. In respect of all these mills, excepting the Indian Sugar Works, Siwan (Bihar), in respect of which no action is said to be possible owing to pending litigation, the Committee agrees that, *prima facie*, there is no sufficient ground for shifting them and that, at much less expense, measures can be taken to enable them to operate successfully even where they are now situated.

Examining the position of each one of the nine mills, the Committee says that the Ganesh Sugar Mills Ltd., Anandnagar (U.P.) has been asked to put forward definite proposals for being rehabilitated in its present size. The factory has also been given an opportunity to explain, if it so desires its case personally before the Committee at its next meeting. The Committee has suggested to the Andhra Sugars Ltd., Tanuku (Andhra), to approach the State Government for obtaining the financial help required by it for starting an agricultural farm. In the case of the Kirlampudi Sugar Mills Ltd., Pithapuram (Andhra) and the Bhavnagar Sugar Mills Ltd., Dhola Jn. (Saurashtra), the Committee has invited the views of the State Governments concerned on the points raised by the mills in their replies to the questionnaire. The Murugappa Sugar Co., Ltd., Mailpatti (Madras), has been advised to approach the Industrial Finance Corporation for getting the desired assistance for modernising and expanding its plant to an economic size. The Committee has requested the State Government concerned to indicate the steps so far taken by it for working the Jiwaji Rao Sugar Co., Ltd., Dalauda (Madhya Bharat) successfully and has asked as to what further steps appear necessary in this connection. As regards the Noori Sugar Works, Bhatni (U.P.), the Committee is of the opinion that the Factory can work successfully after the disputes among the partners are over. It has, therefore, decided not to go further into the case of this factory. The Committee has invited the views of the State Government on the proposals for rehabilitation submitted by the Bijay Sugar Mills Ltd., Bijainagar (Ajmer). The Committee feels that it will not serve any useful purpose to consider the rehabilitation or shifting of the Shri Laxmi Narain Sugar Works Ltd., Harpalpur (Vindhya Pradesh), as it has a small worn-out plant of uneconomic size. The factory has been informed accordingly.

With regard to the Indian Sugar Works, Siwan (Bihar), there is, according to the Committee, a good *prima facie* case for holding that the factory is unsuitably located, but, as litigation is in progress between the partners and the case is pending before the High Court, no definite action for shifting it is possible till the Court pronounces its decision. In view of increased supplies of sugarcane in the area, the Government of Bihar is examining the possibility of working the factory at the existing site during the next season under an Authorised Controller.

Shifting of Factories

The number of sugar factories which have stated that their existing sites are unsuitable and that they would live to shift to other sites is nine. Of these, the Committee is of the view that, since the existing site of the Jagajit Sugar Mills Ltd., Phagwara (P.E.P.S.U.), is suitable, there is no case for shifting it to another site. It has decided that *prima facie* there is case for shifting the R. B. Lachmandas Sugar and General Mills Ltd., Jarwal Road (U.P. the Shri Anand Sugar Mills Ltd., Khalilabad (U.P.), the Belvandi Sugar Farm, Belwandi (Bombay), the D. B. Sindhi Sugar Mills Ltd., Deoria (U.P.), and the Nawabganj Sugar Mills Co., Ltd., Nawabganj (U.P.—idle plant of 700 tons capacity). In the case of the last mentioned three mills, arrangements are being made to get their machinery inspected in order to ensure that it is in sufficiently good condition to justify a move. The machinery of the other two mills is said to be in good order. The State Governments concerned have been addressed regarding these factories. The U.P. Government has already agreed to the shifting of the two first mentioned units and has suggested alternative sites which have been communicated to the factories concerned. A reply from the Government of Bombay regarding the Belvandi Sugar Farm is awaited. In the case of Bhopal Sugar Industries Ltd., Sehore (Bhopal) and Raza Sugar Co., Rampur (U.P.), the Committee considers that it may be more economical to try to develop cane cultivation in the respective areas rather than to shift them. Arrangements are, therefore, being made to hold consultations with the representatives of the factories and the State Governments concerned. As regards the Etikoppaka Co-operative Agricultural and Industrial Society Ltd. (Andhra—idle plant of 75 tons capacity), the Committee has decided not to pursue investigations, as it is a small uneconomic unit.

One factory, namely, Coimbatore Agro-Industries Ltd., Podanur (Madras), has expressed the desire to change over to *jaggery* refining, because sugar production is not profitable owing to competition from *gur* in its area. This is a small factory of only 50 tons capacity and the Committee does not feel that the question of shifting or rehabilitating it requires to be pursued. The Factory has been informed accordingly.

The interim report of the Expert Committee does not cover those sugar mills which have a daily cane crushing capacity of less than 100 tons. The explanation given by the Committee for this exclusion is that, as the minimum economic unit under present-day working conditions is round about 800 tons, it is not worthwhile to examine the cases of very small and uneconomic units. It was this very consideration which first weighed with the Committee in deciding to limit investigations "to factories of about economic size possessing machinery which could still be used over a number of years."

It will be seen from the foregoing account that, out of the 157 sugar mills in existence, as many as 65 mills—these exclude nine units which have a daily cane crushing capacity of less than 100 tons and as such not taken into account for the enquiry—have not cared to submit replies to the Expert Committee's questionnaire. Does it mean that all these mills are quite suitably located and that there is no need either for shifting them or for rehabilitating them? The only

UTILISATION OF COAL

CONTINUED RESEARCH IN FUEL ECONOMY NEEDED

REPRESENTATIVES of the coal industry are said to have expressed their concern to the Planning Commission at the Government's proposal to bring new prospecting and mining of coal under the direct responsibility of the State, as well as at the restrictions on opening up even new seams. Their contention is, according to Press reports, that it would be difficult, if not altogether impossible, to reach the contemplated target of 60 million tons for the second Five-year Plan—an increase of 23 million tons over the present target of 37 million tons—unless the Government provided a reasonably free atmosphere for the private industry in this sector to carry on its activities. It is also stated that the need for substantial Government aid for setting up washing and blending plants to the maximum extent possible stressed by them as the requirements of metallurgical coal alone are estimated to be 16 million tons by the end of the Second Plan. It may be noted here that the present consumption of coking coal for both metallurgical and non-metallurgical purposes is between 8 and 12 million tons. Of this, consumption for purely metallurgical purposes is placed at 3 million tons.

It is admitted that, if the second Five-year Plan were to succeed, the preliminary requisite is to make available fuel in sufficient quantity at a reasonable price. In fact, what is needed is not merely an increase in production but rationalisation of production and consumption of coal. As India's deposits of high-grade and coking coal are limited, this aspect requires greater attention. Unfortunately, not only are the production techniques antiquated and, therefore, labour productivity low, but there is also a woeful lack of blending and washing facilities. Recent experiments conducted at the Fuel Research Institute, Dhanbad, and private industrial concerns like Tatas have revealed that the country's second grade coal is capable of improvement to first grade by washing and blending. It is high time, therefore, the Government encouraged large-scale beneficiation by providing the necessary financial and other technical aids.

Not only is the need for raising the output per man-hour to the highest pitch great but also the need for making the best possible use of fuel. In other words, the output per ton of coal consumed is equally relevant from the point of view of bringing down costs. The overriding economic consideration should always be the total cost of production of manufactured goods per unit of coal.

Consumption

The iron and steel industry is, generally, by far the single largest consumer of coal in a number of industrial nations of the West. Now that India has undertaken a large expansion of this basic industry, it is all the more necessary that the country should take keen interest in discovering ways and means of using this fuel economically and efficiently. In the U.K., for instance, large-scale experiments are being continuously carried out in the efficient use of fuel by this industry. It is gratifying to note that, in recent years, steady progress has been made in this direction and that coke used per ton of pig iron has declined progressively. The industry has tried to supplant the use of coal by liquid fuel and gas, wherever feasible. The greatest change has occurred in the open hearth furnaces where fuel oil, other liquid fuels and coke oven gas are tending to supplant gas-producer coal.

As is well known, coal is a wasting asset and any reckless exploitation of its resources is fraught with danger to the future well-being of the nation. It is true that economic generation of atomic power may revolutionise fuel technology itself. But the prospects of generating the energy at a cheap rate in commercial quantities in the near future are yet distant. Besides, it would appear that the general opinion among fuel technologists is that, whatever be the changes in fuel technology, coal will still hold the field for a long time to come as the main source of fuel to the iron and steel industry, and it will, perhaps, continue to be the cheapest fuel until the world's coal resources reach the stage of exhaustion.

GERMAN MERCANTILE MARINE

RAPID PROGRESS MADE THANKS TO STATE ASSISTANCE

THE German pre-war merchant marine of over 4 million gross register tons had been reduced to a mere 118,000 tons after the capitulation of Germany in 1945. As late as the autumn of 1949, the Federal Republic of Germany disposed of only 248,000 gross register tons of shipping. The situation of German ocean shipping after the Second World War differed radically from that which existed after the First World War in 1918. At that time, Germany was not forbidden to engage in shipping or the building of merchantmen. Its shipyards, research and development institutions, as well as training workshops had remained intact, so that the reconstruction of its merchant marine could begin immediately after the end of the war.

In 1945, however, the Potsdam Agreement prohibited any building of sea-going ships. Later, the Control Council permitted at least the remaining ships to be replaced, but the size of the individual vessel was limited to 1,500 gross register tons and the speed to 12 knots. It was only in long-draw-out and laborious negotiations with the Allies that the German Federal Government gradually obtained the reduction of all such limitations.

The first advance was achieved in November, 1949, by the Petersburg Agreement which relaxed the fetters imposed on shipbuilding and shipping. The last step was made in the Agreement of 3rd April, 1951, concerning Industrial Controls which did away with almost all the remaining restrictions on German merchant shipping.

The German Federal Republic could now tackle the task of creating a merchant marine adequate to her economic needs. To be sure, the big shipyards of West Germany had been largely destroyed or dismantled, and the shipping companies, in losing their fleets, had lost the major part of their material assets. It was, therefore, incumbent on the Federal Ministry of Transport to facilitate the financial side of merchant marine reconstruction. This was all the more difficult, since, in view of world market conditions, reconstruction had to be left to private business. A law concerning loans for the purpose of building or buying merchant ships, dated 27th September, 1950, was a first step in this direction. Pursuant to this law, 227 million DM. were paid from budget funds and 194 million DM. pledged or at least earmarked up to 31st March, 1953. Over and above this, 171 million DM. were loaned and another 130 million DM. earmarked up to that date from E.R.P. counterpart funds. In addition, funds for providing employment amounting to 23.5 million DM. were channelled into shipbuilding during the same period. In order to pre-finance further investments of this kind, the German Federal Ministry of Transport obtained a rediscount credit from the Central Bank for banks engaged in the financing of shipbuilding.

Taxation Aids

The reconstruction of the merchant marine was also promoted by the taxation policies and tax legislation of the German Federal Republic. The law on income taxes offered shipowners favourable opportunities of writing ships down to depreciation account, thus enabling them to finance shipbuilding practically with short-term funds.

All in all, more than 1.5 billion DM. were invested in the reconstruction of the German merchant marine between 1st September, 1949, and 31st March, 1953. This sum will have risen to over 2 billion DM. by the time the current building programmes of the Federal Ministry of Transport have been carried through.

This reconstruction and financing policy has yielded positive results. Through a combination of new construction, purchases abroad and the rehabilitation of raised wrecks the German merchant marine grew from 248,000 gross register tons on 1st September, 1949, to 730,000 tons on 1st January, 1951, and on 1st January, 1952, a total of 1,160,000 tons of shipping were sailing under the German flag.

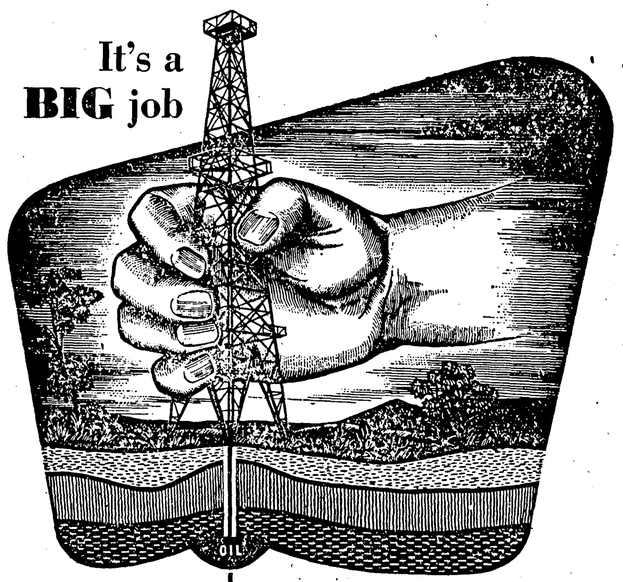
Until 1st October, 1954, 380 ships totalling 901,910 gross register tons were built under seven rebuilding programmes established by the German Federal Government, while 256 ships totalling 436,745 gross register tons were built outside those programmes, that is, a total of 636 ships measuring 1,338,654 gross register tons added to the merchant marine of the German Federal Republic. In addition, 193 ships bought abroad and totalling 635,363 gross register tons were put to sea under the German flag.

Thus, on 1st October, 1954, the German merchant marine consisted of 2,123 ships totalling 2,258,388 gross register tons. At the same date the German deep-sea fishing fleet contained 840 ships totalling 148,588 gross register tons. Besides, 357 lighters, tug boats and other auxiliary vessels totalling 58,458 gross register tons were registered at that date.

Sailing the Old Lanes Again

The German merchant marine is gradually winning back its traditional transport markets in the face of keen international competition. While by the middle of 1949, only the line services to Denmark, Sweden, Finland, Britain, Holland and Belgium had been re-established, the second half of 1949 witnessed the resumption of services to Spain, Portugal, and the Near East. In 1950, services were resumed to the West Indies, Cuba, Mexico, the east coast of North America and the Gulf of Mexico, in 1951 to Brazil, the Persian Gulf, Pakistan, the Canary Islands, West and South Africa, the east coast of South America, Canada and the Great Lakes, in 1952 to India, and early in 1953 to the west coast of South America. Subsequently, as the merchant marine grew, further services as, for instance, to the west coast of North America, to the Far East and to Australia, were opened up again by German ships.

In recent years, German shipping companies have also been able to resume again their co-operation with foreign lines and have become members of numerous shipping conferences in which international line shipping along the various sea lanes is associated. The Association of German Ship Owners is again a member on a footing of equality of the International Chamber of Shipping, i.e., of the international organisation comprising almost all the shipowners' associations of the entire world.



looking for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil ? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

TREND OF TEA SALES IN APRIL

CEYLON GOVERNMENT'S ATTEMPTS TO SUPPORT MARKET UNSUCCESSFUL

THE month of April was a notable one for the tea industry, inasmuch as it was during this month there was a sudden slump of about 1s. per lb. in tea price both at London and Ceylon. Auctions had to be suspended in London, in order to allow prices to stabilise. It was also during this month that the Ceylon Government stepped in to support the market. In striking contrast to this trend in two important tea markets, the internal market for tea in India ruled fairly steady, the prices for dusts in particular remaining at a very satisfactory level.

During the month only one export sale was held in Calcutta, as against three sales held in March. Four dusts and two internal leaf sales were also held, as compared with four internal leaf and dust sales in March. Offerings in the export sale amounted to 21,247 chests, in the dust sale 76,561 chests and the external leaf sales 21,039 chests. In the one export sale, the market displayed some weakness, prices falling by As. 4 to As. 6. As already stated, in the internal sales prices remained fairly steady, particularly for dusts. The following comparative table shows the quantities of tea sold during the last two seasons upto the end of April and the average prices realised:

	1954-55		1953-54	
	Packages	Averages	Packages	Averages
		Rs. a. p.		Rs. a. p.
Export—				
Assam	814,073	3 2 11	848,823	2 0 9
Darjeeling	92,116	3 8 4	92,846	2 8 5
Dooars	471,064	2 15 4	450,194	1 14 1
Cachars, etc. ..	211,904	2 15 3	241,926	1 14 0
	1,589,177	3 1 6	1,633,789	1 15 10
Dust—				
Assam	411,802	2 8 2	421,587	1 14 7
Darjeeling	10,243	2 7 3	11,772	1 14 7
Dooars	189,578	2 4 5	207,847	1 12 1
Cachars, etc. ..	85,702	2 4 0	81,098	1 11 10
	697,325	2 6 9	722,104	1 13 5
Internal leaf	434,975	2 3 7	100,147	1 12 5

Commenting on the comparative steadiness in the Calcutta internal sales, Messrs. J. Thomas & Co., Ltd., observe in their review for the month of April, as follows:

"The comparative steadiness of the Calcutta internal sales proved, if nothing else, that the demand inside India for tea was constant and that India is capable of consuming a useful percentage of the tea it produces. We must expect, however, that when the new season's export sales reopen on 6th June, 1955, prices will be considerably lower than they were in early March and possibly as much as As. 8 lower than in June, 1954.

"The present lack of demand in the Colombo and London auctions is probably mainly due to buyers' lack of finance rather than a surplus of tea. The very sharp drop in values from January's peak of 6s. 10½d. per pound for common tea to Rs. 3 per lb. has naturally caused very severe monetary loss to blenders and buyers and they are not in a position to make their normal purchases.

"In Colombo, tea has steadily been piling up due to lack of demand until the Government were forced to enter the market. In London, the quantities for sale have been drastically curtailed and auctions postponed in an effort to stimulate demand. However, it must be remembered that, in London, particularly, the quality of the offerings generally has been extremely poor and producers must be regretting that they continued manufacture late in the season. In Colombo too, reports indicate that producers have been plucking very coarse which is not surprising, since it was difficult to imagine how Ceylon's crop could go on and on increasing year after year, if all pretensions to quality were not abandoned. It would appear, therefore, that it is poor quality tea which is helping to clog the markets and the remedy for this state of affairs would appear to lie in producers' hands.

"We would suggest, therefore, that it might be advisable for the major producing countries to make an announcement as to their intended outturns for the coming year in order that buyers may be in a position to operate free from the fear of an overproduction of tea. The prices at present being realised in auction in Colombo and London are for the majority of the offerings, below the cost of production. Such a state of affairs cannot obviously be allowed to continue and any measures that can help to remedy this state of affairs would be welcomed by all section of the trade."

It may be recalled that on 27th April, Mr. J. R. Jayawardene, Minister for Agriculture, Ceylon, announced that his Government would enter the Colombo market as a buyer in the interests of tea producers. At the same time, he announced that for a period of three months, the Government of Ceylon would remove existing quantitative restrictions on the export of tea to London auctions. The Minister, however, said that there would be no reduction in the export duty of Rs. 1 per lb. until the Government had studied the reaction of the last change in the export duty made on 21st April, when it was reduced from Re. 1.30 to Re. 1. In the meantime, production centres of tea were instructed not to despatch any more tea to Colombo and arrangements were made by the Governor of the Central Bank of Ceylon with banks and other financial institutions for credit facilities for producers unable to sell their stocks.

The Ceylon Government's decision to step into the market as a buyer is somewhat ironical. For it was only three months back, the Ceylon Prime Minister ridiculed the high prices of tea prevalent in London and said that consumers in the U.K. were paying more than they should. He also suggested that tea could be purchased more cheaply in Colombo direct than through London. Since then, nothing more has happened than the interaction of the normal forces of supply and demand. It is true that such a reaction has proved to be more painful to those in the trade who had bought at peak prices of 6s. 10d. early in the year and had to part with their stocks at 4s. 6d. It is also true that the price of Ceylon tea went down almost to the cost of production of some estates and the Ceylon Government's anxiety to give the tea producers some support is understandable. But how far this method can be effective is doubtful, because the decline in prices is not restricted to Ceylon tea alone but to teas of other countries also. Further, tea stocks in London bonded warehouses at the end of April aggregated about 176 million lbs., that is nearly three times more than their recent low level.

The output of North Indian tea upto the end of April this year is 20.3 million lbs., as compared with 16 million lbs. last year, thus showing an increase of 4.3 million lbs. It is too early to judge the trend of North India tea production and there is plenty of time to adjust the tea crop to meet the demand. Reports from South India and Ceylon indicate that the crop is already well ahead of last year. It is, therefore, suggested in some quarters that India and Ceylon should come to an agreement early in the season to limit their exports. Such action on the part of India and Ceylon alone would be contrary to the spirit of the International Tea Agreement to which all the exporting countries are signatories and might be misconstrued by consumers who have had to pay high prices for well-nigh two seasons. Any attempt by producers to hold prices of their commodity at a high level without the consent of consumers will not prove a success in the long run. Tea is no longer a monopoly of three or four countries. Numerous small producing countries have appeared on the map of the tea world and they will try to take full advantage of any restrictive policies followed by the principal tea growing and exporting countries.

The latest reports from Ceylon go to show that the Government's attempts at bolstering up the tea market by appearing as a buyer have failed. At the last week's auction the Government bought no more than 265,000 lbs. out of total offerings of over 5 million lbs. This week, it bought even less, 130,000 lbs. Having thus failed in its attempts, the Ceylon Government is considering other measures to afford relief to tea producers. The Government has appointed a committee of seven members of Parliament to prepare a scheme of relief for small-holders during the present crisis. It will also consider a proposal to buy green leaf at guaranteed price. Some members of Parliament representing tea-growing districts have suggested to the Finance Minister that export duty on tea should be reduced and that green leaf be bought from small-holders at a guaranteed price and that the cost of manufacturing a pound of tea be fixed by the Government to ensure a standard price to the bought leaf manufacturer. Once these two prices were fixed, the Government, according to them, could offer a price above the cost of production at the auctions. The Finance Minister is reported to have told the deputationists that he could not make any promise of a reduction in export duty.

The Committee of the Tea Trade Association of Cochin is reported to have decided to postpone leaf sale No. 11, scheduled to be held on 24th May, until 31st May. This decision has been reached in view of the heavy stock of tea lying unsold from sales 8, 9, and 10.

JUTE STOCKS HIGHER STILL IN APRIL

FALL IN OUTPUT

THE position of jute mills, from the point of view of stocks of finished goods, appears to be deteriorating once again. For, as at the end of April last, the stocks with the mills aggregating 103,352 tons show that accumulation continues, there being a further increase of 8,700 tons over the previous month. The last occasion when these stocks exceeded this figure was September, 1953. In that month, the stocks were as high as 118,000 tons, but thereafter they declined gradually until a low of 69,013 tons was seen in November, 1954. The down-trend witnessed a reversal in the following month and, since then, there has been a continuous rise. This is due to increase in working hours to 48 a week, slackness in offtake by foreign countries, rise in prices induced by speculative forces in the jute goods market, and lower despatches from Calcutta owing to labour troubles in that port.

In view of the persistent rise in stocks, as noted above, there are rumours that the jute industry would be obliged to revert to a 45-hour week. Although Press reports indicate that the I.J.M.A. has no intention of reducing working hours, it must be mentioned that, if no active steps are taken to arrest the rising trend, sooner or later, the mills will have to face, once again, the "crisis of stocks" which they did in 1953. One of the ways in which the mills can be helped to expand their sales is the abolition of export duties on jute goods. There is no reason why the Government should not give this concession when it has often declared that export duties are never looked upon as a source of revenue. The earlier the Government moves in the matter the better for the industry.

A variety-wise analysis of stocks reveals that, of the increase of 8,700 tons in the total stocks during April, 1955, hessians, at 39,029 tons, accounted for about 5,000 tons. The rise in the stocks of sackings was only about 3,800 tons, from 59,000 tons to 62,800 tons.

The table below gives the stocks of hessians, sackings and others as at the end of April, 1955, as compared with those at the end of the two preceding months as also at the close of April, 1954:

Jute Goods Stocks

(In tons)

	As on			
	30-4-1955	31-3-1955	28-2-1955	30-4-1954
Civil				
Hessian	38,784	33,762	26,303	31,905
Sacking	62,502	58,802	54,696	57,290
Others	1,501	1,565	1,956	1,616
Total ..	102,787	94,179	82,374	90,800
Government				
Hessian	248	237	275	297
Sacking	320	209	209	236
Others	Nil	Nil	Nil	3
Total ..	565	446	484	536
Grand Total ..	103,352	94,625	82,858	91,426

The output of jute goods during April, 1955, declined by about 3,900 tons, that is, from 89,238 tons to 85,682 tons to be precise. The decline may be attributed to the difficult conditions prevailing in both the raw jute and jute manufactures markets in the month under review. The high prices of raw jute and the paucity of orders from overseas countries for the purchase of jute goods were not at all conducive to increased production. The output of hessians declined from 34,776 tons to 32,780 tons and of sackings from 50,844 tons to 49,326 tons.

The table gives the output of the various types of jute goods during each of the three months ended April, 1955, as also during April, 1954:

Jute Goods Production

(In tons)

	April, 1955	March, 1955	February, 1955	April, 1954
Civil				
Hessian	32,777	34,776	32,001	31,605
Sacking	49,183	50,834	40,431	40,572
Others	2,379	3,638	3,805	2,910
Total ..	84,339	89,238	81,317	74,787
Government				
Hessian	3	10	52	17
Sacking	143	10	10	184
Others	Nil	Nil	Nil	1
Total ..	146	20	62	202
Grand Total ..	85,682	89,258	81,379	74,989

With April production, the total quantity of goods manufactured in the first ten months of the season 1954-55, amounted to 836,149 tons which compares with 719,346 tons in the same period of the preceding season.

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

LANDMARK IN ALUMINIUM INDUSTRY

NEW ROD MILL SET UP IN T.-C. STATE

THE opening of a new mill of the Aluminium Industries Ltd., Kundara, for continuous casting and rolling of electrolytic conductor-grade aluminium rod by Mr. Panampilli N. Govinda Menon, Chief Minister, Travancore-Cochin, on the 13th inst., is a landmark in the progress of aluminium industry in this country. This mill is the first of its kind in Asia. A notable feature of the mill is the revolutionary process it employs in the manufacture of rods. Under this process, the conventional pre-heating and billet casting is eliminated and aluminium rods are continuously cast and rolled directly from molten metal in a matter of well under two minutes. The capacity of the mill is about one ton an hour.

The aluminium rod manufactured by the mill is essential for conductor manufacture. A gratifying feature of the new mill is that indigenous metal (that is, ingot made at the reduction works of the Indian Aluminium Co., Ltd., Alwaye), will be used in the processing of the rod. Indeed, from bauxite to the finished conductor, it will be a completely Indian product—Indian aluminium, Indian rod and Indian conductor. According to Mr. B. V. D. Menon, a Director of the Company, this new mill represents a step forward in achieving self-sufficiency in the raw materials required by the Company.

The importance of the development of aluminium industry will be evident from the fact that, today, aluminium is by far the most economic metal for the manufacture of conductors. It is true that silver is the best conductor of electricity, but it is very costly. Next comes copper, but being a scarce and strategic metal of great importance, its price has gone up heavily. Further, its supply is limited and cannot be readily had. Besides, the price of copper is generally an index of international tension and, therefore, it is unstable. This explains why aluminium is slowly replacing copper in many spheres, especially in the electrical industry.

Although aluminium conductors for high tension power transmission lines have come into prominence in India only recently, their progress has been rapid. The demand for them, which is estimated at 5,000 tons annually today, is expected to shoot up to no less than 10,000 tons in the next few years, following the progress of plans for electrification of rural areas on a large-scale which are either in the offing or already being implemented. Fortunately, India has considerable reserves of bauxite. The total deposits are estimated at 250 million tons and the workable deposits containing over 50 per cent. of alumina at only 28 million tons. Even at the latter assessment, an annual output of 50,000 tons of finished aluminium can be maintained for over 100 years. The deposits of bauxite are widespread, high grade metal being available in Bihar, Bombay, Madhya Pradesh, Orissa, Kashmir and Madras (Salem).

The chief producers of aluminium in India are the Aluminium Corporation of India, Ltd., with an ingot aluminium capacity of 2,000 tons a year, and the Indian Aluminium Co., Ltd., Calcutta with a capacity of 5,000 tons a year. The latter company, which, originally started operations at its plant in Alupuram, Alwaye, on imported material, has now its own works at Muri in Bihar. Among the non-integrated fabricators, mention may be made of Venesta Ltd., Calcutta, which produces foil in sufficient quantities to supply practically all the country's requirements of tea-chest liners. Besides, the Aluminium Industries Ltd., the Indian Cable Co., Ltd., Tatanagar, the National Insulated Cable Co., Shamnagar, the Electrical Manufacturing Co., Dum Dum, and the Hindustan Conductors Ltd., Faridabad, produce aluminium conductors.

While aluminium cable, steel reinforced, can be used with advantage for rural distribution schemes, involving long spans, all-aluminium cables (without steel reinforcement) can be used for distribution schemes involving spans of 250 ft. and less. In 1952, the Travancore-Cochin State alone took nearly 1,000 miles of all-aluminium conductors. In fact, all-aluminium provides more for lesser money.

If one were to study the history of industrial progress during the past half century, one would find that the two important industries that have contributed substantially to the economic development of a number of nations in the world are hydro-electric and aluminium. So great are the potentialities of these two industries that the underdeveloped countries have pinned their faith in their development for their future progress. To quote the significant remarks of the *Aluminium News*:

"Hydro-electric power has attained prominence as the most efficient source of energy known to man. Aluminium has accelerated the spreading of the usefulness of electricity through its peerless capacity to carry electrical energy from the point of origin to the point of use. A happy combination of lightness, strength, carrying capacity, and low costs, places aluminium ahead of all other commercial conductors. The union of aluminium and electricity has stimulated unparalleled advance of industrial expansion and better living, giving promise of a brighter tomorrow for all mankind."

Besides its contribution to the transmission of electricity, aluminium has a variety of uses. It is stated that there are 4,000 end uses to which the metal can be put and they range from the manufacture of spoons to ship super-structures. Its versatility has offered a challenge to the ingenuity of designers and fabricators.

The remakable properties which, apart from its high coductivity, has helped the metal to the forefront are lightness, resistance to corrosion, malleability and ductility. The basic characteristics of aluminium are well suited to the requirements of the present technological age, in terms of speed, economy and efficiency. Pure aluminium readily combines with other elements to yield a range of alloys which retain the distinctive lightness of the parent metal and acquire strength values of a high order. The lightness of the metal with its high tensile strength has made it the high ideal metal for aircraft and other transportation purposes. The corrosion resistance of aluminium has reduced the cost of maintenance, repairs and replacements.

The pattern of use for which the metal is put has been changing in this country also as in others, but at a slower pace. In 1947, for instance, India consumed 12,000 to 13,000 tons, 90 per cent. of which was in the form of utensils. Today, the consumption of the metal is as much as 20,000 tons and it is expected to rise to 27,000 tons by 1957. The pattern of demand too has changed considerably. It is estimated that, in another two years, the utensil industry will consume only 35 to 40 per cent. of the aggregate consumption. Aluminium for conductors alone are expected to account for another 35 to 40 per cent., packing 7 per cent. and transportation and building for most of the rest.

PRICES OF AUTOMOBILE SPARE PARTS

The Government of India has decided that, with effect from 1st June, 1955, the "mark-up" on the landed cost of fast-moving automobile spare parts should not exceed 70 per cent. in fixing retail list prices. This means that fast-moving parts, that is, parts in which the turnover is quick, will be sold to consumers at a margin not exceeding 70 per cent. of the landed cost. So far, the retail prices have been 100 per cent. or even more above the landed cost. A list of spare parts which Government considers as fast-moving ones has been prepared and circulated to the interests concerned. These include hardware items, rubber components, assemblies including components and repair kits of a number of parts and a number of fittings and accessories. The manufacturers and importers have been asked to bring other fast-moving parts, which have not been included in the list, within the scope of the new retail prices. No maximum limit is imposed for the present for other parts which are mainly slow moving. But retail price lists will have to be published by manufacturers and importers for these parts also. The Government has also decided that retail price lists, for both fast and slow-moving parts, should be published by all manufacturers and importers.

One of the most comprehensive and well-equipped oil laboratories in India has been built by Burmah-Shell Refineries Ltd., in Trombay, to undertake work of testing products manufactured by the Refinery. In many respects, the oil laboratory is unique in the sense that it contains a variety of instruments hitherto unknown in India, such as the low temperature distillation apparatus for light hydrocarbons, the flame photometer to analyse the catalyst used in the catalytic cracker, etc.

The Laboratory consists of four main sections —the routine laboratory, the finished products laboratory, the technological laboratory and the engine laboratory. The routine laboratory is working on a 24-hour basis to carry out testing necessary for checking the operation and products of the various processing units. The finished products laboratory determines whether the finished products, such as kerosine, motor spirit, diesel oils and furnace oils are up to specification. The technological laboratory carries out various experiments and tests for the improvement in quality of the manufactured products. The engine laboratory tests petrol on its so-called "octane rating." In all these departments, qualified Indians are using their experience gained during a period of extensive training in the Shell laboratories in the U.K. and Europe.

RIVER VALLEY PROJECTS

MACHINERY LYING IDLE

ALTHOUGH the report of the Plant and Machinery Committee, appointed by the Government of India in October, 1953, was submitted as early as in 1954, it was made available to the public only last week. The Committee, it will be recalled, was appointed to enquire into and report on measures necessary for the efficient operation and maintenance of construction plant and machinery used in river valley projects. A casual glance at the official summary of the Report reveals that there is a colossal rate of sickness of these plant and machinery. It is said that as much as 48 per cent. of the equipment was idle in 1953-54 for want of spare parts. At the same time, about Rs. 6 crores was locked up in spare parts of types which had no future either for immediate or remote utilisation. The availability factor equipment for works visited by the Committee was only 52 per cent. and the Committee seems to have had every reason to fear that the position might be still worse in case of projects not visited by it. A part of the loss is due to the lack of personnel trained in handling the latest machinery. The Report says:

"The mechanisation of projects is a new sphere in which the Indian engineers are not yet fully oriented. It should be realised that we are attempting to adopt 1953 techniques in this country with a background which is 50 years behind the times in relation to the countries that we try to follow. The entire approach is in a process of evolution. Until 1948, there was scarcely any heavy earth-moving equipment in India, whereas today there is an approximately Rs. 40 crores worth of machinery in our projects."

The Committee has made a number of recommendations in order to avoid the repetition of past mistakes. The chief amongst these is the suggestion to set up a machinery and spare parts directorate to keep a record of the equipment in use by the projects, to watch their release and to plan their future utilisation. It has further suggested that, in the case of inter-State transactions, the Directorate could act as an arbitrator for pricing old equipment. As the mechanisation of projects is a new sphere in which Indian engineers are not fully oriented, the Committee feels that it would necessarily take time to train the administrative, technical and ministerial staff to obtain high efficiency in this field and emphasises the need for a central agency to guide the trained and experienced men. To quote the remarks of the Committee:

"Unless a central employment bureau can guide them to other projects where their experience could be helpful, the benefit of such valuable training will be lost in the country. In the absence of such an organisation, the projects will have to depend upon raw hands and train them in a wasteful manner."

The picture of the position of machinery thus presented is indeed disquieting. It is true that, while commenting on the Report from Ahmedabad this week, Mr. Gulzarilal Nanda, Union Minister for Irrigation and Power, stated that the situation had since improved, following implementation of the recommendations of the Committee. But this is only a vain consolation for there can be no real improvement in the position so long as India is dependent upon foreign sources for machinery and spare parts. India, it may be noted, does not at present manufacture much of the machinery, equipment and installation required for use in river valley projects. This dependence on foreign sources, at a time when the country has embarked on a vast programme of harnessing its rivers, is indeed unfortunate.

Lack of standardisation is one of the important causes for non-utilisation of available equipment to the fullest extent possible. Standardisation, so far as river valley projects are concerned, plays an important part both in the field of design and construction. It is said that the principles of standardisation of important mechanical equipment, as recommended by the Committee, has been accepted by the Government with the proviso that the position should normally be reviewed after every five years, the period being curtailed, if special circumstances so warranted.

Much of the difficulty noted above could have been avoided if there had been proper planning. It is needless to add here that advance planning of all mechanical equipment used in a dam is essential, for construction work will normally be in full swing before the first mechanical equipments, such as embedded frames for gates, staircase frames, etc., are installed in the dam. If there is lack of proper planning, procurement will be delayed, resulting generally in the retardation of the progress of the works. Advanced planning depends again on the ability of technical personnel in charge of the projects.

NEW PRODUCTS AND PROCESSES

Wind Tunnel

MAN-MADE winds, up to velocities of 3,800 miles an hour, are expected to be produced soon at the U.S. Air Force station at Tullahoma, Tennessee, for testing and evaluating supersonic planes, aircraft engines, and guided missiles. The winds will be produced by two 83,000-horse-power motors built at the East Pittsburgh, Pennsylvania, plant of Westinghouse Electric Corporation. Delivered to the test site recently, they were given a trial "start-up" by two "starting" motors of 25,000-horse-power each. The combined rating of all four motors, when installation is completed, will be 216,000-horse-power. The wind-maker, with its motors connected in tandem fashion to five even larger compressors, will be more than 600 feet long. In operation, the wind tunnel will force gales around two separate closed courses inside a huge pipe. The pipe itself is nearly wide enough to hold four lines of automobiles. Each of the 83,000-horse-power motors weighs 225 short tons, as much as a railroad locomotive. All four motors together will use as much electric power as needed to supply the entire city of Nashville, Tennessee, which has about 200,000 population. The wind tunnel will require 100,000 gallons of cooling water a minute, a consumption equal to that of the city of Washington, D.C., which has a population of more than 861,000.

Automatic Milling and Grinding Machine

A machine tool factory at The Hague (the Netherlands) produces an automatic milling and grinding machine for making milling cutters, in particular those of a special shape. The performance of cutters with a large number of teeth which are cut to special shapes is much higher than that of cutters with few teeth formed by relief milling. The new milling and grinding machines are capable of turning out these modern, many-teethed cutters automatically. The cutters are first milled and, after exchanging the milling for the grinding unit, subsequently grind. The correct shape is transferred to the workpiece by means of a copying template, over which runs a tapered tracer roll. The movement of the tracer roll over the template, the lifting of the roll and its replacement for the next master pattern, as well as the turning of the workpiece, take place entirely automatically. The magnification ratio of the copying device is 1:2.7 or 1:11.

Lysine Produced Synthetically

Lysine, an essential element in human nutrition, is now being made synthetically by the Du Pont Company in the United States. Many foods, notably those made chiefly of wheat, are deficient in this substance. Lysine is one of eight amino acids—called nature's building blocks for body tissues—that are considered essential to human well-being. Some foods such as meat, eggs, fish and cheese have a proper balance of the essential amino acids. On the other hand, many foods, particularly those consisting mainly of grains, do not. In some cases the lack of balance can be corrected by the addition of small quantities of lysine. Tests have, for example, shown that adding two-tenths of one per cent. of lysine to wheat flour increases the protein value of bread from 70 to 100 per cent. Research indicates that infant growth can, in many cases, be improved substantially by adding lysine to children's diets.

Portable Emergency Lamp for Motorists

An incandescent lamp factory at Eindhoven (the Netherlands) produces a handy portable lamp mounted on a strong permanent magnet. The material of this magnet retains its magnetic force for a very long time, so that even after many years this lamp firmly adheres to all iron parts. This lamp is a godsend to every motorist, who has a breakdown at night. The shape of the magnetic part is such that the lamp can be attached in various positions to all possible iron parts. The lamp radiates a generous bundle of white light in front and at the same time a red light at the back. It can, therefore, also be used to replace a faulty tail light or number-plate light. The lamp can also be conveniently used for map reading and as a hand lamp.

Valuable Minerals Found in Coal

Coal, in addition to its heating qualities, is also a natural storehouse of many of the world's rare but valuable minerals. According to the U.S. Bureau of Mines, experiments are now being conducted to determine if these minerals can be extracted from coal in commercial quantities. The principal mineral elements found in coal in sufficient quantity to be economically important include cobalt, beryllium, boron, titanium, vanadium, chromium, nickel, molybdenum and copper. Because of the presence of these minerals, scientists say that the day may soon come when coal will be mined for its valuable minerals as well as for fuel.

Yeast from Tree Sugars

A yeast made from tree sugars, called torula, is being manufactured in Green Bay, Wisconsin, by the Charmin Paper Mills and the Red Star Yeast and Products Company. The yeast, a by-product of papermaking, is being produced in a new plant with a capacity of 6,000 tons a year, which the manufacturers say will be the major American source of the product. Torula is already being used in animal and poultry feeds and in pharmaceutical preparations. Its use in human food has so far been limited. It was produced initially in Europe during World War II as a vitamin and protein supplement.

SCOPE FOR CROP INSURANCE

INSURERS ASKED TO TAP THIS LINE

THE call given by Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, Government of India, to insurers of Patna, while inaugurating there the Insurance Club on the 9th inst., to extend their activities to rural areas, is advice which is both merited and timely. Its merit lies in the fact that its implementation will open up a new vista for expansion of insurance business. As Mr. Guha himself pointed out, the *per capita* insurance in India is only Rs. 26. This compares very unfavourably with Rs. 1,900 in Australia, Rs. 2,900 in New Zealand, Rs. 5,000 in Canada, Rs. 7,000 in the U.S. and almost the same amount in the U.K. These figures show how backward India is in making its people insurance-minded. This backwardness is, of course, due primarily to the underdeveloped nature of our economy and its high level of population. There is, however, no doubt that insurance in India can occupy a much higher place than it does now, provided insurers work hard and concentrate their energy on new fields, particularly in rural areas. India is an agricultural country and, as is well known, about 70 per cent. of the country's national wealth is derived from agriculture, and insurers may well disperse their activities—in this predominantly rural industry—for underwriting not only life but also general business. In this context, it is worth recalling Mr. Guha's observations. He said: "In some of the advanced countries there is a system of crop insurance, cattle insurance and such other things. I know there is an intrinsic difference in the structure of agriculture in our country and in the U.S. or some other Western countries. In spite of these differences and other difficulties, I think it is yet possible to extend your activities in the agricultural sphere in the form of crop insurance, cattle insurance, etc."

This advice of Mr. Guha may be said to have been timely. For the present time appears to be the most opportune to initiate moves for establishing crop and cattle insurance schemes. Thanks to a number of changes which have taken place, and are still taking place, in the Indian economy, the climate for initiating the schemes is now more favourable than in the past. The major and minor river valley projects completed under the Five-year Plan have, by ensuring regular supplies of water to crops, eliminated the vagaries of the monsoon and the crops today are a good risk for insurance companies. Secondly, a nation-wide attempt is being made to finance agricultural crops by a system of integrated institutional credit. It is proposed to distribute this credit through the State Bank of India to be established in July next. When the flow of this credit starts, the position of agriculture will improve perceptibly. Besides, schemes have been launched for not only increasing per-acre yield of crops but also establishing warehouses and marketing boards for storing and selling the produce on scientific methods. These schemes will also help make crop insurance a practical as well as a remunerative business venture. More or less, these considerations are also applicable to schemes of cattle insurance. Mr. Guha is, therefore, quite right when he says: "Insurance must move along with the nation and adapt to the changed and changing conditions. We are all working under a plan. Insurance business will surely help the Plan for developing the country."

Some Bad Practices

No appreciable expansion in insurance business, however, can take place on sound lines, unless insurers adopt the right kind of principles and practices. Experience has shown that it is not uncommon for insurers to deviate from the accepted path. Mr. Guha's references to the "bad practices prevalent in the business" are not unwarranted. According to him, even some reputable insurance firms are not free from these drawbacks. His particular complaint relates, to their attitude towards the tendency of overlooking the provisions in the Insurance Act relating to restrictions on expense ratio. He is of the opinion that As. 4 in the rupee paid as cost of insurance companies or 25 per cent. of their income, is undoubtedly a big amount. His appeal to insurers to make a determined bid to reduce the expense ratio should not go unheeded by them in their own interests. In this context, his deprecation of unhealthy competition in the business should serve as a note of warning to insurers who eagerly take over the business of other insurers by unfair means. Mr. Guha's appeal to field workers and insurers to be careful in selecting good lives is also appropriate, as in the craze for new business, the quality has deteriorated considerably and this is reflected in the ratio of lapses of life insurance policies. In this context, his call to field workers to serve the policyholders and keep the reputation of their companies clean is worthy of being heard. He remarks:

"The last Insurance Companies Act has given certain amenities and privileges and security to the field workers. It is primarily their responsibility to keep the reputation of their company clean and above any reproach. Their first attention should be service to the policyholders. I can recollect about four decades ago an insurance agent was just a most unwelcome intruder in the house. But I think things have changed. It would depend very much on the field worker himself to make him a welcome friend and not an unwanted busybody. So long the field worker's job was just a side show of any middle-class man. He himself would not give any respectability to his job and naturally the public also would not treat him as such. But I think under the changed circumstances of free India and of the fairly developed insurance companies and under the changed provisions of the Insurance Act, field working of insurance companies has become a respectable profession for anyone intellectually and morally well equipped. Insurance has a social value, as I have said, and philologically, the word means giving a sort of security or surety to the person."

Progress of Insurance

While reminding thus the field workers of their responsibilities towards the business, Mr. Guha is not unconscious of the progress that has already been made by Indian insurance during the past few years. He considers the rise in the assets of insurance companies from Rs. 168 crores in 1947 to Rs. 297 crores in 1953 as quite significant. The total annual premium income of Indian life offices at Rs. 37 crores compares, he says, favourably with Rs. 6.1 crores earned by foreign life offices in India. His observations, in this context, are worth reproducing here, as, incidentally, they indicate the Government's policy towards foreign insurers. He says:

"Foreign insurance companies are doing business here and it is not our policy to put any discriminating conditions to foreign investment. But as foreign companies have been working here, may we not expect that Indian life companies also should start their business in other countries? This is a source of the invisible income of the nation and from the point of view of earning of foreign exchange, it is an important issue. I am glad that Indian life insurance companies are not quite idle in this sphere also. From Rs. 1.4 crores in 1947, its annual premium income in foreign countries has increased to Rs. 4.3 crores in 1950. Compared to the business that is being done by foreign life companies in India, this achievement is far from satisfactory."

Mr. Guha points out that insurance provides for the individual family as well as helps in making greater savings for the country's national income, and in this, insurance has a social value. Upto 1949, about 4 or 5 per cent. of India's national income was being saved for reinvestment. In the past six or seven years, the rate of savings has gone up, he says, by another 2 or 3 per cent. But he feels that the country can save more and that insurance can provide the best means for effecting such saving. Although this is true, we may add here that the Government's tax policy, as also other unhelpful economic policies, is acting as a hindrance to the growth of the country's economy. Unless the economy as a whole continues to be buoyant, the rate of growth of insurance, it is needless to add, will be slow, spread over a long period.

ACHIEVEMENT OF PRIVATE SECTOR IN INSURANCE

Within a short period of 30 days, the National Insurance Company, Ltd., Calcutta, has had the distinction of laying the foundations of two new buildings, one at Kanpur early last month, and another at Delhi on the 3rd inst. The foundation-stone laying ceremony at Delhi was performed by Mr. K. N. Katju, Minister for Defence, Government of India, while Mr. K. M. Munshi, Governor of U.P., laid the foundation-stone for the Kanpur building. The events indicate, in a way, the eagerness of the Company to spread the gospel of insurance among the people of the country by constructing imposing buildings in their midst.

This attempt by the National Insurance is, indeed, a tribute to the spirit of the private sector. In fact, the President of the Company, Mr. Lakshmipat Singhania while requesting Mr. Katju to lay the foundation-stone, spotlighted the attention of his audience on the role of private enterprise in building up insurance in India. In view of the danger of nationalisation of insurance, Mr. Singhania's reference to this role is both relevant and opportune. Thus, private enterprise in the field of insurance has taken the volume of new business from Rs. 36 crores in 1940 to Rs. 137.5 crores in 1953. It can today claim that every third family in urban India has at least one policy. It has entered rural areas with non-medical schemes of insurance and can be expected to depend upon spreading insurance over the whole of rural India. It has never lacked initiative and is today making lump-sum payments to cover untimely death, and providing capital which the insured could utilise for building a house, or meeting the expenses of marriage or education of his children, pension in old age, etc. Private enterprise has not only popularised insurance inside the country but has carried the message of Indian insurance even beyond India over the land and across the seas. It is no longer confined to life business alone. It has diverted it into international channels by making rapid progress in general insurance. It keeps invested in Government securities more than 50 per cent. of its total funds. If the restrictions are relaxed, it could play, according to Mr. Singhania, an increasing role, by providing funds for both the public and private sectors for further investment.

Private enterprise has enabled the insurance industry to employ 75,000 people directly over and above the three lakh agents who are engaged in insurance work. What is more, insurance employs mostly educated classes in which the problem of unemployment is most acute. Thus, private enterprise can be expected to play an increasingly important role in making the dream of socialistic pattern of society a reality.

HEALTH INSURANCE

The Employees' State Insurance Scheme, as we pointed out last week, has now been extended to Hyderabad. The Scheme, which is already in operation in Nagpur, Bombay, Coimbatore, Delhi, Kanpur, four industrial centres in Madhya Bharat and seven industrial centres in the Punjab, covers 7½ lakh workers or about one-third of the insurable population. Plans to implement the Scheme have made progress in Calcutta City and Howrah District and six centres in Saurashtra. Referring to the progress of the Scheme, Col. V. M. Albuquerque, Director-General, Employees' State Insurance Corporation, in his broadcast from the Hyderabad Station of the All India Radio, said:

"The Northern States stole a march in introducing the Scheme first. Though the Southern States have been late starters, they are catching up very quickly. The Andhra Government has taken a decision to start the Scheme in seven industrial centres. The Scheme is expected to start in Madras City in a few months and the State Government is considering its early extension to all centres of the State with 2,000 or more workers. It is also likely that the Government of Travancore-Cochin will introduce the Scheme shortly. The Mysore Government is expected to take an early decision regarding Bangalore."

There has, as is well known, been a persistent demand for the extension of medical benefit under the Scheme to the families of insured persons. The Union Labour Minister, Mr. Khandubhai Desai, who inaugurated the Scheme in Hyderabad, reiterated that the Government was considering the question of such extension. Col. Albuquerque, in his broadcast, also emphasised that the demand for such extension was a "very legitimate" one. He said that it was once feared that the inclusion of families might be too ambitious and beyond the financial and administrative resources of the Scheme. It would, however, appear that the experience in the working of the Scheme limited though it was, has been favourable. The Director-General revealed that the Corporation had appointed an independent actuary to study the finances of the Corporation to see whether, on the present scheduled contributions of employers and employees, it would be possible to render outpatient medical care to families also. The report of this actuary is expected to become available to the Corporation in the middle of this year.

GREATER OPERATIONAL ACTIVITY RESULTS IN INCREASED SALES VOLUME

HEAVY CAPITAL EXPENDITURE INESCAPABLE

SUBSTANTIALLY ENLARGED WORLD CONSUMPTION

SIR FREDERICK GODBER'S VIEWS ON OIL PRICES

THE Annual General Meeting of The "Shell" Transport and Trading Company, Limited, will be held on June 1 at The Chartered Insurance Institute, 20, Aldermanbury, London, E.C.

The following is the statement by the Chairman, Sir Frederick Godber, which has been circulated with the report and accounts for the year ended December 31, 1954:—

The Board of Directors

Little more than a year after his resignation from the board owing to ill health, Sir Andrew Agnew, our colleague for so many years, has passed away.

In my statement last year I paid tribute to Sir Andrew's half-century of devoted and untiring service to your company and to the group. I recalled, too, his outstanding work in building up the group's tanker fleet into one of the world's largest and most efficient maritime enterprises. I feel sure you will wish to join in extending sympathy to Lady Agnew and to all the members of his family.

Balance-sheet and Revenue Statement

The financial results of the group are reported elsewhere in this statement. The dividends paid to the parent companies for 1954 amounted to £26,841,299, compared with £22,186,010 for 1953. In consequence the net revenue of your company, which consists mainly of dividends from the group, was £10,527,844, against £8,670,523 in 1953.

After deducting the Preference dividends paid and accrued and the interim Ordinary dividend of 1s. per £1 unit free of income tax, paid on January 18, 1955, there remains available for distribution, including the carry forward from 1953, an amount of £9,538,414.

The directors now recommend a final dividend of 2s. per £1 unit free of income tax which, if approved, will be payable on June 8, 1955, and will absorb £6,541,763.

Reference has already been made in this report to an issue during 1954 of 10,902,939 Ordinary shares through the capitalization of part of the company's share premiums reserve.

When commenting on this issue in my statement last year, I said that one of its objects was to broaden the basis of the ownership of the company. You may, therefore, be interested to learn that during 1954 registered Ordinary stockholders increased by approximately 10,000, and in December numbered over 142,000. You will appreciate, of course, that the number of individuals who own the equity of the company must exceed this figure by a substantial margin, there being no record of those who prefer to be registered in the name of nominees, or of holders of Ordinary stock in bearer warrant form.

By means of such issues from time to time the shareholder has obtained in concrete form acknowledgment of the growth of the assets which his shares represent, and of the business in which they are used.

The Royal Dutch/Shell Group

The assets of The "Shell" Transport and Trading Company, Limited, are substantially in the form of investments in a large number of companies known collectively as the Royal Dutch/Shell Group. Your company has a 40 per cent. interest in these companies and the Royal Dutch Petroleum Company a 60 per cent. interest.

The greater part of these investments is held through three principal wholly owned operating companies—The Anglo-Saxon Petroleum Company, Limited, N.V. De Bataafsche Petroleum Maatschappij, and The Shell Petroleum Company Limited. The managing directors of each of these three companies are identical and at present are: The Hon. Sir Francis Hopwood, Jonkheer J. H. Loudon, H. Bloemgarten, J. W. Platt, F. A. C. Guépin, F. J. Stephens, L. Schepers.

At last year's annual general meeting I mentioned that it was proposed to make available a figure of group income for 1954 on a half-yearly basis. The publication of these results, which was made in September, was widely appreciated and favourably commented upon, as affording an opportunity of following more closely the current trading results of the group. I am glad to say that this year we propose to publish similar results on a quarterly basis, and that figures for the first quarter will be available within a few weeks.

I will now proceed to the report on the group financial results for 1954.

THE ROYAL DUTCH/SHELL GROUP REPORT ON THE YEAR 1954

Financial Position

Net income of the group for 1954, after taxation and elimination of minority interests, was £134,474,218, compared with £130,413,373 in 1953.

Higher activity in all phases of the group's operations resulted in an increase in the volume of sales in 1954 of nearly 10 per cent. in world outside North America, and of 4 per cent. in North America. This improvement was reflected in an increase in group net income before taxation of £23 million. The greater part of this increase, however, has been offset by higher taxation provisions, to which reference is made later. As a consequence of these larger tax provisions, the net income of the group after taxation increased by only £4 million over the previous year. This is a very significant fact.

Out of the 1954 income, dividends of £26,841,299 have been paid to the parent companies—Royal Dutch Petroleum Company and The "Shell" Transport and Trading Company, Limited.

Sales proceeds and other income, amounting in 1954 to £1,851,039,043, were higher by £150,324,593 than in the previous year. The greater proportion of the more valuable light products achieved in 1953 sales was maintained in 1954, in spite of the fact that the higher demand pressed more heavily on fuel oils. Geographically the improvement was particularly pronounced in Europe, where it is attributable to the record level of economic activity reached in western European countries during 1954. The increasingly high standard of quality of group companies' products also contributed to the improvement, since it resulted in public preference for them becoming more marked.

In the U.S.A. sales and income of Shell Oil Company were higher, in spite of the U.S. oil industry's general experience during 1954 of more difficult conditions, which were reflected in a reduction of allowable production of crude oil, and in one of the smallest annual increases in consumption since the war.

Costs and expenses of the group rose in total at about the same rate as sales. Operating expenses amounted to £1,044 million in 1954, against £977 million in 1953. In addition to those costs directly attributable to the production, manufacturing, transporting and marketing of oil and chemicals, there are other heavy expenses connected with exploration and with research, both of which increased. In 1954 group companies spent more than £50 million on exploration in an intensification of the search for new oil; this, like the expenditure on research, is a cost incurred to safeguard our future position.

Depreciation, depletion and amortisation charges were, at £155 million, higher than in 1953 by £7 million. The upward trend in this item during recent years has thus continued, and is likely to do so in the future in view of the high level of present day capital expenditures.

Larger sales have also meant higher sales taxes, excise duties and similar levies, which rose by £58 million in 1954 to a total of £406 million. The steep increase in this item is in great part attributable to the increase in sales in Europe, where these levies are particularly onerous.

Taxation on income of group companies throughout the world in 1954 was £102 million, and was thus £19 million higher than in 1953. This increase is principally due to the fact that taxable income was substantially higher in 1954 than in 1953. The provision also includes certain charges in respect of extra or new taxation levied during 1954 and relating partly to prior years, as is to be expected in operations so widespread and diversified as those of the group. In some years such charges arise, while in other years amounts may be brought back into the accounts. In 1953 these factors operated on balance in our favour, but in 1954 this was not the case.

It must be remembered that income taxes are levied on group companies by fiscal authorities all over the world, in fact by more than 50 different governments. In the same way the income of £134 million is spread over an equally large number of countries, and while a few of these contribute a very significant proportion, no preponderant part is attributable to activities in any one country.

Assets and Liabilities

Turning now to the statement of assets and liabilities, you will see that some changes in presentation are made, in order that a more detailed and clearer picture of the financial position may be given. Long-term receivables have been separated from current receivables, and a new item, short-term borrowings, appears under current liabilities. This is made up of bank overdrafts, short-term accommodation bills with banks, and long-term borrowings due within one year; the two last items were formerly included in accounts payable. In addition, separate figures have been shown for cash and for short-term marketable securities.

There have again been substantial increases in property, plant, and equipment, the gross investment in which stood at £1,694 million at the end of 1954. The rise in the figure for investments from £85 million to £104 million is due to a number of causes, the chief of which is the group's initial investment in Iran; there were also other substantial investments in joint production, refining, and marketing enterprises.

Stocks of materials have continued to fall—from £102 million to £92 million—despite the higher level of activities and some rising prices. This is due to the development in group companies of the most modern methods of material indenting and stock control, by means of which they have taken full advantage of the easier world markets for materials. The increase in trade has resulted in the value of oil stocks and of accounts receivable rising to £216 million and £199 million respectively.

It is gratifying to note the increase in cash and securities, which at the end of 1954 together amounted to £346 million. Against this improvement, however, must be set very substantial forward capital commitments; moreover taxation liabilities have risen to £129 million, and these must be met irrespective of the course of our future generation of funds. It is essential for our cash position to be strong, in order that we may be in a position to meet requirements for funds in nearly every country in the world, in most of which facilities for raising funds are limited or negligible.

Capital Expenditures

Our capital expenditures during 1954 were quite as high as was predicted a year ago. The figures for the past four years in millions of pounds were as follows:—

	1954	1953	1952	1951	Total	1951/54
	£	£	£	£	£	%
Exploration and production ..	110	101	96	88	395	50
Oil refineries and chemical plants	57	73	51	45	225	28
Marketing facilities	28	30	30	24	112	14
Ocean-going fleets	27	13	6	3	49	6
Miscellaneous	4	4	5	4	17	2
Total .. £	226	220	188	164	798	100

About two-thirds of these outlays have been met from depreciation and other provisions, and the remainder from the retained earnings of the group.

In the light of information available at present it appears probable that the future levels of capital expenditures will, if anything, be even higher than in the recent past. Since such vast sums are concerned, it is desirable to give an explanation of the factors governing them.

In the survey of activities it is suggested that the rise of world energy demand over the next 25 years may be of the order of 3 per cent. annually, in which case demand would double within this period; and that the oil industry will have to contribute an increasing proportion of these great additional requirements. Moreover the capital expenditure necessary for finding, producing, shipping, manufacturing and marketing each extra barrel of oil has risen considerably in recent years. This trend is attributable to higher capital costs in all phases of the industry—to the ever-increasing cost of finding new oil to replace reserves; to rising costs of capital goods, such as ships; to the public's demand for higher quality products, which entails increasing use of expensive plant such as catalytic cracking and reforming units; and to the demand for a higher standard of technical services, which frequently involves the provision of extra equipment.

In this sense, therefore, much of our capital expenditure may be defensive, and consequently does not offer prospects of any great increase of income. The normal test of profit-earning cannot be applied to such investment, which must be treated rather as a cost of maintaining our business than as new investment on which added return can be expected.

E.C.E. Report on Oil Prices

The explanation which I have just given you should afford a good understanding of the financial administration of the group's operations, and for that matter of the business of any of the larger companies in the international oil industry. I have given explanations on similar lines in previous years and I hope, therefore, that you have been adequately informed, and so have obtained an understanding of the financial aspects of the industry.

I stress this because recently there has been considerable publicity concerning oil prices arising out of a document published last March by the United Nations Economic Commission for Europe. This document set forth the results of a study made, on its own initiative, by the Secretariat of that Commission for its Coal Committee, and while there seems to have been a serious effort to elucidate for the committee the basis and machinery of prices at present charged for oil in western Europe, the fact that on the authors' own admission the document had to be based on incomplete knowledge of relevant facts, and that its conclusions, as well as many of its statements, are accordingly erroneous and academic, makes it very questionable whether it ought to have been presented to the committee as a contribution of value.

Furthermore, on the accepted precept that a little learning is a dangerous thing, it is even more questionable whether it should, or even would, have been published in the ordinary course of events. However, the decision to publish it was undoubtedly influenced by the fact that before even the coal committee, for whom it was prepared, had had an opportunity of considering the document, leakages of its contents appear to have taken place, and the Press here as well as elsewhere gave much publicity to distorted versions, which alleged that the document accused the oil industry of charging extortionate prices through the machinery of an international oil cartel. Such accusations are not included in the report itself, nor is there any foundation for them.

Nevertheless, these distorted "leakages," and the sensational criticism indulged in on the strength of them, engendered a good deal of interest in the subject generally, whereas probably the report itself, if it had not been so heralded, would not have done anything of the kind, either on its merits as a study or as sensational material. In fact since its publication views on its limitations have been widely endorsed in the Press, as well as by spokesmen of H.M. Government and the U.S. State Department. Nevertheless, in the light of the events which I have described it is appropriate that I should supplement my comments on the finances of the group in relation to certain statements and inferences in the E.C.E. document and the critical expressions which it evoked.

The point, supposedly extracted out of the document, which has been responsible for most publicity is that prices of oil products, such as petrol, in western Europe may be too high. The reasons given for this suggestion are that such prices are linked to prices in the U.S.A., and that the cost of producing crude oil in the Middle East, which is the main source of supply for western Europe, is lower than that in the United States. Actually the document does not contain any such statement in this precise form. This is the interpretation applied by those responsible for the publicity to certain phraseology in it; but since the wording of the document might without too much stretch of imagination carry the implication in question, and since it has been quoted in many quarters as a positive criticism of the industry, it is best that I should deal with it as such.

Prices and Profits

I am sure that all of you must know that, like most other commodities, crude oil and also oil products are sold on the basis of market prices. Market prices in their movements are not necessarily respecters of costs, let alone costs in one particular area or particular phase of the business. What, therefore, is the criterion by which to judge whether or not, a market price at a given moment is too high?

The total profits of the major oil companies, including our own, represent large sums in terms of money. But the quantity of oil which is sold is also very large, as is the capital required to put it into consumption. I will use our own companies' results in dealing with this question. Our business is primarily financed by our shareholders, who provided the money with the sole object of receiving some reasonable return on it in relation to the circumstances. The profit of the group for the last year was £134 million, and this means a return on capital employed of less than 14 per cent. We sold 26 thousand million gallons of oil and therefore on all operations, that is on producing, shipping, refining, and marketing combined, our profit margin world-wide was about 1¼d. per imperial gallon. By what standards can either of these results be judged excessive?

Even so, only a small proportion of these profits go to the shareholders in dividends. I explained to you last year in cold terms that, if we are to maintain our business all over the world in strength and in progress, heavy capital expenditure is inescapable; and also that, since the capital requirements of the international oil business have now outgrown the money markets of the world, they can be financed only by retaining in the business an appreciable proportion of earnings. Even in the U.S.A., where capital is much more plentiful, it has been estimated that 90 per cent. of gross investment in the oil industry since the war has been financed by funds generated within the industry.

I have already commented on the great increase in energy requirements forecast for the future, and the part which the oil industry is expected to play in filling these. We should be failing in our duty to the public as well as to our shareholders if we did not continue to make whatever provision is possible to enable us to play our part in this expansion. To the extent, therefore, that these future requirements must be financed out of earnings, it is a complete fallacy to regard such earnings as profits in the conventional sense. Moreover, should prices fall to a point where it became impossible for the industry to make adequate provision for financing expansion, there would be a shortage of oil products, with the consequence that economics would eventually prevail. This would inevitably, after a period of dislocation, bring us back to where we are to-day, which shows clearly enough what is the influence which must govern prices in the industry.

I would, however, like to put one more test to this question. Are oil prices too high for the economic health of the consumer?

It is impossible to assert seriously that they are since oil products are probably the main victims of taxation all over the world.

You will see from the financial statements that the payments of sales and excise taxes by group companies were three times group net earnings. World-wide they represent over one-fifth of sales proceeds, but in Europe they reach one-third. If petrol in Europe is taken by itself—and its price has been especially criticised—well over half of our realizations represent sales or similar taxes. Such heavy imposts inevitably raise the cost of living since, taking the United Kingdom as an example, four-fifths of petrol used is for industrial and commercial purposes or for public authorities. Therefore, while it might with reason be asserted that the consumer is paying too much, it is not the basic price which is responsible for this, and Governments must hold the view that the basic price of oil is economically so favourable to the consumer that he can afford to pay much more in the form of taxation.

None of the information which I have now reviewed and amplified is new to you. I have given it in more concise terms in previous years, particularly last year, and it is a curious fact that the authors of the E.C.E. document, seeking knowledge as they obviously were, seem to have neglected industry reports. The same must apply to many of the other critics, who could not have seriously raised some of the questions which they did, if they had had the knowledge which has been conveyed to the shareholders of this company in recent years, and which would have been available by reading the reports, had they made any effort to procure them.

World Oil Conditions

Total world oil consumption in 1954 showed a substantial increase over the 1953 level, for which the latter months of the year were mainly responsible. Though the growth in the U.S.A. was one of the smallest of the post-war years, in the rest of the world, excluding the Russian sphere, it approached the remarkable figure of 10 per cent.

Contributing to this increase was the rising demand for fuel oil, which continued into the early months of this year, and which during the winter months reached such a level that it stretched available fuel oil supplies world-wide to the limit. In consequence the price of that product rose in February of this year. The world's future energy requirements are likely to make further heavy demands on the oil industry, in particular for fuel oil, until such time as atomic energy becomes a significant factor.

A consequence of the unexpectedly buoyant demand for all products over the winter months was the rapid rise of short-term tanker freight rates, which by February last had more than doubled between the trough of midsummer and the peak of winter. At the height of this activity tankers on short-term charter amounted to as much as one-fifth of the total tonnage employed in moving oil, and consequently this rise in short-term rates was a major factor during the winter months in freighting costs. In contrast, the basis used for establishing the freight rates charged by group companies resulted in variations of less than 10 per cent. during the corresponding period.

The world tanker position remains in surplus. Though the winter demand brought tankers out of lay-up, at the period of highest demand, there were still over one million tons idle. Moreover, a record total of 4½ million tons of new buildings became available in 1954 and the building programme still continues at the very high level of 8 million tons, about half of which will come into service this year. The creation of this modern tanker fleet with its lower operating costs must be detrimental to the trading prospects of older tankers in a continuing highly competitive market, and their increased scrapping or conversion to other uses will become still more necessary.

The future requires that supplies of crude oil, the raw material from which the industry's manifold oil products are derived, be at all times available in sufficient quantity to fulfil potential demands. This can only be achieved by continuous exploration for new oil discoveries. It will be appreciated that over the past years those prospects which were most readily accessible have already been tested, with the consequence that reserves for the future must be sought, for the most part, in remote and less accessible regions, at the greater depths which modern methods enable the drill to reach, or in off-shore waters. The search goes on, but year by year becomes for these reasons more hazardous, more difficult and more costly.

I have made reference earlier to the large capital sums which the industry is called upon to spend; a considerable proportion arises from the increasing demands for refineries in the areas of consumption. I do not propose to go in detail into the arguments for or against this trend, since they vary widely in the differing circumstances of one country as compared with another. It is, however, as well to sound a note of warning that there is a minimum limit of capacity below which a refinery, if it is to produce the high quality of products increasingly in demand, cannot economically be justified. Self-sufficiency, however, appealing it may be from the point of view of national prestige, can in certain circumstances only be at the expense of flexibility, and hampers the replacement and modernization of equipment which is so necessary. Up-to-date quality at the lowest

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION LTD.

THE RT. HON. VISCOUNT KNOLLYS' STATEMENT

SYSTEM OF FREE ENTERPRISE IN INSURANCE DEFENDED

"THAT British insurance has survived the tests imposed by wars and radical changes in the political and economic scene and has been able to build itself up in spite of them into a great and thriving national asset, has been chiefly due to the intrinsic merit of the system of free enterprise under which it operates." This is the view expressed by the Rt. Hon. Viscount Knollys, G.C.M.G., M.B.E. D.F.C., Chairman of the Employers' Liability Assurance Corporation Ltd., in his statement to the shareholders accompanying the Directors' report and statement of accounts of the Corporation for the year ended 31st December, 1954.

The following is the full text of Viscount Knolly's statement:

"My first duty is the sad one of recalling to our shareholders the death of Lord Courtauld-Thomson on 1st November, 1954, just two months before he was due to retire from the Chairmanship of the Corporation, which he had held for over twenty years. On behalf of his colleagues on the Board and of all those on the staff of the Corporation and its associated companies who had the privilege of knowing him, I would like to pay tribute to the qualities which made him so greatly respected during his long life, and which have ensured that he will long be remembered with deep affection.

"His influence on the fortunes of 'The Employers' was profound. For twenty years in almost daily contact with the executive, his hard-headed judgment, imaginative advice and enthusiastic urge, combined with a disarming sense of humour, stimulated and cheered us all. He was at his best when problems were difficult, for he was fearless as well as far sighted. We shall miss him much. I am only sorry that he did not live to know of the outstanding profit which the Corporation earned in his last year as Chairman.

"Although he was known personally to many of our staff from all parts of the world, I had the good fortune to know him better than any. I have acknowledged my own debt to him elsewhere, but I should like to take this opportunity of saying how conscious I am of the difficult task I have in following him as Chairman of the Corporation, to which office my fellow Directors did me the honour of electing me at the end of last year. I am fortunate in being able to rely on the invaluable help of my colleagues, and particularly in having the continued support of Lord Waverley, our Deputy Chairman, whose experienced judgment was so much appreciated by my predecessor.

"As was announced last year, Mr. C. E. Keysell has, as General Manager, assumed the duties of Chief Executive, in which he will be supported by Mr. A. E. Gover as Deputy General Manager and Secretary, and Mr. C. S. B. Crocker as Assistant General Manager.

Share Capital

"The issue of fresh capital which we made last April in the form of an offer of new shares to our shareholders at the date of issue was entirely successful, and we were particularly pleased that nearly all of them took up the full number of shares which they were entitled to acquire. Of the proceeds, a part has already been used in the purchase, on 1st July, 1954, of The Halifax Insurance Company of New York, the name of which has since been altered by us to The Halifax Insurance Company of Massachusetts. Some part also has been added to our investments in Canada to enable us to take advantage of the exceptional opportunities which exist there for the development of profitable business, and the balance is, as we indicated at the time of the issue, being applied to support expansion of our business in these countries or elsewhere as and when it is needed.

Dividend

"Your Directors have decided to recommend for 1954 a final dividend at the rate of 3s. 6d. per share, making, with the interim dividend already paid, a total of 5s. 0d., or 6d. per share more than that for 1953. The cost of this, on the share capital as now increased, amounts to £283,750 net, as against a net cost of £190,463 for the 1953 dividend.

Fire

"In the United States, our fire business showed a gratifying increase in premium volume, but the high reserves required in respect of long-term premiums, which are the rule in fire insurance there, penalise for the time being any marked development. Furthermore, the abnormal sequence of three severe hurricanes in the Eastern States affected not only our branch but also the six months' accounts of our new American subsidiary, and, in consequence of these two factors, our group fire results showed a net loss for the year. It is, however, satisfactory that we are building up our United States fire account, since this class of business has been profitable in the past, and in our view will continue to be so over the years. I am, moreover, glad to be able to express confidence in the future of The Halifax Insurance Company of Massachusetts, since its agency representation, which change of ownership has hardly disturbed, is well spread and of high quality.

"In other territories overseas, our total fire business continued to grow, but at a slower pace than in recent years. Not all countries contributed to this growth, but it is in those British Dominions from which we derive a substantial proportion of our fire business that we are able to report the best increases in premium income. The claims during the year were again reasonable and, in consequence, it was a profitable period for the Corporation's fire business in the general overseas field.

"In the United Kingdom, we succeeded in increasing the premium income. The claims experience worsened somewhat, and, as a result, our home fire business, although satisfactory, was unable to contribute quite the same quota of profit to the fire account as that to which we had become accustomed in previous years.

Accident and General

"The excellent results on this account reflect successful operations in nearly every part of the world in which we are represented, and particularly in the United States and Canada, where we transact most business.

"In the United States, we had an outstanding year, ending with the highest amount of profit that we have ever earned there. Premium volume showed a rather smaller percentage increase than usual. This was principally because we were not aiming at too rapid expansion in a market which has been becoming more and more competitive, while rate changes on the whole were of little significance. Business activity, too, experienced a slight recession from the level of 1953, though it was, in fact, higher than that in any other year.

"The profit which we earned in Canada was again satisfactory, and continued a long succession of good results on this account.

"Both of our largest classes, motor and workmen's compensation, turned out well. Though either of them presents problems to us locally from time to time, as to any other company that writes them, I feel confident that we can carry them at a profit in the long run.

"In the United States, in particular, motor business, which is our largest class there, proved even better than in 1953, and we have to go back a long way before we find two consecutive years of such good experience. Although the cost of claims has continued to rise, their frequency has fallen, and this may be the result of the many road safety campaigns operative in all States to which your attention was called last year.

"The improved results have naturally made motor business more attractive and, with a slower rate of expansion in the amount of it available, a buyer's market has developed. Competition has become keener than ever and is likely to be the most important factor in 1955. The inevitable result must be the forcing down of rates to some extent, although not necessarily to an unprofitable level. For the long view, we may hope that measures taken in recent years to put the rating structure on a more stable basis will prove effective to the extent that, although there will still be fluctuations in results, they will not be so marked as in the past.

"Our United States workmen's compensation results recovered in 1954 and made a good contribution to the total profit there. Premiums fell away slightly, owing to the lower level of payrolls. The favourable experience in general over recent years has automatically given rise to a tendency towards reductions in rates, the effect of which, as they were mainly in the latter part of 1954, has hardly been felt so far. As compensation benefits have not kept pace with the increase in the cost of living, it is likely that they will be raised in many areas when the State Legislatures meet this year, and, if past practice is followed, corresponding increases in rates are not likely to be made concurrently. On the other hand, there is the prospect of a higher level of wages in 1955 from increased business activity, and so there should still be a margin for profit.

"In overseas territories, other than the United States, workmen's compensation, owing to various local conditions or proscriptions, amounts to only a small part of our operations. Motor business is, therefore, proportionately much the most important class, and I am glad to report that it has again yielded us a good profit. In Canada, we equalled the good results of 1953, and in Australia and South Africa, where we also do a large business, claims experience for 1954 showed a satisfactory improvement over that for previous years.

"The other classes of business included in this account, in spite of a deterioration in the results of public liability in the United States, contributed their fair share to the total profit. On our employers' liability business in the United Kingdom, the high level of damages has continued, but the application of revised rates of premium, in conjunction with our efforts in the field of accident prevention, has created a more favourable account, on which a profit has been made.

Life

"Our associated life office, the Clerical, Medical and General Life Assurance Society, continues to do well. The value of the Society's assets showed a considerable increase during 1954, as a result of the general prosperity of industrial undertakings, and was further enhanced by a fall in market rates of interest, which have, however, fluctuated to some extent since the end of the year. The interest yield on the Society's life assurance fund is based upon book values and is, accordingly, not greatly influenced by temporary fluctuations in market values.

"The figures for 1954 represent yet another year's progress in the series of excellent results to which the Clerical, Medical and General has now accustomed us. I feel sure that our shareholders will appreciate that so high a standard of achievement, regular though it is, is not an automatic phenomenon, but has been maintained by constant care and forethought in the management of the Society's business and investments.

Marine

"The greater part of the decrease in net marine premiums of The Merchants Marine Insurance Company, Ltd. is accounted for by a deliberate policy of reducing lines on the less desirable hull risks.

"The first year settlements in respect of the current year were among the lowest for some years, and settlements on previous years were more favourable than in 1953. The improvement in 'after the third year' settlements of claims in the accounts, to which your attention was called last year, has continued.

"Cargo business still continues to show a profit, but business is being written today at rates which must in the long run be disastrous to the whole cargo market. Reasonable competition has always been a healthy element in marine business and I hope that this will continue to be so, but some rates leave little or no margin for total losses or even heavy general average claims.

Aviation

"Our main interest in this field is still our holding of Aviation and General Insurance Company shares. In spite of the many serious flying accidents which we have seen reported during

the year, this Company has again shown a good profit.

Investments

"Forecasts of the course of business economies which turn out to be correct are rare. It is all the more striking, therefore, that business in the United States in 1954 behaved almost exactly as had been prophesied. A gentle recession at the beginning of the year did not, as had been feared, become severe. It was halted in the summer and an up-turn in almost all types of business activity took place in the autumn. This is still continuing. For once, fears and talk of depression did not themselves create a snowballing effect, and the natural buoyancy of demand and the well-justified confidence for the future set the economy once more on the upward course. Certain features still make one cautious, as, for example, the high level of instalment buying, although hire-purchase in itself has become a well-established and practical feature of the American way of life. When fearing over-production, one must always remember that there are 200,000 more people in the United States every month and that in 20 years' time the population there will have grown by over 40 millions to over 200 million people. Such conditions must provide a constantly increasing demand for all kinds of goods.

"The stock market, with the exception of a few flurries, has evidently taken this view. Our own investment in equities, modest in proportion to our total portfolio, has provided a welcome appreciation in our investment total. The bond market has not shown striking movements, but the issue by the United States Government of a 40-year bond earlier this year confirmed the fairly comfortable state of the market at that time.

"During my visit to the United States last year, I was able once again to meet all the members of our Executive Committee there, and to hear their views on the country's financial and economic situation and prospects, and on our own investment policy. At the time of our discussions, which took place in October, 1954, the recession which had started earlier in that year and which I have discussed above had been successfully checked, and our move from short-term securities into long-term corporate obligations, to which Lord Courtauld-Thomson referred last year, had been nearly completed. Thus, our bond portfolio is restored to its usual pattern of evenly spread maturities, but contains an increased proportion of high grade corporate bonds, on which we obtain a somewhat higher yield than on Government securities of comparable date.

"The state of our total investments is summarised later, and I feel sure that shareholders will find it highly satisfactory.

Overseas Visits

"The regular exchange of visits between our executives from London and our senior representatives all round the world was continued throughout the past year.

"Last autumn, I paid one of my usual visits to the United States, including the active and prosperous Western seaboard, and also to Canada. There, in company with the Deputy Chairman, I took the opportunity of seeing the recently developed area of Kitimat, a centre of great promise for Canadian heavy industry.

"Early this year I flew to inspect the Corporation's Australian Branch and to discuss the development of our growing interests there with Mr. S. C. Smith, our Manager for Australia. I had the opportunity on this visit to approve the purchase of excellent office premises in Melbourne for the use of the Branch. I found the country prosperous and growing in population and production, but their problems of inflation and balance of payments have been brought out by the recent import restrictions they have had to reimpose. The consequences of the chronic increases in rates of wages and salaries since the war may have a serious effect in the long run on the sales of Australian products abroad.

"The Deputy Chairman, Lord Waverley, while in the United States on the business of one of his other interests, was able to call at our offices in Philadelphia and Chicago, and several Directors who have travelled abroad in the past year have seen other of the Corporation's branches or agencies.

Anniversary Year

"I would like to call your attention to the fact that the 25th October this year is the 75th anniversary of our incorporation in 1880. Our history, since we issued our first policy, is to a large extent that of our great development in the last twenty-one years, the main facts of which were set out in the Chairman's statement last year, and can now be rounded off with our progress and profitable trading in 1954. We should not, however, under-estimate the pioneer work done in earlier years of our life, seeing that the seeds of much of our later prosperity were sown by our entry into Canada and South Africa in 1883, Australia in 1884 and the United States in 1886.

"In the three-quarters of a century upon which we now look back, the world has been changed more fundamentally and more violently than in any other similar period before. That British insurance has survived the tests imposed by wars and radical changes in the political and economic scene, and has been able to build itself up, in spite of them, into a great and thriving national asset, has been chiefly due, I am convinced, to the intrinsic merit of the system of free enterprise under which it operates.

"Companies conduct their affairs primarily in the interests of their own member shareholders and their policyholders, and it is healthy competition that keeps their service to the public efficient and their operations successful. Indeed, twenty-one years of experience as a chief executive have shown me that rivalry between the leading offices in this country is a very real thing. Boards and staffs are obliged by it to use all their skill and imagination to the best possible advantage in the management of the business of insurance, and in the handling of investments and other assets. What they thus achieve is, beyond any question, beneficial to the nation as well as to the companies themselves, seeing that it includes not only a constant and well directed supply of funds for Great Britain's industry and commerce but also the production year after year of a great volume of profits earned abroad and remitted here. In this, the Corporation has played a full part, particularly through its large interests in the great hard currency area of the North American continent.

Executive and Advisory Committees

"It was with the greatest regret that we learned of the death on 10th June, 1954, of Mr. Charles Francis Adams, who had been a member of our Executive Committee in the United States for 50 years until his resignation from it in September, 1953, and Chairman of it from 1933 to 1952. Mr. Adams was long regarded as the 'first citizen' of his native State of Massachusetts, and was a great American, who was devoted to his country. His opinions were balanced, free from bias and fearlessly spoken, as is the way with a man of his strong character and conspicuous integrity. He was a sincere and greatly valued friend of the Corporation.

"To fill the vacancy so caused, your Directors invited Mr. Edward L. Bigelow, Chairman of the Board of the Second Bank-State Street Trust Company of Boston, Massachusetts, to become a member of the United States Executive Committee, and were delighted to have his acceptance. Mr. Bigelow, as his office indicates, holds an important position in the New England financial world, and it will be of the greatest benefit to our Committee to have his experience and ability at their disposal.

"I am pleased to report that our Local Advisory Directors in Canada have had Mr. R. H. B. Ker added to their number. Mr. Ker is President of Ker and Stephenson Ltd. and Director of several undertakings, including the British Columbia Electric Company and the Montreal Trust Company and he is, undoubtedly, a most valuable addition to those available to Mr. Curtis, our Manager for Canada, for consultation on his investment problems.

"In Australia we have appointed Sir Leslie J. Morshead, K.C.B., K.B.E., C.M.G., D.S.O., a Local Advisory Director. Sir Leslie is President of the Bank of New South Wales and has other important interests in Australia, and we are very glad that he is now associated with our Australia Branch.

Tribute to Officials and Staff

"You will, I know, wish me to say how grateful we are to our officials, managers, staff and agents throughout the world for their excellent work during this successful year. May I also on my own behalf offer them sincere thanks for the splendid support which they have given me throughout the twenty-one years that I was the executive head of the Corporation.

"In particular, I would on this occasion like to record the Board's appreciation of the skilful and farsighted efficiency with which Mr. E. A. Larner has managed the affairs of our United States Branch over all the period since he became our United States Manager and Attorney in 1947. At the end of last year your Directors decided to recognise both his personal achievement and the importance of the office he holds by appointing him United States General Manager and Attorney.

"In conclusion, may I refer to the new form of presentation which I have chosen for this statement. It is designed to make it easier to read, shorn as it is of the mass of figures which have before been included with the rest of the statement, but are this year shown separately. I trust that our shareholders and others will appreciate this innovation."

cost can be provided only if the refiner is in a position to keep pace with the rapid developments in refinery techniques.

RECENT GROUP ACTIVITIES

Bombay Refinery

As has become customary, a separate and illustrated survey of activities is being circulated with this report. The achievements of group companies in 1954 follow the pattern of increasing and intensive activity in all phases of the business, which has been the keynote of past reports.

The wide range of these activities includes the considerable developments in marine exploration areas, of which drilling in the off-shore Texas and Louisiana concessions, in Qatar (Persian Gulf) and the Gulf of Paria (Trinidad) are examples. In the Gulf of Paria, where we operate with partners, oil has been found since the end of the year, though the extent and nature of the find have yet to be determined.

Last year I mentioned that oil had been found in Nigeria. Although since then oil indications have been found in a second well also located in the coastal area, much further work will be required before the value of this discovery can be assessed.

In the refining sphere, Geelong (Australia) started operating in mid-1954 and Bombay early this year, whilst the capacity and scope of our manufacturing facilities are being expanded in many places to meet growing product requirements.

Supplementing the transportation chapter in the survey, a further 19 general purpose tankers of 18,000 tons are expected to be delivered by the builders during 1955, as well as seven of the 31,000-ton ships on order. These deliveries will further improve the efficiency of the fleet.

In February of this year an offer was made by Shell Chemicals Ltd. of £5 million for the acquisition of the entire issued share capital of Petrochemicals Ltd., and in full settlement of the claims upon that company. The terms of the offer were accepted, and Petrochemicals Ltd. has consequently become a group company. The acquisition of this interest gives the group an immediate entry into a chemical field in the United Kingdom which is complementary to its present interests; it will also provide rights in certain new and important fields of chemical research.

PROBLEM OF RAISING PRODUCTIVITY

PSYCHOLOGICAL APPROACH ADVOCATED

WHENEVER presidents of employers' organisations address their members, they are generally known to confine themselves to problems of employer-employee relations and to comment on the hardships caused to industries by the unhelpful attitudes of labour and Governments in their approach to solve these problems. A departure from this traditional approach is found in the presidential address delivered by Mr. G. D. Somani, at the twenty-second annual session of the All India Organisation of Industrial Employers held in Bombay on the 13th inst. He devoted a good part of his speech to the general problem of economic development of India and offered a number of constructive suggestions for tackling it. It is primarily from this point of view that he looked at the subject of employer-employee relations.

The chief problem facing India today is, according to Mr. Somani, essentially the problem of recasting the occupational patterns, that is, enlarging and diversifying employment opportunities. At present, the means of livelihood for the bulk of the country's population is agriculture. There is, therefore, a need to reduce the preponderance of agriculture by creating new occupational opportunities in industry, transport, commerce, professions, service, etc. A prerequisite for creating these conditions is an increase not only in the capital stock available in the country, but also the productivity of the different factors of production. This, Mr. Somani says, is possible only by taking to modern modes of production. In this connection, he is of the opinion that cottage industries would not be of much avail in increasing production. Explaining his contention, he remarks: "...an improvement in the standard of living of the people and an improvement in the working conditions of labour force will be possible only when the modern modes of production are utilised. However much cottage industries may appeal to sentiment, they are variety of areas where exploitation of man by man is the greatest for the simple reason that Government or municipal supervision is almost impossible, and furthermore, because low productivity has to be made up by drudgery and overwork." The truth of this statement is evident from our remarks in the course of a leading article last week and, therefore, further comment on Mr. Somani's contention will be superfluous. Suffice it to underline his warning against the danger of solving productivity through the traditional and slow means of capital formation. "We have to think," he says, "in terms of utilising on a greater scale newer methods like encouraging voluntary labour, deficit financing, etc." He further avers that while basic capital intensive industries must be started, a new type of industries—different from the present cottage and handcraft industries and the present large-scale factory industries in industrially advanced countries—should be evolved so that such industries will not require large capital investments but which will at the same time produce efficiently and cheaply. This type of industry, he observes, may with advantage be operated to produce consumer goods.

Another suggestion emphasised by Mr. Somani relates to the need for imparting training in new skills necessary for rapid industrialisation. Industrial society undergoes constant changes when new processes of manufacture are introduced. This requires people to make adjustments in the methods of working and manner of living. In other words, people must be ready to change their jobs, learn new skills and move to work in different areas. This applies not only to workers but also to managements. "I should also like to mention," Mr. Somani remarks, "that management also must increasingly use psychological techniques in running industry. As industry becomes increasingly complex and as workers become increasingly conscious of their rights and responsibilities, it is necessary for managements in India, as has been done by managements in advanced industrial countries, to divide work into specialised categories, such as production, marketing, personnel control, etc." His organisation, we are told, is taking keen interest in spreading the principles of scientific management, particularly personnel management. Further, the logic of his contention that labour leaders should be trained in the basic principles of economics in addition to the methods of organising trade unions is too obvious to need any emphasis.

Mr. Somani's appeal to the Labour Minister not to proceed with the abolition of the Appellate Labour Tribunal but to strengthen it, as well as the labour courts, is in line with the consensus of opinion among employers generally. He, however, says that if the Tribunal is abolished, the structure of adjudication machinery should be carefully considered.

Referring to the demand for the appointment of a wage commission, Mr. Somani states that no purpose would be served by the Commission, as the Joint Consultative Board of Industry and Labour is seized of the problem. The Board has decided to initiate a comprehensive study of wage structure in the country and elsewhere. Such preliminary studies as have been made till now show, according to Mr. Somani, that the percentage of factory wages to *per capita* income is the highest in India, being 419. This compares with 216 in Japan, 190 in the U.S., 145 in the U.K., and 127 in Argentina. These differences can be largely accounted for by differences in occupational distribution, the levels of underemployment and unemployment, the relative productivity of agriculture and industry, etc. The factory worker in India is better paid than the worker either in cottage industries or in agriculture. The point is, Mr. Somani argues, that the fundamental objective of a national wage policy must form part and parcel of the country's general economic and social policy and that wages should be fixed at a level which will not curtail employment opportunities. He considers that the appointment of a wage commission would induce workers to entertain expectations which, in practice, cannot be fulfilled.

EXPORT PROMOTION DRIVE

The Government of India is reported to have drawn up a 12-point programme for promotion of exports from India. This programme, parts of which are already being implemented, is calculated to increase the exports of Indian merchandise abroad. The move has been made not a day too soon. For the increase which has taken place in industrial and agricultural production necessitates concerted action for finding a market abroad for the additional output. The extent of the increase in the industrial output is evident from a rise of about 40 per cent. in industrial production during the past five years, as witness the rise in the relevant index figure from 105 in 1950 to 146.5 in 1954. If this improvement is to be maintained India should concentrate its attention on developing foreign markets for its goods, and this the programme referred to above is expected to do.

One of the major steps to promote exports from India is the establishment of Export Promotion Councils for a number of commodities. Already two Councils, one for cotton textiles and the other for silk and art silk fabrics, have been established. Now it is proposed to set up a few more of such Councils for cashewnuts and pepper, tobacco, shellac, mica, sports goods, plastics and engineering goods. The Councils for plastics, cashewnuts and pepper will, it is reported, be set up shortly. These Councils undertake market studies in foreign countries, appoint representatives, conduct publicity and disseminate information about market conditions, lay down standards of quality and packing and attend to complaints from foreign importers.

There have been complaints of exports of substandard goods from India. With a view to eliminating such complaints, steps have been taken to ensure the quality of the goods according to samples. In the case of cotton textiles, a certification trade mark scheme has already been in operation, under which certain varieties of cloth for export can be inspected and stamped to ensure that the importers get quality goods. In the case of hemp, tobacco and raw wool, exports of only those grades covered by certificates granted under the Agmark rules are permitted.

Again, special import licences are being issued to exporters to make additional quantities of raw materials available to them. These raw materials include raw silk, precious stones, plastic raw materials and chicory. Rebate of import duties is also granted on raw materials used in finished articles exported from India. This concession applies to such products as art silk fabrics, embroidered goods, linoleum, automobiles, crown corks, plastic radios, radio batteries, electric fans, bicycles and cigarettes.

Among other measures adopted to promote exports are the removal of discrimination in shipping freights against Indian goods and efforts at securing stability in the process of primary products. Besides, controls on exports to the extent of 90 per cent. of the items entering export trade have been removed. Again, export duties are not looked upon as a source of revenues, and wherever possible, duties have been slashed. Under this category come cotton textiles, jute goods, pepper, groundnut oil and castor oil. Duties have also been removed altogether on a number of other items.

For commodities such as tea, jute, handloom and handicrafts, export promotion work is being handled by special boards like the Indian Tea Board, the Indian Jute Mills Association, the All-India Handloom Board and the All-India Handicrafts Board. The Tea Board has set up Tea Promotion Councils in the U.S.A. and other countries in collaboration with the tea trade of these countries and other tea-producing countries like Ceylon and Indonesia. The Tea Council in the U.S. is conducting publicity over the radio and television for increasing consumption of tea. The I.J.M.A. has sent goodwill missions to overseas countries and in the U.S. it has launched a campaign through farm and trade journals, radio and television, and leaflets to increase the offtake of Indian Jute manufactures. The Handloom Board is implementing an external marketing scheme under which commercial travellers are being appointed, and sales emporia are being opened in important centres in the Middle East and South-East Asia.

It has been decided to set up in New York a trade centre for marketing Indian handicrafts. The centre will explore local markets by means of test consignments of specific categories of Indian goods. The details of a trade corporation to be associated with this centre are being worked out.

A decision has been taken to start an export credit guarantee scheme on the lines of those in operation in the U.K., Canada and Japan. The scheme is in the nature of an insurance risk for exports and will have some new features, including payment of compensation to foreign importers, for default on the part of exporters.

Sponsoring trade delegations is another step to promote exports to overseas countries. Indian delegations have recently visited countries in the Middle East, East Asia, the Soviet Union and Poland to acquaint those markets with the products of Indian industries unknown to them so far. A tobacco delegation, which visited East Asian countries last year, was able to conclude a deal for exporting 2,000 metric tons of tobacco to China, thereby creating a lasting taste for Indian tobacco.

Showrooms have been set up by Indian missions abroad where Indian goods are displayed throughout the year. They are located in Colombo, Bangkok, New York, London, Paris, Brussels, San Francisco, Prague, Rome, Alexandria, Tokyo, Jakarta, Hamburg, Geneva, Buenos Aires, Rio de Janeiro and Rangoon. Besides, it is proposed to hold an exhibition in Hongkong or Jakarta this year for displaying Indian manufactures. Last year Indian goods were exhibited in Cairo, London, Toronto, Damascus, Sacramento, Frankfurt and Lausanne.

The new export promotion drive, as stated above has, undoubtedly, great potentialities. But its performance will be judged by the results it yields. This depends, to a major extent, on the personal which handles the various schemes of the programme and the wholehearted co-operation offered by trade and industry.

ANOTHER STATE-OWNED D.D.T. FACTORY

A second State-owned D.D.T. factory is to be set up near Alwaye in Travancore-Cochin State. The factory, which will have a capacity of about 1,400 tons of D.D.T. per year, is estimated to cost about Rs. 75 lakhs.

The Government of India has also decided to double the capacity of the factory set up near Delhi with the assistance and technical collaboration of U.N.I.C.E.F. and U.N.T.A.A. This factory has already gone into production and is expected to reach its rated capacity of 700 tons per year by the end of 1955. After expansion its capacity will be 1,400 tons per year.

With the doubling of the Delhi plant and the setting up of a second plant at Alwaye, a total capacity for the production of about 3,000 tons of D.D.T. per year will have been established in the country.

D.D.T. is an important weapon in the campaign against malaria which has been launched by the Government on a country-wide scale. It is estimated that, at its peak, the campaign will require about 8,000 tons of insecticides per annum. Thereafter for maintenance purposes, the requirement will not exceed 5,000 tons per annum. Besides D.D.T., benzene hexa-chloride is being used in the anti-malaria campaign, and it is expected that in the near future, capacity for the production of about 2,000 tons of benzene hexa-chloride will be established in the private sector. Taken with the capacity for the production of approximately 3,000 tons of D.D.T. per annum as approved by Government, this will cover the entire recurring requirements of the country.

DOCKYARD LABOUR

Seventy-one per cent. of the 25,440 dockyard workers in India in September, 1952, were permanent while three per cent. were on contract basis. The Bombay and West Bengal Units employed over 10,000 workers each whereas Visakhapatnam and Cochin employed 3,779 and 584 workers respectively.

The minimum monthly basic wage rate of workers was the highest in Cochin, being Rs. 65. It varied from Rs. 26 to Rs. 54-9 in Bombay and Rs. 30 to Rs. 41-7 in West Bengal. In Visakhapatnam, the wage rate was Rs. 45-8.

Dearness allowances varied from Rs. 40 to Rs. 61-12 in Bombay and Rs. 30-14 to Rs. 43 in West Bengal. In Cochin and Visakhapatnam the allowances were Rs. 39-13 and Rs. 30, respectively. Eight units paid bonus. Some units also paid travelling and attendance allowances, etc.

In addition to statutory leave, workers in all the dockyards got between 10 to 17 holidays with pay during a year. They were also entitled to 7 to 15 days' sick leave with pay.

All dockyards except one maintained well-equipped dispensaries with qualified doctors to provide free medical aid to the workers. The dockyards provided facilities for the education of workers' children.

The workers enjoyed provident fund facilities in all the dockyard, with an equal amount of contribution from the employees. In addition to the provident fund, 11 units also paid gratuity to their employees, usually at the rate of a month's pay for each year of service subject to a maximum of 15 months' pay. One unit also paid pension to employees with over 20 years' service.

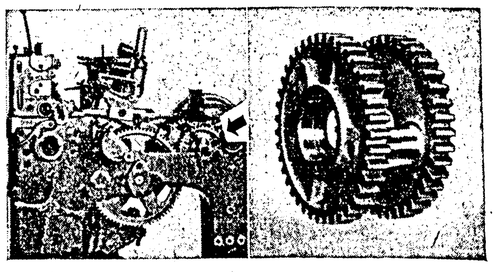
Cast Iron with a difference! 1A/SC/4

SPHEROIDAL GRAPHITE IRON



S.G. Iron gear crank for eccentric drive on a weaving machine, shown alone and in position on the machine. (By courtesy of Adolph Saurer, S.A.)

Iron castings with vastly improved properties are now in commercial production. The important difference in these new irons is in the form of the graphite which is present as spheroids instead of flakes. Properties which may be expected in commercial production fall within the following ranges:

	Maximum Stress t.s.i.	Yield Point t.s.i.	Elongation %
As Cast (Pearlitic)	35—45	25—35	1—5
Annealed (Ferritic)	27—35	20—25	10—25

Spheroidal Graphite Iron is manufactured under licence and is the subject of patents and patent applications in the name of The Mond Nickel Co. Ltd.

INDIA SUGARS AND REFINERIES EARN BETTER PROFIT

EXPANSION SCHEME SANCTIONED BY GOVERNMENT

AFTER two years of successive recession, in which the gross profits had dwindled from Rs. 28.91 lakhs to Rs. 10.42 lakhs, the working of the India Sugars and Refineries Ltd. (Managing Agents: The India Sugar Agencies Ltd., Madras) during the year ended 30th September, 1954, has turned out to be more encouraging, the gross profit having gone up to Rs. 12.17 lakhs. Notwithstanding the improvement noted above, the Company's profit for the year under review is one of the lowest in the last seven years of its history. Also, the dividend on ordinary shares has been cut from 25 per cent. to 17½ per cent., though it is on the increased capital from 1st July, 1954, raised by the capitalisation of a sum of Rs. 16 lakhs out of the reserves.

The Company's factory crushed during the year under review 97,155 tons of sugarcane and produced 9,985 tons of sugar, as against 89,666 tons crushed in the previous year producing 9,425 tons of sugar. Thus, both the quantity of cane crushed and the output of sugar were higher than in the previous year. They, however, fell very much short of the record quantities of cane crushed and sugar produced in 1951-52. The Company has had to pay again, during the year under review, a sum of Rs. 3.32 lakhs as bonus to sugarcane growers under what is known as the S.I.S.M.A. formula. In the previous year, it had to pay as much as Rs. 9 lakhs over and above the contracted rates, consequent on the application of the S.I.S.M.A. formula. The Government of India is reported to be considering the revision of this system of bonus-payment and the Directors naturally await the outcome of this with more than ordinary interest.

An idea of the Company's progress during the past three years can be had from the following comparative table giving the salient features of its profit and loss accounts:

(In lakhs of rupees)

	Year ended 30th September			
	1954	1953	1952	1951
Sales and closing stock ..	90.24	107.28	133.66	116.09
Other income	4.82	2.67	1.71	0.97
Expenses	82.89	99.53	115.20	88.15
Gross profit ..	12.17	10.42	20.17	28.91
Managing Agents' commission and office allowance ..	1.11	0.72	1.96	2.85
Depreciation ..	0.38	4.00	1.37	1.15
Provision for taxation and contingencies	5.50	3.75	7.50	10.50
Net profit	5.18	1.95	9.34	14.40
To reserves	..	..	5.00	8.76
Dividends—				
7% per cent. Preference ..	0.09	0.09	0.09	0.09
Ordinary ..	2.11	3.25	3.25	3.25
	(17½%)	(25%)	(25%)	(25%)
Carry forward	4.20	2.32	3.71	2.71
Cane crushed (in tons) ..	97,155	89,660	182,634	111,529
Sugar produced (in tons) ..	9,985	9,425	12,502	11,946

The 'other income' shown in the above table includes for the year under review a sum of Rs. 2.50 lakhs representing premium on shares and Rs. 0.51 lakh representing E.P.T. Post-war Refund. It may also be noted that the provision for depreciation has been substantially reduced, while that for taxation and contingencies has been raised. The Directors point out in their report that the addition to the reserve for taxation and contingencies has been calculated on a very conservative basis that, in the circumstances now existing, this measure of caution is necessary. For the second year in succession, no addition to the reserves has been possible. The Directors have instead carried forward a substantially larger sum.

During the year under review, the Company capitalised a sum of Rs. 16 lakhs from out of the general reserve, but the entire amount has not been utilised to issue bonus shares. Only a sum of Rs. 12.71 lakhs has been utilised for that purpose, the balance of Rs. 3.29 lakhs being kept in suspense. Also the 60,000 ordinary shares of Rs. 5 paid-up were made fully paid-up. The bonus shares become entitled to dividend only from 1st July, 1954.

Even after the aforesaid capitalisation, the Company's reserves and surplus aggregate Rs. 18.30 lakhs, as against a paid-up capital of Rs. 29.01 lakhs, besides a bonus share suspense of Rs. 3.29 lakhs. The provision for taxation and contingencies amounts to Rs. 14.73 lakhs. The current liabilities aggregate Rs. 31.30 lakhs. The gross block of the value of Rs. 26.97 lakhs stands well written down to a book value of Rs. 8.46 lakhs. The current assets amount to Rs. 68.18 lakhs and exceed the current liabilities and provision for taxation by a handsome margin of Rs. 41.15 lakhs.

The Company's proposals to put up an additional plant, with a view to increasing the crushing capacity by about 50 per cent. and improving the economy and efficiency of the factory, has been sanctioned by the Government. The Managing Agents are arranging to implement it as quickly as possible. The Company has also made substantial progress on the subsidised industrial housing scheme and the Directors hope that, before the next annual general meeting of the Company to be held in 1956, it would have been completed in all its phases.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 18-6. At this rate and on the basis of the latest dividend, the yield works out to 9.5 per cent. per annum free of tax.

INDIAN WOOD PRODUCTS

Slightly better results are disclosed by the audited accounts of the Indian Wood Products (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) for the year ended 30th September, 1954. Trading profit, for instance, which had declined from Rs. 17.94 lakhs to Rs. 16.85 lakhs in the previous year, shows an increase to Rs. 17.42 lakhs for the year under review. The net profit (after providing the managing agency commission, depreciation and taxation) is, however, almost unchanged at the previous year's level of Rs. 7.65 lakhs, to which it had dwindled from Rs. 9.22 lakhs for 1951-52. As in the previous year, the Directors have strengthened the reserve fund by the addition of Rs. 2 lakhs from the year's profit and have declared a slightly higher dividend to shareholders, by raising the final distribution. The interim dividend paid in December last was unchanged at 10 per cent., while the final dividend has been raised from 15 per cent. to 17½ per cent. Though the rate of dividend for the year under review is less than those paid for the years 1951-52 and 1950-51, the quantum of distribution is higher than for any of the other previous years. The Company's capital was raised in March, 1953, by the capitalisation of Rs. 5 lakhs out of the reserves.

The following comparative table, bringing out the salient features of the profit and loss account for the past four years, gives a good idea of the Company's progress:

(In lakhs of rupees)

	Year ended 30th September			
	1954	1953	1952	1951
Sale proceeds	37.41	34.61	34.94	32.74
Cost of manufacturing ..	20.07	17.82	17.01	15.17
Trading profit	17.42	16.85	17.94	17.64
Other income	0.06	0.43	1.69	0.27
Other expenses	1.29	1.82	1.28	1.08
Managing Agents' commission	1.82	1.64	1.74	1.73
Depreciation	0.86	1.04	1.12	1.04
Taxation	5.84	5.58	6.27	6.86
Net profit	7.65	7.65	9.22	7.70
To reserve	2.00	2.72	3.00	2.50
Dividend	5.50	5.00	5.25†	5.25
	(27½%)	(25%)	(30%)	(35%)
Carry forward	1.90	1.63	1.70	0.74

† Final dividend of 15 per cent. on the increased capital of Rs. 20 lakhs raised by the capitalisation of Rs. 5 lakhs in March, 1953.

Commenting on the Company's working during the year, the Directors observe, in their report, as follows: "The profit for the year was slightly higher than last year and this is satisfactory, as this year's figures include no excess profits tax refund or interest on advance payment of tax. By working three shifts, considerably more timber was processed and this resulted in a marked increase in production of both Cutch and Katha, though the extraction percentage of Cutch was appreciably lower this year. The value of our stocks of Khair wood increased further, due to the higher royalty charged by the U.P. Government."

The Company's financial position, as seen from its latest balance-sheet, is quite satisfactory. The paid-up capital of Rs. 20 lakhs is supplemented by reserves and surplus aggregating Rs. 19.95 lakhs, of which general reserve accounts for Rs. 13 lakhs and repairs and replacement reserve for Rs. 4.40 lakhs. The reserves would have been more impressive but for the capitalisation of a sum of Rs. 8 lakhs, once in June, 1948, when Rs. 3 lakhs were capitalised and issued to the then existing shareholders in the proportion of one share for every four shares held, and the second time in March, 1953, when Rs. 5 lakhs were capitalised and issued to the existing shareholders in the proportion of one new share for every three shares held. The provision for taxation stands at Rs. 2.56 lakhs and current liabilities aggregate Rs. 11.28 lakhs. The gross block of the value of Rs. 18.19 lakhs stands written down to a book value of Rs. 4.66 lakhs. The current assets amount to Rs. 49.13 lakhs and exceed the current liabilities and provision for taxation by a huge margin of Rs. 35.29 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 39-8 *ex-div.* On this basis, the yield on the shares works out to 7 per cent. per annum free of income-tax.

I.B. PETROL'S PROFIT SHRINKS SLIGHTLY

DIVIDEND, HOWEVER, RAISED

THE year ended 31st December, 1954, represents the first full year for the Indo-Burma Petroleum Company, Ltd. (Managing Agents: Messrs. Steel Brothers & Co., Ltd., Calcutta) after the participation of the Burma Government in the oil industry of that country, for which negotiations were successfully concluded in January, 1954, between the Government and three participating oil companies, namely, (1) the Indo-Burma Petroleum Company, Ltd., (2) the Burmah Oil Company, Ltd., and (3) the British Burmah Petroleum Company, Ltd. Under the new arrangements, details of which were given in our issue dated 5th June, 1954, (*vide* page 1092), the Indo-Burma Petroleum, along with the Burmah Oil Company (Burma Trading) Ltd., was appointed selling agents of the new company, the Burma Oil Co. (1954) Ltd., in respect of its products.

The aforesaid arrangement has not, however, seriously affected the working results of the Indo-Burma Petroleum for the year under review. The gross profit has no doubt declined from Rs. 61.68 lakhs earned in 1953 to Rs. 56.24 lakhs, but it still stands well above that for either of the years 1952 and 1951. The net profit amounts to Rs. 19.26 lakhs, as compared with Rs. 9.90 lakhs for the previous year. The higher net profit is accounted for by the substantial reduction in the provision for taxation from Rs. 44 lakhs to Rs. 24 lakhs. The net profit is supplemented by a sum of Rs. 13.02 lakhs being the adjustment in respect of previous years, the corresponding amount for 1953 being Rs. 7.57 lakhs. A sum of Rs. 4.83 lakhs has been provided out of the above profit towards provision for contingent liability, from which the Directors wrote back last year Rs. 6.10 lakhs as no longer required. No addition to reserves has been made as in previous years. The dividend on ordinary shares has been raised from 20 per cent. to 30 per cent. This is the third year in succession for which the dividend is being thus raised. Thus, in the course of the last three years, the dividend has been trebled from 10 per cent. (paid for 1951) to 30 per cent. for the year under review.

The Company's progress during the past three years can be judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	664.49	638.14	607.06	578.75
Other income	10.48	10.76	19.90	14.90
Expenses	621.80	590.15	577.48	540.56
Gross profit	56.24	61.68	49.47	47.09
Managing Agents' remuneration	2.57	2.92	2.80	2.00
Depreciation	5.58	4.86	4.35	9.21
Taxation	24.00	44.00	27.16	22.30
Net profit	19.26	9.90	14.60	13.58
Adjustment account previous years	13.02	7.57	6.86	8.63
Other income	..	6.10	8.01	..
Provision for contingent liability	4.83	..	6.10	..
To reserve	..	4.08	9.50	10.60
Bonus to staff	..	..	0.25	0.25
Dividends—				
7% Preference	2.58	2.58	2.58	2.58
Ordinary	30.00	20.00	15.00	10.00
	(30%)	(20%)	(15%)	(10%)
Carry forward	0.64	0.92	4.03	2.10

The paid-up capital of the Company stands at Rs. 150 lakhs, made up of 250,000 ordinary shares of Rs. 40 each fully paid and 50,000 7 per cent. taxable cumulative preference shares of Rs. 100 each fully paid-up. As against this, there are reserves and surplus aggregating Rs. 158.62 lakhs. These include, among others, capital reserve at Rs. 110.50 lakhs, general reserve at Rs. 36 lakhs and dividend equalisation reserve at Rs. 5 lakhs. The provision for taxation amounts to Rs. 27.83 lakhs and current liabilities aggregate Rs. 170.75 lakhs. The gross block of the value of Rs. 57.27 lakhs has been written down to a book value of Rs. 13.09 lakhs. Trade investments aggregate Rs. 72.50 lakhs and current assets Rs. 421.61 lakhs. Of these current assets, investments in Government securities (at cost less depreciation reserve) account for Rs. 128.46 lakhs—the market value as at the close of the year being Rs. 133.94 lakhs—and cash balances for Rs. 187.03 lakhs. It will be noted that the surplus of current assets over current liabilities and provision for taxation is quite substantial.

The announcement of higher dividend was greeted by the Calcutta Stock Exchange where the Company's shares (Rs. 40 fully paid up) are quoted with a sharp jump in the value of these shares from Rs. 122-8 to Rs. 146. They are, however, currently being quoted at Rs. 135 *ex-div.* At this rate and on the basis of the latest dividend, the yield on the shares works out to 8.9 per cent. per annum.

EMPLOYERS' LIABILITY ASSURANCE CORPN.

HIGHER DIVIDEND ON RAISED CAPITAL

THE most outstanding feature of the working results of the Employers' Liability Assurance Corporation Ltd. (General Manager: Mr. C. E. Keysell, M.B.E., London) for the year ended 31st December, 1954, is the exceedingly good performance shown by the accident and general department of the Corporation. Here, not only the upward trend in premium income noted in the previous years was kept up in the year under review but the underwriting profit almost doubled. To mention the figures, the premium income (less re-insurances) of this department, which had steadily advanced from £11.85 million in 1949 to £22.40 million in 1953, staged a further rise to £23.22 million in 1954. It will be interesting to note here that, during the last five years, the premium income of the accident and general department has almost doubled itself. The underwriting profit of this department, which had risen from £233,171 in 1952 to £796,562 in 1953, shot up to £1,579,230 in the year under review. In the fire department, however, the experience of the Corporation was somewhat different. Though the premium income improved further from £2.44 million to £2.80 million, the underwriting profit suffered a sharp decline from £119,266 to £1,778, thus maintaining the downward trend noted in the previous two years.

The excellent results of the accident and general departments more than offset the setback in the fire department, so that the total underwriting profit of the Corporation for 1954, at £1,581,008, compares very favourably with that of £915,828 earned in 1953. The Corporation's share of the life profit of the Clerical, Medical and General Life Assurance Society is £55,815, almost the same as in the previous year. This, together with the interest of £1,004,003 earned on investments, after providing £351,466 towards staff pension account and expenses not charged to other accounts, gives a total trading profit of £2,289,360. This not only represents an increase of £831,051 over that for 1953 but is also a fresh record in the annals of this seventy-four year old Corporation. Out of the aforesaid profit, the Directors have set aside £1,246,620 for U.K. taxation, leaving a net profit of £1,042,740. This net profit, together with the surplus of £882,422 brought in from the previous year, gives a total distributable sum of £1,925,162, as compared with £1,322,885 in the previous year. Out of this, the Directors have transferred £324,317 to the general reserve and £150,000 to contingencies account. In November, 1954, the Directors had paid an interim dividend of 1s. 6d. per share. They have now recommended the payment of a final dividend of 3s. 6d. per share of £1 each, making a total of 5s. per share (less tax) or 6d. per share more than that for 1953. As the dividend for 1954 is on an increased capital, particulars of which are given in the last para of this article, the cost of this has gone up from £190,463 to £283,750, leaving a surplus of £1,167,095 to be carried forward.

The following comparative table gives an idea of the Corporation's progress in underwriting fire and accident and general business in recent years:

(In £'s sterling)

—	For the year ended 31st December			
	1954	1953	1952	1951
Fire—

Provision for unexpired liability at the end of the year ..	8,339,626	8,065,391	7,600,556	7,027,086
Profit ..	1,579,230	796,562	233,171	919,219

The excellent results achieved in accident and general business reflect the successful operations in nearly every part of the world in which the Corporation is represented, and particularly in the U.S. and Canada where it transacts most business. In the U.S., the Corporation had an outstanding year ending with the highest amount of profit that it had ever earned there. "The premium volume showed a rather smaller percentage increase than usual," the Chairman, the Rt. Hon. Viscount Knollys, says in his annual statement (the full text of which appears elsewhere in this issue) to the shareholders. "This was principally because we are not aiming at too rapid expansion in a market which has been becoming more and more competitive, while rate changes on the whole were of little significance. Business activity, too, experienced a slight recession from the level of 1953, though it was, in fact, higher than that in any other year." In Canada, the Corporation's profit in this class of business was again satisfactory and "continued a long succession of good results on this account." Commenting on the experience in fire account, the Chairman says that the high reserves required in respect of long-term premiums penalise for the time being any marked development." "Furthermore," he adds: "the abnormal sequence of three severe hurricanes in the Eastern States affected not only our branch but also the six months' accounts of our new American subsidiary, and, in consequence of these two factors, our group fire results showed a net loss for the year."

During the year under review, the Corporation capitalised a sum of £1,154,318 out of the general reserve, in order to pay up the uncalled liability of 15s. per share on the 1,539,090 shares of £1 each. The share capital was thereafter raised to £2 million by the issue of a further 460,910 fully paid shares of £1 each at 90s. per share. The proceeds of this issue are being used for the further development of the Corporation's business and a part has been applied to the purchase of a subsidiary company in the U.S. The aforesaid capital is supplemented by a general reserve of £5 million, including premium on new shares amounting to £2.5 million.

Points From The Chair

Competition and Quality

"A NEW fashion has, however, arisen—the cry for knockout competition in private enterprise. It is sometimes hard to reconcile this with a simultaneous clamour for industry to be nationalised and thereby become a monopoly. We in the electrical manufacturing industry believe most wholeheartedly in competition—let there be no mistake about that. We also believe in progress; we even spare a thought for the safety of those who use our products, which are inevitably linked to a lethal source. We are inclined to think it a little old-fashioned to believe in the law of the jungle. When you harness nature it is advisible to see that your bridle and reins are in good condition. Modern science has supplanted the horse by the production of many wonderful means of transport. But if an engine fails or a wing breaks during the transatlantic flight, the fact that an airline has effected an economy, or made a profit, by paying for its aircraft lower prices brought about by cut-throat competition would be of little consideration."

D. D. WALKER,
British Electrical and Allied Manufacturers' Association (Incorporated).

Research and Development

"The rising cost and increasing scarcity of office labour and the problems presented by the aggravating complexities of modern business have during the past year, even more than previously, led managements to intensify their studies of and to explore the potentials of the new trends in book-keeping and computing. Public lectures have been held; newspapers and magazine articles have appeared, and many study groups have been set up by professional bodies and commercial and industrial concerns. All these factors taken together have given great impetus to those revolutionary changes in the design, production and use of office machines to be, onset of which I have drawn your attention in earlier years. Changes such as these should carry interesting developments for your company but, like a gradually developing photographic plate, the picture has now cleared to the point, where I can say with confidence, not only that the punched card industry will be able to assimilate the new techniques but also that it will turn them to advantage by widening the market in such a way that your products, hitherto considered by commerce and industry as valuable ancillaries, will often become the central pivots without which businesses would, in many cases, be severely impeded."

COL. A. T. MAXWELL,
Powers-Samas Accounting Machines.

World Oil Conditions

"Total world oil consumption in 1954 showed a substantial increase over the 1953 level, for which the latter months of the year were mainly responsible. Though the growth in the U.S.A. was one of the smallest of the post-war years, in the rest of the world, excluding the Russian sphere, it approached the remarkable figure of 10 per cent. Contributing to this increase was the rising demand for fuel oil, which continued into the early months of this year, and which during the winter months reached such a level that it stretched available fuel oil supplies world-wide to the limit. In consequence, the price of that product rose in February of this year. The world's future energy requirements are likely to make further heavy demands on the oil industry, in particular for fuel oil, until such time as atomic energy becomes a significant factor."

SIR FREDERICK GOBBER,
The "Shell" Transport and Trading Company, Ltd.

Tea Prices

"The high prices ruling at the beginning of 1955 were not, it will be seen, warranted by the actual state of supply and demand, and the very sharp fall that occurred thereafter was not fully justified either—as so often happens, the pendulum has tended to swing too far in each direction. The position is, however, by no means out of balance and I hope that in the current season prices will establish themselves at levels which, while satisfactory to producers, will give the public their tea at a cost not out of line with those of other important items in the domestic economy."

R. W. B. DUNLOP,
Walter Duncan & Goodricke Ltd.

COMPANY MEETINGS AND DIVIDENDS

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1955. Dividend: 3 per cent. (Rs. 3 per share) less income-tax. Transfer books remain closed from 15th to 25th May, 1955, both days inclusive.

CHAPARMUKH-SILGHAT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1955. Dividend: 1¾ per cent. (Rs. 1-12) less income-tax. Transfer books remain closed from 15th to 25th May, 1955, both days inclusive.

HOWRAH-SHEAKHALLA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1955. Dividend: 3 per cent. (Rs. 3) less income-tax. Transfer books remain closed from 15th to 25th May, 1955, both days inclusive.

FUTWAH-ISLAMPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1955. Dividend: 1¾ per cent. (Rs. 1-12) less income-tax. Transfer books remain closed from 15th to 25th May, 1955, both days inclusive.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 25th May, 1955. Dividend: 6 per cent. (Rs. 6) less income-tax. Transfer books remain closed from 15th to 25th May, 1955, both days inclusive.

EASTERN MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 26th May, 1955. Dividend: Rs. 3 per share. Transfer books remain closed from 19th to 26th May, 1955, both days inclusive.

ASSAM SAW MILLS AND TIMBER CO., LTD. Annual General Meeting, Calcutta, 26th May, 1955. Dividend: *Nil.* Transfer books remain closed from 13th to 26th May, 1955, both days inclusive.

PRESIDENCY JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: As. 3 per share. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

UDAYGIRI RUBBER CO., LTD. Annual General Meeting, Kottayam, 30th May, 1955. Dividend: Rs. 2-8 per share. Transfer books will remain closed from 26th to 30th May, 1955, both days inclusive.

ANANDAM RUBBER CO., LTD. Annual General Meeting, Kottayam, 30th May, 1955. Dividend: Rs. 2-8 per share. Transfer books will remain closed from 26th to 30th May, 1955, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

SHREE DIGVIJAY CEMENT CO., LTD. Annual General Meeting, Seeka, 6th June, 1955. Dividend: Rs. 8-8 per share, payable on 7th June, 1955. Transfer books remain closed from 16th May to 1st June, 1955, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Hospet (Bellary Dist.), 6th June, 1955. Dividend: Re. 1-12 per ordinary and "B" ordinary shares, free of income-tax, payable on or after 20th June, 1955. Transfer books will remain closed from 23rd May to 6th June, 1955, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 13th June, 1955. Dividend: Re. 1 per ordinary share, payable on or after 20th June, 1955. Transfer books will remain closed from 25th May to 18th June, 1955, both days inclusive.

DILARAM TEA CO., LTD. Interim dividend of Rs. 20 per share, for the year ended 31st December, 1954, payable on or after 30th May, 1953.

COMPANY REGISTRATIONS

RUSTOM DUBASH INVESTMENT LTD. (First Director: Mr. R. D. Dubash.) Business: To invest in, acquire by purchase, lease, exchange or otherwise, lands, buildings, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Darabshaw House, Ballard Road, Ballard Estate, Fort, Bombay.

VISSANJI KHIMJI & CO., LTD. (First Director: Seth Ratansey Karsondas.) Business: Cotton brokers, buying agents, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 9, Wallace Street, Fort, Bombay-1.

SHREE BANSIDHAR LTD. (First Director: Mr. Raojibhai M. Patel.) Business: Dealers in dyes, dyestuffs, colours, chemicals, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Attarwala Compound, opposite City Mills, Kankaria Road, Ahmedabad.

ASSAM SAW SUFFERS LOSS AGAIN

UDAYAGIRI AND ANANDAM RUBBERS RAISE DIVIDEND LEVELS

Assam Saw Mills and Timber Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September, 1954.

After providing Rs. 2,00,997 (Rs. 1,55,049) for depreciation and crediting a sum of Rs. 12,000 (*nil*) being allowance forgone by management agents, the profit and loss account shows a loss of Rs. 3,20,289 (Rs. 97,203) which increases the debit balance brought forward from the previous year to Rs. 4,17,492 (Rs. 97,203) and this amount the directors recommended should be carried forward.

General Report.—The directors regret that although the Tea Trade prospered during 1953-54 and the demand for tea chests increased considerably, the capacity for manufacture in the country is now so great that there is overproduction.

In addition, the road and river communication difficulties mentioned in the previous year's report have not been solved and in fact, although the directors are in touch with the State Government and the North East Frontier Agency continuously over this problem and have no doubts about their interest in helping them, it is not going to be an easy problem to solve.

The directors report that while the indigenous capacity exists to produce many more tea chests than are required by the Tea Trade, and although in the year 1954-55 the Company has sold virtually the whole production, the price obtainable is not such as to enable the Company to expect much, if any, profit.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,99,998	Block ...	21,01,700
Reserves ...	28,23,970	Work-in-progress ...	50,164

Udayagiri Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George and Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1954.

The tea harvested during the year was 2,26,940 (2,28,620) lbs. at 129.41 (130.74) cents per pound against an estimate of 2,25,000 (2,20,000) lbs. at 132.40 (131) cents per pound. The crop estimated for 1955 is 2,25,000 lbs. at 151.91 cents per pound. The tea was sold at an average price of 275 (191.25) cents (Rs. 2-12) per pound.

The net profit after providing for managing agents' remuneration, depreciation and taxes, and transferring Rs. 85,000 to the debenture redemption fund is Rs. 37,870 (Rs. 56,047) to this has to be added the balance brought from last year of Rs. 18,004 (Rs. 19,558) making a total of Rs. 75,874 (Rs. 75,604). This is reduced by 7 per cent. dividend on preference shares paid in February, 1955, Rs. 5,600 (Rs. 5,600), the directors now recommend the payment of a dividend of 25 (10) per cent. on the ordinary shares Rs. 55,000 (Rs. 22,000) leaving a balance of Rs. 15,274 (Rs. 18,004 after transferring Rs. 30,000 to debenture redemption fund) which is proposed to be carried forward.

The visiting agent reports that the estate is in excellent condition. The total acreage under tea is 440 acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	8,04,287
Debentures	2,49,000	Stock-in-trade ...	1,05,140

	Rs. 12,56,851		Rs. 12,56,851

Anandam Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George and Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1954.

Tea crop secured during the year was 2,05,610 (8,400) lbs. at an estate cost of 108.03 cents per pound. The crop estimated for 1955 is 2,10,000 pounds at 129.14 cents per pound. The tea was sold at an average price of 262.5 cents (Rs. 2-10) per pound.

The rubber harvested during the year was 1,16,420 (1,17,923) lbs. at 57.34 (67.78) cents per pound. The crop estimated for 1955 is 1,10,000 lbs. at 63.63 cents per pound. The average selling price for rubber was 125.75 (124.16) cents per pound.

The net profit after providing for managing agents' commission, depreciation and taxes (Rs. 1,30,000) is Rs. 1,64,241 (Rs. 45,618) to which has to be added the balance from the last year of Rs. 30,637 (Rs. 27,520) making a total of Rs. 1,94,979 (Rs. 73,137) which is reduced by preference dividend for 1954 paid in February, 1955, Rs. 17,500 (Rs. 17,500, the directors now recommend to pay 25 (10) per cent. dividend on the ordinary shares Rs. 62,500 (Rs. 25,000) and transfer to reserve for capital expenditure Rs. 80,000 (*nil*) leaving a balance of Rs. 34,979 (Rs. 30,637) which is proposed to be carried forward. Before arriving at the above profits, Rs. 26,211 has been transferred to the reserve for leasehold land from the current year's profits, to bring it up to Rs. 3,50,000.

The acreage under rubber is 329 and that under tea is 300. Both Pookulam and Kannambra Estates are in good condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

	Rs. 13,70,931		Rs. 13,70,931

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

The following schedule in respect of the sale of electricity and revenue indicates that satisfactory progress has been maintained during the half-year under review. The Government of Uttar Pradesh has sanctioned additional load for development purposes in the towns supplied through the hydel grid and further development is taking place in Delhi Shahdara.

Half-year ended	*Units Sold*	*Revenue* Rs.
31st March, 1952 ...	3,174,549	6,49,675
30th September, 1952 ...	3,635,698	6,66,947
31st March, 1953 ...	3,537,022	6,96,433
30th September, 1953 ...	3,659,582	6,96,992
31st March, 1954 ...	3,758,678	7,37,088
30th September, 1954 ...	4,379,345	7,43,320

After providing for all charges in compliance with the provisions of the Electricity (Supply) Act, 1948, there remains a balance of Rs. 45,218 (Rs. 62,274) including Rs. 27,667 (Rs. 26,460) brought forward from the previous half-year, available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 24,875 (Rs. 24,875), an additional payment of As. 2 (As. 2) per share free of income-tax Rs. 6,219 (Rs. 6,219) and in carrying forward to next half-year Rs. 14,124 (Rs. 31,181).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,98,750	Block ...	8,03,347

Profit and loss account ...	45,218	Investments	84,057
		Cash ...	5,47,236
	Rs. 24,44,934		Rs. 24,44,934

Arrah-Sasaram Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1954.

The gross earnings for the half-year were Rs. 8,72,228 (Rs. 7,55,852) which is Rs. 1,16,376 (Rs. 10,115) more than the earnings of the corresponding period ended 31st March, 1953. There are increases of Rs. 73,351 (Rs. 32,942) under coaching and Rs. 40,915 (decrease of Rs. 25,412) under goods and Rs. 2,110 (Rs. 2,583) under miscellaneous. The working expenses for the half-year were Rs. 7,54,194 (Rs. 6,72,766) plus Rs. 74,408 (Rs. 65,922) set aside to renewal reserve, making a total of Rs. 8,28,602 (Rs. 7,38,688) which is Rs. 89,913 (Rs. 80,047) more than the figure for the corresponding period ended 31st March, 1953. The net earnings for the half-year were Rs. 43,626 (Rs. 17,164). The balance available for distribution is net profit for this half-year were Rs. 43,626 (Rs. 17,164). The balance forward Rs. 34,731 (Rs. 53,206), making a total of Rs. 72,282 (Rs. 80,568). The directors recommend that the available balance be disposed of as follows:—

Payment of a dividend for the half-year ended 31st March, 1954, at the rate of 6 (6) per cent. per annum less income-tax costings Rs. 47,995 (Rs. 47,995) and balance to be carried forward Rs. 24,287 (Rs. 32,573.)

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,69,300	Block ...	29,70,561
Reserves ...	6,22,599	Stores ...	1,19,143

Liabilities ...	11,12,564	Debts, deposits and advances ...	5,31,808
Profit and loss account ...	72,282	Investments	2,98,866
		Cash ...	2,57,330
	Rs. 41,97,931		Rs. 41,97,931

Chaparmukh-Silghat Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March, 1954.

The route mileage of line open for traffic at the end of the half-year was 50.81 miles, mileage opened for traffic during the half-year was *nil*, gauge 3-3⅜" and date of first opening for traffic 30th March, 1920.

The total capital expenditure to the close of the half-year was Rs. 35,46,011 (Rs. 35,44,567). The gross earnings during the half-year were Rs. 2,65,097. During the corresponding period in 1953 they were Rs. 1,27,660. The increase was Rs. 1,37,437 (decrease of Rs. 1,48,585). The working expenses are as usual, 50 (50) per cent. of the gross earnings. The net earnings were therefore Rs. 1,23,008 against Rs. 63,830 in 1953 inclusive of interest on loans. The balance available for distribution is Rs. 88,420 (Rs. 95,419) including the balance brought forward of Rs. 38,119 (Rs. 84,042). The directors recommend that the available balance be disposed of as follows:—

Payment of Rs. 2-9-3.6 (Rs. 2-9-3.6) per share representing a dividend at the rate of 3¼ (3¼) per cent. per annum less tax for the two half-years ended 30th September, 1953 and 31st March, 1954 Rs. 80,019 (Rs. 80,019) and balance to be carried forward Rs. 8,401 (Rs. 15,400). The amount proposed to be distributed as dividend is computed as follows:—

3¼ per cent. on share capital Rs. 31,00,000 for the year ended 31st March, 1954 Rs. 1,08,500, less income-tax and surcharge thereon Rs. 28,481.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	28,10,290
Reserves ...	1,00,000	Other assets	7,35,721
Provision for taxation ...	60,939	Book debts	1,56,097
Liabilities ...	3,61,615	Cash ...	8,266
Profit and loss account ...	88,420		
	Rs. 37,10,974		Rs. 37,10,974

Tropical Plantations, Ltd.

The directors of the above Company (Chairman: Mr. Lakshmana Rau, Kottayam) submit the audited accounts of the Company for the year ended 31st December, 1954.

The area under tea is 497.76 acres, that under rubber is 1,816 acres, and that under coconuts, pepper and arecanuts is 479.5. Cashew plantations cover 45 acres; cardamom plantation cover 25 acres; coffee plantations cover 104 acres and teak plantations cover 30 acres. The total area of the estate is 3,230.47 acres.

Tea.—The tea crop harvested during the year amounted to 3,77,683 (3,49,212) lbs. (796 (736) lbs. per acre). The production cost is 107.085 (115.745) cents (Re. 1-1-1.603) per lb., and the average price realised is 237.284 (158.453) cents (Rs. 2-5-11.545) per lb.

Rubber.—The rubber crop obtained during the year is 7,44,938 (8,15,244) lbs. 425 (456) lbs. per acre) at a cost of 60.413 (57.095) cents (As. 9-7.992) per lb. and the average price realised is 126.093 (122.734) cents (Re. 1-4-2.009) per lb.

After providing Rs. 3,14,021 (Rs. 1,80,814) for taxation and after charging depreciation, bonus to staff and remuneration to the managing director, the net profit for the year amounts to Rs. 4,90,238 (Rs. 3,52,117). This together with Rs. 2,038 (Rs. 9,921) brought forward from the previous year aggregates to Rs. 4,92,276 (Rs. 3,62,038). Out of this, the directors have transferred Rs. 90,000 (Rs. 1,20,000) to general reserve, leaving a balance of Rs. 4,02,276 (Rs. 2,42,038) available for distribution. The directors recommend payment of a dividend of 20 (12) per cent. Rs. 5 (Rs. 3) per share, free of income-tax and agricultural tax absorbing Rs. 4,00,000 (Rs. 2,40,000) and propose to carry forward the balance of Rs. 2,276 (Rs. 2,038) to 1955 accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	19,87,530

Eastern Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1953.

The profit for the year after providing for depreciation Rs. 1,80,000 (Rs. 2,00,000) and making sundry adjustments amounts to Rs. 36,135 (Rs. 59,794) to which must be added the balance brought forward from the previous year of Rs. 8,368 (Rs. 16,074), making a total of Rs. 44,503 (Rs. 75,868). From this amount the directors recommend a dividend on 2,000 6 per cent. preference shares at Rs. 6 per share absorbing Rs. 12,000 (Rs. 12,000) and a dividend on 8,500 ordinary shares at Rs. 3 (Rs. 3) per share absorbing Rs. 25,500 (Rs. 25,500), leaving to be carried forward a sum of Rs. 7,003 (Rs. 8,368).

Jute stocks are shown at cost price. Stocks of finished goods sold and unsold have been calculated at contract or market prices. Unfinished goods have been taken at cost price. Buildings, power plant and machinery have been maintained in thorough repair.

Working hours.—The portion of the mill which was engaged in the manufacture of specialities like webbing, carpet, sashcord, etc., continued exempted from the working time agreement of the Indian Jute Mills' Association. In terms of clause 10 of the working time agreement, 111 looms out of the registered complement of 396 looms worked 96 hours per week. The balance loom hours were sold.

Business Outlook: Webbing.—With a reduction in prices and a marked improvement in quality, overseas demand for the webbing improved considerably and a satisfactory turnover was recorded in spite of competition in some of the principal export markets. Towards the latter part of the year, increased loom working was found necessary to deal with a large Government order. *Twine.*—In spite of the abolition of export duty on twine in September, 1953, export interest did not revive and sales were made mostly on the local market. Sashcord shipments to East and West Africa were maintained. *Gunnies.*—During the period, trading conditions remained difficult with an upward trend in prices of both raw jute and manufactured goods towards the end of the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Associated Stone Industries (Kotah) Ltd.

The directors of the above Company (Managing Agents: Rajputana Mining Agencies Ltd., Ramganjmandi) submitted the audited accounts of the Company for the year ended 30th September, 1954.

The working of the Company for the period ending 30th September, 1954, after providing Rs. 51,316 for depreciation on assets has resulted in a profit of Rs. 4,21,004. To this, a sum of Rs. 7,98,284, the balance of profits brought forward from the last year was added, making a total of Rs. 12,19,288.

As compared to the previous year, this year the sales have decreased on account of the short supply of wagons. Though the sales of polished stone of 11,62,318 sq. ft. was the highest, since the inception of the Company, the total sale was only 76,53,139 sq. ft. during the period under report.

Out of the total profits of Rs. 12,19,288, the directors have paid an interim dividend free of income-tax on 85,000 ordinary shares at Re. 1 per share Rs. 85,000 and on 1,00,000 deferred shares at Re. 1-6-9 per share Rs. 1,42,187, leaving a balance of Rs. 9,92,100, from which the directors have made provision for charity and donations amounting to Rs. 10,000, paid bonus to staff Rs. 15,000 and bonus to labourers Rs. 21,000. This leaves a balance of profit of Rs. 9,46,100. Out of this sum, the directors have paid a dividend at 6 per cent. on 2,000 6 per cent. cumulative preference shares, absorbed a sum of Rs. 12,000 and carried forward Rs. 9,34,100.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,50,000	Block ...	4,60,495
Reserves ...	4,49,514	Stock-in-trade	21,05,503

	Rs. 40,44,371		Rs. 40,44,371

Bokakhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1954.

Tea crop.—A crop of 3,801 (4,031) maunds was manufactured and has been disposed of for sale in Calcutta for export 3,117 maunds and for sale in Calcutta for internal consumption 684 maunds. The average price per lb. realised was Rs. 3-2-1 as compared with Rs. 2-0-4 a lb. obtained for the previous season's crop of 4,031 maunds. Owing to adverse climatic conditions the crop fell short of the estimate by 300 maunds. The Company's export quota for season 1954 was 2,900 maunds. No extensions were put out during the year and the area under cultivation remains unchanged at 484.66 acres.

The revenue account shows a profit of Rs. 3,63,489 (Rs. 1,47,298) and after deducting, gratuity Rs. 3,480 (*nil*), staff commission and bonus Rs. 22,324 (Rs. 8,814), managing agents' commission on profits Rs. 7,280 (Rs. 2,938) and depreciation Rs. 23,062 (Rs. 33,119) there is a balance of of Rs. 3,07,343 (Rs. 99,727). To this sum is added the refund of income-tax paid at source on interest on investments for the year 1952-53 of Rs. 375 (*nil*) giving a net profit for the year of Rs. 3,07,718 (Rs. 1,00,549). After adding to this the adjusted credit balance of Rs. 64,211 (debit of Rs. 36,833) brought forward from the previous year, there is a credit balance of Rs. 3,71,929 (Rs. 63,716) on profit and loss account from which the directors recommend to pay a dividend of 10 (*nil*) per cent. for season 1954 without any deduction for income-tax paid by the Company Rs. 60,000 (*nil*), place to reserve account Rs. 2,00,000 (*nil*), place to buildings and machinery reserve account Rs. 50,000 (*nil*) and carry forward Rs. 61,929 (Rs. 63,716).

The estimates for season 1955 provide for a crop of 4,500 maunds at a cost of Rs. 6,23,117 excluding expenditure of a capital nature amounting to Rs. 69,060.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

	Rs. 12,49,782		Rs. 12,49,782

Eastern Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1954.

The profit and loss account after paying an interim dividend on the cumulative preference shares at the rate of 2½ (2½) per cent. per annum less tax, amounting to Rs. 46,094 (Rs. 46,094) and after transferring Rs. 75,000 (Rs. 2,50,000) to general reserve, shows a credit balance of Rs. 8,20,742 (Rs. 8,19,307) including the sum of Rs. 3,11,873 (Rs. 3,15,489) brought forward from last year. The directors propose to dispose of this as follows:—

In paying a final dividend of 2½ (2½) per cent. per annum making the total dividend at 5 (5) per cent. for the year on the 25,000 issued preference shares less income-tax at 48 pies per rupee plus 5 per cent. surcharge on income-tax Rs. 46,094 (Rs. 46,094), in paying a dividend of 9 (9) per cent. per annum on the 51,260 issued ordinary shares, without any deduction for income-tax paid by the Company Rs. 4,61,340 (Rs. 4,61,340) and in carrying forward Rs. 3,13,308 (Rs. 3,11,873).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,26,000	Investments ...	1,34,39,918
Reserves ...	53,95,753	Debts, etc.	5,16,486

Liabilities ...	5,56,628		
Profit and loss account ...	3,13,308		
	Rs. 1,45,08,828		Rs. 1,45,08,828

Jawahar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Umaiyambika and Co., Chettinad) submit the audited accounts of the Company for the year ended 31st December, 1954.

After deducting all working expenses and interest and providing Rs. 3,79,724 (Rs. 2,64,363) for depreciation, the year's working has resulted in a net profit of Rs. 9,51,081 (Rs. 1,53,287). From this the directors have appropriated Rs. 33,475 (Rs. 40,000) for debenture redemption reserve, Rs. 1,206 (Rs. 373) for donations and presents in 1954, Rs. 36,668 (*nil*) for writing off the balance of loss of 1952, and provided Rs. 4,42,936 (Rs. 40,000) for taxes. Thus, out of this year's profit there is a balance of Rs. 4,00,596 (Rs. 1,12,914). The directors recommend to dispose of this sum as follows:

To set apart for reserve for dividend equalisation Rs. 1,25,000 (*nil*), reserve for contingencies Rs. 1,20,373 (*nil*), pay a tax-free dividend of 12½ (7½) per cent. to shareholders Rs. 1,11,250 (Rs. 63,000) and to carry forward to next year Rs. 43,973 (Rs. 49,914).

The directors inform that the Company has decided to put up a branch mill at Chettinad with 12,000 spindles. Orders have already been placed for a major portion of the machinery required for this mill. It is expected that this branch mill may go into production in the first quarter of 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,90,000	Block ...	13,99,064

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1954.

Normal development has been maintained inasmuch that the demand for electricity shows progressive increase and satisfactory progress is being maintained as will be seen from the schedule of units sold and revenue incorporated herein.

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st March, 1952 ...	25,430,966	31,52,162
30th September, 1952 ...	28,185,332	34,33,172
31st March, 1953 ...	28,300,558	34,62,595
30th September, 1953 ...	31,257,135	37,86,990
31st March, 1954 ...	30,249,935	37,97,207
30th September, 1954 ...	34,269,077	39,84,423

After making adequate provision for liabilities and setting aside Rs. 85,000 (Rs. 50,000) to development and extensions account, a balance of Rs. 3,60,681 (Rs. 3,59,568) including Rs. 83,389 (Rs. 78,548) brought forward from the previous half-year remains available, and this the directors recommend be disposed by payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 2,80,000 (Rs. 2,80,000) and in carrying forward to next half-year Rs. 80,681 (Rs. 79,568).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,37,87,338

		Debts, deposits and advances ...	24,04,869
		Investments	5,60,277
		Cash ...	5,11,905
	Rs. 2,01,94,982		Rs. 2,01,94,982

Societe Generale Industrielle De Chandernagor (Gondalpara Mill)

The directors of the above Company (Agents: Messrs. Gillanders Arbuthnot and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1954.

After taking credit for a sum of Rs. 1,50,000 (Rs. 1,00,000) on account of commission waived by the agents, the result of the year's working has been a loss of Rs. 76,869 (profit of Rs. 1,17,550) to which is added unclaimed dividend previously forfeited paid during the year Rs. 900 (*nil*) and provision for business profit tax previously underestimated Rs. 12,590 (*nil*), making a total of Rs. 90,359 (credit of Rs. 1,17,550). The above loss is reduced by the amount brought forward from the previous year of Rs. 4,743 (credit of Rs. 41,193), profit on sale of motor vehicle Rs. 197 (*nil*), rebate in respect of foodstuffs Rs. 1,317 (*nil*), excess provision for liabilities Rs. 473 (*nil*), provision made against the difference between the cost of raw jute stock and estimated realisable value written back Rs. 40,000 (*nil*) and post war refund of excess profits tax Rs. 69,535 (*nil*), leaving a balance of Rs. 23,907 (Rs. 1,58,743) at credit of profit and loss account. From this has to be deducted transfer to depreciation reserve Rs. 1,00,000 (Rs. 1,00,000). This leaves a loss to be carried forward to next year of Rs. 74,093 (credit of Rs. 4,743 after paying a dividend of Rs. 15 per share absorbing Rs. 54,000).

In accordance with the Indian Jute Mills' Association's main and supplementary working time agreements the mill worked 42½ hours per week up to 10th July, 1954, 45 hours per week up to 16th October, 1954 and 48 hours per week during the remaining part of the year, with 12½ per cent. looms sealed throughout the year.

During the first half of the year, raw jute prices were not in parity with the prices received for manufactured goods and this is the reason for the poor result shown.

Jute in stock and process has been taken into account at rates corresponding with forward sales of manufactured goods, and manufactured goods have been taken into account at contract or market rates.

In view of the difficult conditions mentioned above, reflected in the poor result of the year's working, the directors are unable to recommend the payment of a dividend. The agents have waived the sum of Rs. 1,50,000 (Rs. 1,00,000) from the commission due to them by the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,80,000	Block ...	23,09,271
Debentures ...	1,800	Stock ...	12,31,137
Reserves ...	28,00,000	Stores ...	4,62,320
Provision for taxation ...	68,943	Debts, deposits and advances ...	15,80,848
Liabilities ...	17,37,478	Investments	79,089
Profit and loss account ...	23,907	Cash ...	51,453
	Rs. 57,14,128		Rs. 57,14,128

TEXTILES

(Concluded from page 972)

The Forward Markets Commission recently submitted a report on the establishment of futures markets at various centres in India. The report contained the following recommendations:

(1) The continuance of recognition of the E.I.C.A. should be on a permanent basis;

(2) futures markets should immediately be set up in Akola, Indore and Ahmedabad;

(3) the Madhya Pradesh Commercial Exchange Ltd., Akola, and the West India Cotton Association, Ahmedabad, must be recognised for a period of three years;

(4) an association (to be newly constituted at Indore) should be recognised for a period of three years as soon as an application is received from it, provided the Commission is satisfied that it is fully representative of the interests concerned and accords a balanced representation to Indore and Ujjain on its Board of Directors; and

(5) futures markets should be opened, in due course, at two or three additional centres in the country.

The Central Government's decision to permit establishment of forward markets at Akola and Indore will be widely welcomed by the cotton interests of these centres, as it would afford them hedge facilities nearer home. There is, however, a predominant section of cotton interests in Bombay which is opposed to the decision. The opposition stems from the consideration that the opening of forward markets in more than one centre is against the principle of unitary trading in respect of not only Bombay State but India as a whole. Attention is also drawn to the possibilities of increased speculation and, consequently, an exaggeration of the bullish and bearish trends in cotton economy.

RELIEF TO PONDICHERRY TEXTILE MILLS

A brief reference to the plight of the textile mills in Pondicherry and the measures under the consideration of the Government of India to help these mills tide over the difficult situation was made in these columns last week. The mills have since been exempted from payment of export duty on cotton cloth produced by them for a period of six months with effect from the 1st inst. For the same period, the mills are also permitted to export unlimited quantities of cotton yarn produced by them from the port of Pondicherry.

Giving the above information, Mr. V. S. Matthews, Chief Secretary, Pondicherry, stated the other day that the measures would greatly contribute to the rehabilitation of labour and help the industry itself "which is a major factor in Pondicherry's economy." Mr. Matthews called upon the mills to work at their full capacity by re-employing the labour which had been idle for some days now.

RADAR FOR RAYON RESEARCH

One of the instruments used by scientists at Britain's newest rayon research station, opened at Manchester, is a naval radar set, which has been converted to industrial use to show at a glance how the motions of looms are synchronised. The set is attached to a loom, and the pattern of lines of material being woven can be interpreted from the screen.

Electronic devices now in use include one which detects any faults in the yarn before it is woven into cloth. Another—one of the smallest electronic "brains" ever made—is used for calculating the structure of rayon fibre, while an electron microscope magnifies objects 200,000 times. These are used in conjunction with an X-ray camera to investigate the molecular structure of fibres. In the machinery development department, new ideas in textile design are being exploited. A number of improved machines have been developed, such as a knitting machine capable of shaping parts of a garment and of knitting purl as well as plain stitches.

Bombay Cotton Annual, 1953-54. Published by the East India Cotton Association Ltd., Bombay. Price: Rs. 4.

The *Bombay Cotton Annual* has been so very popular for well over three decades that the latest edition—the one covering the season 1953-54—hardly needs any fresh introduction. The *Annual* is an authoritative compendium of practically all aspects pertaining to every branch of the cotton trade. It contains innumerable tables giving a wealth of statistical information on cotton crop forecasts, acreage, production, ginning returns, exports, imports, consumption, stocks and prices. Also given are statistical data relating to production and exports of yarn and piecegoods, spindles and looms in Indian mills and the growth of Indian cotton mills. Statistics relating to all the important foreign cottons are also given. The utility of the publication is further enhanced by the inclusion of a list of cotton pressing factories in India, the schedule of the Indian cotton contract and freight-age on full pressed cotton bales to Bombay (Wadi Bunder or Cotton Depot) from the various railway stations in India as quoted by the Central Railway. As usual, the reference material is preceded by a factual survey of the events in the cotton world in the 1953-54 season. Indeed, the *Annual* is a handy book of reference to all those who are interested in cotton and cotton textiles.

The period of free licensing of all permissible varieties of cotton piecegoods (mill-made and powerloom) and cotton manufactures including cotton waste blankets, for shipment has been extended by a further period of six months, that is, upto the end of the current calendar year. The licensing procedure and other conditions will remain the same as hitherto. The extension of the time limit is welcomed by trade interests, in that it will enable exporters of cloth to plan their overseas sales well in advance for shipment.

The Central Government has decided to allow for export during the current half-year a further quantity of 1 million yards of grey drill processed in mineral khaki shade by outside processes (other than mills).

SUGAR

(Concluded from page 976)

answer which the Committee gives is: "It may be assumed that there are few, if any, other factories that are unsuitably located, since no others have replied to this effect in answer to the questionnaire, which was issued some months ago." Is this assumption correct? We, for our part, are not so sure as the Committee is. It is quite possible that some at least of the mills that had not replied to the questionnaire are not located in the right place. In any case, the Committee should have insisted on all those 65 mills to submit their replies. The Expert Committee will, therefore, do well to call upon these factories also to reply to the questionnaire and base its final report on the results of its study of all the sugar mills, excluding those with a capacity of less than 100 tons.

The general impression is that defective location of factories is a feature of only Uttar Pradesh, Bihar and other northern parts of India, considered not so ideal for growing sugarcane. The Committee's findings show that this impression is not wholly correct, because they show locational defects in both tropical and subtropical parts of India. Thus, out of 20 factories referred to earlier, 6 are located in the Deccan and South India, that is, areas which are climatically more suitable for sugarcane cultivation than North India. The problem of shifting or rehabilitating the unsuitably located and idle sugar mills is, therefore, a problem not confined to North India alone.

TENDER NOTICE

SEALED B-1 TENDERS IN SEPARATE covers for the work of (1) Providing 50' wide concrete roads connecting Queen's Road and skirting of playground in Block II B.B.R.S. Bombay, estimated to cost Rs. 23,399, and (2) Paving of footpath in front of developed plots in Block No. II B.B.R.S., estimated to cost Rs. 38,219, will be received upto 4.00 p.m. on 30th May, 1955, by the Executive Engineer, Presidency Division, P.W.D., Fort, Bombay, and opened at 4.15 p.m. the same day if possible. Tender forms will be issued upto 4 p.m. on week days and 1 p.m. on Saturdays except Sundays and Holidays and the date on which the tenders are to be received, on payment of Rs. 5 each.

Further particulars can be had on application. Right is reserved to reject any or all tenders without assigning any reasons.

GILT-EDGED BUOYANT

(From Our Own Correspondent)

BOMBAY, *18th May*

There was a slight lull in activity in the short-term money market during the week under review. The heavy demand for bank credit noted in the previous week abated a little with the result that banks were not keen borrowers. There was, however, no appreciable improvement in the supply of funds, as the return of money from upcountry was by no means large. Basically, therefore, there was no fundamental change in the state of the market, with no perceptible variation in interest rates. Inter-bank call money rate continued to stay at 3 per cent. per annum among all sections of banks. There was also no change in the short-term deposit rates either, with banks offering 3 per cent. for one to six months. House money, too, fetched the self-same rate of 3 per cent. per annum.

The results of Treasury Bill sales during the week were fully in conformity with the state of the market described above. Although offerings at Rs. 138.75 lakhs were Rs. 17.25 lakhs less than those in the previous week, the average rate of accepted tenders was unchanged at Rs. 2-9 per cent., to which level it had declined in two successive weeks from Rs. 2-9-5 per cent. per annum. Tenders have been invited for Rs. 100 lakhs next week also, same as those this week.

Minor variations are disclosed by the Currency Department of the Reserve Bank of India statement for the week ended 13th May, 1955. Notes in circulation show a rise of only Rs. 1.83 crores, while notes held in the Banking Department are lower by no more than Rs. 2.02 crores. The consequential decline of Rs. 19 lakhs in total notes issued is covered by a similar fall in rupee coin. In the Banking Department, after five weeks of successive decline, the deposits of the Central Government staged a rise of Rs. 1.84 crores, which contrasts with the aggregate decline of Rs. 14.93 crores in the preceding five weeks. Continuing the drop of Rs. 11.78 crores in the previous week, the deposits of other Governments have gone down by another Rs. 3.97 crores in the week under review. Deposits of banks are up by only Rs. 72 lakhs, but this rise is in contrast with the decline of Rs. 1.42 crores noted in the previous week. A drop of Rs. 1.69 crores is noted in balances held abroad. Loans and advances to Governments are unchanged, while other loans and advances show a rise of Rs. 4.03 crores, following the net increase of Rs. 3.49 crores in Scheduled banks' borrowings against usance bills—the total borrowings under this head during the week being Rs. 11.26 crores.

A sharp drop of Rs. 8.08 crores in demand deposits is the outstanding feature of the Scheduled banks' statement for the week ended 6th May, 1955, as compared with that for the previous week. Time deposits, on the other hand, show a rise of Rs. 20 lakhs. Inter-bank borrowings are lower by Rs. 1.46 crores, while borrowings from the Reserve Bank of India have gone up by Rs. 5.37 crores and those from the Imperial Bank by Rs. 1.77 crores. A rise of Rs. 2.54 crores is noted in advances and of Rs. 74 lakhs in inland bills purchased and discounted. Foreign bills purchased and discounted have, however, declined by Rs. 69 lakhs. Investments are higher by Rs. 33 lakhs. Cash on hand and balances with the Reserve Bank are together lower by Rs. 41 lakhs. Balances with other banks in current account show no worthwhile change, but money at call and short notice has dwindled by Rs. 1.95 crores.

The *Gilt-edged* market maintained its buoyancy during the week under review also. There was a keen demand for short and short-medium dated securities, but the demand could not be satisfied in the absence of sellers. The indication given by the authorities last week that they were preparing the way of the new loan by stepping up their selling rates for some of the medium-dated issues was further confirmed this week when the Reserve Bank raised today its selling price for 3 per cent. 1966-68 by As. 3 to Rs. 90-14 and that of 3½ per cent. 1964 by As. 2 to Rs. 98-12. The general consensus of opinion is that the authorities are likely to issue a 3½ per cent. 1965 loan at Rs. 98-8. There are, however, some who are inclined to think that the new loan will be a 12-year one, interest at 3½ per cent. and issue price Rs. 98.

3 per cent. 1957 put on As. 2 to Rs. 99-8 and 3 per cent. 1958 moved up by a similar extent to Rs. 99-7. 3 per cent. 1959-61 was bid up to Rs. 97-12, a rise of As. 3 over the week. 3 per cent. 1963-65 advanced by As. 6 to Rs. 94-2 and 3 per cent. 1964 by As. 4 to Rs. 93-15. 3 per cent. 1966-68 was done up to Rs. 90-13, as against Rs. 90-11 last week, though the Reserve Bank's selling rate was pitched up to Rs. 90-14. 3 per cent. 1970-75 had business at Rs. 87-0½, the Bank's selling rate being Rs. 87-1. 3 per cent. 1986 Conversion Loan, however, was marked down from Rs. 80-14 to Rs. 80-11½. 3½ per cent. 1961 National Plan Bond hardened by As. 2 to Rs. 99-13, and 3½ per cent. 1964 National Plan Loan was done up to Rs. 98-11½, the Bank's selling rate being Rs. 98-12.

In the foreign exchange section, the rupee displayed a slight weakness in terms of U.S. dollars, the bank's selling rate for ready dollar rising from Rs. 478½ to Rs. 479 per $100 and the buying rate from Rs. 474½ to Rs. 475 per $100. This is presumably due to the weakening of the pound sterling *vis-a-vis* the U.S. dollar. Thus, in New York, spot sterling moved down from $2.79½-2.79¾ to $2.79 9/16-2.79 11/16 and three months' forward sterling from $2.78½-2.78¾ to $2.78½-2.78¾. Transferable sterling, however, displayed some steadiness, the rate moving up from 2.77½-2.77¾ to $2.77½-2.77¾.

BULLION RECOVERS EARLY LOSS

(From Our Own Correspondent)

BOMBAY, *18th May*

The bearish trend noted in the Bombay bullion market during the previous week persisted during the first half of the week under review also, prices of both silver and gold retreating by a substantial extent on nervous liquidation by bulls and fresh selling by bears. Reports of arrivals of *kutcha* silver from upcountry centres and rumours of an expansion in the inflow of contraband gold induced nervousness among bulls. Seizing this opportunity, the short-sellers became aggressive and hammered down the market. As a result, forward silver for delivery in *Jeth* settlement dropped on Saturday to a low of Rs. 157-6, the lowest level seen by it since the middle of January. Forward gold in *Jeth* settlement also came down on that day to Rs. 88-4, the lowest level seen since the first week of January.

Revival of bull support and heavy covering by shorts on rumours of the formation of a bull syndicate in silver, coupled with the heavy demand for ready gold, however, changed the complexion of the market from Monday onwards and values of both the metals improved substantially. As a result, the earlier fall in prices of both the metals was almost made good when the market closed today. Nevertheless, as the spread between the first and second settlements in silver widened yesterday to more than Rs. 5, buyers of silver in *Jeth* settlement with outstanding commitments had to pay a margin at the rate of Rs. 500 per bar in terms of by-law 33D(1)(b) which states: "Whenever the daily official closing rate of the current forward contract is lower than its official starting rate and the daily official closing rate of the current forward contract is quoted higher than the daily official closing rate of the next succeeding forward contract by Rs. 5 or more per 100 tolas or by Rs. 2-8 per tola of gold, every member who has outstanding purchases shall pay to the Association a margin amount at the rate of Rs. 500 per silver bar and Rs. 7 per tola of gold."

Silver for forward delivery in *Jeth* settlement opened the week at Rs. 160-4 and reacted to a low of Rs. 157-6 on Saturday. Thereafter, it recovered by stages to close today at Rs. 159-11. *Ashad* silver declined from Rs. 156-9 to Rs. 152-2 before gaining strength to Rs. 153-15. Business in *Shravan* settlement opened on Monday this week at Rs. 151-12 and declined to Rs. 149-10 before finishing the week at Rs. 151-7.

Ready silver (.996 Mint) gained from Rs. 163-7 to Rs. 163-11, the premium over the forward rate for the first settlement widening from Rs. 3 to Rs. 4. The floating stocks of silver are reported to be 900 bars. The daily average offtake was 15 bars.

Gold for forward delivery in *Jeth* settlement opened the week at Rs. 90-10, and retreated to Rs. 88-4 on Saturday, but the broadening of demand for ready metal and bull manipulations lifted it up to Rs. 90-10 at the close today. *Ashad* gold moved down from Rs. 89-5 to Rs. 87-3, before finishing at Rs. 89-4. Dealings in *Shravan* settlement were begun on Monday at Rs. 86-4, the closing rate today being higher at Rs. 88-2.

Ready gold moved up from Rs. 88-3 to Rs. 92-10, the closing rate being the same as the opening rate. The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was no more than 3,000 to 3,500 tolas on an average.

In London, both silver and gold displayed a firm trend. Spot silver was marked up from 76½d. to 78¼d. and forward silver from 76d. to 77¾d. per fine ounce. Gold rose from £12 10s. 5½d. to £12 10s. 7d. per fine ounce. In New York also, silver was strong, gaining from 88½ cents to 89¾ cents per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	18-5-55	Highest	Lowest	11-5-55
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

DEMAND FOR TEA LOW

(From Our Own Correspondent)

CALCUTTA, *17th May*

Offerings during last week's sale for domestic consumption aggregated 18,000 chests. Demand was much below that required to stir the market to liveliness. As a result, the market opened As. 2 lower than previous rates, and closed As. 2 to As. 3 lower. The low-priced residue teas were easy. Assams and medium Dooars fully represented the general market trend described above. Among Assam C.T.Cs, the liquoring teas were sold at valuations. The balance declined by As. 4 and, in spite of this, a moderate quantity had to be withdrawn without attracting buyers. The rates were: best Assam C.T.C. Rs. 2-7 (nominal), medium Dooars Re. 1-14-6, and medium Assam grainy dust Rs. 2 to Rs. 2-1.

FORWARD COTTON SLUMPS

(From Our Own Correspondent)

BOMBAY, *18th May*

It looks as though the morale of the Bombay cotton market has been shaken once again by a heavy slump in cotton prices during the week under review. The net decline over the week was as much as Rs. 13 in I.C.C. May contract and Rs. 12-12 in I.C.C. August contract. This is surprising, considering the encouraging advices from the piecegoods market and renewed reports of deterioration in quality of cotton in several producing areas. The slump in prices was chiefly due to the sudden impact of selling by bulls, following fixation of lower room rates—at Rs. 13 "on," as against the last rates of Rs. 25 "on"—by the East India Cotton Association. The bulls felt that, since the room rates were unusually favourable to sellers, the volume of tenders would be larger on the coming notice days, because the penalty in the event of rejection is small. Another factor which imparted weakness to the market was the report that the *ad hoc* Committee had declared Morvi cotton at above ⅞" staple as non-exportable. There was, besides, the news that all the eight lots of cotton had been passed in the Survey. The cumulative effect of all these factors was that the cotton market was almost in a state of panic and cotton prices toppled down. Even the Central Government's decision not to entertain any applications for import of cotton from non-dollar areas failed to induce recovery.

The forward section exhibited distinctly weak conditions during the first few sessions of the week under review. This was due to issuance of larger tenders on Thursday—700 bales, as against 400 bales on Monday last week. Option dealers, together with bulls, rushed to sell their holdings. Weak spot advices and the fact that some lots of Kalyan and Bagalkot were passed on appeal on Friday also acted as dampers. The values of cotton, as a result, suffered a break. Selling was somewhat abated on Saturday, when the market picked up strength, following purchases by professionals and shorts at low levels. Consequently, prices staged a slight recovery. The recovery gathered further momentum in the beginning on Monday, but soon tables were turned against it and prices backed away on sudden impact of selling from bull quarters for reasons stated at the outset. The recession persisted till practically the close today.

I.C.C. May contract began the week at Rs. 594 and was hammered down to Rs. 572 on Friday. After recovering to Rs. 590-8 early on Monday, the contract retreated to Rs. 579 today before closing at Rs. 582. I.C.C. August contract slumped from Rs. 581 to Rs. 568 on Saturday and, after recovering to Rs. 575-8 on the 16th inst., it relapsed to Rs. 565-8 before finishing at Rs. 567-12.

The trend of prices during the week under review is indicated below:

	11-5-55	High	Low	4-5-55
I.C.C. May ...	Rs. 595	595	572	582
I.C.C. August ...	Rs. 580½	581	563½	567¾

A feature of trading in the spot market during the week under review was that spinners' demand for domestic staple styles was confined only to purchases of selected lots to fill in nearby needs. Prices of most varieties of cotton tended to recede. Berar *deshis* and high grade Bengals, however, evoked support from exporters, following enquiries from Japan for the latter. In the foreign section, operators evinced interest in Sudans, thanks to the sharp reduction in the reserve prices announced by the Gezira Cotton Board for the cottons offered in the auction last week. Barring some business which took place in ready lots of Californians and Egyptians, there was practically no interest in other foreign styles.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 540; Berar Jarillas Rs. 620; Khandesh Rs. 595; Vijay Rs. 760; Oomra *deshi* Rs. 540; Moglai Rs. 520.

The whole of the 100,000 bales of Bengals released for export so far during the current season is reported to have been sold out. With regard to Oomras and Dholleras, more than 50 per cent. of the export quota has been disposed of. It is, however, in respect of the 25,000 bales of old crop ⅞" cotton that the performance on the export front would appear to be none too satisfactory, in that no more than 3,000 bales are said to have been sold. As regards the export quota of 100,000 bales of new crop cotton stapling ⅞" released on 12th April, the quantity sold does not exceed 8,000 bales.

The question of setting up a machinery under the ægis of the East India Cotton Association (E.I.C.A.), for arbitrating U.S. cotton on the basis of universal grade standards was discussed by the two U.S. cotton experts with the cotton interests at a meeting held in Bombay last week. These experts are Mr. Edward J. Overby, Director of the Cotton Division Agricultural Marketing Service, Washington, and Mr. Alton L. Smith, Chairman of the Board of Supervising Cotton Examiners, Memphis. At the aforesaid meeting, the trade interests are believed to have suggested preparation of the standards once a year, instead of once in three years as is now being done by the U.S. Department of Agriculture.

While at Bombay last week, Mr. Overby expressed the view that there was not even the remotest possibility of an export subsidy for U.S. cotton during the 1954-55 season. According to him, the public announcement on this question had been held up by the rift on the issue between the executive branch and the congressional legislation section. Mr. Benson, the Agriculture Secretary, was, he said, trying to reconcile these two groups. As soon as Mr. Benson was assured of sufficient backing to his viewpoint, which is opposed to any export subsidy, he would make a public statement forthwith.

The firm trend witnessed in the Karachi cotton market last week gathered further momentum during the week under review. Inspired by excellent buying enquiries from the domestic textile industry and foreign importers, operators were busy enlarging their commitments by buying on a large-scale, so much so that prices of cotton continued their upward march. N.T. Roller May cotton contract, which was quoted at Rs. 64-15 (per 82 lbs. weight) eight days ago, stood at as high as Rs. 67-12 yesterday. July contract spurted from Rs. 63-11 to Rs. 65-10. The quotations for spot cotton at Karachi yesterday were: Sind *deshi* Rs. 59; Punjab *deshi* Rs. 51-8; 4F. roller Rs. 60-10; 4F. S.G. Rs. 65-10; Punjab roller Rs. 64-10; S.G. Rs. 69-10; 289 F.N.T. roller Rs. 68-10; S.G. Rs. 73-10; 289F Punjab roller Rs. 68-14; S.G. Rs. 74-10.

Poland and China are two more countries with which Egypt is reported to be negotiating for the sale of cotton. Recently, Egypt concluded a cotton deal with Russia involving 13,900 bales (720 lbs.). It also sold about 4,000 bales of Ashmouni and Karnak to Hungary. Thanks to higher discount rates, fair deals in cotton were put through with India, the U.S. and Germany. Enquiries were confined mostly to Karnak good and fully good. Giza 30 also met with some support. Interest in Ashmouni, however, declined slightly. The premiums for entitlement sterling continued to be firm at the recent highs. The aggregate quantity of cotton sold for export by the Government during the current season up to the 4th inst. was 574,907 bales.

The Sudan Gezira Board held its 12th auction at Khartoum on the 11th inst., when 14,178 bales Gezira S and L and AL/WL varieties and 4,000 bales of Nuba Mountain cotton were offered for sale. The reserve prices were the same as before. Barring a few lots of Gezira S and L and whites varieties; the balance of 12,727 bales Gezira and 3,400 bales whites had to be withdrawn, owing to paucity of bids. As a consequence, the Sudan Gezira Board has been forced to revise the reserve prices downward to take effect from the 18th inst. and also to discontinue weekly auctions to be replaced by daily auctions. During these auctions, the unsold sampled lots will be offered at buyers' request.

An auction in East African cotton was held at Kampala on Wednesday last week. Contrary to earlier expectation of a decline, prices at the auction were fairly steady. B.P. 52 cotton fetched Rs. 1,555 c.i.f. and Busoga Rs. 1,515. Offerings of Jinja, it is reported, had to be withdrawn, since the bids were below those expected by the Lint Marketing Board.

The Liverpool cotton futures market ruled strong during the week under review too. There was good trade fixing brought about by encouraging advices from cloth and yarn markets. Consequently, cotton values moved further upwards. The improvement would have been more marked but for the uncertain U.S. official policy regarding export of cotton in the ensuing season. Traders were not inclined much to enter into any large commitments on new crop positions. This attitude was supported recently by the U.S. Senate Agricultural Sub-Committee's recommendation for a flexible but effective export subsidy. Interest in spot cotton was limited mainly to medium qualities of U.S. cotton for spot and shipment. Egyptian types also received some support. The latest available quotations from the futures market are: May-June 32.30*d.*; July-August 31.33*d.*; October-November 30.65*d.*; December-January 30.42*d.*

An irregular trend was in evidence in the New York cotton futures market this week. Thus, spot and nearby positions suffered a fall in prices, under renewed hedge selling and scattered realising by earlier buyers. Later deliveries, on the other hand, tended to look up, following switching operations. The general tendency of the market was easy. Business in new crop positions was slow, pending further developments with regard to the official cotton policy for the ensuing season.

The total production of cotton in the U.S. in 1954 is estimated at 13.68 million bales, which is higher by 110,000 bales as compared with the official December estimate, according to the final report on the 1954 cotton crop issued recently by the Crop Reporting Board of the U.S. Department of Agriculture. The cultivated and the harvested areas are estimated at 19.79 million acres and 19.25 million acres, respectively. The yield per acre was 341 lbs., the highest ever recorded.

The Mid-April parity price of cotton is fixed at 35.22 cents, a figure which is 12 points below that of the previous month. The price is, however, the same as the Mid-January parity price. Of this price, 90 per cent. represents the support level for Mid 1" cotton of New crop unless mid-July parity is higher.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-5-55	10-5-55	3-5-55
Spot	34.75	35.00	34.70
May	—	34.65	33.95
July	34.11	34.19	33.98
October	34.25	34.15	34.03
December	33.33	34.20	34.09
March	34.28	—	—

RAYON YARN QUIET

(From Our Own Correspondent)

BOMBAY, 18th *May*

A notable event of the week under review in the rayon yarn market was the resumption, with effect from the 12th inst., of trading in June-July 1955 fixed delivery and onward contracts in 150 and 120 deniers rayon yarn on cones. Practically no deals were put through. This was so because most of the traders were out of the station enjoying a holiday in their home towns. The few operators who were in the market were disinclined to enter into fresh commitments, as they preferred to await details regarding the actual stock position in respect of rayon yarn on cones.

Thanks to limited enquiries from consuming centres and expectation of arrivals from abroad, the forward and spot sections ruled quiet and prices tended to drift downwards. Rayon yarn (150) May delivery, declined by Rs. 2 to Rs. 731 yesterday but recovered a rupee today. In the spot section, 120 Japan and 150 Japan receded by 18 pies and 21 pies to Rs. 3-13 and Rs. 4, respectively. 120 Italy was quiet at Rs. 4-2. 150 Italy were lower by half an anna at Rs. 3-11-6. Prices of indigenous yarns, however, were fully steady, owing to temporary scarcity of supplies. National Rayons 120 Bt. cones I grades hardened by nine pies to Rs. 4-1-3 and II grades gained half an anna to Rs. 4-1-3. 150 Bt. cones I and II grades were fully maintained at Rs. 3-6-9 and Rs. 3-6-3, respectively. 150 Hanks I grade was steady at Rs. 3-9.

The staple fibre yarn section depicted an easy trend this week, notwithstanding reports of enlarged demand from consuming centres and of reduced production in several mills. The easiness was due to lack of good and persistent support from traders who were more inclined to watch the trend of rayon and cotton yarn prices. Consequently, transactions in staple fibre yarn were effected at lower prices. Staple fibre yarn (40x2) for May delivery, which had improved from Rs. 589-4 to Rs. 593-8 on Friday, receded to Rs. 590 today. June contract, after advancing by Rs. 4-4 to Rs. 592-8, relapsed to Rs. 589 today. Among indigenous yarns (40x2) in the spot section, Kohinoors dropped an anna to Rs. 3-5-6. Citys shed six pies to Rs. 3-3-6. New Greats lost 4½ pies to Rs. 3-1-7½. Among foreign yarns, Suicos were quiet at Rs. 4-8 and Shincos at Rs. 4-7.

Conditions in the cotton yarn market were very irregular during the week under review. Enquiries were larger, but actual offtake was limited. There were reports of increasing stocks with dealers and mills. In a communication addressed to the Central Government, the Bombay Yarn Merchants' Association and Exchange Ltd. has urged for liberalisation of cotton yarn exports. As regards coarse cotton yarns, in particular, demand was considerably restricted and several mills had revised their rates downwards. Among 10 count yarns Elphinstones fell by As. 2 to Rs. 12-8. Podars lost an anna to Rs. 12-13. Among 20s, Moderns and Seksarias eased by As. 2 each to Rs. 16-2 and Rs. 15, respectively. Medium count yarns, however, were generally steady on buying support, Maduras among 30s being quoted at Rs. 21-3 and Moderns among 40s at Rs. 25. Fine and superfine count yarns also ruled steady. Thus, among 60s, Finlays strengthened by a rupee to Rs. 62. Moderns advanced by As. 4 to Rs. 61. Among 80s, Finlays were fully maintained at Rs. 68-8 and Moderns at Rs. 62-12.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	18-5-1955	11-5-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. May	732 0	733 0
120 Japan (per lb.)	3 13	3 14½
150 Japan (per lb.)	4 0	4 1½
120 Italy (per lb.)	4 2	4 3
150 Italy (per lb.)	3 11½	3 12
Staple fibre yarn—		
40 x 2 May	590 0	589 4
40 x 2 June	589 0	588 4
Suicos (per lb.)	4 8	4 8
New Greats (per lb.)	3 1½	3 2
Cotton yarn (per bundle of 10 lbs.)—		
10s Elphinstone	12 8	12 10

30s Maduras	21 2	21 4
40s Seksaria	22 6	—
40s Modern	61 0	60 12
80s Finlay	68 8	68 8

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, 18th *May*

The dull conditions witnessed last week in the oilseeds market continued to persist this week also. Lack of buying support was in full evidence in almost all the sections, with the result that the prices declined and recorded notable losses over the week. The groundnut section was in the lead. Reports from Madras that the crushers were granted a small quota of only 15,000 tons of groundnut oil for export dampened the enthusiasm of operators both in Madras and in the local market, as they expected a higher quota. Again fears of large arrivals of seeds and oils from Saurashtra, following the removal of export duty on oils and oilseeds by the State Government, also depressed sentiment of the groundnut section. The linseed section was, however, steady early in the week owing to enquiries from the U.K. and the Continent; but thanks to shortage of shipping space, exporters were unable to do any business. Subsequently, there was selling pressure and the final quotations, as a result, were a shade lower than those a week previously. The performance of *kardi* and *niger* seed sections was also not encouraging, in sympathy with the groundnut section. The castorseed section proved no exception to the generally easy trend, in the absence of any notable overseas enquiries. Business, as a whole, done in the market was, therefore, small. The undertone, however, remained quiet.

In the groundnut section, Bold ready declined from Rs. 21-6 to Rs. 20-5. August-September delivery disclosed a loss of As. 12 to Rs. 21-9. Khandesh quality eased from Rs. 21-8 to Rs. 21. Groundnut oil ready lost As. 3 to Rs. 11-5. June and July delivories were lower at Rs. 11-5 and Rs. 11-6, as against Rs. 11-11 and Rs. 11-12, respectively.

Trading in Bold ready in the linseed section was done at Rs. 22-5, as against Rs. 22-7. June-July delivery receded from Rs. 22-5 to Rs. 21-1. Linseed oil was down by an anna at Rs. 13-3.

May, 1955, futures, among castorseeds, were enquired at Rs. 70 as against Rs. 71-13 at the end of last week, thereby disclosing a loss of Re. 1-12 over the week. The highest touched was Rs. 71-14, while the closing rate of Rs. 70 was the lowest. Tenders to the extent of more than 2,000 candies are reported to have been delivered against May contract. September delivery opened the week at Rs. 77-13 as against Rs. 77-8 end of the previous week. After fluctuating between Rs. 77-14 and Rs. 75, it closed at Rs. 75-1. Among readys, Madras quality declined from Rs. 14-12 to Rs. 14-6 and Kanpur from Rs. 13-8 to Rs. 13-6. Castor oil, Commercial quality, was virtually quiet at Rs. 8-4 and first pressure at Rs. 8-12.

Among others, *kardi*, ready bold, suffered a loss of As. 12 at Rs. 11-4. June-July delivery receded from Rs. 12 to Rs. 11-10. *Niger* F.A.Q. eased from Rs. 18 to Rs. 17-8 and Madras quality from Rs. 19 to Rs. 18-4.

The Government of India has decided to permit export of a further quantity of 5,000 tons of linseed oil cake to all permissible destinations excluding the Portuguese possessions in India, for shipment upto the end of June, 1955. Exports will be allowed against advance registration of sales by the following categories of shippers:

(1) Crushers of linseed who are able to produce a certificate from the excise authorities to show that they have paid cess on linseed crushed during any one of the three years, 1952, 1953 or 1954; or

(2) Shippers who exported any oil of controlled variety, namely, castor oil, cottonseed oil, groundnut oil, kardi seed oil, linseed oil, mustard oil, *niger* seed oil, rape seed oil, etc., during the period from 1st January, 1949, to 31st December, 1954.

The maximum quantity for which a crusher or shipper will be allowed to register sales is 200 tons from all the ports taken together. Eligible crushers and shippers should submit their application for registration of sales supported by documentary evidence of firm contract and evidence of freight having been booked together with the required cess certificate or documentary evidence showing exports of controlled varieties of oils during 1949 to 1954 as the case may be. Registration of sales will be stopped as soon as the ceiling is reached. Licences for export will be endorsed on shipping bill, the validity period of which will be restricted to 15 days as usual.

Reports from the U.K. and the Continent disclosed that there is very good demand for oilcake especially for groundnut and linseed cakes. There are also encouraging enquiries from Japan and the Far Eastern countries. It is stated that the recent abolition of export duties on niger, kardi and castorseed cakes and the reduction of duty on cotton cake to Rs. 30 per ton, have been responsible for substantial export enquiries. In spite of a high duty of Rs. 50 per ton on exports of linseed, mustard and sesamum cakes, and Rs. 230 per ton on those of groundnut cake, the profit margin is stated to be appreciable.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	18-5-1955	10-5-1955	4-5-1955

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 18th *May*

The steady trend witnessed in the sugar market in the past few weeks persisted during the week under review also, following renewed demand from consuming centres and the delay on the part of the Government in announcing liberal releases of sugar from the Bombay-Deccan mills. Arrivals of indigenous sugar into the Bombay market amounted to 9,600 bags only.

In the forward section, *Shravan* delivery gained As. 12 to Rs. 88-4. *Jeth* delivery hardened by As. 3 to Rs. 83-6.

In the spot section, large grain indigenous sugar was quoted at Rs. 95-Rs. 102, as against Rs. 96-Rs. 101 a week before. Small and medium grains were fully steady at Rs. 88½ and Rs. 89-Rs. 94, respectively. Among foreign sugars, Czechoslovakian sugar met with renewed buying support and advanced by Rs. 2 to Rs. 88-Rs. 90 per 220 lbs. British refined sugar was throughout maintained at the last week's level of Rs. 84 per 224 lbs., as also German and French sugars at Rs. 80 and Rs. 82-Rs. 84 per 220 lbs., respectively.

It is understood that the sugar mills in the Deccan have made a representation to the Union Food Ministry urging the latter to issue more frequent and more liberal releases of sugar. This plea is on the ground that the sugar mills have already sold the entire quantity of sugar released and that

they are carrying heavy stocks at present. Attention is also drawn to the fact that heavy imports of foreign sugar into Bombay harbour have sufficiently jeopardised the interests of the indigenous industry. The Deccan sugar mills consider as unfair the Government's policy of regulating sugar release with a view to protecting the interests of U.P. sugar factories alone.

The quantity of sugar produced by sugar mills in India upto the end of April, 1955 amounted to 1.49 million tons. On this basis, the total sugar output for the whole of the current season is estimated at 1.55 million tons—a record in the history of the Indian sugar industry—exceeding the previous peak production by 60,000 tons. The figures relating to the offtake of indigenous and imported sugar reveal that the total offtake upto the end of April, 1955 was only 9 per cent. less than that in the corresponding period of the previous season. The real trouble, therefore, is not so much the fall in consumption as the fact that the offtake of imported sugar has been heavier than indigenous sugar, a trend which was not in evidence in the previous season. The total offtake of sugar from all the mills in India upto 30th April, accounted for not more than 27 per cent. of the production till that date, leaving as much as 73 per cent. to be cleared in the next five months of the current season.

The speedy lifting of imported sugar *vis-a-vis* indigenous sugar in consuming centres is attributed to the fact that the Regional Directorates (Food) can secure as many wagons as they require and can move huge quantities of sugar to various way-side stations, a facility which has been denied to indigenous mills. It is, therefore, not surprising that the sugar mills in Bihar are reported to be carrying about 92 per cent. of their output. This is, indeed, disquieting and the sugar industry is justified in complaining that the sugar import policy of the Food Ministry has resulted not only in marketing difficulties for the mills but also in a reduction of prices. The authorities will do well to follow a more realistic policy for releases of indigenous sugar and afford adequate transport facilities to the hard-pressed mills.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 18th *May*

With stiff attitude of growers, a very steady trend was evinced by Malabar pepper during the week. There being a scarcity of contracts, small enquiry was enough to push up prices. At Alleppey prices improved to Rs. 1,125 after a temporary reaction, while at Cochin garbled were quoted at Rs. 192.

New York, after haggling for a lower price, is reported to have paid $0.47 for afloat parcels, while May shipment was done at $0.46. The news of competitive selling in New York by Lampong and Sarawak has so far failed to have any adverse effect on our primary markets, as growers are reserved sellers in view of the present comfortable stock position on the coast.

Indian exporters, in general, are of opinion that the present selling by Lampong and Sarawak is only a passing phase; for, the former are selling their balance of old crop which is reported to be not more than a few hundred tons and the latter can only sell a small quantity for May and June shipments, because the quality of their new crop will not prove to be up to the mark of A.S.T.A. standard before the month of July. With the improvement in prices, holders of Lampong and growers in Sarawak are also likely to present a firm front as is usual in the pepper trade.

Indian growers along with important exporters are said to be bullishly inclined, as they think when prices advance to a level of Rs. 1,200, sellers may become all the more stiff. Conversely grinders in New York are likely to become aggressive buyers, when the spot price stabilises at round about $0.50.

In Bombay, May, June and July shipments are quoted at a flat rate of $0.46 to $0.47 with a few sellers, while June, July and August deliveries are quoted at Rs. 1,030-40, Rs. 1,030-40 and Rs. 1,020-30, respectively.

Following are today's nominal quotations:—

Ready delivery Rs. 140 (as against Rs. 140 a week ago) per Bengal maund, June Rs. 1,030-40 (Rs. 990-1,000), July Rs. 1,030-40 (Rs. 990-1,000) and August Rs. 1,020-30 per candy of 5¼ cwts.

HEAVY WITHDRAWALS IN TEA AUCTIONS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 12th *May*

The offerings in sale No. 10 which was held on Tuesday, 10th May, amounted to approximately 1,625,000 lbs. With very little support from exporters and with the increased quantity of tea available, there was a poor demand and prices generally declined by As. 6 to As. 8 with very heavy withdrawals. Best liquoring and Middle East types received some competition at rates fully As. 4 lower, but F.Ps. and O.Ps. reflected the general drop in price. The following are the quotations:—

	1955			1954		
	Rs.	a.	p.	Rs.	a.	p.
Low-grown Travancore B.O.P.	1	9	0*	2	8	0
Medium Travancore B.O.P. ...	1	9	6*	2	8	9
Anamallais B.O.P.	2	0	0*	2	11	0
Best liquoring Nilgiri B.O.P.	2	7	3	3	0	0
Well made black leaf O.P. ...	2	10	0*	2	11	3

*Nominal.

London Market.—High-grown 2*d.* dearer. Medium and low-grown easier tendency.

Colombo Market.—Mediums continue neglected. Considerably improved demand. Best quality and Persian Gulf types dearer rates. Five millions offered.

Calcutta Market.—Fair general demand. Market As. 2 to As. 3 easier. C.T.C. and best liquoring sorts weakest feature.

Export Quota.—The special licence market again eased and business was done today at 21 pies. 1955-56 export quota, however, continues to have buyers at As. 4½.

Forthcoming Auctions.—Dust sale "J" will be held on Tuesday, 17th May, and sale No. 11 will be held on Tuesday, 31st May. Dust sale "K" will be held on Tuesday, 7th June.

At a meeting of the Committee of the Tea Trade Association of Cochin held on 12th May, it was decided to postpone leaf sale No. 11 advertised for Tuesday, 24th May, until Tuesday, 31st May. This decision was reached, in view of the heavy stock of tea lying unsold from sales 8, 9 and 10.

Dust sale "J" will be held, as advertised, on 17th May, but dust sale "K" will not be held until Tuesday, 7th June.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire as follows:—

"*Dust Sale J.*—420,000 lbs. Better demand. Well made and better liquoring sorts sold well at last rates. Others irregularly As. 4 easier."

ARGENTINA BUYS JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 17th *May*

At long last, Argentina appeared as a buyer of Indian hessians. This caused prices of both hessians and heavy goods to move up, and rumours that mills would have to curtail working hours were no longer in circulation. It was on Tuesday last that first indications were available that some business had already been put through with Argentina. Rates began to rise, and bears were busy with covering. By this time, Argentina had already commenced to negotiate for a further quantity, and on Friday it was definitely known that purchases during this week by Argentina had amounted to 59,500 metric tons, which will be shipped between now and December next. As stocks in that country are running low and as it has entered the market very late, the expectation in the market is that a good portion of the aforesaid quantity will be shipped in the near future. Shippers are expected to get busy soon, and sellers anticipate that shippers will turn to stockists to meet commitments. Sellers have already put on a reserved air. There were a good number of enquiries for heavy goods also, and during this month shipping of both hessians and sackings is expected to reach high levels. However, it has been unfortunate that prices are being pushed up, especially when everybody is aware that overseas buyers have been so far delaying showing interest only in an attempt to take prices down to more reasonable levels. This trend has already affected raw jute prices which are also moving up.

The need for an economic relation between the prices of raw jute and the finished products cannot be overemphasised. Overseas buyers of jute goods are reluctant to pay higher prices and if these go beyond the rates for substitutes, jute goods are priced out. In fact, consumption of packing materials all over the world is on the increase, and several countries have embarked on schemes of setting up jute mills. Nearer home, Pakistan has already established a few mills, and production is soon to be stepped up to 200,000 tons a year. As time goes on, East Bengal will increase its exports of raw jute, as it will have to feed most of the new mills that are being planned in the Middle East and Turkey. These considerations have not perturbed the local dealers as it is believed that there is plenty of raw jute in Pakistan.

Early in the week, jute goods were much depressed, and ready 40" 10 oz. hessians were priced as low as Rs. 42-13, and B. twills Rs. 113-4. This followed the announcement of the stock position of the I.J.M.A. mills as at the end of April, 1955, according to which hessians increased to 39,000 tons from 34,000 tons and sackings to 62,800 tons from 59,000 tons. In view of the rise in stocks with mills, fears of a possible reduction in mills' production were entertained, which, if materialised, would have only raised the prices of goods. It was at this stage, heavy goods were enquired at lower levels, and B. twills at Rs. 113-8 gained As. 4. The enquiries came from the Middle East and Africa. Simultaneously, indications were forthcoming of Argentina's definite interest in hessians, and the 40" 10 oz. consequently recovered to Rs. 43-1 from Rs. 42-13. Shippers showed keen interest even at the improved rates, and this was taken as confirmation of receipt of substantial orders from overseas. By Thursday, hessians 40" 10 oz. gathered strength to Rs. 43-10, and B. twills to Rs. 115-8. On Friday, Argentina's interest was fully confirmed, and the prices reached Rs. 44-4 and Rs. 116-12 respectively. Profit-taking intervened at this stage, and hessians gave way fractionally to Rs. 44-2 and B. twills to Rs. 116-4 by the week-end. Yesterday, B. twills spurted to Rs. 117-4, and the 10 oz. hessians at Rs. 44-4 recorded a gain of As. 2. The eight oz. was steady at Rs. 36.

Raw jute was also steady, and on support from mills prices hardened by 1 to 1½ points. Thus Assam Bottoms moved to Rs. 33 from Rs. 31-8. Business was also done in new crop, but near delivery was difficult. Most of the sellers booked business for delivery after August. It can now be said that not much is left of the old crop, and sellers are naturally reserved.

BASE METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 17th *May*

Although the business that passed through the metal market during the week under review was insignificant, prices of base metals were held steady. Stockists of electrolytic copper were unable to quote firm rates, in view of the uncertainty caused in overseas markets following the fixation of prices at £280 a ton by the Rhodesian Selection Trust group in regard to copper from the mines of Roan Antelope and Mofulira as from 9th May. There is the provision for variation in price after one month from 9th May, at 24 hours' notice. The adjusted price will again remain in force for a definite period. In Calcutta, quotations were difficult, as stockholders were awaiting definite trends from overseas markets. The price of tin hardened from Rs. 485 to Rs. 495. This was so because of the difficult supply position. It was only recently the local quotation touched the replacement level, and this had enabled importers to enter into commitments. Some time would elapse before fresh supplies are received. The slow unloading of the imports that had reached Kidderpore Docks was also a cause for the upward movement. Antimony was priced at Rs. 167-8, with supplies being adequate to meet current needs. Mercury was steady at Rs. 1,255, although Bombay reported a higher price at Rs. 1,320. The cause for the higher level was the decline in stocks and speculators' desire to build up their holdings in view of the changing situation. Virgin lead was unchanged at Rs. 74. Demand was little, but ready metal was becoming difficult to find. Electrolytic zinc opened at Rs. 62 and moved to Rs. 62-4.

KIPS RECEDE

(From Our Own Correspondent)

MADRAS, 16th *May*

Arrivals of kips were on the usual scale, but clearance was restricted, due to lack of fresh buying orders from the U.K. Prices declined by six to nine pies per lb., but these are far above U.K. importers ideas. Arrivals of buffs were large, but selections poor. Tanned cow calf and buff calf superior marks were in good demand.

In the tanned skins London public auctions last week, prices of goat skins advanced by 6*d.* to 12*d.* on March levels, due to Continental support. Light weights, especially lower grades, were keenly competed for at 12*d.* to 18*d.* over March prices. It is believed that light weights will be in good demand and raw goat prices will rule firm in South India for some more time. Tanned Sheep auction reports on opening showed an advance of 3*d.* to 6*d.* and the sales have not yet concluded. In the local market, prices of goat and sheep skins remained steady and clearance by shippers was fair-sized.

FOODGRAINS BETTER

(From Our Own Correspondent)

HAPUR, 16th *May*

The foodgrains market ruled steady during the week and wheat prices for *dara* quality, after an initial rise from Rs. 9-14 to Rs. 10-8 during the mid-session, receded to Rs. 10-2 today. The fall in wheat prices was under pressure of heavy arrivals which mounted to an average of 4,000 maunds daily. Demand from consuming centres was very brisk and, after good offtake, the local stock here increased to 12 *khaties*, as against 5 *khaties* last week-end. Owing to an improvement in the ceiling price for average quality, the Government purchases of wheat were discontinued here and in other parts of the State, and the total quantity so far purchased on Government account all over the State is about 30,000 maunds. Rice prices continued steady at almost last week's levels and this may be accounted for by the fact that the demand is active due to the marriage season and the local stocks too are not very heavy.

Despite an increase of 7.4 per cent. in area at 19,577,000 acres and 11.3 per cent. in production at 4,559,000 tons, as revealed by all the second all-India estimate of gram for 1954-55, gram prices advanced during the week by As. 6 to Rs. 6-4 for local quality and to Rs. 6-14 per maund for punjab quality. Gram stock swelled to 5 *khaties*. Barley and *bejhar* prices also improved during the week and were today quoted at Rs. 5-8 and Rs. 5-4 per maund, respectively. Arrivals of new *bejhar* crop averaged 150 maunds daily and the seasonal demand was very good and the stock was estimated at 7 *khaties*. An appreciable rise in peas prices was another feature of trading in the week and peas average quality advanced to Rs. 5-14 per maund and fine quality to Rs. 7 per maund, as against Rs. 5-5 and Rs. 6-8, respectively, last week-end. The Government of India's announcement of fresh export quota of pulses also acted as a bullish factor. *Arhar* prices moved to Rs. 6-8 in sympathy with peas. Other pulses continued steady and the latest prevailing rates are: *Urd* green Rs. 10-8, black Rs. 12-4, *moong* Rs. 7-12 to Rs. 8-4 and *masoor* Rs. 6-4 per maund.

Pulses futures initially advanced during the week, but, at a later stage receded slightly, due to profit-taking at the highest level. Peas *jeth* was quoted today at Rs. 5-11-6, *arhar jeth* at Rs. 6-8, peas *bhadon* at Rs. 5-13-9 and *arhar bhadon* at Rs. 6-7-6, as against Rs. 5-6-6, Rs. 6-6-3, Rs. 5-8-9 and Rs. 6-5-9 respectively, on the 9th inst.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 16th *May*

Revival of demand from consuming centres, including Saurashtra and Bombay side, resulted in a small advance of mill delivery prices for sugar during the week. The sugar mills in west U.P. are still getting enough cane and the season is expected to continue up to the end of the month. The aggregate output of sugar which had been estimated at 1.4 million tons sometime ago is now estimated to touch an all-time record of 1.6 million tons. Reports of increased sowings for the next season continue to pour in. The latest mill delivery rates for sugar are: Jaswant Rs. 29-4, Simbhaull Rs. 29-4, Mowana Rs. 29-6, Daurala Rs. 31-4, Amroha Rs. 28-8, Bijnore

STOCK & SHARE QUOTATIONS

Abbreviations:—D=Deferred shares. P.O.=Preferred Ordinary shares. V=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal notations. e.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, tools and plant. All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years.

PROVISIONAL INCREASE IN STEEL PRICES

TEXT OF GOVERNMENT'S ANNOUNCEMENT

THE retention prices of steel payable to the Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd., were announced on 20th July, 1953 and 25th March, 1954, respectively. These retention prices were to remain in force up to 31st March, 1955. While announcing the retention price for the Indian Iron and Steel Co., Ltd., the Government expressed the view that the principles of price fixation hitherto followed required revision, that the revised principles should be applied to the industry from 1st April, 1955, and that at that stage the treatment to be accorded to the colliery block of the steel companies, on which the Tariff Commission had submitted a report, could also be appropriately dealt with.

The Government has had under consideration the question of expansion of steel capacity in the country and has agreed that the capacity of the Tata Iron and Steel Co., Ltd., should be expanded by about 500,000 tons of finished steel and that of the Indian Iron and Steel Co., Ltd., by 100,000 tons, and an increase in the finishing capacity of the mills over and above the capacity already planned under their respective expansion programmes. Both the producers, however, have represented that the retention prices fixed for them should be suitably raised to facilitate the implementation of these additional expansion programmes partly from out of their internal savings. The Government has considered these representations and has also reviewed the principles of price fixation hitherto followed, and have decided:

(1) That the major producers of steel should be paid a uniform retention price;

(2) that the uniform retention price to be paid to the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd., should be fixed at Rs. 385 per ton, pending enquiry by the Tariff Commission; and

(3) that agreements should be obtained from the two producers that the extra profits made by them, as a result of the present increase in the retention price, will be earmarked specifically for development and expansion and not for any other purpose, except with the express permission of the Government.

The Tariff Commission is now requested to conduct necessary enquiries and to recommend a uniform retention price which should be paid to the major producers, having regard to their current expansion programmes and the additional programmes which they are to undertake. As indicated above, the Government desires that the prices fixed for the two producers should be uniform on the average and where necessary and possible for each comparable product. In order that the introduction of a uniform price may not adversely affect the production and expansion programme of the Indian Iron and Steel Co., Ltd., whose works costs per ton are higher than those of the Tata Iron and Steel Co., Ltd., the uniform price should be fixed on the basis of the costs of production of the Indian Iron and Steel Co., Ltd., the uniform price should also be such as would enable both the producers to obtain a portion of their capital requirements of their current and additional expansion programmes from internal resources and to raise the balance from outside.

The Commission may also recommend the period for which the revised retention price should remain in force, having in view the fact that the emphasis in respect of the present review of prices is on the expansion of the capacity of the respective plants.

As regards the treatment to be accorded to the colliery block of the steel companies, the Government accepts the Commission's recommendations that such block should be treated as an integral part of the steel block and that the steel companies should be allowed to recover their actual cost of raising coal in the price of steel.

MARKET GOSSIP

(*Concluded from page 963*)

taking in assigning cargoes to tramps on time-charter basis, with a view to avoiding delays in turnround of ships, as a result of unsettled labour conditions in Australian and Indian ports. High rates have to be paid, because shipowners now consider it more advantageous to operate on a voyage-to-voyage basis rather than let their vessels out for protracted employment.

• • • •

It will be recalled that, early in April, the U.S.-India, Pakistan, Ceylon and Burma Outward Freight Conference announced a surcharge of 35 per cent. on freight and other charges on all cargoes to Calcutta, Bombay and Madras. Subsequently, the Calcutta-Japan Conference also gave notice of a surcharge of 25 per cent. on all cargoes, excluding ores, to and from Calcutta. The Australian Outward Shipping

MR. NEHRU'S VIEWS ON SOCIALISM AND NATIONALISATION ANALYSED

THE publication of Mr. Jawaharlal Nehru's speech at a recent meeting of the Congress Parliamentary Party in the A.I.C.C. *Economic Review* has been both timely and welcome, in that it gives an insight into Mr. Nehru's mind on socialism and nationalisation. There is, of course, nothing new in what he has said, but whatever he has said clarifies the position further, at least so far as he is concerned. As the issue discussed by him is very important from the point of view of the future of private enterprise, his speech needs to be analysed in these columns.

There are some cynics in this country who feel that Mr. Nehru is cleverly playing the game of a communist, in the sense that he is trying to introduce in this country the essentials of communism by peaceful means. They base this view on the strong emphasis he lays on the public sector. This emphasis means that the State will own and/or effectively control virtually all the key sections of the country's economy. The ultimate outcome of this development will, it is argued, be State domination, one-party rule, and loss of freedom for the people to choose their ways of life and means of living. In short, it will finally end in the loss of democracy. It is not clear from his speech whether Mr. Nehru realises these implications. But it is quite clear that Mr. Nehru is not a communist either in spirit or in thought. His dislike of the system prevailing in Russia, its satellites in East Europe, and China is quite evident. He seems to be aware of the lop-sided development of the economies of communist countries and the difficulties which these countries are facing as a result of following a system of complete State ownership. He has definitely no love for this system and his faith in democratic methods of development stands undiminished.

Does socialism inevitably mean complete nationalisation of every economic activity? In Mr. Nehru's opinion, it does not. He says that the "whole proposition of complete nationalisation is wrong." What is more important to him is complete control. "We should never, as far as possible, waste State money when we have full control," he adds. This means that Mr. Nehru is more for State control than for State ownership and that nationalisation should be on a minimum scale. If this criterion is followed, there is no case for nationalisation of banking and insurance. Both these sectors are amenable to the effective control of the State and are, in fact, under strict control, the degree of such control on insurance being greater than in the case of banking. There are statutory restrictions of a stringent nature on investments of insurance companies, as well as on their expenses. The shareholders' share of net profit is limited by the law. The type of business they can do and the extent to which they can compete among themselves are also regulated by the Government. There can be a no more impressive example of State-controlled activity than insurance.

The position of banks is not dissimilar. All banking companies are subject to the control of the Reserve Bank either directly or indirectly. The Reserve Bank has such wide powers that it can, if it knows the job, effectively force the banks to follow whatever policy the Government lays down. There is, however, no need for any coercion at all, for the banks are prepared to abide by the directives of the Reserve Bank, subject to their obligations to depositors. At no time, to our knowledge, has the Reserve Bank complained of any lack of co-operation from commercial banks in implementing national policies.

Why then does Mr. Nehru talk of nationalisation of banks and insurance companies? There is no answer to this question in his speech. He, of course, does not say that these institutions should be nationalised right now or in the near future. Indeed, in one place, he actually discourages the idea of nationalising banks, as witness the following quotation from his speech:

"Take banking. We want banking to expand tremendously in India. In India, the credit structure has to expand. We do not expect private banks to take much initiative in this; nevertheless, they can. Mostly Government will do it. But, if the Government wanted to do the whole thing by itself, it would be a mighty long time before it would be able to do it because of various obvious considerations. You take banking in England or in European countries. Practically speaking, every village has a bank there. We are hundreds of miles away from those conditions. Now, if you merely prevent others from doing it and take everything, in theory it may be all right, but, in actual result, instead of expansion of banking, there would be destruction of banking. So you must see that, in order to reach the goal you are aiming, what is the best method of doing it, and not get tied up with some theoretical considerations, which you have read in books. You may imagine that we are going towards that goal when you may actually be going against the spirit of dynamism, so essential today for our economy."

Yet in the end he says thus:

"If I may say so—I am giving my personal opinion—I am not interested in acquiring factories. I have said that many times. I do not want to acquire second rate factories from anybody. I am not interested in acquiring factories at all. I am interested at the right time in acquiring banks, insurance companies and mines. I am interested in these, because these are basic things, and again there is the question of time. Take the case of banking, for example. I want to expand banking in India, but I do not want suddenly to take steps in banking which may be theoretically correct, but may actually result in a backward move and come in the way of the expansion of banking. I prefer the private banks to expand than no banks at all. Therefore, I want the private banks so long as I cannot expand rapidly. There is so much room for State banking to expand, then why should I worry about private banks?"

What does all this question mean? It means, when interpreted charitably, that Mr. Nehru is for nationalisation of banks and insurance companies at the right time. Meanwhile, he wants private banks, as well as insurers, to go ahead and expand. But what is the right time? Perhaps, the right time is when the Government feels confident that it can do this job well. No one, however, can say when the Government will feel confident. Will it be two years from now, or ten, or twenty? With this uncertainty hanging like Damocles' sword, which private bank will have the incentive to

Party in England did not try it and does not propose to. Further, once banks and insurance services are nationalised, it is as good as having nationalised the whole business sector and killed democracy as we all know it. Evidently, it was as a result of this realisation that these two services were not included in the Industrial Policy Statement of 1948, which the Government has not yet openly denounced. In contemplating nationalisation of these services, Mr. Nehru is going beyond that statement. If he were to go on changing his Government's policy thus, it would not be conducive to confidence and enthusiasm without which there could be no rapid progress. Now that it has been shown that banks and insurance companies are subject to complete control by the State, he should reconsider this question and give an assurance that there would be no further nationalisation of these institutions.

Mr. Nehru has included mining in the list of industries to be nationalised. Here, he probably has coal in his mind. The coal industry is protected from nationalisation till 1958. If it is the intention of the Government to take over this industry, it is better to say so and end the uncertainty. Every one connected with the industry will then know where one stands. The Government must also decide the basis of compensation payable to owners of collieries. As has been pointed out by us on more than one occasion, the uncertainty created by the Government's policy is impeding the development of coal industry and yet, unless the coal industry is developed, the other industries cannot make much progress. It is unrealistic on the part of the Government to plan for rapid industrialisation without laying down a firm basis for expanding production of coal. Indeed, it is no planning at all, if the policy to be followed in regard to an industry which forms the major source of fuel is left undecided. The Government must at least declare the basis it will adopt for payment of compensation in the event of nationalisation, so that the present colliery owners may go ahead with the implementation of their development plans, fully assured that the money they invest on the plant and machinery which they have to install for keeping their mines in good condition and for washing coal, will be returned to them intact. Any further delay by the Government in this respect will retard the country's economic growth.

A reference to the subject of compensation to nationalised concerns also figures in Mr. Nehru's speech. He is not for any scheme of nationalisation in which there is no provision for "just and equitable compensation." Though he does not seem to regard market value as a test of fair compensation, he feels that compensation paid should be such as would not disturb the confidence of investors and thereby upset progress. There are some who argue that the State should not pay large sums by way of compensation and that the quantum of compensation should be fixed at such a low level as to effect a saving to the Treasury. Rightly describing this argument as a false one, Mr. Nehru remarks: "If you do something which has the effect of stopping the progress which you wish to encourage, that is obviously a wrong move and mere saying that we have saved Rs. 10 lakhs has no meaning to me, because, when you ought to have advanced 100 steps, you could go only two steps." This observation is encouraging. And equally encouraging is his reply to the contention that payment of compensation for nationalised property should be utilised as one of the means for bringing about equality, or for reducing inequality, in the distribution of wealth. Mr. Nehru considers that this is a wrong approach to the problem of reducing inequalities. This objective, in his opinion, should be attained through taxation. In this connection, the following quotation from his speech is worth being recorded in these columns, because it will be a valuable source of reference when the occasion arises:

"Some points have been raised about the differentiation between land and industry, etc. Now, first of all, broadly speaking, one should not imagine that I am merely expressing my views, that giving less compensation is any part of socialism, except one part, that is, we want to reduce inequalities. That I understand. But are you going to reduce inequalities by giving less compensation? The more obvious method is to levy capital taxation and all that. Compensation has nothing to do with that. It is true that compensation, as calculated often, has been very unfair, has been too high and all that, and we shall take care not to give it. What I mean to say is, we must distinguish between the two. This equalising process is something we should aim at. If it is helped occasionally by other processes, we adopt them, but the mere compensation clause does not necessarily equalise. It (compensation) is a complicated thing. You may—I do not know—lay down that compensation to a person who has so much money, who has already got a lot, should be less than others. But, normally speaking, whether it is land or it is a factory or it is a house, one gives compensation which is normally fair, equitable and which is probably—I do not wish to bring the market value of it—but which is normally considered to be the value of it. There is no virtue in not giving it."

The foregoing observations of Mr. Nehru are in refreshing contrast to the views expressed by some Congress men like Mr. Tripathi who are agitating for payment of compensation on the basis of slab system even in regard to industrial property taken over by the State. Nevertheless, the apologetic manner in which Mr. Nehru has defended his principles of compensation is not likely to inspire confidence among investors. That he has yet no firm views on this question is apparent from a remark that he makes later on in the same speech. Observing that the question of compensation is a complicated one and that no uniform principle can be applied, he avers: "I do not want you to pick out any sentence from what I said, as if that is the final opinion in regard to everything." It is regrettable that on so fundamental an issue as compensation Mr. Nehru is still not prepared to take a definite stand. The confidence of investors has already received a severe shock and the share markets have started slowly but steadily sinking. This state of affairs is not conducive to the economic development of the country. The rot must be arrested and confidence restored, if the private sector is to play a significant role in such development. The least that Mr. Nehru can do now is to back up his welcome assurance of fair and equitable compensation by giving a further clear cut assurance that the principle of slab system will not be made applicable to payment of compensation in regard to any industrial and institutional rights taken over by the State. Besides this, he must also advise all his colleagues in the Congress not to confuse and frighten the public by expressing views on this subject that are contrary to those which he has already expressed.

Since Mr. Nehru has eschewed total nationalisation as something undesirable, it is axiomatic that the private sector should be allowed to exist. This he concedes in full measure. "We have to have a private sector," asserts Mr. Nehru, "we really have not got the capacity at the present moment either in personnel or in any other way to take them over." He realises that, if the State were to take over the entire private sector today, the immediate result would be a tremendous loss of production in the country. He then goes on to say:

"I think, there is really no choice before us between having a private sector and allowing it and encouraging it to function, and not having it at all. It is foolish to have a private sector, and then undermine it and prevent it from functioning. There is no point in it. You simply undermine your own policy that way. Whether you should have a private sector or not is another matter. One can discuss it. I think, personally, there is no way out for us, except to have a private sector and even to encourage it. That does not mean I am going to encourage it at the cost of the public sector. The public sector will always be number one and will, I have no doubt, grow at a much faster pace than the other sector, and shall gradually really determine the economy of the country. The rest will have to fit in; even now, we try to make it fit in, in our plan."

It will be worthwhile to pause here for a minute and reflect over Mr. Nehru's observations. Mr. Nehru does not want to abolish the private sector not on grounds of principle but on those of practical considerations. He feels that it will be impossible for the country to get on for several years to come without the private sector, for the simple reason that the State has no personnel. He further feels that the State should not waste its finances on taking over old industries, and that, if the State can get the results of nationalisation through mere control, it will be unnecessary to take over business concerns. But he seems to have no objection to nationalisation on principle. He does not seem to have bothered to consider as to what would happen to democracy, in which he is a firm believer, if the State dominates on the economic front. Too many controls by the State will kill the initiative of the people and progress will be restricted. Too many State-owned undertakings will also have the same result and deprive the people of the benefits of the ingenuity and inventiveness of private *entrepreneurs*. The freedom of the Press, an important pre-requisite for the survival of democracy, will be at stake if the country is dominated by State-owned industrial undertakings. It is common knowledge that, in this modern world, no newspaper can exist without a sizable advertisement revenue. And what certainty is there that, when newspapers have to depend on the advertisements of Government-owned corporations, they will have the freedom to criticise the actions of the party-in-power freely when such criticism is warranted? One would like Mr. Nehru to examine the issue of the public sector *vs.* the private sector from this angle also and not solely from the point of view of practical considerations.

It is, however, gratifying that Mr. Nehru recognises that the private sector must be allowed to exist, that it must be encouraged and that it should be given sufficient freedom to function effectively. It is now left to his lieutenants, at both the Central and State Government levels, to bear this basic policy in mind when they frame and administer economic controls and fiscal measures. But we are sorry to say that, with singular exceptions, there has so far been no evidence that they are doing so. On the contrary, there are more curbs on the private sector today than a year ago. If Mr. Nehru is not to be suspected of running with the hare and hunting with the hound, he should see to it that what he has been saying about the private sector is followed in practice and preached by his party members all over India.

There are, in our view, a few things which the private sector must do on its own initiative to protect itself. These we pin-point below:

In the first place, all sections of private enterprise must strongly believe in the philosophy of this system. They must not run to the Government every now and then for finding a solution to their difficulties. They must themselves try to solve them.

Secondly, they should not seek to stifle competition by soliciting State-control and protection; healthy competition is a basic feature of private enterprise and must be encouraged.

Thirdly, the tendency in the private sector to secure the services of Civil Servants, on a loan basis or otherwise, to run their undertakings is fraught with danger, especially if it is coupled with provision of capital also by the State. It sounds ridiculous that the private sector, which prides itself to be superior to the public sector in administrative talent and which has been saying that Civil Servants are not trained to man efficiently industrial and business undertakings in a competitive market economy, should run after these Civil Servants and try to entice them by offering fat salaries. It should evolve an efficient system for producing trained business administrators to fill the shortage that is arising. If it does not wake up to this need now, it may soon be beaten by the public sector, for the Government is going ahead with its scheme of training I.A.S. candidates for managing commercial undertakings.

Fourthly, the private sector must not slow down its rate of contribution to the economic development of the country, just because of the various uncertainties created by the Government. To do so would be to invite the State to extend its sphere of activity. On the contrary, if the private sector braves all this uncertainty and works vigorously by establishing new industries and expanding the existing ones, the chances of its survival are better. This we realise is easily said but difficult to follow, in the face of heavy taxation and various other impediments. But somehow the private sector must not allow frustration to get the better of it.

A suggestion for this—the final one in our list—is for all sections of the private sector to get together, and meet Mr. Nehru through a few selected representatives of theirs who can talk to him freely and frankly. After all, Mr. Nehru is a very fair-minded person and amenable to reason. These representatives must explain to him their difficulties and their requirements for functioning effectively and efficiently. It is, of course, needless to add that they must go to him well prepared, as also with a determination to set their house in order and to play fair with workers and consumers. We have no doubt that, in the light of what Mr. Nehru has stated on the place of the private sector, such an approach will bear fruit. In any case, nothing will be lost by making an attempt and the best time for it will be after Mr. Nehru completes his proposed visit to Russia. This will also give sufficient time for all the spokesmen of the private sector to meet and discuss the course of action suggested by us.

SHARE MARKETS SLOWLY SINKING

COMPENSATION FOR AIRWAYS—WORLD SUGAR MARKET—TREND OF U.S. ECONOMY

THURSDAY, 5 P.M.

MARKET GOSSIP

TO a Share Market already suffering from fears of nationalisation at inadequate rates of compensation, the statement of Mr. C. D. Deshmukh at Bangalore on Sunday last, that an additional taxation of Rs. 100 crores per annum would have to be imposed from next year for financing the second Five-year Plan, came as a shock. Whether Mr. Deshmukh would be able to raise so much of additional taxation is a moot point. His attempt to raise one-fifth of this amount this year did not succeed, as it met with heavy opposition from both inside and outside Parliament. If still the market reacted bearishly to this statement of Mr. Deshmukh, it is an index of its lack of strength. There is hardly any investment demand. On the contrary, some large-scale individual investors have been liquidating a part of their holding in the shares of companies liable to be nationalised. Professional bulls have lost their enthusiasm for this game, as they do not see any factor that will help them make quick profits. Thus, the Share Market is steadily languishing. Its revival depends upon the attitude of the Government towards the private sector, a question fully discussed in our leading article this week.

• • • •

It is significant that the proposed Rs. 6,300-crore second Five-year Plan has made no impression on the Stock Exchange, despite Mr. Deshmukh's hint that a large dose of deficit financing might be necessary for implementing the Plan. Ordinarily, the prospect of such a heavy capital expenditure would have cheered the market. If it has failed to do so now, it may be because of three reasons, namely, (*a*) threat of still heavier taxation, (*b*) fear of nationalisation at low rates of compensation and (*c*) the prominence given to small-scale industries for meeting the increased demand for consumer goods at the expense of established large-scale industries. These very reasons are also responsible for the market not taking any notice of the efforts that are being made by the Commerce and Industry Minister to stimulate exports and to maintain industrial production at a high level. That Mr. T. T. Krishnamachari is very anxious to keep the economy buoyant is evident not only from the provisional increase in steel retention prices last week but also from the prompt manner in which he responded this week to the request of cotton mills to relax the sudden ban on imports of sterling area cotton, as well as to that of the cotton trade which suggested that exports of medium staple, including Jarilla, cotton should be permitted. He has also considerably relaxed the restrictions on exports of oilseeds, oils and oilcake. All this he has done with a view to arresting the downward trend in prices of commodities. To some extent, he has succeeded, in that commodity prices have tended to steady up. But the share market is not in a mood to take notice of these favourable indications.

• • • •

At long last, the exact terms of compensation to the shareholders of Air-India Ltd. and Air-India International Ltd., the two airlines under the management of Messrs. Tata Industries Ltd., which were nationalised with effect from 1st August, 1953, have been announced. All points of dispute between the Companies and the Corporations concerned have been resolved, except the one concerning a claim by the Government for deduction of an amount representing employees' leave salaries outstanding on the date of nationalisation. The compensation offered by the Indian Airlines Corporation to Air-India Ltd. amounts to Rs. 1,43,67,780, after deducting Rs. 4,47,567 representing the leave "liability" referred to above. The compensation in the case of Air-India International Ltd. is Rs. 2,76,90,800 after deducting Rs. 7,11,857 representing the leave liability. The Companies have, however, disputed the Government's claim for deduction of amounts representing employees' leave salaries and have referred this point to the special Tribunal under the Air Corporations Act.

• • • •

In the meantime, the Companies have agreed to receive the above offer without prejudice to their contention about staff leave salaries. As the offer now stands, the compensation value of a Rs. 100 share of Air-India will be about Rs. 95-12 plus accrued interest (at 3½ per cent. per annum) and before deducting the Company's expenses including cost of liquidation. In the case of Air-India International, it works out to about Rs. 138 plus accrued interest and before deducting the Company's expenses including costs of liquidation. If the Tribunal decides the issue of leave liability in favour of the Companies, then the value of each share of both the Companies will increase by about Rs. 3. It may also be noted that there is a likelihood of the shareholders of Air-India International receiving an additional amount over and above the aforesaid compensation, in case the Company gets an indemnity for the loss sustained by it in its last year of operation. It may be recalled that, under the Agreement of Concessions made between the Company and the Government of India, the Company was to be held indemnified against all losses for the first five years of operation. Unfortunately, the Company made a loss of Rs. 10.5 lakhs in its last year of operation, that is during the seven months from 1st January to 31st July, 1953. The Company has, accordingly, claimed this amount as an indemnity due from the Government. This claim is in dispute with the Government and is, therefore, under correspondence.

A part of the compensation due was payable in cash and the Companies have, accordingly, received 10 per cent. of the compensation in cash. The balance due is expected to be received by the Companies in July, 1955, in five-year bonds of Rs. 100, Rs. 1,000 and Rs. 10,000 in the case of Air-India and of Rs. 100, Rs. 1,000 and Rs. 25,000 in the case of Air-India International, all carrying interest at the rate of 3½ per cent. per annum from 1st August, 1953, the date of nationalisation, and redeemable by the Corporations at their face value after the expiry of five years from the same date. At the last annual general meeting of the Companies, the majority of the shareholders had expressed a preference to receive payment for their shares in cash rather than in Corporation bonds. The Companies, therefore, propose to dispose of the bonds when these are received by offering them to institutional investors and others. They, however, propose to offer some of the bonds to such of the shareholders as may desire to purchase them, and have invited such of them to send their offer, stating the price, the amount in value and denominations of bonds. The offers should be made before 30th June, 1955, failing which they will not be considered. The bonds will be sold cum-interest accrued thereon from 1st August, 1953, and the purchase price quoted should be made on this basis.

• • • •

The question which may naturally be exercising the mind of a shareholder who may like to purchase these bonds is, therefore, what price should he offer for these bonds, so that he might not be a loser when the bonds are redeemed on 1st August, 1958. In this connection, the shareholders are told by the management that in the event of the companies selling the bonds to institutional investors and others at an average price lower than that offered by a shareholder, the price which will be payable by such shareholder, if his offer is accepted, shall be such lower average price and not the price offered by him. This means that, if the Companies are able to get higher price for these bonds from institutional investors and others (not being shareholders in pursuance of offers received from them in terms of the Companies' circulars), the shareholders' offer will not be accepted. It looks as though shareholders need not be unduly anxious to take these bonds, for any profit realised by their Companies on the sale of these bonds to institutional investors will be passed on to them. As the rate of interest offered on these bonds is really attractive for a short-dated security, the Companies should be able to dispose of them at a good premium, so that the net compensation per share would be a little more than the figure indicated above.

• • • •

Finally, a word must be said in favour of the Government. It is true that as many as 22 months have been taken to settle the details of compensation. But the delay has not meant any loss of income to shareholders, for the Government is paying interest at 3½ per cent. since the date of takeover. It is doubtful whether they would have received any return at all on their investment during these years if the Companies had not been nationalised. In fact, the Government's decision to nationalise these Companies was a windfall to the shareholders, because the market value of their holdings was standing at a heavy discount and there was at that time little chance of their being able to get back the capital intact. The shareholders of Air-India, it may be noted here, had not received any dividend since 1947 and those of Air-India International since 1951. In these circumstances, it must be said that the Government has been quite fair to the shareholders of these Companies and the latter will not be justified in nursing any grouse against the Government.

• • • •

The firm trend depicted by the world sugar market in the past few weeks, following considerable buying enquiries from Soviet Russia, Chile, Ceylon and France, has abated somewhat. The price of raw sugar (spot No. 4 world contract) at New York which had registered a distinct improvement from 3.17c. per lb. early this year to 3.41c. on the 16th inst., receded to 3.39c. on Monday last. In fact, "there is," to quote a London report, "some nervousness in the world sugar market at present." This is rather surprising, considering that the supply and demand position in respect of sugar as it exists today "should be sufficient to maintain a price somewhere above current levels." Russia and Japan, it is reported, are interested in purchasing large quantities of Cuban sugar. Some speak of the possibility of as much as 150,000 tons being purchased by Russia. These demands on current supplies of sugar will, as Messrs. C. Czarnikow Ltd., London, the world-famous firm of sugar traders, observe in their latest review, add to the strength of the position.

• • • •

What then is the present easiness in the world sugar market due to? Some observers attribute it to the possibilities of changes in the effective free quota supply by the International Sugar Council. This view is based on the fact that the anticipated large purchase of sugar by Russia will absorb the free quota of Cuba fully and, pending further releases, Cuba will be off the list of world free sugar suppliers. That possibility, while constituting an element of strength, also makes it fairly evident that representations will be made at the forthcoming International Sugar Conference by exporting countries for the freeing of further sugar. Quotas are still at 90 per cent. of the basic tonnages of member-countries and the restoration of the remaining 10 per cent. is expected to add about 460,000 tons of sugar to the total quotas. Deducting the East European countries' share, on the assumption that it would not, at any rate, be available before the autumn, the effective increase in free supplies is estimated at 385,000 tons, of which Cuba alone will figure with 225,000 tons. The Dominican Republic and Formosa will have 60,000 tons each.

• • • •

The aforesaid possibility has no doubt imparted some easiness to the market. Nevertheless, Messrs. C. Czarnikow Ltd. emphasise that any action which the Council may take at the forthcoming meeting is unlikely to alter the overall figures of supply and demand which, on present indications, should have lent more confidence to the market than has recently been apparent.

• • • •

Although somewhat quietly steady during the past few days, the British Gilt-edged market has slumped heavily during the last four or five weeks. Thus, the *Financial Times* index of Government securities which stood at 100.05 on 14th April last has steadily declined to 95.5 on 23rd May, representing a fall of 4½ per cent. over the period. The downward trend is also evident from the behaviour of some of the favourite bonds. 3½ per cent. Conversion Loan, for instance, has come down from £82⅞ in the third week of last month to £81⅝ on the 23rd inst. Similarly, 3 per cent. War Loan, 1955-59 has receded by 2¼ points to £96¼ and 4 per cent. Funding Loan has lost 2½ points to £97½. So also 4 per cent. Victory Bonds which have slumped from £100⅞ to £98⅝. 3½ per cent. Conversion Loan, too, has declined from £82⅞ to £81⅝. 2½ per cent. Consols have moved in sympathy with the general fall and stand ⅝ point lower at £61⅝.

• • • •

What is this fall due to? Some time ago, the weakness of the British Gilt-edged market was believed to be due to fears of a further jump in the Bank rate. These fears have, however, since waned, as the behaviour of bill rates in the London market has persuaded the operators to feel that the official policy would not be directed to make money still dearer in the U.K. The recovery of sterling after an earlier fall also strengthened the belief that the Bank rate would not be pushed up further. This has also stimulated an inflow of money for investment in Government stocks in the last few days. Even foreigners, it would appear, are taking the same view, and there have been indications that American investors have also been taking an increasing interest in a number of leading industrial issues. The causes, therefore, for the fall in Gilt-edged values are traced to factors other than the fear of a further increase in the U.K. Bank rate.

• • • •

The chief factor responsible for the continued recession in British Government securities was sales by banks in quest of liquidity. But selling of securities was not confined to banks alone. Other selling arose from switching by a few institutions which were changing their view of the market and rearranging the dates of the stocks they held. The market was also adversely affected by the recent weakness in sterling, necessitating the operations of the Exchange Equalisation Fund to prevent it from further weakness. On top of these bearish influences appeared the fear of damage to the economy by the strike wave which was in evidence in several sectors. Dealers were, therefore, naturally inclined to put off purchases until the strike movement was dealt with effectively. This reserved attitude was strengthened further by their desire to await the outcome of the General Elections this week. Above all, long back, the market had anticipated the appearance, this month, of several big loan issues. One was the offer by the Iron and Steel Holding Realisation Agency, consisting of (*a*) 5 million 5½ per cent. cumulative redeemable shares of £1 per cent. at 20*s.* and (*b*) £5 million 4½ per cent. debenture stock, 1974-79, at par. Another issue was by the Dunlop Rubber Company consisting of £12 million 4½ per cent. second debenture-stock, 1972-82, at £97-10 per cent. Both these were oversubscribed. A third offer was by the Land Securities Investment Trust. The Company placed at par £20 million of 4½ per cent. mortgage debenture stocks with a final redemption date in 2005. This too was oversubscribed. With a view to participating in these attractive issues, investors—both institutional and individual—not only held back their purchases, but also unloaded a portion of their holdings in Gilt-edged securities.

In our customary fortnightly despatch from America, received just before our going to press, our special correspondent describes the latest economic trends in the U.S. as follows:

"Official interpretations of current business conditions, expressed to me in private conversations, is at this time there is no fear that the boom will get out of hand. Projections are that the national products would rise about 2 per cent. in 1955. This is regarded as natural growth rather than anything to be alarmed about. The apprehension over what some economists call 'boomitis' is that the present development does not conform to seasonal patterns. Automobile sales are ahead, consumer borrowing is ahead of previous patterns and the fear in those quarters is the boom will feed on itself as a recession can and an undue overexpansion may set in. It must be remembered, however, that the timing in bringing out new automobile models has been changed and, therefore, the seasonal pattern is not applicable. However, there is a general feeling in informed quarters that the present rate of car building cannot be sustained indefinitely.

"The cloud which still overhangs the automobile industry, steel and associated industries is the question of major strikes this summer which may or may not take care of a possible overproduction. Also, housing no longer conforms to the

EQUITIES PUT ON BEARISH TREND

ACTIVITY AT LOW EBB

(From Our Own Correspondents)

BOMBAY, *26th May*

A BEARISH sentiment came to prevail on the Bombay Stock Exchange during the week under review. There was an all-round marking down in values of equities and, barring a few exceptions, the entire list closed this week with fair-sized losses. The market, which had already been listless and looking for some incentives, actually received a damper from the Finance Minister's reference at Bangalore to the possibility of raising additional funds to finance the second Five-year Plan by way of increased taxation to the tune of Rs. 100 crores a year. The Labour Appellate Tribunal's award of an increase of Rs. 5 in pay-scales of superior clerks of textile mills affected sentiment in textile shares. It is stated that this will cost the textile industry in Bombay Rs. 22 lakhs annually as recurring expenditure. These, coupled with the liquidation of some of the States' holdings, weakened the morale of operators. Activity was at a low ebb and fresh interest was lacking due to end-of-account considerations.

At a Press Conference in Bangalore on Sunday last, Mr. C. D. Deshmukh, Union Finance Minister, said that the second Five-year Plan envisaged an expenditure of Rs. 6,300 crores, made up of Rs. 2,000 crores in the private sector, and Rs. 4,300 crores in the public sector. To finance this expenditure, according to him, taxation to the extent of about Rs. 100 crores a year and a larger measure of deficit financing might be necessary. Mr. Deshmukh's above reference to additional taxation, following the Prime Minister's declaration in the previous week that he was interested in acquiring at the right time, banks, insurance and mines, cast a feeling of uncertainty and gloom on the market.

In the steel section, Tata Ordinaries steadied up a little from Rs. 233-8 to Rs. 235 early in the week, but slowly gave way to a low of Rs. 228-4 at the close today. The closing, it may be noted, was the lowest level seen by this scrip since 22nd February this year and compared with a peak of Rs. 246 touched on 25th March last. After an initial hardening from Rs. 33-8 to Rs. 33-13¾, Indian Irons sagged today to Rs. 33-2¼, the lowest since 23rd February. The closing was a fraction better at Rs. 33-3¼.

The textile section fared no better than the steel, thanks to lack of fresh interest and occasional unloading. Bombay Dyeings hardened earlier in the week from Rs. 460-10 to Rs. 463-12, but reacted to Rs. 455-10, the lowest level after the shares were listed *ex*-dividend. Kohinoors, after moving up from Rs. 312 to Rs. 315-8, reacted to Rs. 311. Centurys slipped from Rs. 382-8 to Rs. 376-12. Central Indias lost Rs. 2 to Rs. 123, Gokaks Rs. 4 to Rs. 211-8 and Indu Ordinaries As. 3¼ to Rs. 10-10¼. Finlays were steady at Rs. 245-8. Mysores lost Rs. 2-13 to Rs. 111-4, while New Greats picked up Rs. 5 to Rs. 171, Podars Re. 1-4 to Rs. 160, Simplex Re. 1-8 to Rs. 154 and Svadeshis Re. 1-4 to Rs. 184-8. Shree Niwas were steady at Rs. 235, whereas Standards were marked down by Rs. 5 to Rs. 358-12 and Tatas by Re. 1-4 to Rs. 48.

Barring Imperial Banks, bank shares were quiet. Imperial Fully Paids gathered Rs. 5 to Rs. 1,700 and the Partly Paids Rs. 2-8 to Rs. 416-4. Central Banks shed As. 8 to Rs. 47-4 and their new shares As. 8 to Rs. 49. Bank of Indias shed Rs. 2-8 to Rs. 146. Barodas were held at Rs. 100, as also Punjab Nationals at Rs. 42-4. United Commercials lost a fraction at Rs. 44-4.

Insurance shares ruled easy with losses in leading counters. Orientals moved down from Rs. 7,250 to Rs. 7,200 and New Indias from Rs. 49-12 to Rs. 49. Industrial and Prudentials shed a fraction to Rs. 44. Jupiters, on the other hand, gained As. 6 to Rs. 8-10.

The electricity section was relatively steady with gains in many counters. Ahmedabad Electrics lost As. 5 to Rs. 105, while the new shares moved up by As. 8 to Rs. 51-12. Amalgamated Electrics had business at the unchanged rate of Rs. 10-13½. Bombay Suburbans hardened by Re. 1-4 to Rs. 123-12. Broach Electrics changed hands a fraction higher at Rs. 10-8. Surat Electrics were taken up Rs. 4-6 higher at Rs. 135-10 on excellent working results. Andhra Valleys gained Rs. 6-4 to Rs. 1,376-4, while Tata Hydros shed As. 8 to Rs. 143. Tata Powers lost Rs. 7-8 to Rs. 1,445 as also their new shares to Rs. 1,122-8.

Barring a few selected counters miscellaneous industrials were quiet with narrow movements. Among sugar shares, Belapurs declined to Rs. 300-8, after an initial rise from Rs. 301 to Rs. 302. Phaltans changed hands Re. 1 lower at Rs. 119-8 and Walchandnagars Re. 1-14 lower at Rs. 203-12. Bhopal Sugars were, however, unchanged at Rs. 12-12. Cement shares were a steady feature. A.C.Cs. showed no change on balance at Rs. 175-4, although they had touched earlier in the week Rs. 177-4. Digvijays advanced by Re. 1-8 to Rs. 184-4. In the engineering group, Alcock Ashdowns provided a feature with an impressive rise of Rs. 18-12 to Rs. 273-12 on the stepping up of the dividend from Rs. 10 to Rs. 12-8 per share of Rs. 100. Premier Constructions slumped from Rs. 152-8 to Rs. 146. In the mining group, B.B. Petrols dropped 9 pies to Rs. 3-5, while Indian Coppers improved by As. 2¾ to Rs. 3-11 on hopes of higher dividend. Shivrajpurs were picked up Re. 1 lower at Rs. 65-8. Among other miscellaneous industrials, Bombay Burmahs (old) improved from Rs. 458-2 to Rs. 462-8 before reacting to Rs. 455-10.

• • • •

Calcutta Stock Exchange

CALCUTTA, *25th May*

Although trading was cautious, there was a note of liveliness prevailing on the Calcutta Stock Exchange during the week under review. This was because of the buying interest shown to selected counters in all sections. Thus, the orders for 11,500 goods wagons placed on three Calcutta firms kept these counters in the engineering section active. The ordered quantity is equivalent to the raised capacity of these concerns for a year. Coals were featureless, although note was taken of the reports of an easing of the wagon position for transporting coal. In the coming months, greater despatches should help collieries in reducing their stocks.

The situation with regard to unloading and loading in Kidderpore dock has been causing much anxiety to all concerned with the export and import trade of the country. Should the threat of an increase in surcharge on freight rates by certain foreign shipping companies, as well as the counter-threat of the Government of India to prohibit these lines to touch Indian ports, materialise, the setback caused to trade will take a long time to be corrected. In view of this, business in jute and tea shares, the trend wherein is in no small measure dependent on the export trade, was on a cautious note. The time of the year is fast approaching when jute goods would be exported in greater quantities. More attention was paid to miscellaneous industrials, and there were a few features.

Sectionwise, engineering scrips received more attention for the reason already indicated. The three companies on which the Railway Board has placed orders for goods wagons are Messrs. Braithwaite & Co., Messrs. Jessop & Co., and Messrs. Martin Burn & Co., the scrips of which were better at Rs. 24-6, Rs. 37-1 and Rs. 23-12, respectively. The last-mentioned counter subsequently staged a recession to Rs. 23-6. From Rs. 33-10, Indian Irons improved to Rs. 33-14, but closed for the week at Rs. 33-7. Indian Standard Wagons which staged an improvement of Rs. 2 to Rs. 130 were steady. Texmacos recovered from Rs. 17-14 to Rs. 18-7, but reacted to Rs. 18-3. Kumardhubis, after improving from Rs. 12-2 to Rs. 12-5, were firmly held at Rs. 12-2. Burn & Cos. improved by Rs. 3 to Rs. 272.

Textile shares accounted for a fractional rise. Thus, Elgin Mills, at Rs. 18-13, were higher by As. 7 and Cawnpores were better by As. 6 at Rs. 8-8. New Victorias were steady at Re. 1-6. Dunbars rose from Rs. 202 to Rs. 208.

Coal shares ruled steady, though business did not broaden to any noticeable extent. New Beerbhooms were put through at Rs. 19-1, as against Rs. 19 previously, while Burrakurs were unchanged at Rs. 12-10.

Although most of the jute shares were quiet, there were all the same a few selected features. Thus, while Kanknarrahs eased from Rs. 150 to Rs. 146, Albions gathered strength from Rs. 149 to Rs. 158. Nuddeas were unchanged at Rs. 55-4, as were Ganges at Rs. 103. Barnagores receded from Rs. 174 to Rs. 172, recovering yesterday to Rs. 173.

Teas remained at lower levels, which were the cause for an increase in the volume of business. Rajgarhs were dealt with at Rs. 43 at which rate a fractional improvement by As. 4 was recorded. Dhelakhats softened from Rs. 18-13 to Rs. 18-10. Brooke Bonds receded to Rs. 15-4 from Rs. 15-6, and Hoograjulis from Rs. 69 to Rs. 65. Hantaparas were as low as Rs. 318, as against Rs. 335 last week. Hasimaras were marked down from Rs. 44-8 to Rs. 43-14. Bishnauth from Rs. 45 to Rs. 43-14 and Huldibari from Rs. 44-12 to Rs. 40.

Among miscellaneous industrials, Indian Coppers improved to Rs. 3-13 from Rs. 3-9. B.I. Corporations, after giving way from Rs. 9-1 to Rs. 8-14 on profit-taking, steadied up to Rs. 9-3.

• • • •

Madras Stock Exchange

MADRAS, *25th May*

The performance of the Madras Stock Exchange turned out to be encouraging this week, in marked contrast to the dull trend noticed last week. Owing to revival of enquiries for tea leaves frm the U.K. at the low levels touched some days ago, sentiment in tea shares improved and the declined noted last week in these shares was arrested and prices tended to look up. This was also partly due to a natural reaction after the recent sharp fall in values. Rumours that the Government of India might shortly reduce the export duty on tea, now at As. 10 per lb., gave an added support to the market. Under the leadership of teas, other plantings too staged a general recovery. Textile and miscellaneous scrips came in for some selective support. As a whole, business done in the market was comparatively better than in the last week and prices, on balance, advanced and thereby registered sizable gains over the week.

In the textile section, Bangalore Woollens declined from Rs. 427-8 to Rs. 425-8. Coimbatore Spinnings receded by Rs. 2 to Rs. 66 and Rajalakshmis by Re. 1 to Rs. 131. Dhanalakshmis, however, put on Re. 1 to Rs. 269. Cambodias were slightly better at Rs. 11-13. Coimbatore Pioneers were quiet at Rs. 218 *cum-div.* and Buckinghams at Rs. 151-8. So also Pankajas at Rs. 55.

Among teas, Blue Mountains rallied an anna and a half to Rs. 3-9-6 and Devasholas As. 4 to Rs. 24-4. Kailas gained As. 2-3 to Rs. 5-3-3 and Peermades As. 8 to Rs. 36-4. Waterfalls advanced by As. 2 to Rs. 3-10. Chandramalais were, however, dull at Rs. 5.

Cochin Malabars, among rubbers, put on As. 4 to Rs. 7-11-6 and Rajagiris As. 2-6 to Rs. 16-3-6. Vaikundams gathered As. 8 to Rs. 22. Thirumbadis were fractionally better at Re. 1-14, while Be Bes were dull at Rs. 4-4 and Midlands at Rs. 16-8.

In the coffee section, Coffee Lands improved from Rs. 16-8 to Rs. 16-12 and Consolidated Coffees from Rs. 18-11¼ to Rs. 19. Puthutotams were higher at Rs. 4-3, as against Rs. 4-1.

Among miscellaneous scrips, Rallis gained Re. 1 to Rs. 40 and Spencers As. 4 to Rs. 17-4. F.A.C.Ts put on an anna to Rs. 5.

MARKET GOSSIP

(Concluded from previous page)

seasonal pattern of the past and, except for some local over-building, is regarded as healthy, although the extremely easy credit terms for mortgages of Government agencies which are dictated by social rather than by economic considerations, do not conform to the general policy of fractionally tighter credit in other segments of the economy.

"The fiscal and credit authorities would like to tighten housing credit, too, so that the building bonanza may be spread over a greater period. The stimulus given by liberal housing legislation last October is considered too great. What can be done about it as a practical matter, remains to be seen. Liberal credit terms are regarded as excellent vote-getting bait in election years and there is an unwillingness in legislative quarters to listen too much to economic realities, as presented by the experts, if election or re-election is at stake. Also, there is no Congressional sentiment for re-instituting consumer credit control, although it is held to be almost imperative in official quarters for preventing conditions in some areas to get out of hand. There is no question that hire-purchase indebtedness has been rising, rather steeply and rather unexpectedly. But there are many factors to be considered. Since the war when savings began to swell, a new psychology has made its appearance on the American scene.

"Many wage-earners in the U.S. have a fairly substantial backlog of savings in the banks and in other forms. In former years, they drew them out to buy capital goods. Today, they prefer to have, say, $4,000 as a nest-egg and they buy their requirements on the instalment plan. It follows that consumer credit figures *per se* are not necessarily a true criterion, since the public could, if it wished, pay their debt in a lump sum.

"The official thought is that any possible slump, caused by strikes or a normal decline in production in steel and autos because of saturation, may be taken up by other industries such as textiles and farming, which, while showing signs of recovery, are still below par. There is considerable room for improvement in some of these areas and a betterment is visible.

"There are no economic distress signals anywhere. Speculation in the securities markets has lessened. Brokers' loans have reached new highs, but this had more to do with the stickiness of some new capital issues than with day-to-day trading. Further, there has been always a considerable lag between action and effect and the recent increase by the Federal Reserve Board in margin requirement from 60 to 70 per cent. has not made itself fully felt in the overall statistics.

"So far as monetary policy is concerned, the United States Treasury will have to borrow about $10,000 million in the last half of the year. It may or may not have a considerable influence on overall credit conditions. No formula has as yet been set how this financing is going to be accomplished. A lot will depend on the international situation, on the atmosphere of a possible East-West conference and on the attitude of confidence or distrust it may create in the public mind. Hence, the official admission is quite logical that the economic symphony will have to be 'played by ear' rather than by hard and fast rules. In such circumstances, it is possible that there may be more frequent changes in re-discount rates, that open market operations of the Federal Reserve system will be co-ordinated with the general aim as well as statutory reserve requirements of member banks. Flexibility is the pass-word.

"The quasi-stability of the world situation at the moment seems also to be reflected in gold sales. Turnover in international markets is estimated at $105 million in April, against $85 million in March and $75 million in February. Total gold sales for the first four months of the year were $350 million, against $370 million for the same period last year, according to *Pick's World Currency Report*. Commenting on Soviet sales, the report says, 'only a modest amount of the new Russian offerings was purchased by British authorities. The remainder was acquired by a British-Swiss banking group.'

"The U.S. political situation also shows no change. There are as many people who say President Eisenhower will run for another term as those who say he will not. Meanwhile, Governor Averell Harriman of New York seems to emerge more and more as a contestant for the White House."

NEWS IN BRIEF

THE next session of the Lok Sabha will commence on Monday, 25th July, 1955, at 11 a.m.

An allotment of Rs. 17 crores for forestry and Rs. 45 crores for soil conservation is expected to be made in the second Five-year Plan.

The U.P. Government has reiterated its determination to maintain the price of wheat at Rs. 10 per maund and to step into the market as soon as the price fell below that level.

The U.P. Government proposes to bring 125,000 acres of land under the Japanese method of cultivation in the next rice season. This is expected to yield an additional 700,000 maunds of rice.

The Vindhya Pradesh Government has finalised proposals to nationalise passenger transport under the second Five-year Plan. Ninety-two passenger buses plying on 45 routes will be affected by this step.

The official estimate of *mesta* (hemp) crop in Madhya Bharat for 1954-55 shows that, while the area under cultivation has remained unaltered at the previous year's level of 16,000 acres, production has declined from 15,000 bales to 14,000 bales.

The Indian railways propose to make an outlay of Rs. 1,480 crores in their second Five-year Plan. This expenditure is more than three and a half times the provision made in the first Five-year Plan. The target expenditure of Rs. 400 crores for the railways in the first Plan is likely to be exceeded by about Rs. 18 crores.

Unemployment in India will be totally mitigated at the end of the third Five-year Plan, according to Mr. Gulzarilal Nanda, Union Minister for Planning, Irrigation and Power. Unemployment would be removed to a great extent at the conclusion of the second Five-year Plan, but it would not be totally mitigated until the end of the third Five-year Plan.

The Railway Board has drawn up plans for a four-fold increase in three years in the number of air-conditioned coaches on Indian railways for which new coaches are being built in the railway workshops in Bombay, Lillooah, Kharagpur and Ajmer. Since the abolition of the first class on Indian railways, there is said to be a noticeable increase in the demand for air-conditioned berths.

The Orissa Government has launched a scheme to extend the area under cotton cultivation to 50,000 acres during the second Five-year Plan. The final forecast of the cotton crop in Orissa for 1954-55 puts the total area under cultivation at 25,200 acres, as against 25,900 acres in the preceding year. The total production has been estimated at 2,186 bales, as against 2,247 bales in the preceding year.

The Government of India sanctioned during April, 1955, a sum of Rs. 36.84 lakhs as loans and subsidies for construction of 1,092 tenements under the Subsidised Industrial Housing Scheme. Of this, the Hyderabad State Government was given a loan of Rs. 17.84 lakhs and an equal amount as subsidy. The rest of the amount was given as loans and subsidies to a cement concern in P.E.P.S.U. and a co-operative housing society in Ahmedabad.

The Government of India has decided to release for export a limited quota of rice bran, paddy bran and rice meal from Saurashtra ports on the first-come-first-served basis to all permissible destinations, other than the Portuguese possessions in India. Licences will be issued subject to a maximum of 50 tons by one party at a time and will be valid for a period of four weeks. Licensing will be stopped as soon as the quota is exhausted or by 30th June, whichever is earlier.

The Mysore Government is reported to have decided to nationalise bus transport both in Bangalore and Mysore cities. The Government will put on the road in Mysore City, its own buses from June next or at least from September next. The nationalisation in Bangalore will be undertaken as soon as possible. The displaced private bus-owners will be allotted other mofussil routes.

The Government of India proposes to recruit foreign technicians to assist small-scale industries in India in their technical problems. The technicians would be recruited for specific industries, such as manufacture of survey instruments, cutlery, surgical instruments, glass goods, engineers' drafting instruments and small hand tools and more secure and advanced types of locks. The Government has already secured the services of two eminent foreigners as experts.

One more State which has decided to apply the co-operative method to the development of sugar industry is Andhra. The Government of this State is considering a proposal for the establishment of two sugar mills on co-operative basis—one at Chittoor and the other at Hindupur, places where sugarcane is being extensively cultivated. Giving this information, Mr. D. Sanjeevaiah, Andhra's Minister for Co-operation, said at Kurnool the other day that each one of the proposed sugar factories required Rs. 40 lakhs as share capital, of which 50 per cent. was expected to be held by the Government, the balance being subscribed by sugarcane growers and merchants.

The provisional figures of foreign sea and airborne trade of India on private and Government accounts during April, 1955 show that the total value of merchandise trade, excluding transit trade of Pakistan, but including that of other land frontier countries, is Rs. 88.80 crores, of which exports account for Rs. 38.65 crores, re-exports for Rs. 42 lakhs (including transit trade Rs. 3 lakhs) and imports for Rs. 49.73 crores (including transit trade Rs. 1 lakh). Exports of currency notes amount to Rs. 44 lakhs, import of gold Rs. 1 lakh and import of currency notes Rs. 1.27 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 10.69 crores.

From Abroad

France has approached the member-countries of the Colombo Plan for permission to take part in the Plan.

A Ceylon trade delegation, led by the Minister of Commerce, will leave on 8th June on a tour of 14 European countries, with a view to seeking new markets for the Island's produce.

The Ceylon Government has approved of a six-year economic development plan, costing Rs. 210 crores. The Plan envisages full employment through expansion of industries and development of agriculture.

The aggregate net profits of 82 leading Swedish companies, the shares of which are quoted on the Stockholm Stock Exchange, rose by 14.2 per cent. in 1954, that is, from Kr. 524.6 million in 1953 to Kr. 599 million. The dividends went up by 72 per cent. to Kr. 345 million.

Steel production in the U.S. during April this year amounted to 9,006,000 net short tons (2,000 lbs. each) of ingots and castings, bringing the total production during the first four months of 1955 to 38 million tons. Soaring demand this year has caused a rise in steel operations from 83 per cent. of capacity in January to 93 per cent. in April.

Artificial rain-making successfully passed an 18-month test in Puerto Rico. This was disclosed by Dr. Horace R. Beyars, Chairman of the University of Chicago's Department of Meteorology, in his report to the American Meteorological Society last week. The analysis shows that there was only one chance in 50 that the success was luck.

The automobile industry in the U.S. is expected to bring out its four-millionth unit for the current year so far in June. The three-millionth unit was produced in the first week of May. If the four-million mark is reached by about the middle of June as expected, the total output for 1955 at that point will be 1 million units ahead of 1954.

During the first quarter of 1955, about 80 per cent. of the 1,077 companies listed on the New York Stock Exchange paid dividends which aggregated a record of $1,671 million, that is, 9.4 per cent. more than those paid in the corresponding quarter of 1954. This is the thirteenth year in succession in which the dividends during the first quarter have maintained the upward trend.

The Pakistan Embassy in the U.S. presented last week a fashion show featuring dresses, hats, bags and shoes made of burlap (woven from jute) in the latest modes created by the leading designers of the U.S. and Canada. This show was held in co-operation with the Chandler Manufacturing Company, which recently perfected a new process that makes burlap ideal for fashions.

American business turned out an all-time record volume of goods and services in the first three months of this year, according to the U.S. Department of Commerce. The gross national product hit a record annual rate of $370,000 million, due chiefly to new highs in auto purchases and home building. This compared with the previous record rate of $369,000 million set in the second quarter of 1953.

The four major groups of electrical engineering companies of the U.K. propose to build atomic power stations and have, for that purpose, set up active trading and sales organisations. The combined initial capital set aside for the four atomic power groups amounts to about £4 million, but a much larger sum is expected to be spent on development work as the use of atomic power increases.

The Du Pont Company of the U.S. proposes to promote thrift among its workers by contributing 25 cents for each dollar that a worker saves. The Company's contribution will be placed in a trust fund to buy Du Pont Common Stock for the employee, while the employee's savings, to be deducted from his pay roll, will buy U.S. Savings Bonds. The plan is expected to come into operation from 1st September, 1955.

Profits of U.S. companies during the first quarter of 1955 rose to an annual rate of $40,000 million, an increase of $3,200 million, as compared with the fourth quarter of 1954. Profits after taxes were also higher at an annual rate of $20,300 million, having risen from $8,700 million in the closing quarter of 1954. Dividends declined from an annual rate of $10,400 million to $10,000 million, but undistributed profits rose from $8,300 million to $10,300 million.

PERSONAL

SITHU U Aung Soe has been appointed Ambassador of the Union of Burma to India in succession to U Kyin.

Mr. D. P. Mathur, Director of Finance, Railway Board, has been appointed Senior Deputy General Manager of the Central Railway.

Mr. Naval H. Tata, a prominent industrialist of Bombay, left for Geneva on Sunday last to attend a meeting of the I.L.O. Governing Body.

Maulana Abul Kalam Azad, Union Minister for Education, has left for the U.K. on a two month goodwill-*cum*-official tour of Europe and the Middle East.

Mr. C. T. Venugopal, Senior Deputy General Manager of the North-Eastern Railway, has been appointed Director of Finance in the Railway Board.

Mr. P. P. Kapadia, Senior Vice-President of the Western India Automobile Association, Bombay, has been elected President of the Association for the current year.

Sardar Datar Singh, Development Adviser and Additional Secretary, Union Ministry of Home Affairs, left for Rome on Sunday last to attend a meeting of the Co-ordinating Committee of F.A.O.

Mr. Jangbir Singh, Development Commissioner for Small-scale Industries, Union Ministry of Commerce and Industry, left for Geneva last week on a tour of the U.K. and Europe for recruiting technicians to assist small-scale industries in India.

Mr. Kanwar Sain, Chairman of the Central Water and Power Commission, Mr. Hayat, a member of the Commission, and Mr. A. C. Mitra, Chief Irrigation Engineer, U.P., are expected to leave on a 30-day study tour of the Soviet Union next month.

"COMMERCE" 1930

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *31st May*

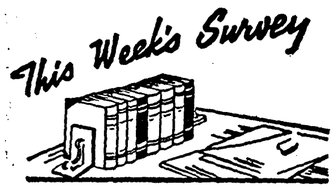
Indian Sugar Industry

India is now passing through a period of agricultural reconstruction, particularly in respect of the sugar industry. Both on the growers' side and on the factory side improvements are being made in Indian sugar. But while these improvements are being effected, it is necessary that the industry should be temporarily protected. It is believed that this matter will soon engage the attention of the Indian Tariff Board. Meanwhile, the import dues on foreign sugar have been increased as a first step towards the establishment of the Indian sugar industry on an improved basis. A very large grant has been made by the Imperial Council of Agricultural Research to the Government of the United Provinces for expanding the sugar section of the Harcourt Butler Technological Institute at Cawnpore into an experimental factory and school for training sugar scholars from all India. This section, which is now on a provincial basis, will be expanded into one on an imperial basis. In future, young men from all the Provinces of India will have facilities for studying the process of the sugar industry of this institute. In addition, a qualified sugar technologist has been appointed by the Imperial Council of Agricultural Research in the person of Mr. J. P. Srivastava who is a Deputy Director in the Industries Department of the United Provinces. India, as is well known, has the largest acreage under sugarcane in the world. Of this acreage over 50 per cent. is to be found in the United Provinces. Mr. Srivastava's duty will be to advise improvement in sugar factory methods and to assist people who desire to start sugar factories in technical details.

The additional protocol to the Argentine-Russia 1953 trade agreement, which was signed last week, provides for the supply of 60,000 tons of linseed oil, 25,000 tons of hides and 5,000 tons of wool by Argentine to Russia. As against these, Russia will deliver 500,000 tons of petroleum and 200,000 tons of iron and steel, besides timber, chemicals, railway materials, etc. The total inter-change envisaged comes to $100 million, as against the previous arrangement for $150 million.

A new continuous coal mining machine, named the Twin Borer, has been developed by the Joy Manufacturing Company. The new machine, it is claimed, can dig and load eight tons of coal a minute. It is equipped with two boring arms and top and bottom saw chains which cut a swatch of coal 12 to 13 feet wide and six to eight feet high. It weighs nearly 80,000 pounds. The Company says that it is ready to begin commercial production of the new machine and is expected to be on the market before the end of August, 1955.

The British Transport Commission and the trade unions concerned have arrived at an agreement for the establishment of an eighteen-member British Railways Productivity Council. The Commission will be represented on the proposed Council by nine members and the trade unions will elect nine members amongst themselves. The Council will initiate proposals for increasing efficiency, including the best use of man-power, and advise the Commission and the unions on how best to apply them. It will also consider and advise on matters referred to it concerning modernisation and re-equipment plan, besides reviewing the working of the joint consultation machinery.



COLONIALISM IN SHIPPING WORLD

IT is, indeed, regrettable that India's opposition to the resolution at the fifteenth biennial Congress of the International Chamber of Commerce (I.C.C.), which has just concluded in Tokyo, seeking a modification of what is vaguely termed as "flag discrimination," was drowned by the steam-roller majority of well-entrenched maritime nations. More so, because India's voice at the Conference reflected the feelings of the underdeveloped maritime nations of Asia and the Far East, which are desirous of developing their merchant navies in accordance with their needs. The discussions at the Conference once again exposed the existence of a clique among the leading maritime nations of the world to maintain the *status quo* at any cost. There was little inclination among them to respect even the modest desires of underdeveloped countries and to share with these countries at least a part of the world trade in shipping. The attitude displayed by the shipowners of developed countries revealed that they have not moved with the times and that they still considered themselves to be the uncrowned kings of the entire shipping world. To quote Sir B. P. Singh Roy, a Director of the India Steamship Company, Ltd., who opposed the resolution, the stand taken by the leading maritime nations of the world was: "We have got settled down to trade and we shall keep it at all costs and make it as difficult as possible for any other line to enter this trade."

The most disquieting feature was the nature of the resolution on flag discrimination adopted by the Conference. Ironically enough, the resolution registered the I.C.C.'s "profound concern" at the "continued increase of flag discrimination," particularly in the form of measures for restricting the routing of cargoes by nations to ships carrying their own flags. As if to strengthen its case, the I.C.C. cited in the memorandum attached to the resolution the recent trade agreements India signed with Egypt, Czechoslovakia, Russia, Yugoslavia, Turkey and Rumania, providing "all facilities to secure that ships of contracting parties carrying as large a proportion as possible of goods exported or imported under the agreement." In other words, the I.C.C. resolution sought to restrict the shippers' choice which had previously been conceded by the very same Chamber. It will be recalled that, when the Greek companies complained in 1949 that fruit from Greece were carried in British ships and no part of it was allowed to Greek shipping, the reply of the I.C.C. was that it was the shippers' choice. Quoting this instance, Sir Singh Roy asked: "If that is accepted, where is the question of flag discrimination if Government, which is a shipper as much as any other shipper, chooses the line by which its goods should be carried?" After all, Governments are entitled to enter into bilateral agreements with certain countries. They have also the right to allot a certain portion of the cargo to national shipping of either country. Surely, it is absurd to level the charge of flag discrimination against this arrangement especially as the bulk of imports and exports of these countries is still carried in non-national lines not connected with the bilateral agreements.

Again, certain leading maritime countries have been discriminating against non-national vessels berthing facilities and priorities in berthing. According to Sir Singh Roy, some companies in London and Liverpool have got exclusive rights for certain specified berths, which means that, when a ship of that company arrives, that berth must be cleared and made ready at once. There is no waiting for that ship, as if the berth was its home. On the other hand, India has not given any such berthing priorities for its domestic shippers. Unless the law "first come first served" is impartially applied to all shipping companies in all ports, as in India, no justice will be done to ships of other nations.

Sir Singh Roy exploded the myth of "freedom of the seas," a phrase frequently used as an infallible and inevitable standard which lesser nations should adopt, but which the maritime powers could conveniently ignore. The existence of a conference which limits its membership, which limits the number of steamers that could ply on the part of some members and which limits the sailings of certain lines are all positive proof that the "freedom of the seas" exists only in the imagination of certain members. Actually, as Sir Singh Roy pertinently pointed out, although colonialism in the political field has ended in many parts of the world and what little exists is on its last leg, in the world of shipping, colonialism by different countries is more firmly established than ever and the vested interests of maritime nations are putting all sorts of obstacles to prevent new-comers entering the field. Ironically enough, the disappearance of colonialism from the Indian sub-continent has led to a strengthening of colonialism in the shipping world. Thus, the partition of India and the attainment of independence by countries such as Burma and Ceylon have been taken advantage of by the well-entrenched shipping companies. One conference, which existed for the whole area, has been broken into different conferences. The U.K. has taken advantage of being a member of all these conferences, while Indian shipping companies, although they have natural, geographical, political and cultural affinities, are denied membership to these conferences. Elucidating this point further, Sir Singh Roy observed as follows:

"The ships of U.K. are members of 40 different maritime conferences. They sail the wide seven seas; they can be members of every conference of the world. To them, the freedom of the seas means that they alone can enjoy membership of every conference existing on the wide seas, but other shipping lines are precluded from being conference members in trades sometimes on routes to and from their own country and often of trades on the routes of their most extensive trade."

Similarly, the Scandinavian countries, the trade of which is infinitesimal, are members of conferences next in number only to the U.K. They restrict membership of other lines, old or new. When this is combined with the fact that no national Indian ship can ply to a Scandinavian port carrying goods from India or taking goods from Scandinavia to India and when it is further coupled with the fact that a Scandinavian ship can directly trade not only from Scandinavian ports but also from wayside ports to India, the illusion of "freedom of the seas" is best illustrated.

It is the sovereign right of every country to develop its shipping according to its needs. In order to ensure such development, it is necessary for the developed countries to limit the interpretation of the term "flag discrimination" and to recognise the rights of underdeveloped countries to take whatever measures they consider appropriate for building up adequate merchant fleets subject to a scrupulous avoidance of discriminatory treatment at ports. There is no reason why reservation of national cargo even up to 50 per cent. for national ships should not be permitted. After all, even this will still leave a generous margin of national trade to be carried in the bottoms of leading maritime countries.

MADRAS CABINET CAUTIONED

The landlords of Madras State are strongly opposed to the proposed fixation of ceilings on lands for ownership and the redistribution of excess land. They are of the view that such a step is unwarranted and, in fact, detrimental to the development of the agricultural sector in the existing circumstances. At a meeting held recently in Mayavaram, the landlords of Tanjore, the rice granary of South India, adopted a resolution opposing the recommendation of the Land Reforms Sub-committee of the Tamilnad Congress Committee (T.N.C.C.) prescribing residential qualification for personal or *pannai* cultivation. The meeting also held that the recommendations of the Sub-committee of the T.N.C.C. for conversion of *warram* (crop-sharing) tenures into lease-tenures of more or less permanent nature would amount to a fresh creation of a larger number of small *zamindaries*, which had been abolished and which is in contravention to the cherished principles of the Congress regarding land tenures. The Conference expressed the opinion that the share of crop due to the *warram* cultivator was already too high, as there had been a substantial increase of such share from 25 per cent. to 40 per cent. since 1947 and any further increase would cripple agriculture and annihilate the smaller landowners, as they had also to bear the cost of land improvement, besides the *kist* and other duties. The consensus of opinion of the landowners was that the Tanjore Tenants and *Pannigals* (Farm Servants) Protection Act, which was in force only in one or two districts, might be extended to other districts as well and given a decent trial for at least a period of 10 years, before deciding to experiment with such dubious reforms as fixing a limit on the land that can be held by an owner. The Conference felt that the fixation of rent for an indefinite period was arbitrary and illegal and therefore suggested that the period should not exceed five years and that, at the end of every five years, the lease could be renewed at the instance of the landowner.

Coming as they do at a time when a Sub-committee of the Madras Cabinet is preparing its report on the future set-up of the landownership and tenure, the views of the Tanjore landlords are valuable. For, if the scheme of land reforms which the Sub-committee is going to recommend is to give a "lead to the whole of India," as the authors claim it would, it should certainly be not one-sided and should hold the scales of justice even between the landlord and the tenant. At a meeting held last week, the Cabinet Sub-committee is said to have arrived at tentative conclusions. The Sub-committee will meet again some time in June to reconsider them and submit a scheme of land reform for the consideration of the Cabinet.

If the scheme of land reforms on the anvil is to be a model for the rest of India, it should boldly avoid the fixation of a ceiling on agricultural lands that can be held by an individual. There is no need for a ceiling at all, for large holdings are not many. The temptation will, therefore, be to fix the ceiling at a low level. If this were to be done and effectively enforced, it would only perpetuate the evil of small farms, low productivity and poor living standards. Then again, there is not enough land in the country to be distributed to all landless labourers. This will aggravate agrarian discontentment, especially as those labourers—and they will be in a majority—who do not get land under the redistribution of excess holdings will feel jealous and fall an easy prey to the false propaganda of the extremist political elements. The whole scheme may, therefore, act as a boomerang on the Congress Party itself, instead of strengthening its hold over the rural masses. Then, there is a danger of more people trying to stick to the easy and traditional occupation of agriculture, because, if land is made freely available, the eagerness to try and find other means of occupation will be less keen. The effect of this will be that the pressure of population on land will increase. The Madras Cabinet will, therefore, do well to ponder over all these points before making up its mind.

THE PUNJAB & SIND BANK LIMITED
Established 1908

Registered Office .. .. .. AMRITSAR
Central Office .. .. DEHRA DUN

Branches in India:
Amritsar, Ambala City, Dehra Dun, Delhi (Chandni Chowk), Delhi (Karol Bagh), Delhi (Pahar Ganj), Hoshiarpur, Jullundur City, Kanpur, Karnal, Ludhiana, Patiala and Sub-office Khanna.

AGENCIES IN ALL PRINCIPAL TOWNS

Fixed Deposit interest at different rates.
Savings Bank interest at 1½ per cent. per annum.
Special Fund Deposits interest 2 per cent. Withdrawals by cheque.

Widows and Orphans special interest rates allowed

Safe Deposit Lockers are available at Amritsar, Ludhiana, Ambala, Dehra Dun, Delhi (Pahar Ganj) and Delhi (Karol Bagh) Offices.
Advances made against approved securities, bullion, gold ornaments, goods, etc.

Terms can be had from Local Managers

Dr. Balbir Singh, Ph.D. (London)
Managing Director

FUEL SHORTAGE IN THE U. K.

It is unfortunate that hardly any efforts are being made by India to take advantage of the fuel shortage in the U.K. and the Continent which is becoming more and more keen. According to latest reports from London, the U.K. has so far imported about 4 million tons, as against 3 million tons during the whole of 1954, and it is estimated that it will have to import another 6 million tons, if it is to tide over the coming winter. There is also a woeful shortage of coal on the Continent. It is estimated that the import of coal by the Continent this year may amount to about 17 million tons, as against approximately 10.5 million tons last year. About 8 million tons have already either been imported or contracted. This leaves about 9 million tons yet to be booked.

India requires to export more coal today than at any time before in order to ensure economic working of its collieries and maintain employment. Although exports of coal at 2.0 million tons in 1954 were slightly better than 1.9 million tons in the preceding year, they were far lower than those in 1952, when exports stood at 3.5 million tons. Indian exports to the U.K. in 1952 were 36,954 tons. Since then there has been no exports to that country. At present, there are large stocks of coal not only in the U.S. but also in India. It is true that a good part of the requirements of coal of the U.K. and the Continent is sought to be met by the U.S. Nevertheless, India should explore all possibilities of availing itself of the opportunity provided by fuel shortage in the U.K. and the Continent to boost its exports.

The future of Indian eonomic development is dependent on the quantum of foreign exchange available to balance its import of capital and other essential goods. Even to maintain the present employment of labour in the collieries at the present levels, export of coal in larger quantities must be made. For, if the collieries are to balance their budgets without retrenching surplus labour, they must increase the rate of their output and this will be possible if additional outlets are found. It is high time that an Export Promotion Council for coal was constituted, with a view to taking advantage of export markets as and when opportunities arise.

BETTERMENT LEVY COLLECTION

The Government of Punjab is examining a proposal to permit landlords to pay betterment levy in land instead of in cash, if they so desired. If this proposal, the first of its kind to be considered by any State Government, were to materialise, it is likely to help resettlement of evicted tenants and landless labourers with less trouble. For it is expected that many landowners who possess land in excess may avail themselves of this mode of payment, which would release extensive tracts of land for the rehabilitation of persons who have no land.

The proposal to accept land in payment of betterment levy is indeed novel. And, as the landlord will have the option to pay in cash or land, there is hardly any justifiable argument against the proposal. Under the new scheme for land reform in the State, awaiting the assent of the Centre, controlled ejectment of tenants in order to enable landowners to reserve 30 acres for self-cultivation is provided for. If ceiling on land were to be approved by the Centre, all land above the ceiling would be acquired. In such a case, the present proposal would go a long way towards helping the landlords to dispose of their excess land. It is estimated that the betterment levy collections in the Punjab alone will aggregate over Rs. 80 crores, to be paid in biannual instalments spread over a period of 15 years, and a substantial portion of this levy, especially in Ferozepur and Hissar Districts, where many big landlords are concentrated, is expected to be paid in land.

PRICES DURING 1954-55

Full details of the trend of prices during 1954-55, which, incidentally, is the penultimate year of the first Five-year Plan, are now available. These reveal that the wholesale prices of commodities exhibited almost a continuous downward trend during the year. Thus, the general price index (Base: August, 1939=100) which stood at 402.6 in April, 1954, declined to 381.3 by July, 1954, and, after recording a slight rise in the two subsequent months, began to fall again to touch a low of 354.2. The average for the whole year was lower at 377.5, as against 397.5 for 1953-54, representing a decline of 5.0 per cent.

A number of factors contributed to the downward trend in prices. The first and foremost of these factors was the substantial improvement in agricultural and industrial production. Mention may also be made of reduction in the selling prices of imported rice, wheat and milo and restrictions on export of groundnut and castor oil. The free flow of coarse grains from surplus States to deficit areas, following removal of regional controls, also exercised a downward pressure. A further momentum to the decline in prices, especially in cities like Bombay and Calcutta, was provided by the removal of the remaining controls on foodgrains. Yet another bearish factor was the liberalisation of imports of several consumer goods, sugar in particular.

Barring manufactures, all the constituent groups in the wholesale price index recorded a decline, as will be seen from the following figures:

(Base: Aug., 1939=100)

	1953-54	1954-55	Percentage fall (—) or rise (+)
Food articles	384.4	339.8	—11.6
Industrial raw materials ..	467.7	436.2	— 6.7
Semi-manufactures ..	359.2	350.3	— 2.5
Manufactures..	367.4	377.4	+ 2.7
Miscellaneous..	686.6	612.4	—10.8

The fall of 11.6 per cent. in the index of food articles during 1954-55 was chiefly the result of substantially lower prices for pulses, the index of which dropped by as much as 37.8 per cent. to 280. The prices of cereals also staged a retreat, the index moving down by 15.5 per cent. to 381. The index of residual group, however, was slightly higher at 291, as against 278. Despite a rise of 3.5 per cent. (to 447) in prices of fibres and of 14 per cent. (to 427) in "others" such as raw hides and skins, lac and rubber, the index of industrial raw materials fell by 6.7 per cent. to 436.2. This was due to the severe fall in the prices of oilseeds and minerals; the index of the former was lower by 26 per cent. at 424 and of the latter by 6 per cent. at 422. In the semi-manufactures group, the index of leather declined by 6.7 per cent. to 376, of vegetable oil by 19 per cent. to 433 and of oilcakes by 12 per cent. to 381. The index of mineral oils was a shade down at 221, as against 224. The index of cotton yarn, on the other hand, registered a small rise of 3 per cent. to 454. Metals also increased by 5 per cent. to 240 and "others" by 11 per cent. to 312. The miscellaneous group which comprises *vanaspati*, spices and condiments, betelnuts, cashewnuts, bricks, tiles and tobacco leaf fell steadily from 707.4 in April, 1954, to 553.3 at the end of March, 1955. The average for the year as a whole was 10.8 per cent. lower at 612.8, as compared with 686.6 in 1953-54.

As already stated, the prices of manufactures proved an exception to the general trend in that they ruled fully firm, their average index for the year under review standing 2.7 per cent. higher at 377.4. This is a clear indication of the rigidity of cost structure in the industries. The sub-group index of textiles as a whole moved narrowly and the average for the year remained higher by 4 per cent. at 421. Jute manufactures witnessed a rising trend and the index at 448 was about 10 per cent. more than the previous year's average of 408. The prices of cotton manufactures ruled 2 per cent. above the index for 1953-54. The index of rayon and silk manufactures increased by 9 per cent. to 469, while that of woollens was 1 per cent. lower at 311. The rise of 1 per cent. in the index of metal products was due to the advance of 1.5 per cent. in the prices of iron and steel manufactures in the month of April, 1954. The sub-group for other manufactures moved around 286; the prices of footwear and cement moved up, while those of tyres and tubes, glass, paints and dyestuffs tended to decline.

PATTERN OF FOREIGN TRADE

NEED FOR A WELL-THOUGHT-OUT PLAN

From A Special Correspondent

NEW DELHI, *24th May*

THE discussions at both the Import and Export Advisory Councils during this week-end reveal that the Government of India is now being called upon to tackle a new set of economic problems which are products of the return of normal conditions in the country and which also reflect the country's desire to quicken the pace of economic development in the coming years. There is no longer a scramble for getting licences by the commercial community. Nor is there any complaint about the enormous delay in the issue of permits. On the other hand, there is full appreciation of Government's creditable achievements for having brought about order and regularity in the administration of import and export controls. Even the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, would appear to have been so much satisfied with the progress on this front that he was content to leave the delivery of speeches, etc., to his lieutenants and to remain in the background, taking up a sort of paternal attitude and interfering only to announce the policy of Government on specific questions referred to by members of the Council.

DELHI LETTER

The proceedings at the Import Advisory Councils were initiated by Mr. Nityanand Kanungo, Deputy Minister for Commerce and Industry. The Minister gave some indications of Government's policy in regard to import trade in the coming months and pointed out that the policy of selective liberalisation was being gradually extended in diverse ways to cover a wide sector of the country's import trade. He recounted that 33 new items were added to the liberal licensing schemes, that quota percentages were increased in the case of 40 items, that token quotas were introduced for 19 items, that provision was made for the grant of additional licences to established importers in 13 fresh items and that basic period was extended to include the year 1952-53 for a further 60 items and the year 1953-54 for another 16 items. Mr. Kanungo also stated that, consequent on the increases in import duties with the commencement of the current year, a further measure of liberalisation was announced in respect of 12 items. The doubling of small value licences for a number of items, together with the extension of the operation sphere to new-comers, had brought about considerable stabilisation in the import trade. The Minister was careful enough to utter a note of warning that the continuance of the policy of a progressive and controlled liberalisation was conditioned by the country's ability to augment export earnings. He also suggested that, with the increased tempo of industrialisation, the pattern of India's import trade would be characterised by higher level of imports of industrial raw materials, plant and machinery and some specialised manufactures.

Serving the Consumer

At the end, Mr. Krishnamachari wound up the proceedings and maintained that Government would continue to revise its import policy every half-year so that all interests could be satisfied. Similarly, he justified the canalisation of imports of certain raw materials through agencies approved by Government and restrictions on profit-margins in certain items. This was being done to serve the consumer in various parts of the country properly. Again, the Minister uttered a note of warning to the foreign shipping interests to the effect that, if they carried out their threat to raise freight surcharge on goods carried to India, their ships would not be allowed to touch Indian ports.

In the course of his address to the Export Advisory Council, Mr. D. P. Karmarkar, Minister for Commerce, brought out the salient developments in export trade in recent months. He stated that the rise in the total export trade at Rs. 583 crores in 1954-55, as against Rs. 531 crores in the previous year, was largely due to the phenomenal rise in the price of tea, that further expansion of trade in the three principal commodities, tea, jute goods and cotton cloth, which accounted for nearly 58 per cent. of the total trade, was limited, that there was need for diversifying and broadbasing the pattern of export trade, that there was resumption of export trade in rice, pulses, etc., that exports of oils were showing some improvement, that there was necessity to augment raw cotton exports also, that the quantum of exports of tobacco, cashew kernels, pepper and mica was better and that exports of lac, raw hides and skins and wool recorded an increase both in quantity and value. He emphasised that, in the coming years, India should make a sustained effort to develop export markets in chemicals, cement, electric fans, sewing machines, diesel engines, centrifugal pumps, machine tools, cycles, plastic goods, toilet requisites, sports goods, etc.

Towards the close of the meeting, Mr. Krishnamachari spoke for a few minutes and emphasised the need for planning in trade and suggested that there should be some kind of economic survey every year which could indicate the country's expectations and the limits of its achievements.

The importance of a trade plan to fit in the second Five-year Plan does not require any emphasis in these columns. It is only the availability of adequate foreign exchange resources that will enable the orderly implementation of the second Plan. It is, however, strange that the Panel of Economists has completely omitted this aspect of the problem in its memorandum submitted to the Planning Commission. Perhaps this defect must be attributable to the fact that the Panel is being dominated by theoretical academicians.

Prof. Mahalanobis' Proposals

Prof. P. C. Mahalanobis has, however, devoted some attention to this aspect of the question. In his pamphlet, entitled *Draft Recommendations for the Formulation of the second Five-year Plan*, he observes: "Much larger imports will have to be made of capital goods in the second Plan. The total needs would come to about Rs. 1,200 crores; adding Rs. 400 crores for imports of equipment for replacements, the total requirement would be about Rs. 1,600 crores for imports of capital goods. This must be met partly by increased production of foodgrains, sugar, cotton and petrol; partly through foreign assistance and withdrawal from sterling balances; and by curtailment of non-essential imports and promotion of exports in every possible way." It is gratifying to note that Prof. Mahalanobis has given considerable importance in his pamphlet to the manufacture of heavy machinery in India. For rapid industrialisation, he says, it is essential to fabricate plants and machinery at home. To install a plant for the production of one million tons of steel per year, it is necessary at present to import machinery worth about Rs. 40 or Rs. 45 crores from outside. Provision has been made for investment of Rs. 150 crores to establish large engineering workshops to fabricate machinery needed for producer goods plants. An immediate aim would be to manufacture every year most of the machinery required for installing a one million ton capacity steel plant. An investment of Rs. 40 crores is contemplated for establishment of plants for the manufacture of heavy electrical equipment. The production of machinery for the manufacture of consumer goods (textiles, etc.) must be roughly doubled during the Plan period, and an investment provision of Rs. 50 crores has been made for the purpose. In regard to investment by industries, the learned professor has earmarked a sum of Rs. 240 crores for the manufacture of producer goods, Rs. 425 crores for iron and steel and Rs. 80 crores for synthetic petrol. It may be noted that the President of the Federation of Chambers of Commerce and Industry, Mr. Shantilal Mangaldas, has also stated, in the course of his discussions at the Export Advisory Council, that India would require roughly foreign exchange to the extent of Rs. 300 crores annually for capital goods alone for the implementation of the second Five-year Plan.

The pamphlet on the Second Five-year Plan prepared by the Economic Division, Ministry of Finance and the Economic Division, Planning Commission, under Prof. Anjaria, is also vague in regard to trade plan. In the course of discussion, this pamphlet says: "In the case of important export items such as tea and tobacco, exports must be maintained and increased as far as possible in spite of greater consumption at home. The increase in the production of tobacco from 250 to 300 thousand tons and of tea from 675 to 750 million lbs. is postulated on this basis." It is really surprising as to how the pamphlet has

U.K'S TRADE BALANCE IN APRIL

SAVING IN FOOD IMPORT BILL

From Our Own Correspondent

LONDON, *21st May*

THE complete break in the tea market has been responsible for saving this country £9 million in the month of April on the average food import bill compared with the monthly average for the first quarter of this year. But maintenance of low tea prices for the rest of the year would not help the trade accounts compared with 1954 to anything like the full extent these figures suggest since the main weight of high tea prices fell only on the first quarter of this year. At present the news about tea in the City looks very contradictory—for, while the market is well and truly down and Mincing Lane is thinking in terms of not paying for shipments from Ceylon more than 1 rupee per lb. (before allowing for export duty of course), the 1954 accounts of Indian and Ceylon tea companies show both cash profits, and dividend rates on average about twice as high as last year. But to balance these gains, which relate, of course, to the past, the companies concerned have to accept some very low estimates for their future earnings and a corresponding slump in share capital values of the order of 40 per cent.

LONDON LETTER

But tea has not been the only April import to show a big saving to the British balance of payments. Other foodstuffs are also down on the month, as compared with the average of the previous three months and contribute to a total saving of some £15 million. Imports in April of basic materials and manufactured goods also showed reductions, but coal moved the other way and reduced the overall gain on imports other than food to the order of some £3 million a month.

Unfortunately the April trade balance cannot take credit for the whole of the monthly saving on imports of £17 million compared with the first quarter of the year since exports are down by £4 million. Nevertheless, the average gain to the trade balance is £14 million which may be taken as a good augury for the trend for the rest of the year.

Interesting Differences

The following table brings out the most interesting differences between April and the first quarter average:—

(In millions of £'s)

	April, 1955	First quarter Monthly Average
Imports:		
Food etc.	120	135
Raw materials	92¼	93¾
Fuels	34¼	31¾
Manufactures	70	73¾
Miscellaneous	1¼	1¾
Total ...	318¼	333
Exports and re-exports ...	255¼	258
Deficit	63	77

April exports really show a better trend than the above figures suggest. Not only has the general group of engineering items, agricultural machinery and tractors and electrical apparatus in particular, been up, but, even more significant, exports to the dollar area are well up. In fact, the improvement all this year in shipments to dollar countries is marked over, 1954. Unfortunately, dollar imports also continue high, and the trade deficit with dollar countries is still running at about twice the level it was a year ago. It is not surprising that the April gain in the trade balance was principally made with the sterling area for which, of course, the reduced tea shipments were responsible.

Another encouraging feature is the upward movement in the gold and dollar reserves. It is too soon yet to say whether the adverse developments of the past six months have been basically changed but, for a single month, April has done its fair share.—*All Rights Reserved.*

U.K. AND FRANCE TO EXCHANGE ATOMIC INFORMATION

Britain's Atomic Energy Authority and the French Atomic Energy Commission have concluded an agreement for the exchange of classified information between the two organisations on a number of subjects relating to development of atomic energy. The Atomic Energy Authority will further help the Atomic Energy Commission by giving advice and by supplying experimental quantities of various materials.

FRAME OF SECOND FIVE-YEAR PLAN

PROF. B. R. SHENOY'S VIEWS ON CERTAIN BASIC CONSIDERATIONS

THE Economists' Panel of the Planning Commission submitted its memorandum on the second Five-year Plan, described as the interim document, to Mr. Chintaman Deshmukh, Chairman of the Panel, on 10th April, 1955. The memorandum sets out the basic considerations relating to the preparation of a Plan-frame. These considerations have been grouped under three heads, namely, (1) size of the Plan, (2) structure and content, and (3) policy and institutional implications of the proposed Plan-frame. There is, it is said, broad consensus of opinion among the members of the Panel with regard to these basic considerations. Prof. B. R. Shenoy, one of the members of the Panel and Director, University School of Social Sciences, Gujarat University, Ahmedabad, has, however, differences of opinion on some points and these have been indicated in a separate note. It is proposed to analyse here the note of dissent of Prof. Shenoy.

To take first the size of the second Five-year Plan. The Plan-frame is built on the basis of a 25 to 27 per cent. increase in national income in five years. The targets of production for several sectors, which correspond to this rise in income, would require a rise in net investment (or savings) from 6.75 per cent. of national income in 1955-56 to 10.95 per cent. in 1960-61. On this basis, there will be a total net investment of Rs. 5,600 crores in five years—Rs. 3,400 crores in the public sector and Rs. 2,200 crores in the private sector. The total development outlay corresponding to the net investment in the public sector would be Rs. 4,300 crores. The Economists' Panel regards this increase in investment as "fairly ambitious" and stresses that "the effort involved in this increase is considerable and will strain the economy a very great deal"!

Rate of Investment Over-ambitious

To Prof. Shenoy, however, the aforesaid emphasis does not sufficiently bring out the risk which such huge investment may involve, unless, of course, foreign assistance is forthcoming on a scale incomparably larger than the one envisaged in the Plan-frame. He considers the proposed rate of investment as "over-ambitious." The size of the Plan-frame, he says, has been unduly inflated, as a result, on the one hand, of an over-optimistic growth in national income which it aims at and, on the other of an unduly high average rate of saving as applied to this assumed growth in income. Elucidating this aspect, he observes:

"Judging from our own recent experience and also the experience of other democratic countries, the available real resources (savings) for development cannot for some time be expected to be of an order that would permit anything like a doubling of the rate of growth in national income. The current rate of savings in India is generally estimated at 7 per cent. or under of the national income. During the past years, it has risen by about 1 per cent. It would be too optimistic to assume that the rate of increase may be accelerated in the next five years. A reduction in the inequalities of income distribution, which is the declared policy of the Government, would tend to reduce overall savings. The consumption of food of the vast masses of the people being both below the national average and below the minimum nutritional standards, it has been estimated that about 50 per cent. of the increase in consumer expenditure is liable to be utilised in India on foodgrains. In conformity with traditional experience, a succession of good harvests which we have experienced may be followed by a couple of years or so of bad or indifferent harvests. In the circumstances, it may not be safe to assume a rate of saving of much higher than 8 per cent. at the end of the next five-year period. The possibility of this conjecture proving too high cannot be ruled out."

Referring to the experience of a few countries, Prof. Shenoy points out: "Statistics of the growth of national income in certain overseas countries show that, in Canada, Switzerland and Germany, the rate of growth in national income generally approximated to the rate of growth experienced in India during the first Five-year Plan. In the U.S.A., the rate of growth was 4.5 per cent. until 1913 and 3 per cent. from 1929 to 1950. Both in *per capita* income and in the capacity to save, we are far behind these countries. It is significant that in the Soviet Union, Poland, Czechoslovakia, Hungary and Bulgaria, the rate of growth in recent years varied between 12 and 16 per cent. This was doubtless rendered possible by totalitarian devices."

In view of these considerations, Prof. Shenoy urges revision of the size of the Plan in such a way as to match the real resources as indicated by the rate of savings. He also emphasises that the estimate of the rate of increase in national income should be adjusted to conform to the investment equivalent to the rate of saving. Otherwise, he warns: "To force a pace of development in excess of the capacity of the available real resources must necessarily involve uncontrolled inflation. In a democratic community, where the masses of the people live close to the margin of subsistence, uncontrolled inflation may prove to be explosive and might undermine the existing order of society. Alternatively, if appropriate physical measures familiar to a communist economy were adopted (in an effort to prevent inflation), we would be writing off, gradually or rapidly, depending upon the exigencies of the Plan, individual liberty and democratic institutions by administrative or legal action."

Deficit Financing

With regard to deficit financing, Prof. Shenoy is one with his colleagues in cautioning against any tendency to be unduly optimistic about the extent to which deficit financing may avert the awkward necessity of a deliberate endeavour to mobilise resources. He agrees that deficit financing can be safely resorted to when (1) a larger money supply is needed as a result of expansion of monetised sector relatively to the non-monetised sector and (2) a larger money supply is needed to keep pace with an increase in the national income. But he cautions that, on these occasions, the deficit financing should be in a limited measure. He characterises, as too excessive the deficit financing at the rate of Rs. 200 crores per annum—or Rs. 1,000 crores in the five-year period—which the Economists' Panel regards as safe and even necessary. In support of this view, he says:

"Even on the assumption of a doubling of the rate of growth of the national income, the demand for the additional cash balances cannot be of an order to justify deficit financing on a scale equivalent to 50-60 per cent. of the money supply. If a third of the central bank money proposed to be put into circulation through deficit financing went to augment the reserves of commercial banks and if they built on it a volume of credit six to seven times, the total money supply at the end of the Plan period may be more than double the money supply at the beginning of the period. This would be clearly inflationary. An increase in the rate of growth of national income from 13 per cent. to 27 per cent. would not require a doubling of the total money supply.

"Deficit financing is essential in an underdeveloped economy to permit full use of the scarce real resources. By the same token, deficit financing should stop severely short of the point at which inflation begins. Inflation does not, on balance, add to the aggregate real resources. It creates wasteful or socially less useful demands on the limited

New FROM BUMPER TO BUMPER

DESOTO '55

DIPLOMAT 4-DOOR SEDAN

The car with the Forward Look

LONGER — LOWER — WIDER

Inside and out the 1955 DeSoto is a ravishingly beautiful new car. There are surprises in plenty for you.

First and foremost is its long, low FORWARD LOOK. So long—at least 10 inches longer...so low—at least 2 inches lower...you'll rub your eyes and wonder if it is moving even when it is standing still!

The "new horizon" windshield has a new surprise for you. It wraps around at top and bottom to give you a fuller view of the road, to give you greater driving safety. *Tubeless tyres are fitted as standard equipment without any extra cost to you.*

You won't believe how new the 1955 DeSoto is until you have seen it. It's right there at your dealer's.

INDUSTRIAL FINANCE AND COMMERCIAL BANKS

VIEWS OF A BRITISH BANKER

It is well known that British bankers are by tradition strongly opposed to joint-stock commercial banks providing long-term finance to industries. But last week one of them created a sensation in the City by advocating a change in this policy and calling upon the banks to play a bigger role in the financing of industry. This was Sir George Erskine, a Managing Director of Morgan Grenfell & Co., one of the well-known private bankers of London. Sir George made this point in his capacity as President of the Institute of Bankers, London, while addressing the annual meeting of the Institute. Sir George, however, seems to have failed to carry much conviction, if the reaction of the City to his speech is any indication. Nevertheless, Sir George's observations will be read with interest in this country, too, for commercial banking in India is modelled on British banking. Further, a section of industrialists in this country feels that commercial banks in India should play an active role in meeting the long-term credit requirements of industry, as witnessed the volume of evidence tendered in 1953 before the Shroff Committee appointed by the Reserve Bank of India. The idea, however, has been resisted by Indian bankers and recourse is, therefore, being taken to the establishment of special institutions such as State Financial Corporations and the Industrial Credit and Investment Corporation.

Addressing the Institute of Bankers, Sir George maintained that nowadays finance for industry, particularly risk capital, was less readily available than in earlier times. This was in contrast to the needs of industry which would require to increase its rate of capital development, if the potentialities of the second industrial revolution were to be achieved. Sir George's contention was not that there was any marked shortage of finance now for capital development programmes on hand, but that finance would be a limiting factor on capital development in future. "We should," he said, "retard the present circumstances as providing us with temporary respite in which to prepare to deal with the emerging shortage, and not be misled into imagining that no problems exists." By this he meant that the U.K. would, in the future, need a much higher rate of capital formation, if it is to take full advantage of technological advances and the industrial uses of atomic energy and electronics. He, therefore, wanted the commercial banks, which had kept aloof all these days from this field, to think of steps which would enable them to meet the calls for long-term finance by industry in the near future. He suggested three main possible lines of action by which the banks might extend the scope of their accommodation to industries.

Underwriting New Issues

The first line of action suggested by Sir George was assistance in marketing new issues. Although the market machinery for new issues was good, it could be made, he contended, smoother, if further resources could be brought into operation. The banks might participate, he added, directly in sub-underwriting new issues—a business at present largely undertaken by the institutions. For the private sector of industry the banks might act in the same manner as the Government department did for issues of nationalised industries. In other words, they may "take up any slack at the time of issue, carry it for a period, and peddle it out later at an appropriate moment." Further, the banks might make advances to institutions and other investors to assist them in taking up new securities. In this context, he drew the attention of his audience to arrangements in the U.S. where banks made loans to brokers and dealers to enable them to buy and carry new securities, until they could be sold to investors. The period of such loans might vary, he stated, according to the ability of the market to absorb new issues. The banks could also encourage, he added, individual investment by advising personal customers to invest in industry and by assisting them to do so.

Sir George's second main suggestion was that the banks might widen the range of industrial activity which they considered suitable for financing by a bank advance and the period of advances. He admitted that, to some extent, this was already being done, as the banks financed the early stages of a capital development programme until it was considered suitable for a capital issue. Sometimes, this period was indefinite and prolonged, but even these advances were nominally repayable on demand. He asked: "Might the banks not reasonably make term loans, again, following the example of banks in the U.S.?" These were made in the first place, he added, for periods from one to five or more years, often for the purchase of plant and machinery. If the British banks decided to make such loans, perhaps they could be matched, he said, by the acceptance of deposits for a corresponding term, or even by the issue of short or medium-term bonds as was being done in Switzerland. He felt further that the banks might undertake, either directly or through subsidiaries, hire purchase finance for companies buying industrial plant and machinery.

Broaden Investment Policy

The third suggestion of Sir George was that banks should be prepared to broaden their own investment policy, so as to take up and hold new issues of debenture stocks and preference shares and even equities. According to him, at the present level of deposits, £65 million invested in this way would represent only 1 per cent. of the total deposits. Even assuming no further growth in deposits, the banks might invest, he suggested, in industry a net sum of about £30 million each year for 20 years and still have less than 10 per cent. of their assets in this form.

Sir George considered that, of the financial institutions not at present concerned with long-term industrial finance, only the banks had the necessary organisation, and connection and the resources on a large enough scale to deal with the emerging shortage. He reminded the banks that industry's need for ordinary bank advances had been lessened by such developments as (a) integration, (b) preference for other forms of finance, and (c) suitability for internal finance for working capital—the traditional subject for bank advances. He was of the opinion that the earning power of banks as compared with pre-war, seemed to have declined. The yield on investments was less than on advances and the upward pressure of costs had also affected earnings. The banks could do, he declared, with some more profitable outlets for their resources, organisation and energy.

The suggestion that commercial banks should play a bigger role in financing industry is not a new one, but it had not hitherto been advocated so vigorously by a banker as was done by Sir George last week. It has been a subject of controversy both in pre-war and post-war years, but the British banks have remained uninfluenced by it. It does not seem that Sir George, himself a banker, will succeed where others had failed to convert them. City circles argue that his suggestion assumes the existence of a large volume of idle funds with banks, an assumption which will not hold good with any efficient banking system. As usually the funds of banks are usefully employed by them, fresh money for entering new channels should only come from the national savings. Says the *Financial Times*, London: "In the long run, if long-term investment on the basis of credit creation—that is, through inflation—is ruled out, the problem is not one of what type of institution should actually channel funds to industry. It is one of increasing the total of real savings which is a problem about which the banks can do relatively little." More or less a similar opinion was held by Mr. W. G. Edington, Chief General Manager of the Midland Bank, who also addressed the Institute of Bankers last week. Describing the suggestion of Sir George as highly controversial, Mr. Edington said: "The problem of capital investment is essentially one of physical resources. In the simplest form, it devolves upon the difference between national production and national consumption which sets the real savings of the country. As to where these resources will go depends upon fiscal and monetary policies. The main thing is to see that the public sector does not get more than its fair share. Given the right fiscal conditions, a surplus to start with, a fair allocation of it, a free capital market and a flexible monetary policy, funds will be forthcoming, provided the price is right."

Mr. Edington then went on to add that, at the present time, the Central Departments were trying to prevent the banks from doing any more business. Far from the banks having to find more outlets, the Government was doing, he complained, its best to stop them. He asked whether banks should make advances as and when required out of revolving funds or tie money up in equities.

PUNJAB FINANCIAL CORPORATION

The working of the Punjab Financial Corporation during the year ended 31st March, 1955, as compared with that in the previous year, discloses certain interesting trends. Notable among them is the marked fall in the number of loan applications received by the Corporation. In the previous year, as many as 94 applications for an aggregate sum of Rs. 1.23 lakhs had been received. But, during the year under review, their number was only 45, for a total loan of Rs. 39.12 lakhs. Explaining this fall, the second annual report of the Board of Directors of the Corporation observes: "The number of applications received during the initial year of the existence of the Corporation was based on haphazard schemes which were backed with insufficient security. It was obviously not realised by the industrialists that the Corporation, under the State Financial Corporation Act, 1951, from which it derives its charter, was authorised to make advances against the security of tangible assets alone. As the applicants got gradually acquainted with the limitations of mortgage banking, the number of applications, as also aggregate amount of loan applied for, declined in the second year of the functioning of the Corporation. The schemes received by the Corporation during the year under review were comparatively more coherent and practicable and the loan requests for their execution, to a fairly considerable extent, showed more judicious calculations."

That industrialists had, as stated above, gained considerable experience regarding the loan policy of the Corporation is also evident from the fact that, during the year under review, there was an increase in the number of applications sanctioned from 20 to 26, while the number of rejected applications dropped from 40 to 13. The Corporation thus considered 39 applications during 1954-55 of which 26, for an aggregate loan of Rs. 20.77 lakhs, were sanctioned. The 13 applications which were rejected were for a total loan of Rs. 13.1 lakhs. The number of applications lapsed or withdrawn declined from 10 in the previous year to four in 1954-55. The reasons for rejections cover a variety of grounds, such as absence of adequate security, limited scope for expansion, insufficiency of earning capacity to repay the instalments of principal and interest, unsatisfactory financial position, unfavourable credit reports, bad management, etc. At the end of 1954-55, 30 applications for a loan of Rs. 37.8 lakhs were pending consideration.

Since its inception, the Corporation has received 139 applications for an aggregate loan of Rs. 162.26 lakhs. Of these, 46 applications for Rs. 49.29 lakhs were sanctioned and 53 for Rs. 35.97 lakhs rejected. Only 14 applications for a loan of Rs. 16.5 lakhs were withdrawn or allowed to lapse. The actual disbursements amounted to Rs. 24.03 lakhs out of which repayments aggregated Rs. 1.92 lakhs, leaving thus the net amount outstanding at Rs. 22.11 lakhs.

Two of the industrial concerns were able to make substantial improvement in their production and sales and were granted a further loan of Rs. 46,000 on furnishing additional securities.

The industries covered by the loans included hosiery, metal, engineering, textiles, cold storage, utensils, cotton ginning, glass, oil mills, cycle and motor spares, electric goods, wood and machine screws, woollen yarn spinning, etc. Textile manufacturers were the largest recipients of the loans, their share being Rs. 14.95 lakhs out of the total amount of Rs. 49.29 lakhs sanctioned by the Corporation. Woollen yarn producers were second with loans of Rs. 7.1 lakhs. Metal engineering came next with a share of Rs. 5.21 lakhs followed by hosiery producers with Rs. 4.93 lakhs.

The rate of interest charged by the Corporation on the loans granted by it remained unchanged at 7 per cent. per annum for loans below Rs. 2 lakhs and 6½ per cent. per annum for loans of or above Rs. 2 lakhs. The Corporation allowed a rebate of ½ per cent. for prompt repayment of instalments. It is interesting to note that the rebate has found favour with the borrowers, as the facility has been fully availed of by all loanee concerns by paying their instalments of principal and interest on the due dates.

The working of the Corporation during the year under report resulted in a net profit of Rs. 2.39 lakhs. After providing Rs. 90,000 for taxation and Rs. 10,000 for reserves, the balance of Rs. 1.39 lakhs was utilised for payment of dividend. The State Government was called upon to give subvention of Rs. 1.60 lakhs to make up the guaranteed dividend of 3 per cent. per annum. In the previous year, the subvention drawn from the State Government amounted to Rs. 2.08 lakhs.

THE SAURASHTRA FINANCIAL CORPORATION

The Saurashtra Financial Corporation received 17 new applications in the year ended 31st March, 1955. As the year opened with a balance of 16 applications of the previous year, the total number of applications received, since the inception of the Corporation, was 37 for a total loan of Rs. 62.2 lakhs. Of these, 11 applications for a loan of Rs. 15.40 lakhs were sanctioned. Of the remaining, seven were rejected, five were referred to the Small-scale Industries Board, and one was withdrawn. At the end of the year, 13 were pending investigation.

Of the aggregate loan of Rs. 15.40 lakhs sanctioned, a sum of Rs. 5.5 lakhs was granted to only one concern engaged in the manufacture of bakelite powder and bakelite and brass accessories. Two concerns engaged in the production of silicate of soda were given a total loan of Rs. 1.55 lakhs. Two oilseeds crushers together were sanctioned Rs. 1.1 lakh and a paper board manufacturer received Rs. 80,000. One concern producing diesel engines was sanctioned a sum of Rs. 60,000. One cotton ginning company got Rs. 75,000, while another engaged in solvent extraction processing was granted a loan of Rs. 1.5 lakhs. A total loan of Rs. 3.60 lakhs was given to two electric power supplying concerns.

The amount actually disbursed by the Corporation during the year was only Rs. 6.1 lakhs.

The applications sent to the Small-scale Industries Board were for sums below Rs. 20,000 and all of them were those that were in the schedule of industries to which the Board gave loans.

The net profit of the Corporation amounted to Rs. 2.85 lakhs. After allocating Rs. 45,000 for taxation and transferring Rs. 15,000 for reserves, there remains a balance of Rs. 2.25 lakhs. This is proposed to be utilised for payment of the guaranteed dividend at 3½ per cent. per annum for the year under review. The Saurashtra Government has been called upon to give subvention for the balance of Rs. 1.24 lakhs required to meet the dividend liability.

COMMONWEALTH DEVELOPMENT FINANCE COMPANY

The Commonwealth Development Finance Company received, during the (its second) year ended 31st March, 1955, 40 applications for loans. Only two of these were considered to be most suitable for investment through the normal market and institutional channels. Most of the other applications were found to be beyond its terms of reference. The Company has agreed to invest £9.75 million, of which 130,000 has already been repaid.

It may be mentioned here that the Company has to borrow the money it lends, and the recent increases in the British Bank rate have had, it is stated, an adverse effect on the net earnings of the Company and its ability to lend at rates acceptable to Commonwealth borrowers, particularly in countries where rates of interest are currently lower than the U.K. rate. The C.D.F.C. looks to joint-stock banks for the money it puts out on debenture and loan stocks, and these loans will have to be funded by some form of long-term capital in the near future.

In the first two years of its operations, the Company has its investments in several Commonwealth countries. It has invested in Sui Gas Transmission in Pakistan, Electric Supply Commission and South African Industrial Cellulose in South Africa, Industrial Credit and Investment Corporation in India, Chirunder Sugar Estates in Rhodesia, Algaon Union Mines in Canada and Tasman Pulp and Paper in New Zealand.

PLAN FOR EXTENDING RURAL CREDIT IN MADRAS

A phased programme of reorganisation and expansion of agricultural credit and marketing to be included in the second Five-year Plan has been drawn up for the Madras State. The programme aims at enabling co-operative institutions to issue a total credit of Rs. 15 crores annually for meeting roughly 20 per cent. of the credit requirements of the rural areas.

The scheme is designed to provide for the formation of large-sized primary societies, establishment of rural banks and opening of new marketing societies in areas not covered at present. Attention is paid also to strengthen existing agricultural credit societies. The tentative plan contemplates a progressive increase in short-term, medium-term and long-term agricultural credit so that the target of Rs. 15 crores will be reached by the final year of the Plan period.

On the side of agricultural marketing, provision is made for the construction of godowns, and the setting up of processing plants such as rice-hullers, groundnut decorticators, cotton gins, oil mills, etc. Necessary funds both by way of subsidy and loan will be provided for the district co-operative central stores (which will function as marketing societies as well) and the primary marketing societies for enabling them to undertake the construction of warehouses. Provision is also made for starting new training institutes and a co-operative training college in the State.

The aforesaid programme is modelled on the main recommendations of the Rural Credit Survey Committee appointed by the Reserve Bank of India. As such, it is bound to evoke the support of the Central Planning Commission and the authorities in charge of organising expansion of rural credit in the country on an integrated institutional basis.

INVESTMENTS ABROAD BY AMERICAN FIRMS

Direct investment by American firms in foreign countries has been running recently at about $1½ billion a year, but show little tendency to rise. About half of this represents the reinvestment of overseas earnings. Of the other $670 million of net outflow in 1954, $412 million went to Canada and $82 million to Latin American countries. In 1954, American firms risked only $134 million in the whole of Africa, Asia and Australasia and, if the pattern of 1953 continued, three-quarters of this would be from American oil companies.

The investment abroad of private American investors and investment companies rose from a net repatriation of $178 million in 1953 to a net outflow of $262 million in 1954.

ROLE OF WOOL IN WORLD FIBRE ECONOMY

PROSPECTS APPEAR BASICALLY SOUND

IN view of the growing competition in the world textile fibre trade among the various types of fibres, it will be interesting to take stock of the factors that influence the outlook for wool. The past three decades have witnessed a remarkable development of man-made fibres, mainly rayon and acetate. The world total output of rayon alone is now about 50 per cent. more than wool. The percentage share of wool in the world textile fibre market has gone down from 20 in 1920 to 11 at present, while that of rayon (and acetate) yarn and other man-made fibres now stands at 18 and 2, respectively, as against *nil* in 1920.

After about two decades, rayon is now well-established in the fibre market. A large variety of newer man-made fibres—the so-called "wonder fibres"—has entered the field in recent years. These include terylene, dacron, nylon, acrilon, ardil and vicara. Industries established at considerable capital cost are now producing these fibres in the U.K., the U.S. and on the Continent. The fibres are being used for a multitude of end-uses. Many claims are being made for them, some of which have decided advantages, though they are by no means one-sided. The fibres may in a sense be wonder fibres, but wool is itself a very marvellous fibre. Some of the synthetic fibres are already well established and apparently giving satisfactory performance according to their specific uses, although time alone can tell whether many of the claims made for the properties of synthetic fibres are justified.

Wool Consumption

In one respect at least, it is certain that the claim made on behalf of man-made fibres is not wholly correct. That claim is that the synthetic fibres will drive wool out of the fibre market. Wool is invincible, for the total wool consumption has not only been maintained but actually increased, though the development of other fibres has prevented the rise in wool consumption being as large as it might otherwise have been. How else can one explain, for instance, the steady improvement in world wool production. The quality of wool expected to be actually produced during 1954-55 amounts to 4,450 million lbs. (greasy), as against 4,402 million lbs. in the previous season and 3,821 million lbs. before the war (average for the years 1934-38).

Incidentally, it may be noted that the bulk of the total world wool output—50 per cent., to be precise—is accounted for by crossbred wool. The percentage shares of merino and carpet wools are 30 and 20. Australia is the largest individual wool producing country, its contribution to the world supply of wool being 30 per cent. About three-quarters of the Australian wool clip is merino wool and the balance is crossbred wool. This country accounts for about two-thirds of the world output of merino wool. The other main wool producing countries are New Zealand (nearly all crossbred wool), South Africa (mainly merino), Argentina, Uruguay, and the U.S. The first four countries are exporters of wool and, together with Australia, they account for nearly 60 per cent. of the total world production and for 85 to 90 per cent. of the total world trade in raw wool. The U.S. is a net importer of wool and the Government price support policy there is designed to augment the value of domestic output to at least 300 million lbs. (greasy) per annum, as against the present rate of about 230 million lbs.

Rise in Wool Output

The world wool output, it is calculated by experts, can eventually be raised by about 25 per cent., at an annual rate of probably not more than 2 per cent. With the major part of the long-term increase likely to come from Australia (producing almost exclusively apparel wools), the aggregate rise in world production of apparel wool will be somewhat higher than 25 per cent.

To revert to wool consumption. In recent years, the blending of man-made fibres with wool has produced many types of fabrics and apparel. Blending will continue to be widely practised by textile manufacturers as the normal technique. Although blending has thus reduced the proportion of wool utilised in some textile products, wool is now being used in the manufacture of products for which it was previously considered unsuitable. In fact, it appears that, in many respects, the new fibres are, instead of supplanting wool, widening its use through blending. Indications are that wool consumption will be at least maintained at the present level, or even possibly at a slightly higher rate, although its share in the total fibre consumption will continue to decrease. There is no doubt that the production of other fibres, particularly man-made fibres, will expand and that, with increased economies of larger-scale production, some reduction in their prices may be expected. At the present rate of output, however, the high capital investment in the man-made fibre industry appears to leave little room for a downward revision in prices, thereby limiting the scope for competition with wool.

Publicity and Research

In order to boost consumption of their products, the producers of man-made fibres are engaging in extensive publicity and research programmes. they are supplying textile manufacturers with abundant scientific data covering the composition and performance of the fibres concerned. This is a challenge which has to be met by the wool industry if it is to prevent any marked inroads upon their domain by producers of man-made fibres. The wool industry has already embarked upon an ambitious programme of extensive research covering investigations and observations of wool fibre, its structure and performance, woollen textile manufacture, and techniques of wool production. The Commonwealth Scientific and Industrial Research Organisation, the Universities, the Departments of Agriculture, and the wool industry itself are all working on specific aspects of wool production and utilisation. The achievements of such research over the last decade have been as spectacular in their own way as those of the man-made fibres. Of recent special interest have been the moth-proofing and shrink-proofing of wool, the successful myxamatosis campaign against rabbits, the discoveries in the field of trace element deficiencies and improved methods of pasture control and development.

All things considered, the short- and long-term prospects for wool seem to be basically sound. Nevertheless, it is not unreasonable to anticipate quantitative marketing problems, what with the overall market for fibres steadily expanding, as world population and incomes rise (at least at a rate comparable with the rate at which wool production may be expected to increase). As the Commonwealth Bureau of Agricultural Economics recently stated, "competition from a steadily increasing supply of synthetic fibres is likely to curb any sharp upward movement of wool prices, rather than to provide any obstacles to the absorption of annual wool production."

It is clear from the above account that the future demand for wool will undoubtedly be influenced mainly by its capacity to compete with man-made fibres in the matter of price. The expansion of the wool textile industry in the past was held back not so much by competition from man-made fibres as from the limited supply of wool. But now that wool production has improved, the supply problem is not the main one. The main determining factor is price. If the price of wool is reasonable, as compared with other textile fibres, this animal fibre should be able to hold the field with little difficulty.

COURTAULDS' NEW RESEARCH LABORATORY

The British firm which pioneered the manufacture of textile yarns by the viscose process (rayons) and today claims to be, with its associated companies, the largest producer in the world —Courtaulds Ltd.—has just opened a new research laboratory at Coventry with the aim of improving the properties of existing yarns and discovering new man-made fibres whilst developing better methods of manufacture. Viscose was discovered over 50 years ago by three British chemists. The commercial production of viscose rayon was started by Courtaulds Ltd. at Coventry in 1904. Today about 80 per cent. of the annual world output of over 4,000,000,000 lbs. of man-made fibres is produced by the viscose process. Buildings, equipment and pilot plant at the new laboratory represent one of the major projects in the post-war expansion plan of the firm.

Samples of special fibres are made in the pilot plant. The principal raw material—cellulose in the form of highly refined wood-pulp—is fed in at one end of the plant and is converted, by a series of chemical processes, into cellulose xanthate. This is dissolved to form a thick syrupy liquid, known as viscose, which is finally coagulated and changed back to pure cellulose in fibrous form. The production method is flexible and fibres having a wide variety of properties can be obtained. Apart from trying to develop new fibres with original features, efforts are constantly being made by Courtaulds to improve man-made fibres by giving them more natural qualities so that they can be readily used by conventional spinning and other textile machinery.

"PIRACY" OF BRITISH TEXTILE DESIGNS

Two vital proposals for preventing "piracy" of British textile designs by Japanese firms were put forward by the U.K. textile mission (led by Mr. T. Gray Hill, Chairman of the Manchester Chamber of Commerce Textile Designs and Trade Marks Committee) during its recent visit to Japan. First, Japanese exporters should be obliged to produce a certificate from the printer of the original design, in addition to written permission from the design owner. Secondly, as regards orders from abroad, based on paper design, the Japanese should, when it is impossible to know whether the design is an imitation or original, suspend trading with the foreign buyer, if the design were later discovered to be a copy. The Japanese textile interests are reported to have accepted the second proposal but have not committed themselves on the first. They have, however, agreed to submit the proposal to their constituent organisations. The British delegation regards the first proposal as a vital point.

During the discussions between the representatives of the British and Japanese textile industries, there was full agreement on the basic principle that "copying of an existing textile design which belonged to someone else, whether registered or not, was most undesirable and should not be countenanced." The Japanese representatives explained the steps that Japan had already taken to prevent "piracy" of textile patterns. Particular mention was made of the setting up of a textile colour design centre at Osaka and the adoption of enforcement procedures by the Japanese Cotton Textile Exporters' Association.

EXCISE ON POWERLOOMS

With effect from 18th May, 1953, the scope for the applicability of excise duty on the powerloom industry has been widened by bringing within it weaving units having more than four looms, in addition to the composite units. This decision of the Central Government is a sequel to the recommendation made by the Taxation Enquiry Commission. Accordingly, a duty of Rs. 18 per shift per loom is levied on looms exceeding four but not nine, Rs. 20 in respect of looms exceeding nine but not 24, and Rs. 22-8 on looms exceeding 24.

The above decision has, as is only to be expected, evoked a strong protest from the powerloom cloth producers. The levy, it is pointed out, has been imposed at a time when the industry is facing a critical time. To quote one report: "The industry had to switch over to the production of white cloth, as the output of saris has been reserved for handlooms. Now the excise duty will force several units to close down, with the result that the unemployment situation will further worsen. The industry is not in a position to bear the incidence of excise duty. It is, therefore, urged that the Government should reconsider the position "in order to enable the industry to survive." It is stated that there are nearly 150 factories using powerlooms in Bombay State alone. These are concentrated mainly in Maharashtra and the Deccan, in centres such as Malegaon, Ichalkaranji and Sangli.

EGYPTIAN COTTON

Supplies of cotton in Egypt would appear to be very much more comfortable than as originally forecast. The final official estimate of the Egyptian cotton crop for 1954-55, for instance, places the aggregate output at 7,567,000 cantars, which compares very favourably with 6,917,000 cantars in the previous season, representing an increase of more than 9 per cent. The bulk of the improvement is accounted for by medium-staple cotton. The long and extra long-staple varieties are slightly higher than in the 1953-54 crop.

The rise in cotton supplies as noted above has, however, not been accompanied by a corresponding increase in exports which have actually suffered a sharp fall. Thus, the quantity of cotton exported from Egypt during the period 1st September, 1954, to 30th April, 1955, was only 450,202 bales, as against 679,523 bales in the same period last year. A substantial decline has occurred in the offtake by Lancashire spinners which during the aforesaid period aggregated only 30,791 bales, as against 107,590 bales a year before. The Continental millowners have also reduced their purchases from 355,044 bales to 253,402 bales. The total offtake by India, China and Japan has also been slightly lower at 137,006 bales, as also by the U.S. at 29,003 bales.

JAPAN AND FRANCE CUT COTTON IMPORTS

On Wednesday last week, the Japanese Ministry of Trade announced suspension of allocation of foreign exchange for imports of raw cotton. The measure is intended to reduce raw cotton imports in the current financial year to 1.85 million bales, as against the original estimate of 1.95 million bales. As a result of this decision, the monthly rate of output of cotton yarn is expected to be lowered to about 165,000 bales, as compared with last year's monthly average of 197,000 bales. In order to enforce the decision effectively, the Ministry has limited mills' operation to 16 looms per day with seven holidays per month and has threatened to penalise those units which violate this stipulation by reducing raw cotton allocations to them.

Japan is not the only country which has curtailed imports of cotton. France, too, is said to have decided to reduce cotton imports. It is reported that the U.K. also is contemplating to fix quotas in respect of cotton imports from non-dollar areas.

LABOUR PARTY'S COTTON PROGRAMME

LIVERPOOL MARKET COMPLETES A YEAR OF FREE TRADING

From Our Own Correspondent

MANCHESTER, *17th May*

ALTHOUGH Lancashire cotton textile leaders can take little or no positive action towards a solution of the industry's problems until a new Parliament assembles, the rumblings of discontent show few signs of abating. As a matter of policy, with a general election approaching, the trade unions and Labour Party candidates will exploit to the full the undoubtedly serious position existing in Lancashire and the Conservative Government's alleged failure to adopt any effective measures to alleviate the situation. Lancashire has 15 or 16 marginal seats and the industry may well be a vital election issue to those in any way connected with cotton. It is, perhaps, a yardstick of the widespread concern abroad in the industry, however, that the employers, who might logically be expected to hold Conservative sympathies, are keeping attention focussed on Lancashire's problems, whether, by so doing, they embarrass the Conservatives or not.

MANCHESTER LETTER

The Central Committee of the Cotton Spinners and Manufacturers' Association, which represents owners of 1,000 cotton weaving mills, discussed the attitude of the Government towards the cotton industry at a meeting in Manchester last week. The Chairman, Mr. Eric W. Cockcroft, issued a statement afterwards which announced that the Committee was "seriously perturbed" at the present situation. His statement added: "We are deeply disappointed at the complete lack of any Government action with regard to imports of cloth into this country. It must be strongly emphasised that this importation is the basic problem of the industry and was the essential point stressed in all representations to the Government." The Committee announced its intention of summoning another meeting in the near future to consider what further action can be taken.

Policy-making

Policy-making at a time like the present, with an election only a few days away, can be an exhilarating pastime for politicians. Whether the programmes submitted so confidently to an unsuspecting public can, in fact, be carried through by legislation is not always easy to predict. In any case, it is far simpler to submit proposals when freed of the cares of office than to put them into practice at a later date.

Dissatisfaction there may have been among many Lancashire traders with the last Government's attitude towards the complicated problems facing the cotton industry, but it is by no means certain that the measures proposed by the Labour Party would meet with any greater support. The manifesto giving the Socialist policy for cotton may offer protection against unfair competition and assert: "Labour has not written off the cotton industry." But the suggestions put forward do not go into enough detail about how the trade would receive assistance.

The Conservative Government has made it clear that wider economic considerations make it impossible to restrict arrivals of foreign cloth, especially from the Commonwealth, into Britain. The Labour Party proposes the establishment of a trading commission to purchase centrally all imported yarn and piecegoods, with power to restrict the volume of goods arriving on a basis of unfair competition.

Shadowy Long-term Projects

This principle would, perhaps, be supported by spinners and manufacturers, but merchants and finishers would object strongly to interference with their liberty in this way. Later attempts to negotiate with the Indian Government and obtain modifications of G.A.T.T. are shadowy long-term projects.

Socialist doctrine has ever believed in the power of centralised purchasing and it is not surprising that the re-establishment of the Raw Cotton Commission is planned should the Labour Party be returned to power. No inkling is given as to whether private merchants would still be permitted to trade, the main reason for the revival of the Commission being "to revive long-term contracts with Commonwealth cotton growers."

The policy statement regards this as "an essential measure to reduce Lancashire's heavy dependence on American cotton and to ease the problems that American price policy have brought." It is difficult to see how Lancashire, or any other consuming country, can ignore the supplies of cotton always available in the United States or the dominating influence of American cotton prices on the world level of values. The Raw Cotton Commission made a half-hearted attempt to fix its prices without taking notice of producing countries at an early stage in its career, but it soon found it necessary to reflect the variations in New York as a basis for quotations.

A Year of Freedom

Twelve months ago, the reopening of the Liverpool cotton futures market was being heralded with considerable enthusiasm in many sections of the trade and with hidden forebodings in other directions. Considerations of policy were much to the fore in the views expressed as to the success of the venture and even now a good deal of the heat arising from discussions on the market is based on political ideas.

It must be admitted at the outset that the transition to full-scale private trading after so many years of controlled and semi-Government-sponsored purchasing was effected with remarkable smoothness. No one in the trade anticipated that the market would be conducted on a broad basis in its early stages, particularly as it was restricted to an American contract only. Unfortunately, the hope that its influence would widen as the months went by has not been fulfilled and problems confronting raw cotton merchants as well as spinners have multiplied.

It is easy to offer destructive criticism without giving suitable assistance, but it cannot be denied that the Liverpool market, as it now stands, has not lived up to the expectations of those who supported its revival. The narrowness of its scope has reacted against its importance and there has been a tendency to use the New York futures market to a much greater degree.

Liverpool interests will no doubt attribute this trend to the continued basing of yarn prices on futures quotations in New York, but, particularly during the past two or three months, the irregular movement of prices in Liverpool has deterred spinners from operating in the market. It must also be remembered that, since its restoration, the Lancashire cotton trade as a whole has been passing through a phase of declining order books, with the natural disinclination of spinners to build up supplies of raw cotton.

Clearance of Futures Contracts

As an indication of the amount of business recorded in the Liverpool market since its reopening, the following table shows the number of futures contracts cleared by the Liverpool Cotton Clearing Association each month and the daily average of transactions:

(In bales)

		Total	*Daily average*
	1954		
May, June	.. ..	633,400	10,920
July ..	.. ..	553,200	12,573
August	.. ..	450,000	10,714
September	.. ..	569,800	12,950
October	.. ..	382,200	9,100
November	.. ..	503,800	11,405
December	.. ..	485,400	11,032
	1955		
January	.. ..	597,800	14,945
February	.. ..	527,200	13,872
March	.. ..	903,400	19,639
April	.. ..	710,400	18,695

When facilities were offered to cotton spinning firms to obtain membership of the Liverpool Cotton Association, it was suggested that this would result in the bigger combines arranging to import most of their supplies direct. This prophesy has been fully borne out and a fair proportion of the cotton reaching this country is now being obtained without utilising the services of merchants on this side. This, in turn, has kept the quantity of spot stocks much lower than was originally expected and supplies available for spinners at short notice are not at all plentiful.

One of the main complaints voiced by spinners about the revived market has been the absence of a suitable long-staple contract. Talks have taken place in this country and in Egypt on the subject and the establishment of such a contract was promised early this year. The fine spinning trade is still waiting, somewhat impatiently, for action.

It has often been said that it is far easier to destroy than to rebuild, and, certainly, in the case of the Liverpool market, this has been amply illustrated. Among individual spinners, there is much dissatisfaction at what are regarded as the lack of facilities to cover yarn orders effectively. Such a controversial issue clearly leads to conflicting opinions and often strong views. Should political changes occur at the end of this month it is likely that readjustments in cotton purchasing policy will follow. In the meantime, there is by no means unanimity in Lancashire on the question.

Keeping Faith

A great deal of attention is devoted to matters of price when foreign competition is being considered, but there is a tendency in some quarters to overlook the fact that quality standards too are of vital importance. Lancashire traders are sometimes accustomed to assume that local quality goods are automatically the best and their views are coloured accordingly.

Not many months ago, it was reported that firms in New Zealand particularly were complaining about the faults found in Lancashire fabrics and official action was taken through trade organisations. Lately, there has been a revival of such complaints with special emphasis on imperfect shirtings. Individual instances cannot be avoided where sub-standard goods are shipped abroad, but it is extremely discouraging to learn that complaints of this kind are fairly widespread.

More particularly, foreign buyers can now compare local products with goods sent from other countries, including Japan, Germany and the United States. Rivalry between various manufacturing countries is becoming progressively keener and lapses on Lancashire's part will not be forgiven, even in Commonwealth markets, which have common ties with Britain. Many customers in such outlets would be prepared to pay slightly higher prices for British goods, if they could be assured that the quality would be at least equal to those of competing nations. From certain accounts, it would appear that this guarantee no longer holds good.

In the immediate post-war years, Lancashire was flooded with demand from abroad. Every effort was made to raise production and, in the process, some of the labour secured for the mills was not capable of producing cloth up to former standards. Now, however, conditions are so altered that there can be no excuse for passing imperfect fabrics. Trade organisations can do little but urge greater care in this connection and it remains up to the individual firm to keep faith with its customers.

An appeal along these lines was lately made by Mr. W. T. Winterbottom, the newly-elected President of the Textile Institute, when he urged the industry to increase efficiency but not to sacrifice quality. The responsibility of the technologist, he said, was to achieve increased production and better quality simultaneously.

Foreign Yarn Supplies

An interesting feature of trade in cotton yarns produced in this country has been the steadiness of export business procured during the past 15 months. Since the beginning of 1954, the monthly variation in exports of yarn has been extraordinarily narrow, ranging from 2,950,000 lbs. to slightly above 4,000,000 lbs. In the first three months of this year, the variation has been as small as 30,000 lbs., average shipments being just over 3,500,000 lbs. each month. Arrivals of foreign supplies, although highly competitive, have not been on quite the same scale as in the cloth section. To the end of March, they aggregated 3,525,000 lbs.—equivalent to one month's exports from this country.

It is not only in cloth, however, that foreign producers are rivalling Lancashire mills. Latest reports from Egypt, for example, indicate that a drive is being made to achieve larger shipments of yarn overseas. Cotton yarn exports in January this year represented nearly 4½ per cent. of the value of all overseas trade obtained by Egypt, the highest proportion yet achieved. By volume, these shipments of Egyptian yarn were 2,755,000 lbs. not far below the level attained by Lancashire. The productive capacity of the 28 spinning plants in Egypt is estimated at about 145,600,000 lbs. annually, of which about 110,000,000 lbs. are used by the local mills.—*All Rights Reserved.*

THE BRITISH PETROLEUM COMPANY, LIMITED

RECORD SALES IN 1954

LORD STRATHALMOND'S STATEMENT

THE Forty-sixth Annual General Meeting of The British Petroleum Company, Limited, will be held on 9th June in London, England.

The following is an extract from the circulated statement by the Chairman, the Rt. Hon. Lord Strathalmond, C.B.E., LL.D.:

"In accordance with the resolutions approved at the Extraordinary General Meeting of 16th December, 1954, this is your Company's first annual report and accounts to appear under its new name, The British Petroleum Company, Limited.

"The consolidated trading profit and other income for 1954 before providing for depreciation was £75,348,941, as compared with £63,883,828 for 1953. From this figure provision has been made of £30,406,091 for depreciation, the corresponding figure for 1953 being £20,058,243.

"After providing for debenture interest and £19,592,977 for taxation on profits, the amount available for reserves and dividends is £23,962,764, as compared with £24,382,850 for 1953.

"Your Directors have placed £5,550,000 to the general reserve, and have recommended a final dividend on the ordinary stock of 14 per cent., making a total for the year of 15 per cent. on the capital as increased by the capitalisation, last December, of part of the general reserve.

"Total capital expenditure during 1954 was approximately £55,000,000 including the following main items: refineries £32,500,000, tankers £9,000,000, oil exploration interests £4,500,000, marketing interests £8,000,000.

Production

"Crude oil production in Kuwait, Iraq, and Qatar was again increased in 1954, when our off-take from those sources totalled some 36,000,000 tons, as compared with 32,000,000 in 1953. As from 29th October, when the agreement between Iran and the Consortium companies took effect, to the end of 1954, our liftings from Iran were 440,000 tons, about one-third in crude oil and the balance in refined products. Our current liftings from Iran are at the rate of 5,000,000 tons per annum, including 2,000,000 tons of crude oil.

"In the United Kingdom, our crude oil production was 59,000 tons, as compared with 54,600 tons in 1953.

"Exploration operations were increased during the year in the various overseas territories in which we have interests.

Refining

"Our total refinery throughput in 1954, at 24,000,000 tons, was 4,000,000 tons greater than in 1953. Principal contributors to this increase were the new Aden refinery, which came into operation in July, 1954, and the Kent and Hamburg refineries. On 1st February last our new Kwinana refinery in Western Australia was commissioned; that addition, together with the development of our other refining installations and interests, should achieve the figure of 30,000,000 tons which I mentioned last year as our expected total refining capacity by the end of this year.

"In Great Britain, throughput in 1954 of our four refineries totalled 10,563,000 tons, as against 9,327,000 tons in 1953.

"The British Tanker Company's fleet now consists of 148 ships totalling 2,063,000 deadweight tons, as against 142 ships of 1,917,000 deadweight tons at this time last year.

Distribution and Sales

"World demand for petroleum products, excluding Russia and her satellites, increased by about 5 per cent. in 1954, following the same trend as in the previous two years. This world figure would have been greater but for the slight business recession in the United States where the increase was limited to 2 per cent. In the Eastern Hemisphere, wherein lies the bulk of your Company's interests, the increase in oil consumption in a year of generally high business activity was 11 per cent. above the 1953 level, as compared with increases of about 8 per cent. in each of the two preceding years. This gain in Eastern Hemisphere trade, representing some 18 million tons, was matched by increased output of Middle East crude oil—particularly in Kuwait and Saudi Arabia.

"The growth in refinery capacity in the Eastern Hemisphere last year of 24 million tons was more than adequate to cover the increased demand. About half of this increased capacity, including our new refinery at Aden, was situated east of Suez. With the commissioning of Kwinana refinery in Western Australia we have now reached the position where the output of our new refineries east of Suez together with our share of products from Iran has eliminated the long back haul from European refineries that was such an abnormal feature of our operations over the previous two years.

"The Group's sales of crude oil and refined products in 1954 were at a record level of 41 million tons, about one million tons greater than the previous peak figure achieved in 1950, the last year in which we were fully operating in Iran. Sales in 1954 represented an increase of nearly four million tons, or 10½ per cent. over 1953.

Marketing Outlets Increased

"During the year, the Group acquired the marketing interests in Europe and Africa of the Atlantic Refining Company of Philadelphia. This acquisition, in addition to increasing our outlets in certain markets in which we are already established, provided us with an entry to areas new to the B.P. Group including West Africa and Portugal.

"In India, Pakistan, the Middle East, South and East Africa and other markets bordering the Indian Ocean our outlet has continued to expand satisfactorily.

"Our sales of aviation spirit have continued to expand, and the B.P. Aviation Service has again been entrusted with the task of providing in whole or part for the fuelling of many of the major international air lines, the armed services, and other flight operations in the countries covered by its growing network.

"The B.P. International Oil Bunkering Service continued to provide an important part of world bunker supplies.

"Sales of our branded lubricants show a very satisfactory increase compared with 1953, both in this country and overseas, and our largely increased production is all being disposed of through our own marketing outlets.

"In the United Kingdom, the continued upward trend in industrial activity was reflected in a strong demand for petroleum products in 1954. Sales of fuel oil showed a marked expansion and we are being called upon to contribute in an increasing degree to the country's industrial energy requirements.

"The work of our research and development establishments continues to maintain and enhance the Company's reputation for products of the highest quality and performance as well as to keep the B.P. Group abreast of its competitors in the continually evolving techniques of finding, producing, transporting, and refining crude oils."

turning oil into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

INTENSIFYING CANE DEVELOPMENT

SOME USEFUL SUGGESTIONS OF AN EXPERT

ALTHOUGH the Indian sugar industry has had over 20 years of tariff protection, the conditions actually obtaining in the industry are still not so satisfactory as they should be. Not only has the output of white sugar fluctuated rather widely, but the prices of sugar continue to remain at high levels. This unsatisfactory state of affairs is due to the fact that progress in the primary stage of sugar industry—that is, cultivation of cane—has not kept pace with that in the secondary stage—that is, manufacture of sugar—as is evident from the low per-acre yield of sugarcane and the poor sucrose-content in cane. The existence of this state of affairs is a sad commentary on the efficiency of State Governments. While they have not hesitated to collect crores and crores of rupees by way of cess on cane crushed by the factories at a stiff rate, they have displayed little enthusiasm and diligence for bringing about an increase in the quality of cane, as well as in the yield per acre, for which purpose the cess has been imposed.

It is gratifying to find that the Central Government has decided not to tolerate this state of affairs any longer. The Joint Committee of the Development Council for Sugar Industry and the Indian Central Sugarcane Committee (Chairman: Mr. P. A. Gopalkrishnan, I.C.S., Joint Secretary, Union Food and Agriculture Ministry), for instance, proposes to impart more vigour to the cane development operations. At its meeting held in New Delhi recently, the Joint Committee made the following notable recommendations:

(1) Wherever possible, every sugar factory should set up a 200-acre farm for growing sugarcane for seed purposes and for undertaking varietal and manurial trials;

(2) In areas where land is not available for the purpose, factories should encourage and assist progressive growers in maintaining small farms for demonstration and supplying seed;

(3) Government should procure for experimentation and demonstration light agricultural machinery used on sugarcane farms in Australia and other countries; machinery found suitable for use under Indian conditions should be popularised;

(4) transport facilities should be improved by constructing roads in the factory areas;

(5) irrigation facilities should be increased by sinking tube wells;

(6) Government should take steps to maintain *gur* prices at remunerative levels; and

(7) the need for spending the entire cane cess on sugarcane development work should be emphasised on the State Governments.

Mills and Cane Development Work

The above recommendations are based on an interesting and valuable report submitted by Mr. R. C. Srivastava, a well-known sugar expert of India and formerly Director of Indian Institute of Sugar Technology. In this report, Mr. Srivastava has emphasised that, in order to increase production of sugar, the first thing necessary is to step up production of good quality sugarcane. For the achievement of this objective, he suggests that, on the lines of *Shramdan*, the sugar millowners should directly participate in cane development work, especially in their own zones. The sugar mills should maintain complete staff for development work who should work on lines approved by the Cane Development Departments of State Governments. The officers in the employment of the factories, the technical staff, in particular, who remain idle during the off season, must supervise this work; they should not leave it to the inferior staff, such as the *kamdars*. If each factory has a few good agricultural men who constantly go round and supervise the work actually done in the fields, good results, it is pointed out, are sure to follow.

Another important suggestion put forward by Mr. Srivastava relates to the supply of manures and fertilisers—such as oilcakes and ammonium sulphate—to factories at concessional rates. These should be distributed to cane growers where possible as advances to be repaid in the form of cane supplies during the next season. For seed cane, the factories may be helped in purchasing about 200 acres of land each on which they can grow seed cane and also conduct varietal and manurial trials. Where such land cannot be had, the next best thing will be to arrange with some of the bigger and better types of cultivators to grow seed cane under the directions of the factory. This should not be difficult, since seed cane generally yields more profit than ordinary cane.

The implementation of the aforesaid suggestions involves some expenditure. In the present depressed state of the sugar industry, the factories may not be able to find necessary finance. In order to overcome this difficulty, the factories undertaking such work should, it is opined, draw up in advance annual budgets of expenditure and programme of work which must be scrutinised and approved of by the cane development departments. The work should then be financed by the State Governments out of the cane cess revenues subject to two conditions. First, proper accounts must be maintained and these are to be open for inspection by Government inspectors and auditors. Secondly, the total amount paid to any factory should not exceed 50 per cent. of the cess paid by it.

As regards the cane development work carried out by the Governments, the existing system may be confined, as at present, since the total expenditure on it is, after all, very nominal. The Government can help particularly in providing irrigation facilities and in maintaining roads in good condition, as both these are outside the scope of the work of factories. The Governments may concentrate more on development of areas, where cane is grown for *gur* and *khandsari* manufacture.

Transport of Cane

Mr. Srivastava refers next to the problem of transporting cane from the interior fields to the factories. According to him, where two or three sugar mills are situated close to each other, light railways (2-ft. gauge) can be laid down and worked jointly. The usual method of working these railways is to set up weigh-bridges and purchasing centres for cane in the important growing areas in the interior which are not easily accessible from the factories or from railway stations. The cultivators' cane is weighed and paid for at these purchasing centres and loaded directly into waiting trucks of the railways. The locomotive comes at fixed intervals and takes all filled trucks from different purchasing depots direct to the factories. This system is expected to be advantageous to both cultivators and factories. Thus, while the former will get transport almost at their field and will not have to use their own or hired bullock carts, the latter will gain by getting assured supplies of cane and that in a much fresher condition, as the time taken for transporting it will be greatly reduced.

As in the case of cane development work, so also the construction of light railways entail expenditure. The cost of a 20-mile line with trucks and 2 or 3 locomotives is estimated at Rs. 8 to Rs. 10 lakhs. There are not many factories at present which can raise this much capital. The solution proposed by Mr. Srivastava for this difficulty is that the Industrial Finance Corporation should give loans to the factories which can be repaid by them over a period of years.

Mr. Srivastava has put forward an alternative scheme also for ensuring cheap and quick transport of cane to factories, namely, use of tractors and trailers. An idea of the approximate working cost for haulage of cane under this scheme can be had from the following figures:

	Rs.	a.	p.
Working cost per hour, inclusive of cost of tractor, and trailers, and running cost	13	10	0
Cost per mile for carrying 10-ton load, 2 trailers	1	7	5
Cost per mile per maund on the basis of a load of 280 maunds	0	0	1
Cost per mile per maund on the basis of 1 trailer carrying 140 maunds	0	0	2

If this alternative method of transporting cane by using tractors and trailers is followed, it will be cheaper in terms of initial capital cost but slightly more costly in running expenses. An additional advantage of this method will be that, by having a few additional fittings, the tractors can also be used for shunting railway wagons and also for working hoists for loading and unloading sugarcane in the trucks.

The sugarcane transported by light railway or tractors and trailers will be much fresher. Indeed, it is expected to raise the recovery of sugar by 0.5 per cent., which, in turn, will lower the cost of production of sugar. When cane is purchased and paid for in the growing areas in the interior and the means of transport is provided by the factory (in the shape of light railway), the price paid for cane at the purchasing centre can be reduced, according to Mr. Srivastava, below the minimum price fixed by the Central Government to the extent of one pie per maund per mile, subject to a maximum of As. 3. As the expenses of running the light railway are very much lower than this, the net cost of cane to the factory will be less, thereby lowering the cost of sugar manufacture. The cost can further be decreased, avers the expert, by the use of power-driven hoists (by means of small oil engines or by tractors) for loading cane into trucks at the purchasing depots. If suitable chain slings are placed under the cane in the trucks, they will permit quick unloading at the factory by means of another similar hoist. This will, we are told, result in economy at the cane carrier and quick turn-round of trucks. Shunting of cane wagons by means of tractors by making suitable fittings will also go some way towards lowering the cost of sugar manufacture.

KORBA COALFIELDS IN M.P.

CENTRE DECIDES TO DEVELOP THEM

THE Government of India has decided to develop the Korba coalfields, situated in Madhya Pradesh, itself. This decision sets at rest all controversy regarding the question whether the exploitation of the Korba coalfields should be undertaken by the private or the public sector and, if the latter, whether by the Central or the State Government. There was at one time a proposal that the State Government should develop the coalfields, while the Central Government could work a section of it (an area of ten miles).

It is not clear whether the present decision of the Central Government represents the first step towards its proposal to nationalise by stages all new coal prospecting and mining. It would, however, appear that the Centre is generally against any proposal relating to development of coalfields by the State Governments, let alone private enterprise, as it is of the view that it would be contrary to the general policy that the Centre should assume responsibility for developing all large industries and industries of national, as distinct from regional, and strategic importance. It is, however, willing to permit the States concerned to hold a third of the shares in the Central enterprises. The development of coalfields will be carried out by the Production Ministry.

The Central Government's move to develop the Korba coalfields as early as possible forms part of the scheme for erecting an integrated iron and steel plant at Bilhai, in co-operation with the U.S.S.R. It is said that the preliminary report of the Soviet experts has stressed the need for immediate development of the Korba coalfields. It is not surprising that the Union Government wants to develop the said coalfields itself. The existing steel producers in the private sector, namely, the Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd., themselves raise all the coal and coke needed by them. It is but logical, therefore, that the Government has decided that the Bilhai steel project should be self-sufficient in coal. Accordingly, no serious objection can be raised to its move. The only ground on which the Government's wisdom in undertaking this responsibility can be questioned is whether it can do the job efficiently. But this objection holds good in regard to the Government's adventure into the field of steel industry itself. Rightly or wrongly, the Government has decided to go ahead with the establishment of heavy industries on its own account and it is too late now to argue about these things. Nevertheless, one is tempted to pose this question. Burdened as it is already with too many responsibilities, would it not be wise on the part of the Government to entrust the task of raising coal to another agency that knows the job? The agency we have in mind is, of course, the private sector.

It is possible to argue that the Union Government has had plenty of experience in raising coal and that, thanks to the control exercised on the coal industry for well over a decade now, it knows all about coal. But has it obtained proficiency in either of these fields? Complaints against coal control have been numerous; these complaints, it is noteworthy, have emanated not only from producers of coal but also from consumers of this fuel. As for experience in raising coal, it is true that the Government has been operating the collieries belonging to the railways for a long time, but what are the results? Most disappointing, despite the preferential treatment accorded to it by way of allocation of wagons for transport of coal and the like. There was a severe drop in profit in the year 1953-54, the net profit for the year being no more than Rs. 1,35,163, as against Rs. 61,20,802 in the previous year, a drop of Rs. 59,85,639. Nor are their working conditions any better than those found in private collieries. If the Government has any sense of realism and if it really means what it professes, namely, that it does not want to introduce socialism on doctrinaire grounds, it must revise its decision and allow private enterprise to develop the coalfields for it. There is nothing in its Industrial Policy Resolution of 1948 which says that the Government must nationalise the coal industry after 1958. This policy statement lends itself to be stretched like India-rubber in whatever manner one likes.

This latest decision of the Central Government has increased the uncertainty regarding the future of the private sector engaged in this industry. The Government has not yet decided as to what it should do about the ownership of this important basic industry. It is needless to point out that, so long as this uncertainty lasts, an uncertainty heightened by making the question

CEYLON GOVERNMENT SUBSIDISES EXPORT OF TEA

NEW BID TO PREVENT FALL IN PRICES

THE Government of Ceylon has introduced a scheme of export subsidy to prevent tea prices from falling below Re. 1.50 per lb. with effect from the auctions which commenced on Monday, the 23rd inst. The broad outlines of the scheme were announced by the Prime Minister of Ceylon, Sir John Kotelawala, at a Press Conference in Colombo last week. The scheme was decided upon by the Government after a meeting which the Prime Minister had with tea producers, traders, shippers, brokers, members of Parliament and Ministers concerned with the tea industry. It appears that this latest scheme also does not enjoy the unanimous support of all the sections of the industry and trade.

Under the scheme, all teas which are catalogued and sold at auction as firsthand tea at a price below Re. 1.50 per lb. will receive, as an export subsidy, the difference between Re. 1.50 and the price realised. In other words, if the price realised was, say, Re. 1.30 per lb., the balance of 20 cents would be made good by the Government by way of subsidy. The Government has, however, decided that such subsidy would be subject to a maximum of 50 cents. Thus, if the price of tea realised falls below Re. 1 per lb., the balance of loss, that is, the loss in excess of 50 cents will have to be borne by producers or traders. Probably, the Ceylon Government feels that the price is not likely to go below Re. 1 per lb. at the auctions.

If any tea remains unsold at auctions, owing to lack of bids, but not due to withdrawals, the Ceylon Tea Controller will buy such teas at his discretion and on valuation. The Prime Minister said that, in view of the improvement in tea market of late, the Government did not expect that the expenditure on the subsidy would be much, nor that it would have to buy up lots of tea. But should the need arise, the Government, he said, would certainly go all out to meet its commitments under the scheme. The scheme is designed to help medium teas which were reported to be selling below costs of production, notwithstanding the Government trading as a measure of price support and restriction of the weekly catalogue at Colombo auctions to 5 million lbs.

This is the second time within four weeks that the Ceylon Government has come forward with a bold step to prevent the Island's tea industry from suffering serious losses on account of the falling prices. It may be recalled that on 27th April last, the Minister for Agriculture, Ceylon, announced the Government's decision to enter the market as a buyer in the interests of tea producers. At the same time, he announced the removal of the then existing quantitative restrictions on the export of tea to London auctions for a period of three months. The Government's latest decision to subsidise the export of tea so soon after its earlier decision to buy in the open market, obviously means that its first step to stem the downward trend in prices was not quite successful, though the subsequent removal of restrictions on tea exports to London has had some effect. It has been officially announced that at the last three weekly auctions in Colombo on 3rd, 10th and 17th May, the Ceylon Government's purchases amounted to no more than 133,000 lbs., 240,000 lbs. and 70,000 lbs., respectively. It is also learned that, following the removal of restrictions on exports to Britain, the Tea Controller of Ceylon issued licences to cover the export of 9 million lbs. between 1st May and 18th May. This compares with the total quantity of 21.3 million lbs. for which export licences to London were issued during the first four months of this year. The monthly totals were: January 3.9 million lbs., February 4.4 million lbs., March 6.2 million lbs. and April 6.8 million lbs. The larger export licences during the first three weeks of May is probably due to larger demand for Ceylon tea on account of the end of the North Indian season and the unattractive quality on offer in London. The quantity of tea that remained unsold in Colombo at the close of the third week of May amounted to 23.5 million lbs., as against 60 million lbs. at one time.

The weakness of the Colombo market, according to Sir John Kotelawala, was due only to one reason, namely, the practically complete absence of Australia, the largest buyer of Ceylonese tea, from the Colombo auctions for a period of nearly six weeks. Australia, it is reported, bought about 60 million lbs. of tea a year from Ceylon through the auctions, or about 1.2 million lbs. on an average per sale. The Prime Minister hopes that it will not be long before Australia re-entered the Ceylon market and bought at reasonable prices the medium teas which are now difficult to sell. As for the London market, the Prime Minister feels that there is every indication that the bottom has been reached and normal buying at reasonable prices will soon be a regular feature there.

The Ceylon Government's latest decision to subsidise export of tea has had a mixed reception in Colombo. Mr. E. W. Kannangara, Chairman of the Lowcountry Products Association, welcomed it, describing it as "the best evolved so far and quite reasonable." Mr. S. Pathmanathan, the previous Chairman of the above Association, however, expressed the view that it would lead to many abuses. Referring to the Prime Minister's hope that the medium teas would really when Australia re-entered the market, Mr. Pathmanathan said that it was too much of a risk to take and too dangerous to await. He added that two months from now, the markets would be flooded with Indian tea crops bearing a lesser export duty than Ceylon teas and that Australia would, therefore, prefer to buy Indian teas. There seems to be considerable force in this contention. But what sounds astonishing is that the Ceylon Government should have decided to give an export subsidy while subjecting the very same to a stiff export duty of Re. 1 per lb. The logic behind this action is incomprehensible.

INDIAN TEA PRODUCERS TO IMPROVE QUALITY

It is understood that the Indian Tea Association, the Indian Tea Planters' Association, Jalpaigurl and other tea producing associations in North East India have issued a special request to all their members to maintain and, where possible, improve the quality of the tea they produce. While in general brokers' reports have shown that standard of North India tea was even better in 1954 than in 1953, the producing Associations consider that it is now even more essential, in view of the lower prices that have recently prevailed in world markets, that particular attention to quality should be paid in the 1955 season, even if it results in some diminution of the total crop produced.

EXPORTS OF INDIAN TEA RISE

The quantity of North Indian tea exported from Calcutta during the month of April, 1955, amounted to about 5.07 million lbs., as compared with 3.92 million lbs. in the corresponding month of 1954. The total exports of North Indian tea during the year ended 31st March, 1955, amounted to 363.32 million lbs., as against 382.74 million lbs. in 1953-54. Shipments of tea from Cochin during the month of April amounted to 4.46 million lbs., as against 4.08 million lbs. in the corresponding month of the previous year, bringing the total shipments from January-April, 1955, to 19.37 million lbs., an increase of 1.86 million lbs. over the same period in 1954.

CORRESPONDENTS ALL OVER THE WORLD

CONSUMPTION OF TEA IN U.K. DECLINES

Imports of tea (net) for consumption in Britain during the first quarter of 1955 were about one-eighth less than in the same period of last year. At the end of April, stocks in warehouses stood some 40 per cent. higher than 12 months previously. This is revealed by the May, 1955 statistical summary just issued by the International Tea Committee in London. Thus, the U.K. tea imports (net) for consumption for the first three months of this year aggregated 119.65 million lbs., as compared with 134.88 million lbs. in the corresponding period of 1954, the figure for March, 1955 alone being 37.84 million lbs. as compared with 47.50 million lbs.

The summary quotes the following figures supplied to the International Tea Committee by the Tea Clearing House for stocks in London and provincial warehouses at the close of work on the last Friday in each month:

(In 000's lbs.)

	Stocks in warehouse	Stocks entered for Customs, but not yet received in warehouse
1954		
February	131,483	7,200
March	24,500	115,928
April	132,886	8,800
1955		
February	127,445	21,010
March	22,354	163,851
April	149,968	11,848

Tabulating the average prices fetched in the London auctions, the summary leaves several blank columns for weeks when no auctions were held. The last week of April is recorded as a blank, the last week quoted being that beginning on 18th April. Since the week beginning on 19th April, 1954, is also recorded as a blank, the figures given below are for the average buying bids for the weeks beginning 12th April, 1954; 26th April, 1954; and 18th April, 1955:

	12th April, 1954	26th April, 1954	18th April, 1955
	s. d.	s. d.	s. d.
Northern India..	4 8.6	4 8.6	4 10.2
Southern India..	4 10.3	4 9.2	4 10.3
Pakistan ..	4 7.1	4 6.9	4 7.2
Ceylon	4 11.6	4 11.8	5 2.3

The stocks of tea in the U.K. as on 13th May, 1955, aggregated 169.40 million lbs., an increase of 65.02 million lbs. over those on the corresponding date of 1954. This compares with a high of 180.95 million lbs. as on 22nd April, 1955.

WORLD RUBBER POSITION IN 1955

The International Rubber Study Group has estimated that the world output and consumption of natural rubber during 1955 will almost balance each other. The production is estimated at 1,845,000 tons and consumption at 1,830,000 tons, leaving a small surplus of 15,000 tons. This surplus compares with that of 35,000 tons in 1954, when output of natural rubber amounted to 1,802,500 tons, while consumption was no more than 1,767,500 tons.

The production of synthetic rubber in member countries of the International Rubber Study Group during the current year is estimated at 985,000 tons and consumption at about 955,000 tons, apart from the synthetic rubber produced in non-member countries. The surplus of estimated production over consumption of natural and synthetic rubber together will thus be 45,000 tons, which will be available for absorption into Governmental and commercial stocks.

The Natural Rubber Bureau of the U.S. has predicted that the U.S. consumption of new rubber during 1955 will be a record at 1.4 million long tons, of which natural rubber will account for 600,000 tons or 43 per cent. In 1954, it may be recalled, the consumption of natural rubber in the U.S. amounted to 595,000 tons out of a total of 1.23 million tons. If this consumption of natural rubber is to be maintained in 1956 also, according to the Bureau, its price should be fully competitive. The capacity of the U.S. synthetic rubber, excluding oil-extended rubbers, will reach 1.1 million tons in 1956. According to the U.S. Department of Commerce, the demand for synthetics in the U.S. will amount to 1.01 million tons by 1959, while consumption of natural rubber will decline to 450,000 tons.

RUBBER PRODUCTION IN INDIA

The output of rubber in India during the first four months of 1955 amounted to 5,740 tons, while consumption by manufacturers aggregated 8,911 tons. Stocks with estates and dealers as on 30th April, 1955, were estimated at 3,088 tons, while stocks with manufacturers as on that date were reported to be 2,961 tons. In 1954, it may be recalled, the total production of raw rubber in this country aggregated 21,493 tons and in 1953 it was 21,136 tons. The total consumption in 1954 was 25,487 tons, as against 22,373 tons in 1953.

DISQUIETING POSITION OF JUTE INDUSTRY

EXPORT ADVISORY COUNCIL PAYS LITTLE ATTENTION

PRESS reports on the proceedings of the Export Advisory Council's meeting held at New Delhi on the 22nd inst. do not indicate that the Council viewed the problems facing the jute industry with as much concern as the situation warranted. In fact, according to one version, there was no discussion at all on the present position of this industry, though it is stated that Mr. M. P. Birla, a leading jute millowner, emphasised the need for achieving self-sufficiency in raw jute as early as possible. Alluding to jute goods, he is reported to have stated that production had gone up by 33 per cent. in the last four months, while stocks had started accumulating with the mills. The situation required, according to him, careful watching both by the industry and the Government. In spite of these remarks of Mr. Birla, it is somewhat strange to note that the Council did not feel like going into the problems of the jute industry. Nor was the Council moved by the remarks of Mr. D. P. Karmarkar who, in the course of his address to the Council, clearly pointed out that the scope for further expansion of trade in jute goods, particularly on account of the increasing competition in world markets, was limited.

What is the reason for this indifference of the Council? Perhaps, the Council might have been guided by the official view which, according to Press reports, would appear to entertain an optimistic outlook for the industry. This complacency in Government circles at New Delhi may be traced to three factors, namely, (a) improved supply position of raw jute, (b) higher production and higher exports of jute goods in recent times, and (c) progress of modernisation of jute mills. It is worthwhile examining the position in all these respects to see to what extent official circles are right in coming to the conclusion they have done.

Raw Jute Supplies

To take the first one, namely, raw jute supplies. The official view is that there is now enough raw jute in India to meet the requirements of mills till the arrival of new crop to the market in two months' time. The condition of the new crop is stated to be satisfactory. The high prices for raw jute for some time past have acted as an incentive to farmers to grow more jute. There are, accordingly, expectations of good crop next year. Besides, the arrivals of raw jute in Calcutta and mill stations during the current season are considered, in official circles, to be better than those last year. And, despite the present increased rate of consumption of jute by mills, thanks to working 48 hours a week, instead of 42½ hours, last year, mills are well stocked with raw jute. Again, official circles draw pointed attention to the fact that there does not appear to be any particularly great demand for Pakistan jute at present, partly because there is enough supply of Indian jute and partly because of the price of Pakistan jute being relatively higher, as compared with Indian jute.

Few would disagree with the aforesaid views, attributed to official spokesmen, giving an overall picture of the supply position of raw jute. But they overlook certain practical issues which should be tackled forthwith. Mere abundant supplies of raw jute provide no panacea for the ills of the industry. The quality of jute produced in India is not of the superior type grown in East Pakistan and, if India is to compete on equal terms with other countries producing and exporting jute goods, it must import certain quantities of high grade jute from Pakistan. The latter variety of jute is also required for producing special fabrics in which India has specialised. Then there is the price factor. The cost of producing raw jute varies, it is stated, between Rs. 18 and Rs. 23 a maund, whereas in the Indian market it is quoted as high as Rs. 32 to Rs. 33 a maund. The high price of raw jute has crippled the competitive power of the industry abroad, with the result that it no longer enjoys the world monopoly which it once did. And, lastly, there is the question of inadequate transport facilities for the movement of jute from the jute-growing areas of Assam, West Bengal and Bihar to the mills in Calcutta. Dislocation of transport due to floods has been a hardy annual and so far no notable precautions seem to have been taken by the authorities to remove the bottleneck in the coming season. This bottleneck is found both in river and rail transport. This has encouraged speculation in jute futures which, by raising prices, acts adversely on both production and sales of jute goods. Unless these difficulties are overcome, it will be nothing but complacency to assume that the supply of raw jute has ceased to be a problem.

Output and Exports

Further, New Delhi seems to be feeling that, with higher production and improved exports, "the jute goods industry is now in a fairly satisfactory position." It admits, we are told, the continuation of competition from European manufacturers as well as the new industry in Pakistan, but, at the same time, hopes that the I.J.M.A., with the assistance of Government, will be able to succeed in its campaign for increasing the consumption of jute goods not only in the traditional lines but also by finding out new uses for jute products. In holding these views, the officials seem to be pinning their faith on overall position of output and exports, ignoring again the difficult situation in which the industry is finding itself at present. It is true that exports of jute goods have registered a marked rise from 778,000 tons valued at Rs. 114 crores in 1953-54 to 852,000 tons worth Rs. 124 crores in 1954-55. But this overall improvement should not be allowed to disguise a disquieting trend in stocks with jute mills, since December, 1954, as witness the table below:

	Tons
December 1954	69,729
January 1955	76,579
February 1955	83,102
March 1955	94,473
April 1955	103,354

Stocks Rise

It will be seen that during the five months ended April, 1955, stocks with mills have risen by 47 per cent. This accumulation in stocks has already given rise to rumours of a possible reduction in the hours of work of jute mills. If, unfortunately, the mills were to decide in favour of a reduction in working hours, nothing will be more injurious to their own long-term interest. It may provide a palliative for its present problems, but it will complicate its long-term problems. For it may mean conceding an advantage to the foreign competitor to march forward into the markets traditionally served by India. The remedy for accumulation of unsold stocks lies, therefore, not in curtailing production by reducing hours of work, but in taking steps which will increase the competitive capacity of Indian jute mills. The Government can assist the industry by abolishing the export duty on jute goods. There is no reason why it should not make this concession when it has often declared that it does not look upon export duties as a source of its revenue. The competitive strength which the abolition of export duty releases will certainly be such as to enable the industry to regain its lost market with a broad sweep. Until this is done, the chances of success of the sales campaign of the I.J.M.A. on any appreciable scale will be slender.

Rationalisation?

Another means by which the jute industry can be enabled to strengthen its capacity to compete with its confreres abroad is to facilitate modernisation of its equipment as speedily as physically possible. A Press report claims that, "during the first three months of this year alone, 22 mills were granted licences for importing modern high speed jute mill machinery worth about Rs. 4 crores." It is further reported that "a firm in Calcutta has also started the manufacture of high speed spinning frames (other than sacking weft)." These reports, of course, come as a revelation, for the strong opposition to rationalisation of the jute industry by an influencial section of the Congress Parliamentary Party, ever since a resolution supporting the introduction of rationalisation was passed last year by the Lok Sabha, has given rise to the impression that the Government may not implement this resolution. If the Press report referred to is correct, it seems that there has been a change for the better in the attitude of the Government towards this question. If that is so, the Government will do well to clarify the position by issuing a statement so that all misgivings regarding modernisation of jute industry may be laid to rest.

DUNDEE'S RECORD POSTWAR OUTPUT

With little physical expansion of plants and with but 23 per cent. increase in the labour force employed, the Dundee jute industry in 1954 produced 85 per cent. more than before the war. The record output last year is attributed to the deconcentration of production units after the war, the modernisation programme on which a sum of £6.75m. has been spent and the greater use made of capital equipment through an increase in shift working.

With the rise in production has come a rise in wages. Since 1939 the wage rates have gone up by 172 per cent. for male operatives and 200 per cent. for females.

WORLD OIL SITUATION

SPECTACULAR RISE IN OUTPUT

THE production of petrol and its products has been on the increase in recent years. Thus, the world production of petroleum and natural gas shot up to more than 700 million tons in 1954, a spectacular increase of about 28 million tons above the peak touched in 1953. The Middle East with an increase of 15 million tons and Latin America of 9 million tons were chiefly responsible for most of the rise. The output of East Europe and the U.S.S.R. was up by 7 million tons. Production in North America, however, declined, by 4 million tons. This was apparently due to a decline in the volume of economic activity witnessed in 1953 and 1954. As a result, the share of North America in world production fell below half, for the first time since 1902. The Middle East, which had outstripped Latin America for the first time in 1953, increased its lead over the region by as much as 6 million tons. Consequently, there were a number of significant shifts in the relative importance of several oil producing areas, as indicated below:

*Regional Shares in World Oil Production**

(Percentages of world total)

	1950	1953	1954
North America	53.1	51.2	48.6
Middle East	16.4	18.0	19.4
South America	19.3	17.9	18.5
U.S.S.R. East Europe ..	8.4	9.7	10.3
Others	2.8	3.2	3.2

*Crude petroleum, shale oil and natural gasoline.

According to the United Nations *Monthly Bulletin of Statistics* (March), international trade in petroleum products appears to have risen to a total of about 340 million tons in 1954, of which about 210 million tons were in the form of crude oil and 130 million tons in the form of products. The crude oil trade originated largely in the Middle East (over 110 million tons) and Venezuela (about 75 million tons) and moved chiefly to Western Europe (close to 90 million tons), the Netherlands Antilles (over 40 million tons) and North America (about 45 million tons). The trade in products originated chiefly in the Netherlands Antilles (over 30 million tons), Europe (about 30 million tons), the Middle East and the U.S. (roughly 15 million tons each).

The details of trade in oil in 1954 are not yet available, but it is believed to have been similar to that in 1953, except that quantities involved were generally larger. In 1953, the trade in oil, barring that of Latin America, was largely inter-regional in nature. Latin America's trade consisted of intraregional shipments principally to Netherlands Antilles and shipments to North America. The intraregional trade of the Middle East and other Asian countries consisted chiefly of movements by pipeline from Saudi Arabia to Bahrein (8 million tons) and from Brunei to Sarawak (5 million tons).

About 20 countries were crude petroleum exporters. But close to 90 per cent. of all exports came from four countries. About 30 countries imported crude petroleum but 75 per cent. of the world crude went to six countries as shown below:

Major exporters (Percentage of world exports)		*Major importers* (Percentage of world imports)	
Venezuela	37	Netherlands Antilles	21
Kuwait	21	U.S.	16
Saudi Arabia ..	16	U.K.	13
Iraq†	14	France	12
		Italy	7
		Canada	6
Total ..	88		75

The trade in refined oils in 1953 consisted chiefly of shipments from Latin America, North America and the Middle East to other regions and international shipments within Europe. Three countries in the Carribbean region, namely, the Netherlands Antilles, Venezuela and Trinidad, provided 55 million tons of oil products entering international trade. The remainder came largely from the U.S. (11 million tons), Saudi Arabia and Bahrein (17 million tons) and five European countries (23 million tons).

Imports of oil products were fairly distributed throughout the world in 1953. North America imported 24 million tons of products chiefly from Latin America. Imports of the Western European countries also amounted to 24 million tons, but were obtained largely from European sources. Imports into Asia, outside the Middle East, aggregated nearly 17 million tons, while Africa and Oceania received 11.5 and 7 million tons, respectively. Latin American imports aggregated 21 million tons in 1953. For the first time, Western Europe's imports and exports of petroleum products were approximately equal in 1953.

Combined surpluses of crude and products in Latin America and the Middle East amounted to more than 170 million tons in 1953. Western Europe, with net imports of 81 million tons of crude and products, took the largest share of the oil available in international trade, mostly in the form of crude, while North America absorbed a net total of 54 million tons, the greater part also in the form of crude. Africa's imports, aggregating 12 million tons, consisted almost wholly of products. Net imports of Asia, outside the Middle East, consisted mainly of crude oil and amounted to about 8 million tons.

The shift in the composition of the oil trade from products to crude continued through 1953, largely as a result of a further shift in refining from producing to consuming areas. Western Europe, which produced only 35 million tons of petroleum products in 1950, produced more than 76 million tons in 1953. North American output rose during the same period from 254 to 333 million tons. Output in Latin America, Asia outside the Middle East, Oceania and the U.S.S.R.-East Europe area also increased substantially between 1950 and 1953. In Africa, production remained about constant during this period, while in the Middle East, it fell considerably as a result of the shut-down at the Abadan refinery.

These changes in refinery activity resulted in some redistribution of regional shares in the production of oil products, as indicated below:

Regional Distribution of Refinery Output in 1950 and 1953

(In percentages of world total)

	1950	1953
North America	56.1	55.9
Latin America	16.1	14.2
Western Europe	7.7	12.8
U.S.S.R.—East Europe*	8.7	9.4
Middle East	8.7	4.5
Other Asia	2.4	2.9
Africa	0.2	0.1
Oceania	0.1	0.2

* Estimated on the basis of crude oil supplies.

World consumption of petroleum products in 1953—the latest year for which data are available—appears to have been in the neighbourhood of 580 million tons. Regionally, consumption was distributed as follows* (in percentages of world consumption):

North America	57.1
Western Europe	10.9
U.S.S.R.—East Europe and China Mainland† ..	9.5
Latin America	6.7
Asia outside Middle East	3.2
Middle East	1.5
Africa	1.2
Oceania	1.2
Air and Ocean bunkers	8.7

* Regional percentages exclude bunker loadings.
† Estimated, including bunker loadings.

So far as particular products are concerned, world consumption (including bunker fuels and additions to stocks) appears to have been distributed roughly as indicated below:

Estimated World Consumption of Liquid Fuels, 1953*

	Million tons	*Percentage of world consumption*
Aviation gasoline	11	2.1
Motor gasoline	174	33.1
Kerosene and jet fuel	31	5.9
Distillate fuel oil	115	21.8
Residual fuel oil	184	35.0
Liquefied petroleum gas	11	2.1
Total ..	526	100.0

* Excluding the U.S.S.R., East Europe and China Mainland.

The utilisation of petroleum products is difficult to ascertain in the absence of use data for many countries. A rough estimate of uses can be made on the basis of such use data as are available, if they are, however, coupled with data on consumption of particular products. On this basis, the distribution of end-uses in 1953 appears to have been about as follows:

Estimated World[1] Utilisation of Oil Products, 1953

	Million metric tons	*Percentage of total*
Household[2], etc.	100	19.2
Transport[3]	290	55.8
Air	(20)	(3.8)
Highway	(180)	(34.6)
Rail, pipeline and inland waterway.	(40)	(7.7)
Ocean	(50)	(9.6)
Electric power and gas	20	3.8
Industry[4] and others[5]	110	21.2

[1] *Excluding U.S.S.R., East Europe and China mainland.*
[2] *Including some agricultural use.*
[3] *Including some white oils used for agricultural or military purposes.*
[4] *Refinery use is included.*
[5] *Including fuel oils used for military purposes.*

Mineral oil today provides, 51 per cent. of the world energy requirements, as against 24 per cent. in 1938, and it is forecast by Mr. C. M. Vignoles, Managing Director of Shell-Mex and B.P., that the use of oil as a fuel would continue to rise. It is estimated that the demand for energy in the next 25 years will increase at the rate of 3 per cent. annually and a sizable portion of it will have to be met by liquid fuel. This is because coal is believed to have entered a phase of relative decline, and it is not likely that atomic energy for commercial purposes will be available in large quantities in the near future. Consequently, it has a great part to play in the interim period. According to Mr. Vignoles, oil will have to play an increasing role subsequently also "perhaps as a permanent partner of the old and the new forms of energy."

INDIA'S IRON ORE RESERVES

India's iron ore reserves are estimated at over 21,000 million tons, according to a survey conducted recently by a seven-man expert committee of the U.N. This constitutes nearly one-fourth of the world's reserves, estimated at 84,580 million tons. Of the total reserves, 17,630 million tons are estimated to be hematite ore, 1,670 million tons magnetite and 2,000 million tons limonitite. The iron content of the ore is over 64 per cent., which is comparatively higher than in many other countries. Three-fourths of the reserves in India are located in Bihar and Orissa (8,000 million tons) and Madhya Pradesh (7,000 million tons). The only known deposits in Pakistan are found in Chitral area. They are estimated at 60 million tons (magnetite ore).

The Report further reveals that mankind consumed more than 9,000 million tons of iron ore in the last 100 years, of which more was used during the past 30 years than in the first 70 years. A century ago, iron ore production was not one-tenth of what it is today. Among the 15 underdeveloped countries of the world, India and Mexico are listed as producers of iron ore mainly for internal use. India is the seventh among the countries producing iron ore in the world. Its output in 1951 was 2,378,000 metric tons of iron content. The highest production was that of the U.S. with 60,084,000 metric tons. The world's total iron ore supply that year was 140,681,000 metric tons.

HINDUSTAN STEEL WORKS

The Hindustan Steel Ltd. has decided to work the iron ore deposits in Taldih to meet the requirements of the projected steel works at Rourkela. Investigations on the deposits at Taldih carried out by the Indian Bureau of Mines have shown that the area contains approximately 20 million tons of iron ore of an average iron content of 65 per cent. up to a depth of 66 ft. from the surface. Drilling for proving of iron ore to the south of this area has now begun.

At Rourkela, the layout of sector "B" has been completed and construction of 70 houses is in progress. Many temporary structures, both for office and residence, have been completed. The survey of six more sectors of the township has been carried out. Two firms of architects are preparing the layout of two sectors and planning the houses. Roads for constructional work have been laid out. Wells have been sunk in the bed of the river Koel for water-supply to the construction camp. Water is also being supplied to the old Rourkela town to supplement the supply of water there at the request of the Government of Orissa. This has been a boon for this little town as wells have been drying up on account of an exceptionally hot summer this year.

FREIGHT RATES TO AUSTRALIA AND NEW ZEALAND

Whether or not increases in freight rates are justifiable at the present moment is highly debatable. As in India, freight increases are resented everywhere both by the Government and the trading interests as they would add to costs of imports and exports. The Government of Australia, for instance, has decided to resist the proposal of the Australian Outward Shipping Conference Lines to increase freight rates from the U.K. and the Continent to Australia, with effect from 1st July. The Australian trade and the Government circles fear that the proposed increase in freight would paralyse the country's delicately balanced economy, as it would

(*Continued on page* 1055)

NEW PRODUCTS AND PROCESSES

Radio-Telephone Waves

DIRECT television signals and multi-channel radio-telephone conversation can now be transmitted beyond the horizon for distances up to 200 miles. This discovery made by the Bell Telephone Laboratories, in co-operation with the Massachusetts Institute of Technology, is expected to be a great aid to countries planning television and radio-telephone communication systems.

Sedative for Rheumatism

A chemical works at Zwaagwesteinde, Province of Friesland (the Netherlands), manufactures a new sedative for various rheumatic pains, myalgia, sprains, muscular wrenches, etc. This agent at the same time promotes the process of recovery. It does not irritate the skin, but on the contrary imparts to it an agreeable feeling of suppleness. The sedative has been tested for two years in the neurological clinic of a Netherlands University and has been approved by the Netherlands Government Institute for Pharmaco-Therapeutical Research, Leiden.

Dehydrating Potatoes

The preservation of potatoes by drying is at least 2,000 years old, but the process usually had an adverse effect on their taste and colour. Now, improved methods of dehydration can preserve potatoes so that they retain their original flavour and appearance. Under new processes developed by the U.S. Department of Agriculture (U.S.D.A.), dehydrated potatoes will be marketed as flakes and granules from which mashed potatoes can be made, and as potato puffs and potato-chip bars. Commercial production will begin as soon as equipment and processes which have already passed Department tests are fitted to large-scale industrial production.

Anti-T.B. Drug

Nineteen child health centres in the United States are co-operating in a study to determine whether the drug izoniazid will prevent development of tuberculous meningitis in children with first-infection tuberculosis. Some 1,000 children will be treated with the drug for one year. The possibility that izoniazid might prevent development of tuberculous meningitis was suggested by Dr. Edith Lincoln of Bellevue Hospital, New York. She reported that no child at Bellevue Hospital treated with the drug for primary infection had developed meningitis. Tuberculous meningitis affects the covering of the brain and spinal cord and is the most dreaded of possible complications of primary pulmonary tuberculosis in children.

Brakes Slow Jet Planes in Flight

Brakes for jet planes which go into action while the plane is in flight have been developed by the General Electric Company in the U.S. They are considered of great value because they reduce the space required for jet aircraft landings. The new brake is called a "thrust spoiler." It is mounted in the tailpipe of the jet engine and deflects gas moving backward at high speed before it passes through the jet exhaust nozzle. This reduces the forward thrust of the engine. This not only reduces the normal landing distance of jet aircraft, but also produces a safety factor, since the plane can be flown at reduced speeds without reducing the operating speed of the engine. It is especially important in landings when a pilot may be waved off and told at the last moment to make another approach.

TV Trouble Eliminated

Atmospheric conditions frequently interfere with the broadcasting of television programmes by causing a phenomenon called "fade." This distorts and weakens the pictures on the receivers' screens. The Bell Telephone Laboratories in the United States have now devised a way to avoid this annoying type of interference. When a fade threatens —usually before the viewer is aware that a fade is coming—an electronic watching device sends a warning signal back by wire to a control station. An automatic switching mechanism then promptly transfers the picture to a clear channel. The entire operation takes 1/500 of a second. When the fade ends, the picture is switched back to the original channel.

Lubricating Oils

Lubricating oils for watches, clocks and other fine instruments which constitute one of the essential requirements of the country, are at present imported from foreign countries, although the quantities required are limited. The special features of these oils are that they should possess (i) good oiliness, (ii) low spreading power, (iii) low cold test, (iv) good stability against oxidation and (v) non-corrosive character against ferrous and non-ferrous metals. The oils should be susceptible to small changes of viscosity under wide variations of ambient temperature. Investigations at Technical Development Establishment Laboratories, Kanpur, have shown that these requirements cannot be met by mineral lubricating oils. Formulations have consequently been evolved to meet the requirements by blending together esters of certain organic acids with or without a vegetable oil thickener. The exact blending proportions depend upon the viscosity of the ingredients and the final oil compositions. The materials developed possess all the essential and desirable features of good quality watch oils. The method of production and the equipment are simple: no intricate chemical or technical processes are involved. The process is covered by Indian Patent No. 47273.

SHREE NIWAS COTTON MILLS LIMITED

MR. G. D. SOMANI'S SPEECH AT TWENTIETH ANNUAL GENERAL MEETING

THE urgent need for rehabilitation and modernisation of the Indian textile industry, if it was to maintain and improve its working on a sound basis, was emphasised by Mr. G. D. Somani, M.P., Chairman of the Shree Niwas Cotton Mills Ltd., at the Twentieth Annual General Meeting of its shareholders held in Bombay on 23rd May, 1955. In this connection, Mr. Somani outlined the steps taken by the Shree Niwas Mills towards modernisation of its plant. He also drew the attention of the Government to the serious repercussions which might follow, if it decided to freeze the production of mills at 5,000 million yards, as recommended by the Kanungo Committee.

The following is an extract from Mr. Somani's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the twentieth annual general meeting of the shareholders. The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December, 1954, have been in your hands for some time and I shall take the same as read.

"As you must have seen, the profits for the year ended 31st December, 1954, are Rs. 20,80,610, after making a provision of Rs. 6,84,105 for depreciation. It may also be noted in this connection that the award of the Appellate Tribunal had imposed a burden of Rs. 10,28,800 on your Company by way of increased bonus for 1952 and extra dearness allowance with retrospective effect from May, 1953 to December, 1954. This additional liability was partly met by the amount of Rs. 2,69,921 that was carried forward last year and the remaining amount of Rs. 7,58,879 had to be met from the profit of the period under review. I have no doubt that you will find the working results shown under the circumstances as fully satisfactory.

"Your Directors have always followed the policy of modernising the old and worn-out plant and machinery of your mills as far as the resources of the Company have allowed. A new printing plant was added recently and is likely to go into production shortly. The scheme of modernising the ring frame department will be completed shortly, when the conversion materials for the remaining 10 old ring frames are received and replaced. Your Directors have also recently placed an order for 28 additional new ring frames, which, when erected, will add to your spinning department extra 10,204 spindles. I have no doubt that this process of modernisation will enable your Company to run its mills on an efficient and sound basis in the present competition.

"As you are already aware, your Company has taken under its control and management Shree Madhusudan Mills from July, 1953. This mill had been making heavy losses before, but I am glad to report that its working has been making steady progress ever since it came under our management. A lot of repairs and readjustments had to be carried out in the various departments and some new machinery had to be installed to have a balanced working. A new printing plant has also been added and has already started working. Every effort is being made continuously to bring about further improvement in its working.

"I would also like to take this opportunity of informing our shareholders that your Directors have decided to capitalise an amount of Rs. 20 lakhs from the reserve funds of the Company by issuing one ordinary bonus share for every three shares held by our ordinary shareholders and the necessary application in this connection is pending with the Controller of Capital Issues for sanction. As soon as the said sanction is received, your Directors propose to issue the bonus shares in the ratio referred to above, provided there is no new development in Government policy towards the issue of such shares. I am sorry to find that our and similar applications from various other companies are held up by the Government, as the matter is still under their examination. Since the Taxation Enquiry Commission has thoroughly examined the question in all its aspects and have come to the conclusion that such shares are not taxable, I hope the Government of India will be able to come to a favourable decision on this issue at an early date.

"Now coming to the general problems, I would like to refer first to the urgent needs of rehabilitation and modernisation of the industry. It cannot be too strongly emphasised that, if this premier national industry is to maintain and improve its working on a sound basis, then the industry must be allowed to modernise and rehabilitate its outmoded equipment on an extensive scale and steps should be taken to introduce rationalised working by gradual stages to bring about the necessary reduction in the manufacturing costs. I welcome, in this connection, the development rebate of 25 per cent. which the Finance Minister has introduced in his last Budget and I hope this will accelerate the pace of installation of new machinery and plants in many units. The problem, however, is really very gigantic and complicated and I appeal to the Government and the Planning Commission to give their proper attention to solve this issue which is of such vital importance to the future well-being of the industry.

"I would also like to draw attention to the serious repercussions which might follow in future, if the Government ultimately decide to accept the recommendation of the Kanungo Committee to freeze the production of the textile industry at the present level of 5,000 million yards. It can be reasonably assumed that, with an annual increase in our population of about 4½ million people and the expected improvement in the standard of living of our people, there would be a substantial increase in demand for cloth and, if even the normal expansion of our industry is also not to be allowed, then our consumers may have to pay heavily in future for this policy. I hope when the target for the textile industry is fixed under the second Five-year Plan, a realistic approach will be taken to ensure proper supply of our clothing requirements at fair prices."

COAL

(*Concluded from page* 1025)

of compensation in the event of nationalisation a non-justiciable issue, the industry in the hands of the private sector will not be in a position to raise the additional capital required for increasing the output of coal needed for the successful implementation of the second Five-year Plan. It is estimated that, in order to increase the present output of 36.7 million tons to 70 million tons, which is expected to be the demand by 1961, at least about 200 new collieries, each with a production capacity of 10,000 tons a month, will have to be opened, besides removing the restrictions on the opening of new seams and rationalisation of the modes of production. All this requires pre-planning and advance decision to invest heavy sums. This will not be possible so long as the private sector does not know its fate after 1958, when the 10-year period of "no-nationalisation" expires. Is it not high time, therefore, the Government made up its mind on this question?

BRITISH COLLIERY EQUIPMENT FOR INDIA

Shipment to India last week of two 175 h.p. electrically-operated single-drum haulages from the Chesterfield works of a British firm marks the completion of a recent contract for the supply of colliery equipment to the Digwadi and Sijua collieries of the Tata Iron and Steel Company. The contract, valued at over £40,000, concerns a total of five haulages, each over 18 ft. long, 12 ft. wide and 10 ft. high, and each weighing 33 tons. The haulage drums are 8 ft. in diameter and 5 ft. 6 ins. wide, giving a one-inch rope capacity of 1,200 ft. The rope speed is eight miles per hour. The most up-to-date safety features have been incorporated in the haulages, each of which is fitted with a dual brake operating gear. The brakes are automatically applied to the drum.

COAL STATISTICS

The output of coal in collieries in India increased from 3,251,682 tons in February, to 3,304,154 tons in March, 1955, according to official statistics released by the Chief Inspector of Mines in India. Despatches of coal during the month amounted to 2,764,412 tons, as against 2,502,505 tons in the preceding month. Coal stocks at pitheads increased from 3,879,459 tons at the beginning of the month to 3,945,961 tons at the close of the month. During the month under review, 841 collieries were reported to be working with an average daily employment of 351,061 workers. Output per man-shift was estimated at 1.08 tons for miners and loaders, 0.59 ton for all workers underground and in open workings and 0.83 ton for all persons employed including surface workers. The percentage of absenteeism was 14.78. Coke plants at collieries and elsewhere produced 375,454 tons of hard, soft and other kinds of coke during the month and despatched 180,202 tons.

STAFF INSURANCE SCHEME

LIFE OFFICE BODY PLEADS FOR ABOLITION

THE introduction of Staff Insurance Scheme by certain life insurers last year still seems to be a subject of controversy in insurance circles. In a communication recently addressed to the Chairman, Executive Committee, Life Insurance Council, Simla, the Indian Life Insurance Offices Association, Bombay, for instance, pleads strongly for the abolition of the Staff Insurance Scheme by law. The communication was a sequel to the modifications suggested by the Executive Committee of the Insurance Council to the Staff Insurance Scheme on the basis of recommendations of a sub-committee appointed by it in November, 1954. As the recommendations made by this Sub-committee have been summarised in our issue dated 2nd April, 1955 (*vide* page 633), there is no need to refer to them here again in detail. Suffice it to say that the Sub-committee had suggested the following, among others:

(1) Introduction of a slab system prescribing the minimum number of employees to be insured under the scheme.

(2) For the purpose of the scheme, the staff at the head office, each branch office, or each factory should be considered as a separate unit, the staff being sub-divided into factory workers and others.

(3) The scheme should apply only to (a) whole life assurance by limited payments; (b) endowment assurance, (c) children's marriage endowment and educational annuities, and (d) deferred annuities.

(4) The reduction in premium charged under the scheme (as compared with ordinary tables) should not exceed 8 per cent. under assurance plans where the premium-paying period is 10 years or more, and 5 per cent. in other cases, including deferred annuities.

(5) The sum assured under policies issued on the same life should not exceed certain specified limits.

(6) No insurance agent should be employed for the purpose of securing business. No commission or any overriding commission should be paid to the insurance agent, etc.

Objectionable in Principle

Commenting on the foregoing changes, the Indian Life Offices Association observes: "The so-called modifications imposed by your Committee on the business that is written under the Staff Insurance Schemes in no way touch the fundamental aspect and do not remove the evils underlying the writing of business under the said schemes. If anything, they aggravate it further, inasmuch as they make an utterly unwarranted distinction between insurers organised on branch basis and those on chief agency basis, and give an advantage to the former over the latter, as a result of stoppage of payment of any commission to the agents. My Association is convinced that Staff Insurance Schemes are objectionable in principle, adversely affect the interests of insurance agents, insurers and policyholders alike, and are detrimental to the growth of healthy development of life insurance business in the country. My Association strongly urges you to follow the principle accepted by your Executive Committee in the year 1952, that life insurers in the country should adopt the same rate of premium for the same type of benefits offered to all persons enjoying the same standard of living and longevity and that no distinction be made between one citizen of India and another, on grounds other than those that affect his health and habits such as occupation, etc. The so-called benefit to the consumers pleaded in its favour does not stand close scrutiny when examined against the interests of the entire body of policyholders, who, in fact, along with the agents, subsidise, to some extent, the reductions made in favour of the select few employed as salary earners."

Agents Affected

The Association is of the opinion that Staff Insurance Schemes in India are introduced at reduced rates by effecting savings in expenses, mainly by cutting down agents' commission. The reduction thus effected in agents' commission would, in its opinion, be detrimental to the insurance agency profession in the country. In this context, it reminds the Executive Committee of the Life Insurance Council how it directed all those insurers who, in March, 1954, had reduced their rates of life premiums by cutting agents' commission, to raise their rates and restore their agents' commission to the levels which were customarily applicable to them. The Association points out that the principle then enforced by the Committee is equally applicable to the rates reduced under the Staff Insurance Scheme. Continuing, it argues that such schemes would take away from the field of operation a large number of persons who belong to a better class and who do not require much canvassing, and that, as a consequence, the insurance agents would be left with the inferior class of lives for their field of operation. Further, a large portion of policies taken out at higher rates under the ordinary schemes would be converted into paid-up policies to take advantage of the reduced rates under the Staff Insurance Scheme. This would result, it adds, in the insurance agents losing their renewal commission on such business. As the income of the agent in India is already low, the loss of commission on account of the Staff Insurance Scheme would, it avers, retard the growth of the insurance agency profession in the country, which is the backbone of the insurance industry.

Small Insurers

The Association next proceeds to explain how the Staff Insurance Scheme would affect small and medium-sized insurers in the country. The Scheme would induce, it points out, the policyholders in small and medium-sized life offices to have their old policies with higher premium converted into paid-up policies, so that they may take up new policies bearing low premiums under the Staff Insurance Scheme. As these schemes are generally started only by large and well established companies, with country-wide organisations and high-level contacts, the business of Staff Insurance Scheme would become the monopoly of a few companies. Having lost their business owing to large-scale conversion into paid-up policies, the small insurers, even though well managed, would come to grief. As the position of these concerns has already been adversely affected by the recent reduction in rates of premium introduced by several insurers and declarations of higher bonuses, the Staff Insurance Scheme would, the Association contends, result in aggravating their distress.

Apart from adversely affecting the interests of the insurance agents and small and medium-sized insurers, the Staff Insurance Scheme would also, according to the Association, be detrimental to the interests of life insurers and policyholders as a whole. Owing to reduction in premium rates last year, many policyholders converted, as stated already, their old policies with higher rates of premiums into new policies with lower rates. The net effect of this was, remarks the Association, that insurers had to suffer a considerable reduction in renewal premium income without any reduction in their costs. On the contrary, they had to meet higher initial cost resulting from this process of substitution. Now a further reduction under the Staff Insurance Schemes, on these reduced rates, would greatly jeopardise the financial position of all insurers, as the incentives to convert old policies into paid-up ones are greater.

Reduced Rates Not Justifiable

The Association further thinks that the reduction in rates of premium offered under the Staff Insurance Schemes is not justifiable, as the Schemes overestimate the savings in the cost of procuration and servicing of the business. The cost of servicing the business under such Schemes would, it observes, be the same as on ordinary policies, for the simple reason that policies under these Schemes are individually canvassed, covered and serviced. Although premiums under the policies are collected by the employer and remitted to the insurer, individual servicing will have to be done and individual ledger accounts will have to be maintained. Though the business is not canvassed by paying the agents' commission at normal rates, the expenses incurred on supervisory staff such as inspectors, organisers and clerks who actually do the work of canvassing, instead of the agent, raise the actual cost of placing the business. The Association, therefore, declares that such Schemes would, in effect, amount to subsidising a particular class of policyholders at the cost of other policyholders. Consequently, Staff Insurance Schemes create, it says, a situation which would seriously retard the progress of life insurance business.

The Association then goes on to point out that the Staff Insurance Schemes of the nature introduced in India are not in operation anywhere in the world. In the U.K. and the U.S., policies are issued, under Group Insurance Schemes, to employers. They cover the requisite number of employees and premium is paid by the employer or by both the employer and the employee. The amount of insurance on each person is based on some plan which will preclude individual selection. Staff Insurance Schemes in India, on the other hand, have no employers' contribution, and policies are individually canvassed and serviced. Therefore, there is, the Association asserts, no similarity between Staff Insurance Schemes in operation in India and the Group Insurance Schemes in the two countries mentioned above.

Again, under the State Insurance Scheme, some classes of persons will be insured at different rates according as they are (a) employed or not employed, or (b) connected or not connected with firms to whom the Staff Insurance Schemes are offered. This violates, in the opinion of the Association, the principle that there should be uniformity in premium offered to the nationals of the country where the ages and other conditions affecting the acceptability for life insurance are identical.

In view of all these considerations, the Association desires that the Staff Insurance Schemes should be prohibited by law and that any policies issued under rates other than the tabular rates should only be under Group Insurance Schemes defined in section 4 of the Insurance Act.

STATE INSURANCE MEDICAL SERVICES COMMITTEE

The provision made by the Bombay Government for settling disputes between Insurance Medical Practitioners and insured persons under the Employees' State Insurance Medical Benefit Scheme is a welcome step, though it reflects the rather unhappy state of affairs in the administration of the Scheme. Under rule 18 of the Employees' State Insurance (Medical Benefit) Rules, 1954, the Government has set up a committee, known as the Medical Services Committee, to deal with the disputes. The Committee consists of representatives of workers and the medical profession.

The purpose of the Committee is to investigate any complaints referred to it by an insured worker or his representative in case the worker is deceased, regarding the failure of an insurance medical practitioner to render proper treatment to the insured or any other breach of his duties under the terms of service. The Committee will also examine the cases of complaints received from the insurance medical practitioners in respect of the conduct of an insured person, while receiving treatment. The Committee will also investigate any matter relating to the administration of the medical benefit on the discharge of their duties by the practitioners referred to it by the Administrative Medical Officer.

All complaints for investigation should be referred to the Medical Services Committee in writing within six weeks after the event which gave rise to the complaint. The Committee after proper investigation will report to the Surgeon-General who, in his turn, will refer the case to the Regional Officer or the Corporation for action under rule 22(2) of the Medical Benefit Rules. Provision is also made for going in appeal against the decision of the Surgeon-General to the State Government. The aggrieved party should, however, do so within one month from the date of the receipt of the decision. The State Government's verdict in all such appeal cases will be final.

This provision for settling disputes between the insured and insurance medical officers no doubt fills up a lacuna. The success of the medical benefit scheme, however, depends not so much on the settlement of disputes by the Medical Services Committee as on the full co-operation and sympathetic approach of medical practitioners to the workers who fall sick. The success will be judged by the fewer cases that are referred to the Committee.

In this context, it is encouraging to note that the newly formed Employees' State Insurance Scheme Medical Specialists Association, at its inaugural meeting held in Bombay last week, offered its unstinted support to make the Scheme a success. The Association feels that a mutual understanding of problems of the Medical Practitioners' Association and Insured Workers' Association and an interchange of views and suggestions will do much to ensure a smooth running of the scheme.

Presiding over the meeting mentioned above, Dr. B. B. Yodh, a veteran consultant and physician, said that the Scheme was passing through its teething period, but felt confident that the difficulties it was facing would be overcome before long. He stressed the need for building more diagnostic centres which would ensure easy working of the scheme.

UNEMPLOYMENT INSURANCE IN BIHAR

The Bihar Government is reported to be having under consideration the question of introducing unemployment insurance in the State. Under the proposed scheme, funds will be created to give relief to industrial workers during the period of their unemployment. The employers and employees and the Government will, it is stated, contribute to this fund. There is also a proposal to frame a suitable legislation for the enforcement of the proposed unemployment insurance scheme.

In this context, it is stated that the Government of India desires that the system of unemployment insurance should take the place of the present provisions for compensation for lay-off and retrenchment. The Central Government has, therefore, solicited the opinions of State Governments on the matter and the Bihar Government has, it is said, agreed to introduce the unemployment insurance scheme as stated above.

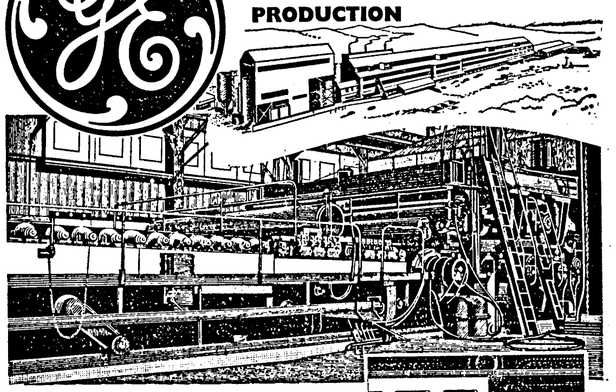
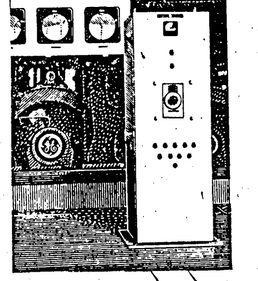
ELECTRONIC CONTROL FOR NEPA NEWSPRINT PRODUCTION



India will soon be able to meet one-third of her requirement of newsprint when the Rs. 6-crore Nepa Mills goes into full production in a few months time. The only one of its kind on the mainland of Asia, six electronic controlled drives of Nepa Mills will turn, abundantly grown *salai* and bamboo of Madhya Pradesh, into useful newsprint playing a very important role in the development of the country's press and literacy.

The quality and production of paper calls for very critical control of the paper machine drive. The G.E. Electronic Amplidyne Control installed at Nepa Mills will enable one operator to co-ordinate all six groups working at the same time. This highly accurate and modern G.E. drive system is being used by leading paper mills in the United States, Canada and Europe.



Using G.E. Electronic Amplidyne drive system, it is estimated that enough paper in a sheet 18 feet wide could be produced in 24 hours to cover the 327 miles from Nepanagar to Bombay.

DEVELOPMENT OF SMALL INDUSTRIES

STATE OWNERSHIP AND DIRECTION IMPERATIVE FOR SPEEDY PROGRESS

By R. Dayal

ONE of the functions of a Government dedicated to the task of establishing a Welfare State is to take up those lines of production where private enterprise is either unwilling or tardy to act. This principle occupies a much more solid and fundamental place in the theory of welfare economics than the dogmatic doctrine of State ownership of means of production. Our Government spokesmen, too, have made it clear on many an occasion that their first concern is to increase the total wealth of the nation. That being so, it devolves on Government to step in as owner and producer not in the fields where private enterprise is willing and is capable of more efficient and speedy production, but in the fields where the private sector is disorganised and cannot take up production at the desired speed and standards.

There seems to be an inadequate realisation by Government of the fact that the development of small industries is a much more difficult task than the development of large-scale industries, and that, in terms of the principle stated above, the small sector has a more urgent claim on Government's personnel and investment resources than the large-scale sector. So far as the large-scale industry is concerned, our *entrepreneurs* are well experienced in promoting new undertakings or expanding existing ones. They are resourceful and creditworthy enough to muster the necessary finance. Many of them have business connections abroad and so can get the assistance of foreign manufacturers well established in the lines they wish to promote. They can buy in the foreign countries the necessary technological and managerial skill. In short, there is nothing that Government can do and these *entrepreneurs* cannot do. All that they want is a word of cheer from Government and bits of assistance here and there.

As against this, the task of developing small industries is a formidable one. Their methods of production have to be geared to modern-day conditions—a thing easy to say but extremely difficult to accomplish. As is well known, our small industries have been using age-old methods, which have not changed for generations. They fall far short of meeting the modern demands for efficiency and good quality of the products. The difficulty is that, whereas the quality and variety of products of these industries have stood still for generations, the tastes and standards of the consuming public have made rapid advance, with the result that the products of these industries do not find ready buyers. Similarly, there is a wide gap of generations that separates the outmoded methods of management in these industries and the modern standards of efficient management.

Government Must Take A Direct Part

While in the large-scale sector, we have a class of seasoned *entrepreneurs*, there are very few people, as compared to the number required, who can act as small industrialists and start small undertakings on modern lines. In most of the small industries, methods of production and management have to be changed out of recognition. New lines of production, especially in the fields complementary to large-scale industry, have to be started with pioneering zeal and ability. An important consideration is that, while the large-scale industry can draw upon foreign experience and research, in the case of small industries most of the skill and methods have to spring from the soil. Private individuals or groups of individuals may not be able to achieve substantial results in these directions, unless the Government takes a more direct part in the ownership and organisation of these industries.

This is not to suggest that the Government has not done much to help these industries. Within its broad philosophy of leaving the small-scale sector largely to private enterprise, the Government has, in the past year, acted with commendable vision and energy in trying to foster the welfare of these industries. Instead of sporadic action, it is now attacking the problem on all fronts, namely, raw material supply, designing of products, techniques and equipment, training of personnel, finance and credit, marketing and co-operatives. Indeed, a good basis is being laid for a promising long-term development.

But the vital point is that the various measures, taken by Government on the recommendation of the Ford Foundation's team of experts, are long-term measures which would prove valuable and effective in the long run only. The whole programme, however impressive, is not likely to make its mark on the advancement of actual production in the short run of the next three years or more. Under this programme, research teams would make investigations and surveys of the requirements and deficiencies of existing industries, and explore the possibilities of new ones. Then, more efficient tools and equipment and better designing would be devised at the various institutes of technology and their branches. Problems connected with spreading the use of better equipment and methods among individual industrialists would have to be solved through co-operatives or otherwise. Organisation of successful co-operatives is itself a stupendous task. Questions relating to the provision of easy credit and more efficient marketing would have to be tackled. The co-ordination of the various agencies undertaking these tasks is also a time-consuming business. Inevitably, a good deal of time would elapse before this programme makes an impact on actual production.

Whole Chain has to be Galvanised

But speed is a crucial thing. The development of these industries is a race against time. These small industries are to be the mainstay in India's programme of providing employment to the vast number of people suffering from involuntary idleness. It is highly desirable that the expansion of actual production in these industries should get into full swing without loss of time, lest the unemployment problem should create a politically serious situation.

The measures taken by Government, which are essentially of a long-term nature, might have produced results in the immediate future also, if the problem of these industries were merely a weak link here and there. But, as we know, the whole chain has to be galvanised. These industries have to be lifted from deep-rooted backwardness and entirely new industries have to be set up. Individuals are not educated and trained enough to take up the challenge. If a speedy development of these industries is to be achieved, Government should, instead of spoon-feeding them at every step, give, by actually owning and operating these industries, a practical demonstration of how they can be run as successful enterprises. A network of Government-run workshops belonging to a particular industry would be able to make a concentrated study of and applied research in the problems of that industry. What is envisaged here is a separate corporation for each—or two or three—of important industries, each corporation owning and operating units of the assigned industry or industries at different places in the country. This corporate structure of an individual industry can have within itself an engineering division, an inspection department and procurement and sales sections. This corporate structure would also be able to put to practical use, without delay, the results of research, investigation and surveys conducted by the Institutes of Technology, the Marketing Service Corporation, etc. There does not seem to be any better way than this of making small business establish itself as efficient modern units standing on their own feet in the community.

Means of Understanding Problems

Government ownership and operation of these industries will enable it to see more objectively what problems face those industries. Various steps needed to overcome these difficulties will be devised in direct contact with respective craftsmen and tradesmen. A considerable part of the research in technology and designing will be done at the place of actual production. This will make progress swift and more effective.

It is not suggested that Government should be the sole producer in the industries taken up by it. The idea of State enterprise is that it should serve as a model to private producers. But the model should be sufficiently big. It should serve as a national extension service for small industries and disseminate methods and techniques employed in each of them. The best way of training persons is to make trainees work on up-to-date equipment in successfully-run workshops.

An Illustration

A concrete illustration may be given to bring home the utility of State enterprise in small industries. Suppose we want to develop the dairy-farming industry in this country to produce tinned dairy products for internal consumption as well as for export. This industry, if developed on a nation-wide scale, can become the largest single source of employment. As the knowledge and experience of the equipment and various technical and trade processes of this new industry are lacking in this country, not many people **may be capable and willing** to initiate undertakings in this industry. They must first know which latest equipment and machinery is used, where it is available, within the country or abroad, and which firms deal with it. In the absence of thorough knowledge, they may not get the right type of machinery or they may get machinery of inferior quality at more than competitive prices. These enquiries would take a good deal of time, as also the determination of the size and site for an undertaking. Then they must face the problem of getting trained persons, or training themselves, to operate and maintain the machinery properly and economically. They must also go through the lengthy routine of raising finance. The form in which and the channels through which the products can be marketed is another job requiring specialised knowledge and skill. All these difficulties, which are ordinarily experienced in an old and well-established industry, become extraordinary in the case of new industries. Of the small number of people that may take the initiative, only a few might be able to establish undertakings and fewer still might be able to make a success of their business.

As against this, a corporation for the dairy industry set up by Government will be able to bring into being a network of units in a much smaller time. Such a corporation may depute an officer to study the industry in a foreign country, say, Denmark. The same procedural steps that an individual or a group of individuals may have to go through for the single undertaking, will, in the case of a corporation, be taken on behalf of, say a hundred undertakings that the corporation may propose to start. The development of the industry will be achieved in a much shorter time and with greater economy and success than under small private enterprise.

Co-operatives No Solution

It is thus clear that State enterprise, which is not an equal of private enterprise in the large-scale sector, can, however, prove of immense utility and seems almost indispensable for a speedy and effective development of the small-scale sector. Government may say that it is trying to promote and develop these industries through co-operatives, and that, in view of this, State enterprise on a wide scale is not necessary. Co-operatives can, no doubt, be of great service to small industries. But, in view of a record of many failures of these co-operatives, it is doubtful if we can immediately pin much hope on them. The difficulties of small industries are too many to be entrusted immediately to the co-operative system, which in our country is itself immature and shaky. Moreover, as the Ford Team of experts has pointed out in their report on small industries, co-operatives can succeed where they can be of a service agency to fill a need for producing or consuming members. As a rule, no attempt should be made to have co-operators associate in an act of production as members. To try to secure the development of these industries through co-operatives would mean the introduction of another delaying factor besides many others standing in the way of speedy improvement and expansion of these industries. Of course, as soon as it becomes clear that the improved methods of production and marketing innovated in State undertakings have become sufficiently well established to make these small workshops going concerns, Government can withdraw from ownership, handing over the field to individual craftsmen organised into co-operatives which would serve the need of credit, procurement, marketing, etc., but would not interfere with actual production.

Principle Already Accepted

The principle of State enterprise in small industries has already been accepted by Government. Thus, Government has set up a Small Industries Corporation, which, among other activities, would organise production for meeting Government orders. All that is suggested here is that Government should take up production on a wider scale. The test of a mature and progressive small industry is not its ability to supply its products to Government, which will instruct its Departments to buy these products—good or bad. The real test would be when these industries are able to satisfy the consumptive needs and tastes of the public at large, exercising its full freedom of choice and not acting under instruction to patronise these industries. Only when it produces for the public and not merely for Government departments, would Government be able to appreciate the deficiencies of small industries.

It is to be hoped that Government would see the necessity of devoting more of its personnel and finance to the small-scale sector and leave more of the large-scale sector to private enterprise. If the aim is to eliminate poverty and not merely to distribute poverty, a shift of State activity from large-scale industry to the small-scale sector seems imperative.

SECTION 48 OF THE INCOME-TAX ACT

APPEAL AGAINST REFUSAL OF CLAIM FOR REFUND

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

A VERY interesting question was recently debated in an appeal before the Appellate Assistant Commissioner as to the admissibility of appeal filed under section 48 of the Indian Income-tax Act. The short facts were that a company had been taxed and, according to the assessee, insufficient credit had been given in the assessment. The appeal was that, on the basis of this insufficiency of credit, a refund was due and hence the decision of appeal against the Income-tax Officer's refusal to grant the refund.

The Appellate Assistant Commissioner contended that the appeal was barred by sub-section (4) of section 48. He argued that, under section 48, no question can be agitated which question had become final and conclusive. To admit the appeal would be tantamount to a revision of assessment which had become final and conclusive under section 23. This led to an interesting discussion as to the scope of section 48, its requirements and the manner of the adjudication of refund, which made an interesting and instructive probe into the complexities of the Income-tax Law.

What is Section 48?

In order to understand the discussion in its proper perspective, let me quote in full section 48:

"(1) If any individual, Hindu undivided family, company, local authority, firm or other association of persons, or any partner of a firm or member of an association, individually satisfies the Income-tax Officer or other authority appointed by the Central Government in this behalf that the amount of tax paid by him or on his behalf or treated as paid on his behalf for any year exceeds the amount with which he is properly chargeable under this Act for that year, he shall be entitled to a refund of any such excess;

"(2) the Appellate Assistant Commissioner, or the Appellate Tribunal in the exercise of their appellate powers, if satisfied to the like effect, shall cause a refund to be made by the Income-tax Officer of any amount found to have been wrongly paid or paid in excess;

"(3) where income of one person is included under any provision of this Act in the total income of any other person, such other person only shall be entitled to a refund under this section in respect of such income;

"(4) nothing in this section shall operate to validate any objection or appeal which is otherwise invalid or to authorise the revision of any assessment or other matter which has become final and conclusive, or the review by any officer of a decision of his own which is subject to appeal or revision, or where any relief is specifically provided elsewhere in this Act, to entitle any person to any relief other or greater than that relief or to entitle any person to claim a refund of tax payable before the commencement of the Indian Income-tax (Amendment) Act, 1939, which he would not be entitled to claim but for the passing of that Act."

Now, section 48(1) states that, if an assessee satisfies the Income-tax Officer that the amount of tax paid by him or on his behalf exceeds the amount with which he is properly chargeable under the Act for that year, he shall be entitled to a refund of any such excess.

Determination of Chargeability

This section contemplates adjudication of the amount properly chargeable and finding the excess by which he is actually charged. Determination of chargeability must result in an adjudication of the assessee's return. For, without a return, either already submitted under section 22 or voluntarily submitted by him along with the application of refund under section 48, the amount of chargeability cannot be ascertained. But chargeability cannot be determined under section 48 but only under section 23. It is, therefore, provided that, if the chargeability is not already ascertained, it shall be ascertained by the Income-tax Officer under section 23, while disposing of the application under section 48. But this leaves a loophole for agitating the question concluded by an order under section 23. Hence sub-section (4) provides expressly that section 48 cannot be utilised for validating any objection or appeal that has become invalid or for revising an assessment that has become final and conclusive. Hence, under section 48, the only question that can be agitated is that of insufficiency of any refund due—not on account of any reduction of the total income or tax computed thereon, but the amount ultimately found payable by reason of credit for tax already paid at source.

It was strongly urged on behalf of the Department that section 48 can operate for giving a refund without going into the question of assessment. On behalf of the assessee, rules 36 and 37 were quoted to show that a refund application under section 48 is not complete unless a return accompanies such an application. Rule 37 provides that, if a return has already been made, a further return is not necessary. From this, it was sought to argue that what section 48(4) prohibits is the readjudication of an assessment already made or appeal that has become already invalid. But it does not bar the assessee the right to agitate any question of refund due to him. The income assessed and the tax determined thereon, it is submitted, cannot be the subject of an appeal under section 48. But the claim for refund of excess tax paid by reason of insufficient credit or omission to give proper credit can always be agitated under an appeal against the Income-tax Officer's order refusing a refund.

Refund Without Making A Return

Allied to this is another subject which I am tempted to discuss. The view seems to prevail in some quarters that a person whose income is exempted from tax by reason of the operation of section 4(3) may apply for a refund under section 48 without making a return or the Income-tax Officer adjudicating thereon on the ground that he was not properly chargeable to tax but has been so charged by tax being deducted at source, and, therefore, a refund is due under section 48.

This seems to me a clear misconception. No refund under section 48 is due to a person until his income is adjudicated under section 23. And that is the reason why rule 36 and rule 37 of the Act provide for a return to accompany such an application for adjudication, unless one has already been adjudicated at the time a refund application is made.

Basis of A Refund

The reason for this is simple. The basis of a refund is the chargeability or non-chargeability of the income of the applicant. And this chargeability has to be determined by a proper adjudication of the return of total income under Chapter IV which deals with "Deduction and Assessment." This is a condition precedent to a refund. Even the opening words of section 48(1) clearly state that what the assessee has to satisfy the Income-tax Officer is that the amount of tax paid by him or on his behalf exceeds the amount with which he is *properly chargeable* under the Act. How is one to satisfy the Income-tax Officer that he has paid tax in excess of what he is properly chargeable under the Act, except by putting in a return and asking the Income-tax Officer to adjudicate thereon? But such adjudication of return can only be made under section 23 and under no other section. And, therefore, the Income-tax Officer cannot grant refund merely on the finding that the income is an income exempted under section 4(3) and, therefore, refund is due under section 48, but the return has to be adjudicated under section 23. Such a view overlooks the function of a return—even a *nil* return. *Nil* return, when adjudicated, carries with it the responsibility that the assessee has made a return of all his income and, if the return is found inadequate or false, it carries with it the liability of penalty or even a prosecution. This is the result of making a return. And this liability would be avoided by the assessee making no return and claiming refund on the evidence only of the fact that the tax that has been deducted on income is exempted under section 4(3).

Orders for Refund

Arising from discussion is also the interesting question whether the Income-tax Officer adjudicating the tax under section 23 can order a refund, if the tax paid at source exceeds the tax properly chargeable on the total income. Such a refund, as a matter of practice, is at present normally given without the intervention of an application for refund under section 48. But does the law permit a refund in the order of assessment? Let us look at the provisions of the Act. Sections 22(1) and (2), under which a return of total income is made, and section 23(3), under which the same is adjudicated, run as follows:

"*Section* 22(1): The Income-tax Officer shall, on or before the 1st day of May in each year, give notice, by publication in the Press and by publication in the prescribed manner, requiring every person whose total income during the previous year exceeded the maximum amount which is not chargeable to income-tax to furnish, within such period not being less than sixty days as may be specified in the notice, a return in the prescribed form and verified in the prescribed manner, setting forth (along with such other particulars as may be required by the notice) his total income and total world income during that year.

"*Section* 22(2): In the case of any person whose total income is, in the Income-tax Officer's opinion, of such an amount as to render such person liable to income-tax, the Income-tax Officer may serve a notice upon him requiring him to furnish, within such period not being less than thirty days as may be specified in the notice, a return in the prescribed form and verified in the prescribed manner setting forth (along with such other particulars as may be provided for in the notice) his total income and total world income during the previous year.

"*Section* 23(3): On the day specified in the notice issued under sub-section (2), or as soon afterwards as may be, the Income-tax Officer, after hearing such evidence as such person may produce and such other evidence as the Income-tax Officer may require, on specified points, shall, by an order in writing, assess the total income of the assessee and determine the sum payable by him on the basis of such assessment."

So, under section 23(3), the Income-tax Officer assesses the total income of the assessee and determines the sum payable by him on the basis of such assessment by an order. The words of this section leave no doubt that the Income-tax Officer's order can only relate to tax payable and not refund of tax already paid. If so, then the order under section 23(3) will only determine the tax payable and leave the assessee to claim a refund of any tax payable by him at source, if the total amount deducted at source exceeds the tax payable by him according to the total income determined by the Income-tax Officer in his order. The assessee can get this refund of the excess only by a refund application, not otherwise. A separate refund order would be strictly necessary. An order determining his total income and tax payable will not legally entitle a claim for refund. It is true that, normally, such refund applications are not called for by the Income-tax Officer, but a refund order is passed on the basis of an order under section 23, where the tax determined is less than the tax already paid, but the section under which refund orders are deemed to be passed must always be section 48 and no other section. Cases may, therefore, arise where the Income-tax Officer refuses to give any refund in an assessment order, unless a refund application under section 48 is adjudicated by him. And, if this application is barred by time, the fact of an order under section 23 computing tax payable will not help.

Thus, a lot of confusion prevails on the true function of certain provisions of the Income-tax Act even in the quarters where you would least expect and, the sooner the Central Board of Revenue issues clear and explicit instructions to its subordinate officers, the better it is for the administration and the public.—*All Rights Reserved.*

HOW TO OBTAIN REFUND OF INCOME-TAX

(1) Apply in the prescribed form.

(2) Enclose original dividend certificates, after duly signing the blank spaces there.

(3) In case the originals are lost, file duplicate dividend warrants with an indemnity bond.

(4) Obtain from your Income-tax Officer an *Exemption* Certificate, in case your total income is below Rs. 4,200.

(5) Refund due to a deceased person can be claimed by his legal heir, executor or administrator.

(6) Apply to the Income-tax Officer, Bombay Refund Circle, if your income is below Rs. 5,000 and you are a resident.

(7) Apply to the Income-tax Officer, Non-Residents' Refund Circle, if you are a Non-resident.

(8) Date of declaration of dividend governs limitation.

(9) The same consideration applies to interest on securities. The date when the tax was deducted at source matters.

(10) Refunds arising out of reductions in your total income consequent on appeal do not require any applications.

(11) The application for refund should be accompanied by a return of your income.

Following the assent of the Union President, the Motor Vehicles Tax (Amendment) Act, 1955 has been published in the Bombay Government *Gazette* dated 6th May, 1955. The Amendment Act enables large-scale organisations operating transport vehicles in the State to pay the tax by lump sum to a single authority based on the number of vehicles used during each calendar month. This will eliminate the necessity for applying for refund of tax in respect of each and every vehicle remaining off the road for one or more calendar months. The procedure of payment of tax and of claiming refund involves considerable labour, cost and inconvenience for them. The Amendment Act also gives relief to small dealers in motor vehicles. Hitherto, they were required to pay a tax of Rs. 500 per annum for seven motor vehicles, even though they might require the general licence in respect of less number of vehicles in any year. Schedule I to the Act has, therefore, been amended, so that tax will have to be paid at the rate of Rs. 100 per vehicle.

journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round . . . it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

PROBLEMS OF IMPORT AND EXPORT TRADE

BALANCE OF PAYMENTS POSITION SATISFACTORY

THE meetings of the Import Advisory and the Export Advisory Councils are always looked forward to by the mercantile community with considerable interest. For these meetings provide an occasion not only to review the prevailing position of India's foreign trade—both imports and exports—but also to exchange views between the representatives of trade and industry and the Government on problems of trade currently facing the country. The meetings of the two Councils, held at New Delhi last week-end, were true to this description, as will be seen from the following account of their proceedings. The Minister for Commerce and Industry, Mr. T. T. Krishnamachari, presided over the meetings of both the Councils.

The discussions of the Import Advisory Council centred on a number of problems. Some importers expressed uneasiness regarding the threat held out by certain foreign shipping companies of imposing a surcharge of 35 per cent. on all goods to be unloaded by them at Calcutta Bombay and Madras from 1st June next. Another subject discussed related to cotton. The President of the Federation of Indian Chambers of Commerce and Industry complained that some mills had been put to inconvenience because of the recent notification preventing import of all cotton from the sterling area and asked that it should be withdrawn or suitably amended. The difficulties experienced in getting the imported goods cleared from the customs were also voiced at the meeting. A suggestion was made by a member that the actual users of newsprint, even if they were not established importers, should be given import licences on the basis of the quantity used by them in previous years.

Replying to the discussions, Mr. T. T. Krishnamachari touched on the threat of certain foreign shipping companies to impose a surcharge on goods carried to India as stated above, and warned that "if any foreign shipping company carried out its unwarranted threat of raising freight surcharge on goods carried to India, its ships would not be allowed to touch our ports." This decision of the Government might lead, he said, to "temporary inconvenience for six to eight months," but the Government was not going to be cowed down by such threats. For one thing, the Government was willing, he went on to add, to do without the imports carried by these ships rather than give in because India had, after all, some importance in world affairs. For another, it could always encourage imports from countries whose shipping interests did not raise their freight surcharge. He pointed out that India was not the only country to have clearance delays due to labour troubles at the ports. Dock strikes were almost an everyday occurrence in the U.K. these days, and yet no shipping company had so far threatened to raise freight surcharge for goods carried to British ports. He admitted, however, that the situation at the various ports such as Calcutta and Bombay was more or less out of control. But the Government was alive to the problem.

Imports of Cotton

Dealing with the imports of cotton, the Minister stated that the Government would shortly examine the possibility of allowing additional import of Egyptian cotton of 1¼" staple and above. He revealed that the Secretary of his Ministry would shortly proceed to Bombay to hold talks on the subject with the interests concerned. The Minister stated that the Government had to fix some quotas for import of cotton from dollar as well as non-dollar areas. Other countries in the world like Japan and the U.K. were also doing the same thing. So far as non-dollar imports of cotton were concerned, they had reached the quota already fixed, although he recognised that some inconvenience had been caused to individual mills. In India, there was a fairly big cotton crop this year—some 4.6 million bales—which was, he remarked, 350,000 bales more than the crop last year. As a result of the measures which the Government took, the price of cotton now, according to him, was somewhat stable. Replying to the complaint that mills were not consulted before the stoppage of non-dollar cotton, the Minister said that it was not his fault, if they did not buy their requirements earlier.

As regards the difficulties in getting goods cleared quickly at the customs, Mr. Krishnamachari promised that he would arrange a meeting between the Import Advisory Council and the Minister for Revenue and Defence Expenditure, Mr. A. C. Guha, so that importers could get their grievances redressed. He promised that he would issue import licences to users of newsprint on the basis of the quantity used by them.

The Council was addressed by the Deputy Minister for Commerce and Industry, Mr. Nityananda Kanungo. The highlight of his statement was that the policy of selective liberalisation of imports was being gradually extended in diverse ways to cover as wide a sector of the country's import trade as possible. This policy, however, depended, according to him, on the measures taken to increase export earnings, bearing, of course, in mind the demand for foreign exchange for capital goods required under the second Five-year Plan.

As the economy developed and industrialisation proceeded, the pattern of import trade would be characterised, Mr. Kanungo observed, by higher level of imports of industrial raw materials. This trend was seen in the rise in imports of raw materials from Rs. 288 crores in 1953 to Rs. 329 crores in 1954. These imports in 1955 were expected to be, according to him, of the order of about Rs. 340 crores. Proceeding, the Deputy Minister said that the balance of trade in 1954 was adverse to the extent of only Rs. 23.35 crores, whereas in the previous year, it was as high as Rs. 54.26 crores. He was satisfied that the foreign exchange position was satisfactory, as sterling balances, at the end of March, 1955, stood at Rs. 732 crores. Nevertheless, he opined that there was no room for any complacency, because the favourable balance was principally due to the unprecedented rise in the price of tea.

Liberalisation of Import Controls

Mr. Kanungo stated that a number of suggestions for liberalisation of import controls made by the Council had been implemented in the import policy for the current half-year. Apart from extending the policy of liberalisation in diverse ways, 33 new items were added to the liberal licensing schemes. Quota percentages were increased in the case of 40 items, and token quotas were introduced in respect of 19 new items. In the case of 13 items, provision was made for the grant of additional licences to established importers. The basic period was extended to include 1952-53 for a further 60 items and the year 1953-54 for another 16. Although it was not easy to assess the net effect of these measures of liberalisation, he said that, during the last half-year, nearly 10,000 licences of the face value of Rs. 17 crores were issued to newcomers. The liberal licensing scheme covered 134 items and licences against this scheme of the value of Rs. 48 crores were issued during July-December, 1954.

The Minister referred also to the trends in imports of plant and machinery and consumer goods. There was a fall in imports of plant and machinery from Rs. 84 crores in 1953 to Rs. 76 crores in 1954. This was due partly to a fall in prices of machinery and partly to the indigenous industry meeting the requirements of machinery of the country. In the sphere of essential consumer goods, a similar trend was visible as their imports fell from Rs. 188 crores in 1953 to Rs. 159 crores.

Imports Through Approved Agencies

Another feature of the current import policy was the canalisation of imports of certain essential raw materials, through agencies approved by the Government. These related to raw silk, soda ash, caustic soda and soda bicarbonate. Besides, restrictions were imposed on profit margins of certain items as air conditioners, refrigerators and cooking ranges. This was being done, the Minister stated, to ensure a regular supply of raw materials to industries at fair prices.

At the meeting of the Export Advisory Council, most of the members urged that the transport position in the country as a whole, and at the major ports in particular, should be improved if much headway was to be made in the export drive. It was also suggested that the railway freight structure should be so rationalised as to give impetus to exports. Replying to these suggestions, Mr. K. B. Mathur, Member for Transportation in the Railway Board, informed the Council that a committee would shortly be set up to go into the question of railway freights. Meanwhile, he wanted the members to specify the commodities for which grant of a rebate would stimulate exports. He indicated that, in the next three or four months, transport supply would be stepped up by 20 to 30 per cent. He favoured the drawing up of a programme for despatches of exportable commodities as in the case of sugar and coal, so that priority of transport supply could be determined and speculative demands eliminated.

Participating in the discussions, Mr. T. T. Krishnamachari indicated the possibilities of a slight increase in yarn exports quota. He stated that he would consider the question of enhancing the quota for export of raw cotton also in the light of observations made by members. He promised to give favourable consideration to the proposal to send a delegation abroad to promote export of handloom products.

Mr. M. P. Birla emphasised the need for achieving self-sufficiency in raw jute as early as possible. As for jute goods, production had gone up, according to him, by 33 per cent. in the last four months, but stocks had started accumulating. He pointed out that the situation required careful watching by the industry and the Government.

Export Trade Position Reviewed

Mr. D. P. Karmarkar, Minister for Commerce, who initiated the proceedings, gave a rapid survey of Indian exports during 1954-55. He observed that the total value of exports during 1954-55 stood at Rs. 583 crores, as compared with Rs. 531 crores in 1953-54 and Rs. 578 crores in 1952-53. The adverse balance of trade was reduced from Rs. 50 crores in 1953-54 to Rs. 40 crores in 1954-55. The balance of trade with the dollar area registered a further improvement, resulting in a favourable balance of Rs. 21 crores—an increase of Rs. 4 crores over the figure for 1953-54. Sterling balances as a result remained steady even though expenses on imports rose more than the country's export earnings. It was gratifying that this improvement had been made when world prices for several commodities had been falling. Fortunately there were, he said, no significant changes in export prices in the case of our most important export commodities.

There was, however, one disquieting feature in India's export trade. That was the predominance of a few commodities in total exports. Of the increase of Rs. 52 crores in exports during 1954-55, almost the whole of the increase—excepting the small sum of Rs. 7 crores—was, according to Mr. Karmarkar, contributed by tea. What was more, about 58 per cent. of the country's total exports was accounted for by three commodities—tea, cotton piecegoods and jute goods. Exports earnings through tea rose from Rs. 102 crores in 1953-54 to Rs. 147 crores in 1954-55. Similarly, the earnings from jute textiles advanced from Rs. 114 crores to Rs. 124 crores. The total quantity of cotton piecegoods exported increased from 770 million yards to 815 million yards in 1954-55. Mr. Karmarkar stated that the scope for further expansion of trade in these commodities, particularly on account of the increasing competition in world markets, was limited. There was obviously, he stressed, the need for diversifying the export trade.

Discussing the prospects for diversification, the Minister for Commerce observed that there had been an increase in the output of light engineering and chemical goods. There was need for developing export markets for these products, especially chemicals, cement, electric fans, sewing machines, diesel engines, centrifugal pumps, machine tools, cycles, plastic goods, toilet requisites, sports goods, etc. The relevant statistics did not, however, show that there had been any increase in exports of these products which, after rising from Rs. 67 crores in 1952-53 to Rs. 70 crores in 1953-54, declined again to Rs. 64 crores in the following year. He opined that there was scope for exports to the Middle East and South-East Asian region and that efforts should be concentrated on taking such active steps as would not only diversify but also expand the country's exports.

PAK-CEYLONESE TRADE

Ceylon and Pakistan signed this week a trade pact here agreeing to accord each other "most favoured nation treatment."

The pact will come into force as soon as it is ratified by both Governments and will remain valid until it is revoked by either Government.

According to an official of the Ceylon Government, the pact does not commit either country to any quantities or commodities but stipulates a large number of items in which there is scope for trade. The commodities stipulated include rice and fertilisers on the Pakistan side and coconut products on the Ceylon side.

INDUSTRIAL LABOUR IN INDIA

HAS IT BEEN GIVEN A "FAIR DEAL"?

THE industrial worker occupies an important place in a country's economy. For it is on his efficiency, loyalty and contentment that the progress of industry, in particular, and of the nation, in general, depends. It is, therefore, a matter for gratification that, in recent years, there has been a steady and substantial improvement in the standard of living of the industrial worker all over the world; India has been no exception to this world-wide trend. This improvement is due partly to the activities of such institutions as the International Labour Organisation and partly to the progressive outlook of the employer towards the worker. Employers in many parts of the world now appreciate to a greater degree than in the past the necessity to pay workers a decent wage and to ensure healthy working conditions. In underdeveloped countries like India, a large number of employers are providing either collectively or individually even the basic social services, such as education, medical facilities and housing, not to mention maintenance of workers' towns, which in Western countries are regarded as part of the elementary duties of the State. It must also be acknowledged that the development of trade unions, leading to a strengthening of the collective bargaining capacity of industrial workers, is also one of the important factors which have won for workers better living standards.

Now that the emphasis in the second Five-year Plan is on the development of the industrial sector, there is an urgent need for paying proper attention to win the hearts of industrial workers, to persuade them to give higher production and to agree to introduction of up-to-date machinery without which there can be no further real improvement in their living standards. They must be enabled to see that a rise in their real wages hinges on higher productivity. This is doubtless a delicate problem because of the sensitive human material that is involved. There is, therefore, no denying the fact that a mere economic approach is not sufficient. On the contrary, a psychological approach is what is primarily needed. The days are gone when labour was considered as a unit in a vast statistical mass which could be dealt purely by the law of supply and demand. There has now emerged an era of industrial labour, as opposed to industrial capital.

Income

Viewed against this background, the study of progress of industrial labour in India, made by the Employers' Association, Calcutta, and published in the form of a pamphlet a couple of months ago, is a valuable one. In this publication, the Association has attempted to give an objective assessment of the gains secured by Indian labour both in respect of wages and real income, as compared with the position in 1939. The country's wage structure is also examined from the regional aspect and it is shown that the disparities in wages between the different parts of the country are being steadily reduced. The general conclusion emerging from the study is that the worker is not only better off than ever before but is now able to enjoy a higher standard of living than many others in the society, including certain sections of the middle class.

It is not, of course, contended that the Indian worker has all that he wants or that his standard of living leaves nothing to be desired. Indeed, none, as pointed out by the Association, is more aware than the employers themselves of the need to raise the standard of living of the workers much above the present level. What is, however, sought to be emphasised is that the industry has already done a good deal for the improvement of labour conditions and that there should be a proper appreciation of this on the part of the Government and the public, so that there will be greater readiness to understand the handicaps which now prevent the industry from increasing efficiency and output, which ultimately is the only way by which labour can enjoy more of the good things of life.

At the outset, the study traces the growth of employment. It states that employment of labour in perennial factories, which stood at 1.4 million in 1939, is now over 2.1 million. The bulk of organised labour is employed in major industries, such as cotton and jute textiles, engineering, minerals and metals, chemicals and paper. The cotton textile industry is the biggest employer of labour. Its labour strength in 1954 was as much as 660,000, as against 653,000 in 1952 and 489,000 in 1939. The textile industries, cotton and jute, now account for 48 per cent. of the total industrial labour.

A significant development during the period under review was the increase in perennial factories, accompanied by a fall in seasonal factories. In 1939, for example, about 66 per cent. of the total factories belonged to the perennial categories, but, in the next decade, it went up to over 83 per cent. It is also important to note that the labour force has now become well organised. These two developments have led to a great measure of stability in employment.

Wage Bill

It is true that merely by virtue of the larger employment, there should have been an increase in the wage bill. But, as there has been a more than proportionate increase in money wages, the annual average earnings per worker are definitely higher. The total wage bill of workers employed in perennial factories and drawing wages below Rs. 200 per month was Rs. 232 crores in 1952, as against Rs. 40.75 crores in 1939. The total wage bill for 1953 is estimated at Rs. 237 crores, assuming an average earning of Rs. 1,121 per worker and the number employed 2.11 million.

The average annual earnings of workers in perennial industries in general improved from Rs. 285 in 1939 to Rs. 1,084 in 1952. The earnings of textile workers stood at Rs. 1,122 in 1952 as against Rs. 293.5 in 1939 and engineering workers at Rs. 1,371.3 as compared with Rs. 263.5. The position in respect of the workers in mineral, metal, and chemical industries also discloses similar improvement.

Benefits

While it is abundantly clear that money wages have increased generally and industrial labour has benefited to a greater extent than the rest of society, it is held in certain quarters that, because wage costs expressed as a percentage of total expenses are lower, industrial workers have lost ground and that agriculturists, shareholders and industrialists have gained considerably. The study says that nothing can be farther from the truth. It is not correct to draw any inference from wage costs expressed as a percentage of total expenses in a period when prices for agricultural raw materials have risen considerably. For industries have suffered on account of the rise in replacement costs and there is in effect heavy taxation of profits, even capital, and that profits are rigidly controlled. If, therefore, higher prices have to be paid for raw materials, it is due to factors beyond their control. Raw cotton and raw jute prices, even at the present depressed levels—depressed in relation to the fantastic prices that obtained in 1951-52—are five to six times higher than the pre-war prices, while money wages have risen by four to four and a half times. Naturally, wage costs will be lower expressed as a percentage of total costs. The increase in prices for cash crops is, however, to be "welcomed" in some measure as the agricultural community has benefited somewhat. At the same time, it is necessary to draw attention to the fact that, even with higher prices, the average income of the agriculturist is half, or even lower, that of the industrial worker.

The survey points out that an average factory worker earns as much as Rs. 1,121, as against the *per capita* national income of Rs. 272, that is, four times the national income. This disparity is, however, not noticeable in other countries. In the U.S., for instance, the average annual income of the industrial worker is 196 per cent. of the *per capita* national income, in Canada 277 per cent., in the U.K. 143 per cent., West Germany 195 per cent., New Zealand 151 per cent. and Japan 297 per cent. The survey, however, rightly warns that it is not, perhaps, correct to read too much into these figures, as the smaller disparity in advanced countries is due, to a great extent, to larger remunerative employment and the existence of more earners in a family unit. Nevertheless, it says, that comparison is helpful in drawing pointed attention to the fact that the Indian industrial worker is occupying a rather "privileged" position in the economy of the country. There is scarcely any exaggeration in this conclusion. It is supported not only by the wage levels but also by the various legislations that have been passed, in order to ensure several amenities and security of service which are not available to other sections of the population that are far numerous in number.

Regional Analysis

Making a regional analysis, the study highlights the fact that the States which were very backward in payment of wages to industrial workers in 1939 were able to report better conditions in 1952. Thus, in 1939, Bihar stood rather low in the list with the average annual earnings at Rs. 285.0, as against Rs. 370.4 in Bombay and Rs. 309.4 in Delhi. But in 1953, the picture was different. The earnings in Bihar stood at Rs. 1,474.2 in 1953, as against Rs. 1,346.4 in Bombay and Rs. 1,311.6 in Delhi. In terms of percentages, the increases have been of the order of 417, 264 and 324, respectively. (It may be noted, in this connection, that the Labour Appellate Tribunal recently decided in favour of increasing the dearness allowance of workers numbering about 250,000 in the Bombay cotton mills by 10 per cent. with retrospective effect from May, 1953.)

In Orissa, the average annual earnings of factory workers improved from Rs. 161.8 in 1939 to Rs. 880.8, a rise of 444 per cent. Good performance is reported in the Uttar Pradesh also where the average annual earnings are up by 333 per cent. It is also interesting to note that the textile workers' money wages in the U.P. (Kanpur) are highest, next only to those of Bombay. The minimum wage of a textile worker in Kanpur is Rs. 30 per month; besides, he gets a personal wage at the rate of Rs. 4 and a dearness allowance of Rs. 50 per month. In Madras, the increase in average annual earnings has been from Rs. 175.9 to Rs. 825.0 or 370 per cent.

Seasonal Factories

The workers of seasonal factories too have fared equally well. The average daily number of workers in 1952 was 343,699, that is, 14 per cent. of the total labour force in factories in general. In 1939, this number was 290,823 or 17 per cent.

Seasonal factories have been classified into four groups: (1) processes allied to agriculture, (2) food, except beverages, (3) beverages, and (4) tobacco. The industries included in group I are mainly seasonal. Those in group II are also chiefly seasonal, with the exception, perhaps, of "slaughtering, preparation and preservation of meat, canning and preservation of fruits and vegetables, flour mills, as well as edible oil and hydrogenated oil industries." The average income of workers employed in all these groups of seasonal industries has gone up from Rs. 408.8 in 1950 to Rs. 417.8 in 1951 and Rs. 446 in 1952. The average earnings of a worker in purely seasonal industries may be around Rs. 350 (for a season). The increase would have been more pronounced but for the fact that the sugar industry has not been able to work at full capacity. In the pre-war period, the average was about Rs. 60 a season. Thus, the wage bill of seasonal workers has tended to increase even more strikingly than that of the perennial workers and, at the present moment, it can be roughly estimated at over Rs. 10 crores a year.

Manager.

In putting any construction on these figures, however, the study says that it is necessary to bear in mind that the workers are employed seasonally in the rural side and, therefore, for a smaller number of days. A better idea can be had only if the wage rates are taken into consideration. Thus, taking the case of the sugar industry, the minimum wages in the U.P. and Bihar factories have risen from Rs. 11 per month in 1939-40 to Rs. 55 per month in 1953-54 and the benefit of the higher wage has been obtained since 1948-49. Apart from the minimum wage, bonuses related to the quantum of production have been paid. Besides, they are provided with several other amenities. More important is the fact that the seasonal workers are assured of "regular" employment. Either by convention or by regulation, the majority of workers are taken up every year. In fact, in the U.P., it is obligatory on the part of every sugar factory to employ a worker who was engaged in a previous season. Periodical increases in wages are also effected.

Real Earnings

The study further claims that, without any exaggeration again, generally speaking, the real earnings and the social status of the workers have improved so much that they may well excite the envy of many sections of the middle class, such as clerks and teachers, whose economic position "has not only not improved but even became worse." The following table gives the index of real earnings during 1939-53:

Base	1939	1944	1945	1946	1947	1948	1949	1950	1951	1952	1953
1939=100 ..	..	85	85	82	89	95	103	100	103	114	114
1949=100 ..	97	82	82	80	86	92	..	97	100	111	111

Thus, real wages in India in 1953 were 14 per cent. over those in 1939 and 11 per cent. over those in 1951. Facilities like free medical aid, greater leisure, free house (or at nominal rents), etc., in the case of industrial workers drawing below Rs. 200 per month are estimated to have resulted in an additional increase by 5 to 6 per cent. (The adjustment in regard to smaller working hours alone will, it is stated, mean an "increase" of 11 per cent.) In other words, the worker's money wage *plus* "invisible income has raised his real wage by 20 per cent. between 1939 and 1953. If the change in real earnings of a factory worker were to be related to increase in the *per capita* income, it is possible to say that the increase in the real earnings of the former was more than the increase in the *per capita* income in 1939-53. In effect, the real wage of the factory worker has risen faster than the real *per capita* income. In 1953, the real wage stood at 111 (1949=100), as against the level of 106 for the real *per capita* income (1948-49=100) and at 114 (1939=100) (excluding invisible income), as against the level of 101 (approximately) for the real *per capita* income (1939=100). This means that labour gets very much more than its former share of the national income of the country.

Conclusions

Summarising the conclusions of its study, the Association observes:

"It can be reasonably claimed that the industrial worker has been given a fair deal and that, apart from being effectively protected against the impact of inflation, he has been able to enjoy a standard of living much higher than most other sections of society. In the past decade, particularly, money incomes have risen fast and because of the development of new industries and the increase in the stature of old industries, the character of the labour force has undergone a significant change. Average annual earnings have, as a result, tended to increase, both industrywise and regionwise. The smaller number of hours, the better conditions of work and more congenial environments have made employment in factories, plantations and mines worthwhile. The real incomes also have risen appreciably while the supply of essential goods at subsidised prices in times of scarcity was indeed a great advantage. It should be said, however, that only an important beginning has been made. There could be a further sizable increase in the average earnings if absenteeism was less and productivity tended to rise. It has been amply demonstrated by the happenings in other countries that intelligent rationalisation of working methods and elimination of waste could lead to a notable reduction in working expenses and could facilitate the payment of higher wages over a period. It should certainly be possible to effect a gratifying improvement in the money and real incomes over the existing levels, if labour and capital co-operate wholeheartedly and there is an identity of interests."

Notices

IMPERIAL BANK OF INDIA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Principal Register and the Branch Registers of the Imperial Bank of India will be closed for transfer of shares from Thursday the 16th June, 1955, to Thursday the 30th June, 1955, both days inclusive.

In terms of Section 6(1)(*a*) of the State Bank of India Act, 1955, all shares in the capital of the Imperial Bank of India shall be transferred to, and shall vest in, the Reserve Bank of India, free of all trusts, liabilities and encumbrances on the "appointed day" which has been fixed for the 1st July, 1955, by the Government of India Notification No. F.8(8)-F.I./55, dated the 14th May, 1955. Section 9(1) *ibid* provides that every person who immediately before the 1st July, 1955, is registered as a holder of shares in the Imperial Bank of India shall be entitled to compensation in accordance with the provisions contained in the First Schedule.

All purchasers of Imperial Bank of India shares are therefore advised to lodge with the Bank for registration the instruments of transfer in their favour along with the relative share certificates, *not later than the 15th June*, 1955.

S. K. HANDOO,
Managing Director.

The Share Transfer Books of the Company will remain closed from 10th to 17th June, 1955, both days inclusive.

By Order of the Board,
SAHU JAIN LIMITED,
Managing Agents.

CALCUTTA, 12*th May*, 1955.

BENGAL PAPER MILL'S PROFIT SHRINKS AGAIN

DIVIDEND, HOWEVER, MAINTAINED

A DECLINE of Rs. 1.37 lakhs to Rs. 11.46 lakhs in the gross profit is disclosed by the audited accounts of the Bengal Paper Mill Company, Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) for the six months ended 31st December, 1954. This is the second half-year in succession that the Company's earnings have recorded a shrinkage, the drop in gross profit for the previous half-year having been of the order of Rs. 0.81 lakh, that is from Rs. 13.64 lakhs to Rs. 12.83 lakhs. Thus, the decline in the Company's profit for the latest half-year is greater than that noted in the previous six months, bringing the aggregate fall in gross profit for the two half-years to Rs. 2.18 lakhs. The net profit, which had been marked down from Rs. 8.79 lakhs to Rs. 7.72 lakhs in the previous six months, has gone down further to Rs. 6.61 lakhs for the half-year under review.

Notwithstanding the aforesaid decline in the profit, the distribution to shareholders has not been affected, the dividend on the ordinary shares being kept unchanged at 12½ per cent. per annum, a rate which the Directors have been paying from the half-year ended 30th June, 1951, with only a break of two half-years, namely, those ended 31st December, 1952 and 30th June, 1953, when, unfortunately, the Company had suffered losses for reasons beyond its control. The above dividend has been maintained for the half-year under review only after a sum of Rs. 3.25 lakhs had been transferred to the tax contingency reserve, which had received Rs. 4 lakhs six months ago.

The setback in the Company's earnings for the half-year under review may not be a surprise to the Company's shareholders, for they had been prepared for it by the Directors in their report for the previous half-year. It will be recalled that, in the month of June, 1954, the Company had experienced some trouble with its Wagner furnace causing high chemical losses. As this trouble occurred only in the closing month of the previous half-year, the result for that half-year had not been affected very much, but its effect was felt during the half-year under review to a greater extent than in the previous one. The Directors, however, report that the recovery plant has since been working much more efficiently. As in the previous half-year, labour relations during the six months under review were good and the mechanical efficiency of the mill was well maintained.

The following comparative table presents the financial results of the Company for the past four half-years, from which an idea of the Company's progress can be gained:

(In lakhs of rupees)

	For the half-year ended			
	31-12-54	30-6-54	31-12-53	30-6-53
Sale proceeds	89.51	83.09	97.39	46.76
Other income	1.39	0.41	0.58	0.51
Stocks	0.72	3.86	1.90	4.37
Manufacturing and other expenses	76.30	77.63	81.86	53.94

The increase of Rs. 1.42 lakhs in sale proceeds does not mean that production during the half-year under review was more; in fact, the output of paper must have been lower as indicated by the fall of Rs. 1.33 lakhs in manufacturing and other expenses. The increase in sale proceeds was obviously due to the decline of Rs. 3.14 lakhs in stocks of paper.

No provision for taxation has been made as in the previous four half-years. In the immediately preceding half-year, however, the Directors had set aside a sum of Rs. 30,000 towards provision for sales tax, but even this provision has now been written back. The tax contingency reserve has been strengthened by the transfer of Rs. 3.25 lakhs from the profit for the half-year under review, bringing it to Rs. 13 lakhs. The Directors say that this reserve still requires to be reinforced.

The Company's paid-up capital, as at the close of the half-year under review, remains unchanged at Rs. 71 lakhs, of which ordinary shares account for Rs. 45 lakhs, 7 per cent. cumulative preference shares (of Rs. 50 each fully paid) for Rs. 2 lakhs, 7 per cent. 'A' cumulative preference shares (of Rs. 100 each fully paid), for Rs. 4 lakhs and 6 per cent. 'B' cumulative redeemable preference shares (of Rs. 100 each) for Rs. 20 lakhs. The ordinary capital is made up of 180,000 shares of Rs. 25 each, of which shares of the face value of Rs. 30 lakhs were issued for consideration other than cash. The reserves and surplus, as on 31st December, 1954, aggregate Rs. 33.16 lakhs. There is a debenture liability of Rs. 5.44 lakhs, secured on land, machinery and plant at Raneegunge and carrying interest at the rate of 4½ per cent. per annum. The current liabilities aggregate Rs. 30.41 lakhs, while provision for taxation stands at Rs. 2.03 lakhs. The gross block of the value of Rs. 199.96 lakhs stands written down to Rs. 58.90 lakhs. The current assets aggregate Rs. 83.14 lakhs and exceed the current liabilities and provision for taxation by an impressive margin of Rs. 50.70 lakhs.

The Rs. 25 paid-up ordinary shares of the Company are being currently quoted at Rs 65 *ex-div.* At this rate and on the basis of the latest dividend, the shares give a yield of 4.8 per cent. per annum, free of income-tax.

SHREE NIWAS COTTON MILLS LTD.

Satisfactory results are disclosed by the audited accounts of the Shree Niwas Cotton Mills Ltd. (Managing Agents: The Marwar Textile (Agency) Ltd., Bombay), for the year ended 31st December, 1954. The gross profit, no doubt, shows a small decline from Rs. 32.77 lakhs to Rs. 30.83 lakhs. But this small setback is due to the incidence of the award of the Labour Appellate Tribunal under which the Company had to provide Rs. 10.29 lakhs towards increased bonus for 1952 and extra dearness allowance with retrospective effect from May, 1953 to December, 1954. It may, therefore, be noted that but for this additional liability, the results for the year under review would have been really very encouraging. The net profit (after providing for depreciation and taxation) is actually higher at Rs. 13.81 lakhs, as compared with that of Rs. 12.70 lakhs for 1953. Consequently, the Directors have been able to repeat the allocation of Rs. 2 lakhs to the reserves, with the change that it is credited during the reporting year to the general reserve, instead of to the renewal and replacement reserve as in the previous year. The dividend on the ordinary shares has been maintained at 14 per cent., to which level it had been raised last year from 12½ per cent. paid for 1952.

The following comparative table giving the salient features of the Company's profit and loss accounts for the past four years, provides an idea of the Company's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds	369.16	338.12	362.81	401.92

*Approximate.

It will be observed that the rise in sale proceeds is accompanied by an increase of Rs. 3.46 lakhs in "other income" accounted for mainly by the increase of Rs. 1.19 lakhs in processing and mercerising charges and Rs. 2.16 lakhs in interest and dividends. The rise in sale proceeds and "other income" has been more than offset by the increase of Rs. 36.44 lakhs in expenses, of which consumption of cotton, cotton waste, chemicals, stores, etc., account for Rs. 22.89 lakhs, electricity and water consumption for Rs. 1.87 lakhs, brokerage, selling agency commission, etc., for Rs. 1.16 lakhs, and wages and establishment expenses for Rs. 8.62 lakhs.

The Company's paid-up capital amounts to Rs. 64.80 lakhs, as against which the reserves and surplus aggregate Rs. 69.74 lakhs. The provision for taxation stands at Rs. 9.14 lakhs. The current liabilities aggregate Rs. 90.76 lakhs. There has been an addition of Rs. 7.39 lakhs to the gross block during the year, bringing the total value to Rs. 91.26 lakhs. This has been written down to a book value of Rs. 40.54 lakhs. The current assets amount to Rs. 193.90 lakhs, exceeding the current liabilities and provision for taxation by a margin of Rs. 94 lakhs.

In pursuance of its policy of modernising the old and worn-out plant and machinery, the Company has added recently a new printing plant and this is likely to go into production shortly. The scheme of modernising the ring frame department will be completed shortly, when the conversion materials for the remaining 10 old ring frames are received and replaced. The Company has also placed an order for 26 additional new ring frames, which, when erected, will add to the spinning department 10,204 more spindles.

The Company proposes to capitalise a sum of Rs. 20 lakhs from the reserves and issue one ordinary share for every three ordinary shares held. The necessary application for the purpose is pending before the Controller of Capital Issues for sanction. If the sanction is given and the bonus shares issued, will be the fourth occasion when the Company thus capitalises a part of the reserves. In June, 1944, it may be recalled, the Company capitalised a sum of Rs. 4.80 lakhs and issued 4 per cent. tax-free redeemable cumulative preference shares as bonus shares to the then existing ordinary shareholders in the proportion of one preference share for every five ordinary shares. In March, 1948, a sum of Rs. 24 lakhs was capitalised and one ordinary share for every ordinary share was issued as bonus. In February, 1951, for the third time, the Company capitalised Rs. 12 lakhs and issued one ordinary share for every four ordinary shares.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 235 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.3 per cent. per annum, free of tax.

SURAT ELECTRICITY EARNS RECORD PROFIT

The Directors' report and audited accounts of the Surat Electricity Company Ltd. (Agents: Messrs. Killick Industries Ltd., Bombay) for the year ended 31st December, 1954, make encouraging reading, inasmuch as the Company's sales of energy during the year and the profit have registered a sharp rise over those of the previous year, carrying them to new record levels. Thus, the sales of energy during the year under review amounted to 28.25 million kw.h., as compared with 23.62 million kw.h. for the previous year, representing an increase of 4.63 million kw.h. or 19.6 per cent. The gross profit, which had declined a little from Rs. 8.74 lakhs (for 1952) to Rs. 8.37 lakhs (1953), has jumped up to Rs. 11.06 lakhs. The net profit (after making provisions for Agents' remuneration, depreciation and taxation) amounts to Rs. 5.43 lakhs—also a record—as compared with Rs. 3.79 lakhs for 1953 and Rs. 4.25 lakhs for 1952.

Out of the above profit, the Directors have utilised Rs. 1,751 to write off the new share capital issue expenses, for which purpose a sum of Rs. 1,632 was utilised a year ago. They also propose to transfer Rs. 25,670 to the statutory contingencies reserve, as against Rs. 22,928 set aside last year, Rs. 60,000 to dividend equalisation reserve and Rs. 61,900 to employees' retiring gratuities reserve, both of which had received nothing last year. The dividend on the ordinary shares is being maintained at 7 per cent. per annum for the eleventh year in succession, notwithstanding the substantial increase in equity capital during these years.

The following comparative table gives an idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1954	1953	1952	1951
Sale proceeds of energy	46.66	40.01	41.72	35.84
Other income	2.65	2.52	2.54	2.19
Cost of energy purchased	21.76	17.96	1.08	..
Other expenses	16.42	16.20	28.53	21.19

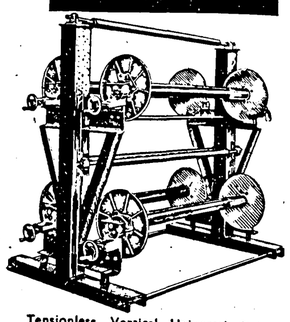
There was no change in the basic rate of supply of electricity. The special rebate of 5 per cent. on consumers' bills introduced in September, 1953, was withdrawn in August, 1954. 1,235 new consumers were connected to the mains, bringing the total number to 22,831, an increase of 5.72 per cent. over that at the close of 1953. The continuity of supply to the Company from the Government's thermal station at Utran was satisfactory. The Company's maximum demand on the Grid was 4,900 kw., as against 4,400 kw. in 1953, and it purchased 25.71 million kw.h. of energy, an increase of 4.25 million kw.h. over that in the previous year. Its diesel generating set No. 5, which had been out of commission since 28th February, 1951, was rebuilt with a new half crankshaft and was put on commercial load during the year under review. The maximum demand on the diesel generating plant was 3,370 kw. and the quantity of energy generated was 5.15 million kw.h., as against 4.73 million kw.h. in 1953. The maximum load on the Company's system as a whole was 7,600 kw., as against 6,880 kw. during the previous year.

The Company's reserves and surplus as at the close of the year amount to Rs. 14.19 lakhs, as against a paid-up capital of Rs. 56.24 lakhs. The provision for taxation stands at Rs. 2.79 lakhs and current liabilities aggregate Rs. 30.72 lakhs. The gross block of the value of Rs. 102.68 lakhs has been written down to Rs. 72.22 lakhs. Capital work-in-progress, intangible assets and obsolete and unserviceable assets account for Rs. 1.09 lakhs. The current assets amount to Rs. 30.64 lakhs.

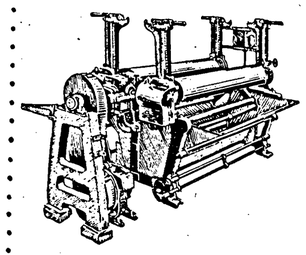
The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 131-8 *cum-div.* On an *ex-div.* basis, the dividend for the year under review gives a yield of 5.5 per cent. per annum, free of income-tax.

Why worry!
SIZING & DYEING NO MORE A PROBLEM
Insist on New Design

UNIVERSAL SIZING CREEL & TENSIONLESS SEMI AUTOMATIC DYEING JIGGER



Tensionless Vertical Universal Sizing Creel to take four beams, anti-friction roller bearings, saves valuable floor space, easy of approch to beam-ends.



Tensionless Semi Automatic Squeezing Type Stainless Steel Jigger, with Ebonite rollers, with self-aligning ball bearings, complete with electric motor and reversing switch.

Points From The Chair

Modernisation and Rehabilitation

"IT cannot be too strongly emphasised that, if this premier national industry is to maintain and improve its working on a sound basis, then the industry must be allowed to modernise and rehabilitate its outmoded equipment on an extensive scale and steps should be taken to introduce rationalised working by gradual stages to bring about the necessary reduction in the manufacturing costs. I welcome, in this connection, the development rebate of 25 per cent. which the Finance Minister has introduced in his last budget and I hope this will accelerate the pace of installation of new machinery and plants in many units. The problem, however, is really very gigantic and complicated and I appeal to the Government and the Planning Commission to give their proper attention to solve this issue which is of such vital importance to the future well-being of the industry."

G. D. SOMANI, M.P.,
Shree Niwas Cotton Mills Ltd.

Demand for Fuel Oil

"I drew attention last year to the mounting evidence of difficulty in keeping the balance product by product between market demand and what the refiner can extract from the barrel of crude oil in Eastern Hemisphere operations. Events since then have served to underline the problem. The demand for heavy oils, particularly residual fuel oil, has continued to increase rapidly. High levels of industrial activity and the inability of other fuels to cope with the increasing requirements has led, in Europe, for example, to a rise of about 20 per cent. in fuel oil consumption. Demand is likely to remain high, since oil will probably be called upon to satisfy increasing fuel requirements—in this country, the electricity authorities, gas boards and railways are all planning to use substantial quantities of fuel or diesel oil. The consumption of motor spirit, on the other hand, is generally restricted by heavy taxation, and sales in the Eastern Hemisphere showed an increase of only about 9 per cent., as compared with 13 per cent. for black oils. This artificial restriction of the demand for the lighter fractions, which include motor spirit, continues to present us—and the oil industry in general—with a difficult situation."

LORD STRATHALMOND,
British Petroleum Company Ltd.

Investment Policy in Insurance Business

"Successful investment policy in the insurance business is not to be measured by the outcome of a single year; premiums that are entrusted to us by life policyholders must usually be invested over a period of many years to build up the funds from which claims are paid. There is a continuing need throughout the life of each policy to invest such premium to obtain the best return that is consistent with security, avoiding discernible risks but taking advantage of promising investment opportunities as they arise. We are not alone in the insurance business in giving greater weight in our investment thinking to the long-term expectations of sound industrial ordinary shares, and the prospect of a gradually improving income from them. But in investment policy there can be no pre-conceived or hard and fast line, as recent events have again proved; only by constant watchfulness as conditions change can the maximum security and the best return be secured. We have, too, another responsibility in our investment policies. That is to take our share in directing an important part of the stream of national savings into productive industry. This aim, so essential to the progress of the British economy, is in our view no less to the ultimate advantage of our policyholders also."

THE RT. HON. LORD GLENCONNER,
Northern Assurance Company Limited.

Rural Credit Problem

"I am glad to say that the Government and the Reserve Bank have realised the importance of solving or tackling the rural credit problem. The experts from abroad have been consulted. Department of Investigation and Research of the Reserve Bank have produced a number of reports as to why and how this problem should be tackled. But I am constrained to say that the present proposal, as adumbrated by the Government as well as by the Reserve Bank shows lack of rural touch and outlook. The investigation reports reveal that the problem has not been completely understood. I think the regional commercial banks with sound directorate, who have got the knowledge of local area and the economic conditions of the rural population, will be able to tackle the problem successfully."

H. R. MOHARAY,
Bank of Karnatak Ltd.

Customers are Price-conscious

"...at the present time, with stocks in plentiful supply, customers do not feel the same compulsion to buy. They are free to choose and, what is more to the point, they are becoming more price-conscious and this situation of plentiful stocks and price-resisting customers is a safeguard against rising prices. That leads me to another point, I should like to make. Obviously, quality goods must be more expensive from a purely price point of view. There was a time when quality was the main consideration both at home and abroad and customers bought quality goods realising that it paid them best to buy the best. But now, as I said before, price is becoming more of a consideration and this also applies to the export trade."

SIR RICHARD BURBIDGE,
Harrods Ltd.

COMPANY MEETINGS AND DIVIDENDS

ALEXANDRA JUTE MILLS LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: Rs. 5 per share. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: As. 10 per share. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: As. 6 per share. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 30th May, 1955. Dividend: As. 4 per share. Transfer books remain closed from 16th to 30th May, 1955, both days inclusive.

BENGAL PAPER MILL CO., LTD. Half-yearly General Meeting, Calcutta, 31st May, 1955. Dividend: Re. 1-9 per share (6½ per cent.). Transfer books remain closed from 20th to 31st May, 1955, both days inclusive.

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, 6th June, 1955. Dividend: Rs. 2-8 per share (includes interim dividend of As. 10 per share). Transfer books will remain closed from 31st May to 6th June, 1955, both days inclusive.

SHREE DIGVLAY CEMENT CO., LTD. Annual General Meeting, Seeka, 6th June, 1955. Dividend: Rs. 8-8 per share, payable on 7th June, 1955. Transfer books remain closed from 16th May to 1st June, 1955, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Hospet (Bellary Dist.), 6th June, 1955. Dividend: Re. 1-12 per ordinary and "B" ordinary shares, free of income-tax, payable on or after 20th June, 1955. Transfer books will remain closed from 23rd May to 6th June, 1955, both days inclusive.

SENDRA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 10th June, 1955. Dividend: As. 2 per share. Transfer books remain closed from 27th May to 10th June, 1955, both days inclusive.

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 10th June, 1955. Dividend: *Nil.* Transfer books remain closed from 27th May to 10th June, 1955, both days inclusive.

ALCOCK ASHDOWN AND CO., LTD. Annual General Meeting, Bombay, 10th June, 1955. Dividend: Rs. 12-8 per share, payable on 13th June, 1955. Transfer books remain closed from 16th May to 4th June, 1955, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 15th June, 1955. Dividend: Re. 1 per ordinary share, payable on or after 20th June, 1955. Transfer books will remain closed from 25th May to 18th June, 1955, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 1st July, 1955. Transfer books will remain closed from 16th June to 1st July, 1955, both days inclusive.

INDIAN CEMENT CO. (1937) LTD. Annual General Meeting, Bombay, 18th July, 1955. Dividend: Rs. 2-8 per share. Transfer books will remain closed from 3rd to 14th June, 1955, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Dividend of Rs. 6 per share, for the year ended 31st December, 1954, payable on 11th July, 1955. Transfer books will remain closed from 3rd June to 2nd July, 1955, both days inclusive.

SRI BALASUBRAMANIA MILLS LTD. Dividend of Rs. 6 per share (15 per cent.), for the year ended 31st December, 1954. Transfer books remain closed from 26th May to 8th June, 1955, both days inclusive.

NENMENY RUBBER AND PRODUCE CO., LTD. Dividend of Re. 1-8 per share, for the year ended 31st December, 1954. Transfer books will remain closed from 14th to 18th June, 1955, both days inclusive.

THAMARAPALLY RUBBER CO., LTD. Dividend of Rs. 3 per share, for the year ended 31st December, 1954. Transfer books will remain closed from 14th to 18th June, 1955, both days inclusive.

BALANOOR TEA AND RUBBER CO., LTD. Final dividend of Re. 1-8 per share, for the year ended 31st March, 1955. Transfer books will remain closed from 13th to 18th June, 1955, both days inclusive.

DEVON TEA AND PRODUCE CO., LTD. Final dividend of Re. 1-8 per share, for the year ending 31st March, 1955. Transfer books will remain closed from 13th to 18th June, 1955, both days inclusive.

ANDHRA CEMENT CO., LTD. Dividend of Rs. 10 per "A" ordinary share and Re. 1 per "B" ordinary share, for the year ended 31st December, 1954. Transfer books remain closed from 15th to 29th May, 1955, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Dividend of Rs. 2 per ordinary share, for the year ended 31st March, 1955. Transfer books remain closed from 28th May to 11th June, 1955, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Final dividend of Rs. 10 per share, for the year ended 31st December, 1954. Transfer books remain closed from 27th May to 9th June, 1955, both days inclusive.

RESULTS OF SOME BIRD-HEILGER GROUP COAL COMPANIES

JANARDANA MILLS' PROFIT HIGHER

Bhulanbararee Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

Raisings and despatches.—84,832 (63,363) tons of coal were raised and 1,02,138 (76,334) tons were despatched compared with 72,941 tons raised and 65,815 tons despatched in the preceding half-year.

The Ropeway continued to work satisfactorily and transported 85,791 tons of sand to the Company's pits. The comparable figure in the previous period was 81,259 tons.

The process of sand getting and sand stowing continues in the nation's best interests, but it must be stressed again that the quantum of compensation by way of subsidy allowed by Government is not and never has been adequate.

Conservation.—While Government's plans for the expansion of the Indian Steel Industry go forward rapidly the plans for providing these same units with coal, a basic commodity, have not advanced at all in the last few years. Pegging of production continues in this coking coal colliery with resultant high costs.

Transport.—The seasonal increase in wagon supplies occurred during the half-year since when there has been the usual decline with stocks of coal accumulating at pit-heads. The locking up of capital is a serious matter in these days of narrow margins, if any, between selling prices and production costs.

Labour.—The directors report that relations with the workmen were on the whole satisfactory. The All-India Industrial Tribunal (Colliery Disputes) hearings which commenced in February, 1954 continue. Rs. 11,384 was received during the period from the Coal Mines Welfare Commission by way of subsidies on account of houses built for Labour.

The profit and loss account, after providing Rs. 33,766 (Rs. 26,270) for depreciation and including the debit balance of Rs. 2,04,456 (Rs. 41,494) brought forward from the previous period, shows a debit balance of Rs. 2,17,803 (Rs. 1,36,897) which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,15,000	Block ...	15,32,037
Reserves ...	14,52,017	Capital expenditure in progress ...	44,789
Liabilities ...	7,28,057	Coal stock ...	73,688
		Stores	1,32,775
		Debts and advances ...	8,25,033
		Investments	64,105
		Cash ...	4,844
		Profit and loss account ...	2,17,803
Rs.	28,95,074	Rs.	28,95,074

Borrea Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

Raisings and despatches.—75,147 (72,733) tons of coal were raised and 78,205 (75,298) tons were despatched compared with 75,768 tons raised and 73,587 tons despatched in the preceding half-year. The pegging target imposed by Government again restricted raisings.

Under the new taxation proposals, the Company will have a taxation saving of Rs. 1,000 for this period under the development rebate scheme. This sum is being taken to a development rebate reserve. The profit and loss account, after providing Rs. 37,410 (Rs. 30,244) for depreciation, Rs. 1,31,160 (Rs. 1,37,839) for taxation, transferring Rs. 6,800 (Rs. 6,000) to tax contingency reserve, Rs. 50,000 (Rs. 30,000) to development reserve, Rs 25,000 (*nil*) to reserve for bad debts, bringing in Rs 10,000 (*nil*) from taxation reserve and including the sum of Rs. 98,663 (Rs. 1,06,183) brought forward from last half-year, shows an available balance of Rs. 1,86,771 (Rs. 2,10,952) which the directors propose to dispose off as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 13,000 (Rs. 13,000), in paying a dividend on the ordinary shares at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 75,000) and in carrying forward Rs. 98,771 (Rs. 1,04,202 after paying a bonus of As. 4 per share which absorbed Rs. 18,750).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Block ...	16,31,195
Reserves ...	22,92,190	Capital expenditure in progress ...	2,54,869
Provision for taxation ...	1,34,512	Coal stock ...	37,791
Liabilities ...	5,32,571	Stores ...	1,21,506
Profit and loss account ...	98,771	Debts and advances ...	13,18,943
		Investments ...	7,64,979
		Cash ...	78,761
Rs.	42,08,044	Rs.	42,08,044

Burrakur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

Raisings and despatches.—5,10,755 (4,71,163) tons of coal were raised and 5,39,960 (4,99,753) tons were despatched compared with 5,15,703 tons raised and 5,02,872 tons despatched in the preceding half-year.

The Loyabad Ropeway continued to work satisfactorily and transported 4,81,558 (4,43,802) tons of sand to the Company's collieries and to other neighbouring collieries. The comparable figure in the previous period was 3,46,186 tons.

Loyabad Coke Plant.—36,726 (29,360) tons of metallurgical coke were manufactured during the period compared with 28,759 (32,428) tons last half-year. Relative despatch figures were 36,767 and 29,855 tons, respectively.

The directors report that the repair programme has now reached the stage where with repairs to only half the total number of ovens completed the Plant is producing more coke than a year ago due to the decrease in carbonisation time. Repairs to the remaining ovens are continuing as rapidly as possible.

A temporary shortage of by-product hard coke which evinced itself during the period under review has led to statements issued from various sources that the existing producers will be unable to meet the country's future demands for this commodity. In support of these statements there have been certain assessments of the extent of the potential demand, which in the directors' opinion have been greatly exaggerated. The directors consider that the existing sources of supply should be able, when working to capacity, to meet in full any demand for by-product coke which may arise within the near future. Consequently and bearing in mind the inherent inelasticity of the industry, it would be a mistake for the authorities to embark upon any scheme for the installation of new coke-oven capacity without first being fully satisfied that overproduction would not ensue. These views, which are fully shared by the other members of the commercial by-product hard coke industry, have been communicated to the Coke Oven Projects Enquiry Committee, whose report is awaited.

A sum of Rs. 16,954 was received during the period from the Coal Mines Welfare Commission by way of subsidies on account of houses built for Labour. Under the new taxation proposals the Company will have a taxation saving of Rs. 20,000 for this period under the development rebate scheme. This sum is being taken to a development rebate reserve.

The profit and loss account, after providing Rs. 4,89,955 (Rs. 3,92,488) for depreciation, Rs. 4,67,365 (Rs. 3,77,366) for taxation, transferring Rs. 65,000 (Rs. 55,000) to tax contingency reserve, Rs. 50,000 (Rs. 50,000) to debenture redemption reserve, Rs. 70,000 (Rs. 50,000) to ropeway rope replacement reserve, Rs. 30,000 (*nil*) to general reserve and including the sum of Rs. 1,49,910 (Rs. 83,552) brought forward from last half-year, shows an available balance of Rs. 5,61,616 (Rs. 4,28,860) which the directors propose to dispose off as undernoted:—

In paying a dividend on the 1st preference shares of 7 per cent. per annum without any deduction for income-tax paid by the Company Rs. 80,493 (Rs. 80,493), in paying a dividend on the 2nd preference shares of 6 per cent. per annum after deduction of income-tax paid by the Company Rs. 9,956 (Rs. 9,956), in paying a dividend on the ordinary shares at the rate of 6¼ (5) per cent. per annum without any deduction for income-tax paid by the Company Rs. 2,84,140 (Rs. 2,27,312) and in carrying forward Rs. 1,87,027 (Rs. 1,11,099).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,18,42,280	Block ...	2,38,64,086
Debentures ...	20,00,000	Capital expenditure in progress ...	2,07,218
Reserves ...	1,73,11,164	Stock-in-trade	15,18,618
Liabilities ...	62,12,979	Stores and spare parts	28,87,075
Profit and loss account ...	1,87,027	Debts, deposits and advances ...	66,87,867

		Cash ...	4,69,944
Rs.	3,75,53,450	Rs.	3,75,53,450

Churulia Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

Karanpura Mining Syndicate.—During the half-year ended 31st December, 1954, 66,571 (74,888) tons were raised and 65,780 (68,186) tons were despatched. The Secretaries report that rail movement has become somewhat easier recently but wagon supplies are not yet on a par with the output capacity of the mine.

The managing agents have decided to forego their allowance in respect of the period under review. The profit and loss account after including Rs. 25,618 (Rs. 19,867) brought forward from last half-year shows an available balance of Rs. 18,342 (Rs. 9,056) which the directors propose to dispose of as follows:—

In paying a dividend of 6 (6) pies per share, without any deduction for income-tax paid by the Company Rs. 4,688 (Rs. 4,688) and in carrying forward Rs. 13,654 (Rs. 4,368).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Investments	7,26,037
Reserves ...	1,43,230	Debts and advances ...	39,865
Liabilities ...	10,849	Cash ...	1,831
Profit and loss account ...	13,654		
Rs.	7,67,733	Rs.	7,67,733

Karanpura Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1954.

There was the usual seasonal increase in wagon supplies during this period and coal despatches from the Karanpura field improved accordingly. Information regarding the working of the coal industry during the second Five-year Plan indicates that this field is listed as one of the important centres.

Sales of fireclay again improved and the Company's income from the use of its drilling equipment showed satisfactory results. The laboratory continued to do useful work in many spheres.

It is probable that the Company's appeal against the decision of the Patna High Court will be heard by the Supreme Court towards the end of the year.

Raisings and despatches.—During the period under review 3,94,142 (3,99,107) tons of coal were raised and 3,95,633 (3,76,337) tons were despatched. The Argada Colliery has resumed working after serious flooding.

Regarding Scott and Saxby Ltd., a subsidiary company, the managing agents report that although the accounts for 1954 have not yet been finalised it is probable that the figures will show a small profit. Business was booked to capacity particularly in the tea garden areas, but the floods hampered programmes. Future prospects are good and the Company's order book is full for 1955 to date.

As previously on the advice of the Company's lawyers the directors do not recommend the payment of any dividend. For the same reason the managing agents do not propose to draw their commission for the half-year and the amount in question will be carried forward. The profit and loss account after providing Rs. 5,718 (Rs. 1,32,500) for taxation, Rs. 11,648 (Rs. 8,059) for depreciation and transferring Rs. 19,000 (Rs. 31,500) to reserve for bad and doubtful debts and including the sum of Rs. 26,086 (Rs. 72,147) brought forward from last half-year shows an available balance of Rs. 16,731 (Rs. 20,127) which will be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	31,62,003
Reserves ...	27,12,396	Stock ...	5,403
Provision for taxation ...	24,040	Stores ...	81,512
Liabilities ...	27,38,330	Other assets	20,317
Profit and loss account ...	16,731	Debts, deposits and advances ...	16,68,981
		Investments	25,22,969
		Cash ...	30,312
Rs.	74,91,497	Rs.	74,91,497

Janardana Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. G. Venkatswamy Naidu and Co., Uppilipalayam, Singanallur) submitted the audited accounts of the Company for the year ended 31st December, 1954.

After meeting all working expenses and interest, and after providing Rs. 2,26,182 (Rs. 1,10,357) for depreciation the year's working has resulted in a net profit of Rs. 2,13,246 (Rs. 57,344). Out of this sum, Rs. 5,168 has been expended on charity, leaving a balance of Rs. 2,08,078 (Rs. 57,344). The directors recommend to pay a tax-free dividend of 10 (9) per cent. to the shareholders Rs. 89,000 (Rs. 80-100 after taking Rs. 22,756 from dividend equalisation fund) and to reduce the loss of previous years Rs. 1,19,078 (*nil*).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,90,000	Block ...	14,13,391
Reserves ...	10,65,683	Stock-in-trade	7,37,169
Provision for taxation ...	69,769	Stores ...	1,85,063
Liabilities ...	8,37,156	Debts, deposits and advances ...	4,00,988
		Investments	59,680
		Cash ...	16,193
		Profit and loss account ...	50,124
Rs.	28,62,608	Rs.	28,62,608

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 25th *May*

Fairly comfortable conditions prevailed in the short-term money market during the week under review. This was not due to any appreciable improvement in the supply of funds, but was the result of a further abatement in the demand for money and the banks had no difficulty in meeting whatever demand there was. In the inter-bank call money sector, borrowers were able to get their requirements at 2½ per cent., as against 3 per cent. in the previous week. There was, however, no change in the short-term deposit rates. Banks offered 3 per cent. for one to six months' money. Ordinarily, at this time of the year, banks are not keen bidders for one to two months' deposits, for the period of their use falls in the slack season. But this year some are inclined to accept them, because they feel that, if the forthcoming Central Government loan were to be kept on tap, as was done last year, firm money conditions might prevail during the slack season, too. It remains to be seen whether this view will find wider acceptance next week.

The results of the Government of India Treasury Bill sales this week do not, however, clearly reflect the comfortable conditions in the short-term money market described above. Thus, while the amount offered, in response to the invitation for Rs. 100 lakhs, at Rs. 155 lakhs, were Rs. 16.25 lakhs more than those in the previous week, the average rate of accepted tenders hardened from Rs. 2-9 per cent. to Rs. 2-9-1 per cent. per annum. Tenders for Rs. 100 lakhs have been invited next week also.

A contraction of Rs. 8.68 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 20th May, 1955. This compares with the small expansion of Rs. 1.83 crores noted in the previous week. Notes held in the Banking Department, on the other hand, are higher by Rs. 8.94 crores, so that there is a net increase of Rs. 26 lakhs in total notes issued. This rise is covered on the assets side by a corresponding expansion in rupee coin. For the second week in succession, deposits of the Central Government show an increase, the rise during the latest week being Rs. 3.30 crores. The downward trend in deposits of other Governments, noted in the previous two weeks, is maintained in the week under review also with a further drop of Rs. 4.25 crores. Deposits of banks have risen by Rs. 2.91 crores. A rise of Rs. 1.51 crores is noted in balances held abroad. There has been no change in loans and advances to Government, while a decline of Rs. 4.06 crores is noted in other loans and advances, of which outstanding loans and advances to Scheduled banks against usance bills account for Rs. 3.38 crores. Fresh borrowings by banks against usance bills during the week amounted to Rs. 5.50 crores.

The consolidated statement of position of the Scheduled banks for the week ended 13th May, 1955, discloses a rise of Rs. 1.10 crores in demand deposits, in contrast to the decline of Rs. 8.08 crores in the previous week. Time deposits have gone up by Rs. 2.29 crores. Inter-bank borrowings reveal a fall of Rs. 88 lakhs, while borrowings from the Reserve Bank show an increase of Rs. 3.51 crores. Borrowings from the Imperial Bank have declined by Rs. 95 lakhs. On the assets side, the rise of Rs. 2.54 crores in advances noted in the previous week, has been followed up by a further increase of Rs. 1.54 crores in the week under review. Inland bills purchased and discounted account for a decline of Rs. 1.55 crores and foreign bills for Rs. 23 lakhs.

Firm conditions continued to prevail in the Gilt-edged market during the week under review also, with the demand for short and medium-dated securities well maintained in the face of a shortage of floating stock. Business put through was, however, very small for want of sellers. 3 per cent. 1957 was in demand at the self-same rate of Rs. 99-8, as also 3 per cent. 1958 at Rs. 99-7. 3 per cent. 1959-61 was well maintained at Rs. 97-12. 3 per cent. 1963-65 was in request and rose by an anna to Rs. 94-3, as also 3 per cent. 1964 to Rs. 94. 3 per cent. 1966-68 was held at the Reserve Bank's selling rate of Rs. 90-14. 3 per cent. 1970-75 was unchanged at Rs. 87-1, the Bank's selling rate. 3 per cent. 1986 Conversion Loan, however, softened a little to Rs. 80-11. 3½ per cent. 1961 National Plan Bond hardened from Rs. 99-13 to Rs. 100, while 3½ per cent. National Plan Loan was done at Rs. 98-12.

In the foreign exchange section, the rupee ruled weaker in terms of the U.S. dollar. Banks' selling rate for ready dollar rose from Rs. 479 to Rs. 480, though it declined today to Rs. 479½ per $100. Similarly, the buying rate, after rising from Rs. 475 to Rs. 475½, closed at Rs. 475¼ per $100. This is again in tune with a similar trend of sterling in terms of the dollar. Thus, in New York, spot sterling was marked down from $2.79 9/16-2.79 11/16 to $2.79-2.79½ on the 20th inst., the lowest level seen since 11th March, but recovered yesterday to $2.79 11/32-2.79 13/32. Three months' forward sterling closed at $2.78-1/16-2.78-3/16, after declining from $2.78½-2.78⅞ to $2.77 11/16-2.77 13/16. Transferable sterling dropped from $2.77¼-2.77⅞ to $2.77⅛-2.77¼.

(Concluded from next column)

In the tanned skins section, prices of sheep were firm and those of goat unchanged. Tanned goat superior tannages were well enquired after and the market was steady to firm. In the London public auctions, tanned sheep skins fifths and inferior selections sold strongly and prices advanced 12 to 18 pence on the sixth day of the sales but closed erratically. Out of 470,000 sheep, 135,000 remained unsold.

MARGIN IN GOLD IMPOSED

(From Our Own Correspondent)

BOMBAY, 25th *May*

After remaining featureless and somewhat subdued during the major part of the week under review, the bullion market experienced a flare up towards the close, with both silver and gold registering sharp increase in prices. The undertone of the silver section was steady with minor fluctuations in prices during the major part of the week, as the bulls were in no mood to relax their hold over the market, despite the imposition of a margin of Rs. 500 per bar from 17th May and reports of large arrivals of unrefined metal. They continued to take heavy carry forward charges from bears, the spread between the forward settlements in *Jeth* and *Ashad* widening from Rs. 5-10 to Rs. 6-8, though today it narrowed down a little to Rs. 6. Towards the close, however, there was a spurt in prices on heavy demand in the ready section, as witness the widening of the premium of ready over the forward from Rs. 3-8 to Rs. 4-8.

The gold section remained subdued in the earlier part of the week, due to slackness of demand and heavier arrivals, as indicated by the narrowing of the premium which ready gold commanded over forward from Rs. 2-6 at the opening of the week to Rs. 1-10 on Saturday. Thereafter, prices ruled steadily, until today when there was actually a flare up on account of heavy demand for ready gold and short-covering. The premium for spot gold again widened to stand at Rs. 2-15 at the close. The strength of spot gold today pushed up the closing price for forward delivery in *Jeth* settlement to Rs. 91-15, that is, to a level above the official starting rate for that settlement, namely, Rs. 91-4. And as this rate was Rs. 2-10 above the closing price for the next succeeding contract, a margin of Rs. 25 per tola on all outstanding purchases was imposed today, in terms of by-law 33-D(1) (a) (i).

Silver for forward delivery in *Jeth* settlement opened at Rs. 159-9 and moved between Rs. 160-6 and Rs. 159-3 before advancing to Rs. 161-5 today. The closing rate was Rs. 161-2. *Ashad* silver moved up from Rs. 153-15 to Rs. 155-2 and *Shravan* silver from Rs. 151-7 to Rs. 152.

Ready silver (.996 Mint), after dipping from Rs. 163-11 to Rs. 162-9 earlier in the week, advanced to Rs. 165-13 today and closed at Rs. 165-10. The floating stocks of silver are reported to be 700 bars. The daily average offtake was 25 bars.

Gold for forward delivery in *Jeth* settlement softened from Rs. 90-10 to Rs. 90-1, only to recover to Rs. 91-15 at the close today. *Ashad* gold moved down from Rs. 88-9 to Rs. 88-1 before hardening to Rs. 89-5 today. Business for *Shravan* gold, which was done at Rs. 87-7 at the close of the previous week, came to be done at a low of Rs. 86-13. It, however, wound up today at Rs. 88-1.

Ready gold moved up from Rs. 92-10 to Rs. 94-14, although it was done lower at Rs. 91-11 during the week. The floating stocks of gold are estimated at 10,000 tolas. The daily average arrivals and offtake were even at 5,000 tolas.

In London, silver prices depicted a soft tone earlier in the week, but regained to stand higher over the week. Spot silver dropped from 78½d. to 78d., but closed better at 78¾d. Similarly, forward silver closed ¼d. better at 78¾d., although it was lower at 77⅞d. also during the week. Gold advanced from £12 10*s.* 7*d.* to £12 11*s.* 2½d., the highest level since 10th March, before closing at £12 10*s.* 11*d.* per fine ounce. In New York, there was a further rise in the price of silver during the week from 89¾ cents to 90¼ cents per fine ounce.

The following comparative table shows the trend of the market during the week under review:

	25-5-55	Highest	Lowest	18-5-55

N. B.—Foreign bullion prices shown in the above table relates to the previous day.

GOOD OFFTAKE IN KIPS

(From Our Own Correspondent)

MADRAS, 23rd *May*

The kip market ruled steady and arrivals met with good offtake at three to six pies per lb. less than last week. U.K. business was patchy, due to importers trying to buy at low prices. Top marks held steady. Prices in the raw centres also remained firm, due to tanners' buying. Tanned buff calf ordinary quality was in good demand from the U.S.A., but at low prices, and superior quality from the U.K. at 62d., a penny lower than the previous sales. Tanned cow calf superior marks were in good demand. The U.S. buyers were less active in the buff hides section and prices were a shade easy, although they were still one penny above the U.K. buyers' ideas.

(Continued in previous column)

FORWARD COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 25th *May*

The cotton market exhibited a firm trend during the week under review, in distinct contrast to the weak conditions prevailing in the previous week. The firmness was aided principally by the upward revision in the limit of staple length of Indian cotton for all export quotas for the current season from ⅞″ to 25/32″ and free licensing of *Zoda* cotton exports (upto 30,000 bales) announced by the Central Government on Monday last. Rumours regarding the possibility of a reduction in the export duty of Rs. 300 per candy on cotton and removal of duty on cloth exports also imparted strength to the market. As a result, extensive buying activity was so much in evidence that even the bearish factors such as the Government's decision to resume licensing of cotton (1⅛″ staple) imports from non-dollar areas, especially from Egypt, and the report of curtailment of imports of cotton by several countries—Japan, France and the U.K.—were completely overlooked and prices of cotton forged ahead.

The cotton futures market presented buoyant conditions during the first two sessions of the week under review. The improved sentiment was largely the result of (1) fixation of lower room rates —at Rs. 7 "on," as against the previous rates of Rs. 13 "on," (2) application of call options, and (3) support extended by option dealers as well as by prominent bull operators. Consequently, values of cotton moved forward. The trend was somewhat halted on Saturday when, following heavy selling by a couple of prominent speculators, prices staged a retreat. The fall gathered further momentum early on Monday, thanks to high issuance of tenders on that day—amounting to 2,150 bales—and somewhat lenient survey results. Towards the close, however, a marked recovery was in evidence, due to the reasons stated at the outset. Today the market remained steady.

I.C.C. May went off the boards of the E.I.C.A. today. The contract opened the week at Rs. 578 and improved to Rs. 590 on Thursday. Thereafter, it gradually receded and terminated at Rs. 573-8 today. The total tenders against the May contract amounted to 13,550 bales, as against 5,950 bales tendered against the February contract. Of this quantity, 6,150 bales were tendered today. I.C.C. August delivery began the week lower at Rs. 562, as against Rs. 567-12 last week-end, and advanced to Rs. 571-8 on the 20th inst. After receding to Rs. 565-12 on Saturday, it recovered to Rs. 575 today before finishing at Rs. 573-4.

The trend of prices during the week under review is indicated below:

		18-5-55	*High*	*Low*	25-5-55
I.C.C. May ...	Rs.	582	590	573½	573½
I.C.C. August ...	Rs.	567¾	575	562	573¼

Although there was enlarged mill and trade demand for cotton in the spot market, prices did not record any rise. On the contrary, they were maintained more or less at last week's levels. Mill interest was specially focussed on Jaydhar, Laxmi, Jarilla and Vijay. In the export section, Dholleras met with enquiries from the Continent and Bengals from Japan. Among foreign cottons, there was moderate demand for ready lots of Egyptians, Africans and Sudans.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 540; Berar Jarillas Rs. 610; Khandesh Rs. 595; Vijay Rs. 540; Oomra *deshi* Rs. 540; Moglai Rs. 520.

The Alexandria cotton market ruled fully steady during the week. Karnak and Giza 30 were on special request, enquiries being mainly from India, Switzerland, Japan, France, Germany and the U.S. There was a further rise in premiums of entitlement currencies, with sterling touching a high of 15-9/16 per cent. The continued firmness is attributed to reduced volume of cotton exports from Alexandria and rumours of the Government selling sterling at 13½ per cent. to import licence holders. Even so, buyers paying fully in sterling for Egyptian cotton can get the very attractive discount of 9-1/8 per cent. Other entitlement currencies are also equally strong with Deutsche marks and U.S. dollars fetching a premium of 15½ per cent. Thanks to attractive discounts, enquiries, particularly from the U.S., have been better.

As was briefly reported last week, the Sudan Gezira Board has reduced the reserve prices for cotton further, as the earlier revision effected for the auction on the 11th inst. failed to break down buyers' resistance. The reduction is to the extent of 75 penny points for G2S, 100 penny points for XG3S, G3S, and XG4S, 65 penny points for XG5S and 125 penny points for all 'L's. The Board has also discontinued weekly auctions to be replaced by daily auctions which commenced on Wednesday last week. Sales by private treaty, too, have been suspended. The unsold stocks of old crop cotton lying with the Board are estimated at 16,740 bales.

In East Africa, the main interest now centres round MWANZA crop, the first auction of which covering 15,000 bales is being held today. The estimate of this crop is placed at 120,000 bales.

Quiet conditions prevailed in the Liverpool cotton futures market during the week under review. In view of continued uncertainty with regard to U.S. official policy for cotton exports during 1955-56, traders did not evince much interest in fresh business. Consequently, prices of cotton eased slightly. The latest available quotations from the futures market are: May-June 32.26*d.*; July-August 31.28*d*; October-November 30.53*d*; December-January 30.42*d.*

Trading in the New York cotton futures market was characterised by liquidation in near deliveries and transfers into new crop positions. Reports of beneficial rains over Eastern belt sections and generally favourable crop conditions

imparted easiness to the market and prices tended to recede.

The following are the latest available quotations from the New York market, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-5-55	17-5-55	10-5-55
Spot	34.80	34.75	35.00
July	34.04	34.11	34.19
October	34.20	34.25	34.15
December	34.22	34.33	34.20
March	34.15	34.28	—

COTTON YARN STEADY

(From Our Own Correspondent)

BOMBAY, 25th *May*

Notwithstanding expectations of larger cotton yarn output, based on the Government's decision to permit imports of cotton of over 1¼" from non-dollar areas, the cotton yarn market presented a fully steady tone during the week under review. This was because the sentiment of the market was hardened by rumours regarding the grant of a further export quota of yarn for giving relief to spinners who had heavy unsold stocks with them. There was, besides, the expectation of better off-take from weaving centres in the coming weeks. These factors, coupled with encouraging advices from importing countries, especially Aden and Hongkong, induced the operators to support the market and prices of yarn, as a consequence, tended to look up.

Among 10 count yarns, Moderns evoked the special attention of traders and spurted by As. 3 to Rs. 13. Podars were fully maintained at Rs. 12-13 and Elphinstones at Rs. 12-8. Among 20s, Maduras advanced by As. 4 to Rs. 17-4, Raghuvamshis were steady at Rs. 16-6. Deals in 40 count yarns were put through at higher levels, Moderns rising from Rs. 25 to Rs. 25-2. Among 60s, Moderns gathered As. 8 to Rs. 61-8. Finlays were steady at Rs. 62 and Raghuvamshis at Rs. 55. Among 80s, Seksarias met with special buying enquiries and rallied a rupee to Rs. 54-4. Finlays and Moderns were unaltered at Rs. 68-8 and Rs. 62-8, respectively. Yarns of 30 counts, however, proved an exception, in that they suffered a decline in prices for want of support. Thus, Maduras receded by As. 3 to Rs. 21. Moderns eased by As. 2 to Rs. 21-2.

In the absence of any encouraging development, the rayon yarn market ruled quiet this week too, as in the previous week, and prices continued their downward march. Rayon yarn (150 deniers) for May contract dropped a rupee to Rs. 731. There was no forward trading in June-July, 1955 fixed delivery and onward contracts at 150 and 120 deniers rayon yarn on cones during the week under review also. In the spot section, 150 Japan and 120 Italy declined by an anna each to Rs. 3-15 and Rs. 4-1, respectively. 150 Italy had six pies to Rs. 3-11. 120 Japan, on the other hand, strengthened by an anna to Rs. 3-13 on buying support. Indigenous yarns also had good enquiries and registered a handsome improvement in prices. National Rayons (120 deniers) Bt. Cones I Grade firmed up by As. 3-3 to Rs. 4-4-6 and II Grade by As. 2 to Rs. 4-2-6. 150D Bt. Cones I and II Grades hardened by 21 pies each to Rs. 3-8-6 and Rs. 3-8, respectively.

Encouraging offtake in consuming centres imparted some strength to the staple fibre yarn section and values which had suffered a fall last week staged a recovery. Staple fibre yarn (40×2) for May delivery rose from Rs. 590 to Rs. 591-8 before finishing at Rs. 590-12. June delivery improved by Re. 1-8 to Rs. 590-8 but ended the week at Rs. 57-12. Among foreign yarns (40×2) in the spot section, Sulcos changed hands 18 pies higher at Rs. 4-9-6. Shincos were fully maintained at Rs. 4-7. Among indigenous yarns, Kohinoors increased by half an anna to Rs. 3-6. New Greats put on 1½ pies to Rs. 3-1-9. Citys were steady at Rs. 3-3-6, Centurys at Rs. 3-1-6 and Sitarams at Rs. 3-2.

The table below gives the prices of art silk staple fibre and cotton yarns quoted today, as compared with those a week before:

	25-5-1955	18-5-1955
	Rs. a.	Rs. a.
Art silk yarn—		
150 D. May	731 0	732 0
120 Japan (per lb.)	3 14	3 13
150 Japan (per lb.)	3 15	4 0
120 Italy (per lb.)	4 1	4 2

60s Modern	61 8	61 0
80s Seksaria	54 4	53 4

GROUNDNUTS BETTER

(From Our Own Correspondent)

BOMBAY, 25th *May*

The oilseeds market ruled rather quiet early in the week on larger arrivals of oilseeds. Shippers and crushers preferred to be cautious in view of the forthcoming closure of certain minor ports owing to the approaching monsoon. Besides, there was also shortage of storage space in Bombay. Consequently, demand was at a low ebb and prices showed a tendency to decline. But, subsequently, the market put on a cheerful appearance. This was chiefly due to revival of overseas enquiries for groundnut oil at £102 per ton, as against £96 to £97 per ton a fortnight ago and for linseed oil at £98 as against £91 per ton. Prices in the groundnut and linseed sections, therefore, advanced and recorded sizable gains over the week. The castor, *niger* and *kardi* seed sections also moved in sympathy with groundnuts.

In the groundnut section, Bold F.A.Q. improved from Rs. 20-5 to Rs. 20-14. June-July delivery gained As. 9 to Rs. 20-14 and August-September As. 3 to Rs. 21-12. Khandesh quality hardened by As. 6 to Rs. 21-6. Groundnut oil ex-mill gathered an anna to Rs. 11-6. June and July deliveries changed hands at Rs. 11-7 and Rs. 11-9, as against Rs. 11-5 and Rs. 11-6, respectively.

Bold delivery in the linseed section put on Re. 1 to Rs. 23-5. June-July delivery advanced from Rs. 22-1 to Rs. 23-3. Small Sutna rallied As. 14 to Rs. 21-14. Linseed oil gained As. 13 to Rs. 14.

There was very little activity in May delivaries in the castorseed section. After opening at Rs. 69-8, it fluctuated between Rs. 70-8 and Rs. 69-1. The clearing rate was Rs. 70-8. September delivery, which changed hands early in the week at Rs. 74-7, as against Rs. 75-1, closed at Rs. 75-3, the highest and the lowest touched being Rs. 75-15 and Rs. 74-1, respectively. Among spots, Madras quality gained an anna to Rs. 14-7 and Kanpur As. 2 to Rs. 13-8. Castor oil B.S.S. gathered As. 4 to Rs. 9-8. Commercial quality also put on a similar amount to Rs. 8-8.

Among others, *kardi* Bold was better by As. 4 at Rs. 11-8, and June-July delivery by As. 2 at Rs. 11-12. Niger F.A.Q. rallied As. 12 to Rs. 18-4 and Madras quality Re. 1 to Rs. 19-4.

Overseas demand for oilcake is said to be quite encouraging. Trading circles have welcomed the decision of the Government of India to permit export of 5,000 tons of coconut oilcake to all permissible destinations other than the Portuguese possessions in India upto the end of July, 1955. According to a Press note issued by the Joint Chief Controller of Exports, Bombay, on the 19th inst., export will be allowed by the following categories of shippers only:

(1) Crushers of cocoanut, who are able to produce a certificate from the excise authorities to show that they have paid cess during any one of the three years, 1952, 1953 or 1954 or

(2) Shippers who have exported any oil of controlled variety, namely, castor oil, cottonseed oil, groundnut oil, *kardi* seed oil, linseed oil, mustard oil, *niger* seed oil, rape seed oil and salad oil during the period from 1st January, 1949 to 31st December, 1954.

The eligible crushers and shippers should submit the necessary shipping bills along with relevant documentary evidence. The maximum quantity that a crusher or shipper will be allowed to export from all ports is 200 tons, and licences issued will be valid for 15 days only.

Exporters are, however, warned not to enter into long-terms commitments, as the licensing will be stopped as soon as the ceiling is reached.

The Government of India has also decided to release a further quota of 10,000 tons of cottonseed oilcakes, decorticated and undecorticated, for export by all shippers upto the end of August, 1955.

The following table shows the price of oilseeds and oil today, as compared with those at the end of the previous two weeks.

	24-5-1955	18-5-1955	10-5-1955
	Rs. a.	Rs. a.	Rs. a.

SUGAR QUIET

(From Our Own Correspondent)

BOMBAY, 25th *May*

Influenced by the further release of indigenous sugar for sale in the free market, the sugar market depicted a quiet note during the week under review. Some selling was in evidence and prices of sugar generally tended to look down. The fall would have, perhaps, been marked but for the slow arrival of indigenous sugar into the market—the total for the week being only 4,400 bags, as against 9,600 bags a week before—and good demand from interior centres.

Sugar for *Shravan* delivery dropped As. 6 to Rs. 87-14, but recovered to Rs. 88-2 today. *Jeth* delivery declined by As. 2 to Rs. 83-4.

Among indigenous sugars in the spot section, large grain was quoted at Rs. 93½-Rs. 101, as against Rs. 95-Rs. 102 a week before. Deals in medium grain were put through at Rs. 89-Rs. 93, as compared with Rs. 89-Rs. 94. Small grain was quiet at Rs. 88-8. The prices of foreign sugars were all maintained at last week's levels. Thus, British refined sugar was quoted at Rs. 84-4 per bag of 2 cwts. and Czechoslovakian sugars at Rs. 88-Rs. 90 per 220 lbs. French and German sugars were done at Rs. 82-Rs. 84 and Rs. 80, respectively, per 224 lbs.

As stated at the outset, the Union Food Ministry has announced a further release of indigenous sugar amounting to 50 per cent. of the production in the month of April. The share of sugar mills in South India, including Bombay Deccan, in this release is estimated at approximately 41,000 tons. The Deccan sugar mills have been granted liberal release. As the busy seasonal demand for sugar normally tapers off by about the middle of June and as plenty of stocks of released sugar remain unsold, the sugar factories have become keen sellers around existing prices.

N.B.—The rates for Indian sugars are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER BUOYANT

(Messrs. Parekh & Co.)

BOMBAY, 25th *May*

Buoyancy was the highlight of trading in Malabar black pepper during the week in all primary markets. Acute shortage of floating stocks following small arrivals from the interior aided sentiment. Active enquiries from New York for May, June and July shipments fanned the fire. New York is reported to have paid for May shipment, as high as $0.51, while June was placed at as high as $0.50 and $0.50½. With every advance in the prices, growers are becoming more reserved sellers. They refuse to sell, unless at their price. They only sell small quantity even at higher prices, thus making buyers who have sold short more nervous and forcing them to cover at still higher prices. Hereunder we give the statistical position of Malabar black as on the 1st May, 1955, from all available data:

		Tons	Tons
Carry-over from 1953-54		2,000	
Crop during 1954-55		19,000	
			21,000
Export—			
1954	Cwts.		
November	19,605		
December	23,655		
1955			
January	33,552		
February	19,983		
March	26,156		
April (estimated)	44,000		
		8,347	
Plus estimated local consumption during 6 months at the rate of 750 tons per month		4,500	
			12,847
Balance as on 1st May 1955			8,153
Less: India's estimated consumption for 2 months at 750 tons and remaining 4 months at 500 tons			3,500
Less stock generally maintained irrespective of prices by the growers to be carried forward into next season.			1,500
Estimated exportable balance as on 1st May, 1955			3,153

The estimate of pepper whether it be from India, Indonesia or Sarawak, is a matter of guess-work. One's guess is as good as another's. The only reliable data available are the export figures. There is always wide difference between the trade's estimates and those by the Governments. Traders while estimating the crop, like to err on a safer side, while Government having no axe of its own to grind, in almost all cases give out exaggerated figures of production. Following are the comparative figures of estimates of pepper in India, Indonesia and Sarawak:

	Government estimate	*Trade's estimate*
	(In tons)	
India (crop 1954-55)	25,800	19,000
Sarawak (crop 1955)	15,000	10,000
Indonesia (crop 1955)—		
Black	8,000	6,000
White	6,000	5,000

If trade's estimates of crops of pepper in the important countries come out true, the overall picture of supply of pepper to world will be short and prices are likely to go still higher, as world consumption is placed at about 32,000 tons during the coming eight months, while the supply available will be in the neighbourhood of 25,000 tons only.

May and June shipments were done at $0.51½ per lb. C. & F., New York, while July-August-September are sought after at $0.51.

In the delivery section, market showed more liveliness than at any time during the last three to four months. June, July and August deliveries are quoted at Rs. 1,095-1,105, Rs. 1,110-20 and Rs. 1,105-15, respectively.

Following are today's nominal quotations: Ready delivery Rs. 155-60 (as against Rs. 140 a week ago) per Bengal maund, June Rs. 1,095-1,105 (Rs. 1,030-40), July Rs. 1,110-20 (Rs. 1,030-40) and August Rs. 1,105-1,115 (Rs. 1,020-30) per candy of 5¼ cwts.

BETTER DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart and Figgis, Ltd.)

COCHIN, 19th *May*

The offerings in dust sale "J" which was held on Tuesday, 17th May, amounted to approximately 415,000 lbs. There was a better general demand. Better liquoring and natural dusts sold well at around last rates. Milled dusts which have been neglected recently sold fairly well at an irregular decline of As. 4 per pound.

London Market.—Stronger demand. Assam B.O.Ps. and orange fannings 2d. to 3d. dearer. Others irregularly 1d. to 2d. higher. Plainest types barely steady.

Colombo Market.—Middle East types strong demand. Dearer. Best quality good demand about last rates. Medium teas neglected. Heavy withdrawals. Quantity five millions.

Calcutta Market.—Dust 10,000 packages. Better general demand. Clean commons and C.T.C. fairly firm to dearer. Nominal internal leaf

670. Few new season's good demand, rest old season's fairly well supported.

Export Quota.—Some business was effected in special licence at 21 pies and in new season's quota at 57 pies.

Forthcoming Auctions.—Sale No. 11 will be held on Tuesday, 31st May, and dust sale "K" will be held on Tuesday, 7th June, 1955.

B. TWILLS DECLINE

(From Our Own Correspondent)

CALCUTTA, 24th *May*

The active conditions which were in evidence a week ago, following good business in both hessians and heavy goods for export, gave way to dull trading during this week, and prices dropped. All the same, shipping during this month is expected to reveal satisfactory results. Conditions in Calcutta port are causing much concern to trade circles and the Government alike. Congestion in the port as a result of difficulties caused by labour troubles is causing harmful delay in both loading and unloading. But for the trouble in the port, jute goods would have attracted more attention. The threat of some foreign shipping companies to increase the surcharge on freight rates for cargo to and from Calcutta, Bombay and Madras ports was a factor which during this week prevented forward business. The Union Commerce Minister has armed himself with a counter-threat, namely, not to allow such ships as would increase the surcharge to touch Indian ports. It is to be hoped that the labour situation in the ports would improve and that the threats and counter-threats do not materialise. If, unfortunately, a deadlock over the surcharge on freight were to develop export industries such as jute, cotton textile, tea, etc., would be facing serious difficulties, and jute mills may be compelled to reduce output drastically.

During this week, news from New York stated that burlap consumption in the United States during April fell by 8 million yards to 71 million yards, while stocks were higher at 258 million yards, as against 254 million yards in March. The stock figure for April consisted of 131 million yards afloat and 127 million yards ready, as against 120 and 134 million yards, respectively, in the month of March. That means the quantity afloat was higher by 7 million yards, which has surprised Calcutta trade circles, as stocks with mills as at the end of April, increased substantially to 103,300 tons from 94,600 tons. However, the fact is that America is having burlap sufficient to last for about eight weeks, and that means that the United States can afford to watch the price situation for some time more.

The week commenced with reports that certain steamers would be delayed. Prior to this, very high levels had been reached in the *fatka* market. This factor coupled with the above reports made bulls to unload their holdings. The weak operators also indulged in profit-taking. In this process, ready 40" 10 oz. hessians gave way to Rs. 44-4 and B. twills to Rs. 116-8 from Rs. 117-2. Forward business was sought, but buyers were difficult to be found due to the uncertainty caused by the proposal of certain foreign shipping companies to increase the surcharge on freight rates by 25 to 30 per cent. as from 1st June. July-September hessians 10 ozs. were pushed down to Rs. 43-12 from Rs. 44-1 and similar B. twills to Rs. 112-8 from Rs. 113-6. Selling pressure continued and business was welcome for delivery up to the end of the year. Apart from some small business in ready goods, there was nothing of note. By Thursday, ready 40" 10 oz. hessians had declined to Rs. 43-10, which was lower by As. 10 compared to the week's opening. July-September goods were lower by almost a point to Rs. 43-4. Ready B. twills at Rs. 114 revealed a fall of Rs. 3-2, and July-September position at Rs. 110 dropped by Rs. 3-6. At this stage, some mills showed anxiety for business, and this was enough for a further pull-down. By the week-end, B. twills had fallen to Rs. 112-8, the recession over the week amounting to Rs. 4-10, and July-September goods at Rs. 108-12 compared with Rs. 113-6 at opening. In the lower level, hessians were not much affected in view of the earlier orders from Argentina. Ready hessians 40" 10 oz. closed for the week at Rs. 43-10, which was lower by As. 10. Yesterday, quotations eased further, and the 10 oz. hessians were lowered to Rs. 43-5, with the eight oz. being priced at Rs. 34-8. Similarly, B. twills also lost to Rs. 112-2 from Rs. 112-8 over the week-end.

Raw jute was also easier; however, the extent of the fall compared to that in jute goods was insignificant. Sellers were reserved. Assam bottoms fell to Rs. 32 from Rs. 33 a maund.

NARROW MOVEMENTS IN BASE METALS

(From Our Own Correspondent)

CALCUTTA, 24th *May*

Prices of base metals were subjected to narrow fluctuations during the week under review, as consumers were reluctant to enter into commitments beyond immediate requirements. Electrolytic copper was quoted at Rs. 255 for most part of the week, but closed lower at Rs. 250. While demand was at a low ebb, stockists took note of the steadiness in the London Metal Exchange, following the report that West Germany would be looking to the London market for about 6,500 tons of copper. Earlier, it had been reported that West Germany had covered her requirements.

On the other hand, there was a report emanating from Washington that the United States would make available 16,000 tons of copper from stockpile to its domestic industries. This was taken as an indication that world prices were unlikely to harden. This was noted in the local market, and the quotation for electrolytic copper gave way to Rs. 250. Lead was done at Rs. 74. Consumers were anticipating a fall in price in view of recent arrivals. Mercury was firm at Rs. 1,235. Electrolytic zinc eased from Rs. 63-8 to Rs. 63. Some quantity changed hands, and the arrival of fresh imports have increased ready stocks. Tin opened at Rs. 497. Moderate business was put through, but the price eased to Rs. 493 following an increase in stocks. However, even the lower level was above replacement cost.

TEAS FOR INTERNAL CONSUMPTION BETTER

(From Our Own Correspondent)

CALCUTTA, 24th *May*

Conditions were better during last week's sale for domestic consumption. There was more general demand and prices recovered. Offerings aggregated 10,756 packages, of which 443 chests were of new season's tea. The small quantity of new tea was in good demand, and a few lots were sold at above valuations. Of the old season's tea, the poorer C.T.C. Assams realised prices above valuations, and the good C.T.Cs. were quoted at firm rates. Clean well-made teas rose fractionally. The quotations were: best Assam C.T.C. Rs. 2-7 to Rs. 2-9, medium Assam grainy dust Rs. 2 to Rs. 2-1, and medium Dooars Re. 1-14-6 to Re. 1-15.

The leaf section also met with good demand, with more attention being shown to the new season's tea which amounted to 174 packages. Old season's tea amounted to 285 packages. The new teas were firm, while the old season's lots were irregularly priced.

HIDES FULLY STEADY

(From Our Own Correspondent)

KANPUR, 23rd *May*

The hides and skins market was devoid of any development during the week under review. In the absence of any inspiring factor, dealers evinced little interest in fresh business. The undertone of the market, however, remained fully steady.

The latest available quotations are: wet salted cow, 1st grade Rs. 360 to Rs. 400, 2nd grade Rs. 320 to Rs. 380 and 3rd grade Rs. 120 to Rs. 320 per score; wet salted buff, 1st grade 1 lb. 10 ozs. and 2nd grade 1 lb. 12 ozs. per rupee; goat skins, 1st grade Rs. 300 and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep skins Rs. 200 to Rs. 225 per 100 pieces.

PEAS PRICES ADVANCE

(From Our Own Correspondent)

HAPUR, 23rd *May*

Foodgrain prices revealed an uncertain trend during the week and earlier losses were made up towards the close. The Union Food Minister has reiterated the Government's decision not to allow the price of wheat to fall below Rs. 10 per maund anywhere in the country. Wheat prices which were quoted above Rs. 10 per maund last week, leading to a virtual suspension of Government purchases, declined to Rs. 9-10 per maund this week under pressure of heavy arrivals (averaging 4,000 maunds daily). Following revival of Government purchases and fall in arrivals to 1,500 maunds daily, the prices again improved to Rs. 9-14 for average quality. Although the State Government is purchasing wheat at the fixed price of Rs. 10 per maund in 56 principal markets in the State, the producers' confidence yet remains to be restored. The steep fall in the red quality wheat prices to as low as Rs. 7-4 per maund in some part of the State is causing concern, but, of late, there has been good demand for wheat from Calcutta and Bihar. Daily arrivals here now average 1,500 maunds and the wheat stock has increased to 25 *khaties*. The coarse grain also recorded a slight fall in prices in line with wheat prices. Gram was today transacted at Rs. 6-4 for *desi* quality and at Rs. 6-12 for Punjab quality. Arrivals of gram from Punjab side having increased, the gram stock has swelled to 8 *khaties*. Barley and *bejhar* prices continued unchanged at almost last week's levels, being quoted at Rs. 5-6 and Rs. 5-2 per maund, respectively, with *bejhar* stocks at 8 *khaties*.

The peas prices which had advanced during last week receded to the previous level of Rs. 5-8 per maund for average quality and of Rs. 6-8 for white quality. With increase of arrivals to 1,500 maunds daily and the outside demand being dormant, the peas stock has increased to 28 *khaties*. *Arhar* prices continued unchanged at Rs. 6-6 per maund and, with arrivals of *arhar* from Madhya Bharat and Gwalior sides, the stock here is estimated at 13 *khaties*. Other pulses continued steady. Peas futures, on the other hand, displayed a steady outlook with prices recording gains in almost all the sections on bull support from east U.P. and on expectations of exports in the near future. Peas *jeth* and *bhadon* are today quoted at Rs. 5-11 and Rs. 5-13, as against Rs. 5-8-3 and Rs. 5-10, respectively on Monday. *Arhar jeth* and *bhadon* also advanced fractionally to be quoted at Rs. 6-8 and Rs. 6-10 today.

LARGER TURNOVER IN SUGAR

(From Our Own Correspondent)

HAPUR, 23rd *May*

A slightly better turnover, following revival of demand for sugar from Saurashtra, Bombay and Madras sides, resulted in better prices of mill delivery sugar during the week under review. Selling pressure seems to have subsided and confidence has revived in the sugar market. The total availability of sugar, which includes an increased production of indigenous sugar, appears to be far higher than the country's requirements. With reports of increased sowings and expectations of bumper cane crop next season, there is very little possibility of any substantial improvement in sugar prices in the near future. The mills on this side of the State are still crushing cane and the latest prevailing rates are: Jaswant Rs. 29-4, Simbhauli Rs. 29-4, Mowana Rs. 29-5, Daurala Rs. 30-8, Amroha and Bijnore Rs. 28-8, Mansoorpur Rs. 31, Rampur Rs. 32; retail Rs. 31-12 and *khandsari* Rs. 21 to Rs. 27 per maund.

Ready *gur* prices drifted lower this week. Outside demand was slack. Arrivals and offtake offset each other at 300 maunds daily. The local stock is now estimated at 90,000 maunds and the latest prices are: Dry quality Rs. 9-10 and kotha wet quality Rs. 9-4 per maund. The stocks of *gur* here this time last year amounted to only 18,000 maunds.

The ready *gur* markets in the South ruled quiet during the week, as daily arrivals fell. In Maharashtra, however, the *gur* stocks are reported to be heavy.

The future *gur* market at Hapur recorded a downward trend and the latest quotations on Monday were: *Gur Asar* Rs. 8-12-9 and *gur phagun* Rs. 8-9-6, as against Rs. 9-1-9 and Rs. 8-14-3 quoted last week-end.

TEXTILES

(Concluded from page 1020)

In view of the foregoing developments, it remains to be seen whether the upward trend in cotton exports from India witnessed so far in the current season will be maintained in the remaining months. Exports of cotton from India during this season (up to 7th May, 1955) aggregated 165,664 bales, as against 112,404 bales in the corresponding period of 1953-54. The destination-wise exports of Indian cotton is indicated below:

(In bales of 400 lbs. each)

	1st Sept. 1954 to 7th May 1955	
	1954/55	1953/54
U.K.	24,971	13,887
Continent	41,024	22,621
Hongkong and China	3,221	251
Japan	77,490	61,190
U.S.A.	17,598	13,003
Other foreign countries	1,360	1,452
Total ...	165,664	112,404

It will be noticed that the total exports have risen by more than 50,000 bales during the current season as compared with those in the previous season. There has been a noticeable increase in the offtake of cotton by Japan, the Continent and the U.K.

STANDARDS FOR HANDLOOM FABRICS

The handloom industry is one of the most important small-scale industries in India. Measures adopted recently by the Government of India to give further impetus to this industry, it is claimed, have enabled the handloom products to attain an important place in the country's economy. Further progress of the handloom industry depends, to a large extent, on the uniformity of quality of material that it can produce for internal consumption and for export. The Handloom Cloth Sectional Committee of the Indian Standards Institution has circulated thirteen draft standard specifications for handloom cotton fabrics covering turkish towels, honeycomb towels, huckaback towels, napkins, tablecloths, dusters, sponge cloth, jaconet cloth, ticking cloth, bandage cloth, china sheeting, floor durries and bed durries.

The draft standards prescribe general requirements of the fabrics, such as quality of yarn, freedom from defects, etc., and specific requirements, such as ends per inch, picks per inch, weight, breaking strength, width and length, colour fastness, and scouring loss. Methods of test for the determination of the above characteristics have also been referred to. The manufacturing particulars and the corresponding samples of handloom fabrics produced in different parts of the country were scrutinised before selecting varieties in each item for the purpose of formulation of standards.

The proportion of the U.K.'s national income spent on textiles, which had made a sharp jump in the Korean war and immediately after the end of rationing, has again fallen to the depressed level of the 1930's. This was revealed by Dr. Mark Abrams, a market research expert, at the annual conference of the Textile Institute in London last week. The amount actually spent on textiles now represents about 7.9 per cent. of the national income, as against 9 per cent. in 1950. According to Dr. Abrams, in spite of the considerable boom during 1954, textiles as a whole have not benefited. The textile trade has not sufficiently appreciated that heavy advertising by an industry as a whole can raise the level of consumption.

At an urgent meeting held at Virudunagar (South India) last week, the Executive of the Madurai, Ramnad and Tinnevelli Districts Cotton Merchants' Association urged the Central Government to permit exports of at least 16,000 bales of cotton grown in the three districts as in the case of Kakinada cotton, 6,000 bales of which were recently allowed to be exported. The plea is put forward on the score that, owing to absence of buying by mills in the region at reasonable prices, a large stock of cotton has accumulated.

STOCK & SHARE QUOTATIONS

Abbreviations.—D=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. x.d.=Ex-Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares.—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts.—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery, and All other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly, dividends are shown separately for the respective half-years

* Including bonus.

(†) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

(k) Investments.

(s) For seven months ended 31st March 1954.

FRAME OF SECOND FIVE-YEAR PLAN

(*Concluded from page 1017*)

savings. Investment gets diverted into luxury trades to meet the demand for their products resulting from inflation incomes. It diverts an undue proportion of savings into urban property and real estate into gold hoards and jewellery and into foreign exchange, as a result of the effort of the savers to protect the value of their savings. The resources available for the Plan would be, as a result, correspondingly less, and overall economic development would be impeded.

"Inflation tends to be self-perpetuating. With the rise in prices and wages, the original estimates of the cost of the project taken in hand will be out of date. More deficit financing would be necessary for the completion. And, as they cannot be left half-finished, there would be a pressure for further deficit financing. At any given moment, the whole of the currently available savings being invested either in the public or in the private sector, or outside the Plan, there would be no idle savings to draw upon. Real resources would have to be drawn into the Plan by force, which would render the distortions and wastages referred to above unavoidable. This takes away from the practical value of the caution that the inflationary situation should be kept under watch. Once inflation begins, it tends to gather momentum and, while it runs its course, we are apt to be more or less helpless witnesses. The best protection against inflation is to prevent it by keeping the investment programme within the available real resources."

In the considered opinion of Prof. Shenoy, the amount of deficit financing and the amount of credit creation should be together limited to the increase in the cash balances. Since the rate of expansion in the balances depends on the rate at which India's national product has risen during the first Five-year Plan, he emphasises the need for a clear study of the magnitude of the credit creation and deficit financing. As a conjucture, however, Prof. Shenoy estimates that an aggregate deficit financing of Rs. 180—Rs. 220 crores for the five years, or an annual rate of Rs. 35—Rs. 44 crores, may be safely undertaken. A part of this, he says, will have to be allocated to the sector and will be matched by equivalent credit creation by the banking system. The total amount of sterling releases during the Five-year period is placed at Rs. 100—Rs. 150 crores by the Plan-frame.

Policy and Institutional Implications

This brings us to Prof. Shenoy's views on certain policy and institutional implications of the Plan-frame. He is unable to agree with the views expressed by his colleagues that "it is only when there is a firm legislative and administrative base that it is possible to think in terms of doubling the rate of progress in the second Plan period, of increasing capital formation, of raising levels of living and of providing the machinery for accelerated development in the future." Prof. Shenoy apprehends that reliance on legislative and administrative measures to augment the rate of savings may, by degrees, undermine the democratic social order, "which would be too high a price to pay for accelerated economic development." In his opinion, such measures should be diverted only to ensuring the specially most effective use of savings. In order to permit accelerated economic development, it would be preferable to supplement domestic savings by foreign capital and foreign aid.

Prof. Shenoy is also unable to agree with his colleagues' recommendation for the amendment of Article 286(3) of the Constitution, in order to permit taxation of articles essential to the life of the community. For, according to him, there is hardly room for a further reduction in the standard of living of the lower-income groups in India. Finance for the Plan, he says, must be raised from the middle and the upper income groups. He feels that such measures of taxation and other devices as would tend to reduce further the consumption of the lower income should be avoided.

Nationalisation

The colleagues of Prof. Shenoy point out that the scarcity of administration and specialised personnel and the necessity of conserving savings for the Plan are factors against extension of nationalisation. But they have no objection for such extension on principle. Prof. Shenoy does not agree with them. He is opposed to the general extension of nationalisation even on principle. Nationalisation, he says, should ordinarily be limited to public utility concerns and concerns involving national security. Otherwise, State intervention should be concerned with the prevention of monopolies or quasi-monopolies. Significantly enough, he adds: "Efficient management of business and industrial concerns in a competitive market economy is a highly specialised function and requires qualities which a civil servant is not required to possess, and, in the ordinary course

TASK BEFORE MR. T. T. KRISHNAMACHARI

THE establishment of a separate Ministry at the Centre to be in charge of State-owned iron and steel undertakings, as well as State-owned foundries, is a step in the right direction. It is an indication of the Government's eagerness to expand the iron and steel industry—the mother of all industries—as quickly and efficiently as possible. This is further evident from its choice of the person to be in charge of this new Ministry. Mr. T. T. Krishnamachari, who holds the new portfolio in addition to Commerce and Industry, has already proved his mettle to the satisfaction of the public. He is recognised as a Minister who knows his job and is capable of running the Ministry in a business-like manner. It was, after all, he who made the Government and the Planning Commission to think in terms of a six-million-ton target for steel. It was he who was mainly responsible for attracting British iron and steel plant manufacturers to India for putting up a steel plant with a capacity of a million tons. He has already done considerable thinking and spade-work for absorbing the additional steel that will be produced. The Prime Minister and his colleagues have done the right thing in asking Mr. Krishnamachari to take over this additional responsibility. What they have done has the full appreciation of the public, in general, and the business community, in particular. This appointment, as well as the success that has attended the working of the Commerce and Industry Ministry during the last three years, clearly shows that an experienced administrator, with all the qualities of a business man, is more suited to be in charge of commercial and economic portfolios of the Government than mere academicians or lawyers. The efficiency of the Congress Party as a ruling power will improve manifold if it can attract into its fold business men of the calibre and experience of Mr. Krishnamachari.

A separate department or Ministry in charge of iron and steel industry is a common feature in most of the industrially developed countries. In Britain, for instance, the Government has constituted a separate body known as the Iron and Steel Board. This Board was set up only two years ago and since then the progress of the British iron and steel industry has been remarkable. The chief function of this Board is to promote "the efficient, economic and adequate supply, under competitive conditions, of iron and steel products." Soon after it came into existence, the Board revised the price structure for iron and steel products and re-drew the development plans by providing higher targets. The Government of India is thus in good company in forming a separate Ministry for iron and steel. But it has not acted in a scientific manner. Its action seems to have been motivated more by a desire to please this Minister or that than by the merits of the case. It is a poor compromise of conflicting demands, which is quite typical of the Congress Party. Mr. Nehru has evidently tried to follow a *via media* designed to satisfy Mr. Krishnamachari's long-standing demand, namely, that responsibility for industrial production, be it under the public sector or the private sector, should be centralised in one ministry and not divided between two or three ministries as has been the case in recent years, without, at the same time, displeasing his other valuable and loyal colleague, Mr. K. C. Reddy, Minister for Production.

The unscientific manner in which the new Ministry has been constituted will be clear from the fact that, although the Ministry will be known as "Ministry of Iron and Steel," only "the Government industrial undertakings for the production of iron and steel" and "Government-owned foundries" will form its charge. It will have nothing to do with the iron and steel units in the private sector. Apparently, these will remain under the control of the Ministry of Commerce and Industry. Yet, the Press note, announcing the President's order constituting the new Ministry, says that the Government of India has decided to constitute a new Ministry for Iron and Steel, "in view of the importance of developing and expanding" this key industry. Surely, if a separate Ministry for developing this industry has been considered necessary, the proper thing to do would be to bring the units in the private sector also under the care of this Ministry. If this anomaly is not conspicuous now, it is because the Minister for Commerce and Industry has been made Minister for Iron and Steel also. But will it be always so? Will it make for co-ordination and smooth working of industry if two different persons happen to be in charge of these two separate ministries?
