TARGETS FOR AGRICULTURE

EVER since Mr. Nehru mentioned the need and the scope for raising the second Plan's target for food production by 40 per cent., a new sense of urgency for agriculture has dawned upon the country. If Mr. Nehru's statement had done nothing more than stimulate thought, it would still be reckoned as a national blessing. For there was a possibility that the country, in its legitimate enthusiasm for industry, might fall into a mood of complacency so far as agriculture was concerned. The emphasis in the second Plan, according to the popular view of the Plan, is all on industry, the implied assumption being that the battle on the agricultural front has been won for ever. What could be a more attractive thought than to pride oneself that this country has attained self-sufficiency in food and most of the agricultural raw materials and could therefore enter upon the relatively more fascinating adventure of industrial progress? But few people realise that even industrial prosperity must have a strong agricultural base and that the country can never afford wholly to relax its efforts on the farm front.

Perhaps, the illusion that the country had won its battle on the agricultural front arose from the fact that the publicists for the second Plan frequently choose to emphasise only its industrial aspects. It is true that the financial provision for agriculture in the second Plan is less than on industry. But it is not true that agriculture has been neglected. It is, of course, a different matter whether the investment now proposed matches the country's needs. The point is that agriculture and irrigation still account for Rs. 1,083 crores (22.5 per cent. of the total outlay), as against Rs. 658 crores (34.4 per cent. of the total outlay) in the first Plan. It is the fact that industry and mining absorb Rs. 890 crores (18.5 per cent. of the total outlay) in the second Plan as against a mere Rs. 179 crores (7.6 per cent.) in the first Plan that has given rise to the wrong impression that the second Plan is mainly an industrial Plan even as the first was chiefly agricultural. But those who suffer from this illusion overlook the fact that the outlay on several schemes, allied to agriculture, has been stepped up in the second Plan. To take only one such item of allocation, flood control; it absorbs Rs. 105 crores, as against a mere Rs. 17 crores in the first Plan. A more correct view of the second Plan is that, without in any way sacrificing agriculture, it devotes a somewhat larger attention to industrial development. No one need quarrel with this system of priority.

Although the targets provided for agriculture in the second Plan are by no means so impressive as they are for industry, they do imply a not inconsiderable increase over the existing level of output. The targets, set by the Planners to be reached in 1960-61, with figures in brackets representing the existing levels of output, are: Foodgrains 75 million tons (65 million tons); oilseeds 7 million tons (5.5 million tons); sugarcane 7.1 million tons (5.8 million tons); cotton 5.5 million bales (4.2 million bales); jute 5.0 million bales (4.0 million bales); coconut oil 210,000 tons (130,000 tons); arecanut 2.7 million maunds (2.2 million maunds); pepper 32,000 tons (26,000 tons); cashewnuts 80,000 tons (60,000 tons) and tea 700 million lbs. (644 million lbs.). A factor which has prevented the fixation of more impressive targets than what these figures suggest is that the scope for extending the area under cultivation is strictly limited. Even so, it will be seen that the targets provided in respect of the chief crops represent an increase in output of 15 per cent. in foodgrains, 27 per cent. in oilseeds, 22 per cent. in sugarcane, 31 per cent. in cotton, 25 per cent. in jute and 9 per cent. in tea.

More recently, however, a few considerations have prompted the authorities to think in terms of higher targets. In the first place, the target for foodgrains, when it is reached, will just provide for 18.3 ounces per adult. This level of consumption, though it is more than the present level, could become insufficient if living standards rise faster than now anticipated. It cannot be too often emphasised that in an underdeveloped economy any rise in incomes will be primarily absorbed by food and cloth. Secondly, there is the ever-present threat of inflation through deficit financing. War-time experience has shown that what people resent most is the shortage of foodgrains and cloth. Thirdly, there is the consideration that a higher level of agricultural output might conceivably leave a surplus for export and thereby turn out to be a valuable ally in the battle for foreign exchange. And India, with so much to import in the second Plan period, should strain itself to the utmost to export as much as it could.

It is against this background that one must assess the deliberations of the recent State Agriculture Ministers' Conference at Mussoorie. Considering the national importance of the discussions which took place there, it is certainly deplorable that no official version of either the speeches made or the conclusions arrived at has been made available to the public. This is a sad commentary on the way the Government is setting about its task of enlisting public co-operation for the Plan. Here was a Conference which was intended to consider ways and means of raising the target for production of an article of vital public concern—foodgrains. And yet the Ministry for Information and Broadcasting has not deemed it necessary to tell the public anything about it. The result is that the press has had to pick up what information it can from confused reports and contradictory accounts in which misplaced decimals have no little havoc.

Be that as it may, what is the Conference? A working group appointed by the Conference, [see] page 642. Most an increase in the foodgrain target million tons to 81.5 million tons—16.5 million tons over the present of 65 million tons, as against the increase provided in the Plan. The other crops were raised thus: 5.5 million bales to 5.86 million bales, 4.95 million bales to 5.54 million cane from 7.1 million tons to 7.8 million tons, oilseeds from 7.0 million tons to 7.6 million tons, black pepper from 32,000 tons to 36,000 tons, cashewnuts from 80,000 tons to 106,000 tons and recommended no change in the target for production of coconut, arecanut and tobacco. It is not clear whether all the new targets were accepted by the Conference. But it would appear that the Conference generally agreed to the increase in foodgrain output by 16.5 million tons as recommended by the Working Group and that, in partial response to the plea from the Commerce and Industry Ministry, it raised the target for cotton to 6.1 million bales as against 6.6 million bales suggested by this Ministry.

The new foodgrain target (81.5 million tons) now accepted by the Conference, represents an increase of 25 per cent. over the existing level of output, namely, 65 million tons, and of 6.5 million tons over the target of 75 million tons set in the second Plan. This increase is, of course, much less than the 40 per cent. rise desired by Mr. Nehru. But a consideration of all relevant factors will go to show that the increase in output envisaged at Mussoorie is more realistic, though less ambitious, than what was considered desirable by some members of

the Planning Commission as an afterthought. The Prime Minister was inclined to pitch his target high on the ground that large increments in yields have been achieved in the model farms. But conditions in rural areas are far different from what they are in model farms. These farms are meant to be models and, if conditions there could be reproduced in the fields in their entirety, they would cease to be model farms. The fact is that ideal farming conditions, such as assured water-supply, availability of manure of the right kind, supply of credit and knowledge of advanced farming practices, do not exist in Indian agriculture. After all, even in the National Extension Service regions and Community Project areas, where probably the highest level of agricultural practices are now being followed, the increase in farm output has been only of the order of 20 to 25 per cent. To expect a higher level of output in the rest of the country is certainly to court grievous disappointment. The Union Minister for Food and Agriculture, Mr. A. P. Jain, who argued a very convincing case for the modest increase of 16.5 million tons in foodgrain output, said: "We have to put our targets at the minimum, because, once we fix them, I shall feel ashamed if we are not able to achieve them." It is certainly no use fixing targets on paper which cannot be hit with reasonable effort.

Indeed, even the Mussoorie target, realistic as it is, cannot be accomplished without great effort. All that could be said in its favour is that it is not impracticable. But it would not be practicable in the absence of modern agricultural practices, rural credit and transport. Above all, it must be remembered that the monsoon is still an uncertain factor. If the monsoon fails in a year, or continuously for two or three years, the deficit may be too large to be made up by an increase in output in areas of comparatively assured water-supply. Not all the agricultural talent available in the country can prevail against a bad monsoon. Further, it would be folly to overlook the fact that even the achievement of the Mussoorie target implies a larger allocation of financial resources to agriculture. The Conference, it is stated, asked for an additional allotment of Rs. 111 crores to agriculture in order to enable the country to reach the new target. The Minister for Planning, Mr. Gulzarilal Nanda, was, however, disinclined to increase the allocation to agriculture. The Conference, on its part, felt that, if fresh allocations were not possible at this stage, the funds needed for the implementation of the agricultural programme could be drawn upon during [illegible] first three years of the Plan and that, at the [illegible] of the period, the position could be reviewed [illegible] additional allocations made. It is not clear [illegible] this could be done, especially because such [illegible] has been made by other ministries, [illegible] particularly, the Transport Ministry. Such [illegible] if conceded, would reduce the Plan [illegible]800-crore three-year Plan. Never[illegible]ld be possible, if production out[illegible]anticipations or if some shortfall [illegible]outlay on certain other schemes, [illegible]stments, including upward re[illegible]allocations for specific agricultural [illegible]of proved efficiency and certain [illegible]herefore, well for the Government [illegible]find that the first legitimate heirs [illegible]falls are the Agriculture and Trans[illegible]es.

[illegible] 122402

[illegible]oblem of increasing agricultural pro[illegible]has both administrative and financial [illegible]On the administrative side, it means a [illegible]land reform policy and dissemination [illegible]rmation on modern agricultural practices. [illegible]present land reform policy is not conducive [illegible]efficient farming. It tends towards further [illegible]gmentation of holdings, foments discord between landlord and tenant. Further, it increases the number of law suits and till they are settled neither party to the suit has any interest in the cultivation of the land. Again, if the Government is unable to provide all the credit that is needed for improving the land, it could at least adopt such measures as would induce the rich urban citizens to take to farming or to finance it. But the present land reform laws serve only to drive the well-to-do landlord from the village to the towns. So far as dissemination of agricultural information is concerned, the farmer is no doubt becoming more manure-minded. Even so, he needs more help than he now receives. It may be mentioned here that, in the U.K. which has achieved some notable progress in recent years in the sphere of agriculture, the Ministry of Agriculture and Food operates an array of field services which employ 10,000 persons to cater to the needs of the country's 360,000 farmers; despite the need for utmost economy as part of its anti-inflationary battle, the Government has refused to cut the present £10-million budget for these services. India will need a far more extensive agricultural service than what it has today, if the farmers are to be taught the benefits of modern science.

The financial aspect of the agricultural problem embraces a wide range of issues. Primarily, it means, of course, the supply of adequate credit. But it means much more than the provision of loans. What the farmer needs is an assurance of at least a minimum income. This means a price support scheme for agriculture. The Government of India cannot long delay the consideration of this demand. Little has been done to help the farmer maintain, let alone improve, his income. This is in strange contrast with the very generous schemes of social security made available to the industrial worker. And yet, when one comes to consider the question, the Indian farmer needs, thanks to the vagaries of the monsoon and the consequent fluctuations in his fortunes, such security far more than the industrial worker or his counterpart in modern economies which operate price support schemes.

Although no attempt has been made to evolve a comprehensive price support scheme, the question of agricultural prices did come up for discussion at the Mussoorie Conference. Some State representatives were of the view that prices for wheat and rice should be linked with the current issue prices for these grains, namely, Rs. 14 per maund and Rs. 16 per maund respectively. Others felt that minimum prices should be fixed for cash crops also. These are vague suggestions but they are sufficient to suggest that there is a large section of public opinion in favour of a price support scheme for agricultural crops.

The question of optimum level of prices for agricultural commodities which would ensure a fair deal to consumers and producers alike and keep the living costs and production costs at competitive levels was also discussed at the Conference. The Planning Commission, it is stated, has suggested a 20 per cent. reduction in these prices. Mr. Jain was opposed to this suggestion. But it is not known whether the Commission meant a decline from the present price levels or from the uncomfortably high levels touched in recent months. Surely, the latter cannot be taken as reasonable ones. But this does not mean that the low levels witnessed in the 1954-55 marketing season were reasonable either. An optimum level would be between these two extremes. And it should be the endeavour of the authorities to maintain that level through suitable open market operations.

Any scheme designed to stabilise prices should, of course, ensure that the free market is not unduly disturbed. It is, therefore, gratifying to note that Mr. Jain is strongly opposed to rationing and controls. He said:

"We have enough experience of the evil effects of food controls and we are in no mood to undertake them easily. After considerable thinking I and my Ministry have reached the conclusion that we shall maintain sufficient buffer stocks and control prices through them. We have decided to build reserves of one million tons of rice and one million tons of wheat. Part of these reserves will be built during the current year and we hope to fully build them up next year. Besides, there are monetary and fiscal measures including mopping up and immobilisation of currency which can be effective in checking the vagaries and speculative activities of the market. The Government of India will not hesitate to make use of them when the situation arises. I am confident that we shall be able to maintain a free market and reasonable prices in foodgrains without resorting to rationing and procurement. At the same time, we must continue to wage an unrelenting war against shortage and match our supplies with the demands."

This extract shows that the Kidwai spirit still animates the Food and Agriculture Ministry. This is an encouraging sign. Food control and rationing will not be consistent with democratic planning. They were abolished only through the statesmanship and intuitive courage of Rajaji and the late Mr. Kidwai, who will be long remembered as the father of freedom in foodgrain markets. Never again should those obnoxious restrictions be allowed to return, making the farmer hoard like a thief the grain he has laboured to grow and the consumer supplement his allotted share by means other than those that are strictly legal.

AUTOM[illegible]

THE Tariff Comm[illegible] mobile indus[illegible] prices of vehicles[illegible] promises to be o[illegible] kind and also, p[illegible] versial. There is[illegible] a strong case for[illegible] cars. There has b[illegible] materials and comp[illegible] facturing costs, whil[illegible] pite the recent increa[illegible] itself a factor which[illegible] tion cost per unit. F[illegible] a large amount of cap[illegible] city. This could be[illegible] is profitable. At the[illegible] try performs a vital ser[illegible] so that any large incr[illegible] products will have seri[illegible] Commission will naturally hav[illegible] relevant considerations before it[illegible] question of automobile prices. At all[illegible] inquiry ought not to end in a mere exercise in cost accounting and the fixation of fair average profit.

The industry now consists of six units of which two produce cars and trucks, two produce trucks alone, one produces cars and one produces jeeps. The total annual assembly capacity of all the units is 50,100 vehicles on the basis of single-shift working. The demand for automobiles, as would be seen from the figures quoted by the Chairman of the Commission, Mr. K. R. Damle, has been steadily moving up. The following table shows the offtake of vehicles of different types in 1953, 1954, 1955 and the first quarter of 1956:

Type	1953	1954	1955	1956 (first quarter)
Small cars	40	969	3,443	1,165
Light and medium cars	1,947	2,846	4,546	1,327
Big cars	526	953	2,028	683
Jeeps	396	1,395	2,272	1,107
Diesel medium truck (3 to 5 ton)	..	71	1,756	872
Diesel heavy truck (above 5 ton)	159	303	684	217
Petrol light trucks	1,146	558	2,313	452
Petrol medium trucks	1,523	2,994	2,908	781
Diesel buses	93	373	1,840	780
Total	5,830	10,467	21,790	7,384

It is certainly gratifying to note that the demand for vehicles has been going up. Indeed, Mr. Damle said that it is possible that "we may apprehend a shortage in supply compared to estimated demand." This is certainly a happier state of affairs than having a supply that is in excess of demand. But it also means that the country must know how best any shortage that might develop could be met. From the industry's point of view, it is, perhaps, fortunate that it has felt the need for higher prices at a time when the demand for vehicles has been rising. The manufacturers should, however, realise that higher prices could well reverse the present encouraging trend in demand. The dilemma could be resolved only through a more thorough-going search for a remedy which will further increase the demand for vehicles, thereby enabling the manufacturers to increase their production and turnover and thus reduce production costs. This will, of course, involve a study of a wide range of problems such as the tax burden on the industry and the vehicle-owner, the freight on vehicles and supply and availability of spare parts.

But it is to be feared that the Commission's inquiry will not be so far-reaching as to include these questions. Nevertheless, the enquiry is bound to prove valuable, in that it will deal with several immediately urgent issues. These, as stated by Mr. Damle, will include: (1) estimate of demand for vehicles, (2) relative preference for diesel and petrol vehicles, (3) level of demand essential for undertaking economical manufacture, (4) provision of after-sales service and (5) system of distribution of vehicles and spare parts, including "dealer's discount." The Commission has done well to include within the scope of the inquiry the examination of methods for investigating complaints about the quality of vehicles manufactured by the Indian industry. After all, a protected industry, as Mr. Damle rightly pointed out, has a special responsibility for maintaining the quality of its product. The automobile industry cannot afford to overlook this vital obligation to its customers.

CENTRE'S BORROWING PROGRAMME ANNOUNCED

Interest Structure Unchanged—Bombay Should Be The Capital Of Insurance

THURSDAY, 6 P.M.

DETAILS of the Central Government's borrowing programme for the 1956-57 fiscal year have just been announced. While the timing of the programme has been in accordance with market expectations, the terms of it are not without a large element of surprise. It was fairly clear even three weeks ago that, although the stringency in the money market was unlikely to ease to any appreciable extent, the monetary authorities might wait only up to the first week of this month for launching the programme. It was also evident that the new loan would be a medium-dated *cash-cum*-conversion one. But it was not widely believed that the programme would contain three types of loans as it has now turned out to be. From the open market operations of the Reserve Bank, the maturity pattern of existing loans, and the preferences of institutional investors for loans of certain duration, one could anticipate fairly correctly the terms of the new loan. Thus, the general expectation was that the new issue would be 3½ per cent. 1967 at Rs. 98-8 or Rs. 98-4. This has proved correct. None, however, could foresee or assert with such accuracy that this issue would be clubbed with two choices for investors.

MARKET GOSSIP

The particulars of the borrowing programme are:

Three new loans are being offered to investors. First, there is a short-medium-dated loan, repayable after six years, that is, on 16th July 1962. Interest on this will be at 3½ per cent. The issue price is at Rs. 98 per cent. and the loan will be redeemed at par. This issue was totally unexpected.

The second is a long-medium-dated loan, repayable after 11 years, that is on 16th July 1967. It carries interest at 3½ per cent. The issue price is at Rs. 98-8 per cent., redeemable at par. This is in accordance with expectations. There was, of course, a doubt whether the issue price will be Rs. 98-4 or Rs. 98-8, but market circles knew that, if the Reserve Bank were to succeed in pushing up the rate for the 3½ per cent. 1965 loan to about Rs. 99, the issue price would be Rs. 98-8. By last week, the Bank had raised the market value for the said loan to about Rs. 99, though it is now standing at Rs. 98-12 *ex-voucher*.

The third loan is a long-dated issue of 18 years' duration. Redeemable at par on 16th July 1974, it is being issued at the same price as the second loan, that is, at Rs. 98-8 per cent. but carries a higher rate of interest, namely, 3¾ per cent. This issue, too, was not expected. It is true that there was a suggestion that a long-dated loan yielding a return of 4 per cent. should be issued. On the basis of this suggestion, some anticipated a second issue of 2¾ per cent. 1976 at Rs. 82-8. What has, however, materialised is vastly different from this anticipation. The yield on it is well below 4 per cent. and the capital profit is only Re. 1-8 and not Rs. 17-8. It was pointed out in these columns that the present socialist Government would never consent to permit such a large capital gain on a Gilt-edged security.

Interest on all the three loans is subject to income-tax and will be paid half-yearly (on 16th January and 16th July).

The list for all loans opens on the 16th inst. and will remain open for three days. It may, however, be closed earlier without notice, if the subscriptions exceed the amount invited.

The total amount of all the three loans put together is Rs. 150 crores. The Government reserves the right to retain subscriptions received up to 10 per cent. in excess of the sum of Rs. 150 crores. No specific amount has been fixed for each loan.

Applications may be made in cash as well as in 3 per cent. 1957 loan which will be accepted at Rs. 99-13 per cent. Interest on this loan will be paid up to the 15th inst. The rate of Rs. 99-13 for conversion is the same as the current market rate for this loan. Thus, no special concession is being made to holders of this loan to induce them to convert it into any of the three new loans.

The total amount of the Central Government's borrowings is also a surprise. Since the Finance Minister had stated in his budget speech that for this year he would borrow Rs. 100 crores, the sum of Rs. 150 crores now announced has exceeded expectations. Surprising though the amount is, there is an explanation for it. As the authorities have decided to make a conversion offer to holders of an issue maturing only a year hence, the target has been raised. It may be noted here that the outstandings of 3 per cent. 1957 are as much as Rs. 114.07 crores.

The terms of all the three new issues are in line with the current redemption yields available on the existing comparable loans, as will be seen from the following table:

	Current price Rs. a.	*Yield* Per cent.
2¾ per cent. 1962	93 15	3.83
3½ per cent. 1962 (New) ...	98 0	3.62
3½ per cent. 1965	98 12	3.67
3 per cent. 1966-68	93 4	3.69
		3.79*
3½ per cent. 1967 (New) ...	98 8	3.67
2¾ per cent. 1976	82 13	4.00
3 per cent. 1970-75	90 6	3.71
		3.90*
3¾ per cent. 1974 (New) ...	98 8	3.87

* Later redemption.

In the case of 3½ per cent. 1962 and 3¾ per cent. 1974, the yields are slightly lower than those on the existing comparable loans. But this does not reduce the attractiveness of the new issues *vis-a-vis* the old ones, for the new loans offer a considerably higher running yield. Institutional investors, it may be noted here, are not attracted so much by prospects of a capital profit as by the running yield, inasmuch as they are treated as dealers for tax purposes and their entire income, including capital gains, is taxed. Even individuals (who are not treated as dealers by the tax authorities) investing in Government securities care more for running yield than for capital gains—to realise which in full they will have to wait for several years—because they want as large an income as possible. This will be clear from the following two instances, taken from the existing loans:

	Current market price Rs. a.	*Running yield* Per cent.	*Redemption yield* Per cent.
2½ per cent. 1961	93 9	2.67	3.91
3½ per cent. 1961	99 9	3.52	3.60
3 per cent. 1964	95 0	3.16	3.73
3½ per cent. 1964	98 12	3.54	3.68

The maturity of the two loans in either set of instances mentioned above is the same, whereas the rates of interest on them differ. In the case of loans carrying higher rates of interest, the redemption yields are lower than those on loans entitled to lower rates of interest. It is precisely this pattern which the authorities have followed in the case of new loans.

Although for the first time after 1938 the Government of India is now floating a new loan at the high rate of 3¾ per cent., one need not interpret this development to mean a fresh move towards higher interest rates, for the current yields on long-dated loans have been at about 4 per cent. for a fairly long period now.

Conditions in the money market are by no means comfortable to borrowers. It is true that stringency now is perceptibly less than that three or four weeks ago, when it was very acute. Nevertheless, the supply of funds is not plentiful and borrowers are over. Both inter-bank call money and house money still fetch as much as 3½ per cent., as against 1¾ per cent. this time last year. The following statistics relating to Scheduled banks in India will provide a rough picture of the state of the money market:

(In crores of rupees)

	22-6-56	11-5-56*	25-6-55
Advances and bills	759.77	769.19	609.81
Investments†	348.08	355.20	346.56
Borrowings from Reserve Bank ...	56.33	73.46	17.22
of which against usance bills only ...	41.91	52.08	16.71
Cash balances ...	107.14	103.85	86.72
Deposits	1,072.66	1,053.96	982.94
Ratio of advances to deposits ...	70.8%	73%	63.07%

*Peak of busy season.
†In Government securities.

The foregoing data reveal that, though the Scheduled banks' position is slightly better as compared with that in the second week of May last, the banks are not flushed with funds. They are still having good demand for credit from trade and industry, with 70 per cent. of its deposits locked up in commercial loans. This state of affairs may seem to be not quite conducive to the success of new loans. But enquiries made in market circles reveal that all institutional investors, who usually participate in Central loans, have earmarked some funds for the new issues and that cash subscriptions, excluding those of the Reserve Bank but including those of the life insurance funds, will aggregate not less than Rs. 50 crores. In any case, the monetary authorities seem to be quite confident of making the loans a success. This is obvious from the fact that they are keeping the list open only for three days, as against six days last year, even though the sum invited is 50 per cent. higher. Their optimism is note unjustified. In the past one year, they have sold out quite a big part of their holdings of Government loans, so that they can take up a substantial part of the new loans and release it later to the market as and when demand arises. Further, they must be holding a large slice of 3 per cent. 1957 loan which they can readily use for closing the list in good time.

• • • •

Now that the Life Insurance Corporation Act has come into force with effect from the 1st inst. and the Corporation itself is to be formed in a month or two, the question as to where the Head Office of the Corporation should be located has become an urgent issue, requiring an early decision. Luckily for the Government, the claim is only from two centres, Calcutta and Bombay, because others have not cared to put in their claims. Purely on merits, there is no cause for a controversy at all, because there is only one centre that has them, and that is Bombay. But Calcutta has other considerations for advancing its claim and, in these days, when merits alone are not sufficient and when sentiment and politics play a large part in influencing the decisions of the authorities, Bombay City should be more on the alert than it seems to be at present. Calcutta's case is being strongly backed by the West Bengal Government, headed by the highly influential Congress leader, Dr. B. C. Roy. With the future of Bombay City in the melting pot, there is no political backing for the city's undoubtedly strong case for having the Head Office of the Corporation in its midst. There is no indication that the Bombay Government, or its equally influential Chief Minister, Mr. Morarji Desai, is interested in this controversy. There is thus every danger of this city's case going by default for want of political support. It would seem that, at one time, Mr. S. K. Patil and Mr. M. C. Shah took some interest in the issue. It is, however, not known whether they are still at it or have given it up entirely.

Calcutta's demand for getting the Central Office of the Corporation is based roughly on the following arguments:

(1) Bombay has already the Head Offices of the Reserve Bank and the State Bank. It will lead to excessive concentration of economic power in Bombay, if the Life Insurance Corporation also chooses to locate its Head Office in that centre. Such a development will be contrary to the declared policy of dispersal of enterprises and economic activity. Since power goes with finance, more and more enterprises will come to be established in the western area than in the eastern area.

(2) Calcutta feels that it has been neglected for long by the Government of India. It will not be in the larger interests of the country to let this feeling gain momentum.

(3) If New Delhi had been chosen as the Headquarters of the Corporation, there would have been no room at all for controversy. Since the main consideration is that it should be in a commercial centre, Calcutta is as good a centre as Bombay, if not better. Having already situated the head offices of the Reserve Bank and the State Bank in Bombay, to favour the latter with the Head Office of the Life Insurance Corporation also would tantamount to showing excessive favouritism to the Western city at the expense of Calcutta.

(4) The Eastern city is faced with the huge problem of finding employment for the refugees coming from East Bengal. The location of the Headquarters of the Corporation there will help ease the pressure of unemployment.

(5) If the Corporation does not have its Headquarters in Calcutta, the major industries of Eastern India such as coal, tea, jute and engineering will not get their legitimate share of industrial finance from the life funds.

A reference to this controversy was made in our issue of 7th April 1956, *vide* page 642. Most of the points mentioned above were replied to. It was shown that the last mentioned argument had no substance. As was pointed out by us then, investment is no matter of favour. The Corporation, so long as it is run on businesslike principles, will be in search of attractive investments consistent with safety. Subject to this general consideration, it will also have in mind the needs of regional development. It cannot afford to neglect this consideration, for the State Governments will not keep quiet if they do not get the support of life funds.

After advancing this argument, we added:

"If the fear is that, in the event of investment being channelled through Bombay, it is only the brokers in the city that will get the benefit of brokerage, it could at any time be set at rest by evolving a system under which approved brokers working in all the leading Stock Exchanges will get the Corporation's business in the investments quoted on their respective Exchanges. Even in regard to Government securities, a scheme could be devised whereby the Corporation's orders could be carried out partly in Bombay and partly in Calcutta. It is to be hoped that the Corporation will, in fact, evolve a suitable system for this, if only to avoid giving the impression that only brokers in any one centre are being favoured by it."

The other reasons put forward in favour of Calcutta are partly sentimental and partly political. There can be no effective and logical reply to them. Nevertheless, it is difficult to resist the temptation of remarking that the establishment of the Head Office of the Corporation at Calcutta cannot be much of a solution to the refugee problem.

It will not be right to decide a fundamentally business issue on sentimental or political grounds. The main consideration should be whether a particular centre would be suitable for the efficient discharge of the functions of the central office of the Life Insurance Corporation. What are these functions? Investment of funds, development planning for the whole country, research and quick decisions on policy questions—these, in brief, are the main functions. In the following paragraphs,

(*Continued on page 55*)

EQUITIES QUIETLY STEADY

SUGAR SHARES RULE FIRM

From Our Own Correspondents

BOMBAY, *5th July*

THE share market lacked drive and energy during the week under review. Although equities moved somewhat erratically within a small range, the market as a whole remained quietly steady. After an early depression which was only an extension of last week's weakness, there was a modest rally, thanks to the new import policy which favoured industries. The liberalisation of imports of machinery, spare parts and raw materials to step up the pace of industrial development was well received. The improvement, however, proved short-lived, as selling pressure emerged at higher levels. Under the bearish influence of a number of factors, such as the none-too-cordial welcome to the new cloth policy by the textile industry, because of the strings attached to it, the slackness in domestic demand for cloth at present and rumours of a possible increase in excise duty on coarse and medium cloth, the market sagged and quotations of a number of popular counters closed a shade lower. The miscellaneous section, however, proved an exception in that some modest rally was noted in a number of shares.

An important development of the week was the extension of the time for receipt of applications for the new shares of the Tata Iron and Steel Co., Ltd. The Company had made a call of Rs. 35 per share (including a premium of Rs. 10 per share), being made payable on or before 2nd July. The Company has now extended the date up to 16th July. In view of this, the Stock Exchange authorities also permitted the resumption of transactions on the Stock Exchange in Tata Steel Rights on 2nd July (official business had originally closed on 23rd June) and the official business in these issues will continue up to 7th July.

In the steel section, Tata Ordinaries gave way early in the week from Rs. 199-12 to Rs. 196-4. After recovering to Rs. 201, they once again receded to Rs. 197-12 before finishing today at Rs. 200-4. Indian Irons moved between Rs. 36-3 and Rs. 35-4 and closed As. 10 lower at Rs. 35-15. Tata Rights rose sharply by Rs. 3 to Rs. 67-8.

Textile shares presented a mixed pattern. Bombay Dyeings came down from Rs. 641-14 to Rs. 630, but closed at Rs. 632-8. Centurys dropped from Rs. 567 to Rs. 555 before finishing at Rs. 561-8. Kohinoors provided a firm feature in the earlier half of the week, advancing from Rs. 371-8 to Rs. 378, but sharply reacted to Rs. 372-8 at the close. Central Indias were maintained on balance at Rs. 156. Finlays shed Re. 1 to Rs. 339, while Gokaks hardened by Rs. 2 to Rs. 235-8. Indu Ordinaries declined by As. 3¼ to Rs. 13-8¼. Lakshmis were lower by Rs. 5 at Rs. 580, while New Kaiser-I-Hinds stood Rs. 2-8 higher at Rs. 125. Podars rose by Rs. 3-2 to Rs. 188-12. The Company has declared a final dividend of Rs. 5 per share and a bonus of Rs. 2, making in all Rs. 12 per share of Rs. 100 for the year 1955, as against Rs. 10 for 1954. Shree Niwas stood unchanged at Rs. 213-12, while Simplex were steady at Rs. 218. Standards moved down by Rs. 3-4 to Rs. 438-12. Svadeshis were fairly steady at Rs. 250-8 and Tata Mills at Rs. 56-12.

A sharp rise of Rs. 2-4 to Rs. 163 in Bank of Indias was a feature among bank shares which generally received some support, on expectations of better earnings by banks for the first half of the year. Barodas rose by As. 12 to Rs. 98-4, Centrals by As. 8 to Rs. 51-8 and Punjab Nationals by As. 12 to Rs. 58. United Commercials held ground at Rs. 51-8.

There was a revival of enquiries for insurance shares, but business was selective. New Indias were in the limelight with a sharp rise from Rs. 46-8 *cum-div.* to Rs. 50 *ex-div.* British India Generals improved by As. 10 to Rs. 14-2 and Indian Mercantiles by As. 8 to Rs. 44-8. Vulcans also rose by As. 8 to Rs. 15-8.

In refreshing contrast to the depressing trend noted in the previous weeks, there was a marking up in values of electricity shares this week, on replacement buying. Ahmedabad Electrics gained As. 5 to Rs. 96-9. Bombay Suburbans rose sharply by Rs. 2-8 to Rs. 114-6. Tata Hydros, however, fell by Rs. 3 to Rs. 125-8. Tata Powers improved by Rs. 15 to Rs. 1,285 and Andhra Valleys by Rs. 20 to Rs 1,200.

In the miscellaneous section, sugar shares ruled firm with a sharp rise in prices. Belapurs advanced from Rs. 235-8 to Rs. 242-8, Bhopals by Rs. 2-8 to Rs. 17-12, Phaltans by Rs. 2-8 to Rs. 158 and Walchandnagars by Rs. 3-12 to Rs. 258-12. In the cement group, Associated Cements dropped by Rs. 3-12 to Rs. 187-4, while Digvijays gained Re. 1 to Rs. 195. Among engineering and mining shares, Alcocks were steady around Rs. 347-8. Tata Locos were marked up by Rs. 3 to Rs. 148-8. Premier Constructions put on Rs. 2-8 to Rs. 194 and Larsen and Toubros As. 4 to Rs. 15-10. Shivrajpurs hardened by Rs. 2-8 to Rs. 99. Indian Coppers were steady at Rs. 7-2½, and B.B. Petrols at Rs. 4-5½.

Among shipping and transport shares, Scindias advanced from Rs. 18-13 to Rs. 19-2½, before reacting to Rs. 18-13½. Great Eastern Shippings were unchanged at Rs. 19-4. Premier Automobiles staged a sharp rise of Rs. 3 to Rs. 98. Hindustan Motors fared well with a rise of As. 6 to Rs. 10-2. Among other industrials, Bombay Burmahs receded from Rs. 645-10 to Rs. 634-6, but regained to Rs. 637-8. British India Corporations rose sharply by As. 9½ to Rs. 11-6½. Killick Industries were again a feature with an advance from Rs. 161-8 to Rs. 170. National Rayons moved up from Rs. 232-12 to Rs. 234, but softened at the close at Rs. 232. Tata Chemicals were quiet at Rs. 18-12½, while Tata Oils advanced by Rs. 2 to Rs. 58-8, in anticipation of a dividend of Rs. 3. Wimcos were quiet at Rs. 185.

* * * *

Calcutta Stock Exchange

CALCUTTA, *4th July*

Depressed conditions prevailed on the Calcutta Stock Exchange during the week under review. Lack of support affected sentiment considerably and more sellers appeared on the scene. Speculative counters led the decline. Poor advices from Bombay, the difficulties facing the jute industry, and the heavy burden imposed on the coal industry as a result of the recent Tribunal award were factors which kept out buying interest, although some recovery was noted in the miscellaneous industrial group during yesterday's session. Had it not been for the general dullness, the import policy for the July-December period, which places further restrictions on the import of goods manufactured within the country and which liberalises imports of industrial requirements, would have had a favourable effect on trading. Profit-taking pushed down many a quotation, but, considering the increasing tempo of industrial activity in the country, the present lethargy should prove purely temporary and, when once some of the present uncertainties are removed, activity on the Exchange should again get momentum. The present increase in prices of essential goods may be regarded as a sign of inflation, but the fear whether it would result in demands for increased wages was restrained in bulls.

* * * *

Madras Stock Exchange

MADRAS, *3rd July*

The Madras Stock Exchange presented a rather dull appearance during the week under review, with the exception of textiles which continued to rule firm. In the absence of incentives, operators did not evince much interest in fresh business. Despite encouraging dividend news, the planting section was easy; for want of support, coffee, tea and rubber shares all tended to move down. Insurance, electric and sugar shares failed to evoke much attention. Activity in the miscellaneous section was also restricted. Textiles, however, continued their firm tendency, thanks to renewed expectation of better corporate results, following the expansion of cloth production now allowed by the Government. Mining shares were somewhat favoured well on hopes of a higher compensation value arising from nationalisation.

The week under review was notable for the following dividend announcements:

	Year ended	*Dividend per cent.* Latest	Previous
Standard Motors	31-12-55	6	6
Vanguard Fire ...	,,	6	6
Sarada Mills ...	,,	10	6
Indian Steel Rollings	,,	7½	7½
Devashola Tea ...	,,	15f*	40
Midland Rubber	31-3-56	20	25

f—Final. * Making a total of 25 per cent.

Gnanambikai's provided the brightest spot in the textile section, with their quotation forging ahead by Rs. 18 to Rs. 156 *ex-div.* Vasantas jumped up by Rs. 12-8 to Rs. 320. Coimbatore Pioneers rallied Rs. 10-8 to Rs. 317-8 and Ashers Rs. 10 to Rs. 190. Rajapalayams advanced by Rs. 6 to Rs. 161. Pankajas strengthened by Rs. 5-8 to Rs. 90. Radhakrishnas and Vijayalakshmis registered a rise of Rs. 5 each to Rs. 310 and Rs. 140, respectively. Radhakrishna 'B's improved by Rs. 3 to Rs. 155. Anglo-Frenchs gathered Rs. 2-8 to Rs. 102-8. Coimbatore Cottons gathered a like amount to Rs. 372-8. Vijayamohinis put on Rs. 2 to Rs. 95. Lakshmi 'A's Re. 1-12 to Rs. 110-12 *cum-div.* and Rayalaseemas Re. 1 to Rs. 140. Bangalore Woollens, however, receded by Rs. 4-8 to Rs. 567-8 for want of follow-up support.

In the planting section, tea shares suffered losses. United Nilgiris dropped As. 10 to Rs. 24-10. Twyfords declined by As. 8 to Rs. 23-8 *cum-div.* Nilgiris Teas fell by As. 4 to Rs. 14-6 and Talayars by As. 3 to Rs. 13-6. Haileyburias and Highlands lost As. 2 each to Rs. 27-14 *cum-div.* and Rs. 18-14 *cum-div.*, respectively. But Emerald Valleys firmed up by As. 12 to Rs. 9 *cum-div.*, on account of good buying support induced by the report that the Company had received the Government's sanction for the issue of bonus shares. The annual meeting of the Company will be held on the 31st inst. At this meeting, a special resolution for raising the capital to Rs. 5 lakhs (divided into 100,000 ordinary shares of Rs. 5) and for issuing bonus shares at one new share for every share held will be considered.

Among rubber shares, Midlands staged a retreat from Rs. 22 *ex-div.* to Rs. 21-14 *cum-div.* Travancore Rubbers dropped As. 6 to Rs. 24-10. Rajagiris and Teekoys finished each As. 4 lower, the former at Rs. 24-12 and the latter at Rs. 11-6. Pullangodes eased by As. 3 to Rs. 4-7 *cum-div.* Malankaras were quiet at Rs. 32-8, as also Be Bes at Rs. 4-14.

Deals in coffee scrips were put through lower at Rs. 24-1, as against Rs. 24-7. Consolidated Coffees slipped by As. 3 to Rs. 20-8. Anandams were unchanged at Rs. 24-4, Balmadies at Rs. 4-10 and Mysores at Rs. 2-12. Amalgamated Coffees, however, evoked special enquiries and hardened by As. 4 to Rs. 12-8. Kadurs were favoured an anna higher at Rs. 2-15.

In the miscellaneous section, Rallis were subjected to heavy selling and moved down by Rs. 4-8 to Rs. 41. India Cements decreased by Re. 1-12 to Rs. 34-2. Aluminium Industries receded by As. 6 to Rs. 20-4. Bruntons lost As. 3 to Rs. 7-9. F.A.C.Ts eased by As. 2 to Rs. 6-10. Madras Safes, on the other hand, had good buyers and the quotation advanced by Rs. 6 to Rs. 56. Textools picked up Rs. 2-8 to Rs. 185. Champion Reefs were better by As. 3 at Rs. 4-12. Mysore Golds gathered As. 2 to Rs. 2-12.

GOVERNMENT OF INDIA

3¼ PER CENT. BONDS 1962

ISSUE PRICE Rs. 98 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1962

3½ PER CENT. NATIONAL PLAN BONDS—THIRD SERIES (3½ PER CENT. 1967)

ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1967

3¾ PER CENT. LOAN 1974

ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1974

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 150 crores (approximately). Subscriptions may be in the form of (i) Cash/Cheque or (ii) Securities of the 3 per cent. Victory Loan 1957 which will be accepted at Rs. 99-13 for every Rs. 100 (Nominal) tendered for conversion. Interest will be paid on the 3 per cent. Victory Loan 1957 tendered for conversion upto the 15th of July 1956 inclusive.

Interest on the new bonds and loan will be payable half-yearly on the 16th of January and the 16th of July.

Subscription lists will open on the 16th of July 1956 and close on the 18th of July 1956 or earlier without notice.

Applications for the bonds and loan will be received at

(1) Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore ;

(2) Branches of the State Bank of India except in the States of Hyderabad and Mysore ;

(3) Branches of the Hyderabad State Bank in Hyderabad State ; and

(4) Branches of the Bank of Mysore Ltd., in Mysore State.

For full particulars apply to any of these offices or branches, or treasuries

NEWS IN BRIEF

THE opening of an office of the Imports and Exports Controller at the Visakhapatnam Port is under the active consideration of the Government of India. A controller will be in charge of this office, when established.

The Travancore-Cochin Banking Inquiry Committee has completed its survey of the problems of banks operating in that State. The Committee's recommendations will determine the future of 118 banks, commanding a total deposit of Rs. 26 crores.

The Government of India has decided to continue free licensing of exports of cottonseed oil within an overall ceiling for the licensing period from 1st July onwards upto the end of December 1956, or till the ceiling is reached, whichever is earlier.

The Central Government is investigating the possibilities of establishing a Rs. 10-crore aluminium plant in Salem district, Madras. The annual output of the plant is expected to be of the order of about 10,000 tons. The Hirakud private aluminium factory will expand its capacity by about 10,000 tons.

A contract of the total value of £1.25 million, —the biggest so far placed by India with a single manufacturer—for the supply and erection of five water turbines and alternators has been placed with a British firm, the English Electric Company. These sets, each developing 77,000 h.p., are for a new power station to be built as part of the Rihand project in U.P.

Sixteen agreements were signed last week between the Government of India and the U.S. Technical Co-operation Mission. The aid that will be provided by the U.S. under these agreements for various projects amounts to more than $2.4 million. In addition to this, the U.S. will provide technicians and professional experts in various fields as well as training facilities abroad for selected Indian personnel.

The Tariff Commission's recommendation that protection should be granted to the calcium carbide industry till 31st December 1958, has been accepted by the Government of India. The Government has not, however, seen any special reason to reduce the protective duty from the current rate of revenue duty on calcium carbide, that is, from 50 per cent. *ad valorem*, to 45 per cent. as recommended by the Tariff Commission.

The minimum rates of wages fixed under the Minimum Wages Act for the various classes of employees employed in the printing industry in Bombay State have been brought into force from 1st July 1956. The Government has, however, decided that certain classes of employees of the printing industry be exempted from the provisions of the Minimum Wages Act for a period of three years with effect from 1st July 1956.

Work in connection with the installation of a fourth unit at Bokaro thermal power station has already been started by the Damodar Valley Corporation. The D.V.C. is also taking up work on the construction of a thermal power station at Durgapur. With the installation of a new station and an additional unit at Bokaro, the D.V.C. will be in a position to meet the enhanced power requirements in the Valley during the second Five-year Plan.

The agreement entered into between the Government of India and the U.K. on 3rd April 1956 for the purpose of avoiding double taxation with respect to estate duty came into force on 30th June. The main principle behind the agreement is that the country of *situs*, i.e., where the property is situated, retains the tax, while that of domicile grants the relief, so that ultimately an assessee pays duty only once.

The Fifth Session of the International Rice Commission, established under the auspices of the F.A.O., will meet in Calcutta between 12th and 17th November 1956. A large number of technical papers on important subjects such as improvement of rice through breeding, better fertilising practices, problems of soil, water and plant relationship in the production of rice, storage and processing of rice, etc., will be discussed at the session.

Nearly 20 per cent. of the population of Travancore-Cochin came under the co-operative movement by 1955, according to statistics published by the State Co-operative Department. At the end of the financial year 1954-55, there were 3,121 co-operative societies in the State undertaking such activities as land cultivation, irrigation, distribution of manure, dairy farming, production of handloom cloth, etc.

The efforts made by the Ministry of Commerce and Industry to achieve the aim of "licence across the counters," have now almost become a reality. Only the minimum time is taken for the scrutiny of papers. All export licences are issued across the counter. In the half-year ended 30th June 1955, out of a total intake of more than a lakh applications, all, except 600, were disposed of by the end of the period. During the present half-year, out of a total intake of one and a half lakhs, only 199 are pending.

Work in connection with the erection of a 200-ton crane in Calcutta Port has already begun. Most of the structural and machinery parts has already arrived from Germany. The crane, costing about Rs. 19 lakhs, when complete, is expected to accelerate the loading and unloading of heavy cargo. Installation work is to be expedited, in view of the fact that Calcutta is to be the port of entry for nearly all heavy lift packages intended for different development projects undertaken by the Government in the eastern regions under the Second Plan.

* * * *

From Abroad

Indonesia has raised the export premium on tea from 10 per cent. to 20 per cent.

The International Tin Agreement has come into force from the 1st inst. Korea and Israel have applied for permission to join the agreement.

The Cement Makers' Federation of Britain has raised the price of cement by 3*s.* per ton with effect from 1st July 1956. It has also promised to freeze the price for a year, unless something quite unexpected and exceptional happens.

The F.A.O. has decided to set up a cocoa study group, on the pattern of the existing Rubber Study Group. The group will study cocoa production, consumption and trade, particularly supply and demand, and probable development.

Eighty-seven nations will be invited to meet at the United Nations' headquarters in New York City on 20th September to take final action on the draft statute on formal establishment of the International Atomic Energy Agency. The meeting will conclude before 24th October.

The income of American families during 1955 set a new record high, according to a U.S. Commerce Department report. The national average income, before Federal taxes, was $5,520 in 1955, a 3 per cent. increase over 1954. The average family income-tax paid by families in 1955 was $540.

The British Chancellor of the Exchequer has announced a cut of £76 million—the first slice of the proposed saving of £100 million—in published estimates of expenditure for the current year. Of this cut, defence expenditure will account for £50.5 million and estimates of civil ministries for £25.5 million.

Sweden's industrial wages, in relation to internal purchasing power, are the highest in Europe, according to a report by the International Labour Organisation. Sweden is closely followed by Denmark and Britain, but there is only a slight difference between these three countries. In the world, as a whole, the lead is taken by the United States, Canada and Australia.

The International Co-operation Administration (I.C.A.) announced last week that the full amount (about $5 million) of U.S. economic aid to Ceylon for the fiscal year 1956, has now been allotted. The purchase of 15 diesel locomotives, supply of vital equipment for irrigation projects, aid to the University of Ceylon, and supplies for agricultural research are provided for under the arrangement.

An one-year trade agreement has been signed between Pakistan and the U.S.S.R.—the first bilateral trade agreement between the two countries—under which Pakistan has extended "most-favoured-nation treatment," to the Soviet Union. The agreement is renewable at the end of the period. Under the pact, Russia will supply machinery of all types, and will buy in return raw jute, jute manufactures, cotton, tea and various other commodities.

The Australian Bureau of Agricultural Economics, considers the outlook for wool during 1956-57 as sound. The average prices, it says, should be about the same as in the season just closing. There is a possibility of a record clip in 1956-57 and this, coupled with the large quantity of current season's unsold wool expected to be carried forward to next season, may result in an exceptional amount being available. However, the present rising trend in consumption in the main consuming countries is expected to continue.

It has been decided by the Pakistan Government to float two new loans, a 3 per cent. 1961 (second issue) loan and a 3½ per cent loan (1967), on the 16th inst., with a view to financing the industrial and agricultural development schemes sponsored by the Central and Provincial Governments. The 3 per cent. loan will be issued at Rs. 99-14 for every Rs. 100 of the loan applied for and will be open to subscription for a day only on the 16th inst. The 3½ per cent. loan will be issued at par and will be open to subscription until further notice.

The United States will help Afghanistan expand its domestic airlines service, build new airports, rehabilitate existing airports, and develop an international airport at Kandahar, according to an announcement by the International Co-operation Administration (I.C.A.). Under an agreement negotiated with the Afghan Government, the I.C.A. will provide up to $14.56 million for the programme. Of this amount, $5 million will be in the form of a loan and the remainder as grant. The aforesaid aid brings the total U.S. aid to Afghanistan to more than $25 million since it was begun in 1952. It is in addition to $39.5 million in loans from the Export-Import Bank to help finance the Helmand Valley land reclamation and hydro-electric project.

PERSONAL

MR. Ing. Jiri Nosek has been appointed as Ambassador Extraordinary and Plenipotentiary of Czechoslovakia to India.

Mr. T. K. Desai, Deputy General Manager, New India Assurance Co., Ltd., has been selected for the post of General Manager of the proposed Reinsurance Corporation of India.

Dr. John Matthai, Chairman of the State Bank of India, has decided to relinquish the chairmanship of the Bank. He will hand over charge on 31st August 1956.

Mr. R. Narayanaswami, Joint Secretary, Union Ministry of Finance, Mr. S. Jagannathan, Joint Secretary, Ministry of Production, Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Industry, and Mr. P. R. Subramaniam, Senior Deputy Director-General of Shipping, have been appointed Directors of the Western Shipping Corporation (Private) Ltd. established by the Government of India on 22nd June last. Dr. Nagendra Singh, Director-General of Shipping, as already announced, is the Chairman and Managing Director of the Corporation.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *4th July*

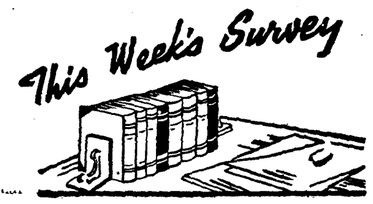
Unemployment Insurance

The Labour Government has decided not to accept the recommendations of the Royal Commission on Unemployment Insurance in Great Britain. In a statement made in the House of Commons last week, Miss Margaret Bondfield, Minister for Labour, declared that, while the Macdonald Government was always opposed to place an increased burden on industry, it was likewise opposed to oppress the workers by reducing the existing benefits of unemployment insurance. She announced that Government would not accept the recommendations of the Commission. But in order to remedy the "dole abuses" and save £5,000,000 annually the Government has introduced a Bill, with a view to disqualifying certain claimants from the benefit of unemployment insurance, particularly workers who receive substantial wages for two or three days per week and married women who have ceased to be employed industrially. It is interesting to recall that the Royal Commission on Unemployment Insurance was appointed by His Majesty's Government six months ago, with Mr. Justice Holman Gregory as the President. He and four of the six other members have made recommendations which, if put into effect as estimated, will produce an annual saving of £31,800,000 on the working of the insurance scheme and £10,100,000 on "transitional benefit," that is, benefit commonly called dole, drawn by insured workers who have exhausted their statutory rights.

The St. Erik's Fair in Stockholm, Scandinavia's largest international trade fair, is to be held for the fourteenth time from 1st to 16th September 1956. There will be exhibitors from 28 countries, no less than 15 nations organising officially sponsored pavilions. This year's event will feature a considerably extended range of Swedish products, including a wide range of semi-finished products in the steel and chemical fields. The General Export Association of Sweden will give visitors a comprehensive picture of the country's export potential.

A Paisley (Scotland) engineering firm, which recently completed a £1,000,000 order for machinery for sugar factories in the Punjab, has received a further order from India. The new machinery is for mills in the Madras area, and will be capable of crushing 1,000 tons of sugarcane in a day. The value of this new order is estimated at £500,000. The two Punjab factories also have a crushing capacity of 1,000 tons daily, and the firm has previously manufactured machinery for sugar mills in India, the Philippines, and South America. Since 1840, the manufacture of sugarmaking plant has centred round Glasgow and Paisley. There are six firms in the district engaged in this work. The sugar-machinery industry employs some 4,000 people in the area.

Plans for the construction of an ethylene glycol plant in Puerto Rico at a cost of about $28.5 million have been announced by Morse G. Dial, President of Union Carbide and Carbon Corporation. It is contemplated that the new plant will be constructed, owned, and operated by Union Carbide Caribe Inc., a wholly-owned subsidiary of Union Carbide. An application for tax exemption under Puerto Rico's Industrial Incentive Act has been filed by Union Carbide Caribe Inc. Completion of the plant is scheduled to be in about two years after the grant of tax exemption. A long-term contract between Union Carbide Caribe and Commonwealth Oil has been signed under which Union Carbide-Caribe would purchase by-product refinery gas from Commonwealth Oil, thus assuring the new plant adequate supplies of raw materials on a long-term basis. Part of the new plant's production will be destined for international markets in the Western Hemisphere and Europe, while the balance is expected to be sold in the United States.



PENCIL INDUSTRY

IF language is the vehicle of understanding, the pencil is a vital tool for its communication. The pencil industry may, therefore, well claim that it is pre-eminently an educational industry. Its position is especially unique now, since India is on the threshold of a new era of economic and social development. If such development is to make its full contribution to the well-being of the masses, programmes for spreading education should be accorded a high priority. The Planning Commission has, indeed, done well in recognising this aspect fully; it has stepped up the outlay on education from Rs. 169 crores in the first Plan to Rs. 307 crores in the second Plan. With the importance attached to education thus, the development of the pencil industry assumes utmost significance. This aspect was ably stressed by Mr. R. P. Gooptu, President of the Indian Pencil Manufacturers Association, when he addressed its second annual general meeting held at Calcutta on Thursday last week. Mr. Gooptu said: "One of the criteria to judge the progress of a country is to find the percentage of its literates in the population, and all the advanced countries of the world today have near cent per cent literacy in its population. The directive principles of the Indian Constitution also enjoins upon our Government to accomplish cent per cent literacy by 1970. At that time, we shall possibly have to increase our (pencil industry's) installed capacity by about five to six times and also work more shifts to meet the internal requirements."

While this is a long-range problem, the immediate one relates to the utilisation of the huge surplus idle capacity, amounting to as much as 82 per cent. The output of pencils is now running at an annual rate of not more than 200,000 gross, which represents a bare 18 per cent. of the installed capacity of 1.1 million gross (on single-shift basis). Even as compared with the aggregate annual requirements of 600,000 gross, the idle capacity will be fairly large, being 45 per cent. The demand for pencils will, of course, rise in the coming years; taking the annual rate of rise as 10 per cent., the total demand at the end of the Plan period will work out to 900,000 gross. Even then, there will be an idle capacity to the extent of 18 per cent. It is the existence of a huge idle capacity in the pencil industry, it will be recalled, that influenced the Tariff Commission to recommend withdrawal of protection to the industry in 1953.

The chief problem before the pencil industry is, therefore, the maximum utilisation of installed capacity. There is said to be a severe handicap in the way of such utilisation, namely, market resistance. Drawing attention to this handicap, Mr. Gooptu observed:

"The greatest difficulty in selling our pencils at the present moment is being offered by competition from foreign pencils. We all know to our bitter disadvantage that there is a consumer preference for foreign pencils even when the latter are sold at a higher price. This cannot be counteracted by any amount of publicity or price-cutting by us. What is needed, therefore, is a ban on the importation of foreign pencils. When importation is stopped, we shall have to increase our production not only to stop the gap caused by stoppage of import but also to tap the unexplored market within the country."

The plea for a closed market for pencils is not justified. The consumer preference for foreign pencils, notwithstanding high prices, stems from quality considerations. How else can one explain the continued large imports of pencils? During 1955-56, India imported 200,211 gross pencils (valued at Rs. 25.57 lakhs), as against 107,128 gross (Rs. 17.91 lakhs) in 1954-55. The quality of the pencils manufactured in India, though it has registered some improvement in recent years, still does not generally compare favourably with that of pencils made in countries like Germany and the U.K. If monopoly conditions are created by a total ban on imports, there is the possibility of the quality suffering a setback. A complete ban on imports, it is needless to add, will take away even the little incentive which the domestic manufacturers may have to produce high quality pencils at competitive prices.

As Mr. Gooptu himself rightly remarked, the two chief factors in expanding sales of pencils are price and quality. So far as price is concerned, the industry, we are told, is not able substantially to reduce the prices which are already much lower than those of imported pencils. Attention should, therefore, be directed to the improvement in quality. There is also the need for taking a few other steps. These, according to Mr. Gooptu, are: (1) a joint enterprise for undertaking the production of as many raw materials as possible within the country itself; barring graphite, the rest of the raw materials—woodslats, clay and waxes—are being imported at present; (2) prevention of cut-throat competition among the units producing pencils; (3) sustained publicity campaign and more intensive marketing. While commending these suggestions to the manufacturers, we would like to reiterate that their prosperity ultimately lies in improving the quality of the industry's product. With this end in view, some of the manufacturers will do well to secure the assistance of foreign manufacturers who have a reputation for producing high quality pencils. Incidentally, this may also prove to be a satisfactory solution to the problem of overcoming consumer prejudice.

NEW IMPORT POLICY

The import policy for the current half-year, namely, July-December 1956, announced during last week-end, reveals no marked changes as compared with that for the first half of this year. Changes, if any, are mainly designed to meet the requirements of the second Plan. Since the Plan lays stress on the establishment of heavy machinery industries, the need for imports of machinery, spare parts, and industrial raw materials is great. Accordingly, imports of these have been liberalised. Domestic industries in both the public and private sectors should, therefore, be satisfied with the policy. What must be even more gratifying to them are the restrictions imposed on the imports of a variety of goods which are being or can be produced in adequate quantities in the country. Although this is welcome, it may sometimes result in hardship to the consumer. For, if the domestic producers fail to produce goods of quality to the extent needed, it may lead to scarcity and high prices. In this connection, the reactions of Mr. Shantilal M. Shah, President, All-India Importers Association, Bombay, to the new import policy are worth noting. In the course of a statement to the Press, he says: "The most distressing feature of it is that restrictions have been imposed not only on the basis of actual indigenous production but on the basis of envisaged production. This will create shortage of important goods in the country, will inflate prices and will adversely affect the growth of industries consuming such restricted goods." These apprehensions are genuine, being based on past experience and, therefore, call for vigilance on the part of the authorities, so that they may take timely action to curb inflationary tendencies, if and when they begin to manifest.

In order to gear the import policy to the requirements of industrialisation as also to the need for conserving foreign exchange, several adjustments have been effected in the quotas as well as in the licences for imports. Thus, in certain cases such as ball-bearings, files, and so on, import quotas have been enhanced. In certain other cases, even additional *ad hoc* licences have been granted as in the case of marine engines, fuel injection equipment, etc. A number of items has been removed from the purview of the liberal licensing schemes, while in respect of others import quotas have been reduced. Adjustments have also been made in respect of face values of a number of items. Besides, the basic period has been extended to 1954-55 for 168 items and to 1955-56 for another 58 items, though licensing procedures for the issue of licences to newcomers and special avocations have been tightened in order to prevent abuses. Provision has been made for certain types of newcomers to become established importers.

The growing tendency to channel imports through the State-sponsored bodies, such as the State Trading Corporation, is viewed with concern in some business circles. Mr. Murarji J. Vaidya, President, Indian Merchants' Chamber, commenting on the import policy, for instance, observes: "It is, however, a little disconcerting to note that the policy of canalisation of imports through Government-approved or Government-sponsored bodies in respect of certain industrial raw materials like raw silk, caustic soda, etc., has been continued during the current licensing period." Again, Mr. Shah of the All-India Importers' Association also points out that the entry of the State Trading Corporation in the field of foreign trade is a new factor to be reckoned with. He does not, however, criticise the Government for making this State agency to participate directly in foreign trade, though he is fully aware of the danger of such State encroachment upon the sphere of private trade. On the contrary, he has advised the trade fully to co-operate with the Corporation and continue to play its role in the development of India's trade. By this gesture of co-operation, the spokesman of the importers has displayed a commendable sense of realism. It is to be hoped that the gesture will be reciprocated by the authorities.

U.S. STEEL STRIKE

Much concern is expressed in the U.S. over the labour strike in the steel industry which commenced on Sunday this week, following breakdown in negotiations between the 1.25 million workers' union and the 12 major steel producers for settling the primary demands of the former. The demands fall into five categories—substantial wage increase; supplemental unemployment pay; improvements in health insurance and pensions; additional paid holidays and greater vacation benefits; premium pay for work on Saturday and Sunday. The demands have been put forward on the ground that the steel industry has been having its biggest boom in history, working at 99 per cent. capacity, its profits amounting to $312 million during the first quarter of 1956. The workers have asked for a higher share in these profits. Incidentally, it may be noted that the U.S. steel industry accounts for over 40 per cent. of the world's steel; its daily output exceeds 300,000 tons and the daily wage bill is about $10 million. The U.S. steel worker is one of the world's highest paid industrial workers, earning, on an average, $2.46 cents an hour in wages and benefits.

In each of the above categories of steel workers' demands, the producers have made offers—spread over a five-year period—which, they estimate, will add 17.2/3 cents an hour to their labour costs in the first year, reaching a cumulative total of 65 cents an hour four years later. The workers, however, regard this estimate as a highly exaggerated one. A number of the proposed benefits, the workers point out, will not become effective before some years and, in some cases, only a minority of workers will be affected by them.

The breakdown in negotiations is attributed chiefly to divergent views over two important issues, namely, contract provision and basic wage rate. The steel producers made an offer for a five-year contract—later reduced to 4½ years—in the interest of ensuring stability in the industry. The offer was turned down by the workers' union on the ground that the period was "too long a time to commit its members to a frozen pattern of working conditions." Attention was drawn to the fact that the previous contract which expired on 30th June last was for a two-year period only. In respect of the basic wage rate, the producers offered direct wage increases averaging 17.2/3 cents for each year of the contract, together with an escalator clause providing for compensatory increases in the event of a rise in living costs. But the Union considered the offer as inadequate. For the offer, it said, was "far less than the employees are entitled to on the basis of the industry's record-breaking profits and the employees' record-breaking productivity." Last year, the steel workers won an average wage rise of 15 cents an hour, bringing their average earnings to $2.47 an hour.

There was also lack of agreement over the fringe benefits offered by steel producers. These included (1) a 52-week unemployment benefit plan for workers with three or more years of service; (2) a seventh paid holiday (effective in 1957); (3) increased vacation benefits for senior employees (effective in 1958); (4) premium pay for Sunday work equal to night shift premiums (effective in 1959); and (5) a plan for increasing health and welfare benefits but retaining the feature of employee contributions which was opposed by workers. These benefits, the workers contended, contained conditions which robbed them of their value; the benefits derived by workers, it was said, would be so little that, even by 1st July 1961, they would be far below the level of benefits generally prevailing in the American industry at the moment.

The great concern caused by the aforesaid strike is only as it should be. Almost all the industries are dependent on steel, so that a prolonged strike in the steel industry will have a serious effect on the entire economy. Within two weeks from the commencement of the strike, the construction, railway, oil and gas industries will, it is said, have to cease operations and, within four weeks, all other steel users will have to shut their shops. The consequences of the steel strike will be all the more severe, considering that the industry has launched plant expansion plans involving a capital outlay of over $1,000 million annually and a rise of 15 million tons in the annual capacity in the next three years. A rise of even one cent in the wages of a steel worker, it is computed, will raise the price of steel by 40 cents a ton. "It is likely," to quote one report, "that the steel price will go up by about $10 a ton as a result of the strike." Indeed, it is feared that this will result in prices going up in every manufacturing industry, setting in motion inflationary pressures and also curtailing the consumers' purchasing power. In view of the distressing consequences of the steel dispute, it is to be hoped that both workers and producers will resume negotiations at an early date and reach a compromise settlement.

UNEMPLOYMENT IN BIHAR

The interim recommendations of the Bihar Unemployment Committee (Chairman: Dr. A. N. Sinha, Finance Minister), submitted to the State Government recently, are, to say the least, highly ideological. In its anxiety to revitalise the small-scale and cottage industries, the Committee has completely overlooked certain basic economic considerations. How else can one explain, for instance, the Committee's suggestion for reserving the production of certain specific varieties of commodities to cottage industries, on the one hand, and for imposing restrictions on further production of these varieties by large-scale industries, on the other? True, the cottage industries play a very vital role in the economy of India which is predominantly rural in character, inasmuch as they provide employment—direct and indirect—to a fairly large section of people. But employment is not the only consideration to be taken into account; it must be matched against the no less vital consideration, namely, the price the consumer is called upon to pay for his requirements of essential items of consumption such as rice, oil and cloth. The importance of price aspect is all the greater in the present context of rapidly rising demand as a result of increase in income, following the implementation of the series of development schemes under the second Five-year Plan.

It is scarcely necessary to point out that the very structure of cottage and small-scale industries is such that there is hardly any scope for the attainment of a high level of efficiency and reduction in cost of production. The scope will be restricted still further, if markets are reserved for these industries by taking recourse to the negative remedy of curtailing the operations of the more efficient large-scale industries. It is a pity that the members of the Bihar Unemployment Committee should not have given due weight to these considerations. Considering the rapid rate at which population is rising and the standard of living is improving, any undue reliance on the low efficiency and high cost cottage industries for meeting the consumption requirements of the people is, indeed, beset with dangerous consequences.

AMERICAN LETTER

ADMINISTRATION MAY NOT INTERVENE TO SETTLE STEEL STRIKE

CONFIDENCE IN FUTURE STILL ABOUNDS

From Our Special Correspondent

NEW YORK, 28th June

THE largest United States steel companies' furnaces have been banked, because of the very uncertain outlook in the wage negotiations. An interruption of production of whatever duration, therefore, has become an actuality. Steel inventories have been built up in recent weeks and months by fabricators and consumers in anticipation of what is happening now. Thus, industries depending on steel will be able to continue operating for some time. A prolonged steel strike, however, would have serious repercussions.

It would mean a large increase in unemployment, a decline of industrial activity throughout the country and almost certainly a drop in loans to business and industry by commercial banks. There is no certainty at this time how long the interruption in production will last.

Despatches from Washington make it clear that the present Administration has no intention of interfering with current labour-management negotiations as previous regimes have done. A strict hands-off policy has been adopted and it is expected to be maintained, unless a national emergency should arise.

In the meantime, President Eisenhower is progressing satisfactorily. He is now beginning a period of recuperation on his farm in Virginia. There is much public regret that the visit of Prime Minister Nehru of India had to be postponed because of Mr. Eisenhower's recent operation.

The meeting will, however, still be held somewhat later and, indeed, might be more fruitful after the Indian Prime Minister has had a chance to digest his impressions from the Commonwealth Ministers meeting at London. Many problems, particularly those of the Eastern part of the world, are of as much importance to India as they are to the United States.

There is suppressed apprehension here that the level of business will go down in the United States in the second half of this year. So far in 1956, retail sales throughout the U.S. have been 3.9 per cent. higher as an average than in the same period last year.

There is, therefore, no immediate cause for worry, except for the economic effect of prolonged labour disturbances. Steel wage negotiations always set the pace for other industries and if substantial labour gains are made in one field, they usually serve as a pattern for demands in other industries.

CORRESPONDENTS ALL OVER THE WORLD

The trend of consumer buying later this year should be of fundamental importance. If many people are out of work for reasons of their own choosing, it is possible that a slight slump in this area may occur.

There have been predictions that public buying will pick up as the new automobile models become available in the fall. In my opinion, this is no foregone conclusion, particularly because next year's models will vary very little from the autos which are in the showrooms this year. But, then, America is the country of automobiles and many families are prone to cut down on their food budget rather than not surprise their neighbours with a new car in front of their home.

With incomes curtailed by possible extended strikes, it is difficult to visualise that a great increase in buying could be supported by an expansion in consumer credit which has already reached lofty levels. But, with sufficient confidence in the future, it is quite possible that families may draw on their very substantial savings to satisfy their requirements.

Savings are still going up in all categories, although the rate of gain has been lower in 1956, as compared with 1955. From perusing stock market statistics, there is no evidence that investors take a dim view of the future. If the United States could not afford the economic wastefulness of strikes, they would not occur. Besides, if they do happen, they invariably create an inflationary pent-up demand for goods which may or may not be bemoaned.

For the first half of the year, despite some declines in certain parts of the economy, business as a whole has been little affected. National income and employment are still at record levels. This is primarily due to capital expenditures.

Innumerable new factories are being built and States, cities, municipalities and villages are issuing an avalanche of capital issues to finance sewage systems, water reservoirs, roads, schools, hospitals, airports and so on. These capital expenditures have been a very important sustaining factor in the American economy and the calendar looks as though there is no early let-up in sight.

For the year as a whole, satisfactory business conditions are foreseen with the reservation of the abovementioned conditions. Confidence still abounds. One factor underlying this feeling of buoyancy is the probability of an easing in credit. If the business picture turns cloudy, this is a certainty.

Easing of credit can be achieved in many ways by the Federal Reserve banks and has been accomplished in the past. At present, because of wage and price increases, there are still certain inflationary dangers.

Politically, the U.S. is being conditioned, at the present time, to the forthcoming conventions of Republican and Democratic parties. The final news who will be the Presidential candidates for either side will have to await the final verdict of the two gatherings.

President Eisenhower's influence will be a powerful one, as will that of Adlai Stevenson in the Democratic camp. The major issues are still foreign aid, defence expenditures and civil liberties for heretofore underprivileged groups. The present Administration, with the exception of a few unguarded comments by Cabinet members, has steered a pretty clear course, depending on local options and the opinions and the voice of the populace as a whole.

The major attack by the Democrats is directed against the policy which they regard as favouring big business against the little man. All Democratic candidates follow the same line. It was also the policy of the late Franklin Delano Roosevelt.

The only difference is that, when President Roosevelt took over, it was in the midst of a severe depression and now everyone is relatively happy and satisfied and has no particular reason to change the leadership of the country out of dissatisfaction.—All Rights Reserved.

CONTRIBUTION OF AGRICULTURE TO EXPORT TRADE

IMPORTANCE OF OILSEEDS

From A Special Correspondent

NEW DELHI, *3rd July*

DELHI LETTER

IT is fairly certain that the Government of India's trade and production policies will be closely interlinked in the coming months if the observations of some Ministers and high dignitaries of the Government are any indication. This is, of course, already being followed while determining the import policy from time to time. In cases where the industries have been able to report higher production and the quality of goods manufactured is satisfactory, Government has been restricting the quantum of imports, so that the indigenous industry could reasonably be assured of a steady internal market. In the case of exports of agricultural produce and industrial raw materials, the Government is expected to concentrate its attention on a policy of expansion by linking production of commercial crops and other products to that of exports.

At the three-day Conference of State Ministers of Agriculture held at Mussoorie this week, Mr. Ajit Prasad Jain, Minister for Food and Agriculture, made certain interesting remarks about the possibilities of exporting some important commercial crops. He stated: "For the success of the Plan, which will, to a great degree, depend upon the quantities of capital goods that we are able to acquire, we must export larger quantities of cash crops like oilseeds, cotton, tobacco and plantation products." The Minister did not disclose the export targets for these goods, but was disinclined to agree with the views expressed recently by the Finance Minister, Mr. C. D. Deshmukh, and the Prime Minister, that India should be able to export about two million tons of foodgrains annually, in order to enable the country to earn the much needed foreign exchange for the imports of machinery, iron and steel and other industrial raw materials. He informed the States Ministers for Agriculture that proposals had been worked out by his Ministry to step up the targets for the increased production of raw cotton from 31 per cent. now envisaged to 37 per cent., raw jute, sugarcane and oilseeds from 25 per cent., 22 per cent. and 27 per cent. to about 37.5 per cent., 31 per cent. and 36.4 per cent., respectively.

Among the new targets fixed for agricultural production, the most important from the export point of view is oilseeds. During the first Plan period, production of oilseeds did not record any impressive rise, the figure moving up from 5.1 million tons in 1950-51 to no more than 5.5 million tons in 1955-56. In the second Plan, the target has been raised to 7 million tons. According to the latest revision of the targets, the Agriculture Ministry desires that production of oilseeds should be improved to about 9.6 million tons. In other words, there should be a definite increase of about four million tons from the current level during the next few years. Since groundnut happens to be the major item among oilseeds, its output has to be increased to about 6.0 million tons from the present level of about 3.5 million tons.

It is now being realised by Government that high priority should be given to the production of such commodities and raw materials as are in greater demand in the export markets of the world. The authorities feel that, if India's capacity to produce more groundnut were to rise appreciably, it will not only help the Government to maintain a reasonable level of prices in the internal market for vegetable oils and oilseeds, but will also enable the Government to earn more foreign exchange during the coming years.

Only a few weeks ago, the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, remarked that exports of oilseeds and vegetable oils at Rs. 45 crores during 1955-56, as against Rs. 24 crores in the preceding year, must be considered as a flash in the pan. Export earnings from this source might have been higher still but for Government's restrictive policy in regard to exports of groundnut oil after November last. The Agriculture Ministry would now appear to be of the view that the export policy in regard to vegetable oils and oilseeds should not be subject to fits and starts by linking it to the vagaries of production but should be a steady one in the coming years. But it is not known as to how this could be done. The frequent changes in the export policy of vegetable oils, particularly in respect of groundnut oil, is largely due to the small margin available for export after meeting the internal requirements. Since the production of oilseeds is entirely dependent on the course of the monsoon, failure of the rains in the important producing areas adversely affects the trend of production to an appreciable extent.

If the Agriculture Ministry were able to achieve the increased target of about 9.6 million tons in respect of oilseeds, India could easily more than double the quantum of exports of oil and seeds. It may be noted that, in 1955-56, the total quantum of exports of groundnut, linseed and castor oils came to about 2.45 lakh tons, and, after taking into account the other kinds of vegetable oils and oilseeds exported during the last fiscal year, total exports in terms of oil may be computed at about 2.80 lakh tons. In case the Agriculture Ministry succeeds in achieving the revised targets of production for oilseeds, it should be possible for Government to have an export target of one million tons or slightly more, in terms of oil.

This higher target must be considered essential for augmenting the exchange resources of the country. Since the potential demand for vegetable oils, especially groundnut oil, in the Western European countries is considerably greater, efforts on the part of India to export more vegetable oils will be welcomed by these countries. Apart from West Germany, France, Belgium and the Scandinavian countries, more enquiries will be forthcoming from Soviet Russia and other East European countries also.

For another reason also a higher export target for groundnut and other vegetable oils is necessary. During the post-war period, India has been consistently incurring a sharp deficit on trade account with many West European countries, largely as a result of the considerable fall, and in some cases, practically *nil*, in the exports of vegetable oilseeds, short-staple cotton, raw jute, etc. Since West Germany has now become an important supplier of machinery and other capital goods to India in recent years, imports from that country have been rising steeply. In 1955-56, for instance, India imported Rs. 60.20 crores worth of merchandise from that country, as against Rs. 40.68 crores in the preceding year. India's exports to West Germany were, however, more or less static, the figure standing around Rs. 15 crores. With other West European countries also, India has been running an adverse trade balance. Since all these countries are capable of absorbing more vegetable oils, particularly groundnut oil, it is in India's interest to step up the production of vegetable oilseeds and oils with the object of exporting them to this part of the world.

In recent months, India's trade with Soviet Russia and East European countries has been showing signs of expansion. Soviet Russia is interested in the purchase of tea, jute goods, raw wool, castor oil, etc. There are reports that India will try to send woollen manufactures also to that country. Since large-scale imports of machinery, steel, oil drilling equipment, etc., are coming from that country, India should endeavour to supply it with sizable quantities of industrial raw materials. Import of 1.5 million tons of steel alone during the current year will cost about Rs. 120 crores. Machinery imports are likely to touch the Rs. 200-crore mark this year. It is, therefore, imperative that India should step up its exports by producing and exporting such goods and agricultural commodities as are in good demand in overseas countries. Since vegetable oilseeds and oils are one of them, the Agriculture Ministry must give top priority to augmentation of their output. Production of other cash crops such as raw cotton, sugarcane, raw jute, etc., is also extremely necessary to maintain the industrial tempo of the country, but special efforts have to be taken to increase the quantum of supply of many exportable crops too.

COMMONWEALTH CONFERENCE

THE PROSPECTS

From Our Own Correspondent

LONDON, *30th June*

THE day the Premiers of the Commonwealth met in London this week, *The Times* began its leading article with the words "The Commonwealth has often been likened to leaven, enriching and lightening the whole loaf of the world. It is not a bad description. The only trouble is that the leaven finally disappears and is lost in the loaf. Is that to happen to the Commonwealth?" The now defunct idea of the Commonwealth was a group of equal sister nations under one monarchy. The Republic of India accepts the monarchy only for Commonwealth and not for internal affairs; South Africa is going the same way, but more than this—the British Association of Nations "has no common judiciary or administration, no constitution, no joint system of defence. Its legal systems and political institutions are varied and often contradictory. Its ethical unity is shattered, since not all its members subscribe to the basic doctrine of racial equality." So comments the London *New Statesman*.

LONDON LETTER

What then is left? An exchange of views? But an exchange of views ungoverned by common interests is unlikely to be a practical force. At present the Commonwealth has real ties based on Imperial Preference and the common use of sterling. But the G.A.T.T. has made it impractical to develop further the system of preferences and they have since the war diminished in importance. Suppose that dollars became freely convertible with sterling, what then would happen to the sterling bloc? And, without preferences and the advantage which the use of a common currency brings, what would be left of the Commonwealth, except the English *lingua franca* in which all its members are able to confer?

But the implication of these thoughts is that, as the world becomes closer knit together as an economic unit, so the groupings of units within the world have less importance. At first sight, the Commonwealth is a less cohesive body than the Communist bloc. But the Communist bloc also has its anomalies, its Yugoslavia linked with East and West; just as Eire is able to be outside the Commonwealth and even diverge violently on matters of defence policy and yet enjoy all the benefits of Commonwealth membership and the right of Eire Nationals to bi-nationality, to seek employment and go about their affairs in this country as if they were U.K. citizens, a right which members of no Commonwealth country enjoy. To come back to the comparison with the Communist bloc, their trade and currency arrangements depend fundamentally on barter and indeed the bloc takes its strength from trade and investment support which the Soviet Union can give. Without that support the Communist bloc would be merely a political grouping.

But, in the Commonwealth, the significance of a political grouping is weakened by the fact that acute political problems and not only those of nationality have arisen and have not been helped to solution by membership of the bloc. Indeed, Commonwealth political problems get transferred to the arena of the United Nations. We are, therefore, being driven to the conclusion that the significance of the Commonwealth as a cohesive group must depend upon the significance to its members of the advantages they derive from mutual economic interests, and here again there is a note of warning—that the sterling area may be of less advantage to some members of the Commonwealth than it is to the U.K. What can the U.K. offer to continue to be looked to as the hub and centre of this community of Nations? It is a great market for Commonwealth produce but it must be more than that, it must give out as well as receive; finance and organise the flow of capital to the less developed areas; not only provide ideas, such as the Colombo plan, but the means, the men as well as the material, to carry them through. Community of objective, community of ideas and community of *economic interest* must be the links that survive if the Commonwealth is to remain after this Conference more than a name.—*All Rights Reserved.*

THE LAKSHMI VILAS BANK LIMITED

Head Office: KARUR Estd: 1926

Thanks You to Know the following

SERVICE:

Completes 30 years creditable good service with negligible losses, below Rs. 10,000 for all these years.

CAPITAL: Fully paid up with Reserves exceeding Capital.

DEPOSITS INTEREST: Offers attractively good interest for various deposits from 1 per cent. to 5 per cent. Please enquire.

DIVIDEND: Declared since last 3 years: 18 per cent., 19 per cent. and 22 per cent. Average dividend exceeds 12 per cent.

SHARE VALUE: Exchanged in market at more than thrice the face value with buyers' demand increasing.

GENERAL BANKING: Does banking service of all kinds. Advances against Bullion, Jewellery, Gold and Silver wares, Approved Commodities and Gilt-edged Securities. Undertakes Collection of Bills and Discounting. Government Bonds sold or purchased for constituents. Drafts issued on all trade centres and Loans accommodated on all deposits.

RESOURCES: Satisfactory working resources with steady progress.

Further particulars on Application.

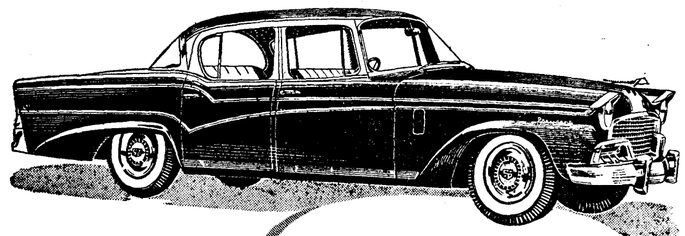
UNIQUE IN LUXURY . . . IN SPACIOUSNESS . . . IN ELEGANCE

President Classic AND *Commander 1956*

PRODUCTS OF

STUDEBAKER-PACKARD



The big new PRESIDENT CLASSIC and COMMANDER are stand-outs in comfort, performance and safety. Designed and produced after the merger of the Studebaker and Packard Corporations, they carry the impress of Packard's prestige engineering and craftsmanship and Studebaker's leadership in styling.

They are powered by the world's most efficient V8 Engine. The conventional six cylinder engine, designed in pre-war years, is an out-dated type of power unit now being discarded by leading automobile manufacturers in America.

In India, the President Classic and the Commander alone are powered by a perfected Over-Head Valve V8, which is the most powerful engine manufactured in this country.

New features like the Pyramid design low-level ride, dual safety-action brakes, new safe-lock doors, "Cyclops-eye" speedometer, plus all-steel "shield of protection" body, make these cars ideally suited to today's motoring needs.

The COMMANDER is a unique car in its price-range and the grand new extra-spacious PRESIDENT (120 1/2" W.B.) is the only ***LUXURY*** car available in India.

WORLD BANK COMPLETES TEN YEARS OF VALUABLE SERVICE

UNDERDEVELOPED AREAS GREATLY BENEFITED

THE International Bank for Reconstruction and Development, popularly known as the World Bank, celebrated its tenth anniversary on 25th June last. Although the charter was drawn up at Bretton Woods twelve years ago, the Bank commenced its operations only on 25th June 1946. Its original membership of 41 nations on that date has now climbed up to 58, with 43 of them participating in loans (amounting to $2,750 million) given.

Few U.N. institutions can claim with pride a successful career similar to that of the World Bank in its first decade, the completion of which is marked by its activity at the highest pitch. The tenth year which ended on 30th June last is expected to establish records in several spheres of its activity. The Bank must have approved before the completion of the fiscal year 28 new loans amounting to $429 million, exceeding the previous record of $410 million established in 1954-55. Again, earnings of the Bank are expected to reach a new peak of $29 million and so also reserves at $225 million. The year witnessed the grant of $80 million loan for Kariba development in Rhodesia, the Bank's largest loan so far for a single project. Moreover, negotiations for an additional $180 million of loans are, it is stated, to be completed by September next and this is expected to raise the Bank's total lending to the equivalent of nearly $3,000 million—a record which is really creditable to an institution of only 10 years. In the matter of repayment of loans by the Bank's borrowers, too, its experience has been happy. Thus, without interruption, every instalment of principal and interest has been received on the due date; indeed, in some cases, loans have been repaid in advance. Of the loans made so far, $250 million plus interest have been received by the Bank.

The success of the World Bank may be traced to a number of factors. The most important has been the unprecedented rate of world economic growth in the first post-war decade. It took four years after the war for world poductive capacity to regain its pre-war level. Thereafter, there was a great surge forward, greater than in any previous period. The Bank took advantage of this favourable economic climate, but its success lay in enlarging its financial operations on sound banking principles.

More Loans to Backward Areas

The Bank's first loans were for reconstruction from war damage and were, therefore, granted to war-affected countries of Europe. The attention paid to backward countries in the earlier years of the Bank was relatively insignificant. This was due to lack of knowledge and unfamiliarity with the conditions prevailing in these countries and to the urgency of making European countries stage a rapid recovery from the ravages of war. But, when once the reconstruction was completed, the Bank began devoting more attention to underdeveloped countries. In this work, the European economies, which had regained their productive capacity, also extended a helping hand to the Bank, with the result that not only were more funds available but also more capital goods needed by the underdeveloped countries. At present loans are made for the development of electric power, irrigation, industry and transportation.

In the initial stages, the Bank's resources, consisting mainly of subscriptions from members, were limited and, therefore, insufficient to meet all its needs for lending over a long period. It had to supplement them by other means, especially by borrowing from the capital markets. Unfortunately, at the time when the Bank began its operations ten years ago, the climate in the international capital markets was far from congenial. Investors' faith in foreign investments was at a low ebb. The resort to moratorium by a number of countries in the inter-war period and the depression of the thirties had caused most of the large financial institutions to exclude overseas investments from their portfolios. This tendency was in full evidence in the U.S. where foreign investments were confined to direct investments made by American corporations through their subsidiaries overseas. This attitude of investors had to be changed if the World Bank was to have the capital it needed. In order to bring about the change, it had, on the one hand, to ensure that the loans granted to underdeveloped countries were productive and contributed to a healthy and enduring economic progress of the countries and, on the other, to show to the investors in the financial centres of the world that the operations of the Bank could be conducted with commercial success and that international investment was not necessarily a bad risk. This meant setting rigorous standards of investigation of projects put forward for the Bank's assistance and wherever necessary to suggest improvements in the projects. In addition, in order to ensure regular repayment of both the principal and interest, the guarantee of the Governments of borrowing countries was also obtained.

Bank's Bonds Popular

The business-like manner in which the Bank conducted its affairs did not take long to demonstrate to the private investor that international investment can be a sound business proposition. The Bank's bond issues gradually gained popularity. Today, more than half of the funds disbursed by the Bank has been raised from the investment market mainly in the form of bond issues. Besides, the Bank has been able to augment its resources by the sale of part of its loans to the market. In the U.S., commercial banks, pension funds, and insurance companies are today showing increasing interest in portfolio investment in overseas development. This growing interest of the financial institutions in the Bank's operators has been another important factor which has contributed to its progress.

Another notable feature of the Bank's progress has been its successful endeavour to maintain its international character in both lending and borrowing operations. During the last five or six years, it has issued bonds in London, Switzerland and the Netherlands. The total value of bonds issued so far in these countries is equivalent to $129.5 million. Besides, Central Banks in Europe have purchased parts of loans from the Bank's portfolio. In 1955, 40 per cent. of the outside capital made available to the Bank came from European financial centres. Their share in the World Bank loans amounted to $260 million during the five-year period ended 30th June 1956. The international character of the Bank is maintained in the policy of its disbursements also. It allows the borrowing countries to spend the Bank's loans to them in any country where they get the best value for their money. In the earlier years, the U.S. was the only country with the industrial capacity to fill large orders for capital goods from the Bank's borrowing countries. But, in recent years, European producers have been able to compete with the U.S. and secure an increasing share of these orders. In the course of an article contributed to a London daily, Mr. Eugene R. Black, President of the World Bank, observes that European producers have more and more come back into the picture and that their effective competition for orders under Bank loans has been reflected in the figures with the Bank. Thus, in the fiscal year 1954-55, 48 per cent. of the Bank's disbursements went to European manufacturers and this proportion has, it is stated, increased in the past twelve months.

Let LLOYDS BANK look after *your* interests

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND LB 2/56

WORLD'S BIGGEST BANK

Two decades ago, Britain could lay claim to possessing the world's biggest banks, judged by the size of their total assets. In 1937, the Midland Bank topped the list, followed by the "Big Five" group of London clearing banks occupying four of the next half dozen places. Today American banks occupy the first three ranks, while the London clearing banks occupy the next three places.

The biggest American banks are now very much larger than their nearest British rivals. The world's largest bank, the Bank of America, has a balance-sheet total equivalent to some £3,450 million. The next in the list is the Chase Manhatten Bank, with a total of £2,700 million, followed by the First National City Bank of New York with £2,500 million. Britain's largest bank, the Midland, accounts for a figure far below at £1.450 million. Barclays and Lloyds come next in order with £1,350 million and £1,150 million.

The causes for the lead gained by American banks make interesting reading. One of them is the devaluation of sterling. Conversion of American bank resources into sterling values is now made at about $2.80 per £, whereas the average quotation in 1937 was at about $5 per £. Another cause for the American banks to move higher up in the ladder has been the extension of bank mergers in the U.S. Lastly, the credit policies in Britain have restricted the growth of British banks' resources, whereas American banks have been only moderately affected by such policies.

Judged in terms of branch strength, the U.K. banks still hold the lead. The first three American banks have each about 300 branches. But Britain's three largest banks each have some 2,000 branches.

RENEWAL OF E.P.U.

The life of the European Payments Union has been extended by another year. A proposal renewing its life was signed at Paris on 29th June last by representatives of the member-countries of the Organisation for European Economic Co-operation. It provides for bilateral repayments and amortisation agreements similar to those in operation since June 1954. The agreements cover a total of $207 million, involving part payments in gold or agreed currency immediately and the balance in annual instalments.

Under the agreements, the U.K. is to pay $60 million—$20 million each—to Belgium, Holland and Switzerland. The first two will receive $24 million in cash and the third $2 million. Similarly, Italy has agreed to pay $90 million, of which Germany is to get $35 million, Holland $30 million, Belgium $15 million and Switzerland $10 million. In addition, Italy has agreed to pay voluntarily $12 million to the E.P.U., following the example of France which made such payments amounting to $80 million and $50 million in January and December 1955, respectively. The Union will use this money to repay its creditors in proportion to their claims. Thus, Germany gets $7 million, Belgium $2.2 million, Holland $1.8 million and Switzerland $1 million.

Under the new proposal, Norway has to pay $57½ million. Of this sum, Germany will get $38 million, Holland $12½ million and Belgium $7 million. In all, Germany will receive under these agreements $73 million, Holland $62½ million, Belgium $42 million and Switzerland $30 million, the total payable in cash being $39 million.

AMENDMENT TO RESERVE BANK OF INDIA ACT

Apropos our two leading articles on the communication of the Federation of Indian Chambers of Commerce and Industry to the Government of India on the Bill seeking to amend the Reserve Bank of India Act, now pending before Parliament —*vide* pages 1130 and 1178 of *Commerce* dated 16th and 23rd June, 1956—the Secretary of the Federation writes as under:

"It is appreciated that our communication has evoked interest enough to persuade you to analyse it in two successive issues of your valuable weekly dated 16th and 23rd June. I submit, however, that your comments do not do justice to the basic and reasonable stand of the Federation apropos the role of managed currency in the affairs of the nation. You have charged the Federation as suffering from not only 'orthodoxy' but also ignorance. Often 'orthodoxy' is in advance of current fashions; those who pause and query are not necessarily ignorant.

"At the very outset, I should like to mention that the argument of the Federation is directed

WOOL UNDER SECOND FIVE-YEAR PLAN

IS EXPANSION OF MANUFACTURING CAPACITY NECESSARY?

IT is very difficult to say what considerations actually weighed with the Planning Commission when it drew up the development programme for the woollen textile industry. Although the present installed capacity of the industry is more than adequate to meet the estimated requirements at the end of the second Plan period, the Commission has provided for a further expansion. Thus, the capacity target for the industry in 1960-61 is fixed at 45 million lbs. for woollen and worsted yarn, as against the capacity of 38 million lbs. as on 31st March 1956 and the anticipated demand of 27 million lbs. Similarly, the target for woollen cloth is fixed higher at 50 million yards, as compared with the existing capacity of 48 million yards and the estimated requirements of 20 million yards. In other words, the surplus capacity of the woollen textile industry (in relation to requirements) at the end of the Plan period will be as large as 40 per cent. in respect of woollen and worsted yarn and 60 per cent. in respect of woollen cloth. One, therefore, wonders whether capital, which is scarce, should be expended on the expansion envisaged by the Commission and whether it will not be advisable to divert such capital to other industries which badly require an increase in their capacity.

The expansion programme for the woollen textile industry in the private sector and under the National Industrial Development Corporation (N.I.D.C.) during the second Plan period is tabulated below:

	Wool tops (Mil. lbs.)	Woollen and worsted yarn (Mil. lbs.)	Woollen cloth (Mil. yds.)
Annual capacity as on 31st March 1956*	Nil	38.0	48.0
Production in 1955-56*	Nil	21.6	14.9
Requirements in 1960-61*	18.0	27.0	20.0
Targets for 1960-61:			
Annual capacity	9.0	45.0	50.0
Production	9.0	27.0	20.0
Fixed capital investment during 1956-61 (Rs. crores)	2.35	..	..

* Estimated.

The statement above shows that, during the five years ending 1960-61, the output of woollen and worsted yarn is expected to go up by 5.4 million lbs. and that of woollen cloth by 5.1 million yards. The programme includes a scheme for the production of wool tops, at a cost of Rs. 2.35 crores. The capacity and production targets are both put at 9 million lbs. Even then, they fall short of the estimated requirements by as much as 50 per cent. The gap will naturally have to be covered by imports from abroad. Taking the average imported price of wool tops at Rs. 6 per lb. (on the basis of the imports during the financial year 1955-56), the total cost of importing 9 million lbs. of wool tops in 1960-61 will work out to Rs. 5.4 crores. During 1955-56, India imported 12.63 million lbs. of wool tops valued at Rs. 7.46 crores.

Reduction of Prices Imperative

The aggregate requirements of woollen cloth in 1960-61 are estimated, as already stated, at 20 million yards. This estimate seems to be based on two important factors. First, the population of India is rising at an annual rate of about 4.8 million, the estimate for 1960-61 being placed at 408 million. Secondly, as a result of the implementation of the series of development schemes, the purchasing power of the people will register an improvement; the national income is expected to rise during the Plan period by 25 per cent. to Rs. 13,480 crores (1952-53 prices). Notwithstanding the rise in demand for woollen cloth, the *per capita* consumption will still be as low as 0.05 yard. If the consumption of woollen goods is to be stepped up, it is necessary that the present high level of prices should be reduced. Such a reduction will be possible only if the prices of raw wool, now quite high, are lowered. Otherwise, there are no prospects of expansion beyond what could be necessitated by an increase in population.

Viewed thus, it will be seen that the Planning Commission has done well to give due importance to wool development. The second Plan provides Rs. 1.5 crores for this purpose. It is proposed to establish 396 sheep and wool extension centres in the different regions of the country and three new sheep breeding farms—one each in Himachal Pradesh, Madhya Bharat and Saurashtra. The farms are intended to produce rams of good quality for both pure breeding and cross-breeding. At each of these farms, a fleece testing laboratory and a wool utilisation centre will be set up.

Raising Wool Yields

It is estimated that there are about 38 million sheep in India, producing 60 million lbs. of wool annually. Out of this quantity, about 24 million lbs. are utilised in the country, the balance being exported. Finer varieties of wool are imported to the extent of nearly 11 million lbs. per annum. The average yield of wool from indigenous sheep is put at 2 lbs. per head. Improved varieties of sheep are said to yield about 6 lbs., so that there is considerable scope for development. The demand for wool comes from five sources, namely, cottage industries, carpets and floor rugs, blankets, clothing material and knitting yarns in mills, and manufacture of shawls, tweeds, etc. Imported wool is used mainly by mills.

Over many years, studies have been undertaken in the cross-breeding of local types with merino type sheep in Kashmir, Mysore and the Deccan, in the selective breeding of Bikaneri, Deccani and Bellary types, and in the grading up of local inferior sheep with the Bikaneri. The studies have led to the adoption of a long-term plan which covers (1) selective breeding of indigenous breeds in the plains and at places where definite breeds exist; (2) upgrading of nondescript breeds with Bikaneri; and (3) cross-breeding with foreign breeds in selected hilly areas. Cross-breeding with foreign sheep, it is stated, has given valuable results in respect of not only the quantity but also the quality of wool produced. Encouraging results are also said to have been obtained from selective breeding and from grading of local inferior sheep. As against the average yield of the Kashmiri breed of 16 ozs. (fleece), the yield of the half-breed variety is about 37 ozs. and, in certain cases, as much as 56 ozs. There is thus considerable scope for improving the present yields of wool.

TEXTILE INDUSTRY IN JAPAN

The downward trend of cotton textile production and exports noted in Japan during 1955 would appear to have abated in the current calendar year. During the first quarter of 1956, Japan produced 221.16 million lbs. of yarn and 733.74 million square yards of cloth, as against 215.82 million lbs. and 710.78 million square yards, respectively, in the corresponding quarter of 1955. The improvement in production has been accompanied by a similar rise in exports. The total quantity of yarn sent out of Japan during the quarter under review was 9.54 million lbs., which compares very favourably with 5.21 million lbs. a year before. Likewise, the shipments of cloth were higher at 363 million square yards, as against 252 million square yards a year before. The following table indicates the trend of Japanese cotton textile production and exports:

(Yarn in million lbs.; cloth in million square yards)

	1st quarter		1955	1954
	1955	1954		
Production:				
Yarn	221.2	215.8	826.9	929.6
Cloth	733.7	710.8	2,814.9	3,045.8
Exports:				
Yarn	9.5	5.2	26.2	29.5
Cloth	363.0	252.0	1,139.0	1,278.0

SOVIET TEXTILE INDUSTRY

The sixth Five-year Plan of Soviet Russia envisages a substantial rise of 160 per cent. in textile production in the Ukraine. Under the Plan, steps are being taken to promote the widest application of new machinery, to rationalise the use of existing equipment and to broaden the assortment of goods. These steps are expected to raise the output of cotton fabrics (as compared with the 1955 volume) by 850 per cent., of silks by 300 per cent. and of woollens by 100 per cent. A marked expansion of rayon output is also to be effected.

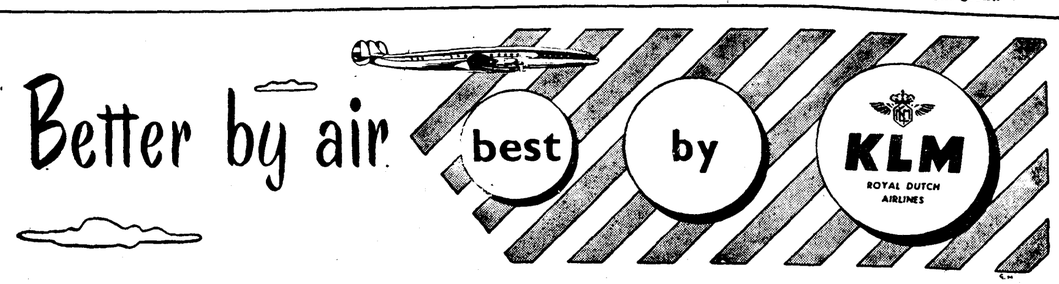
An extension of production facilities is considered essential for a further increase in the output of textiles. Since the beginning of this year, the cotton mills of Kherson have received an additional 20,000 spindles and 300 automatic looms. Preparations are under way for commissioning new dyeing and finishing mills. Output is due to rise by 350 per cent. as compared with last year. The cotton spinning mill at Poltava has received, since the beginning of this year, an addition of 26 spiral spinning machines of continuous action. Antiquated machines will be completely replaced at the Lvov cotton spinning mill; as a result of this, the production capacity of the mill is expected to rise by 25 per cent. Equipment is to be modernised at the textile mills in Chernovtsy, Korostyshev, Steblev and elsewhere. A highly efficient unit for finishing pure wool fabrics has been installed at the woollen mills in Kharkov. The woollen mill at Voroshilovgrad will receive a substantial addition to its automatic looms. A weaving mill will be commissioned this year at the Darnitsa silk mills. It will have 1,220 looms for the production of silks and tapestry.

Considerable funds are allocated in the new quinquennium for financing the construction of textile mills. New woollen mills will go into operation at Chernigov, the second section will be started at the Kherson cotton mills, and the cocoon processing mill will go into operation at Zaporozhye. It is planned to build rayon mills at Chernigov and Cherkassy, mills for the production of draperies at Chernovtsy, and cotton and linen mills at Zhitomir.

CONVERTING HANDLOOMS INTO POWERLOOMS

The new textile policy of the Government of India, announced by Mr. T. T. Krishnamachari on 18th June 1956, is being implemented in right earnest. While several representatives of the mill sector have already been consulted with regard to the installation of 14,600 automatic looms in mills, the State Governments have been asked to draw up schemes for the introduction of 35,000 powerlooms in the handloom sector. In a communication addressed to the State Governments, the Union Ministry of Commerce and Industry is reported to have urged the switch-over, by the existing or future co-operative societies, from handloom weaving to the more economic method of powerloom production.

It is, of course, pointed out that such conversion need not mean that the existing handlooms should go out of commission. In fact, arrangements are contemplated for keeping the handlooms going even where the present weavers are allotted powerlooms. Ordinarily, a weaver will be allotted only one powerloom, but, in cases where a person owns three or more handlooms, two powerlooms may be allotted. The financial assistance to be given by the Centre, it is understood, will cover the cost of powerlooms which will be approximately Rs. 1,000 each, working capital, amounting to Rs. 500 per loom, and 80 per cent. of the share capital of a co-operative society. All this money will be given as a loan. But the cost of training the weavers in the use of powerloom will be borne by the Centre as an outright grant.



DECLINE IN EARNINGS FROM EXPORTS

TEXTILE CONCERNS PLAN MOVES TO EXPAND ACTIVITIES IN OTHER WAYS

From A Special Correspondent

MANCHESTER, *26th June*

THE International Federation of Cotton and Allied Textile Industries, in its latest trade review, is not optimistic about the outlook for the Lancashire textile industry.

MANCHESTER LETTER

Surveying the situation in the spinning section of the industry during the first quarter of the year, the Federation says yarn production was 11 per cent. lower than in the corresponding period of 1955 and there was a further decline of 2.7 per cent. in the number of workers compared with the final quarter of 1955.

Sales of yarn were at a "relatively high level" in January and February, but fell away substantially in March, and the total volume of business booked was less than in the final quarter of 1955. The general trend was for order books to shorten slightly. During the quarter exports of cotton yarn showed a light increase.

"Future prospects are inclined to be less encouraging, as buyers to an increasing extent have been disposed to act with extreme caution and have only done business to meet urgent requirements," adds the review.

Still Slipping

Succeeding months bring no encouragement to the hard-pressed British exporter of cotton goods. Value as well as volume is now well below last year's levels and, to the end of May, earnings from cotton goods accounted for £37,672,511 as against £45,172,724 a year ago.

For the first five months of 1956, average shipments of cotton cloth have failed to reach 40 million square yards a month, the end-of-May total being 199,190,000 square yards as against 256,774,000 yards in 1955. The value has fallen from £32,760,346 to £25,896,599.

Australia continues to head the list of receiving countries, having so far taken 32,960,000 square yards against 47,628,000 yards last year. Shipments to South Africa are practically unchanged at 24,430,000 square yards, but trade with Nigeria has been halved at 12,021,000 yards. New Zealand has taken 13,008,000 square yards against 17,749,000 yards.

Nor can any consolation be obtained from the volume of rayon and synthetic fibre piecegoods exported this year. To the end of May, they amounted to 53,034,000 square yards as against 61,897,000 square yards, the value declining from £9,892,504 to £7,861,026. In this instance the feature of trading has been the larger purchases made by Rhodesia and Nyasaland, which account for 8,678,000 square yards as against 6,199,000 square yards. Shipments to Australia have fallen from 10,956,000 yards to 7,530,000 yards and those to New Zealand from 7,407,000 yards to 5,566,000 yards.

The fall in overseas trade can be mainly attributed to the smaller quantities of woven fabrics sent to foreign markets. Shipments of yarn have shown little change, the volume of cotton yarn exports being 16,009,172 lbs. for the five months, as compared with 16,603,923 lbs. Rayon and synthetic fibre yarns have moved off in slightly larger quantities, the total being 14,256,860 lbs. against 12,924,692 lbs. In both instances India has absorbed larger quantities.

Larger Imports

During May, the position was reached when for every 100 yards of cotton and rayon cloth exported from this country nearly 75 yards of foreign cloth arrived from overseas. Imports of cotton goods in the grey state were the largest since early 1955, the volume being 28,701,000 square yards, which exceeded the comparable total in May last year.

For the first five months of the current year, arrivals of cotton grey cloth amounted to 115,828,000 square yards, against 130,674,000 yards in the same period last year. A sharp increase in arrivals last month brought the total of Indian cloth imported this year to 61,449,000 yards as against 65,072,000 yards. Supplies from Hong Kong amounted to 21,392,000 yards as against 23,548,000 yards, but Japanese mills have so far only sent 15,413,000 square yards as compared with 38,207,000 yards.

Slightly larger quantities of finished cotton goods are still reaching this country from abroad, the latest total being 16,842,000 square yards as against 13,836,000 yards in the first five months last year. Supplies of cloth woven from rayon and synthetic fibres in foreign mills have also risen, total imports to the end of May being 35,659,000 square yards as against 25,138,000 yards a year ago.

When the larger groups of textile companies in Lancashire issue their financial results their earning power inevitably attracts attention, whereas similar results in ratio by smaller concerns pass without undue comment. Some of the latest announcements by the bigger groups, however, have given further indications of the contractions in production in the industry.

In line with the lower earning capacity of several mill combines, the figures issued by the Fine Spinners and Doublers did not cause much surprise. A fall in the group profit of nearly £750,000 to £1,540,000, accompanied by a reduction in the annual dividend from 12½ per cent. to 10 per cent. was largely in line with market anticipations. Equally so, the drop of over £160,000 in the group profits earned by the Bleachers' Association was not entirely unexpected. In this case, the dividend of 12½ per cent. was maintained, partly as a result of a credit of £75,000 from tax previously overprovided.

A result which has caused very considerable comment, however, has been the initial statement from Fothergill and Harvey, Ltd., which has reported a loss of £118,000 as against a profit of £51,000 a year ago. Reasons for this swift reversal of fortunes are awaited, and speculation must await a statement by the Chairman. Another company which has been suffering adverse conditions for some time past is Thomas Hoghton Ltd., the Oswaldtwistle weaving firm. The mills are now weaving out, having incurred a loss of some £65,000 last year, while stockholders have received an offer of 3*d.* per unit from a firm of Manchester warehousemen.

Evidence of a persistent reduction in the amount of machinery turning out textile products is forthcoming almost from week to week. Some concerns based primarily on the textile trade are, however, not perturbed and are planning moves to expand their activities in other ways. The British Cotton and Wool Dyers' Association, for example, has obtained power to branch out into numerous other trades—from the electrical industry to cabinet-making or wholesale and retail trade in any goods "which can conveniently be dealt with by the company." It is not suggested that all such projects are under immediate consideration but the opportunity is available to the Directors if suitable openings occur.

Another venture, not so far from the textile field, is being undertaken by the Bradford Dyers' Association the interest of which in a new company has just been announced. This firm, with works near Halifax, is to start making nonwoven fabrics of fibres bonded by chemical and physical means to produce material without using spindles or looms. The first of these specialised products is said to be a "novel interlining material."

Holiday Season

The curtain has now gone up on the 1956 Wakes season in the North-West textile belt—and by land, sea and air 250,000 workers and their families began the journey to holiday resorts in this country and on the Continent.

Mills and workshops in nine towns and districts closed down for two weeks, including Oldham, Middleton and Macclesfield. Between now and mid-August they will be followed by more than 90 other towns taking their fortnight's holidays in rotation.

Extra trains put on by British railways include nearly 50 from Oldham. On the road hundreds of extra coaches have been reserved.—*All Rights Reserved.*

During the first quarter of 1956, cloth exports from the U.K., according to the latest statistical review of the Cotton Board, aggregated 120 million sq. yards as compared with 129 million in the final quarter of the last year. The review states that the British cotton textile industry suffered a more severe reduction in output in the first quarter of 1956 than that of any other important cotton manufacturing country. In a world-wide review of the cotton textile activity, the Board said the greatest rate of expansion, compared with the first quarter last year, appeared to have been achieved by Germany and the young cotton industries of Pakistan, Hong Kong and Egypt. In France, Italy, Switzerland, and Portugal cotton yarn production in the quarter was "appreciably lower." The most impressive export performance during the quarter—during which world trade in cotton piecegoods showed a slight decline—was that of Japan, which again set up a new post-war record.

COTTON TARGET RAISED

IS IT ADEQUATE?

IN recent months, the question about the target for cloth production in the second Five-year Plan has attracted considerable notice and become the subject of discussion in official and non-official circles. This is as it should be, in view of the fact that any shortage of this essential consumer article in the period of the Plan will mean great hardship to the people which, in its turn, will rob the people of their enthusiasm for the Plan. But the allied question of the target for cotton, the chief raw material for the textile industry, has not received the same notice. The fixing of an adequate target for cotton and the adoption of measures that will be needed to reach it are important questions which must continually receive the attention of the authorities. From this point of view, it is gratifying to note that, at the recent conference of Agriculture Ministers at Mussoorie, the target for cotton production figured in the agenda and it was raised from 5.5 million bales mentioned in the Plan to 5.86 million bales. This target is to be reached by 1960-61.

In the first Five-year Plan, the target for cotton was set at 4.2 million bales to be reached by 1955-56, as against a mere 2.9 million bales (official estimate) in the base year of the Plan (1950-51). This target was exceeded in 1954-55 alone when production reached a total of 5.46 million bales. For the current season, namely, 1955-56, the output of cotton has been placed at 4.57 million bales. But this decline in output is somewhat exceptional, as it is the result of very adverse climatic conditions which prevailed in the cotton-growing areas.

Target for Cotton

The target for cotton in the second Plan must be viewed in the light of the textile targets and the foreign exchange needs. The second Plan envisages a target of 8,400 million yards of cloth or 1,950 million lbs. of yarn to be reached before the end of 1960-61. The Plan originally provided that, in order to fulfil these targets, the production of cotton should be raised to 5.5 million bales in 1960-61. Referring to the administrative measures that will be necessary for raising the output of cotton, the Planning Commission said:

"Programmes for the cotton development will continue the measures undertaken during the first Five-year Plan such as provision of hybrid seed, multiplication and distribution of improved seed, grant of loans to cultivators for the purchase of seed and fertiliser and extension and propaganda among the cotton cultivators. An important feature of development under the second Plan will be the emphasis on increasing the production of long-staple varieties, particularly in the areas brought under major irrigation projects. The achievements made so far in increasing the production of long-staple varieties have been significant and the proportion of these varieties had gone up from 17.5 per cent. in 1948-49 to about 37 per cent. in 1954-55."

The target for cotton, as stated at the outset, has been raised to 5.86 million bales. In discussing the adequacy of this target, one must, of course, take into account at least three factors, namely, the target for cotton textiles, the need for maintaining a certain level of cotton stocks and exports in order to earn badly needed foreign exchange. The target for cotton manufactures in terms of yarn is 1,950 million lbs. In 1955, the Indian mills produced about 1,625 million lbs. and the consumption of cotton was 4.88 million bales, of which Indian cotton accounted for 4.3 million bales and foreign cotton for 580,000 bales. On this basis, mills will require about 5.85 million bales of cotton in order to produce 1,950 million lbs. of yarn. Assuming (without questioning its desirability) that the consumption of foreign cotton will continue to form the same proportion of the total consumption of cotton as now—that is, about one-eighth of the total consumption—the mills will require about 5.12 million bales of Indian cotton and about 730,000 bales of foreign cotton. But as India would need to conserve foreign exchange and as more land is being brought under irrigation in the cotton belts of India, the aim should be to reduce the import of foreign cotton to no more than 400,000 bales. This means that requirements of Indian cotton will stand raised to 5.45 million bales.

Mills' Requirements

Thus, the mills' requirements of Indian cotton may be placed at 5.45 million bales. To this must be added a figure that will leave sufficient stocks of cotton within the country. A reasonably adequate level of stocks would be one that would equal the mills' consumption in six months. This means that stocks of about 2.7 million bales will have to be maintained. And exports may be placed at 800,000 bales, if not more. Thus, the overall supply in the final year of the Plan should be of the order of 8.95 million bales. As against this requirement, the production target, as envisaged at the Mussoorie Conference is 5.86 million bales. Since stocks of cotton at the end of August next are expected to be no more than 1.6 million bales, the gap between the supply on the basis of a target of 5.86 million bales and the supply as calculated above, namely, 8.95 million bales, is 1.49 million bales. This will give an idea of the extent to which the production target will have to be stepped up.

Some Considerations

At this stage, it is necessary to refer to certain other vital considerations. In the first place, the present target for cloth is based upon a *per capita* consumption of 18.5 yards. If living standards rise, the first impact of the rise will be felt by foodgrains and cloth. The Government itself has recognised that the position will have to be reviewed in a year or so in the light of consumption trends. If consumption goes up beyond 18.5 yards (as some sections of opinion think it will), then a higher target of cloth will be necessary. It is well to remember that it will not be possible to bring about an increase in cloth production if the supply of cotton is insufficient. Nor can cotton be produced at short notice. Secondly, the present target involves the production of 300 million yards of cloth from Ambar charkha yarn. Assuming that the Ambar charkhas will be able to produce the necessary yarn, it is not clear whether this method of production will not involve a certain wastage of cotton.

Thirdly, in arriving at a target for cotton output, one must take into account the need for cutting down the imports of foreign cotton to the barest minimum. Fourthly, it is well to plan for as large a level of exports of cotton as possible. It is true that the country should primarily aim at exporting cloth instead of cotton. But its foreign exchange requirements are heavy and exports of cloth are bound to become increasingly difficult. Exports of cotton could, therefore, be relied upon as an effective second line of defence. Further, India grows certain varieties of cotton which enjoy a ready market. It would be folly not to produce and export those varieties at a time when the country needs all the foreign exchange it can earn. Finally, India is still a land where the level of agricultural output, including the output of cotton, is determined by the monsoon. The completion of irrigation projects would, of course, improve the position, but could hardly alter it so effectively as to eliminate the "monsoon" factor altogether. These considerations point to the necessity for fixing as high a target for cotton as possible.

Per-acre Yields

In planning for a higher cotton target, one must of course take into consideration both the quantitative and the qualitative aspect of the problem. A consideration of the quantitative aspect immediately brings up the problem of per-acre yields. These are low at about 100 lbs. per are, as compared with the free world average of 236 lbs. It should be possible to increase the per-acre yield when the proportion of irrigated land under cotton (now about 9 per cent. of the total acreage) goes up as a result of the completion of the irrigation projects which are under construction and which are contemplated in the second Plan. It is believed that the projects recently completed will bring about 250,000 acres under cotton and those under construction will bring about 1.15 million acres. When this additional land is brought under imported cotton, it may add about 700,000 bales to the present level of output. The Government must assess more accurately the possibilities of growing cotton in the project areas and also take the necessary measures to make the cultivation of cotton popular in these regions.

As regards the qualitative aspect of the problem, much good work has no doubt been done. The proportion of long-staple cotton (⅞" and above) has now gone up from 17 per cent. in the 1940-45 period and the 1945-50 period to about 35 per cent. India has been able to grow even 1⅛" staple cotton, though it may take some time before these varieties are stabilised under Indian conditions. Some botanical miracles have been achieved through crossing the American and Asiatic varieties which do not take kindly to each other. The evolution of the varieties 170 C02 and 134 C02 M is a piece of admirable research work. All these and similar efforts need to be encouraged, so that India could augment its production of long-staple varieties and thereby reduce its dependence on foreign cotton.

DOLLAR-CREDIT FOR JAPAN

The U.S. Government has agreed to the request of the Japanese cotton interests to postpone the last date for imports of American cotton under the U.S. 60-million dollar credit scheme in order to facilitate Japanese imports of American cotton.

ZAGREB INTERNATIONAL FAIR

the Oldest, Most Important Fair in S. E. Europe

★

SEPTEMBER 7th to 20th 1956

This year's Fair will be the largest ever staged in Yugoslavia. It will extend over the old site to a new site being developed on the bank of the river Sava. Yugoslavia will again exhibit to the world non-ferrous metals, timber, glassware, textiles, agricultural engineering equipment, leather and footwear, handicrafts, tobacco, medicines, foodstuffs and wine. The Zagreb Fair offers exceptional facilities for buyers and visitors to inspect goods displayed by manufacturers in over 25 different national pavilions. Special reduced rates for rail transport and visas will be granted to holders of Fair certificates.

PRODUCTION TARGET FOR SUGARCANE TO BE STEPPED UP

STRESS ON INTENSIVE CULTIVATION

SUGARCANE is one of the important cash crops for which the production target envisaged in the second Five-year Plan is proposed to be stepped up. Inaugurating the three-day conference of State Ministers of Agriculture held at Mussoorie last week, Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, revealed that the new target proposed for sugarcane was a production rise of 35 per cent., as against 22 per cent. fixed by the Planning Commission. Accordingly, the aggregate output of cane at the end of the Plan period (1960-61) is estimated at 78 million tons, which compares favourably with 58 million tons for 1955-56; the Planning Commission's target is 71 million tons. It was for the State Governments to consider, Mr. Jain declared, as to what extent the higher target could be achieved by (1) schemes as included at present, (2) readjustment of schemes within the existing financial allocation, and (3) taking up additional schemes. The third category, according to him, would involve allocation of more funds. He further emphasised that the creation of a proper atmosphere which might stimulate the farmer into greater activity was also essential.

The Food and Agricultural Minister did well to stress that the increase of 20 million tons in the output of sugarcane (as also of other agricultural commodities) was to be achieved primarily through the intensification of agricultural measures already contemplated. Among these, mention may be made of provision of irrigation facilities, establishment of seed nurseries, distribution of disease-free and improved varieties of seeds, supply of manures and fertilisers, control of pests and diseases, and organisation of demonstrations and crop competitions. Utmost stress will be rightly laid on augmenting the sucrose content of sugarcane.

Need for Intensifying Cultivation

The need for intensifying cultivation of sugarcane cannot be emphasised too strongly. For the scope for enlarging the area devoted to cane is limited. Such increase as may take place in the area under cultivation is likely to raise the production mainly of sugarcane with low recovery per cent. As the cane-crushing capacity of the sugar industry expands and as modernisation of equipment in mills gathers momentum, there will be a distinct tendency for the demand for sugarcane to shift from the inferior variety of sugarcane to cane with rich sucrose content. What is more, the present high proportion of sugarcane costs in the cost of manufacture of sugar—sugarcane accounts for as much as 60 per cent. of the cost of sugar manufacture—can be reduced only by improving the per-acre yield of cane with rich sucrose-content. It is needless to add that, notwithstanding the repeated stress laid on sugarcane development all these years, the conditions actually obtaining in the agricultural sector of the sugar industry continue to be backward *vis-a-vis* other sugar-producing countries, as the following statement shows:

	Yield per acre (In tons)	Sucrose content (Percentage)
India	18.00	9.85
Hawaii	62.05	10.46
Java	56.20	11.49
Peru	41.14	12.33
Egypt	30.42	9.97
Formosa	28.27	12.93
Philippines	27.08	8.45
Cuba	17.12	12.25
Puerto Rico	24.16	22.23
Mauritius	19.63	12.08
South Africa	22.36	10.90
Australia	21.34	14.33

Figures relating to India are all-India averages based on the final estimate of sugarcane crop for 1955-56.

It will be seen from the foregoing figures that the per-acre yield of cane is the lowest in India. The recovery per cent. of sugar in cane is also the lowest, barring the Philippines. Incidentally, it may be noted that the 1955-56 sugarcane season has witnessed a distinct setback to the crop. Thus, according to the all-India final estimate, while the area sown to cane was substantially higher by 11.3 per cent. at 4.45 million acres, as against 3.99 million acres in 1954-55 (partially revised estimate), the aggregate production was higher by only 1.5 per cent. at 57.75 million tons, as against 56.92 million tons. In other words, the yield of cane per acre suffered a fall, from over 14 tons in 1954-55 to 13 tons during the season under review. Similarly, the quality of the cane grown slightly deteriorated, the all-India average percentage recovery for 1955-56 being 9.85, which compares unfavourably with 9.90 for the previous year.

If conditions in the Indian sugar economy are to be stabilised, it is of the utmost importance to see that the progress in the agricultural sector should keep pace with that in the manufacturing sector. The scope for augmenting per-acre yields of superior quality sugarcane through intensive cultivation is not only ample but almost unlimited. Basing himself on the experience of the success of the Japanese method of cultivation, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, in a talk broadcast from the Delhi station of the All India Radio the other day, said:

"We can confidently assert that the following are the fundamentals of better cultivation and, if we can persuade a sufficiently large number of farmers to practise them even on a small fraction of their lands, our tasks and targets can be very easily not only accomplished but exceeded:

"(1) Proper tillage of seed beds and the lands; (2) minimum possible seed-rate; (3) sowing of crop in lines to facilitate inter-culture operations; (4) adequate but scientific spacing between plants and rows; (5) use of manures and fertilisers in liberal quantities; (6) use of irrigation; (7) weeding at intervals, and (8) control of pests and diseases."

In the light of these broad principles, it should be possible to make very definite recommendations in regard to seed-rate, spacing, kind and quantity of fertilisers, time and method of application, etc., on the basis of results of research and experimental evidence available with the State Governments for sugarcane. And, when such recommendations are implemented, it should be possible to raise not only the per-acre yield of sugarcane but also its quality.

ALL-INDIA FINAL ESTIMATE OF SUGARCANE

The all-India final estimate of sugarcane for 1955-56 puts the current year's area and production at 4,446,000 acres and 57,749,000 tons, as against the partially revised estimate of 3,994,000 acres and 56,923,000 tons, respectively, for 1954-55. This shows an increase of 452,000 acres or 11.3 per cent. in area and 826,000 tons of cane or 1.5 per cent. in production over last year. Expressed in terms of *gur*, current year's production is placed at 5,859,000 tons, as against 5,760,000 tons for 1954-55.

The increase in acreage during the current year has been shared by almost all the sugarcane-growing States, especially the States of Uttar Pradesh, Bihar and Punjab; it is attributed mainly to better climatic conditions at the sowing time during the current year, as compared with last year. Rise in production has also been reported by almost all the sugarcane-growing States, especially the Punjab, Bihar, Madhya Bharat, Mysore and Assam; it is due partly to increase in acreage and partly to favourable seasonal conditions during the growing period. The improvement in production would have been more marked but for the setback to sugarcane crop in Andhra, Bombay, Madras and P.E.P.S.U. In Bombay, the crop was damaged by rain, heavy winds, and sporadic attack of pyrilla pest and stem-borers.

The estimate includes, for the first time, information in respect of Travancore-Cochin State which accounts for 17,000 acres of area and 305,000 tons of cane (or 31,000 tons of *gur*) production during 1955-56. The production estimates for 1954-55 and 1955-56 in respect of Andhra and West Bengal (excepting Darjeeling district) are based on the results of random sample crop cutting surveys.

The Bombay Molasses (Control) Bill, 1956, has received the assent of the President. The Bill seeks to control the supply and distribution of molasses, so as to ensure its availability at fair prices. Molasses is one of the main by-products of the sugar industry which is used as a raw material in the manufacture of power and industrial alcohol. There are several industries using alcohol and, in order to encourage the development of these industries, it is necessary that alcohol should be made available at an economic price. With this object in view, the Government of Bombay drew up the aforesaid Bill which, as stated at the outset, has received the assent of the President.

With effect from the 1st inst., the provisions of the Payment of Wages Act, 1936, have been extended to the sugarcane farms in Bombay State. The provisions now apply to all those persons employed on any farm on which 25 or more persons are employed and which is maintained for the purpose of growing sugarcane and attached to a factory established or maintained for the production of sugar. The power to extend the Act to such sugar farms was recently taken by the Government of Bombay by amending the Act suitably.

The U.P. Government is convening a tripartite conference shortly to consider the question of payment of bonus to labour in the sugar industry in the State. Sugar labour has demanded that bonus should be linked to production, but the industry maintains that this system would affect production adversely.

LABOUR IN COAL MINES

CONTRACT WORKERS FORM 16 PER CENT. OF TOTAL

RECENTLY, a survey was conducted by the Department of Mines, Dhanbad, to estimate the extent of contract labour employed in coal mines of India. The object of the survey was to facilitate consideration of the ways and means of eliminating the contract system of labour in coal mines. The survey covered all the coalfields in India, except Assam, and statistics were collected from 545 collieries out of the total of 850 in the country. In States other than Bihar and West Bengal, almost all the mines were covered by the survey, while in Bihar and Bengal, the information was gathered from 473 (or 62 per cent.) of the total of 765 collieries. The reporting mines account for an average daily employment of about 300,000 out of a total of 340,000 employed in all the collieries. In other words, the survey covered more than 88 per cent. of the total labour employed. In effect, however, the necessary information was collected from almost all mines in which labour is engaged through contractors. Those mines which have not been covered are small ones in which labour is not usually employed through contractors.

The total number of persons employed through contractors in the coalfields covered by the survey is 51,811. On the basis of a previous survey, the number of workers so employed in Assam (which, as already stated, is not covered by the latest survey) is about 2,000; this brings the total number of persons employed through contractors in all coalfields to about 54,000 or about 16 per cent. of the total labour employed. The latest survey disclosed that, in Bengal and Bihar, the labour employed through contractors aggregated 38,491, or 16.2 per cent. of the total labour in reporting mines and 14.1 per cent. of the total labour in all mines. The two ratios are considered as the upper and lower limits between which the real figure is expected to lie. It may, however, be noted that the two sets of percentages in the coalfields of these two States are reasonably close to each other. In other States, the number of workers employed through contractors is 13,320. In these States, the two ratios are identical, because nearly all the labour employed are through contractors.

An area-wise analysis shows that Karanpura and Hyderabad top the list with about 35 per cent. total labour being employed through contractors. Madhya Pradesh and Bokara come next with 20 to 22 per cent. It is about 15 to 17 per cent. in Raniganj and 12 to 13 per cent. in Jharia. The majority of the workers so employed through contractors are engaged in coal cutting and loading, wagon loading and truck loading. Over 45 per cent. of them are, however, employed on other miscellaneous jobs, such as building, stone-cutting, smithy, sand-raising, earth-cutting, soft coke manufacturing, shale-removing, etc.

Some interesting details about the systems of contract, method of payment, etc., are also disclosed by the survey. There are three main categories of contractors, namely, raising contractors, commission contractors, and managing contractors, the number of workers employed under each being 17,946 (or 34.6 per cent.), 14,179 (27.4 per cent.), and 1,872 (3.6 per cent.). The rest, forming about 34.4 per cent., are engaged through miscellaneous categories, such as petty contractors, building contractors, etc. This group also includes workers employed in collieries having more than one type of contract. As regards payment, about 26 per cent. of the labour employed through contractors are paid directly by the companies' management and 63.3 per cent. by the contractors under the companies' supervision. Only 10.7 per cent. are paid independently by the contractors.

In the course of the survey, the collieries were asked to report whether contractors' workers were entitled to provident fund, leave with pay, maternity benefits and overtime rates and whether there was any difference between direct labour and contract labour so far as these benefits were concerned. In most cases, it was found that there was no difference. In many cases, the jobs performed by contract labour are different from those done by direct labour. In some cases, no comparison is possible between the conditions of work of contract and direct labour on the same job. Broadly speaking, however, it is found that contract labour employed in mining operations are generally entitled to all the benefits given to direct labour, while those employed on special jobs, such as building on the

RESEALING OF JUTE LOOMS

I.J.M.A. ANNOUNCEMENT

THE Indian Jute Mills Association, Calcutta, has, after considerable deliberation, decided to reseal 2½ per cent. of the looms of member-mills. This decision, taken on the 25th ultimo, will come into force on the 16th inst. From that date onwards, the proportion of sealed looms will be 7½ per cent. of the total, instead of 5 per cent. as at present. It may be mentioned here that 12½ per cent. of the looms remained sealed since 1949. However, early this year, the mills unsealed twice a portion of these looms, once on 10th January to the extent of 2½ per cent. and, again, on 20th February, a further 5 per cent., thus leaving only 5 per cent. of the looms to remain idle since then. These relaxations were made in order to prevent scarcity of jute goods developing in the country, as the stocks with mills had dwindled considerably by then.

During the past few months, however, stocks of jute goods with mills continued to accumulate, as the pace of offtake of these goods lagged behind that of their production. During May, the total stocks rose by 11,200 tons over the previous month's figure to 119,000 tons. Consequently, there arose a need for adjusting the industry's output to the current world demand, so that the industry may prevent a glut in jute manufactures. The Government of India, which became alive to the situation, thought that the solution to the difficulty lay in fixing a minimum export price for jute goods. It forwarded this proposal to the I.J.M.A. for its consideration. It was then wholly averse to limiting production. The jute industry, for its part, felt that fixation of a minimum export price was no panacea for its present ills, as it feared adverse reactions from the American market. As an alternative, it seems to have suggested to the Government to permit resealing of looms and the Government would appear to have accepted the proposal. While announcing the present resealing of 2½ per cent. of the looms, the Association said that the decision had been taken after "a very careful examination" of the present market situation and after "full consultation with the Government of India." The Association further pointed out that the resealing of looms amounted to a readjustment of output after a temporary phase of high production and was one aspect of a "flexible policy designed to relate production to demand and to preserve the industry's stability." The Union Government's accord to the I.J.M.A.'s suggestion may be taken as an indication that the Government has changed its approach to the problem facing the jute industry. This demonstrates its anxiety to see the industry through its present difficulty.

Present Position

It will be appropriate, in this context, to refer to the picture of the present position of the industry drawn by the Chairman of the I.J.M.A., Mr. D. P. Goenka, at a reception given in his honour at Calcutta by the Gunny Trades Association of that city. Speaking on the occasion, Mr. Goenka stated that the difficulties facing the industry had been created by record production and consistently low prices. While it was an excellent thing for jute goods to be cheap, jute mills now found themselves, he said, in a situation where there was a lack of parity between prices of manufactures and cost of raw materials. This unfortunate situation had been receiving the anxious consideration of the I.J.M.A. and every possibility of securing some relief for the industry had been investigated. He was glad that the Union Government also had a thorough appreciation of the industry's difficulties and was doing everything in its power to assist the industry.

Mr. Goenka referred to the work that is being done by the I.J.M.A. for the development of overseas markets. He mentioned that the Association maintained offices in the U.K. and America for this purpose. The American office which cost Rs. 9 lakhs a year, had already done valuable work in re-establishing the reputation of burlap, as an unsurpassed multipurpose packaging material. It never ceased conveying the message of burlap's cheapness and abundant availability. In the ultimate resort, however, the trade depended on contacts with individual overseas buyers. The task of preserving and extending markets was one which could not be performed, he said, solely by the I.J.M.A. but which fell equally to the lot of the individual trader and shipper. He emphasised, in this connection, the need for wholehearted co-operation of the entire trade.

Outlook

The prospects for the industry was examined by Mr. M. P. Birla, ex-Chairman of the I.J.M.A., who was also the guest of honour along with Mr. Goenka. Mr. Birla thought that, although the industry had its problems, there was no need to be unduly pessimistic about the future. Jute goods had proved their efficiency and for heavy packaging purposes, they were unsurpassed. Moreover, the industry was not at a standstill. Almost every unit of it was either engaged in or contemplating ambitious and large-scale modernisation programmes. In the overseas market, a vigorous sales campaign was being conducted to re-establish jute as the premier packaging material and to increase its consumption. Nevertheless, it would be folly, Mr. Birla cautioned, to ignore the fierce competition with which jute had to contend. Not only were there the old threats from substitute materials and bulk handling methods, but, in recent years, there had been the growth and expansion of jute manufacturing industries in other countries, particularly Pakistan. He concluded by observing that the jute industry had a hard upward struggle in front of it, but he believed that its battles could be waged in the confident knowledge of ultimate victory.

Mr. Viswanath More, President of the Gunny Trades Association, welcoming the guests, stated that the gunny bazar was the organic limb of the industry. It prospered or suffered with the jute mills. A strong bazar was an asset to the industry, as it acted as a buffer between mills and shippers and its existence was essential for the continuous life of the mills. Gunny merchants would be satisfied, Mr. More averred, if they got their normal share of business from the mills which should increasingly withdraw their interest from broking, and exporting firms. He pointed out that the new Companies Act made it easy for jute mills to adapt themselves to this age-old market tradition.

WEST BENGAL TO GROW MORE JUTE

The Government of West Bengal has undertaken a programme of intensive cultivation of jute to increase its annual production by 829 000 bales, during the second Five-year Plan period.

The total jute yield in West Bengal during 1950-51 was 1,496,000 bales, and according to the new target, the yield will come up to 2,321,000 bales. This increase in the total yield has to be obtained not so much by expanding the acreage under jute as by intensive cultivation, through distribution of better seeds, replacement of the broadcast sowing method by sowing in lines with seed drills, plant protection measures, increased application of fertilisers, and the introduction of double cropping, wherever possible, by raising an earlier *capsularies* variety of jute in *aman* paddy lands.

The maximum acreage which is intended to be covered by jute during this period will not exceed the largest area sown with jute in any year during the period 1950-51 to 1955-56. This area was 876,000 acres in 1951-52. The acreage under jute in 1955-56 was 780,000 and the total yield was 1,958,000 bales. The additional yield at the end of the second Five-year Plan period is estimated to be 21,500 bales on account of improved seeds, 30,000 bales on account of the line-sowing of jute, 12,500 bales on account of plant protection measures, 162,000 bales on account of wider distribution of fertilisers, and 625,000 bales on account of double-cropping.

Thus at the end of the second Plan period, the total yield will be nearly 26,000 bales more than the target set for the second Five-year Plan.

TEA IN U.S. LAST YEAR

CONSUMPTION DECLINES

THE United States of America is neither a producer nor a large consumer of tea; its *per capita* consumption of tea is the lowest among the tea-drinking countries, being only 0.64 lb. It has, therefore, not much stake in the world tea trade. But this need not necessarily be so for all times. While there is hardly any prospect of that country becoming a tea producer, it may turn out to be a major consumer in the not distant future. The fact that a country with the largest *per capita* income has the lowest *per capita* consumption of tea gives one an idea of the immense scope that exists for raising the U.S. intake of tea, the King of Beverages. Man is after all an animal of habits. Accordingly, if constant effort is made to spread and sustain the tea habit in a manner that will appeal to U.S. citizens, it cannot but succeed in yielding satisfactory results in course of time. It may be noted here that the Tea Council of the U.S.A., formed by the joint efforts of the U.S., Ceylon, India and Indonesia, has been sparing no pains to make Americans more tea-conscious. The latest annual report of the Council, that is, the one covering the year 1955, gives an interesting account of the effects of the world tea market on the tea trade in the U.S. and the lessons drawn from its experience during the year under review.

The past year was the second best in U.S. tea history, 1954 being the best. However, the report adds, it was not a good year for tea, for the year witnessed a setback in tea sales, thereby reversing the upward trend noted in the previous three years. When the tea campaign got under way in the U.S. market, the Council's objective was to halt the downward trend and it has more than succeeded in this respect.

After six years of continuous campaign, it may be noted here, the tide turned in favour of the industry in 1952 and, during the subsequent two years, marketing of tea rose by 6.4 per cent. In 1954, particularly, when one might have reasonably expected a setback, sales of tea in the U.S. experienced an improvement, on account of two factors, namely, (1) the sharp rise in coffee prices and (2) the rising trend in tea price itself. It may seem strange to some that sales were bigger during a year of higher prices. But this was so, because, as the Tea Council's Chairman explains, "it is a phenomenon of business that buyers continue to buy in a rising market, up to a point, to protect themselves in anticipation of further price increases." In 1955, however, the tide again turned and there was a decline in sales. The *per capita* consumption in the U.S. during 1955 was 0.64 lb. (provisional estimate), having declined from 0.69 lb. in 1954, to which level it had risen from 0.63 lb. in the three years 1950, 1951 and 1952.

Imports

Imports of tea by the U.S. during 1955 amounted to 105.5 million lbs., as against 115.7 million lbs. in 1954 and 105 million lbs. in 1953. Sales of tea also were marked down from 112 million lbs. to 106.6 million lbs. Over the past four years, however, the marketing of tea recorded a rise of 10.7 per cent., a heartening achievement, in view of the cautious predictions by most partners of the Council that the first five years of its operation would probably be needed merely to halt the downward trend. The achievement of the Council during these years, therefore, has exceeded the most optimistic expectations.

The Tea Council uses several indices to measure periodically throughout the year the position of tea in the U.S. The general picture revealed by these indices during the year under review was one of "serious trouble" early in the first half of the year and a recovery in the second half. At the end of the year, the U.S. tea industry's mood was "aggressive and optimistic." The past year was expected to be so. The industry "fought a good fight and feels, with cautious optimism, that the future is good."

In summing up the Council's experience in 1955, the Chairman Mr. Robert B. Smallwood, draws the following conclusions: (1) Sharply fluctuating tea prices in any year work a hardship on producer and distributor alike; (2) tea's fortune in any one year is extremely sensitive to the pressures of competition, the level of prices and the effectiveness of consumer advertising and merchandising efforts; and (3) the sales campaign needs to be sharpened and strengthened in the future, in order to produce a new

(*Continued on next page*)

U.K. HELPS OTHER COUNTRIES TO PRODUCE MORE STEEL

SUPPLY OF PLANT AND EQUIPMENT

By W. Andrews

THE capacity of the British steel industry has expanded by about 6½ per cent. since the end of the war. This has naturally been accompanied by greatly increased activity on the part of the manufacturers of steel-making plant and equipment. Because of the enormous growth in demand, firms which have always specialised in this class of work have extended their scope, by the development or acquisition of new designs, and some companies have turned to the supply of particular types of plant and machinery stimulated by the technical advances which have been made in the past 10 or 15 years.

One of the latest advances in which the industry in Britain has taken a leading part is the provision of extensive instrumentation and the availability of such items as immersion pyrometers for regulating casting temperatures, flow-meters and recorders of all kinds for measuring the volumes of gases and liquids consumed, electronically operated automatic controls for different processes and similar accessories which both guarantee high quality production and make possible the maximum output from a specific type of plant.

The heavy metallurgical industry throughout the world tends towards the construction of integrated iron and steel works where the whole process of production, from the receipt of the iron ore to the despatch of the finished material, is carried out on one site, organised to ensure the maximum economy and efficiency of operation throughout.

For the customer it is obviously more convenient to contract with a single company for the complete plant rather than with the individual manufacturers of the different sections, and in recognition of the advantages to be gained in this way from joint representation, a number of prominent British companies formed, in 1945, the Metallurgical Equipment Export Co., Ltd. (M.E.E.Co.). This consortium is an engineering, co-ordinating and sales group of British firms capable of supplying and erecting a complete iron and steel works. Among the important oversea contracts which the consortium has arranged in recent years are the supply of Bessemer steel-making plant to the Swedish concern Norbotten Jarnverk, and the provision of iron and steel-making and rolling mill plant for the Empresa Nacional Siderurgioa S.A. at Aviles in Spain. Firms associated in this way continue, of course, to accept individual contracts.

Building For India

An even larger consortium, conceived by the Directors of the Metallurgical Equipment Export Co., Ltd., is that known as the Indian Steelworks Construction Co., Ltd. which recently concluded a preliminary agreement with the Government of India for the construction at Durgapur, West Bengal, of an integrated plant with a capacity in excess of a million tons of ingots a year. Of the total contract value of £80 million, some £50 million will be required to cover the cost of supplies from the United Kingdom, the balance, which represents rupee expenditure, will relate to civil engineering work on site, local manufacture and purchases.

Prominent manufacturers of plant for every phase of iron and steel production have many orders in hand for oversea customers. Simon-Carves Ltd., for example, is building additional coke oven batteries for the Tata Iron and Steel Co., Ltd. and the Indian Iron and Steel Co., Ltd. at Burnpur. The latter plant, which will be complete with a by-product plant and coal and coke handling equipment, will raise the capacity of the existing plant to 6,300 tons per day and make it the biggest carbonising plant in the Commonwealth. Ashmore Benson Peace and Co., Ltd., too, is engaged on the construction of two large blast furnaces, both with hearth diameters of 25 feet and rated outputs of 1,200 tons a day, for the Indian Iron and Steel Company's plant at Burnpur.

A coke oven plant valued at £1,750,000 is being built by the Woodall-Duckham Construction Company for the South African Iron and Steel Industrial Corporation's Pretoria plant. Birlec Ltd. recently supplied four arc melting furnaces to the Tata Locomotive and Engineering Co., Ltd., with, in addition, a coreless, mains frequency induction melting and super heating furnace for foundry work. Equipment made for countries of the Commonwealth by the Adamson-Alliance Co., Ltd. includes a 400-ton ladle crane, believed to be the largest in the world outside the United States.

Head Wrightson and Co., Ltd. recently booked an order for scale cars for a Spanish blast furnace plant, as well as Indian and Italian orders for heavy forging manipulators. Electric Furnace Co., Ltd. has manufactured for Switzerland a 1,000-kilowatt induction heating plant for forging and has undertaken the design and supply of equipment for the ordnance factory of Pakistan including arc, high and low frequency and heat treatment furnaces.

The Wellman Smith Owen Engineering Corporation Ltd. has provided a complete tube-making plant for Brazil, the Shell forging plant for Pakistan and a complete open-hearth steel plant for Israel.

For Norway

Davy and United Engineering Company, Ltd., recently completed plant for the Norwegian national steel works at Moi Rana, of which the principal items were a 42-inch by 108-inch high-lift, reversing blooming and slabbing mill with 900-ton electric bloom shear, roller table and auxiliary equipment, a 32-inch two-high reversing, three-stand structural mill for producing sections up to 18-inch beams, with electric billet shear, electric sliding frame hot saw, cooling banks and a complete 19-stand Morgan combination merchant bar, wire-rod and strip plant capable of finishing speeds up to 5,000 feet a minute. The total value of the material supplied by British firms for this Norwegian works was of the order of £2,000,000.

Other orders on which this company is engaged include the construction of a 60-inch four-high reversing hot strip mill for the Swedish firm Surahammars A.B. It is to produce alloy steel strip and the order is valued at £300,000. Among valuable orders for works in the Commonwealth is a new 18-inch 14-stand, Morgan continuous skelp and strip mill for the Newcastle (N.S.W.) works of the Broken Hill Proprietary Company, Australia, at an estimated cost of £500,000. This 14-stand rolling installation is intended to produce principally the special strip, known as skelp, which is processed into steel tubes.

Another British company which has supplied much plant abroad is the Brightside Foundry and Engineering Co., Ltd. One of its most interesting recent contracts has been a 34-inch two-high reversible slabbing and blooming mill for the Karabuk Iron and Steel Works in Turkey. Supplied to the order of the Sumerbank General Directorate, the mill is intended to roll ingots of up to three tons weight, with a maximum dimension of 10½-inch square section, to make blooms of 35-inch by 12-inch for the production of slabs.

The full plant comprises approach, working and run-out tables, 34-inch mill and drive, with sideguard manipulators, ingot weighing and turning device, hot cropping and dividing shears, slab pusher and transfer bed and tables and transfer gear for feeding blooms either direct or by way of a wash heating furnace to an existing 28-inch structural mill. The whole forms an excellent example of the manner in which new machinery can be designed to fulfil the user's requirements for integration with plant already in service. The company is also to make a bar and continuous rod mill for the production of precision alloy steel bars in straight lengths and coils, also to roll strip, for a French firm, the Societe Metallurgique d'Imphy.

A continuous medium strip for the Iloa Altifoni e Acciaierie D'Italia at Genoa is one of several orders received by the Loewy Engineering Company Ltd. which, in addition, has recently completed an important order for the Swedish firm, Avesta, for hydraulic forging presses and has manufactured rolling and forging plant of all kinds for steel works all over the world including Russia.

Mention has already been made of the high degree of instrumentation characteristic of British iron and steel making. Other phases of the industry to which reference should be made are the presintering of iron ore before smelting, the many modern designs of furnaces, including oil and gas fired smelting, soaking and heat treatment furnaces, the progress made in electric furnace design, particularly arc melting units for which some of the largest models installed outside of the United States have been supplied, and the advances made in gas producer practice. The British electrical equipment manufacturers have also participated to a major extent in these contracts, supplying the main and auxiliary driving motors, control gear and equipment.—*Exclusive to "Commerce."*

(*Concluded from previous page*)

period of dynamic growth for tea in the U.S.A. There is no doubt that the sponsors of the Council will bear these lessons in mind and take suitable action in good time. Accordingly, there is convincing ground for hoping that the tea habit will spread to every nook and corner of the U.S. and bring in return a tidy sum of dollars to tea-producing countries, the vast majority of which belong to underdeveloped Asia.

ARGENTINA TO EXPORT TEA

Argentina bids fair to become, in the near future, a competitor in the world tea market as one of the leading tea exporting countries. It is now an importer of tea with an annual intake of 5 million lbs.

According to official statistics, the area under tea in Argentina increased between 1950 and 1955 from 1,406 hectares to 32,437 hectares, and the number of bushes from 5,723,700 to 146,286,000. But, as tea plants cannot be commercially exploited until they are three years old, only 8.5 million bushes are now in production. This means that three years hence the production of tea in Argentina will increase 16-fold to 16,000 tons. It is estimated that a surplus of 13,000 tons (about 30 million lbs.) will be available for export after meeting the internal demand.

Brazil, Peru and Paraguay are also hard on Argentina's heels to expand tea production for export, and competition is keen to capture the Central and South American markets. Possible importers include Chile, Uruguay, Venezuela and the Caribbean countries, as well as the U.S.A., which will provide much needed dollars to those countries.

The fall in imports by Latin American countries from 18.5 million lbs. in 1952 to 10.5 million lbs. and 9.5 million lbs. in the following two years is attributed to the improved local supplies.

AREA UNDER RUBBER

The Rubber Board is reported to have put forward a proposal for the consideration of the Government of India for extending the area under rubber cultivation by 100,000 acres under a ten-year plan. This is in addition to the Board's earlier proposal for re-plantation of 70,000 acres in a ten-year period which has already been accepted by the Government. The Board has also recommended that assistance be given to growers for new planting in the form of loans at Rs. 750 per acre, instead of direct subsidies offered in other countries, like Malaya and Ceylon.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 2-13-11 per lb., as against Rs. 3-5-0 per lb. in force from 1st June 1956. There is no change in the existing rate of duty of annas six per lb.

The Government of India has decided that imports of raw rubber will henceforth be made by the Rubber Board.

The Indonesian Government has reduced the export duty on rubber for the third quarter of this year to 3.4 rupiah cents per kilo from 18.6 cents for the second quarter. In the first quarter, the duty was 65.4 cents.

COAL

(*Concluded from page 16*)

surface, etc., are in some cases not entitled to the usual benefits.

Of the 204 reporting collieries, in about 170 provident fund, leave with pay and maternity benefits are applicable to either all or certain sections of the contract labour. In about 150 collieries, contract workers are eligible to higher overtime rates like direct labour, while, in a few others, contract workers are not required to do overtime work. In some cases, however, the management of collieries have no control over the contract labour and in such cases, therefore, it is not known whether the contract workers are entitled to the above benefits.

ENCOURAGEMENT TO SMALL-SCALE MINING OPERATORS

GOVERNMENT'S POLICY ANNOUNCED

WELCOMING the assurance given by the Union Minister for Natural Resources, Mr. K. D. Malaviya, at the recent meeting of the Mineral Advisory Board, that the Government would seek to maintain, in the sphere of mining, a "healthy balance between the private and the public sector," we observed that the value of the assurance would lie in the way it was implemented. It is gratifying to note that, so soon after the meeting of the Board, the Ministry has moved in the direction of a liberal policy for mining leases. A Press note, issued by the Ministry, has clarified certain issues relating to leases and also made it clear that it will, in certain cases, grant mining leases to applicants who intend taking up mining operations in the minerals which fall under the "public sector" in the Industrial Policy Resolution. It must, however, be noted that such concession will apply only to small-scale mining.

Schedule A

Under the Industrial Policy Resolution, the mining of coal, manganese and chrome ores, iron ore, gypsum, sulphur and mining and processing of copper, zinc, lead, tin, molybdenum and wolfram are listed in Schedule 'A' which defines the industries falling within the purview of public enterprises. The Union Ministry has now requested the State Governments to dispose of applications for mineral rights relating to minerals in Schedule 'A', where the applicants have prospected the area under a prospecting licence in accordance with Mineral Concession Rules, 1949. It is pointed out that as the holders of prospecting licences are entitled to mining leases under the Rules, there is no need for any delay in the disposal of such applications. The official Press note adds:

"It was also stated at the conference that the Central Government would be prepared to consider requests for a prospecting licence recommended specially by the State Government for consideration on the ground of exceptional circumstances under which delay in forwarding the application prior to the Resolution was attributable to the State Government. No right, however, is recognised whether to a prospecting licence or a mining lease on the mere ground that an application was made prior to the release of the Policy Resolution. All such cases of applications, whether for prospecting licences or for mining leases, in respect of minerals listed in schedule 'A' are now included in schedule 'IV' of the Mineral Concession Rules, 1949, and, consequently, require the prior approval of the Central Government. It has, further, been decided that State Governments may forward applications for prospecting licence or mining lease under the Mineral Concession Rules, 1949, in respect of areas which, in the opinion of the State Government, it would not be appropriate in the public interest to reserve for exploitation by the State; in considering such cases, the State Governments will take into account such factors as the location of the mineral, its occurrence, its extent and nature, which may suggest that it is best worked as a small-scale mine and which it would be uneconomical for the State to exploit. The cases recommended should generally be susceptible of classification under small-scale mines referred to in para 12 of the Policy Resolution. These considerations may also be taken into account by the State Governments in relation to the disposal of areas already held under lease which stand to be thrown open on the expiry of the lease under Rule 67 of the Mineral Concession Rules, 1949."

While the Government's policy which is designed to encourage private mining of minerals, normally reserved for the State sector, is welcome, the restriction of this concession only to small-scale mining may defeat the very purpose of liberalisation. For one thing, it is not known how many of the applicants for small-scale mining have the necessary resources to utilise the rights they are given. Secondly, it is somewhat uncharitable to the private sector to suggest that it may have, if it chooses to have, mining leases for areas which "it would be uneconomical for the State to exploit." If it is "uneconomical for the State to exploit" those areas, it must be equally so for the private sector. On the other hand, if the implied suggestion is that the private sector will be able to make a commercial success of a mining operation in which the State is likely to fail, it means that the former deserves a much better deal than what it has got under the present dispensation.

Industrial Policy

It has been further suggested that the applications for mineral rights, recommended by the State Governments for exemption from the operation of schedule A classification, should "generally be susceptible of classification under small-scale mine referred to in para 12 of the Policy Resolution." This is a somewhat vague directive, in view of the fact that para 12 of the Resolution does not define small-scale mining at all. This paragraph, which is generally believed to have the effect of softening the rigidity of the division of industries into "private" and "public" enterprises, says, *inter alia*: "It will be open for the State to start any industry not included in schedule A or schedule B when the needs of planning so require or there are other important reasons for it. In appropriate cases, privately-owned units may be permitted to produce an item falling under schedule A for meeting their own requirements or as by-products. There will ordinarily be no ban to small privately-owned units undertaking production, such as the making of launches and other light craft, generation of power for local needs and small-scale mining." It will thus be seen that this paragraph, while it emphasises that small-scale mining has a claim for special treatment, does not throw any light on what constitutes such mining. It can offer little guidance to the State Governments.

In the light of what has been stated above, the Government will do well not to limit the scope of the new mining policy to small-scale mining only. Alternatively, it can take a liberal view of what constitutes small-scale mining. The chief aim should be to see that mining rights go to persons who are equipped both technically and financially to utilise them and that such rights are utilised to maximum national advantage. In deciding these issues, the zonal mineral councils, which are to be set up shortly, could be of considerable help, for they would possess knowledge of local and regional conditions.

KUNDAH HYDRO-ELECTRIC SCHEME

The Kundah hydro-electric project, which was inaugurated last week by the Union Finance Minister, Mr. C. D. Deshmukh, is designed to be yet another important project of its kind in the Madras State. At present, the three important hydro-electric projects are the Pykara, the Mettur and the Papanasam hydro-electric schemes which were commissioned in 1932, 1936 and 1944 respectively. The Kundah project, which is situated in the Nilgiris district of the State, is expected to generate a firm power of 129 M.W. with an installed capacity of 180 M.W. in the first two stages which will be completed in nine years' time.

Inaugurating the project, Mr. Deshmukh dwelt at some length on the importance of power to national economy. He said that they were all aware that money was power and power (electric power) was money. He said that electric power was the chief instrument of economic advancement. Emphasising the low *per capita* consumption of power in India, he pointed out that, while it was 5,743 units in Norway, 3,094 units in Sweden, 2,556 units in Switzerland, 2,500 units in the U.S., 1,492 units in Australia, 1,259 units in the U.K., 1,227 units in W. Germany and 579 units in Japan, it was only—"Now be prepared for a shock" he said—25 units in India in 1955-56, though it might go up to 50 units in 1961.

Paying a tribute to Canada which has decided to make a generous grant of Rs. 10 crores to the Kundah project, Mr. Deshmukh said that Canada's assistance to India under the first Five-year Plan was Rs. 36 crores, of which nearly Rs. 20 crores had been utilised; the balance would be utilised in the second Plan. Canada had also sent its experts and opened a number of training centres. Referring to the assistance given by that country to the Kundah project, in particular, he said: "Certainly, it is a very massive assistance which is worthy of all praise and worthy of our gratitude. It is done with some goodwill towards us and with a genuine desire to help backward countries in the world to advance for the common good."

SEARCH FOR MINERALS

A "flying laboratory"—the first in Europe to carry out three kinds of mineral search simultaneously—has just been demonstrated near London. It is claimed that, with the help of this laboratory and its detecting equipment, weighing nearly a ton, the geologist can obtain in one day data covering hundreds of square miles of country which a decade ago would have taken a month to collect. Over the past few years, survey aircraft with sensitive electronic gear have charted thousands of square miles of virgin land, swinging across dry plains and jungles, locating and pinpointing millions of tons of ores.

They are the mineral prospectors' new tool. Some have carried instruments for spotting likely deposits of iron, nickel, titanium and oil; some for detecting copper, zinc, lead; some for fixing the position of uranium. The new aerial "divining rod" will reveal the likely positions of all these minerals in the course of one survey flight. Technologically it is a big step forward, and—even more important—it is a key to undiscovered mineral wealth throughout the world.

Mr. G. M. Adams, General Manager of Hunting Geophysics Ltd., the firm which has installed the new apparatus, said in an interview that the plane bearing the new apparatus will soon be going to Spain to make a survey for the Spanish Government, followed by a month's demonstration tour in Rhodesia during which it will work for the Rhodesian Selection Trust. It will then fly on to South Africa for further demonstrations.

ALUMINIUM UTENSILS

The Indian Standards Institution has granted three licenses for use of its certification mark to a firm in Calcutta. The Standard Mark, which will be applied to wrought aluminium utensils manufactured by the firm in its three factories at Calcutta, Madras and Bombay, will certify that the utensils have been manufactured in conformity with the relevant Indian standard. The mark consists of the monogram of the Indian Standards Institution, superscribed by the number designation of the Indian standard together with the relevant grade. The aluminium utensils bearing the mark will convey an assurance to the purchaser that they have been manufactured under controlled conditions and are of the standards of quality laid down in the relevant Indian standard.

The Government of India, it may be recalled, announced recently that the export of aluminium utensils, not bearing the Standard Certification Mark of the Indian Standards Institution, would not be allowed after 15th June 1956, but at the request of manufacturers the date has been extended to 1st October, 1956. Several other manufacturers of aluminium utensils, it is stated, have approached the Indian Standards Institution, for grant of licences and their applications are under consideration. The Institution intends to extend its Certification Marks Scheme to the entire production of aluminium utensils in the country.

WINGLESS AIRCRAFT

Wingless aircraft, which will depend upon jet power for lift and propulsion, may be the air-planes of tomorrow, says Hanson W. Baldwin, writing in the *New York Times*. A number of aircraft of this type are already being studied and designed. One of these is the so-called "Aerodyne," which has been tested in model form by the Collins Radio Company's Aeronautical Research Laboratory at Cedar Rapids, Iowa. The company expects to start work on a full-sized wingless aircraft shortly. The Aerodyne, utilising jet power, looks something like the streamlined fuselage of a modern airliner stripped of its wings. The jet thrust from the engine is deflected, as desired, in any direction by altering a system of flaps. When the jet thrust is straight down, the Aerodyne rises vertically. When most of the jet thrust is to the rear, the aircraft is expected to fly at supersonic speeds.

ELECTRONIC GENIUS

Pan American World Airways has entered the jet age of accounting with the installation of a giant electronic brain to process airline statistics. The brain, the first of its kind in the transportation industry, can make 8,400 additions or 1,200 multiplications a second.

The brain is an assembly of more than 200 integrated machines. In a demonstration, a total of 50,000 airway bills covering a week's cargo flown to all points of the globe was submitted to the machine for analysis. The calculator absorbed the information, separated it into commodity classification and showed the point of origin, destination, weight and cost as fast as the answers could be read.

During January, Pan American World Airways flew 653,000 pounds of cargo over the Atlantic, a 61 per cent. increase over the same period last year. The largest carrier of air freight between the United States and Europe, Pan American operates all-cargo Clippers that leave New York every morning of the week except Monday for Frankfurt, London, Munich, Brussels, Nuremberg, Dusseldorf and Amsterdam. In addition to the all-cargo schedules, it provides cargo space in the 98 weekly passenger flights that it operates in both directions over the Atlantic during the off-season. At the height of the summer season this year, the airline will step up its frequency of transatlantic passenger flights to 160 a week. January's cargo total included 439,000 pounds flown west-bound and 214,000 pounds east-bound. Last year, the airline flew 269,000 pounds west-bound and 137,000 pounds east-bound.

NEW PRODUCTS AND PROCESSES

New Tyre-making Process

A NEW method of tyre-making which may in future be regarded as revolutionary has been developed by the Dunlop Rubber Company. This was announced by Lord Baillieu, Chairman, at the Company's annual general meeting. The method consists in winding a cord round a drum in a series of geodetic loops. Patent protection for this new process is being taken out, but it will be some time before it can be fully developed and applied. This new construction, it is stated, may, if successful, introduce entirely new methods of manufacture for a wide range of tyres in the future.

Conveyor Buckets

Long-term economies in coke and coal handling are suggested by the results of a two-year test of special aluminium-manganese alloy conveyor buckets designed and fabricated by the T.I. subsidiaries, T.I. Aluminium and the New Conveyor Company, and installed at the Windsor Street (Birmingham) Gas Works with the co-operation of the West Midlands Gas Board. The corrosive and abrasive effects of handling coke, and almost equally coal, it had been found, were such that effective life of steel buckets on the conveyors was less than three years. After a period of continuous use for more than two years, the experimental aluminium alloy buckets remained virtually as new, with no signs of corrosion or holing, and little denting. Steel buckets rust on contact with the damp coke and coal, and this layer of rust is progressively removed when handling the coke, so that the surface of the bucket constantly becomes thinner to a point where it easily perforates. As aluminium does not rust, there is no removal of metal. The frames attaching the buckets to the conveyor were of malleable iron, and were not replaced when the aluminium alloy buckets were installed. The two metals were insulated from each other by a simple zinc chromate coating, which proved completely adequate in preventing any bimetallic corrosion. Because the buckets are lighter the amount of power required to operate conveyor belts is reduced.

Bronze Casting

A sand mould for bronze casting which has as great a chilling power as a mould of steel shot has been developed by Dr. Pell-Walpole, a lecturer in metallurgy at Birmingham University. Chief advantage claimed for the new sand moulding method is that it produces better castings which do not require as much machining and finishing as those produced from the traditional steel shot moulding.

The mould, it is stated, is prepared by adding graphite and linseed oil to Southport sand. It is used in the same way as normal foundry sand, and while retaining the many advantages of the sand mould, it also has a cooling power as high as that of the steel shot mould. The moulding material recommended by Dr. Pell-Walpole is made up as follows: 75-80 per cent. Southport sand, 15-20 per cent. graphite and 5 per cent. linseed oil. Asbestos can be added to the mix to lessen the chilling power of the sand. This addition may be necessary to retard the solidification of thin sections of the casting.

A New Harvester

A new self-propelled combine harvester for farms with small acreages of grain crops has been designed by Massey-Harris-Ferguson of Coventry, England. Claimed to be the first of its kind to appear on the British market, the combine has a cutting width of 6 feet and an overall width of 7 feet 7 inches. This means, it is stated, that the machine can travel through narrow lanes and pass through ordinary field gates. It has been tested in the heaviest crops and has been found to be particularly suitable for use on the slopes of hills. It is stated that special attention has been paid to safety precautions. The operator on the bagging platform is protected from moving parts by two spare screens. Three different sized screens are provided and the two spares carried on the machine enable quick changes to be made. The combine is powered by an Austin 4-cylinder, 1,560 cc. engine which develops 23.5 brake horsepower. Unlike other Massey-Harris self-propelled combines, the engine is located on top of the machine. When not in use the whole engine unit can be removed by slackening six nuts and it can then be put to a number of out-of-season uses as a stationary power unit.

Battery Chargers

Two new medium-power battery chargers for charging the batteries of cars, vans, small trucks and marine craft have recently been produced. They have been designed by the General Electric Company (Magnet House, Kingsway, London, W.C. 2), particularly for the small garage or vehicle contractor requiring facilities for full rate as well as trickle charging. One model, will charge up to two 12-volt batteries at a maximum charging rate of 2½ amps. and the other one 12-volt battery at a maximum charging rate of 5 amps. Each model can be supplied for use in either a temperate climate or a tropical climate with temperatures over 95 degrees Fahrenheit. The chargers are housed in a sheet steel case and are suitable for bench or wall mounting. Overall dimensions are 11½ inches by 10½ inches by 13½ inches.

ANNUAL MEETING OF INDIAN INSURANCE COMPANIES' ASSOCIATION

FUTURE FOR GENERAL INSURANCE BRIGHT, SAYS MR. K. C. DESAI

"I VISUALISE a bright future for our industry, since the scope for insurance companies to add to their premium income will be growing daily, with the progressive implementation of the various schemes for the economic development of the country," said Mr. K. C. Desai, Chairman of the Indian Insurance Companies' Association, Bombay, presiding over the 28th Annual General Meeting of the Association held on Friday, 29th June 1956. Mr. Desai, however, added that "the supreme need of the moment is a complete change of outlook on our part so as to ensure an abiding place for our business in the private sector," and that this effort should be supported by an unqualified and categorical statement from the Government that "this business is to remain within the private sector, so that insurance companies, reassured about their future existence, can go ahead with their programmes of expansion and equip themselves better for their vital role in the coming crucial years."

Case Against Nationalisation

"The year," continued Mr. Desai, "marked a milestone in the planned economic development of India and also saw far-reaching developments in the direction of State ownership, of which the amendment of the Constitution and the nationalisation of the Imperial Bank of India and life insurance business were proofs. The two grounds on which nationalisation was being considered as a panacea for our economic ills were, in the opinion of Government, the acceptance of a socialist pattern of society and the need for speedy and planned development. Dr. John Matthai, Chairman of the State Bank of India, had shown how nationalisation was not indispensable for the purpose, in a recent talk to the Rotary Club of Bombay, and even Mr. Hugh Gaitskell, Leader of the British Labour Party, admitted that 'simple, direct and unique relationship between wholesale nationalisation and the ultimate ideals of socialism, which early theorists took for granted, cannot be 'assumed' in the new circumstances today.'" Mr. Desai, therefore, hoped that the hard school of experience would lead to a gradual reorientation of the Government's attitude towards the private sector and free enterprise would be allowed to make its proper contribution to the enrichment and diversification of the national economy.

Compensation

After expressing his disappointment at the Government's decision to nationalise life insurance without taking into confidence the interests concerned, especially when their record was second to none in any part of the world Mr. Desai referred to the question of compensation and the advocacy of Mr. A. D. Shroff before the Select Committee where he ably argued that the Government were offering only 35 per cent. of the real value of the shareholders' interests. He also referred to the able manner in which Mr. Tulsidas Kilachand put the case of Indian insurance companies regarding the Government's decision to nationalise life insurance during the debates in the Lok Sabha, when the Finance Minister was obliged to observe that the State did not have to make out a case that the private sector had failed. Mr. Desai was happy to note the Government's decision not to nationalise general insurance business. "General insurance," he observed, "is neither basic to the economy nor does it render social service of a type required to be State-owned in the larger interests of the community. In its varied types, it is closely linked with commerce and industry, the insurer undertaking to indemnify the insured against different risks which arise in the day-to-day conduct of business and trade. Further, general insurance is highly complex, demanding flexibility of management and adaptability to supply a tailor-made service with immense variations in insurance coverages to suit different types of risks. General insurance, again, is not confined to the frontiers of the country. By and large, there has been a general appreciation on the part of the public of these special features which make it unsuitable for nationalisation. All the same, voices were often heard during the debate on the Life Insurance Corporation Bill asking for nationalisation of this class of business. The Government, on their part, have already given repeated assurances, but I believe it is necessary that they should again make a categorical and unqualified statement that this business is to remain within the private sector."

Need for Fair Practice

Urging the need for fair practice in insurance business, Mr. Desai said:

"The nationalisation of life insurance business has posed certain difficult problems of readjustment to the majority of Indian companies which happen to be composite offices. As it is, many insurers are hard put to keep their management expenses within the limits prescribed under section 40C of the Insurance Act. In the process of adjustment, therefore, many companies may be forced to close down their branch organisations and may have further to lose the services of those who have worked for them efficiently well over a long period. There is also the fear of competition for business among insurance companies becoming stiffer.

"With the increasing tempo of economic activity, there will soon be enough business to go round. But, in the meantime, it is very essential that we take a long-range view of things and concentrate our energies on effecting a radical rationalisation in the working of our business by eliminating all undesirable features that hamper our progress on the right lines and might prevent us from making our proper contribution to the task of nation building. It might be necessary for companies to subordinate their immediate advantage to the larger interests of the trade as a whole in order to create healthy conditions, which would enable all type of companies—small, medium and large—to participate in the available business on a fair and equitable basis."

Immediate Problems

After announcing the formation of a re-insurance corporation which, with Mr. T. K. Desai as the first General Manager, would play a significant role in the development of the country's economy, Mr. Desai pointed out that some of the provisions in the Companies Act would cause unnecessary hardship to insurance companies in their day-to-day work and increase their management expenses on account of the duplication involved and urged the Government to exempt the companies from their operation so that the companies can continue to function efficiently, unhampered by needlessly irksome rules. The other problem arose from the acquisition by Government of a number of general insurance companies as a result of the nationalisation of life insurance and he hoped that these State-associated concerns would not enjoy an unfair advantage. The continued uncertainty regarding the taxation of profits arising from re-insurance contracts, Mr. Desai pointed out, had been a source of anxiety and he hoped that the recommendation of the Taxation Enquiry Commission would be implemented.

EXPORT CREDIT INSURANCE

The Expert Committee on Export Credit Guarantee Scheme, appointed by the Union Ministry of Commerce and Industry in January this year, has submitted its report to the Government. The Committee has made out a strong case for the institution of a scheme of insuring export risks, similar to the schemes in force in about a dozen other countries. Broadly, the risks to be covered by the proposed Export Risks Insurance Corporation are the insolvency or protracted default of the buyer, non-payment or delay in payment on account of exchange and import control restrictions in the buyer's country after the goods have been shipped to him or accepted by the buyer, war and civil war risks, and catastrophic risks of earthquakes, floods, and hurricanes; and any other cause of loss occurring outside the Indian territory and which is beyond the control of the exporter and the foreign buyer. The Committee's proposals, while preserving the basic principles of voluntary credit insurance followed in Canada, U.K., and some of the countries of Continental Europe, make some important departures in that the Indian exporter is likely to have a greater degree of freedom and selectivity in insuring his risks, than even in the U.K. and Canadian schemes. The Committee has recommended the establishment of a non-profit-making credit insurance corporation run on commercial lines and assisted by an Advisory Council representative of industry, trade, agriculture, banking and insurance interests. The Report is under examination in the Ministry of Commerce and Industry.

SOME PROBLEMS OF GENERAL INSURERS REVIEWED

IMPACT OF NATIONALISATION OF LIFE OFFICES

ALTHOUGH it is only life insurance that has been nationalised, this measure is not entirely without significance to the general insurers. For one thing, such nationalisation has deprived the composite offices of one of their important sources of revenue. Indeed, life insurance was the mainstay of many composite offices so that the loss of this portfolio has created several organisational and financial problems. Secondly, the Government has now come to own some general offices which were subsidiaries of the life offices it has taken over. Thus, it is in a position to compete with general insurers in their field. Thirdly, there is the ever-present threat of nationalisation of general insurance—a threat which has been kept alive by the repeated demand for such nationalisation by certain sections of opinion in this country. On all these major issues, Mr. K. C. Desai, the Chairman of the Indian Insurance Companies' Association, had some very pertinent remarks to make in the course of his illuminating speech at the recent annual meeting of the Association.

To take first the important question about the future of general insurance. The Government spokesmen have generally given the assurance that it is not their intention to take over general insurance. They have also recognised that this form of insurance is part and parcel of the private sector. Nevertheless, some people have continued to press for the acquisition of general insurance offices by the State. The advocates of nationalisation of general insurance will do well to ponder what Mr. Desai has to say on the subject. He rightly said that general insurance was neither basic to the economy nor did it render social service of a type required to be State-owned in the larger interests of the community. Further, general insurance is highly complex, demanding flexibility of management and adaptability to supply a "tailor-made service." Again, it is not confined to the frontiers of the country but extends to different countries. In fine, general insurance is unsuitable for nationalisation. It is to be hoped that in view of these special characteristics of general insurance those who clamour for its nationalisation will give up their present stand on the subject.

Composite Offices

The next problem with which general insurers are now concerned is the effect of nationalisation of life insurance on their activities. The composite offices, as Mr. Desai pointed out, now stand "truncated and their working is disturbed by the splitting of complementary activities which used to be conducted heretofore through common branches, agencies and personnel." It was the usual practice of the companies to have in[illegible]me of their staff both on the administrative mind the field side to look after their life as well whic[illegible]eneral insurance business. The sudden small-s[illegible]tion of the life and general sides of the mical fo[illegible]he said, had made things rather diffimended [illegible] fication unde general side. He added:

12 of the Pc[illegible] many insurers are hard put to keep may also be [illegible]nent expenses within the limits pres-ernments in [illegible]ection 40C of the Insurance Act and ready held und[illegible]ossible for them now to retain these open on the exp[illegible]he same basis of remuneration as Mineral Concess[illegible]t when they looked after both the

While the G[illegible]ral side. In the process of adjustsigned to encou[illegible]many companies may be forced to normally reserv[illegible] branch organisations and may come, the restric[illegible]se the services of those who have small-scale minir[illegible] efficiently and well over a long of liberalisation.

how many of th[illegible]disturbance to the general side ing have the n[illegible]nationalisation of life insurance rights they are [illegible]m which faces the general inuncharitable to [illegible]s, as Mr. Desai said, fear of comthat it may hav[illegible]siness among insurance comleases for areas[illegible] cal for the Sta[illegible] mical for the must be equal[illegible] other hand, i[illegible] private sect[illegible] success of a[illegible] is likely [illegible] serves a[illegible] under [illegible]

Reinsurance

A notable development in the field of general insurance is the proposal to form a reinsurance corporation. This proposal has reached beyond the blue-print stage, so that the corporation is likely to be formed in the near future. Mr. Desai welcomed this move and hoped that the corporation will play a significant role in the future economy, having regard to the rapid industrial development envisaged under the five-year plans in the country. Paying a well-deserved tribute to Mr. T. K. Desai, who is to be the first General Manager of the Corporation, he said that there could not have been a better choice to fill the post and that with his intimate knowledge and varied experience in general insurance business he will carry out his heavy responsibility with distinction. It may be mentioned here that a similar tribute to Mr. T. K. Desai was paid by Mr. B. K. Setalvad, in the course of his speech as Chairman of the General Insurance Council (Tariff). Mr. Setalvad said that he was sure that a no more suitable executive than Mr. Desai could have been found to fill the post and steer the new body through its "birth pangs and teething troubles." He added, "I only hope that his preoccupation with the work of the Corporation will not deprive us of the benefit of Mr. Desai's great fund of knowledge and immense experience of general insurance business."

To revert to the speech of the Chairman of the Indian Insurance Companies' Association. Mr. Desai was an optimist so far as the future of the general insurance business is concerned. He said that he visualised a bright future for the industry inasmuch as the scope for insurance companies to add to their premium income by developing new lines of business as well as by improving further the lines in which they are engaged will be growing daily with the progressive implementation of the various schemes of the economic development of the country. At the same time, he rightly emphasised that it was essential that general insurers should take a long-range view of things and concentrate their energies on effecting a radical rationalisation in the working of their business by eliminating all undesirable features that hamper their progress and on developing the business on right lines so as to make their "proper contribution to the task of nation building." Clearly, in the immediate future, general insurers must equip themselves with the necessary knowledge, experience and organisation in order to avail themselves of the much bigger opportunities which lie ahead of them.

NEW GREAT INSURANCE

A notable improvement in general insurance business is disclosed by the audited accounts of the New Great Insurance Company of India Ltd. (General Manager: Mr. M. G. Mody, Bombay) for the year ended 31st December 1955. The aggregate net premium income for the year amounts to Rs. 58.02 lakhs, a rise of Rs. 3.64 lakhs over the year, thus maintaining the upward trend noted in the previous years. Thus, in the course of the past 13 years of its history, the net premium income has grown from a mere Rs. 1.65 lakhs (in 1943) to Rs. 58.02 lakhs.

The rise in premium income for 1955 has not, however, been shared by all the three departments. While the premium income of the fire department has gone up from Rs. 21.18 lakhs to Rs. 25.59 lakhs and that of the miscellaneous department from Rs. 14.42 lakhs to Rs. 16.42 lakhs, the marine premium income has suffered a setback from Rs. 18.78 lakhs to Rs. 16.01 lakhs. The claims paid and outstanding, as well as commission and expenses of management, have gone up in all departments, but the claims in the marine section have been rather heavy, with the result that the department has again shown a loss. After maintaining the reserve for unexpired liability at 50 per cent. in the fire and miscellaneous departments, the underwriting profits amount to Rs. 1.93 lakhs (as against Rs. 2.76 lakhs in 1954) and Rs. 0.63 lakh (having shrunk from Rs. 1.05 lakhs), respectively. The loss in the marine department has, however, declined from Rs. 2.89 lakhs to Rs. 2.04 lakhs.

The following comparative table shows the progress of the Company's general insurance business during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Fire Department:				
Premium income (net)	25.59	21.18	22.88	24.54
Claims paid and outstanding	9.58	9.49	6.92	4.97
Commission and expenses	12.10	10.03	11.27	10.36
Reserve for unexpired liability	12.80	10.59	11.44	12.27
Miscellaneous Department:				
Premium income (net)	16.42	14.42	13.92	11.93
Claims paid and outstanding	8.01	6.86	6.24	5.03
Commission and expenses	6.94	6.42	6.50	5.55
Reserve for unexpired liability	8.21	7.21	6.96	5.96
Marine Department:				
Premium income (net)	16.01	18.78	15.11	12.44
Claims paid and outstanding	15.92	13.33	12.02	8.83
Commission and expenses	5.32	6.00	5.46	4.57
Reserve for unexpired liability	16.01	18.78	15.11	12.44

After transferring the profits from the fire and miscellaneous departments and taking into account the profit on sale of investments, transfer fees and shareholders' portion of the life profit (transferred from the life department), there is a profit of Rs. 4.41 lakhs. Out of this, the Directors have set aside Rs. 2.04 lakhs to cover the loss in the marine department and Rs. 3,206 towards expenses not applicable to any particular fund. After bringing in the surplus (Rs. 32,862) of the previous year, the balance available for appropriation is Rs. 2.67 lakhs, out of which provision for taxation absorbs Rs. 80,000, as against Rs. 1 lakh in the previous year. The dividend has been raised from 12½ to 15 per cent., absorbing Rs. 1.50 lakhs (as against Rs. 1.25 lakhs). The surplus left to be carried forward is Rs. 36,579.

The Company's balance-sheet shows that, besides a capital of Rs. 20 lakhs, the reserves and funds aggregate Rs. 46.46 lakhs, of which fire fund represents Rs. 12.80 lakhs, accident and miscellaneous fund Rs. 8.21 lakhs and marine fund Rs. 16.01 lakhs.

TARIFF REVISION

The two important issues which general insurers have to face in the immediate or near future are the prospect of losing third party motor insurance in one of the States, namely, Madras, and the revision of fire tariff rates. Both these problems figured prominently in the speech of Mr. B. K. Setalvad, Chairman of the General Insurance Council (Tariff) at the annual general meeting of the tariff insurers in India, held last week, at Bombay. Referring to the Madras Government's move to take over third party insurance as a State venture, he felt that the estimate of the revenue to the State from this source would seem to be grossly overrated. Further, this move implied that the State would function in the dual capacity of insurer and prosecutor. He did not, however, wish to dilate upon these general aspects of the problem. But he rightly pointed out that if the State Governments entered the field of third party insurance, it would deprive general insurers of a substantial slice of their motor portfolio. In the interests of general insurance in this country, the Madras Government will certainly do well to desist from this move. Further, it must be noted that the Madras Government's move comes on top of the proposal to amend the Motor Vehicles Act so as to provide for the creation of a claims tribunal to adjudicate third party claims. This proposal, as Mr. Setalvad averred, would lead to a rise in claims cost since the sympathies of the tribunals, however judicial-minded they might be, would lie with the injured party and insurers would most likely be called upon "to pay repeatedly and substantially."

Proceeding, Mr. Setalvad feared that insurers did not exercise as much vigilance as they should in scrutinising all claims and in obtaining the assistance of competent surveyors to that end. He added: "The very fact that there are comparatively few competent, reliable and experienced surveyors in the country goes to show that the field of endeavour is very limited. I cannot too strongly emphasise the need for keeping a strict watch on all claims so that excessive or unjustified payments may be avoided."

The other problem to which Mr. Setalvad referred is the revision of fire tariff rates. The next revision in their rates designed to bring about a loss ratio of less than 37 per cent., as is well known, is to take place in 1958. For some time now, the authorities have felt the need for reliable statistics on which they could base any revision of fire tariff rates. Accordingly, they have decided to collect such statistics from the insurers. In this connection, Mr. Setalvad said: "You must realise that to approach the Government for discussions on a revision in rates without having adequate and reliable figures to support the argument will be *tantamount to inviting ad hoc* reductions on all items of fire tariffs without any consideration of loss experience. I am sure that none of you will contemplate the possibility with any degree of equanimity and I would, therefore, appeal once again to all of you to see that the work of submitting the figures to the Committee's office is done regularly." It is to be hoped that Mr. Setalvad's plea will not fall on deaf ears and that general insurers, in their own individual and common interest, will co-operate with the authorities in order to make the collection of statistics easy and the necessary data reliable.

ATOMIC INSURANCE

Referring to the prospect of atomic insurance in the U.K., the Insurance Correspondent of the London *Financial Times* says that the special risks arising from the operation of nuclear reactors and plants which utilise atomic energy have been under consideration for some time past, both by British insurance companies and underwriters and those in other countries. Not only are such premises exposed to normal risks of damage from fire and similar causes, but they involve damage and breakdown risks due to acceleration of the pile or similar installation.

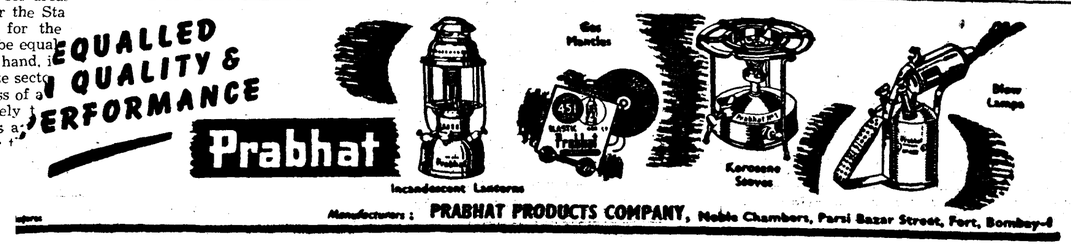
In addition, the third party risks involved are of a special nature, including as they do the possibility of claims for personal injury and damage to property due to direct radiation and the release of radio-active materials. The situation has a special interest at the present time, since the first nuclear power station at Calder Hall is nearing completion. It is probable that British insurers will undertake these new risks, just as they have been able to provide cover for other new perils as they have developed in the past. In the U.S., a Nuclear Energy Liability Insurance Association has recently been formed to operate as a pool for the underwriting of radiation liability risks of privately owned and operated reactors and similar plants. The pool consists of 110 insurance companies.

LIFE INSURANCE CORPORATION

Mr. M. C. Shah, Union Minister for Revenue and Civil Expenditure, said in Bombay last week that the new Life Insurance Corporation would achieve signal success. Characterising the nationalised institution as a "momentuous venture," he said that one of its main objects would be to make the people of this country insurance-minded. Addressing pressmen, the Union Minister disclosed that the new Corporation which would exclusively handle life business in the country would come into existence by the middle of August or by the first of September at the latest.

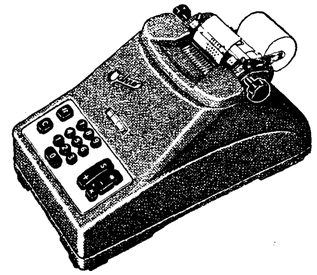
There will be a central organisation and five zonal offices, one each in Bombay, Madras, Calcutta, Kanpur and Delhi. The zones will be allotted certain territories. Under the zones will come divisional offices. There will also be sub-divisional offices and ultimately it is proposed to have a branch office in every district in the country. Mr. Shah observed: "Thereafter, we will have to penetrate into the rural areas also. We have made all these preliminary arrangements."

The Corporation will have 15 directors including a chairman. For some time there will be a part-time chairman who will be one of the senior-most officers of the Government. Thereafter, it is proposed to have a whole-time chairman.



NEWS...

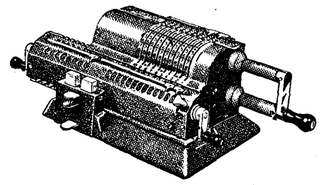
India will soon adopt the decimal system for currency, weight and measures and we are offering from stock our NEW Odhner Adding Machines, hand and electrically operated, for decimal system:



Odhner ADDING MACHINES

- NEW EXCLUSIVE FEATURES
- STREAMLINED EFFICIENCY
- SIMPLE 3-KEY OPERATION

Also available from ready stock:



Latest models of ORIGINAL-ODHNER Calculating Machines at most competitive rates.

CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

ANOTHER YEAR OF SATISFACTORY WORKING

SIR HARRY BURN'S REVIEW

THE Fifty-ninth Annual General Meeting of the Calcutta Electric Supply Corporation, Ltd., was held on 28th June at Victoria House, Vernon Place, Bloomsbury Square, London, W.C., Sir Harry H. Burn, K.B.E., A.C.A., Chairman of the Company, presiding.

The following is his review circulated with the report and accounts:

"The year 1955 witnessed an increase in demand and gave evidence of the process of development and expansion to which reference has been made in previous reviews. The number of units sold was 1,242 million, an increase of 142.7 million units over the sales in 1954. The ordinary domestic and commercial load at the flat rate increased from 171 million units in 1954 to 184 million units in 1955. The population of Calcutta continues to increase, the city is still in a congested state and the pressure on all available accommodation is intense. To ease the situation large blocks of flats have been built and these include several erected by the West Bengal Government to provide staff quarters. Many more buildings of this type are in course of erection and, in general, building continues unabated, particularly, in the south-east of Calcutta and along the Diamond Harbour Road in order to meet the pressing need for accommodation and relax the pressure of the population on the overcrowded city area. The special tariff under which we make available to owners of large buildings current at high voltage for conversion by them to low tension—thus relieving congestion on our D.C. network—has attracted new consumers during the year and sales under this tariff mounted to 38.7 million units, an increase of 6.8 million units over the 1954 figure.

Upward Trend of Industrial Demand

"On the industrial side served by high tension power, the rate of expansion in demand for current has shown a further upward trend. The sales for 1955 were 799 million units, as against 699 million units in 1954—an increase of 100 million units, as compared with an increase of 58 million units in 1954. The improvement in working conditions noted in 1954 was maintained; there was no period of serious labour unrest during 1955. The jute mills, cotton and other textile mills, paper mills, engineerings and aluminium workshops and also chemical works accounted for the major part of this increased demand for industrial high tension power. The largest increase came from the jute mills whose consumption rose by 35 million units. Three more mills came on to our supply in 1955 and working hours, which had been progressively increased during 1954 to 48 hours per week, remained unchanged throughout 1955. The number of mills now taking power is 57. There has been a further rise in demand since the beginning of 1956, as the total complement of looms in commission has been increased from 87½ per cent. to 95 per cent. In the case of the cotton mills, exports continue at a high level and sales of textiles are rising steadily in India with the increase in population. Engineering workshops show a consistent annual increase in consumption of current and mark the emphasis placed on rapid industrialisation in the Five-year Plans.

"The demand for low tension industrial power shows an appreciable increase in the activity of small industrial firms. The sales for 1955 were 77 million units, as against 68 million units in 1954 whereas sales for 1954, 1953 and 1952 showed little change. There has been a considerable increase in the number of small workshops, some of which receive their raw materials from, and work exclusively for, larger concerns and manufacture components. The protection afforded to indigenous industries by the restriction of foreign imports and the rehabilitation of refugees in small industries by the aid of Government loans has, undoubtedly, contributed to the increased sales in this section.

Steady Increase in Consumption

"Public lighting shows a steady increase in consumption. The Calcutta Corporation continued with their programme to install adequate street lighting throughout the city and four new Calcutta Improvement Schemes were taken over by the Corporation during 1955.

"The Calcutta Tramways demand for current has remained steady over the past two years with a small increase in 1955. There were no major interruptions in traffic during the past year. There has been a much greater demand for bulk supplies to distributing undertakings. The sales for 1955 were 20.6 million units, as against 14.6 million units in 1954. The North Calcutta Grid of the West Bengal Government was responsible for the major part of this rise, which was due to an increase in supply to an industrial consumer.

Growth of Revenue

"The development and expansion on which I have commented, is reflected in our revenues, as may be seen from the figures for the three preceding years which are set out in the Directors' report, receipts having increased by £567,826 over the previous year. Expenditure of a normal nature, taking into account the depreciation charge, rose by £344,712 from £3,898,066 to £4,242,778. Due to the higher output, coal consumption increased by 113,700 tons to 924,000 tons costing an additional £218,000. Wages and materials cost more, but in general the increase in expenditure is a consequence of the general expansion of our operations. In addition, there is an increase in expenditure of £91,479 for extra bonuses to our employees for the years 1953 and 1954. During 1955 an Industrial Tribunal awarded an extra bonus for 1953 and your Directors decided to follow the precedent adopted in that Award and made it applicable also to the years 1954 and 1955.

Net Revenue Account

"The net revenue account contains a transfer of £192,000 to a special reserve—as directed by the Government of West Bengal—the third of five annual appropriations of this nature which fall to be made from net revenue. The circumstances which gave rise to these appropriations were set out in the Chairman's review of 1953 and I also referred to this matter in my review for 1954. A taxation charge of £418,000 arises in respect of the profits for 1955 and this appears in the net revenue account. For several years prior to 1954 initial depreciation allowances, arising from our large post-war capital expenditure had relieved us of a taxation charge. From the clear profit available for 1955—which is within the reasonable return permitted by the Electricity (Supply) Act, 1948—we have made the usual allocation for the contingency reserve fund, as required by the Act, and propose to make the normal contribution to the retiring gratuity fund. Provision has been made for the interest and sinking fund charges in connection with the debentures. In order to conserve our finances for the continued expansion of the Company's operations, we have deemed it advisable to appropriate a sum of £125,000 to net revenue—special appropriation. The dividend on the preference stock and an interim dividend on the ordinary stock have been paid and we propose to pay a final dividend of 3 per cent. (free of tax) on the ordinary stock making 6 per cent. (free of tax) for the year. This leaves a carry forward on the net revenue account of £136,163.

"It will be seen from the balance-sheet that a considerable reduction has been effected in the bank overdraft during the course of the year. Expenditure on capital account amounted to £939,000 and by far the major portion of this outlay was for extensions to our distribution system.

The Electricity (Supply) Act

"The Electricity (Supply) Amendment Bill, to which I made a reference in the 1954 review, was introduced in Parliament (the Lok Sabha) in the last session of 1955. It is now expected that the Bill will be referred to a Joint Select Committee of both the Houses of Parliament during the current Budget Session in which event the report of the Select Committee should come up for the consideration of both Houses during the September session of 1956. There is thus a prospect of the Bill finding its place on the Statute Book before the close of this year. The Federation of Electricity Undertakings of India, of which this Corporation is a member, is in close touch with the position and has apprised the Government of its views on all essential aspects of the Amending Bill.

Visit to Calcutta

"During the course of January and February of this year I was in Calcutta for a period of five weeks and visited all sections of the Company's widespread organisation, where I saw ample evidence of the care and attention which our officers and staff devote to their work in maintaining efficiency and promoting the Company's interests. I also visited the site of the main receiving substation at Howrah, which will deal with the bulk supply from the Damodar Valley Corporation, and am glad to state that substantial progress has been made with the work on hand there. The erection of the transmission lines was also proceeding satisfactorily and in line with the plans designed to make the supply available in the early part of 1957.

"Our relations with the authorities, continue cordial. The Chief Minister and his officers continue to evince a great interest in all phases of the Company's activities and are fully appreciative of our problems. I met the leaders of commerce and industry in Calcutta and discussed with them various aspects of the Company's operations.

"I took the opportunity during my visit to tour Calcutta and its suburbs in order to see the developments which have taken place in building and in the opening up of new thoroughfares in the city itself and its outskirts. Modern new office buildings—Government and commercial—have been erected in the city. The Calcutta Improvement Trust are in the process of completing new roads and extending existing ones over a wide area. Large residential flats have been constructed in the suburbs and it is evident a great deal of this type of building will take place during the next few years following on the completion of Improvement Trust Schemes. I have referred to this building activity in my comments on the domestic load. There has also been expansion in the industrial area and, in addition, considerable industrial activity throughout our licensed area, which extends well beyond Calcutta on both banks of the River Hooghly. What has so far been accomplished indicates the progressive spirit which animates the authorities and all concerned with the welfare and well-being of the city and its extensive suburbs.

"Four young Indian graduates have recently joined our staff in Calcutta after completing two years' training in the United Kingdom under our Technical Training Scheme. A total of 22 men have now been trained under this Scheme. In addition we give special training to men in our employ in order to accelerate promotion and fit them for the higher posts in our service; two of these men are at the moment receiving training in the United Kingdom. We continue indebted to the Central Electricity Authority and to the various manufacturing companies in this country for the facilities they give us for training.

Tribute to Staff

"Our thanks are due to the staff in Calcutta for another satisfactory year's working. The work throughout the year displayed their high standard of efficiency, zeal and energy in the interests of the Company. Mr. Macpherson, our Agent in Calcutta, has conducted the Company's affairs in a most able manner. His office carries many responsibilities and these range over a wide field. In his dealings with the Government, Local Authorities and the public generally he has shown ability of a very high order. In all respects he justifies the confidence which the Board repose in him. To him and all the staff we express our high appreciation of the service rendered during the year. I also wish to record the Board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as Secretary."

The report and accounts were unanimously adopted and the dividend as recommended was approved.

The retiring Director, Mr. J. H. Waters and Mr. J. W. Gauntlett, were re-elected: and the remuneration of the Auditors, Messrs. J. Dix Lewis, Caesar, Duncan & Co., having been fixed, the proceedings terminated.

THE INDIAN OVERSEAS BANK LTD., MADRAS

(Incorporated in India)

Through a network of branches in India, Burma, Ceylon, Malaya, Thailand & Hong Kong and our correspondents at all important commercial centres of the world, we are in a position to offer the most complete Banking Service to Businessmen and Manufacturers engaged in the export and import trades.

Service is our motto

Notices

THE BRADY ENGINEERING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of The Brady Engineering Company, Ltd., will be held at the Registered Office of the Company, Brady House, 12/14, Veer Nariman Road, Fort, Bombay, on Wednesday, 1st August 1956, at 4 p.m. (S.T.), for the purpose of considering and if thought fit passing:

A. The following resolutions as Special Resolutions:—

I. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for sale by this Company of Castings, Machine Parts and Sundry Engineering Goods and for the purchase by this Company of Printing and Stationery and Boxes on terms of ready or forward delivery, either for cash or on credit or for rendering of service by this Company including service as Welders, Braziers, etc., provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. G. Claridge & Co., Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods or the supply or rendering of the service by this Company as the case may be.

II. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., Managing Agents of the Company, for rendering services to the Company including erection of Machinery and for sale by this Company of Castings, Machine Parts and Sundry Engineering Goods on terms of ready or forward delivery, either for cash or on credit or for rendering of services by the Company including services as Welders, Braziers, etc., provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. Empire Dyeing and Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods or the supply or rendering of the service by this Company as the case may be.

III. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. New City of Bombay Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for sale by this Company of Castings, Machine Parts and Sundry Engineering Goods on terms of ready or forward delivery, either for cash or on credit, or for the rendering of service by the Company, including service as Welders, Braziers, etc., provided that the prices or amounts received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. New City of Bombay Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods or the supply or rendering of the service by this Company as the case may be.

IV. Resolved that this Company hereby approves of all contracts entered into or to be entered into with "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., for the sale to this Company of advertising space and publications on terms of ready or forward delivery, either for cash or on credit, provided that the prices or amounts charged to this Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

V. Resolved that as from the 1st April 1956, Messrs. W. H. Brady & Co., Ltd., be appointed as Buying Agents for this Company, in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co., Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

Resolved further that Messrs. W. H. Brady & Co., Ltd., be reimbursed in respect of buying expenses incurred by them on all such purchases made. The buying expenses to be calculated at the rate of 1¼ per cent. of the total cost of purchases made, such rate having been pre-determined by reference to the average ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co., Ltd. (Manchester Branch), over the last three years.

VI. Resolved that the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents regularly trade or do business in, such as Mechanical Handling Equipment, General Stores and other Engineering Goods and the rendering of service to the Company in a technical capacity or in respect of which they may trade or do business in; also in respect of sales to the Managing Agents by the Company of Chain Wheels, partially manufactured Cranes, Crane Parts, Elevating Trucks, Air-conditioning Ductings, Textile and Sugar Machinery Parts, Castings and all types of Sundry Engineering Goods, etc., on terms of ready or forward delivery and either for cash or on credit and for the supply and rendering of service by the Company to the Managing Agents, such as Erectors, Welders, Braziers, Electricians, etc., provided that the prices charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided the Managing Agents shall make payment to the Company within one month from the date of the supply or sale of the goods or the supply or rendering of the service, as the case may be.

VII. Resolved that whenever any Director who has been appointed by a special resolution passed under Section 261 of the Companies Act, 1956, is likely to be absent from the State in which meetings of the Board are held for a period of not less than three months, the Board of Directors shall be entitled to appoint an Alternate Director in his place and such Alternate Director may be a person to whom the said Section 261 applies.

VIII. Resolved that the Articles of Association of the Company be altered by deleting Article 121 and substituting the following:—

(No. 121) "The Board of Directors may appoint an Alternate Director to act for a Director (hereinafter called 'the Original Director') during his absence for a period of not less than three months from the State in which meetings of this Board are held. Such Alternate Director shall vacate office if and when the Original Director returns to the said State. Such Alternate Director shall not require any qualification while the Original Director holds the necessary qualification."

and B. The following resolutions as Ordinary Resolutions:—

I. Resolved that the Managing Agents, Messrs. W. H. Brady & Co., Ltd., be authorised to retain all Commissions or other remunerations earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been or is hereafter entered into between this Company and other Companies which either fall within the management of Messrs. W. H. Brady & Co., Ltd., or in whose net profit Messrs. W. H. Brady & Co., Ltd., participate as Managing Agents, including Messrs. Empire Dyeing and Manufacturing Company, Ltd., Messrs. New Great Eastern Spinning and Weaving Company, Ltd., Messrs. Belapur Company, Ltd., Messrs. G. Claridge & Co., Ltd., and Messrs. New City of Bombay Manufacturing Co., Ltd.

II. Resolved that Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commissions or any other remuneration earned or to be earned by them at any time during the period they continue to act as Managing Agents of the Company, as Principal Agents of the Employers' Liability Assurance Corporation Ltd., Law Union and Rock Insurance Company, Ltd., Concord of India Insurance Company, Ltd., and the Insurance Office of Australia Ltd., in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been, or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Companies with the Company, provided always that the amounts charged to this Company in respect of all such insurances are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

III. Resolved that this Company hereby authorises Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. I above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

IV. Resolved that this Company hereby authorises Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. II above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that this Company hereby authorises Messrs. New City of Bombay Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. III above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VI. Resolved that this Company hereby authorises "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. IV above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 20*th June* 1956.

A member entitled to attend and vote is entitled to appoint a proxy or, when that is allowed, one or more proxies, to attend and vote instead of himself and a proxy need not be a member.

To

The Shareholders of the Brady Engineering Company, Ltd., and in particular to:—

Arthur Henry Baker, Esq., H. G. H. Everitt, Esq., W. Jenkins, Esq., Rustom Merwanji Bamboat, Esq., George Albert Carter, Esq., William Vans Agnew, Esq., and Joseph D'Costa, Esq.

EXPLANATORY STATEMENT

Special Resolutions: I, II, III and IV

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., New City of Bombay Manufacturing Company, Ltd., and "Commerce" (1935) Ltd., are associates of your Managing Agents, W. H. Brady & Co., Ltd. The said associates have transactions with your Company of the nature set out respectively in these resolutions. This has been the course of business for many years past and your Directors feel that it will be prejudicial to the interests of your Company to alter the procedure suddenly or unless the interests of your Company otherwise require. These resolutions have been put up for consideration in order to comply with Section 360 of the Companies Act, 1956.

Special Resolution: V

Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interests of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration. This special resolution provides for appointing the Managing Agents the Buying Agents of your Company in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The expenses have been calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) for the last three years.

Special Resolution: VI

This resolution has been put up in order to comply with Section 360 of the Act and approves all transactions already entered into or to be entered into between this Company and its Managing Agents in respect of purchases by this Company of various kinds of equipment and stores, which it has been the practice to purchase from the Managing Agents in the past, and also for the sale by this Company to the Managing Agents of Chain Wheels, partially manufactured Cranes, Crane Parts, Elevating Trucks, Air-conditioning Ductings, Textile and Sugar Machinery Parts, Castings, and all types of Sundry Engineering Goods, etc.

It is intended that from time to time the transactions referred to in Special Resolutions I, II, III, IV and VI shall be placed before the Company in General Meeting for confirmation. The buying expenses specified in Special Resolution V will be recalculated from time to time according to the actual figures and if necessary the Company will be asked to adjust the expenses in accordance with the actual figures for the subsequent periods.

Special Resolution: VII

This Special Resolution is desirable so that should any Director appointed by a Special Resolution passed under Section 261 of the Companies Act, 1956, be absent from the State in which meetings of the Board are held for a period of not less than three months, an appointment may be made by the Board of Directors in his place of an Alternate Director, who may also be a person to whom Section 261 is applicable, to obviate the passing of a Special Resolution by the Company whenever such an appointment is necessary.

Special Resolution: VIII

The purpose for which this Special Resolution is proposed is to alter the existing Articles of Association relating to the appointment of Alternate Directors in order to bring it within the provisions of Section 313 of the Companies Act, 1956.

Ordinary Resolutions: I and II

These Resolutions authorise your Managing Agents to retain the commissions and other remuneration which they have already earned or which they may earn by reason of their acting as the Managing Agents of the concerns mentioned in Resolution I, in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts have been made or entered into between your Company and other Companies within their management or in whose profits the Managing Agents participate including the concerns specifically mentioned in Resolution I and as principal agents of the insurance companies mentioned in Resolution II in respect of contracts of insurance.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

Ordinary Resolutions: III, IV, V and VI

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., New City of Bombay Manufacturing Company, Ltd., and "Commerce" (1935) Ltd., are associates of the Managing Agents and by Special Resolutions I, II, III and IV abovementioned are authorised to continue to do business with your Company. These Ordinary Resolutions authorise such Associates of the Managing Agents to retain commission or other remuneration earned or to be earned by them respectively from the business authorised by the respective Special Resolutions.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

The Managing Agents are interested in all the above resolutions as follows:—

As Managing Agents—G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., New City of Bombay Manufacturing Company, Ltd., Belapur Company, Ltd., and New Great Eastern Spinning and Weaving Company, Ltd.

As large shareholders in "Commerce" (1935) Ltd.

As owners of the Manchester Branch of their Company.

As contracting parties in respect of equipment, and stores sold to or purchased by this Company (Special Resolution VI).

As Principal Agents of the Insurance Companies mentioned in Ordinary Resolution II.

The nature of the interest of your Directors in the above resolutions is as follows:—

Name of Director.	*Resolution Nos.*	*Nature of Interest.*
Sir Joseph Kay, K.B.E.	Special Resolutions Nos. I to VI. Ordinary Resolutions Nos. I to VI.	Interested as Managing Director and Shareholder of W. H. Brady & Co., Ltd., and Director and Shareholder of the other Companies.
Kantilal Nahalchand, Esq. ..	Special Resolutions Nos. I, II and IV. Ordinary Resolutions Nos. III, IV and VI.	Interested as Director and Shareholder.
N. B. Jeejeebhoy, Esq.	Special Resolutions Nos. II, III, V and VI. Ordinary Resolutions Nos. I, II, IV and V.	Interested as Director and Shareholder.
	Special Resolution No. IV. Ordinary Resolution No. VI.	Interested as Shareholder.
J. L. B. Heale, Esq.	Special Resolutions Nos. II and III. Ordinary Resolutions Nos. IV and V.	Interested as Director and Shareholder.
Kishore M. Premchand, Esq. ..	Special Resolutions Nos. I to III, V and VI. Ordinary Resolutions Nos. I to V.	Interested as Director and Shareholder.
	Special Resolution No. IV. Ordinary Resolution No. VI.	Interested as Shareholder.
J. Symon, Esq.	Special Resolution No. I. Ordinary Resolution No. III.	Interested as Director and Shareholder.
	Special Resolutions Nos. II, III, V and VI. Ordinary Resolutions Nos. I, II, IV and V.	Interested as Shareholder.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 20*th June* 1956.

PRESIDENCY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-first Annual General Meeting of the Shareholders of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 30th July 1956, at 3 p.m., for the following purposes:—

(1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.

(2) To declare a Dividend.

(3) To appoint a Director in place of Mr. Alec A. Leslie who retires by rotation, but who is eligible for reappointment.

(4) To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

(5) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

(6) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 9th to 30th July 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 27*th June* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 27th August 1956, only to those members whose names are registered in the Books of the Company on the 30th July 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1) (*d*) of the Companies Act, 1956.

Notices

THE EMPIRE DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Empire Dyeing and Manufacturing Company, Limited, will be held at the Registered Office of the Company, Brady House, 12/14, Veer Nariman Road, Fort, Bombay, on Thursday the 26th day of July 1956, at 11-30 a.m. (S.T.), for the purpose of considering and if thought fit passing:—

A. The following Resolutions as *Special Resolutions*:—

I. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the purchase or supply of Printing and Stationery on terms of ready or forward delivery and either for cash or on credit and for the supply or rendering of any service by this Company to Messrs. G. Claridge & Co., Ltd., including servicing and maintenance of motor vehicles and renting out godowns space for storage provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. G. Claridge & Co., Ltd., shall make payment to this Company within one month from the date of supply or rendering of service by this Company.

II. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for sale to this Company of Castings, Machine Parts and Sundry Engineering Goods on terms of ready or forward delivery, either for cash or on credit, or for the rendering of service by Messrs. Brady Engineering Company, Ltd., to this Company including service as Welders, Braziers, etc., and for the rendering of services by this Company to Messrs. Brady Engineering Co., Ltd., including erection of Machinery, etc., provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided that Messrs. Brady Engineering Company, Ltd., shall make payment to this Company within one month from the date of rendering such services.

III. Resolved that this Company hereby approves of all contracts entered into or to be entered into with "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., for the sale to this Company of advertising space and publications on terms of ready or forward delivery, either for cash or on credit, provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

IV. Resolved that from the 1st April, 1956, Messrs. W. H. Brady and Co., Ltd., be appointed as Buying Agents for this Company, in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co., Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

Resolved further that Messrs. W. H. Brady & Co., Ltd., be reimbursed in respect of buying expenses incurred by them on all such purchases made. The buying expenses to be calculated at the rate of 1¼ per cent. of the total cost of purchases made, such rate having been predetermined by reference to the average ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co., Ltd. (Manchester Branch), over the last three years.

V. Resolved that the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents regularly trade or do business in, such as Universal Winding equipment, Mechanical Handling equipment, Sizing Materials, General Mill Stores and other Textile and Engineering Goods and the rendering of service in a technical capacity or in respect of which they may trade or do business in; also in respect of sales to the Managing Agents of the Company of Petrol, Sundry Stores and such other ancillary items or services as may be required from time to time, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable and provided the Managing Agents shall make payment to the Company within one month from the date of the supply or sale of the goods, or the supply or rendering of services as the case may be.

VI. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. New City of Bombay Manufacturing Company, Ltd., the Managing Agents of which are Messrs. W. H. Brady & Co., Ltd., for the purchase by this Company of Yarn, General Stores, and for the sale by this Company of Petrol and rendering service to Messrs. New City of Bombay Manufacturing Company, Ltd., of Cloth Bleaching, Cloth Dyeing, Cloth Mercerising, Cloth Raising, Yarn Dyeing, Yarn Bleaching and Yarn Mercerising, on terms of ready or forward delivery, and either for cash or on credit, and for the supply or rendering of any service by this Company, including servicing and maintenance of Motor Vehicles, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. New City of Bombay Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of goods or the supply or rendering of the service by this Company as the case may be.

VII. Resolved that whenever any Director who has been appointed by a special resolution passed under Section 261 of the Companies Act, 1956, is likely to be absent from the State in which meetings of the Board are held for a period of not less than three months, the Board of Directors shall be entitled to appoint an Alternate Director in his place and such Alternate Director may be a person to whom the said Section 261 applies.

VIII. Resolved that the Articles of Association of the Company be altered by deleting Article 119 and substituting the following:—

(No. 119) "The Board of Directors may appoint an Alternate Director to act for a Director (hereinafter called 'the Original Director') during his absence for a period of not less than three months from the State in which meetings of this Board are held. Such Alternate Director shall vacate office if and when the Original Director returns to the said State. Such Alternate Director shall not require any qualification while the Original Director holds the necessary qualification."

and B. The following Resolutions as *Ordinary Resolutions*:—

I. Resolved that Messrs. W. H. Brady & Co., Ltd., be authorised to retain commissions earned or to be earned by them as Selling Agents of Messrs. English Card Clothing Company, Ltd. (Wilson and Ingham Section) in respect of goods supplied by the said concern to this Company provided always that the prices or amounts charged to this Company in respect of such goods are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

II. Resolved that the Managing Agents, Messrs. W. H. Brady & Co., Ltd., be authorised to retain commission or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been or is hereafter entered into between this Company and other Companies which either fall within the management of Messrs. W. H. Brady & Co., Ltd., or in whose Nett Profit Messrs. W. H. Brady & Co., Ltd., participate as Managing Agents, including Messrs. New City of Bombay Manufacturing Company, Ltd., Messrs. New Great Eastern Spinning and Weaving Company, Ltd., Messrs. Belapur Company, Ltd., Messrs. G. Claridge & Co, Ltd., and Messrs. Brady Engineering Company, Ltd., or of which Messrs. W. H. Brady & Co., Ltd., are Selling Agents, or Representatives, and in particular Messrs. English Card Clothing Company, Ltd. (Wilson and Ingham Section) provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

III. Resolved that Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commissions or other remuneration already earned or to be earned by them at any time hereafter during the period they continue to act as Managing Agents of the Company, as Principal Agents of the Employers' Liability Assurance Corporation, Ltd., Law Union and Rock Insurance Company, Ltd., Concord of India Insurance Company, Ltd., and the Insurance Office of Australia Ltd., in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been, or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Companies with the Company, provided always that the amount charged to this Company in respect of all such insurances are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

IV. Resolved that this Company hereby authorises Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. I, above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that this Company hereby authorises Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. II, above, provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VI. Resolved that this Company hereby authorises "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. III, above, provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VII. Resolved that this Company hereby authorises Messrs. New City of Bombay Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. VI, above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 20*th June* 1956.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

To

The Shareholders of The Empire Dyeing and Manufacturing Company, Ltd., and in particular to: Mr. A. H. Baker, Mr. H. C. H. Everitt, Mr. J. Slater and Mrs. J. S. Forrest.

EXPLANATORY STATEMENT

Special Resolutions: I, II, III and VI

G. Claridge & Co., Ltd., Brady Engineering Company, Ltd., "Commerce" (1935) Ltd., and New City of Bombay Manufacturing Company, Ltd., are Associates of your Managing Agents, W. H. Brady & Co., Ltd. The said Associates have transactions with your Company of the nature set out respectively in these resolutions. This has been the course of business for many years past and your Directors feel that it will be prejudicial to the interests of your Company to alter the procedure suddenly or unless the interests of your Company otherwise require. These resolutions have been put up for consideration in order to comply with section 360 of the Companies Act, 1956.

Special Resolution: IV

Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interests of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration. This Special Resolution provides for appointing the Managing Agents the Buying Agents of your Company in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The expenses have been calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) for the last three years.

Special Resolution: V

This resolution has been put up in order to comply with Section 360 of the Act and approves all transactions already entered into or to be entered into between this Company and its Managing Agents in respect of purchases by this Company of various kinds of equipment and stores, which it has been the practice to purchase from the Managing Agents in the past and also for the sale by this Company to the Managing Agents of petrol, sundry stores and ancillary items or services.

It is intended that from time to time the transactions referred to in Special Resolutions I, II, III, V and VI shall be placed before the Company in General Meeting for confirmation. The buying expenses specified in Special Resolution IV will be recalculated from time to time according to the actual figures and if necessary the Company will be asked to adjust the expenses in accordance with the actual figures for the subsequent periods.

Special Resolution: VII

This Special Resolution is desirable so that should any Director appointed by a Special Resolution passed under Section 261 of the Companies Act, 1956, be absent from the State in which meetings of the Board are held for a period of not less than three months, an appointment may be made by the Board of Directors in his place of an Alternate Director, who may also be a person to whom Section 261 is applicable, to obviate the passing of a Special Resolution by the Company whenever such an appointment is necessary.

Special Resolution: VIII

The purpose for which this Special Resolution is proposed is to alter the existing Articles of Association relating to the appointment of Alternate Directors in order to bring it within the provisions of Section 313 of the Companies Act, 1956.

Ordinary Resolutions: I, II and III

These Resolutions authorise your Managing Agents to retain the commissions and other remuneration which they have already earned or which they may earn by reason of their acting as the Selling Agents or Managing Agents of the concerns mentioned in Resolution I, in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts have been made or entered into between your Company and other Companies within their management or in whose profits the Managing Agents participate including the concerns specifically mentioned in Resolutions I and II and as Principal Agents of the Insurance Companies mentioned in Resolution III in respect of contracts of insurance.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

Ordinary Resolutions: IV, V, VI and VII

G. Claridge & Co., Ltd., Brady Engineering Company, Ltd., "Commerce" (1935) Ltd. and New City of Bombay Manufacturing Company, Ltd., are Associates of the Managing Agents and by Special Resolutions I, II and III abovementioned are authorised to continue to do business with your Company. These Ordinary Resolutions authorise such associates of the Managing Agents to retain commission or other remuneration earned or to be earned by them respectively from the business authorised by the respective Special Resolutions.

These Resolutions are in compliance with Section 359 of the Companies Act, 1956.

The Managing Agents are interested in all the above resolutions as follows:—

As Managing Agents—G. Claridge & Co., Ltd., Brady Engineering Company, Ltd., Belapur Company, Ltd., New Great Eastern Spinning and Weaving Company, Ltd., and New City of Bombay Manufacturing Company, Ltd.

As large shareholders in "Commerce" (1935) Ltd.

As owners of the Manchester Branch of their Company.

As contracting parties in respect of equipment and stores sold to or purchased by this Company. (Special Resolution V.)

As Principal Agents of the Insurance Companies mentioned in Ordinary Resolution III.

The nature of the interest of your Directors in the above resolutions is as follows:—

Name of Director.	*Resolutions Nos.*	*Nature of Interest.*
Sir Joseph Kay, K.B.E.	Special Resolutions Nos. I to VI. Ordinary Resolutions Nos. I to VII.	Interested as Managing Director and Shareholder of W. H. Brady & Co., Ltd., and Director and Shareholder of the other Companies.
J. L. B. Heale, Esq.	Special Resolutions Nos. II and VI. Ordinary Resolutions Nos. V and VII.	Interested as a Director and Shareholder.
F. Edwards, Esq.	Special Resolutions Nos. II to VI. Ordinary Resolutions Nos. I to III and V to VII.	Interested as a Shareholder.
Kantilal Nahalchand, Esq. ..	Special Resolutions Nos. I to III. Ordinary Resolutions Nos. IV to VI.	Interested as a Director and Shareholder.
	Special Resolutions Nos. IV and V. Ordinary Resolutions Nos. I to III.	Interested as a Shareholder.
Kishore M. Premchand, Esq. ..	Special Resolutions Nos. I, II and IV to VI. Ordinary Resolutions Nos. I to V and VII.	Interested as a Director and Shareholder.
	Special Resolution No. III. Ordinary Resolution No. VI.	Interested as a Shareholder.
Nanabhoy B. Jeejeebhoy, Esq. ..	Special Resolutions Nos. II and IV to VI. Ordinary Resolutions Nos. I to III, V and VII.	Interested as a Director and Shareholder.
	Special Resolution No. III. Ordinary Resolution No. VI.	Interested as a Shareholder.
E. F. Morrey, Esq.	Special Resolution No. VI. Ordinary Resolution No. VII.	Interested as a Director.
	Special Resolutions Nos. II, IV and V. Ordinary Resolutions Nos. I to III and V.	Interested as a Shareholder.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Thirteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Tuesday the 17th July 1956, at the Registered Office of the Company at Fort Cochin, to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1956 and the reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

Note.—(i) As Mr. R. M. Saywell, one of the retiring Directors, has already completed 67 years of age, a resolution that the age limit prescribed under Section 280 of the Indian Companies Act, 1956, shall not apply to him is now necessary. Special notice of the following resolution exempting him from the age limit, as required by Section 281, is hereby given:

"Resolved that Mr. R. M. Saywell, who has completed 67 years of age, be and is hereby re-elected a Director, and that the age limit prescribed under Section 280 of the Indian Companies Act 1956 shall not apply to him."

(ii) As Mr. J. K. Hopkins, the other retiring Director, is an employee of the Managing Agents, Messrs. Aspinwall & Co. (Private) Ltd., a Special Resolution of the Company is necessary for his re-election. Special notice of the following Special Resolution for his re-election, as required by Section 261, is hereby given:

"Resolved that Mr. J. K. Hopkins, an employee of Messrs. Aspinwall & Co. (Private) Ltd., the Managing Agents of this Company, he and is hereby re-elected as a Director of this Company."

A copy of the explanatory statement under Section 173 of the Companies Act, 1956, is available for inspection of the Shareholders at the Registered Office of the Company during office hours of the Company on all working days till the date of the above meeting.

4. To appoint Auditors.

The transfer books and Register of Members of the Company will remain closed from 4th July 1956 to 19th July 1956 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,
THE PULLANGODE RUBBER & PRODUCE CO., LTD.,
Per Pro ASPINWALL & CO. (PRIVATE) LTD.,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, 21*st June* 1956.

Notices

G. CLARIDGE AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of G. Claridge & Co., Ltd., will be held at the Registered Office of the Company, Brady House 12/14, Veer Nariman Road, Fort, Bombay, on Wednesday the 1st August 1956 at 2-45 p.m. (S.T.), for the purpose of considering and if thought fit passing

A. The following resolutions as Special Resolutions:—

I. Resolved that this Company hereby approves of all contracts entered into or to be entered into with the New City of Bombay Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the sale by this Company of Printing and Stationery and Boxes on terms of ready or forward delivery and either for cash or on credit provided that the prices or amounts received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. New City of Bombay Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods by this Company.

II. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the supply or rendering of any service by the Empire Dyeing and Manufacturing Company, Ltd., to this Company including servicing and maintenance of motor vehicles and renting out godown space for storage and for the purchase from the Company of Printing and Stationery and Boxes on terms of ready or forward delivery, and either for cash or on credit, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. Empire Dyeing and Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods by this Company.

III. Resolved that this Company hereby approves of all contracts entered into or to be entered into with Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the sale to this Company of Castings, Machine Parts and Sundry Engineering Goods, for rendering of service to this Company including service as Welders. Braziers, etc., and for the purchase from this Company of Printing and Stationery and Boxes on terms of ready or forward delivery, either for cash or on credit provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. Brady Engineering Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods by this Company.

IV. Resolved that this Company hereby approves of all contracts entered into or to be entered into with "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., for the sale to this Company of advertising space and publications and purchase from this Company of Printing and Stationery and Boxes on terms of ready or forward delivery, either for cash or on credit provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that "Commerce" (1935) Ltd. shall make payment to this Company within one month from the date of supply or sale of the goods by this Company.

V. Resolved that as from 1st April 1956 Messrs. W. H. Brady & Co., Ltd., be appointed as Buying Agents for this Company, in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co., Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

Resolved further that Messrs. W. H. Brady & Co., Ltd., be reimbursed in respect of buying expenses incurred by them on all such purchases made. The buying expenses to be calculated at the rate of 1¼ per cent. of the total cost of purchases made, such rate having been pre-determined by reference to the average ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co., Ltd. (Manchester Branch), over the last three years.

VI. Resolved that the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents regularly trade or do business in, such as Mechanical Handling Equipment, Sizing Materials, General Stores and other Engineering Goods and the rendering of service in a technical capacity or in respect of which they may trade or do business in; also in respect of sales to the Managing Agents by the Company of Printing and Stationery and Boxes as may be required from time to time provided that the prices charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided the Managing Agents shall make payment to the Company within one month from the date of supply or sale of the goods, or the supply or rendering of the service, as the case may be.

VII. Resolved that whenever any Director who has been appointed by a special resolution passed under Section 261 of the Companies Act, 1956, is likely to be absent from the State in which meetings of the Board are held for a period of not less than three months, the Board of Directors shall be entitled to appoint an Alternate Director in his place and such Alternate Director may be a person to whom the said Section 261 applies.

VIII. Resolved that the Articles of Association of the Company be altered by deleting Article 106 and substituting the following:

(No. 106) "The Board of Directors may appoint an Alternate Director to act for a Director (hereinafter called 'the Original Director') during his absence for a period of not less than three months from the State in which meetings of this Board are held. Such Alternate Director shall vacate office if and when the Original Director returns to the said State. Such Alternate Director shall not require any qualification while the Original Director holds the necessary qualification."

and B. The following Resolutions as Ordinary Resolutions:—

I. Resolved that the Managing Agents, Messrs. W. H. Brady & Co., Ltd., be authorised to retain all commissions or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs, or other services for the sale, purchase, supply or rendering of which a contract has been or is hereafter entered into between this Company and other Companies which either fall within the management of Messrs. W. H. Brady & Co., Ltd., or in whose net profit Messrs. W. H. Brady & Co., Ltd., participate as Managing Agents, including Messrs. Empire Dyeing and Manufacturing Company, Ltd., Messrs. New Great Eastern Spinning and Weaving Company, Ltd., Messrs. Belapur Company, Ltd., Messrs. New City of Bombay Manufacturing Company, Ltd., and Messrs. Brady Engineering Company, Ltd.

II. Resolved that Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commissions or any other remuneration earned or to be earned by them at any time during the period they continue to act as Managing Agents of the Company, as Principal Agents of the Employers' Liability Assurance Corporation, Ltd., Law Union and Rock Insurance Company, Ltd., Concord of India Insurance Company, Ltd., and the Insurance Office of Australia Ltd., in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been, or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Companies with the Company, provided always that the amounts charged to this Company in respect of all such insurances are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

III. Resolved that this Company hereby authorises Messrs. New City of Bombay Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. I above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

IV. Resolved that this Company hereby authorises Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. II above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that this Company hereby authorises Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. III, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VI. Resolved that this Company hereby authorises "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. IV, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, *20th June*, 1956.

A member entitled to attend and vote is entitled to appoint a proxy, or when that is allowed, one or more proxies, to attend and vote instead of himself and a proxy need not be a member.

To

The Shareholders of G. Claridge & Co., Ltd., and in particular to:—

A. H. Baker, Esq., Warren Hollinshed Brady, Esq., and W. Jenkins, Esq.

EXPLANATORY STATEMENTS

Special Resolutions: I, II, III and IV

New City of Bombay Manufacturing Company, Ltd., Empire Dyeing and Manufacturing Company Ltd., Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., are Associates of your Managing Agents, W. H. Brady & Co., Ltd. The said Associates have transactions with your Company of the nature set out respectively in these resolutions. This has been the course of business for many years past and your Directors feel that it will be prejudicial to the interests of your Company to alter the procedure suddenly or unless the interests of your Company otherwise require. These resolutions have been put up for consideration in order to comply with Section 360 of the Companies Act, 1956.

Special Resolution: V

Your Managing Agents have been buying agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interests of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration. This special resolution provides for appointing the Managing Agents the buying agents of your Company in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The expenses have been calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) for the last three years.

Special Resolution: VI

This resolution has been put up in order to comply with Section 360 of the Act and approves all transactions already entered into or to be entered into between this Company and its Managing Agents in respect of purchases by this Company of various kinds of equipment and stores, which it has been the practice to purchase from the Managing Agents in the past and also for the sale by this Company to the Managing Agents of Printing and Stationery and Boxes.

It is intended that from time to time the transactions referred to in Special Resolutions I, II, III, IV and VI shall be placed before the Company in General Meeting for confirmation. The buying expenses specified in Special Resolution V will be recalculated from time to time according to the actual figures and if necessary the Company will be asked to adjust the expenses in accordance with the actual figures for the subsequent periods.

Special Resolution: VII

This Special Resolution is desirable so that should any Director appointed by a Special Resolution passed under Section 261 of the Companies Act, 1956, be absent from the State in which meetings of the Board are held for a period of not less than three months, an appointment may be made by the Board of Directors in his place of an Alternate Director, who may also be a person to whom Section 261 is applicable, to obviate the passing of a Special Resolution by the Company whenever such an appointment is necessary.

Special Resolution: VIII

The purpose for which this Special Resolution is proposed is to alter the existing Articles of Association relating to the appointment of Alternate Directors in order to bring it within the provisions of Section 313 of the Companies Act, 1956.

Ordinary Resolutions: I and II

These Resolutions authorise your Managing Agents to retain the commissions and other remuneration which they have already earned or which they may earn by reason of their acting as the Managing Agents of the concerns mentioned in Resolution I, in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts have been made or entered into between your Company and other companies within their management or in whose profits the Managing Agents participate and as principal agents of the insurance companies mentioned in Resolution II in respect of contracts of insurance.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

Ordinary Resolutions: III, IV, V and VI

New City of Bombay Manufacturing Company, Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., are Associates of the Managing Agents and by Special Resolutions I, II, III and IV abovementioned are authorised to continue to do business with your Company. These Ordinary Resolutions authorise such Associates of the Managing Agents to retain commission or other remuneration earned or to be earned by them respectively from the business authorised by the respective Special Resolutions.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

The Managing Agents are interested in all the above resolutions as follows:

As Managing Agents—New City of Bombay Manufacturing Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd., Belapur Company, Ltd., New Great Eastern Spinning and Weaving Company, Ltd.

As large shareholders in "Commerce" (1935) Ltd.

As owners of the Manchester Branch of their Company.

As contracting parties in respect of equipment and stores sold to or purchased by this Company. (Special Resolution VI.)

As Principal Agents of the Insurance Companies mentioned in Ordinary Resolution II.

The nature of the interest of your Directors in the above resolutions is as follows:—

Name of Director.	*Resolution Nos.*	*Nature of Interest.*
Sir Joseph Kay, K.B.E.	Special Resolution Nos. I, II, III, IV, V and VI.	Managing Director and Shareholder of W. H. Brady & Co., Ltd. Director and Shareholder of the other Companies.
	Ordinary Resolution Nos. I, II, III, IV, V and VI.	Director and Shareholder.
Mr. Kantilal Nahalchand	Special Resolution Nos. II, III and IV.	Director and Shareholder.
	Ordinary Resolution Nos. IV, V and VI.	Director and Shareholder.
Mr. Jehangir P. Patel	Special Resolution Nos. V and VI.	Director and Shareholder.
	Ordinary Resolution Nos. I and II.	Director and Shareholder.
Mr. Kishore M. Premchand ..	Special Resolution Nos. I, II, III, V and VI.	Director and Shareholder.
	Special Resolution No. IV.	Shareholder.
	Ordinary Resolution Nos. I, II, III, IV and V.	Director and Shareholder.
	Ordinary Resolution No. VI.	Shareholder.
Mr. J. Symon	Special Resolution No. III.	Director and Shareholder.
	Special Resolution Nos. I, II, V and VI.	Shareholder.
	Ordinary Resolution No. V.	Director and Shareholder.
	Ordinary Resolution Nos. I, II, III and IV.	Shareholder.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, *20th June* 1956.

Notices

THE NEW GREAT EASTERN SPINNING AND WEAVING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of The New Great Eastern Spinning and Weaving Company, Limited, will be held at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Thursday the 26th July 1956, at 4 p.m. (S.T.), for the purpose of considering and if thought fit passing:—

A. The following Resolutions as *Special Resolutions*:—

(*a*) Resolved that the Articles of Association of the Company be altered by substituting the phrase "Managing Agents" for the phrase "Secretaries and Agents" wherever the latter phrase appears.

(*b*) Resolved that in future W. H. Brady & Co., Ltd., shall be designated the Managing Agents of the Company.

I. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the purchase or supply of Printing and Stationery on terms of ready or forward delivery and either for cash or on credit provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

II. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the sale by this Company of Yarn, General Stores, and for the purchase by this Company of Petrol and rendering service to this Company of Cloth Bleaching, Cloth Dyeing, Cloth Mercerising, Cloth Raising, Yarn Dyeing, Yarn Bleaching and Yarn Mercerising, on terms of ready or forward delivery, and either for cash or on credit, and for the supply or rendering of any service by Messrs. Empire Dyeing and Manufacturing Company, Ltd., including servicing and maintenance of motor vehicles, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. Empire Dyeing and Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods or the supply or rendering of the service by this Company as the case may be.

III. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for sale to this Company of Castings, Machine Parts and Sundry Engineering goods on terms of ready or forward delivery, either for cash or on credit, or for the rendering of service by Messrs. Brady Engineering Company, Ltd., to this Company, including service as Welders, Braziers, etc., provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

IV. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., for the sale to this Company of advertising space and publications on terms of ready or forward delivery, either for cash or on credit, provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that as from the 1st April, 1956, Messrs. W. H. Brady & Co., Ltd., be appointed as Buying Agents for this Company, in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co., Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

Resolved further that Messrs. W. H. Brady & Co., Ltd., be reimbursed in respect of buying expenses incurred by them on all such purchases made. The buying expenses to be calculated at the rate of 1¼ per cent. of the total cost of purchases made, such rate having been predetermined by reference to the average ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co., Ltd. (Manchester Branch), over the last three years.

VI. Resolved that pursuant to provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents regularly trade or do business in, such as Universal Winding Equipment, Mechanical Handling Equipment, Sizing Materials, General Mill Stores and other Textile and Engineering Goods and the rendering of service in a technical capacity or in respect of which they may trade or do business in; also in respect of sales to the Managing Agents by the Company of Sundry Stores and such other ancillary items as may be required from time to time, provided the Managing Agents shall make payment to the Company within one month from the date of the supply or sale of the goods, or the supply or rendering of the service, as the case may be.

VII. Resolved that whenever any Director who has been appointed by a special resolution passed under Section 261 of the Companies Act, 1956, is likely to be absent from the State in which meetings of the Board are held for a period of not less than three months, the Board of Directors shall be entitled to appoint an Alternate Director in his place and such Alternate Director may be a person to whom the said Section 261 applies.

VIII. Resolved that the Articles of Association of the Company be altered by deleting Article 120 and substituting the following:—

(No. 120) "The Board of Directors may appoint an Alternate Director to act for a Director (hereinafter called 'the Original Director') during his absence for a period of not less than three months from the State in which meetings of this Board are held. Such Alternate Director shall vacate office if and when the Original Director returns to the said State. Such Alternate Director shall not require any qualification while the Original Director holds the necessary qualification."

and B. The following Resolutions as *Ordinary Resolutions*:—

I. Resolved that Messrs. W. H. Brady & Co., Ltd., be authorised to retain commissions earned or to be earned by them as Selling Agents of Messrs. New India Industries Ltd., and Messrs. English Card Clothing Company, Ltd. (Wilson and Ingham Section), in respect of goods supplied by the said concerns to this Company provided always that the prices or amounts charged to this Company in respect of such goods are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable. The commissions are at the rate of 15 per cent. for Healds, 12½ per cent. for Dobby Harness, 10 per cent. for Reeds supplied to this Company by Messrs. New India Industries Ltd., and 5 per cent on all goods supplied to this Company by Messrs. English Card Clothing Company (Wilson and Ingham Section).

II. Resolved that the Managing Agents, Messrs. W. H. Brady & Co., Ltd., be authorised to retain commission or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been or is hereafter entered into between this Company and other Companies which either fall within the management of Messrs. W. H. Brady & Co., Ltd., or in whose Net profit Messrs. W. H. Brady & Co., Ltd., participate as Managing Agents, including Messrs. Empire Dyeing and Manufacturing Company, Ltd., Messrs. New Great Eastern Spinning and Weaving Company, Ltd., Messrs. Belapur Company, Ltd., Messrs. G. Claridge & Co., Ltd., Messrs. Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., or of which Messrs. W. H. Brady Co., Ltd., are Selling Agents or Representatives, and in particular Messrs. New India Industries Ltd., and Messrs. English Card Clothing Company, Ltd. (Wilson and Ingham Section), provided the prices or amounts charged to or received by the Company are not less favourable to this Company than the market rates or which are otherwise reasonable.

III. Resolved that Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commissions or any other remuneration already earned or to be earned by them at any time hereafter during the period they continue to act as Managing Agents of the Company, as Principal Agents of the Employers' Liability Assurance Corporation, Ltd., Law Union and Rock Insurance Company, Ltd., Concord of India Insurance Company, Ltd., and the Insurance Office of Australia Ltd., in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been, or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Companies with the Company, provided always that the amounts charged to this Company in respect of all such insurances are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

The commissions, herein mentioned, are at the rate of 20 per cent. on Fire and Accident Insurance business and 15 per cent. on Marine Insurance business.

IV. Resolved that this Company hereby authorises Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. 1, Part A above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that this Company hereby authorises Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. II, Part A above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VI. Resolved that this Company hereby authorises Messrs. Brady Engineering Company Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. III, Part A, provided that the prices or rates charged to this Company are not less favourable to the Company than the market rates or which are otherwise reasonable.

VII. Resolved that this Company hereby authorises "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. IV, Part A, provided that the prices or rates charged to this Company are not less favourable to the Company than the market rates or which are otherwise reasonable.

By Order of the Board,

W. H. BRADY & CO., LTD.,
Secretaries and Agents.

BOMBAY, 21*st June*, 1956.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

To

The Shareholders of The New Great Eastern Spinning & Weaving Company, Ltd., and in particular to:—

Mrs. Allu Faredoon Dastur, Mr. Cyril M. Carvey and Mrs. Meherbanno P. Dubash.

EXPLANATORY STATEMENT

Special Resolutions: (*a*) and (*b*), *I, II, III, IV*

The present designation of W. H. Brady & Co., Ltd., in the Articles of Association of the Company is by the phrase "Secretaries and Agents," and it is desirable that in view of the definitions now applied by the Companies Act, 1956, to the expressions "Secretaries and Treasurers" and "Managing Agents" that the designation of W. H. Brady & Co., Ltd., be determined by the phrase "Managing Agents."

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., are Associates of your Managing Agents, W. H. Brady & Co., Ltd. The said Associates have transactions with your Company of the nature set out respectively in these resolutions. This has been the course of business for many years past and your Directors feel that it will be prejudicial to the interests of your Company to alter the procedure suddenly or unless the interests of your Company otherwise require. These resolutions have been put up for consideration in order to comply with Section 360 of the Companies Act, 1956.

Special Resolution: V

Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interests of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration. This Special Resolution provides for appointing the Managing Agents the Buying Agents of your Company in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The expenses have been calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) for the last three years.

Special Resolution: *VI*

This resolution has been put up in order to comply with Section 360 of the Act and approves all transactions already entered into or to be entered into between this Company and its Managing Agents in respect of purchases by this Company of various kinds of equipment and stores, which it has been the practice to purchase from the Managing Agents in the past and also for the sale by this Company to the Managing Agents of Stores and ancillary items.

It is intended that from time to time the transactions referred to in Special Resolutions I, II, III, IV and VI shall be placed before the Company in General Meeting for confirmation. The buying expenses specified in Special Resolution V will be recalculated from time to time according to the actual figures and if necessary the Company will be asked to adjust the expenses in accordance with the actual figures for the subsequent periods.

Special Resolution: *VII*

This Special Resolution is desirable so that should any Director appointed by a Special Resolution passed under Section 261 of the Companies Act, 1956, be absent from the State in which meetings of the Board are held for a period of not less than three months, an appointment may be made by the Board of Directors in his place of an Alternate Director, who may also be a person to whom Section 261 is applicable, to obviate the passing of a Special Resolution by the Company whenever such an appointment is necessary.

Special Resolution: *VIII*

The purpose for which this Special Resolution is proposed is to alter the existing Articles of Association relating to the appointment of Alternate Directors in order to bring it within the provisions of Section 313 of the Companies Act, 1956.

Ordinary Resolutions: *I, II and III*

These Resolutions authorise your Managing Agents to retain the commissions and other remuneration which they have already earned or which they may earn by reason of their acting as the Managing Agents of the concerns mentioned in Resolution I in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts have been made or entered into between your Company and other Companies within their management or in whose profits the Managing Agents participate or of which they are Selling Agents or Representatives including the concerns specifically mentioned in Resolution II and as Principal Agents of the Insurance Companies mentioned in Resolution III in respect of contracts of insurance.

The nature of the interest of your Directors in the above resolutions is as follows:—

Name of Director.	*Resolution Nos.*	*Nature of Interest.*
Sir Joseph Kay, K.B.E.	Special I, II, III, IV, V, VI. Ordinary I, II, III, IV, V, VI, VII.	Managing Director and Shareholder of W. H. Brady & Co., Ltd., and Director and Shareholder of other Companies.
Sir Jamsetjee Jejeebhoy, Bart. ..	*Nil.*	*Nil.*
Tulsidas Kilachand, Esq.	*Nil.*	*Nil.*
J. L. B. Heale, Esq.	Special I, II, III. Ordinary I, IV, V, VI.	Director and Shareholder.
K. M. Premchand, Esq.	Special I, II, III, V, VI. Ordinary I, II, III, IV, V, VI. Special IV and Ordinary VII.	Do. do. Shareholder.
N. B. Jeejeebhoy, Esq.	Special II, III, V, VI. Ordinary I, II, III, V, VI. Special IV and Ordinary VII.	Director and Shareholder. Shareholder.
E. F. Morrey, Esq.	Special II. Ordinary V. Special III, V, VI. Ordinary I, II, III, VI.	Director. Shareholder.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

Ordinary Resolutions: *IV, V, VI and VII*

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., are Associates of the Managing Agents and by Special Resolutions I, II, III and IV abovementioned are authorised to continue to do business with your Company. These Ordinary Resolutions authorise such Associates of the Managing Agents to retain commission or other remuneration earned or to be earned by them respectively from the business authorised by the respective Special Resolutions.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

The Managing Agents are interested in all the above resolutions as follows:

As Managing Agents—G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Co., Ltd.

As large shareholders in "Commerce" (1935) Ltd.

As owners of the Manchester Branch of their Company.

As contracting parties in respect of equipment and stores sold to or purchased by this Company (Special Resolution VI).

As selling agents of New India Industries Ltd., and English Card Clothing Company, Ltd. (Wilson and Ingham Section),

and

As Principal Agents of the Insurance Companies mentioned in Ordinary Resolution III.

Notices

THE NEW CITY OF BOMBAY MANUFACTURING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of The New City of Bombay Manufacturing Company, Limited, will be held at the Registered Office of the Company at Brady House, 12/14, Veer Nariman Road, Fort, Bombay, on Thursday the 26th July 1956, at 2-30 p.m. (S.T.), for the purpose of considering and if thought fit passing the following Resolutions:—

A. The following Resolutions as *Special Resolutions*:—

1. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, for the purchase or supply of Printing and Stationery on terms of ready or forward delivery and either for cash or on credit provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Compay than the market rates or which are otherwise reasonable.

II. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company for the sale by this Company of Yarn, General Stores, and for the purchase by this Company of Petrol and rendering service to this Company of Cloth Bleaching, Cloth Dyeing, Cloth Mercerising, Cloth Raising, Yarn Dyeing, Yarn Bleaching and Yarn Mercerising, on terms of ready or forward delivery, and either for cash or on credit, and for the supply or rendering of any service by Messrs. Empire Dyeing and Manufacturing Company, Ltd., including servicing and maintenance of Motor Vehicles, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that Messrs. Empire Dyeing and Manufacturing Company, Ltd., shall make payment to this Company within one month from the date of supply or sale of the goods or the supply or rendering of the service by this Company as the case may be.

III. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with Messrs. Brady Engineering Company, Ltd. an Associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, for sale to this Company of Castings, Machine Parts and Sundry Engineering goods on terms of ready or forward delivery, either for cash or on credit, of for the rendering of service by Messrs. Brady Engineering Company, Ltd. to this Company, including service as Welders, Braziers, etc., provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

IV. Resolved that this Company in compliance with Section 360 of the Companies Act, 1956, hereby approves of all contracts entered into or to be entered into with "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., for the sale to this Company of advertising space and publications on terms of ready or forward delivery, either for cash or on credit, provided that the prices or amounts charged to this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that as from the 1st April 1956, Messrs. W. H. Brady & Co., Ltd., be appointed as Buying Agents for this Company in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co., Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

Resolved further that Messrs. W. H. Brady & Co., Ltd., be reimbursed in respect of buying expenses incurred by them on all such purchases made. The buying expenses to be calculated at the rate of 1¼ per cent. of the total cost of purchases made, such rate having been predetermined by reference to the average ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co., Ltd. (Manchester Branch), over the last three years.

VI. Resolved that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents, regularly trade or do business in, such as Universal Winding Equipment, Mechanical Handling Equipment, Sizing Materials, General Mill Stores and other Textile and Engineering Goods and the rendering of service in a technical capacity or in respect of which they may trade or do business in; also in respect of sales to the Managing Agents by the Company of Spindle Tape, Sundry Stores and such other ancillary items as may be required from time to time, provided the Managing Agents shall make payment to the Company within one month from the date of the supply or sale of the goods, or the supply or rendering of the service, as the case may be.

VII. Resolved that whenever any Director who has been appointed by a special resolution passed under Section 261 of the Companies Act, 1956, is likely to be absent from the State in which meetings of the Board are held for a period of not less than three months, the Board of Directors shall be entitled to appoint an Alternate Director in his place and such Alternate Director may be a person to whom the said Section 261 applies.

VIII. Resolved that the Articles of Association of the Company be altered by deleting Article 121 and substituting the following:—

(No. 121) "The Board of Directors may appoint an Alternate Director to act for a Director (hereinafter called 'the Original Director') during his absence for a period of not less than three months from the State in which meetings of this Board are held. Such Alternate Director shall vacate office if and when the Original Director returns to the said State. Such Alternate Director shall not require any qualification while the Original Director holds the necessary qualification."

and B. The following Resolutions as *Ordinary Resolutions*:—

I. Resolved that Messrs. W. H. Brady & Co., Ltd., be authorised to retain commissions earned or to be earned by them as Selling Agents of Messrs. New India Industries Ltd., and Messrs. English Card Clothing Company, Ltd., (Wilson and Ingham Section) in respect of goods supplied by the said concerns to this Company provided always that the prices or amounts charged to this Company in respect of such goods are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable. The commissions are at the rate of 15 per cent. for Healds, 12½ per cent. for Dobby Harness, 10 per cent. for Reeds supplied to this Company by Messrs. New India Industries Ltd., and 5 per cent. on all goods supplied to this Company by Messrs. English Card Clothing Company Ltd. (Wilson and Ingham Section).

II. Resolved that the Managing Agents, Messrs. W. H. Brady & Co., Ltd., be authorised to retain commission or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been or is hereafter entered into between this Company and other Companies which either fall within the management of Messrs. W. H. Brady & Co., Ltd., or in whose Net profit Messrs. W. H. Brady & Co., Ltd., participate as Managing Agents, including Messrs. Empire Dyeing and Manufacturing Company, Ltd., Messrs. New Great Eastern Spinning and Weaving Company Ltd., Messrs. Belapur Company, Ltd., Messrs. G. Claridge & Co., Ltd., Messrs. Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., or of which Messrs. W. H. Brady & Co., Ltd., are Selling Agents or Representatives, and in particular Messrs. New India Industries Ltd., and Messrs. English Card Clothing Company Ltd. (Wilson and Ingham Section), provided the prices or amounts charged to or received by the Company are not less favourable to this Company than the market rates or which are otherwise reasonable.

III. Resolved that Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commissions or any other remuneration already earned or to be earned by them at any time hereafter during the period they continue to act as Managing Agents of the Company, as Principal Agents of the Employers' Liability Assurance Corporation Ltd., Law Union and Rock Insurance Company, Ltd., Concord of India Insurance Company, Ltd., and the Insurance Office of Australia Ltd., in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been, or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Companies with the Company, provided always that the amounts charged to this Company in respect of all such insurances are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable.

The commissions, herein mentioned, are at the rate of 20 per cent. on Fire and Accident Insurance business and 15 per cent. on Marine Insurance business.

IV. Resolved that this Company hereby authorises Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. I, Part A above, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

V. Resolved that this Company hereby authorises Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. II, Part A above, provided that the prices or amounts charged to or received by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

VI. Resolved that this Company hereby authorises Messrs. Brady Engineering Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. III, Part A, provided that the prices or rates charged to this Company are not less favourable to the Company than the market rates or which are otherwise reasonable.

VII. Resolved that this Company hereby authorises "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., to retain any commission or other remuneration earned or to be earned by them from the business as specified in Special Resolution No. IV, Part A, provided that the prices or rates charged to this Company are not less favourable to the Company than the market rates or which are otherwise reasonable.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 21st *June* 1956.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

To

The Shareholders of The New City of Bombay Manufacturing Company, Ltd., and in particular to:

Mr. Francisco Xavier Domingos Qudros, and Mr. Jose Vetarino Alvares E. Brito.

EXPLANATORY STATEMENT

Special Resolutions: *I, II, III, IV*

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company Ltd, and "Commerce" (1935) Ltd., are Associates of your Managing Agents, W. H. Brady & Co., Ltd. The said Associates have transactions with your Company of the nature set out respectively in these resolutions. This has been the course of business for many years past and your Directors feel that it will be prejudicial to the interests of your Company to alter the procedure suddenly or unless the interests of your Company otherwise require. These resolutions have been put up for consideration in order to comply with Section 360 of the Companies Act, 1956.

Special Resolution: *V*

Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interests of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration. This Special Resolution provides for appointing the Managing Agents the Buying Agents of your Company in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The expenses have been calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) for the last three years.

Special Resolution: *VI*

This resolution has been put up in order to comply with Section 360 of the Act and approves all transactions already entered into or to be entered into between this Company and its Managing Agents in respect of purchases by this Company of various kinds of equipment and stores, which it has been the practice to purchase from the Managing Agents in the past and also for the sale by this Company to the Managing Agents of Spindle Tape, Stores, and ancillary items.

It is intended that from time to time the transactions referred to in Special Resolutions I, II, III, IV and VI shall be placed before the Company in General Meeting for confirmation. The buying expenses specified in Special Resolution V will be recalculated from time to time according to the actual figures and if necessary the Company will be asked to adjust the expenses in accordance with the actual figures for the subsequent periods.

Special Resolution: *VII*

This Special Resolution is desirable so that should any Director appointed by a Special Resolution passed under Section 261 of the Companies Act, 1956, be absent from the State in which meetings of the Board are held for a period of not less than three months, an appointment may be made by the Board of Directors in his place of an Alternate Director, who may also be a person to whom Section 261 is applicable, to obviate the passing of a Special Resolution by the Company whenever such an appointment is necessary.

Special Resolution: *VIII*

The purpose for which this Special Resolution is proposed is to alter the existing Articles of Association relating to the appointment of Alternate Directors in order to bring it within the provisions of Section 313 of the Companies Act, 1956.

Ordinary Resolutions: *I, II and III*

These Resolutions authorise your Managing Agents to retain the commissions and other remuneration which they have already earned or which they may earn by reason of their acting as the Managing Agents of the concerns mentioned in Resolution I, in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts have been made or entered into between your Company and other companies within their management or in whose profits the Managing Agents participate or of which they are Selling Agents or Representatives including the concerns specifically mentioned in Resolution II and as Principal Agents of the Insurance Companies mentioned in Resolution III in respect of contracts of insurance.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

Ordinary Resolutions: *IV, V, VI and VII*

G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd., and "Commerce" (1935) Ltd., are Associates of the Managing Agents and by Special Resolutions I, II, III and IV abovementioned are authorised to continue to do business with your Company. These Ordinary Resolutions authorise such Associates of the Managing Agents to retain commission or other remuneration earned or to be earned by them respectively from the business authorised by the respective Special Resolutions.

These resolutions are in compliance with Section 359 of the Companies Act, 1956.

The Managing Agents are interested in all the above resolutions as follows:

As Managing Agents—G. Claridge & Co., Ltd., Empire Dyeing and Manufacturing Company, Ltd., Brady Engineering Company, Ltd.

As large shareholders in "Commerce" (1935) Ltd.

As owners of the Manchester Branch of their Company.

As contracting parties in respect of equipment and stores sold to or purchased by this Company. (Special Resolution VI).

As Selling Agents of New India Industries Ltd., and English Card Clothing Co., Ltd., (Wilson and Ingham Section)

and

As Principal Agents of the Insurance Companies mentioned in Ordinary Resolution III.

The nature of the interest of your Directors in the above resolutions is as follows:—

Name of Director.	*Resolution Nos.*	*Nature of Interest.*
Sir Joseph Kay, K.B.E.	Special I, II, III, IV, V, VI. Ordinary I, II, III, IV, V, VI, VII.	Managing Director and Shareholder of W. H. Brady & Co., Ltd., and Director and Shareholder of other Companies.

THE UNITED FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY *GIVEN* THAT THE Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4.00 p.m. on Wednesday the 25th July 1956, for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the half-year ended 30th November 1955.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and to fix their Remuneration.

(5) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that the appointment of Messrs. Chaudri & Co. as Sole Banians of the Company on the terms and conditions set out in an Agreement dated 27th March 1945 for the period 1st January 1945 to 31st December 1959 be and is hereby approved."

(6) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that an Agreement be entered into between the Company and Messrs. Shaw Wallace & Co. for a period of 5 years from 1st April, 1956, whereby the Company will purchase from Shaw Wallace & Co. and Shaw Wallace & Co. will sell to the Company goods of the description and quantities set out hereunder at the prices hereunder described, delivery of such goods to be as mutually agreed, such Agreement not to impose any obligation upon either Shaw Wallace & Co. or the Company for the former to sell or the latter to purchase more than the maximum quantities as specified below, but all purchases of goods in excess of such maximum quantities hereunder specified shall be purchased and sold under and in pursuance of the terms of the Agreement above referred to."

Description of Goods.	*Maximum Quantity*	*Price*
New Gunny Bags	2,50,000 per annum	Market price prevailing at dates of orders

The Transfer Register will be closed from the 18th July 1956 to 25th July 1956, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies Act, 1956, and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

CALCUTTA, 25th *June* 1956.

Explanatory Statement for item No. 5 above. Under the provisions of Section 294 of the Companies Act, 1956, the appointment of Sole Selling Agents prior to the 15th February 1955 requires to be confirmed by the Members in General Meeting.

Chaudri & Co. have been actively associated with the Company since its inception and the prosperity of the Company is in no small measure due to their industry, energy and foresight. They have acted as Sole Banians for the Company for very many years and an Agreement, officially appointing them as such for 15 years as and from the 1st January 1945, was entered into on the 27th March 1945. The remuneration currently payable to the Sole Banians under this Agreement is as follows:—

(1) Commission of ¼ per cent. on all sales of Wheat Products with an additional ¼ per cent. on all sales guaranteed by the Banians.

THE ANDHRA CEMENT COMPANY LIMITED

MR. V. RAMAKRISHNA'S SPEECH AT ANNUAL GENERAL MEETING

DDRESSING the shareholders of the Andhra Cement Company Ltd. at their Eighteenth nual General Meeting held in Madras on 16th ne 1956, Mr. V. Ramakrishna, M.A., C.I.E., .S. (Retd.), Chairman of the Company re- red to the Government's decision to reintro- ce State Trading in cement. The Company, said, had made representations to the vernment of India to the effect that the ation of price on an *ex*-works basis, envisaged der the State trading scheme, would adversely ect the economy of the Company and that equate compensatory relief should be granted it. He also added that the matter was under tive consideration of the Government.

The following is the full text of Mr. Rama- ishna's speech:

GENTLEMEN,

"I have great pleasure in extending to you hearty welcome to this, the Eighteenth Annual eneral Meeting of our Company.

"The Directors' report and the audited alance-sheet and the profit and loss account for ie year ended 31st December 1955, had been i your hands for some time and I shall take iem as read.

"You will all agree that there are indica- ons of increasing prosperity in the country ending support to a growing sense of optimism or the steady and sustained development of ndustries. The public and private sectors have ulfilled the expectations of the people in re- ard to the first Five-year Plan. I have no doubt he efforts of the Government and the people n regard to the execution of the second Five- ear Plan will meet with equal success.

State Trading

"The Government have recently decided to ntroduce a scheme of State Trading in cement as a temporary measure for the purpose of equalising the price of imported and indigenous cement. The scheme has been generally agreed to as the objectives of the Government, namely, to make up the cement deficit by imports until internal production is stepped up, to equate the price of imported and indigenous cement and to continue the rationalised movement and distribution of cement are conceived in the public interest. The scheme envisages the fixation of cement price on an *ex*-works basis, while the present price for cement was fixed on the recommendations of the Tariff Board on an f.o.r. destination basis. Your Board made representations to the Government that the fixation of price on an *ex*-works basis would adversely affect the economy of your Company and that adequate compensatory relief should be granted to the Company in fixing the f.o.r. *ex*-works price. The matter is under the Government's active consideration.

"The targets of installed and production capacity for the cement industry under the second Five-year Plan have been fixed at 16 and 13 million tons, respectively. Your Board has already taken steps to double the present capacity of your plant. The work on the expansion scheme is progressing according to schedule and your Board expects the expanded unit to go into production before 31st December 1956. Your Board is endeavouring to complete the expansion with the resources available at the disposal of the Company.

Production and Despatches

"Production and despatches of cement during the year under review were 1,19,342 tons and 1,21,939 tons, respectively, as against 1,21,537 tons and 1,21,402 tons, respectively, in the previous year.

"I will be failing in my duty if I do not bring to your notice that there has been material increase in the power tariff on account of the levy of compounded fuel surcharge. Your Board expects some relief in the power costs when the factory switches over to the hydro-electric grid, but, till then, the present high tariffs may continue. The freight charges also have been revised upwards since April 1956 and the increase in the price of coal due to the implementation of the Labour Award, and for reasons beyond the control of the management, the cost of production of cement is going up, but your Board will endeavour their best to keep the costs down as far as possible.

"The Company contributed Rs. 2,43,124 during 1955 towards rehabilitation and expansion fund, of which a sum of over Rs. 2,20,000 had been withdrawn and utilised for the purchase of capital equipment.

"The relations between the Company and its employees had been cordial. The management had given a number of concessions to the employees and your Board hopes that the employees will, in their turn, respond by increased efficiency and co-operation.

"I am also glad to report that the subsidiary company, 'Andhra Cement Construction Company (Private) Ltd.,' have taken up the contract for the construction of a bridge across the River Krishna at Nagarjunasagar Dam. The initial work taken up by the Company, *viz.*, K.C. canal, is nearing completion with satisfactory results. It is hoped that the Company, besides making good progress in the works taken on hand, will also be able to take up other major works in future and will show more satisfactory progress.

"With these remarks, I now commend the audited balance-sheet and profit and loss account together with the Directors' report for the year ended 31st December 1955 for your consideration and adoption."

(*Concluded from previous page*)

(2) Commission of 1 per cent. on all sales of old gunnies, refractions and waste products.

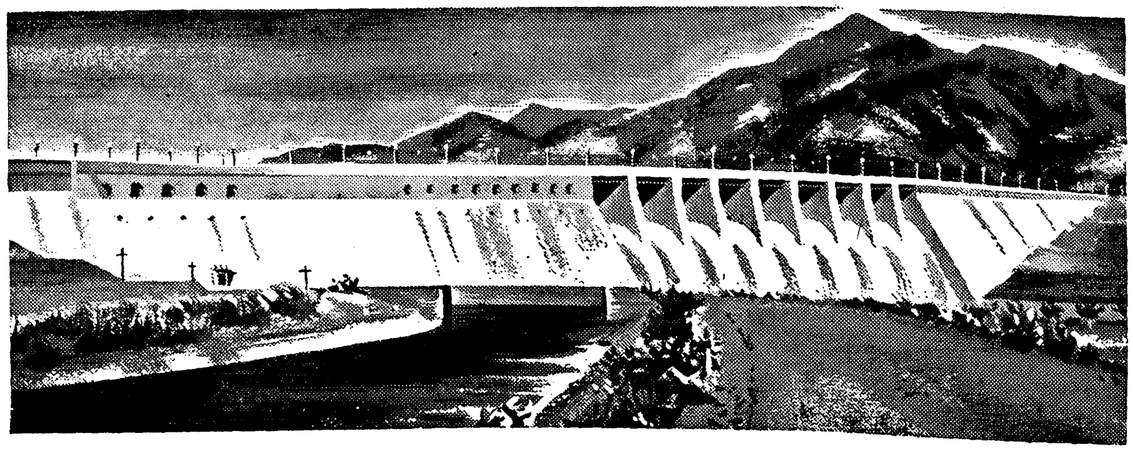
The Agreement is open to inspection by any Member of the Company at the Registered Office on any working day during normal office hours.

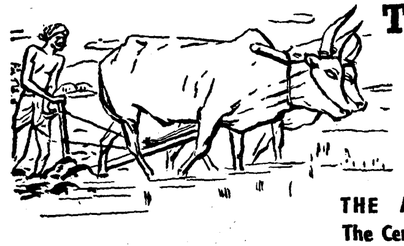
Explanatory Statement for item No. 6 above. Under the provisions of Section 360 of the Companies Act, 1956, a special resolution is required to approve a contract between a Company and its Managing Agent, or an Associate of its Managing Agent, for, *inter alia*, the sale, purchase or supply of any property, movable or immovable.

For very many years, the Company has obtained its requirements of Gunny Bags from Messrs. Shaw Wallace & Co. who, as one of the leading Calcutta shippers of Gunnies, as in a position to obtain the Company's supplies for it on favourable terms. It is therefore considered that the Company will benefit by a continuance of this arrangement.

Since the Managing Agents are a Partner in the firm of Shaw Wallace & Co., the latter might be held to be an associate of the Managing Agents within the meaning of the Companies Act, 1956, and this resolution is required to regularise this arrangement and authorise its continuance.

Mr. C. I. M. Arnold, a Director, is an employee of Shaw Wallace & Co., Ltd., and is to that extent interested in the above Agreement.





The Malampuzha Dam (Malabar District)

Built to last with ***ACC*** *cement*

OVER 64,000 tons of ACC cement were used in the construction of the Malampuzha Dam (Malabar District). Cement means better living for everyone; and the ACC is making more and more quality cement.

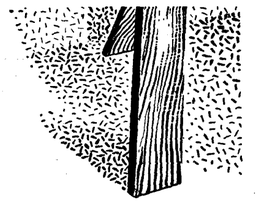
AN EDUCATION IN Oil



This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

EXPORT PROMOTION OF ORES

STATE CORPORATION TO PLAY INCREASING ROLE

THE Government of India has decided "to canalise the export of ores in a progressively increasing measure through the State Trading Corporation." The reason given for this decision makes sad reading. A Press Note issued a few days ago says that the Government has been watching for some time, somewhat anxiously, the developments which have taken place in certain countries in the matter of purchase of ores and their effects on India's foreign trade. It is convinced, it says, that the existing trading mechanism is quite inadequate to cope with these developments. Internally, the preoccupation of the control authorities with the equitable distribution of available wagon space amongst mining and trading interests has made it virtually impossible for the limited resources to be used to the maximum advantage or for economical arrangements to be made for the transportation of ores and for their handling at ports. Again, it has also not been unusual for the trading interests to enter into larger contracts which, for a variety of reasons, some within their control and some beyond, they have not been able to fulfil. This has inevitably caused inconvenience to the buyers of ores abroad and somewhat undermined their confidence in India's capacity to maintain an assured line of supply. Under current conditions, the mining industry, too, does not have adequate scope for development on sound lines.

On these grounds, the Government has come to the conclusion that it would be necessary to play a more positive role to overcome the obstacles in the way of augmenting foreign exchange earnings through the export of ores. It feels that it should help reorientating the trading in ores on more rational lines and that it could do this by arranging export of ores through the State Trading Corporation.

For the same reason, the Government has decided to permit shipments of ores only against contracts scrutinised and cleared in advance by the export control authorities. It has assured the exporters that the work of scrutiny will be carried out expeditiously and the provisions of individual contracts will be treated as confidential. Details of the licensing procedure will, it is stated, be shortly announced by the Export Trade Controllers at the ports shortly.

It is also proposed to apportion transport facilities for direct participation by the trade in the export of ores on the basis of export quotas which will be allotted by the Export Trade Controllers at ports who will notify details of the licensing procedure in due course. Allotments will be made to mineowners also on the annual average of the quantities of ore on which royalty was actually paid (excluding quantities supplied for domestic consumption) and, in the case of shippers, on the annual average of quantities actually exported, during the three calendar years 1953, 1954 and 1955. The quotas will be valid for movement on the lines on which the quota-holders' mine is situated or which have been used by the shipper in the past.

Separate Quotas

Separate quotas will be issued for manganese and iron ores and allotment of wagons for these will also be separate Quotas will not ordinarily be interchangeable, but, if a quota-holder desires to move manganese ore against the quota for iron ore, his request would be considered favourably. Quotas will be valid only for shipments of ores by the shipper or the mineowner concerned directly in his own name and on his own risk and account and no shipper will, as a rule, be permitted to make exports against quotas belonging to other firms.

The Press Note further adds that, for fulfilling its responsibility, the State Trading Corporation will rely mainly on the mining interests in the country and use the existing trading mechanism to the extent practicable. At the same time, limited opportunities are proposed to be provided to mining interests for direct participation in the export trade within the limits of the broad policy that may be laid down by the Government in this behalf.

The export policy for ores and the procedure laid down regarding quotas call for some comment. We have all along been under the impression that the State Trading Corporation will supplement and not supplant private trade. Dealing with this subject in Parliament in April last, Mr. T. T. Krishnamachari himself gave an assurance to the mercantile community thus: "The proposed State Trading Corporation will not replace the private sector and only supplement the trade envisaged in the second Plan." Again, when a member asked the same Minister, at the last meeting of the Export Advisory Council, whether the surplus coffee in the country could not be exported, the latter said that, if there was a surplus, the State Trading Corporation could deal with it. The Minister for Commerce also assured the trading community that there would be no encroachment on their present business or existing channels of trade. These assurances of the Government spokesmen have not been honoured in full, since the Government has decided "to canalise the export of ores in a progressively increasing measure through the State Trading Corporation." Such an action is bound to undermine the confidence of the public in ministerial statements. In this context, the misgivings of the Bharat Chamber of Commerce, Calcutta, are quite genuine. In a Press *communique*, the Chamber says:

"The trade was previously given to understand that the State Trading Corporation would function as a private limited company in certain commodities including iron ore, without in any way impeding the export of the existing trade channels. The Press Note seems to mark a reversal of such a policy. The indications given about the allocation of export quota to mineowners and shippers on the basis of averages for the last three calendar years, restrictions on inter-changeability of quotas for export from different ports, prescription for scrutiny of contracts, all seem to give the impression that the State Trading Corporation may squeeze the exporters to a position which would compel them to go out of the export trade and subserve themselves to the operations of the Corporation."

Inability of Trade

One of the causes for the entry of the State Trading Corporation into the export trade in ores is stated to be the inability of the trade to cope with the demand for iron and manganese ores alike. This plea sounds unconvincing and has been refuted by the Bharat Chamber of Commerce. Thus, in its *communique* referred to above, the Chamber mentions that the trade had already proved its capacity to export nearly 16 lakh tons of manganese ore from India during the year 1953-54 and the target for export at the end of the second Five-year Plan is only 15 lakh tons. Regarding iron ore, there was no export target during the first Five-year Plan, and in spite of all odds, the trade did export nearly 13 lakh tons in 1953-54 and again in 1955-56. In the opinion of the Chamber, it could not, therefore, be said, that the trade could not be expected to achieve the export target of 20 lakh tons for iron ore and 15 lakh tons for manganese ore, if it was provided with the necessary facilities. The real bottleneck in ore export has all along been in respect of wagon scarcity, and the quota system was introduced for Calcutta in 1953 with the definite purpose of ensuring wagon supply at least upto the allotted quota. This could not, however, be maintained by the Government and the railways. The Chamber fails to understand how canalisation of exports through the State Trading Corporation could increase the wagon supply.

Chamber's Appeal

Proceeding, the Chamber stresses that the Planning Commission had fixed a target of 20 lakh tons of iron ore export, only to ensure as much foreign exchange earning as possible from this item to finance the Plan and it may be jeopardised by the policy of canalisation that has been announced. In respect of manganese ore, there is absolutely no scope or reason for the entry of the State Trading Corporation to achieve the target of the second Five-year Plan, as the private trade had already proved its capacity to export more than that quantum, if transport facilities could be ensured. As regards iron ore, the Corporation may expect to export, the Committee observes, upto 7 to 8 lakh tons which is the quantum of additional exports that the second Five-year Plan has decided, even though private trade itself could do the job. If the Government's object is to earn some revenue through the State Trading Corporation, by entering the market when the international price trend is upward, it can do so, the Chamber remarks, from this additional quota. But it warns that, if in this process, it disturbs the existing channels, the country's interests may seriously suffer when the international markets show falling trends or experience a slump, as had happened at least twice during the last four or five years. Accordingly, the Chamber ends with an appeal to the Government that nothing should be done to disturb in any way the present commitments of the private trade and wagon allotments to it. Considerations of equity as well as the interests of the country's goodwill in the overseas markets demand that the existing trade channels should be utilised to the fullest extent possible.

It is evident from the remarks of the Chamber that, if the State Trading Corporation has entered the field of ore exports, it is not due to the inability of the present trade channels to fulfil its role but to enable the Corporation to make profits by entering a line in which, demand being far in excess of supplies, sales could be effected easily and profitably.

MR. N. H. TATA ON RATIONALISATION OF INDUSTRIES

Availing himself of the occasion of commenting on the I.L.O. Director-General's Report at the I.L.O. Conference now in session at Geneva, Mr. Naval H. Tata, Indian employers' delegate to the Conference, focussed the attention of the I.L.O. delegates on the efforts that were being made in India to solve the problems of labour facing it. He commended the report on its thoughtful analysis of the divergent economic tendencies in the industrially advanced and the underdeveloped countries and stated that it was a significant pointer to the direction in which one could search for a possible solution of the vexed problems confronting these regions. Mr. Tata eulogised the heroic efforts made in Asian, Middle East and North American countries at raising the standard of living of their masses and securing for them the basic requirements of life such as food, clothing and shelter. In this context, he pointed out how India was in the process of "embarking on its second quinquennial effort, more massive in size, bold in drive and enterprise and ambitious in what it seeks to achieve." He said that the success of this Plan largely depended on the happy relations between employers and employees in both the private and public sectors.

Mr. Tata drew the attention of the Conference to some of the social problems which deter the pace of economic progress described in the I.L.O. Director's Report. He declared that problems such as adjustment to technical changes, immobility of labour, difficulties in stepping up productivity, paucity of skilled workers and technicians and labour-management relations had to be faced in all their magnitude and complexities. The success of India's efforts at rapid industrialisation would depend on the extent to which the country was able to reconcile the more conflicting factors and tendencies associated with these problems. He gave the instance of the difficulties facing the country regarding rationalisation of production. He regretted that labour in India was not convinced of the need for rationalisation, though the case for it was as clear as crystal. In these days of highly competitive international markets and in the context of technological improvements all round, the need to keep pace with the progress in technology was a compelling necessity to ensure the very survival of the nation. But, if trade unions were to offer passive resistance to schemes of modernisation of equipment and rationalisation of labour on grounds of temporary dislocation of workers, then the country concerned must face the inevitable dilemma. Thus, it must elect either to produce more by modernising at competitive cost to serve the interest of consumers and maintain exports by facing mutually agreed doses of rationalisation with minimum of unavoidable unemployment and survive; or, in the alternative, to maintain uneconomic production at prohibitive cost to consumers, losing foreign markets by resisting retrenchment and modernisation unequivocally and perish. There is no reason why the worker should choose the latter alternative, so long as he is allowed to share equitably in the resultant profit arising from higher productivity, consequent on modernisation and rationalisation. And it is tragic, as Mr. Tata himself observed, to find that the worker in India is not convinced of the benefits resulting from the former choice.

Mr. Tata's contention that the industrial worker cannot continuously press for higher wages, inspired by international yardstick of social security, so long as a fair wage, as laid down by the national tribunals, is paid to him, is quite reasonable. The industrial worker will have to mark time till the efforts of the Government to create employment opportunities to the teeming millions succeed. By saying this, Mr. Tata was not for a moment suggesting a wage freeze, but was pointing out how it was difficult to reconcile an ever-growing demand for an improved wage structure from an industrial worker of an urban area with the comparatively low standard of wages, amenities and social security of the non-industrial worker of the rural area. In this connection, Mr. Tata did well to draw the attention of the Conference to the efforts being made in India to improve the lot of the rural masses through schemes of village uplift, community development projects and national extension services and the encouragement of cottage and small industries as envisaged in the Plan.

Since the I.L.O. Director-General's report dealt with the question of reducing working hours, Mr. Tata pointed out how the question had a close bearing on the national economy of underdeveloped countries such as India. He did not question the reasons for reducing the working hours, but referred to the fact that such reduction was bound to have adverse repercussions on the progress of the second Five-year Plan in India, since it would push up the costs and widen the deficit in resources, which is already causing considerable concern. Mr. Tata was, therefore, justified in suggesting that the question be studied further before taking any hasty step. Mr. Tata, however, had no objection to reduction of hours, through collective agreements, in any country where conditions warranted such reduction.

A Soviet trade mission is expected to visit Britain shortly. This follows from the agreement reached in the recent discussions in London with Mr. Bulganin and Mr. Khrushchev to develop trade between the U.S.S.R. and the U.K. Confirming this, a Foreign Office spokesman said in London last week: "It is a fact that we have welcomed in principle a suggestion from the Soviet Government that they should send a trade delegation to this country. Details are at present being worked out between the two Governments. An announcement will be made when the precise arrangements are complete."

BOMBAY FIRE AND GENERAL INSURANCE COMPANY LIMITED

SPEECH OF THE CHAIRMAN, MR. MANOOBHAI DOONGURSEE

THE Twenty-first Annual General Meeting of the Bombay Fire and General Insurance Company, Ltd. was held in Bombay on 28th June 1956, Mr. Manoobhai Doongursee, Chairman of the Company, presiding.

The following is an extract from Mr. Doongursee's speech delivered on the occasion:

"GENTLEMEN,

"I have pleasure in submitting to you the Directors' report and the audited statements of accounts for the year ended 31st December 1955.

Fire Department

"The net premium is Rs. 8,38,302. The incurred losses are Rs. 1,68,416 (being 20.09 per cent.). Commission and expenses of management amount to Rs. 4,62,719 (being 55.19 per cent. of the premium income). The fire fund now amounts to Rs. 4,35,151, being over 50 per cent. of the premium income, the carry forward to profit and loss account being Rs. 2,06,703.

Marine Department

"The net premium is Rs. 2,15,863. The incurred claims are Rs. 1,25,000 (being 57.90 per cent.). Expenses of management, together with commission, amount to Rs. 1,13,252 (being 52.46 per cent. of the premium income). The marine fund now stands at Rs. 2,15,863, which is still 100 per cent. of the premium income, the carry forward to profit and loss account being Rs. 15,815.

Accident Department

"The net premium is Rs. 1,82,627. The incurred claims are Rs. 71,976 (being 39.41 per cent.). Expenses of management and commission amount to Rs. 93,763 (being 51.34 per cent. of the premium income). The accident fund now stands at Rs. 92,814 being over 50 per cent. of the premium income, the carry forward to profit and loss account being Rs. 9,875.

Profit and Loss Account

"After closing the departmental accounts, the profit and loss account shows a credit balance of Rs. 2,82,900. Adding to this, the net carry forward from last year's account of Rs. 4,08,590 gives a total of Rs. 6,91,490 to the credit of this account. Against this a provision for taxation of Rs. 1,00,000 and a transfer to general contingencies fund of Rs. 1,50,000 have been made. This leaves a balance of Rs. 4,41,490 and your Directors recommend a dividend of Rs. 3 per share on the Rs. 40 paid-up shares, and As. 12 on the Rs. 10 paid-up shares amounting to Rs. 31,467. These dividends are payable free of income-tax, leaving a balance to be carried forward to next year's account of Rs. 4,10,023.

"In conclusion, I would like to express our thanks to our staff, branch managers and agents for their continued support."

Mr. G. M. Shah, a shareholder of the Company, then asked for information on the Company's investments in Pakistan and the state of agents' balances there. He further inquired why large amounts were transferred to general contingencies fund and also carried over in profit and loss account when shareholders were paid only Rs. 3 per share and whether Section 23A of the Income-tax Act applied to this Company. He also wanted to know whether there had been any changes in the Board of Directors, consequent upon the New India Assurance Company, Ltd., acquiring control of the share capital.

Another shareholder, Mr. B. H. Shah, inquired about the extent of "New India's" shareholding in the Company and whether there was any change in the audit fees.

The Chairman, Mr. Manoobhai Doongursee, gave satisfactory explanations regarding the points raised. He stated that the investments in Pakistan were for the statutory deposits required to be made by every insurance company in Pakistan under the Pakistan Insurance Act and the agents' balances outstanding there were quite normal. It was the considered opinion of the Board that rather than earmark the surplus to different departments and lock them up, it was better to have a floating reserve, so that the same could be availed of for future contingencies in any of the departments as and when required during the periodical cycles of bad claim experience years which are known to occur in insurance business. The Company did come under the clutches of Section 23A and had applied to the authorities for exemption. This matter was under the active consideration of the Board and legal advice was being obtained. Shareholders will be notified about it in due time.

The particulars regarding the holding of the "New India" were supplied and the shareholder was informed that the previous Board of Directors continued to manage the affairs of the Company without change.

The Directors' report and accounts were then adopted. Mr. Manoobhai Doongursee and Mr. Pallonji Shapoorji Mistry were re-elected Directors of the Company. Messrs. S. B. Billimoria & Co. and Messrs. Kalyaniwalla and Mistry, Chartered Accountants, were appointed auditors of the Company.

METAL BOX EARNS BUMPER PROFIT

SALES AT RECORD LEVEL—GOOD PROGRESS IN NEW DEVELOPMENTS

THE year ended 31st March 1956 has proved to be the most prosperous one in the history of the Metal Box Company of India Ltd. (Chairman and Managing Director: Mr. H. Chiswell Jones, Calcutta) since its conversion into a public limited company in April 1949. The Company's sales and earnings for the year under review constituted a record. The gross profit, which had gone up from Rs. 34.92 lakhs to Rs. 45.66 lakhs in the previous year (after two years of successive recession), has advanced further to Rs. 75.12 lakhs in 1955-56, thus exceeding the previous highest of Rs. 65.37 lakhs attained in 1951-52.

The net profit, after raising the provision for depreciation from Rs. 9.75 lakhs to Rs. 11.28 lakhs and that for taxation from Rs. 13.25 lakhs to Rs. 31 lakhs, amounts to Rs. 31.82 lakhs, and is also a record one. It represents an increase of Rs. 9.16 lakhs over that for the previous year and of Rs. 2.44 lakhs over the previous best earned in 1951-52. In consonance with the improvement in earnings, the Directors have doubled the allocation to the general reserve from Rs. 5 lakhs to Rs. 10 lakhs, besides raising the provision for doubtful debts from Rs. 0.64 lakh to Rs. 1.01 lakhs. The Company's prosperity has also been shared by the ordinary shareholders, the dividend to whom has been raised to 16¼ per cent. from 12½ per cent., to which level it had been stepped up last year from 10 per cent. paid consistently for four years from 1950-51 to 1953-54.

The following comparative table provides a broad idea of the Company's progress since 1952-53:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	494.55	348.69	321.05	343.68
Other income	3.15	2.95	2.50	1.91
Stocks of manufactured goods	7.01	8.96	6.39	3.62
*Raw materials consumed	271.64	191.08	183.57	200.23
Other expenses	148.99	117.46	107.82	107.72
Gross profit	75.12	45.66	34.92	39.07
Provision for—				
Depreciation	11.28	9.75	8.86	8.30
Taxation	31.00	13.25	9.41	12.85
Net profit	31.82	22.66	16.65	17.92
To reserves	11.01*	5.64*	3.60*	5.05
Dividends—				
6 per cent. preference	1.33	1.33	1.33	1.33
Ordinary	18.99 (16½%)	14.37 (12½%)	11.50 (10%)	11.50 (10%)
Carry forward	16.24	14.43	13.11	12.89

* Includes provision for doubtful debts.

The substantial increase in turnover during the year reflected in the above table was due to the increased demand for such packaged goods as paints, pharmaceuticals, baby foods, processed fruits and vegetables and lubricating oils. This demand was ably satisfied by the Company, thanks to its "efficient production and enterprising salesmanship." During the year, the Company made "solid contributions" to the food and other industries which it serves. In Bombay, it commenced manufacture of open top cans for the canning industry. The quality of production was also improved, following the opening of a new research division at Calcutta on materials and finishes.

There was also a rise in the prices of materials and cost of transport during the year and the Company had to pass on reluctantly a part of this rise to its customers. It would appear that the Company had some difficulty in obtaining adequate supply of tinplate, its main raw material. As the indigenous production of tinplate was, and still is, far below demand, the Company had to rely to a large extent on imports. At present, the Company imports 50 per cent. of its consumption of tinplate.

The Company's balance-sheet as on 31st March 1956 shows that the paid-up capital of Rs. 145 lakhs is supplemented by reserves and surplus aggregating Rs. 71.74 lakhs. The provision for taxation stands at Rs. 19.75 lakhs. The current liabilities aggregate Rs. 115.75 lakhs. There has been an addition of Rs. 13.36 lakhs to the gross block during the year, bringing the total cost to Rs. 188.38 lakhs. This has been written down to Rs. 110.37 lakhs. The current assets amount to Rs. 241.87 lakhs, of which stocks of raw materials alone account for Rs. 133.17 lakhs, having risen from Rs. 87.93 lakhs a year ago. The Company had to increase its stocks of raw materials, because of the time taken to obtain shipments from abroad, although it meant a severe strain on its finances.

The progress in the Company's new developments and new projects has been quite satisfactory, as will be seen from the following extract from the Chairman's review:

"We have made good progress in our new developments. The expansion in demand for aluminium pilferproof seals has been satisfactory and manufacture in Calcutta, foreshadowed in my last review, has now commenced with consequent savings in freight costs to many customers. Progress in the manufacture of polyethylene bags has continued, some printing machinery has been installed and more is on order. The potential demand for products made from this material is considerable and plans have been announced by two world-famous manufacturers for the production in India of polyethylene flake—the basic raw material required.

"Additional equipment for the manufacture of industrial components has now been installed—we have a substantial order book and a large number of new enquiries which augur well for the future. We are presently producing metal components for numerous manufacturers in the electrical, automobile, radio, duplicating machine and bicycle industries—the list will extend in the near future—and we are proud of the contribution we are making to the expansion of these vital industries."

The outlook for the current year is good and the Chairman hopes, by virtue of increased turnover, to maintain the profit level, notwithstanding the increased costs. The long-term prospects are also promising, consequent on the encouragement which the processed food industry is to receive under the second Five-year Plan and the increase in the allocation to horticulture from Rs. 1 crore to Rs. 9 crores.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 29 *ex-div.*, at which rate and on the basis of the dividend for the past year, the yield works out to 5.6 per cent. per annum.

SRI KRISHNARAJENDRA MILLS LTD.

The working of the Sri Krishnarajendra Mills Ltd. (Chairman and Managing Director: Mr. H. N. Pallegar, Mysore) during the year ended 31st March 1956 shows a marked all-round improvement over the past many years. The production and profits for the year under review are the highest witnessed in recent years. The gross profit has staged a rise from Rs. 17.78 lakhs (for 1954-55) to Rs. 24.41 lakhs, thus maintaining the upward trend for the fourth year in succession. The pace of increase in 1955-56 was, however, less marked than that in the previous year. The net profit, too, has staged a rise from Rs. 6.34 lakhs in 1954-55 to Rs. 8.95 lakhs even after the substantial increase from Rs. 3.44 lakhs to Rs. 10 lakhs in the provision for taxation.

The Directors have transferred a sum of Rs. 1 lakh to the general reserve which had not received anything in the previous year and have raised the allocation to the dividend equalisation fund from Rs. 30,000 to Rs. 2 lakhs. The cotton price fluctuation reserve, which was created last year with an allocation of Rs. 2.35 lakhs, has, however, not been strengthened further. The distribution to the shareholders has been raised from 10 per cent. to 14 per cent. by declaring a cash bonus of 4 per cent. This is the fourth year in succession for which the distribution to the shareholders is being stepped up. There has, however, been a change in the pattern of distribution during these years. Thus, for the year 1952-53 it was increased from 6 per cent. (made up of a dividend of 4½ per cent. and a bonus of 1½ per cent.) to 8 per cent. (dividend 6 per cent. *plus* bonus 2 per cent.). In the following year, the dividend and bonus parts were not only consolidated but the total was again raised to 9 per cent. There was a further rise to 10 per cent. in 1954-55. While raising the distribution again to 14 per cent. for 1955-56, as already pointed out, the Directors have split it up into a dividend of 10 per cent. and bonus of 4 per cent.

The following comparative table shows at a glance the progress of the Company during the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	116.75	97.52	88.95	85.39
Stocks	23.15	37.71	23.11	22.65
Expenses	93.40	80.74	80.63	80.45

Carry forward	1.09	0.28	0.26	0.23

D=Dividend. B=Bonus.

The chief contributory factor for the improvement in results during the year is the expansion in production and the increased sales effected by the mills. The sale proceeds, which had increased by about Rs. 8½ lakhs in the previous year, show a further rise of about Rs. 19 lakhs in the year under review, thus indicating a progressively rising demand for the products of the mills.

The Company's latest balance-sheet as on 31st March 1956 shows a satisfactory financial position. The reserves and surplus aggregate Rs. 18.19 lakhs, as against a paid-up capital of Rs. 36.70 lakhs. A provision of Rs. 9.27 lakhs has also been made for taxation. The current liabilities stand at Rs. 13.81 lakhs, having been reduced from Rs. 23.72 lakhs at the end of 1954-55, mainly due to the repayment of the outstanding borrowings from banks amounting to Rs. 12.83 lakhs. There have been no notable additions to the gross block which, at Rs. 81.44 lakhs at the close of the year, stands written down to a book value of Rs. 15.81 lakhs. The current assets amount to Rs. 64.56 lakhs. Investments, at Rs. 29.38 lakhs, dominates the list of current assets and are more than twice the level of the previous year. Of these investments, fixed deposits with banks amount to Rs. 15 lakhs and gilt-edged securities (at cost) Rs. 13.34 lakhs. These, together with the cash balances amounting to Rs. 2.81 lakhs, alone more than adequately cover the current liabilities and provision for taxation.

The Directors have decided to expand the productive capacity of the mills by installing an additional 12,180 spindles involving a capital outlay of about Rs. 22 lakhs. This decision is timely when viewed against the background of the expected rise in demand for cloth in the country during the coming years. Arrangements are in progress to erect and to put into commission the plant as early as possible. What is more noteworthy is that the expansion programme is being financed out of the Company's own resources without recourse to borrowing. This action of the management strengthens the view that the Company's finances are on sound foundations.

SIMPLEX MILLS

In distinct contrast to the sharp decline suffered by several leading textile counters during the past week, the shares of the Simplex Mills Company, Ltd. (Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay) turned out to be one of the few bright features on the Bombay Stock Exchange by displaying a comparatively steady tone. This was due to the confidence inspired by the excellent results of the Company for the year ended 31st March 1956 and the Directors' decision to increase the spinning capacity of the mills. The gross profit for the year has made a smart recovery from Rs. 12.24 lakhs to Rs. 30.20 lakhs, thus reversing the downward trend noted in the previous four years, when the profit had dwindled from Rs. 34.08 lakhs (for 1950-51) to Rs. 12.24 lakhs (for 1954-55). The net profit, too, has more than doubled itself; from Rs. 5.49 lakhs for 1954-55, it has shot up to Rs. 11.30 lakhs, the highest since 1950-51. The profits would have been higher still but for debiting the year's account with the bonuses to workers for 1953-54 and 1954-55.

As in the previous year, no sum has been set aside to the reserves. But, whereas in the previous year the Directors had to supplement the net profit by drawing a sum of Rs. 3 lakhs from the dividend equalisation fund in order to pay a dividend, no such transfers have been made this year. Again, the cut made in dividend last year, from 22 per cent. to 20 per cent., has now been more than made good with a distribution of 24 per cent., the highest to be paid after the increase in capital in September 1953.

The progress of the Company since 1952-53 is fully borne out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds (net)	266.36	266.09	242.83	212.61

Carry forward	0.96	0.16	0.22	0.45 (0.96)

* On the increased capital of Rs. 42 lakhs raised in September 1953.

The most notable feature disclosed by the ta above is the decline of nearly Rs. 20 lakhs in cost of cotton and staple fibre consumed duri the year under review. Of the other expens salaries and wages account for Rs. 76.12 lakhs, hav ing risen from Rs. 70.09 lakhs in 1954-55. These include a sum of Rs. 12.39 lakhs paid as bonus to workers for the three years 1953-54, 1954-55 and 1955-56 in terms of the five-year bonus pact.

The balance-sheet as on 31st March 1956 d closes a sound financial position. The paid-capital of Rs. 42 lakhs is supplemented by reserv and surplus aggregating Rs. 33.98 lakhs, of wh machinery renewal reserve accounts for Rs. 26 lakhs. The provision for taxation stands at Rs. (lakhs and the current liabilities aggregate Rs. 35 lakhs. The gross block of the value of Rs. 98 lakhs, including an addition of Rs. 7.90 lakhs dur the year, has been written down to Rs. 25.15 lakh The current assets amount to Rs. 103.65 lakhs presented by stock-in-trade amounting to Rs. 45. lakhs, stores and spares Rs. 6.63 lakhs, debts,

Points From The Chair

State Trading

"THERE is one recent development in Government policy which, in my judgment, is most disturbing. I am referring to the Government's decision to enter into trade through the formation of a State Trading Corporation. This, I regard, is a most serious encroachment on free and private enterprise in the country. Whilst the extension of the public sector to certain industrial activities may be justified on the grounds of either inadequate financial resources available to the private sector or on grounds of urgency of development, the entry of Government into the trading field is both unnecessary and unjustified. The channels of distributive trade, which today serve the entire population of the country, including the most distant and remote corners, have been built up over a period of generations through the free enterprise, not only of big distributive organisations but also of millions of small traders. We have yet to hear that the country has not been well served by these established and organised channels of trade. State trading has tremendous and widespread implications which threaten, in the ultimate analysis, disruption of the normal economic life of the country. Government are sufficiently armed with powers to checkmate any malpractices or irregularities which may be prevalent in any trade working against the interests of the community. However, a more positive, real and effective service that Government can render in making the existing trading organisations more effective and more readily serviceable, is by providing additional facilities like better road and transport communications between the rural and urban areas, licensed warehouses, and better credit facilities in the interior of the country."

A. D. SHROFF,
New India Assurance Co., Ltd.

Guest Keen Williams Ltd.

"During the year the benefits of increased demand and modernisation schemes led to the results showing a further improvement on the previous year. Shortage of raw materials prevented the plant being used to full capacity. The recently installed plant for the production of screws, safety pins, etc., and the new electric furnace producing special steels were fully extended. Indian staff and operatives have responded very satisfactorily to training and satisfactory progress has been made in giving increased authority to our Indian staff, which augurs well for the future expansion schemes the Company has in hand and will enable it to play its full part in the rapid growth of industrialisation under the Indian Government's second Five-five Plan."

K. S. PEACOCK,
Guest, Keen & Nettlefolds Ltd.

Task Before Insurance Companies

"With the increasing tempo of economic activity, there will soon be enough business to go round. But in the meantime, it is very essential that we take a long-range view of things and concentrate our energies on effecting a radical rationalisation in the working of our business by eliminating all undesirable features that hamper our progress on the right lines and might prevent us from making our proper contribution to the task of nation building. It might be necessary for companies to sub-ordinate their immediate advantage to the larger interests of the trade as a whole, in order to create healthy conditions, which would enable all type of companies—small, medium and large—to participate in the available business on a fair and equitable basis."

K. C. DESAI,
Indian Insurance Companies' Association

(*Concluded from page 40*)

posits and advances Rs. 26.47 lakhs, investments (at or under cost) Rs. 1.10 lakhs and cash balances Rs. 24.09 lakhs. Thus, the current assets provide a substantial cover to the current liabilities and provision for taxation.

The Company has obtained permission to install an additional 15,000 spindles. The Directors point out that these additional spindles will greatly assist the correct balancing of machinery in the mills and will enable a second shift to be worked in the loom shed.

The Rs. 50 fully paid-up shares are being quoted at Rs. 221 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.7 per cent. per annum, free of income-tax.

PAYMENT OF FEES TO COMPANY DIRECTORS

It has been observed that a number of companies have, soon before and after the commencement of the new Companies Act, on 1st April 1956, passed resolutions amending the relevant provisions in the articles of associations or otherwise increasing the fees payable to Directors for meetings of the Board attended by them. Referring to this, a Press note issued by the Union Ministry of Finance (Department of Company Law Administration) says that, while for the purposes of determining the overall maximum managerial remuneration in terms of section 198 of the Companies Act, such fees are to be excluded, any amendment of any provisions relating to remuneration of any director, including the managing or whole-time director, which purports to increase or has the effect of increasing, whether directly or indirectly, is hit by section 310, which lays down that the same shall not have effect unless approved by the Central Government and the amendment, in so far as it is disapproved by that Government, becomes void. The Press note adds that section 310 applies whether increase takes place as a result of amendment of the provisions contained in the company's memorandum or articles or in any agreement entered into by it, or in any resolution passed by the company in a general meeting or by its Board of Directors.

Notice

BENGAL POTTERIES, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-fourth Ordinary General Meeting of the Bengal Potteries Limited will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Tuesday the 17th July 1956, at 4-0 p.m., to transact the following items of business:—

1. To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December 1955.
2. To declare Dividend.
3. To elect Directors.
4. To appoint Auditors for the current year.
5. Placing of the appointment of Allied Distributors & Co. as Sole Selling Agents of the Company, before the meeting under Section 294(3) of the Companies Act 1956.
6. To consider, and if thought fit, pass the following Resolutions as Special Resolutions:—

   Special notice under Section 261 (2) has been received from shareholders sponsoring the Resolutions.

   (1) "Whereas Messrs. Bharat Ram Bhagat & Co., Managing Agents, are authorised by the Agreement of Managing Agency to appoint Directors to the Board of this Company and, as such, under Section 261(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Shri D. N. Sen being a Director, and hence Officer of the Jay Engineering Works Ltd., a Company under the management of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., one of the partners in the Firm of Messrs. Bharat Ram Bhagat & Co., and is also an elected Director of this Company, who retires this year by rotation and whereas it may be construed that Messrs. Jay Engineering Works Ltd. is under the management of Messrs. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri D. N. Sen be and is hereby elected a Director of this Company."

   (2) "Whereas Messrs. Bharat Ram Bhagat & Co., Managing Agents, are authorised by the Agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261 (2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Shri Bishan Swarup Agarwal being an Officer of the Jay Engineering Works Ltd., a Company under the management of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., who are one of the partners of the Firm of Messrs. Bharat Ram Bhagat & Co., and is also an elected Director of the Bengal Potteries Ltd., who retires this year by rotation and being eligible, offers himself for re-election and whereas it may be construed that Messrs. Jay Engineering Works Ltd. is under the management of Messrs. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri Bishan Swarup Agarwal be and is hereby re-elected a Director of this Company."

   (3) "Whereas Messrs. Bharat Ram Bhagat & Co. are authorised by the Agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Lala Shri Dhar is a Director of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., partner in the Firm of Messrs. Bharat Ram Bhagat and Co. and hence is an Officer of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., and is also an elected Director of the Bengal Potteries Ltd., it is resolved that the appointment of the said Lala Shri Dhar as a Director of this Company be and is hereby approved."

   Explanatory Note

   With reference to sub-section 3 of Section 261 of the Companies Act, 1956, the references which make the Resolutions necessary are stated in the body of the Resolutions. Strictly speaking, the Jay Engineering Works Ltd. is not under the management of the Managing Agents of this Company within the meaning of the Companies Act. However, it will be advisable to pass a Special Resolution as required under the Act on the presumption that Messrs. Bharat Ram Bhagat & Co., being a Firm of which Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd. is a partner, this Company and the Jay Engineering Works Ltd. may be considered to be under the management of the same Managing Agents. It is therefore considered advisable that these Resolutions be passed at the Annual General Meeting of the Company and accordingly notice under sub-section 3 of Section 261 is being given to the Shareholders.

7. To consider and if thought fit, to pass the following Resolution as Ordinary Resolution:—

   That the Registers and documents of the Company required to be maintained and disclosed under the Companies Act, 1956, an inspection of which is allowable under provisions of the said Act, will be kept open for inspection by the persons entitled thereto between the hours of 2 P.M. to 4 P.M. on any working day of the Company, except during such periods when such registers, etc., are closed under provisions of the said Act.

8. **As per Section 176(2) of the Companies Act, 1956, every Shareholder of the Company is entitled to appoint a Proxy if he does not attend the meeting personally. The Proxy need not be a member of the Company. Proxies must be deposited with the Company duly completed 48 hours before the time of the meeting.**

The Share Transfer Register of the Company will be closed from 5th July to 23rd July 1956, both days inclusive.

By Order of the Board of Directors,

BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA, *22nd June* 1956.

There appears to be some doubt in commercial quarters as to the language or languages to be employed in exhibiting the names of companies outside their offices or places of business as required by sub-section (1) (*a*) of section 147 of the Companies Act, 1956. Unlike the corresponding section (section 73) in the now repealed Indian Companies Act of 1913, which required the name of a company to be shown in the English language, section 147 (1) (*a*) of the new Act enjoins on all companies to paint or affix their names, outside their offices or places of business in the language or one of the languages in general use in the locality. Exhibition of the names in English alone without, at the same time, showing them in the local language will not, therefore, be sufficient compliance with the requirements of the section. Attention of all concerned is drawn to this change brought about by the new Act.

PROFIT OF SHAW WALLACE DWINDLES

RESULTS OF BIRD-HEILGER COAL COMPANIES

Shaw Wallace and Co., Ltd.

THE directors of the above Company (Chairman: Mr. R. H. D. Campbell, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The Company's profits after the inclusion of Rs. 3,63,651 (Rs. 3,67,879) brought forward from 1954 and after taking credit for Rs. 2,58,791 (*nil*) estimated tax recoverable are Rs. 39,49,819 (Rs. 43,00,880). After making provision for taxation amounting to Rs. 16,02,665 (Rs. 20,17,854), there remains a balance of Rs. 23,47,154 (Rs. 22,83,026). Out of this amount the directors have placed to general reserve account Rs. 3,00,000 (Rs. 4,00,000) and to investment reserve account Rs. 6,00,000 (Rs. 2,50,000). They have declared as interim dividends payable for the year 1955 on the cumulative preference shares as under:—

On the 15th July 1955, 3 per cent. less income-tax Rs. 1,65,937 (Rs. 1,65,937) and on the 15th January 1956, 3 per cent. less income-tax Rs. 1,65,937 (Rs. 1,65,938). The directors now recommend the payment of a dividend on the ordinary shares of 10 (12½) per cent. without any deduction for income-tax paid by the Company, absorbing Rs. 7,50,000 (Rs. 9,37,500), leaving to be carried forward to 1956 Rs. 3,65,280 (Rs. 3,63,651).

Trading conditions.—Generally were satisfactory throughout the year except for the recession in world prices of tea which adversely affected the tea industry as a whole. The forecast made in the directors' report on the 1954 accounts has been amply borne out by events and the Company's profits for 1955 before taxation are approximately Rs. 6 lakhs lower than the preceding year. This reduction, however, has been entirely offset by the lower charge for taxation in this year's accounts. Since the close of the year business continues at a satisfactory level, and provided this tendency is maintained, it is anticipated that the 1956 results will not show a substantial difference, notwithstanding the adverse effect of the 1956 Companies Act on the earnings from managing agencies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,00,000	Block ...	11,96,181
Reserves ...	54,13,860	Share in the firm of Shaw Wallace & Co.	*1,49,02,000
Provision for taxation ...	15,20,000	Amount due from Shaw Wallace & Co. on current account	23,67,338
Liabilities ...	1,33,18,690	Trading stock	16,20,532
Profit and loss account ...	3,65,280	Stores, etc.	96,910
		Share of profits due from Shaw Wallace & Co.	3,68,797
		Debts, deposits and advances ...	1,02,03,983
		Investments	45,33,848
		Cash ...	3,23,241
Rs.	3,56,17,830	Rs.	3,56,17,830

*Includes Rs. 39,63,686 paid for goodwill.

Borrea Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1955.

In conformity with the provisions of the Companies Act, 1956, there will be no half-yearly audited accounts in future. The directors shall, however, cause to be drawn up unaudited half-yearly draft accounts. It is their intention to declare interim dividends when in their opinion the state of the Company's affairs warrant this action.

From now on therefore the Company's accounts will be closed and audited as at the 31st December each year and the first annual closing will be for the 12-month period ending 31st December 1956.

Raisings and despatches.—77,981 (75,147) tons of coal were raised and 85,503 (78,205) tons were despatched compared with 75,187 tons raised and 69,844 tons despatched in the preceding half-year.

The Second Five-Year Plan.—In response to the Government's request for the coal industry's plans for the future, the Company signified its willingness, in certain circumstances, to increase its coking coal output substantially to meet the future demand from the steel making industry. No direct reply has yet been received from Government, but the directors have reason to believe that the colliery will be called upon to increase its output.

A new item appears in the accounts. The directors refer to an allocation of Rs. 75,000 to a coal washing plant reserve. Tests on the suitability of the colliery's coals for washing have been conducted and provided it is the Government's policy to encourage such installations in the private sector, the directors intend pursuing this matter to a conclusion.

Transport.—Although the daily average wagon figures, improved from 3,176 to 3,347 during the last two six monthly periods, it was noticeable that the industry failed to benefit by what is known as the spare capacity period which occurs normally between July and October. In 1955 there was no such period and while the railway's performance has undoubtedly shown an improvement on previous figures, the directors are yet to be convinced that transport plans are geared to the vast requirements of the second Five-year Plan.

Finance Act, 1956.—The proposed additional super-tax on dividends in excess of 6 per cent. of the paid-up ordinary share capital of the Company on this occasion amounts to Rs. 17,312.

The profit and loss account, after providing Rs. 45,717 (Rs. 37,410) for depreciation, Rs. 1,36,666 (Rs. 1,31,160) for taxation, transferring Rs. 3,000 (Rs. 6,800) to tax contingency reserve, Rs. 1,000 (*nil*) to development rebate reserve, Rs. 75,000 (*nil*) to coal washing plant reserve, bringing in Rs 75,000 (Rs. 10,000) from taxation reserve, and including the sum of Rs. 98,656 (Rs. 98,663) brought forward from last half-year, shows an available balance of Rs. 1,72,207 (Rs. 1,86,771) which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 13,000 (Rs. 13,000), in paying a dividend on the ordinary shares at the rate of 20 (20) per cent. per annum without any deduction for income-tax paid by the Company Rs. 75,000 (Rs. 75,000) and in carrying forward Rs. 84,207 (Rs. 98,771).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Block ...	15,86,195
Reserves ...	24,29,026	Capital expenditure in progress	2,70,694
Provision for taxation ...	1,28,706	Stock of coal	14,403
Liabilities ...	5,02,120	Stores ...	1,18,280
Profit and loss account ...	84,207	Debts, deposits and advances ...	11,45,421
		Investments	11,06,851
		Cash ..	53,215
Rs.	42,95,059	Rs.	42,95,059

Ondal Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1955.

Karanpura Mining Syndicate.—During the half-year ended 31st December, 1955, 75,768 (66,571) tons of coal were raised and 75,993 (65,780) tons were despatched. The Secretaries report that raisings from the Syndicate's quarries could have been larger but for the fact that transport was in short supply.

The profit and loss account, after providing Rs. 27,082 (Rs. 45,432) for taxation, and including the sum of Rs. 1,05,531 (Rs. 96,307) brought forward from last half-year, shows an available balance of Rs. 1,00,646 (Rs. 1,59,650) which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 6,500 (Rs. 6,500), in paying a dividend on the ordinary shares at the rate of 10 (10) per cent. per annum without any deduction for income-tax paid by the Company Rs. 37,500 (Rs. 37,500) and in carrying forward Rs. 56,646 (Rs. 1,15,650).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,50,000	Block ...	1,20,000
Reserves ...	12,21,853	Investments	23,11,671
Provision for taxation ...	53,115	Debts, deposits and advances ...	2,66,080
Property sales suspense	3,45,494	Cash ...	15,081
Liabilities ...	85,724		
Profit and loss account ...	56,646		
Rs	27,12,832	Rs.	27,12,832

Burrakur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

Raisings and despatches.—516,165 (510,755) tons of coal were raised and 526,106 (539,960) tons were despatched during the half-year. The figures for the previous period were 513,556 tons and 506,261 tons, respectively.

The managing agents report that three years of endeavour to persuade the Government authorities to interpret the rules relating to sand stowing subsidies more realistically are about to culminate in a revision of the rules. The delay in actual receipts of the stowing subsidy has resulted in a decline in income from this source of some Rs. 2,69,000 compared with last half-year.

Loyabad Coke Plant.—The directors report that good progress has been made with the repair programme and that 31 ovens are now in production. 40,712 (36,726) tons of metallurgical hard coke were manufactured during the half-year as compared with 36,710 tons during the previous period. Relative despatch figures were 40,491 (36,767) tons and 36,726 tons, respectively.

Finance Act, 1956.—The proposed additional super-tax on dividends in excess of 6 per cent. of the paid-up ordinary share capital of the Company has been borne by the Company and on this occasion amounts to Rs. 5,684.

The profit and loss account after providing Rs. 4,30,391 (Rs. 4,89,955) for depreciation, Rs. 5,53,475 (Rs. 4,67,365) for taxation, transferring Rs. 6,900 (Rs. 20,000) to development rebate reserve, Rs 55,500 (Rs. 65,000) to tax contingency reserve, Rs. 50,000 (Rs. 50,000) to debenture redemption reserve, Rs. 1,50,000 (Rs. 70,000) to ropeway rope replacement reserve, Rs. 25,000 (Rs. 30,000) to general reserve and including the sum of Rs. 1,40,510 (Rs. 1,49,910) brought forward from last half-year, shows an available balance of Rs. 4,89,965 (Rs. 5,61,616) which the directors propose to dispose of as follows:—

In paying a dividend on the first preference shares of 7 per cent. per annum without any deduction for income-tax paid by the Company Rs. 80,493 (Rs. 80,493), in paying a dividend on the second preference shares of 6 per cent. per annum after deduction of income-tax paid by the Company Rs. 9,956 (Rs. 9,956), in paying a dividend on the ordinary shares at the rate of 6¼ (6¼) per cent. per annum without any deduction for income-tax paid by the Company Rs. 2,84,140 (Rs. 2,84,140) and in carrying forward Rs. 1,15,376 (Rs. 1,87,027).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,18,42,280	Block ...	2,34,03,524
Debentures	20,00,000	Capital expenditure in progress	4,26,444
Reserves ...	1,79,57,502	Stock in trade ...	13,34,095
Provision for taxation ...	12,20,080	Stores and spare plant	25,58,232
Liabilities ...	46,71,346	Debts, deposits and advances ...	75,52,156
Profit and loss account ...	1,15,376	Investments	21,98,425
		Cash ...	3,33,708
Rs.	3,78,06,584	Rs.	3,78,06,584

Standard Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December, 1955.

Labour.—Under the Tribunal Award payments to workers were due to commence at the end of the period under review. Applications for this relief are continuing and payment is being made after scrutiny of claims. To-date Rs. 86,528 has been disbursed.

The profit and loss account, after providing Rs. 1,000 (Rs. 1,000) for depreciation, Rs. 16,034 (Rs. 49,992) for taxation and transferring Rs. 18,000 (*nil*) from provision for payments under labour disputes and including the sum of Rs. 7,937 (Rs. 59,039) brought forward from last half-year, shows an available balance of Rs. 57,347 (Rs. 1,27,358), which the directors propose to dispose of as follows:—

In paying a dividend at the rate of 10 (15) per cent. per annum without any deduction for income-tax paid by the Company Rs. 40,000 (Rs. 60,000) and in carrying forward Rs. 17,347 (Rs. 67,358).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ..	1,43,060
Reserves ...	13,69,395	Investments	21,66,434
Provision for taxation ...	99,524	Debts, deposits and advances	2,33,045
Liabilities ...	3,23,729	Cash ...	23,456
Profit and loss account ..	17,347		
Rs.	26,15,995	Rs.	26,15,995

Alembic Chemical Works Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bhailal Amin & Sons (Private) Ltd., Baroda) submit the audited accounts of the Company for the year ended 31st December 1955.

The net profit for the year after providing for depreciation is Rs. 7,55,805 (Rs. 5,09,694) to which should be added the sum of Rs. 16,231 (Rs 2,753) being the balance carried forward from last year, making a total of Rs. 7,72,056 (Rs. 5,12,447) which the directors recommend should be dealt with as follows:—

Transfer to provision for taxation Rs. 3,50,000 (Rs. 1,60,000), transfer to gratuity fund Rs. 50,000 (Rs. 50,000), to payment of dividend for the year ending 31st December 1955 on 25,000 ordinary shares at 8 (8) per cent. per annum free of income-tax Rs. 2,00,000 (Rs. 2,00,000), to payment of dividend for the year ending 31st December 1955 on 7,412 new ordinary shares allotted in the year 1955 at 8 per cent. per annum free of income-tax Rs. 28,518, to payment of dividend on 6¼ per cent. cumulative first preference shares Rs. 31,250 (Rs. 31,250), to payment of dividend on 5 per cent. redeemable cumulative second preference shares free of income-tax Rs. 25,000 (Rs. 25,000), to payment of dividend on 6 per cent. cumulative third preference shares Rs. 29,988 (Rs. 29,946) and balance to be carried forward to next year's account Rs. 57,300 (Rs. 16,251).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,41,200	Block ...	85,60,870
Reserves ...	30,91,533	Stock-in-trade	27,74,265
Depreciation fund	44,34,349	Stores and spares ...	18,41,061
Provision for taxation ...	12,61,805	Debts, deposits and advances ...	31,29,244
Liabilities ...	45,64,949	Investments	24,88,527
Profit and loss account ...	7,72,056	Cash ...	65,925
Rs.	1,88,65,892	Rs.	1,88,65,892

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MONEY EASES SLIGHTLY

(From Our Own Correspondent)

BOMBAY, *4th July*

The week under review witnessed signs of slight easing of stringency in the short-term money market. There was an expansion in supply, following the release of funds after the half-yearly closing of bank accounts, with the result that banks did not appear to be very keen borrowers. The demand for bank credit was, however, on a fair scale and interest rates were, therefore, generally held at previous week's levels.

Inter-bank call money was bid at 3¼ per cent., though a fair volume of business was done at 3 per cent. also. House money at call was done at 3¼ per cent. The rates for short-term deposits remained unchanged at 3¼ per cent. for one to three months and 3¼ to 3⅜ per cent. for four to six months.

The Reserve Bank's statement for the week ended 29th June 1956 shows a fall of Rs. 12.19 crores in notes in circulation. This is the third week in succession for which a sizable shrinkage in notes in circulation has occurred, the aggregate decline for the three weeks being Rs. 40.14 crores. Notes held in the Banking Department have also fallen by Rs. 1.42 crores during the week, so that the recession in total notes issued is as much as Rs. 13.61 crores. This is covered on the assets side by a decline of Rs. 9.99 crores in foreign securities and of Rs. 4.98 crores in rupee securities and an increase of Rs. 1.35 crores in rupee coin. In the Banking Department, deposits of the Central Government are lower by Rs. 5.74 crores, while those of other Governments and banks have gone up by Rs. 5.16 crores and Rs. 2.61 crores, respectively. Balances held abroad are up by Rs. 2.70 crores, while loans and advances to Government have dropped by Rs. 2.65 crores. Other loans and advances have also declined by Rs. 1.94 crores, mainly due to the fall of Rs. 4.34 crores in advances to Scheduled banks against usance bills. Investments have risen by Rs. 7.05 crores.

Minor variations are disclosed by the Scheduled banks' statement for the week ended 22nd June 1956. Demand deposits are lower by Rs. 19 lakhs, while time deposits have maintained their upward trend with a rise of Rs. 2.50 crores. Borrowings from the Reserve Bank have been reduced by Rs. 2.04 crores. Advances have declined by Rs. 2.93 crores and bills purchased and discounted by Rs. 1.30 crores. Investments are also lower by Rs. 78 lakhs and cash balances by Rs. 1.27 crores.

The Gilt-edged market was lifeless during the week under review. With banks, insurance companies and other institutions out of the market, anxiously awaiting the announcement of the terms of the new loan, which is expected before this issue goes to Press, business was almost at a standstill.

3 per cent. 1957 was unchanged at Rs. 99-13 and 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 was maintained at Rs. 98-2, 3 per cent. 1963-65 at Rs. 95-2 and 3 per cent. 1964 at Rs. 95. 3 per cent. 1966-68 held ground at Rs. 93-4 and 3 per cent. 1970-75 at Rs. 90-6. 3 per cent. 1986 Conversion Loan was placed an anna lower at Rs. 77-3. 3½ per cent. stood at Rs. 99-9 and 3½ per cent. at Rs. 98-12. 3½ per cent. 1965 was placed at Rs. 98-12 *ex*-voucher, as against Rs. 98-15 *cum*-voucher a week ago.

In the foreign exchange market, the rupee was erratic in terms of the U.S. dollar, but, on balance, it displayed a further weakness. Banks' selling rate hardened from Rs. 478½ to Rs. 478¾ per $100 and their buying rate from Rs. 474½ to Rs. 474¾ per $100. This is in consonance with the drop in value of sterling in terms of the dollar.

In New York, spot sterling receded from $2.79.13/16-2.79.15/16 to $2.79.7/16-2.79.9/16. Three months' forward moved down from $2.78.5/16-2.78.7/16 to $2.77½-2.78. Transferable sterling dropped from 277.30-277.40 cents to 277.15-277.25 cents, before closing at 277.30-277.40 cents.

LINSEED DULL

(Messrs. A. Bradly and Co.)

CALCUTTA, *2nd July*

The linseed market was dull and featureless during the week. The continued disparity between seeds and oil prices and the lack of demand for oil were reported to have forced several small crushers to suspend production temporarily. The availability of seeds remained poor, with movement of wagons restricted, but the withdrawal of buyers from the market resulted in a small price decline. Daily turnover was negligible. Oil prices registered a further fall, in sympathy with lower overseas advices. Business was confined to meagre enquiries from local consumers.

The latest available quotations are: Ready Rs. 21-4 and July-August Rs. 21 per maund.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *2nd July*

The kip market remained firm, with prices advancing by half to one anna per lb. Arrivals met with fair clearance and shippers were moderately active. Demand from the U.K. was for top grades premium marks which were in meagre supply. U.K. interests showed greater interest in lower grades as well. There was also fair local demand for inferior fifths cow hides, the prices of which hardened.

The cow calf, buff hides and buff calf section also, ruled steady, thanks to moderate inquiries and clearance.

The unadulterated skins ruled firm, while quality goat was weak and lining sheep unchanged.

BULLION MOVES IRREGULARLY

(From Our Own Correspondent)

BOMBAY, *4th July*

The bullion market displayed an irregular trend during the week under review also. The fluctuations were, however, confined to a narrow range. On balance, prices of both silver and gold were lower.

Early in the week, silver ruled firm on nervous bear covering following rumours that imports of coins from Tibet would be restricted. Prominent bull operators made heavy purchases in anticipation of a rise in prices. The absence of any reference to imports of silver in the import policy for the current half-year was interpreted in market circles to mean that the *status quo* about silver coins from Tibet would continue, that is, that the Government would allow these coins to be imported, as it has done in recent months. This line of reasoning induced the bulls to book their profits. The bears also seized the opportunity to hammer down prices. Yesterday, however, a news agency message from Kalimpong said that the Chinese authorities in Tibet had restricted the export of Chinese silver dollars. This news caused a hardening of prices again, but as it was not officially confirmed, operators gave no credence to it and the trend became downward.

Gold softened on reports of an increase in arrivals, with no corresponding expansion in offtake.

Forward silver (25th July settlement) rebounded from Rs. 171-14 to Rs. 173-12 at the opening of the week, but reacted on Monday to Rs. 171-4. After a short-lived recovery to Rs. 172-15, it again dropped to Rs. 171-5 at the close.

Ready silver (.996 Mint) came up from Rs. 172-2 to Rs. 174-4 before sliding back to Rs. 170-12. There was again a rise to Rs. 172-9, yesterday, but the closing today was lower at Rs. 170-15.

It will be seen from the rates mentioned above that ready metal which had commanded a small premium of As. 4 over the forward at the opening came to be placed at a discount of As. 6 by the close of the week. This was due to large arrivals and poor offtake.

The floating stocks of silver are placed at 600 bars. The daily average offtake during the week was 5 to 10 bars.

Gold for forward delivery (24th July settlement) moved between Rs. 100-14 and Rs. 99-11, before closing As. 15 lower at Rs. 99-12.

Ready gold suffered a loss of Rs. 2 to Rs. 100-9, on account of the dwindling offtake. This is also reflected in the narrowing of the premium over forward from Re. 1-14 to As. 13.

The floating stocks of gold are estimated at 15,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was no more than 2,500 tolas on an average.

Following the continued weakness of sterling, there was a further hardening of silver and gold prices in London during the week under review. Spot silver moved up from 78½d. to 78¾d. and forward from 78½d. to 78¼d. Gold rose sharply from 249s. 9¾d. to 250s. 2½d. In New York, silver was unchanged at 90½c.

The following comparative table shows the trend of market during the week under review:

	4-7-56	Highest	Lowest	27-6-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

SUGAR IMPROVES

(From Our Own Correspondent)

BOMBAY, *4th July*

Fully steady conditions prevailed in the sugar market during the week under review. The ex-mill quotations for Bombay-Deccan sugar registered a rise of Rs. 3 per bag, thereby recovering the entire loss suffered last week. The rise in ex-mill prices induced good buying support in the wake of reduced arrivals of indigenous sugar into the market, which were only 8,500 bags, as against 10,400 bags a week before and 14,000 bags two weeks before.

In the spot section, large grain indigenous sugar hardened by a rupee to Rs. 96-Rs. 101 per bag. Medium grain rose by a like amount to Rs. 92-Rs. 95. Small grain was throughout maintained at Rs. 90-8, same as last week. British refined sugar, however, was done slightly lower at Rs. 89, as against Rs. 89-4.

In the forward section, *Shravan* delivery contract for "C" grade sugar strengthened from Rs. 91-4 to Rs. 92.

The ex-mill rates for Bombay-Deccan sugar, as already stated, have improved by Rs. 3 per bag. There is reported to be considerable resistance to higher prices. Indications are that there may be a fall of Re. 1 per bag. The ex-mill quotation for North India sugar are a shade easier, by As. 4-As. 6 per maund. Some sugar traders feel that there is not much scope for the market to improve beyond the existing levels.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while that for foreign sugar are exclusive of the tax.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, *4th July*

A steady trend was depicted by the cotton futures market during the week under review. The steadiness was aided by two bullish factors. These were: (1)) continuance of the floor and ceiling prices of cotton at the hitherto existing levels of Rs. 495 and Rs. 820 for Jarilla fine 25/32" and Rs. 565 and Rs. 970 for Vijay fine 27/32"; (2) suspension of licences for import of cotton, excepting Egyptian Karnak and Menoufi varieties. In addition to these factors, rumours of a further *ad hoc* export quota of 5,000 bales Bengal *Deshi* also influenced the sentiment of operators favourably. There, was, therefore, good buying support which, together with some short-covering led to an improvement in prices, although, towards the close, there was a setback.

Jarilla contract (March 1957) opened the week at Rs. 657, as against Rs. 661 last week-end. Influenced by renewed enquiries, the contract advanced to Rs. 669 before finishing at Rs. 663. Vijay contract (April 1957) opened Rs. 3 lower at Rs. 819. After receding to Rs. 812 the same day, the contract recovered subsequently to Rs. 824 yesterday. At the close today, however, it was lower at Rs. 818.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	4-7-56	Highest	Lowest	27-6-56
Jarilla (March) ...	663	669	656	661
Vijay (April) ...	818	824	812	822

The most important event of the week in the spot cotton market was the commencement of trading in the non-transferable specific delivery contracts on Monday the 2nd inst. The decision to permit trading in these contracts was taken by the Board of the E.I.C.A. at its meeting held on 29th June, that is, after the Government of India announced its decision to maintain the *status quo* in the floor and ceiling prices of cotton. The decision is based on the consideration that the continuance of the two contracts working side by side is bound to restrict the scope for speculation, since the two contracts cover, between them, practically all the cotton grown in the country. In the light of this, it is believed that the Forward Markets Commission has no objection in allowing trading in new crop delivery contracts. According to cotton circles, the Commission will interfere only when there is large-scale speculation in these contracts.

Mill demand for cotton was concentrated mainly on Jarilla, Vijay, Jayadhar and Laxmi varieties. Bengal *Deshi* met with keen buying support induced by expectation of a special export quota. In the foreign section, some business was reported in American cotton at Rs. 1,380 for October-November shipment. Sudan also evoked enquiries. Africans, however, failed to elicit support and drifted lower. B.P. 52 was done at Rs. 1,610, as against Rs. 1,640 last week. Busoga was done at Rs. 1,510 (Rs. 1,515) and Jinja at Rs. 1,355 (Rs. 1,385).

The latest available prices from the Sewri market are: Bengal *Deshi* Rs. 625; Berar Jarillas Rs. 770; Khandesh Rs. 780; Vijay Rs. 960; *Oomra Deshi* Rs. 680; Moglai Rs. 685. Delivery contracts: Khandesh 197/3 Rs. 120 on; Berar Rs. 100 on; Moglai Rs. 10 on; 320F Rs. 48 on; Vijay (March) 13/16" Rs. 32 on.

The all-India final estimate of cotton for 1955-56 put the current year's area and production at 20,230,000 acres and 3,998,000 bales (of 392 lbs. each) of cotton lint, as against the partially revised estimate of 18,648,000 acres and 4,227,000 bales, respectively, for 1954-55. This shows an increase of 1,546,000 acres or 83 per cent. in area and a decline of 229,000 bales or 5.4 per cent. in production over last year. As compared with the average of the preceding five years' estimates, the current year's estimate shows an increase of 22.8 per cent. in area and 14.9 per cent. in production. Past experience shows that the official estimates of cotton are generally lower than trade estimates of yield which vary from 4.77 to 4.95 million bales for the current year, as against the partially revised estimate of 5.02 to 5.46 million bales for 1954-55.

The depressed tone of the Karachi cotton market noted last week gathered momentum during the week under review. Traders were inclined to feel that the floating stocks of cotton in the market would be considerable in the next few weeks. This view was based on two grounds. First, overseas enquiries had been very slack; only the other day, the Government of India suspended issue of licences for imports of cotton excepting Egyptian Karnak and Menoufi varieties. Secondly, the new season's cotton would commence arriving in the market. Selling pressure ensued as a result and cotton prices continued to march downwards. N.T. R.G. July delivery dropped Rs. 2-11 to Rs. 77-14 per 82 lbs. January delivery suffered a loss of As. 15 to Rs. 75-10. The prices of spot cotton also drifted lower, excepting *Deshi* styles which were fully steady. The following are the prices—in rupees per 82 lbs.—of a few popular varieties of Pakistan cotton prevailing yesterday, the figures in brackets giving last week-end rates:

Sind *Deshi* 103 (103); Punjab *Deshi* 97-8 (97-8); 4F Roller 80-2 (82-14); S.G. 82-2 (84-14); 289F N.T. Roller 82-2 (85-2); S.G. 83-10 (87-6); 289F Punjab Roller 82-2 (90-14); S.G. 94-10 (98-6).

A distinctly bearish trend was in evidence in the Alexandria cotton futures market this week. Overseas enquiries continued to be very slack. There were, besides, apprehensions of acute competition from U.S. in world cotton markets. Holders of stocks were busy liquidating them and, the buyers being reserved in anticipation of a further fall in prices, cotton futures staged a retreat. The following are yesterday's closing rates—in tallaris

per lb.—at Alexandria (figures in brackets indicate the extent of fall over the week):

Karnak: July 100.00 (—5.05); November 96.75 (—4.45); January 93.40 (—3.80); Ashmouni: August 98.60 (—6.15); October 70.17 (—2.53).

The liverpool cotton futures market ruled distinctly easy this week too. The easiness was due to persistent bearish advices from Alexandria and renewed fears of a setback in world cotton prices. These factors induced large-scale hedging and commission house selling which brought about a further fall in prices. The Egyptian contract was neglected and suffered a break. The Sudan contract also slipped down, thanks to hedging by a prominent mill group which met with limited offtake. The latest available quotations—in pence per lb.—from Liverpool are given below:

Old contract: July-August 24.30. *New contract*: July-August 27.60; October-November 24.95; December-January 24.20; March-April 23.65; May-June 23.25; July-August 23.10. *Egyptian karnak cotton*: July-August, *November-December* and January-February 54.05. *Sudan cotton contract*: July-August 46.75; September-October 45.65; November-December 45.45.

Restricted volume of transactions with narrow fluctuations in prices characterised the trading in the New York cotton futures market during the major part of the week under review. For operators preferred to await the results of the offers made on 26th June 1956 to the Commodity Credit Corporation under the new export sales programme which were made known only towards the week-end. The bids accepted resulted in a sale of 641,702 bales of surplus cotton for export at an average price of 24.40 cents per lb. The bid for next sales will open on the 10th inst. for Middling 15/16" at an average price of 25.20 cents per lb.

The C.C.C. has announced extension of the 1955 loan up to the end of 31st December next. The stocks in the loan will, therefore, become part of the C.C.C. stocks only in 1957. Accordingly, the sales catalogue on about 6 million bales currently in the loan will be prepared not earlier than next year. The addition of this cotton to the qualities offered by the C.C.C. is expected to come by instalments, commencing some time in March 1957. Meanwhile, it is believed that the U.S. Department of Agriculture is examining a proposal which seeks to replace the present competitive sales programme by a direct export subsidy.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-7-56	26-6-56	19-6-56
Spot	36.80	36.80	36.90
July	34.62	34.60	34.48
October	32.65	32.73	32.37
December	32.73	32.67	32.45

IMPORT POLICY FOR YARN

(From Our Own Correspondent)

BOMBAY, 4th July

The import policy for the current half-year announced on Saturday last would appear to have had no significant effect on the yarn market, which continued to rule dull this week also. This is not surprising, considering that the policy reveals no notable change with regard to rayon yarn imports. Thus, the quotas for the import of rayon yarn (per cent. of the face value of licences) for 150 and 120 deniers bright yarns remain unchanged at 25 and 10, respectively. The only change effected is that up to 5 per cent. of the face value of licences for the import of rayon yarn can be utilised for importing acetate yarn of 120 and 150 deniers. The import quota for cotton yarn also remains unaltered, barring 60 counts and above (single and folded), the quota of which has been raised from 60 per cent. to 75 per cent. The import policy did not, therefore, enthuse the operators, so much so that deals put through were limited and prices moved narrowly.

The rayon yarn section ruled somewhat firm. The firmness was aided by expectation of enlarged demand from consuming centres. The expectation was based on the view that, with the 50 per cent. cut in imports of rayon fabrics, the indigenous industry would be able to utilise a larger portion of its installed capacity which is now remaining idle on account of competition from imported fabrics. Buying support ensued as a consequence and spot rayon yarn prices tended to look up. 120 Japan hardened by nine pies to Rs. 3-12-6. 120 Italy and 150 Italy gathered half an anna each to Rs. 3-12-6 and Rs. 3-15, respectively. 150 Japan was better by three pies at Rs. 4-2. Indigenous yarns, however, were easy. National Rayons 120 Bt. cones 1st grade lost six pies to Rs. 3-9-9 and 150 Bt. cones 1st grade three pies to Rs. 3-7-3. Snia rayon yarn (120 dull cones) for August delivery also eased by Rs. 2 to Rs. 782.

Thanks to absence of buyers leading to accumulation of heavy stocks with traders, the staple fibre yarn section presented a weak trend. Under the influence of heavy selling orders, 40×2 staple fibre yarn for July delivery dropped Rs. 13 to Rs. 642. The spot prices also staged a retreat. Among indigenous yarns (40×2), Kohinoors receded by nine pies to Rs. 3-7-9. Both Citys and Centurys declined by six pies to Rs. 3-6-6. New Greats shed three pies to, Rs. 3-6-6. Foreign yarns (80×2) changed hands at lower prices. Paramounts slipped by As. 2 to Rs. 6-4. Sulcos decreased by an anna to Rs. 7-2. Fujis lost a like sum to Rs. 6-5.

Following the grant of higher import quota for 60s and above, cotton yarns exhibited an easy trend. Even the Government's decision to continue the present policy of allowing some exports of yarn failed to influence the sentiment of operators favourably, for there were reports that shippers had not been able to ship more than 30,000 bales of yarn out of the licensed quantity of 65,000 bales. Sixty counts Raghuvanshis declined by As. 8 to Rs. 57. Moderns eased by As. 4 to Rs. 62. Finlays were quiet at Rs. 61. Eighty counts Moderns and Mahendras receded by As. 4 each to Rs. 69 and Rs. 72, respectively. Among 40s, Minaxis dropped As. 10 to Rs. 28-2. Moderns gave way from Rs. 28-6 to Rs. 28-2. Twenty counts were quiet, Finlays being quoted at Rs. 18-2 and Moderns at Rs. 18-4. Among 10s, Podars were dull at Rs. 13-14, while Moderns gained an anna to Rs. 14-2.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	4-7-1956	27-6-1956	20-6-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 4th July

With the exception of a brief spell of activity during mid-week, the oilseeds market presented easy conditions during the week under review. In the initial sessions, bearish advices from overseas markets and rumours of a release of about 10,000 tons of castor oil from the U.S. surplus stocks unnerved operators. The selling pressure that appeared as a result pushed down values of both seeds and oils all round. This decline was, however, temporarily arrested mid-week as a result of short-covering and some bull support induced by expectations that Japan was interested in Indian castor oil. The expectations not having materialised, the market resumed once again on a weaker note on unloading by disappointed longs. There was also a persistent flow of selling orders from Gujerat. Buyers were, therefore, reserved. In the result, the market wound up the week with all-round losses.

The firmness noted in castorseeds September contract last week yielded place to weakness early this week. The contract opened at Rs. 140-6. After temporarily moving to Rs. 140-10, the highest for the week, it steadily declined under the influence of bearish advices to touch a low of Rs. 131 on the 30th ultimo. The low level attracted some speculative support inspired by rumours of Japan's interest in castor oil. The quotation, therefore, improved to Rs. 138-10 yesterday. The improvement, however, proved short-lived. Persistent selling from Gujarat took the rate down to Rs. 133-8, at which level it finished the week. In the spot section ready F.A.Q. was, however, a shade better at Rs. 26-12, as against Rs. 26-4. But Madras quality lost ground from Rs. 27-2 to Rs. 26-12. Castor oil B.S.S. shed As. 6 to Rs. 15-10. Commercial oil receded from Rs. 14-8 to Rs. 14-6.

On continued reports of good rains in the producing areas, the groundnut section struck a bearish note. In the futures market, February delivery, after moving up temporarily from Rs. 134-10 to Rs. 137-4, developed a weak tendency on sustained bear selling and reached a low of Rs. 131-8 before closing at Rs. 132. Bold F.A.Q. retreated from Rs. 33-4 to Rs. 32-8. June-July delivery lost As. 6 to Rs. 32-8. Coromandel quality declined from Rs. 35-4 to Rs. 34. Groundnut oil ex-mill was done at Rs. 17-10, as against Rs. 17-12, and *railway receipt* at Rs. 17-6, *as against Rs. 17-12.*

The linseed section moved in sympathy with the downward trend of the market. Bold ready was marked down from Rs. 29 to Rs. 28-4. Indore variety was done at Rs. 28-8, as compared with Rs. 29-2. Satna receded from Rs. 27-2 to Rs. 26-4. Linseed oil had a few deals at Rs. 15, as against Rs. 15-6.

Among other seeds, *Kardi* seeds lost As. 8 to Rs. 18-8 and *Niger* seeds a like amount to close at Rs. 28-8.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	4-7-1956	27-6-1956	20-6-1956
	Rs. a.	Rs. a.	Rs. a.

PEPPER FEATURELESS

(Messrs. Parekh & Co.)

BOMBAY, 4th July

Malabar black pepper during the week ruled featureless with very small fluctuations, in the absence of any encouraging overseas demand. Alleppey moved between Rs. 725 and Rs. 712½, while garbled at Cochin between Rs. 126 and Rs. 122. A special feature of the market in all the primary centres is the absence of former nervousness on the part of growers and assemblers who entertain the view that the price has reached almost the bottom and if it declines, it will not be more than 2 to 3 cents (Rs. 50 to Rs. 75).

In spite of heavy arrivals of pepper in Singapore, the market there was reported steady, as almost all the imports from Sarawak and Banka were readily absorbed. Singapore was reported to have refused to offer anything less than $0.23½ per lb. c. & f. New York to U.S. Experienced observers feel that foreign demand will soon come in as generally dealers in New York start buying for their fall requirements after the holiday on the 4th July (Independence Day).

The recent typhoon in Travancore-Cochin areas is reported to have caused some damage to paddy, tapioca and plantain crops. However, no news as to the damage to pepper crop has so far been received.

In the A.S.T.A. section, no noteworthy business is said to have passed, price for July-Aug-Sept. having moved *narrowly* from $0.27½ to $0.27¾. In the delivery section, business remained thin with narrow fluctuation.

Following are today's nominal quotations: Ready delivery Rs. 98 (as against Rs. 98 a week ago) per *Bengal maund*; July Rs. 687½-672½ (Rs. 677½-682½) and August Rs. 672½-677½ per candy of 5½ cwts.

QUALITY OF TEAS POOR

[Messrs. Forbes, Ewart & Figgis (*Private*) *Ltd.*]

COCHIN, 29th June

Approximately 1,250,000 lbs. were on offer in sale 17 which was held on Tuesday, 26th June. Quality again showed a decline and the offerings included a number of rush teas which were rough, stalky and unsorted. High grown quality was also rather plain and good liquoring teas were scarce. The sale opened to rather more demand for low grown and low medium teas. Prices, however, followed the decline in quality and these types were irregularly As. 2 lower. There was a useful enquiry for better liquoring teas and, although buyers were selective, these sold well. All thick liquoring teas were sought after and sold around valuations. Middle East type fannings met with some competition and must be quoted dearer. Whole leaf teas were well supported and prices for the better sorts were occasionally dearer. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 5 0
Low medium B.O.P.	1 7 0
Medium B.O.P.	1 8 0
Good B.O.P. ... ... Rs. 2 1 0 *to*	2 3 0
Well-made black leaf O.P.	N. 2 2 0

London Market: *Sale of 25th June 1956*:—Commonest irregular and easier. All others firm.

Sale of 26th June 1956:—Good liquors firm. Thin easier.

Colombo Market: *Sale of 25th June 1956*:—Dusts firm. Others declined 10 to 20 cents. Stalky sorts neglected.

Sale of 26th June 1956:—Low-grown firm. Others quiet. Demand, prices lower. Poor liquoring and stalky sorts neglected.

Calcutta Market: *Export*:—24,000 packages. Rather better demand with withdrawals on plain and low medium teas rather less. Heavy C.T.C. types and better liquoring teas sold very well up to rupee over valuation. Whole leaf grades normally dearer. Darjeelings irregular and easier.

Internal:—21,000 dust. Good general demand tending easier towards close. Middle East and C.T.Cs strongest feature. Mediums and low mediums about steady, but poorer liquoring sorts one anna to As. 2 easier. Residue types irregularly easier.

Dust Sale 'M':—The offerings in dust sale M which was held on Thursday, 28th June, aggregated 950,000 lbs. Considering the heavy quantity on offer, the demand was good, but prices were irregularly As. 3 lower. Better liquoring dusts were well supported, but there was less demand for Middle East types. Milled dusts sold well at lower rates.

Export Quota:—Some quantities of special licence have changed hands at 2 pies, but transactions are drawing to a close. 1956-57 export quota is quoted at 31-30 pies.

Forthcoming Auctions:—Sale No. 18 will be held on Tuesday, 3rd July. Dust sale N will be held on Thursday, 12th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 18:—1,500,000 lbs. Useful demand. Common and low medium As. 2 to As. 3 lower. Medium sorts one anna to As. 2 easier. Good demand for better liquoring teas and all Middle East types whole leaf fully firm."

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, 3rd July

After an early decline, prices of jute goods recovered, while raw jute prices were steady throughout the week. The market thought that the reduction in production now proposed as from the week commencing 16th July would be insufficient to have any significant effect in the nature of mills' stocks of manufactured goods. The re-sealing of 2½ per cent. of the total loomage would reduce production only by about 3,000 tons a month. This way of thinking is easily understandable when it is recalled that the monthly increase in stocks since February, when 5 per cent. of the looms was unsealed, had worked out to be 7,425 tons. Such an analysis in the market caused prices to fall, but, when it was found that the decline did not have any effect whatsoever on raw jute prices, a slow recovery set in. There was a fair covering demand, and speculators became active.

There was a strong feeling in the market that there would be perfect justification for sealing a further 2½ per cent. of the looms. That would bring down the production by 6,000 tons a month, and then demand would be equivalent to production. The total increase in production in the months of February, March, April and May was 20,000 tons, and, even if 5 per cent. of the looms had not been unsealed in February last, stocks would have increased by 9,700 tons in the four months.

Earlier in the week, ready B. twills fell to as low a rate as Rs. 102-12 from Rs. 103-8. This followed heavy selling by speculators, who did not believe that prices would move up in the near future. On the other hand, reports from overseas had suggested that, if and when official minimum prices were fixed, sales of substitutes such as paper and cotton bags would increase. These reports also contributed their share to the decline in prices. However, forward positions were paid better attention, as reports that the jute crop would not turn out to be as good as earlier expected, encouraged buying. Thus, while the ready goods fell as indicated above, in the same period October-December B. twills rose to Rs. 103-12 from Rs. 103-4. Covering demand soon followed to raise the ready position to Rs. 104 by Friday. October-December goods advanced further to Rs. 105-0. The market was closed on Saturday on account of it being a Bank holiday. Yesterday, there was further improvement in ready B. twills to Rs. 104-8. The decline in hessian prices was narrower. Ready 40" 10 oz. hessian opened at Rs. 38, and soon gave way to Rs. 37-12. By the week-end, a recovery set in and the rate was pushed up to Rs. 37-14. October-December goods, after falling to Rs. 37-14 from Rs. 38-1, were quoted higher at Rs. 38-2. July-September regained to Rs. 38-6. The ready position made a further recovery yesterday to Rs. 38-2, the 8 oz. hessian being priced at Rs. 31-8.

Raw jute prices were better. Most constructions of the old crop improved by Re. 1 per maund, both middles and bottoms, while the quotable new crop constructions for forward August-September delivery advanced by As. 8 per maund. Thus, while Assam upper old crop middles for delivery July-August rose to Rs. 31-8 from Rs. 30-8 and bottoms to Rs. 28-8 from Rs. 27-8, Indian northern bottoms new crop for August-September delivery picked up to Rs. 27 from Rs. 26-8. The main cause for this higher trend was reports of floods from Pakistani and Indian districts and of consequent damages to crops. Reports of this kind are usual at this time of the year, and, even if damage to jute plants may be insignificant, such reports cause an uptrend in prices. In fact, it is stated that actual damage to crops is little, but it should be noted that heavy rains are continuing and between now and harvest anything can happen. This apprehension made sellers reserved, but mills bought only small quantities of the new crop on the basis of Rs. 27 a maund Indian northern bottoms. As from 16th July, mills would require less raw jute, that is, by 60,000 maunds per month, and this factor was completely offset by reports of floods and damages to crops. The latest quotations of the old crop July-August delivery are as follows:

	Middles Rs. a.	Bottoms Rs. a.
Pakistani:		
Northern	31 8	28 8
District	33 8	30 8
Indian:		
Northern	33 0	30 0
Assam Upper ...	31 8	28 8
Assam Lower ...	31 8	28 8
Daissee	32 0	29 0
Murshidabad ...	31 0	28 0
Western	31 0	28 0
Jungli	30 8	27 8
Orissa	32 0	29 0
Uttar Pradesh ...	30 8	27 8
Daissee *mesta* ...	30 0	27 0
Bimli f.a.q.		Rs. 27 0

Pucca bales 1st marks ready Rs. 160-0 per bale (Rs. 177-8 a week ago).

HEAVY WITHDRAWALS OF POORER TEAS

(From Our Own Correspondent)

CALCUTTA, 3rd July

During the export tea sale yesterday, once again quality teas continued to get most of the buyers' attention. Demand was better all round; nevertheless, there were heavy withdrawals of the poorer varieties. That similar conditions were in evidence at last Saturday's sale in Mincing Lane was also a factor which influenced the local trend. Note was taken that stocks in British warehouses as on 22nd June amounted to only 121.3 million lbs., which represented a small increase over the previous week's figure, although they were lower by as much as 26.7 million lbs. compared to the stocks of the corresponding week of last year. All these encouraged the hope that better demand would continue to prevail in London's tea sales for some time to come.

Offerings during yesterday's sale here amounted to 25,400 packages. Keen competition was in evidence in C.T.Cs, the very best sorts of which were absorbed in no time. All good liquoring teas advanced in prices. Fractional rise in prices was also recorded in low medium teas. However, most of the plain and thin teas had to be withdrawn. Well-made whole leaf grades were taken steadily, but there was less demand for the plain and stalky teas. Among Darjeelings, the flavoury lots continued to be in the forefront, with others being irregular. Tippy teas sold well. The quotations were: best C.T.C. Assam Rs. 3-8 to Rs. 4, medium Assam B.P. Rs. 2-4 to Rs. 2-6, clean black pekoe Re. 1-12 to Re. 1-14, and plain B.P. Re. 1-7-6 to Rs. 1-8-6.

Offerings during the last week's sale for domestic consumption amounted to 20,688 chests. Buyers were discriminatory to quality, and the offerings were mostly of plain and unattractive old season's teas. For these reasons, the market which opened with a good general demand, developed weakness as the auctions progressed. Medium and low mediums were steady, while the very best C.T.Cs and black leafy exportable teas were the strongest features and realised higher prices. Teas of poor descriptions declined. Quotations which were nominal were: best Assam C.T.C. Rs. 2-6, medium Assam grainy dust Re. 1-7, and medium Dooars Re. 1-6.

There was fair demand at irregular rates for the leaf grades offerings aggregating 170 packages.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 2nd July

Following the Government of India's determination to curb any marked rise in the prices of foodgrains in the country by selling a sufficient quantity from its reserve stocks and strengthening the reserves by expediting imports, foodgrain prices ruled quiet during the week. With favourable weather conditions all over the region and with extensive sowings of the Sawani crop, the trend of foodgrains market was also bearish. Up to 1st June, the Government had purchased 837,000 tons of wheat in foreign countries, out of which 210,000 tons had already reached India and arrangements were nearly completed for continued flow of imported wheat. The Union Food Minister has completely ruled out the possibility of reimposing controls.

Wheat prices at Hapur ruled quiet at Rs. 13-12 per maund for average quality. Local arrivals went down to an average of 500 maunds, due partly to rains and partly to unsatisfactory yield of last *rabi* crop. Farm quality was in request from Madras side and the week's offtake aggregated 4 *khaties* and local stock was put at 83 *khaties*. Rice prices also ruled quiet and, in order to improve its stock position, about 45,000 tons of rice from Burma are expected to reach the country by end of July, out of the two million tons contracted to be purchased from that country in the next five years.

Gram prices backed away slightly, due to increased flow of arrivals from the Punjab, which raised the local stocks to 51 *khaties*. Barley prices, however, were steady, owing to poor stock position, but *bejhar* prices lost As. 2 per maund during the week. A fall in demand accounted for the decline in *jowar* and *guwar* prices. The prevailing rates on Saturday were: Gram local Rs. 10-8, punjabi Rs. 10-12, *barley* Rs. 10-12, *bejhar* Rs. 10, *jowar* Rs. 16 and *guwar* Rs. 10-4 per maund. The market remained closed today as a protest against the imposition of sales tax by the State Government.

Pulses exhibited an easy trend during the week. *Arhar* prices lost As. 8 per maund, influenced by overall increase in production in the country in 1955-56, being 1,814,000 tons, as against 1,687,000 tons last year. The demand at the prevailing rates was also slack. Prices of peas eased during the week in line with *arhar* prices, despite some demand in the form of pulses and for white quality from Madras. Other pulses prices ruled quiet and the prevailing prices were: Peas *dara* green Rs. 10-2, white Rs. 11-6, *arhar* Rs. 11, *urd* Rs. 17-8 to Rs. 18-8, *moong* Rs. 14-4 and *masoor* Rs. 12-4 per maund.

After an early fall in line with ready prices, pulses futures improved towards the week-end on bull support from Punjab. The latest closing quotations on Saturday were: Peas *bhadon* Rs. 10-5, white *bhadon* Rs. 10-12, *arhar bhadon* Rs. 11-0-10½, *urd maha* Rs. 13-12-6 and *guwar maha* Rs. 8-3.

"GUR" DEPRESSED

(From Our Own Correspondent)

HAPUR, 1st July

Trading in the sugar market was dull during the week under review. Supplies were plentiful, following the release of a fresh quota of 150,000 tons of sugar for free sale by the Government of India. The total releases since the beginning of the season comes to 968,000 tons. The sugar factories produced 1,825,000 tons of sugar up to 15th June. Factories in west U.P. are still continuing their crushing operations, despite heavy deterioration in the quality of cane, but, latterly, due to very good rains and consequent transport difficulties in rural areas, heavy quantity of cane remain uncrushed and the factories will have to close their season within a few days. The demand for sugar from Madras side has now subsided, following heavy despatches in the form of sugar specials from factories in west U.P., but, of late, there has been reported a revival of demand from Bombay and Calcutta and sustained buying enquiry from Assam.

The latest mill delivery prices of sugar at Hapur are: Jaswant Rs. 28-6, Simbhauli Rs. 28-4, Mowana Rs. 28 to Rs. 29, Daurala Rs. 30-8, Amroha Rs. 28-2, Bijnore Rs. 28-2, Mansoorpur Rs. 30-8, Rampur Rs. 31-6; retail Rs. 30-8, *khandsari* Rs. 23 to Rs 27 per maund.

Ready *gur* prices ruled dull and depressed. The consuming areas of *Gujerat* were reported to be getting their supplies from markets in the South, where heavy stock position was reported. The week's offtake was small and local stock was put at 50,000 maunds. Dry quality was transacted at Rs. 10-6 and wet quality at Rs. 9 per maund. The standing cane crop is reported to be progressing under favourable conditions.

Forward *Fagun* delivery also moved narrowly during the week on speculative bouts of buying and selling. It was quoted at Rs. 9-5-9 on Saturday.

* * * *

Under the Sugar Workers' Housing Scheme of the U.P. Government, considerable progress has been achieved. Out of the construction of 1,150 quarters undertaken by 52 sugar factories in the State, 1,040 quarters had been completed in all respects upto 15th June 1956, while 34 quarters had reached up to plinth level, 72 up to roof level and 28 were below roof level. Until that date, a sum of Rs. 23,22,489 had been paid to various factories in the State towards the cost of construction.

HIDES DULL

(From Our Own Correspondent)

KANPUR, 1st July

The hides and skin market ruled dull throughout the week under review, thanks to lack of buying interest. Arrivals were not considerable, because the rains had affected the transport system. As demand from overseas was slack, transactions were mainly confined to buff. Madras shippers were indifferent, whereas Delhi parties paid attention to high grade sheep.

The latest available quotations are: Cow wet salted 1st grade Rs. 280 and 2nd grade Rs. 250 per score; buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 175 and 2nd grade Rs. 145 per 100 pieces; sheep 1st grade Rs. 130 to Rs. 140 and 2nd grade Rs. 110 per 100 pieces.

CHANGE-OVER TO DECIMAL COINAGE

Steps which the State Governments should take for the introduction of the decimal coinage on 1st April 1957—the appointed day—were discussed at a meeting held on the 20th June in the Ministry of Finance with the representatives of some of the State Governments. Mr. H. M. Patel, Secretary, Ministry of Finance, Department of Economic Affairs, presided.

The principal problems concerning the introduction of decimal coins that were dealt with at the meeting were: (1) Making of sufficient number of coins by the mints so that an appreciable number could be put into circulation on 1st April 1957; (2) popularisation of the new coins; and (3) making people familiar with the conversion rates which is essential during the transition period when both the sets of coins—the existing as well as the new ones—would continue to be in circulation.

It was explained on behalf of the Ministry of Finance that the India Government Mints at Calcutta and Bombay had already started producing the coins and before the appointed day, sufficient quantities of such coins would be put into circulation.

For popularisation of the new coins, a number of steps were proposed to be taken by the Ministry of Information and Broadcasting and the State Governments. Apart from using the various media of publicity, the Ministry of Finance is arranging, it is stated, to provide demonstration sets of new coins at various central places, such as information centres, primary and secondary schools, for spreading the knowledge of the new coins among the masses. The Community Projects Administration will also help in spreading the knowledge through the agency that it has set up in rural areas. The Ministry has already prepared two conversion tables which would be distributed in very large numbers in the major regional languages.

On a question whether private publishers could publish the conversion tables on their own in calendars, diaries and other literature of mass communication, it was pointed out on behalf of the Ministry of Finance, that there was no objection to do so and such private publishers would be well advised to get authentic copies of conversion tables for publication.

Besides the above basic problems, introduction of the decimal coins would naturally involve change in the accounting in all Government and also in private accounting in due course. So far as Government accounts are concerned, they will be changed into *Naye Paise* with effect from 1st April 1957. The Comptroller and the Auditor-General of India is already seized of this problem, and it is expected that he will issue comprehensive instructions in consultation with the Ministry of Finance for this change-over.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

M—Managed by the board of directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at Rs. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,80,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,80,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

MARKET GOSSIP

(*Concluded from page 3*)

we have endeavoured to show that Bombay is better suited than Calcutta for carrying out all these functions:

(1) From the point of view of facilities for investment of funds, it is essential that the Head Office is located at a place where it is possible to maintain close daily contact with the premier Stock Exchange in the country and also with the Reserve Bank of India. Bombay is the ideal choice for this purpose. The Bombay Stock Exchange and the Bombay money market, it would be readily admitted by any impartial observer, are the biggest and the most efficiently organised markets in the country. With the Head Office of the Reserve Bank of India located at Bombay, the Gilt-edged market here has a high degree of liquidity. Even now, Calcutta has to fall back on Bombay for its supply of Government loans.

(2) Bombay has, from the very commencement, been the life insurance capital of India. It is the Headquarters of the Indian Life Assurance Offices Association, as also the Indian Insurance Companies Association, Federation of Insurance Institutes of India, etc. The share of the Bombay companies in the life insurance business of the country is over 50 per cent. It would, therefore, be in the fitness of things if the Central Office of the Corporation were located in Bombay.

(3) The staff required for the Head Office will have to be a handpicked one, consisting of persons with special qualifications. In this connection, it may be noted that a high proportion of the technically qualified staff in life insurance business is at present concentrated in the city of Bombay. For example, out of a total number of 92 Fellows of the Institute of Actuaries, as many as 40 are at present in Bombay. Similarly, in the other branches of insurance administration also, such as accounts, mechanisation, etc., a good proportion of the highly qualified and experienced men are employed in Bombay.

(4) At present, the head offices of insurers at Bombay are servicing more than 50 per cent. of the total number of policies in force throughout the country. It is now proposed that such servicing should be gradually decentralised and that policies should be serviced from the Divisional Offices of the area in which the policyholder is residing. With the gradual decentralisation of policy-servicing thus, the volume of business that will ultimately remain to be serviced from Bombay City will shrink to about half its present size. This will entail large-scale transfer of staff from Bombay to other centres, with hardship in a number of cases to the staff so transferred. Location of the Head Office, or Central Office, at Bombay would, however, help in reducing the magnitude of the problem of transfer of staff from Bombay.

(5) The problems which will arise in the course of integration of the different insurers would be very complex. In the Bombay zone, particularly, the work of integration will be not merely larger in magnitude but may give rise to special problems not likely to be met with in the other zones, because nearly half the volume of existing business in the Bombay zone will have to be transferred to the other zones. This would also necessitate transfer of staff on a large-scale from Bombay to the other zones. It is desirable that the Bombay zone should, therefore, have the benefit of the seniormost members of the business in Bombay for personal consultations from time to time in tackling the above problems. This would be possible only if the Central Office is situated in Bombay and such senior members retained in Bombay City itself as part of the Central Office staff.

(6) As regards the question of office accommodation, no difficulty would be experienced in Bombay, as there are several buildings in the city owned by insurers

COMMONWEALTH CONFERENCE

IT is not surprising that economic issues figured prominently at the ten-day Commonwealth Prime Ministers' Conference which concluded in London on 6th July 1956, for it only reflects the fact that economic problems are now coming to the fore, pushing political ones to the back. War as a means of settling international disputes is being ruled out, thanks to the invention of thermo-nuclear weapons with devastating power. Although the relationship between the free world and the communist world is still characterised by fear and suspicion, it has come to be realised among the big powers that the alternative to peaceful co-existence is destruction of the world as a whole. It is true that this realisation has not yet proceeded so far as to bring about disarmament, but there are promising signs that the powers concerned are gradually moving in that direction. Russia, under its new regime, already seems to realise that, sooner or later, disarmament is inevitable. Evidence of this is provided by its vigorous trade drive in all parts of Asia, Africa and even in distant Latin America. Apparently, it wants to be ahead of the Western nations in booking the capacity of its heavy industries with orders from these parts of the world hungry for capital equipment and technical know-how. Otherwise, it is difficult to explain its desire to give economic assistance not only to the so-called "uncommitted nations" such as India, Burma, Indonesia and Ceylon, but also to a country like Pakistan which has definitely linked its political fortunes with the West. The present rulers of Russia must have come to the conclusion that, if hot war is ruled out, cold war cannot last very long. The only war that will then remain to be fought out will be trade war. And, as every student of strategy knows, the most effective defence is offence. Here, Russia has certainly stolen a march over the West.

The Western world would appear to have been rather slow in realising the implications of the change in the Russian attitude towards world trade. Britain, however, seems to understand them better now, as evident from the speculation in the British Press on the agenda for the Commonwealth Conference. It was stated that the Soviet Government's trade offensive would figure prominently in the discussions among the Prime Ministers. The official Press *communique* issued after the final session of the Premiers' Conference, however, contains no reference to this subject. It is possible that the Conference did not devote much time to a discussion of this problem. This is perfectly understandable, because this particular economic issue is a delicate one. Past experience has shown that Commonwealth Conferences are generally inclined to leave out highly controversial issues to be settled by time. Moreover, it is difficult to see what good would have emerged from such a discussion, as the Commonwealth comprises nations of heterogeneous interests, though there may be, as the official *communique* claims, "a sense of common purpose in their approach to the major problems of the day." India, for instance, would refuse to view the problem in the same way as British commentators do. It would not regard this issue as a trade war, or an economic offensive by Russia with the political motive of spreading communism throughout the world. Nor would it agree to any form or shape of collective Commonwealth measures to meet the intensified competition by the communist bloc in the sphere of trade. Competition in this sphere has by no means been from the communist bloc alone. West Germany, Japan and, to some extent, even Italy have been competing effectively with Britain and other Commonwealth countries. To speak of action against the communist bloc alone would, therefore, amount to an intensification of the cold war, thereby leading to a revival of international political tension. India, which has been fighting for peace at considerable cost to its economic development, would be strongly opposed to such an approach to international or Commonwealth economic problems. Much of the speculation in the British Press on this subject on the eve of the Conference was, therefore, wishful thinking.

So far as India is concerned, there is no doubt that the emergence of Russia as a supplier of capital goods, consumer durables, agricultural implements, and technical know-how purely on a commercial basis is a welcome development in the sphere of world trade. There are, of course, some in this country who regard the present-day Russian salesmen as the carriers of communist infection, but their number is dwindling. The vast majority believe that the Russian entry in the sphere of world trade does not endanger the democratic set-up of the newly freed countries of Asia. On the contrary, they feel that it has broken the monopoly of the West as a supplier of capital and scientific knowledge to underdeveloped countries. This is largely true. In recent years, the West has been very slow in recognising the needs of these countries and tardy in meeting them. The United States, which was very sympathetic and generous for some years, later made the mistake of rendering financial assistance more and more on political considerations and less and less on economic. Pakistan, though only a third of India's size, is today getting U.S. aid on a scale which is three times that given to India. Three years ago, the reverse was true. The reason for this change is common knowledge. Pakistan has allied itself with the U.S. politically, whereas India has been not only refusing to do so but also actively opposing such political groupings on the ground that they endanger peace. Further, the cost of goods and services from Western countries has been progressively rising, thereby rendering them uneconomical to underdeveloped countries. In these circumstances, the answer to competition in trade offered by the communist bloc lies not in any concer

ing on the line of action to be followed when the subject comes up or is raised for discussion in the U.N. An important prerequisite to this move is that the U.N. and its agencies should be made fully representative of all the countries of the world. This raises the issue of admitting Communist China and Japan into these bodies.

It must be said to the credit of the present British Government that it has shown a commendable degree of tact and understanding in handling this subject. It has not openly talked of a trade war by the communist bloc. It has been fully aware that, in order to counter Russia's economic offensive and to hold the Commonwealth together, Britain must resume its pre-war role of an exporter of capital, besides maintaining sterling as a strong international currency. With this end in view, it has been striving hard to bring under control the inflationary forces in its domestic economy. The task is by no means an easy one, because a large proportion of Britain's resources is still being utilised for producing armaments. If an international understanding could be reached on the armaments question and on outstanding international political problems, Britain can easily switch over its metal-using industries for producing more capital and durable consumer goods for export. It is here one sees a vicious circle and the relevance of the Commonwealth Prime Ministers' stress that, unless settlements can be reached in critical areas of dispute, defence burdens will continue to "distract and weaken mankind."

The official *communique* on the conclusion of the Conference says that "the Prime Ministers noted with satisfaction the United Kingdom's determination to maintain and improve its capacity to serve as a source of capital for development in Commonwealth countries." This is a well-deserved acknowledgment of Britain's strong efforts to improve its balance of payments position and build up surplus funds for investment abroad. For reasons just mentioned, the outcome of these efforts will not be spectacular for some years to come. It has been estimated that even to support the present rate of investment in Commonwealth countries, Britain must have an annual surplus of £350 million, a surplus that has not been achieved in any year so far. With investment needs of the Commonwealth rapidly rising, the surplus, it is needless to add, should be substantially more, if Britain is to fulfil satisfactorily the role it has recognised.

All this does not mean that the other Commonwealth countries have no obligation in this direction. Far from it. And the following quotation from the *communique* reveals that all Prime Ministers are aware of it:

> "The Prime Ministers agreed that it was of first importance for their countries to maintain and increase their economic strength. Each country, through sound internal economic policies and steady development of its resources and earning power, could help to strengthen the Commonwealth and the Sterling Area and move steadily towards the agreed objective of the widest practicable system of trade and payments."

Although brief, the quotation is significant. In view of the limited supply of capital that can be had in the London money market, it is obvious that only those countries which follow a sound "economic policy"—a very wide term—will find it easy to attract the attention of investors in that centre. This is a point which India will do well to bear in mind, now that it is contemplating to raise loans in the capital markets of Europe.

A subject that was expected to be discussed but was not is the twenty-four-year-old Ottawa Pact, otherwise known as Imperial Preference. Of all the members of the Commonwealth, Australia was very keen on raising this issue. It is known to have had discussions on this subject with the British Government separately, but there is no indication yet of their outcome. It seems to feel that it can enter into a separate trade agreement with Britain, without in any way affecting the interests of the other members who are parties to Imperial Preference. No comment on this move can be made until details of it are known. Meanwhile, there is a surprising degree of uniformity in the approach of the Governments of Britain and India to this question. Both of them feel that it is better to let sleeping dogs lie. There is a lot to be said in favour of this view. Suffice it to say that there are so many problems to be solved at present that it is not worthwhile raising a fresh crop of them. Neither India nor Britain has felt any compelling necessity to alter the present arrangement, nor does it seem to be of any great impediment to the expansion of world trade.

COAL PRICES

THE increase in the controlled prices of coal, announced last week, has attracted considerable public attention. This is only partly due to the fact that coal is an essential raw material for industries. The main cause arises from the circumstances which preceded the announcement of the increase in prices. It was known that the Government would be compelled to raise the prices of coal, in order to enable the industry to meet the increase in production costs imposed by the award of the All-India Industrial Tribunal (Colliery Disputes) which came into effect on 26th May last. But the Government kept the industry on tenterhooks for nearly 40 days before announcing the increase in prices. Small wonder, the industry was reduced to the position of having to appeal for justice through a country-wide advertisement campaign.

It is argued, perhaps with some justification, that the Government cannot be entirely blamed for the delay. On judicial analogy, an award has necessarily to come into effect immediately, though the party which feels aggrieved may appeal against the decision. The Government, on its part, had, therefore, to take into account the one-month time limit which an industry gets to file an appeal against a labour award. Normally, these legal niceties would create no difficulty for an industry. For it is open to an industry to implement an award, raise the price of its product, and, in the meantime, prepare its case for appeal. In the coal industry, however, such a procedure is not possible. Being a controlled industry, it could not raise the prices of coal, though it had to pay the higher wages set by the award. The result is that the industry is said to have lost nearly Rs. 2 crores in the period intervening between the date of enforcement of the award and that of increase in coal prices. Assuming that such a time lag is inevitable in the present context of labour awards and controlled industries, it should be the responsibility of the Government to see that this circumstance does not result in any considerable hardship to the industries concerned. A suggested method is to grant, for a fixed period, a slightly higher interim increase in prices than is warranted by the award and then to revise the prices downwards.

So far as the immediate future is concerned, two issues have to be faced: Is the increase in prices, now granted, adequate? What will be its effect on production costs in other industries? The increase in price (per ton), which will apply uniformly to all grades of coal is: Bengal-Bihar Rs. 3; Madhya Pradesh (1) Hirdagarh Rs. 3-8, (2) for other collieries Rs. 3; Orissa (i) Hinger Rampur Rs. 4, (ii) Talcher Rs. 5; Singareni Rs. 3; Assam Rs. 2-4; Vindhya Pradesh Rs. 2. Coke: Hard coke Rs. 6-8 and soft coke Rs. 5.

The industry is disappointed with the aforesaid increases, because they fall far short of its demand for Rs. 4 per ton. In the Bengal-Bihar region, which accounts for 80 per cent. of the production of coal, the increase is only Rs. 3 per ton. In considering this issue of adequacy or otherwise of the increase in prices, one must remember two important considerations, namely, (1) wages account for 60 per cent. of the cost of raising coal, and (2) the award has meant nearly a 40 per cent. rise in the wages bill of the industry. It will be conceded that the question whether the increase in price is adequate or not cannot be decided without reference to production costs in the industry. Unfortunately, the cost data are not very clear. The estimates vary from Rs. 6.75 per ton, according to the Indian National Mine Workers' Federation, to Rs. 14.56, the cost of the companies represented by the Indian Mining Association; other estimates are Rs. 14.37 and Rs. 12.82 per ton. These estimates show wide variations. This is natural, considering that conditions vary from colliery to colliery. After all, there are 960 units in the industry, some units producing no more than a few hundred tons, at one end of the scale, and a few others, at the other end, producing more than 100,000 tons per year. Nevertheless, having regard to all factors, the industry's general demand for an increase of Rs. 4 per ton is certainly not unreasonable.

In the interests of coal production, the Government should have undertaken a more thoroughgoing investigation of production costs before deciding to announce the Award. It may, of course, be pointed out that the Government had to decide the issue quickly and could not afford to undertake elaborate investigations into production costs. In that case, the least that the Government could have done is to assure the industry that the increase in coal prices now granted, is only of an interim nature. In this connection, the Government cannot ignore the fact that, for nearly six weeks, the industry has had to bear a higher wage bill, without a corresponding rise in the prices for its coal. This point has been rightly emphasised by the joint statement issued by the mining associations. The joint statement says:

> "Increased labour costs on account of the Award were incurred with effect from 26th May 1956, but the price increase will be effective from 5th July only. The industry has, in consequence, already lost a total sum of Rs. 2 crores on this account, and no provision has been made for it to recover this sum. This loss arises through no fault of its own, because, for some months before the Tribunal Award was published, the industry repeatedly asked that the Government should take the necessary steps to ensure that a price increase coincided with the publication of the Award and provided figures to assist an easy estimate of the consequences of an increase in wages. It seems that it is now expected to add to this heavy loss at the rate of Rs. 1¼ lakhs per day for an indefinite period and it must be a matter for deep concern that the Government have thought fit to place the industry in this situation at a time when finance is required to put into effect the development plans which are essential for the success of the second Five-year Plan. It must be hoped, therefore, that the present increase for the various coalfields is intended as an interim measure only until such time as the cost of implementing the Award can be accurately assessed on the basis of practical experience. Many units of the industry cannot operate and develop on the increase now granted, and some will be forced to close down. It is a matter of the utmost importance, therefore, that the Government should reconsider their decision within the next three months and, at the same time, should take into account the other claims which have not been included in the present increase."

It will be seen from the foregoing quotation that, unless the issue of coal price is decided satisfactorily, it will be difficult for the industry to play effectively the role assigned to it in the second Plan. Although this role is a relatively modest one, as compared with either its capacity or the one assigned to the public sector, it is not inconsiderable. The private sector is expected to increase its production by 30 per cent.—from 34 million tons to 44 million tons—while the public sector is expected to increase its output by 300 per cent.—from 4 million tons to 16 million tons. Even the public sector will find it difficult—unless it chooses to pass on the burden to the exchequer—to increase its production, if the coal price is below the just and economic level. Further, it must be borne in mind that new installations for raising coal mean more investment than in the past. Thus, one estimate places the capital employed, on the basis of the written-down value of the assets on a per-ton basis today, at Rs. 12; as against this, the capital cost for new mines in Bengal and Bihar is stated to be of the order of Rs. 40 per ton.

It is, of course, true that the important question of the effect of the increase in coal price on other industries should be considered. The railways are the single largest consumer of coal. An increase in the cost of this fuel by Rs. 3 per ton, it has been computed, will mean an increase of Rs. 3.42 crores in the fuel cost of the railways. But this would mean no more than an increase of 2 per cent. in their cost of operation. In many industries, coal and coke account only for a small proportion of the total production costs. Thus, in cotton textiles, it is only 1.15 per cent., in general engineering industries 1.102 per cent., in sugar 0.37 per cent. and in vegetable oils 0.49 per cent. But there are a few industries where coal accounts for a substantial proportion of production costs. Thus, in iron and steel, it forms 11.25 per cent. of production costs, in cement 14.32 per cent., in paper and paper board 6.21 per cent. and in ceramics 12.56 per cent. It must, however, be admitted that the cumulative effect of all these increases may be somewhat large. But then the coal industry, as was pointed out in these columns over a month ago, cannot be penalised for its being a basic industry. Indeed, no single industry should be so penalised, for, in the larger national interests, all industries must pull together. And nothing is more conducive to such economic co-operation than that all industries should feel that they can always expect a square deal from the Government.

STATES PLAN THEIR LOAN PROGRAMME

S.T.C. TO SPREAD ITS TENTACLES?

THURSDAY, 5 P.M.

THERE has been a smart recovery in equities, thereby reversing the downward trend which had persisted till yesterday noon. The recovery merely represents a corrective action. The fall in the past few days had been overdone and, with the current fortnightly settlement falling due tomorrow, the bears must have decided to book their profit. Some of the bulls, who had made a strategic retreat a fortnight ago, are said to have re-entered the ring. Since there was no perceptible cause for the recent setback, and all industries are doing well, it will not be surprising if the upward trend persists. The fear that the borrowing programme of the Government might upset the equities has been dispelled. The Government has not disturbed the structure of interest rates. Further, since the major portion of the amount invited will be met by the conversion of 3 per cent. 1957 loan, the net withdrawal of cash by the Centre will be very much less than Rs. 100 crores, the sum to which the share market had reconciled itself earlier. Market circles are of the view that cash subscriptions to all the three loans put together may not exceed Rs. 40 crores.

MARKET GOSSIP

Now that the Centre's borrowing programme has been announced, the talk of the market relates to State loans. It would appear that almost all State Governments want to borrow from the open market. They must already be in touch with the Reserve Bank for settling the terms and the amount they can raise. The current estimate of the requirements of States is in the neighbourhood of Rs. 45 crores. Mr. C. D. Deshmukh had mentioned the figure of Rs. 50 crores in his last budget speech. But this figure is unlikely to materialise. Even the sum of Rs. 45 crores is considered to be on the high side, though it makes allowance for conversion of the State loans that fall due for repayment this year. It may be noted here that three State loans aggregating Rs. 4.75 crores are maturing on 14th September 1956 and another for Rs. 50 lakhs on 16th August 1956. Last year, the State Governments borrowed at 4 per cent., some at par and others at slight discounts, though the date of maturity was uniformly 12 years for all the loans. This year, too, the same basis may be continued, except that the maturity may be slightly longer, that is, 13 or 14 years.

* * * *

During the past fortnight, bank shares have been evoking some buying enquiries at hardening rates. This is probably due to expectation of good profits for the past half-year. The half-yearly results of the Central Bank and the Bank of India, announced this week, are in keeping with this expectation. Notwithstanding the increase in expenses, at Rs. 44.35 lakhs, the Central Bank's net profit (subject to taxation) for the first half of 1956 shows a handsome rise of Rs. 5.12 lakhs, in refreshing contrast to the fall of Rs. 4.02 lakhs experienced in the corresponding half-year of 1955. Similarly the Bank of India's net profit also shows a rise of Rs. 2 lakhs, from Rs. 37.60 lakhs for the first six months of 1955 to Rs. 39.66 lakhs for the half-year under review. It may be noted here that the improvement in this Bank's profit for the first half of last year, as compared with that of 1954, was only about Rs. 80,000. Thus, the pace of expansion in its earnings has been quite impressive, despite higher cost of operations. Both the banks have, however, only maintained their interim dividends at 12 per cent. per annum. Nevertheless, market circles are optimistic that the final dividends may be better. They feel that the Central Bank should be able to restore the cut in dividend made in respect of 1953 and bring it up to 14 per cent. per annum.

* * * *

In an otherwise rising share market, Shivrajpurs have been conspicuous by sustaining a fall of Rs. 10 over the week, from Rs. 98 to Rs. 88. This decline is mainly due to the extension of the State Trading Corporation's activities to the export of manganese ore. This development has given rise to the fear that the Corporation might pay a very low price for the manganese which it takes over from the producers. The Corporation, of course, proposes to absorb only about 40 per cent. of the production as its share in the export of this ore, but even this quantity is quite sizable. Moreover, it may be varied at any time to the disadvantage of the producer. Again, it is stated that the Government's spokesman has given an assurance to the producers that the S.T.C. will pay a price based on world market rates. But market circles are sceptical in accepting this assurance, as there is nothing to prevent the Government from changing its mind any time and fixing an arbitrary price.

The Government's avowed object in entering this sphere of trade is to stimulate exports of both iron and manganese ores. Ordinarily, this should have served as a bullish factor to the shares of Shivrajpur Syndicate. The fact that it has turned out to be a bearish factor is an index of the market's suspicion of the Government's real motives.

This suspicion is not altogether unfounded, for the State's entry in the export of manganese ore, in particular, is unprovoked and uncalled for, so far as our information goes. The Government has given the following reasons for asking the S.T.C. to take over a part of the export trade in iron and manganese ores:

(1) Malpractices in trade and the prevalence of big margin of profit in favour of middlemen and producers;

(2) better chances of making the best use of all available wagon facilities and of procuring such facilities;

(3) the strong possibility of private trade not being able to secure the best bargain in exports to communist countries, chiefly Russia, and to Japan, where the steel industry has formed a consortium for buying its needs of ores collectively; and

(4) as a result of all the three causes mentioned above, there would be a loss of foreign exchange, a loss which the country can ill-afford at a time when the second Plan calls for maximisation of foreign exchange earnings.

In the course of discussions with the business interests concerned, the officials are said to have reiterated that the Government's objective was purely economic and not political or ideological. They had also stressed, we are told, that the Government's mind on this subject had been definitely made up, that no useful purpose would be served by questioning the necessity for its action, that trade, as well as industry, would, in their own interests, do well to co-operate with the Government, rather than oppose it, and that any genuine hardships, other than loss of business, of course, consequent on the S.T.C.'s entry would be mitigated by suitable adjustment of quotas and other arrangements for honouring the commitments already entered into by the trade.

The foregoing account shows that the Government is trying to justify its action both by threats and persuasion. This is a significant straw in the wind. It reveals that the establishment of the S.T.C. takes the country a step forward in the direction of autocracy. The reports that are circulating in the market only go to confirm this impression further. One of them claims that the Government wants to take over complete distribution of cement after six months and, with this object in view, is cajoling the owners of the Cement Marketing Company of India Ltd., which has a fine country-wide marketing organisation, to sell their show to the S.T.C. They have been gracefully told, so we hear, that, if they readily complied with the Government's request, a reasonable amount of compensation would be paid, but, if they protested and wanted to keep the organisation, the S.T.C. would soon render it idle by extending its monopolistic powers.

It is feared that the next commodity which will attract the attention of the S.T.C. is sugar. The Food Ministry has already considerable experience in sugar trade. All that the S.T.C. will have to do, when the time comes, is to take over the officials of this Ministry who have been handling the business of importing foreign sugar and distributing it to the trade. There are two reasons which make one believe that the sugar trade may not be able to escape the tentacles of the S.T.C. One is the recommendation of the Taxation Enquiry Commission that sugar could conveniently be made a fiscal monopoly; and the other is the alleged prevalence of malpractices in the sugar trade.

Generally speaking, the industrialists have not cared to oppose the activities of the S.T.C. in a strong manner, though the traders affected by it have been trying to safeguard their position as best as possible. The attitude of industrialists is one of acquiescence, presumably because they feel that their interests will not suffer as a result of this new development. It is a moot point how far this assumption will prove correct. In any case, it is now fairly clear that, wherever the S.T.C. spreads its tentacles, it will tantamount to partial nationalisation of that business activity, in that the producers concerned will be reduced to the status of mere managers with a fixed remuneration. In fine, it may not be far wrong to say that the S.T.C. will be used as the machinery for effectively spreading the socialist pattern of society in the business world.

* * * *

To revert to exports of ores. Impartial observers in trade are of the view that there is some justification for Government interference with the export trade in iron ores, but none whatever so far as manganese is concerned. It is admitted that there have been many instances of racketeering both in production and exports of iron ore. But it is pointed out that the Government itself is partly responsible for this state of affairs. It has been giving licences to all and sundry. Wagon quotas have been granted to small mineowners, who have been exploiting the mines with little regard to the requirements of the Mines Act, as well as to inexperienced shippers. These people have not only been making large profits but their actions have been detrimental to organised large mines which respect law and have been taking special care of the welfare of workers. In other words, for the faults of a few which, in turn, are mainly due to the careless manner in which the Government has been issuing licences and wagon quotas, the authorities have chosen to punish the entire trade.

Exporters and producers of manganese ore contend that their field has been free from the blemishes of the nature described above. The Government itself, it is stated, has been convinced of this. Yet, it has no intention of withdrawing the S.T.C. from this trade. On the contrary, it has told the interests concerned that they should reconcile themselves to the lot of having to live with the S.T.C. and of making lower profits than they have been doing all along. It has also warned them that it would not tolerate any attempts on their part to make it difficult for the S.T.C. to survive. Such attempts would only evoke the Government's hostility to the trade.

TURN OF THE SCREW

From Our Own Correspondent

LONDON, *7th July*

LONDON LETTER

AN analysis of the economic position, as seen this week in the House of Commons and in the country as a whole, might be termed a study in black and white. After all, the Chancellor has been awake throughout his term of office to the difficulty of balancing the country's payments and, however much one may argue about the efficacy of the methods he had chosen, he has certainly been trying to do his best within the narrow limits of Government policy. When, therefore, he is attacked on the grounds that his policy is a failure, it is not unnatural to find him with his back to the wall, answering his critics with every available scrap of information to the contrary. He was able to show that, in June, the sterling area's gold and dollar reserves had increased by £6 million, so that they now stood at over £850 million, an improvement of about £100 million since the end of last year. This £100 million is also the Chancellor's estimate of the overall surplus on the country's balance of payments for the first six months of the year; but from that point, the Chancellor appeared to borrow the mantle of that revered but somewhat doubtful prophet, "Old Moore," and declare that the future was rosy: just as over the first half of this year, exports had risen more than 6 per cent. above the corresponding period in 1955, while imports were only 1½ per cent. up, so that trend would be maintained in the second half of this year. Moreover, he thought that the invisible balance would be better and thus the only reason for any decline in the reserves by the end of this year from the point now reached would be the dollar loan repayments which fall in December.

Unfortunately, the Chancellor could submit no evidence as a basis for his prophecy. But he drew satisfaction from the fact that investment in industry appeared to be leaping up. In the first quarter of this year, manufacturing industry was investing 25 per cent. more than a year earlier and estimates that, over the year as a whole, 20 per cent. more will be spent than in 1955. The same pattern is shown in the figures for the building trades, vehicles, shipping, plant and machinery. Shipping, for instance, expects an increase of 18 per cent. in 1956, while vehicles, plant and machinery which three months ago had not expected any increase now forecasts 10 per cent. up.

The Chancellor did not attempt to reconcile these figures with the stark facts of growing redundancy in the motor car industry. The British Motor Corporation, the largest employer of labour in industry, last week dismissed 6,000 men. Reports from the Employment Exchanges in the cities where they have registered show that more than half have already found alternative employment. All may do so, so general is the shortage of labour, but it is the implication that matters. The men in the car industry are nervous. The slightest incident over labour is liable to provoke a strike and the leaders of all the unions whose men are affected are seeking this week-end to meet the employers. They have realised much too late their failure to make good use of the industry's heyday to secure for themselves the sort of terms that American workers have obtained from their employers. They are either found other jobs or they can get six months' compensation. Of course, the American worker does not have the same unemployment pay rights that social security ensures for his British counterpart, but that is not a matter for the employing firms.

Is there any prospect that the position in the car industry—the prosperity of which governs that of a whole host of industries beyond—will change for the better in the near future? They have been steadily losing ground overseas to foreign rivals, content to pin their hopes to an easy home market. And this home market must surely remain restricted—indeed, the Chancellor has said that he will pursue his policy to success—for some time to come. Capital investment in such an industry begins to look like a gross misuse of the nation's resources. Of course, where that expenditure is directed to automation, even a declining industry may benefit in reduced labour cost, and the screw on the car employees will be given another turn. The weather on the labour front looks about as squally as possible when the holiday months are over, in measure as the screw has been turned on labour a storm is likely to break.—*All Rights Reserved*.

EQUITIES RALLY

BOMBAY BURMAHS TOUCH NEW HIGH

From Our Own Correspondents

BOMBAY, 12*th July*

AFTER remaining featureless for the major part of the week under review, equities staged a rally all round during the last two days under the leadership of textiles and miscellaneous industrials. The earlier sluggishness was attributed to lack of support and persistent selling pressure in Indian Irons by leading Calcutta operators. In the absence of any encouraging incentives, the market moved either way within a narrow groove. Later in the week, however, selling in Indian Irons was easily absorbed, and this factor, coupled with frantic covering by shorts, paved the way for a handsome recovery. A spell of strong buying support in textiles, on encouraging advices from Ahmedabad, and quite a few bright spots in the miscellaneous section on prospects of better returns strengthened the bullish sentiment. Equities recorded, on balance, handsome gains over a wide front.

In the steel section, the sentiment was mainly guided by the performance of Indian Irons. Tata Ordinaries moved between Rs. 201-8 and Rs. 199-8 before dipping to Rs. 197-12 on Tuesday. There was, however, a recovery to Rs. 201-12 at the close today in sympathy with Indian Irons. Indian Irons slowly receded from Rs. 35-15 to Rs. 34-14½, but rallied on bear covering to Rs. 35-13.

Textiles were in the forefront on strong speculative support. After a slight reaction from Rs. 632-8 to Rs. 625, Bombay Dyeings spurted to Rs. 645-10. Centurys followed suit with a rise from Rs. 561-8 to Rs. 569-8. Kohinoors moved up from Rs. 372-8 to Rs. 383. Central Indias gained Rs. 3 to Rs. 159, Finlays Rs. 2-8 to Rs. 341-8 and Gokaks Re. 1 to Rs. 236-8. Indu Ordinaries were a shade better at Rs. 13-10. Indore Malwas picked up Rs. 8-2 to Rs. 155, Morarjee Goculdas gathered Rs. 3-12 to Rs. 255, while Mysore Spinnings were unchanged at Rs. 112-8 and New Citys dropped Rs. 4-6 to Rs. 177-8. New Greats, on the other hand, rallied from Rs. 255 to Rs. 265. New Kaiser-I-Hinds moved up by Rs. 2-8 to Rs. 127-8. Shree Niwas shares were a strong feature with a sharp upswing from Rs. 213-12 to Rs. 225, on rumours that the Company proposed to take over one more cotton mill. Simplex rose by Rs. 2 to Rs. 220. Standards provided the highlight of the section with a strident advance of Rs. 38-12 to Rs. 477-8, on prospects of bonus issue. Svadeshis were marked up by Rs. 5-8 to Rs. 256. Tata Mills were steady around Rs. 57. Bradburys shot up by Rs. 4-6 to Rs. 224-6 and Dawns by Rs. 10-10 to Rs. 163-2.

Bank shares attracted enquiries and selected counters scored notable gains. Barodas were taken up As. 4 higher at Rs. 98-8. Centrals shot up by Rs. 3-8 to Rs. 55 and their New shares by Rs. 4-8 to Rs. 57. Bank of Indias gained As. 12 to Rs. 163-12. Punjab Nationals were done at Rs. 58 and Unions at Rs. 6-12, both showing no change over the week, but United Commercials were bid Re. 1-4 higher at Rs. 52-12.

Insurance shares were generally featureless. Barring New Indias and Indian Mercantiles, very little activity was seen in this section. New Indias were marked down by Re. 1-4 to Rs. 48-12 on profit-taking. Indian Mercantiles, however, attracted good enquiries and gained Rs. 1-12 to Rs. 45-12.

The electricity section attracted good support. Ahmedabad Electrics rose smartly from Rs. 96-9 to Rs. 99-6. Bombay Suburbans advanced by Rs. 2-8 to Rs. 116-14. Surat Electrics gained Re. 1-4 to Rs. 120. Tata Hydros jumped from Rs. 125-8 to Rs. 129, and Tata Powers from Rs. 1,285 to Rs. 1,300. Andhra Valleys were up by Rs. 2-8 at Rs. 1,20[illegible]-8.

Good activity was noted in several leading counters among miscellaneous industrials. In the sugar group, Bhopals were a shade better at Rs. 18 and Phaltans at Rs. 159-8, but Belapurs dropped from Rs. 242-8 to Rs. 240. Walchandnagars, however, advanced smartly by Rs. 8-2 to Rs. 261-14. Among cement shares, Associated Cements gathered strength from Rs. 187-4 to Rs. 191. Digvijays added Re. 1 to Rs. 196, while Dalmia Cements were quiet at Rs. 15-14. In the engineering and mining section, Alcocks ruled Re. 1-4 higher at Rs. 348-12. Premier Constructions were in the limelight with a smart rise of Rs. 8 to Rs. 202, following reports that a scheme had been agreed upon between the ordinary shareholders and the holders of the promoter shares for the conversion of the latter class of shares into ordinary shares. Tata Locomotives moved up by Re. 1-8 to Rs. 150. Larsen and Toubros were held at Rs. 15-10. Kamani Engineerings gained As. 13 to Rs. 6-8. Mukand Irons came to prominence with a rise of Rs. 3-6 to Rs. 12-2, following the encouraging results for the year ended 31st March 1956 and prospects of a maiden dividend next year. Sen Raleighs gained As. 6 to Rs. 12-6. Shivraj[illegible]rs were subjected to heavy selling pressure and declined by Rs. 10 to Rs. 89. Indian Coppers were dull at Rs. 7-2½.

Among shipping and transport shares, Scindias moved up by As. 4½ to Rs. 19-2. Great Easterns shaped well with a rise of Re. 1 to Rs. 20-4. Premier Automobiles jumped by Rs. 4-4 to Rs. 100-4 on expectations of handsome dividend. Hindusthan Motors were, however, dull at Rs. 10. In the miscellaneous group, Bombay Burmahs (old) shot up from Rs. 637-8 to Rs. 670, on expectations of higher interim dividend and prospects of reorganisation of capital structure, and their new shares by Rs. 11-14 to Rs. 252-8. National Rayons staged a rally from Rs. 232 to Rs. 243-12 on encouraging reports that the performance during the current year so far was good and that the Company would shortly produce dyed yarns. B.I.Cs. were lower by As. 5½ at Rs. 11-1. Dharamsey Chemicals were bid Rs. 5 higher at Rs. 47-8, Dhrangadhra Rs. 2 better at Rs. 130 and Tata Chemicals As. 9½ higher at Rs. 19-6. Tata Oils changed hands As. 8 better at Rs. 59, while Wimcos were maintained at Rs. 185.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11*th July*

The Calcutta Stock Exchange continued to display, dull and drab conditions during the week under review. Interest was limited, as there were indications of funds being kept apart for subscription to the three Central loans aggregating Rs. 150 crores that will open on the 16th inst. Market circles were inclined to believe that, after these loans were closed, the different States would announce loans amounting to about Rs. 50 crores. They were also inclined to believe that, only after all these loans, the Government would accord its sanction to joint-stock issues. The immediate reaction in the market to the announcement of an increase of Rs. 3 per ton in the Bengal-Bihar coal was an upward trend. The trend was, however, not sustained, as the increase demanded by collieries was a minimum of Rs. 4 per ton which was said to be the actual increased cost in production following the Tribunal Award. Nevertheless the market hoped that, as and when the full financial implications of the Award were assessed, the Government would again consider a further increase in price. The disappointing production results of the Indian Iron and Steel Company, Ltd., for the quarter ended June, restrained speculative sentiment and, as a result, Indian Irons dipped. However, a recovery followed, induced by the realisation that the drop in production was seasonal in character. Jutes continued to be neglected, on reports that raw jute prices were moving up.

Cotton textiles looked back. Dunbars were quiet at Rs. 300. Bengal-Nagpurs returned to the opening level of Rs. 9-7, after having receded to Rs. 9-2. Kesorams were a few annas lower at Rs. 18-9.

On Thursday last, a recovery was recorded in coals, but the rates declined subsequently. Thus, Burrakurs picked up from Rs. 13-9 to Rs. 14-1 but gave way to Rs. 13-7. On balance, Equitables were lower by As. 2 at Rs. 80-2. Pench Valley receded from Rs. 23-8 to Rs. 22-13 and East Indians from Rs. 32-12 to Rs. 31-13.

Jutes recorded very few transactions and, with sellers over, prices gave way. New Centrals were done at Rs. 16-15, as against Rs. 17-4 a week before, and Nationals fell from Rs. 23-10 to Rs. 22-10. Orients were unchanged at Rs. 134, while Birlas were steady at Rs. 17-12. Barnagores were supported at Rs. 132, as against Rs. 133-8 previously. Cheviots were as low as Rs. 175, as against Rs. 204. Kinnisons dropped Rs. 7 to Rs. 163.

Minings also joined the general trend. Karanpura Developments, after improving by As. 13 to Rs. 23-1, declined to close at Rs. 22-6. Indian Coppers were around Rs. 7, and Burma Mines were placed at between Rs. 3-3 and Rs. 3-6. Orissa Minerals were weak at Rs. 26-8.

In an otherwise quiet tea section, Hantaparas advanced by Rs. 15 to Rs. 227. Methonis were earlier held firm at Rs. 24-13, but subsequently gave way to Rs. 24-2. New Dooars at Rs. 375 lost one point, but Brooke Bonds at Rs. 24-8 were better for a time before sagging to Rs. 23-15. Tezpores were unchanged for most part of the week, but eased to Rs. 27-12 yesterday.

Speculative Indian Irons gave poor leadership to the engineering section, and tired bulls were busy liquidating their holdings. Indian Irons opened at Rs. 35-7 and, after recovering to Rs. 36-3, touched as low a rate as Rs. 34-15. Texmacos improved by As. 13 to Rs. 24, but lost to Rs. 22-8. Jessop & Cos., after moving up by Re. 1-8 to Rs. 36-11, closed at Rs. 35-4.

Miscellaneous industrials provided selected features. Niccos, after advancing from Rs. 25-4 to Rs. 25-12, steadied around Rs. 25-6. Likewise Indian Cables were higher at Rs. 36-6 before losing to Rs. 35-14. Asokha Cements were unchanged at Rs. 12-5. India Steamships, after recovering from Rs. 8-14 to Rs. 9-2, were quoted at Rs. 8-13. Imperial Tobaccos were better at Rs. 15-3, but Orient Papers declined by Re. 1-3 to Rs. 38-3.

* * * *

Madras Stock Exchange

MADRAS, 10*th July*

A strong buying spree in textiles was the feature of trading on the Madras Stock Exchange during the week under review. Operators were inclined to become more and more optimistic about the outlook for textile mills, thanks to continued upward trend in cloth consumption. Rubber shares also elicited good attention of buyers who were influenced favourably by expectations of better profits, following the implementation of the replanting scheme drawn up by the Rubber Board. Coffee shares, too, met with support on hopes of an early release of a further export quota. Buying in tea shares was, however, of a selective nature. Bank, insurance, electric, sugar and other miscellaneous shares were fully maintained at last week's levels. The undertone of the market was firm.

The dividend announcements made during the week under review are given below:

	Year ended	*Dividend per cent.*	
		Latest	Previous
Lucky Valley Tea	31-12-55	10	Nil
Nundydroog Mines	"	10	4½
Champion Reef ...	"	Nil	4
Mysore Gold Mining	"	Nil	6
Mlamallay Tea ...	31-3-56	25	75

There was as already stated, a strong buying spree in textiles and prices forged ahead. Radhakrishnas jumped up by Rs. 20 to Rs. 330. Coimbatore Pioneers rallied Rs. 17-8 to Rs. 335. Vasantas advanced by Rs. 15 to Rs. 335. Anglo-Frenchs spurted by Rs. 12-8 to Rs. 115, Pankajas by Rs. 12 to Rs. 102, Rajalakshmis by Rs. 11-8 to Rs. 186 and Radhakrishna 'B's by Rs. 10 to Rs. 165. Lakshmis Woollens hardened by Rs. 7-8 to Rs. 575. Rajapalayams gathered Rs. 7 to Rs. 168. Rama Vilas scored a gain of Rs. 4 to Rs. 109. Metturs were higher by Rs. 3-12 at Rs. 533-12 *cum-div.* and Rayalaseemas by Rs. 3-8 at Rs. 143-8. Krishna Rajendras improved by Rs. 2 to Rs. 116 *cum-div.* Janardhanas and Premiers rose by Rs. 3 each to Rs. 120 and Rs. 220, respectively.

In the planting section, rubber shares recorded improvement in prices. Midlands increased by As. 8 to Rs. 22-6 *cum-div.* Anandams put on As. 5 to Rs. 24-9. Cochin Malabars picked up As. 4 to Rs. 9-13. Vaikundams rose by a like amount to Rs. 30-4. Teekoys were better by As. 2 at Rs. 11-8. Kailas gained an anna to Rs. 6-6. Among coffee shares, Coffee Lands climbed up by As. 9 to Rs. 24-10. Consolidated Coffees hardened by As. 2 to Rs. 20-14. Amalgamateds were firm at Rs. 12-8, as also Mysore Coffees at Rs. 2-12 and Balmadies at Rs. 4-10. Among tea shares, Coorg Teas provided the brightest spot, their quotation advancing by Re. 1-10 to Rs. 13-8. Talayars moved up by As. 6 to Rs. 13-12. Periakaramalais had buyers at Rs. 9-15-6, as against Rs. 9-10 last week-end. Blue Mountains hardened by As. 4 to Rs. 6-2. Kalpettas gained a similar sum to Rs. 34-12.

In the miscellaneous section, Textools were favoured very well; their price registered a sharp rally of Rs. 7 to Rs. 192. India Cements advanced by As. 14 to Rs. 35. F.A.C.Ts gathered As. 3 to Rs. 6-13. Travancore Cements, however, were subjected to selling and fell by Re. 1-3 to Rs. 10-12 *cum-div.* Aluminium Industries were neglected at Rs. 19-13, as against Rs. 20-4. Andhra Cement 'B's receded by As. 3 to Rs. 16-1. Champion Reefs lost As. 2 to Rs. 4-10.

THE CENTRAL BANK OF INDIA LIMITED

PROFITS FOR THE HALF-YEAR ENDED 30th JUNE, 1956

THE Net Profit of The Central Bank of India, Ltd., for the Half-year ended 30th June, 1956, after making the usual provisions for Contingencies and including the sum of Rs. 18,40,358-8-6 brought forward from the last year's account, amounts to, subject to audit, Rs. 62,75,514-4-10, which the Directors have resolved to dispose off as follows:—

	Rs.	a.	p.
To pay an *Ad-interim* Dividend at the rate of 12 per cent. per annum, free of Income-tax (i.o., Rs. 1-8-0 per share) for the Half-year ended 30th June, 1956	18,87,255	0	0
To carry forward to next Half-year's Account, subject to provision for Taxation	43,88,259	4	10
Rs.	62,75,514	4	10

HONGKONG AND SHANGHAI BANK

The Directors of the Hongkong and Shanghai Banking Corporation have declared an interim dividend of £2 per share, free of Hong Kong corporation profits tax, for the year ended 31st December 1956. The dividend is payable on 13th August 1956. Transfer books will remain closed from 27th July to 11th August 1956, both days inclusive.

NEWS IN BRIEF

THE Government of India has approved of an expenditure of Rs. 38.47 lakhs for the development of 29 minor ports in Bombay State under the second Five-year Plan.

A three-man team of oil experts from West Germany is expected to arrive in India in November next on the invitation of the Government of India to study and advise the Government on oil production.

A four-man Russian team has arrived in India to advise the Government of India on the manufacture of heavy machinery. The experts will study the possibility of setting up a factory to manufacture heavy machinery and equipment and submit a report to the Government.

The Anand Agricultural Institute will receive about Rs. 3,80,000 during 1956-57 as aid from the U.S. Technical Assistance Administration and Rockefeller Foundation for instituting a well equipped laboratory for research and post-graduate training in dairy technology and for purchasing books to assist research work at the Institute.

The Andhra Government has decided to expand the ceramic factory at Gudur by constructing a Rs. 2-lakh modern kiln for the manufacture of porcelain insulators and two more kilns at a total cost of Rs. 66,000 for the manufacture of crockery and other porcelain wares. A British expert will arrive shortly to supervise the construction of these kilns.

Raw film experts from Germany who recently visited this country on the invitation of the Government of India to explore the possibilities of starting a raw film factory have submitted their report to the Central Government. They have expressed the view that this industry is possible only in the cities of South India and have recommended certain suitable places.

An official delegation, headed by Mr. M. V. Krishnappa, Union Deputy Food Minister, will leave for China on the 17th inst., to study the methods of agriculture there, with a view to adopting them to increase productivity in India. On his way back, Mr. Krishnappa will visit Burma to finalise the arrangements for transhipment of Burmese rice to India as per the recently concluded Indo-Burma Rice Agreement.

India is among the 21 countries in the world which have been invited by the International Labour Organisation to attend the Preparatory Technical Maritime Conference opening in London on 19th September next. The Conference, which is being convened by the I.L.O., will prepare the texts and documents for the 41st Maritime Session of the I.L.O., 1958. The Preparatory Conference will last till 2nd October 1956.

The Central Warehousing Corporation which is being set up shortly will have an authorised capital of Rs. 20 crores and an issued capital of Rs. 10 crores. The Corporation will operate warehouses at 100 centres of national importance with a storage capacity of 10,000 to 20,000 tons each. These warehouses and those of the State Warehousing Corporations are expected to provide storage facilities for about 2.5 to 3 million tons.

India shows a higher proportion of arable land to the geographical area than any other country. The percentage of arable land to geographical area comes to 45, as against 2.5 in Australia and Brazil, 4 in Canada, 9-11 in China, the U.S.S.R. and Argentina and 25 in the U.S.A. In respect of the absolute area of arable land, India with 360 million acres ranks third in the world, the U.S.S.R. with 556 million acres and the U.S.A. with 478 million acres being the first two.

Less than 50 per cent. of the allotment of Rs. 38 crores made for housing under the first Five-year Plan was actually utilised by the States, according to Mr. Khandubhai Desai, Union Labour Minister. The Planning Commission has allotted Rs. 120 crores for housing schemes under the second Plan. The housing scheme for the low-income group envisages construction of 1.8 million houses by employers of industrial concerns, railways and municipalities.

The Indian Council of Agricultural Research has drawn up a plan for bringing about 50,000 acres of land on the west coast and 60,000 acres on the east coast of the Madras State under cashew cultivation. Under this plan, six nurseries for raising cashew seedlings—three on the west coast and three on the east coast—will be started. The plan has been forwarded to the State Government for its approval. A scheme for planting 37,000 acres of land with cashew in Travancore-Cochin has been approved by the State Government.

The Government of India has approved of the creation of additional capacity for the manufacture of 12.5 million electric lamps per year. This is based on the recommendation of the Licensing Committee which favoured the grant of licences to six firms to expand their production by 2 million lamps per year each, besides a licence for a seventh firm to increase its production by 480,000 lamps per year. With the grant of these licences, the total capacity for the production of electric lamps for general use will be increased to 42.5 million lamps per year. The present installed capacity is about 30 million lamps.

From Abroad

Exports of British textiles to India increased by 41 per cent. in the twelve months ended May 1956 as compared with the corresponding period of the previous year.

The output of cars in the U.S. in the first half of 1956 was 3,190,000 units—25 per cent. less than the figure for the same period in 1955. The June production of 430,000 cars was nearly 34 per cent. less than that in June a year before.

Great Britain's first synthetic rubber plant will be designed and built by Blaw-Knox under a £12 million contract with the International Synthetic Rubber Company. The plant will have an annual capacity of 50,000 tons of GR-S synthetic rubber.

The thirty-ninth International Labour Conference at Geneva called for a new Convention banning all types of forced labour, whether for political, economic, racial or religious reasons. The Conference agreed to place the item on the agenda of its 1957 session.

A survey by the U.S. Federal Reserve Board shows that the total personal income in the country has gone up by $16,000 million to a record high of $303,200 million in 1955. All groups of people, except farm operators, unskilled workers and persons under 25, shared in the increase.

Expert investigation has shown conclusively that the recent outbreak of fire in a British cargo ship which carried a mixed cargo with nylon was not due to spontaneous combustion of nylon, as it was feared earlier. It is now pointed out that "nylon is an entirely safe cargo" and that "normal shipments of nylon are therefore being resumed."

A group of U.S. oil companies are to build and operate a £12 million refinery of a capacity of 1.6 million tons of crude oil and 1.5 million tons of finished products at Whitegate, Ireland, according to the Irish Ministry of Commerce and Industry. When completed, it is expected to supply the entire major needs of oil of Ireland.

The first official strike in the U.K. steel industry after an interval of 40 years, has been called for Saturday, 14th July, by the Iron and Steel Crafts men's National Committee. The decision was the climax of a dispute with the employers who refused to agree to the maintenance men's claim for increased differentials over steel production workers.

Canadian, British and other insurance companies doing business in Canada are now required to deposit with the Canadian Minister of Finance double the amounts they have been depositing hitherto as a result of a new legislation. It is stated that the change has been brought about in order to provide greater security for Canadian policyholders.

A top-level Egyptian mission, led by Mr. Mohamed Abu Nosseir, is in England for a two-week exploration of the possibilities of stepping up the exports of Egyptian cotton to the U.K. which had fallen from 350,000 bales a season in 1950 to 69,000 bales in the last season. The mission is also expected to study the position of capital goods needed by Egypt for execution of the projects at home.

The Stanford Research Institute of Washington is sending a team of four industrial economists to India, under a contract with the Commerce and Industry Ministry to assist in the development of small industries. The group will be headed by Dr. Raymond H. Ewell, who has been with the National Science Foundation for three years and has made a comprehensive study of scientific research and development in the U.S.

For the co-operative economic development of South and South-East Asia under the Colombo Plan, Canada has pledged $34 million for the current year 1956-57. This brings the total of its contribution since the inception of the Plan in 1950 to $160 million. The current appropriation represents an increase of $8 million over that of the preceding year. Part of this will be used to finance the $14 million atomic research and experimental reactor that Canada had agreed to provide to India.

PERSONAL

MR. R. R. Saxena, India's Ambassador to Rangoon, has been appointed General Manager of the Eastern Shipping Corporation. Mr. C. P. Srivastava, Deputy Director-General of Shipping, Government of India, has been appointed Deputy General Manager of the Corporation.

Mr. D. S. Bakhle, I.C.S., Special Secretary to the Government of Bombay in charge of reorganisation of the State, is expected to retire from service and to take over charge as Vice-Chairman of the Bombay Millowners' Association in January next.

Mr. C. V. Narasimhan, I.C.S., Joint Secretary, *Finance Ministry*, Government of India, has been appointed Executive Secretary of the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.), in succession to Dr. P. S. Lokanathan. He is expected to assume office on 1st September next.

Mr. Kanwar Sain, Chairman of the Central Water and Power Commission and leader of the delegation of Indian engineers to the meeting of the Technical Committee of the International Organisation for Standardisation, left for Munich last week-end to attend the Committee meeting now being held there.

Dr. K. B. Lal, Plant Protection Adviser to the Government of India, Directorate of Plant Protection, Quarantine and Storage, has been deputed to attend the sixth session of the F.A.O. Technical Advisory Committee on Desert Locust Control and the third session of the F.A.O. Desert Locust Control Committee at Teheran.

Mr. Walter Frank, a British expert on glass production, has been appointed adviser to the Government of India on development of automatic and semi-automatic glass-production methods. His appointment, which has been arranged under the United Nations' technical assistance scheme, will be for one year and he will take over charge on 1st August next.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 11*th July*

Industrial Training

The greatest desideratum in India is the want of a properly developed technological institute with suitable opportunities for undergoing practical training in a first class industrial concern. One of the keynotes of success in industries in foreign countries is the great attention paid to research and development of invention. This is not merely the spirit in the universities but even in the humblest industrial establishments. The minds of the executives are constantly exercised with the problem of how to do a thing better and at smaller cost and what new articles they could produce. This spirit of progress renders them thoroughly dissatisfied with the existing conditions. It is very necessary that a similar spirit should animate young men in India. There are certain branches of engineering, for instance, architecture, irrigation, railways, etc., in which the progress attained is already great and these branches have the advantage of the experience and activity of the work done throughout the world. The Indian engineer has no reason to be ashamed of what he has achieved in these fields and some of these works are standing monuments of his constructive faculties and bear comparison with other great achievements in this line. But if India should aim at greater industrialisation and succeed in employing more of its men in industrial concerns, an entire change of outlook and methods of training is necessary.

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1962

ISSUE PRICE Rs. 98 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1962

3½ PER CENT. NATIONAL PLAN BONDS—THIRD SERIES (3½ PER CENT. 1967)

ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1967

3¾ PER CENT. LOAN 1974

ISSUE PRICE Rs. 98-8 PER Rs. 100 (NOMINAL)

Repayable on the 16th of July 1974

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 150 crores (approximately). Subscriptions may be in the form of (i) Cash/Cheque or (ii) Securities of the 3 per cent. Victory Loan 1957 which will be accepted at Rs. 99-13 for every Rs. 100 (Nominal) tendered for conversion. Interest will be paid on the 3 per cent. Victory Loan 1957 tendered for conversion upto the 15th of July 1956 inclusive.

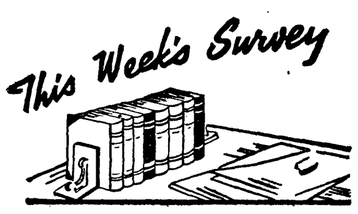
Interest on the new bonds and loan will be payable half-yearly on the 16th of January and the 16th of July.

Subscription lists will open on the 16th of July 1956 and close on the 18th of July 1956 or earlier without notice.

Applications for the bonds and loan will be received at

(1) Public Debt Offices of the Reserve Bank of India at Bombay, Cal[illegible]chi, Madras and Bangalore;
(2) Branches of the State Bank of India except in the States of [illegible]ad and Mysore;
(3) Branches of the Hyderabad State Bank in Hyderabad [illegible]
(4) Branches of the Bank of Mysore Ltd., in Mysore St[illegible]ces or branches, or treasuries

For full particulars apply to any of [illegible]



COFFEE POLICY—A REVIEW

THE Coffee Board has now come to the conclusion that it will receive from the current crop as much as 33,410 tons of coffee and expects, initially, 33,000 tons from the next season's crop. For India, these are large crops and, with an internal consumption in the neighbourhood of 22,000 tons, the exportable surplus comes to well over 10,000 tons.

These large size crops have brought in their wake many new problems for the Board and the growers. The pattern of receipt has altered, the quantity of coffee that has to be stored and financed has vastly increased from the quantities that were familiar to the industry and decisions have now to be taken far ahead of the actual receipt of the crop if the Board is to fulfil its functions efficiently. Such anticipatory decisions call for a grasp of the subject beyond the scope of routine administration and an acceptance of responsibility which an organisation tightly controlled from Delhi cannot possibly take in time, or with the flexibility that the situation warrants. A number of new problems has, therefore, been raised by the arrival of crops which are almost twice as much as the average crop received during the five-year period from 1946 to 1950.

Some idea of the error in estimation and, consequently, in the matter of the disposal of the crop can be obtained from the contrast between the Board's preliminary estimations in June last and the actual crop received so far. The mid-year estimate of the 1955-56 crop was under 27,000 tons which by private opinion might well pass the 34,000-ton mark. In other words, the Board's estimate was out by 7,000 tons between their preliminary and the actual. Although the Board planned to carry over about 5,000 tons from the old crop into the new year, the actual quantity in the pool was the carry-over from the old stock *plus* the receipt from the new crop, which amounted to 3,778 tons by 31st December 1955. Since then the arrival has been much heavier than in the previous year. In January, 8,018 tons were received, in February 8,794 tons, in March 8,439 tons, in April 3,172 tons and in May 984 tons. Within a short period of four months, that is, between December and May, the Board received no less than 28,423 tons this year, as compared with 20,881 tons during the same period last year. At the same time, the amount of coffee carried into the new year was very close to 7,600 tons of both the years. Yet in 1956, during the first four months, only 8,781 tons were disposed of, as compared with 9,768 tons during the same period in 1955, both in the internal market and by export. With a much smaller crop in prospect last year, about 1,000 tons more were disposed of than this year when the Board had to stock 8,000 tons more.

Some defect in marketing is obvious from these figures. An accumulated stock of this nature involves warehousing for which adequate facilities are not available, financing during the period of holding it in stock, deterioration by long storage during the monsoon and, possibly, a break in the market in the latter part of the year. Since the industry has not been organised to handle such large quantities, the strain on storage, financing and management can well be imagined.

At the end of May, the stock held by the Board's pool was over 25,000 tons, whereas the probable internal absorption during the rest of the year is estimated at no more than 12,775 tons. Over 12,000 tons are thereby left over for disposal, of which the Board has recommended a further 3,700 tons for export which still leaves over 8,000 tons in surplus. On top of this, there is the anticipated crop of anything from 33,000 to 36,000 tons for the next year. With a larger crop, the Board's obligation to pay the growers on the receipt of the crop in the pool has become much greater than at any time in the past and the more the received coffee is held in the pool stock, the greater is the necessity of finding money to pay the growers. The Board's power of overdraft was raised to Rs. 3 crores last year and very soon it may be necessary to further raise the limit of bank accommodation.

A whole range of changes from the movement of coffee to the various curing works, the speed of handling at the curing works, storage facilities and the quick disposal of the surplus, all seem to call for administrative as well as policy changes and a more flexible attitude towards marketing.

The question of marketing brings into focus a problem which is likely to emerge as the biggest before the new Board. Although it was hoped that internal consumption would rise greatly as a result of the reduction in prices, it cannot be said that the result achieved is quite as much as was anticipated. The rise in consumption is contrasted between two years of unusual conditions. In one year, normal procedures of marketing were suspended and the Government had taken over direct control together with warnings to the trade which left a nervous market from buying coffee in normal quantities. In that year, sales by the pool did not come up to even 16,000 tons. This was made up in the next year, once the policies governing the new control were made known and a fixed bottom price was announced. The result was a sudden jump in sales to over 20,000 tons. In the subsequent year, the increase in internal absorption was hardly greater than the normal increase witnessed before 1953. It is obvious that a lowering of coffee prices does not *per se* result in an increase in consumption.

As long as the world price of coffee is higher than the internal price, it is possible not only to sell coffee in the home market lower than the price that has to be paid to the grower but even to increase the grower's return over the basic price fixed. The greater the export, the better the receipt into the pool and this was the basis on which coffee's price policy was determined during the last three years. World conditions in coffee are changing so rapidly that growers in South and Central America and in Africa are so concerned about their future as to seriously consider, in a number of conferences, the desirability of regulating production, export and prices.

In the circumstances, the build-up of a large surplus of coffee in India would create problems which cannot be solved by the hope that the export market would absorb all that we have to offer. The basic considerations that brought into being the Indian Coffee Cess Committee of 1935 and the Indian Coffee Market Expansion Board of 1941 would again come to prevail once the export prospects begin to dim. That situation must be foreseen and the only way stability to the industry can be provided is by expanding the internal market.

It is now estimated that, if consumption can be raised to ¼ lb. per head of the population, India would require well over 40,000 tons of coffee a year, a quantity which India may shortly be producing. To raise the consumption from 22,000 tons to 40,000 tons is probably a more difficult undertaking than raising production by that much.

The old Indian Coffee Board had introduced a method of propaganda which was unique in publicity campaigns for any commodity and there are few who do not know about the India Coffee Houses studded throughout the land in all the principal cities and towns. This method of propaganda must have been so strikingly successful as to persuade even the Tea Board to take to it. It is, therefore, somewhat surprising that the new Coffee Board, by an overdose of Central control, a rigidity of routine administration and the stranglehold of overzealous audit procedures, should have reduced their most valuable medium of publicity into dull and faded coffee shops which have lost much of their quality now. The drive and initiative that marked this venture are no longer evident, and, unless the Board and the Government realise the need for a drive which will push coffee into every home in the country, the surplus production that we are meeting with today may not be an advantage.

CREDIT FOR HANDLOOMS

Mr. Nityanand Kanungo, Union Minister for Consumer Industries, did well to stress, in the course of his address at a conference on credit for handloom industry held at Bombay on Saturday last week, that the industry could not be maintained on doles for decades; it must have the potentiality of survival in itself. This is, indeed, a fundamental fact which applies as much to the handloom industry as to any other sector of the country's economy. We have ere now pointed out that the future of the handloom sector depends not on palliatives in the shape of external aid but on measures designed to improve the very structure of the industry which has all along remained outmoded and uneconomic. It is unfortunate that this aspect is being completely overlooked by the enthusiasts of the handloom industry in their anxiety to better the lot of weavers, an anxiety which stems mainly from political considerations. Mr. Kanungo has certainly done a signal service to the industry in calling the attention of these enthusiasts to the aforesaid fundamental fact.

The conference on credit for handloom industry was convened by the Government of India, with a view to eliciting the views of State Governments and co-operative banks on the recommendations made by the Committee on credit facilities for handlooms. The Committee, it will be recalled, was appointed (with Mr. V. Nanjappa, Textile Commissioner, as Chairman) at the conference of State Development Secretaries, held at Delhi on 31st July 1955. The report of the Committee was considered in detail at the conference last week. The conference is believed to have generally endorsed the recommendations of the Committee, although some members suggested certain modifications. These suggestions are now being examined by the Government which will announce its final decision on the Nanjappa Committee's report in due course.

Meanwhile, the Central Government, it is understood, has come to the conclusion that the main recommendations of the Committee are in the right direction and should be accepted, subject to certain modifications. One such recommendation relates to loans from the Reserve Bank of India. The Reserve Bank has agreed to make available to the State Co-operative Banks loans at 2 per cent. interest for the purpose of providing working capital to primary and apex societies concerned with production and marketing of handloom goods. The rules and procedure governing the loans are being finalised. The grant of Reserve Bank loans will be subject to one important condition, namely, that the repayment of principal and interest must be guaranteed by the State Governments concerned. This is only as it should be, considering the disquieting reports that several handloom co-operative societies have not paid back the loans which they took years ago. Indeed, in many cases, the authorities are said to have written off the loans. Now that the State Governments will be required to guarantee repayment of principal and interest, it is hoped that great vigilance will be exercised by these Governments over the way in which the loans granted by the Reserve Bank are actually utilised by the co-operative societies. In this connection, a reference may be made to the following recommendation of the Nanjappa Committee:

> The Government of India should offer to meet 50 per cent. of the losses in individual cases arising from non-recovery of loans, subject to a maximum limit, so far as the Government of India is concerned, of 5 per cent. of the total funds disbursed to the handloom industry by the co-operative banks, irrespective of the source from which the funds have been drawn, provided the State Governments agree to bear the remaining 50 per cent. This should also apply to losses arising from non-recovery of loans advanced to apex weavers' societies. The question of making the co-operative banks a partner in sharing such losses in States where the co-operative banks do not do so now should be examined in due course.

There is no point in the above recommendation, because it would nullify the object of asking the State Government's to guarantee the loans under reference. Why should the Government of India, for no fault of its own, be made to bear the loss arising from non-recovery of loans? If the State Governments are so careless as not to keep a check on the financial assistance given to the handloom industry, it is they that should be made to bear the losses. Such losses can, of course, be greatly avoided by properly assessing, before assistance is granted, the credit that is actually needed by handloom weavers. The assessment should be based on a careful and realistic appraisal of their requirements. One of the members of the Nanjappa Committee, Mr. Shripat, is reported to have felt that the total amounts needed by the industry during the next five years could be easily met from the cess fund, without affecting the other items of expenditure, whether for loans or for development activities. Alluding to this view, Mr. Kanungo stated that the cess fund was very meagre as compared with the extent of the problem and that, if reliance was placed on it, "we shall be nowhere."

The Nanjappa Committee estimates the total credit requirements of handloom industry at Rs. 30 crores, including Rs. 6.5 crores for working capital for the looms outside the co-operative fold. But the Committee has not indicated either the methods of disbursement or the procedure for obtaining funds from the Reserve Bank. Doubts have been expressed as to whether the State Bank of India would be in a position to give loans to weavers who are not members of co-operatives.

It is, of course, gratifying to note that the Nanjappa Committee has taken the view that the credit for purposes of working capital constitutes business finance and it should, therefore, be obtained from the usual financing agencies and not from the Government. Nevertheless, it has recommended that, if loans are not available to primary co-operative societies at 3 per cent., the excess interest should be subsidised out of the Handloom Fund. If this recommendation were accepted, one wonders whether the societies would make any effort to obtain their credit requirements at reasonable rates of interest. In any case, there is no point in subsidising rates of interest on money that is borrowed under "business finance."

MIDDLE EAST ECONOMY

Among our immediate neighbours, the Middle East is certainly one of the most important. And yet, less is known about its economy than about any other With a population of 100 million, the Middle East—a designation which includes Egypt, Iran, Iraq, Israel, Jordan, Lebanon, Saudi Arabia, the Sudan, Syria, Turkey, Yemen, Aden, Bahrein, Cyprus, Kuwait, Muscat and Omar, Qabar and the Trucial Coast—is a region of many countries with different political and economic levels. Nevertheless, the countries have many economic problems in common. Most of them are predominantly agricultural, with a common interest in irrigation and dry farming. Further, the countries share with the other parts of the underdeveloped world the urge to improve and diversify their economies. The U.N. Report, *Economic Development in the Middle East*, throws much new light on the state of the Middle East economy and the progress made in reaching out to higher living standards.

Generally speaking, economic life in the region is still dominated by the staple crops—cereals (wheat, barley and rice), fruits, oilseeds and cotton. In 1944, the area devoted to these crops increased, the greatest relative expansion being in cotton. The production of cotton was estimated at 76,000 tons, as against the average of 65,000 tons in 1948-52. Between 1953 and 1954, there was a slight setback in output of grains, despite the increase in area under these crops. This suggests that the per-acre yields continue to be low. The survey, however, reports that some improvement in the method and conditions of agricultural production have been achieved in the region in the last two years. At the same time, it recognises that "in relation to what has to be done in this field, the achievements were in general rather modest."

Industry appears to have made rather rapid progress in the region as a whole. Industrial development, however, was largely concentrated in Egypt, Israel and Turkey. There was considerable expansion in the output of capital and intermediary goods such as cement, steel and fertilisers, rather than in that of consumer goods. Investments required for development of industry came largely from domestic sources, a great part from the Governments themselves. In Egypt, there was increase in the production of electricity, yarn, textiles, paper products, soap, sugar, iron, cement and fertilisers. In Iran, primary emphasis was placed on sugar, textile and cement industries. Industrial output continued to increase in Israel though the rate of increase declined slightly. In Turkey, the rate of increase was more rapid in mechanised industries and in the electricity generating sector than in other industrial branches.

No one can describe the economy of the Middle East without reference to its oil. The oil revenues, amounting to some $800 million a year in direct contribution to the Government and $120 million a year in wages to employees and purchases of local goods and services, are described as the "most spectacular" element in the favourable long-term outlook in the Middle East as a whole. The region is in the fortunate (or unfortunate) position of being able to derive a larger revenue from oil than it is able to spend. The rate at which the oil revenues accrue, it is stated, is far greater than the rate at which they can be effectively used for development. In some of the Persian Gulf States, the revenues "even outstrip the foreseeable potentialities of development."

Be that as it may, the production of crude petroleum in the whole Middle East amounted to 1·2 million tons in 1955, thereby forming about 20 per cent. of the world oil output. In 1955, the Middle East processed 5.7 per cent. of the refined products in the world as compared with 4.6 per cent. in 1954. Exports of crude petroleum continue to earn large foreign exchange for the region. Last year, they brought $2,500 million, showing a rise of 20 per cent. and 40 per cent. over the earnings in 1954 and 1953, respectively. Efforts are being made to locate new sources of oil supply and also towards the utilisation and conservation of natural gas and refinery gas, produced in large quantities in connection with the raising and refining of petroleum in the region.

The oil revenues are reckoned, as already stated, as a "potential factor in the economic development of the area." The pace of development during the last few years, it is stated, has 'unmistakably" quickened. The large development schemes now coming to fruition or in prospect include the High Dam on the Nile, the Habbaniya Dam on the Euphrates and the Wadi Tharthar Dam on the Tigris (both completed in 1956) and the Huleh reclamation scheme nearing completion in Israel. These and other development schemes, when they are completed, may help start a cumulative process of economic development in the area as a whole. It would then increase the significance of the Middle East to world economy, now largely restricted to its importance as a producer of petroleum and certain industrial raw materials such as cotton.

COMMUNITY PROJECTS

The Community Development Programme has been in operation for some years now. Much self-analysis has gone into the work to find out how far this programme is being carried out successfully in building up a new rural India. In this attempt, the Programme Evaluation Organisation set up by the Government under the ægis of the Planning Commission, has been useful. It has appraised from time to time the merits and drawbacks of the whole movement, so that the main objectives may not be lost sight of by those in charge of administering the programme. Notwithstanding this self-analysis, the desire to proceed on sound lines has also impelled the Government to establish the healthy practice of inviting outside experts to come to India and evaluate the progress of the movement and make suggestions for consideration in future planning. The latest among such experts is Mr. M. L. Wilson, a Ford Foundation Consultant, who has been in the Extension Movement of the U.S. for a period of 50 years. He studied India's Community Development Projects for more than two months. After visiting 19 community project blocks and 17 training centres in various parts of the country early this year, Mr. Wilson has embodied his conclusions in a report submitted to the Government. The report is an interesting account of not only some of the foibles and failures but also the bright spots of the programme.

It is gratifying to note—indeed, this is somewhat flattering—that Mr. Wilson has a

(*Continued on next page*)

STATE TRADING IN MANGANESE
WHO GETS THE MONEY?

Here are the facts about a large well run Manganese Mine in Western India.

1. Production is kept at its maximum—over 90,000 tons per annum.

2. No present anxiety about sales—production is already sold at highest prices upto two years ahead.

3. No trouble with transport—this Mine is favourably situated where wagons are not scarce.

4. Sales (mostly for dollars) and stock adjustment total over Rs. 1,25,00,000 per annum.

5. This money is divided:—

(a)	To the workers at the Mines ..	37.2%
(b)	To maintenance and development of the Mines ..	30.3%
(c)	To the State in taxes and freight	23.8%
(d)	To the owners	5.5%
(e)	To the management	3.2%

6. The owners comprise many little shareholders—50 per cent. hold less than 10 shares of Rs. 10-0-0 nominal each, 96 per cent. hold less than 100 shares. The management is by a corporation with similar composition.

7. Trading in Manganese is a complicated technical business involving many grades of ore. Great experience and confidence between seller and buyer is a prerequisite.

THEREFORE WHAT GOOD CAN STATE TRADING DO IN SUCH A BUSINESS?

IF STATE TRADING DOES NOT RESULT IN GOOD, WHICH OF ALL THOSE ABOVE MENTIONED WILL SUFFER MOST; AND WHY?

Adv.

HEAVY AGENDA BEFORE PARLIAMENT

INDUSTRIALISATION RECEIVING CONSTANT ATTENTION

From A Special Correspondent

NEW DELHI, 10*th July*

THE monsoon session of Parliament, which begins on the 16th inst., has a heavy agenda before it. Members of Parliament are, therefore, expected to work longer hours than usual. The States Reorganisation Bill, due to be passed during this session, will raise further dust and storm over the political horizon. Already, there is considerable tension in some of the affected States. In the Punjab, there is dissatisfaction over the regional formula while, in West Bengal and Bihar, the adjustment of territories is not going to be a smooth affair. Then, there is the thorny issue of Bombay City. The Prime Minister, when he returns from his foreign tour, will have to devote considerable time in order to ease the tension and to get the States Reorganisation Bill passed without much acrimonious debate.

DELHI LETTER

Several Bills of great importance to the business world are likely to be placed before Parliament during this session. The debate on the second Plan will be resumed and it may offer some useful and constructive suggestions for the implementation of the Plan. The Government, on its part, appears to be confident to collect sufficient internal resources for the Plan. The latest flotation of the loan for Rs. 150 crores with option to retain 10 per cent. more of the subscription offered, is expected to become a success. In other words, Government may be able to collect Rs. 165 crores. During the next two or three months, the States Governments and Local Bodies will be raising about Rs. 50 crores or more for financing many local projects. The savings campaign in the rural areas is being intensified and this is expected to result in the collection of more money. All these indicate that Government may succeed in collecting Rs. 300 crores from the public even in the first year of the second Plan. With a progressive increase in the national income, it is likely that the Government will be successful in collecting still larger sums in the following years.

Apart from the discussions on the second Plan, Parliament will be concerned with the amending of the Reserve Bank of India Act, with a view to strengthening the control of the Reserve Bank over commercial banks. A Bill to provide for the levy of sales tax on inter-State transactions in accordance with the recommendations of the Taxation Enquiry Committee will also come before this session. An important step in inter-State co-operation will be taken by amending the State Financial Corporations Act, by which two or more States will be enabled to establish joint financial corporations. The Industrial Development Regulation Act will be amended, in order to provide for the inclusion of certain additional industries in the schedule of this Act. About 28 industries are likely to be brought under the regulation of this Act, more important among them being ferro-alloys and special steels, lignite, teleprinters, X-ray equipment, abrasives and grinding wheels, earth-moving machinery, typewriters and calculating machines, plastic moulding industries, paints, varnishes and enamels, staple fibre, explosives, insecticides, fungicides, wood-pulp, food processing industries, matches, cigarettes, etc. The addition of these industries to the schedule of the Act will increase the already heavy pressure of work on the Development Wing of the Commerce and Industry Ministry. It may be mentioned that the Development Wing is being expanded in order to cope with the work. This Wing has already been playing a creditable part towards the progressive industrialisation of the country. The Tariff Amendment Bill seeking to provide for protection to the calcium carbide industry and to continue protection to certain other industries will also be taken up during the session. Besides these, there is a number of miscellaneous Bills such as the Hindu Minority and Guardianship Bill, and amendment to the Industrial Disputes Act which will also come up for discussion and enactment during this forthcoming session.

In the present context of the economic development of India, the final *communique* issued to the public after the Commonwealth Prime Ministers' Conference in London has a special significance. The relevant portion of the *Communique* states: "The Prime Ministers agreed that it was of first importance for their countries to maintain and increase their economic strength. Each country, through sound internal economic policies and steady development of its resources and earning power, could help to strengthen the Commonwealth and the sterling area and move steadily towards the agreed objective of the widest practicable system of trade and payments. The Prime Ministers noted with satisfaction the United Kingdom's determination to maintain and improve its capacity to serve as a source of capital development in Commonwealth countries."

It is suggested here that the leading Commonwealth countries, particularly the U.K. and Canada, will evince greater interest in the economic development of sister underdeveloped Commonwealth countries. It is possible that they will be willing to render greater help to India than they are doing at present. Many leading industrial organisations and commercial houses in the U.K. would appear to be convinced that, unless they participate in a larger measure in building up important key and strategic industries, the closer economic ties between the U.K. and India which have been in operation during many decades could not be fully maintained in the coming years. It is, therefore, felt that henceforth the U.K. will take keener interest than it has done so far in providing the technical know-how to India.

Another commendable step in the direction of industrialisation of the country is the decision of the Federation of the Indian Chambers of Commerce and Industry to send a delegation of business men to Europe to facilitate establishment of new industries and the expansion of the existing ones by private enterprise. What is interesting to note is that the brain behind this move is none other than Mr. T. T. Krishnamachari, Minister for Commerce and Industry, who, it appears, had suggested some time ago to the Indian industrialists to draw a blue-print in regard to the development of different industries that could be started by private enterprise. Such attempts will have considerable educative value to business men. As a result of the delegation's visit, greater contact is likely to be established between the European and Indian business men. Further, the business tour will enable the Indian business men to widen their outlook and encourage them to invest risk capital in a number of industrial undertakings. If the blueprint of development is made available to Government after the tour, it will be possible for the authorities to provide the necessary advice and help to the private sector in order to achieve the targets set out in the second Plan.

SURVEY

(*Concluded from previous page*)

great admiration for the work that is being done in India. To quote him: "My admiration and enthusiasm for the programme as a whole—its vastness, its organisation and its objectives—is such that I can hardly express my judgment and opinions except in superlatives. In many respects, there has been nothing approaching its scope and objectives in the history of rural improvement and adult education throughout the world." He firmly believes that India has chosen wisely in establishing boldly the Community Development Programme as an integral part of its overall planning for national improvement and development. He is of the opinion that two features in India's Community Development Programme will have world-wide significance. The first is the concept of the evaluation of the work of the projects and national extension blocks through the Programme Evaluation Organisation mentioned above. India's evaluation programme is endeavouring to make, he avers, a scientific concentrated analysis of current operations and policy which will light the way for the policymakers and administrators to make improvements in rural welfare throughout the world. The "other development of great significance is the plan now under study for the establishment of a National Centre or Institute for higher studies and training in the field of community development." This institution will bring, he thinks, the basic resources of social sciences and research to bear on the basic problems of the community development programmes to be started in other parts of the world.

While paying tributes thus, Mr. Wilson is not unmindful of the imperfections which he has noticed during his study tour. This is not his first visit to India, as he had studied on the spot the programme before in 1952. Consequently, he is in a better position to notice some of these drawbacks in the progress that has taken place since. The village level workers he met measured up pretty well to his expectations, but he regretted that they were looked down upon as chore boys who run errands and do all sorts of things for the extension offices. He suggested that they should be extended a more dignified treatment, since it was on their selfless service that the strength of the movement depended. Again, he does not seem to have been impressed by the average block development officer, who he thinks should have much high grade training. In this context, it is worth mentioning that all the officers at different levels should be given periodical training in refresher courses designed in the light of new experience gained from time to time by working the programme.

Mr. Wilson makes some notable observations and suggestions on the position of co-operatives and rural credit. His remarks, however, are not such as to bring comfort to the co-operator, official or non-official. He says: "I do not find as much concrete evidence in the villages of the development of co-operative marketing and purchasing activities or of co-operative credit as I had expected. Three years ago, I was told that such activities would grow very fast and special emphasis was being given to them in the training programme for village level workers. On this recent visit, I was disappointed not to find progress, for it seemed to me that, philosophically and historically, there is a great deal of the co-operative spirit and behaviour in village family life." He suggests that each individual farmer should be made really to understand the co-operative idea. Then only, he says, the farmer can participate with his neighbours in a democratic organisation and in a democratic process.

OIL PIPELINE FOR WEST EUROPE

A £100-million project to connect the Mediterranean seaport of Marseilles to Rotterdam and Antwerp on the North Sea through a 30-inch diameter pipeline is under the scrutiny of the well-known Royal Dutch-Shell Group of oil companies, according to the *Financial Times*, London. The trunk route of the pipeline—west of Lyons, east of Dijon and west of Nancy and Cologne—is so contemplated as to be within easy reach of the important oil-consuming centres like Paris and Strasbourg, and to serve Eastern France, Luxembourg, the Saar, Western Germany, Holland and Belgium. The project, if accepted and put through, is capable of producing two main immediate advantages to the oil companies. In the first place, it would obviate the necessity of constructing new oil refineries at the ports, as has been the case hitherto, and facilitate the location of refineries at the major centres of consumption of oil like Paris, Saar and Ruhr. Secondly, it would result in considerable savings in tanker freight.

The capacity of the pipeline is reported to be 40 million tons a year. It is, however, expected that the throughput would be of the order of 25 to 35 million tons a year in practice, a quantity that constitutes the major proportion of the consumption of the countries the line is expected to serve.

If the proposed Ruhr pipeline from Wilhelmshaven to Cologne materialises, it is believed that the Shell scheme might be connected to the former at Cologne. The plan does not envisage an underwater connection to the U.K., but more tanker capacity to the U.K. ports would become available in the event of the project becoming a reality. It also includes provision for a smaller diameter line from Strasbourg to Paris crossing the trunk line at Nancy. The project is a step forward in the oil industry's progress and will greatly strengthen the industry's ability to meet the expanding power requirements of West European countries which, after a strenuous phase of recovery, are now passing through a period of rapid industrial expansion.

The oil business spells progress which anyone knows means

CO-OPERATION UNDER THE SECOND PLAN

MUSSOORIE CONFERENCE DECISIONS

FAR-REACHING decisions aiming at development of the Co-operative Movement on the lines suggested by the All-India Rural Credit Survey Report were taken by the State Ministers for Co-operation at a three-day conference which concluded at Mussoorie on the 3rd inst., Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, presiding. These decisions covered practically every aspect of the Co-operative Movement. The most notable of them related to the establishment of 10,400 credit co-operatives within the next four years. As many as 1,715 societies should be set up in 1956-57; 2,684 in 1957-58; 3,600 in 1958-59 and 2,401 in 1959-60. These societies, as and when they start functioning, are expected to fulfil the need for expansion of the existing co-operative credit facilities as an "essential step towards increasing agricultural production and simplification of the procedure for making timely and adequate credit available to farmers." Another resolution accepted by the Conference envisaged the setting up of 1,300 co-operative marketing societies in four years—318 in 1956-57, 471 in 1957-58, 100 in 1958-59 and 411 in 1959-60. In this connection it was emphasised that legislation should be enacted to regulate co-operatives in all States and that urgent steps should be taken to set up primary co-operative marketing societies in advance of large-sized co-operative societies. It was felt that steps should be taken to recruit suitable persons for manning the marketing societies and to set up apex marketing societies for forming an all-India federation to handle not only inter-State trade but also export trade.

Further, the Government of India was urged to establish a central warehousing corporation and to construct 22 warehouses at various places throughout the country during the current year. The States were requested to set up State warehousing corporations under the Agricultural Produce (Development and Warehousing) Corporation Act, 1956. With a view to expediting the construction of warehouses, the Central loans to State Governments were recommended to be raised from 62½ per cent. to 75 per cent. of the cost. Higher subsidies were also suggested to be paid to the Governments for buildings hired for training subordinate personnel.

On the subject of finance, the Conference held that State partnership in co-operatives, besides lending strength and stability to the Movement, would also enable the small and medium farmer to become a member and benefit thereby. It was recommended that State partnership and financial assistance for managerial staff provided under the second Plan should be extended only to large-sized co-operative societies which may either be newly formed or brought into being as a result of reorganisation. The Conference further decided that the existing procedure for advancing co-operative loans should be re-examined with a view to its simplification and avoidance of delays in payment of loans. These delays caused by the adoption of cumbersome procedures and observation of formalities have been, it may be mentioned here, one of the causes for the failure of the Co-operative Credit Movement in India, which was able to provide only 3 per cent. of the credit requirements in the country. Success in this direction lies not merely in the simplification of the procedures but in linking the loans not to property but to produce raised by the farmer.

Co-ordination of Marketing and Credit

The Conference did well in considering steps for co-ordinating the activities of the Co-operative Movement in the fields of marketing, credit and cottage industries. The discussions on the subject seem to have revealed that there was not sufficient co-ordination, and that the co-operative spirit was, therefore, not getting sufficient chance to develop. Mr. Nanda, Minister for Planning, stated that the Centre would be writing to the State Governments to furnish details of the actual administrative set-up, so that suggestions could be made for rationalising the co-operative structure on a sound basis. It may be noted that, in most States, co-operation has made poor progress; this is due to lack of administrative personnel and non-official leadership to sponsor and supervise the Movement. Unless this handicap is removed, no amount of State participation and assistance could bring the desired results.

Encouragement of non-officials to enter the field is particularly needed to eliminate factions in rural communities, which also, to a certain extent, are responsible for the tardy growth of co-operation in India. Mr. Nanda was hopeful that this handicap could be removed by utilising the services of the Bharat Sevak Samaj. This is a tall hope since the Samaj has failed to evoke sizable response from the public.

Co-operative Farming

The Conference passed a resolution recommending the introduction of co-operative farming in each of the National Extension Service blocks in the country. After a long debate, it accepted the target of 500 co-operative farms, to start with, to be completed in the current year in the N.E.S. block areas. It was pointed out that an Indian delegation would be shortly leaving for China to study the progress of co-operative farms there. A member stated that the fixation of targets could be postponed till after the return of this delegation, since those fixed would have to be revised later. The Union Minister for Food stated that targets were flexible and had to change in the light of experience. The China delegation would not change the fundamental policy, namely, consolidation of small plots through co-operative farming for the development of rural economy. Mr. Ranga was against co-operative farming of lands of owner-cultivators, since it would 'reduce 46 per cent. of the agriculturist population into mere wage earners." Mr. Nanda, however, contested the point by observing that there was no alternative to co-operative farming where holdings were uneconomic. Co-operation being the basis of socialist pattern it should be pushed forward, he said, with faith and treated as a mission. This argument of Mr. Nanda is hardly convincing. He is making a fresh interpretation of socialist pattern of society in saying that individual liberty and freedom to own property should be subordinated to collectivism. This is a dangerous trend of thought. The fact that the Government of India is anxious to learn from Communist China for introducing land reforms is significant of the poor importance now attached by the party-in-power to the fundamental tenets of democracy.

After approving the need for co-operative farms, the Conference emphasised the necessity for a phased programme for training personnel for the successful running of the farming societies and said that a special subsidy should be provided to the societies to meet the initial expenses incidental to farming. The terms of such financial assistance should be more attractive than in the case of such assistance to individual cultivators. It was further decided that all supplies to cultivators should be channelled through multipurpose or large-sized societies. All this means that methods short of compulsion would be adopted to make people take to co-operative farming.

The programme for the development of co-operation under the second Plan was outlined by the Union Minister for Food and Agriculture in his inaugural address. According to him, a sum of Rs. 47 crores has been allotted for co-operative schemes. This amounts to 13.8 per cent. of the total allotment for agriculture. These figures compare with Rs. 7 crores and 2.9 per cent. in the first Plan. Additional funds will be available from other sources for promoting and assisting co-operatives. Besides, the Reserve Bank is expected to invest about Rs. 25 crores from the long-term Operations Fund for strengthening the credit structure. A good portion of the sum of Rs. 200 crores earmarked for developing small village and cottage industries is likely to be placed at the disposal of co-operatives. Assistance will be given to housing co-operatives engaged in the construction of houses for industrial workers. Attention will also be paid to the co-ordination of credit with marketing and warehousing. It is proposed to make warehouse receipts negotiable and, with the vast expansion contemplated by the State Bank of India, no difficulty is expected to be experienced in financing marketing societies.

Basic Criterion

Explaining the basic criterion for the development of co-operation, Mr. Jain said: "The large expansion of co-operatives in the second Five-year Plan is not a matter of mere expedient. During the last 12 months, far-reaching events have occurred in our economic and industrial policy. The country has accepted the goal of socialist society. Increased production and equitable distribution are its two inseparable attributes. The basic criterion for determining the lines of advance are not private profit but social gain. The structure of socio-economic relation and the pattern of development has to be so planned that they result not only in appreciable increase in national income and employment but also in greater equality in incomes and wealth. Major decisions regarding production, distribution, consumption and investment have to be made by agencies informed by social purpose.

"The benefits of economic development must accrue more and more to the relatively less privileged classes of society and there should be progressive reduction in the concentration of incomes, wealth and economic power. The problem is to create a 'climate' in which the small man who has so far had little opportunity of participating in the immense possibilities of growth is enabled to put in his best in the interest of a higher standard of life for himself and increased prosperity for the country. The small man has to be helped to rise in economic and social status. For creating the appropriate conditions, the State has to take on heavy responsibilities as the principal agency speaking for and acting on behalf of the community as a whole."

Bold and Ambitious

The programme envisaged for the rehabilitation of the Co-operative Movement as indicated by the decisions of the Conference as also by Mr. Jain is both bold and ambitious. It places heavy responsibilities on those who are entrusted with this work. It implies that Mr. Jain and his colleagues both at the Centre and in the States will have to find hundreds, if not thousands, of saints and angels, if the whole Plan is not to end in a thorough failure. We wish them success in their noble mission.

Meanwhile, it will not be out of place to stress here that the Movement, as it is, has been suffering from a number of weaknesses to which attention was drawn in these columns two weeks ago. In tackling these weaknesses, priority should be given to the spread of knowledge on the principles of Co-operation and the benefits of the Movement to the small man. This is essential, because it will help build a body of enthusiastic non-official co-operators who can be expected to guide the Movement without official interference. Work in connection with the rationalisation of co-operative law and the enactment of a marketing legislation should also be expedited, so that the targets for establishing the credit and marketing societies in the first year of the second Plan as decided at the Conference may be reached without any difficulty and on sound lines.

BANK OF INDIA'S PROFIT HIGHER

The working of the Bank of India Ltd., during the half-year ended 30th June 1956, has resulted in a profit of Rs. 39.66 lakhs (subject to taxation), as against Rs. 37.60 lakhs for the corresponding six months of 1955 and Rs. 36.91 lakhs for the first half of 1954. With the surplus of Rs. 13.27 lakhs (as against Rs. 9.11 lakhs) brought in from the previous half-year, the total available for disposal is Rs. 52.93 lakhs, which represents an increase of Rs. 6.22 lakhs over the corresponding sum of the previous year. The Directors have declared an interim dividend of Rs. 3 per share of Rs. 50 each, or 12 per cent. per annum free of income-tax, a rate which they had paid on the present paid-up capital of Rs. 2.50 crores in the previous four years. This will absorb Rs. 15 lakhs, leaving to be carried forward to the current half-year Rs. 37.93 lakhs (subject to tax), as against Rs. 31.71 lakhs carried over a year ago.

MADHYA BHARAT FINANCIAL CORPORATION

The Madhya Bharat Financial Corporation (Managing Director: Mr. John F. D'Souza, Indore) was brought into existence on 30th June 1955, under the provisions of the State Financial Corporations Act, 1951. It made a small loss of Rs. 8,791 during the nine months ended 31st March 1956, according to the first annual report submitted by the Board of Directors.

The authorised capital of the Corporation is Rs. 2 crores divided into 2 lakh shares of Rs. 100 each. Out of the issued shares of the value of Rs. 1 crore, 36,000 shares were taken up by the State Government, while the Reserve Bank of India subscribed to 15,000 shares. Insurance companies, banks, etc., and other private parties accounted for only 26,650 shares out of the remaining 49,000 shares. Accordingly the State Government has been requested to fill up the gap.

During the period under review, 20 concerns applied for financial assistance aggregating Rs. 75 lakhs but only seven of them furnished the necessary data. Out of these seven, two concerns were sanctioned an amount aggregating Rs. 5.50 lakhs, one application was rejected and the remaining four were still under the consideration of the Corporation. The amount of loans sought by these four concerns was Rs. 13.5 lakhs.

(*Continued on page 93*)

POST-WAR TRENDS IN WORLD ECONOMY

"PROBLEM OF MASS POVERTY REMAINS AS STUBBORN AS EVER"

THE United Nations' annual reports on world economic trends are always awaited with utmost interest, inasmuch as they contain an authentic and comprehensive review of the progress in economic development prepared by economists of international repute. And the latest report, that published early this week, is no exception. In fact, the report marks a distinct departure from its predecessors; it surveys, in an impressive manner, the economic developments in the world not merely during 1955 but also in the entire post-war decade. The latter study is in compliance with a request from the Economic and Social Council to the U.N. Secretariat for a suitable review of the trends in the past decade to mark the Council's tenth anniversary. The study, we are told, will serve as the main background for discussion of the world economic situation by the Council which began its twenty-second session at Geneva on Monday last.

The keynote of the U.N.'s Survey under reference is that, although the progress achieved on the economic front is superior to that of the decade following the First World War, the problem of mass poverty in a large part of the world remains as stubborn as ever. The economic history of the period does not, the Survey declares, justify untempered optimism; on the contrary, it provides ground for serious concern. According to it, such growth as has taken place is due only in part to favourable long-term forces; it is special and temporary supports that have accounted for a significant part of the growth. In only a few of the underdeveloped countries has *per capita* economic growth been consolidated to a point where it may be considered self-cumulative. The Survey is, of course, conscious of the international help forthcoming in many ways—private and public, bilaterally and multilaterally—but questions whether the scope and the scale of present programmes represent the world's optimum contribution towards the accepted objectives of economic development. Indeed, it observes that the world has not yet "effectively come to grips with the problem of economic development." In this, as in other economic problems, the primary responsibility rests, the Survey emphasises, with the countries themselves. For cumulative economic growth cannot be imported from without, it must be nourished from within.

Remains Far From Solved

The conclusion which emerges from these observations is that the problem of international economic balance remains far from solved. What is such a state of affairs due to? The following interesting remarks from the Survey provides the answer to this poser:

"Political tensions have led to a division of the world economy into two virtually isolated sectors, each devoting a considerable proportion of resources to military rather than civilian uses. Economic growth in underdeveloped countries has not kept pace with the rate in industrial countries. It would be imprudent, moreover, to project the record of the first post-war decade into the second, especially in so far as favourable developments in the past 10 years have been the result of purely short-term influences.

"With respect to stability, the record of the post-war period is one of rapid growth accompanied by oscillation between inflationary and deflationary pressures in industrial countries. Fluctuations in the demand of the developed countries have had adverse effects on the economic development of underdeveloped countries, particularly through the extreme fluctuations in export prices for primary products."

The world economic progress during the post-war decade is impressively summed up thus: The earth has become capable of supporting a far larger population than ever before. Industrial output has made great strides. In the underdeveloped countries, the most significant advance to date perhaps lies not so much in the physical expansion of productive capacity as in the evolution of a social climate favourable to economic development. In the industrial countries, full employment has been maintained, and the growth in productivity and employment has produced substantial increases in *per capita* incomes and brought some progress in international economic balance. The progress would have been more marked but for the political tensions.

The U.N. Survey divides the post-war decade into four phases, namely, (1) the immediate post-war crises; (2) the general awakening to the long-term character of post-war economic problems; (3) the raw materials boom and collapse associated with the Korean hostilities; and (4) the current expansion of world economy. As compared with the pre-war period, the total volume of production of factories, farms and mines in the private enterprise economies in 1954 was higher by 66% per cent. The rise during the six-year period 1948-54 was particularly marked, being as large as that recorded during the decade 1938-48. The improvement in production was more rapid in the developed than in the underdeveloped countries, especially before 1948. A substantial proportion of this improvement was absorbed by population growth, in the underdeveloped countries, in particular. Investment in the developed countries expanded considerably as compared with the immediate pre-war years. Capital formation rose sharply in the underdeveloped regions. South-East Asia, with a much lower *per capita* average income than Latin America, was, however, not able to devote as large a proportion of capital formation to investment as did the latter.

Trend of Production

The trend of world production has not been uniform. The rate of growth in primary production, for instance, has everywhere lagged very much behind that in manufacturing. This lag is attributed to two factors. First, at higher levels of income, the demand for food rises proportionately less than that for other goods. Secondly, the raw material content of manufacturing has declined, due to economies in the use of raw materials, as a result of technological progress, greater amount of re-processing of already used materials, substitution of synthetic for natural materials, and more elaborate fabrication of the final output.

The expansion in manufacturing has been the chief force contributing to post-war growth. Under the influence of expanded capital formation and defence expenditures, the highest rates of growth during the post-war years in both Western Europe and North America have been established by the chemical and engineering industries. Staple consumer goods industries have been slow in expanding both because private incomes have risen less than national output and because demand for these products has not risen parallel with the rise in private real incomes. In the less developed countries where manufacturing is, in the main, directed to the production of consumer goods, gains have been sufficient, in certain products, to raise the share of this group of countries in the total production of the private enterprise economies. Increases in output of heavy industry, on the other hand, have been overshadowed by developments in the economically advanced regions.

Expansion in Trade Tremendous

One of the most notable features of world economy during the post-war decade was the tremendous expansion in the volume of world trade. By 1955, the volume was about 50 per cent. higher than in 1938 and 1948. In contrast, by 1928—the tenth full year after the first World War—the volume was less than 30 per cent. above the 1913 level. Commenting on the recent trends in world trade, the U.N. Survey points out that the trade has been held back much less than might have been expected by the various limitations and controls prevailing. Indeed, a careful examination of the lag between world trade and world output since 1938 shows that a major part of the lag is due to circumstances which have "nothing to do with trade restrictions." Among these circumstances, mention is made of the fact that a larger share of world output is now being produced in countries the imports of which are small in relation to their output or income. Mention is also made of the lag in food consumption in relation to income, together with the reduction in the raw material import content of manufacturing which has accompanied the structural shift in the industrial countries from light to heavy industries. Consequently, trade in primary products has lagged in relation to world trade and still more in relation to world manufacturing output. By way of a general conclusion, the U.N. Survey observes: "Most countries are now spending a higher proportion of their incomes on imports than in 1937, and those spending a smaller proportion do not consist exclusively of countries maintaining import controls."

While trade in primary products has lagged behind, that in manufactured goods has risen rapidly. By 1954, exports of manufactures from the leading producing countries were about 50 per cent. and 60 per cent. more as compared with 1948 and 1938 levels, respectively. The major changes in the composition of exports were the sharp decline in the share of textiles and a great increase in exports of machinery, transport equipment and chemicals. These shifts, it is said, correspond to the lag in world consumption in relation to world production brought about by much higher rates of capital formation and defence expenditure than had prevailed in 1938. Moreover, the underdeveloped countries have been able to promote factory production of textiles and conserve limited foreign exchange resources for purchases of capital equipment. The rise in the capacity of underdeveloped countries to import since 1938 has been due not only to the expansion in the volume of their exports but also to a substantial improvement in their terms of trade. However, the characteristic instability of the exports of primary producing countries did not diminish with the favourable price trends and general economic expansion of the post-war period.

Division of World Markets

The U.N. Survey has drawn special allocation to what it calls a "characteristic feature of the development of world economy" since the first World War, namely, the dividing up of the world market into compartments of varying degrees of exclusiveness. Appropriately three-fifths of world exports in 1953 consisted of exchanges within the three main trading areas—the centrally planned economies, the dollar area and the European Payments Union area. A common characteristic of these three areas is that each involves an industrial core, together with affiliated areas possessing more or less complementary economies. Somewhat less than one-fifth of world trade in 1953 consisted of the trade of these three main areas with one another

(*Continued on page 93*)

DEVELOPMENTS IN CENTRALLY PLANNED ECONOMIES

TRADE WITH FREE WORLD SHRINKS

ON the previous page, a general review of the post-war trends in world economy as contained in the U.N. World Economic Survey for 1955 has been made. It is against the background of these general trends that the Survey has portrayed the developments in the centrally planned economies by which is meant the Communist countries of Eastern Europe and mainland China. The post-war decade in this region was characterised by radical institutional changes and rapid expansion of industry. Nationalisation of industry and trade, as well as collectivisation of agriculture, says the Survey, resulted in concentration of economic power in the hands of central authorities and made it possible to plan economic development comprehensively.

The first post-war plans were drawn up separately in each country. Later, more attention was paid to the requirements of other countries in the area. Not until 1955, however, did several countries prepare for the first time their plans in close co-operation with one another. Yugoslavia, which had adopted the same methods of planning as other countries up to 1950, changed its methods substantially. Thus, the specific planning of the output of each enterprise was abandoned and the managements of enterprises became free to determine output and prices.

The U.N. Survey discerns three distinct periods of development during the decade 1945-55 in the centrally planned economies, barring mainland China and Yugoslavia. These periods cover (1) reconstruction which ended in 1949, (2) rapid expansion from 1950 to 1953, and (3) general slowing down of the rate of expansion since mid-1953. The period of reconstruction was much shorter, although the damage inflicted upon the E. European economies was considerably greater than that during the First World War. Within about four years, that is, by 1948, recovery had been achieved in most countries, as against 6 to 20 years required for individual countries to regain their 1913 levels of production after the First World War. The aim of reconstruction plans was no doubt primarily to restore and to exceed the pre-war levels of output. But all countries in the area tended, from the very beginning, to alter the structure of their economies, in order to achieve a more balanced relationship among various industries.

During the second period, the long-term development plans of E. Europe called for higher rates of increase in the output of producers' goods than of consumers' goods or of agriculture. By 1950, the targets set for producers' goods were stepped up appreciably, partly as a result of deterioration in international relations. Military expenditure rose sharply. In many sectors, bottlenecks developed, hampering further rapid growth. The swift rise in investment and in military expenditure in the face of considerably slower increases in consumer supplies led to inflationary pressures in several countries and to a decline in real wages from 1950 to 1953. Only in the Soviet Union did prices decline and real wages increase throughout the period since 1947.

The third period (commencing from mid-1953) was marked by the introduction of a new economic policy in the second half of 1953. The policy was designed to eliminate disproportions among the various sectors of the economy, with a view to preparing the ground for a further rapid expansion. Such an elimination was to be achieved by a general slowing down of the rate of growth, by reducing the spread between the output of consumer and producer goods and, within the latter, between the output of engineering products and that of fuel, power and basic materials. It was also planned to bring about a substantial expansion in agricultural output. Thanks to the implementation of this policy, real wages and consumption rose in 1954 and bottlenecks in fuel, power and basic materials were reduced.

Industrial production in the centrally planned economies during 1954 was higher by over 100 per cent. as compared with the pre-war years. The rise was in marked evidence in the Soviet Union, being as much as 190 per cent. For the other E. European countries, the average rise was more than 150 per cent.

While industrial production expanded at a high rate throughout the post-war decade, the average rates of growth declined perceptibly in the course of the period. This reflected the transition from recovery to expansion and, especially during the second half of the decade, the gradual absorption of unused resources. In Yugoslavia, the pattern of growth was similar to that of the other countries of this group up to 1949. The very small increase in output in 1950 and the decline in 1951 and 1952 resulted from poor harvests and difficulties in securing imported raw materials and fuel, subsequent to the severance of economic relations by the other countries of E. Europe. In mainland China where intensive industrialisation began much later, industrial production increased rapidly during 1950-53, but, in 1954, the rate of expansion declined.

Agricultural production, however, recorded only a very slight increase over the pre-war level. This was a major problem in all the countries during the post-war decade. At the end of the war, it will be recalled, agricultural production was considerably below pre-war levels. In the first half of the post-war decade, the output recovered at a rapid rate in most of the countries, generally reaching 85 to 90 per cent. of pre-war levels. But, in the following period, the rate of recovery slackened and the pre-war level of output was reached only recently. The Soviet Union accounted for a 10 per cent. rise in output above the pre-war level in 1952; the output did not stand any significant further increases until 1955. Mainland China reported a rapid recovery in agricultural production after 1949, which, by 1954, reached a level one-sixth above 1936.

The considerable lag in agriculture, as noted above, was the effect of a relatively low rate of investment, as well as of the fiscal and price policies applied to agriculture. In the opinion of the U.N. Survey, the high level of compulsory deliveries at low prices had a depressing effect on all the countries of the group. In the E. European countries which began to organise collective farming after the war, collectivisation by administrative pressures, rather than on a voluntary basis, also acted as an obstacle to the expansion of output. The agricultural policy was, however, changed in 1953. Supplies of machinery and building materials, as also of fertilisers, were substantially increased. The area under cultivation was expanded and further withdrawal of man-power from agriculture was abandoned. There was also a reduction in compulsory deliveries and taxes and an increase in prices paid to the peasants.

Reviewing the developments in the trade of the centrally planned economies, the U.N. Survey notes the creation of a separate, virtually self-contained, trading area, influenced decisively by the existence of close political ties among the members of the group. The trading area was reinforced by the strategic trade restrictions imposed by the West. At the end of the post-war decade, the aggregate volume of trade among the countries themselves was more than two-and-a-half times the pre-war level while the trade with the rest of the world was less than half the pre-war level. The most significant expansion in foreign trade was in the Soviet Union where the total volume in 1954 was over four times as large as before the war. The trend of trade of the centrally planned economies with the rest of the world was downwards throughout the period 1949-53. It was only in the third quarter of 1953 that a recovery began. During the entire post-war decade, Western Europe was the major trading areas in the foreign commerce of E. European countries. The most striking development in the commodity pattern of trade since the end of the war has been the increase in exports of machinery and equipment. In contrast, shipments of foodstuffs have fallen in most of the countries.

COTTON BOARD'S REVIEW OF WORLD TEXTILE SITUATION

U.K. CONCLUDES TRIANGULAR AGREEMENT WITH INDONESIA

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, *3rd July*

A WORLD-WIDE review of cotton textile production by Britain's Cotton Board says the United Kingdom has suffered a more severe reduction in output than any other important cotton manufacturing country. In the first quarter of 1956 the greatest rate of expansion, compared with a year ago, appeared to have been achieved by Germany, together with the young cotton industries, of Pakistan, Hong Kong and Egypt. The most impressive export performance was that of Japan, which raised overseas sales to a new post-war record.

The Board says last autumn's modest recovery in activity in the British cotton industry had not been maintained during the current year. In the first quarter exports fell by a further 9,000,000 yards to a total of 120,000,000 yards, due almost entirely to a sharp reduction in shipments to British and French West Africa.

There was a substantial increase in the amount of cotton cloth imported into this country during the first quarter. The report adds: "India, Hong Kong and Japan all sent greater quantities. Imports of certain made-up articles, particularly shirts and towels, have also increased again to an alarming extent."

U.S. Cotton Plans

Keen criticism of American cotton policy was contained in the annual report issued by Mr. William T. Winterbottom, Chairman of the £25,000,000 textile group, Fine Spinners and Doublers Ltd., Manchester.

"It is unfortunate," he said, "that employment, production and prosperity in the cotton industries of so many countries should depend so heavily on American politics, but that is one aspect of the world we now live in that has to be faced."

Official American policy was to carry through the programme of disposing of surplus cotton supplies without undue disturbance of markets. "This," declared Mr. Winterbottom, "is clearly impossible, but the aim appears to be to minimise injury to raw cotton producers in other countries. There is no evidence of anxiety to avoid hurting users of raw cotton and its products. Much damage has already been done and there is no end in sight."

Observers outside America agreed that no permanent solution to the problem could be found along these lines. If the United States was to regain and hold the share of world trade in raw cotton which the qualities of its cotton deserved, individual growers and merchants must have the proper incentive to produce and market with the utmost efficiency the varieties of cotton the world wanted at the best prices obtainable in free competition with their rivals.

Commenting on conditions in the Liverpool cotton market, Mr. Winterbottom said other cotton-growing countries outside America were setting the pace in a way which was clearly going to affect the structure of futures markets. Continued uncertainty about American cotton policy had made a futures contract based solely on American cotton increasingly useless as an effective hedge and trading in the Liverpool/American contract had declined in recent months. The spinning industry welcomed the announcement that Liverpool intended to open a new futures contract for American type cotton, against which Mexican, Syrian, Nigerian and East African could be tenderable as well as American.

Spinners of long-staple cotton had welcomed the reopening of the Alexandria futures market last September and the simultaneous introduction of a Karnak futures contract in Liverpool, but the hopes built on these events for a better hedge for long-staple cotton had not been fulfilled. There had been no development of a spot stock in Liverpool or Manchester and spinners had generally had to accept the full price risk as well as much of the financing cost if they wanted to keep their mills running.

Closely following the announcement of a deal to provide cotton yarn and cloth for Burma from American aid cotton, the British Board of Trade has disclosed a further arrangement on similar lines with Indonesia. This agreement provides for the manufacture of textiles from United States cotton for undeveloped areas in the Far East on condition that certain formalities are complied with.

Mr. E. H. Stewart, Chairman of the China and Far East Section of the Chamber of Commerce, commenting on the Indonesian agreement, said the Lancashire textile industry welcomed the signing of the pact. At present the bulk of this trade with Indonesia was being done by Japan and India.

It has been estimated that the latest arrangement will involve production of about 8,000,000 yards of cotton cloth by Lancashire mills in the traditional styles of the Indonesian market. A significant feature is that this figure far exceeds the level of recent Lancashire exports to this area. Last year's total was only 2,300,000 yards and taking the past two years together, the figure is still slightly below 5,000,000 yards.

One of the results of the signing of this agreement has been the decision to discontinue open general licensing of dollar cotton imported into the United Kingdom. This action has been taken with the agreement of the Cotton Board, the spinners' organisations and the Liverpool Cotton Association.

The Board of Trade has announced that open individual licences permitting unlimited imports of cotton from dollar areas will be issued to importers on condition that certain undertakings are given to comply with the appropriate procedure whenever United States Government funds are available.

Finance

The reason for the change in procedure is to ensure that full use is made of funds provided by the United States Government to finance imports of American cotton either under the mutual aid arrangements or as part of triangular deals between the Governments of the United Kingdom, United States and other countries.

Dollar aid has been received direct from the United States in the form of cotton imported by spinners and merchants and other supplies have been made available under the $5 million deal with Pakistan and the new $2.6 million pact with Burma. Average quantities of American cotton taken up in recent months have been so small that importers have regarded the documentation process as a nuisance and in consequence dollars have been spent needlessly. The Pakistan triangular deal has also been held up by this failure to carry out some of the details and unexpected interest charges have been incurred by traders.

The possibility of further textile deals involving the provision of cloth made from American aid cotton has made the traders concerned agree that this exceptional reversion to individual licensing is justified and necessary.

The change of procedure is a short-term measure to meet special conditions. If these conditions cease, owing to the withdrawal of direct dollar aid in cotton or of triangular deals in textiles and the raw material, the open general licensing system will be restored as soon as possible.

Australian Imports

Another severe blow affecting Lancashire's prospects in shipping cotton textile goods abroad has been the decision of the Australian Government to make further drastic import cuts.

The new cuts affect the Lancashire textile industry's leading overseas market. Shipments of cotton piecegoods so far this year have already shown a decline to 33,000,000 yards valued at £4,000,000. This compares with 48,000,000 yards valued at £5,800,000 in the corresponding period last year.

Although action by Australia to restrict its imports was not unexpected, the announcement disturbed traders on the Manchester Royal Exchange and there was increased anxiety about the outlook. Australian buyers have been acting cautiously for some time.

The Cotton Board and the Manchester Chamber of Commerce reserved comment pending official details of the cuts. A Chamber spokesman said it appeared that the further cut would virtually reduce textile imports to the base quota of 20 per cent. announced by the Australian Government in March 1952.

The situation will be considered at early meetings of trade organisations.—*All Rights Reserved.*

A substantial rise in New Zealand's wool exports for the first nine months of the current season is reported by the Commonwealth Economic Committee. Shipments of wool in March this year aggregated 90.7 million lbs., actual weight more than three times the unduly low February total, and representing on a greasy basis twice the quantity shipped in the previous March. In the nine months July-March 1955-56, shipments were 295 million lbs. actual weight, which on a greasy basis represented an increase of 14 per cent. compared with the corresponding period of the previous season. Exports to the United Kingdom rose by 4 per cent. to 134 million lbs., and those to France by 13 per cent. to 43 million lbs. Shipments to the United States were 56 per cent. higher at 30 million lbs., and those to Western Germany showed a rise of 14 per cent. to 23 million lbs. A notable increase occurred in shipments to the Soviet Union, which were nearly trebled at 10 million lbs. Larger quantities also went to Belgium, Italy and Japan.

WORK OF INDIAN CENTRAL COTTON COMMITTEE

QUALITY AND PER-ACRE YIELD IN 1954-55 IMPROVE

THE Indian Central Cotton Committee, since it was established in 1921, has provided a common forum for all sections of the cotton industry and the cotton-growing States in India at which the cotton problems of the country are discussed and measures for dealing with them suggested. Apart from this function, the Committee's research schemes and laboratory service have proved of great value to the Indian cotton grower and the mills, for there has been in recent years considerable improvement in the quality and quantity of cotton grown in India. The cotton mill interests have made an increasing use of the facilities for testing provided by the Committee's Laboratory. It is noteworthy that the Committee, in its latest report covering the year ended 31st August 1955, has been able to record an increase in the proportion of long-staple cotton to the total crop grown in the country and a significant improvement in the per-acre yield of cotton.

Efforts have been made since the partition to make the country self-sufficient in respect of its requirement of cotton of staple length less than 1.1/16". They appear to have borne fruit with the acreage and production figures reaching the all-time high of 18.3 million acres and 42.98 lakh bales in the year 1954-55. As compared with 17.2 million acres under cotton and production of the order of 39.65 lakh bales in the previous year, the figures for 1954-55 represent an increase of 1.1 million or 6 per cent. in acreage and 3.33 lakh bales or 9 per cent. in production. It may be mentioned here that trade estimates, which past experience has shown to be more accurate than official estimates, place the 1954-1955 season's cotton crop at 54.6 lakh bales.

The target set by the Planning Commission, for achievement by 1955-56, in respect of acreage and production was 18 million acres and 42.29 lakh bales respectively. It is evident from the figures quoted above that the target was reached in 1954-55 itself, a year ahead of schedule. The increase in area under cotton during the season has been attributed to favourable weather conditions at sowing time and to efforts made under the cotton extension schemes of the Government of India. The acreage under improved varieties and irrigated cotton during the year of the report was 11.6 million and 1.7 million, as against 10.7 million and 1.4 million acres, respectively, in the previous year. The States of Bombay, Punjab, Saurashtra, P.E.P.S.U., Rajasthan and Mysore mainly contributed to the increase in area, whereas outturn showed an improvement in Bombay, Punjab, P.E.P.S.U., and Saurashtra only.

A point that deserves notice is that the increase in the acreage and production of cotton in 1954-55 was mostly in the long- and medium-staple varieties. Production under these groups in the year was 15.87 lakh bales and 18.86 lakh bales, as against 14.20 lakh bales and 16.62 lakh bales, respectively, in the previous year. The table below gives the approximate distribution of the cotton crop of 1954-55 into different staple length groups:

	Cotton production (Thousand bales of 392 lbs. each)		
	1954-55	1953-54	1952-53
Superior long staple (1" and above)	1,587 (37)	1,420 (36)	66 (2)
Long staple (¾" to 31/32")			839 (27)
Superior medium staple (13/16"×27/32")	1,886 (44)	1,662 (42)	842 (27)
Medium staple (below 13/16" and above 11/16")			553 (17)
Short staple (11/16" and below)	825 (19)	883 (22)	831 (27)
Total ..	4,298	3,965	3,131

N.B.—Figures in brackets represent percentage to total.

It is clear from the table above that the proportion of the long-, medium- and the short-staple cotton to the total crop in 1954-55 was 37 per cent., 44 per cent. and 19 per cent. respectively, as against 36 per cent., 42 per cent., and 22 per cent. in 1953-54. Long-staple cotton, it may be further noted, which formed 37 per cent. of the total in 1954-55, accounted for only 23 per cent. in 1950-51. The following table shows the staple-wise production of Indian cotton during the last five years, together with the corresponding averages for the two quinquennia 1940-45 and 1945-50:

(In thousand bales of 392 lbs. each)

Year 1st September to 31st August	Cotton production (Based on official forecasts)			
	Long staple (7/8" and above)	Medium staple (below 7/8" and above 11/16")	Short staple (11/16" and below)	Total
Average 1940-45 ..	619 (17)	1,461 (41)	1,526 (42)	3,606
,, 1945-50 ..	383 (17)	1,148 (51)	721 (32)	2,252
1950-51	648 (23)	1,448 (49)	830 (28)	2,971
1951-52	918 (29)	1,223 (39)	992 (32)	3,133
1952-53	903 (29)	1,395 (44)	831 (27)	3,131
1953-54	1,420 (36)	1,662 (42)	883 (22)	3,965
1954-55	1,587 (37)	1,886 (44)	825 (19)	4,298
Average 1950-55 ..	1,103 (32)	1,523 (43)	874 (25)	3,500

N.B.—Figures in brackets represent percentage to total.

Improvement has not been confined to quality but is also reflected in the yield per acre. The latter has gone up from 93 lbs. per acre in the quinquennium 1947-52 to 116 lbs. in 1954-55. The corresponding figures for 1952-53 and 1953-54 was 92 lbs. and 104 lbs., respectively.

The following table shows the figures of yield per acre based on the estimates of actual crop arrived at by the Committee during the last three years together with the corresponding average for the quinquennium ended 1951-52:

Year 1st September to 31st August	Area (Thousand acres)	Estimated actual crop (000 bales of 392 lbs. each)	Yield per acre (lbs.)
Average 1947-52	12,975	3,076	93
1952-53	15,693	3,667	92
1953-54	17,182	4,573	104
1954-55	18,346	5,434*	116

* Provisional.

Several cotton extension schemes, as is well known, have been undertaken for increasing the production of cotton. They were continued for the fifth year during the 1954-55 season. In 1951-52, these schemes were merged with the cotton plan under the first Five-year Plan. A target of production of 42.3 lakh bales was fixed for achievement by the end of the Plan in 1955-56. The target for 1954-55 was 39.8 lakh bales. Accordingly, plans were drawn up by the Government of India in consultation with the various State Governments and for facilitating implementation, an out-right grant to the extent of Rs. 9.89 lakhs for staff and other expenditure and loans to the extent of Rs. 58.10 lakhs for the purchase of improved seed were sanctioned by the Government of India to the various State Governments. The measures adopted under the cotton extension schemes for increasing the production of cotton, consisted of: (1) Expansion of cotton area by reclamation of waste and fallow lands, by replacement of food and other crops by cotton and by growing cotton as a second crop, (2) intensive cultivation by (*a*) provision of extra irrigation facilities, (*b*) inter-cropping cotton with other crops, (*c*) use of improved seed, (*d*) application of manure and fertilisers, (*e*) provision of adequate plant protection measures.

The following table gives the targets of additional area and production fixed for the 1954-55 season together with their estimated achievements:

Particulars	Additional area (In lakhs of acres)		Additional production (In lakhs of bales)	
	Targets	Achievements	Targets	Achievements
By expansion of area..	4.96	7.91	1.09	1.77
By provision of extra irrigation facilities..	0.91	1.08	0.31	0.28
By inter-cropping cotton with other crops..	4.41	3.92	0.41	0.27
By manuring ..	3.94	3.15	0.35	0.25
By use of improved seed ..	24.64	18.26	0.67	0.58
By plant protection measures	0.82	0.13	0.04	0.01
By improved cultural methods	0.13	1.48	..	0.01
Total ..	..	..	2.87	3.17

STRIKE IN U.S. STEEL INDUSTRY

ITS CONSEQUENCES ANALYSED

IN view of the labour strike in the U.S. steel industry with effect from the 1st inst., the following article reproduced from the July issue of the *Monthly Letter* of the First National City Bank of New York will be read with interest:

Steel wage negotiations held the centre of the stage last month. The companies offered wage increases and additional fringe benefits for workers over the next five years, amounting, by the end of that period, to a total increase in employment costs of 65 cents per hour worked. The union rejected this offer as "trifling."

Pressed for funds to finance expansion, the steel companies are expected to advance prices to cover at least the initial added cost of any wage settlement. The question is, how much? Increased steel prices will likely mean higher prices for a wide range of goods that use steel. The size of the steel settlement is likely to have an impact also on negotiations in other industries such as meatpacking, telephone, rubber, steel fabricating, and aluminium. Thus, a big wage and price hike in the trend-setting steel industry raises the possibility of a resumption of the upward wage-price spiral of earlier post-war years. It comes at a time when the economy is moving along at close to record levels, prices—even in the farm sector—have been moving up, and the cost of living index has touched its previous high point of October 1953.

Apart from an oversize initial boost, the benefits offered by the mills over the later years of the contract—above 4 per cent. a year—appeared to be an estimate—perhaps on the optimistic side—of the improvement in productivity of labour that modernised facilities can bring, as well as the advantages of five years of labour peace.

Erring on Side of Generosity

The temptation to the employer, when business is good and a shutdown costly, is to err on the side of generosity. The temptation to the union is to press its advantage to the utmost, and make demands that, to be fulfilled, require large price increases.

This is an illustration of the way prosperity, sellers' markets and an abundance of employment opportunities threaten economic stability. One solution is Government price and wage controls. The solution for the free society is for the negotiating parties to exercise self-restraint when business is good so as to have a price basis that can be sustained when business is not so good.

These conflicts that we call "labour disputes" are basically a natural haggling that goes on every day in the business process. They become more than that when they relate to the whole of a key industry such as steel. They determine what other industries and unions feel impelled to do. Yet there is a basic identity of objectives in this difficult area of economic bargaining. Mr. Joseph L. Block, President of Inland Steel Company, in a New York speech on 24th May, made the point this way: "Workers, management, owners and the public gain by a sharing of productivity increases. They all suffer from the harmful effects of inflation. The only proper question at issue is an evaluation of future productivity increases based on past experience."

The Record

Since 1939, the dollar has lost nearly half its buying power. Average hourly earnings in manufacturing in that period have tripled. With the spread of "fringe benefits," the increase in labour costs has been even greater. Estimates developed by the U.S. Bureau of Labour Statistics indicate a rise of labour productivity in manufacturing over this period of perhaps 40 per cent. In other words, labour costs have been rising at a rate inconsistent with price stability.

Over the long run, wages must be paid for out of production, and thus can be raised only by increased production. Some union officials insist that employers can take the cost of wage increases out of profits. This ignores the fact that the employer needs adequate profits to reward management, provide a return on invested capital, and keep the company financially strong so that it can provide for growth. Thus, wage demands in excess of productivity gains must be felt in higher prices. Inflation will reduce *real* gains to those warranted by production.

Historically, *real* hourly earnings have moved up closely in line with output per man-hour. Going back all the way to 1909, for instance, hourly earnings, in terms of purchasing power, and output per man-hour as estimated by the Bureau of Labour Statistics, are both up by about 250 per cent. That contrasts with a tenfold increase in nominal money earnings. This, then, is the issue in the steel wage dispute. Shall we try to keep the rise in labour costs in line with prospects for improved productivity? Or shall we delude ourselves with the mirage that excessive labour cost increases can come from some place other than the consumer?

The Same Problem Abroad

The same disease—sometimes in more advanced forms—plagues a number of Western European countries. With an increasing scarcity of labour as Europe's industrial expansion continues, trade unions have found their bargaining position greatly strengthened and feel a natural disposition to take advantage of it. In Great Britain, for instance, there have been more job openings than people seeking jobs. At latest report, unemployment in that country amounted to 265,000, while the number of unfilled vacancies came to 380,000. In France, wages rose by 9 per cent. during 1954 and by 11 per cent. in 1955. Wage increases in Belgium, Norway, Sweden, West Germany, and the United Kingdom have followed much the same pattern.

Excessive wage demands have created critical difficulties for England. While weekly earnings per worker have increased by some 45 per cent. since 1950, weekly output per wage earner has increased only by 10 per cent. And it seems likely that wages will increase even more this year. In the first four months of 1956, weekly pay-rolls increased by over £5 million—about the same amount as for all of 1955. A number of wage negotiations are still outstanding, while further wage demands on behalf of engineers, railwaymen, and miners will be presented before the end of the year.

The British Chancellor of the Exchequer, Mr. Harold Macmillan, took note of the seriousness of the matter in a speech in May before the British Chamber of Commerce. As reported in the *New York Times*, he declared that, if every rise in price resulting from past wage increases is regarded as a basis for future pay rises, "we are certainly on the road to ruin." He continued: "I say to the whole country and in the plainest words I can use, our jobs are at risk, and will be so increasingly until this ruinous spiral of wages and prices is stopped."

Full Employment Policies

The task of preserving the value of money, while at the same time keeping business activity at high levels, is most difficult in those countries which most actively pursue full employment goals. The fuller the employment the harder it is to keep the lid on prices. That is because when labour is scarce, employers bid for workers by offering higher wages. Increased pay-roll costs are passed on in higher prices to the consumer.

Senator Paul Douglas of Illinois, an economist who has made a life study of employment statistics, wrote a book in 1952, entitled *Economy in National Government*. In it, he suggested that a normal proportion of seasonal and transitional unemployment would run near to six per cent. of the civilian labour force. In other words, there would be people finding their way to job openings that exist.

Between 1945 and 1955, the number of unemployed persons in this country averaged under four per cent.—well below what Senator Douglas suggested as a norm. Put another way, full employment policies of the Government in this country have actually produced "over-full" employment—more jobs than workers in many lines. It is significant to note that, in the same ten-year period, consumer prices in this country rose by nearly 50 per cent. Mr. Neil H. Jacoby, former member of President Eisenhower's Council of Economic Advisers, in his recent book, entitled *Can Prosperity Be Sustained?*, discussed the effect of rising prices this way: " . . . Since 1941 more human suffering has been visited upon Americans by the doubling of consumer prices than by unemployment. . . ."

Those European countries which have succeeded in pushing unemployment down [illegible] further than in this country have [illegible] with even greater wage-price pre[illegible]

be seen in the following table. It shows that the cost of living has gone up faster in Sweden, Holland, and the U.K., where unemployment is almost non-existent, than in Germany, Belgium, and the U.S., where the percentage of unemployed has been higher.

	Germany		Belgium		Holland	
	Cost of living*	Unemployment†	Cost of living*	Unemployment†	Cost of living*	Unemployment†
1950 ..	100	10.2	100	10.9	100	2.0

* Calculated from *International Financial Statistics* Indices: 1950=100.

† Percentage of labour force; Source: *I.L.O. Year Book of Labour Statistics*, 1955.

‡ Estimated.

There is some evidence of a growing awareness of the difficulties created by making wage demands greater than increased productivity and by pursuing full employment policies regardless of the effect on prices. As to the first area—wage demands—the April issue of *Economic Trends and Outlook*, published by the A.F.L.-C.I.D. Economic Policy Committee, carried this paragraph: "...Certainly, it is true that, if real wages are to rise, there must, indeed, be a constant increase in productivity as well which, in turn, can make possible a rapid growth in the total size of the production pie.... If real wages are to continue to rise, this movement must be underpinned by rising man-hour output and greater total production...."

An example of increasing maturity in labour leadership abroad showed up in Sweden not long ago. The Swedish Confederation of Trade Unions, in April, agreed to fix wage increases at a maximum of 3.7 per cent. for 1956, while at the same time making an effort for an over-all production rise of at least 4 per cent. Said Mr. Rudolph Meidner, Economic Adviser to the trade unions: "We know that a new wage increase of 12 per cent., as in 1955, would be dangerous. The economy cannot bear a wage increase of 10 per cent., if the production is raised only by 3 or 4 per cent."

Responsibility to Share

The responsibility for preventing inflation in this country and abroad in the months ahead rests on many shoulders. Workers need to hold their demands for increased wages to amounts justified by their own proficiencies and by general advances in technology and productivity. Government monetary and fiscal authorities must realise that pumping up the credit supply—in order to perpetuate "full employment"—will lead to further erosion of the currency. Although inflationary forces are set in motion by excessive wage demands, refusal by the authorities to underwrite the increases by boosting the credit supply would dampen these forces. Business men must strongly resist excessive union demands and set price and profit policies, so that part of the benefits of increased productivity can be passed on to the consumer in the form of better products or lower prices. The public must give its support to Government and private efforts to restrain economic excesses—even though money income (as distinguished from real income) may not rise as fast as in the past.

If this and other countries are to enjoy sound economic growth with stable currencies, the responsibilities must be met. To do otherwise is to invite inflation and later collap[illegible]

A report by the U[illegible]merce Department states that the famil[illegible] 3 per cent. over 1954 level, and 100 p[illegible]es increased from 36 million in 1929 while [illegible]on in 1955. The past decade also wit[illegible] wide changes in the pattern of income dis[illegible]ution. The proportion of those earning less than $5,000 a year went down from 79 to 30, of those between $5,000 and $10,000 a year shot up from 17 to 44 and of those above $10,000 from 4 to 26.

CONTROL OVER MOLASSES IN BOMBAY

SUGAR FACTORIES ADVERSELY AFFECTED

THE assumption of wide and arbitrary powers by the Government of Bombay under the Molasses (Control) Act, 1956, is not only untimely but also highly unjust. The Act, it will be recalled, vests in the Government full authority to control the price at which and the manner in which molasses—one of the main by-products of the sugar industry—is bought or sold generally for any industrial purpose. It also vests in the Government powers to regulate, by licences, permits or otherwise, the storage, supply, transport, distribution, disposal, acquisition, possession, use or consumption of molasses. In addition to these, the Act empowers the Government to issue an order providing for the following:

For requiring any person or occupier of a sugar factory to sell molasses, held in stock by him or produced or to be produced in his factory, to the State Government to the exclusion, complete or partial, of others or to such person or class of persons and in such circumstances and upon such terms as may be specified in the order; where any person sells molasses, there shall be paid to him the price therefor—(a) where the price can, consistently with the controlled price, if any, be fixed by agreement, the price so agreed upon; (b) where no such agreement can be reached, the price calculated with reference to the controlled price, if any, fixed under this section; and (c) where neither clause (a) nor clause (b) applies, the price calculated at the market rate prevailing in the locality at the date of sale;

for the taking of samples and grading and testing of molasses;

for regulating or prohibiting any class of commercial or financial transactions relating to molasses, which, in the opinion of the State Government, are, or, if unregulated, are likely to be, detrimental to the public interest;

for collecting any information or statistics with a view to regulating or prohibiting any of the aforesaid matters;

for requiring occupiers of sugar factories and persons engaged in the production, supply or distribution of, or trade and commerce in, molasses, to maintain and produce for inspection such books, accounts and records relating to their business and to furnish such information relating thereto, as may be specified in the order; and

for any incidental and supplementary matters, including, in particular, the grant or issue of licences, permits or other documents, their terms and conditions and the charging of fees therefor.

The aforesaid powers will be exercised by the Government through inspectors appointed for the purpose. The inspectors will be authorised to inspect, at all reasonable times, the stocks of molasses held by any sugar factory or person, to have samples from such molasses for analysis or testing, and to examine licences, permits, records, books, accounts, returns, documents or statements relating to transactions in molasses in the possession or custody of any person or sugar factory. For the purpose of advising the State Government on matters pertaining to molasses, a Molasses Board, with not less than six members, will be constituted.

Delegation of Powers

The Act provides for delegation of powers. Accordingly, the State Government can direct that any power conferred or any duty imposed on it may, subject to such conditions as it will specify, be exercisable also by any officer specified by it. Further, the Government can exempt, either wholly or partially, any area or person or class of persons from all or any of the provisions of the Act, or of the rules and orders made thereunder. It can also call for and examine the records of any proceedings before any officer exercising powers or discharging duties under the Act, including those relating to the grants or refusal of a licence or permit under an order for the purpose of satisfying itself as to the correctness, legality or propriety of an order passed in, and as to the regularity of, such proceedings and may either annul, reverse, modify or confirm such order or pass such order as it may deem fit.

The Act also provides for severe penalty in cases of default. Thus, whoever contravenes any provisions of the Act or any order made thereunder will, on conviction, be punished with imprisonment of either description which may be extended to one year or with fine. Any court trying such contravention may direct that the stocks of molasses in respect of which the contravention has taken place shall be forfeited to the State. The Director, Collector or any officer empowered to investigate an offence under the Act will be authorised to (a) enter and search at all reasonable times, any premises in which he has reason to believe that any molasses in respect of which an offence punishable under this Act has been or is about to be committed is kept or concealed and seize such molasses and any box, receptacle, package or covering containing such molasses; (b) seize in any open place or in transit any molasses in respect of which he has reason to believe that any offence punishable under this Act has been committed and also any box, receptacle, package or covering containing such molasses; (c) seize any books, accounts, documents or statements relating to transactions in the molasses so seized; (d) detain, search and arrest any person whom he has reason to believe to be guilty of any offence punishable under this Act.

It will be evident from the foregoing analysis that the Bombay Government has assumed very wide and arbitrary powers to control molasses which will adversely affect the sugar industry. As it is, molasses in this State is subjected to rigid restrictions as regards sale, transport, storage and possession, and export, thanks to prohibition. These restrictions make it impossible for the sugar factories to dispose of their stocks of molasses, even though there is good demand for it from other States, as also from foreign countries. Consequently, huge stocks of molasses have accumulated with the factories and their storage has been a standing problem to the mills ever since the Prohibition Act came into force.

Wasteful Disposal

When faced with excess stocks of molasses, the factories try to solve the problem by destroying them or by using them as manure wherever they are found suitable. Even for this, they have to take the permission of the Government. The fulfilment of this condition involves considerable delay and expenditure. For instance, when a factory wants to move the surplus molasses from the storage tank or pits to fields either for destruction or for being used as manure, it must do so only under an escort provided by the Government. What is more, the cost of escort, which is specified by the Government, is to be paid by the factory itself. Thus, for no fault of its own, the factory is compelled to pay a penalty. Here is a by-product which is inevitable in the manufacture of sugar. It can be put to valuable use, but the manufacturer is prevented from doing so, because of laws framed for enforcing prohibition. When as a result, stocks accumulate and have to be destroyed, not only has the manufacturer no freedom to do so but has also to pay for it. That is not all. When the surplus molasses is destroyed on the fields, it results in bad odour lasting for several days and adversely affecting the health and temper of people working in sugar factory areas. We do not think there is any industrial country in the world where the disposal of a useful by-product is handled in such an annoying and wasteful manner as in Bombay State.

In view of all this and of the prospect of having to face additional accumulations, following the new controls referred to above, it will not be surprising, if sugar manufacturers in Bombay-Deccan were to suffer from a sense of exasperation. The reasons adduced by the Bombay Government for having brought forward the legislation are not, to say the least, convincing. The Government says:

"The main raw material required for the manufacture of power and industrial alcohol is molasses and, unless its supply at fair prices is ensured, it will not be possible to manufacture power and industrial alcohol on an economic basis. It is, therefore, considered essential to control the supply of molasses for the purpose of development of certain industries in which the use of power and industrial alcohol is essential by securing their equitable distribution and availability at fair prices and for certain other matters. The Bill is intended to achieve the objective in view."

Where is the Need for Control?

Few would dispute the need for ensuring adequate supplies of molasses for alcohol distilleries at a fair price. But this is no problem at all. For the stocks of molasses are, as already stated, plentiful. Even if all the distilleries in India were to work to their full capacity—27 million gallons per annum—about 600,000 tons of molasses would be required on the assumption that the all-India average yield amounts to 46.41 gallons of alcohol from 1 ton of molasses. As against this requirement, the total quantity of molasses available comes to more than 717,000 tons. But the fact is that the existing capacity is not being utilised in full and the supply is far in excess of the demand. Accordingly, even normal market forces will keep the prices down at reasonable levels.

The assumption of full control over molasses is instituted for no other reason than using it in the manufacture of rectified spirit and power alcohol. Unfortunately, its actual use for this purpose in the State is confined only to a few licensed distilleries attached to the sugar factories and the Government Distillery at Nasik. These distilleries need only a very limited quantity of molasses. Again, negligible quantities of molasses are used by foundries for casting purposes. Even after meeting all the requirements, there is still left a surplus which can usually find its way to other States. Where then is the need for the authorities to control the supply of molasses?

Truth Lies Elsewhere

The truth behind the Bombay Government's policy lies elsewhere. It will be recalled that, about two years ago, the Government put up an additional plant at its Nasik Distillery for the purpose of manufacturing power alcohol for use as motor fuel by mixing it with petrol. At that time, it did not care to ascertain the prospects of working the distillery successfully. It soon discovered that the cost of this power alcohol would ultimately be higher than the cost of petrol. The problem before the State Excise authorities was, therefore, to manufacture power alcohol at a cost that would make it competitive with petrol. As this was not an easy problem, the authorities felt that, if they could secure the raw material at a nominal cost, the difficulty regarding the ultimate cost would be overcome. The Government could have, of course, exempted power alcohol from excise duties. But this it was not prepared to do. It wanted to have the cake and eat it. And this it could do only at the expense of the producer of molasses. The sugar factories were accordingly subjected to every form of pressure to provide the Distillery with a sufficient quantity of molasses at a very low price. The sugar industry tried its utmost to accommodate the Government in this respect. But the negotiations ultimately broke down over the question of price. Thereafter, the Government arbitrarily fixed the price of molasses at As. 4 per maund under the Bombay Essential Commodities and Cattle (Control) Act, 1946. Since the legality of the move to control molasses was doubted, the Government of Bombay decided to bring forward the aforesaid legislation. And the amendment to Article 31 of the Constitution made its task easier. But this does not alter the fact that, if the Government takes away molasses from the factory at as low a price as As. 4 a maund, it will be nothing short of expropriation of private property.

COAL INDUSTRY IN INDIA

PRODUCTIVITY LOWEST IN WORLD

THE history of the coal industry in India dates back to the year 1774, when mining was started in the Raniganj area. It will be surprising to note that this 182-year old industry occupies only ninth place in respect of production among the important coal-producing countries of the world. This backwardness is due to the fact that production of coal was for a long time, till the advent of the Jharia Coalfields, insignificant, considering the vast size, resources and population of the country. Very little attention was paid to the industry even up to the First World War. This is understandable, because industrial progress of India was at a very slow pace till then. It was only the pressure of the Second World War that caused great attention to be paid to the growth of the industry and made the Government devise measures which, while aiming to raise production, brought price, allocation and distribution of coal under Government control. Some kind of control had, of course, been exercised over the industry ever since production started, but it was not so detailed as during the war years.

The importance of the industry to the country's economy has now ceased to be a matter of academic discussion. The important role it plays in the economy of the country has come to be widely recognised. The rapid industrialisation envisaged under the second Five-year Plan confers a more vital role on it than hitherto. There are 960 collieries in this country and their present output is of the order of 38 million tons. The total amount of capital sunk by 475 joint-stock companies (as at the end of 1953-54) is Rs. 22.42 crores, besides that employed by private individuals and syndicates The average number of persons employed daily is about 340,000.

The output of coal in India, which was about 26 million tons in 1939, rose to 38.21 million tons in 1955. In spite of this increase, it is stated by some—*vide* page 24 of the Award of the All-India Industrial Tribunal (Colliery Disputes), Volume I—that the industry is not in a position to meet the entire domestic demand. In support of this contention, the following figures (collected from the Coal Commissioner's Office, Calcutta) are cited:

(In million tons)

Year	Production	Demand	Allocation	Despatches
1950	32.31	34.74	34.37	27.11
1951	34.43	37.19	35.08	29.22
1952	36.80	39.01	34.70	31.14
1953	35.98	37.51	36.37	30.76
1954	36.86	39.48	39.06	31.91

It is hard to believe, as the Tribunal does, that the industry is unable to meet the entire domestic requirements of coal. It is not known how the domestic demand has been calculated. The fact is that the industry is strictly controlled and production targets for certain high grade varieties of coal are determined by the Government. The industry has also been exporting coal of well over a million tons and there are no restrictions on exports. In 1952, exports amounted to 2.5 million tons. Thereafter, they have been running at the rate of 1.25 million tons. If domestic production is running below domestic requirements, it is not clear why exports are being freely allowed.

The real position, as it appears to us, is this. If the industry is unable to produce coal to meet the country's requirements in full, it is mainly because of inadequacy of transport. This is clear from the fact that even the available supplies do not reach the consumers to the full extent, as will be seen from the table above showing a wide gap between allocations and despatches.

The inadequacy of transport facilities has been the problem ever since coal production commenced in India with the result that control over wagon allotment has persisted right through. The control over wagon allotment was tightened during the war years. The accumulated stocks at the pit-head amounted to 3.61 million tons at the end of 1955. It is officially stated that the position would improve in the coming years, thanks to the large provision made under the second Five-year Plan for railway rolling stock. But it remains to be seen how far this optimism is justified. It must be borne in mind, in this connection, that the second Plan has made provision for a large increase in the output of coal, the target to be hit by 1960-61 being 60 million tons.

Now that the coal industry in India is on the threshold of a phase of rapid development, it will be interesting to view its position in relation to certain other principal coal-producing countries of the world.

The following table sets out the position of the Indian coal industry in relation to other important coal producers:

Countries	Production* (In mill. tons)	Labour† force (In 000's)	O.M.S.† (overall)	O.M.S.† (underground)
U.S.	448.46	397	6.67	N.A.
U.K.	225.13	716	1.21	1.61
U.S.S.R.	347.10	N.A.	N.A.	N.A.
West Germany	130.93	419	1.11	1.47
China-Manchuria (estimated) ..	40.00	N.A.	N.A.	N.A.
Poland	94.72	N.A.	N.A.	N.A.
France	55.33	241	0.91	1.36
Japan	42.43	365	0.88	0.59
India	38.21	343	0.37	1.10
Belgium	29.72	160	0.75	1.05
South Africa	32.26	57	N.A.	N.A.

* As in 1955. † Relates to 1952.
N.A.=Not available.
O.M.S.=Output per man-shift.

It will be seen from the above that India is ninth in the order of priority so far as production is concerned. Countries which are much smaller than India in size and resources are producing more. From the point of view of total labour force employed, India occupies the fifth place amongst the first eleven coal producing countries. In the matter of output per man-shift (overall), India is at the bottom, while, in respect of O.M.S. for underground, it does not compare so very unfavourably with other countries, considering that mechanisation is more advanced in Western countries. Though the statistics relating to labour force and output per man-shift relate to the year 1952, there is no reason to believe that there must have been any marked variation in the position since then.

The leading position which the U.S. commands in respect of production and output per man-shift is due to the advantages it has both in geological conditions and human factors. Mechanisation, admirably suited to geological conditions, is continuously progressing. There has also been enormous progress in the mechanisation of loading operations. More important than the mechanisation is the human factor also. There is close co-operation between the employers and the workers at every stage. Employers show high consideration to workers and the latter, on their part, show great understanding. They realise that mechanisation of equipment and modernisation of mining methods are in their own ultimate interest. They do not distrust modern methods, but, on the other hand, demand that such be applied.

As compared with the U.S., the U.K. is only a distant second. In fact, production has shown a declining tendency. From 244.26 million tons in 1937, it has fallen to 225.13 million tons. The overall productivity has, however, been kept up. From 1.16 tons in 1939, it declined to 1.02 tons in 1945, but since then it has gone up to 1.21 tons in 1952. The same trend is noted in productivity underground. The example of the U.K. has clearly shown, according to the Coal Mines Committee, that "mechanisation in itself is not enough to solve productivity problems; its success depends upon the attitude of the workers." In the Federal Republic of Germany, production declined from 137.57 million tons in 1937 to 123.34 million tons in 1952, but rose to 130.93 million tons in 1955. Overall productivity had fallen from 1.56 tons in 1939 to 1.11 tons in 1952 and underground productivity from 2.01 tons to 1.47 tons. The problems of the German coal industry are different from those of other countries. They relate to the employment of 60,000 to 70,000 physically incapacitated miners, "negative rationalisation" method, high fluctuation of labour force, inadequate renewal of shaft capacity and lack of capital which has restricted the extension of modernisation methods. Mechanisation also has not progressed sufficiently, due to serious shortage of iron and steel.

Among the other countries, special attention needs be drawn to Belgium, Japan and India. It will be noted from the table above that production in Belgium is lower than that in Japan or India. The workings are the deepest in Belgium. Coal-mining conditions in that country are the most difficult among all coal-producing countries. Belgium man-power shows lack of interest in mining. So the industry has to depend on foreign man-power which has created problems of its own. Special geological conditions restrict the application of modern mechanical and electrical mining machinery. Nevertheless, the output per man-shift is higher than that in Japan or India. Efforts are being made to improve the working and living conditions of labour in Belgium. Since the end of last war, Japan's coal industry has been suffering from shortage of underground workers. The gradual deepening of the mines has rendered mining conditions less favourable than ever. Considerable improvement has been made in mechanisation since the war, but the main factor which affects output trends in the Japanese coal industry is worker's remuneration. The overall productivity declined from 0.65 ton in 1939 to 0.21 ton in 1946. After an increase to 0.40 ton in 1951, it has again declined to 0.38 ton in 1952.

As regards India, the method adopted for assessing output differs from that usually applied in other coal-producing countries and the position of India's coal industry cannot be compared with that of the other coal-producing countries, as India's problems are of a very special nature. Referring to the position in India in respect of productivity, the All-India Industrial Tribunal (Colliery Disputes) in its latest award observes:

"While the output per man-shift in India is low, it is not as bad as it is sometimes made out to be. The real problem is in regard to the O.M.S. overall which most certainly calls for early attention and careful and detailed investigation. It is for the management and the labour to give thought to the matter and devise ways and means to increase productivity. There can be no doubt that O.M.S. could be increased both underground and overall. It may be that the present disparity is primarily due to slow mechanisation in India. In India, in most mines work underground is done manually and not mechanically. Even in the few collieries where automatic loading exists, mechanical loading is not possible, because of transport difficulties and the paucity of open wagons."

It will be noted from the foregoing survey that each country has its own peculiar problems and a strict comparison between any two countries will be neither useful nor correct. So far as India is concerned, there is every reason to feel gratified with the achievements made so far, in regard to production, working conditions and labour welfare, etc. There is, however, ample scope for further improvement. Much will depend on the employer-labour relationship and, in this respect, the example of the U.S. should serve as a good guide.

The output of coal in India increased to 3,314,435 tons in May 1956 from 3,224,493 tons in April 1956. Despatches of coal amounted to 2,871,114 tons in May 1956, as against 2,866,348 tons in the preceding month. Coal stocks at pitheads amounted to 3,834,498 tons at the close of the month.

During the month under review 843 collieries were reported to be working with an average daily employment of 328,227 workers. Output per man-shift was estimated at 1.10 tons for miners and loaders, 0.58 ton for all workers underground and in open workings and 0.38 ton for all persons employed including surface workers. The percentage for absenteeism was of the order of 14.77. Nine coke plants at collieries and elsewhere produced 335,952 tons of hard, soft and other kinds of coke during the month and despatched 152,230 tons.

There appears to be a misconception in certain quarters that there is, at present, some sort of restriction on the export of Indian coal. The Government of India wishes to make it clear that no restrictive controls are in force at present on the export of Indian coal. The export coal was under State trading some years ago in vogue. With a view to encouraging exports and the system of commercial charges established long continued in 1953. Except the statutory minimum price fixed for coal, no other control is enforced in regard to the price of coal. The other restrictions on export have also been considerably relaxed, particularly in the case of high-coking coal; and above all the procedure for the grant of export licence has been simplified.

RISING COST OF PRODUCTION OF TEA

MR. HOARE CALLS FOR GOVERNMENT ASSISTANCE

IT is generally held that the outlook for Indian tea is bright. This optimistic view is based on many factors. The first is that the record world output in the season 1955-56 has been "fully absorbed" by the world markets. Secondly, none of the main consuming countries holds stocks in excess of its normal requirements. Thirdly, internal consumption in India is expanding at an impressive pace. Fourthly, Russia, which has entered the Indian tea market, is expected to buy 50 to 60 million lbs. under its barter agreement with this country. The optimism must, however, be tempered by the danger of rising cost of production and the increasing competition from other countries, not to mention other beverages.

Of the two aforesaid bearish factors, the cost aspect is the more important. It is not, therefore, surprising that it figured prominently in the address of Mr. M. W. Hoare, Chairman of the Nilgiri Planters' Association, at its annual general meeting, held recently at Coonoor. In fact, Mr. Hoare even went to the extent of saying that the outlook for the Indian tea industry was bleak, unless the Government came to its assistance by reducing the rates of export duty and cess.

Tracing the recent trends in the price of tea and the cost of production, Mr. Hoare said that the boom of 1954 was not an indication of a steadily rising price trend. It would, indeed, be many years, he said, before one could hope to see again an equally high level of prices. On the contrary, industry would, he added, continue to display a succession of irregular booms and slumps, an unhappy characteristic of the past. Dealing with cost of production, he envisaged that it would steadily increase over the years to come to an even greater extent than it had been expected hitherto. Labour welfare measures were not limited only to the obligations imposed by the Plantations Labour Act; taxation would be enhanced under the second Plan; and even the controlled degree of inflation during the second Plan period would go to swell the industry's cost burden. In this context, Mr. Hoare drew attention to the fact that, while the cost of their product was necessarily based on the economic conditions within India, the major part of their produce secured a price which was subject to the difficulties inherent in competitive overseas markets. Accordingly, Mr. Hoare viewed with concern the ever-narrowing margin between the cost of production and the net selling price. It is obvious that, unless the tea market improved or costs were reduced, it would be impossible to meet the existing burdens, let alone the future burdens. He added that it was within the Government's power to assist in the solution of these real difficulties, by reducing the rates of export duty and cess, especially at those levels which operated when market prices were low. He felt sorry that appeals by the industry in this direction had so far gone unheeded.

Proceeding, Mr. Hoare suggested that a vigorous export drive could also be launched with some reduction in export levies, so that the position of the Indian industry in world markets could be made more competitive. This would go a long way towards solving the industry's difficulties and in enabling it to meet the other commitments which were being imposed upon it, in the name of a welfare State.

Mr. Hoare's picture of the industry's future thus may seem too gloomy, but it cannot be denied that there is considerable force in his arguments. Tea cannot hold its position as a staple drink, unless it is made cheap and competitive with other beverages. Moreover, India cannot for all time depend on foreign markets alone to consume the major part of its tea production. Internal consumption must be raised and this cannot be done unless tea is offered at a price that will suit the purse of the masses.

Alluding to labour problems, Mr. Hoare referred to the consequences of the enforcement of the Plantation Labour Rules with effect from 4th January last. These rules would add further to the already heavy administrative burdens of management. He reiterated that inspectors appointed to administer these rules must be of a calibre and experience suited to the magnitude of their task. Otherwise, great financial and economic harm might be done unwittingly by officers with the power of law behind them but without sufficient experience in the application of theoretical rules to practical circumstances.

It may not be out of place to refer here to some of the observations of Mr. Khandubhai Desai, Union Minister of Labour, at the inauguration of the South Indian National Plantation Workers' Federation at Coonoor last week. He said that the Government had a great interest in the prosperity of the plantation industry, not because it was owned by a few planters, but because it employed a million people whom the Government wanted to look after. Whatever profit was produced would be utilised to improve the standards of living and the human conditions of those who assisted in producing that wealth. In the socialistic pattern of society that India was ushering in, Mr. Desai added, there were no employers or employees. According to him, those who were managing the industry were also workers. He also added that plantation labour should equip itself in the near future to sit with the managements and technicians to see how plantations could be better managed. Mr. Desai probably envisages a day when the plantation workers can take an active part in the management of plantations.

Mr. Desai also referred to the introduction of provident fund benefits to plantation workers. He said that the Central Government would be quite willing to accord the necessary sanction to State Governments if they wished to enact suitable legislation. It is needless to add that if provident fund benefits are introduced, it will further add to the cost of production of plantation crops. Further, if the State Governments are given the freedom to enact legislations of their own, there will be no uniformity in the incidence of this additional burden, unless the Centre does a certain amount of co-ordination.

(Concluded from next column)

While the rise in internal consumption portends a good omen to the jute mill industry, the fact that exports in the season just ended have lagged behind is a cause for increasing concern. Slackness in overseas demand has caused accumulation of stocks with mills. It is proposed to tackle the problem by cutting down the output. This is a negative measure which at best is no more than a palliative. The best way to help the mills is to place at their disposal good quality jute at reasonable rates which would enable them to reduce their cost of production. This will be possible only if the State Government in the jute-growing areas take interest and make the cultivator of jute take to intensive cultivation involving line-sowing, wheel-hoeing, and supply of improved type of seeds. The West Bengal Government has expressed its desire to take up the work of encouraging intensive cultivation and it is to be hoped that other Governments would also follow suit. For this they need not wait for long periods. Since jute is a six to eight months' crop, they can show results quicker if only they start working without losing time.

FRENCH PRODUCTION OF JUTE GOODS MOVES UP

Production of yarns and cloth by the French jute industry declined during April, as compared with the previous month, reports Jute Bulletin of the Indian Central Jute Committee. The spinning mills reported an output of 8,850 tons (provisional) as against 9,846 tons (revised) in March, while the weavers produced 6,800 tons as against 7,388 tons (revised).

Production figures for the month of February, previously given as 8,900 tons of yarn and 6,700 tons of cloth, have been revised downward to 8,835 tons and 6,546 tons, respectively. The output for the first four months of the current year aggregated 36,702 tons of yarns and 27,504 tons of fabrics, as against 34,816 tons and 27,733 tons for the first quarter of 1955.

BAG SUPPLIES RISE IN HOLLAND

Prosperity in the potato trade has brought about a steep increase in the number of bags at present in circulation in the Netherlands. In all, 7.5 million bags were supplied during the first quarter of 1956, as compared with 4 million in the corresponding period last year.

Consumption of bags during February and March amounted to 9.4 million of which 5.4 million were new and 4 million used. Imports during the same period were 7.55 million made up of 2.95 million new and 4.6 million used bags.

The Netherlands exported 55,000 new bags and 3.4 million used during February and March 1955.

DESPATCHES OF JUTE GOODS

DOMESTIC OFFTAKE IMPROVES BUT EXPORTS SAG

THE total despatches of gunnies during May 1956 amounted to 89,000 tons, as against 81,300 tons in the preceding month and 89,600 tons in May 1955. Of the total, despatches for overseas amounted to 73,700 tons and for local consumption 15,300 tons, as compared with 62,600 tons and 18,700 tons, respectively, in April 1956 and 74,300 tons and 15,300 tons in May last year.

With May's despatches, the total for the first 11 months of the 1955-56 season amounted to 956,500 tons, as against 904,400 tons in the corresponding period of the preceding season. Of this total, exports of gunnies accounted for 779,800 tons, as compared with 783,500 tons in July-May 1954-55. The quantity consumed within the country amounted to 176,700 tons, as against 120,900 tons. These figures reveal that shipments to overseas markets during the July-May 1955-56 season were 3,700 tons lower than those a year previously, while the offtake for internal consumption was better by 45,800 tons over the corresponding period of 1954-55.

It will be interesting to review here the trend of despatches of gunnies during the past five or six years. The table below gives an idea of the quantity exported outside India and the offtake for internal consumption during the five years since 1950-51:

Despatches of Gunnies from Indian Jute Mills

Year	Exports	Internal consumption	Total despatches
1950-51 ..	712,200	114,200	826,400
1951-52 ..	784,600	147,000	791,600
1952-53 ..	686,100	167,600	853,700
1953-54 ..	791,900	116,800	908,600
1954-55 ..	850,800	137,600	988,400
1955-56* ..	850,610	192,763	1,043,373

* Estimated.

Some significant changes are noted in the trend of despatches during the period referred to above. Exports of gunnies maintained a steady upward trend from 1950-51 up to 1954-55, except in 1952-53, when they showed a marked decline to 686,100 tons. The fall reflects the crisis through which the industry passed in that year when jute goods stocks with mills rose month after month at an alarming rate. Godowns were jammed to capacity. Foreign demand was at a low ebb with export duty at Rs. 275 per ton on hessians and Rs. 175 per ton on sackings working heavily on them. Competition from continental mills, to which Pakistani jute was easily accessible at rates relatively lower than those paid by Indian mills, was severe and India was forced to lose a part of its traditional markets. From 1953-54 onwards, however, exports once again resumed their upward trend. The chief factors responsible for this improvement were the reduction in export duties first and their total abolition later. The offtake of Indian jute goods by many countries, especially Argentina, Australia, China, Russia, Burma and the U.S. improved. The mills were better placed in respect of raw jute supplies. The I.J.M.A. also initiated a vigorous drive for export promotion in the U.S. and other countries, making overseas consumers know that gunnies, as a packaging material, brought many advantages to their users.

In the 1955-56 season, however, the estimated exports, at 850,610 tons, were more or less the same as those in 1954-55. This means that the year witnessed a check in the rising trend of exports noted in the preceding two years. And this is due, as readers are aware, to (*a*) relatively higher prices of Indian jute goods, (*b*) competition from packaging substitutes, (*c*) wider adoption of bulk handling methods and (*d*) emergence of Japan and Pakistan as competitors in Indian markets. These explain in a way the reason for the I.J.M.A.'s recent decision to reseal 2½ per cent. of the total looms of member mills.

Despite the setback in exports as noted above, the total despatches by mills have shown a steady improvement since 1950-51, reaching a peak of 1,043,373 tons (estimated) in 1955-56. This marked rise is due to a good offtake for internal consumption which at 192,763 tons is 55,163 tons higher than in 1954-55. This improvement may be traced chiefly to the Government's move to stock foodgrains as reserves, growing output of cement, and increased agricultural production in recent years.

NEED FOR A VIGOROUS NATIONAL HOUSING POLICY

USE OF CHEAPER MATERIALS WILL BRING DOWN CONSTRUCTION COSTS

THE shortage of housing in the urban areas and the not so apparent but very real shortage of good housing in the rural regions are problems which must continue to engage the attention of the authorities for several years to come. As incomes rise and population increases, there will be an insistent demand for better and more houses. There can surely be no real improvement in living standards so long as the people are not properly housed, for it is well known that housing is one of the essentials for decent living. This will certainly call for a national housing policy pursued with vigour and executed with an eye to keeping the ultimate cost to the houseowner at the minimum possible level. A point that needs to be emphasised, in this connection, is that the implementation of a country-wide housing programme will mean a great fillip to many industries like steel, cement and timber, and also provide direct employment to both skilled and unskilled labour. The fact that some of the chief building materials such as steel and cement are in short supply, reinforce the need for a search for cheaper building materials and alternative building processes which will help keep down the use of materials in short supply.

Although the problem of providing houses for the millions in this country is thus a complex one, with many and varied facets, there is no doubt that its solution cannot be delayed for long. Realising the importance of housing to national economy and social welfare, the Planning Commission has promptly stepped up the outlay on housing in the second Five-year Plan. As against a total provision of Rs. 38.5 crores in the first Plan, the second Plan has allotted a sum of Rs. 120 crores. The break-up of the Rs. 120-crore outlay is: subsidised industrial housing Rs. 45 crores; low-income group housing Rs. 40 crores; rural housing Rs. 10 crores; slum clearance Rs. 20 crores; middle-income group housing Rs. 3 crores; plantation housing Rs. 2 crores. Houses will also be provided under certain other schemes. Thus, housing schemes for workers in the coal industry are financed from the Coal Mines Labour Welfare Fund which is expected to provide over the five-year period about Rs. 8 crores. Substantial housing programmes are undertaken by the different Ministries of the Union Government, the State Governments and the local authorities. No reliable estimate of the houses that might be constructed by the private sector is available. But so far as the first Five-year Plan is concerned, a rough estimate has it that the private sector accounted for no less than 600,000 houses in urban areas.

Urban Areas

The continuing shortage of houses in urban and semi-urban areas and the deplorably bad state of houses in both the urban and rural areas serve to bring out the fact that no effective solution has yet been found for the problem. The problem of rural housing, though perhaps simpler to solve in certain respects, is of very large magnitude. To take the urban sphere alone, during the first Plan period, about 1.3 million houses, it is estimated, were constructed. In the current Plan period, the Rs. 120-crore outlay, to which a reference has been made above, will provide for 322,000 houses. Other housing programmes under the auspices of the Central and State Governments and local authorities are expected to result in 753,000 units. Private construction, it is believed, will add 800,000 units. Thus, the total programme for the second Plan envisages the construction of 1.9 million houses, as compared with 1.3 million during the first Plan.

All these houses will not materially relieve the shortage of housing in India. There are about 64 million houses in the country of which 54 million are in villages and 10 million in towns. It is not known how many of these houses need replacement or even thorough-going repairs. Apart from this problem, there is the question of providing houses for the increase in population. No adequate survey or estimate has been made of the demand for houses. This demand does not, of course, depend entirely on the increase in population. It is rather influenced by the rate of marriages. There are at present no means of knowing this rate. A rough estimate of the likely demand for houses in urban areas has, however, been made by the Planning Commission. This estimate will give one a rough idea of the magnitude of the problem. The Commission calculates that, in 1951, there were 10 million houses in urban areas for a population of 62 millions, the shortage of houses being estimated at 2.5 million. It adds:

"The population of towns increased by 10.6 million between 1931 and 1941 and by 18.1 million between 1941 and 1951. During these decades the number of occupied houses in urban areas increased respectively by 1.8 and 1.7 million. Even apart from the question of the quality of housing, the quantitative shortage increased considerably during the period 1941-51. Alongside post-war developments and Partition there has been accelerated urban growth. Between 1951 and 1961 the total urban population is expected to increase by about 33 per cent. so that, in the absence of effective measures and carefully formulated programmes of urban development, the shortage in 1961 may be twice as much as in 1951."

Finance

It will thus be seen that maximum effort will be needed in order to prevent deterioration of the housing situation. The problem has to be tackled on the physical as well as the financial fronts. On the physical front, it is one of increasing the supply of building materals. This calls for a special study of building materials industry and measures designed to increase production in this industry. The financial problem is one of providing credit to intending houseowners and fiscal relief for those who construct houses as a matter of investment. These problems were ably dealt with by Mr. A. R. Venkatacharya, retired Chief Engineer to the Government of Madras, in the course of his address at the Building Trades Exhibition, held recently in Madras. He asked whether a corporation similar to the National Industrial Development Corporation was not needed by the construction industry. He added: "Actually, the function of the National Industrial Development Corporation as listed out in the Planning Commission's report on the second Five-year Plan do not include housing schemes or construction activities except what possibly may be included under the head 'factory and industrial buildings' and the subsidies granted to industrial housing in the vicinity of factories. I think the scope should be extended also to cover constructional activity on housing of a general nature as soon as circumstances permit of this being done." He also urged the need for a Board for the construction industry on the lines of the Tea and Coffee Boards. Such a body, as he rightly pointed out, could do much for the construction industry besides providing for research.

Proceeding, Mr. Venkatacharya emphasised the value of research in the production and use of low cost materials especially in regard to rural housing. In this connection, he referred to the attempts to build rammed earth houses by the Madras Corporation and soil cement houses built elsewhere and the experiments in treating the thatch roofing material to render it fire and rot-proof. He pointed out that greater progress was necessary in this direction. The use of bitumen or chemical solutions such as had been tried in the past successfully, e.g., the Forest Research Institute, he said, could be pursued and developed.

The organisers of the Exhibition should be congratulated on their wisdom and foresight. For, one of the chief handicaps in the sphere of construction is the absence of information about building materials and dissemination of technical information. The building contractors, particularly those in smaller towns, continue to build houses in the old way and by following established models. There is need to educate the contractors themselves, in the first instance. Next, there is the need to educate the lay public in regard to costs and housing designs. It must be remembered that most houseowners can afford to build houses only once in their lifetime. Those who build without devoting much thought to design or construction live to regret it. But the too cautious among them are afraid of building houses for fear of being involved in a costly enterprise in which the chances of going wrong are many. An exhibition of the kind organised in Madras would be an education both to technical men and the lay public. Such an exhibition deserves to be organised all over the country, in the large and the small towns, and also in some of the leading representative villages. The private sector in the building industry will be doing a real service to the public and itself much good by encouraging the organisation of such exhibitions.

STEEL RESEARCH

The United States Steel Corporation's new steel research centre at Monroeville, Pennsylvania the largest of its kind in the nation, is counted on to help maintain steel's leadership against competing metals. Mr. Roger M. Blough, Chairman of United States Steel, says the Corporation is meeting the challenge of competing materials with new products and improved technological developments through "tremendous" acceleration of research. He says that United States Steel is ready to place on the market such new products as plastic-coated and aluminium-coated sheet metal.

"We feel," Mr. Blough said at the opening ceremonies of the new steel research centre, "that there definitely is a place—an expanding place—for aluminium. We feel there is an expanding place for plastics. But we also feel that our steel products have such a large field that there is no present indication that any of these other materials will interfere with our markets and our production. In the long run," he added, "the more aluminium and plastics used the more steel will be needed."

A large part of the burden of ensuring that steel does maintain its metallurgical position has fallen on the 600 chemists, engineers, physicists and other skilled scientists and technical employees who man this huge research centre. United States steel has 44 other research facilities of its own and it participates with some 60 other organisations in various types of research. In all, United States steel employs more than 1,000 research scientists and technicians.

Mr. Clifford F. Hood, President of United States Steel, said that the acceleration that research could give to new business, new products and new ideas in every field "is beyond measure." He noted that "less than a handful" of American business concerns maintained research laboratories 50 years ago, while today more than 6,000 American companies have their own research facilities and thousands of other U.S. firms utilise outside research organisations. "American industry," he declared, "has expanded and prospered due to its refusal to recognise the existence of any boundaries of production and service. American industry is literally mass-producing progress through an expenditure for research which this year may total more than $4,000 million."

U.S. LIBERTY SHIPS

India has been making vigorous attempts to get the U.S. release vessels from its mothball fleet in favour of this country. A representative of a leading shipping company of Bombay was recently in the U.S. to persuade the American Government to let India have a few Liberty ships from its reserve on a long-term credit basis. He is reported to have encountered considerable opposition from the U.S. shipping lines. One of the arguments urged against such a release to India was that this country might use such ships for trading with the U.S.S.R. and that such a course was not in the interest of the free world. It would, however, appear that this and other objections were ably met by the Indian representative. It is now believed that the U.S. is likely to make a gesture in India's favour by releasing a small number of vessels to begin with.

In this connection, shipping interests in this country will no doubt be interested to know that the U.S. Federal Maritime Board has recommended the release of 15 reserve fleet Liberty ships to the Isbrandtsen Company for the coal trade with Europe. The Board held that privately owned vessels are not now available at reasonable rates and on reasonable conditions. It has asked the Maritime Administrator to satisfy himself that these conditions do exist before releasing vessels from the mothball fleet.

The Board, it is further stated, has not yet disposed of applications for eight other vessels from three companies along with requests from the International Co-operation Administration (I.C.A.) for 30 ships. The I.C.A. is reported to have complained that ships are needed for freight which private operators in the U.S. were unable to handle at reasonable rates but the private lines insisted at a preliminary hearing that they would meet the demand if it exists.

NEW PRODUCTS AND PROCESSES

New Motor-car Lamp

IN view of the ever-increasing traffic and the fact that cars are constantly being run at higher speeds, an incandescent lamp works (Philips N.V., Eindhoven (Holland)), has manufactured a new head lamp with a non-symmetric dimming beam. The distribution of light is such that the right-hand side of the road is lighted over a much greater distance than with the conventional system, while the *dazzling* of oncoming motorists is not increased. The inventors adopted as basis the normal European lamp, the filament for the dimming beam being placed in a bowl to mask the light. By removing part of this bowl, more light can be thrown along the right-hand side of the road. To obtain a non-symmetrical shape of the beam a special front glass adapted to this purpose must be used, to prevent the horizontal spread of the light which is emitted upwards to the right.

Paper Spinning Tubes

A factory in Holland, Van Katwijk's Papier- en Cartonverwerkende Industrieën N.V., Damstraat 25, Aalten, has for some time manufactured some new types of paper tubes for the winding of the yarn during the spinning process. The tubes consist of a good quality of paper, which can be impregnated in various ways, e.g., with a synthetic resin. As a result, the tubes become resistant to moisture, steam and even to the action of chemicals and are stronger and tougher than other products of a similar nature. They run free from vibration, so that there is not only less wear, but also a considerable reduction in the number of yarn breakages. Contrary to wooden tubes, they are free from warping and splintering. Among the new spinning tubes made by the factory are the so-called roving- or slubbing-bobbins. The tops of these roving bobbins are turned inwards and the bearing is fitted against the beaded edge, so that it cannot loosen. The firm has also developed a new ring spinning tube or twist-tube, provided with a spiral groove, such that the bas-relief has a definitely rough appearance. This ensures greater winding-off speeds when yarns are rewound.

Multi-colour Printing

A high-speed printing press factory (Nederlandsche Snelpersenfabriek Mercedes, Distelweg 84, Amsterdam-N (Holland)), has constructed a machine with which it is possible to mount multi-coloured blocks on a foot with extreme accuracy. The registering of the blocks takes very little time and takes place outside the press, thus saving machine-hours. An impression of each block is made on transparent material, e.g., celloplane the various prints are laid on the ground-glass frame of the apparatus, which is lighted from below, in such a way that they together form the whole picture, and are fastened with transparent adhesive tape. They are then locked together with a frame which is provided with punch-holes. Two holes are punched in the prints with a punching nipple. These holes make it possible always to fit the blocks in the correct position in the mounting machine. Two fixing rulers prevent any shifting of the blocks. The mount, which is built up in advance, is inserted into a collapsible frame of the machine and the block can then be registered on the mount with perfect accuracy. This method of working is repeated for all the blocks.

Welding Device

An automatic welding device or "head" for use with the Argonaut welding equipment supplied by British Oxygen (Bridgewater House, Cleveland Row, London, S.W.1.) has recently become available. Argonaut is an inert gas-shielded electric welding process which uses a continuous consumable wire electrode and up to the present welding could only be carried out by means of a hand gun. The new head, it is stated, provides a full automatic system for the production welding of heavy sections of metal. The advantages of this equipment, it is claimed, lie in high welding speed, smooth weld bead, controlled penetration and freedom from porosity. It is particularly suitable for welding mild steel and several of the new units are being used for welding heavy gauge aluminium. The unit consists of a welding head which houses the wire feed mechanism, a water-cooled machine barrel, a reel casing assembly with mounting bracket and control panels. In order to fully utilise the new head other devices, such as powered carriage units and work positioners, are required. These can be arranged to move either the work or the welding head.

New Textile Fibre

The American Cyanamid Company announces plans to produce a new textile fibre in the acrylics family. The Company expects it to compete with other fibres in the same group, including E. I. du Pont's "Orlon," Chemstrand's "Acrilan" and Eastman's "Verel." American Cyanamid is calling its new fibre "Creslan." Tests have indicated a potential market in sweaters, sportswear, blankets, jersey fabrics, artificial furs and fleeces, the Company indicates. Other markets will be sought in dresses, suitings and overcoatings, and industrial and non-woven fabrics. The Company claims for its product a high standard of dyeability. It is setting a target for production of some 27 million lbs. of Creslan staple and tow by the second half of 1958. Beginning in December, construction will begin on a plant for the new fibre. Until this is completed, it will be turned out in limited amounts in a pilot plant at Stamford, Connecticut.

UNION INSURANCE SOCIETY OF CANTON LIMITED

THE HON. C. BLAKER'S STATEMENT

THE Annual General Meeting of the Union Insurance Society of Canton Ltd. was held at Hong Kong on 24th May 1956. In the course of his statement accompanying the accounts of the Society for the year ended 31st December 1955, the Chairman, the Hon. C. Blaker, M.C., E.D., reviewed in brief the progress made by the Society during the year in the various departments, which enabled it to maintain the dividend on a higher capital.

The following is the full text of Mr. Blaker's statement, together with an extract from the Directors' report:

"In the Marine Department, the result of the year's working was satisfactory. An increased volume of business was transacted, but, because of the generally lower level of cargo rates, our marine premium income remained virtually unchanged at £3,413,162. Claims paid during the year accounted for 68 per cent. of the premiums, as against 74 per cent. during the previous year. This improvement in the claims experience was helped by the discontinuance of certain accounts which had shown unprofitable results in the past and by the collection of recoveries in respect of earlier years of account.

"The Marine Fund now amounts to 163 per cent. of the year's premium and is considered satisfactory in the light of present-day trends affecting marine insurance business.

"Although there has been an appreciable increase in fire damage in a number of countries, owing to a higher incidence of big fires, particularly in the North American field, major catastrophes were few. We were, however, involved in the conflagration in Bacolod in the Philippine Islands and in a large oil plant fire in Indiana which proved costly to the many insurers involved in it.

"Our margin of profit in the Fire Department is not unsatisfactory, though rather lower than usual in relation to premium income. A small increase in premium income was achieved in the face of very keen competition which involved rate reductions in some areas.

"Further expansion took place in the Accident and General Account during 1955, with particularly good progress being made in Australasia. The high costs applicable to repairs and also to the settlement of personal injury claims in connection with motor business are features of this section of the account which show little improvement over previous years. The increase in road traffic in so many countries coupled with inadequate road systems is a problem which is likely to be with us for some time yet. The attendant problem of the higher speeds of all kinds of vehicular traffic presents further underwriting difficulties in the transaction of motor business.

"The claims experience, however, of the whole account is satisfactory, being relatively lower than in the previous year and a profit of £198,932 has been realised.

"An innovation in the profit and loss account this year is the entry 'Contributions to Staff Pension and Provident Funds.' In the past it has been the Society's practice to charge these contributions largely to the underwriting revenue accounts, but it has been decided this year to change to the growing modern practice of showing the item separately. The 1954 figures printed in the accounts have been adjusted where necessary, in order that proper comparisons may be made.

"During the year shareholders will have received the additional shares to which they were entitled as a result of the capitalisation issue approved in May 1955. As a result of the issue, the Exchange and Investment Fluctuation Account is reduced by £150,000 and the Society's fully-paid capital is increased by £150,000 to £1,500,000.

Dividend Maintained on Higher Capital

"It is with satisfaction that the Board are able to recommend a final dividend of £1-2-6, making a total dividend of £2-2-6 for the year, thereby, as foreshadowed in my statement last year, maintaining the dividend at the 1954 rate on the increased capital.

"You will see our usual note on the balance-sheets that Stock Exchange securities have been taken at or under their mean market values (less accrued interest and dividends) as at 31st December 1955. It is satisfactory to know that, despite the depreciation which has taken place in many Stock Exchange securities during the year, particularly in United Kingdom Government securities, there continues to be a substantial margin between the market values of our Stock Exchange assets and the values at which they stand in the balance-sheets.

"In conformity with the policy of maintaining close liaison between head office and our representatives in other parts of the world, the General Manager, Mr. L. B. Stone, visited our branches in Canada and the United States of America in the last quarter of the year. Mr. C. R. Kingsland, who succeeded Mr. R. C. Langker as General Manager for Australasia upon his retirement at the end of the year, visited head office and met the Board of Directors in December.

"I have to record the recent retirement, for health reasons, of Mr. S. H. Dodwell, C.B.E., from our London Advisory Committee after more than 40 years' association with the Society. Mr. Dodwell was for many years a Director of the Society and its subsidiary, Hong Kong Companies, both here and when head office was temporarily established in Sydney during the last war. We wish him many happy years of well-deserved retirement.

"We have also lost the services from the Board of Mr. J. H. Hamm and we wish him all success in his new appointment in London.

"In conclusion, I record my thanks to all members of the staff and our many agents, for their keenness and loyal support in the furtherance of the Society's world-wide interests."

DIRECTORS' REPORT

Marine

The net premiums for the year amounted to £3,413,162. After releasing £205,000 to profit and loss account, the Marine Fund stands at £5,582,684.

Fire

The net premiums for the year amounted to £3,752,673. £256,742 has been transferred to profit and loss account. The additional reserve has been increased by £20,000 by a transfer from the Society's profit and loss appropriation account. The Fire Fund stands at £2,094,669.

Accident and General

The net premiums for the year amounted to £3,595,119. £198,932 has been transferred to profit and loss account. The additional reserve has been increased by £50,000 by the transfer of £30,000 from the Society's profit and loss appropriation account and £20,000 from the profit and loss appropriation accounts of subsidiary companies. The Accident and General Fund stands at £1,689,292.

Profit and Loss Account

Interest and dividends amounted to £514,787 and transfers from underwriting accounts to £660,674. After charging outgoings not brought into account elsewhere, making provision for taxation, and allowing for the minority interest of the outside shareholders of a subsidiary company, the profit for the year appertaining to the Society is £735,340. After adding profit retained in subsidiary companies £245,052, there remains a distributable profit of £490,288. To this has been added the balance brought forward from the previous year of £361,626. After providing for the dividends, transferring £120,000 to [illegible] and investment fluctuation account, £50,000 to the Accident and General Account Additional Reserve and £20,000 to the Fire Account Additional Reserve, there remains a balance of £363,164 to be carried forward.

WORKERS IN STATE ENTERPRISES

THEIR STATUS AND RIGHTS REVIEWED

IN recent weeks, there has been considerable unrest in the ranks of Government employees. The non-gazetted officers of the Madras State Government, who have for a long time now been dissatisfied with their lot, made an ineffectual attempt to meet Mr. Nehru, in order to acquaint him with their grievances. One of their representatives decided to go on fast in front of the Secretariat, and actually fasted for a day; the object was to draw the attention of the public. He was, however, persuaded to give up his resolve by his friends, as they feared that it might lead to a worsening of the relations between the Government and its employees. There was prolonged unrest in the ranks of railwaymen, the Kharagpur centre having distinguished itself through the violent demonstration of the workers. There was similar trouble in the Punjab and Himachal Pradesh which was marked by police firing at Kalka. The unrest among railway workers has not died down. It has only been suppressed by the intervention of the top leaders of the Congress Party. Again, in the Damodar Valley Corporation, the workers "imprisoned" their chief, because they felt that the Corporation was not giving them a square deal. Field workers of the nationalised life insurance companies continue to meet and pass resolutions expressing their concern over the future of their jobs. These are no doubt isolated instances and probably mean no more than local discontentment. Even so, they denote a deep-seated *malaise* which may well grow with the passage of time and burst into an epidemic, unless timely action is taken to eradicate it.

Government Enterprises

The question of the status of employees of the Government and public enterprises is a very important issue. For one thing, the activities of the Central and State Governments are increasing, so that they now employ a much larger number of men than in pre-war years. Secondly, the State in India is committed to increasing encroachment in the economic sphere. All this means that the ranks of the direct and indirect employees of the Government will continue to grow rapidly, as it has done in the recent past. The Industrial Policy Statement has affirmed that "with the growing participation of the State in industry and trade the manner in which their activities should be conducted and managed assumes considerable importance." Further, it has stated that, in a "socialist democracy, labour is a partner in the common task of development and should participate in it with enthusiasm." It has recognised that workers should be "progressively" associated in management and the enterprises in the public sector should "set an example in this respect."

The Planning Commission, in the course of its discussion of the labour policy, has emphasised that the administration of industrial relations in public enterprises is "of great importance for the success of the undertaking and for the fulfilment of the aspirations of labour." It has declared that "any attempt, therefore, on the part of public employer to avoid the responsibility of an employer on the ground that he is not working for profit has to be discouraged." It said:

"Managements of public undertakings should not normally seek exemptions from labour laws or ask for other concessions not available to the private sector. This is not to suggest that public undertakings as a rule come forward to seek exemptions from laws relating to labour or to imply that working conditions there are not satisfactory. In fact, in all the new State enterprises, considerable attention has been paid to labour welfare in the comprehensive sense. In the last analysis, the employees in the public sector should on the whole be at least on par with their counterpart in private employment and should feel a legitimate pride in what they produce and in their position as employees in the public sector."

Bombay High Court's View

These are fine sentiments. But is the position of the worker in State enterprises as good as, if not better than, in private enterprises? What is the strictly legal position? To this second question, the judgment delivered last week by the Chief Justice and Mr. Justice Dixit of the Bombay High Court in a case filed by a dismissed employee of the Ambarnath ordnance factory provides an answer. The facts of the case may be briefly summarised. The employee, who served the factory between May 1949 and March 1956, was dismissed on the ground of retrenchment. The employee contended that the authorities had terminated his services without observing the formalities laid down in the Industrial Disputes Act, that they had not adopted the "last-come-first-go" principle and that he had not been paid compensation. He alleged that his services had been terminated because of his trade union activities. The respondents stated that, whatever the Industrial Disputes Act might lay down, the President of the Union had an overriding power conferred upon him under Article 310(1) of the Constitution which states that a member of the civil or defence services holds his office "during the pleasure of the President." They argued that, by reason of this Article, it was open to the Union to terminate the services of its employees without assigning any reason and without any notice. Their plea was upheld by the High Court.

In the course of his judgment, the Chief Justice stated that, even though a law might be passed which might apply to the Government, and the State might, in the ordinary course, give effect to it to its own employees, the ultimate power which the Constitution had conferred on the President to terminate the service of even a civil servant without notice and without any liability to pay compensation must remain unaffected. Referring to the argument that the proper authority had not exercised the power of the President, he said that the Article did not at all deal with the authority who could terminate the services of a civil servant. It was open to the petitioner to challenge the authority of the ordnance superintendent to terminate his service but that challenge had not been made in the petition. Adverting to the allegation that the superintendent was actuated by ulterior considerations in terminating the services of the petitioner, the Chief Justice said that, when the President had the power to terminate the service of any civil servant at his pleasure, the question of notice was irrelevant.

Compensation

Dismissing the petition on these grounds, he said there was no reason why, in this particular case, the respondents should not give effect to the provisions of the Industrial Disputes Act at least as far as payment of retrenchment compensation was concerned. The Chief Justice added: "The clear intention of Parliament was that the Act should apply not merely to private employers, but also where the Government was the employer, and if that was the intention of Parliament there was no reason why the ordnance factory should get rid of the petitioner's services without paying him the compensation which Parliament thought was a fair and equitable compensation to be paid to every employee who was retrenched from an industry."

From this judgment, it is now possible to deduce the legal position of an employee in a State enterprise. The labour laws, which apply to the employees in the private sector, cannot be invoked in favour of the employees of State enterprises. It is thus not incumbent upon the management of these enterprises to follow the "last-come-and-first-go" principle. They need not also assign any reason for terminating the services of an employee. Nor is it incumbent upon them to pay compensation in the event of retrenchment. These are the powers which the State enterprises possess though whether they will or will not use them on all occasions or on any particular occasion is a matter of policy. At any rate, the legal position is that the managements are free from labour laws.

Nationalisation

Now that the legal status of employees in State undertakings has been made clear, it is for workers and their leaders to consider whether their attitude towards the extension of the State sector of economic activity should be changed. Labour in many democratic countries now finds that nationalisation of industries and services means the extinction of trade unionism for more than one reason. In the first place, the State, when it combines within itself both political and economic power, becomes irresistibly strong and the labour unions correspondingly weak. Secondly, mobility of employees, by which is meant movement of an employee from one employer to another in the same industry or a different industry, becomes restricted. When an industry consists of several units in the private sector, it is open to an enterprising employee in any particular unit to change his master. But, when the industry is entirely owned by the State, the employee is in the position of a seller who is confronted by a monopolistic buyer. His skill may be of little use in other industries not owned by the State. In any case, private employers will not easily take a man dismissed from a Government-owned factory. The fear of victimisation may discourage them from doing so. It must be remembered, in this connection, that, in an economy where State-owned enterprises predominate, the units belonging to the private sector also will invariably be under State control of one form or another. Accordingly, the latter units will be chary of doing anything that may have the remotest chance of displeasing the Government.

It will be pertinent to recall here the observations of Dr. H. C. Franz Blucher, German Vice-Chancellor and Federal Minister for Economic Co-operation, on this subject. In an article published on page 1236 of our issue, dated 30th June 1956, he says:

"If industry is nationalised, or managed by planned economy in the hands of the State, or if institutions entirely dependent on the State are established, the illusion is created that a complete control over economy has been attained. This belief and the resulting commitment to some rigid national system, lead inevitably to complete loss of freedom. Wherever the State controls all fields of activity including that of industry, directly or indirectly, it is inevitable that the employee should lose his independence in the struggle to determine conditions of work and living. It is true that a levelling up of the standard of living conditions for all might be achieved, but the rights, which to us seem the most valuable gift of democracy, namely, the rights of freedom to organise, will only remain on paper. In effect, the State is in complete control and can refuse to tolerate any opposition to the terms of pay and work which it has laid down. In a socialised economy, or an economy conducted on State-planning principles, the trade unions lose their mission and effectiveness."

These considerations have made the labour leaders in several democratic countries to reorientate their attitude towards nationalisation. Thus, Mr. Hugh Gaitskell, Leader of the British Labour Party, said: "We have to admit that the simple, direct and unique relationship between wholesale nationalisation and the ultimate ideals of socialism, which early theorists took for granted, cannot be assessed in the new circumstances today. This is an open question on which we need to and shall think afresh." We urge the labour leaders in this country to examine the question of nationalisation of industries with a similar intellectual honesty.

COMPANY MEETING

THE METAL BOX COMPANY OF INDIA LIMITED

CHAIRMAN MR. H. CHISWELL JONES'S REVIEW

THE Twenty-third Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday, July 18th 1956, at 59c, Chowringhee Road, Calcutta.

The following is a copy of the review by the Chairman, Mr. H. Chiswell Jones, which has already been circulated to the members:

SALES

"During the year under review there was a high level of investment in national development. Investment activity created a rising demand for packaged goods—paints, pharmaceuticals, baby-foods, processed fruits and vegetables, lubricating oils, etc. Enterprising salesmanship and efficient production enabled us to play a significant role in satisfying this demand.

"National investment during the Second Plan will create an expanding level of demand and the supply of goods to satisfy this will be a condition both of the success of the investment programme and of continued political stability. To this end your Company and its customers have a major contribution to make; the processed food industry in particular is strategically placed. It is to receive active encouragement in the Second Plan and the allocation for horticulture has been increased from Rs. 1 crore to Rs. 9 crores. These measures are to be welcomed as the addition of processed fruits and vegetables to the national diet will make for important improvements in public health and preventive hygiene. The development of this industry involves co-operation between large and small-scale industry since the safe preservation of food requires precision-made cans that only high-speed equipment—equipment inseparable from large-scale industry—can produce while at the other end horticulture is a part of intensive small-scale agriculture. This pattern of co-operation is already established between the canners, the horticulturists and ourselves.

"During the year we made solid contributions to the food and the other industries we serve. In Bombay we commenced manufacture of open top cans for the canning industry. The work of the newly opened research division at Calcutta on materials and finishes contributed effectively to improved quality and our access to the extensive Research Laboratories of our Technical Consultants in the U.K. continued to provide an invaluable part of our service.

"There are, however, some ominous signs: the programme of taxation, increases in railway and ocean freights and the rise in food prices are implied threats to purchasing power. Transport and the shortage of steel and cement are capable of braking the country's economic growth. We have made a good start in the current financial year but there is no room for complacency. We are planning in a spirit of optimism tempered with caution.

PROFIT

"The increase in sales of nearly Rs. 1½ crores and the further diversification of our business resulted in a return to the more normal profit levels obtaining when the public first acquired an interest in the equity capital of the Company.

"Prospects for the current year are good and it is hoped, by virtue of increased turnover to maintain this profit level notwithstanding the increased costs referred to later.

RAW MATERIALS

"It has been another year of anxiety in the matter of tinplate supply. Indigenous tinplate production remains well below demand and although The Tinplate Company have installed an additional rolling mill, they have not been able yet to obtain the extra tonnage of steel to operate the mill. Supplies of imported steel have been promised for the middle of this year but even when this is regularly available and processed, the extra 10,000 tons of tinplate produced will still leave a large gap between supply and demand. Our own imports are currently 50 per cent of our total consumption.

"Because of the time taken to obtain shipments from abroad we have had to raise our stock levels of raw materials thus increasing the strain on our finances. The price of materials and transport has risen during the year and part of the increases had to be passed on to our customers.

"We are reluctant to pass on to our customers anything but direct increases in the price of tinplate, which is our main raw material, and we have met increased costs by production economies made possible by greater overall demand. Nevertheless, there is a limit to our ability to absorb price increases of a general nature and there are presently signs of inflationary pressures which could very quickly upset our price structure. Government are clearly aware of these and have indicated that they have weapons with which they can speedily deal with the problem should it assume serious proportions. I hope they will not hesitate to do so.

"There are two aspects of recent price increases which I must stress. The first is the heavy additional burden on the Company's cash resources which follows from higher raw material costs and bigger inventories—the second is that we find ourselves completely priced out of a number of export markets in neighbouring countries. The cost to Government of a drawback of the Steel Equalization Fund contribution on tinplate used for containers exported from India would be small—the gain in foreign exchange would be substantial; very much more so if extended to filled as well as empty containers.

INDUSTRIAL RELATIONS

"From May 1955, when work was resumed at Calcutta after the disturbances there, we have had a period of complete industrial peace and at all factories negotiations and consultations with our employees have been conducted in an atmosphere of harmony and a keen desire to reach understanding. The excellent relations throughout the year have materially contributed to the satisfactory trading results and I am happy to say that we recently concluded with our employees a prosperity bonus agreement covering the next three years.

"Training of staff continues to receive our careful attention. We have an excellent cadre of young management trainees and each year we send more Indian officers abroad for training. Our Technical Consultants recently sent the head of their staff and personnel division to discuss how they can best serve us in this all important matter of training. His visit was of the utmost value.

"To a degree the success of the second Five-year Plan will depend on an adequate supply of technicians. We are making our contribution by offering facilities for practical training in our factories to students and graduates from universities, engineering colleges and technical training centres. We have also offered our co-operation to Government in the encouragement of training in scientific management.

"Labour welfare continues to engage our attention. We are operating a most successful Scheme under which sick leave not utilised during the year is offered by employees to a pool and such leave, to a maximum of four months, may be used for the benefit of any employee unfortunate enough to contract T.B. In the treatment of serious cases the Company also meets 75 per cent of the cost of special drugs and medicines. In the two years' working of the scheme more than 20 employees have been completely restored to health and have been able to resume their employment with us. A Benevolent Fund is in operation at all branches, the Company's contribution being based on the total amount subscribed by the employees. We have also extended recreational facilities to include sports, cinema shows and libraries.

DEVELOPMENTS AND NEW PROJECTS

"We have made good progress in our new developments. The expansion in demand for aluminium pilferproof seals has been satisfactory and manufacture in Calcutta, foreshadowed in my last review, has now commenced with consequent savings in freight costs to many customers.

"Progress in the manufacture of polyethylene bags has continued, some printing machinery has been installed and more is on order. The potential demand for products made from this material is considerable and plans have been announced by two world-famous manufacturers for the production in India of polyethylene flake—the basic raw material required.

"Additional equipment for the manufacture of industrial components has now been installed—we have a substantial order book and a large number of new enquiries which augur well for the future. We are presently producing metal components for numerous manufacturers in the electrical, automobile, radio, duplicating machine and bicycle industries—the list will extend in the near future and we are proud of the contribution we are making to the expansion of these vital industries.

"Plans have been completed for the erection of the new manufacturing and office buildings at Calcutta adjoining the new printing factory. We expect the new buildings to be ready in about twelve months' time and this will permit us greatly to improve our plant layout, provide adequate office accommodation and generally achieve better working conditions. An extension to the Madras factory is under consideration and we plan to install additional printing equipment there to meet the growing demands for lithographed containers in that area. The research division in its first year of operation has made a valuable contribution towards the improvement of indigenous metal decorating materials. The division has established close technical liaison with our principal suppliers and standardised numerous specifications covering both supply and application resulting in improved container quality. In line with our policy of purchasing indigenous materials wherever possible, the division has assisted suppliers in satisfactorily producing a number of materials hitherto imported—others, still under test, show considerable promise.

"I wish to acknowledge our indebtedness to our Technical Consultants, The Metal Box Company Limited, London, for their continued advice and guidance in all matters affecting the progress and well-being of our Company. We are most fortunate in being able to call on their vast store of knowledge and experience.

STAFF

"This has been a year of intense activity and unremitting effort on the part of the staff. The excellent results achieved would not have been possible without their sustained enthusiasm and loyal support. The Board join me in expressing our thanks to them all for their splendid efforts."

NEW PUBLICATIONS

The British Co-operative Movement. By Jack Baily. Publishers: Hutchinson & Co. (Publishers), Ltd., 178-202, Great Portland Street, London, W. 1. Price: 8s. 6d.

THE publication is a brief but interesting account of the humble beginnings, the growth and ramifications of one of the most advanced co-operative movements of the present-day world.

The squalor and misery that enveloped the lives of the working classes in the wake of the industrial Revolution set the minds of certain social reformers in England, as elsewhere on the Continent, in quest of remedies. In the chapter on "Co-operative Beginnings," the author gives a vivid account of the vicissitudes through which Robert Owen, "one of the most outstanding figures of the nineteenth century," who "gave moral content and social philosophy" to the Co-operative Movement, and his supporters like William Thompson and Dr. William King of Brighton had to pass. A number of attempts by Owen and his followers between 1821 and 1845 to create Co-operative communities had met with failures, and the real foundations of the Movement were laid when the leaders conceived the Movement as an alternative to competitive industrialism.

The experience gained by Owen and his two supporters was made use of by the Rochdale Pioneers, their principles having been formulated in the light of past experience and to suit the conditions of their day; in the end, their society survived all the economic and social upheavals through the decades. The Rochdale Society of Equitable Pioneers, started in December 1844 with a capital of £28, subscribed by 28 members, gained strength by stages and commanded, by 1952, a capital of £501,473, contributed by 29,603 members.

A noteworthy feature of the British Co-operative Movement is its dynamism. There had been, and still is, some dispute as to what constituted the essential principles of Co-operation. The author states that certain societies had given up or modified some of the Rochdale Principles when circumstances warranted such a course. In respect of the principle of cash trading, for instance, the author rightly observes, "to apply rigidly and literally the Rochdale principle of cash trading would seriously handicap the Co-operative societies in their competition with private traders." Again, "it is no longer possible, however, to disregard forms of Co-operative enterprise to which the principles cannot be applied." The principle of political neutrality itself has been modified in Britain; and the changes in rules introduced from time to time in the Acts governing the activities of the societies indicate to what extent the need has been felt to maintain the dynamic character of the Movement. The extent to which the Movement has grown and its principles have changed during the last hundred years could be seen from the following observation of the author:

"If Rochdale Pioneers could return, they would probably be bewildered by some of the Co-operative practices of today, but, if these practices were related to the kind of world in which modern Co-operators have to live, they might well conclude that the faith which led them to Toad Lane more than a hundred years ago has not yet been extinguished."

In the light of what the author has taken pains to point out, it is clear that there is not so much of conflict between domocratic planning, as different from totalitarian planning, and Co-operative ideals as might appear at first sight. Both agree on the goal to be attained, both have taken their Roots in the chaos caused by the Industrial Revolution, and above all both the systems are wedded to democracy. The only difference lies in the varying emphasis they lay on the degree of democracy to be allowed in respect of the working of the different processes. In view of the flexibility and dynamism which characterise the Co-operative Movement, it may not be difficult for it to meet the challenge posed by the fast changing conditions in the world.

While describing the growth, functions and multifarious activities of the two giant wholesales, namely, C.W.S. and S.C.W.S., the author gives an illuminating catalogue of the advantages and disadvantages of centralising the powers in a Board of Directors "made up of laymen."

"What is in question," the author points out, "is not the competence of the members of the Board, but the ability of any kind of Board to comprehend efficiently so gigantic and diversified an enterprise." After discussing the pros and cons, the author comes to the conclusion that it is far more practicable for the Wholesale Boards to delegate responsibilities to committees and directors, even if it required a larger directorate than at present.

Stating that "under present conditions, the international ideas of the Co-operative Movement are wider than its commercial achievements," the author asks the Co-operators of Britain to attach more importance to ideals, too, than before, and not to trading results alone, in order to attain larger markets for co operative products. He rightly points out that the nationalistic policies of Governments and trade restrictions operate against the adoption of international Co-operative planning.

The book deals also with the progress of Co-operation in respect of retail societies, education, employment, etc. It is a worthy addition to the literature on Co-operation and a useful handy volume to students interested in this subject. It should appeal to many in this country, where attempts are being made to revitalise the Co-operative Movement with the active participation of the State, a feature which is regarded by some as unorthodox and not in full conformity with the accepted principles of Co-operation.

Trade and Welfare. By Prof. J. E. Meade. Oxford University Press, Amen House, London, E.C. 4. In India: Oxford University Press, Oxford House, Apollo Bunder, Bombay 1. Price: 45s. net (in U.K. only).

This is the second and final volume of a treatise on the Theory of International Economic Policy, the first volume of which was published in 1951. In the present volume, Prof. J. E. Meade, an economist of world repute, has first enunciated a general theory of economic welfare and then applied it to the special case of international trade. Significant though Prof. Meade's thesis is, it is more hypothetical than real, inasmuch as it is based on assumptions. The assumptions are maintenance of full employment domestically within each trading country and equilibrium in international balance of payments. Nevertheless, the thesis helps one to understand the implications of the various forms of State control over world trade and over world movement of labour and capital. It also helps one to find an answer to the important poser: Is it possible, in conditions of full employment, to raise standards of living by certain forms of State interference with freedom of international trade and of international factor movements?

Prof. Meade begins the study with an essay on the general theory of economic welfare without any special reference to world economic problems. The theory is then developed in ways which make it useful for application to problems of international economic policy. He dismisses as unconvincing the basic types of arguments in favour of controls over world trade and over international movement of labour and capital. In his opinion, the many theoretically valid arguments for policies of control over world trade and factor movements do not, in fact, amount to a conclusive case for the wholesale abandonment of a liberal international economic policy.

To those who would like to see the rebuilding of a liberal international economic order, Prof. Meade presents three rather different general conclusions. First, the restoration of greater freedom for international trade and factor movements can be made meaningful only by means of world agreements which cut rather deeply into domestic economic arrangements. If a more liberal international economy is to be established by world agreement, one must reach for a working compromise between the need effectively to curb protective devices and the need to give national governments freedom to adopt effective domestic economic policies for the attainment of legitimate domestic objectives. Secondly, no effective compromise of

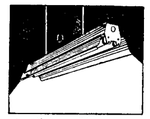
give these hands better light — *at less cost!*

A factory cannot afford faults—because faults mean hold-ups, unfulfilled quotas, reduced profits. That's why most modern factories have fluorescent lighting. Production experts have discovered that a good light reduces faults greatly... increases production.

Philips 'TL' Fluorescent Lamps give more than three times more light than filament lamps of the same current consumption! That's real economy! And the light is not harsh—it lights up the working bench evenly. The worker's eyes do not get tired easily if the lighting is well planned! He can do better work. Install Philips 'TL' Fluorescent Lighting and watch output go up... costs come down.



PHILIPS

'TL' FLUORESCENT LAMPS & FITTINGS

—make light work for you!

A Philips Fluorescent Lamp gives more than three times more light —lasts on an average 7,500 hours!

Can we advise you? The Philips Lighting Service Bureau will be glad to show you how you can use fluorescent lighting in your factory—free of charge and without obligation. Please write to Philips Electrical Co. (India) Private Ltd.

ZAGREB INTERNATIONAL FAIR

the Oldest, Most Important Fair in S. E. Europe

★

SEPTEMBER 7th to 20th 1956

This year's Fair will be the largest ever staged in Yugoslavia. It will extend over the old site to a new site being developed on the bank of the river Sava. Yugoslavia will again exhibit to the world non-ferrous metals, timber, glassware, textiles, agricultural engineering equipment, leather and footwear, handicrafts, tobacco, medicines, foodstuffs and wine. The Zagreb Fair offers exceptional facilities for buyers and visitors to inspect goods displayed by manufacturers in over 25 different national pavilions. Special reduced rates for rail transport and visas will be granted to holders of Fair certificates.

●

Further information and Fair certificates can be obtained from

Yugoslav commercial and diplomatic representatives, or direct from

FUTURES TRADING IN RAPESEED AND MUSTARD

DELHI AND AGRA CONSIDERED SUITABLE CENTRES

THE Forward Markets Commission has, after a detailed investigation into the question of permitting futures trading in rapeseed and mustard seed, recommended that Om Exchange Ltd. in Delhi and the Agra Merchants' Chamber Ltd., Agra, should be recognised for conducting futures trading in these oilseeds. The grant of recognition to the said associations is subject to the condition that they carry out modifications in their Articles of Associations, trading by-laws and working procedure in consultation with the Commission. The Commission has further recommended that a futures market should be established in due course in Kanpur as well as Batinda, when strong representative associations come to be established at these centres. It has also come to the conclusion that it would be in the interest of the trade, as well as in the public interest, to permit futures trading in mustard seed and rapeseed, but not in their oils for the present. The Government of India has accepted these recommendations in its notification issued on 13th June last.

As a prelude to these recommendations, the Commission examined in all 44 applications from Bihar, Bombay, East Punjab, Uttar Pradesh, P.E.P.S.U., Delhi, Rajasthan and Madhya Bharat. No application came from West Bengal, although the State is an important producer and consumer of rapeseed and mustard seed. Out of these applications, 38 asked for recognition to conduct futures trading in seeds and six in oils.

The Commission's findings, as a result of its investigation into the above applications, provide very useful and comprehensive data on the posision of rapeseed and mustard seed in India. Treating both the types of seeds as belonging to one species, the Commission says that rapeseed and mustard are the second largest oilseeds crop in India. In U.P., the principal producing State accounting for about 60 per cent. of the total acreage in the country, the seeds are cultivated as a mixed crop with other crops, with the result that the acreage under rapeseed varies with the acreage under the crop with which it is mixed such as wheat and barley. The total area under cultivation in India increased from 4,583,000 acres in 1939-40 to 5,665,000 acres in 1954-55. The acreage under the crop reached its peak in 1951-52 when the area sown was 5,934,000 acres. Production, on the other hand, did not show a corresponding increase, the output being 872,000 tons in 1939-40 and 962,000 tons in 1954-55, representing an increase of 10.3 per cent. as compared with a rise of 23.3 per cent. in acreage. The principal reason for the fall in output was the decline in the average yield per acre from 426 lbs. in 1939-40 to 380 lbs. in 1954-55. The table below gives the area sown to and the output of mustard and rapeseed during the last 15 years.

Year	Area (in '000 acres)	Production (in '000 tons)
1939-40	4,583	872
1940-41	4,588	846
1941-42	4,610	837
1942-43	4,078	757
1943-44	4,028	692
1944-45	4,274	828
1945-46	4,335	719
1946-47	4,590	829
1947-48	4,615	806
1948-49	4,633	735
1949-50	4781	793
1950-51	5,188	750
1951-52	5,934	921
1952-53	5,199	837
1953-54	5,534	855
1954-55	5,665	962

Among the world's producers of rapeseed and mustard, India is second only to China in respect of area and output. During 1949-50, the share of China in world acreage and production was of the order of 64 and 63 per cent. as compared with India's share of 22 and 17 per cent. respectively.

About 60 per cent. of the production of rape and mustard seeds in India is accounted for by U.P. The Punjab ranks second with about 8 per cent., while Rajasthan occupies the third place. The other producing States are Assam, Bihar, West Bengal, Madhya Pradesh, P.E.P.S.U., Orissa, Bombay and Madhya Bharat.

Before the First World War, India was a leading exporter of these seeds. It exported about 23 per cent. of its internal production and accounted for about 72 per cent. of world exports. The average of annual exports for the quinquennium ended 1913-14 was 277,000 tons. They were despatched mostly to Belgium, Germany, France, Italy and the Netherlands. Continental markets were lost with the outbreak of the second World War. Internally, too, the Government of India imposed restrictions on exports of these seeds. Exports in 1952-53 amounted to a mere 47 tons. The fall in exports can also be attributed to the partition of the country, the stress laid on exports of oil in preference to seeds and the sustained internal demand. The seeds are used mainly for the extraction of oil, about 82 to 90 per cent. being used on that account. About 66.6 per cent. of the seeds crushed remain in the form of oilcakes which are used as cattle feed and as manure for sugarcane farms and tea plantations.

Futures in Seeds Necessary

Examining the case for futures trading in rapeseed and mustard seed, the Commission gives a number of reasons why such trading is necessary in these seeds. The area under cultivation and the production of the commodity are large and, in terms of quantity, it is the second major oilseed crop in India. The cultivation of the crop spreads from the Punjab in the North-West to Assam in the North-East. It is dependent on rainfall and thus the cultivation is exposed to uncertainties in the total volume of supply. There is a considerable volume of inter-State movement of seeds and crushing takes place throughout the year, while the crops are marketed during January to April. Crushers, stockists and traders, therefore, have to hold large stocks of seed and would welcome hedging facilities to cover their risks. There is also a good deal of uncertainty in regard to the price of oil, because the principal market for oil, West Bengal, is far away from main producing centres. The oil-millers, too, therefore, would welcome the reopening of futures trading in the seeds since the hedging facilities provided thereunder would give them protection against price fluctuations. The existence of futures markets before the introduction of the ban in 1944 has shown that an adequate number of experienced operators is available to deal in the commodity. Besides, ample warehousing facilities would be available at terminal markets, as well as in the producing and crushing centres. The seeds can be stored for long periods without deterioration in quality.

As for futures trading in rapeseed oil and mustard oil, the Commission feels that there is no compelling need to open forward trading in oil for the time being. It gives five reasons for this view: (1) Mustard oil is used mostly for edible purposes and not for any industrial use. Consequently, there is no organised body of consumers in need of holding large stocks of oil. There is also no export trade therein. The market for oil is, therefore, narrow. (2) There does not appear to be any tradition of futures trading in oil in the past, most of the associations having confined themselves to trading in seed only. (3) The representations received for the resumption of futures trading were mostly in respect of seed. (4) Many associations have stated that hedging in seeds would satisfy the requirements of all sections of the trade. As there seems to be a fairly well defined and stable relations between the prices of seed and oil, hedging in seeds would give protection to the oil interests. And (5) trading in non-transferable specific delivery contracts in respect of these oils is freely permitted throughout the whole country and this should go some way towards meeting the requirements of the oil interests.

SMALL BUSINESSES ENSURE COMPETITION

In India, there is a growing tendency on the part of the State to enter into and expand its activities in every sphere of economic activity. It is seeking to play an increasing role in industry, banking, insurance, trade and transport. In the second Plan the State has been assigned such a predominant role that, to a shrewd observer, it looks as though the day will not be far off when monolithic State agencies functioning under statutory regulations will spread out and kill competition which is the essence of all progress in a democratic society. The private *entrepreneur* has already felt the pangs of such expansion. Over a year ago, when an attempt made by a private industrialist to establish a steel company at Durgapur failed to fructify, an anguished business man, who was apprised of the failure, remarked: "Why bother the private sector entering the field of steel manufacture. The public sector is producing enough iron to enter the souls of 360 million Indians." While frustration is thus being felt among lovers of free enterprise, at no time in the past was there such urgency as today for enlightening the general public of the dangers of an economy in which competition is eliminated in the name of establishing a socialist pattern of society.

The public in India stands to benefit by keeping itself abreast of what is being done in the U.S. to control monopolies and to encourage the small business man. Having full faith in the benefits of competition to society, the U.S. Government has not failed to keep under control monopolistic tendencies, on the one hand, and to provide protection to the small business man against the threat of monopoly, on the other. President Eisenhower, in his Economic Report to the U.S. Congress early this year, observed: "One of the clearest lessons of business history is that tendencies toward monopoly are always present in some degree and that constant vigilance is needed to assure ascendancy of competitive conditions. Strict enforcement of the anti-trust laws is our primary weapon for thwarting any impairment of competition." The President made this remark, because American business consists of predominantly small business concerns. According to the Small Business Administration, a Government agency created by the U.S. Congress to "aid, counsel, assist and protect small business concerns," out of 4,225,000 business enterprises in the U.S. as on 30th June last, as many as 4,000,000 were small businesses. This domination of the small business man is due to the American belief that the small business is indispensable in a competitive enterprise system of economy.

One of the most obvious examples of this is found in the oil industry in the U.S. Most of the big oil companies, such as Standard Oil Company of New Jersey, distribute their products through the hundreds of thousands of independently owned and operated gasoline stations that serve American motorists in cities, towns and the countryside throughout the U.S.

No precise definition of the term "small business" is available in the U.S. But there are certain criteria that give it a definite meaning. The Small Business Act passed in 1953 defines a small business concern as "one which is independently owned and operated and which is not dominant in its field of operation. The Small Business Administration created under the Act considers any firm that employs fewer than 500 persons as a small business. It issues a share of Government contracts on this criterion. In the distribution trades, the S.B.A. uses dollar volume as a measuring rod. Net sale of $5 million a year is the ceiling for small wholesalers, while, in the retail trade, most firms having annual net sale of less than $1 million are regarded as small. In this latter category are hundreds of thousands of small retail businesses, such as neighbourhood grocery stores, shoe repair shops, restaurants, dress shops and haberdasheries whose annual net sales do not reach one-tenth of the $1 million ceiling. Firms engaged in most service-trades are also classified as small, if their annual receipts are less than $1 million.

There is no doubt that small business concerns, especially small manufacturing corporations, labour under some inherent handicaps in the U.S. free-enterprise economy. The limited amount of capital with which most small corporations operate is an obvious disadvantage in times of financial stress and strain. For the same reason, the small corporations generally do not have the money to set up laboratories and to hire highly skilled technicians to conduct research. Nor do they have the financial backing to conduct experiments that sometime require years for the development of a single, complicated product.

At the same time, the small concerns also enjoy certain inherent advantages in a free economy.

OFF TO A GOOD START

The Second Five Year Plan has allocated Rs. 710 crores for industrial and mining developments, which is an increase of Rs. 537 crores over the First Plan. Village and small-scale industries receive Rs. 200 crores—an indication of the all-round industrial effort conceived in the Second Five Year Plan.

In this unprecedented expansion of our industries, paper will play an important role. In mills, mines, construction yards... wherever plans and estimates have to be made...paper will provide the means of record and communication.

PROFITS OF McLEOD GROUP JUTE COMPANIES SHRINK

ALEXANDRA AND NELLIMARLA REPEAT DIVIDEND

THE six months ended 31st December 1955 proved to be a period of extremely difficult trading conditions for the jute industry, despite the fact that there was a steady demand for manufactured goods throughout the period. This was so because raw jute prices were ruling at such a high level and the market for jute manufactures was highly competitive that it was impossible to transact business in manufactured goods at a profit. The position was rendered more difficult by the increase in working costs as a result of the implementation of the Third Tribunal Award, which had granted an increase of Rs. 3-12-9 per worker per month with effect from 6th November 1955, leading to a rise of about Rs. 12 per ton in working costs of jute mills.

The aforesaid trading conditions are duly reflected in the financial results of the jute mills under the management of Messrs. McLeod & Co., Ltd., Calcutta, for the half-year ended 31st December 1955. Of the six companies (among the group of eight), namely, Alexandra, Chitavalsah, Empire, Kelvin, Nellimarla and Presidency, the salient features of the accounts of which are tabulated at the foot of this page, only one, Nellimarla, has been able to show a slightly better profit than in the previous two half-years. The worst affected is the Alexandra, the gross profit of which has dwindled sharply to a mere Rs. 0.98 lakh from Rs. 6.16 lakhs for the previous half-year and the record level of Rs. 9.34 lakhs for the corresponding six months of 1954. The profit for the half-year under review is the lowest since the six months ended 30th June 1952. The gross profit of Chitavalsah, which had steadily advanced from Rs. 4.33 lakhs for the half-year ended 30th June 1954 to Rs. 9.22 lakhs in the corresponding six months of 1955, has dropped to Rs. 7.82 lakhs.

The gross profit of the Empire Jute for the half-year under review has declined in succession to Rs. 2.83 lakhs from Rs. 4.69 lakhs for the previous half-year and Rs. 6.30 lakhs for the corresponding six months of 1954 The profit of the Kelvin Jute amounts to Rs. 7.94 lakhs, as against Rs. 9.77 lakhs and Rs. 13.40 lakhs, respectively, for the previous two half-years taken for comparison The Nellimarla, however, has earned a better profit of Rs. 6.19 lakhs, having risen from Rs. 5.88 lakhs for the previous half-year and Rs. 3.84 lakhs for the half-year ended 30th June 1954, and represents the highest for the past four half-years. The profit of the Presidency Jute has dropped from Rs. 3.53 lakhs to Rs. 2.63 lakhs, but the shrinkage is negligible as compared with that in the previous six months when the profit had more than halved itself from the record level of Rs. 7.19 lakhs to Rs. 3.53 lakhs.

The trend of net profits earned by the aforesaid six Companies and the dividend distributions for the past three half-years are clearly indicated in the table on this page. However, a word of explanation about the appropriation of the net profits will make it easier for readers to follow the trend.

It will be noted that, out of the six companies, only two have been able to repeat the dividends, while the others have had to cut them in consonance with the fall in their earnings. The Alexandra Jute has been able to maintain the dividend —for the third half-year in succession— even after transferring a sum of Rs. 75,000 to the reserve for machinery renewals, thanks to the writing back of Rs. 60,000, being the provision for possible loss on forward contracts made in the previous half-year, and to the sizable surplus of Rs. 2.03 lakhs brought in from the previous half-year. The Chitavalsah Jute has reduced the allocation to the reserve for machinery renewals from Rs. 1.75 lakhs to Rs. 1 lakh and has cut the dividend from 15 per cent. to 12½ per cent. per annum, thus restoring it to the level paid for the half-year ended 31st December 1954. The cut in dividend of the Empire Jute has been the sharpest, having been reduced from 15 per cent. per annum (paid for the previous two half-years) to 10 per cent. per annum, although the net profit is maintained at the previous half-year's level. This cut has been effected only after providing Rs. 1 lakh to the reserve for machinery renewals, which had not received anything in the previous half-year. The Directors of the Kelvin Jute have transferred to the reserve for machinery renewals Rs. 2.50 lakhs, as against *nil* in the previous half-year. No addition has been made to the general reserve, which had received Rs. 1 lakh six months ago. The dividend has been reduced to 15 per cent. per annum, from 20 per cent. per annum maintained for three previous half-years in succession. The Nellimarla Jute has repeated the allocation to the reserve for machinery renewals at Rs. 1.75 lakhs and the dividend at 10 per cent. per annum, to which level it had been raised last half-year from 7½ per cent. per annum. The dividend declared by the Presidency Jute, at 5 per cent. per annum, is the lowest among the group, having been reduced from 7½ per cent. per annum paid for the previous two half-years. No addition to the reserves has been made as in the previous half-year.

It will be noted from the foregoing analysis that the six mills have been able to add no more than Rs. 7.00 lakhs in the aggregate to the reserve for renewal of machinery, at a time when the whole industry is in need of large financial resources for financing the heavy modernisation programme. If such was the position of the industry during a period of good, steady demand for jute goods, investors can easily imagine its plight in the subsequent half-year (that is, the one ended 30th June 1956) when, as a result of the offtake lagging behind production, there was a huge accumulation of stocks with mills. Besides the sharp fall in earnings, the mills have had to lock up a substantial part of their resources for financing the accumulated stocks.

UNION INSURANCE SOCIETY OF CANTON LTD.

Established as far back as in 1835, the Union Insurance Society of Canton (General Manager: Mr. L. B. Stone, Hongkong), is one of the world's leading general insurance offices with branches and agencies in all parts of the globe. During the year ended 31st December 1955, the Society's net premium income aggregated £10.76 million, as compared with £10.13 million in the previous year, thereby recording an increase of £629,518. The expansion of the Society's activities has enabled the Directors to maintain the dividend at £2 2*s.* 6*d.* per share of £10 paid-up, the dividend being applicable to the increased capital of £1,500,000.

The increase in net premium income, to which reference has been made above, is shared by all the three departments, namely, marine, fire and accident. Between 1954 and 1955, the net premium income in the marine department moved up from £3,412,179 to £3,413,162, in the fire department from £3,629,233 to £3,752,673 and in the accident department from £3,090,024 to £3,595,119. The increase in the marine premium income, though it appears to be small, is particularly noteworthy in view of the fact that cargo rates were generally lower in 1955 than in the previous year.

In the marine department, claims accounted for £2.31 million, as against £2.52 million in 1954, and general expenses for £589,542, as compared with £608,208. Claims in the fire department absorbed £1.74 million as against £1.61 million. Referring to the claims experience in this department, the Chairman, The Hon. C. Blaker, points out that the Society was involved in the conflagration in Bacolod in the Philippines and in a large oil plant fire in Indiana which proved costly to the many insurers involved in it. In the motor department, claims paid and outstanding aggregated £1.95 million as compared with £1.69 million. In this connection, the Chairman has made certain remarks which are bound to be read with interest in this country. After referring to the high cost of repairs and settlement of personnel injury claims, he says: "The increase in road traffic in so many countries coupled with inadequate road systems is a problem which is likely to be with us for some time yet. The attendant problem of the higher speeds of all kinds of vehicular traffic presents further underwriting difficulties in the transaction of motor business."

The underwriting profit in the marine, fire and accident departments was £205,000, £256,742 and £198,932, respectively. These sums, together with the income from interest and dividends, made in all £1.18 million. The provision for taxation absorbed £222,056 and contributions to staff premium fund £173,634. After providing for expenses, not applicable to any other account and allowing for the minority interests of the outside shareholders of a subsidiary company, the Society's net profit is £735,340. After deducting profit retained in subsidiary companies £245,052, there was a balance of £490,288 which, together with the balance brought forward from the previous account £361,626, made in all £851,914. The payment of dividend at £2 2*s.* 6*d.* absorbed £318,750. After transferring £120,000 to exchange and investment fluctuation reserve, £30,000 to the accident and general additional reserve and £20,000 to the fire additional reserve, there was a balance of £363,164 to be carried forward to current year's account.

The Society's financial position is very strong. Besides a capital of £1.5 million, it has reserves and funds aggregating £11.81 million, inclusive of marine fund of £5.58 million, fire fund of £2.10 million and accident fund of £1.69 million.

MUKUND IRON AND STEEL

Substantial progress in the working of the Mukund Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeewan Ltd., Bombay) is disclosed by the audited accounts of the Company for the year ended 31st March 1956. The gross profit for the year amounts to Rs. 17.27 lakhs, as compared with only Rs. 4.53 lakhs for the previous year. After setting aside a sum of Rs. 5.55 lakhs for depreciation and utilising Rs. 1.98 lakhs to write off the loss of assets at Lahore, the Directors have transferred Rs. 5 lakhs to the rehabilitation and development reserve and Rs. 2.50 lakhs to the dividend equalisation fund. They have also recommended the payment of the arrears of preference dividend (5 per cent. per annum, subject to tax) for two years, namely, 1949-50 and 1950-51, which will absorb Rs. 1 lakh, leaving to be carried forward Rs. 0.31 lakh.

The Directors have also recommended the wiping out of the arrears of preference dividend for the rest of the five years also, namely, 1951-52 to 1955-56. There is, however, a technical difficulty in carrying out this recommendation. For the Company cannot pay during any calendar year more than two years' dividend to preference shareholders, so long as the loan taken from the Industrial Finance Corporation of India remains outstanding, without the prior sanction of the I.F.C. The Directors have asked for the Corporation's permission, and, as soon as it is received, the arrears of preference dividend for the aforesaid five years will be paid out of the dividend equalisation fund.

The earnings of the Company for the year would have been higher but for the slow-down of production by the workers for a few months towards the close of 1955. Normal production was, however, restored soon.

The Company, it will be recalled, was established in 1937 and had two factories, one at Lahore and the other at Bombay. Before the partition of India, the Lahore factory was the major production unit of the Company. The loss of the Lahore factory, as a result of the partition, was, therefore, a severe blow to its economy. Thanks, however, to the vigorous efforts of the management in developing the Bombay factory, the Company has

Points From The Chair

Outlook for Ceylon Tea

"AS to prospects for 1956, I feel hopeful of being able to see comparable prices in that the overall world position for tea would appear, at the moment, to be reasonably sound. However, this hope is contingent on two particular factors, first that the shortfall in tea crops, due to an abnormally severe drought in the early months of the year, is largely overtaken, and second, on our continuing to be able to work in co-operation with the new Government of Ceylon, thus ensuring the maintenance of a strong and stable tea industry, and to this end we extend to the new Prime Minister our good wishes for the future."

MR. R. D. W. MEGGINSON,
Imperial Ceylon Tea Estates

Excessive Competition Cargo Market

"In the cargo market competition continues. Healthy competition is an excellent thing and has always been a feature of marine insurance, but in recent years the world market has grown to such an extent that capacity exceeds the business available, resulting in excessive competition and the reduction of rates, in many cases, below economic levels. It takes a long time for the real position to be reflected in the figures but sooner or later such rates will have to be rectified. In the meantime we may have to face a few lean years during which we shall still find it necessary to be most selective in our underwriting."

MR. B. M. MAVROLEON,
The Hull Underwriters' Association

World Position of Man-made Fibres

"I will now refer to the world production of man-made fibres, which during the year 1955 was roughly 14 per cent. higher than for the twelve months in 1954; the increase amounted to 670 million lbs., and the aggregate production figure reached the formidable total of 5,600 million lbs. Of the increase, about one-fifth was in synthetics and the remaining four-fifths was divided between viscose and acetate continuous filament yarn and staple—viscose having much the larger share. We estimate that the synthetics now comprise about ten per cent. of the world production of all man-made fibres, compared with roughly eight per cent. in 1954. There is a growing interest in these synthetics, more particularly on the American continent, where much progress has been made and where several producers now compete with each other for the available business. Progress has been somewhat slower in Europe, partly perhaps because of climatic conditions, but also because the average European is more conservative than his American counterpart in trying something new—especially so when he continues to be well served by the use of fibres with a cellulose base."

SIR JOHN HANBURY-WILLIAMS,
Courtaulds Ltd.

Prospects for Electricity Consumption in Calcutta

"I took the opportunity during my visit to tour Calcutta and its suburbs in order to see the developments which have taken place in building and in the opening up of new thoroughfares in the city itself and its outskirts. Modern new office buildings—Government and commercial—have been erected in the city. The Calcutta Improvement Trust are in the process of completing new roads and extending existing ones over a wide area. Large residential flats have been constructed in the suburbs and it is evident a great deal of this type of building will take place during the next few years following on the completion of Improvement Trust Schemes. I have referred to this building activity in my comments on the domestic load. There has also been expansion in the industrial area and in addition considerable industrial activity throughout our licensed area which extends well beyond Calcutta on both banks of the River Hooghly. What has so far been accomplished indicates the progressive spirit which animates the authorities and all concerned with the welfare and well-being of the city and its extensive suburbs."

SIR HARRY BURNS,
Calcutta Electric Supply Corporation

Problem of Modernisation of Tea Estates

"Apart from Chinese growths, for which only guess-work estimates can be made, fully four-fifths of the world's tea is grown in India, Pakistan and Ceylon. These three countries all have a long-term problem before them in the need to modernise their gardens—a large proportion of their acreages could be much more productive, to the great advantage of growers and Governments alike, if so much were not already past middle age. Planting costs, however, have become so high that to replant on any substantial scale is now out of the question for most producers. In the case of Ceylon, tea accounts for two-thirds of the Island's total exports, and is, consequently, of critical importance to the economy. The problem of modernisation should receive the sympathetic consideration of the Governments concerned, since a large element in the high costs is due to their taxation policies and a solution is becoming more urgent every year."

SIR ERIC MACFADYEN,
Rubber Plantations Investment Trust

COMPANY MEETINGS AND DIVIDENDS

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, 17th July 1956. Dividend: As. 4-4/5 per share (15 per cent.). Transfer books remain closed from 4th to 19th July 1956, both days inclusive.

BENGAL POTTERIES LTD. Annual General Meeting, Calcutta, 17th July 1956. Transfer books remain closed from 14th to 18th July 1956, both days inclusive.

MOON MILLS LTD. Annual General Meeting, Bombay, 20th July 1956. Transfer books remain closed from 1st to 20th July 1956, both days inclusive.

CLIVE ROW INVESTMENT HOLDING CO., LTD. Annual General Meeting, Calcutta, 24th July 1956. Dividend: Re. 1-6 per share (includes interim dividend of As. 8). Transfer books remain closed from 13th to 24th July 1956, both days inclusive.

SARAN ENGINEERING CO., LTD. Annual General Meeting, Kanpur, U.P., 24th July 1956. Dividend: As. 4 per share. Transfer books remain closed from 9th to 24th July 1956, both days inclusive.

UNITED FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 25th July 1956. Dividend: Re. 1-4 per share. Transfer books will remain closed from 6th to 26th July 1956, both days inclusive.

SIMPLEX MILLS CO., LTD. Annual General Meeting, Bombay, 25th July 1956. Dividend: Rs. 12 per share, payable on 27th July 1956. Transfer books remain closed from 22nd June to 6th July 1956, both days inclusive.

ALEMBIC CHEMICAL WORKS CO., LTD. Annual General Meeting, Calcutta, 30th July 1956. Dividend: Rs. 8 per ordinary share. Transfer books remain closed from 18th to 25th July 1956, both days inclusive.

TRAVANCORE CEMENTS LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 30th July 1956. Dividend: As. 2 per share final (making As. 10 for the whole year). Transfer books remain closed from 14th to 30th July 1956, both days inclusive.

PRESIDENCY JUTE MILLS CO., LTD. Half-yearly General Meeting, Bombay, 6th August 1956. Dividend: As. 2 per share. Transfer books remain closed from 9th to 30th July 1956, both days inclusive.

FORT GLOSTER JUTE MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 31st July 1956. Dividend: Rs. 7-8 per share. Transfer books will remain closed from 20th to 31st July 1956, both days inclusive.

EMERALD VALLEY ESTATES LTD. Annual General Meeting, Coimbatore, 31st July 1956. Dividend: As. 10 per share (includes interim dividend of As. 5 per share). Transfer books will remain closed from 16th to 31st July 1956, both days inclusive.

MUKUND IRON AND STEEL WORKS LTD. Annual General Meeting, Baroda, 26th July 1956. Dividend: *Nil*. Transfer books will remain closed from 16th July to 6th August 1956, both days inclusive.

INVESTA MACHINE TOOLS AND ENGINEERING CO., LTD. Annual General Meeting, Bombay, 7th August 1956. Transfer books will remain closed from 24th July to 7th August 1956, both days inclusive.

INDIA PAPER PULP CO., LTD. Dividend: As. 11-1/5 (7 per cent.) per share, for the half-1956. Transfer books will remain closed from 18th year ended 31st March 1956.

MANAR ESTATES LTD. Dividend of As. 4-4/5 per ordinary share, for the year ended 31st March 1956. Transfer books will remain closed from 18th to 29th July 1956, both days inclusive.

MERCARA RUBBERS LTD. Interim dividend of As. 6 (7½ per cent.) per ordinary share, for the year ended 30th June 1956. Transfer books remain closed from 5th to 23rd July 1956, both days inclusive.

LAKSHMI MILLS CO., LTD. Final dividend of Rs. 7-8 per ordinary share and Rs. 3-12 per 'A' ordinary share, for the year ended 31st March 1956. Transfer books will remain closed from 31st July to 3rd August 1956, both days inclusive.

COMPANY REGISTRATIONS

WESTERN SHIPPING CORPORATION (PRIVATE) LTD. (First Director: Dr. Nagendra Singh, I.C.S.) Business: To purchase, charter, build, hire or otherwise acquire steam and other ships, etc. Authorised capital: Rs. 10,00,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

GRACE AND STYLE PRIVATE LTD. (First Director: Kamla Kapur.) Business: Film producers, distributors, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Nilam Mansions, Lamington Road, Bombay 4.

BAKUL AGENCIES PRIVATE LTD. (First Director: Shri Premchand Jain.) Business: All kinds of agency business. Authorised capital: Rs. 5,00,000. Private company. Address: 15-A, Horniman Circle, Fort, Bombay.

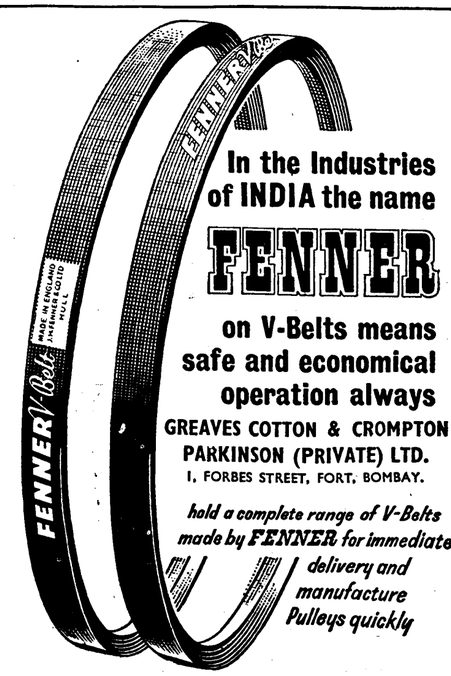
EASTERN CONTRACTORS PRIVATE LTD. (First Director: Lt.-Col. W. P. Horsburgh.) Business: Mechanical, electrical and general engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Bal Sakarbai Hospital Compound, Government Gate Road, Parel, Bombay.

(*Concluded from previous page*)

been restored to a position wherefrom it can look forward to the future with a reasonable degree of optimism.

The two main activities of the Company are steel re-rolling and steel casting. The re-rolling section had, in the past, suffered from chronic shortage of raw material, that is billets. This difficulty has now been overcome, and with the provision for production of substantial quantities of billets by major steel producers during the second Five-year Plan and the formulation of a programme of imports of large quantities, including billets, the Directors safely expect a good supply of billets in years to come.

The production for the railways, particularly in the sphere of wagon building, in the second Plan period has given considerable impetus to the Company's steel casting section. It has already reached the target for steel castings set at the commencement of the expanion of the Bombay factory and further expansion is being seriously considered. Efforts are also being made to secure technical co-operation of foreign firms, in order to get the advantages of the latest production techniques. This is expected to result in further improving the working efficiency of the Company's existing plant and equipment.



CLIVE ROW INVESTMENT RAISES DIVIDEND

PROFIT OF SARAN ENGINEERING HIGHER

Clive Row Investment Holding Co., Ltd.

THE directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1956.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; and this fact has been commented upon by the auditors in their report.

The profit for the year amounted to Rs. 31,92,061 on which taxation provision requires Rs. 10,70,000, leaving a net profit for the year of Rs. 21,22,061. To this amount has to be added the balance at credit of profit and loss account at 31st March 1955 Rs. 10,62,491, making a total in the profit and loss account of Rs. 31,84,552. From this is deducted the interim dividend of As. 8 per share paid on 25th November 1955 Rs. 6,94,000 and the directors now propose a final dividend of As. 14 per share amounting to Rs. 12,14,500, leaving to be carried forward Rs. 12,76,052.

During the year there was a net increase of Rs. 4,08,320 in the cost of the investment portfolio, and the investments of the Company are now divided among the main industries of the country as follows, the relative position as at 31st March 1955, being shown in brackets:

	Per cent.	Per cent.
Tea	22	(24)
Jute	24	(23)
Coal	17	(18)
Paper	6	(6)
Inland shipping	5	(6)
Miscellaneous	26	(23)

The tea company dividends taken into this account indicate the unprecedented prosperity of the tea industry in 1954. The results of the 1955 season will show a drop in the Company's income from these investments and will be more in line with the average results to be expected from this industry whose prosperity is to a great extent dependent on world markets. Prospects at present for 1956 are for a satisfactory season.

The recently published accounts of jute companies reflect the difficult time through which the jute industry is passing. Unless there is a substantial increase in the differential between the cost of raw jute and the price of the finished product, and in the demand for jute goods, prospects cannot be considered encouraging.

It is difficult to forecast whether the existing private sector in the coal industry will ultimately be nationalised or not. There are, however, good prospects during the next five years for most coal companies, provided the railways are able to move the additional coal which will be raised under the Second Plan, and provided Government grant an increase in the prices for coal sufficient to cover the increases in costs resulting from the recent Award affecting the industry.

With the growth of literacy in the country, the demand for paper is likely to increase, and we may take an optimistic view of the future of the paper industry. It is hoped that the increase in industrial activity which should result from the Plan will benefit the miscellaneous companies in which this Company is interested.

Since the shares of the Company were made available to the general public in January 1955, they have become widely spread and the shareholders of the company now number 970. Under the provisions of the Finance Act, 1956, the Company would be liable to a penalty super-tax at 8 annas in the rupee on any part of its assessable profits not distributed as dividend. Although the dividend recommended is the minimum to avoid this liability, it incurs dividend super-tax as it is in excess of 6 per cent. of the capital. It is unfortunate that a company of this nature, in which the public are so substantially interested, cannot build up its reserves and widen its scope except at the expense of considerable contributions to the public revenues.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,38,80,000	Investments	2,03,27,282
Reserves ...	17,34,264	Book debts	69,830
Provision for taxation ...	4,97,490	Cash ...	41,526
Liabilities ...	30,50,832		
Profit and loss account ...	12,76,052		
	Rs. 2,04,38,638		Rs. 2,04,38,638

Saran Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. (Private) Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st March 1956.

The results for the year, after providing for all charges including provisions for depreciation Rs. 2,00,000 (Rs. 1,60,000) and taxation Rs. 60,000 (*nil*) show a profit of Rs. 1,08,352 (Rs. 40,893) from which has been appropriated for rehabilitation reserve Rs. 75,000 (*nil*), leaving a balance of Rs. 33,352 (Rs. 40,893). After adding the carry forward from the previous year of Rs. 13,412 (Rs. 10,019), there is an available sum of Rs. 46,764 (Rs. 50,912). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of As. 4 (As. 4) per share, free of income-tax, for the year ended 31st March 1956 absorbing Rs 37,500 (Rs. 37,500) and in carrying forward Rs. 9,264 (Rs. 13,412).

The Company's works have been kept fully employed and the turnover shows an increase over the previous year.

The extensive capital replacement programme referred to in the last report is proceeding. During the year under report, approximately Rs. 4 lakhs has been spent on that account. The existing commitments of the Company on account of capital expenditure amount to approximately Rs. 4,65,000. A sum of Rs. 75,000 has been transferred to rehabilitation reserve from the current year's profits which the directors have transferred to capital reserve. The Company's property has been maintained in good repair.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	9,22,727
Reserves ...	6,10,321	Stock-in-trade	1,52,449

		Investments	49,875
		Cash ...	86,228
	Rs. 40,23,910		Rs. 40,23,910

Pullangode Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Aspinwall and Co. (Private) Ltd., Fort Cochin) submit the audited accounts of the Company for the year ended 31st March 1956.

The net profit for the year amounts to Rs. 2,05,458 as compared with Rs. 1,84,471 for the previous year. The necessary provision for depreciation on buildings and machinery have been made, while unsold rubber on the date of closing has been valued on the basis of control rates. The profit earned in 1953-54 was Rs. 1,87,689, the profit for 1952-53 was Rs. 3,05,313 and that for 1951-52 amounted to Rs. 2,99,654.

Crops and costs.—Against an estimate of 6,00,000 lbs., a crop of 6,28,000 (6,23,000) lbs. was harvested, exceeding the previous year's record crop by 5,000 lbs. Estate expenditure worked out at 84.45 (77.69) cents per lb. The following are the working results for the past three years:—

Year	*Crop*	*Estate expenditure*	*Net profit*
	Lbs.	Cts. per lb.	Cts. per lb.
1953-54 ..	6,05,000	73.19	31.01
1954-55 ..	6,23,000	77.69	29.61
1955-56 ..	6,28,000	84.45	32.72

During September 1955 the controlled price of rubber was increased by Rs. 5-12 per 100 lbs. in order to effect compensation for an increase in excise duty introduced in August 1955.

With the addition of Rs. 90,574 (Rs. 1,50,103) brought forward from the previous year in the profit and loss account, and after deduction of preference dividend paid, the balance in profit and loss account amounts to Rs. 2,87,032 (Rs. 3,25,574), which the directors recommend be disposed of as follows:—

By payment of a dividend of 15 (17½) per cent. on ordinary shares absorbing Rs. 1,65,000 (Rs. 1,92,500), transfer to rubber rehabilitation reserve Rs. 42,830 (Rs. 42,500) and to carry forward in profit and loss account Rs. 79,202 (Rs. 90,574).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	14,73,599
Reserves ...	2,29,794	Stock-in-trade	1,39,987
Provision for taxation ...	1,05,747	Stores and spare parts	18,935
Liabilities ...	1,23,114	Rubber nursery ...	5,372
Profit and loss account ...	2,87,032	Debts, deposits and advances ...	45,897
		Investments	2,04,910
		Cash ...	1,06,987
	Rs. 19,95,687		Rs. 19,95,687

Emerald Valley Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1955.

The result of the year's working (after making provision for depreciation on buildings, machinery, furniture, etc., amounting to Rs. 7,156 (Rs. 3,990 but without any deduction in respect of income-tax) is a net profit of Rs. 53,219 (Rs. 1,62,695) to which must be added the balance of Rs. 34,176 (Rs. 16,895) brought forward from the previous year's account, making a total of Rs. 87,396 (Rs. 1,79,590). Out of this, an interim dividend of 12½ (12½) per cent. amounting to Rs. 21,875 (Rs. 21,875) was paid on the 10th January 1956 leaving a balance of Rs. 65,521 (Rs. 1,57,715) which the directors recommend to dispose of as follows:—

To pay a final dividend of 12½ (17½) per cent. on the ordinary shares absorbing Rs. 21,875 (Rs. 30,625) and to carry forward subject to taxation Rs. 43,646 (Rs. 62,090 after transferring Rs. 30,000 to general reserve and Rs. 35,000 to dividend equalisation reserve).

Acreage.—The area under tea is 193.03 acres.

Crop and price.—A total crop of 1,13,140 (1,18,050) lbs. of tea was harvested during the year as against an estimate of 1,15,000 lbs. The cost of production was 153.02 cents per lb. as against 116.53 cents for 1954. The net average price realised per lb. was 217.00 cents as against 268.46 cents last year.

Estimates for season 1956 provide for a tea crop of 1,20,000 lbs. to cost 143.11 cents per lb. f.o.b. But it is doubtful the estimate will be realised. Due to the severe and prolonged drought experienced in the beginning of the year the crop harvested todate is 8,422 lbs. less than that harvested in the corresponding period last year. Provided the weather favours in the second half of the year, it may be possible to make up part of the shortfall.

Issue of bonus shares.—As early as 30th September 1954 the general body had resolved to issue the bonus shares subject to sanction from the Government of India. The sanction has since been received and the directors have decided to issue the bonus shares immediately on passing of the special resolution given notice of (this has been included in the notice of the annual general meeting) which is the last statutory requirement to be observed to proceed with the issue of bonus shares.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,75,000	Block ...	3,02,577
Reserves ...	3,40,000	Stock of tea	30,794
Liabilities ...	24,542	Stores and spare parts	17,609
Profit and loss account ...	87,396	Other assets	1,572
		Debts, deposits and advances ...	25,243
		Investments	1,26,964
		Cash ...	1,22,179
	Rs. 6,26,938		Rs. 6,26,938

Harinagar Sugar Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Narayanlal Bansilal, Bombay) submitted the audited accounts of the Company for the year ended 30th September 1955.

The accounts showed a net profit of Rs. 5,16,531 (Rs. 4,78,837). This together with the carry-over of Rs. 18,275 (Rs. 14,438) brought forward from last year's account, makes a total of Rs. 5,34,806 (Rs. 4,93,275) which the directors disposed of as follows:—

To provision for taxation and other contingencies Rs. 3,00,000 (Rs. 4,00,000), to investment reserve Rs. 1,50,000 (*nil*) and to dividend at 7½ (7½) per cent. free of income-tax Rs. 75,000 (Rs. 75,000). The balance of Rs. 9,806 (Rs. 18,275) was carried forward. The directors have created an investments reserve this year to the extent of Rs. 1,50,000.

The factory crushed about 30 lakh maunds of cane during the season, an increase of about 8½ lakh maunds over the season 1953-54. In addition to the normal mechanical breakdowns, the labour also for some time adopted go-slow tactics. The working of the factory on the whole had been satisfactory.

During the year under report the implementation of the provident fund scheme to the workers and staff of the Company, with retrospective effect from February 1953, as per the Labour Appellate Tribunal's Award was given effect to.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	39,25,973
Reserves ...	13,25,149	Stock of sugar	34,37,143

Provision for taxation ...	19,14,428	Live-stock	21,080
Liabilities ...	62,39,341	Debts, deposits and advances ...	36,92,575
Profit and loss account ...	9,806	Investments	15,80,971
		Cash ...	4,24,531
	Rs. 1,37,59,073		Rs. 1,37,59,073

United Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1955.

The Company's profit for the half-year, after the inclusion of Rs. 21,399 brought forward, is Rs. 1,21,396. After making provision for taxation Rs. 64,514 there remains Rs. 56,882. Out of this the directors have recommended the payment of a dividend at the rate of 25 per cent. per annum, absorbing Rs. 31,250 leaving to be carried forward Rs. 25,632.

The directors report, that during the half-year the demand for the Company's products was well sustained and despite occasional difficulties over supplies of wheat the Mill was able to work to full capacity. During the greater part of the period, Indian wheat was used almost exclusively but in early October floods in the Punjab interrupted the flow of supplies and the Government of India resumed the release of stocks of imported wheat from the middle of that month.

Labour.—Relations with the Company's employees continued to be good and in recognition of the satisfactory results for the year a higher rate of bonus was paid than hitherto.

Production during the half-year was 2,24,621 maunds as compared with 1,76,769 maunds during the half-year ended 31st May 1955. The average cost of wheat during the half-year was Rs. 12-15-1 per maund as compared with Rs. 14-0-10 per maund during the half-year ended 31st May 1955. The average price realised for products during the half-year was Rs. 15-3-10 per maund as compared with Rs. 17-6-10 per maund during the half-year ended 31st May 1955.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,000	Block	2,47,341
Reserves ...	8,22,763	Stock of wheat and flour etc.	8,05,825
Provision for taxation ...	1,49,000	Stores	20,796
Liabilities ...	5,27,305	Debts, deposits and advances ...	6,54,008
Profit and loss account ...	25,632	Investments ...	17,831
		Cash	28,899
	Rs. 17,74,700		Rs. 17,74,700

Shahdara (Delhi)-Saharanpur Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

Gross earnings—Gross earnings for the half-year were Rs. 23,28,000 (Rs. 21,64,775) which is Rs. 1,63,225 (Rs. 1,37,007) more than the earnings of the corresponding period ended 30th September 1954. There are decreases of Rs. 20,112 and Rs. 16,396 under goods and sundries and an increase of Rs. 1,99,733 under coaching.

Working expenses—Working expenses for the half-year were Rs. 15,01,927 (Rs. 13,02,969) plus Rs. 2,00,000 (Rs. 3,00,000) set aside to the replacement and renewal reserve fund, making a total of Rs. 17,01,927 (Rs. 16,02,969) which is Rs. 98,958 (Rs. 45,337) more than the figure for the corresponding period ended 30th September 1954.

Net earnings.—Net earnings for the half-year were Rs. 6,26,073 (Rs. 5,61,806).

The balance available for distribution is:—Net profit for the half-year Rs. 2,24,890 (Rs. 97,300) and balance brought forward Rs. 14,031 (Rs. 6,796) making a total of Rs. 2,38,921 (Rs. 1,04,096). The directors recommend that this balance be disposed of as follows:—

Payment of a dividend for the half-year at the rate of 12 (12) per cent. per annum less income-tax costing Rs. 66,375 (Rs 66,375) and balance to be carried forward Rs. 1,72,546 (Rs. 37,721).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	62,56,929
Debentures	30,00,000	Stores ...	8,42,029
Reserves ...	20,83,232	Work-in-progress ...	33,712
Provision for taxation ...	6,48,330	Debts, deposits and advances ...	12,64,585
Liabilities ...	24,07,815	Investments	10,48,473
Net revenue account ...	2,38,921	Cash ...	4,32,570
	Rs. 98,78,298		Rs. 98,78,298

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

After providing for depreciation the profit for the half-year was Rs. 91,780 (loss of Rs. 77,954). After deducting this from the balance brought forward of Rs. 6,18,709 (Rs. 6,10,532), there remains a balance of Rs. 5,26,929 (Rs. 6,88,487) at the debit of profit and loss account, which it is proposed to carry forward.

As the financial year of the Company covered by the attached accounts ended before the Companies Act, 1956, came into force the form in which the balance sheet and profit and loss account have been prepared differs from the form prescribed by that Act.

The higher profit due to a Rs. 4-lakh increase in turnover reflects improved production in all sections of the works. As the Company has now procured a healthy order book, especially with regard to electric motors and switchgear, steps have been taken to increase the productive capacity of these two shops.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs
Capital ...	5,00,000	Block ...	5,44,177
Reserves ...	1,06,358	Stock and work-in-progress ...	16,90,789

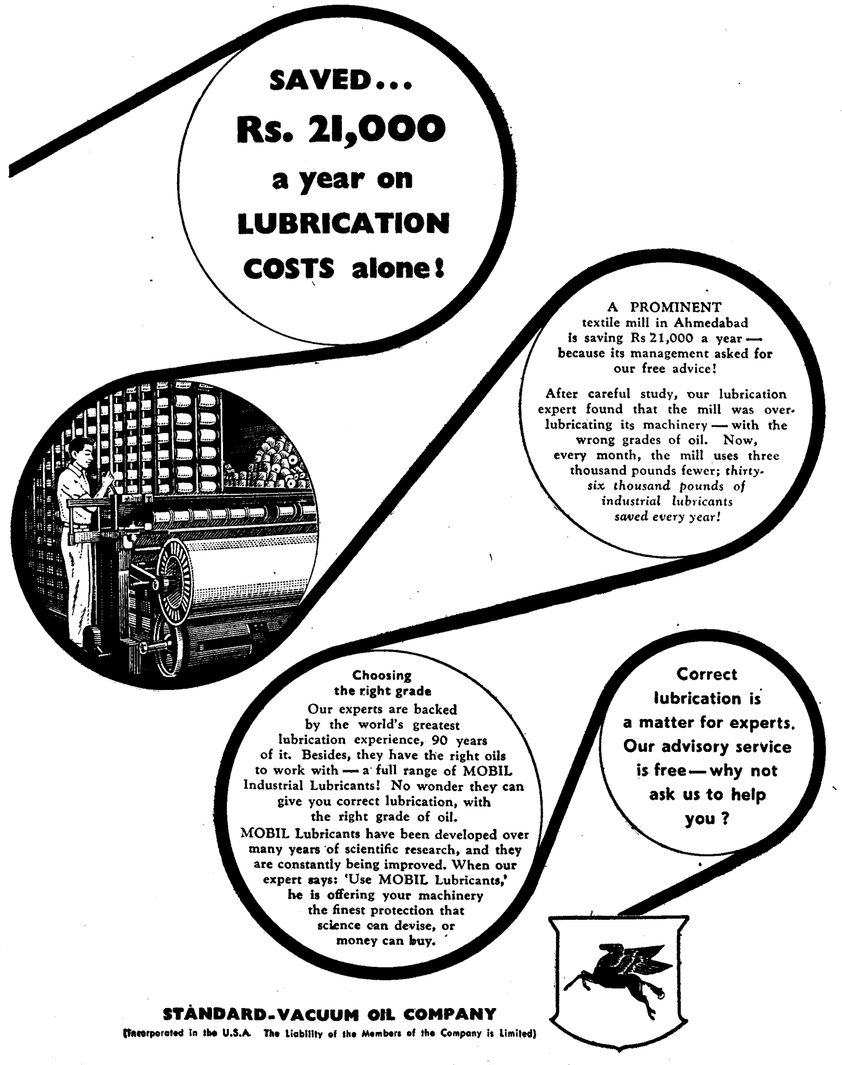
		Debts, deposits and advances ...	9,41,439
		Investments	2,000
		Cash ...	4,594
		Profit and loss account ...	5,26,928
	Rs. 37,84,311		Rs. 37,84,311

N.B.—Figures within brackets relate to the corresponding period of the previous year.

TATA OIL TO ISSUE BONUS SHARES

The Directors of the Tata Oil Mills Company, Ltd., have decided to recommend a dividend of Rs. 3 per ordinary share for the year ended 31st March 1956, as against Rs. 2 per share paid for the previous year. The Directors have also decided to capitalise a part of the amount standing to the credit of the share premium account of the Company and to utilise the same for issue of fully-paid ordinary bonus shares of Rs. 25 each, in the proportion of one share for every five ordinary shares held. The issue of bonus shares will be subject to the consent of the Government of India and approval by the shareholders at an extra-ordinary general meeting to be held at a later date. The date of the annual general meeting has been fixed on Tuesday, 14th August 1956.



Notices

THE PODAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office of the Company, Podar Chambers, Parsee Bazar Street, Fort, Bombay, 1, on Tuesday the 14th August 1956, at 4-30 p.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1955.
2. To sanction, if thought fit, the payment of Dividend on the Preference and Ordinary Shares of the Company and Special Bonus on the Ordinary Shares.
3. To elect a Director in place of Sir Behram N. Karanjia, who retires under Article 95 of the Articles of Association of the Company, but who offers himself for re-election.

   And to consider and if thought fit, to pass the following Resolution of which Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company from a member.

   Ordinary Resolution

   RESOLVED: "That the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Sir Behram N. Karanjia who has attained the age of 79 years and who retires by rotation under Article 95 of the Articles of Association of the Company, as a Director of the Company, and that he be and is hereby elected as a Director of the Company."
4. To consider, and if thought fit, to pass the following Resolution as an Ordinary Resolution:

   Ordinary Resolution

   RESOLVED: "That the Company hereby consents to the Board of Directors contributing to charitable and other funds not directly relating to the Business of the Company or the welfare of its employees an amount not exceeding Rs. 1,00,000 (Rupees One Lakh only) during each of the two financial years 1956 and 1957."
5. To appoint Auditors for the current year and fix their remuneration.

By Order of
The Board of Directors
For THE PODAR MILLS LIMITED.
For PODAR SONS PRIVATE LIMITED,
Managing Agents,
GANESHNARAYAN R. PODAR,
Director.

BOMBAY, 3rd *July* 1956.

N.B.—1. EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956, IN RESPECT OF ITEMS NOS. 3 AND 4 IS ANNEXED HERETO.

2. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

3. The Dividend when declared, will be payable at the Bank of Jaipur Ltd., Bombay, on and after 16th August 1956. Dividend Warrants will be posted to those Shareholders whose names stand on the Company's Register on the 14th August 1956.

4. The Transfer Books of the Company will remain closed from Tuesday the 24th July 1956 to Tuesday the 14th August 1956 (both days inclusive).

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

In respect of item No. 3 of the Notice of the Annual General Meeting to which this is an annexure, it is notified that Sir Behram N. Karanjia, who retires by rotation as a Director of the Company, but offers himself for re-election, has attained the age of 79 years and accordingly the Resolution set out in the said item is required to be passed under Section 281 of the Companies Act, 1956, for his election as a Director and Special Notice under provisions of Section 281 has been received by the Company from a Member, of his intention to move the said Resolution at the Annual General Meeting. The said Special Notice received by the Company can be inspected at the Registered Office of the Company during business hours on working days.

In respect of item No. 4 it is notified that under Section 293 (1) (*e*) of the Companies Act, 1956, the Board of Directors cannot without the consent of the Company in General Meeting contribute to charitable and other funds not directly relating to the business of the Company or the welfare of its employees are restricted to an aggregate sum of Rs. 25,000 or 5 per cent. of its average net profits from last three years. For several years in the past, the Company has been making contributions to such charitable and other funds; it may be necessary for the Board of Directors of the Company to contribute to the charitable and other funds not directly relating to the business of the Company or the welfare of its employees in excess of the said limits. The Board of Directors, therefore, seek the requisite consent of the Company in General Meeting for the purpose by the abovementioned Ordinary Resolution as per the aforesaid Section 293 (1) (*e*) of the Companies Act, 1956.

THE KARANPURA DEVELOPMENT COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above named Company that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the Seventieth Ordinary General Meeting of the Company), will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday the 4th August 1956, at 10 a.m., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 31st December 1955, declaring the Dividends recommended by the Directors, electing Directors and Auditors and for transacting any other ordinary business of the Company.

NEW PUBLICATIONS

(*Concluded from page 82*)

the kind mentioned above can be attained except among a group of countries which adopt reasonably similar objectives for their domestic policies and employ reasonably similar "price-mechanism" instruments for their attainment. Thirdly, in modern conditions, it is really not possible to achieve a liberal world economic order merely by free trade between sovereign nations. Something more positive in the way of international economic institutions (if not of supranational economic authorities) is required for the purpose.

Prof. Meade also draws attention to some fields of economic policy in which, in the modern world, it is desirable that still more positive action should be organised internationally. These fields relate to abandonment of protective policies as instruments for influencing the distribution of income among countries; structural change and economic development, which is a matter of common concern to the so-called developed and undeveloped countries; defence in which there is need for a large number of countries to plan their programmes jointly. The restoration of a liberal economic order in the modern world is thus not a negative act of mere *laissez faire*. Such a restoration requires, as the learned economist has rightly emphasised, a considerable development of international, if not of supranational, economic organisation. It also requires a careful selection of domestic economic policies which, while they are effective for the attainment, within the various countries, of the major aims of economic policy, are not incompatible with the type of international economic order discussed above.

NO CHANGE IN MONEY

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

Conditions in the short-term money market continued to be a shade comfortable during the week under review also. Though there was no marked expansion in floating funds, banks were able to get their requirements without much difficulty from the inter-bank section and even at slightly lower rates after clearing hours.

The slight easiness noted for the last two weeks is expected be a temporary phase. For, when the list for the Central Government's new issues—the terms of which were announced on Thursday last —opens on the 16th inst.—there will be a heavy withdrawal of funds. It is common knowledge that several investors have already mobilised their resources with a view to taking up the new loans and placed the cash with banks on a call basis.

During the week under review, inter-bank call money was bid at 3¼ per cent. A fair volume of business was reported done even at 3 per cent., but only after clearing hours. House money at call continued to fetch 3¼ per cent. Short-term deposits were offered 3⅜ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

After three weeks of successive recession, a rise of Rs 7.83 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 6th July 1956. Notes held in the Banking Department are lower by Rs. 8.19 crores. On the assets side, foreign securities have declined by Rs. 9.94 crores and a corresponding rise is noted in rupee securities. In the Banking Department, the National Agricultural Credit (Long-term Operations) Fund, which was created in February last with a sum of Rs. 10 crores, has been strengthened further by Rs. 5 crores. The National Agricultural Credit (Stabilisation) Fund has been credited with an initial allocation of Rs. 1 crore. Deposits of the Central Government have declined by Rs. 2.61 crores and those of other Governments by Rs. 8.40 crores. Deposits of banks, too, have fallen by Rs. 3.94 crores. On the assets side, balances held abroad have risen by Rs. 6.90 crores. Loans and advances other than to Governments are lower by Rs. 8.60 crores, of which advances to Scheduled banks against usance bills account for Rs. 3.88 crores. Investments have been reduced by Rs. 5.72 crores.

The Scheduled Banks' statement for the week ended 29th June 1956 discloses a rise of Rs. 5.74 crores in banks' demand deposits, after four weeks of successive decline. Time deposits have further gone up by Rs. 3.25 crores, while inter-bank borrowings are lower by Rs. 2.28 crores. Borrowings from the Reserve Bank have also been reduced further by Rs. 3.11 crores and those from the State Bank of India by Rs. 1.51 crores. In contrast to the successive decline in the previous three weeks, there has been a rise of Rs. 1.97 crores in advances, while inland bills purchased and discounted have dropped by Rs. 3.27 crores and foreign bills by Rs. 1 crore. Investments are again lower by Rs. 45 lakhs. Cash balances have swelled by Rs. 6.26 crores and balances with other banks in current account by Rs. 4.19 crores.

The Central Government's borrowing programme for the current year announced on Thursday last brought an element of surprise to market circles, for two reasons. In the first instance, the total amount sought for is Rs. 150 crores, as against Rs. 100 crores announced at the time of the Budget. Secondly, three different loans of varying terms are to be issued, as against a single medium-dated loan. The terms of the loans are:

Rate of interest	*Maturity date*	*Issue price* Per cent. Rs. a.
3½ per cent. (bonds) ...	1962	98 0
3½ per cent. (N.P. bonds) ...	1967	98 8
3¾ per cent. (loan)	1974	98 8

A notable feature of the issue is that no specific amount has been fixed for each loan. Subscriptions to these loans will be received in the form of cash or securities of the 3 per cent. 1957 loan which will be accepted at Rs. 99-13 per cent. tendered for conversion. Subscription lists will open on the 16th inst. and close on the 18th inst. or earlier.

The terms of the loans were well received by the market. They had no effect on the existing securities, as the yields on the new loans are in consonance with those obtaining on the comparable maturities. Prices were generally well held around previous week's levels. Towards the close, however, there were sellers in some selected counters, but, in the absence of buyers, business was next to nothing.

3 per cent. 1957 was unchanged at Rs. 99-13, as also 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 had some demand, but the quotation was unchanged at Rs. 98-2. 3 per cent. 1963-65 had buyers at Rs. 95-2. 3 per cent. 1964 was stagnant at Rs. 95 and 3 per cent. 1966-68 at Rs. 93-4. 3 per cent. 1970-75 was in request at Rs. 90-5½. 3 per cent. 1986 Conversion Loan was on offer and declined by As. 3 to Rs. 77. 3½ per cent. 1961 attracted sellers at Rs. 99-9 and 3¾ per cent. 1964 at Rs. 98-12. 3½ per cent. 1965 shed an anna to Rs. 98-11.

In the foreign exchange market the rupee displayed a further weakening tendency in terms of the U.S. dollar early in the week, but staged a recovery before the close. Banks' selling rate of ready dollars rose from 478⅜ to Rs. 479½, before dropping to Rs. 478¾ per $100. Similarly, their buying rate improved from Rs. 474⅜ to Rs. 475½, but reacted to Rs. 474¾ per $100. In New York, spot sterling advanced from $2.79-7/16-2.79-9/16 to $2.79-9/16—2.79-11/16, but shaded off to $2.79⅝-2.79⅞. Forward sterling (three months) closed on balance 1/16 cent higher at $2.77-15/16-2.78-1/16 after touching $2.78-1/16-2.78-3/16. Transferable sterling, however, closed lower at 277.25-277.35 cents, as compared with 277.30-277.40 cents a week ago.

SILVER GATHERS STRENGTH

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

A sharp rise in silver prices was the outstanding feature of trading in the bullion market during the week under review. Gold, on the other hand, displayed a quiet tendency in the earlier part of the week, but staged a modest recovery to close, on balance, with no marked variation.

The upswing in silver was due to speculative support by leading bull operators on revival of rumours that the export of silver coins from Tibet would be restricted. Nervous short-covering and reports about the possibility of bulls absorbing delivery in the maturing settlement also contributed to the firm trend.

Slackness in offtake caused a recession in gold in the earlier half of the week, but an improvement in demand during the last three days, coupled with the strength of silver, pushed up the prices.

Forward silver (25th July settlement) advanced from Rs. 171-5 to Rs. 172-11 on Friday last. After a short-lived dip to Rs. 171-11, it staged a sharp recovery to Rs. 173-10, before closing at Rs. 173-6. Business in the next settlement opened yesterday at Rs. 172-2, the official starting rate being Rs. 171-15. The closing rate today for this settlement was Rs. 172-2. The carry forward charge, which was Re. 1 against sellers yesterday, widened to Re. 1-4 at the close today.

Ready silver (.996 Mint) moved up from Rs. 170-15 to Rs. 173-6, but closed a shade lower at Rs. 173-2. The floating stocks of silver are placed at 700 bars. The daily average offtake was 15 bars.

Gold for forward delivery (24th July settlement) receded from Rs. 99-12 to Rs. 98-14 early in the week, but gained ground to touch Rs. 100. The closing was, however, a fraction lower at Rs. 99-13. Forward gold for the next settlement opened at Rs. 99-6 (as against the official starting rate of Rs. 99-3½) and closed today at Rs. 99-7, the carry forward charges being As. 6 against sellers.

Ready gold gave way from Rs. 100-9 to Rs. 99-2, but gathered strength to Rs. 100-8, before closing at Rs. 100-5.

The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas. The daily average offtake, which was only 2,000 tolas earlier in the week, improved to 4,000 tolas in the last three days.

In London, silver prices were unchanged at 78⅜d. for spot and 78½d. for forward. Gold advanced from 250s. 2½d. to 250s. 4½d., but dropped back to 250s. 2½d. In New York, silver was marked down by ⅛c. to 90½c.

The following comparative table shows the trend of market during the week under review:

	11-7-56	Highest	Lowest	4-7-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	100 5	100 8	99 2	100 9

HIDES IRREGULAR

(*From Our Own Correspondent*)

KANPUR, 8*th July*

The hides and skins market presented irregular conditions during the week. Supplies of fresh goods were not as considerable as those in the previous week. The main purchasers were the local tanners and the Madras dealers. There were several enquiries from Delhi, but no transactions were effected.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 220 and 3rd grade Rs. 150 per 100 pieces; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 3 ozs. per rupee; goat 1st grade Rs. 170 to Rs. 180 and 2nd grade Rs. 130 to Rs. 140 per 100 pieces; sheep Rs. 150 per 100 pieces.

LINSEED SUPPLIES SHORT

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 9*th July*

The linseed market ruled bearish early in the week but picked up strength towards later sessions. Seeds were in short supply and crushing was reported on a very limited scale with accumulated stocks of oil still in the hands of a few crushers. The improvement in the oil section was stimulated by better advices from London and reports of a bid from Russia for about 3,000 tons of Indian linseed oil.

The latest quotations are: Ready Rs. 21-6 and July/August Rs. 21-4 per maund.

COTTON FUTURES EASY

(*From Our Own Correspondent*)

BOMBAY, 11*th July*

Trading in the cotton futures market during the week under review was characterised by slow dealings with narrow fluctuations in prices. For operators did not evince much interest in fresh business, as they preferred to await reports of new crop position. There was also some disinclination to extend commitments on account of rumours of a possible revision in official cotton policy. The Central Government's decision to allow imports of 40,000 bales of American cotton stapling 1.1/16" and above, too, acted as a restraining influence. The undertone of the market was generally easy. Turnover during the week was not more than 75,000 bales, which was, of course, larger by 12,000 bales as compared with the previous week.

Jarilla Contract (March 1957) opened the week firm at Rs. 664, as against Rs. 663 last week-end, and swiftly receded to Rs. 658-8. The decline was due to short selling induced by Government's decision to allow U.S. cotton imports, lack of encouraging advices from cloth markets and reports of good rains in cotton-growing tracts. After moving irregularly on the 6th and 7th inst., the Contract staged a recovery to Rs. 664 on Monday, thanks to scattered professional buying and helpful spot advices inducing bear covering at lower rates. The recovery strengthened slightly today, following short covering together with bull buying on reports of unwanted heavy showers in cotton-growing tracts, and the Contract improved to Rs. 668-8 before finishing at Rs. 666-12. Vijay Contract (April 1957) opened at Rs. 818 and was taken down to Rs. 812 on Saturday. After recovering to Rs. 816 yesterday, it fell again to Rs. 811-8 before finishing at Rs. 817-12.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	11-7-56	*Highest*	*Lowest*	4-7-56
Jarilla (March) ...	666¾	668½	657½	663
Vijay (April) ...	817¾	821½	811½	818

Barring further imports of American cotton, there was no development worth noting in the spot cotton market which also ruled listless, in sympathy with the futures section. Demand from mills was mainly for current crop Wagad, Morvi, Vijay and Kalyan. Delivery contracts evoked some support and their prices tended to look up. Business in exportable styles was completely at a standstill in the absence of any move on the part of the Government to allow for export the stocks of Bengal *Deshi* still remaining unsold. The foreign section ruled quiet, since traders were hesitant to commit themselves for further quantities; the mills were reported to have almost covered their major requirements. Stray transactions were reported in American Good, Middling 1.5/32" at Rs. 1,375-Rs. 1,380. Some enquiries were also noted in higher Karnaks, T.151 (new crop) being done at Rs. 2,709 for October-November delivery.

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 625; Jarilla Rs. 775; Khandesh Rs. 785; Vijay Rs. 965; Oomra *Deshi* Rs. 680; Moglai Rs. 685. Delivery contracts: Berar December Rs. 105 on Jarilla; 320F December Rs. 62 on Vijay; Vijay 13/16" February-March Rs. 43 on Vijay.

The Karachi cotton market put on a somewhat cheerful appearance, in distinct contrast to the depressed tone in the past two weeks. There was good buying support induced by expectations of an improvement in world cotton prices. The expectations were based on reports from the U.S. that the Commodity Credit Corporation would sell the six million bales of cotton in the 1955 loan only from March 1957 onwards. N.T.R.G. July delivery which had dropped to Rs. 77-14 last week recovered to Rs. 80-15 yesterday. January delivery improved from Rs. 75-10 to Rs. 76-14 before receding to Rs. 74-11. Spot cottons, with the exception of *Deshi* styles, also staged a recovery. The following are the prices—in rupees per 82 lbs.— of a few popular varieties of Pakistan cotton prevailing yesterday, the figures in brackets giving last week-end rates:

Sind *Deshi* 102 (103); Punjab *Deshi* 97 (97-8); 4F Punjab Roller 81-12 (80-2); S.G. 83-12 (82-2); N.T.R.G. 84 (82-2); S.G. 68 (83-10); 289F Punjab R.G. 89-12 (82-2); S.G. 95-12 (94-10).

Cotton futures at Alexandria staged fair advances during the week. The sentiment of operators was favourably influenced by reports that Czechoslovakia was interested in purchasing Egyptian cotton. The Cotton Commission was believed to have already sold 12,000 bales of Ashmouni from its stocks to this country. Another helpful factor was the forecast of the delay in the arrival of new crop cotton into the market by a couple of weeks. Traders, were, therefore, inclined towards extending their commitments and prices moved up. The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market are given below:

Karnak: July 106.00; November 98.40; January 96.70. Ashmouni: August 71.70; October 71.25.

There was a sharp fall in the prices of Gezira cotton auctioned recently at Khartoum. The fall was brought about partly by fears of a downward revision in the Sudan Gezira Board's reserve prices and partly by hedge selling by a leading mill group in the wake of subdued buying interest. The total quantity of Sudan cotton lying unsold is estimated at about 124,000 bales.

The easy trend of the Liverpool cotton futures market noted in the past two weeks continued unabated. Apart from the absence of assurance from the U.S. regarding the price stability at the future sales, discouraging advices from yarn and cloth markets acted as a damper. There was selling on American and commission house account. Prices, as a result, suffered further losses. The Egyptian contract continued to be inactive with prices unchanged and Sudans were quiet on hedging pressure influenced by bearish reports from Khartoum.

The following are the latest available quotations—in pence per lb.—from Liverpool:

Old contract: July-August 24.00. *New contract*: July-August 27.50; October-November 24.52; December-January 23.75; March-April 23.45; May-June 23.20; July-August 23.00. *Egyptian Karnak cotton*: July-August, November-December and January-February 54.05. *Sudan cotton contract*: July-August 46.50; September-October 45.55; November-December 45.35.

The New York cotton market depicted a distinctly easy trend during the week under review. The easiness was due to bearish Government acreage estimate which was above trade ideas. This led to liquidation in old July, while New Orleans were sellers of new crops. The market also experienced heavy selling attributed to liquidation by Carolina mills against purchases of cotton in Southern markets.

The bids for further sales of C.C.C. cotton Middling 15/16" opened yesterday. The results of the offers are, however, not known. The C.C.C. has so far sold 2,471,744 bales under the new export sales programme, thereby covering nearly 50 per cent. of the 5 million bales export target. The C.C.C. stocks as on 1st January last, it will be recalled, were 8,052,371 bales. The C.C.C. sold, under the special export sales programme covering 15/16" and shorter cotton, one million bales. Under the new export sales programme, it has already sold 2,471,744 bales. Sales outside the export programmes made from 1st January till June were approximately 268,290 bales. The balance of C.C.C. stocks available for further sales are now about 4,312,337 bales, slightly more than half the quantity at the commencement of this year. The cotton in the 1955 loan is about six million bales, but it will become part of C.C.C. stocks only next year and, according to present estimates, will be offered for sale by the C.C.C. only from March 1957.

The Bureau of Agricultural Economics has reported that the mid-June parity prices for the principal farm commodities are unchanged from that of mid-May. The mid-June parity price for cotton is, therefore 35.44 cents.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-7-56	3-7-56	26-6-56
Spot	36.55	36.80	36.80
July	34.58	34.62	34.60
October	32.58	32.65	32.73
December	32.60	32.73	32.67

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 11*th July*

The sugar market continued to present a steady trend during the week under review. Spot stocks of sugar were very limited, with an acute shortage of medium grain sugar. This factor, coupled with reports of the Food Ministry's move to export about 200,000 tons of sugar, induced good buying support. Consequently, prices moved up further.

Ready medium grain indigenous sugar rallied Rs. 2 to Rs. 94-Rs. 95. Large grain advanced from Rs. 96-Rs. 101 to Rs. 98-Rs. 103. Small grain was firm, at Rs. 90. British refined sugar, however, eased by As. 12 to Rs. 88-4 for want of follow-up support.

In the forward section, *Shravan* delivery contract for 'C' grade sugar rose by As. 12 to Rs. 92-6. There were many buyers at this price.

Arrivals of indigenous sugar into the market during the week were slightly larger as compared with the previous week; they aggregated 9,600 bags, as against 8,500 bags.

(*N.B.*—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugars are exclusive of the tax).

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 11*th July*

Contradictory trends were witnessed in the three principal sections of the yarn market this week. Thus, forward rayon yarns were steady, whereas spot yarns were easy, staple fibre yarns weak and cotton yarns firm. The steady trend in forward rayon yarn was due to short-covering and profit-taking. The easiness in spot yarns followed large arrivals of imported yarns and slackness in demand. On the contrary, staple fibre yarns were weak, thanks to heavy pressure of sales. The firmness, however, in cotton yarns was aided by seasonal demand and encouraging reports from the Southern markets. Consequently, quotations in these sections varied according to their respective trends.

Snia rayon yarn (120 deniers) for August delivery advanced by Rs. 2 to Rs. 784. October delivery was done today at Rs. 791. Ready 150 Japan and 150 Italy, however, receded by an anna each to Rs. 4-1 and Rs. 3-14, respectively. 120 Japan declined by nine pies to Rs. 3-11-9. 120 Italy was quiet at Rs. 3-12-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade was unchanged at Rs. 3-7-3. But 120 Bt. cones 1st grade was a shade better at Rs. 3-10.

In the staple fibre yarn section, 40×2 July delivery dropped Rs. 8 to Rs. 634. The spot prices of both indigenous and foreign yarns staged a retreat. Among the former (40×2), New Greats and Citys fell by 18 pies to Rs. 3-5. Centurys slipped from Rs. 3-6-6 to Rs. 3-5-6. Kohinoors eased by half an anna to Rs. 3-7-3. Deals in foreign yarns (80×2) were put through, Suicos losing As. 4 to Rs. 6-14, K'Suns As. 2 to Rs. 6-10 and Paramounts an anna to Rs. 6-3.

Cotton yarns changed hands at higher prices. Ten counts were specially favoured. Elphinstones picked up As. 6 to Rs. 13-10. Podars improved by As. 4 to Rs. 14-2. Moderns gathered As. 2 to Rs. 14-4. Among 20s, Hinds rose by As. 2 to Rs. 18-4. Moderns were firm at Rs. 18-4. Among 40s, S'Rajas rallied As. 12 to Rs. 31-4. Minaxis strengthened by As. 6 to Rs. 28-8. Maduras hardened by As. 4 to Rs. 29. Among 60s, Colabas recorded a rise of Re. 1 to Rs. 55. Moderns put on As. 8 to Rs. 62. Patels increased by As. 4 to Rs. 49-4. Eighty counts, however, were subjected to selling pressure and suffered losses. Seksarias declined by a rupee to Rs. 54. Finlays climbed down by As. 12 to Rs. 74-4. Elphinstones lost As. 8 to Rs. 68.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	11-7-1956	4-7-1956	27-6-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn **(per case of 200 lbs.)—**			
120 Dull Cone Snia August ..	784 0	782 0	784 0
October ..	791 0	—	—

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 11*th July*

With the exception of linseed, the oilseeds market ruled bearish during the week under review. A combination of factors was responsible for this weakness. Thus beneficial weather conditions in producing areas, heavy offerings in groundnuts from Gujerat and Saurashtra and unfavourable advices from overseas markets induced long liquidation. Prices of groundnuts and castorseeds, as a result, tended to decline. The downward trend gained further momentum on account of weakness in castorseeds caused by the prospect of early opening of futures business in the new castorseed crop. In linseed, however, a cheerful note was in evidence on expectations of Russian entry into this market for the purchase of about 3,000 tons of linseed oil. The quotations, therefore, registered moderate gains on balance.

Groundnut February opened the week encouragingly at Rs. 132-14 but fell back sharply to Rs. 125-8 being the lowest for the week, but recovered and finished the week at Rs. 128-8. The spot rates, too, kept in line with the downtrend in futures. Bold F.A.Q. and June-July both shed Rs. 3 each and closed at Rs. 29-8. Coromandal and Khandesh quality each declined by Rs. 2-12 to Rs. 31-4. Groundnut oil ex-mill and R/R also moved down, the former by As. 8 to Rs. 17-2 and the latter by As. 10 to Rs. 16-12.

Castorseeds, September contract, which closed the previous week at Rs. 133-8, opened this week higher at Rs. 135-12. On sustained selling pressure the rate steadily came down to the week's low of Rs. 126-14 yesterday. Today, however, there was some support and the quotation improved to Rs. 127-12. The spot rate also declined in sympathy with the futures market. Ready F.A.Q. and Madras lost Re. 1-2 each at Rs. 25-10, Castor oil B.S.S. fell by As. 14 and closed at Rs. 24-14. First Pressure shaded off to Rs. 15 from Rs. 15-4.

Linseed, however, depicted an upward trend as noted above. Bold ready and June-July were each done at Rs. 28-12 as compared with Rs. 28-4 at the close of last week. Aug.-Sept., too, gained As. 10 at Rs. 28-12. Indore put on As. 6 and Satna As. 8 at Rs. 28-14 and Rs. 26-12, respectively. Linseed oil ready closed at Rs. 16-6, showing thereby a gain of Re. 1-2 over the week.

Among others, *kardi* seeds moved down sympathetically with groundnuts and castorseeds. *Kardi* seeds, ready Bold and Aug.-Sept. both were done at Rs. 17-12, as against Rs. 18-8 a week ago. *Niger* seed ready F.A.Q. remained quietly steady at Rs. 28-4, so also Madras at the same rate.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	11-7-1956	4-7-1956	27-6-1956
	Rs. a.	Rs. a.	Rs. a.

TEAS ATTRACT BUYERS AT LOWER LEVELS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 5*th July*

The offerings in sale No. 18 which was held on Tuesday, 2nd July, aggregated 1,500,000 lbs. Quality showed very little change from the previous week and there was still quite a large quantity of unattractive rush tea on offer. Some medium teas showed a slight improvement in liquor but high-grown quality was only fair. Prices for low-grown and low-medium brokens and fannings declined by As. 2 to As. 3, but at this level demand was quite useful. Medium teas met with fair support at a drop of an anna to As. 2 and buyers again showed interest in thicker liquoring teas. There was a good demand for better liquoring teas, but buying was selective and followed quality closely. Middle East type fannings were strongly supported at firm rates. Whole leaf grades sold well and orange pekoes were often dearer. The following are the latest quotations:—

	1956 Rs. a. p.
Plain B.P.	1 4 0
Low medium B.O.P.	1 5 6
Medium B.O.P.	1 7 6
Good B.O.P. ... Re. 1-15-0 to	2 1 0
Well made black leaf O.P. ...	2 4 0

London Market: *Sale of 2nd July* 1956.—Poorest sorts 1*d.* to 2*d.* lower. Others firm.

Sale of 3rd July 1956.—Good liquors better, others easier.

Colombo Market: *Sale of 2nd July* 1956.—Good demand. Firm to dearer rates except stalk and poor liquoring sorts.

Sale of 3rd July 1956.—More general demand. Black leaf firm; useful liquoring sorts steady; fannings dearer; rush teas still declining.

Calcutta Market: *Export*.—25,000 packages. Better general demand for all, but plain liquoring kinds. C.T.Cs. and better quality teas sold at considerably higher rates. While leaf stylish teas and better Darjeelings sold well, but stalky whole leaf grades irregular and easier.

Internal.—17,800 dust. Only fair demand. Medium Assams As. 2 easier. Dooars and commons weak enquiry, heavy withdrawals. C.T.Cs. and Middle East types very strong and dearer. Residue teas fair support at easier rates. 600 leaf. Good general demand at irregular rates."

Export Quota.—Following the expiry of special licence, new season's quota has hardened slightly and business was done at 33 pies. There are now sellers at this figure.

Forthcoming Auctions.—Sale No. 19 will be held on Tuesday, 10th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 19.—1,500,000 lbs. Much better all-round demand. Prices unchanged, except for black leaf and best liquoring which are dearer."

WOOL FULLY STEADY

NEW DELHI, 7*th July*

The Delhi wool market ruled fully steady during the past fortnight. Advices from Liverpool indicated steady conditions and some improvement in private sales, while U.S. quotations improved by two to three cents for white wools. The July auction at Liverpool is to take place on the 17th. Prices are expected to be firm as compared with June auction. In Northern India, the season for yellow wool is to begin by the end of this month when clipping will start. By the middle of August, good arrivals in the various markets are expected.

The quotations for wool prevailing at Delhi yesterday are given below:

(In rupees)

Superior White ..	3-4 to 3-5 per lb. f.o.r. Bombay.
Yellow	2-10 to 2-11 ,, ,, ,,
Kashmiri Goddi ..	175 to 185 per md. (extra long clip)
Kashmiri pulled ..	140 to 150 ,,
Mediums	120 to 135 ,,
Desi	100 to 120 ,,
Shorts	85 to 100 ,,
Camel hair	90 (in baled condition)

Bradford, U.K. (29-6-56): At the Australian sales this week, Yorkshire is believed to be the leading buyer, though there is good Continental support, and the price level, which is possibly at the best point of the season, is its own indication of the sustained need for wool in the principal consuming centres of the world. At Yorkshire, top production is at a very good level, as this is the time of the year when spinners are building up working stocks in readiness for the approaching annual holiday period. Export demand for tops is also well maintained, and British shipments of tops made from Commonwealth wool are holding a level which, if sustained, will exceed last year's export record. The Bradford top market is very firm.

London (28-6-56): The committee of the London Wool Brokers announce that 45,400 bales are expected to be offered at the London sales commencing on the 9th inst. The offerings include 10,600 bales Australian, 25,000 bales New Zealand, 1,700 bales South African, 2,000 bales Falkland Islands, 6,000 bales Punta Arenas, and 100 bales sundries.

Australia: At *Brisbane* (on 25-6-1956), there was strong competition from Japan, Britain and the Continent, and values were fully firm on the previous week's closing rates at the same centre. At *Melbourne*, prices moved in sellers' favour as compared with the last sale in the first week of June. Prices for combing wools remained fully firm.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 10*th July*

There was strong general demand, and a very impressive increase in prices for teas of all descriptions was recorded during yesterday's export sale. Note was taken of the announcement in New Delhi fixing the price of tea at Rs. 2-13-11 a lb. for the purpose of determining the export duty, as against Rs. 3-5 fixed on 1st June, which meant that there was no change in the export rate of As. 6 per lb. In London, during last Saturday's sale, demand for the better liquoring varieties continued with virtual neglect of the poorer kinds. Such a tendency was despite the lower warehouse stock position, but it would appear that stockists were becoming confident that they could increase stocks whenever they liked in view of the higher output figures. During the week, it was reported that the Pakistani crop up to the end of May had aggregated 7.73 million lbs., representing a substantial increase of 2.1 million lbs. compared to the corresponding figure for the previous season. The trend in Mincing Lane auctions is a clear indication that if India desires to increase exports local consumption would have to be content with more of the inferior variety.

Offerings during yesterday's auction amounted to 23,000 packages. The strongest feature was provided by best C.T.C. teas rising by as much as Re. 1 per lb. following keen competition. A gain of several annas was recorded by the ordinary C.T.C.s also. Good demand pushed the price of medium Assams with useful quality by As. 4 to As. 8, that of low medium Assams and Dooars by 1 anna to As. 1½, and that of plain liquoring teas by an anna. Whole leaf grades also gained in price. Among Darjeelings, flavoury lots were readily bought. Tippy teas were also a strong feature. The rates were: best C.T.C. Assam B.P. Rs. 4 to Rs. 5, medium Assam B.P. Rs. 2-4 to Rs. 2-6, clean black pekoe Re. 1-14 to Rs. 1-15, and plain B.P. Re. 1-9.

In consonance with the above trend, export quota rights were in keen demand. The new season's rights were bought at As. 2-11/12 with sellers wanting As. 3.

Conditions during last week's internal sale followed the familiar pattern, namely, of keen demand for quality teas, and of heavy withdrawals of the poorer varieties. Dusts offered consisted of 12,000 chests of new season's teas and 7,350 chests of old season's teas. There was keen competition for the useful liquoring C.T.C. teas, as well as for the black Middle East types. As a result, prices of both varieties improved. Residue teas were sold at lower rates, mediums were easier, and heavy withdrawals were reported in Dooars and common teas. Nominal quotations were: best Assam C.T.C. Rs. 3, Assam grainy dust Re. 1-12 to Rs. 1-13, and medium Dooars Re. 1-8.

Leaf grades on offer amounted to 540 chests, comprising 300 chests of old season's and 240 of the new season's teas. Although prices eased, there was fair demand.

KIPS IMPROVE

(From Our Own Correspondent)

MADRAS, 9*th July*

There were several enquiries from the U.K. for kips, and importers grudgingly paid half to one penny per pound over last week on run and fifths selections on certain established marks. Sellers in the local bazaar increased their prices and these were out of line with U.K. levels. It was felt however, that the bottom had been reached, and lower prices were not in sight in the near future. There was some call for buff calf and cow calf from the U.K., and good inland demand for buff hides. Prices in all sections ruled steady to firm.

In the July tanned skins public sales, prices of goat skins were generally on May levels. Good selection in superior tannages were in good demand and were well competed for, while adulterated classes and lower selections realised low prices where sold.

Shipments during the month of June were: To the U.K.: 2,978 bales tanned cow hides, 299 tanned cow calf, 20 tanned buff hides, 250 tanned buff calf, 1,165 tanned goat skins and 639 bales tanned sheep skins. To the Continent: 8 bales tanned cow hides, 458 tanned goat skins and 55 bales tanned sheep skins. To the U.S. ports: 5 bales tanned cow calf 45 tanned buffs, 55 tanned buff calf, 63 tanned goat and 3 bales tanned sheep skins. To Japan: 318 bales tanned sheep skins.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 9*th July*

Steady to firm conditions prevailed in foodgrain prices during the week under review. Heavy rains in most part of the west U.P. causing loss to the *sawani* crop and complete drought conditions at Hapur and nearby villages were the main stimulating factors. Arrivals were appreciably lower and good buying enquiry by local consumers, together with support from Bihar and other outside centres, strengthened the bullish trend further. Prices have also registered advance in Punjab and other centres. Wheat prices rose by a rupee to Rs. 15 for average quality and to Rs. 16 for farm quality. Arrivals were at an average of 500 maunds daily and local stock was put at 83 *khaties*. The week's offtake to Madras and Bihar aggregated two wagons of wheat. Complete dislocation of traffic by road from Delhi, due to breach in road caused by floods in the river Hidan, accounted for the stoppage of arrivals of gram from Delhi and Punjab side by road and this resulted in an advance of As. 12 to Rs. 11-12 per maund for Punjabi quality wheat. Madras advices recorded a firm trend in gram prices. The local stock was heavy at 60 *khaties*.

Rice prices ruled steady on rumours that rice was being smuggled to East Pakistan, although the Government had arranged to sell rice in deficit areas. Barley prices appreciated in line with wheat prices and stock position locally was reported very poor. *Bejhar* prices advanced on good ready demand by consumers. *Jowar* and *guwar*, however, ruled quiet, due to fall in demand for seed purposes and the prices at the week-end were:—Barley Rs. 11, *bejhar* Rs. 10-10, *jowar* Rs. 17-4 and *guwar* Rs. 10-4 per maund.

Pulses also recorded a hardening tendency. Peas *dara* green improved by As. 8 to Rs. 10-12 and white quality was transacted at Rs. 12-4 per maund. Local stock was put at 58 *khaties*, as against 93 *khaties* last year. Local arrivals were down at about 200 maunds daily. *Arhar* prices also recorded a small gain to Rs. 11-3 per maund, in sympathy with *arhar*. Prices of other pulses ruled steady at almost unchanged price levels Future recorded appreciable gains on vigorous bull support from Delhi and east U.P. operators. The latest quotations as on Monday are: Peas *bhadon* Rs. 10-13-9, white *bhadon* Rs. 11-7, *arhar bhadon* Rs. 11-7, *guwar maha* Rs. 8-7 and *urd maha* Rs. 14-8.

SUGAR RULES DULL

(From Our Own Correspondent)

HAPUR, 9*th July*

Trading in sugar was dull for most part of the week, due to fall in demand from Madras State where heavy quantity of sugar reached from Northern India. Some demand, however, was reported from Bombay side, but despatches were small, thanks to dislocation of railway track from Muzaffarnagar side. Some of the factories in west U.P. were still made to run under pressure from the Government, despite heavy deterioration in cane quality and its sugar contents. Owing to heavy rains during the week, rural transport has been dislocated and it is now gathered that large quantities of cane remain uncrushed.

Slight gains were recorded in mill delivery prices of sugar towards the week-end. The latest prices as on Monday are: Jaswant Rs. 28-8, Simbhauli Rs. 28-8, Mowana Rs. 28 to Rs. 29, Daurala Rs. 29-12, Amroha Rs. 28-2, Bijnore Rs. 28-2, Mansoorpur Rs. 28-4 to Rs. 29, Rampur Rs 30-12; retail Rs. 30-10 per maund.

A large quantity of *khandsari* sugar was reported to have been damaged in Muzaffarnagar districts, due to unprecedented heavy rains during the week. This accounted for a slight improvement in prices which are now standing at Rs. 23-4 to Rs. 27-8 per maund.

Ready prices of *gur* recorded a rise of As. 8 per maund at the close of the week, following reports of heavy damage to about 150,000 maunds of *gur* at Muzaffarnagar. Appreciable improvement in future prices was also the stimulating factor. *Gur* arrivals into the market during the week were small and offtake aggregated 10 wagons. Local stock was lower at 35,000 maunds. Dry quality *gur* was quoted at Rs. 10-12 and wet *kotha* quality at Rs. 9-8 per maund.

Future *gur* prices recorded strident advance during the week on vigorous bull support. Opening at Rs. 9-6, *fagun* delivery improved to touch the highest at Rs. 10-1-9 today.

BANKING

(*Concluded from page* 66)

The criteria applied by the Corporation for judging the creditworthiness of the applicants appear to be sound and it is gratifying to hear that the Corporation's approach is "sympathetic and objective."

Madhya Bharat has great potentialities for the development of industries, especially of the small and medium size. Just as the new Corporation could not make any profits during the first nine months of its existence, so also certain industrial undertakings may not show bright prospects in their formative stages. That, however, should not deter the Corporation from encouraging the new entrants to the field. Under the able guidance of the Chairman, Mr. D. P. Mandelia, who has several successes to his credit as an industrial administrator, it is to be hoped that the Corporation will gain strength, and help the State acquire a status on a par with the other advanced States of India.

LONG-TERM OPERATIONS AND STABILISATION FUNDS

The statement of affairs of the Reserve Bank of India for the week ended 6th July 1956 reveals that the Bank has taken a further step forward in the implementation of the scheme for enlarging rural credit. It reveals that the new item on the liabilities side of the Banking Department entitled "National Agricultural Credit (Long-term Operations) Fund," established in the first week of February last with an initial credit of Rs. 10 crores, has been strengthened by the addition of Rs. 5 crores. The item "National Agricultural Credit (Stabilisation) Fund," which has been appearing with no balance, has been credited, for the first time, with a sum of Rs. 1 crore as provided in the Reserve Bank of India (Amendment) Act, 1955.

Under section 46A of the above Act, the Reserve Bank is required to establish and maintain a fund, to be known as the National Agricultural Credit (Long-term Operations) Fund. To this fund is to be credited, according to this provision, not only an initial sum of Rs. 10 crores, but it should be credited, during each of the subsequent five years, with a sum not less than Rs. 5 crores. The initial sum was credited by the Bank early in 1956 and a further sum of Rs. 5 crores has been added to it now. This Fund will be utilised for giving loans and advances to State Governments for subscribing to the share capital of co-operative credit societies and to State co-operative banks for agricultural purposes.

Again, under section 46B of the Reserve Bank of India (Amendment) Act, 1955, the Bank had to credit before 30th June last a sum of Rs. 1 crore to the National Agricultural Credit (Stabilisation) Fund. Accordingly, the sum has been credited now and there is a further obligation to be discharged hereafter that, beginning from the year ended 30th June 1956, a sum of Rs. 1 crore will have to be credited for a period of five years to this Fund. The purpose of this Fund is to make advances and loans to state co-operative banks for periods not less than 15 months and not exceeding five years from the date of the loan, for enabling them to pay any dues in respect of bills of exchange and promissory notes purchased or rediscounted by the Reserve Bank, which the banks are unable to honour in time owing to drought, famine or other natural calamities. These loans are required to be guaranteed by the State Governments concerned in respect of both principal and interest.

POST-WAR TRENDS IN WORLD ECONOMY

(*Concluded from page* 67)

and the remainder, amounting to rather more than one-fifth of the total, consisted of trade of the rest of the world.

While a marked improvement in world balance of payments has accompanied a recovery in production, the problem of the so-called "concealed" dollar gap seems to persist. The residual world dollar gap on commercial transactions at the current level of exchange and trade restrictions was nearly $2.4 billion in 1954 and $3.4 billion in 1955. The gap did not, of course, give rise to serious difficulties, because it was substantially less than the total overseas economic aid rendered and military expenditures incurred by the U.S. Government. The U.N. Survey attributes the persistent imbalance in world trade and payments partly to the efforts at promoting capital investment and industrial development. "It is not," to quote the Survey, "unnatural for countries, especially those which are underdeveloped, to take the view that the concept of international balance was too narrowly conceived in the past and that an adequate rate of economic growth is itself an indispensable ingredient of international balance."

Notice

BALMER LAWRIE & CO., LTD.

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, 20th August 1956, at 12 noon, to consider the Report of the Board of Directors and the Report of the Auditors, the Profit and Loss Account for the year ended 31st December 1955, and the Balance Sheet as at that date, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following proposed Resolutions:

1. "That the act of the Directors in extending and renewing, on the same terms and conditions, for a further period of fifteen calendar months commencing from 1st January 1955, the Agreement dated 21st February 1951, made between the Company of the one part, and Mr. Alec Mansfield of the other part, appointing him a Manager of the Company, and the further act of the Directors in granting to Mr. Mansfield leave of absence not exceeding twelve calendar months during such extended period be and are hereby ratified."
2. "That subject to the approval of the Central Government, if required (for which an application has been made), sanction be and is hereby given to the payment made or to be made of a sum or sums not exceeding Rs. 25,600/- as a contribution to the Company's approved Superannuation Fund for the year 1955 in respect of Mr. C. D. Wilson, a Director of the Company."

NOTICE is also hereby given that the Register of the Members of the Company will be closed from 6th August 1956 to 20th August 1956, both days inclusive.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

By Order of the Board,

D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. I.=Interim Dividend. F.=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

M—Managed by the board of directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. • Including bonus. (k) Investments.
(l) Made up of an interim dividend of Rs. 1-12 per share on 1,39,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,39,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Alliance and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

WORLD BANK'S LOAN TO TISCO

MORE details are now available regarding the World Bank's loan of $75 million in various currencies to the Tata Iron and Steel Company, Limited, of India. The loan is intended to assist in the financing of a large-scale expansion programme to raise the Company's annual output to 1,500,000 long tons of finished steel (2 million long tons of ingot steel). This is the largest loan the Bank has yet made for industry, and also the largest the Bank has made in Asia.

The First National City Bank of New York, the Irving Trust Company and the Manufacturers Trust Company are participating in the loan to the total of $2,355,000, being the first maturity, due in December 1959.

The Tata expansion scheme is included in the investment proposed for the private sector in the second Five-year Plan. The Plan envisages an increase in domestic production of finished steel from the present level of 1.25 million tons to about 4.5 million tons a year. This is to be achieved by expanding the two existing privately-owned plants and by establishing three new Goverment-owned plants. It is estimated that demand for steel in India, which already necessitates heavy imports, will increase with the economic expansion of the country and the growing requirements for steel products for railways, industry, power, irrigation and other construction. The supplies made available by the proposed expansion of steel capacity including that of the Tata Company, should be absorbed by the internal market.

The Tata Iron and Steel Company, Limited, is one of the largest integrated plants in Asia and has a long record of sound management and profitable operations. Its plant is situated at Jamshedpur, 150 miles west of Calcutta. Nearby are ample sources of good quality iron ore and coking coal; the electric power needed for greater production will be supplied by the Damodar Valley Corporation, to which the Bank has made two loans, amounting to $27.2 million, to assist the financing of power plants and dam construction. The Tata Company's proximity to raw materials and power supplies enables it to produce steel at a cost as low as any in the world.

Capacity of the Tata steel mills has been 800,000 tons of finished steel a year since before the war. During the war period, the plant was subjected to heavy and continuous use without adequate renewals and replacements. Some parts of the existing facilities are already in process of modernisation and expansion under a first post-war programme which began in 1951. The Company has now embarked on a second programme of expansion. Both programmes should be substantially completed by 1958, when capacity is scheduled to rise to 2 million tons of ingot steel a year, or 1½ million tons of finished steel. The total investment programme of the Tata Company is expected to be the equivalent of about $250 million for the period

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2368 BOMBAY, 21st JULY 1956 PRICE Rs. 1/8

FREE ENTERPRISE AND DEMOCRACY

THIS journal has been feeling for long that the vast changes in the economic policies of the Government of India beginning with the amendment to Article 31 of the Constitution would ultimately prove inimical to the democratic way of life voluntarily chosen by the people. The speed with which opposition to these changes has been dying down even in quarters which can be expected to appreciate the seriousness of the danger only strengthens this feeling. There is a deplorable tendency amongst the vast majority of business men—the expression business men is used here in its widest sense, namely, industrialists, big and small traders, bankers, financiers, etc.—to accept these changes as something inevitable and to feel grateful to the Government and the party in power for even the crumbs that are thrown to them. Another regrettable tendency on the part of a section of the business community is to sing in praise of the Government once the individual or sectional interests are safeguarded, without due regard for the implications of the overall economic policy to democracy and free enterprise. This, it is needless to add, encourages the Government to follow a policy of divide and rule. Of late, there have been many instances of abject surrender by some section or other of the business community to the dictates of bureaucracy. In any parliamentary democracy, the laws enacted by the Government have, of course, to be obeyed and respected. But this does not mean that one should meekly submit to policies and programmes announced in the name of a Welfare or Socialist State, without even registering verbal protests. One has every right to ventilate one's reactions to such policies and programmes and to form Opposition on constitutional lines.

It has been truly said that eternal vigilance is the price of liberty. And, without liberty, there can be no democracy. An essential element of democracy is free enterprise. Indeed, the two are inseparable. Business men, big and small alike, as well as self-employed individuals such as lawyers, journalists, accountants and doctors, constitute the backbone of free enterprise. When, therefore, the State places too many restrictions on business men and/or deprives them of the right to practise their trade, the future of democracy itself is imperilled. The business community thus owes a special responsibility to the Nation for the preservation of democracy. If it were to reconcile itself stoically to all the restrictions placed upon it by the State, it would be contributing to the perpetuation of bureaucracy which would, sooner or later, give way to some form of dictatorship.

The trends in India are unmistakably clear. They show that the country will be in the grip of bureaucracy in the near future. The nationalisation of the Imperial Bank, with the prospect of a few more commercial banks being nationalised, the complete monopoly acquired by the State over life insurance, the bureaucratisation of the central banking organisation, the semi-nationalisation of the Co-operative Movement, the establishment of State Trading Corporation which is threatening to take over a sizable part of India's internal and external trade from the hands of private traders, some of the features of the new Company Law, the drastic land reforms, especially the proposal to place a ceiling on land, and a system of taxation largely confiscatory in nature—all these promise to usher in a long era of bureaucratic rule for the people of India. The aforesaid list can be easily extended. Nevertheless, it is necessary to add, at least in passing, that even the Press is being brought under the control of the Government, as witness the proposed legislation for controlling the prices of newspapers through a price-page schedule on the illusory ground of monopolistic trends in the newspaper world.

At one time, the tendency in the Government was to give preference to independent corporations for running nationalised or State-sponsored new undertakings, whether irrigation, industrial or financial. The Government also showed an inclination to place the administration of these concerns in the hands of non-officials, irrespective of political considerations. These persons were mostly drawn from the business world. This policy tended to offset, to some extent, the disadvantages of nationalisation. Indeed, the fact that even the key portfolio in the Cabinet, namely, Finance, was allowed to be retained by persons who were not full-fledged party members itself had a leavening influence on the economy of India. But all this is changing fast to the detriment of democracy. The spirit of tolerance is yielding place to one of intolerance. Almost all the corporations are being brought directly under the control of bureaucrats or of men who belong to the party in power. The exit of Lala Shri Ram, a talented business man, from the Industrial Finance Corporation, and of the impending exit of Dr. Matthai from the State Bank of India, of Mr. C. D. Deshmukh from the Finance Ministry and of Mr. C. H. Bhabha from the Eastern Shipping Corporation are only a few instances to illustrate our point. There was a time when the administration of the Company Law used to be under the advice of a committee of which a non-official of independent views was the chairman. But now that post has been given to an active member of the Congress Party. Again, it has become the fashion of the day to have boards of directors composed of officials only for managing the newly established commercial ventures of the State. Typical instances of this policy are the new State-owned Western Shipping Corporation and the State Trading Corporation. The Board of the Reserve Bank of India used to enjoy a certain measure of autonomy even after the Bank was made a hundred per cent. State-owned body. But, in recent years, it has been reduced to a nonentity. The Government attaches hardly any importance to the views of the Board. Thus, both political and economic power has come to be vested in the hands of the same set of persons. This is a state of affairs which no true lover of democracy would like, as this leaves little room for individual initiative and judgment.

In saying this, we are not pleading for a *laissez-faire* policy. A modern State, it must be conceded, must have enough powers to prevent monopolies, to ensure fair working conditions for workers, and to regulate the economic forces in a manner that will not lead to marked ups and downs in price levels. It may even be granted that, in an underdeveloped country, the State may find it necessary to establish industries in order to st

ing." The Government spokesmen and the Planning Commission have already begun to say that, as land is a precious social asset the supply of which is limited, it belongs to the State and that farmers have only the right to cultivate it. Surely, the line dividing communism and socialism in rural areas has already begun to blur. That is how one step towards the left leads to another. Are we not already witnessing it on the urban front, too? Had there been a free market in insurance, corruption and malpractices would have been eliminated almost fairly quickly, for a free market has a corrective element in it, namely, competition. But the Government thought, wrongly of course, that the best way to eliminate them was to introduce controls. Everyone now knows what happened later. Controls only perpetuated the disease. Then more controls were introduced. These, too, failed to work, because the Government itself did not, or could not, effectively implement them. In order to cover its failure to trace and punish the guilty, the Government finally plumped for complete nationalisation and creation of a State monopoly. The story is the same in regard to State-trading in iron and manganese ores; because of its bungling in the issue of licences for mining and wagon quotas and of its inability to provide enough transport facilities for the trade, the Government has decided to carry on the trade almost by itself.

It is at this critical juncture of the Nation's career, a "forum of free enterprise" has been formed, with the laudable object of educating public opinion about the merits of free enterprise and the danger of excessive State domination and State control over the activities of its citizens. The manifesto of this Forum is published elsewhere in this issue. Though little is yet known of its sponsors, the ideals expounded in its manifesto are lofty and deserve to be pondered by everyone, employers, employees and the State. It is stated that "it is a non-political and non-partisan organisation." This self-imposed restriction on the scope of its activity will, however, reduce its utility to the country. While an educational campaign has its own value, a stage has been reached when free enterprise can be saved only through a fight in the hustings. The country needs a political Opposition which must make the Congress Party feel that its opponents in elections are found not only in the left but also in the right. If free enterprise feels that it has, as it undoubtedly does, a philosophy to sell to the public through educational propaganda, there is no reason why it should fight shy of carrying its campaign into the halls of State Legislatures and Parliament. With its talent and experience, it can make itself effectively heard if it enters these halls in fairly larger numbers. And, what is more, only when it develops a stake in the form of votes in these august assemblies, will all its rank and file realise the necessity for cultivating a greater sense of responsibility to the society and eschewing those practices that have earned for it a bad name. That way, the present unhealthy tendency among business men to safeguard their position through political bribery can also be ended. Our suggestion may mean a considerable amount of sacrifice for the business community, but no worthy cause has ever been won without making sacrifices.

STATE TRADING IN ORES

THE worst fears of the commercial community about the State Trading Corporation have now proved correct. Those who had hoped that the Corporation would be a valuable machinery for promoting India's foreign trade are now sadly disappointed. The Government, in its understandable anxiety to gather finance for implementing the second Plan, has been unable to resist the temptation of robbing private traders of their avocation. The first shot has been fired, the target being the trade in iron and manganese ores. Another target is cement. There is no knowing what other commodities will not be taken over by the Corporation as its exclusive monopoly, thereby depriving the private trade of the business built through decades of unremitting effort.

Before the Government announced its intention to enter the ores trade, it was believed that the Corporation would carefully feel its way, find out what commodities lend themselves to advantageous trading by the State, and decide its policy and practice after consultation with the interests conderned. The Government spokesmen were, of course, completely reticent on the role of the Corporation. They would neither define nor indicate the scope of its activities. But this silence was then interpreted to mean that the Government was anxious not to commit itself to any preconceived course of action. Further, it was not merely reassuring but positively encouraging to be told that the Corporation would supplement, not supplant, the normal trade channels.

It was this assurance that engendered the belief that the Corporation would play the role of a genuine "elder" brother—not a mere "big" brother—in trade. It was believed that some striking developments were in the offing, that the Corporation would make a distinctive contribution to India's national economy. Who could have then thought that the Corporation, after raising large expectations, would come out with so ludicrous a proposition as trading in ores? It is a descent from the sublime to the ridiculous. Here was a Corporation intended to make a solid contribution to India's foreign trade. It now transpires that this organisation can do no more than sell a mere raw material, iron and manganese ores. It is not as if the Corporation will undertake an intelligent market research, sell the articles for which private trade cannot find a market, and thereby set a model for skilful marketing. The Corporation will do nothing of the kind. It will just take over what private trade has been doing and what the latter can, given the necessary facilities, do even better than it is doing at present. In other words, the Corporation, contrary to earlier expectations, will supplant, not supplement, private effort.

The reasons advanced for this strange excursion into India's foreign trade make most amusing reading. They were set forth in a Press note issued on 22nd June, which constitutes a fine easy in confused thinking. The Press note asserts that the existing trade mechanism is inadequate for meeting the export trade in ores. It is not clear why this precious information was not made known to the public earlier. If the Government was convinced that all was not well with the state of the export trade in ores, it could have convened a conference of exporters, exhorted them to behave better, and also undertaken an examination of the handicaps from which the trade suffered. The trade, on its part, has ere now pointed out that it has not done badly at all, if allowance is made for the handicaps under which it operates.

The Government's charge against private traders sounds hollow particularly in the light of its own admission that the "preoccupation of the control authorities with the equitable distribution of available wagon space amongst mining and trading interests has made it virtually impossible for the limited resources to be used to the maximum advantage or for economical arrangements for the transportation of ores and for their handling at the ports." One should have thought that this appreciation of the transport problem would be a prelude to the allotment of more wagon space for exporters and miners. But the Government is apparently convinced that the best way of solving the transport problem is to take over the trade which demands such transport. Now that a chronic shortage is developing in rail transport, it will be a handy excuse for the Corporation to take over the trade in any commodity it likes.

Proceeding, the official Press note indulges in some sanctimonious grief over the plight of foreign buyers. Thus, we are told that Indian exporters have not been able to fulfil their contracts and that "this has inevitably caused inconvenience to the buyers of ores abroad and undermined their confidence in India's capacity to maintain an assured line of supply." This is a serious allegation, if it is true. Only, it passes one's comprehension that the Government should have kept this deplorable lapse on the part of Indian exporters a well-guarded secret. It is now hardly ten weeks since the Export Advisory Council met. And, so far as we can remember, no reference was made then to the allegation that the export trade in ores was being conducted in a manner which had "undermined" the importers' confidence in India's ability to export ores. On the other hand, the only reference that was made then was to the transport difficulty in the movement of iron and manganese ores. And the spokesman for the Railway Ministry outlined the arrangements that had been made for making available as much transport for ores as each port could despatch. Against this background it seems somewhat odd that the Government should now shed copious tears over the sorry plight of overseas buyers of Indian ores.

An argument that has been trotted out in support of the State Trading Corporation's monopoly or near-monopoly in the export of ores is that the Government has entered into trade treaties, involving the export of this commodity, with certain European countries where Government-sponsored bodies conduct the foreign trade. It is also pointed out that, in Japan, too, a combine operates in the sphere of import trade in ores. The implication is that, in this context, the Government-sponsored State Trading Corporation would be in a better bargaining position. This is a sensible argument. We have repeatedly expressed the view that it is best that the Government is allowed to deal with countries where foreign trade is a State monopoly. But it is not necessary for this purpose to entrust or seek to entrust the entire trade in a commodity to the State Trading Corporation. Further, so far as Japan is concerned, there is no indication to suggest that it would greatly prefer to deal with a State-owned Corporation in India. On the contrary, there are reports that it is strongly opposed to this move. In any case, the right course would be to make the Corporation responsible for trading with countries possessing a regimented economy and leave the rest of the field open wholly for the private sector. The totalitarian countries, it is noteworthy, do not figure very prominently as markets for India's mineral ores. Between 1954-55 and 1955-56, exports of iron ore increased from 1.01 million tons valued at Rs. 4.21 crores to 1.36 million tons valued at Rs. 6.27 crores. The only totalitarian country which figured as an important buyer was Czechoslovakia. But its offtake actually declined from 277,964 tons to 186,527 tons. Japan, on the other hand, increased its offtake from 502,601 tons to 1.01 million tons. Total exports of manganese ore declined from 989,999 tons valued at Rs. 12.92 crores in 1954-55 to 920,847 tons valued at Rs. 10.72 crores in 1955-56. The chief buyers in 1955-56 with figures in brackets indicating their offtake in the previous year were: the U.S. 321,468 tons (569,541); the U.K. 91,795 tons (122,672); Japan 124,932 tons (66,387). Clearly, the communist countries are not what one would call bright spots in India's ore export picture.

From all this, the conclusion is inescapable that the Government, having decided to take over trade in ore exports on other grounds, has been compelled to find a laboured—and, therefore, unconvincing—explanation of its move. Perhaps, the real reason is that the Government was looking around for some safe and profitable line of export trade and it then occurred to it that exports of ores could serve this end. There is nothing wrong in the Corporation wanting to make a profit; rather, it would be wrong for it to make a loss. Only, it is wrong for the Government to let the Corporation make a profit by artificially drying up the normal trade channels. Further, there is a real difference between the profit made by a State-owned Corporation and that made by innumerable traders, for, in the latter event, taxes are paid and larger employment is provided. In any case, there is no excuse for this abrupt termination of the services of normal trade. It is true that the Government has given the assurance that normal trading mechanism would be utilised—though this concession is limited by the phrase "to the extent practicable"—and that limited opportunities would be given to mining interests for direct participation in the export trade. But these are crumbs meant to keep the trade in good humour and may be withdrawn any time. Already, some of these concessions are proving a bone of contention. Some miners feel that their interests have not been jeopardised at all, since the Corporation would buy the ore requirements from them. They seem to think that they need not be unduly worried over the fate which has befallen the exporters. Apparently, they do not realise that the system under which the exporters have to compete among themselves for the purchase of ore will ensure a better price for the commodity than a system under which there is a monopolistic buyer.

There are also several immediate issues to be settled. It is suggested, for instance, that the sales made by quota-holders will be scrutinised with a view to examining whether they conform to the objectives of the Government policy. Nowhere it is stated what these objectives are and what standards will be applied in judging the appropriateness of these sales. Secondly, little is known about the way the Government will permit the forward commitments, made by exporters to be honoured. The whole position is obscure. Thirdly, it is not clear what types of ores the Corporation will buy. If it confines itself to high-grade ores, what happens to stocks of low-grade ores and the mines which produce them? These and other intricate issues could have been settled in advance, if the authorities had taken the trade into confidence and not sprung a surprise on it. It is a pity that State trading in this country should have commenced with so bad a start.

STOCK EXCHANGE BILL ADOPTED

LINSEED FUTURES—STERLING VERSUS D.MARK

THURSDAY, 5 P.M.

THE revival of upward trend in equities witnessed in the previous week has been kept up by a further impressive rise in textiles and miscellaneous scrips. Steels, too, have been firm, but the gain has been relatively modest, as compared with that in the other sections. The maintenance of dividend on the T.I.S.Co. shares has been in accordance with earlier expectations. The news that almost the entire new issue of T.I.S.Co. has been taken up by the shareholders has made a good impression on the market. Between the two scrips in the steel section, the performance of Indian Irons was less impressive. While Bombay was a keen supporter of this counter, Calcutta went on continuously selling it. Consequently, after going up from Rs. 35-13 to Rs. 36-8, Indian Irons closed weak at Rs. 35-14, whereas Tata Ordinaries were able to finish on a steady note, with a gain of Rs. 2-8 at Rs. 204-4, against the peak of Rs. 206-8 touched during mid-week. Calcutta selling of Indian Irons was, perhaps, due to the generally subdued tone of the entire share market in that centre. Bombay operators' fancy for Indian Irons is based on authentic reports that the Company's working is very encouraging and that its profit-margin has vastly improved owing to all-round improvement in efficiency. They argue that, as a "growth share," Indian Irons are by no means overvalued, though they may appear to be so on the basis of current yield.

MARKET GOSSIP

* * * *

One of the refreshing features of trading in the share market in recent weeks has been the sustained rise in the shares of the Bombay Burmah Trading Corporation Ltd., in contrast to the general downward trend of the market. This buoyancy was due to two reasons, namely, (1) the hope that the interim dividend for the year ended 31st May 1956 would be maintained, which at one time was thought might not be possible in view of the sharp fall in tea prices during 1955, and (2) the expectation that the scheme for abolition of the founder shares would be announced shortly. Both these expectations have since materialised. The management of the Company announced yesterday the broad details of valuation of the rights of the founder shares, as also its decision to repeat the interim dividend at Rs. 225 per share on the founder shares of Rs. 2,500 each, at Rs. 11-4 per share on the old shares of Rs. 125 each and at Rs. 4-8 per share on the new shares of Rs. 125 each of which Rs. 50 only are paid-up.

The Company, it may be noted, has 100 founder shares of Rs. 2,500 each, enjoying a special right in respect of dividend. According to the valuations made independently by two firms of chartered accountants of the rights of these shares, the value of the rights is equivalent to 18,000 fully paid shares of Rs. 125 each. The founder shares, it will be recalled, are entitled to receive an extra or preferential dividend equal to one-third of the surplus profits remaining in any year after paying a dividend of 12 per cent. per annum on all shares in the Company, including the founder shares, and after setting aside any sums to the credit of the reserve fund as the Directors may decide.

Ever since the move to amend the Company Law, there has been an impression in market circles that the founder shares deserve to be eliminated, as they have become an anachronism. The new Company Law, of course, does not require joint-stock companies with different rights to dividends existing before the commencement of the Act to abolish these extra rights. The management of the Bombay Burmah, however, would appear to have thought it fit, and rightly so, to move with the spirit of the times and convert these founder shares into ordinary shares. Accordingly, they had the valuations done by two eminent firms of chartered accountants as stated above. These valuations are subject to confirmation and acceptance by the ordinary shareholders of the Company.

In the event of this valuation being accepted, the holders of founder shares will receive 18,000 ordinary shares of a face value of Rs. 125 each, aggregating Rs. 22.50 lakhs. At the current market value of these shares (Rs. 710 each), this holding is worth Rs. 127.80 lakhs. In other words, as against a nominal face value of Rs. 2.50 lakhs, the 100 founder shares are today worth Rs. 127.80 lakhs. This feature is likely to raise the envy of some ordinary shareholders. They may be inclined to feel that the holders of founder shares are getting too high a price. Apart from the fact that this price is based on the valuation of independent experts, it must not be forgotten that, if the scheme is put through, the ordinary shareholders are bound to derive certain advantages. One of them is a substantial saving in dividend now being distributed as preferential dividend to the founder shareholders. Another advantage is that it will pave the way for the issue of bonus shares, for which the Company has more than adequate reserves.

* * * *

The Bill for regulating stock exchanges—known as Securities Contracts Regulation Bill—was adopted by the Lok Sabha on Monday without much ado. The Revenue Minister, Mr. M. C. Shah, who piloted the Bill, had an easy time. The members who participated in the discussion were only a handful. Of these, excepting a communist member from West Bengal, all belonged to Rajasthan and Gujerat. This is an indication of the poor interest taken in this measure by members representing the other parts of the country. A Jan Sangh member from Rajasthan made the interesting suggestion that the nature of emergency, under which Government could interfere with the working of stock exchanges, should be defined in the Bili. He criticised the provision which seeks to limit the number of members of any particular stock exchange. He felt that the question of withdrawal of recognition given to a stock exchange should be left to be decided by an independent tribunal. The provision in the Bill authorising the Government to decide this question after giving a chance to the authorities of the Stock Exchange concerned to explain their stand was not, in his opinion, satisfactory. Another member questioned the efficacy of the provision relating to blank transfers. Referring to option trading, he stated that it should be regulated and not completely banned, because such trading was implicit in any futures market. In support of this view, he pointed out that options were being allowed in both London and New York Stock Exchanges. A third member entered a plea that the Government should not interfere unduly with the day-to-day working of Stock Exchanges.

In his reply to the debate, Mr. Shah gave the assurance that there was no intention on the part of the Government to interfere in the day-to-day administration of the Stock Exchanges. The object of the Bill, he said, was only to have a strong and healthy investment market in which members of the public could invest their savings with full confidence. He was however, strongly opposed to options on the ground that they were no better than gambling. But he did not care to say how he would successfully implement the relevant provision. Experience so far shows that, although options are illegal, they are still thriving in all futures markets. Proceeding, he contended that it would not be desirable to have more than one stock exchange in a notified area, but promised to see that, where there were more than one exchange at present, proper conditions were created for their amalgamation. He pointed out that the Government had taken powers to ensure that the membership of the amalgamated exchange was not confined to members of a particular stock exchange only.

* * * *

The results of the Government of India's borrowing programme are in accordance with expectations. The list was closed four hours before time. The target of Rs. 150 crores was fulfilled. The official *communique*, be it noted, says that the notified amount was "fully subscribed" and not oversubscribed. Accordingly, all applicants will get full allotment. Although the amount of borrowing proposed by the Government has been raised, the degree of its success can be determined only if and when the details of cash subscriptions and conversion are made public. Meanwhile, the impression prevailing in market circles is that the response to the loans from investors has been more encouraging than was believed and that the short-dated and the long-dated loans have been more popular than the medium-dated issue. This is not surprising, because the market has become saturated with medium-dated issues.

* * * *

In the light of our first leading article this week, it may seem strange that Government should have permitted futures trading in linseed under the auspices of the Bombay Oilseeds Exchange. But, on a little reflection, it will be realised that there is nothing surprising about it. All futures markets in commodities are now under the strict control of the Forward Markets Commission. If they run wild, the Commission has powers to suspend trading. The chairmen and the directors of the commodity exchanges have been reduced to the status of the Commission's nominees. They have all become 'yes' men, following the Commission's successful show of might against the doyen of the cotton trade, Mr. Purshotamdas Thakurdas. The Commission, which was at one time expected to be a purely advisory body, has now become an all-powerful police authority and as such is more feared by the trade than respected. The speculators have now been made to realise that, if they indulged in excesses, they would be denied the very means of their existence. Further, several safeguards have been introduced to check unhealthy speculation. With speculation thus subdued and with the Commission on the alert, there is little risk in allowing one more commodity to have the benefit of futures trading.

After an interval of over 12 years, futures trading in linseed will be resumed tomorrow. The contract to be traded in is May 1957. The terms of the contract will be more or less on the same lines as before. The basic variety is Bombay bold; the unit of trading is 25 tons. There are to be two contracts, May and September. To begin with, trading will be confined only to the former. As in the case of groundnuts, a margin system will operate. There is also provision for delivery against the hedge contract in as many as 30 upcountry centres.

* * * *

Under the revised industrial policy, the Government has a right to start an industry even in spheres generally earmarked for the private sector. Cotton textile belongs to this category. It is an industry in which there are no completely State-owned units at present. If the Government's proposed move means anything, the cotton mill industry will cease to be the preserve of the private sector. Recently, when Mr. Manubhai Shah, Minister for Heavy Industries, visited Travancore-Cochin, he stated that the Central Government would establish cotton spinning mills in that State, in order to relieve the pressure of unemployment. It is now learned that the Government proposes to have in all three cotton spinning mills—all fine counts—one in the Punjab, with 50,000 spindles, another of the same size in Southern Maharashtra, and a third of 25,000 spindles in Travancore-Cochin. All the three mills will be under the scheme for expanding cloth production already announced by the Government. These mills will naturally be utilised for supporting the handlooms.

* * * *

The reference made to Indo-German economic co-operation in the Press *communique*, issued at the conclusion of Mr. Nehru's visit to Bonn, will certainly be a source of widespread satisfaction in the country. It would appear that considerable importance was attached throughout the talks between Mr. Nehru and the German Chancellor, Dr. Adenauer, to economic questions. Apart from the two concrete offers, namely, the establishment of a technological institute and the award of 100 scholarships to Indian students, the Germans, it is stated, have shown great interest in extending their co-operation for the implementation of India's second Five-year Plan. This is a happy augury for the future of Indo-German economic collaboration which has already become conspicuous through the Rourkela steel plant and Mercedes-Benz partnership with Tatas in the manufacture of heavy-duty trucks. It is to be hoped that Mr. Nehru's visit will be a prelude to further extension of the scope of Indo-German economic co-operation.

In this connection, it is interesting to note that Germany is one of the few countries in the world today which is in the fortunate position of having a strong and buoyant economy and a very comfortable payments surplus. This has made the German mark one of the strongest of the world's currencies. India too runs a large deficit with W. Germany, so that effective collaboration with that country is likely to be limited by the currency factor. Indeed, Germany is apprehensive that its comfortable balance of payments position may actually endanger its export trade. For other countries cannot be expected to continue putting all their gold into the German money-box for long. They are bound to cry halt to it through restrictions on imports of German goods. German authorities are not altogether oblivious to this danger.

Realising the need to do something about the growing strength of the Deutschemark in relation to other currencies, the German Minister for Economic Affairs, Dr. Erhard, recently suggested to the British Chancellor of the Exchequer that there should be Anglo-German talks on the question of European exchange parities. The idea was that such talks should be commenced on the occasion of the O.E.E.C. conference, in Paris, this week. The agenda for the conference includes: the common battle against the return of inflation, the growing signs of disequilibrium in economic and financial relationships between the O.E.E.C. members and progress made to date in trade liberalisation and the plans for a further advance. In Europe, it is now well recognised that no advance can be made towards freer trade until the German problem of payments surplus is solved. Nevertheless, the British Chancellor is reported to have rejected the German Minister's proposal for talks on European exchange parities. This rejection, it has been explained, does not indicate any lack of appreciation of the German problem. It is stated to spring from the consideration that the acceptance of the proposal would create the impression that European currencies are overvalued in terms of the Deutschemark and impede the steps the British authorities have been taking to restore confidence in sterling. There is certainly something to be said for this view. For no currency adjustment can possibly be made the subject of prolonged talks and the public kept waiting for the result of the discussions. This is particularly true in respect of European currencies, for Dr. Erhard, who proposed the talks, has repeatedly expressed the view that most of these currencies have become overvalued. In this context, the talks could have only one result—to start a new wave of uncertainty in exchange markets and possibly a further loss of confidence in the currencies concerned. At the same time, some observers hold that the strength of the Deutschemark, great as it is, could be exaggerated. They feel that it has acquired some additional strength as a result of rumours that it might be revalued and, if this factor were removed, it would cease to be as strong as it now seems.

* * * *

The relative weakness of sterling—that is, its weakness in relation to certain European currencies, notably Deutschemark and Guilder—has raised an interesting controversy as to whether it is right and proper that the British pound should be maintained as a world currency. The implication is that, if sterling were freed from its obligations which attach themselves to a world currency unit, it would gain in inherent strength what it might lose in world prestige. At present, sterling has to bear the impact of any adverse currency weather in other countries in the sterling area. The advocates for de-internationalising the pound argue that, once it is freed from the obligations implied in its world status, it would be possible for the pound to come into its own and play a more efficient role, though such role would be played on a less wide arena. In this connection, they contrast the attitude of the British authorities with that of the German. Although the German authorities are convinced that their currency has sufficient strength to attain a world status, they are unwilling to give it that status for fear that the Deutschemark would then be exposed to many winds emanating from different countries. It is, therefore, felt that Britain is taking more risks than it need take by continuing to give the pound a world status, that the losses from such status far outweigh the gains.

Discussing this issue, "Lombard" of the London *Financial Times* points out that it may well be that there has been a tendency in the U.K. to assume too readily that, because Britain drew much benefit in earlier times from the pre-eminence of sterling among the currencies of the world, it must stand to gain by promoting its use as a medium of exchange today. He recognises that, owing to the vast changes in Britain's basic relationship with the rest of the world over the past few decades, the risks

BUOYANCY IN SHARES KEPT UP

ACTIVITY BROADENS

From Our Own Correspondents

BOMBAY, 19*th July*

THE cheerful sentiment noted in the share market last week was fully maintained in the week under review also. Almost the entire list of equities recorded fair-sized gains on active bull support and frantic short-covering. What is more noteworthy is that there was a substantial broadening of activity even at rising levels, despite the stringency of the money market and the absorption of funds by the new Central Government loans. The buoyancy of the market was due to (1) expectation of a fresh dose of inflation under the second Five-year Plan, (2) reports of good offtake in cloth, (3) fresh flow of encouraging corporate news, (4) hopes of higher yields on industrial equities thanks to enlarged industrial production under the impetus provided by higher standard of living in the second Plan period and (5) narrow carry forward charges at the last settlement. Notwithstanding the profit-taking at the close, the undertone remained firm.

The Stock Exchange remained officially closed today on account of *Bakri-Id*.

Two important company events of the week were: (1) the decision of the Directors of the Tata Iron and Steel Co., Ltd., to maintain the dividend on ordinary shares of the Company for the year ended 31st March 1956 at Rs. 10-8 per share; and (2) the announcement of the broad details of valuation of the founder shares of the Bombay Burmah Trading Corporation, along with the Directors' decision to maintain the interim dividend on the fully-paid and partly-paid shares at Rs. 11-4 and Rs. 4-8, respectively. According to valuations arrived at separately by two eminent firms of chartered accountants, the value of the rights to extra dividend attached to the 100 founder shares of Rs. 2,500 each is equivalent to 18,000 fully paid shares of Rs. 125 each.

To revert to the behaviour of the market. The trend in steel shares was upwards till almost the close, when it was halted by heavy profit-taking by bulls. Tata Ordinaries gained from Rs. 201-12 to Rs. 206-8, but reacted at the close to Rs. 204-4. Indian Irons picked up from Rs. 35-13 to Rs. 36-8 before receding to Rs. 35-14.

Textiles were well favoured and the rise in prices was marked and widespread. Bombay Dyeings moved up from Rs. 645-10 to Rs. 666-4 before closing at Rs. 655. Centurys advanced from Rs. 569-8 to Rs. 577 but shaded off to Rs. 573-8 at the close. Kohinoors scored a gain of Rs. 7 to Rs. 390. Central Indias put on Rs. 2 to Rs. 161, Finlays as much as Rs. 8-8 to Rs. 350 and Gokaks Rs. 6 to Rs. 242-8. India United Ordinaries were well held at Rs. 13-10. Indore Malwas gained Re. 1-14 to Rs. 156-14, Khataus gathered Rs. 13-2 to Rs. 253-12 and Models Rs. 3-2 to Rs. 154-6. New Kaiser-I-Hinds advanced by Rs. 6-4 to Rs. 133-12 and Podars by Re. 1-4 to Rs. 190. Shree Niwas stood unchanged on balance at Rs. 225, while Simplex moved up by Rs. 6 to Rs. 226. Standards rose smartly from Rs. 477-8 to Rs. 488-12. Svadeshis gained Rs. 2-8 to Rs. 258-8 and Swans as much as Rs. 16-4 to Rs. 447-8. Tata Mills put on Re. 1 to Rs. 58. Bradburys jumped by Rs. 20-10 to Rs. 245. Lakshmis rose from Rs. 682-8 to Rs. 700 and Sassoon Spinnings from Rs. 38-8 to Rs. 41.

Bank shares responded well to the general buoyancy of the market. There were buyers in most of the counters and prices rallied smartly. Barodas gained Rs. 3 to Rs. 101-8, following the stepping up of the interim dividend from 5 per cent. to 6 per cent. Central Banks moved up by Re. 1 to Rs. 56 and their new shares by As. 8 to Rs. 57-8. Bank of Indias were keenly bid and rose by Rs. 7-4 to Rs. 171, on the announcement that the Controller of Capital Issues had sanctioned the issue of bonus shares in the ratio of one share for every five shares. Punjab Nationals gained a fraction to Rs. 58-8 and United Commercials jumped sharply by Rs. 2-4 to Rs. 55.

Insurance shares were steady, but the volume of business was small. New Indias were a shade quiet at Rs. 48-8, while Indian Mercantiles were done As. 4 higher at Rs. 46. Universals changed hands Re. 1-4 better at Rs. 12-8. Empire of Indias gathered Rs. 50 to Rs. 375.

The electricity section maintained a steady note with the trend of prices slightly upward. Ahmedabad Electrics gained further As. 15 to Rs. 100-5. Bombay Suburbans found buyers As. 10 higher at Rs. 117-8 and Tata Hydros Re. 1 better at Rs. 130. Tata Powers advanced by Rs. 17-8 to Rs. 1,317-8 and Andhra Valleys by Rs. 7-8 to Rs. 1,210.

There was a broadening of enquiries in the miscellaneous section, and leading counters registered sharp gains. In the sugar group, Belapurs moved up by Rs. 3-8 to Rs. 243-8. Phaltans were bid Re. 1-8 higher at Rs. 161 and Walchandnagars Rs. 8-2 better at Rs. 270. Among cement shares, A.C.Cs. were taken up from Rs. 191 to Rs. 195, before reacting to Rs. 193-8. Digvijays gained Rs. 4-4 to Rs. 200-4, while Dalmias were done a fraction lower at Rs. 15-12. Ashokas were done at Rs. 12-6. In the engineering and mining group, Alcock Ashdowns rose briskly by Rs. 20 to Rs. 368-12. Tata Locomotives moved narrowly and closed a fraction lower at Rs. 149-12. Larsen and Toubros gained As. 5 to Rs. 15-15. Premier Constructions were in keen demand and rose by Rs. 6-8 to Rs. 208-8. Kamani Engineerings put on As. 4 to Rs. 6-12. Shivrajpurs came to light with a rise of Rs. 2 to Rs. 91. B.B. Petrols were better at Rs. 4-6, while Indian Coppers were dull at Rs. 7-2.

Among shipping and transport shares, Scindias advanced from Rs. 19-2 to Rs. 19-13, but shaded off to Rs. 19-9. Great Easterns were steady at Rs. 20-8. Premier Automobiles moved up from Rs. 100-4 to Rs. 101-8, before closing at Rs. 100. Hindustan Motors were maintained at Rs. 10. In the miscellaneous group of industrials, Bombay Burmahs provided again the highlight with a sharp advance from Rs. 670 to Rs. 716-14, before profit-taking brought them down to Rs. 708-12. Their new shares scored a gain of Rs. 20 to Rs. 272-8. National Rayons spurted from Rs. 243-12 to Rs. 253. Tata Chemicals gained As. 10 to Rs. 20. Dharamsey Chemicals rallied by Rs. 3-8 to stand at Rs. 51 and Dhrangadhras by Rs. 2 to Rs. 132. Tata Oils were unchanged at Rs. 59 and Wimcos at Rs. 185.

* * * *

Calcutta Stock Exchange

CALCUTTA, 18*th July*

The week under review on the Calcutta Stock Exchange was noted for a recovery in share values, following moderate support at lower levels and better advices from Bombay. However, the volume of business remained low, as buying was induced by the lower levels touched on profit-taking. The reference by the West Bengal Government of the demand for higher wages by the textile mill workers in the State to the industrial tribunal drove away buying sentiment of operators in textile shares, while following more export enquiries for jute goods, a minor recovery was recorded in jutes. The increase in the tempo of industrial progress was a factor which gave strength to miscellaneous industrials, while the improvement in the understanding among the big powers regarding possibility of a ban on nuclear weapon tests encouraged long-term investors to look for counters of good standing. In their search, recent reports of good corporate results were also helpful. Teas were quietly steady, and operators continued to watch recent trends in tea auctions. Coals were driven to lower levels on account of the dissatisfaction at the quantum of the price increase for the fuel.

Among cottons, Bowreahs were unchanged at Rs. 168, while Kesorams, after dropping to Rs. 18-3, recovered to Rs. 18-9. New Victorias eased to Rs. 2-10 from Rs. 2-11.

Raneegunges in coals showed strength as recorded in the rate advancing to Rs. 13-10 from Rs. 13-3. Bengals disclosed no change at Rs. 538-8, but Central Indias recovered to Rs. 7-11 from Rs. 7-2. Burrakurs hovered around Rs. 13-10 throughout the week.

The slight decline in raw jute prices caused jutes to record a small recovery. From Rs. 22-8, Nationals improved to Rs. 23-1 and at Rs. 17-5 New Centrals were better by As. 5. Birlas were traded at Rs. 17-14, as against Rs. 17-12 a week ago, but Howrahs from Rs. 22 touched a low of Rs. 21-6. Northbrooks rallied to Rs. 23-2 from Rs. 22-10, while Kinnisons fell to Rs. 157 from Rs. 163. Nellimarlas accounted for business at Rs. 11-15 as against Rs. 11-12 a week ago.

In the mining section, Indian Coppers were marked lower at Rs. 6-11 from Rs. 7 on account of the heavy *budla* charges which had to be paid in advance of the dividend. However, in view of the greater prospects for the Corporation, the rate was expected to rally. Orissa Minerals were unchanged at Rs. 26-8, while Burma Mines recovered to Rs. 3-5 from Rs. 3-3.

Indian Irons earlier in the week touched a low of Rs. 34-15, but since then gradually recovered to Rs. 36-4. Among other engineerings, Jessop & Cos. were better at Rs. 36-10, while Texmacos receded to Rs. 22-11 from Rs. 23-5. Burn & Cos. recovered to Rs. 356 from Rs. 353. Braithwaite & Cos. drew attention at Rs. 28-2 at which rate the drop was by As. 6.

Shipping shares were paid better attention during this week. India Steamships picked up strength to Rs. 9-9 from Rs. 8-15, while India General Navigations, came to business at Rs. 113-8, as against Rs. 108-8 previously.

Selected miscellaneous industrials continued to command the good attention of both operators and investors. In transactions, National Carbons were raised to Rs. 28-1 from Rs. 27. B.I. Corporations, after being higher at Rs. 11-7, sagged to close at Rs. 11-7, while Niccos were raised to Rs. 26-4 from Rs. 25-8. On moderate support, Rohtas Industries recovered to Rs. 24-2 from Rs. 23-10 before closing steady at Rs. 23-15. Imperial Tobaccos were firm at Rs. 15-3 as were Ramnugger Canes at Rs. 28-14. Sone Valley Cements were fully steady at Rs. 9-2, Asokas being maintained at Rs. 12-5.

Madras Stock Exchange

MADRAS, 17*th July*

Buoyant conditions prevailed on the Madras Stock Exchange during the week under review. The buoyancy stemmed from hopes of higher return from investment in companies, as a result of enlarged demand for their products consequent on higher living standards. There was renewed buying spree in textiles, the prices of which forged further ahead. Bank shares came in for very keen enquiries at hardening rates, on expectation of good profits for the past half-year. Plantation scrips also encountered good support and recorded sharp increases in values. Sugar shares, too, were quite active. Selective buying was in full evidence in the miscellaneous section. The undertone at close was unusually firm.

Textiles provided the brightest spot with most popular counters scoring sharp gains. Palmalai Rangas were particularly favoured, their quotation jumping up by Rs. 20 to Rs. 110. Ashers, R.C. Ambikais and Radhakrishnas rallied a like amount to Rs. 210, Rs. 250 and Rs. 350, respectively. Dhanalakshmis increased by Rs. 15-8 to Rs. 417-8. Premiers advanced by Rs. 15 to Rs. 235. Lakshmis firmed up by Rs. 12 to Rs. 240 *cum-div.* Vasantas and Radhakrishna 'B's were each bid Rs. 10 higher, the former at Rs. 345 and the latter at Rs. 175. Bangalore Woollens, Coimbatore Pioneers and Janardanas strengthened by Rs. 7-8 each to Rs. 582-8, Rs. 342-8 and Rs. 127-8, respectively. Anglo-Frenchs registered a rise of Rs. 7 to Rs. 122, Lakshmi 'A's of Rs. 6 to Rs. 120 *cum-div.* and Coimbatore Spinnings of Rs. 5-8 to Rs. 110. Coimbatore Cottons put on Rs. 5 to Rs. 380. Rajalakshmis and Rajapalayams gathered a like amount to Rs. 191 and Rs. 173, respectively. Buckinghams rose by Rs. 4 to Rs. 207-8, Loyals by Rs. 3-12 to Rs. 54, Rayalaseemas by Rs. 3-8 to Rs. 147 and Maduras by Re. 1 to Rs. 52.

In the planting section, coffee shares received good attention of operators. Coffee Lands improved by As. 3 to Rs. 24-13. A similar gain was recorded by Consolidateds which were quoted at Rs. 21-1 and by Mysores which were quoted at Rs. 2-9. Sheveroys rose by 18 pies to Rs. 2-15-6. Amalgamateds were fully maintained at Rs. 12-8, as also Kadurs at Rs. 2-14-6. Deals in tea shares were put through at higher levels. Peermades moved up by As. 7 to Rs. 37. Haileyburias and Lucky Valleys hardened by As. 6 each to Rs. 26-10 *ex-div.* and Rs. 15-4 *cum-div.*, respectively. Blue Mountains gathered As. 4-6 to Rs. 6-6-6. Neelamalais gained As. 4 to Rs. 7-13. Perksides were better by As. 2 at Rs. 20. Among rubber shares, Midlands picked up As. 11 to Rs. 23-1 *cum-div.* Vaikundams rallied As. 8 to Rs. 30-12. Tropicals increased by As. 4 to Rs. 37. Cottanads rose by As. 2 to Rs. 22. Kailas gathered an anna to Rs. 6-7.

In the miscellaneous section, sugar and cement shares were firm. Among the former, Deccans picked up As. 7 to Rs. 11-15 on hopes of bonus issue. E.I.D.'s rose by As. 2 to Rs. 29-6. Kirlampudis gathered a similar sum to Rs. 29. There was good buying interest in India Cements, the price of which advanced by As. 10 to Rs. 35-10. Andhra Cement 'B's were strong at Rs. 16-4, as against Rs. 16-1. Among other miscellaneous industrials, Binnys registered a gain of Rs. 4 to Rs. 191. Rallis gathered a rupee to Rs. 42.

ORISSA CEMENTS

The latest entrant into the capital market with an offer of public issue of shares is the Orissa Cement Ltd., once a subsidiary of the Dalmia Cement (Bharat) Ltd. but not so now. The Company's issued capital is Rs. 1.50 crores, made up of 50,000 4½ per cent. (tax-free) cumulative preference shares of Rs. 100 each and 1,000,000 ordinary shares of Rs. 10 each. Of this, a sum of Rs. 1,07,86,500 has been subscribed and paid-up, consisting of 40,000 preference shares of Rs. 100 each and 678,650 ordinary shares of Rs. 10 each. At the time when the aforesaid shares were issued, it was felt that more capital was not necessary. Now, however, the Company has undertaken expansion plans and additional finances are required to finance them. A part of this cost is proposed to be met out of the issue of the unsubscribed ordinary shares. The necessary consent from the Controller of Capital Issues has been obtained for this issue. The Directors propose to issue the entire balance of the issued, but unsubscribed, 321,350 ordinary shares of Rs. 10 each at par to the existing shareholders in the ratio of one share for every two shares held. It will, however, be noted that, if all the existing shareholders exercise their option to take up the right shares fully, the number of shares to be issued now will fall short by 17,975. In such an event, the Managing Agents and their Directors and members have agreed to reduce their allotment to the extent necessary to meet the requirement of other shareholders.

The Company's cement works at Rajgangpur has a daily production capacity of 500 tons. The plant is being extended to raise the daily capacity by a further 600 tons and it is likely to go into production by the end of this year. Besides, the Company has undertaken to install a modern refractory works, with an annual capacity of 80,000 tons of firebricks, in collaboration with German experts. The refractory is expected to go into production by the middle of 1957. It has also sponsored a joint venture with Messrs. Dalmia Cement (Bharat) Ltd. in collaboration with Belgian experts, for the manufacture of special heat-resisting and wear-resisting machinery parts for the cement industry. This will be a separate company under the name of Dalmia Iron and Steel Ltd. The finances for the aforesaid schemes of cement factory expansion and refractory works will be met out of the loan of Rs. 1 crore sanctioned by the Industrial Finance Corporation of India. The further expenses for capital cost and working capital will be met out of the Company's existing resources and out of the present proposed issue of share capital.

The Company has earned a gross profit of Rs. 59.61 lakhs during the year ended 31st December 1955, as compared with Rs. 59.97 lakhs for the previous year. The provision for depreciation has been reduced from Rs. 21.04 lakhs to Rs. 9.78 lakhs. The details of the profit and loss appropriation account are not yet available. However, the Managing Agents propose to suggest to the Board of Directors the payment of a dividend of 12½ per cent. for the year, thus raising it from the maiden distribution of 7½ per cent made for the previous year.

NEWS IN BRIEF

THE Government of India has so far sanctioned sums aggregating Rs. 45,32,160 for road development in the Andaman and Nicobar Islands.

The Planning Commission has decided to send a team to China to study the working of agrarian co-operatives there. The team will be led by Mr. R. K. Patil.

A central land mortgage bank for Gujerat, with a capital of Rs. 10 lakhs, is to be formed soon. A committee has been set up for drafting the constitution for the organisation.

Seventeen foreign experts arrived in West Bengal on the invitation of the State Government to assist in planning and execution of development projects between 1951 and 1954, according to Dr. B. C. Roy, the Chief Minister.

A firm at Kundara in Travancore-Cochin will be given a licence for the manufacture of insulated aluminium cables with a capacity of 125,000 yards per year, to be raised to 250,000 later. The terms of foreign collaboration for this have yet to be approved.

The Government of India has sanctioned loans and grants amounting to about Rs. 38.57 lakhs to the All-India Khadi and Village Industries Board for the development of the hand-pounded rice industry and for the improvement of hand-operated and bullock-driven flour *chakkis*.

The Government of India has lifted the ban on imports of tractors below 10 h.p., in order to help small landholders to own light tractors and utilise them for intensive cultivation. Such tractors are likely to be placed in the market at a price well within the means of small landholders.

A team of 14 geologists and drilling engineers will be sent by the Government of India to Soviet Russia for practical training in oil technology. The team is going under the United Nations' Technical Assistance Administration Programme. The Government of India will bear nearly 50 per cent. of the expenditure.

Under the Government of India's plan for industrialisation of Travancore-Cochin, a textile mill, under the public sector, will be established there. The Central Government will also send a team of experts to the State to explore the possibilities of paper manufacture by utilising the rich forest resources.

The Assam Rail Link Stabilisation Committee has decided to undertake a preliminary inspection of the Assam rail link during the second week of August 1956. The Committee has also decided to call for evidence from individuals and organisations interested in the problem, and also to issue a *questionnaire* inviting suggestions from those interested in the States of Assam and West Bengal.

A third consignment of five tons of heavy water, forming part of the 21 tons sold to India by America under an agreement of co-operation for peaceful uses of atomic energy, has been received by the Indian Atomic Energy Commission. Including the present consignment, India has so far received 16 tons of heavy water which is used as moderator for several types of reactors to slow down the speed of neutrons emitted in the splitting of atoms of the fissionable uranium 235.

An agreement has been signed between the Government of India and the Export-Import Bank of Washington under which the Bank has established in India's favour a credit line amounting to $37.5 million for developmental assistance under the International Co-operation Administration. The credit is to be in either U.S. dollar or other currencies. The amount is to be returned in 73 half-yearly instalments beginning four years after the month in which the first disbursement is made.

A Rs. 12-crore synthetic rubber plant is proposed to be set up in U.P. next year as a joint venture between the Government of India and the State Government. The National Industrial Development Council is considering details of the scheme. U.P. has been selected for the location of the plant, because of the large supplies of power-alcohol available from the area's sugar mills. Production is expected to begin in 1959, by which time, the rubber manufacturing industry will need more raw rubber than the natural industry can supply.

The total gross sea and land customs revenue collected in the Indian Union during May 1956 amounted to Rs. 13.72 crores as compared with Rs. 12.75 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 11.49 crores, as against Rs. 10.16 crores, export duties for Rs. 1.92 crores, as against Rs. 2.45 crores and land customs and miscellaneous for Rs. 31 lakhs, as against Rs. 14 lakhs. The total gross collection of Union excise duties amounted to Rs. 14.37 crores, as compared with Rs. 11.69 crores.

Bihar will receive a loan of Rs. 4 crores from the Reserve Bank of India for helping the growth of the handloom industry in the State during the second Five-year Plan. The number of handlooms in the State is proposed to be increased from 86,000 to 200,000. The money will be utilised for financing the weavers through weavers' co-operative societies. The number of weavers' co-operative societies is proposed to be raised from 550 to 1,000 in the course of the next five years.

The Madras Port's capacity to handle iron ore will be more than doubled (from 300,000 to 750,000 tons) with the arrival of "crab-lifters." This is part of the Rs. 10-crore expansion programme, of which Rs. 2.4 crores have been spent so far. Work costing about Rs. 3.5 crores is expected to be completed by the end of the year. Coal and iron ore yards, now under construction, would be ready by the beginning of 1958. The Port Trust Railway would also be expanded by 150 additional wagons to meet the situation that might arise from increased imports of steel and cement. At present, 180 wagons are on service.

From Abroad

A Czechoslovakian mission will visit Cambodia soon to discuss a trade agreement between the two countries.

Egypt is understood to have approached the U.K. and the U.S. for a final and firm assurance about the joint grant of $70 million for carrying out the initial work on the Aswan High Dam.

A telegram received from the Pakistan Tea Association, Chittagong, states that the crop to end-June increased by about 2 million lbs. to about 13 million lbs. as compared with the corresponding period of last year.

The Advisory Committee to the U.N. Secretary-General on the Peaceful Uses of Atomic Energy will discuss plans for a second International technical conference when it meets in New York in September next.

Construction activity in the U.S. during the first half of this year reached an all-time high at $20,000 million. It showed a two per cent. increase over the record level of the corresponding period in 1953.

Negotiations between Hilton Hotels International and Iraqi officials for the erection of a hotel by the former in Baghdad are in progress. The proposal under discussion provides for the sharing of the net profits in the ratio of 1:2.

A "tremendously important programme" which involves construction of a "pipeline criss-crossing America for carrying fresh and palatable water from the sea" by 1990 is being worked out by the U.S. Department of the Interior.

Pakistan has signed an agreement with the People's Republic of China for the purchase of 60,000 tons of rice for East Pakistan. It is also negotiating for more rice with some other countries. It has already received 20,000 tons of rice free of cost from the U.S.S.R. and also purchased some rice from Burma and India.

Extension of international co-operation for improving conditions of production, trade and consumption of certain commodities, namely, coffee, cocoa, coconut products, hard fibres, grains and dairy products also, was recommended by the F.A.O.'s Committee on Commodity Problems.

The announcement of T.W.A.'s new 15-day excursion fares to Europe, following the successful results achieved in its first experiment from coast to coast in the U.S., is expected to produce an "avalanche of tourists" to the Middle East, India and Ceylon.

The Inter-American Conference for the International Geophysical Year (I.G.Y.), called to study the Western Hemisphere in relation to geophysical problems, opened in Rio de Janeiro on 16th inst. It will seek to contribute to the study of oceanography in the western region of the South Atlantic, particularly in relation to the effect of the waters of the Falkland currents on the continental coast.

The Soviet Union is building a 16,000-ton atomic-powered ice-breaker and is making plans for atomic-powered whalers, railway locomotives, and aircraft which will fly at more than 1,000 miles an hour. The ice-breaker's engine will develop 44,000 horse-power and the ship will be able to stay at sea several months without refuelling. The operation will be completely automatic.

A trade agreement and protocol on economic co-operation between West Germany and Burma was signed last week. Under this agreement, the West German Government promised to support Burmese purchases of investment goods and to further industrial development in Burma. This would enable West Germany to increase its purchase of rice and other products from Burma. The trade agreement and protocol would be effective for three years.

Ceylon proposes to introduce a crop insurance scheme, under which rice growers can claim compensation, if the crops fail owing to flood or drought. It has obtained the services of Dr. P. K. Ray, a F.A.O. adviser to assist it in the preparation of the scheme. Mr. Ray, who has already commenced gathering the relevant data, is of the view that a crop insurance scheme is easier to work in Ceylon, because it could be worked through a network of co-operative agricultural products and sales societies.

"SWARAJ IS MY BIRTHRIGHT"

thundered Lokmanya Bal Gangadhar Tilak to inspire a new sense of freedom in the minds of the people of India.

On the hundredth birth anniversary of Lokmanya Tilak, we join the millions of our countrymen to pay homage to the memory of this great son of India.

"His vast learning, his immense sacrifices and his life-long service have won for him a unique place in the hearts of the people." (***Mahatma Gandhi***)

On this memorable occasion let us, on our part, resolve to secure the right to enjoy financial independence through life insurance.

NATIONALISED LIFE INSURANCE

NATIONALISED INDUSTRIES

NO democratic country has yet been able to devise a wholly satisfactory system for running nationalised industries. Totalitarian regimes do not, of course, face this problem at all, for they have one effective way of meeting criticism—to stifle it. But a democratic government, deriving its power from popular vote and with a necessarily keen sense of its responsibility to the public, must run the nationalised industries in a way that will evoke popular approval and will not lead to a weakening of the foundations on which democracy is based. The essence of the problem is how best such a government can ensure efficiency and parliamentary accountability. The problem is particularly acute in India, for close upon the heels of the institution of Parliamentary Government has come the State's decision to experiment in national ownership of industries and services.

In India, the Government is experimenting with both the forms of public ownership—the public corporation type as in the case of the State Bank and the Bombay State Road Transport Corporation and in the private limited company type as in Bharat Electronics and Hindustan Telephones. Whatever may be the form in which State ownership of an industry or a service is cast, there is no getting away from the fact that the running of a nationalised industry involves several intricate issues of organisation and management. How free should the running of the industry be from executive interference? What is the best form of supervision over the State-owned unit? How can Parliament exercise its control over the unit? What is the best way of ensuring that business efficiency is not lost sight of? These are only a few of the problems which the nationalised units have to face. These questions figured very prominently in a lucid exposition of the problem of nationalised undertakings by the well-known Bombay business man, Mr. R. G. Saraiya, in the course of his speech at the Bombay Suburban (West) Rotary Club, this week.

As regards the form of organisation of State-owned enterprises, the Estimates Committee, in one of its recent reports, had suggested the setting up of functional boards and advisory bodies. Mr. Saraiya did well to criticise both these suggestions. A functional board of directors, consisting of members each of whom is responsible for a single aspect of the working of an enterprise, say, marketing or purchase of raw materials, can hardly be expected to bring to bear on decisions that comprehensive outlook and larger vision which are so essential to the success of the enterprise. In such a board, each member is likely to be more concerned with his own department than with the concern as a whole. Advisory bodies, if the members are properly chosen, will no doubt prove of some benefit to the nationalised units. But, as Mr. Saraiya suggested, such bodies cannot normally be expected to take a genuine interest in their work since they know that their function is a purely advisory one.

Whatever may be the form of organisation devised by the authorities for the State-owned ventures, it is now well understood that Parliament should not meddle too much or too often in the working of these bodies. This does not, of course, mean that those who run these bodies are not answerable to Parliament. Indeed, Parliament is the supreme authority in all matters connected with the administration of State-owned enterprises. Only, it would be unwise to exercise it in a manner that will whittle down the freedom and responsibility of the men on the spot. As Mr. Saraiya said, it should be open to the members of Parliament to discuss the annual report and accounts of nationalised undertakings; it should also be open to the Government to give directives to such undertakings. But it is necessary to allow, as in the U.K., a convention to grow up whereby questions regarding the "internal management, salaries of individual members of the corporation, or the communal or religious composition of their employees or matters of detail as to purchases and sales and individual transactions should not be raised in Parliament." Further, it is, as Mr. Saraiya himself pointed out, necessary to ensure that public corporations are not subjected to the exigencies of party politics.

A related issue is the administration of the Indian Companies Act in respect of State-owned undertakings. Under section 620 of the Act, the Government has retained the power to exempt Government companies from any of the sections of the Act. The only safeguard is that a copy of the notification under this section should be laid before Parliament and its approval obtained. Mr. Saraiya rightly asked as to why the Government should have this power. He urged that the Government-sponsored private limited companies should not be more "private" than the companies in the so-called private sector. It is to be hoped that occasions will not arise for the Government to issue notifications under section 620 of the Companies Act. It will, perhaps, be useful to establish a convention whereby the Government will not utilise the power under this section except in the case of undertakings of recognised defence or strategic significance.

INDO-BURMA TEXTILE DEAL

About 20-25 million yards of cotton textiles worth Rs. 1.9 crores ($3.85 million) will be exported from India to Burma against payment in American cotton of staple length of 1.1/16" and above which the U.S. has agreed to sell to Burma. An agreement to this effect was signed at Rangoon last week-end by the representatives of the Governments of India and Burma. It followed the discussions which the four-member official Indian delegation (Leader: Mr. Chinoobhai C. Javeri) held recently with the Burmese Ministry of Trade Development. The necessary procedure for implementing the agreement has still to be worked out. Further, the actual movement of cotton textiles to Burma and of cotton to India under the deal is expected to start only after about a month, at any rate not earlier than the issue of purchase authorisation for American cotton. Burma has agreed to issue speedily licences for the import of Indian cotton textiles and the Indian Government, on its part, has promised to take all necessary steps to ensure prompt shipments. While the agreement covers both yarn and cloth, the Government of India has made it clear that the total exports of yarn will be subject to availability and internal requirements.

The Indo-Burmese textile deal will be widely welcomed, inasmuch as it will help India recover a part of the textile market lost in Burma lately. The setback was due chiefly to restrictions on imports into Burma and partly also to severe competition from other countries, especially Japan. During 1955, for instance, India could not export to Burma more than 14.41 million yards of cotton cloth, as against 40.00 million yards in 1954 and 89.66 million yards in 1953. In the same year, Japanese exports aggregated 42.58 million yards, which were, of course, lower than the figure of 68.12 million yards for 1954. Notwithstanding the purchase of 6.9 million yards of Indian cloth made by the Burmese Purchase Mission early this year, India's exports to Burma during the first quarter were only 7.2 million yards, which compare unfavourably with the 15.8 million yards exported by Japan.

The conclusion of the triangular deal, the knowledge of Burmese conditions gained by the Indian delegation and the prevailing scarcity of cloth in that country are factors which indicate that the prospects of India exporting a larger quantity of cotton textiles to Burma are better now. But the favourable position cannot be expected to last long. Indeed, there is likely to be keener competition in the Burmese textile market. For Burma, it is said, has already entered into agreements with West Germany, Japan and the U.K. for the supply of cloth. Burma is also reported to be contemplating purchases of Russian cloth in large quantities under a barter agreement. In view of these developments, special significance attaches to the warning administered by Mr. Chinoobhai C. Javeri, leader of the Indian textile delegation to Burma. India, Mr. Chinoobhai declares, can retain its hold on the Burmese textile market only if the supply is made to suit the tastes and requirements of consumers in that country, the qualities and varieties being offered at competitive rates. According to him, the supplies should be made according to samples and in attractive packing. Indian prints are almost out of the Burmese market, because exporters do not supply them in small quantities as per design, as other countries do. If, therefore, India is to maintain and build its position in the Burmese market, indeed, in the world market, it is imperative that utmost attention, as Mr. Chinoobhai pertinently stressed, should be paid to quality, packing and service.

There is one aspect of the Indo-Burmese deal which deserves notice. It is the triangular character of the deal. A few such agreements have been concluded in recent years at the instance of the U.S., for this country is anxious to dispose of its farm surpluses and finds such deals a convenient method of reducing the burden of its own farm stocks. Nevertheless, it must be admitted that all such deals, like bilateral agreements, are opposed to the spirit of the Havana Charter. They are not calculated to improve the chances of ushering in an era of multilateral trade. But India had probably not much choice in the matter. It was not India which started this trend.

PLANT PROTECTION

More than a decade has elapsed since the Indian Famine Enquiry Commission urged the imperative need for launching a vigorous plant protection campaign. The Commission thus said: "If the full benefits of irrigation, manuring and improved varieties are to be assured, effective action must be taken to deal with diseases, pests, vermin and weeds." These words apply with equal force even today. It is true that the work of controlling pests and plant diseases was intensified and extended in many directions during the period of the first Five-year Plan; the total area covered by such operations expanded from 2.5 million acres in 1951 to 9.3 million acres in 1954, the net production gain being estimated at 740,000 tons. But there are still as many as 300 pests and diseases which constitute the enemies of the farmer. It is computed that the annual loss of agricultural output as a result of pests and diseases comes to nearly 10 per cent. Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture, did well, therefore, to emphasise, in the course of a broadcast talk from New Delhi, that plant protection assumed far greater importance in the second Plan than in the first. For Dr. Deshmukh observed:

"While we must attach great importance to food production, the emphasis in the second Five-year Plan has shifted to increasing the production of not only cereals but also various types of protective foods. Secondly, the effort now is to increase the yield per acre rather than to extend the acreage under crops. Protective foods which can be grown are fruits, vegetables and sugarcane. These are the crops which are very susceptible to the attacks of a great many pests and diseases. Intensive cultivation also demands, among other things, the avoidance of waste and damage to crops through pest and disease attacks."

The aforesaid considerations impart urgency to plant protection measures. It is indeed gratifying to note that the second Plan makes provision for a larger outlay on plant protection. The outlay on both Central and State Governments account is fixed at Rs. 6.34 crores, which represents a rise of Rs. 2.31 crores as compared with the total expenditure of Rs. 4.03 crores incurred during the first Plan period. Of this amount, States account for Rs. 3.10 crores, Central Directorate of Plant Protection for Rs. 1.56 crores, Centre's contribution to States under Grow-more-food Schemes for Rs. 1.28 crores, the balance being the share of locust control. The plant protection scheme envisages establishment of a field laboratory at Bikaner for investigations on locusts, strengthening of the ten regional centres opened under the Central Pool of Plant Protection Equipment, setting up of four more such centres, and intensification of aerial operations against pests and diseases. The scheme also envisages the starting of plant quarantine stations at two more seaports—Visakhapatnam and Kandla—at the land frontier near Amritsar, and at the airports of Delhi, Bombay, Madras and Calcutta.

The need for intensifying plant protection operations, as already stated, stems partly from the utmost emphasis that is now being laid on intensive cultivation of crops. Alluding to this aspect of the problem, Dr. Deshmukh reiterated that, "whether the agricultural targets were raised or not, we would continue to strain every nerve to produce more and more, in spite of adverse climatic conditions and other difficulties." He commended, once again, the wide adoption of the Japanese method of growing rice which, he claimed, made good seed go at least eight times further. Incidentally, it may be noted that the area under this method is proposed to be raised during the Plan period from 1.6 to 4.0 million acres. The Agriculture Minister also referred briefly to the fresh fertiliser campaign recently launched. Under this campaign, we are told, 2.5 million acres—the share of rice is 1.5 million acres and of wheat 1.0 million acres—will be specially fertilised with ammonium sulphate and other fertilisers in the coming 5½ months.

In conclusion, Dr. Deshmukh expressed his full confidence that the development programme for agriculture would be implemented more successfully in the second Plan than in the first. "We are," to quote him, "capable of exceeding our previous performances." Whether this confidence will prove correct, time alone must say. This much, however, may be said now, namely, that the agricultural target can be accomplished only by the adoption of a realistic land reform policy and proper dissemination of information on modern agricultural practices, coupled with a price support scheme for agriculture and adoption of modern methods of cultivation.

STATE'S INTEREST IN PLASTICS

Ample evidence of the Government's keen interest in the development of the plastics industry is available in the proceedings of the All-India Plastics Manufacturers' Conference held at Calcutta on the 12th inst. Both Mr. C. A. Pitts, in his presidential address, and Mr. R. G. Gupta, in his welcome address as Chairman of the Reception Committee, had words of gratitude to express for the assistance given by the Government to the industry. Referring to the various projects for manufacturing plastics raw material envisaged in the second Plan, Mr. Pitts said: "The prompt and sympathetic consideration given by the Government of India to these projects is a clear indication of the Government's real interest in stimulating production in this country, and there can be little doubt that similar help would be forthcoming for any well-founded project that may be put forward in the future. When we add to this Government's help in allowing drawback of duty on imported goods used in exports, and the readiness to issue replacement licences, we must gratefully acknowledge their positive and sympathetic attitude."

Thanks to the helpful policy of the Government all the essential raw materials consumed by the industry are either on the O.G.L. or are being permitted to be imported by actual users. Imports of moulding powders, sheets, rods and tubes are liberally licensed, and special import licences are also being granted to exporters wherever imported raw material content of exporters have to be replaced. To quote Mr. Gupta: "The Government have also been following a friendly policy in the matter of plastic and one will be less than fair to the Government, if one does not gratefully mention the fact that the fairly steady rise in plastic exports ever since 1950 would not have been possible but for the positive official encouragement." And what is more significant is the decision of the Government to participate directly in the manufacture of some of the raw materials of the plastics industry and in the organisation of research on a more broadbased foundation than has been possible for private enterprise.

There seems to be, however, one or two difficulties the solution of which requires a change in the attitude of the Government. Under the customs tariff, plastics moulds and dies are being treated as small tools, with the result that they are subject to an import duty of 31¼ per cent. *ad valorem*. The industry has been clamouring for a reduction in the rate to 5½ per cent. *ad valorem* on the ground that they should be treated as an integral part of plant and machinery. Again, it had been protesting against the railway freight surcharge of 6¼ per cent. on "smalls." But, instead of giving relief, an additional surcharge of 6¼ per cent. has been imposed. Plastic goods, it may be noted here, are being manufactured mostly by small-scale and cottage units. They have, therefore, to move generally in "smalls." Whereas all other small and cottage industries receive subsidy in various ways, this industry has to bear now a total freight surcharge of 12½ per cent. It pleads for the cancellation of the original discriminatory freight charge of 6¼ per cent. These appeals have not found favour with the authorities.

Another big handicap of the industry is its extreme dependence on imports from foreign countries. This is not a healthy state of affairs. The Planning Commission, after examining this question, made provision for setting up plants in the country for manufacturing some of them. It is gratifying to learn from Mr. Pitts that action has already been taken in the matter. Thus,

MR. NEHRU'S EUROPEAN TOUR AUGURS WELL FOR SECOND PLAN

OUTLOOK FOR INDO-GERMAN CO-OPERATION

From A Special Correspondent

NEW DELHI, *16th July*

DELHI LETTER

THE monsoon session of Parliament began today, with a certain amount of uncertainty and suspense. Although it is only a little over six weeks since the members had dispersed for their homes, the record of attendance, as also the number of members present in the House and outside, has been somewhat unusually high, indicating, as it were, the coming storm on the highly controversial question of the States reorganisation. Generally speaking, Parliament never used to be summoned at this time of the year and, if it has been summoned, it is because of the necessity to dispose of, as early as possible, some of the urgent and controversial questions of a pressing nature.

Questions of economic importance have not yet started to be discussed. Only some Bills of social and educational importance have been proceeded with. In the absence of Prime Minister Nehru, there is an inclination to avoid taking up controversial matters and, only when he returns from his present European tour, will Bills of far-reaching importance be taken up.

The main topic of conversation among individual members of Parliament during the last one or two days in the capital has been the foreign tour of the Prime Minister. Members are now trying to assess the results of his tour abroad in a number of ways. Apart from the political results, their conversation generally tends to touch on the economic outcome of his foreign tour. In other words, they have been discussing freely with pressmen as to how far India would benefit from the Prime Minister's peregrinations, particularly in Western Europe. Some members have been taking an optimistic view of the whole affair and have even begun to assert that India would be able to implement successfully the second Five-year Plan, despite the fact that the planners had been entertaining some misgivings regarding the financial aspects of the Plan, particularly in regard to external finance.

Foreign Aid

Several members point to certain significant developments during the last few weeks which might go a long way towards India securing the requisite technical and other help from foreign countries for the early execution of the second Plan. They are of the view that, even in Britain, there is considerable awareness of the necessity of the U.K. to lend as much help as possible to India in building up its industries. In the coming months. a number of British industrialists and technical men would be coming to India. Some of them are expected to arrive in the next few weeks. Apart from this, there will be a stream of British technical personnel going over the entire country to advise and co-operate with India in its schemes of industrialisation. Only a few days ago, the Defence Secretary returned after a sojourn in the U.K. and he must have finalised some of the pending schemes for securing British co-operation and help in obtaining certain aero-engines and other defence materials for India. It may be mentioned here that, during the last few years, allocations in respect of capital outlay for the Defence Ministry had not been fully utilised largely as a result of the slow progress made in the building up of defence industries.

Great emphasis is laid here on forging closer economic relationship between India and West Germany. It will be remembered that, even before World War II, Germany happened to be a keen competitor to Britain in the supply of industrial machinery to India. Even in those days, Germany occupied a significant place in respect of machinery supply to India. Although it faded out of the scene during World War II and the years immediately following it, it (W. Germany) has again begun to reassert itself as an important supplier of plant and machinery to India next only to the U.K. Figures relating to imports of machinery during the fiscal year 1955-56 from foreign countries show that, while the U.K. supplied India with Rs. 54.50 crores worth of capital goods, West Germany accounted for Rs. 24.57 crores, whereas the U.S. supplied only Rs. 16.54 crores worth of machinery. In the previous year, that is, 1954-55, imports of machinery from the above countries were worth Rs. 45.69 crores, Rs. 13.13 crores and Rs. 12.93 crores, respectively.

Nehru's Discussions

The prospects for intake of more machinery from West Germany by India appear to be bright as a result of the latest developments. Considerable significance is now being attached to the visit of our Prime Minister to West Germany and his talks with the leading political and economic luminaries in that country. The discussions that have taken place between them strengthen this optimistic view. Already, the Chancellor of West Germany, Dr. Adenauer, has promised to provide increased technical assistance to India. He has promised to help India in the establishment of a technological institute and also to provide 100 scholarships for Indian students for higher education in West Germany. It is stated that Germany will provide all the equipment and also the requisite teaching staff for the technological institute in the beginning. German professors are expected to train a sufficient number of Indian teachers to man the institute ultimately. In this connection, it may be worthwhile mentioning the fact that the first Five-year Plan itself had provided for the establishment of four high level technological institutes in India. Only one of them has been set up in the form of the Kharagpur Institute near Calcutta. Some progress has already been made about the setting up of another Technical Institute in Western India by the Soviet Union. Two other institutes are to be located, one in the South and the other in Northern India.

During the last few years, the progress in this sphere has not been impressive and now that West Germany has come forward to help India establish a technological institute, it is being hoped that the Education Ministry of the Government will take prompt measures to implement the promise made by the German Chancellor.

Contact With W. Germany

The way for increased economic and technological collaboration between W. Germany and India has already been paved during the last few weeks. This is evident from the fact that a number of important Indians have visited Germany and are having discussions with the concerned authorities in that country. In this connection, it is noteworthy that the Secretary of the Iron and Steel Ministry, Mr. S. Bhootalingam, is at present in Germany, investigating the possibility of securing German co-operation in setting up an iron foundry in India. Indications are that his search has been fruitful and that the foundry project representing a financial outlay of Rs. 20 crores will be studied afresh in the light of the reported offer of German co-operation. Another senior official of the Government of India, Mr. H. V. R. Iengar, of the Ministry of Commerce and Industry, is also now in Germany after his sojourn in the Scandinavian countries. Mr. Iengar, it is understood, has a favourable impression of West Germany's speedy industrial and economic recovery from the ravages of the last war and about German industrialists' eagerness to help India build its industries. Mr. B. K. Nehru of the Ministry of Finance will be in Germany this week to examine in some detail possibilities of obtaining foreign financial help for implementing India's second Five-year Plan. While Germany is said to be anxious to outdo Russia's offer of economic and technical assistance to India, the final word on Indo-German economic co-operation has yet to be said. This will be possible only after Mr. Nehru has submitted his proposals to the Government in regard to economic and financial co-operation by W. Germany. India has also sent two of its leading economists, Dr. V. K. R. V. Rao of the Delhi University and Dr. Anjaria to study the economic recovery of West Germany and to see how certain aspects

APPROACHING THE CROSS-ROADS

LABOUR PARTY ON EQUALITY

From Our Own Correspondent

LONDON, *13th July*

LONDON LETTER

THE Labour Party, under Mr. Gaitskell's leadership, has recently published a political testament on the subject of equality. This slogan is apparently to replace that of nationalisation in the future propaganda of the Socialist Party, and some indication is given of how equality is to be achieved. For instance, in matters of taxation the Labour Party advocates a capital gains tax and the payment of death duties in equity shares. This latter step if taken (but how is the State to forgo the cash payments it normally gets on death duties which are wanted for ordinary revenue?) would gradually lead to a very sizable ownership by the State in general industry. But the Labour Party does not indicate whether its part ownership of general industry would lead it to influence control through representation on the Boards of the firms concerned.

These ideas are interesting, but what concept inspires the slogan of equality (here defined as equality of opportunity)? Is it that of the Welfare State writ larger still? Is the State going to have a greater interest in all the aspects of production or is it only to look at *the results* of production and bend its efforts to reducing the rewards of the *entrepreneurs*—those who take an *unequal* share of the productive effort? We are left without enlightenment on these points, but the accent appears to be on making the rich less rich and there is nothing on the subject of making the nation as a whole more rich.

Such an approach is not an adequate policy. The incentives to enterprise have been steadily reduced until the principal incentive left has been the gamblers' capital gain. Is it practical to seek to abolish privileges by making the population as near equal as possible in terms of income? To continue to squeeze the *entrepreneurs'* gain, to interfere in private industries' own risks and decisions, and yet to leave private industry and the *entrepreneur* as the mainspring of economic activity? The road that the Labour Party wishes to take is practicable only if it implies far wider measures of State enterprise than Socialists have so far indicated that they wish to adopt.

On the other hand, the Conservative Party is being exhorted today to have the courage of its convictions and to do something to restore the rewards of capitalist enterprise and the economic forces of a private enterprise economy. This is not to say that *laissez faire* is advocated. The same voices that ask for greater opportunities for private incentive would condemn the attitude of that great employer of labour the British Motor Corporation, which takes a decision to sack a large number of its employees without consulting the Trade Unions concerned. There is far too little imagination in public affairs today directed to getting the most out of individual enterprise. Apart from the general issue of penal taxation, take the question of mobility of labour. Labour can only be mobile if it is able to change its domicile readily. Housing is a key matter and yet while expensive new housing is being provided throughout the country far from people's places of work, old housing is left to decay and is inadequately used as a result of the rents being restricted to those ruling pre-war, and thus making the properties owned by private landlords uneconomic. But, so far, the Conservative Party has been too afraid of criticism for allowing landlords to "grind the faces of the poor," though it is quite prepared to oblige local authorities to charge economic rents for new premises.

This kind of issue is typical of the economy today which abounds in what are called "restrictive practices." Thus, the nation moves slowly to the cross-roads at which very different decisions will have to be taken from those which both political parties pose today. Either capitalism must be a great deal more free, or socialism must become a great deal more dynamic. Of course, a third way remains—to continue shelving the great problems and to jog along in declining prosperity and influence.—*All Rights Reserved.*

DEVELOPMENT OF PORTS AND SHIPPING

Volume of Trade Expected, Port Capacity Needed, Additional Tonnage Required Analysed

M. A. Master

BEFORE we examine the volume of trade which is likely to move through Indian ports in the second Five-year Plan, let us state the aggregate of tonnage which was handled by the five major ports of India, namely, Calcutta, Vizag, Madras, Cochin and Bombay since the outbreak of the last World War. The position, as ascertained from their reports, is as under:

Year	*Deadweight Tons* (In millions)
1938-39	16.6
1948-49	18.5
1949-50	18.9
1950-51	18.8
1951-52	22.2
1952-53	21.2
1953-54	19.8
1954-55	20.1
1955-56	23.6

It will be noted that, since India attained independence, the total volume of trade passing through these five major ports has been on the increase. From 1938-39 to 1951-52 the volume of trade to be carried has risen over 30 per cent. It will be noticed that a little decline was registered in the following three years. It has, however, witnessed a further increase in 1955-56 and gone up to 23.6 million tons. The normal trade may, therefore, be taken at 22 million deadweight tons per annum. This is not the volume of trade for the whole of India. It is the total volume of trade passing through the five major ports only.

In order to arrive at the expected increase in the volume of trade to be carried annually, we should examine the possibilities of the increase in the volume both of the coastal and the overseas trades.

Coastal Trade

So far as the coastal trade is concerned, it has been on the increase from 1950 onwards, that is, from the time when it was reserved to national ships. The volume of trade carried on the coast in deadweight tons was, according to the figures released by the Government, as under:

Year	*Deadweight Tons*
1950	2,559,200
1951	2,448,259
1952	2,607,810
1953	2,884,341
1954	2,882,633

The Transport Minister felt that there was a big gap in the existing coastal trade. This meant that, although a substantial quantity of cargo was offering for being carried in the coastal trade, it could not be moved, because the necessary tonnage for its carriage was not available. He, therefore, made a strong appeal to the shipowners in November 1955, and called upon them to "plan for the purchase of 25 to 30 ships more within a short period to fill the existing gap in the coastal shipping." He further added: "The Transport Ministry is also exploring the possibility of getting a number of new or even second-hand ships, from abroad." It would be obvious that 30 ships would carry about 1.5 to 1.8 million tons of cargo on the coast. It is, however, difficult to understand how the Transport Minister felt that there was such a big gap existing at present in the carriage of cargo on the coast. Moreover, it is not known what the response of the Indian shipowners has been to this appeal. Nor have the Government told us anything in regard to the result of their "exploring the possibility" of getting a number of new or even second-hand ships from abroad." It is, therefore, essential that the position should be carefully ascertained from the Transport Ministry in this connection.

References have been made in responsible quarters, from time to time, that a substantial volume of additional cargo will have to be carried in our coastal vessels as a result of the recommendations of the Rail-Sea Co-ordination Committee. That Committee has, however, not yet submitted its report. It is difficult to say whether the report of the committee will be forthcoming before the end of this year. In any case, the two factors, namely, the promotion of co-ordination between the rail and the sea routes and the easing of the present strain on the railways are bound to influence their recommendations. It may be that the additional cargo, which may have to be carried as a result of their recommendations, may run from a million and a half to two million tons.

Further, the proposed industrialisation of the country in the second Five-year Plan may also require the coastal ships to carry further additional cargo over and above that referred to in the above paragraphs. It is very difficult, however, to say what the volume of this additional cargo, which the coastal ships will have to carry in the future, as a result of the policy of industrialisation and the recommendations referred to above, is going to be. It may be that it may vary from 3 million to 5 million tons. In the absence of relevant data and the recommendations of the Rail-Sea Co-ordination Committee, it can only be a matter of intelligent guess. We cannot, however, ignore the fact that this additional cargo will have to be handled by our ports and will have to be carried by national ships as the coastal trade is reserved for them.

Overseas Trade

Now let us examine the position in connection with the overseas trades of the country. The aggregate quantity of cargo handled at *all* the Indian ports, except the minor ports of Bombay, Travancore, and Orissa, came to 27.5 million tons in 1955-56. As the coastal cargo is counted twice, first at the loading port and again at the port of discharge and as the coastal cargo carried by steamers and sailing vessels came to 4 million tons, it will be necessary to deduct 8 million tons from 27.5 million tons. Further, as the trades with adjacent countries are handled by coastal ships, we shall have to further deduct 1.5 million tons to arrive at the volume of cargo carried in the overseas trade, as such. It will be noted from the figures given above that the volume of cargo moving in international waters came to 18 million deadweight tons. There is bound to be a substantial rise in the movement of overseas cargo during the second Plan period.

Firstly, as only 2.9 million tons of crude oil was imported in 1955-56 and as 3.75 million tons will have to be imported when all the three refineries begin to function, it will be necessary to add 850,000 tons to 18 million tons carried in the overseas trades.

Moreover, it will not be considered unreasonable to say that there will be at least a 5 per cent. rise in the volume of foreign trade as a result of the policy of industrialisation. This will mean the carriage of additional 950,000 tons of cargo.

Further, we must remember that we have been importing special commodities at present to meet our requirements. This tonnage will be in addition to the tonnage which we will be handling under normal circumstances. It is announced that we shall be importing about two million tons of steel, 500,000 tons of cement, 500,000 tons of rice and a million tons of wheat. This means about 4 million tons of additional cargo. This is likely to be a normal feature of our trade during the next five years. Taking, however, a conservative view of the situation, it may be fair to estimate that, during the Plan period, we may carry, on an average, only half of this volume. This will necessitate the carriage of further 2 million tons per annum.

We have also concluded bilateral trade agreements with Russia, Poland and Yugoslavia. A new shipping line has already been started between India and Russia. It is expected that the countries with which we have made agreements will buy Indian goods in rupees. These goods will also have to be moved. We will also be importing goods under the T.C.A. arrangements. We may not, however, add any further tonnage under this head to the additional cargo estimated in the above paragraphs.

If more refineries are established in the country or the present refineries increase their production, more crude oil will have to be imported and a larger quantity of refined products will have to be moved on the coast or even to the adjacent countries. As these possibilities have not yet entered the field of actualities, we need no include them in our present calculations.

Taking all the above factors into consideration, it is likely that we may have to carry every year, in addition to the 18 million tons of existing cargo, a further 4 million tons of cargo in international waters during the second Plan period.

From what we have stated above, it will be apparent that the aggregate quantity of additional cargo to be carried both in the coastal and the overseas trades will come to about 7 million tons. This does not take into consideration the tonnage of about 1.5 to 2.0 million tons of refined products which will have to be carried in the coastal trade since their carriage has been left at the sweet will of the oil companies by Indian or non-Indian tankers at least for a period of ten years, despite the policy of reservation of the coastal trade to national ships.

Capacity of Ports

Now let us turn to the question of the handling capacity of our ports. It is a principle generally recognised that the port capacity must precede the requirements of the trade. What is the existing handling capacity of the five major ports? From the figures given above, it must have been noted that our five major ports handled about 23.6 million tons of cargo in 1955-56. This includes the handling of oil and refined petroleum products to the tune of about 4 million tons. The Secretary to the Government of India, Ministry of Transport, recently pointed out, in an article in *Capital*, that the total of the peak traffic handled at these five major ports in past years came to about 24 million tons. In view of the necessity of rehabilitation, modernisation, dredging and acquisition of modern handling equipments, it would, however, be realistic to say that their handling capacity is about 22 million tons.

We have stated above that we should take 22 million deadweight tons as the normal traffic at these five ports. We shall have to add 7 million tons of additional traffic that we expect per annum during the second Plan period. The movement of the refined products on the coast will have to be counted twice for the purpose of arriving at the handling capacity needed, once while loading and again while discharging. Adding up all these figures, we find that the total handling capacity which will be required at these five ports will come to about 32 million deadweight tons. As practical men, we should, therefore, aim at the provision of 35 million tons capacity for our major ports. We have not taken Kandla into consideration in our examination. That port is expected to open its two jetties to traffic from October or November next. We may, however, say that that port may provide in the beginning a handling capacity of about 500,000 tons. The remaining 34.5 million tons will have to be found by other major ports.

There are several factors which affect the handling capacity of ports. The type and size of the steamers arriving at the ports will affect the handling capacity of the port. For instance, if the minimum scheme at the port of Bombay for providing deep sea-water berths is not carried out, steamers will have to wait in the harbour for want of suitable berths. Further, if the major ports have to handle a far larger quantity of cargo than they are handling today,

MARKED EXPANSION IN MONEY SUPPLY

BANK CREDIT TO PRIVATE SECTOR GROWS IN IMPORTANCE

THE trend of money supply in India during 1955-56 fully reflected the requirements of a sustained increase in production and business activity. Industrial production in 1955, it may be noted, rose by 8 per cent. over the previous year's figure. In many industries, targets fixed in the first Plan were exceeded. The overall agricultural production in the crop year 1955-56 was about the same as that in 1954-55. Commodity prices recorded an almost continuous rise during the greater part of the year; the index of wholesale prices (1939=100) revealed a rise of 11.6 per cent., as against a more or less equivalent decline in 1954-55. There was also a notable improvement in the external payments position, in that the foreign assets held by the Reserve Bank of India revealed a surplus as against a deficit in the previous year. The developmental programme undertaken by the State Governments necessitated large expenditure, while there was a growing need for bank credit by the private sector. In the result, the year witnessed a marked expansion in money supply from Rs. 1,920.60 crores to Rs. 2,184.30 crores or an increase of 13 per cent. over the year.

An analysis of the data relating to the money supply position, as furnished by the *Report on Currency and Finance for the year* 1955-56, published just this week by the Reserve Bank of India, discloses certain notable features. As stated already, the rise of Rs. 264 crores in money supply to Rs. 2,184 crores during the year was more than twice that (Rs. 127 crores) in 1954-55. The main contributory factors for this marked expansion were budgetary deficits and expansion of bank credit. Budgetary deficits in 1955-56 amounted to Rs. 163 crores, as against Rs. 76 crores in 1954-55. The increase in the holdings of Government securities by the Reserve Bank amounting to Rs. 21 crores in 1955-56, as against Rs. 28 crores in the previous year, also contributed to the expansion of money supply.

Expansion of bank credit to the private sector during the year under review was even more marked, since it more than doubled, from Rs. 65 crores to Rs. 148 crores. There was, however, a decline from Rs. 52 crores to Rs. 43 crores in the net addition to time liabilities of banks. As a result, the increase in the net indebtedness of the private sector to the banking system at Rs. 105 crores was much larger in 1955-56, as compared with only Rs. 13 crores in 1954-55. This sharp expansion is proof of the growing importance of bank credit in financing the private sector.

The increase in total money supply may also be attributed to the improvement in the balance of payments position. During 1955-56, there was a surplus of Rs. 16 crores, as indicated by the net rise in the balances held abroad by the Reserve Bank, as against a deficit of Rs. 23 crores in 1954-55.

Change in Seasonal Trends

The year witnessed a significant change in the seasonal trends of money supply and bank credit. During the 1955 slack season (7th May to 28th October), money supply with the public suffered a contraction of only Rs. 3 crores, as against a decline of Rs. 77 crores in the slack season of 1954 and of Rs. 128 crores in the slack season of 1953. Again, in the busy season, the expansion in money supply was pronounced. Thus, in the 1954-55 busy season, it had expanded by Rs. 222 crores. As a result of this, the volume of money supply at the start of the 1955-56 busy season (which commenced a month later than in the previous year) was Rs. 219 crores higher than at the commencement of the previous busy season. These trends indicate that contraction in money supply in the slack season is becoming much less pronounced than before, while the expansion during the busy season is on the increase. A point which needs to be mentioned here is that the rise of Rs. 264 crores in money supply during the complete busy season of 1955-56 very significantly exceeded the rise of Rs. 42 crores in the 1954-55 busy season and the post-Korean expansion in 1950-51, of Rs. 27 crores. In this expansion, as much as 90 per cent. was in the form of currency.

The *Report* also gives an interesting review of the trends in money supply during the Plan period as a whole. Broadly, the trends during this period fell into two phases. In the first phase, covering the two years 1951-53, money supply declined by Rs. 214 crores, the bulk of which occurred in 1951-52. In the subsequent three years, money supply registered a total rise of Rs. 420 crores; the annual rate of increase during the period mounted up from 1.7 per cent. to 13.7 per cent. For the Plan period as a whole, thus, the net rise was Rs. 206 crores or about 10 per cent. This is, of course, excluding the substantial rise of Rs. 137 crores in quasi-money supply, i.e., time deposits with banks. Inclusive of this, the expansion of money supply would be of the order of 15 per cent. During the same period the general index of wholesale prices showed a net decline of 13 per cent. and national income (at constant prices) is estimated to have risen by 18 per cent.

Broadly speaking, the decline in money supply during the first two years of the Plan reflected mainly the deficit in external transactions; during this period, the Reserve Bank's foreign assets declined by Rs. 160 crores. There was also during this period a net decline in bank credit to Government (as reflected in banks' investments in Government securities). As this phase coincided with the working off of the post-Korean credit boom, bank credit to the private sector was almost a neutral factor in money supply. The increase of Rs. 420 crores in money supply during the last three years of the Plan was mainly due to two factors, namely, budgetary deficit and creation of bank credit for private sector, amounting, respectively, to Rs. 203 crores and Rs. 223 crores. The emergence of a surplus on external account during this period, as indicated by the rise of Rs. 22 crores in the foreign assets of the Reserve Bank, also exerted a small expansionist influence on money supply. The expansionist effect of the above factors was, however, partly reflected in quasi-money supply, i.e., time deposits of banks, which recorded an increase of Rs. 111 crores.

Trends in Money Market

A study of the trends in the money market in 1955-56 reveals that there was an expansion in Schedule banks' credit of Rs. 138 crores as against Rs. 85 crores in 1954-55. The sharp rise in the demand for bank credit accounted for a greater measure of stringency in the money market during the major part of the year with money rates ruling higher. The call rates, for instance, rose in March to 3¼-3⅜ per cent. in Bombay and to 4-4¼ per cent. in Calcutta. Rates for three to six months' deposits also tended to harden to about 3½ per cent. The expansion of deposit liabilities of Scheduled banks continued during the year. At Rs. 101 crores, the increase was slightly higher than that of Rs. 94 crores in the previous year. It was, however, less than the rise in the demand for bank credit. The banks accordingly resorted to the Reserve Bank for much larger borrowings, the exact increase being Rs. 28 crores or 76 per cent. over the year.

The capital market was buoyant during the greater part of the year. The Gilt-edged market ruled firm practically throughout the year, in spite of substantial Government borrowing and some net sale of securities by the Reserve Bank. Prices of shares recorded a rise of 6 per cent., reflecting largely the bright long-term prospects for substantial growth of industries as well as the sizable increase in current industrial profits.

The market reacted favourably to the terms of new flotations, namely, the Union Government's 3½ per cent. 1965 loan and the 4 per cent. 1967 State Government issues. There was also a brisk activity in the new issue market.

Some New Capital Issues

Among the important issues of the year, mention may be made of the ordinary shares of the Industrial Credit and Investment Corporation of India for Rs. 3.5 crores, the 5½ per cent. debentures, 1966-70 of the Caltex Oil Refinery (India) for Rs. 2 crores, the 5½ per cent. debentures, 1965-70 of the National Rayon Corporation for Rs. 1.5 crores, the 6 per cent. preference and ordinary shares of the West Coast Paper Mills for Rs. 60 lakhs and Rs. 1 crore, respectively and the 5 per cent. debentures, 1980-65, of the Tata Locomotive and Engineering Company for Rs. 1.5 crores. Other large issues of Rs. 1 crore and above were the 5¼ per cent. debentures, 1962-66 of the Delhi Cloth and General Mills, the 5½ per cent. cumulative preference shares, 1965 of the Jiyajeerao Cotton Mills and the ordinary shares of the Rohtas Industries and the Sirpur Paper Mills.

Towards the close of 1955-56 some symptoms of inflation were noticed. In view of the developmental outlay in the second Plan aggregating Rs. 6,200 crores in both the private and the public sectors, it was felt that the inflationary trends might gather momentum and cause disturbance to the economy. In order to prevent the onset of any such tendencies, the Reserve Bank of India raised its lending rate under the Bill Market Scheme from 3 per cent. to 3½ per cent. effective as from 1st March 1956. Again in May, the Bank initiated action to restrain banks from excessive lending against commodities. It issued a directive to all Scheduled banks to restrict advances against paddy and rice, since these advances had shown a rise of over 100 per cent. in the course of a year. Further, with a view to strengthening the Bank's armoury of weapons of credit control, legislation to amend the Reserve Bank of India Act was introduced in Parliament. The relevant Bill enables the Bank to restrain multiple credit expansion by banks on the basis of large additions to their deposits, likely to emerge from the large-scale deficit financing in the public sector envisaged under the second Plan. In place of the existing reserve requirements of 5 per cent. against demand liabilities and 2 per cent. against time liabilities, the Bill provides for variable rates between a minimum of 5 per cent. and a maximum of 20 per cent. against demand liabilities, the corresponding limits in respect of time liabilities being 2 per cent. and 8 per cent.

During the year under review, the downward trend in rupee coin circulation noticed since 1951-52 was reversed with an increase in circulation of Rs. 9.2 crores. The circulation of small coin also recorded an increase of Rs. 1.5 crores, in contrast to the continuous return in them noticed since 1949-50 amounting in all to Rs. 17 crores, during the six years ended 1954-55. The Hyderabad currency (Hali Sicca) ceased to be legal tender with effect from 1st April, 1955, so also French currency, following the merger of French territories, as from 30th April 1955. The Bill to amend the Indian Coinage Act 1906 seeking to introduce decimal system of coinage was passed and is to come into force from 1st April 1957, in accordance with a notification issued by the Union Government on 14th May 1956. The current coins will continue to be legal tender for about three years after the introduction of new coins.

PROBLEMS OF ECONOMIC STABILITY

DR. ERHARD'S ANALYSIS

IN a recent lecture at Zürich, Dr. Erhard, West German Minister for Economic Affairs, took as his starting point the thesis that, in view of the existing world political constellation, the West is faced with the fundamental problem of finding a way of stabilising the boom now existing in most Western countries, so as to make it a normal state of affairs and to prevent a return to the era of sharp cyclical fluctuations. The achievement of this aim must be regarded as the essential test of the free order of society. A disquieting symptom of the present situation is that—in Germany, at any rate—the more living conditions and social security improve, the more the fundamental principles of a social-market economy are criticised. The social-market economy is held responsible for the fact that growth in well-being is accompanied by the spread of a purely materialistic conception of life, a conception which is giving rise to forces that create an increasingly acute social danger.

Economic policy cannot be expected to embrace every aspect of human life; it must confine itself to steering economic evolution so as to secure the material basis of existence for as large a section of the population as possible. The creation of economic well-being is, however, an indispensable condition for overcoming the materialistic outlook. A new kind of business-cycle policy should be developed on the basis of a revised economic theory, which would recognise, as an economic factor the political influences affecting the economy. The example of the theory of equilibrium prices shows that economic doctrines which ignore the effectiveness of political forces are applicable in practice only in a considerably restricted form. Generally speaking, economic equilibrium cannot be attained, because divergent political stresses and the action of individual elements in the economy keep the economy continuously in motion.

Concept of Inflation

The concept of inflation, too, calls for a more varied interpretation, for there is a considerable difference between a situation in which inflationary tendencies are the result of Government measures, whether through the creation of money or through a budget deficit, and one in which their causes lie in an expansion of purchasing power resulting from the economic process itself. Today it is no longer considered important to distinguish whether wage increases, for example, are the result of lack of discipline on the part of individual elements in the economy or of genuine inflationary impulses. However, the endeavours of workers and employers to secure as large a share as possible of the social product clearly play a decisive part in creating inflationary impulses. If the authorities are to refrain from intervening by means of far-reaching restrictive monetary measures, the only other course open is to undertake an educational campaign to make the economic circles concerned realise the pernicious consequences of their behaviour. If this fails, it is up to the State which subordinates its economic policy to the principles of a social-market economy to take drastic measures to protect income earners who are not directly employed in the production process. But, under a free-market system, the State will never apply the most drastic measures—the freezing of prices and wages; it will, however, make every effort to ensure that the price level shall, on the whole, remain stable.

As a result of considerable increases in productivity, coupled with the maintenance of an absolutely stable price level, West Germany has been able in recent years to achieve a real increase in wages—a development that was deliberately aimed at, since the national economy can hold its own in international competition only when effective purchasing power at home is spread over as large a section of the population as possible. The discussion of a fair wage under boom conditions has been dominated by two extreme points of view: whereas the workers wish wages to be adjusted, to the full extent, to any improvement in productivity, employers contend that this gain should be used exclusively for strengthening the machinery of production. Both points of view are wrong, for when productivity rises none of the parties concerned should be deprived of a share in the gain. It is of decisive importance in allotting shares that only so much should be channelled into consumption via wage increases as can be justified from the point of view of the maintenance of a stable price level; and, on the other hand, a fully employed economy can increase its productivity only by means of additional investments.

In Germany, there are symptoms that wage increases have already expanded demand for consumer goods to a dangerous extent, and it is becoming a matter of increasing urgency to find a way of reducing the present large excess of purchasing power. Dr. Erhard rejected all measures of compulsion, such as the prohibition or control of investment, or the extension of compulsory saving by means of higher taxation. Only when the appeal to reason is not heeded is it permissible for the State and the central bank to intervene by employing the whole arsenal of economic and financial measures at their disposal.

Referring to the use of tariff policy to combat excessive boom conditions, Dr. Erhard observed that, owing to the relatively low price level, the West German terms of trade had not been substantially changed by recent tariff reductions, and that their salutary effect can be explained only by their psychological influence. The recent raising of the bank rate has also been regarded as a warning signal, indicating that the central bank is prepared to make further drastic increases in the discount rate if the situation should call for it. Although discount policy is no longer as effective as it was during the gold-standard era, no monetary business-cycle policy can dispense with this classical instrument.

Remedies Vary

Although most Western countries have the same or similar economic difficulties, the remedies employed vary considerably, and this tends to weaken people's faith in measures of business-cycle policy and to reduce their efficacy. Dr. Erhard deplored the fact that there is at present no institution designed to exercise a correcting and balancing effect on the international price level. The price trends in Europe still differ greatly. The only way of evening out these disparities is by complete liberalisation of foreign trade, and Dr. Erhard expressed his determination that West Germany should attain this goal. Increased liberalisation is also important because it strengthens the power of resistance of the West against the Soviet trade offensive. In order to reinforce the Western position, Dr. Erhard suggested an international clearing agency to collect and examine all the experience gained on the economic front. Joint action by the Western countries in every field is today more necessary than ever, for the countries of Europe are interdependent to such an extent that none of them can solve its problems alone. West Germany, Dr. Erhard concluded, would never agree to any solution of the problem of European integration that involved discrimination against other countries. Only when bilateralism is replaced by a set of principles that exclude discrimination will relations between countries improve to the benefit of all.

STATE FINANCIAL CORPORATIONS

The Joint Select Committee on the States Reorganisation Bill, in its report submitted to the Lok Sabha on the 16th inst., has proposed certain changes in the provisions of the original Bill relating to the State Financial Corporations. In the original Bill, it may be noted, the State Financial Corporations, constituted under the relevant Act, for the existing States of Bombay, Hyderabad, Saurashtra and Travancore-Cochin were deemed to be the Corporations for the States of Maharashtra, Andhra-Telangana, Gujerat and Kerala, respectively. But, in the new set-up suggested by the Select Committee, the existing Financial Corporation for Madhya Bharat becomes the Corporation for the new State of Madhya Pradesh. The Corporation for Andhra-Telangana will be the merger of the present Andhra and Hyderabad Corporations. As regards the Bombay Financial Corporation, since the major part of the business transacted by this Corporation is in the city of Bombay, the Committee is of the view that it should remain the Corporation for Bombay instead of that for Maharashtra. Provision has been made to enable the Central Government to pay such amounts as may be appropriate to the State of Maharashtra and the other successor States on account of the shares held by the existing Bombay State in the Corporation. The relevant clause in the Bill has been revised accordingly.

BANK OF INDIA TO CAPITALISE RESERVES

The Directors of the Bank of India Ltd. announce that the Controller of Capital Issues has given his consent to their proposal to capitalise a part of the Bank's reserves and issue bonus shares in the ratio of one share of Rs. 50 fully paid-up for every five shares held by the existing shareholders, to commemorate the Bank's Golden Jubilee. To enable the bonus issue to be made, a sum of Rs. 50 lakhs will be transferred to the capital from that part of the reserves which consists of premiums collected on previous issues of shares, thus raising the paid-up capital to Rs. 3 crores.

MORE BANK PROFITS

Bank of Baroda

In conformity with the general trend of bank profits for the first half of 1956 published so far, the earnings of the Bank of Baroda Ltd. also for that half-year have recorded an increase. The profit (subject to audit) amounts to Rs. 14.66 lakhs, as compared with Rs. 13.16 lakhs for the corresponding six months of the previous year. With the sum of Rs. 3.36 lakhs brought in from the previous half-year, the amount available for distribution is Rs. 18.02 lakhs (as against Rs. 15.86 lakhs a year ago). The Directors have decided to step up the *ad interim* dividend from 10 per cent. per annum to 12 per cent. per annum, free of income-tax, which will absorb Rs. 6 lakhs, leaving to be carried forward Rs. 12.02 lakhs to the current half-year.

Dena Bank

The profit of the Devkaran Nanjee Banking Co., Ltd., for the half-year ended 30th June 1956, after making the usual provisions for contingencies, amounts to Rs. 6.21 lakhs, representing an increase of Rs. 2 lakhs over that for the corresponding six months of 1955. After bringing in Rs. 1.76 lakhs from last year's accounts, the disposable sum aggregates Rs. 7.98 lakhs. The Directors have declared an *ad-interim* dividend at the rate of 5 per cent. per annum, or Re. 1-4 per share, free of income-tax. No *ad-interim* dividends were, it may be noted, declared in previous years. The interim dividend now declared requires Rs. 1.25 lakhs, leaving to be carried forward Rs. 6.73 lakhs.

State Bank of Saurashtra

The working of the State Bank of Saurashtra during the half-year ended 30th June 1956 has resulted in a profit of Rs. 11.09 lakhs, constituting a fresh record in the history of the Bank.

MILLS PRODUCE MORE CLOTH AND YARN

INTENSIVE UTILISATION OF CAPACITY

IT looks as though the current calendar year will witness an all-time record output of mill cloth. The quantity of cloth actually produced in the first half of 1956, for instance, was 2,568 million yards, as against 2,492 million yards in the corresponding period last year. Assuming that this trend will be maintained during the remaining months, the aggregate output for the whole of 1956 will be of the order of 5,136 million yards, a quantity which surpasses the previous year's peak by 42 million yards. The production of mill yarn in the aforesaid six months was also higher at 801 million lbs., as compared with 781 million lbs. a year before. On this basis, the estimate of the total production for 1956 may be placed at 1,602 million lbs., which, however, compares unfavourably with 1,625 million lbs. in 1955.

The trend of mill output of cloth and yarn —month by month—during the first six months of 1956 and 1955 is indicated below:

(Cloth in million yards; yarn in million lbs.)

	Cloth		Yarn	
	1956	1955	1956	1955
January	414	430	138	132
February	425	399	134	124
March	419	422	133	133
April	425	419	131	131
May	445*	407	135*	129
June	440†	415	135†	132
Total ..	2,568	2,492	801	781

* Preliminary. † Estimate.

Details of how the improvement in mill cloth production has been shared by the different categories are not available for the whole half-year. The latest official figures contained in the monthly *Statistical Bulletin* of the Textile Commissioner are only up to the end of the first quarter. Out of the 1,258 million yards of cloth produced in this quarter, medium counts accounted for 938 million yards, coarse categories for 133 million yards, fine cloth for 104 million yards and superfine varieties for 83 million yards. The bulk of the cloth production—1,142 million yards—was consumed within the country. About 193 million yards were exported and 6 million yards used for other purposes.

Statistical Position

The table below shows the statistical position of cloth for the quarter of 1956, as also for the whole of 1955 and 1954:

(In million yards)

	Jan.-Mar., 1956	1955	1954
Cloth production—			
Mill-made	1,258	5,094	4,998
Handlooms	946	1,490	1,316
Power looms	63	273	243
Imports	1	6	6
Total supply ..	1,668	6,863	6,565
Exports	197	873	956
Deliveries for other purposes	6	29	23
Availability for civil requirements.	1,465	5,951	5,586
Per capita availability (yards) ..	8.9	15.8	15.0

Among the different varieties of wearable cloth packed in the quarter under review, longcloth, sheeting, leopard cloth and markin accounted for the bulk, followed by prints and chintz, shirtings and suicies, *saris* and *dhotis*. Mosquito nettings accounted for the largest share in the production of non-wearable cloth, the next in importance being canvas, duck and filter cloth. The quantities of the different varieties of cloth packed during the quarter are indicated below:

(In thousand yards)

WEARABLES:	
Dhotis	128,724
Saris	140,049
Dupattas, khes, chola and uparana	1,818
Mulls, voiles and dorias	93,977
Poplin, crepe, twill and haircord	68,585
Longcloth, sheeting, leopard cloth and markin	306,780
Shirtings and suicies	149,007
Madapalam, cambrics and lawns	7,287
Prints and chintz	167,427
Coatings, tussores and corduroy	24,177
Drills, jeans and gaberdine	42,257
Other items	41,096
NON-WEARABLES:	
Mosquito netting	5,625
Canvas, duck and filter cloth	5,454
Flannelettes, flint cloth and polishing cloth	3,474
Umbrella cloth	1,677
Tablecloth and domestics	1,116
Tapestry, furnishing fabrics and curtain cloth	1,428
	21,144

Of the 399 million lbs. of yarn spun in the mills during the quarter under review, 281 million lbs. were consumed within the mills for weaving cloth, the deliveries—in million lbs.—of yarn for other uses being manufacturing hosiery and other articles 3.13, export 5.44, and 'other' purposes 0.73. The quantity of yarn available for consumption by handlooms, powerlooms and others amounted to 109.34 million lbs.

The upward trend in the mill output of cloth and yarn is the result of a more intensive utilisation of the installed capacity engendered by the perceptible rise in the domestic demand for cloth. Thus, the daily average of looms run in the second and third shifts during the three months ended March 1956 was higher by 2,738 and 13,404, respectively, as compared with that in the same quarter last year. The first shift, however, accounted for a slight fall of 701 in the looms run. The daily average of spindles run in all the three shifts was also higher. The increase in the third shift was particularly marked, having been 985,486, followed by the second and first shifts, with a rise of 397,568 spindles and 149,255 spindles, respectively. An idea of the machinery and men worked in cotton mills during the first quarter of 1956 and 1955 can be had from the following statement:

	Jan.-March, 1956	Jan.-March, 1955
* Total workers on list	909,999	906,886
Daily average of spindles run—		
1st shift	10,885,557	10,236,302
2nd shift	9,984,983	9,587,115
3rd shift	4,546,142	3,560,056
Daily average of looms run—		
1st shift	182,010	182,711
2nd shift	168,494	165,756
3rd shift	47,687	34,233

* Including *badlis*.

The more intensive utilisation of the mills' spinning and weaving capacity has followed a slight expansion in the installed capacity of the mill sector. The aggregate number of spindles (rings and mules) installed as on 1st January 1956 was 12,051,209, as against 11,957,637 on the same date last year, a rise of 93,572 spindles. Likewise, the number of looms installed was higher at 202,901, as against 202,714.

ITALIAN TEXTILE INDUSTRY

An effective illustration of the expansion of the textile industry in Italy is provided by the gradual numerical increase in spindles and looms. After the war, restoration work was undertaken without delay in all branches of the textile industry. The cotton textile industry at present commands 5.66 million spindles and the wool industry 1.6 million spindles. The total number of mechanical looms installed is 145,000 for cotton, 23,000 for wool and 33,000 for silk. In addition to the 7 million spinning spindles, there are today in Italy 3 million twisting spindles, 27,000 vats for the spinning of cocoon threads (silk drawing), 155,000 wire-drawing machines for the production of artificial textile fibres and 216,000 looms. Cotton heads the list, followed by wool and hemp. There are 2,500 establishments, in which, generally speaking, only one of the two fundamental processes of the textile industry is carried out. In fact, the textile establishments are mainly organised on an horizontal structural basis. From the point of view of management, the firms are organised on a vertical structural basis; there are firms which control up to 10 or more establishments.

The capital invested in the Italian textile industry amounts to about 2,500,000 million lires, equal to Rs. 1,910 crores approximately. About 450 million kilos of raw materials are processed yearly by it. Cotton accounts for 50 per cent., wool for 16 per cent., rayon for 10 per cent., jute for 7 per cent., and linen and hemp for 6 per cent. Processed vegetable or animal fibres cover the remaining 11 per cent. With the exception of hemp, silk and artificial fibres, almost all other raw material required by the textile industry is imported. The domestically produced textile fibres meet only 15.2 per cent. of the industrial requirements.

In the import-export structure of the textile trade, raw materials account for 98.3 per cent., yarn for 1 per cent. and textiles for 0.7 per cent. of the imports. Of the total exports, 21.3 per cent. consists of raw materials, 35.1 per cent. of yarn and 43.6 per cent. of piecegoods. In the cotton textiles sector, only 86 per cent. of the installed capacity for yarn and 87 per cent. for cloth are utilised at present. In the case of wool and silk, the percentage is still less, being only 28 in respect of both yarn and woven goods.

The measures for implementing the programme for the introduction of powerlooms in the handloom sector will be discussed at a meeting of Directors of Industries of nine States, which has been convened by the Union Ministry of Commerce and Industry at New Delhi on the 28th inst. In a letter addressed to State Governments last month, it will be recalled, the Ministry suggested that schemes for the introduction of powerlooms should be drawn up in terms of Government's decision to introduce 35,000 powerlooms over two years, 1956-57 and 1957-58, to assist the existing handloom weavers working on a co-operative basis to switch over to a more economic method of production. The representatives of nine States, where the handloom industry is concentrated and where power is available, who have been invited to the meeting are Punjab, Uttar Pradesh, Bihar, Andhra, Madras, Hyderabad, West Bengal, Bombay and Saurashtra. The meeting will also discuss details regarding further improvement of the existing handlooms, in order to enable the handloom weaver to increase his production and earn more.

OUTLOOK FOR MAN-MADE FIBRES

SEARCH FOR NEW OUTLETS CONTINUES

THE outlook for world trade in man-made fibres would appear to be not very bright. The Chairman of British Celanese, for instance, declared recently that the demand for man-made fibres, though steady, was at keenly competitive prices. The Chairman of Courtaulds has gone a step further by saying that business in these fibres is somewhat patchy.

The keen competition in the world market for man-made fibres is attributed to the rapid increase in output which has brought with it "a desire on the part of producers to export a larger percentage of their product than was formerly the case." The aggregate quantity of man-made fibres produced during 1955 was as much as 5,600 million lbs., representing a rise of nearly 14 per cent. over the production of 5,930 million lbs. in 1954. Of the increase of 670 million lbs., about one-fifth was in synthetics, the remainder being divided between viscose (and acetate) continuous filament yarn and staple, with the share of the former being larger. The synthetics constituted 10 per cent. of the world production of all man-made fibres, as against 8 per cent. in 1954. Commenting on the role of synthetics, Courtauld's Chairman observes:

"There is a growing interest in these synthetics, more particularly on the American Continent, where much progress has been made and where several producers now compete with one another for the available business. Progress has been somewhat slower in Europe, partly, perhaps, because of climatic conditions, but also because the average European is more conservative than his American counterpart in trying something new, especially so when he continues to be well served by the use of fibres with a cellulose base."

Japanese Competition

Thanks to the marked expansion in the world output of man-made fibres, competition has tended to be very keen not only in yarns and staple fibres but also in woven and knitted goods. According to Courtaulds' Chairman, Japan is the outstanding example of a country which has rapidly augmented its productive capacity. Moreover, because of cheaper labour, this country is able to obtain a large share of international trade at the expense of the European countries. Japanese exports of spun rayon piecegoods, which stood at a bare 60 million square yards in 1951, had shot up to touch 530 million square yards in 1955. This quantity represents approximately 55 per cent. of the total world exports of this type of cloth. Japan's shipments of continuous filament piecegoods have also registered an appreciable increase.

The emergence of keen competition in the world markets for man-made fibres is compelling manufacturers to search continuously for new outlets. The Use-Development Organisation of Courtaulds, we are told, has been successful in helping to promote trade in upholstery fabrics containing continuous filament viscose yarn. There is an increasing demand for viscose and acetate spun-dyed yarns which are sold under the respective trade names of "Viscose-Duracol" and "Seraceta-Duracol". This type of production has enabled Courtaulds to offer coloured yarns having an exceptional degree of fastness. Consequent on this development, the field for colour-woven specialities, particularly in dress fabrics, upholstery, swimsuits, ties, umbrellas and domestic cloths, where their brilliance and high resistance to light and washing are a great advantage, is widening. The production of the new triacetate fibre—called "Courpleta"—is being stepped up as quickly as possible, but it will take some time before the market can be satisfied. Pilot plant quantities of an acrylic fibre—called "Courtelle"—are now being produced, and a larger plant is under erection. The plant is expected to commence production next year.

The British manufacturers of man-made fibres are doing their best to explore alternative markets for their products. Mention may be made of (1) the introduction of new tiacetate yarns and adoption of new crimping and bulking processes, designed to strengthen the producers' hold on traditional fields; and (2) expansion of industrial outlets which now absorb about a third of the total output of man-made fibres; high-tenacity viscose for tyres is a notable example. At the same time, the rayon manufacturers are still evincing great interest in the possibilities of synthetic fibres.

OFFTAKE OF TEXTILE PRODUCTS SLOW

WAGE CUTS IN THE OFFING?

By Our Special Correspondent

MANCHESTER, *10th July*

SEASONAL influences can be expected to take their toll of the cotton trade in Lancashire at this time of the year, but the decline into summer slackness has been more complete and provides less encouragement for the future than for many a long day. There have been times in the past few years when salesmen have complained bitterly about the stubborn attitude of buyers. Now they almost despair of making contact again with the object of discussing business.

MANCHESTER LETTER

The long-acknowledged ingredients of distrust continue to dominate cotton affairs and no short-term solution to the basic problems seems at hand. Some elements in the United States not only recognise this factor but also accept the necessity for action in providing long-range cotton programmes, as well as the immediate project for disposing of surplus supplies.

The trouble arises from the inherent danger of constant overproduction, now that modern harvesting methods aid the farmer in producing record yields. The plans to establish a soil bank in the United States and the current method of disposing of a part of the surplus by competitive bids are merely stop-gaps. There is ground for the belief that the same dilemma will recur, unless the authorities in Washington can think out a comprehensive plan to make the raw material truly competitive throughout the world.

Meanwhile the spinners, manufacturers and other processors of cotton in many different countries suffer, as a result. The eventual buyer of textiles is still replenishing his wardrobe and using up goods which will, at some future date, require replacement, but the distributor cannot afford to carry even modest stocks at a time of such fundamental uncertainty.

Seasonal Offtake Slow

Now that our local industry has become mainly a supplier of cotton goods for the home market, as opposed to being predominantly an exporter, more emphasis than ever is placed on the vagaries of the weather. Last year, the fine summer created a demand for textiles at home which drained the resources of retailers and wholesalers and caused extensive pressure on manufacturers to meet the requirements of the public. Perhaps, in pessimistic vain, the distributing trade did not restock to the extent anticipated during the winter months, and its caution has been justified by the adverse weather conditions so far encountered.

A further factor in the situation twelve months ago was the dislocation to transport caused by the rail and dock strikes which hampered the steady flow of materials and goods. There has been no corresponding hold-up this year, but the demand for the many styles of goods now required, either domestically or industrially, has been slow and discouraging.

A new and undesirable development is the disturbed conditions now prevailing in the motor industry and in engineering factories in the Midlands. Such a widespread recession cannot fail to have repercussions and, already, deliveries of textile products used in these industries are being delayed. To add to the grim picture, similar reports have lately been received from manufacturers catering for other home trade departments in the more regular domestic lines, such as apparel cloths, furnishings and household textiles.

With conditions so discouraging at home, any improvement in export prospects would be welcome, but the outlook in this direction is no more promising. Already, shipments are substantially lower than the disappointing figures of a year ago and everything points to a further decline in Lancashire's sales overseas. Not only is an increasing volume of Indian and Hong Kong cloth being received for distribution in the home market, but it has lately been reported that large quantities of textiles from Pakistan are now being purchased by local merchants.

Better Rayon Prospects

But from one section of the Lancashire textile industry—rayon spinning—there has been brighter news about the trade outlook. Mr. W. T. Winterbottom, Chairman of the Spinners' Section of the Rayon Staple Spinners' and Doublers' Association, told the annual meeting in Manchester that, although new orders were at present seasonally curtailed, yarn order books were good and stocks light. "Blended yarn stocks," he said, "are significantly lower now than either 12 months ago or in October 1955. Yarn order books are substantially larger now than at either of those dates, and stretch considerably further ahead than other Lancashire yarn order books."

Describing the present state of the rayon spinning industry as healthy, Mr. Winterbottom added: "The part played by spinners in improving the technical qualities of their products and in experimenting with new fibres, show that they have a firm belief that the long-term prospects for the industry are essentially good."

Trade With Eastern Europe

Prospects of an early increase in United Kingdom exports to Yugoslavia are discouraging, Mr. W. S. Laver, H. M. Councillor Economic at Belgrade, said when he visited the Manchester Chamber of Commerce this week. Yugoslavia's capacity for buying was limited by a shortage of sterling. The only "bright spot" was that the Yugoslavian Government has decided to set aside the equivalent in foreign exchange of about £5½ million for the import of consumer goods in order to help supply the domestic market and combat inflation. As a result, he said, they were interested in textiles from the United Kingdom, including cotton fabrics, more than 55 inches wide, chemicals and spices. Mr. Laver said that Yugoslavia also required dyestuffs. At present, the United Kingdom supplied about 10 per cent. of her needs. Prospects of the Lancashire cotton industry expanding its trade with Yugoslavia were restricted, owing to the construction since 1950 of a number of new spinning mills and the enlargement of weaving sheds.

A Lancashire weaving industry dispute which, according to trade union leaders, could be the opening move in wage cuts for hundreds of operatives was the subject of a special meeting between union officials and employers in Manchester last week. But, although Mr. Lewis Wright, Weavers' Amalgamation General Secretary, described the issue as being of "tremendous significance," an employers' spokesman—Mr. Arnold K. Roberts, Secretary of the Cotton Manufacturers' Association—later described it as "really a minor matter."

The dispute, said Mr. Wright, centred on a Nelson mill where a group of weavers had threatened strike action because of a management proposal to reduce pay under the six-loom system to 19½*d.* per 100,000 picks. Although this was the rate laid down in the agreement, most firms, said Mr. Wright, were, in fact, paying 22*d.*

The joint meeting had discussed the whole position of payment under the six-loom system. A further joint meeting had been arranged in which the seven-union Northern Counties' Textile Trades' Federation would join.

Engineers' Wage Claim

Two trade unions representing 4,000 mill engineers and other power plant workers in the Lancashire textile industry are to submit a wages dispute to arbitration. This was announced after a meeting with the cotton spinning and weaving employers had ended in deadlock. Mr. John Harrison, General Secretary of the National Engineers' Association, said that the employers had refused to go beyond their offer of a 5 per cent. increase. The unions were claiming 12½ per cent.—*All Rights Reserved.*

Wholesale textile sales in the U.K. during the month of May were the best for that month since 1951. This year, unlike the previous three years, there was no seasonal fall in the index of sales between April and May. "To this steadiness the early date of the Whitsuntide holiday and the good weather about that date probably contributed," a spokesman of the Wholesale Textile Association declared the other day. Statistics prepared by the Association in collaboration with the Bank of England show that the index for total sales (1950 =100) in May, at 98, was 12.2 per cent. more than in May 1955. Sales of women's and children's wear at 102 and men's and boys' wear at 100 were each the highest sales for May since 1951. Piecegoods sales in May, which rose by 4 points to 66 during the month, were better than in either 1954 or 1955. As compared with 1955, the only contraction in sales was the fall of 5.3 per cent. in the gloves' section. This general improvement raised the cumulative sales in the first five months of 1956 to 5.8 per cent. more than for the same period last year.

Competition was strong when the fifth series of London wool sales was resumed on the 13th inst. A total of 7,671 bales was on offer and the clearance was quite substantial. A feature of the sale was keen bidding for Australian greasy merinos, and prices rose 2½ per cent. above Wednesday's closing rates. All wools had been in great demand on Wednesday, and some price increases of 5 and 7½ per cent. had been recorded. Spinners' style wools from New South Wales comprised the best of offering, but topmaking styles sold almost as well. Several hundred bales of South African greasy merinos also came forward and were in very satisfactory demand. Prices for most were very firm on June closing rates, with those for the best style full-length wools moving distinctly in sellers' favour. Firm prices were also obtained for New Zealand greasy cross-breds, the selection of which was confined to medium qualities, while the market for scoured crossbreds showed a further tendency to harden against the buyer. Most of the latter wools were from Hawke's Bay.

U.S. COTTON EXPORT POLICY

MEXICO PROTESTS AGAINST TWO-PRICE SYSTEM

EVER since President Eisenhower gave his assent to the new U.S. Farm Bill on 28th May last, a series of protests have been raised by cotton producers outside the U.S. expressing their concern over certain features of this new legislation. Particular objection has been taken to sections 202 and 203 of the Farm Bill which direct the Government to dispose of its surplus cotton abroad and to capture new markets for future production. The law, as is well known, empowers the Government to sell the surplus cotton held by the Commodity Credit Corporation (C.C.C.) in foreign markets at competitive prices, irrespective of whether they are at or below the price of cotton produced in other countries. Since the costs of production of cotton in the U.S. are, for various reasons, higher than costs abroad, the new policy, it is maintained, is a clear case of dumping—a form of competition condemned as immoral by the existing code of international trade practice.

The U.S.'s next door neighbour, Mexico, has strongly reacted against the measure. Its attitude to the U.S. policy was expressed, in unambiguous terms, on two recent occasions: in a recent report presented by the Mexican delegation to the XVth meeting of the International Cotton Advisory Council and in a note delivered to the U.S. State Department by the Mexican Ambassador in Washington. Both these official documents stress that the U.S. cotton export programme will harm the economic interest of Mexico directly, that it will not bring any lasting solution to the world cotton problem, and that it is contrary to U.S. foreign obligations and goes against all previous assurances given by the U.S. The Mexican delegation, in its extensive report to the meeting, examines the various aspects of production, consumption and export of Mexican cotton and endeavours to find a just solution to this burning international issue.

Output of Cotton

The cultivation of cotton, says the report referred to above, is of utmost importance to Mexico because it is the most important crop from the point of view of the living standard it affords the farmers who form nearly 60 per cent. of the population. Cotton production was valued at $288 million in 1954-55. This is roughly 30 per cent. of the aggregate value of agricultural production. Compared to this, corn, though it occupies by far the largest area, accounts for only $180 million.

In 1955-56, Mexico produced 2.21 million bales of cotton as compared with 1.22 million bales in 1952-53—an increase of over 80 per cent. This increase in outturn has been mainly due to the fact that average yields per hectare have almost doubled in the last two years. Thus, whereas area under cotton increased only by 13 per cent. from 926,000 hectares to 1.05 million hectares, average yield per hectare increased from 279 kg. per hectare in 1953-54 to 457 kg. per hectare in 1955-56. These facts serve to underline the country's natural advantages for cotton and the improvement in agricultural techniques. According to preliminary reports, the probable cultivated area in the 1956-57 season will be reduced by 15 per cent. Several factors have influenced this reduction, the chief among them being Government's efforts to stimulate production of basic foodstuffs in preference to cotton and reduction in international price of cotton and the prevailing uncertainty with respect to prices and markets.

Fiscal Policy

As regards fiscal policy, it may be noted that cotton in Mexico does not get a favourable tax treatment. On the contrary, production and export of cotton are burdened by heavy taxes which have increased greatly in recent years. Such taxes presently amount to 25 per cent. of cotton prices abroad. This is clearly a definite discouragement to cotton producers, for, it reduces their income. On the other hand, export taxes tend to reduce exports and thereby stimulate internal consumption. In spite of definite disincentives cotton production increased by 80 per cent. in the period 1952-55. The conclusion which necessarily follows is that the increase was not the result of artificial promotion; rather, it was the consequence of a general policy of economic development and in particular, of improved production techniques.

Internal consumption of cotton has been on the increase. The present consumption of 450,000 bales represents an increase of about 50,000 bales over the 1954-55 figure. But the expansion in the consumption of cotton textiles has been limited, as elsewhere, by competition of synthetic fibres. It is estimated that these fibres have displaced, approximately, 70,000 bales of cotton. The former also enjoys the advantage of more modern equipment whereas mills in the cotton textile sector have been modernising rather slowly. Mexico, the report says, has continued fostering increases in cotton consumption, but a high level of cotton consumption in that country, as in other underdeveloped countries, is inevitably linked to a rise in the very low living standards of its agricultural population.

Despite the presence of export taxes and increased domestic consumption, cotton continues to figure as an important item in Mexico's export trade. Out of a total production of 2.21 million bales in 1955-56 only 450,000 bales were accounted for by internal consumption, the balance being the exportable surplus. Although it had diversified its exports cotton is still a vital source of foreign exchange on which depends to a significant extent, its imports of capital goods. In 1954-55 Mexico earned $230 million from its cotton exports. This is equivalent to 33 per cent. of the value of all exports and 20 per cent. of its income on current account of the balance of payments. The chief markets for Mexican cotton are Japan, Germany, Belgium, the U.K., Sweden, Switzerland, Holland, France, Italy, the U.S.A. and other countries. Mexico sells its cotton in the international markets on a strict free competitive basis as to quality and price. Mexican cotton is chiefly of medium staple 1.1/16". It is white and extra white, the greater part being Middling and better. The fibre produced is highly uniform and the systems of contracting for and classifying the fibre have improved closely following international cotton standards.

In the light of these facts about the Mexican cotton situation, the concern felt in that country over U.S. policy is understandable. Mexico is highly sensitive to every passing wind that blows over the international cotton market as cotton occupies a strategic position in its economy. The report of the delegation says that the new U.S. policy has brought about a disruption of world markets and sales of cotton for future delivery have almost been brought to a standstill. Demand and prices abroad have declined, affecting unfavourably the interest of both importing and exporting countries and the stability of markets. The report emphasises that it is not as if Mexico, along with other cotton-producing countries, is facing a problem brought about by the violent fall of prices because of natural market conditions. On the other hand, the present market conditions, it is held, are the result of unilateral action of one country, namely, the U.S.

Mexico is convinced that a sharp drop in prices, without ensuring a better long-term supply and increased consumption, may affect the cotton industry in the main producing countries. Such developments may result in discouragement to growers, disproportionate reduction in supplies of raw cotton and, finally, a new rise in prices and more acute problems than those which must now be solved. The U.S.'s policy of surplus disposal has already caused an excessive drop in prices abroad and a shrinkage of inventories. According to the report, from August 1955 to May 1956 cotton prices have dropped about 20 per cent. The present policy, it is stated, will reduce by 2.5 million bales the sales of other exporting countries which exported 7 million bales last year; this would amount to a 25 per cent. reduction in the volume of their exports. The combined effect of such reductions on foreign exchange receipts is likely to be serious. For Mexico itself, this reduction could result in a shrinkage of its dollar income by about $100 million which amounts to 40 per cent. of the volume of its cotton exports in 1955-56 and 8 per cent. of its total dollar income in 1955 on current account.

Complex Problem

The cotton problem, according to the report, is complex and surrounded by conflicting interests and hence solution should be sought along multilateral means. It reports that recent steps taken by the U.S. Department of Agriculture and the C.C.C. are not in keeping with the international obligations of the U.S. and its earlier professions. President Eisenhower himself had declared on 9th January that "if the agricultural surpluses moved abroad in quantities large enough to remedy present difficulties, they would shatter world prices and trade and injure our friends and undermine domestic prices as well." The Permanent Committee of the International Cotton Advisory Committee had pointed out that if the policy announced by the U.S. were implemented the smooth functioning of hedging operations in cotton markets outside the U.S. would be jeopardised and arbitrage operations between New York and outside markets made impossible. To combat the effects upon their economies of the introduction of the two-price system cotton-producing countries substantially dependent upon exports of cotton for foreign exchange might resort to greater use of bilateral agreements and barter arrangements which are "undesirable" from an economic point of view.

Mexico considers that to make good the assurances given by the U.S. it is necessary that the latter's exports take place at prices and through practices that will not entail any unfair competition for other producing countries nor constitute an element of market instability. The C.C.C., it is urged, should change its sales programme so as to give back to international marketing its traditional functions and for the system of double pricing to disappear at the earliest possible moment. Mexico believes that it is possible to find concrete formulas for gradual long-term measures—realistic and equitable—if the problem is approached with an open mind and with due regard for its repercussions on other countries. Clearly, it is only through such measures as will reinforce international economic co-operation that a lasting solution can be found to this vexed problem.

FORUM OF FREE ENTERPRISE

A MANIFESTO

WE BELIEVE that democracy is an essential element in the Indian way of life. Free Enterprise is an integral part of it and as such it should be permitted to play its legitimate role in our national life.

WE BELIEVE that today the case for Free Enterprise is going by default. In recent years it has been the target of sustained and unjustified attacks. The contribution which it has made to national progress has not been given the recognition that is due to it. There is urgent need to educate public opinion on the fundamentals of Free Enterprise and on the contribution which it can make to national welfare. That is why this Forum has come into being.

WE BELIEVE that the beginning of intelligent living is the beginning of Free Enterprise. It is not something new: it is as old as man. The man who first discovered fire was a Free Enterpriser as also the man who invented the locomotive. Today, the man who builds up industries is a Free Enterpriser; so also is the small trader. The shopkeeper and the merchant, the farmer and the artisan, the salesman and the company director—all these are Free Enterprisers.

WE BELIEVE that it is the legitimate expectation of reward for honest, productive effort which motivates Free Enterprise. This expectation of reward for endeavour is inherent in human nature. The desire to earn a fair wage or to make a legitimate profit is necessary and healthy, and is in sharp distinction to profiteering which is anti-social and evil.

WE BELIEVE that Free Enterprise is a natural phenomenon and has been responsible for the progress of mankind. In our own country, the development of the steel, textile, sugar and cement industries as well as those of shipping, banking and insurance, despite the handicaps under which they have laboured, stand as testimony to the qualities of Free Enterprise. The fact that Free Enterprise has the capacity to fulfil its responsibilities is proved by its record in the first Five-Year Plan during which a number of industries exceeded the targets allotted to them.

WE BELIEVE that Free Enterprise must and can operate only within the framework of values and principles of a democratic society. Within this framework it moves as a well-balanced wheel satisfying the needs of the consumer, worker and investor. Under this system, only those goods and services can be produced which the consumer is prepared to accept. Free Enterprise has, therefore, to be competitive and to carry on constant research to win a widening circle of consumers by providing better and cheaper goods and services. As with the consumers, so also with the workers. They have the freedom to choose alternative employment; they have the right to demand higher wages; and they have the right to deny their labour. The investors, having risked their savings to start and develop industries, have the right to ensure that these industries are efficiently run and so earn for them a fair return. Free Enterprise is thus economic democracy in action. Unless it is allowed to play its part, the entire fabric of democratic society would be in jeopardy.

WE BELIEVE that in the circumstances prevailing in our country today, there is ample room for State enterprise to function alongside of Free Enterprise in the service of the people. Monopoly of any kind, whether State or private, is undesirable. Should any single organisation arrogate to itself the right to do everything, it would upset the delicate mechanism of a free and democratic social order. Under monopoly conditions, the consumer would be forced to buy only that which is offered to him; the worker would find himself gradually deprived of his right to choose his job, to demand higher wages, and to deny his labour; the investor and the entrepreneur would be denied the opportunity to promote the development of industries of their choice.

WE BELIEVE that despite our basic democratic character, there have of late been many dangerous trends. The latest example is the displacement of normal trade channels by the intrusion of State trading. This process can result in depriving the country's individual traders, large and small, of their livelihood, concentrating at the same time a dangerous amount of power and patronage in a few hands. We have to guard against such tendencies if our traditional way of life is not to be destroyed.

WE BELIEVE that Free Enterprise must have clean hands. We realise that within its fold, as in that of every system, there are black sheep, and it will be our constant endeavour to develop and foster healthy traditions within Free Enterprise. We also accept, without reservation, our obligations towards the community as embodied in regulation by a democratic government.

WE BELIEVE that Free Enterprise is your enterprise and contributes to your prosperity. It is the lifebreath of a free society. It is not a creed; it is a way of life which all who cherish freedom must safeguard.

The Forum of Free Enterprise is a non-political and non-partisan organisation. The Forum will disseminate authoritative information to educate public opinion. It will bring to public notice the achievements of Free Enterprise in this country and the manner in which it can make its contribution to the economic development of India in order to raise the standard of living.

We invite all those who believe in the values of voluntary enterprise, whether they be in service, profession, agriculture, trade or industry, to join us in developing the activities of the Forum.

SUGAR OUTPUT TOUCHES ALL-TIME PEAK

FINAL OFFICIAL ESTIMATE PLACES YIELD AT 1.85 MILLION TONS

THE first official forecast of sugar production in the current season—that is, 1955-56—was referred to in these columns two months ago (*vide* page 1008 of issue dated 26th May 1956). That forecast had placed the output at 1.70 million tons. This estimate has turned out to be a very conservative one in the light of subsequent developments. The final official forecast just available, however, puts the aggregate quantity of sugar actually produced during the season at as high as 1.85 million tons. This figure represents an increase of 9 per cent. over the first estimate and of 16.3 per cent. over the 1.59 million tons produced in the previous season (1954-55). Never in the history of the Indian sugar industry had white sugar output touched this level. The current sugar season can, therefore, justifiably be described as a landmark in the sugar industry.

The wide gap—of 150,000 tons—between the first and final forecasts of production as noted above may appear somewhat strange. But it is not without an explanation. It will be recalled that, when the first forecast was made, there were reports of heavy accumulations of cane stocks lying uncrushed in several parts of Uttar Pradesh. The cane growers raised a hue and cry and blamed the authorities for not having taken adequate steps for the crushing of surplus cane. As a sequel to the representations made by the growers, the U.P. Government issued a directive to all the sugar factories to make the cane-crushing season the longest, so that the largest quantity of cane could be crushed before the season was out. The Governments of some other States also persuaded the sugar mills to extend their crushing operations. Thanks to the U.P. Government's directive, the sugar production in the State now stands higher at 950,000 tons, as against 870,000 tons anticipated earlier.

The following comparative statement indicates the quantities of sugarcane crushed and sugar produced in the different States during the seasons 1954-55 and 1955-56:

(In thousand tons)

	Cane crushed		Sugar produced	
	1955-56	1954-55	1955-56	1954-55
Uttar Pradesh	9,610	9,347	950	903
Bihar	3,405	2,201	335	225
Bombay	1,905	1,486	208	174
Andhra	782	676	72	65
Madras	696	611	61	57
Hyderabad	620	425	63	47
Mysore	475	500	48	49
Madhya Bharat	305	111	29	11
Punjab	294	217	29	20
P.E.P.S.U.	147	104	12	9
Rajasthan	136	117	13	11
W. Bengal	98	86	10	9
Travancore-Cochin	87	50	8	5
Bhopal	70	45	6	4
Orissa	40	30	4	3
Ajmer	5	..	†	..
Saurashtra	2	..	‡	..
All-India	18,575*	16,012	1,848*	1,592

* Excludes one factory in Saurashtra and one experimental factory at Kanpur.

† 200 tons only. ‡ 100 tons only.

The marked improvement in sugar output during 1955-56 is the result of a substantial rise in the quantity of cane available to the factories. This, in turn, must be attributed to three factors. First, the sugarcane crop registered an increase, the aggregate yield during 1955-56, according to the final official estimate, being 57.75 million tons, as against the partially revised estimate of 56.92 million tons for 1954-55. Secondly, the prices of *gur* have continued to be low, the average for the year being Rs. 10-Rs. 11, same as in the previous season, as against Rs. 20-Rs. 22 during 1953-54. Consequently, the cultivators continued to prefer to sell a large part of their cane crop to the sugar mills, instead of converting it into *gur* themselves or selling it to professional *gur* producers. A third factor is the new price formula for sugarcane which has led to a more enduring arrangement than before for the supply of sugarcane between the cane-growers and the factories. The campaign carried on by officials amongst cane-growers that they should ensure a regular supply of cane to the factories in their area in order to ensure a steady bright future for themselves and that their fortunes were linked with those of the industry seems to have yielded satisfactory results.

Besides large supplies of cane, the improvement, albeit slight, in the quality of cane supplied to the mills also contributed, to some extent, to the expansion in sugar output. Indicative of this improvement is the rise in the recovery percentage of sugar, the all-India average for the season under review being 9.95, as against 9.93 a year before. The first official forecast had, however, placed the average recovery lower at 9.87 per cent. The improvement in recovery was reported mainly by Uttar Pradesh, Mysore and Rajasthan. But it suffered a setback in Bihar, Bombay and Madras.

The rise in sugar production during 1955-56 was shared by all the States, with the exception of Mysore. The rise was particularly marked in Bihar, being 100,000 tons. Uttar Pradesh accounted for an increase of 47,000 tons and Bombay for 34,000 tons.

During the season under review, 143 sugar factories—out of the 147 registered—are reported to have worked, as against 136 in the previous season. All those factories which were in operation in 1954-55 continued to work. In addition to these, Gaya factory in Bihar, Bijay factory in Ajmer and Bhavnagar factory in Saurashtra also worked. Four newly erected mills—two in P.E.P.S.U., one in Bombay and one in Madras—too, started production. The number of factories that actually worked during 1955-56 was 68 in U.P., 28 in Bihar, 15 in Bombay, 8 in Andhra, 4 each in Madras and Madhya Bharat, 3 in P.E.P.S.U., 2 each in Hyderabad, Mysore and Rajasthan, and one each in the Punjab, W. Bengal, Orissa, Travancore-Cochin, Bhopal, Ajmer and Saurashtra.

Thanks to the comfortable sugarcane supply position, the duration of the crushing season was longer than in 1954-55; the all-India average was 138 days, which compares favourably with 129 days. The rise in the duration was noticeable particularly in the State of Bihar, the estimate of the average number of days being placed at 138 during 1955-56, as against 94 a year before. The number of crushing days increased from 141 to 151 in Andhra also and from 139 to 141 in Bombay. In U.P., however, the duration was shorter by 50 days at 134 days. The number of sugar mills which worked for more than 150 days is put at 65, as against 36 in 1954-55, and the number working for more than 120 days was 99, as against 79.

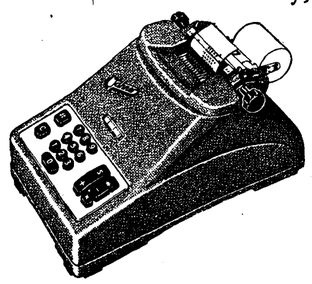
The crushing operations continued in the case of 72 factories even during the month of May 1956 and afterwards, as against 53 factories in the same period last year. The frequency distribution of factories according to the estimated dates of close of crushing is shown in the table below:

	1955-56	1954-55
Till 15th February	2	3
16th-29th February	5	3
1st-7th March	3	2
8th-15th "	6	6
16th-23rd "	4	9
24th-31st "	6	10
1st-7th April	5	11
8th-15th "	13	13
16th-23rd "	6	16
23rd-30th "	20	10
1st-7th May	9	8
8th-15th "	20	11
16th-23rd "	8	6
24th 31st "	16	11
After 31st "	18	17
Total	141	136

As in the previous seasons, so also during 1955-56, Mysore accounted for the largest number of working days; it was 225 days, which was, of course, lower than 240 in the previous season. Next in order come the Punjab with 211 working days, the figure for 1954-55 being 203 days, and Madras with 189 days (219 days). The average number of working days with figures in brackets relating to the 1954-55 season for the other States is: Uttar Pradesh 134 (139); Bihar 138 (94); Bombay 140 (139); Andhra 151 (141); W. Bengal 145 (134); Orissa 136 (105); Hyderabad 143 (126); P.E.P.S.U. 95 (131); Madhya Bharat 131 (49); Rajasthan 126 (116); Travancore-Cochin 136 (96); Bhopal 90 (65).

NEWS...

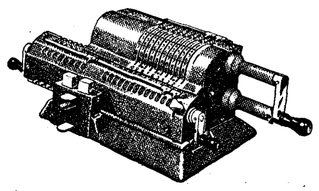
India will soon adopt the decimal system for currency, weight and measures and we are offering from stock our NEW Odhner Adding Machines, hand and electrically operated, for decimal system:



Odhner ADDING MACHINES

- NEW EXCLUSIVE FEATURES
- STREAMLINED EFFICIENCY
- SIMPLE 3-KEY OPERATION

Also available from ready stock:



Latest models of ORIGINAL-ODHNER

E.C.E. DISCUSSES COAL PROBLEMS

LARGER IMPORTS FROM U. S. LIKELY

PROBLEMS relating to coal and coke markets in Europe were reviewed by Government delegates from most of the east and west European countries and from the U.S.A. at various meetings held recently in Geneva under the auspices of the United Nations Economic Commission for Europe (E.C.E.). Meetings were held of the E.C.E. Coal Trade Sub-Committee, Coal Classification Working Party and the Utilisation Working Party. They devoted particular attention to the difficulties experienced by a number of countries in regard to supplies of coke. The discussions were based on a report prepared by the Secretariat of the E.C.E. from information supplied by the various Governments and it was found that full development of iron and steel production in Europe was being impeded by shortage of coke. It is stated that some countries, particularly in Scandinavia, are also finding it difficult to obtain sufficient coke for domestic use during the next heating season. A number of proposals were put forward by experts gathered at the meeting to overcome these difficulties, but no conclusions were reached. These proposals will be studied further on international as well as national levels.

A study of the production, demand and trading prospects for the third quarter of the current year, submitted by the various European Governments, disclosed that the iron and steel industry's coke requirements would go up further, so that the already difficult situation will continue to be so. There is, however, a ray of hope, in that the availabilities of coke from Poland and the U.S.S.R. for domestic purposes are said to have considerably increased. This development will help bridge the gap between production and demand.

The demand for coal, too, is expected to show sharp increases in a number of countries during the current quarter. An important factor behind the expected increase in demand is the need for building up consumers' stocks which had run down very much in Continental countries during the cold spell in February last. As regards supplies, the major changes expected are seasonal declines in production in Belgium and the U.K. (where miners' paid holidays are taken during the summer months) and some increase in Western Germany (where paid holidays occur at scattered periods). Although exports of coal from Poland and the U.K. to Continental countries are expected to run at a level above that of the second quarter, they will not be sufficient to cover the gap between the European production and the demand, which is expected to widen. Consequently, imports from the U.S. are expected to come in at a higher rate than at present.

Classification of Coals

The representatives of the various Governments gathered at the E.C.E. coal meetings also studied the various aspects of the international classification of hard coals, brown coals and coke. They also agreed upon a description of the E.C.E.-approved international classification system for hard coals by type and this will be published by the E.C.E. shortly. After extensive laboratory investigations on a large number of coal samples from countries in all parts of the world, the experts decided to fix a dividing line between hard coals and brown coals at 5,700 Kcal/kg. (gross calorific value, moist, ash-free 30°c/96 per cent. humidity). The experts also formulated a draft proposal for an international classification system for brown coals and lignites which will be tried out in the various countries.

A special meeting of the experts on the utilisation of solid fuels discussed a preliminary report on the rational utilisation of European coal availabilities for carbonisation purposes. No decisions were, however, taken. Further discussions will be held on this report at a later session, with a view to making recommendations to Governments. The experts also discussed communications received from various Governments on low and medium temperature carbonisation, district heating and heat recording meters. Further information will be obtained on these subjects and possibly, at a later date, a special *ad hoc* meeting of experts will be convened to discuss specific problems connected with heat recording meters.

STRONG DEMAND FOR QUALITY TEAS

PROSPECTS FOR CURRENT SEASON

THE performance of tea markets during the first five sales of new season's North Indian tea has been encouraging and augurs well for the rest of the current season. There has been a good demand for teas of all descriptions, excepting thin and plain liquoring kinds which have experienced even some withdrawals. Prices in both export sales and sales for internal consumption have recovered from the closing prices for the previous season. This recovery is particularly heartening in the case of best C.T.C. Assams and medium Assams and in auction for export last week, the best C.T.C. Assam B.P. jumped up by a rupee to Rs. 5 per lb. The demand for these varieties is rather keen. And this is only in conformity with the earlier expectations that the strong preference for better liquoring teas noted in the previous season would continue. It also underlines the need for realisation on the part of producers that clean plucking and careful manufacture are essential to any estate which is to prosper under modern market conditions.

The following table shows the trend of prices in Calcutta during the past few weeks:

	9-7-1956	2-7-1956	30-4-1956	4-7-1955
Export sale—	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	1 14 0 to 1 15 0	1 12 0 to 1 14 0	N.Q.	2 15 0 to 3 0 0
Plain B.P.	1 9 0	1 7 6 to 1 8 6	1 8 0	2 5 0
Medium Assam B.P.	2 4 0 to 2 6 0	2 4 0 to 2 6 0	1 10 0	2 7 6 to 2 8 0
Best C.T.C. Assam B.P.	4 0 0 to 5 0 0	3 8 0 to 4 0 0	N.Q.	2 14 0 to 2 15 0
Internal sale—	10-7-1956	3-7-1956	1-5-1956	5-7-1955
Medium Dooars dust	1 6 0 to 1 7 0	1 3 0	1 3 0 to 1 9 0	2 4 0 to 2 5 0
Medium Assam grainy dust.	1 12 0	1 12 0 to 1 13 0	1 9 6 to 1 10 6	2 7 0 to 2 8 0
Best Assam C.T.C. dust.	3 4 0 to 3 8 0	3 0 0	2 12 0 to 2 14 0	3 2 0 to 3 4 0

It will be noted from the above that the latest price of best C.T.C. Assam B.P. in the export sale is well above that fetched in the corresponding sale of the previous season. It has also crossed the previous season's best level of Rs. 3-4 to Rs. 3-6 per lb. seen in September-October 1955. The plain and thin liquoring teas are comparatively neglected and this clearly bears out the fact that a policy of quantity before quality in the matter of production can, as was pointed out by us in our issue of 30th June 1956, easily lead to disaster. This plain truth has further been emphasised by Messrs. F. W. Figgis & Co., Ltd., one of the leading tea brokers of Calcutta, in their annual review of the Northern Indian tea season 1955-56. They say: "There can be no doubt that it is in the vital interest of every producer to aim at the highest standard of which his garden is capable and we once again record our opinion that the adoption of any scheme for the destruction of the comparatively small percentage of residual tea manufactured by every garden could only result in material benefit to the industry as a whole."

So far as the current season's production is concerned, Messrs. Figgis and Co. see little reason to doubt the capacity of the industry to produce another record crop, particularly in view of the heavy cropping conditions brought about by early monsoon. The following are the crop particulars of the leading tea producing countries for the current season so far, as compared with those for the corresponding periods of the previous two seasons:

(In million lbs.)

Countries	Period	1956	1955	1954
North-east India	April-May	54.0	51.8	54.8
South India	Jan.-May	58.1	53.5	58.8
Pakistan	April-May	7.7	6.6	7.3
Ceylon	Jan.-May	175.5	188.1	175.8
Indonesia	Jan.-April	31.4	35.8	33.5
Total ..		321.7	329.8	330.2

It will be seen from the above table that, although the aggregate output of the principal producing countries is lower, the production of India and Pakistan is running at a higher rate. This is, no doubt, a bearish factor and the closing down of estates just to restrict the supply of tea in order to raise its price, will be a painful process. The only true antidote to the larger supplies, suggested by Messrs. Figgis and Co., is the conclusion of a new International Tea Agreement. They, however, add that the chances of an agreement being signed still seem remote, owing to "the preference of other producing countries to make tea while the sun shines, rather than to endeavour to create a sound basis for the future of world trading." India cannot be expected, under these conditions, to impose a restriction policy of its own. Messrs. Figgis and Co., however, express the hope that the wide gap in the past season's prices between good teas and poor teas and, in particular, the uneconomic rates received for stalky residue types will encourage producers in a quality rather than quantity plan and that common sense will impose its own brake on a runaway policy of overproduction."

Another step by which the effect of large production can be overcome is to raise internal consumption. As Messrs. Figgis and Co. have rightly pointed out, "the greatest insurance of the smaller producer must continue to be a healthy and expanding internal demand." It is estimated that consumption within India has risen over the past season and it is hoped that, with the implementation of the Tea Board's plans for tea centres in larger cities and a stepping up of propaganda generally, this will be further expanded. Herein lies one of the most vital essentials for future prosperity.

Thus, the two main factors on which the prospects for the current season depend are production and internal demand. There are other factors also which will influence the outlook. Referring to these, Messrs. Figgis and Co. observe:

"In the U.K., still by far India's largest customer and likely to remain so, there is a moderate stock position which should augur favourable conditions for buyers to operate on this market. Deliveries have been steady at a satisfactory rate over the past year and, though the enormous advances made by other beverages cannot but be viewed with concern, the trade in the U.K. is well alive to this danger and will undoubtedly do everything in its power to combat it. These same competitors are met on an even greater scale in America and Canada, but, here again, intensive propaganda is being employed, particularly with regard to the proper methods of preparing tea.

"Other countries show increases or decreases from year to year, but Indian tea appears to be holding its own in the majority, and rumours have been prevalent for some time that Russia may take as much as 20 million lbs. from the new season's production.

"Having considered the pictures of probable supply and demand, it is considered that a feeling of cautious optimism is justified. Nevertheless, the balance is extremely lightly poised, and any increases in an already high cost of production could have grave consequences."

In conclusion, Messrs. Figgis and Co. point out that it is well within the Government's power to afford some relief to the industry by modifying the present financial burdens it has now to bear. Any move in this direction, they add, will go far to restore a measure of confidence, now so badly lacking, and will assist in maintaining, if not improving, India's position vis-a-vis other producing countries in the tea markets of the world.

Mexico was the third largest coffee producer in the world, according to figures for 1955 released by the National Coffee Commission. Mexico's exports in 1955 aggregated 1,366,715 60-kilo bags valued at $1,328 million pesos. Coffee covered 14 per cent. of Mexico's total exports of $9,484 million pesos.

The United States is Mexico's principal coffee buyer. Last year it bought 1,198,952 bags—87.72 per cent. of Mexico's total coffee exports—and represents a 19 per cent. increase over 1954 sales. Germany was the second largest buyer of Mexican coffee with 101,610 bags. Other important purchases were made by Holland, Belgium, France, England, Canada, Italy, Sweden, Switzerland, and Syria. European purchases are increasing. While in 1951 Europe bought four per cent. of Mexico's export production, last year it purchased 11.8 per cent.

JUTE GOODS IN JUNE

OUTPUT FALLS BUT STOCKS RISE

THE latest I.J.M.A. returns disclose that the output of jute goods during June 1956 as compared with that in the preceding month declined by 2,800 tons, that is, from 101,700 tons to 98,900 tons. This fall, which works out to 2.7 per cent., is less than a day's production of about 3,400 tons and is probably the result of June being shorter than May by a day. It is hard to say, in the absence of detailed information, to what extent the difficult trading conditions in jute goods were responsible for this drop in production. But, as readers are aware, the industry was greatly concerned over the accumulation of stocks and the poor margin of profit owing to high prices of raw jute. It was this concern that led to the I.J.M.A.'s decision last month, with the consent of the Government, of course, to reseal 2½ per cent. of the looms that had been unsealed in February last. As this cut in the working looms comes into force from the 16th inst., the output this month is expected to be lower at the rate of 2,800 tons per month from this week onwards. The effect of the reduction in looms is, however, unlikely to be felt to the fullest extent as July is a longer month and as the cut came into force fully after the first half of the month.

The table below shows the output of the three principal categories of jute goods during June 1956, as compared with that of each of the preceding two months and in June 1955:

Jute Goods Output

(In tons)

	June 1956	May 1956	April 1956	June 1955
Hessian	35,000	35,800	32,900	34,200
Sacking	57,300	59,600	55,000	47,900
Others	6,600	6,300	6,000	3,600
Total ..	98,900	101,700	93,900	85,700

It will be seen from the above table that the decline in output is shared by hessians and sackings, while others show a small increase. Thus, sackings have declined rather perceptibly from 59,600 tons to 57,300 tons and hessians slightly from 35,800 tons to 35,000 tons. The output of other varieties has, however, risen by 300 tons to 6,600 tons.

Output for Whole Year

With the output in June, figures for the whole season that has just ended, namely, 1955-56, are now complete. The season's output amounts to 1,094,945 tons, as compared with 1,043,400 tons in 1954-55 and 900,400 tons in 1953-54. In fact, the output has been the highest for any year since independence, as is evident from the table below:

Year	Output of jute goods Tons
1947-48	1,074,700
1948-49	1,081,100
1949-50	857,500
1950-51	892,300
1951-52	982,900
1952-53	927,200
1953-54	900,400
1954-55	1,043,400
1955-56	1,094,945

Although the output has varied since 1949-50 from year to year, the general tendency of production has been upward, especially since 1953-54. This trend indicates that the industry has been able not only to consume more raw jute but also to despatch more goods. It further reflects that the demand for goods is active though not so active as to absorb the full extent of the additional goods produced, since stocks have continued to accumulate with mills. With vigorous efforts calculated to promote exports, including the drive for producing high-yielding quality jute, it should be possible for the industry to maintain the upward trend in output in the coming years.

The consumption of raw jute during the season 1955-56, based on production of jute goods, may be estimated at 6,350,681 bales, as against 5,863,000 bales in the preceding season.

Despite the fall in production as noted above, stocks of jute goods held by the I.J.M.A. mills at the end of June amounted to 125,900 tons, an increase of 5 per cent. over that at the end of the preceding month at 119,700 tons. In fact, the June-end stocks were the highest for any month since July 1953 when they stood at as high as 136,700 tons. Since the latter month stocks registered a steady decline and touched a low of 62,100 tons at the end of October last. But, at

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

MOVE TO SET UP HEAVY MACHINERY PLANT IN PUBLIC SECTOR

RUSSIAN EXPERTS' ADVICE SOUGHT

IT was not so long ago that the intrepid and energetic dreamer, the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, went on record as saying that India would in the course of the next decade, emerge from the state of semi-developed economy into that of a highly industrialised country. While all will wish that this dream comes true, everyone will grant that such transformation is by no means easy to achieve. For one thing, an industrial economy is based essentially on machinery-manufacturing industry without which it is impossible to attain a really high degree of industrialisation. It is, therefore, gratifying to note that the Government of India has already set up a Heavy Industries Division in the Commerce and Industry Ministry, with a whole-time Minister, Mr. Manubhai Shah, in charge. In the next few years, this Division may well be expected to become a key section of the Government Secretariat, setting the pace for the country's industrialisation.

Realising that machinery manufacture is the basis of an enduring industrial edifice, the Planning Commission gave top priority to increased production of iron and steel, heavy chemicals, heavy engineering and machine building industries, followed by expansion of capacity in respect of other development commodities and producer goods such as aluminium, cement, chemical pulp, dyestuffs, fertilisers and essential drugs. Explaining the importance of heavy engineering industries, the Commission stated that these industries are a "natural corollary" of iron and steel works. It pointed out that "the high priority accorded to them arises both on this account and from the fact that they will provide within the country a wide range of industrial machinery and capital equipment" and that the creation of certain basic facilities such as the establishment of heavy foundries, forges and structural shops was "absolutely necessary." The targets set for heavy foundry-*cum*-forge shops (to be reached in 1960-61) are: steel foundry 15,000 tons, forging shops 12,000 tons and cast iron foundries 10,000 tons. The Plan has also provided Rs. 20 crores for manufacture of industrial machinery and machine tools. In addition to these schemes, a provision of Rs. 1.2 crores has been made for the expansion of the Government electric factory at Bangalore. Among other industries which fall in this group, mention may be made of the aero-engine project and the electronic and wireless equipment project.

The Government has taken the initiative in the direction of the establishment of heavy machinery industry by inviting a four-member Soviet team, headed by the Vice-Minister for Heavy Machine Building Industry, Mr. B. K. Prihodiko. The team is now in India examining the possibility of setting up a heavy machinery and equipment factory. The Government, it is stated, is contemplating the establishment of one or two big plants to manufacture heavy machinery. It is believed that the plant will be established in two stages. During the first stage, the factory would be developed within certain financial limits to fit in with the allocations that have been or may be made. The stage would be completed in the second Five-year Plan period. And during the second stage, it would be developed in terms of physical requirements for which the necessary financial provision would be made in the third Five-year Plan.

It has been further reported that the factory, which would need a capital expenditure of about Rs. 15 crores, would be so designed as to manufacture heavy machinery for basic chemical, cement, steel and sugar industries. But it is not clear whether the projects will not mean a certain duplication of effort, considering that some private agencies are already manufacturing many items of sugar and cement machinery and one of them has a big plan for stepping up its productive capacity. Perhaps, the Government will do well to consult the private sector before it finalises its arrangements on this project so that waste and unnecessary duplication of effort may be avoided.

Notwithstanding its decision to start heavy machinery industry on its own, the Government would appear to be more sympathetic to the claims of the private sector for the manufacture of a wide range of engineering goods. Again, no authoritative information is available on this subject. From Press reports, however, it would seem that the Licensing Committee of the Government of India has sanctioned a number of schemes for the manufacture of machinery and equipment. A Hyderabad firm has been granted a licence for the establishment of a new undertaking for the manufacture of 4,200 tons of steel forgings annually for automobiles, diesel engines, agricultural and general engineering industries. A Calcutta firm is expected to undertake the manufacture of 6,000 tons of steel structurals, including pipes and pressure vessels, per year while a firm in Madras is said to have received a licence for the manufacture of 2,000 tons of hot forged and hot pressed bolts and nuts per year. Other licences reported to have been granted to firms in different centres are: (1) A firm in Bombay—manufacture of 300,000 twist drills and 3,600 milling cutters per year; (2) a firm in Coimbatore—manufacture of automatic diesel engines of various sizes with a capacity of 600 per year; (3) a firm in Delhi—to increase the capacity for the manufacture of concrete mixers from 10 to 50 per month; (4) two firms in Calcutta—one to increase its capacity by 13,000 fans and V-belts per month and the other by 45,000 industrial V-belts and fan belts per month. It is needless to add that, when these licences are actually utilised, they will add to the production of engineering goods, capable of wide use and application to industry and agriculture.

Efforts are being made by the Government to sponsor official delegations to Europe in order to contact machinery manufacturers. Thus, an official delegation, led by Mr. Satish Chandra, Union Deputy Minister for Production, it is stated, will carry on negotiations with Messrs. Oerlikons of Switzerland. This Swiss firm, it may be recalled, had agreed in 1949 to act as technical consultants and collaborators in setting up the Government-sponsored Hindustan Machine Tool Factory, at Bangalore. Two chief executives of the Swiss firm were in India some time ago to discuss certain important matters in connection with their technical collaboration with the Government. It is expected that the Indian delegation will be able to complete these discussions at Zurich and settle the outstanding issues. To enable the Hindustan Machine Tools Factory to take up the production of new lines of machine tools, the delegation will also visit some other European countries. The delegation is expected to be in Europe for about four weeks. Mr. Satish Chandra's presence in Europe will be utilised for visits to various industrial concerns in the United Kingdom, Germany, France, Italy, Czechoslovakia, Austria and Belgium. He is also likely to visit a new fertiliser factory in Egypt on his way back to India.

BALL BEARINGS

Ball bearings, though tiny items of industrial machinery in themselves, constitute so essential a part of such machinery that it is obviously wrong to reduce their supply in the market through excessive restriction on imports. And yet, the dealers in these goods have recently complained that the Government's import regulations have caused considerable shortage of these goods. Their contention is that the import quotas are based on the assessment of the country's requirements made in the year 1950, whereas the demand for bearings has increased significantly since that year. They place the demand for ball bearings at 2.4 million pieces, made up of 1.2 million pieces upto 1", 0.7 million pieces between 1" and 2" and 0.5 million pieces over 2". As against this demand, the protected domestic industry, it is stated, is producing only about 0.8 million pieces annually; the gap has necessarily to be met by imports. Not only is the gap thus of the order of 1.6 million pieces but the domestic industry does not produce all the varieties of ball bearings needed by the consumers; it turns out about 113 different items, whereas the demand runs to nearly 3,000 items. It would further appear that the position has not improved even after the announcement of the slightly liberal import policy for the current half-year period. This is partly because the policy, based as it is on 1950 data, does not take fully into account the higher level of present demand and partly due to the ban on imports of certain items of ball bearings.

The dealers have, therefore, suggested that imports of ball-bearings should be further liberalised. In this connection, they point out that no good purpose is served by reserving licences for actual users inasmuch as such users seldom import their meagre requirements on their own; they prefer to buy from the market rather than allow production to be held up. Further, they urge that the domestic manufacturers must maintain a reserve stock for the items for which imports are restricted and that the latter should follow a sales policy that will induce the dealers to stock and sell their goods. The manufacturers, it is further point out, should provide technical assistance at all important industrial centres.

It is well to remember that ball bearings are an indispensable item of nearly all types of machinery, including a wide range of consumer durables such as cars, cycles, sewing machines and fans and that a slightly larger volume of imports of this class of goods will make no important difference to India's foreign exchange position. It is to be hoped that these considerations will prompt the authorities to adopt a more liberal import policy in respect of ball bearings, consistent with the need to offer sufficient protection to domestic producers.

The skill and ingenuity of Indian fishing boat-builders was highly praised in Rome, this week, when Mr. Paul B. Ziener, a Norwegian naval architect who has been working in India for the past 2½ years for the Food and Agriculture Organisation (F.A.O.), returned to the Organisation's headquarters. He said: "The boat-builders are of course, great craftsmen with traditions going back for centuries. This background might have made them conservative in dealing with design and construction problems associated with mechanisation, but I found they welcomed the new ideas and quickly overcame the technical problems." "The fishermen, too, show great adaptability," added Mr. Ziener. "Men who have never been in a mechanised boat are quick to learn and skilful." Mr. Ziener, who was born in Oslo, worked for many years in South America where he helped to develop modern fishing vessels in Brazil, Chile, and Peru. After serving as an instructor at the F.A.O. Latin American Fisheries Training Centre at Valparaiso, he was assigned by F.A.O. to India in 1953 as Fishery Naval Architect to the Government of India.

A process to improve the smoke point of kerosene has now been installed by the two-million-ton Burmah-Shell Refinery at Trombay. Built at a cost of Rs. 1 crore, the new plant, named after the famed Rumanian Chemist, Dr. L. Edeleanu, came "on stream" on 20th June 1956. Dr. Edeleanu originally established the principle that liquid sulphur dioxide has the power of extracting selectively the more aromatic compounds which are responsible for the bad illuminating properties of kerosene. This forms the basis of a modern Edeleanu plant which is a highly specialised and complex piece of machinery consisting of a maze of pipes and towers where the undesirable kerosene components are removed by a special extraction treatment with liquid sulphur dioxide. The Edeleanu process thus improves the smoke point and burning qualities and produces a high quality illuminating kerosene for the market.

A British motor-scooter setting a new fashion in design was recently shown in London for the first time and is going into immediate production. It is named after its designer, Vincent Piatti. The makers have spent nearly £250,000 equipping their factory, which they claim to be the most modern in the world for motor-scooter production. Fully enclosed in a one-piece, pressed steel body, the Piatti's single-cylinder, air-cooled 125-c.c. engine gives the scooter 140 m.p.g., with a cruising speed of 35 m.p.h. and a maximum speed of 45 m.p.h. It has a twist-grip gear-change, and the clutch needs to be used only to start in first gear. Another noteworthy feature of the Piatti is its ease of maintenance. Standard equipment includes spare wheel and tyre, a dual seat of foam latex, luggage-carrier, and toolbox.

Indian-owned tonnage as on the 30th June 1956 consisted of 126 vessels totalling 491,453 gross registered tons (g.r.t.), of which 38 vessels totalling 254,463 tons operate in the overseas trade, 70 vessels of 230,000 tons in the coastal trade and 18 small vessels totalling 7,000 tons in short coastal services. The overseas vessels include 27 vessels aggregating 188,000 tons operating in the India-U.K.-Continent trade and one or two vessels each in the trades with East Africa, Persian Gulf, Australia, Japan-Far East and Malaya-Singapore. Two ships operate as tramps. Less than 50,000 ton of the total Indian tonnage are over 20 years old.

NEW PRODUCTS AND PROCESSES

Cathomycin

A NEW antibiotic, Cathomycin, is now entering world markets as another potent weapon for physicians and hospitals in controlling serious human diseases, including some which have become resistant to all present methods of treatment. Cathomycin (novobiocin), developed by scientists in the Merck Sharp and Dohme Research Laboratories, will be made available throughout the world as rapidly as supplies permit. The new antibiotic is particularly effective against a class of bacteria known as staphylococci which cause most skin infections and become a source of grave danger when they enter the blood stream.

The majority of staphylococci are resistant to most antibiotics in wide use today—and clinical trials in the United States and Canada have produced dramatic results in saving lives of patients from dreaded staphylococcal infections. Staphylococci are also frequently responsible for such conditions as abscesses, boils, carbuncles, the very serious bone disease, osteomyelitis, and frequently cause infections in cuts and following surgical operations. Among the systemic diseases which are often fatal are septicemia and endocarditis.

The extensive clinical investigations confirmed favourable laboratory studies reported by the Merck Sharp and Dohme scientists. In addition, clinicians have indicated that the unusually high blood levels developed by Cathomycin in the human body revealed an increased effectiveness against infecting organisms which could not be predicted from the laboratory studies. They also found the new drug effective against certain urinary tract infections. They reported that the new antibiotic is rapidly absorbed by the body following oral administration. Effective antibacterial levels are usually attained in the blood stream in one to two hours. Of further significance, the clinical studies revealed that Cathomycin has a high degree of safety when given in therapeutic doses.

New Outlet for Pine Gum

Two new chemical products of pine gum, developed by United States Department of Agriculture scientists, are now available for industrial use. One, maleopimaric acid, is the first industrial chemical to be made directly from pine gum. It is being used by the photographic industry and has applications in paper coatings, printing inks, and other products requiring a plasticizer, emulsifier, or resin. The other new pine-gum derivative is pinane hydroperoxide (PHP), a catalyst for cold rubber production, with applications also in the production of certain plastics.

Although present output of these two chemicals is limited, their commercial availability represents a major advance in the naval stores industry. Eastman Kodak Company recently announced the addition of maleopimaric acid to their stock of organic chemicals and the American Cyanamid Company has indicated that it can supply experimental quantities of PHP. The new process for production of maleopimaric acid yields rosin of better-than-ordinary quality and turpentine as by-products. An advantage of the method is that conventional gum-processing equipment and operations can be adapted for recovery of the acid as an intermediate step in turpentine and rosin production. Continuous study of pine-gum products in the U.S. have brought research advances in gum naval stores production—including discovery in rosin of a new substance, palustric acid, which is helping to extend commercial uses of rosin, and esters of pinic acid from turpentine, suitable for use in plastics and also in lubricants to help jet-aircraft engines operate at sub-zero temperatures.

Machine for Airline Reservations

To handle airline reservations quickly and accurately let Univac do it. That is the idea with a busy carrier in Minneapolis; punch a few buttons and get the answer, on the button. The Northwest Orient Airlines has ordered a new electronic computing system to control passenger reservations automatically. Remington Rand makes it and the name is Univac Airlines Reservation System. It is an electronic reminder and checker that works by itself or in series with a number of units and can tell a clerk what is available on a flight at a glance. It works somewhat like an adding—or subtracting machine that keeps score in its own innards, with an electronic memory, just like its parent machines, the big Univacs that whizz through a mass of calculations in seconds, and flash off the answers. Instead of figures, it handles reservations and flights, which are expressed in terms of figures anyway. When the clerk wants to know, he punches the proper buttons and Univac tells him.

The Northwest Airlines plans to set up the equipment at first in its new headquarters operational base in Minneapolis. It will serve the entire N.W.A. system. At the start, the "agent" sets—which can be linked to the master unit by an ordinary wire—will be used only in the Minneapolis-St. Paul area. That is the busiest loading area for N.W.A.

The Univac system does not eliminate the human agent. Somebody has to talk to the customer and Univac is not ready for that yet. It gives the reservation personnel the information that is needed, quickly and accurately. Remington Rand reports that the accuracy of the new system is "virtually absolute" and fast. Although Univac for reservations was developed for that particular purpose, it is a computing device readily adaptable for other airline uses.

TRENDS IN BRITISH INSURANCE

PREMIUM INCOMES RISE BY £75 MILLION

THE calendar year 1955 was one of notable progress for the insurance companies in Britain. For the year witnessed a substantial improvement in the premium incomes, which aggregated as much as £1,098 million, as against £1,023 million in 1954, representing a rise of £75 million or more than 7 per cent. The improvement was shared by all classes of insurance —fire, accident, marine, ordinary life and industrial life. It was particularly marked in the case of premiums in the accident and fire departments, the rise being £30.63 million and £10.53 million, respectively. In fact, these premiums rose more rapidly during 1955 than in any other year since 1952, according to Mr. J. A. Pollen, Chairman of the British Insurance Association. Even in the marine department, the premiums recorded a rise—of £2.41 million—in distinct contrast to the continuously downward trend of the last three years. The three non-life branches together thus accounted for an increase of £43.57 million in premiums over the year 1955. The ordinary and industrial life companies also showed a satisfactory expansion in business.

The net premiums written by the member-companies of the British Insurance Association during 1955, as compared with those written in the previous year, are indicated below:

	(In thousand £'s) 1955	1954
General		
Fire	224,287	213,758
Accident	338,524	307,898
Marine	61,450	59,041
Life		
Ordinary	335,681	310,582
Industrial	138,394	131,313
£	1,098,336	1,023,813

The rise of £6.58 million in the "industrial life" premiums during 1955, as noted above, is attributed to two factors. First, in the industrial field, the remarkable activity of the post-war years was maintained and new production records were established. Secondly, inflationary pressures which had somewhat been checked in 1953 rose once again during 1955.

The following statement compares the position of British insurance companies' investments during 1955 with that in 1954 and 1947:

(In thousand £'s)

	1955		1954		1947	
	£	%	£	%	£	%
Mortgages ..	531,888	12.0	450,143	10.9	157,724	6.2
British Government and British Government guaranteed securities ..	1,242,614	28.0	1,269,447	30.6	1,008,702	39.2
Commonwealth Government, Provincial and Municipal stocks	192,017	4.3	188,679	4.5	110,950	4.3
Foreign Government, Provincial and Municipal stocks ..	226,672	5.1	227,442	5.5	135,604	5.3
Debentures, Loan stocks, preference and guaranteed stocks and shares ..	988,744	21.2	852,130	20.6	521,207	20.4
Ordinary ..	679,854	15.4	584,029	14.1	271,921	10.6
Real property and ground rents ..	257,448	5.1	294,598	7.8	148,749	5.8
Other investments ..	260,579	5.9	249,493	6.0	211,184	8.2
Total ..	4,429,756	100.0	4,146,061	100.0	2,560,991	100.0

The above table is compiled from figures given by the members of the British Insurance Association with head offices in the United Kingdom.
The table applies to invested assets only: current assets are omitted.

The returns relating to investment of insurance companies for 1955 show a continuation of the post-war trends of a sharp increase in the total of mortgage loans and a further expansion in the holdings of fixed interest securities, as well as of ordinary stocks and shares. The proportion of funds invested in British Government securities, it will be recalled, had been on the decline since 1947, a movement paralleled in the inter-war years 1927-37. During the Second World War, as in the first, the insurance companies devoted practically the whole of their new money to the financing of the war through subscription to Government stocks. After the war, the companies devoted themselves rather to the financing of industries—in the form of either fixed interest securities or ordinary shares —and simultaneously assisted in the provision of homes through loans on mortgages to private individuals.

A striking feature of development in British insurance lately is the extensive use made of long-term agreements between insurers and policyholders. The effect of such agreements is merely to bind the insured company to continue its insurances with certain insurers for a period of three or more years; the agreements can be renewed from time to time. In return for this undertaking, the insured company receives a discount off the rates which otherwise will be charged, so that, by entering into such agreements, a definite saving—usually of the order of 5 per cent.—is achieved. These agreements were first used for fire insurance policies and have been applied to both fire and profits insurances for many years. They are now being commonly employed in connection with other types of insurance. Discussing the advantages of such agreements, the Insurance Correspondent of the *Financial Times* has made the following observations:

"Obviously, these agreements have advantages for the insurers, who virtually secure the business for their account for the period of the agreement. Although a discount is granted, a certain amount of work may be saved to the insurers. The cost of putting business on to their books, undertaking surveys and inspections and issuing policies is not inconsiderable, and the certainty of retaining the business for a definite period allows these costs to be spread over the years.

"The fact that the long-term agreement is completed does not alter in any way the arrangement for premium payment. The premium remains on an annual basis, and renewal notices are issued in the ordinary way. In these days, when insurances of large companies are completed by collective policies, the usual forms of collective renewal notice and receipt are issued annually, and the annual premium less the agreed discount has to be paid for the insurance."

Whether or not long-term agreements are entered into, an insurance company will be well advised, as the Correspondent points out, to leave its insurances with the same insurers over a period of years. Indeed, this is a sure way of building up goodwill which will prove to be invaluable wherever there is a border-line claim or other issue. After all, it must be recognised that continuity in insurance arrangements, as with any other business, has its advantages. Once this fact is recognised, the desirability of entering into long-term agreements and thus achieving some saving of premium will no doubt become apparent.

INDIAN MERCANTILE INSURANCE

The 12 months ended 31st December 1955 has proved to be another year of successful working for the Indian Mercantile Insurance Company, Ltd. (General Manager: Mr. R. M. Desai, Bombay). The aggregate net premium income of the general insurance business, which had gone up from Rs. 20.29 lakhs to Rs. 22.19 lakhs in 1954, has recorded a further increase to Rs. 25.94 lakhs in the year under review. The year, which was the last one for life insurance business in India under private management, was also favourable for the Company's life department, as seen from the report of the Custodian. The new life business for the year aggregates Rs. 116.92 lakhs covering 3,326 policies, as against Rs. 105.17 lakhs on 2,983 policies. The distribution to shareholders has been maintained at Rs. 3 per share of Rs. 20 paid-up, to which level it had been stepped up last year from Rs. 2-12 per share.

The following comparative table gives an analysis of the Company's general insurance business for the past four years:

(In lakhs of rupees)

	For the year ended 31st December 1955	1954	1953	1952
Fire—				
Net premium	13.70	12.10	10.78	10.69
Claims	3.81	4.25	5.18	4.03
Commission and expenses of management	5.63	5.18	4.81	5.02
Reserves	8.85	8.05	7.30	7.34
Profit	3.50	2.13	0.87	2.72
Miscellaneous—				
Net premium	8.60	6.36	5.82	6.08
Claims	3.50	2.94	2.01	3.16
Commission and expenses of management	3.75	2.52	2.43	2.61
Reserves	4.30	3.18	2.91	3.04
Profit	0.20	0.67	0.65	0.41
Marine—				
Net premium	3.64	3.73	3.70	2.88
Claims	2.10	2.25	1.62	1.46
Commission and expenses of management	1.04	0.76	0.99	0.71
Reserves	3.64	3.73	3.70	2.88
Profit	0.04	0.75	0.32	0.25

As will be seen from the above table, the fire department continues to be the mainstay of the general insurance business of the Company, the premium income of which exceeding the aggregate premium incomes of the other two departments.

The underwriting profits of the three departments, together with income from interest and other sources, amount to Rs. 5.83 lakhs. After providing for expenses of management (not applicable to any particular fund or account), bad and doubtful debts and other expenses, there is a profit of Rs. 5.11 lakhs, as against Rs. 4.46 lakhs for the previous year. With the surplus of Rs 2.88 lakhs brought in from 1954 and the profit transferred from shareholders' life profit account, the amount available for disposal is Rs. 8.68 lakhs. Out of this, the provision for taxation in respect of 1953 absorbs Rs. 90,247. A sum of Rs. 50,000 (same as in the previous year) has been transferred to the dividend equalisation reserve, Rs. 1.50 lakhs (Rs 1.14 lakhs) to the general reserve and Rs. 30,000 for bonus to staff. The dividend absorbs Rs. 1.27 lakhs leaving Rs. 4.21 lakhs (subject to taxation for 1954 and 1955) to be carried forward.

The Company's financial position is quite satisfactory. The paid-up capital of Rs. 8.46 lakhs is supplemented by reserves and funds aggregating Rs. 36.68 lakhs, including capital premium reserve amounting to Rs. 8.46 lakhs. Since the close of the year, the entire sum standing to the credit of the capital premium reserve has been capitalised and applied towards reducing the uncalled liability to the extent of Rs. 20 per share on 42,306 shares of Rs. 100 each, of which only Rs. 20 had been paid-up before. The capital, thus, stands doubled to Rs. 16.92 lakhs.

During the year under review the life business of the Central India Insurance Company, Ltd., was taken over by the Indian Mercantile. Accordingly, the life funds of the latter as at the close of the year include those of the Central India also. The number of policies in force at the close of the year, including those transferred from the Central India, was 19 497 assuring a sum of Rs. 548.55 lakhs (Rs. 482.14 lakhs), of which Rs. 64.12 lakhs are reinsured. Claims were, however, lower at Rs. 6 10 lakhs, as against Rs. 6.62 lakhs. The renewal expense ratio was 13.1 per cent., having gone up from 12.8 per cent. for 1954.

BRITISH INDIA GENERAL'S GOOD PROGRESS

The results of working of the general department of the British India General Insurance Company, Ltd. (General Manager: Mr. M. S. Dastur, Bombay), during the year ended 31st December 1955 are encouraging, inasmuch as the aggregate net premium income has recorded an increase of Rs. 6.66 lakhs over that for the previous year. This rise compares favourably with that of Rs. 3.43 lakhs noted in 1954. Though, as in the previous year, the increase in premium income has been shared by all the three departments, namely, fire, marine, and accident and general, a substantial part of it is accounted for by the last named department. The life business of the Company, which has since the close of the year been taken over by the Government of India and a separate report on which has been appended by the Custodian (Mr. K. A. Pandit), shows a slight setback during the year. The number of proposals received was 3,259 for an aggregate sum of Rs. 108.53 lakhs, as compared with 3,425 proposals for Rs. 117.23 lakhs in 1954. The number of proposals resulting in policies was 2,817 for Rs. 95.02 lakhs, as against 2,832 policies for Rs. 97.82 lakhs in the previous year.

The net premium income of the fire business rose from Rs. 33.56 lakhs to Rs. 34.11 lakhs and the net losses paid and outstanding from Rs. 10.60 lakhs (31.59 per cent. of the premium income) to Rs. 10.80 lakhs (31.66 per cent.). The transfer to reserve for unexpired risks has been maintained at 40 per cent., while additional reserve has been slightly raised from Rs. 4.19 lakhs to Rs. 4.26 lakhs, leaving a balance of Rs. 4.15 lakhs to be transferred to the profit and loss account.

In the marine section, the net premium income aggregates Rs. 7.13 lakhs, which compares favourably with Rs. 6.87 lakhs in 1954. The expansion in business was accompanied by an increase in claims also, from Rs. 3.90 lakhs (56.74 per cent. of the net premium) to Rs. 4.61 lakhs (64.70 per cent.). The reserve for unexpired risks has been credited with 40 per cent. of the net premium, besides which the entire balance of *Rs. 4.59 lakhs (as against* Rs. 4.46 lakhs) has been credited as additional reserve.

The accident and general department yielded a net premium income of Rs. 26.73 lakhs, a marked increase of Rs. 5.85 lakhs over that for 1954. Claims paid and outstanding went up from Rs. 8.57 lakhs to Rs. 9.70 lakhs, but, in view of the sharper rise in premium income, the percentage of claims to premium has declined from 41.05 per cent. to 36.28 per cent. After setting aside 40 per cent. of the net premium as reserve for unexpired risks and Rs. 4.01 lakhs (Rs. 2.92 lakhs) as additional reserve, there is a profit of Rs. 0.78 lakh (Rs. 0.89 lakh).

The underwriting profit of the Company's general insurance business, together with income from interest and dividends (Rs. 1.84 lakhs), as well as other sources, amounted to Rs. 6.86 lakhs, as compared with Rs. 6.58 lakhs for the previous year. After setting aside Rs. 2.45 lakhs as provision for taxation and expenses not relating to any particular account and excess expenditure transferred to life assurance closed account, there was a balance of Rs. 3.86 lakhs, as against Rs. 3.91 lakhs. Out of this, a sum of Rs. 25,000 has been transferred to reserve for bad and doubtful debts, Rs. 50,000 to general reserve, Rs. 25,000 for dividend equalisation reserve, Rs. 37,500 for contingencies reserve and Rs. 30,000 for gratuity reserve. The dividend is maintained at Re. 1-2 per share, or 11½ per cent. per annum, free of income-tax, to which level it had been raised last year from 10 per cent. per annum.

The financial position of the Company as at the close of the year stands as follows:

	Rs.
Paid-up capital	20,00,000
Fire funds	17,90,744
Marine funds	7,44,300
Accident and miscellaneous funds	14,70,153
Reserves	16,22,209
Profit and loss account surplus ...	76,387
Total .. Rs.	77,03,793

The Custodian's report on the life business of the Company shows that the net premium income for the year was Rs. 13.47 lakhs (as against Rs. 12.24 lakhs), while net claims paid and outstanding aggregated Rs. 71,457 (Rs. 42,462). The total business in force as at the end of the year was Rs. 290.60 lakhs and annuities Rs. 4,955, out of which business amounting to Rs. 38.43 lakhs have been reinsured. The life assurance fund, as at the close of the year, stands at Rs. 33.54 lakhs, an increase of Rs. 8.62 lakhs over the year.

BOMBAY FIRE AND GENERAL

A slight setback in the earnings of the Bombay Fire and General Insurance Company, Ltd., (Managing Director: Mr. Framroze S. Mehta, Bombay) is disclosed by the audited accounts for the year ended 31st December 1955. The aggregate net premium income for the year was Rs. 12.37 lakhs, as compared with Rs. 13.22 lakhs for the previous year, the decline having been shared by all the three departments, namely, fire, marine and accident. The underwriting profits of all the departments amounted to Rs. 2.32 lakhs only, having dropped from Rs. 2.54 lakhs for 1954.

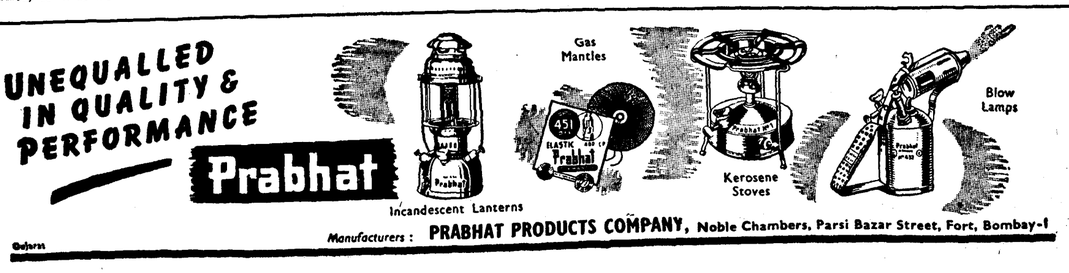
The fire premium has gone down for the second year in succession from Rs. 9.22 lakhs in 1953 to Rs. 8.81 lakhs in 1954 and to Rs. 8.38 lakhs in the year under review. Claims losses have, on the other hand, been slightly favourable at Rs. 1.68 lakhs (20 per cent. of the premium), as against Rs. 1.83 lakhs (20.8 per cent.) in the preceding year. Commission and expenses of management have been very nearly maintained at the previous year's level, namely, Rs. 4.63 lakhs, but, in terms of the premium income, they show a rise from 52.7 per cent. to 55.2 per cent.

The premium income of the marine department also has come down from Rs. 2.57 lakhs to Rs. 2.16 lakhs. Claims amounting to Rs. 1.25 lakhs represent 57.9 per cent., having risen from 49 per cent. a year ago. Expenses of management and commission have gone up from Rs. 0.98 lakh (33 per cent.) to Rs. 1.13 lakhs (52.5 per cent.).

The decline in the premium income of the accident department is negligible, the actual income being Rs. 1.83 lakhs, as against Rs. 1.85 lakhs. Claims losses have gone up from Rs. 0.69 lakh (37.4 per cent.) to Rs. 0.72 lakh (39.4 per cent.). Commission and expenses of management have, however, shrunk from Rs. 0.96 lakh (51.8 per cent.) to Rs. 0.94 lakh (51.3 per cent.).

The profits transferred from the three departments, together with interest and other income, amount to Rs. 2.83 lakhs. After bringing in the surplus of Rs. 4.08 lakhs from the previous year, the Directors have set aside Rs. 1 lakh for taxation (as against Rs. 75,000 a year ago) and Rs. 1.50 lakhs (as compared with Rs. 50,000) for general contingencies fund. They have also maintained the dividend at 7½ per cent. per annum which absorbs Rs. 31,467, leaving to be carried forward Rs. 4.10 lakhs.

The total funds and reserves and surplus as at the end of the year amount to Rs. 17.35 lakhs, as against a paid-up capital of Rs. 4.20 lakhs. Estimated liability in respect of outstanding claims is Rs. 3.72 lakhs. The Company's investments in India aggregate Rs. 13.64 lakhs, the market value of the same being Rs. 13.79 lakhs.



ORISSA CEMENT LIMITED

(A National Enterprise under the Patronage of the Government of Orissa)

Registered Office and Head Office: **P. O. Rajgangpur, Dist. SUNDERGARH.**

AUDITORS

MESSRS. V. SANKAR AIYAR & CO., Chartered Accountants.

BANKERS

NATIONAL BANK OF INDIA LIMITED.

The Company had issued 10,00,000 Ordinary shares of Rs. 10 each in the beginning, out of which *6,78,650 shares were subscribed.* At that time as more subscription was not felt very necessary, no efforts were made for getting further Capital subscribed. Now fresh consent from the Controller of Capital Issues has been obtained to get subscribed the balance issued and unsubscribed 3,21,350 Ordinary shares of Rs. 10 each at par, a complete copy of which is open to public inspection at the Head Office of the Company at Rajgangpur. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINION EXPRESSED WITH REGARD TO THIS.

The Company's Cement Works at Rajgangpur has a daily production capacity of 500 tons. The Cement Works is under extension by a further daily capacity of 600 tons, which is likely to go into production by the end of this year. Besides, the Company has also undertaken putting up of a modern refractory works of an annual capacity of 80,000 tons of firebricks of various kinds including basic bricks in collaboration with German experts for technical advice on royalty basis, the construction of which has sufficiently advanced. The refractory works at Rajgangpur is also expected to go into production before the middle of the year 1957. Further, the Company has also sponsored jointly with Messrs. Dalmia Cement (Bharat) Ltd. an iron and steel foundry in Calcutta under a separate company—Dalmia Iron and Steel Ltd. (with Registered Office at Rajgangpur in Orissa) by subscribing to its capital, which in collaboration with Belgium experts, will manufacture special heat-resisting and wear-resisting machinery parts for the cement industry.

The Industrial Finance Corporation of India has sanctioned a loan to the Company to the tune of Rupees One Crore for the above referred schemes of cement factory expansion and refractory works undertaken by the Company. The further expenses for capital cost and working capital will be met out of the Company's savings made during the last years and out of the present proposed subscription.

The Government of Orissa at the time of flotation of the Company, besides subscribing to the Preference share capital of the Company to the tune of Rs. 40 lakhs, had advanced a sum of Rs. 50 lakhs to the Company free of interest for purchase of 4 lakh tons of cement out of which Rs. 44,35,227-8 have been paid back and/or adjusted by the end of *June 1956 at the rate of Rs. 12-8 per ton of* cement supplied out of the contracted quantity. The balance amount is expected to be cleared very shortly.

The Company had contracted with the Government of Orissa to supply 4 lakh tons of cement as stated above for the Hirakud Dam Project at Rs. 7 per ton less over the contracted rates of the Indian Stores Department of the Government of India. Out of this 3,54,818 tons 4 cwts. have been supplied by the end of June 1956 and the balance quantity would be completed shortly. After that, this special rebate of Rs. 7 per ton would be further saving to the Company.

The Company's results for the first four years' working are given in the table at the bottom. The figures for the year 1955 are subject to audit. The Managing Agents propose to suggest to the Board of Directors to recommend 12½ per cent dividend on Ordinary shares for the accounting year 1955.

The present issue in the first instance is being offered to the existing registered Ordinary Shareholders whose names appear in the Register of Members at the close of Share Transfer Register on 3rd September 1956, at par in the ratio of one share for each two shares held. The present issue number of shares falls short by 17,975 shares if all the shareholders exercise their option to take right shares fully. In such event, the Managing Agents and their Directors and members have agreed to reduce their allotment to the extent as may be necessary to meet the requirement of other shareholders. The time limit for exercising the option to take right shares is upto 31st October 1956. The Letters of Right to be issued to the shareholder are renounceable in favour of any person and the shareholders can get them split up from the Registered Office of the Company to any denomination free of charge. If splitted Letters of Right are required by registered post, the applicant should remit eight annas to cover registration postage charges. Any shareholder, holding big lot of shares in the Company, if desirous to have the Letters of Right splitted from the very beginning, he should write as such to the Company in advance, stating the denomination of each splitted Letter of Right. The shareholders have also the option to apply for extra shares over their right quota but the allotment of such extra shares within the proposed issue would depend on the availability thereof after satisfaction of the application of Right Shares and will be at the absolute discretion of the Directors.

The shareholders who do not receive the circular dated 14th July 1956 in this respect later by 21st July 1956, are requested to refer the matter to the Registered Office of the Company stating their correct address, so that they receive another copy of the circular and the respective Letters of Right properly in time.

The Share Transfer Register shall remain closed from 3rd to 29th September 1956, both days inclusive.

The Letters of Right are expected to be posted on or near about 17th September 1956 under certificate of posting by ordinary post.

Trend of Results

Year	Gross block at cost	Cement production	Gross profits earned before providing depreciation and Managing Agents' commission	Depreciation provided	Dividend on Ordinary shares

INTERNATIONAL FLOW OF PRIVATE CAPITAL IN RECENT YEARS

U.N. STUDY SHOWS NO STRIKING IMPROVEMENT

THE net export of private long-term capital by United States and United Kingdom residents is estimated to have averaged about $2.3 billion annually during the past several years, according to a report on recent international private capital movements released by the United Nations. The net export of such capital from other countries would raise the total to "well above this figure", which includes the reinvested profits of foreign business enterprises. The report, entitled *The International Flow of Private Capital, 1953-1955*, points out that recent private capital exports, when adjusted for the post-war rise in prices, remain well below the volume of the 1920's and have lagged far behind the expansion in international trade, world industrial production and domestic investment. The low level of private investment is accounted for by the drop in foreign portfolio investments*; there is no doubt, the study points out, that the annual post-war growth of direct investments controlled by foreign business enterprises has been larger than during the 1920's.

The study, prepared by the U.N. Bureau of Economic Affairs, supplies information on the international movement of private capital during the last few years and for comparative purposes, contains certain data on the export of public capital. It presents also a survey of recent trends in the "climate" for international investment, covering Governmental measures and policies affecting the flow of private capital in both under-developed and developed countries. The Economic and Social Council will consider the study when it debates the question of financing of economic development at its twenty-second session now being held in Geneva.

With certain exceptions, there has been, according to the Study, a general trend in underdeveloped areas during the past several years towards measures aimed at encouraging private investment from abroad. New policy developments in the major capital exporting countries have been less striking, but, in several European countries, rising levels of savings and the improved payments position have led to relaxation of restriction on capital exports.

Investment Decisions

"It is not to be expected, however, that the action taken will exert a strong influence on the total volume of investment in the short run," the Report states. "Many of the measures and policies adopted in capital importing countries leave considerable room for administrative flexibility. Investment decisions usually depend on long-range calculations, and continuity of governmental policies affecting such investments is accordingly important; the full impact of changed policies is not likely to be felt for some time." Furthermore, the measures taken are concerned primarily with investments by foreign business enterprises; "the scope for specific Governmental measures to stimulate private foreign portfolio investment, especially in Government bonds, is fairly limited."

In the less developed countries, particularly, the function formerly performed by foreign private portfolio investment has been taken over to a large extent by public capital in the form of loans and grants channelled through national agencies or loans by the International Bank for Reconstruction and Development. The study points out, however, that, in the present conditions, the borderline between public and private capital is not always clear-cut and several types of association between the two involving varying degrees of risk on the part of the private lender have emerged. Bonds floated in the private capital market of a few lending countries now cover a substantial portion of the loan commitments of the International Bank. The International Bank and the United States Export-Import Bank have also increasingly obtained the participation of private financial institutions, particularly commercial banks, in their lending operations.

During the early post-war years, the volume of private capital exports tended to increase. Since about 1952, however, there has been hardly any clear trend in the outflow from the United States and the United Kingdom, which are the major sources of funds. Private long-term capital exported by the United States in 1964 was over $1,600 million, including reinvested earnings of oversea subsidiaries, while, in the United Kingdom, the net outflow is estimated at some £200 million ($560 million), the highest level for some years.

In 1955, private capital exports from the United States, according to preliminary data, remained at about the 1954 level. The volume of direct investments remained substantially unchanged, while a decline in new foreign security issues was apparently offset by a rise in medium-term lending abroad by commercial banks. In the United Kingdom, a fairly sharp decline in long-term capital outflow occurred in 1955; heightened domestic demand for funds and rising interest rates in the United Kingdom, says the Survey, apparently contributed to this result.

The United States has accounted for well over half of the world's private capital exports in recent years, with Canada the principal recipient. Considerable sums have also been absorbed by Latin America, western Europe, the Middle East—where investment has been chiefly in petroleum extraction—and by Africa for mineral development. United Kingdom private capital exports have gone principally to the sterling area. The private capital movements of continental European countries, the Survey finds, follow a complex and variable pattern. However, a substantial portion of the outflow from this area has gone to the dependent territories of the countries concerned. In addition to the United States and the United Kingdom, the report also contains estimates of capital exports from Switzerland, Belgium, western Germany, France and the Netherlands.

Importance to Economy of Host Nations

In a number of countries, the rapid post-war growth of foreign business investments has reached a level which accounts for an "important share of total output, employment and gross capital formation." This applies particularly to Canada, Venezuela, the oil producing countries of the Middle East and several countries in Latin America and Africa that have attracted sizable investments in mining. The major part of the capital for the post-war expansion of manufacturing that has occurred in a number of less developed countries has been supplied locally, but, recently, the report states this branch of activity, particularly in Latin America, has drawn increasingly on foreign capital and enterprise.

"Foreign enterprises have been particularly active in less developed countries in manufacturing ventures requiring advanced technology in such fields as chemicals and pharmaceuticals, various types of consumer goods and, in a few countries, components of motor vehicles, electrical machinery, and similar products. In a number of cases, the foreign business enterprise has supplied a minor portion of the capital together with essential assistance in the form of patents, information on complex production processes and skilled personnel."

The quantitative importance of foreign investments in the economy of the capital importing country, the Study asserts, is naturally not a full indication of their economic significance. "Foreign enterprises have contributed to increases in productivity through the transfer of modern technology, the training of local labour, the development of managerial techniques and the stimulation of local ancillary industries. They have also served to an increasing extent to mobilise domestic savings for joint investment with foreign capital in productive ventures."

Liberalisation of Governmental Measures

The past several years have seen a substantial increase of governmental action concerned with the international flow of private capital, it is stated. Most of the measures taken have been designed to reduce specific obstacles to the inflow or outflow of capital resulting from previous governmental action or to provide special incentives to private investors. In a number of countries the scope for new investments, particularly in the production of petroleum and other minerals, has been widened by such action. A few countries, however, have expanded the area reserved for public investment and accordingly reduced the potential scope of private foreign enterprise.

The Study notes a trend in many capital importing countries toward a more liberal policy as regards the regulation of entry and operations of foreign-owned enterprises and an easing of restriction on the transfer of income and the repatriation of capital of foreign investments. Since 1953, a number of under-developed countries has also adopted or broadened tax measures designed to stimulate private investment, both foreign and domestic. Other measures taken include the widening of the network of bilateral treaties between the United States and various capital importing countries relating to private investment and the broadened scope of the United States programme of guaranteeing private United States investments abroad against expropriation and inconvertibility of foreign exchange earnings.

Since the beginning of 1953, it is noted, many capital importing countries have modified principles and procedures for the authorisation of new investments from abroad. "A major object of such modification," it is stated, "has been to provide assurances to the investor regarding his right to transfer income and capital accruing from the investment." During the period under review (since 1953) the number of countries authorising the transfer of income accruing to new foreign investments without limit or within fairly broad limits has substantially increased. Regulations relating to the repatriation of capital of non-resident investments remain more stringent, but have also been liberalised.

The degree of assurance against transfer difficulties varies considerably from country to country. The report points out that certain countries not providing assurance by law regarding transferability, administer their exchange controls in a more liberal manner than certain countries with special investment laws. The restriction of transfer of funds accruing from investments has also been eased, it is stated, by the development, in several countries which maintain exchange restrictions, of a free exchange market through which it is possible to make additional transfers at a rate less favourable to the investor than the official rate of exchange. Examples of recent action cited in this connection are Argentina, Brazil and Chile.

*Portfolio investments are made up of many elements, but represent chiefly market purchases of new and outstanding corporate securities and bonds issued by Government or other public authorities.

ECONOMIC COUNCIL IN FRANCE

ITS ORGANISATION AND FUNCTIONS

By J. Bergeal

In almost every country in America and Europe, the Government and Parliament are advised by an expert body on economic matters. In the U.S., there is a Council of Economic Advisers to the President. In the U.K., there is the Board of Trade. In France, too, there is an Economic Council. A difference between the French body and its counterparts elsewhere is its size. The Council consists of as many as 169 members, drawn from the most representative bodies of workers, employers, civil servants, technicians, engineers and executive personnel. One may wonder how such an unwieldy body can work successfully. But the author of the article published on this page avers that it has made a very valuable contribution to the economic progress of France.—ED.

ALONG with the National Assembly, the Senate and the French Union Assembly, the Economic Council constitutes a fourth major French governmental body. Made part of the fundamental machinery of the State by the Constitution of 1946, the Economic Council is a successor to the National Economic Council, which was created in 1925. The Council is designed to link representatives of all economic and social productive forces to the management of French and French Union affairs by uniting them in a single group. This group is more than just consultative; it may take over a question which, in the opinion of the Council, is urgent and needs to be worked out within its jurisdiction.

These two roles—consultative and active—give a greater importance every day to the activities of the body. Certain personalities, including the ex-President of the Republic, Mr. Vincent Auriol, would like to see the Economic Council the first to be apprised of all problems which may arise concerning production, work, consumption, professional organisations, workers, agriculture, crafts, and consumers. The President of the Council, Mr. Emile Roche (who succeeded Léon Jouhaux after the latter's death in 1954), has often pointed out that this third attribution of capital importance to the management of the State may well be granted one day.

The Economic Council has 169 members, appointed each for three years. The present Council, which entered into function in March 1954, is the third to hold office. These 169 members are delegates of the most representative organisations of workers, employees, civil servants, technicians, engineers, and executive personnel (45 members); industrial enterprises (20 members, including 6 from nationalised enterprises); commercial enterprises (10); artisans (10); agricultural organisations (35); medium classes (2); co-operatives (9); departments and overseas territories (15); intellectual workers (8); family and housing associations (9); and various other activities (6).

The sessions of the Council are usually held during those of Parliament. The bureau consists of 14 members. The study groups consist of committees which are competent in both specialised and general economic matters, empowered to call in experts for consultation on a given problem.

The opinions and resolutions adopted by the Council are published in the *Journal Officiel*, and comments on the debates in the *Bulletin du Conseil Economique*. Since the inception of the Council in 1947, more than 3,500 meetings have been held by the various committees.

The specialists on the committees bear no particular political label. They discuss the problems which are submitted to them, or which they themselves decide to study, only from the economic, professional or social angle. With all projects or bills belonging to one of those three categories, the nation's industrial plant and economic international agreements are, therefore, examined. The entire activity of the nation is analysed in order to inform the Government and Parliament on the best political, economic and social policies to be followed.

The Economic Council is thus charged with a continuous and vigilant task, which is not always understood by the public. The opinions and recommendations formulated provide an exact tableau of opinion on all the forces at work in the country, because of the diverse sectors of activity represented by its members. Parliament and the Government realise this, and the Council's decisions almost always influence, to a certain extent, the decisions made by the other two bodies, as observers have often noted. Many carefully prepared documents, emanating from accurate sources, enable the members to examine in detail the economic situation and its development. A resume of the work carried out over the past eight years would be extremely long, since all the work touches on fundamental problems of the French economy. We must limit ourselves to a brief look at what has been done during the past two years.

Two matters on which the Economic Council has proffered much sound advice are economic expansion, together with cost factors involved and the need for public support behind such a programme, and the nation's equipment plan. The equipment plan, for example, should be in keeping with a preliminary survey on the whole of foreign trade, resulting in an improved investment policy, as determined by the exigencies of foreign trade. Moving to social problems, the Council favours social progress being linked closely to economic progress. The Council feels that the two are inseparable.

A survey was made on the mass of direct and indirect salaries in the national income between 1949 and 1953, which showed that cash salaried incomes rose in France from 47.9 per cent. in 1949 to 54.4 per cent. in 1953. All domestic trade problems, as well as those of agriculture, were also examined. The Council affirmed the necessity of reforming and lightening the commercial structure, and bringing about a better organisation of agricultural markets and a controlled expansion.

Reports have also been made suggesting possible improvements in the main sectors of industry. The Council insisted on the necessary reconversion of certain enterprises, indicating how such reconversion could be carried out. In the field of science and technology, it was deemed advisable to increase technical exchange programmes with foreign countries. The Council is of the opinion that every international organisation of a scientific, technical, economic or social nature should be encouraged to develop its activities, and recommended that French firms participate extensively in fairs and other international exhibitions.

With regard to foreign trade, the Economic Council proffered many different opinions in which the necessary conditions for the development and the commercial balance were commented upon. The Council prophesied that the future would probably see organisations develop in a given region, grouping several countries within their respective jurisdictions. These organisations would work towards harmonising the various national policies, help the economic development and raise the social standards of member countries, while maintaining full employment. Economic and social problems of the French Union have been the subject of extensive surveys, resulting in the proposal of comprehensive expansion programmes. These opinions and solutions of competent men have made the Economic Council the economic survey bureau *par excellence* of France.

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — *now!*

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at *your* disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

INDIAN ELECTRIC LAMP INDUSTRY

POSITION, PROBLEMS AND PROSPECTS

THE Indian electric lamp industry, consisting of 14 producers, of whom 10 are members of the Indian Lamp Factories Association formed in 1946, is of recent origin. As is the case with all other nascent industries, it has had to contend with numerous handicaps which would have proved insurmountable had it not been for the assistance extended by the Industries Department of the Government of India in certain respects. In the context of large-scale programmes initiated by the Governments, both Central and State, for execution during the ensuing five years and the consequent pressure on the electric lamp industry, the need for meeting the needs of this industry and for strengthening its foundations is all the more important.

The electric lamp industry produces G.L.S. lamps, fluorescent tubes, miniature bulbs, coloured lights, street series and others. Its installed capacity and assessed capacity are 40 million pieces of G.L.S. and other filament types and 31 million pieces, respectively. The present position of the industry is that it is not able to sell all the products turned out even according to the capacity limited by the Government. It may be recalled here that, in order to avoid cut-throat competition and excess production, the Government had sealed a part of the capacity of this industry. While in 1947 the Electrical Equipment Panel estimated the demand for 1952 at 30 million pieces, the actual demand was no more than 20.89 million pieces. In 1952, again, the demand for 1955 was estimated at 31 million pieces and the factories were allowed to expand their production accordingly to 32.5 million pieces (G.I.S lamps only). But, as the demand rose only slowly, the actual production even in 1955 was only 24.40 million pieces (19.90 million G.L.S. variety and the rest other types), that is, about 75 per cent. of the limit allowed.

Trend of Production

The table below gives a clear picture of the trend of production of the various types of lamps from 1950 to 1955:

(In million pieces)

	1950	1951	1952	1953	1954	1955
G.L.S. lamps ..	N.A.	15.235	18.499	17.2	19.34	19.90
Train lighting ..	N.A.	0.549	1.038	1.020	1.45	1.54
Coloured	N.A.	0.215	0.156	0.169	0.43	0.54
Strait series ..	N.A.	0.023	0.055	0.033	0.55	0.70
Others	N.A.	0.493	1.999	1.379	1.64	1.70

N.A. = Not available.

It will be noted from the table above that after pursuing an upward trend between 1950 and 1952, production in 1953 declined. The fall was the result of surplus stocks on hand at the beginning of 1953. At this stage, in order to give relief to the industry, the Government intervened after repeated requests from the producers and restricted the production by 25 per cent. which brought the rated capacity to 24 million. The demand remained low at 17.02 million in 1953. But, thereafter, it picked up. And the cut was gradually reduced during the subsequent years until it was completely abolished early this year. Nevertheless, the industry is still left with a surplus capacity of about 12 million lamps.

The position in respect of non-G.L.S. lamps is, however, somewhat different. In respect of fluorescent lamps, a bulk of the present requirements is being imported. There is only one factory in India producing these lamps. As for miniature lamps, however, three factories have started production, while a fourth one is in the offing. The Lamp Factories Association, however, fears that the demand may not be equal to the total production of these factories. The production of special lamps like Loco headlight lamps, engine headlights and others, has been sufficient to meet internal requirements for some time past.

Raw Materials

The position in regard to raw materials is that only two items, namely, glass shells and brass caps, are being produced. While the former are being turned out by E.L.M.I., Hind and Bengal Electric Works, the latter are being manufactured only by one company, that is, Hind Lamps Limited. The production of these two items, however, is not sufficient to meet the full requirements of the industry. More so in regard to brass caps nearly half the requirements of which is being met by imports.

As a result of representations made by successive Presidents of the Lamp Factories Association, the Government of India established in 1955 a Development Council for all electrical products under the provisions of the Industries (Development and Regulation) Act, 1951. The functions of the Development Council, in which the Association also is represented, are, among other things, recommending targets of production and measures for further utilisation of the installed capacity, suggesting norms of efficiency, reviewing the progress achieved by the industry from time to time, and promoting arrangements for better marketing.

On the basis of a 10 per cent. increase in consumption every year over that of the previous year, the Development Council has estimated the demand for electric lamps in 1960-61 as follows:—

Type of lamps	*Quantity in million pieces*	
	1955†	1960-61
(a) G.L.S. and other types ...	31	45
(b) Miniature	17.2	30
(c) Fluorescent tubes ...	0.8	2

†Not actual but estimated.

Estimated Demand High

The Indian Lamp Factories Association is, however, of the view that the aforesaid estimates err on the high side. The factors that make for an increase in the demand for electric lamps are the establishment of new industries and expansion of old ones, extension of power facilities to a large number of villages and towns and the improvement in the general standard of living of the people during the second Five-year Plan. The Association, however, contends that the increase in demand as a result of all these factors will not be as rapid as has been assumed by the Development Council. The reason given by it for this view is that the impact of economic development on the demand for lamps will not be immediate, nor that large, as most of the expected increase in employment will be in cities and towns which are already electrified. The Association, therefore, estimates that the demand by 1960-61 will be not more than 34.24 million pieces of G.L.S. and other types of lamps (excluding train lighting) 25 million miniature bulbs and 2 million fluorescent tubes.

As a result of this difference of opinion between the Development Council and the Lamp Factories Association on the anticipated demand for lamps in the second Plan period, the estimates in regard to other requirements such as total investment, raw materials, transport needs, etc., have also differed widely. Thus, whereas the Council has estimated the new investment required to reach the target at Rs. 88 lakhs, the Association comments that this amount is rather high.

Excise Troubles

Surplus capacity apart, the industry is faced with many other problems, some of which are highly complicated. The Finance Minister announced in the Budget for 1955-56 the imposition of an excise levy of 10 per cent. *ad valorem* on the manufacture of electric lamps. The cost of electric lamps, thus raised, and the surcharges imposed by the State Governments on the consumption of electricity have tended to dampen the enthusiasm of the low-income groups for lamps. The Central Government has, however, exempted the miniature lamps from excise duty in response to the appeal from the Association. Again, the lamp factories have been asked to fill in a number of forms and submit various returns which increase their overhead expenses. They are not allowed to keep duty-paid goods inside their factories. This has been a source of much annoyance to them especially when the goods cannot be despatched on account of the closure of booking offices. The excise authorities insist on including in the total production all lamps produced in the factories even if they are broken in the process. The factories are, moreover, asked to pay duty again when goods broken in transit are replaced. Non-excisable goods, to add to their troubles, are not allowed to be brought into or taken out of the factories without the permission of the excise authorities. This causes much trouble and inconveniences to the factories. The Association strongly feels that the removal of these and a number of other similar disabilities should help the industry go forward, gaining strength from stage to stage.

The Association feels that as internal production is more than sufficient to meet the entire domestic demand and as there is a large surplus capacity, there is a strong ground for restricting the imports of the following types of lamps:

(1) All types of G.L.S. lamps up to 1,500 watts, (2) all types of loco, headlight, etc., lamps; (3) pigmy lamps, (4) miniature lamps (auto, radio dial and telephone switchboard).

Outlook

In view of the huge expansion programmes proposed under the second Plan, the electric lamp industry has, it is needless to emphasise, a bright future. In the next five years, the country's power resources are to be raised from 3.4 million kw. to 6.8 million kw. and the *per capita* consumption of energy from 25 units to 50 units. The number of towns and villages to be electrified is expected to rise from 7,400 in 1956 to 18,000 in 1961. Substantial amounts have also been allotted for development of industries in both the public and private sectors. An amount of 120 crores is also earmarked for housing during the same period.

In view of these prospective developments, which bear no semblance to what has been done under the first Plan, the programme drawn up by the Development Council for the electric lamp industry is not overbig. Nevertheless, an infant industry like the one under review deserves all possible encouragement at the hands of the Government. It is to be hoped that the authorities will carefully consider the proposals put forth by the Association and facilitate the speedy growth of the industry.

EMPLOYEES' PROVIDENT FUNDS ACT

The Government of India has decided to extend the Employees' Provident Funds Act, 1952, to another four lakh workers in nearly 1,400 factories in the country with effect from 31st July 1956. The factories proposed to be covered are:

(1) Edible oils and fats, (2) Sugar, (3) Rubber and rubber products, (4) electricity including generation, transmission and distribution thereof, (5) tea except in the State of Assam where the Government of Assam have instituted a separate Provident Fund Scheme for the industry including plantations, (6) printing, including the process of composing types for printing, printing by letterpress, lithography, photogravure or other similar processes or book-binding, but excluding printing presses, covered under "newspaper establishments" to which the Employees' Provident Funds Act has already been extended under section 15 of the Working Journalists (Conditions of Service) and Miscellaneous Provisions Act, 1955, (7) stone-ware pipes, (8) sanitary wares, (9) electrical porcelain insulators of high and low tension, (10) refractories, (11) tiles, (12) match factories having a production of over 5 lakh gross boxes of matches a year, and (13) sheet glass factories, glass shell factories, and other glass factories having an installed capacity of over 600 tons.

The provident funds accumulations including the employers' share after the extension of the scheme are estimated to rise by Rs. 32 lakhs. The collections so far made under the scheme amount to over Rs. 55 crores. Covering over 16 lakh employees working in 2,200 factories, the Employees Provident Funds Act, 1952, was enforced on 1st November the same year. The Act at present applies to six industries, namely, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles. The Government proposes to extend the Act to all industries including plantations, mines and commercial establishments, etc., employing 10,000 workers or more during the second Five-year Plan period.

The decision, it is stated, has been taken in response to a persistent demand for the extension of provident fund benefits to all industrial workers. The Planning Commission and the Tripartite Consultative Committees also recommended the extension of the Employees' Provident Funds Act to other industries.

U.K. EXPORTS IN JUNE

The value of Britain's exports in June this year was £276.1 million the second-highest figure ever recorded—only £7.7 million less than in May. In the second quarter of the year, total exports were £816 million, over 5 per cent. more in value than in the first quarter. For the first half of 1956 they were 14 per cent. higher than in the corresponding period of last year, when, however, recorded exports were, on balance, reduced by industrial disputes.

Imports in June amounted to £340.3 million, which was £11.1 million more than in May. For the second quarter of the year, they were 1 per cent. more than in the first quarter; and for the first half-year, 4 per cent. more in value than in the corresponding period last year. Re-exports, at £12.2 million were lower than in recent months, but the total for the half-year was 42 per cent.

BALMER LAWRIE'S BUMPER PROFIT

DIVIDEND RAISED—LARGER TURNOVER

A SHARP jump of Rs. 10.80 lakhs to Rs. 35.33 lakhs in gross profit is disclosed by the audited accounts of Messrs. Balmer Lawrie & Co., Ltd., Calcutta, for the year ended 31st December 1955. This rise in profit follows that of Rs. 2.77 lakhs noted in the previous year after two years of successive recession from a high of Rs. 38.72 lakhs earned in 1951 to Rs. 21.76 lakhs in 1953. Thus, notwithstanding the aggregate rise of Rs. 13.57 lakhs in profit during the past two years, the earlier decline has not been entirely made good. The net profit, at Rs. 19.78 lakhs, compares very favourably with that of Rs. 15.67 lakhs for 1954 and is the highest since 1951.

In consonance with the improvement in earnings, the allocation to the reserves has been raised from Rs. 7.71 lakhs to Rs. 10.24 lakhs and the distribution to the shareholders has been stepped up. There is, however, a slight variation in the pattern of disbursement. Whereas in the previous year, the Directors had added a sum of Rs. 5.01 lakhs to the general reserve and Rs. 2 lakhs to provision for bad and doubtful debts, the entire sum of Rs. 10.24 lakhs set aside from the profit for the year under review has been added to the general reserve. The dividend of 12½ per cent. for the year under review is on the capital reconstructed in September 1954, while the previous year's distribution was made up of a preferential interim dividend of 5 per cent. on the then ordinary shares (which were entitled for such a dividend) before the conversion of deferred shares and capitalisation of reserves and a final dividend of 8 per cent. on the reconstructed capital. On the reconstructed capital, the distribution for 1954 is equal to 9.8 per cent. and this has now been raised to 12.5 per cent. for 1955.

The marked improvement in results for the year under review is due to the larger turnover and increased profit in the import and distribution of engineering products and steel. Export business in tea was, however, less profitable than in the previous year, owing to slump in tea prices. The managed companies also had a favourable year of trading. Referring to the activities of these companies during the year under review, the Directors observe:

"Among the managed companies, the Bengal Paper Mill Company, Ltd., produced a record tonnage and a satisfactory profit. Production of tissue paper at Tribeni Tissues Private Ltd. was also the highest so far recorded. A little less than half the output was exported. The Bridge & Roof Company (India) Ltd. continued to do well and the turnover from the structural shops and the civil engineering and building side of the business was the highest so far recorded. Output included 639 metre-gauge railway wagons. The Indian Galvanising Company (1926) Ltd. did better than in 1954, due to an increased production of drums and metal windows at the Calcutta Works. The British India Electric Construction Company, Ltd. showed a profit during the year. There is still a debit carried forward from previous years which has not yet been wiped off. The Bengal Flour Mills Company, Ltd., did excellently during the first half of the year, but there was a considerable falling off during the last six months owing to market conditions.

"All order books are full and there continues to be a demand for the goods supplied by the Companies in the Group."

The rise of Rs. 11.48 lakhs in receipts from sales and services is accompanied by an increase of Rs. 8.17 lakhs in commission and other income (of which commission alone accounts for Rs. 7.49 lakhs). Another welcome feature of the year's working is that expenses have been kept at the previous year's level.

The paid-up capital of the Company, which was reconstructed in September 1954, is unchanged at Rs. 80.01 lakhs. The reserves and surplus aggregate Rs. 121.56 lakhs, made up of a general reserve of Rs. 51.50 lakhs, share investment reserve Rs. 58.03 lakhs, provision for bad and doubtful debts Rs. 7 lakhs and profit and loss account surplus Rs. 5.03 lakhs. There is a provision of Rs. 11.21 lakhs for taxation. The current liabilities amount to Rs. 225.39 lakhs, having been reduced from Rs. 256.73 lakhs at the end of 1954. The gross block of the value of Rs. 67.47 lakhs has been written down to a book value of Rs. 33.50 lakhs. The current assets aggregate Rs. 404.68 lakhs, represented by trading stocks and stores Rs. 118.42 lakhs, goods-in-transit Rs. 13.30 lakhs, debts, deposits and advances Rs. 160.87 lakhs, investments Rs. 107.79 lakhs and cash balances Rs. 4.29 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 166 *cum-div.* (final div. Rs. 10). On an *ex-div.* basis, the yield on the shares works out to 8 per cent. per annum.

BOMBAY SUBURBAN ELECTRIC

The Bombay Suburban Electric Supply Ltd. (Agents: Messrs. Killick Industries Ltd., Bombay) made further notable progress during the year ended 31st March 1956. The gross profit of the Company, which stood at the low level of Rs. 13.63 lakhs for 1952-53, rose for the third year in succession and reached the handsome figure of Rs. 27.93 lakhs. This improvement reflects the marked expansion in the sale of energy. From 40.66 million kilowatt hours in 1953-54, which itself represented an increase of 22.87 per cent., energy sales aggregated 60.47 million kw.h.—a record in the Company's history—in 1955-56. The profit would have been higher still but for an increase of 15 per cent. to 24.5 per cent. in the thermal surcharge, unaccompanied by any rise in the rates charged to consumers. As readers are aware, electricity rates are strictly controlled by the State and the latter is very slow in recognising the need for raising the tariffs even when the costs go up perceptibly. Consequent on this policy, the net profit-margin of the Company has been steadily declining neeessitating a dip in past reserves even to maintain dividend.

The following comparative table shows the progress of the Company for the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds of energy ..	70.66	61.40	50.80	37.56
Other income	3.03	2.52	2.20	2.04
Cost of energy purchased ..	26.30	20.78	15.08	10.82
Other expenses	20.40	18.21	17.45	15.15
Gross profit	27.93	24.93	20.52	13.63
Agents' commission ..	1.28	1.43	1.16	0.71
Depreciation	7.43	6.56	5.54	4.77
Provision for taxation ..	..	3.55	3.28	..
Net profit	19.22	13.39	10.55	8.15
Transferred from reserves ..	0.12	0.19	1.07	4.91
E.P.T. refund	..	..	..	0.09
To write off intangible assets ..	0.10	0.10	0.10	0.09
reserves	6.99	2.11	1.03	0.89
Dividend	12.25 (7%)	11.37 (7%)	10.50 (7%)	9.17 (7%)
Carry forward	..	..	..	0.01

As can be seen from the table above, the sale proceeds have shot up from the none-too-spectacular figure of Rs. 37.56 lakhs in 1953 to an impressive level of Rs. 70.66 lakhs for the year under review. It will also be noted that the cost of energy purchased and other expenses have gone up perceptibly. In spite of higher gross profit, Agents' commission is lower.

The net profit, at Rs. 19.22 lakhs, is the highest for the last several years. Absence of any provision for taxation during the year under review was by and large responsible for the level attained. But the provisions for statutorily compulsory reserves have greatly reduced the sum available for distribution to shareholders. The Directors have, therefore, found it necessary to withdraw Rs. 12,000 from the dividend equalisation fund to maintain the dividend at 7 per cent.—prevailing for more than ten years. The dividend for 1955-56 is on a higher capital, thanks to the increase of Rs. 12.49 lakhs during the year under report.

Of the sum of Rs. 6.99 lakhs set apart this year for reserves, employees' retiring gratuities reserve alone accounts for Rs. 4.27 lakhs. Of the balance, a sum of Rs. 1.31 lakhs has gone to contingencies, Rs. 70,466 to dividends and tariffs control reserves and a similar amount to consumers' benefit reserve.

As stated above, the paid-up capital of the Company rose during the year under review, following the call of Rs. 25 per share made on the 50,000 partly-paid shares, and stood at Rs. 174.99 lakhs as at the close of March last. Reserves and surpluses at Rs. 39.32 lakhs supplemented the capital. Current liabilities and provisions at Rs. 49.50 lakhs were Rs. 2.62 lakhs more than current assets which stood at the level of Rs. 46.88 lakhs. Additions to the tune of Rs. 17.50 lakhs were made to the gross block which stood at Rs. 262.22 lakhs, as against which there is a total depreciation of Rs. 58.57 lakhs. Intangible assets, consisting mainly of promotion expenditure and new share capital expenses, have been appropriately written down from Rs. 2.14 lakhs to Rs. 2.04 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 116-14 *cum-div.* and, on an *ex-div.* basis, the yield works out to 6.2 per cent. This may appear quite attractive and is positively very much above the level considered adequate for a public utility scrip. The reasons for this high yield are uncertainty about the future margin of profit and the possibility of the industry being nationalised at some time or other.

JEEWANLAL (1929) LTD.

A substantial expansion in turnover, accompanied by a shrinkage in profit, is the outstanding feature of the working of Jeewanlal (1929) Ltd. (Managing Director: Mr. Himchand K. Shah, Calcutta) during the year ended 31st December 1955. Sale proceeds show an increase from Rs. 184.05 lakhs to Rs. 194.92 lakhs, while the gross profit has dwindled from Rs. 4.21 lakhs to Rs. 1.10 lakhs, consequent on the sharp rise in cost of goods sold from Rs. 164.74 lakhs to Rs. 177.21 lakhs and other expenses from Rs. 16.77 lakhs to Rs. 18.53 lakhs.

The profit has, however, been supplemented by a sum of Rs. 3.01 lakhs being the profit on sale of the Company's fixed capital assets at Rangoon, following the closure of the Company's business in Burma. After setting aside Rs. 1.49 lakhs for depreciation (as against Rs. 2.08 lakhs in the previous year) and Rs. 0.62 lakh (Rs. 1.26 lakhs) for taxation, the net profit amounts to only Rs. 1.99 lakhs, which, however, compares favourably with Rs. 0.88 lakh for 1954. After writing back income relating to previous years, the Directors have utilised the net available sum (Rs. 2.01 lakhs) to reduce the accumulated losses of the previous years to Rs. 17.56 lakhs. Consequently, the dividend on ordinary shares has had to be passed over for the fourth year in succession.

During the year under review, the Company along with other aluminium fabricators was faced with certain acute problems. In the first instance, an increase of 10 per cent. in the price of raw materials was made with effect from 1st February 1955. Normally, this would have given the Company a chance to realise more remunerative prices on its stocks, but for the action of the Government in allowing duty-free imports of ungraded scraps at low prices. The result was that the prices of indigenous scraps had to be kept low on par with the imported duty-free scraps. The prices of aluminium utensils also could not be raised to offset the rise in prices of genuine standard raw materials. Also, the manufacturers of genuine aluminium wares had to face competition from cheap products made out of scrap materials.

The aforesaid difficulties were, to some extent, overcome towards the close of the year. On a representation made to the Government of India, imports of scraps were removed from O.G.L. with effect from 1st October 1955 and a 25 per cent. *advalorem* duty was imposed on imports of aluminium scraps with effect from 3rd December. The Government also withdrew from November 1955 the duty draw-back concessions enjoyed by the Company along with a few other companies for the last 25 years. This affected the Company's working and earnings to some extent. To restore the *status quo*, however, a scheme of manufacturing aluminium wares in bond, as sanctioned by the Government, has been introduced by the Company in its factories. The scheme is still in its initial stage and is yet to be developed.

Another recent development of considerable importance to the Company is the Government's action in prohibiting, with effect from 15th June 1956, export of aluminium utensils which do not bear I.S.I. standard marks. The Company has acquired the licence to use the I.S.I. standard marks on goods for export.

ALEMBIC CHEMICAL WORKS

The progress made by the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs. Bhailal Amin and Sons (Private) Ltd., Baroda) during the year ended 31st December 1955 is impressive. The sale proceeds reached a record high at Rs. 115.38 lakhs from Rs. 88.87 lakhs in 1954. The gross profit, the upward trend in which has been maintained since 1952 when it was Rs. 9.48 lakhs, has shot up from Rs. 11.11 lakhs for 1954 to Rs. 14.90 lakhs. As the provision for depreciation and taxation has absorbed the major part of this increase, the Directors could only maintain the dividend, albeit on a slightly increased capital. Nor could they add any amount to reserves. The table below gives a picture of the comparative performance of the Company during the last three years;

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	115.38	88.87	77.28	68.47
Closing stocks	46.15	42.28	38.45	37.40
Raw materials consumed ..	66.81	47.40	39.99	33.16
Expenses	35.81	32.51	28.65	26.97
Gross profit	14.90	11.11	10.28	9.48
Managing Agents' remuneration	3.19	2.38	2.15	1.90
Depreciation	4.15	3.68	4.35	4.31
Taxation	3.50	1.60	0.98	0.90
Net profit	4.06	3.50	2.79	2.37
To gratuity fund	0.50	0.50	..	..
Dividends—				
Preference	0.86	0.86	0.86	0.86
Ordinary	2.20* (8%)	2.00 (8%)	2.00 (8%)	2.00 (8%)
Carry forward	0.57	0.16	0.03	0.11

* On the increased capital raised by a fresh issue of 7,412 shares made during the year.

The sudden increase in the demand for the products of the Company appears to be the reason for the sizable headway it made last year. What is noteworthy, however, is the fact that the expenses have not increased much as compared with the rise witnessed between 1953 and 1954 when sale proceeds, too, went up by Rs. 11.5 lakhs. The net profit, which was only Rs. 3.50 lakhs, Rs. 2.79 lakhs and Rs. 2.37 lakhs during the three preceding years, jumped up to Rs. 4.06 lakhs, a level not touched since 1948. The dividend on preference shares absorbs Rs. 0.86 lakh, and that on ordinary shares Rs. 2.29 lakhs. The dividend on ordinary shares has been maintained at 8 per cent. by the Company for the past six years, but the amount required to maintain it is more at Rs. 2.29 lakhs (as against Rs. 2 lakhs in 1954), consequent on the allotment of 7,412 new shares of Rs. 100 each during the year.

The paid-up capital of the Company has increased from Rs. 39.99 lakhs to Rs. 47.41 lakhs as a result of the new issue of shares referred to above. It is supplemented by reserves and surpluses amounting to Rs. 31.49 lakhs. Among the current liabilities amounting to Rs. 61.92 lakhs, provision for taxation occupies a prominent place at Rs. 16.12 lakhs which is Rs. 3.78 lakhs higher than in 1954. The financial strength of the Company can be further seen from the fact that the current assets (excluding investments in subsidiaries) at the level of Rs. 81.32 lakhs are Rs. 19.40 lakhs in excess of the current liabilities. Gross block, too, has been strengthened by additions to the tune of Rs. 6.33 lakhs and stands as at the end of the year, at Rs. 85.67 lakhs, as against which a depreciation fund of Rs. 44.34 lakhs has been built up.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 123 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7 per cent. per annum, free of income-tax.

COMMERCE AND INDUSTRY

(*Concluded from page 132*)

more than a year ago. The total visible trade deficit in the first half-year was £306 million—almost £150 million less than in the same period of last year. Exports to North America in June were valued at £37.6 million—the second-highest ever recorded. These consisted of £20.3 million worth to the United States and £17.3 million worth to Canada.

INDO-BRITISH TRADE

The value of U.K.'s total trade with India during the first five months of the current year amounted to £133.52 million which is £2.06 million more than that in the corresponding period of last year. Of this total, exports to India accounted for £70.77 million and imports for £62.75 million, as against £55.61 million and £75.84 million, respectively, during January-May 1955. Thus, Britain had a favourable trade balance of £8.02 million during the period this year, as against an adverse balance of £20.2 million in the same period last year.

The table below indicates the U.K.'s principal exports to, and imports from, India during January-May 1956, as compared with those in the same period last year:

	5 Months: Jan-May.	
	1955	1956
Total all exports	55,615	70,772
Of which:		
Machinery other than electric	13,150	19,015
Electric machinery, apparatus and appliances	6,772	8,821
Chemicals	6,858	8,745
Road vehicles and aircraft	4,224	5,088
Total all imports	75,838	62,748
Of which		
Tea	42,073	27,341
Leather and manufactures and dressed furs	4,945	5,362
Animal and vegetable oils, fats, etc.	2,871	5,152
Miscellaneous textile manufactures ..	7,046	5,543

It will be seen that, out of the total value of U.K.'s exports to India, machinery other than electric amounted to £19.0 million, as compared with £13.1 million. Electric machinery, apparatus and appliances held the second rank in the list of exports, their value amounting to £8.8 million, as compared with £6.7 million. Shipments of chemicals, too, rose during the five-month period from £6.8 million to £8.7 million. The value of road vehicles and aircraft despatched to India increased from £4.2 million to £5.1 million.

Among commodities purchased from India by the U.K. during January-May 1956, tea topped the list, though it was 35 per cent. lower than the purchases made last year in the same period. Thus, the offtake of tea this year declined from £42.0 million to £27.3 million. There was, however, an increase in leather and manufactures and dressed furs from £4.9 million to £5.8 million. Imports of animal and vegetable oils, fats, etc., aggregated in value £3.1 million, as against £2.3 million. Imports of miscellaneous textile manufactures, however, dropped from £7.5 million to £5.5 million.

WORLD TOBACCO PRODUCTION

World production of tobacco in 1955 aggregated 8,100 million pounds, according to data collected by the United States Department of Agriculture. This was 2.3 per cent. higher than in 1954 and 12.7 per cent. greater than the average for 1947-51. Most of the increase in production occurred in Asia, while North and South America, Africa and Oceania showed slight decreases. World production of flue-cured tobacco—the principal type entering world trade—increased 223 million pounds with larger supplies available in the United States and Asia. Production of this type outside the United States has increased from 30 per cent. of the market in 1935-39 to 45 per cent. today. Flue-cured, Burley and oriental, the principal cigarette types, account for more than 50 per cent. of world production in contrast to about 33 per cent. before World War II.

Points From The Chair

State Trading Corporation

"The talk of State Trading Corporation has been in the air for some time past, and, although the Government vacillated for some time, a Corporation has been established and started functioning. At this stage, we can only hope that this Corporation will not spread its tentacles beyond its legitimate sphere and the Government would allow free trade to operate in internal and external trade. However, the Government will do well to announce its definite policy in respect of the commodities to be covered by this new institution, so that uncertainty may not hamper the development of our international trade relations. In the modern industrial economies, a growing foreign trade is an essential aspect of a healthy economy and on it depends the exchange resources, the industrial and business activity, the employment potential and the level of incomes in the country. Availability of adequate exchange resources is a prime necessity also for the development of heavy industry and largely the success of the National Plan."

B. L. JALAN,
Bombay Gas Co., Ltd.

World Surplus of Tin

"World production of tin in 1955, exclusive of the U.S.S.R. and China and Eastern Germany (for which figures are not available), was 168,000 tons of tin-in-concentrate. Comparable world consumption was 147,000 tons, leaving a surplus of about 20,000 tons which was largely absorbed by the Texas Smelter. The Texas Smelter may discontinue taking the surplus by the end of this year, but under the proposed International Tin Agreement the buffer stock could be built up so as to prevent an immediate burdensome surplus. Unless a recession in industrial activity occurs, particularly as affecting the tinplate industry, the degree of curtailment in production of tin necessary to balance the supply and demand should, therefore, not be great."

W. M. WARREN,
Malayan Chamber of Mines

Inadequacy of Roads

"A great deal is nowadays written about inflation and the universal panacea of increased production. I believe that to be effective it must be accompanied by the reduction of avoidable waste. More waste is occasioned by transport than by any other single factor, and the waste in transport is mainly due to the congestion and inadequacy of our roads which carry 72 per cent. of all freight tonnage. The expenditure on roads of a fraction of the much heralded expenditure on railways could eliminate most of the wasted cost of transport in a much shorter time. It is a national disgrace, and undoubtedly one of the causes of our economic difficulties, that our expenditure on roads *per capita* of population is so much less than that of every other civilised country in the world."

W. H. GATTY SAUNT,
Amalgamated Roadstone Corporation

Sale of Motor Oils

"Your Company was among the original subscribers to the Motor Accessories Manufacturers Association Limited, which has as its object 'to promote, by exchange of information and by concerted action, the unrestricted sale and display of accessories, tyres, batteries, oils and other products distributed by members of the Association to the motor and allied trades.' Members of this Association believe that the motor trader should be free to sell, and the motorist should be free to buy, any product he wishes. Having absolute confidence in the value and quality of its products, your Company does not desire to restrict the availability of competitive goods. Nor does your Company wish to compete with its trade customers by buying or building company-owned outlets. This policy is welcomed by motor traders and as a result Castrol continues to enjoy not only the widest distribution but also sales predominance in the field of branded motor oils in Britain."

L. W. FARROW,
C. C. *Wakefield & Co., Ltd.*

Outlook for Tin

"The tin market remains very sensitive, especially so in view of the imminence of the enforcement of the Tin Restriction Scheme. Here I would say that despite all the great things expected and claimed for this, we maintain that it still remains to be established whether or not the scheme will prove to be beneficial. However, in the absence of any material disadvantage therefrom, and given the maintenance of a satisfactory tin price level and also a steady improvement in the 'State of Emergency' in Malaya, I think we can look forward with reasonable confidence to results for the current year being not less satisfactory than those now submitted."

R. ELLERTON,
Sungei Kinta Tin Dredging Ltd.

COMPANY MEETINGS AND DIVIDENDS

WESTERN INDIA TANNERIES LTD. Annual General Meeting, Bombay, 27th July 1956. Dividend: As. 15 per share, on shares Rs. 5 and Re. 1-14 per share, on shares of Rs. 10. Transfer books remain closed from 12th to 26th July 1956, both days inclusive.

KATRAS JHERRIAH COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th July 1956. Dividend: Rs. 3-8 per share. Transfer books remain closed from 16th to 30th July 1956, both days inclusive.

JEEWANLAL (1929) LTD. Annual General Meeting, Calcutta, 31st July 1956. Dividend: *Nil.*

GENERAL INVESTMENT AND TRUST CO., LTD. Half-yearly General Meeting, Calcutta, 3rd August 1956. Dividend: Rs. 2-13 per share. Transfer books remain closed from 19th July to 3rd August 1956, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd August 1956. Dividend: Rs. 3-12 per share. Transfer books remain closed from 19th July to 3rd August 1956, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Half-yearly General Meeting, Calcutta, 4th August 1956. Dividend: Re. 1 per ordinary share. Transfer books remain closed from 21st July to 4th August 1956, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 4th August 1956. Dividend: As. 4 per share Transfer books remain closed from 18th July to 4th August 1956, both days inclusive.

HYDERABAD CONSTRUCTION CO., LTD. Annual General Meeting, Hyderabad-Deccan, 4th August 1956. Dividend: O. S. Rs. 6 per share, on shares of Rs. 100 and O. S. Rs. 4-8 per share, on shares of Rs. 75. Transfer books will remain closed from 23rd July to 4th August 1956, both days inclusive.

STRAW PRODUCTS LTD. Annual General Meeting, Calcutta, 6th August 1956. Transfer books will remain closed from 27th July to 7th August 1956, both days inclusive.

THAMARAPALLY RUBBER CO., LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 8th August 1956. Dividend: Rs. 3 per share. Transfer books will remain closed from 1st to 8th August 1956, both days inclusive.

SOUTH ARCOT ELECTRICITY DISTRIBUTION CO., LTD. Annual General Meeting, Madras, 11th August 1956. Dividend: 6¼ per cent.

PODAR MILLS LTD. Annual General Meeting, Bombay, 14th August 1956. Dividend: Rs. 7 per share (final), payable on 16th August 1956. Transfer books will remain closed from 24th July to 14th August 1956, both days inclusive.

SAUGOR ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 16th August 1956. Dividend: As. 4 per share. Transfer books will remain closed from 10th to 16th August 1956, both days inclusive.

BAREILLY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 16th August 1956. Transfer books will remain closed from 10th to 16th August 1956, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 20th August 1956. Dividend: Rs. 10 per share (final). Transfer books will remain closed from 6th to 20th August 1956, both days inclusive.

UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 20th August 1956. Transfer books will remain closed from 14th to 20th August 1956, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. (And Reduced). Dividend of Rs. 2 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 7th to 13th August 1956, both days inclusive.

MLAMALLAY TEA ESTATES LTD. Dividend of Rs. 6-4 per ordinary share, for the year ended 31st March 1956. Transfer books will remain closed from 28th July to 4th August 1956, both days inclusive.

SRI SARADA MILLS LTD. Dividend of Rs. 10 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 22nd July to 4th August 1956, both days inclusive.

INDIAN STEEL ROLLING MILLS LTD. Dividend of As. 12 per ordinary share, for the year ended 31st December 1955. Transfer books remain closed from 18th to 31st July 1956, both days inclusive.

COMPANY REGISTRATIONS

D. P. G. SALES PRIVATE LTD. (First Director: Mr. Damod Prasad Gupta). Business: Importers, exporters and dealers in all merchandise, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 85/87, Nagdevi Street, Bombay 3.

ATUL DRUG HOUSE PRIVATE LTD. (First Director: Mr. Navnitlal Manilal Shah). Business: Importers and exporters. Authorised capital: Rs. 5,00,000. Private company. Address: Mooli Jetha Building, 12, Champa Street, Bombay 12.

KATRAS JHERRIAH RAISES DIVIDEND

SHARP FALL IN PROFIT OF FORT GLOSTER

Katras Jherriah Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st January 1956.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; and this fact has been commented upon by the auditors in their report.

After providing Rs. 63,000 (Rs. 73,500) for depreciation and Rs. 3,48,000 (Rs. 2,38,000) for taxation and cesses and after transferring Rs. 1,00,000 (Rs. 1,00,000) to reserve fund, there is a balance of Rs. 3,08,474 (Rs. 2,28,480) at the credit of profit and loss account out of which the directors recommend payment of a dividend at Rs. 3-8 (Rs. 2-8) per share absorbing Rs. 1,75,000 (Rs. 1,25,000), leaving to be carried forward Rs. 1,33,474 (Rs. 1,03,480).

Raisings during the half-year were 1,53,183 (1,45,596) tons compared with 1,45,054 tons during the previous half-year and despatches, which included purchased coal, were 1,86,541 (1,84,684) tons as against 1,87,070 tons. Raisings at both Seebpore and Laikdih Deep collieries continue to be satisfactory, and these coals find a ready market. The question of expanding coal production to meet the increased demand for the second Five-year Plan is receiving the attention of the directors.

The Award of the All India Industrial Tribunal (Colliery Disputes) was published on 25th May 1956. Representations have been made to Government by the industry for adequate increases in the controlled selling prices for coal to compensate for the considerable extra cost which is already being incurred as a result of the Award.

Hitherto half-yearly accounts have been issued by this Company to its shareholders, but in the opinion of the board of directors this is no longer practicable in view of the provisions of the Companies Act, 1956, regarding annual general meetings and the accounts to be presented at such meetings. Accordingly yearly accounts will be issued in future, commencing with those for the year ending 31st January 1957. This will not preclude the payment of half-yearly dividends, subject to the Company's results permitting, as the Company's Articles authorise the payment of interim dividends. It is therefore the Board's intention to consider the payment of interim dividends in the light of the Company's results up to 31st July, each year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	10,29,548
Reserves ...	16,60,000	Stock of coal	1,56,553
Provision for taxation and cesses ...	6,32,182	Stores ...	4,33,125
Liabilities ...	18,22,560	Debts, deposits and advances ...	20,03,659
Profit and loss account ...	1,33,475	Investments	6,08,225
		Cash ...	5,17,107
Rs.	47,48,217	Rs.	47,48,217

Fort Gloster Jute Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

The accounts show after providing for depreciation Rs. 3,17,282 (Rs. 4,19,862) a profit of Rs. 4,32,433 (Rs. 8,52,341), to which has been added the balance brought forward from the previous account of Rs. 71,982 (Rs. 40,839), making a total of Rs. 5,04,415 (Rs. 8,93,180). This amount the directors recommend should be dealt with as follows:—

To transfer to renewals and replacement reserve account Rs. 1,00,000 (Rs. 4,50,000), to paying the dividend on 7 per cent. cumulative preference shares for the half-year ended 31st March 1956 at Rs. 3-8 per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 49,000), to paying the dividend on 5 per cent. cumulative second preference shares for the half-year ended 31st March 1956 at Rs. 2-8 per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 17,500), to paying a dividend on the ordinary shares at Rs. 7-8 (Rs. 10) per share without any deduction for income-tax payable by the Company Rs. 1,57,500 (Rs. 2,10,000) and to carry forward Rs. 1,80,415 (Rs. 1,66,680).

The mills continued to work with 12½ per cent. sealed looms till 8th January 1956 in accordance with the main and supplementary working time agreements of the Indian Jute Mills' Association. In terms of the resolutions passed by the Association, 2½ per cent. of the total looms were unsealed from 9th January 1956 and a further 5 per cent. looms with effect from 20th February 1956 leaving 5 per cent. of the total looms sealed.

The prices of manufactured goods remained firm during the half-year but not in proportion to the rise in raw materials which advanced steadily because of the damage to the crop by heavy floods and an increase in demand in the latter part of the period due to unsealing of looms. Trading conditions were therefore difficult and it was not possible to transact business in manufactured goods at a profit simultaneously. The unsealing of further looms encouraged overseas buyers of manufactured goods to hold off pending an assessment of the increase in overall production. Unfortunately, the demand for goods was not sufficient to absorb the increased production. At the date of this report, there is little or no profit on simultaneous business and shareholders would have read in the press of Government's concern at this state of affairs. Ways and means to improve the position are under the active consideration of the industry and the Government.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	42,00,000	Block ...	81,28,836

Thamarapally Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1955.

Estates.—Both Thamarapally and Malyakal Estates are reported to be in good condition.

Crop and prices.—The rubber crop harvested during the year was 2,42,101 (2,29,775) lbs. at 52.12 (51.99) cents per pound against an estimate of 2,28,000 lbs. at 62.94 (60) cents per lb. The crop estimated for 1956 is 2,35,000 lbs. at 62.08 cents per lb. The average price realised was 140.84 (127.37) cents per pound. The controlled price for rubber was increased by Rs. 12 in February 1955 and Rs. 5-12 in September 1955, the latter to compensate for the increase in excise duty introduced from August 1955.

The net profit after providing for depreciation, taxes, managing agents' remuneration, etc., is Rs. 1,06,547 (Rs. 82,288). To this has to be added the balance from last year of Rs. 15,715 (Rs. 13,303), making a total of Rs. 1,22,262 (Rs. 95,590). After deducting the dividend on preference shares for 1955 paid in February 1956 amounting to Rs. 4,875 (Rs. 4,875), there is an available balance of Rs. 1,17,387 (Rs. 90,715). From this the directors recommend 30 (30) per cent. dividend on the ordinary shares Rs. 75,000 (Rs. 75,000) and transfer to dividend equalisation fund Rs. 27,500 (*nil*), leaving a balance of Rs. 14,887 (Rs. 15,715) to be carried forward.

The area under mature rubber is 467.00 acres, and that under coconuts, cashew, etc., is 67.78 acres.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,25,000	Block ...	5,06,834
Reserves ...	2,37,500	Stock-in-trade	69,325

Profit and loss account ...	1,22,262	Advances ...	792
		Cash ...	2,03,669
Rs.	7,84,919	Rs.	7,84,919

Hyderabad Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Babu Khan & Sons, Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 31st December 1953.

The total of receipts from works for the year was I.G. Rs. 25.59 lakhs and after allowing for all working and management expenses and providing for depreciation Rs 52,415, contribution to employees' provident fund Rs. 10,769 and commission to managing agents Rs. 45,250, the working has resulted in a net profit of I.G. Rs. 4,07,253, compared to I.G. Rs. 4,40,341 in the previous year 1954. The aforesaid profit added to the sum of I.G. Rs. 429 brought forward from last year, makes up a total of I.G. Rs. 4,07,682 which the directors propose to appropriate as under:

To dividend on 20,000 4 per cent. cumulative preference shares of O.S. Rs. 100 each, fully paid-up, I.G. Rs. 68,571, dividend of Rs 6 per cent. or O.S. Rs. 6 per share of O.S. Rs. 100 fully paid and O.S. Rs. 4-8 per share partly paid at O.S. Rs. 75 free of income-tax in each case I.G. Rs. 1,35,000, bonus to employees I.G. Rs. 26,500, taxation reserve I.G. Rs. 1,62,500, contingency reserve I.G. Rs. 10,000, dividend stabilisation reserve I.G. Rs. 4,500 and balance to be carried forward to next year I.G. Rs. 610.

The directors report that the Nizam Sugar Factory and the Power Alcohol Factory at Shakarnagar under the Company's management are working quite satisfactorily.

In regard to the conversion of the share capital from Hali Sicca into equal I.G. currency, sanctioned by the shareholders, subject to the approval of the Central Government in the last general meeting held on 17th August 1955 by special resolutions Nos. 6 (5 and 6) and 7, the directors have to report that the matter is under correspondence between the Company and the concerned department of the Government of India. Other special resolutions passed at the aforesaid last general meeting have duly been given effect to.

Accounts in brief are as under:—

Western India Tanneries Ltd.

The directors of the above Company (Managing Agents: Messrs. Pratap Pandit & Co., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The total sales for the year ended 31st December 1955 together with the closing stocks as on 31st December 1955 and sundry receipts amounted to Rs. 53,01,414 (Rs. 48,88,670). After deducting the opening stock, purchases of raw materials, etc., and direct expenditure thereon such as stores consumed, workmen's wages, rents, rates, etc., for the year ended 31st December 1955, which amounted to Rs. 45,04,659 (Rs. 41,58,081), the gross profits for the year is Rs. 7,96,755 (Rs. 7,30,589). From this balance is deducted agents' allowance and commission, staff salary and general charges amounting to Rs. 2,78,546 (Rs. 2,63,680), leaving an available balance of Rs. 5,18,209 (Rs. 4,66,909). From this profit is provided for gratuity Rs. 1,105 (Rs. 1,773), depreciation written off for the year 1955 Rs. 26,551 (Rs. 28,948) and bonus to the Company's staff and workmen (1955) Rs. 59,622 (Rs. 60,835), leaving a net profit subject to provision for taxation as per statement for the year ended 31st December 1955 of Rs. 4,30,932 (Rs. 3,75,353) to brought forward Rs. 9,133 (Rs. 9,230), making a total of Rs. 4,40,065 (Rs. 3,84,583). This amount the directors propose to dispose of as follows:—

To taxation including dividend tax Rs. 2,05,000 (Rs. 1,64,200), to payment of a dividend at As. 15 (As. 15) and Re. 1-14 (Re. 1-14) per share of Rs. 5 and Rs. 10 paid up, respectively, free of income-tax and dividend tax out of the profits for the year 1955 Rs. 1,31,250 (Rs. 1,31,250), to transfer to reserve fund Rs. 85,000 (Rs. 75,000), to reserve for gratuity Rs. 10,000 (Rs. 5,000) and to carry forward to next year's account Rs. 8,815 (Rs. 9,133). The directors desire to draw the shareholders' attention to the declared policy of the City's Municipal Corporation to shift in the near future all the tanneries (including the Company's tanneries), from their present location in Dharavi to some place beyond Chembur or Thana. The Company has, therefore, to be prepared for the heavy loss due to dislocation of its business and the large expenditure which this change will involve; and the Company hopes that the reserves which the Company as been trying to build up will prove helpful in meeting this contingency when it arises.

Attention of the members is invited to section 170 of the Articles of Association of the Company under which dividends remaining unpaid for more than five years are liable to be forfeited and credited to the reserve fund account. The dividends for the year ended 31st December 1950 if not drawn on or before the 31st December 1956, will be forfeited and credited to the reserve fund.

The actual number of days worked during the year ended 31st December 1955 is 306 (306). The directors have paid a bonus at the rate of three months' basic salary to the members of the staff and three months' basic wages to the workmen of the Company out of the profits for the year ended 31st December 1955.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Saugor Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The erection of the new thermal station on a site adjacent to the existing power house was commenced in April of this year, and satisfactory progress has been made, and if unforeseen difficulties do not arise, it is expected to commission the power station at the end of the current year. The municipality has a waterworks project in hand, and it is expected that this will be commissioned in the early part of next year. The waterworks will take a load of 615 h.p. from the Company's new power station. Satisfactory progress has been maintained, as will be seen from the following schedule:—

Half-year ended	*Units sold*	*Revenue* Rs.
30th June 1953	641,013	2,06,359
31st December 1953	591,616	1,96,763
30th June 1954	645,244	2,10,358
31st December 1954	635,557	2,10 705
30th June 1955	676,261	2 16.306
31st December 1955	682,701	2 25,792

After providing for all charges, and placing Rs. 1,824 (Rs. 1,500) to statutory contingencies reserve, Rs. 5,000 (*nil*) to general reserve and Rs. 1,119 (*nil*) to tariffs and dividends control reserve, there remains a balance of Rs. 9,748 (Rs. 10,180) including Rs. 2,643 (Rs. 2,756) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 5 (5) per cent. per annum free of income-tax for the half-year Rs. 7,500 (Rs. 7,500) and carrying forward to next half-year Rs. 2,248 (Rs. 2,680).

Accounts in brief are as under:—

General Investment and Trust Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August 1955.

Incluling the sum of Rs. 7,556 (Rs. 7,021) brought forward from the previous half-year and after providing Rs. 7,000 (*nil*) for taxation and transferring Rs. 10,000 (Rs. 2,000) to general reserve and Rs. 10,000 (Rs. 5,000) to revaluation of investments reserve, the profit and loss account shows a credit balance of Rs. 22,002 (Rs. 18,449). The directors propose to dispose of the available balance as follows:—

In paying a dividend on the 1st cumulative preference shares at the rate of 5 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,500 (Rs. 2,500), in paying a dividend on the 2nd cumulative preference shares at the rate of 6 per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 2,213 (Rs. 2,212), in paying a dividend on the ordinary shares at the rate of 7½ (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 8,438 (Rs. 5,625) and in carrying forward Rs. 8,851 (Rs. 8,112).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,25,000	Investments	4,83,776

Profit and loss account ...	8,851		
Rs.	5,15,182	Rs.	5,15,182

Sathe Biscuit and Chocolate Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sathe Food Industries, Private Ltd., Poona) submit the audited accounts of the Company for the year ended 31st March 1956.

After providing Rs. 1,20,000 for depreciation, the profit and loss account shows a net profit of Rs. 79,859 adding to this the last year's carry over of Rs. 4,029 it comes to Rs. 83,888. The directors disposed of this amount as follows:—

Payment of 5 per cent. dividend (less tax) on 5 per cent. redeemable cumulative preference shares on paid up value Rs. 18,450, payment of 5 per cent. dividend on ordinary shares on paid up value Rs. 49,200, provision for income-tax Rs. 6,500 and in carrying over Rs. 9,738.

During the year a further loan of rupees three lakhs was received from the Bombay State Financial Corporation. It is only with this timely assistance that the Company has been able to show appreciable progress in the business.

The sales for the period under report show an increase of just over Rs. 5,00,000 compared with the figure of the previous year, which denotes a steady progress which it is expected would be continued during the current year.

The sales depots at Kanpur and Calcutta are making progress. Moulding of chocolate on a small-scale has already been started at Calcutta. It is expected that this arrangement would help to increase the demand for chocolate in Calcutta and surrounding market.

Accounts in brief are as under:—

THE NEW GREAT INSURANCE COMPANY OF INDIA LTD.

SPEECH OF MR. TULSIDAS KILACHAND

PRESIDING over the Thirteenth Annual General Meeting of the shareholders of the Company held at Baroda on the 14th July 1956, and in moving the adoption of the Directors' report and accounts, Mr. Tulsidas Kilachand, the Chairman of the Company, made a brief survey of the country's progress under the First Five-year Plan and expressed the view that if the Second Plan was to succeed fully, it should arouse the interest of all sections of society. The responsibility for social and developmental investment rested entirely with the Government, but their resources being barely adequate to tackle their legitimate functions, it would be unwise to expect them to supplant non-governmental organisations and assume additional responsibilities. Industrialisation was the core of national progress for which the country would have to lean heavily on the non-Government sector. He, therefore, urged that this sector should be afforded appropriate working conditions and helped to obtain financial resources. Although the order of priorities laid down in the Plan were applicable to both the sectors, the odds were distinctly in favour of projects in the Government sector. There was a tendency not only to exempt State undertakings from various legal obligations applicable to the non-Government sector, but also to give them precedence in the matter of financial allocations. As a case in point, he mentioned how the non-Government sector, having to depend on its own finances, was being handicapped by the recent enhancement of rates of direct taxation and new imposts such as the additional super-tax on registered firms and on dividends in excess of 6 per cent. as well as on bonus issues. Mr. Tulsidas admitted the helpful role played by the Industrial Credit and Investment Corporation of India but felt that better results could be achieved if the non-Government sector were helped to develop self-reliance rather than depending excessively on Governmental sources.

Insurance Problems

Referring first to the nationalisation of life business, Mr. Tulsidas expressed the hope that the policyholders would continue to get the same efficient and prompt service to which they were accustomed so far. He also suggested that Government should formulate its investment policy in such a way that it would lower the cost of life assurance and increase the bonus rates.

With special reference to third party insurance, the Chairman suggested that insurance interests should get together and make strong representations to the authorities to see that the various State Governments who had shown a tendency to deprive them of their legitimate share of business were dissuaded from doing so.

Referring to the working of the Code of Conduct, he suggested to the trade to approach the Government to bring about certain amendments in the Act which, whilst ensuring the solvency of the companies, would at the same time give complete freedom to the companies to transact their business without any artificial restrictions. He also requested the trade once again to set its house in order and thus avoid giving an opportunity to the Government to interfere in its day-to-day activities.

Mr. Tulsidas appealed to the stronger units to render all help to the weaker ones who might find themselves in difficulties after separation of their life business.

The Chairman also mentioned that the Company had agreed to be one of the promoters of the proposed Reinsurance Corporation which was being set up with the primary object of earning more foreign exchange for the country.

Before concluding his general observations, Mr. Tulsidas welcomed the formation of the Federation of Insurance Institutes and hoped that young men in the profession would take full advantage of the facilities afforded by the new body.

Departmental Accounts

Dealing with the departmental accounts, Mr. Tulsidas stated that the gross income for the year 1955 was Rs. 55,16,239 in fire, Rs. 19,92,911 in miscellaneous insurance, and Rs. 43,55,233 in marine, whilst the net premiums were Rs. 25,59,424, Rs. 16,42,443 and Rs. 16,00,845, respectively. After providing for losses and expenses, and reserves at 50 per cent. in respect of fire and miscellaneous insurance business, a sum of Rs. 1,93,277 from fire and a sum of Rs. 62,748 from miscellaneous insurance were transferred to the profit and loss account. Mr. Tulsidas regretted that a sum of Rs. 2,04,524 had to be transferred to the marine revenue account from the profit and loss account. He attributed this to the rather heavy loss ratio which was a feature of this business the world over, aggravated in the New Great's case by the adverse experience of certain foreign treaties. He, however, assured that this aspect was receiving the Company's attention and in fact appropriate steps had been taken to reduce the Company's commitments gradually.

In the profit and loss account, after providing for the necessary outgo, the balance left over amounted to Rs. 2,66,579. The Directors have proposed to transfer to taxation reserve Rs. 80,000 and to pay seventh dividend on ordinary shares at Re. 1-8 per share, free of income-tax, against last year's dividend of Re. 1-4.

The Chairman also took the opportunity of thanking the Company's agents, field-workers and the officers and staff for the splendid work that they have done last year.

The resolutions relating to the adoption of the accounts, and the re-election of Directors, Mr. Tulsidas Kilachand, Mr. Jehangir Pestonji Patel, and the two new Directors Mr. A. M. M. Arunachalam and Mr. Pratap Bhogilal and the declaration of dividend were carried unanimously. The appointment of Messrs. Dalal and Shah as the Company's Auditors for 1956 was duly approved by the shareholders.

DELHI LETTER

(*Concluded from page 112*)

of German industrial and economic development could be advantageously applied to India.

All these things indicate that the implementation of the second Five-year Plan will progress more smoothly than was originally thought by a section of the Indian people. India will be getting greater economic collaboration from the U.K. as a result of the recent visit of our Prime Minister. His discussions with the important people in Britain shows this trend.

One important fact is that, among many foreign countries which have been able to show impressive development in respect of foreign trade during the post-war period, W. Germany assuredly takes the foremost place. Because of its rapid recovery in the economic sphere, its exports have shown substantial increases from year to year. For instance, during 1954-55, total imports from West Germany to India were valued at Rs. 40.68 crores, while in 1955-56 the figure recorded a remarkable increase to Rs. 60.28 crores, indicating a rise of about 50 per cent. in the level of imports. Looking at it from another angle, it can be safely said that the rise in imports from West Germany is largely accounted for by machinery and capital goods. Imports of millwork and machinery from West Germany during 1955-56 were valued at Rs. 24.57 crores, as compared with Rs. 13.13 crores in the previous year. Expressed differently, the increase in machinery imports works out to about 90 per cent. Although the United Kingdom continues to occupy the first place as the supplier of machinery to India, the progress of West Germany in this sphere must be considered as remarkable, inasmuch as it has been able to march considerably ahead of its competitors.

Machinery Imports

Looking back a little further, in 1951-52, the year of the commencement of India's first Five-year Plan, the overall imports of machinery into India recorded as high a figure as Rs. 108.63 crores. Britain, as usual, headed the list, the extent of its exports of machinery being Rs. 59.60 crores. The U.S.A. came second, exporting as much as Rs. 20.89 crores worth of machinery. Although West Germany was then not in the picture, during the last five years, it has staged a remarkable recovery. As the demand for machinery and millwork in India is likely to go up considerably with the progress in the implementation of the second Plan, imports of machinery from West Germany can be expected to improve further appreciably. In the coming years, economic and technical co-operation between West Germany and India is therefore, expected to be more closer than hitherto.

BOMBAY GAS CO., LTD.

EXPANSION SCHEME TAKEN UP

THE Annual General Meeting of the Bombay Gas Company, Ltd., was held in Bombay on 11th July 1956, under the chairmanship of Mr. Narayanlal Bansilal, a Director of the Company, in the absence of Mr. B. L. Jalan, Chairman. The following is an extract from the Chairman's speech read at the meeting:

"As you will have noticed from the accounts, the trading profits for the year under review are more or less the same as those for the year 1954. You will also notice that, in spite of the decrease in the revenue of the Company from Rs. 82,79,546, in 1954 to Rs. 82,41,293 in 1955, the profits have shown an increase of Rs. 50,961 and this increase has been possible owing to the strict supervision maintained over the expenditure during the year. The gross profit for the year was Rs. 10,98,667, as against Rs. 10,47,706 in the previous year and after making provision for income-tax and super-tax in India and the U.K. to the extent of Rs. 7,57,506 and providing a further sum of Rs. 1,00,000 for gratuity and after adjustments, the net profit for the year comes to Rs. 4,55,641, as against the corresponding figure of Rs. 5,49,639 at the end of the previous year. After adding to the net profit the balance brought forward from the last year we have Rs. 7,10,667 available for distribution, out of which your Directors have recommended a tax-free dividend of 12½ per cent. as in the previous year.

Sales of Gas Increase

"The picture of the accounts of the Company as explained by me would be incomplete without drawing your attention to the fact that the Company has a liability in respect of future payments of gratuity to employees to the extent of Rs. 7,07,346, against which we have a provision for Rs. 4,00,000 only in our balance-sheet. The sale of gas showed an increase of 8,507,000 cubic feet from 1,329,048,600 cubic feet in 1954 to 1,337,555,600 cubic feet in 1955, which comes to 0.64 per cent. over the previous year. Ever since the new management took over the Company, we have been making our best endeavour to increase the production and serve the consumers to our best.

"The production had steadily increased from year to year, as was reported to you last year. This increase was well maintained during the year under review also. Thus, whereas the Company increased its production by 13.5 per cent. in 1949, 21.2 per cent. in 1951 and 30.6 per cent. in 1953, it increased the production by 35.5 per cent. in 1955 over 1946.

"The demand for additional supplies of gas continued but we were unable to take on additional consumers during the year. The production, purification, storage and distribution units were being worked under conditions of constant overload and, in spite of adequate maintenance, there were increasing signs of the effects of this overload on the plant and machinery. A disturbing feature of the year under review was the inadequate and erratic nature of the coal supplies, which resulted at one time in the restriction of coal gas production.

Expansion Scheme

"Schemes of expansion, both major and minor, such as the utilisation of municipal sludge gas, a second water gas plant, oil gasification, etc., were examined. It is gratifying to be able to record that the Directors were pleased to sanction late in 1955 the extension of the present retort house by five more retort beds complete with additional coal handling, charging and gas cooling equipment. An increase in production of about 200 million cubic feet per year is possible with appropriate expansion of the purifier, holder and mains capacity. This extra gas could satisfy the needs of 2,500 new consumers.

"The scheme for the expansion of the retort house by five more beds has been taken in hand and extra supplies on completion of the same will be available by the end of 1956.

"During the year 1955, though the total gas sales could not be improved upon appreciably due to lack of production capacity, carbonisation efficiencies were improved upon. The gas qualities and pressures were further improved to the growing satisfaction of the consumers. The production and sale of all the by-products have registered an increase.

"Labour relations were smooth throughout the year, excepting for general demands like bonus and increase in the dearness allowance. Workers were generally amenable to discipline and were co-operative, which is appreciated.

"The working operations of the Company during the year have been satisfactory and for this our thanks are due to all our staff, of whom Messrs. Chowdhary and Ruggles require special mention."

STERLING GENERAL INSURANCE CO., LTD.

MARKED INCREASE IN BUSINESS

THE following is an extract from the report of the Directors and accounts of the Company for the general insurance business for the year ended 31st December 1955, passed at the Twelfth Annual General Meeting of the Company held on 18th July 1956:

The gross premium booked during the year increased by 27.5 per cent. to Rs. 65,09,028 (Rs. 51,03,013 in 1954), and the net premium increased from Rs. 32,71,738 in 1954 to Rs. 35,46,119 in 1955. The reserve for unexpired risks increased from Rs. 11,54,899 (as at 31st December 1954) to Rs. 14,18,450 (as at 31st December 1955). The expense ratio decreased from 30 per cent. to 27.8 per cent. After providing for all expenses, depreciation and other liabilities, and after increasing the reserves for unexpired risks by Rs. 2,63,551, the working for the year resulted in a net profit of Rs. 1,01,602. Adding to this Rs. 4,871 brought forward from the previous year, the total profit came to Rs. 1,06,473. Out of this, Rs. 38,823 was transferred to reserve against bad and doubtful debts, Rs. 15,000 to provide for income-tax, Rs. 5,000 to staff gratuity fund, Rs. 8,370 to provide for bonus to staff and Rs. 37,268 for dividend to shareholders at 3 per cent., free of income-tax. The balance of Rs. 2,012 has been carried forward to next year.

Increase in Premium

Due to nationalisation of life insurance business, all the assets and organisation relating to that business were taken over by a Custodian who has published the accounts of the life department separately. The year under report witnessed further marked progress in the business of the Company in all departments of general insurance. The gross premium increased by over Rs. 14 lakhs during the year and the net premium by about Rs. 2,75,000 over the figure of the previous year. The Company has been able to strengthen its financial position in all directions and to declare dividend to its shareholders at 3 per cent., free of income-tax.

The assets of the Company (excluding life department) amounted to Rs. 52,99,700 at the end of the year.

The accounts and the report were adopted.

Notice

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Bank will be closed from MONDAY the 6th August 1956 to THURSDAY the 23rd August 1956 (both days inclusive).

By Order of the Board,

N. K. KARANJIA,
General Manager.

BOMBAY, 16*th July* 1956.

N.B.—Warrants for the *Ad-Interim* Dividend for the half-year ended 30th June 1956 on both Ordinary and Ordinary 'A' Shares will be posted to the Shareholders to their registered addresses on and after the 24th August 1956. Intimation of any change of address should be given to the Bank immediately.

QUESTION HOUR IN PARLIAMENT

Looms in Jute Mills

THE Indian Jute Mills Association has decided to seal 2½ per cent. of looms in jute mills. The Government has been consulted in the matter. It is not expected that there will be any retrenchment of labour as a result of the measure.

—*M. M. Shah*

Export of Indian Films

The question of setting up an export promotion council for films is under consideration. There is no control on the export of Indian films under the export control regulations and no licence is necessary. It is understood that there is a fairly substantial demand for Indian films in Kenya, Uganda, Tanganyika and the West Indies. Films worth Rs. 5.33 lakhs were exported to British East Africa in 1955 and worth Rs. 5.20 lakhs in 1954.

—*D. P. Karmarkar*

Manufacture of Streptomycin

Preliminary plans for the setting up of a streptomycin plant in the Penicillin Factory at Pimpri have been drawn up. The scheme envisages the manufacture of 15,000 to 20,000 kilograms of streptomycin per year. A number of leading firms have been asked to state the terms and conditions on which they will be prepared to collaborate in the project.

* * * *

Import of Gypsum from Pakistan

The State Trading Corporation of India (Private) Ltd. has entered into an agreement with the Pakistan Industrial Development Corporation for the purchase of 150,000 tons of gypsum. The agreement will be valid for 12 months from 26th May 1956 when the contract was signed. The price of the imported gypsum will be Rs. 13 per ton f.o.r. Wagah, for a quality content of a minimum of 93 per cent. calcium sulphate. The price can be adjusted at specified rates for variations in quality either way. The average cost of the Rajasthan gypsum is about Rs. 34 per ton f.o.r. Sindri, while that of Pakistan gypsum will be about Rs. 40 per ton f.o.r. Sindri. The quality of Pakistan gypsum is superior.

* * * *

Production of Lathes

The actual production of lathes by the Hindustan Machine Tool Factory at Bangalore is more or less according to the schedule. Twelve lathes have been assembled from imported components and five lathes from parts manufactured in the Factory. Five more lathes are on the test floor and 20 lathes manufactured from components in the factory are being assembled. The agreement with Messrs. Oerlikons envisages the production of 1,200 lathes per year but the sanctioned scheme envisages production of 400 lathes. The target of 400 lathes is to be achieved progressively within a period of five years, beginning with the production of 40 lathes this year. No payment of allowances to Messrs. Oerlikons, is envisaged in the agreement. But provision is made for assigning to Messrs. Oerlikons, free of payment 5 per cent. of the shares of the Company and payment of royalty on actual sales of products of the factory.

—*K. C. Reddy*

JUTE

(*Concluded from page* 122)

this level, overseas markets developed weakness and the offtake fell. In the face of this development, production was raised, thereby aggravating the difficulties of the mills. Stocks began to accumulate once again, with the result they are now nearer the three-year old peak.

The month-end stock position of jute mills during the three months ended June 1956, as also in the same month last year, is shown in the table below:

Jute Goods Stock

(In tons)

	As on 30th June, 1956	As on 31st May, 1956	As on 30th April, 1956	As on 30th June, 1955
Hessian	37,500	40,600	35,900	48,600
Sacking	82,000	71,700	63,300	36,000
Others	6,400	7,400	8,700	3,000
Total ..	125,900	119,700	107,900	87,600

Hessian stocks have registered a fall of 3,100 tons to 37,500 tons, while sackings have shot up further by 10,300 tons to 82,000 tons, thus maintaining the upward trend which began in November 1955. "Others" have, however, shown a steady decrease since March this year when they were higher at 9,500 tons. In June they were 3,100 tons lower at 6,400 tons. It remains to be seen whether, with the resealing of looms which affects production only to the tune of 2,800 tons per month, the stocks with the mills will decline to any perceptible extent from next month onwards.

LOANS FULLY SUBSCRIBED

(*From Our Own Correspondent*)

BOMBAY, 18*th July*

The outstanding event of the week under review which had an important bearing on the money market was the opening of the list for the Central Government's loans on Monday the 16th inst. The list remained open for more than two days and closed today at 11 a.m., after the loans were "fully subscribed." Though no details of the quantum of cash subscriptions and conversion of the 3 per cent. 1957 loan are yet available, it is stated that cash offerings were fairly encouraging, having been more than the figure anticipated.

Be that as it may, the short-term money market experienced a distinct pull during the last three days, following the withdrawal of the floating funds. Banks were not able to get their requirements without resort to borrowing from the Reserve Bank. During the earlier part of the week, however, conditions were a little comfortable.

Inter-bank call money, which was done at 3 per cent. to 3¼ per cent. earlier in the week, was keenly bid at 3½ per cent. during the last three days. House money at call was done at the self-same rate of 3½ per cent. Short-term deposits continued to be offered at 3½ per cent. for one to three months and 3¼ to 3⅜ per cent. for longer periods.

The Reserve Bank's statement for the week ended 13th July 1956 discloses a shrinkage of Rs. 7.91 crores in notes in circulation, in contrast to the rise of Rs. 7.83 crores noted in the previous week. Notes held in the Banking Department have gone up by Rs. 9.29 crores and the consequent increase of Rs. 1.38 crores in total notes issued is covered by a similar rise in rupee coin. There has been a further decline of Rs. 9.94 crores in foreign securities and a corresponding rise in rupee securities. In the Banking Department, there is no change either in the National Agricultural Credit (Long-term Operations) Fund or in the National Agricultural Credit (Stabilisation) Fund. Deposits of the Central Government are lower by Rs. 2.20 crores, while those of other Governments and banks are up by Rs. 2.17 crores and Rs. 2.09 crores, respectively. On the assets side, small variations are noted in balances held abroad and loans and advances to Governments. Other loans and advances have again declined by Rs. 5.58 crores, of which advances to Scheduled banks against usance bills account for a rise of Rs. 28 lakhs. Government Treasury Bills purchased and discounted have declined by Rs. 1.80 crores.

A fall of Rs. 2.60 crores in demand deposits is revealed by the Scheduled banks' statement for the week ended 6th July 1956. Time deposits have again gone up by Rs. 2.09 crores. Inter-bank borrowings also have risen by Rs. 3.83 crores, while borrowings from the Reserve Bank have declined by Rs. 8.41 crores. Borrowings from the State Bank are up by Rs. 1.44 crores. A fractional decline is noted in advances, while inland bills purchased and discounted show a rise of Rs. 1.06 crores. Foreign bills purchased and discounted have, on the other hand, declined by Rs. 1.87 crores. Investments are lower by Rs. 73 lakhs, cash balances by Rs. 4.45 crores and balances with other banks in current account by Rs. 3.57 crores. Money at call and short notice has gone up by Rs. 4.74 crores.

As stated at the outset, the new Central Government loans were fully subscribed. They, however, had no effect on the existing securities which continued to rule dull. Most of them were on offer, but, in the absence of buyers, business was negligible.

3 per cent. 1957 was unchanged at Rs. 99-13, as was 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 found sellers at Rs. 98-2 and 3 per cent. 1963-65 at Rs. 95-2. 3 per cent. 1964 had, however, buyers an anna higher at Rs. 95-1, while 3 per cent. 1966-68 was on offer an anna lower at Rs. 93-3. 3 per cent. 1970-75 had sellers at Rs. 90-5½. 3 per cent. 1986 Conversion Loan backed away from Rs. 77 to Rs. 76-11, but sellers were in evidence even at the lower level. 3½ per cent. 1961 was on offer at Rs. 99-8½ and 3½ per cent. 1964 at Rs. 98-11½. 3½ per cent. 1965 was placed an anna lower at Rs. 98-10. State loans were devoid of any interest.

In the foreign exchange section, the rupee displayed some weakness in terms of the U.S. dollar early in the week, but soon gathered strength, in consonance with the firmness of sterling abroad. Banks' selling rate of ready dollars, after an early rise from Rs. 478⅜ to Rs. 479¼, declined to Rs. 478½ per $100. Similarly, their buying rate moved up from Rs. 474⅜ to Rs. 475¼ before falling to Rs. 474½ per $100. In New York, spot sterling advanced a little from $2.79½-2.79⅝ to $2.79⅝-2.79¾. Forward sterling (three months) gained from $2.77.15/16-2.78.1/16 to $2.78.3/16-2.78.5/16 and transferable sterling from 277.25-277.35 cents to 277.35-277.45 cents.

HIDES FIRM

(*From Our Own Correspondent*)

KANPUR, 15*th July*

The hides and skins market presented a firm trend during the week under review. There was keen demand for upper grade cow and buff, the main purchasers being the local tanners led by Messrs. Cooper Allens. Madras dealers were keen buyers of lower grade cow, and all grades of goat and sheep. Fresh arrivals from the local sources were considerable.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 220 and 3rd grade Rs. 120 per score; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat 1st grade Rs. 170 to Rs. 200 and 2nd grade Rs. 140 per 100 pieces; sheep 1st grade Rs. 180 and 2nd grade Rs. 130 to Rs. 140 per 100 pieces.

SILVER REACTS AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, 18*th July*

The bullion market remained officially closed today on account of *Ashad Ekadasi*. During the major part of the week under review, the market remained firm under the leadership of silver. Yesterday, however, there was a setback on renewed pressure from bears. On balance, silver disclosed a moderate loss, while gold ruled higher by a few annas.

The earlier firmness in silver was attributed to reports that leading bulls had arranged to take delivery of a large quantity of the white metal at the maturing settlement next week. There was, therefore, heavy covering by short sellers. Yesterday's setback was due to two factors, namely, (1) reports that the sellers would be able to give delivery of a quantity more than what the bulls had arranged to take by converting the Tibetan coins and (2) the penalty payable by members in case the contracts are cut out before the settlement is said to be more favourable to sellers.

Gold presented a steady front following a decline in arrivals and rumours that a large quantity of gold was seized by the authorities in Calcutta.

Forward silver (25th July settlement) hardened from Rs. 173-6 to Rs. 174-4, but reacted yesterday to Rs. 172-4. The August settlement moved up from Rs. 172-2 to Rs. 172-12 before winding up at Rs. 171-5.

Ready silver (.996 Mint) rose from Rs. 173-2 to Rs. 174-4, but reacted to Rs. 172-9 at the close. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 15 bars.

Gold for forward delivery (24th July settlement) moved up from Rs. 99-13 to Rs. 100-14 before closing at Rs. 100-7. The August settlement advanced from Rs. 99-7 to Rs. 100-4, but finished lower at Rs. 99-14, the carry forward charges widening from As. 6 to As. 10 against sellers.

Ready gold gained from Rs. 100-5 to Rs. 101-6, but reacted to close at Rs. 100-14. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 2,500 tolas and the offtake also was of the same order.

In London, silver prices were marked down, spot from 78¾*d.* to 78⅝*d.* and forward from 78¾*d.* to 78⅛*d.* Gold moved up from 250s. 2½*d.* to 250s. 4¾*d.*, but receded back to 250s. 2½*d.* New York silver was maintained at 90½*c.*

The following comparative table shows the trend of market during the week under review:

	17-7-56	Highest	Lowest	11-7-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.996 fine Mint) ..	100 14	101 6	100 7	100 5
Forward*	100 7	100 14	99 15	99 13
Sovereign	66 8	66 12	66 8	66 8

† 25th July settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

METALS MOVE UP

(*From Our Own Correspondent*)

CALCUTTA, 17*th July*

Prices of base metals registered small gains during the week under review. However, demand was limited. On the other hand, stockists were reluctant to sell as they anticipated that the uptrend would continue. Stockists of finished goods were pressing for deliveries of products for which they had placed orders on local manufacturers when prices had declined recently. Electrolytic copper opened at Rs. 210 and, after gaining to and remaining at Rs. 212 for most part of the week, jumped to Rs. 217. This followed the substantial gain in prices both in London and in New York markets. This was in turn due to the strike news in the Mufulira mine. Although the strike ended, reports indicated that there was danger of recrudescence of trouble there since the strike was stated to have been staged for political causes. It should be noted that on the London Metal Exchange forward rates were quoted below the ready. Locally, fire-refined ingots recovered from Rs. 200 to Rs. 206. There was good demand for scrap, and, at Rs. 208, clean wire scrap scored a gain of Rs. 8.

Tin was quoted steady at Rs. 492 after easing earlier to Rs. 490 from Rs. 491. The quantity that changed hands was limited. The fact that Malayan tin production was being affected by labour trouble was noted. Virgin lead advanced from Rs. 78 to Rs. 79. This improvement was due not to any local development, but merely reflected the higher trend in London. Electrolytic zinc was quoted at Rs. 64-8, as against Rs. 64-4 early in the week.

LINSEED IMPROVES

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 16*th July*

With better demand from crushers, chiefly for near positions, linseed prices improved during the week. Owing to very poor arrivals from centres and scarcity of supplies, turnover was very poor, although buyers showed some interest chiefly for near positions. The oil section, though it displayed a somewhat better tone, remained rather dull and no parity existed between local and overseas prices.

The latest available quotations are: Ready Rs. 21-12 and July-August Rs. 22 per maund.

COTTON FUTURES EASY

(*From Our Own Correspondent*)

BOMBAY, 18*th July*

The cotton futures market presented a firm trend in the first two sessions, but developed easiness on Saturday which persisted till the close today. The earlier firmness was aided by fears of lower output of cotton as a result of the damage caused by excessive rains in the cotton-growing tracts. Encouraging advices from the spot market also influenced the sentiment favourably. Traders, as a result, were inclined to buy and cotton prices registered an improvement. The upward trend was reversed on Saturday, when, on reports of helpful weather conditions and the consequent prospects of good crop, selling ensued and prices staged a retreat. The earlier gains were completely wiped out and today's closing rates were slightly lower than those at the end of last week.

Jarilla Contract (March 1957) opened the week firm at Rs. 668, as against Rs. 666-12. After advancing to Rs. 676 on Friday, it gradually receded to Rs. 666 today before finishing at Rs. 666-4. Vijay Contract (April 1957) opened at Rs. 819 and spurted to Rs. 825 on the 14th inst. Thereafter, the Contract declined to touch Rs. 816 today before closing a shade better at Rs. 816-8.

The following is the trend of prices of the two Contracts during the week under review:

(In rupees per candy of 784 lbs.)

	18-7-56	*Highest*	*Lowest*	11-7-56
Jarilla (March) ...	666½	676	666	666¾
Vijay (April) ...	816½	825	816	817¾

In the spot section, there was demand for good quality cotton during the major part of the week. Mills were also interested in new crop; they made purchases of Berar, Khandesh and Vijay styles. Delivery contracts were fully steady on fears that the present stocks, together with the first instalment of the new crop, would not be sufficient to cope with the demand after *Diwali*. Many mills were, therefore, inclined to augment their stocks of good quality raw cotton, particularly Vijay and Jaydhar. Today, however, prices of spot lots declined in sympathy with the futures section. In the foreign section, the trend was firm throughout the week. There was a sudden spurt in prices of Egyptions yesterday on reports of a reduction of 10 per cent. in cotton acreage in that country. Some business was reported in new crop B.P. 52 at Rs. 1,470.

The following are the latest available rates from the spot market at Sewri:

Bengal *Deshi* Rs. 620; Jarilla Rs. 770; Khandesh Rs. 775; Vijay Rs. 960; Oomra *Deshi* Rs. 675; Moglai Rs. 680. Delivery Contracts: Khandesh 197/3 December Rs. 125 and Berar December Rs. 107 on Jarilla; 320F December Rs. 64 on Vijay; Vijay 13/16" February-March Rs. 42 on Vijay.

The Karachi cotton market ruled bearish with prices moving down, in contrast to the cheerful appearance noted last week. Enquiries from abroad were negligible. Local demand was also slack, as traders lacked enthusiasm in the absence of fresh developments. N.T.R.G. July, which had staged an impressive recovery last week, dropped Rs. 3-9 to Rs. 77-6 per 82 lbs. January delivery fell by Re. 1-11 to Rs. 73. In sympathy with futures, spot cotton also drifted lower. Punjab *Deshi* receded by Rs. 2 to Rs. 95. Sind *Deshi*, however, was better by As. 8 at Rs. 102-8. The following are yesterday's closing rates—in rupees per 82 lbs.—for a few other popular varieties of Pakistan cotton, with last week's rates given in brackets:

4F Roller 79-1 (81-12); S.G. 81-9 (83-12); 289F N.T. Roller 81-5 (84); S.G. 83-1 (88); 289F Punjab Roller 85-9 (89-12); S.G. 92-9 (95-12).

The Alexandria cotton futures market continued to depict a firm trend during the week under review also. There was renewed buying support throughout the week and values registered a marked improvement. The principal inspiring factor was the reduction in cotton acreage. Trade interest was mainly centred round long-staple varieties. The tone of the spot section, however, was subdued. Business done was limited. Interest in new crop was also small, principal attention being paid to Menoufi.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market are: *Karnak*: July 110.00 (106.00); November 101-85 (98-4); January 98.80 (96.70). *Ashmouni*: August 73.50 (71.70); October 73.45 (71.25).

The Sudan Gezira Board, it is reported, is finding it difficult to dispose of its unsold stocks of cotton at the present reserve prices. These stocks are estimated at 150,500 bales, consisting of lower grades such as GS, GL, AL/WL and KS/KL. No sales, for instance, have been made in the past fortnight.

The most important development in the Liverpool cotton futures market this week was the commencement of business in a new mixed growths cotton futures contract on the 16th inst. It is understood that the U.S., Mexican, East African, Nigerian and Syrian cottons will be tenderable against the contract if of "good character" with a staple length of 1" and above. No allowance will, however, be given for quality better than strict Middling 1.1/16". The new contract will, it is felt, reflect the world price of medium-staple range more accurately than the purely U.S. contracts that are now functioning. Some trade circles believe that, since the new contract is based on five fully representative American type growths, it would be free from the influence of U.S. cotton export policy. This view has, however, been disputed in certain other quarters which point out that, as the U.S. surplus sales policy is the major factor determining world cotton prices, the new contract is unlikely to function smoothly so long as the future selling price of U.S. cotton continues to remain uncertain.

Cotton futures at Liverpool ruled generally easy. There was American and hedge selling in new crop which met with very little offtake. Buy-

ing confidence was lacking, for traders were apprehensive that the U.S. Department of Agriculture might be forced to reduce the Commodity Credit Corporation's floor prices, in order to cope with competition from other cotton-growing countries. Spinners' interest in ready cotton was mainly centred round American short-staple, Mexican, Brazilian, Nigerian and Sudan. But actual turnover was small. Shipment purchases was confined to U.S. varieties, Mexican and Brazilian. The following are the latest available quotations—in pence per lb. —from Liverpool:

Old contract: July-August: 24.00. *New contract*: July-August 27.75; October-November 24.45; December-January 23.5; March-April 23.25; May-June 23.15; July-August 22.90. *American mixed growth contract*: October-November 24.70; December-January 23.65; March-April 23.15; May-June 22.95; July-August 22.75. *Egyptian Karnak Cotton*: July-August, November-December, January-February 54.05. *Sudan contract*: July-August 47.45; September-October 46.00; November-December 45.80.

After an initial advance in prices induced by scattered trade buying and short-covering, the New York cotton futures market developed a reactionary tendency in the later sessions. Following the publication of the official forecast of higher cotton acreage in the coming season, operators were inclined to reduce their commitments. There was also light hedging and selling by locals supplying the offerings. Consequently, prices tended to look down.

The cotton acreage in the new season (1956-57) is expected to be larger than the final acreage for the current season. The Department of Agriculture puts the estimate at 16,962,000 acres, as against 16,928,000 acres sown in 1955-56. The forecast is contrary to the anticipation of traders who had assumed that the acreage restrictions induced by the Government would result in a cut in area under cotton cultivation. Commenting on the U.S. cotton crop position, the Manchester Correspondent of the *Financial Times* observes: "If the yield per acre approaches the very high standard achieved during the past two years, there will be another large crop, leading to a further accumulation of supplies. Last season, a new all-time record yield of 417 lbs. per acre was attained, and the resultant production was 14,721,000 bales. Surplus stocks of American cotton are at present practically equal to a year's output, and the continued building up of stocks has had a most unfortunate effect on world trade both in the commodity and in the finished textile products. The U.S. Government has been urged on all sides to introduce plans to reduce the excess supplies, and is at present engaged on a disposal programme aimed at shifting at least 5 million bales in export contracts at world competitive prices which are distinctly lower than those quoted in the American home market. The further addition of a substantial quantity of new crop cotton could have an even more disturbing effect on the international cotton situation."

Emergence of boil-weevils, according to the U.S. Department of Agriculture, has been very heavy. In early areas of the cotton belt, boll-weevil infestation was increasing rapidly in untreated fields in June last and is a "serious threat unless controlled." By 1st July, the Department says, the acreage of cotton diverted to the Soil Bank was negligible in all States. Actually, Soil Bank participation by cotton farmers, if it comes in appreciable amounts, will not be felt until later this month.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-7-56	10-7-56	3-7-56
Spot	35.90	36.55	36.80
July	32.50	34.58	34.62
October	32.62	32.58	32.65
December	32.70	32.60	32.73

STAPLE FIBRE YARN FIRM

(From Our Own Correspondent)

BOMBAY, 18*th July*

A sharp rise in staple fibre yarn prices was the feature of trading in the yarn market during the week under review. The rise followed a buying spree induced by reports of very limited stocks in consuming centres, particularly in the Punjab. Also, the attractively low levels touched as a result of the two-week old recession in prices evoked good demand from traders. In sympathy with the firmness in fibre yarns and owing to better enquiries from upcountry centres, ready rayon yarns registered an improvement in prices. Forward rayon yarns, however, ruled easy, thanks to rumours of open forward sales of yarn by the National Rayon Corporation. Cotton yarns were, however, irregular, moving both ways. Thus, lower counts elicited buyers' attention on encouraging reports from the South, while finer counts were dull, as offtake continued to be rather poor. The market remained closed today on account of *Ashad Ekadashi*.

Staple fibre yarn (40x2) for July delivery forged ahead by Rs. 18 to Rs. 652. August delivery was well favoured at Rs. 655. Spot indigenous yarns (40x2) also recorded a rise. Citys rallied 21 pies to Rs. 3-6-9. Kohinoors climbed up by 15 pies to Rs. 3-8-6. New Greats strengthened by an anna to Rs. 3-6. Centurys hardened by a like amount to Rs. 3-6-6. Foreign yarns (80x2), on the other hand, were somewhat neglected. Suicos, K'Suns and H'Races declined by As. 2 each to Rs. 6-12, Rs. 6-8 and Rs. 6-2, respectively. Fujis lost an anna to Rs. 6-2. Paramounts eased by half an anna to Rs. 6-2-6.

Snia rayon yarn (120 deniers) for August delivery slipped by Rs. 4 to Rs. 780. October position suffered a like fall to Rs. 787. In contrast, ready 120 Japan improved by an anna to Rs. 3-12-9. 120 Italy rose by three pies to Rs. 3-12-9. 150 Italy was fully maintained at Rs. 3-14 and 150 Japan at Rs. 4-0-9. Among indigenous yarns, National Rayons 120 Bt. cones, 1st grade, gained nine pies to Rs. 3-10-9. 150 Bt. cones 1st grade were better by half an anna at Rs. 3-7-9.

In the cotton yarn section, ten and twenty counts met with good buying support and registered gains on balance. Among the former, Elphinstones picked up As. 6 to Rs. 14. Moderns hardened by As. 4 to Rs. 14-8. Podars advanced from Rs. 14-2 to Rs. 14-4. Deals in 20s Moderns were put through at Rs. 18-6, as against Rs. 18-4 last week. Hinds gained an anna to Rs. 18-5. Forty counts, however, staged a retreat for want of enquiries. Maduras and Minaxis receded by As. 6 each to Rs. 28-10 and Rs. 28-2, respectively. Moderns were quiet at Rs. 28, as also Gokaks at Rs. 28. The prices of sixty counts yarns were unchanged, Moderns being quoted at Rs. 61-8, Raghuvamshis at Rs. 57-4 and Finlays at Rs. 61. Among 80s, Elphinstones declined by Re. 1-8 to Rs. 66-8 and Moderns by As. 8 to Rs. 68-8, but Finlays improved by As. 12 to Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted on 17th as compared with those a week and fortnight before:

	17-7-1956	11-7-1956	4-7-1956
	Rs. a.	Rs. a.	Rs. a.

OILSEEDS RECOVER

(From Our Own Correspondent)

BOMBAY, 18*th July*

The oilseeds market witnessed a two-sided movement during the week under review. In the first three sessions, the sentiment of the market was adversely affected by bear selling and unloading by certain well-known operators. Prices as a consequence declined, to see the lowest levels of the week on the 16th inst. Thereafter, however, the market put on a lively appearance on persistent bull support, induced by fears of damage to crop by excessive rains especially in Saurashtra and by prospects of export quota in castor oil. The firmness in castorseeds May contract which was commenced on the 16th inst. also hardened the sentiment. In the result, prices forged ahead making more than good the earlier losses. The undertone of the market was firm at the close. The market remained closed today, being *Ashad Ekadashi*.

Groundnut, February contract, which closed last week at Rs. 128-8, opened the week lower at Rs. 127-8. On persistent selling pressure, it gave way to touch the week's lowest at Rs. 126-8. At this level there were some buying enquiries as a result of which it made a smart recovery to close at Rs. 130-4. The spot rates were firm, with Bold F.A.Q. registering a rise of Rs. 3 at Rs. 32-8. June-July rose by Rs. 2-12 to Rs. 32-4. August-September too improved by Rs. 2-1 to Rs. 31-5, Khandesh quality put on Rs. 2 at Rs. 33-4. Groundnut oil ex-mill at Rs. 17-4 was a shade higher. Railway receipts were As. 8 better at Rs. 17-4.

Castorseed futures started the week on a quiet note at Rs. 126-14. Owing to sustained offers, the quotation declined gradually to a new low of Rs. 124-4, touched on the 16th inst. Subsequently, however, on rumours of a possible export quota for castor oil, the rate improved to Rs. 132-10. May contract opened on the 16th inst. at Rs. 111-4 and made an encouraging headway to finish the week at Rs. 115. Ready F.A.Q. was, however, a shade lower at Rs. 25-6, while Madras and Kanpur advanced by Rs. 1-2 and As. 14 to Rs. 26-12 and Rs. 25-12, respectively. Oil B.S.S. was done at Rs. 15 and oil commercial was fractionally higher at Rs. 14-2.

Forward trading in linseed will be resumed from Friday the 20th July. Spot linseed moved in sympathy with the general trend of the market. Bold ready, on balance, was As. 6 higher at Rs. 29-2 and August-September As. 12 at Rs. 29-8. Indore, too, finished at Rs. 27-8, representing a gain of As. 12, during the week. Linseed oil ready, however, shed As. 6, closing the week at Rs. 16.

Among the other oilseeds, *kardi* Bold F.A.Q. lost As. 2 to Rs. 17-8. *Niger* seed Bold F.A.Q. was dull at Rs. 27-12. Madras, however, was bid at Rs. 29 as against Rs. 27-12.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	17-7-1956	11-7-1956	4-7-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 18*th July*

The sugar market depicted an easy trend during the week under review. Demand from Malabar side was considerably slack, thanks to the movement of large stocks of sugar from Uttar Pradesh to South India. The ex-mill quotations for Bombay-Deccan sugar were also lower by a rupee per bag, in anticipation of an early further monthly release of sugar for sale in the free market. Some selling was, therefore, in evidence and prices tended to recede. The decline would have been more marked but for renewed reports of the Central Food Ministry's move to export about 200,000 tons of sugar.

In the spot section, large grain indigenous sugar dropped a rupee to Rs. 97-Rs. 102 per bag. Medium grain was done at Rs. 93-Rs. 95, as against Rs. 94-Rs. 95 last week. Paucity of stocks of this variety was keenly felt, owing to unsatisfactory movement position. Small grain sugar was dull at Rs. 90. British refined sugar, however, met with good support and rose by As. 10 to Rs. 88-14.

In the forward section, *Shravan* delivery contract for 'C' grade sugar declined from Rs. 92-6 to Rs. 96. But today, it was favoured As. 4 higher at Rs. 92-4.

Arrivals of indigenous sugar into the market during the week aggregated 9,700 bags, as against 9,600 bags a week before.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

OUTLOOK FOR PEPPER UNCERTAIN

(Messrs. Parekh & Co.)

BOMBAY, 18*th July*

In the earlier part of the week, Malabar black pepper ruled quiet in view of enquiries from the U.S. being smaller and selective. New York dealers refused to pay anything more than $0.27½ for July shipment for Malabar, as Indonesia was reported to be underquoting. Although the present prices are said to be sufficiently low, it appears that operators in the U.S. and Europe are still entertaining doubts as to the ability of the growers in Sarawak and Indonesia to hold on the present prices in the beginning of their respective harvesting seasons.

Alleppey growers were forced to reduce their price from Rs. 700 to Rs. 687½, but even at this rate, business turnover failed to expand, as the recent change in the freight by the Conference Line, made the purchases by the exporters at the limit unremunerative. Garbled at Cochin were done at Rs. 117½. Owing to fairly good demand of white pepper from Europe, Sarawak was reported to be steady, where prices for black after touching Str. $73 improved to Str. $79 and white from Str. $108 to Str. $119. But this did not mend matters for Malabar for the reasons that Indonesia started competing and the Indian growers who were firm at Rs. 700 showed some signs of weakness when prices were quoted below the levels at which they took out loans on their stocks. The future of black pepper seems to be highly uncertain, as in spite of small spot stock and approaching fall season, New York is still persisting in its hand-to-mouth buying policy.

In the later part, however, slight improvement was noticed at Alleppey when exporters who sold on views came out to cover for their sales for shipment during the first half of July. Alleppey went up to Rs. 700 and garbled to Rs. 120.

A small sympathetic rise, both in A.S.T.A. and delivery, was witnessed locally when August-September improved from $0.27 to $0.27¾ and delivery from Rs. 617½ to Rs. 640. Following are today's nominal quotations: Ready Rs. 94 per Bengal maund. July Rs. 640-45 and August Rs. 645-50 per candy of 5¼ cwts.

TEAS WELL SUPPORTED

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 13*th July*

Offerings again amounted to 1¼ million pounds in sale No. 19 which was held on Tuesday, 10th July. Quality was irregular, occasional invoices of low-grown tea were a little brighter, but there was still a heavy weight of rush tea on offer. There were slightly more better liquoring teas on offer and one or two high-grown quality invoices. The sale opened to a much better all-round demand and prices were generally about steady on last rates. There were far less withdrawals of low-grown types. There was a useful demand for better liquoring teas and a strong demand for quality high-growns. The latter were often dearer. Clean, black Middle East types were well supported and were occasionally dearer. Any teas with a show of tip sold well. Whole leaf grades were again a strong feature. The following are the quotations:—

	1956 Rs. a. p.	
Plain B.P.	1 4 0	
Low Medium B.O.P.	1 5 0	
Medium B.O.P.	1 8 0	*Nom.*
Good B.O.P. ... Rs. 1-15-0 to	2 1 0	
Well-made black leaf O.P. ...	2 5 0	

London Market: *Sale of 9th July 1956*:—Market unchanged plainest steady.

Sale of 10th July 1956:—Market firm.

Colombo Market: *Sale of 9th July 1956*:—Sharp advance better qualities. Others slightly dearer, except rubbish.

Sale of 10th July 1956:—Active demand. Low-growns five cents dearer, mediums ten cents dearer, improved quality dimbulas 10 to 20 cents dearer, improved quality uvas frequently 50 to Re. 1 dearer.

Calcutta Market: *Export.*—23,000 chests. Much stronger demand for all descriptions. Better liquoring teas often Re. 1 dearer. Medium Assams As. 4 to As. 8 dearer. Low mediums an anna to As. 1½, plainer types one anna dearer. Whole leaf strong to dearer. Flavoury Darjeeling very strong. Tippy kinds stronger.

Internal.—11,000 packages dust. Very strong general demand. Middle East and C.T.C. types often As. 4 to As. 8 dearer. Dooars commons and low mediums weakest feature irregularly one anna to As. 2 easier. Good support medium Assams and Darjeelings generally one anna to As. 2 dearer. Old seasons sold around last rates. 500 leaf. Good demand irregular rates.

Dust Sale 'N':—The total quantity on offer in sale N, which was held on Thursday, 12th July, amounted to 850,000 lbs. From the outset there was a much better all round demand. Nevertheless, prices were irregularly 1 anna to As. 2 easier. Best liquoring dusts and black Middle East types were the strongest features.

Export Quota.—The market has again hardened and business has been done at 36 pies.

Forthcoming Auctions.—Sale No. 20 will be held on Tuesday, 17th July. Dust sale 'O' will be held on Thursday, 26th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 20:—1,300,000 lbs. Useful demand, but commonest easier. Low and low medium brokens firm. Best liquorings dearer. Very strong enquiry all fannings grades which have advanced. Whole leaf strong demand at better prices."

GOOD LIQUORING TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, 17*th July*

During yesterday's export tea auction buyers once again concentrated their attention on good liquoring teas of all descriptions. Recent trends in tea auctions have shown that the demand for better quality teas has unmistakably increased all the world over. This is principally due to a feeling in the market that, in view of the adverse weather conditions of late, the demand for quality teas during this season may not probably be met in full. As at present, there is little chance for an agreement among the producing countries to regulate and restrict production to demand. For, producing countries apparently prefer to produce as much tea as there is demand. Thus, a glut in supplies of low medium and common teas is likely. Keen competition would naturally drive consumers to prefer quality teas. This is the reason why good teas are fully steady in auctions at Calcutta as well as at Chittagong and Mincing Lane. In such a situation, the need for Indian gardens to seize the opportunity and pay attention to qualitative production rather than quantitative, which was last season's experience, cannot be overemphasised.

Yesterday's offerings amounted to 27,900 packages, and quality teas were fully steady. Tippy teas and medium Assams with quality realised higher prices. There was good demand for the ordinary C.T.C. teas, but the best C.T.C.s were the strongest feature of the sale with the rise in price by several annas. Small black fannings were higher on good demand from Middle East buyers, while the ordinary teas of this variety declined by an anna. Low medium and plain teas were easy, and withdrawals were reported. Darjeelings of all descriptions met with a good market. Whole leaf grades were steady. The quotations were: best C.T.C. Assam B.P. Rs. 4 to Rs. 5, medium Assam B.P. Rs. 2-2 to Rs. 2-4, clean black pekoe Re. 1-15 to Rs. 2, and plain B.P. Re. 1-8 to Rs. 1-8-6.

Export quota right varied from As. 2½ to As. 2-8, with business being done at As. 2-7.

At the internal sale held last week prices for quality teas registered a substantial increase. Thus, C.T.C. Assams and black leaf teas suitable for consumption in the Middle East rose by As. 4 to As. 8. Offerings totalled 10,050 chests, which included 3,100 chests of the old season's teas. There was better demand for the quality teas on offer. Darjeelings improved by an anna to As. 2, as did medium Assams, while commons, Dooars and low mediums lost by an anna to As. 2. Residue teas representing end-of-season characteristics disclosed no change in prices. The rates were: best Assam C.T.C. Rs. 3-4 to Rs. 3-8, medium Assam grainy dust Re. 1-12, and medium Dooars Re. 1-6 to Re. 1-7.

Leaf grades on offer aggregating 416 chests included 232 chests of the new season, and the balance was of the old season's teas. There was fair demand for all teas excepting the green teas, most of which had to be withdrawn.

JUTE GOODS BETTER

(From Our Own Correspondent)

CALCUTTA, 17*th July*

Following good support from overseas buyers, prices of jute goods were better during the early part of the week under review. Hessians held the pride of place, with traders paying more attention to them than to sackings. From the statistical point of view also, such greater attention to hessians was only natural. During the week, the stock position as at the end of June was announced. While overall stocks had increased by 6,200 tons to 125,900 tons, hessians and miscellaneous constructions dropped to 37,500 and 6,400 tons, respectively, from 40,600 and 7,400 tons respectively. The increase in sacking goods at 82,000 tons was by as much as 10,300 tons. This position suggests that, in order to arrive at a correct balance between demand and production, some of the sacking looms would have to be transferred to hessian manufacture. Output figures for the month of June were also available during the week. Compared with the figures for May, production in June fell by 2,800 tons to 98,900 tons, mainly due to the shorter working month. It was, therefore, noted that the total availability of goods during the last month was 218,600 tons from which if the month-end stocks of 125,900 tons were deducted, the demand was of the order of 92,700 tons, i.e., 6,200 tons lower than production. Since yesterday, 2½ per cent. of the looms have been kept under seal, and the feeling in the market is that this is only a partial step towards arriving at a balance between demand and production. This step would curtail production by 3,000 tons, and a further reduction by a similar amount would be in the fitness of things.

From the shipping figures too, traders could derive little satisfaction so far as sackings were concerned. For, sackings shipped during June were lower by 10,000 tons at 30,000 tons, but hessian shipments were higher at 33,900 tons, as against 28,900 tons in May. This was also a factor which led to more interest being shown in hessians by speculators. Although note was taken of the fall in consumption in June in the United States by 10 million yards, this had hardly any depressing effect in hessians in view of the statistical strength. Hessians 40" 10 oz. ready were fully steady at Rs. 38-14, following the announcement of the stock position, and forward goods were quoted at a premium. Thus July-Sept. hessians at Rs. 39-1, were higher by As. 3 and Oct.-Dec. were priced at Rs. 38-15. The lower trend in raw jute prices and mills' anxiety to enter into forward commitments in goods led to a decline in quotations. Ready hessians 40" 10 oz. eased slightly to Rs. 38-9 but remained steady at that level for three days before dropping to Rs. 38-6 by the week-end. The absence of buyers caused a further fall in the rate yesterday to Rs. 38-5 with the forward rates quoting at a premium of As. 3. In sackings, some export business was done with Australia. Ready B. twills after being steady at Rs. 105-6 earlier in the week declined to Rs. 104. The recovery to Rs. 104-4 was short-lived as by the week-end, the quotation had given way to Rs. 103-10. Depressed conditions prevailed yesterday and ready B. twills sagged to as low as Rs. 102-12. As in hessians, forward goods in sackings also were sold at a premium.

The feature in the raw jute market was the decline in prices, following a slight improvement in arrivals. After the substantial purchases last week, mills showed little interest. The old crop jute fell by Re. 1-8 a maund, and the new crop by As. 8. Thus Indian northern bottoms declined to Rs. 27-8 from Rs. 29, and Aug.-Sep. to Rs. 27 from Rs. 27-8.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 16*th July*

The sugar market ruled quietly steady during the week. Mill delivery prices improved slightly. There were enquiries from consuming centres, particularly from the Punjab, Delhi and Bombay area. Booking by railway, however, was restricted and, consequently, despatches were small. Despatches were mostly to Delhi. The total overall production of sugar during the current season is about 1.85 million tons. The standing cane crop for the next season is progressing under healthy conditions in most parts of the State of U.P., due to fairly good rains, but rains in small area at Hapur and near centres are yet deficient and this accounted for the check in progress in the cane crop in this area.

The latest mill delivery prices of sugar are: Jaswant Rs. 28-10, Simbhauli Rs. 28-12, Mowana Rs. 28-4 to Rs 29, Daurala Rs. 29-8 to Rs. 30-4, Amroha Rs. 28-2, Bijnore Rs. 28-4, Mansoorpur Rs. 29 to Rs. 30, Rampur Rs. 31; retail Rs. 30-10 per maund.

The *khandsari* market ruled depressed. Demand was negligible, with meagre arrivals. Inferior grade was quoted between Rs. 20 to Rs. 23 and superior between Rs. 24 to Rs. 27 per maund.

Ready *gur* recorded gains during the week. It was quoted at Rs. 11 per maund for dry quality and at Rs. 10 for wet *kotha* quality. Daily arrivals were about 100 maunds and the week's offtake—mostly to the consuming areas of Gujerat—aggregated 14 wagons and local stock was put at 25,000 maunds. Future *gur* prices ruled both ways in speculative bouts. Opening at Rs. 10-1-9, *fagun* delivery touched the highest at Rs. 10-4-6 and the lowest at Rs. 9-15 during the week and were quoted today at Rs. 10-4-3.

FOODGRAINS SPURT

(From Our Own Correspondent)

HAPUR, 16*th July*

Barring wheat the prices of which ruled quiet, the prices of other grains recorded sharp advances during the week. Wheat average quality was quoted around Rs. 14-12 per maund and outside buying enquiry was stagant at the prevailing rates, but, due to small arrivals at an average of 200 maunds and good demand from consumers, prices continued to be steady. Farm quality prices, however, appreciated slightly, due to some offtake to Bihar. Local wheat stock was unchanged at 83 *khaties*, as against 126 *khaties* at this time last year when average quality was quoted at Rs. 11-6 and farm quality at Rs. 12-12 per maund. Sales of wheat by the Government at Delhi at the rate of Rs. 14 per maund had a quietening effect on the local market. Some foreign wheat was also brought here and was transacted at Rs. 15 per maund. Rice prices also recorded gains during the week, influenced by worsening food situation in East Pakistan and reported smuggling of rice from Bengal to that country. Local supply position is satisfactory and prevailing rates are: *Rangooni* Rs. 19, *manipuri* Rs. 20, *basmati* Rs. 25 to Rs. 33 and coarse quality Rs. 16 per maund.

Barley and *bejhar* prices recorded handsome improvement during the week on poor stock position locally and good consumer demand. The overall production of barley in the country during the year 1955-56 is put at 2,341,000 tons, as against 2,493,000 tons last year and in U.P. alone, barley production has gone down by 150,000 tons. The latest prevailing prices are: Barley Rs. 11-8 and *bejhar* Rs. 11-4 per maund.

Pulses also recorded a rise in prices which, under the leadership of gram, spurted to new highs. The final production report of *gram* for 1955-56 in the country records a fall of 9.8 per cent. as compared with last year, although gram production have been very good in Punjab. Local gram stock was swelling, due to heavy quantity arrivals from Punjab and was put at 70 *khaties*, but prices went up on firm Punjab advices and good demand from Madras. Loading restrictions, however, hampered despatches to that area. Gram local quality was transacted at Rs. 11-12 and Punjab quality at Rs. 12-4 per maund. Peas *dara* green advanced to Rs. 10-13 per maund and arrivals declined to an average of 150 maunds and local stock was put at 59 *khaties*, as against 93 *khaties* at this time last year. *Arhar* was quoted As. 4 higher at Rs. 11-5 per maund and stock swelled to 100 *khaties*, as against 38 *khaties* a year before. *Urd* also recorded gains during the week and the prevailing prices are: *Urd* Rs. 18 to Rs. 19, *moong* Rs. 14, *masoor* Rs. 13-12 per maund. Barring *guwar maha* the prices of which ruled quiet in absence of fresh driving force, prices of all pulses futures recorded advance on bull support and were on Monday quoted at: *Peas bhadon* Rs. 11-2-9, peas white *bhadon* Rs. 11-12, *arhar bhadon* Rs. 11-10-6, *guwar maha* Rs. 8-6-6 and *urd maha* Rs. 14-11.

KIPS FULLY STEADY

(From Our Own Correspondent)

MADRAS, 16*th July*

Trading in kips was moderate. Arrivals were as usual and clearances slow, because sellers were demanding high prices—one to two annas above U.K. levels. It was felt that, if shippers enhanced their offers so frequently, the U.K. buyers would probably lose confidence at origin and keep out of the market again, in view of good shipments made in June, as also to be made in July.

In the July tanned skins London public auctions, prices of sheep skins primes and light weights advanced 6*d.* to 12d., while ordinary tannages were difficult to sell.

Arrivals of tanned skins into the market were on the usual scale and clearance of sheep skins were excellent, probably for shipment to Japan, and prices increased by As. 3 to As. 4 per pound. There was moderate clearance of goat skins and prices advanced by As. 2 per pound. Raw skins markets were firmer in sympathy.

Notice

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

INTERIM DIVIDEND

NOTICE IS HEREBY GIVEN THAT THE following Interim Dividends have been declared for the year ending 31st May 1956, namely:

Rs. 225 per share on 100 Original Shares of Rs. 2,500 each.

Rs. 11-4 per share on 40,000 shares of Rs. 125 each.

Rs. 4-8 per share on 84,000 shares of Rs. 125 each (Rs. 50 paid up).

The above Interim Dividends are payable on and after 3rd September 1956 to shareholders whose names stand on the Register at the close of business on 16th August 1956.

The Transfer Books will be closed from 16th August to 31st August 1956, both days inclusive.

CAPITAL

For the information of shareholders, the Board of Directors advise that they have consulted leading Counsel with regard to the rights to an Extra dividend attached to the holders of the 100 shares of Rs. 2,500 each (nominal), and have obtained two valuations from eminent firms of Chartered Accountants. The valuations have been made on the basis of the conversion of the rights to extra dividend into ordinary shares at par, and both valuations arrive at the same result, namely 18,000 fully paid shares of Rs. 125 each (nominal) as the equivalent in value of the rights to Extra dividend.

By Order of the Board of Directors,

R. E. FORRESTER,
Chairman.

BOMBAY, 18*th July 1956.*

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

INDIA THROUGH BRITISH EYES

IT is at all times interesting to know what foreigners think of one's own country. In recent years, India has had this experience in an abundant measure. Many foreigners have visited this country and paid handsome tributes to its Government and its people. It is, however, easy to overrate these praises. Some of them are no more than a mere traveller's impression formed after a brief and pleasant stay. What really counts from the point of view of the economic development of the country is whether the foreigners who come here from the industrially advanced countries are prepared to consider India as a good "investment risk." This is the real test. It is gratifying to note that India has passed this test from the British standards, for that is the clear verdict in *India*,* a brochure published by the Federation of British Industries.

The fact that foreign investment is needed by a country may indicate that it is economically backward. But, if a foreigner regards that country as a place where he can safely risk his capital, it is a high enough tribute to it. For, nothing can be more depressing to a country to be told that it is not worthy of the aid it may want or need. The favourable British verdict on India is particularly welcome. For one thing, it is easy for the Britisher to yield to the temptation of saying that things were good in the pre-independence days. That it is a Britisher who finds that much good has been accomplished in the post-independence era is an encouraging tribute. Secondly, the tribute is paid after a fairly close and analytical study of Indian economic and political conditions. It is not a mere traveller's tale, pleasant and superficial. Thirdly, the study has been made from the point of view of potential investors in Britain. And investors are always a class of people who would like primarily to be informed of the risks rather than the opportunities. Finally, the study has been made by a person who has himself had previously an intimate knowledge of conditions in this country. For the author of this study, Mr. Stephen Garvin, was a member of the Indian Civil Service for nearly a decade.

Nevertheless, it may be wondered whether Mr. Garvin has altogether overcome the creditable British weakness to see more of the other side than is strictly necessary for an impartial review. For instance, he seems rather disinclined to take too serious notice of some of the recent acts of intervention by the Government of India in the economic sphere. He need not have so wholly endorsed, as he has, the Government's measures nationalising civil aviation, the Imperial Bank and life insurance. On each of these issues and more particularly on the last, the case for nationalisation rested on very insecure grounds. And the undemocratic manner in which nationalisation of life insurance was carried out evoked the strongest protest even from those who did not seriously doubt the wisdom of the Government's desire to own insurance. The fact is that, through such endorsement of the Government's policies, a foreigner may unwittingly do more harm than good, for that is likely to be taken in certain official quarters as a word of encouragement intended as a spur for further acts of State intervention. Yet another weak point in Mr. Garvin's survey is that no mention is made of the Government's drastic land reforms policy which, in the form now advocated by a large section of the party in power, could inflict serious damage on the country's economy and bring about a revolutionary change for the worse in the democratic character of rural India.

Nor is Mr. Garvin entirely right when he assumes that, to an average Indian, it is the paternalistic Government's duty to own and operate industrial enterprises. He says that "the mass of the people are familiar with State enterprise and to them it appears normal and to be expected that the Government should own and operate a steel plant or fertiliser factory as that it should run the railways or provide irrigation system." This is not correct at all. Actually, the people consider it an innovation that the Government should interfere in the economic field. There is, for instance, a proverb in all Indian languages that, "in a kingdom where the king (the State) engages in trade, the people will turn beggars." The fact is that State interference in economic activities of the people is foreign to Indian thought and tradition. Socialism may or may not be a plant worthy of cultivation. But there can be no doubt that it is an exotic plant on the Indian soil. It is, however, true that the average Indian regards the Government as a sort of protecting angel, as a kind and benevolent father. But this feeling is not akin to socialism. Actually, it is the antithesis of socialism. The "protecting angel" would cease to be a protecting angel once it begins to work in the market place.

Again, Mr. Garvin is inclined to exaggerate the importance of special circumstances in which the State has necessarily to play a more vital role in the economic sphere than in the past. Thus, he urges the foreign critics not to ignore the fact that, in India, "only the State can undertake the massive investment required to give India the basis of an industrial economy within a reasonable time." Here, too, he has got the picture out of focus. For it is well not to ignore the fact that this country owes what little industrial progress it has made so far entirely to private enterprise. In the early post-independence years, too, it was remarkably alert in starting several new enterprises in such diverse fields as textile machinery, automobiles, locomotives, aircraft and civil aviation. Even in the sphere of steel manufacture, it is a well-known fact that private enterprise was willing to shoulder the responsibility. The truth is that the State is doing these things, not because private enterprise was not daring enough to undertake them, but because it has, through its cussed industrial policy and penal taxation and on purely ideological grounds, actively prevented such enterprise from promoting the cause of industrialisation.

All this, however, should not detract one from the value of Mr. Garvin's study; nor need it materially affect the validity of the main conclusion he has drawn. In fact, he has succeeded in presenting a synoptic and objective view of Indian economy and political conditions. If he is appreciative of the country's achievements, he is not blind to many of its weaknesses. From this point of view, it ought to commend itself to British investors, for whom it is primarily written, and to Indian authorities, officials and non-officials alike, who will do well to note what so friendly and sympathetic a critic as Mr. Garvin has to say about this country.

What are the encouraging factors about India? These, according to Mr. Garvin, are the "new dynamism" in Indian sobiety, the efficient civil service, and the improvement which has been effected in the agricultural and industrial sectors of the country's economy. He rightly deplores the "linguistic separatism" which, with every week that passes, continues to inflict graver and graver damage on India's unity and the cause of economic progress. He is also right in deploring the "curiously monolithic character" of the Congress Party and the extra-Parliamentary means by which decisions affecting the Government and the country are reached. "One cannot entirely escape," he observes, "the feeling that the sooner India develops a genuine two-party or multi-party parliamentary system the better it will be, for it is clearly not good for the prestige of Indian Parliamentary institutions that all real decisions are so consistently seen to be taken elsewhere." The truth of this observation is borne out by our erstwhile Finance Minister, Mr. C. D. Deshmukh, who, in the course of his statement in the Lok Sabha on his resignation from his office, has taken exception to the extra-Parliamentary means by which the decision over Bombay was reached and announced.

There is a sound and critical appraisal of the second Five-year Plan in the brochure Mr. Garvin deplores that rail transport is already the worst bottleneck in Indian industrial development. After pointing out that there is much doubt whether the provision for the railways is adequate to meet the increase in industrial activity contemplated, he says: "It is difficult to see how it can be expected to do any better at the end of the second Plan than it is now, and many good judges think it may be worse." Although he thinks that industrial targets in the Plan are not too high to be reached by India, he seems to have strong misgivings about the financial side of the Plan. After remarking that "up to a point—a point which the Indian financial authorities have so far shown themselves well able to identify—deficit budgeting is not only safe but necessary," he points out that it is a more serious criticism that, despite an optimistic view of the amount of public borrowing that will prove feasible, a gap of Rs. 400 crores remains in domestic financial resources. In this context, he feels that the likellhood would seem to be that the Government will have to choose between underfulfilment of the Plan in some of its less essential aspects and a risk of inflation much greater than it has so far ever run. Surely, both these alternatives could be avoided and the Plan implemented in its entirety, if the Government and the people adopted a more positive and constructive attitude towards foreign capital. After emphasising that India has to learn that it can, without loss of self-respect, take the aid of private foreign capital, he says:

> "Equity capital will, in the long run, better serve India's interest than fixed-interest loans. India would be more inclined to seek it in the U.K., if we showed any prospect, which we do not at present, of being able to resume our old position as an exporter of capital. This is officially the aim of the Chancellor of the Exchequer, but we are so remote from achieving it that Indian Ministers tend at present to feel that they have hitherto lost little by failure to cultivate the British private foreign investor to more purpose."

An impediment to the flow of foreign private capital and its necessary corollary, technical skill, to India is the high rate of personal taxation. In the context of the paucity of resources for development, no one will regard it as a great tribute that "India is now, in respect of the taxation of personal incentive in industry, the most highly taxed country in the world." Further, the perquisites, which mean for a foreigner working in India far more than they do to him in his own country, have been brought within the net of income-tax. These considerations, it is to be hoped, will induce in the Government second thoughts on this subject. The labour laws and the Indian Companies Act are other sore points. But, as against these factors, he points to the fact that "India is prepared to welcome foreign investment on terms which are not unreasonable, have been conscientiously adhered to, and compare well with those enforced by other underdeveloped countries." India has also a good record as far as capital repatriation and remittance of profits are concerned.

The Government's attitude towards foreign capital, as stated by the Prime Minister in 1949, is quite clear. Briefly, that statement says that Government expects all undertakings, Indian and foreign, to conform to the general requirements of industrial policy. Secondly, the Government foresees no difficulty in remittance of profits and has no intention to place any restriction on withdrawal of foreign capital investments, but remittance facilities would naturally depend on foreign exchange considerations. Thirdly, compensation would be paid on a fair and equitable basis in the event of compulsory acquisition of foreign enterprises. Fourthly, the Government will not object to foreign capital having control of a concern for a limited period, if it is found to be in the national interest and each individual case will be dealt with on its merits. Nor will the Government object to the employment of non-Indians in posts requiring technical skill and experience, though it attaches vital importance to the training and employment of Indians even for such posts in the quickest possible manner. So much for the "written" assurance. But what is really important is the general attitude of the Government. And here, Mr. Garvin urges foreign investors to realise that the Government's attitude of "commonsense and pragmatism" in individual cases is valuable and is of "far more benefit to private industry than vague reassurances which invite empty controversy."

To the British investors, Mr. Garvin offers some very valuable advice. After all, they have a far greater stake in this country than any other class of foreign investors. Their investments aggregate about £300 million or over 80 per cent. of all foreign investments in this country. Further, India is among the first six of the U.K.'s best customers; it takes one quarter of all its imports from the U.K. and sends to Britain no less than one-third of its exports. He notes that there is in India immense goodwill towards Britain. This is a well-known fact, though it may seem surprising to many that the British have not made any serious attempt to turn it to mutual advantage. It should certainly be possible for Britain to play a more active role in India's industrialisation. And, as Mr. Garvin warns, if it does not participate in this process, other countries will. But, before Britain does so, it will do well to remember that it compares unfavourably with its rivals in respect of firm prices, delivery dates, credit terms and in style and appearance of goods. There is no doubt that Britain can make a better showing on all these fronts. And such improvement, when it comes on top of the existing fund of goodwill, would greatly add to the already high level of Indo-British trade.

TABLES TURNED AGAINST INDIAN COTTON TEXTILE INDUSTRY

SOVIET OFFER OF ASSISTANCE TEMPTING

THURSDAY, 5 P.M.

THE exit of Mr. C. D. Deshmukh from the Union Cabinet has had no effect on the share markets, as it was almost a certainty. The vast majority of operators had expected that the first act of the Prime Minister on his return from his foreign tour would be to advise the President to accept Mr. Deshmukh's resignation. It was, of course, not expected that the Prime Minister himself would take over the Finance portfolio even as a temporary arrangement. This part of the development, therefore, came as a surprise. But it is realised in market circles that this is only a stop-gap arrangement and that he would soon hand over the responsibility to a full-fledged party member. There are various guesses as to how soon he will part with this onerous job, requiring, as it does, the undivided attention of a whole-time Minister. Some say that he may have to hold the baby till October, by which time the States Reorganisation Scheme will be complete, releasing from work a good number of trusted Congress leaders. Others feel that he may find a person for this job soon after the S.R.S. Bill is adopted by Parliament. There is, however, hardly any who is inclined to think that he will carry on this responsibility till the forthcoming general elections are over and a new government is formed. With the 1957-58 budget to be framed, it would mean too much work for the Prime Minister who is already burdened with many cares of very exacting nature.

MARKET GOSSIP

* * * *

The British cotton textile industry continues to cry hoarse over imports of cloth into the U.K. As recently as on the 20th inst., Mr. W. T. Winterbottom, Chairman of Fine Spinners and Doublers Association at Manchester, characterised the duty-free imports from India and Hong Kong as "scandalous." There has been no relaxation in the pressure that is being brought on the Board of Trade to "do something" against these imports. The campaign is being carried on not only by the Lancashire millowners but also by the workers' unions. In fact, the latter are making so much political capital out of it that the Tory Government is compelled to take notice of it. Significantly enough, a fortnight ago, Sir Anthony Eden, Britain's Prime Minister, disclosed, at a political meeting in the heart of Lancashire industry, that he had had talks on this subject with Mr. Nehru when the latter was in England for the Commonwealth Conference and suggested to him that it would be in the interests of both the U.K. and India if there were discussions between representatives of the textile industries of the two countries. He added that, personally, he regarded such talks as useful and that he felt that Mr. Nehru shared his view.

Enquiries made in Bombay and New Delhi reveal that neither the Indian cotton mill industry nor the Government of India is averse to such talks. Both of them realise the value of cordial Indo-British trade relations. Despite wild charges by some British trade union leaders and millowners about the state of Indian textile economy, they have, in the past, gone out of their way to meet the British demands. In September 1954, quota restrictions on imports of British-made cotton goods were removed in deference to representations from that country. Again, in May 1955, a substantial reduction in the import duties on certain types of British goods was made. These concessions enabled the U.K. to step up its exports to India from 2.6 million yards in 1954-55 to 6.9 million yards in 1955-56.

Public opinion in India is, however, sharply critical of any concessions shown to Lancashire. Although it is true that neither the reduction in duties in the summer of 1955, nor the lifting of import quotas in the last quarter of 1954, has adversely affected the Indian cotton mills, as the imports have hitherto consisted of special fabrics not manufactured on any large scale in this country, the industry and the Government of India will have to do a lot of explaining if they yield further to the pressure from Lancashire. There are many reasons for this state of affairs. In the first place, Lancashire has had a lead in cotton textile manufacture for well over a century. It is high time other countries which are naturally better placed than Lancashire in the matter of raw materials, labour and markets, had a chance.

Secondly, Britain is in a position to make room for others in the world without suffering any injury to its economy. It has diversified its manufactures and exports by taking to several new lines of manufacture. This has enabled it to provide employment to workers who became displaced as a result of shrinkage in the size of its cotton industry. The labour position in Britain is such that there is still plenty of scope for carrying this readjustment further. In spite of all the ballyhoo from Lancashire, the fact remains that there is no unemployment in Britain, its economy is buoyant and its people are having record high incomes as well as living standards.

Thirdly, in distressing contrast to the aforesaid picture in Britain, conditions in countries which are now able to export modest quantities of cloth to it, are economically poor and suffer from a high level of unemployment. Britain, therefore, should not grudge yielding a small part of its domestic market to these countries. Fourthly, not all the imports of cloth by Britain are for its domestic consumption. A large proportion of them—over 60 per cent.—is re-exported after processing and finishing.

Finally, while Lancashire mills are making much of the fact that the Commonwealth cloth imported into Britain is free of duty, they conveniently seem to forget that the quantum of British cloth imported by Commonwealth countries under preferential duties was very much in excess. Thus, in 1955, Lancashire enjoyed the benefits of preference over £51 million of its sales to the Commonwealth, whereas only £7.5 million worth of duty-free textile imports came into its home market. It is true that, so far as India is concerned, Lancashire mills do not get the benefit of Imperial Preference, but other industries in Britain do derive a considerable amount of advantage, with prospects of further expansion in this direction. Surely, Lancashire cotton interests cannot expect India to view the latter's economic relations with Britain purely from their own point of view. It is for the British authorities to see how best the effect of transition in the character of Britain's export trade on some of its old industries is moderated and met.

Apart from the above line of reasoning, the world cotton picture has undergone such a material change in recent months that the competitive capacity of Indian cotton mills has suffered a serious setback. This is a new development which has turned the tables against India. In fact, in a few months, if not weeks, it is the Indian cotton textile industry that may complain of serious competition from other countries, including Lancashire. A few years ago, when a British cotton delegation visited India under the chairmanship of Sir Raymond Streat in order to solicit this country's co-operation to fight against Japanese competition, he said, in answer to a query by Press men at the premises of the Bombay Millowners' Association, that Lancashire was not seriously worried about competition by Indian mills, because he knew very well that, once they lost the advantage they had over Lancashire in the form of low cotton prices, they would not be able to stand the battle for export markets successfully. In his opinion, the main competitor for Lancashire was Japan. There is every reason to feel that his forecast will come true in the very near future.

India is fast losing the advantage it had in raw material costs and the prospect of losing it completely in the next cotton season is almost certain. What makes us say so is the manner in which the U.S. has been disposing of its surplus stocks of cotton. As against a surplus of 5 million bales, it has so far contracted to sell nearly 3 million bales. Of this, 1.6 million bales had been sold between 16th June 1956 and 18th July 1956 at an average price of 25 cents per lb., as against the ruling spot price of about 35 cents per lb. It is possible that the U.S. may try to sell the remainder of the cotton even below this price. India, too, has bought a small quantity of such cotton, but it is negligible, as compared with its total annual consumption of over 4.95 million bales. It is not, therefore, going to strengthen the competitive capacity of Indian mills in any way.

It will be interesting to note, in this connection, that, at 25 cents, American Middling 15/16" staple will cost about Rs. 940 per candy in the U.S. As against this, the comparable Indian variety, namely, Vijay, is currently quoting in the neighbourhood of Rs. 980 per candy. Thus, price for price, the 30 to 40 per cent. advantage which the Indian mills had till recently, has already gone, in so far as the surplus cotton disposed of by the U.S. is concerned. But the story does not end here. The decline in the world prices of cotton has only just begun. When the new crop cotton starts flowing into the world cotton markets, there is likely to be a further fall in prices, as the non-American growths will start competing with American growths. With inflationary pressures steadily gaining ground in India, it is a moot point whether the prices of cotton within the country which have already gone up sizably since November last, will decline to any appreciable extent in the coming months. In any case, it seems fairly certain that they cannot go down to the extent necessary for giving the same margin of benefit which the Indian mills had over Lancashire and Japanese mills till recently.

Another new factor that has to be borne in mind, while discussing the controversy of Lancashire *versus* Indian mills, is the perceptible increase in the cost of living in India over the past eight months. Between November 1955 and May 1956, the working class consumer price index for Bombay has advanced from 330 to 357. As a result of this, the wage bill of the industry has gone up substantially. In view of the heavy development expenditure envisaged in the second Plan, quite a good bit of which will be met through deficit financing, the prospects are for a further rise in the cost of living number.

It would appear that the Government of India itself is beginning to appreciate the gravity of the situation that lies ahead. It is stated, for instance, that the Commerce and Industry Ministry is prepared to loosen some of the strings which it proposed to attach to the scheme for introducing 14,600 automatic looms for the purpose of facilitating exports of cloth. That it is prepared to have second thoughts on its policy so soon after its announcement is significant of the difficult days ahead for the export trade of the industry.

In view of what has been stated above, it seems pretty obvious that Lancashire's complaint about competition from India will become obsolete pretty soon, if it is not already so. Accordingly, it is hard to see what useful purpose will be served by talks between representatives of Indian and British textile industries at this stage. If Lancashire were to wait for some more time, it might discover that its principal competitors in both domestic and export markets are the mills on the Continent, Hong Kong and Japan, not to mention the communist nations. Of course, nothing will be lost by the spokesmen of British textile industry coming over here and having a discussion with Indian millowners. Such a meeting will enable them to understand the position of each other better.

* * * *

From Odessa, the Russian port, comes the report that the first Indian vessel to visit the Soviet Union, the s.s. *Jalamanjari*, has just left after a six-day stay in that port and is carrying cranes, iron tubes and other Soviet-made equipment for industrial establishments in India. It is now a little over three months since India signed with Russia the only shipping agreement it has concluded with any foreign country. Already, trade between the two countries has started. It is not, of course, known what commodities the ship took on its onward voyage from India. But it is useful to recall that the shipping agreement set down a schedule of rates for carrying such Indian commodities as tobacco, tea, jute goods, cotton, shellac, wool, spices, hides, nuts and footwear and Russian commodities like machines, metals, textiles, paper, cotton, cement and dyestuffs. These are the articles that are likely to figure prominently in the Indo-Russian trade. A remarkable development in recent months is the rapid expansion of that trade. Between 1954-55 and 1955-56 imports from Russia had increased from Rs. 1.81 crores to Rs. 6.21 crores and exports to that country from Rs. 2.12 crores to Rs. 3.26 crores. But there is no doubt that the recent increase in Indo-Russian trade will be dwarfed by the very large expansion that is bound to take place in the next few years.

Economically speaking, Russia is getting closer to India. Apart from the Indo-Russian trade agreement, concluded in 1953, and the recent undertaking by Russia to supply one million tons of steel against jute goods, tea, oilseeds, and spices, there is the great Bhilai steel project which, when it was first announced, took many a financial centre in the world by surprise by the astoundingly favourable £39-million 12-year credit scheme, carrying interest at 2½ per cent. per annum. This was—and will perhaps remain for all time—the biggest project of Indo-Russian economic co-operation. But the Russians have followed it up very ably indeed by other gestures of co-operation. They have impressed the Government of India by the offer of capital goods and equipment, by their willingness to share technical know-how and by their undertaking to train Indians in technical jobs in their own country. Yet another way in which they seem to have impressed the Government is the frank and encouraging manner they draw up several technical reports. For instance, the report on drugs and dyestuffs submitted by the Russians is reported to be an eye-opener to India, in that it deals with the production of alkaloids from Indian herbs. Russia has also submitted detailed reports on non-ferrous metals, oil, diamonds and technical education. Meanwhile, another team of Russian experts, headed by the Vice-Minister for Heavy Machine Building Industry, Mr. B. K. Prihodiko, is now in India examining the possibility of setting up a heavy machinery and equipment factory. Above all, they have impressed the Government by the speed with which they can enter into and implement agreements. This is, of course, partly due to the fact that a totalitarian government, such as the Government of the U.S.S.R., is always at an advantage over a necessarily slow-moving democratic country. But it may also be partly due to the fact that Russia is now more willing and anxious to cultivate India's friendship than in the past.

Whatever may be the reasons for the many rapid developments which are taking place in the Indo-Russian economic front, there is no doubt that the developments themselves are of utmost significance to Indian economy. This will be evident from the fact that Russian equipment and technical know-how are available over as wide a sector of the economy as this country could wish—steel manufacture, chemical and pharmaceutical industry, coal mining, tyres manufacture, oil exploration, heavy machinery industry, mining industry, farm machinery and technical education. Russia has agreed to set up a technological institute at Bombay. It has supplied farm machinery that will meet the needs of a 30,000-acre farm. It is reported to have agreed to set up a motor tyre and tubes factory in the public sector and a file factory in the private sector. All this has had two important effects on the public mind, and even on official opinion. In the first place, although much of the Russian co-operation, apart from the Bhilai steel plant, is still only in the blue-print stage, the sheer magnitude and variety of assistance promised are staggering to a degree. This creates the impression that Russia is willing and anxious to do a great deal for India's economic progress. Secondly, Russia, whether by accident or design, has shown itself particularly willing to offer assistance in fields where no underdeveloped country has hitherto been able to make any headway on its own, namely, oil exploration and certain mining and chemical industries. These are highly technical fields where progress is difficult to achieve without active assistance from industrially advanced countries.

The Russian offer of assistance in these spheres naturally strikes India as an encouraging factor, for it whittles down the bargaining position of other industrially advanced countries. What makes it even more attractive is the absence of fanfare and political strings. Russia does not resent India taking aid from other countries with which its relationship is not friendly. The question of questions is whether this warmth will continue if and when the U.S. and Britain decide to withdraw their assistance to India, as they have done in the case of Egypt in regard to its Aswan Dam project, for then this country will have to depend mostly on Russia. From this point of view, it will be interesting to watch the type of relations that develop between Egypt and Russia and the price that the latter will demand for aiding the former.

SHARE MARKET DULL

BOMBAY BURMAHS, HOWEVER, SHOOT UP

From Our Own Correspondents

BOMBAY, *26th July*

THE Stock Exchange had only three sessions during the week. For it remained closed on Monday the 23rd inst. on account of the birth centenary of Lokamanya Tilak. On the following day, the market was officially open, but traders refrained from doing business as a mark of mourning for the victims of the Anjar earthquake. Today, again, the Exchange remained closed as a mark of respect to the late Mr. Pranlal Devkaran Nanjee, prominent industrialist and banker, who passed away yesterday.

During the short working week the market was generally dull. Under the gloom of heavy earthquake damage at Kutch, operators had no inclination to do business. Trading, therefore, remained restricted and price fluctuations were narrow. The undertone was also a shade quiet, in the absence of any encouraging factors, in distinct contrast to the buoyancy noted in the previous two weeks. Advices from Calcutta, too, were none too helpful. The news of Mr. Deshmukh's resignation having been accepted by the President created a feeling of uncertainty among operators. There were, however, a few bright spots in the market, Bombay Burmahs and National Rayons being the prominent among them. Bank shares also shaped well.

In the steel section, Tata Ordinaries moved between Rs. 204-4 and Rs. 202-4 before closing Re. 1 lower on balance at Rs. 203-4. Indian Irons dipped early in the week from Rs. 35-14 to Rs. 35-5½. After coming up to Rs. 35-15, they finished at Rs. 35-11¼.

Textile shares generally ruled quiet. There were, however, a few bright features, particularly in the cash section on good long-term prospects. Bombay Dyeings receded from Rs. 655 to Rs. 646-14. Yesterday, however, they opened very high at Rs. 657-8, only to relapse to Rs. 652-8 at the close. Centurys moved down early in the week from Rs. 573-8 to Rs. 569-8. After regaining to Rs. 574-8, they closed at Rs. 572-8. Kohinoors dipped from Rs. 390 to Rs. 384-8 and closed at Rs. 386-4. Central Indias dropped Re. 1 to Rs. 160. Finlays were dull at Rs. 349-8. Gokaks lost Re. 1 to Rs. 241-8. Indu Ordinaries were a fraction lower at Rs. 13-9. Indore Malwas lost Re. 1-4 to Rs. 155-10, while Khataus advanced by Rs. 9-6 to Rs. 263-2 and Morarjee Goculdas by Rs. 5 to Rs. 260. New Greats changed hands at Rs. 2 lower at Rs. 263 and Podars Rs. 2-8 down at Rs. 187-8. Shree Niwas were, however, maintained at Rs. 225 and Simplex at Rs. 226. Standards drifted lower from Rs. 488-12 to Rs. 481-4 and Svadeshis from Rs. 258-8 to Rs. 255. Tata Mills were a shade lower at Rs. 57-4. Among cash shares, Ruia group mills were prominent, with Bradbury Mills registering a rise of Rs. 10 to Rs. 255, Dawns Rs. 16-14 to Rs. 180 and Phœnix Rs. 3-12 to Rs. 145. Hindustan Spinnings gathered Rs. 15 to Rs. 5,340 and Western Indias a like amount to Rs. 5,140. New City Mills were taken up Rs. 2-8 higher at Rs. 180, while Vishnus lost Rs. 2-8 to Rs. 185.

The firm trend in bank shares noted in the previous week was kept up in the week under review also. Barodas gathered Rs. 2-8 to Rs. 104. Centrals gained a fraction to Rs. 56-4, while their New shares were well held at Rs. 57-8. Punjab Nationals put on Re. 1-8 to Rs. 60. Union Banks were maintained at Rs. 56-4, while United Commercials were better by Re. 1-4 and Rs. 56-4.

Insurance shares ruled steady, though business was restricted. New Indias were done Re. 1-12 higher at Rs. 50-4. British India Generals moved up by As. 14 to Rs. 15.

The electricity section attracted some support to a few counters. Ahmedabad Electrics gained As. 5 to Rs. 100-10. Bombay Suburbans were done at the self-same rate of Rs. 117-8, as also Surat Electrics at Rs. 120. Tata Hydros (Old) were maintained at Rs. 130. Tata Powers (Old) moved up by Rs. 3-12 to Rs. 1,321-4 and their New shares by Rs. 17-8 to Rs. 1,277-8. Andhra Valleys (Old) rose sharply from Rs. 1,210 to Rs. 1,232-8.

Barring a few counters, the miscellaneous section moved in consonance with the generally downward trend of the market. In the sugar group, Belapurs drifted lower from Rs. 243-8 to Rs. 241-8 before closing at Rs. 242-8. Bhopals were unchanged at Rs. 18. Phaltans lost Re. 1 to Rs. 160, while Walchandnagars gained Rs. 2-8 to Rs. 272-8. Cement shares were quiet. A.C.C. declined from Rs. 193-8 to Rs. 191-4, but gained to close at Rs. 192-8. Digvijays also lost on balance Re. 1 to Rs. 199-4. Among engineering and mining shares, Alcock Ashdowns forged ahead further from Rs. 368-12 to Rs. 376-14. Tata Locomotives moved up from Rs. 149-12 to Rs. 152, but finished lower at Rs. 150-8. Larsen and Toubros were a shade better at Rs. 16-2. Josts Engineerings were done Re. 1 lower at Rs. 75, while Kamani Engineerings crept up from Rs. 6-12 to Rs. 7-6. Premier Constructions were steady at Rs. 208. Shivrajpurs were steady at Rs. 91. Indian Coppers were featureless at Rs. 7-1¼ and B. B. Petrols at Rs. 4-6½.

Among shipping and transport shares, Scindias were marked down from Rs. 19-9 to Rs. 19-4 and, after a rise to Rs. 19-9, softened to Rs. 19-6½. Great Easterns were done a fraction lower at Rs. 20-6. Hindustan Motors shed As. 2 to Rs. 9-14 and Premier Automobiles As. 4 to Rs. 99-12. In the miscellaneous industrial group, Bombay Burmahs provided the highlight. After an early dip from Rs. 708-12 to Rs. 687-8, the shares shot up to a record high of Rs. 727-8, before closing at Rs. 725, on expectations of a favourable settlement over the compensation to the Company's founder shareholders. National Rayons dropped early in the week from Rs. 253 to Rs. 249, but gathered strength to Rs. 257 at the close. Tata Chemicals were dull at Rs. 19-15½. Tata Oils lost As. 12 to Rs. 58-4, while Wimcos were steady at Rs. 185-10.

• • • •

Calcutta Stock Exchange

CALCUTTA, *25th July*

The Calcutta Stock Exchange remained somewhat dull during the week under review. Though sentiment remained intact and prices were not generally too adversely affected, operators were in no mood to widen their activity, in the absence of any fresh stimulus. The interruption of trading by holidays, the acceptance of Mr. Deshmukh's resignation, fears that the rising trend of prices of food and other essential commodities, if not halted, would lead to higher industrial costs and settlement considerations were some of the factors which restrained activity.

In the textile section, Kesorams were done As. 7 lower at Rs. 18-2. Cawnpore Textiles were steady at Rs. 9, while Basanti Cottons were dull at Rs. 6-15. Jayshree Textiles were bid As. 2 higher at Rs. 7-3. New Victorias were steady at Rs. 2-10.

Coal shares lacked support and prices drifted lower. Bengal Coals softened from Rs. 538-8 to Rs. 535. Burrakurs dropped As. 6 to Rs. 13-4. Borreas were held at Rs. 23-1, while Central Indias declined by As. 6 to Rs. 7-5. Karanpura Collieries were Re. 1 lower at Rs. 116. Raneegunge shed As. 3 to Rs. 13. Sendra Coals moved down from Rs. 9-10 to Rs. 8-12 and Western Bengals by As. 3 to Rs. 6-10.

Jute shares presented a mixed trend. Anglo-Indias recorded a rise of Rs. 7 to Rs. 165. Agarparas were maintained on balance at Rs. 11-8, while Alliance Jutes gathered Rs. 2 to Rs. 122. Bally Jutes also jumped from Rs. 130 to Rs. 137. Birlas were quiet at Rs. 16-12. Champdany Jutes dropped Rs. 2 to Rs. 153, while Ganges advanced by Rs. 5 to Rs. 66. Gourepores receded from Rs. 234 to Rs. 220. Howrahs gained on balance As. 5 to Rs. 21-14. Kamarhatty Jutes declined by Rs. 4 to Rs. 126. Nationals were steady at Rs. 23-2 and Nellimarlas at Rs. 11-14. New Centrals shed As. 3 to Rs. 17-1. Rameshwaras were held at Rs. 7. Reliance Jutes gained As. 4 to Rs. 10. Soorah Jutes lost Re. 1-3 to Rs. 14-12, while Unions rallied from Rs. 131-8 to Rs. 142.

The strengthening of tea prices at auctions, particularly for quality teas, was not duly reflected in prices of tea scrips. Birparas declined by Rs. 9 to Rs. 171. Brahmapootras were quiet at Rs. 8-13, while Brook Bonds gained no more than As. 3 to Rs. 24-2. Dhelakhats picked up As. 14 to Rs. 23-4, while Hasimaras shed Re. 1 to Rs. 35-8, Hantaparas Rs. 9 to Rs. 206 and Hattikhirras Re. 1-4 to Rs. 19-6. Jayshrees were lower by As. 5 at Rs. 11-10. Tezpores, however, gained As. 12 to Rs. 26-8.

Engineering shares lacked support and prices were in favour of sellers. Braithwaites declined by As. 5 to Rs. 27-13, Marshalls by Re. 1 to Rs. 6 and Indian Irons by As. 10 to Rs. 35-9. Burn & Cos. were steady at Rs. 355-8. Indian Standard Wagons were marked down by Rs. 2-8 to Rs. 178-8, Jessops by Re. 1 to Rs. 35-8, Richardson and Cruddas by As. 7 to Rs. 26 and Texmacos by As. 9 to Rs. 22-2.

In the miscellaneous section, Burma Mines were held at Rs. 3-5, while Indian Coppers were done As. 2 lower at Rs. 6-9. Assam Bengal Cements shed As. 9 to Rs. 7-7. Sone Valleys, on the other hand, gathered As. 5 to Rs. 9-9. Alkali Chemicals were Re. 1-8 lower at Rs. 21-2. Calcutta Electrics were steady at Rs. 13-8. Angelo Bros. moved down by As. 14 to Rs. 22-2. Balmer Lawries rose by Rs. 6 to Rs. 186. B.I.Cs. were As. 2 lower at Rs. 11-5. Calcutta Trams picked up As. 9 to Rs. 17. Dunlops were steady at Rs. 29-3. Indian Cables receded by As. 10 to Rs. 35-6. Metal Box gained As. 10 to Rs. 30-3. National Carbons drifted lower by As. 3 to Rs. 27-10, Rohtas by As. 8 to Rs. 23-7 and I.B. Petrols by As. 14 to Rs. 39. India Papers were quiet at Rs. 25-4. Titaghur Papers dropped Re. 1 to Rs. 40-4.

• • • •

Madras Stock Exchange

MADRAS, *25th July*

The buoyancy of the Madras Stock Exchange noted in the last two weeks abated this week. In fact, conditions on the Exchange were distinctly easy. Apart from the intervention of holidays, the acceptance of the Union Finance Minister's resignation was interpreted somewhat bearishly by market circles. Moreover, the high levels to which equity values had touched in the past fortnight evoked profit-taking. Prices, as a result, drifted lower. The decline was shared by all the principal sections of the market—textiles, planting and miscellaneous.

Among textiles, Buckinghams and Coimbatore Pioneers dropped Rs. 2-8 each to Rs. 205 and Rs. 340, respectively. Loyals receded by Re. 1-8 to Rs. 52-8. Coimbatore Kamlas fell by a rupee to Rs. 100. Janardhanas lost As. 8 to Rs. 127. Maduras eased by As. 4 to Rs. 51-12 and Cambodias by As. 2 to Rs. 14-14. Bangalore Woollens were quiet at Rs. 582-8, as also Pankajas at Rs. 99, Radhakrishnas at Rs. 350, Vasantas at Rs. 345 and Kotharis at Rs. 17-15. Premiers, however, met with special buying support and rallied Rs. 10 to Rs. 245. The support was induced by the decision of the Directors to recommend a higher dividend of 15 per cent. for the year ended March 1956, as against 12 per cent. for the previous year. Lakshmis were also favoured Rs. 4 higher at Rs. 244. Coimbatore Spinnings advanced by Rs. 3 to Rs. 113.

In the planting section, rubber shares lacked enquiries. Travancore Rubbers declined by As. 4 to Rs. 23-12. Pullangodes shed As. 2 to Rs. 4-6-6. Thirumbadis lost an anna to Rs. 2-3-6. Rajagiris were neglected at Rs. 24-10 and Vaikundams at Rs. 30-12. But Cochin Malabars had some buyers and the quotation rose by As. 2 to Rs. 10. Tea shares also failed to elicit attention of operators. Niigiri Teas fell by As. 4 to Rs. 13-12. T.R.T. & Cos. eased by As. 2 to Rs. 13. Neelamalais lost an anna to Rs. 7-12. Talayar Teas were dull at Rs. 13-9 and Ouchterlonys at Rs. 5-8. Among coffee shares, Balmadies were done As. 3 higher at Rs. 4-13. Consolidated Coffees improved by As. 2 to Rs. 21-3.

Activity in the miscellaneous section was restricted. Among cement shares, Andhra Cements were subjected to some selling and gave way from Rs. 16-4 to Rs. 16-1. Deals in Dalmia Cements were put through at Rs. 15-14 *ex-div.*, as against Rs. 17-10 *cum-div.* F.A.C.Ts and Spencers shed an anna each to Rs. 6-14 and Rs. 17-2, respectively. India Cements, on the other hand, elicited support and put on As. 10 to Rs. 36-4. India Cements Ltd. has come out with an issue of fresh capital for Rs. 40 lakhs, divided into 160,000 ordinary shares of Rs. 25 each, payable in full on application at par to holders of equity capital as on 11th August 1956. Rallis spurted by As. 8 to Rs. 42-8. Mettur Chemicals picked up As. 6 to Rs. 10. The Directors of Mettur Chemical and Industrial Corporation Ltd. have recommended a final dividend of 4⅜ per cent. on ordinary shares, making a total of 7½ per cent. for the year ended March 1956, which compares favourably with 6¼ per cent. for 1954-55.

Sugar shares were generally dull. Travancores eased by half an anna at Rs. 13-5. Mysores were quiet at Rs. 48-8. E.I.Ds, however, climbed up by As. 6 to Rs. 29-12 on special support.

COMPANY INTELLIGENCE

Dalmia Cement (Bharat) Ltd.

Readers will recall the proposal of the Directors of the Dalmia Cement (Bharat) Ltd. to distribute at par the ordinary shares of the Orissa Cement Ltd. held by the Company among its ordinary and deferred shareholders in lieu of the dividends for the year ended 31st December 1955, up to 75 per cent. of such dividends, if the shareholders so desired. The preference shareholders were not, however, given such option, on the ground that they were entitled to only fixed cumulative dividend. The aforesaid proposal to distribute ordinary and deferred dividends in specie, if the shareholders so desired, was subsequently dropped.

The reasons for dropping the proposal were explained by the Chairman in his address to the shareholders at their annual general meeting, held last week—the full text of the speech is published elsewhere in this issue. It would appear that the preference shareholders took objection to their being excluded from the option and threatened to take legal proceedings. The management, consequently, consulted legal advisers and on their advice dropped the above proposal. The Chairman suggested that the dividends recommended for the year on the ordinary and deferred shares could be treated as interim dividends and paid in cash. The Directors, he said, would consult the Stock Exchanges where the shares were being quoted and recommend an additional dividend if deemed desirable or necessary.

It will be interesting to note here that such an option to receive the dividend in specie was given to the preference shareholders also in the previous two years, but was not extended in respect of the year 1955.

Saraswat Co-operative Bank

The Saraswat Co-operative Bank Ltd. has earned a profit of Rs. 88,900 during the year ended 30th June 1956, as compared with Rs. 85,079 for the previous year. With this increase, the Bank has not only maintained the upward trend in profit noted for several years past but established a fresh record. The profit for the year under review, it must be noted, has been arrived at after paying a bonus of 12½ per cent. on the interest earned by the savings depositors. In paying the bonus to depositors the Bank has set a precedent of making them participants in the profit of the concern. The dividend has been maintained at 6¼ per cent. per annum. The working capital at the end of the year exceeded Rs. 170 lakhs.

Pye's Telecommunications Division has signed a further contract with the Pakistan Industrial Development Corporation (for the Sui Gas Transmission Company) for the supply and installation of a V.H.F. multichannel radio-telephone system between Sui and Multan in West Pakistan. The system will provide telephone and teleprinter services along a new pipeline carrying natural gas to Multan, a distance of 200 miles. The radio-telephone equipment for the Sui-Multan pipeline is jointly manufactured by Pye and Ericsson's Telephones. Pye mobile two-way radio-telephones will also be used by the Sui Company and the pipeline contractors during the construction of the new line.

Bulk Oil Plants has been formed jointly by the United Africa Company, which is part of the Unilever Group and by the Nigeria Central Marketing Board. It has a capital of £6,50,000 of which one-third is being subscribed by the Board and two-thirds by United Africa. The purpose of the new company is to forward the interests which the Board and the Company have in common in providing an efficient bulking service. Operations are expected to begin next September.

NEWS IN BRIEF

THE Asian Regional Conference of the I.L.O. would be held in India some time in March 1957.

A textile institute is proposed to be opened at Salem in Madras State, which has four textile mills and over 120,000 handlooms.

A cycle factory is expected to be started at Patna, with a capital of Rs. 6 crores. The installed capacity of the plant will be 100,000 cycles a year; the factory will also produce auto-rickshaws.

The estimated output of iron ore in India increased from 318,962 tons in April 1956 to 339,992 tons in May 1956, according to official statistics released by the Chief Inspector of Mines in India.

A team of French railway experts, led by Mr. F. Nouvion, a well-known railway electric traction expert, is expected to visit Bombay in connection with the electrification of the Igatpuri-Bhusaval section of the Central Railway now under consideration.

The Soviet Union has supplied to India 20 rigs for its State coal mines. These rigs include eight boring machines for test drilling and three self-propelled drilling installations. A group of Soviet experts who are coming to India shortly will train Indian engineers to handle the new equipment.

A two-day conference on the development of atomic energy, sponsored by the Government of India, was held in Bombay on 23rd and 24th of July. The Conference, which was attended by Ceylon, Egypt, Burma and Indonesia, was presided over by Dr. H. J. Bhabha, Secretary to the Atomic Energy Commission of India.

An eight-member Japanese mission, headed by Mr. Ryuichi Senda, has concluded the investigation of the possibilities of constructing a port at Paradip, 52 miles east of Cuttack, for exporting iron ore to Japan from the nearby Sukinda mines. The mission is expected to submit its report shortly to the Orissa Government.

Negotiations have been resumed by the representatives of the Assam Oil Co., and the Government of India for the formation of a rupee company for exploring and refining oil in eastern parts of Assam. The talks were suspended in the third week of May owing to differences of opinion about the quantum of shares to be held by the Government of India in the Company.

The Government of Madhya Pradesh will establish three food research laboratories at Amaravati, Jabalpur, and Raipur in collaboration with the Union Government. The estimated cost is about Rs. 25 lakhs. The Union Government will meet 75 per cent. of the non-recurring and 50 per cent. of the recurring expenses of the laboratories which are expected to start working by the end of this year.

Erection work is proceeding on Burmah-Shell Refinery site at Trombay on six tanks of the latest type equipped with floating roofs. Three tanks of this type of 4,000 tons capacity each are already in use and two more of 5,000 tons capacity are nearing completion. Four additional tanks for crude oil storage of capacities ranging between 16,000 and 20,000 tons each are under construction and expected to be complete by the end of 1956.

Iron-ore exports from India in June 1956 declined both in respect of quantity and value. India exported 78,440 tons of iron-ore valued at Rs. 42 lakhs in June this year, as against 109,214 tons valued at Rs. 48 lakhs in the previous month. The decline was mainly due to poor offtake by Japan which accounted for only 34,974 tons in June, as compared with 73,468 tons last May. Exports to other destinations, however, showed some improvement.

The question of supplying adequate quantity of coal to tobacco re-drying factories and tobacco flue curing works were discussed at a conference held on 20th July at Madras which was attended, among others, by the Director of Controlled Commodities, Andhra, and Deputy Chief Coal Controller. A large quantity of coal is required for these purposes in the months of December to March. The Conference discussed the question of coal allocation and its movement from the various collieries to their destinations.

The Cashew and Pepper Export Promotion Council, Cochin, has a scheme under preparation to ensure the quality of cashew and pepper exported from India. The scheme will help the Council to eliminate those unscrupulous exporters who undermine the prestige of the Indian trade. The Council views with concern the increasing number of complaints received from foreign importers regarding the quality of cashew and pepper exported and proposes to take effective measures to prevent adulteration in future.

The Rihand Dam Control Board has decided to give the contract for the supply of powerhouse installations to a British firm, the English Electric Company. The value of the contract, under which the Company will supply turbines, generators and gear control apparatus, is about Rs. 2.2 crores. The Board had received 58 tenders from different parts of the world including West Germany, Italy, France, Japan, Norway, Czechoslovakia and Switzerland. Five turbines, each of 50,000 kw. capacity, will be installed at the power station to be set up at Dudhi in Mirzapur district.

The Council of Scientific and Industrial Research has secured the services of Mr. John S. Dean, an American expert, under the Point Four Aid Programme, for the development of the glace kid leather industry. He will work at the Central Leather Research Institute, Guindy. His services will be made available to commercial tanneries which require them. Glace kid is costly leather, manufactured from goat's skin. At present, there are three tanneries in the South for manufacturing such leather. A large quantity of raw goat skin is now being exported to the U.S.A. The object of engaging the expert is to see how best the skin could be processed in India itself.

According to Dr. J. C. Ghosh, member of the Planning Commission, a second shipyard will not be completed during the second Plan period due to paucity of funds. The sum of Rs. 45 crores allotted for shipbuilding in the Plan is earmarked for more urgent aspects of the programme. The Government proposes to take measures for reducing the cost of ships built at Visakhapatnam shipyard. For this purpose priority will be given to the building of a dry dock there and to raising the capacity of the yard to produce eight to 12 ships a year at competitive prices. Meanwhile, preparatory work for the second shipyard will go on with the Rs. 75 lakhs allotted for the purpose. Cochin is likely to be the site.

The Government of India has decided to give as loan to weavers' co-operatives 66⅔ per cent. of the total amount allotted towards the construction of houses. Till now, the Government was providing 33⅓ per cent. of the construction amount as grant and 50 per cent. as loan while the balance had to be met by the weavers themselves. Weavers were finding it difficult to pay this amount and so, in spite of the Government's efforts to push through housing schemes, much headway could not be made. The Government will pay, as usual, 33⅓ per cent. as grant. The loan is on a long-term basis, repayable in 25 years. Funds will also be provided on loan basis for the entire expenditure on water-supply, drainage and other amenities.

From Abroad

A non-official Malayan trade mission will visit China next month to explore the possibilities of further trade with that country.

Under the terms of an agreement reached between West German and Japanese officials, 500 Japanese would go to work in Ruhr coal mines for three years.

World oil production in the first half of 1956 is estimated to have risen by about 10 per cent. over the corresponding period of 1955. The rate of increase, said to be one of the highest the industry has ever experienced, had been due to greater consumption than was expected.

The National Planning Association of Washington, a non-political, independent, non-profit association, has recommended that, over the next ten years, the U.S.A. should provide Burma with $400 million in low interest development loans and technical aid.

In a draft resolution circulated to delegations attending the current session of the U.N. Economic and Social Council in Geneva, the Soviet Union has proposed the creation of an international organisation for trade co-operation open to all members of the U.N. and other interested countries.

A new company, to be known as "Newconex," has been formed in Canada with an authorised capital of one million dollars for taking part in the Canadian mining industry. It is a subsidiary company of the well-known Consolidated Gold Fields of South Africa, belonging to the Rand Finance house.

The American machine plant company Parsons-Whittemore, has concluded an agreement with the Turkish Government for the establishment in Turkey of three large paper factories. The Company will invest the equivalent of $12 million for the supply of machinery and erection of the factories and will participate in profits.

Japanese exports during the period January to June registered a remarkable improvement, as compared with the corresponding period of last year. Exports to the dollar area during the period were $512.78 million, i.e., 57.1 per cent. above those in the corresponding period of 1955. Exports to the sterling area in the same period were valued at $444.50 million, a rise of 26.1 per cent.

The American Telephone and Telegraph Company plans to offer its shareholders on 1st October the right to subscribe to 5,750,000 additional shares, the largest direct offering of stock in U.S. financial history. The sale at $100 a share, will provide the Company with $575 million toward its record construction budget of $2,100 million in 1956, and a like amount next year.

An Anglo-American venture, requiring an investment of $11 million, for the production of methyl methacrylate—more commonly known as "Perspex"—has been announced in London. The firms concerned are Britain's Imperial Chemical Industries and the Hercules Powder Co. of the U.S.A. The new plant, with an annual capacity of 34,000,000 lbs., will be built on a 20-acre site at Louisiana, Missouri, U.S.A.

The scholarships scheme sponsored by the Federation of British Industries (F.B.I.) for giving practical training to oversea engineers in the United Kingdom is to be enlarged. In the 12 months up to 31st March this year, 107 scholarships had been awarded to engineers from 19 different countries. Of these, 49 scholarships went to the Commonwealth, 51 to Latin America, and seven to the Middle East.

The Ministerial Council of the 17-nation Organisation for European Economic Co-operation has decided to set up a steering committee to prepare a draft statute for a European nuclear energy agency. The Ministers who met at Paris on 18th July also discussed the general economic situation and agreed to set up a special Ministerial study group to meet in October to examine the problem of rising prices, German creditor position, and European balance of payments position.

The F.A.O.-sponsored plant protection agreement for South-East Asia and the Pacific has come into force following its acceptance by India, Viet Nam and Portugal. The three new signatories make a total of nine countries joined in a co-operative effort to fight plant pests and diseases which cause losses amounting to millions of dollars annually. The agreement requires all contracting Governments to adopt effective and uniform measures to prevent the introduction of destructive plant pests and diseases from other parts of the world.

The International Co-operation Administration (I.C.A.) has sent a six-man U.S. team to assist the Afghan Government in surveying and studying the potentialities of the land reclamation project in the Helmand Valley. The team, which includes U.S. experts in the fields of engineering, agriculture, industry, rural development and economics, is headed by former Idaho State Governor, Mr. Leonard Jordan. The purpose of the study is to recommend the steps that need to be taken to realise the potentialities of the $80 million project which the Afghan Government began in 1946 to make more productive land available to its people. The project is designed eventually to irrigate between 400,000 and 600,000 acres of land.

PERSONAL

MR. A. D. Shroff, Chairman of New India Assurance Company, Ltd., and a Director of Tata Industries Ltd., left for Europe on a five-week tour.

Mr. J. H. Devey, an I.L.O. expert on manpower organisation, left India last week on the completion of his assignment with the Union Ministry of Labour.

Mr. M. Bhaktavatsalam, Minister for Agriculture and Labour, Government of Madras, who led the Indian delegation to the I.L.O. session at Geneva, returned last week-end.

The resignation of Mr. C. D. Deshmukh, Union Finance Minister, was accepted by the President on the 24th inst. His portfolio has been temporarily taken over by the Prime Minister, Mr. Jawaharlal Nehru.

Mr. H. V. R. Iengar, Secretary, Union Ministry of Commerce and Industry, now in Europe, will proceed to Bonn to discuss details of the scholarships, technical training facilities, etc., offered by the West German Government during Mr. Nehru's visit last week.

Mr. J. R. D. Tata, Chairman, Tata Iron and Steel Company, Ltd., left for London on Sunday last to deliver one of the five key-note addresses by overseas personalities at the Duke of Edinburgh's Study Conference on Human Problems of Industrial Communities within the Commonwealth and Empire, now being held there.

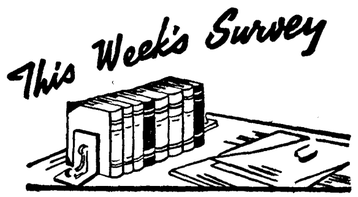
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *25th July*

World's Wheat Crop

The Department of Agriculture, U.S.A., in a statement on world wheat prospects, has declared that indications of the probable demand "point to another year of very low prices for the whole world." This is not a very cheerful prospect; but according to the Royal Bank of Canada's bulletin for June last, there is likely to be a decrease of approximately 150,000,000 bushels in this year's world crop. This forecast is made by the Food Research Institute of Standard University, U.S.A., "subject to reservations concerning unusual weather conditions and unforeseen increases in sowings." The estimate is quoted at the conclusion of a detailed study by Dr. Donald Marvin, the Royal Bank's economist, of seasonal reports from all wheat-growing countries. Seedling operations are being completed in Western Canada, says Dr. Marvin, and interest centres in the outlook for the coming crop. The land prepared last season is estimated to have exceeded 19,000,000 acres, an area larger than in any previous year except 1930. In spite of these early large-scale preparations, it seems probable that the total acreage sown to wheat this spring will not exceed 23,000,000, as compared with 25,000,000 acres in 1930. Exceptionally heavy rains during the growing season will be essential for a satisfactory yield. During the spring, supplies in Europe were substantially reduced, and quickening in demand has been apparent. Germany has reduced the tariff on wheat from $1.62 to $1.29½ per bushel, and increased the proportion of imported wheat which may be used with domestic grain, and France has made two successive increases in the quota of foreign wheat. It seems evident that European countries will have to draw upon exporting countries, and that there will be a well maintained demand during the baiance of the present crop year.



TAX LAWS

TRUE to its tradition of rejecting all non-official resolutions, the Lok Sabha threw out the resolution moved by Mr. H. V. Kamath for setting up a committee to report on the working of the Income-tax Department. The resolution demanded that a committee, consisting of seven members (not less than four of whom should be members of Parliament) should be asked to report within six months on the working of the department and make recommendations designed to improve its efficiency, so as to achieve speedy assessment and collection of tax. Although the resolution was rejected, the debate on it proved useful. For one thing, it showed that many members of the House were critical of the working of the department. Secondly, the Government itself is not unaware of the twin evils of evasion of tax among assessees and corruption in the ranks of its employees. Thirdly, the debate provided an opportunity for the Government to reveal that it contemplated the setting up of a high-power commission to go into the working of the Income-tax Act and codify it, in order to make it simpler.

Before the House divided on the resolution, Mr. M. C. Shah, the Union Minister for Revenue and Expenditure, explained some of the measures the Government had taken, in order to improve the efficiency of the Income-tax Department. He said that the Government had appointed a high official of the Income-tax Department who was with the Income-tax Investigation Commission to look into the working of the department and suggest methods of reorganisation and standardisation of the department's work. The officer had also been asked to suggest the abolition of such procedures as might cause delay in assessment and collection of tax. It would appear that the report of this enquiry would be available at the end of this month. Further, the Government, Mr. Shah revealed, had sent three officers of the department to Sweden, Japan and the U.S. to study the working of the Income-tax Department; another officer was being deputed to co-ordinate their studies.

As regards evasion of tax, Mr. Shah admitted that Prof. Kalder had placed the amount involved at as high as Rs. 200 to Rs. 300 crores. But the latter had said that it was based on "slender" statistics; the Finance Ministry's estimate of tax evasion was Rs. 30 to Rs. 40 crores. The Ministry, according to Mr. Shah, has taken a few steps to check evasion. They include the establishment of a Directorate of Inspection and Investigation and of special circles all over the country and the appointment of efficient officers in centres where important cases of evasion were concentrated. Referring to corruption, he said that the Government had initiated a drive against this evil; six officers had been dismissed very recently. In order to improve the working of the department, the Government had increased the number of officers of whom there were now 1,200, as against 550 in 1945.

It is gratifying to note that, though the Government has rejected Mr. Kamath's resolution, it has itself recognised the need for setting up a high-power commission to codify the income-tax law and simplify it. This reform is long overdue. And it is particularly necessary, in view of the fact that the rise in incomes, as a result of the implementation of the second Five-year Plan, may conceivably increase the ranks of the assessees. A point that deserves to be remembered is that what most assessees dislike is not the magnitude of the tax burden but the delay and the complexity of tax procedure and the uncertainty of the burden they might be eventually called upon to bear. The chambers of commerce and trading organisations in the country will do well to start studying the problem as to where the tax shoe pinches them, so that they may be in a position to place concrete and positive suggestions before the Commission. The Government, on its part, should give due weight to these representations. Further, it must never be forgotten that most of the assessees in India are hardly very educated men, let alone being experts in law. They need guidance in the preparation and submission of accounts. The Government, it is stated, will soon appoint more public relations officers in the Income-tax Department. Such officers could play a vital role in improving the morale of the assessees by providing them with necessary assistance.

PROVIDENT FUND AND PLANTATION FACTORIES

The decision of the Government of India to extend the Employees' Provident Fund Act to the tea and rubber factories may not come as a surprise, in view of the fact that the proposed extension had been discussed already at the seventh session of the Industrial Committee on Plantations held in New Delhi on 31st August and 1st September 1955. The question whether the Central Government's scheme or the scheme already instituted in the plantation factories of Assam by the Government of Assam would be more suitable to plantation factories in the rest of India was also discussed at the Committee but a decision was not taken. It was, however, understood that the Government of India would look into this aspect and take a final decision.

Some surprise has, however, been caused by the very short notice given to plantation factories to start the scheme. The Government's notification, issued only in the second week of July, stated that the scheme would be extended with effect from 31st July 1956. That was giving the plantation factories a bare three weeks' notice, and it is understood that the notification was not preceded by any indication that the scheme was going to be brought into force so soon. Regional Commissioners of Provident Fund Schemes are stated to have asked the plantation factories within their jurisdiction to take steps to implement the scheme and to furnish them with various figures within a few days' time. It appears to have put the factories concerned in some unexpected trouble.

It is worthy of note that the scheme itself is applicable to employees in tea and rubber *factories* only. So far as tea is concerned, this will only apply to a very small percentage of the labour employed in a tea plantation, since the normal complement of workers in a tea factory is not more than about 10 or 12 per cent. of the total labour force, the rest being engaged on the field. The position will be complicated by the fact that the workers in a tea factory are not always the same persons, it being a common practice to send some of them to the field during slack periods in the factory, and conversely to take more workers from the field into the factory when there is a rush of work in the factory. The implementation of a scheme of provident fund to workers in a tea factory would mean that hereafter there should be two distinct and separate categories of workers in a tea plantation and its factory.

The idea of a provident fund scheme to workers cannot be objected to by the tea industry, as the latter has reconciled itself to such a scheme as a result of the discussions at the Industrial Committee. But the actual extension of the present scheme to the tea industry without necessary modifications to suit an agricultural industry, where only a small proportion of whole labour is employed in factories, cannot be regarded as quite proper, as it may lead to a number of anomalies. The reactions of the industry are awaited with interest.

NEW WORLD WHEAT PACT

Wednesday of next week—1st August—will herald the beginning of a new International Wheat Agreement, the third of its kind established since 1949. An announcement to this effect was made in London by the International Wheat Council on the 20th inst., that is, after the representatives of the signatory nations of the Agreement concluded their session. The new Agreement has already been signed by all but eight of the fifty countries listed in it. The eight countries which have not yet signed are Ceylon, Colombia, Cuba, Haiti, Honduras, Jordan, Japan and Venezuela. The Council has provided for the accession of these countries subject to their depositing the necessary instruments with the U.S. Government by 1st December next. The Council has also set up an Executive Committee comprising the Argentine, Australia, Canada and the U.S. as representatives of producing countries and the Benelux, Brazil, Germany, India, Italy, Japan, Portugal and South Africa as representatives of consuming countries.

Like the current (1953-56) world wheat pact, the new Agreement is for a period of three years ending July 1959. The first agreement covered four years (1948-53). The objectives also remain the same, namely, to assure a market for wheat-growing countries and a ready source of supply for the importers. Thus, if the free market price of wheat—Basis: No. 1 Manitoba Northern wheat in bulk in store Fort William-Fort Arthur —rises above the maximum of $2.00 stipulated in the Agreement, the importing countries can call upon the exporters to deliver the agreed quantities at the maximum price. Similarly, if the price falls below the minimum of $1.50, the exporters can ask the importers to buy the agreed quantities at the minimum price.

The new International Wheat Agreement, however, differs from the current, as also the previous, pacts in three important respects. First, the Agreement covers a reduced quantity of wheat, the actual aggregate sales guaranteed by producing countries being 8,244,000 metric tons, as against about 10.7 million tons in the current pact and 15.8 million tons in the 1948-53 agreement. Secondly, both the maximum and the minimum prices fixed are 5 cents lower than those fixed in the current agreement; as compared with the 1948-53 pact, the maximum is higher by 20 cents, while the minimum remains unchanged. Thirdly, Argentina—one of the world's leading wheat producers—which had remained out of the current and the previous pacts —has joined the new Agreement.

The working of the new Wheat Agreement will be watched with considerable interest the world over. How far the Agreement will prove successful, it is difficult to say, especially when the problem of wheat surpluses continues to be an intractable one. Incidentally, it may be noted that no attempt has been made to link the disposal of existing wheat surpluses with the working of the Agreement. It is for this reason that the U.K. has stood out of the pact. The lack of any solution in the Agreement for the problem of wheat surpluses itself reduces somewhat the importance of the Agreement. Unless this problem is satisfactorily solved, conditions in the world wheat economy, indeed in the agricultural economy as a whole, cannot be stabilised. The International Wheat Council will do well, therefore, to examine the domestic production policies of the wheat-growing countries and find out the means of regulating the disposal of wheat surpluses in an orderly manner. It is to be hoped that this question will be taken up for consideration by the Council at its next meeting to be held towards the end of December next.

WORLD BANK'S INSTITUTE

The International Bank for Reconstruction and Development, during its ten years' contact with development problems of underdeveloped countries, has had the unique opportunity to observe the impediments to their more rapid economic progress. Shortage of capital, it was realised, is not the only, nor indeed the principal obstacle. Inexperience in dealing with economic and financial policy problems is an even more serious handicap. This realisation led the Bank to establish a training institute, called the Economic Development Institute, at Washington last year. It is a staff college for senior Government officials from underdeveloped countries. It has a small full-time staff, consisting of a Director, Prof. A. K Cairncross of Glasgow University, and two other distinguished economists.

The aim of the Institute is to bring about an improvement in the quality of economic management in the less developed countries. Its work consists primarily of seminars for the discussion of concrete problems and policies. It provides for the participants an intensive course in economic policy and administration designed to broaden their experience and enhance their usefulness to their Governments. The course has an essentially practical orientation and serves to give the administrators who are sent to the Institute a broad perspective of problems of economic development. In a large measure, the Institute draws upon the participant's own experience in dealing with economic affairs. An opportunity is thus provided to them to compare the problems of their own countries with those faced by others and to familiarise them with the relative advantages and disadvantages of the solutions which various countries have adopted. In doing so, they make extensive use of the information and experience acquired by the Bank in its dealings with the economic problems, investment projects and development programmes of Governments throughout the world.

In addition to the seminars and discussions, members of the regular staff of the Bank, including economists, engineers, financial analysts, commodity experts and country specialists, take part in the work of the Institute whenever their special knowledge and experience are likely to be of value. The course of study also includes visits to industrial, commercial, agricultural and financial institutions and discussion with their officials. In this manner, each participant is enabled to benefit from the combined information and experience of all.

Fourteen countries sent senior officials to take part in the first course which opened on 9th January last. The next course will commence on 1st October 1956. The Bank will provide the participants housing accommodation and will meet their travel expenses and other charges incidental to their stay in Washington. As the first group has been small, the impact of the experiment will at first necessarily be small. But the results achieved so far have been gratifying, and the Bank and the Institute are confident that, as the number of those who participate in the course grows, it will be found to have made, through them, a marked contribution to economic development of the world, in general, and less developed areas, in particular.

COMMODITY PRICE STABILISATION

Mr. Dag Hammarskjoeld, United Nations Secretary-General, struck a note of realism when he declared, while opening the debate on world economic situation at the Economic and Social Council last week, that stabilisation of primary commodity prices was imperative for the improvement of international economic position. Although the United Nations Organisation and its various specialised agencies have been functioning for more than a decade now, the problem of world economic balance still remains far from solved. Apart from political tensions which have led to a division of the world economy into two virtually isolated sectors, the lack of effective world action to prevent the violent fluctuations in commodity prices has been a stumbling block in the way of bringing about a world economic equilibrium. Indeed, the inability of countries to make any "serious headway" in stabilising commodity prices constitutes, as Mr. Dag Hammarskjoeld rightly declared, one of the greatest weaknesses in the fabric of international economic co-operation, "a weakness which we cannot afford to overlook." Elucidating this point, the U.N. Secretary-General observed:

"While the commodity problems may be ancillary to the broad problem of economic stability in the highiy developed countries, it cannot be considered as of secondary importance from the world standpoint. The vast majority of mankind still earns its living in primary, rather than industrial, production. It took almost a decade to arrive at the only four international agreements on wheat, sugar, tin and olive oil. Greater interest must be shown, if progress is to be made through the commodity-by-commodity approach, which so many Governments have favoured.

"It is disappointing that, even in percentage terms, the underdeveloped countries have failed to match the rate of growth in *per capita* incomes of the industrialised countries since before the war. Just as mass unemployment introduces not flexibility but economic paralysis, violent price fluctuations produce not economic balance but economic chaos."

There is considerable force in these remarks of Mr. Dag Hammarskjoeld. If the world economy is to be set on a solid, sound and secure footing, it is of the utmost importance that stability in primary commodity prices should be ensured. This problem is not merely a narrow matter of price haggling between producers and consumers. Far from that. It is a problem of eliminating the wild fluctuations which beset the economies of underdeveloped countries—"a problem of as grave import to them and to the world as depressions in developed countries." Emphasising this aspect, Mr. Dag Hammarsk-

PARLIAMENT COMPLETES A DULL WEEK

FURTHER SUPPORT EXTENDED TO LABOUR

From A Special Correspondent

NEW DELHI, 24*th July*

DELHI LETTER

WITH the return of the Prime Minister, Mr. Jawaharlal Nehru, to the capital this morning after his recent foreign tour which, in 32 days, took him to countries spread over three continents, political life in New Delhi has become animated. A series of Cabinet meetings are likely to be held in the coming weeks, in order to dispose of a number of problems awaiting the decision of the Prime Minister.

The controversial States Reorganisation Bill is being taken up in the Lok Sabha this week after disposal of the Bihar-Bengal Transfer of Territories Bill. Despite considerable controversy that the Bill might generate, it is quite likely that the Prime Minister's dominating personal touch and influence will finally prevail on some of the usually vociferous members of Parliament. This might result in not very many substantial changes in the provisions contained in the Bill as amended by the Joint Select Committee.

Now that Mr. C. D. Deshmukh's resignation has been accepted and the Prime Minister himself has taken over the Finance portfolio, albeit as a temporary arrangement, a serious effort is being made by certain influential members of Parliament to retain Mr. Deshmukh's services in some form or other, so that he will continue to give his sound and valuable advice to Government in implementing its financial and economic policies, in framing which he had played no insignificant part. It is suggested that he should be associated with the Planning Commission.

Proceedings in the Lok Sabha this week were particularly dull. Debates were listless and dry. There was complete absence of any learned or illuminating discussions, especially on important financial and economic matters. The Stock Exchange Bill was passed without much heated discussion. Even a far-reaching measure like the Reserve Bank of India Act (Amendment) Bill failed to evoke the usual liveliness and pep. Although the Business Advisory Committee had allotted eight hours for consideration and passing of this measure, the Bill occupied only about six hours. As a matter of fact, many of the members of the Lok Sabha had to be coaxed to speak on the Bill and few could make effective speeches on this important but technical piece of legislation.

In the absence of Mr. C. D. Deshmukh, the Bill was piloted by Mr. Arun Chandra Guha, Minister for Revenue and Defence Expenditure. In view of the complicated nature of the issues involved, he was rather careful in making a written speech while moving for consideration of the Bill. His speech contained a number of useful observations on the importance of foreign exchange resources in relation to note issue. He pleaded for an understanding of the complex problem and emphasised that the essential purpose of foreign exchange reserves everywhere was to enable a country to tide over temporary balance of payment difficulties. In other words, he brought out clearly that there was no sanctity on the question of having large foreign exchange resources in order to give added strength to the fiduciary note issue.

Citing quite a number of instances, where there was no rigidity in regard to the reserve requirements in the form of gold or foreign exchange against issue of currency, Mr. Guha illustrated the implication of clause 10 of the amending Bill and pointed out the necessity for empowering the Reserve Bank of India to exercise credit control, with a view to stabilising exchange rates, maintaining a steady price level and also maximising economic activities and employment. In this connection, he revealed as to what would be the nature of credit control in the coming months. He admitted that, in the present economic conditions, bank rate policy and open market operations were not proving quite effective as means for credit control. In order to achieve a certain amount of balance in the economy of the country, the Reserve Bank should, according to Mr. Guha, be empowered to vary the percentage of the deposits of Scheduled banks with the Reserve Bank from time to time. In other words, he desired that there should be a certain amount of restraint on Scheduled banks in the expansion of their credit facilities to the general trading public. He also deplored the fact that there has been of late a tendency for the excess of reserves kept by the Scheduled banks with the Reserve Bank to decline.

The Government of India must, however, take note of one significant point in implementing this Act. It has already been the policy of the Government to extend rural credit facilities. The State Bank of India, when it was taken over by the Government, was to open about 400 branches in five years in the rural areas in order to provide credit facilities to agricultural people and to enable them to have more holding power in the disposal of their agricultural produce at the time of the crop moving season. In case any undue restrictions and impediments were placed as a result of the working of the provisions of the Reserve Bank of India (Amendment) Bill, it is held by many here that the objective of the Rural Banking Enquiry Committee might not come to fruition.

The Industrial Disputes (Amendment and Miscellaneous Provisions) Bill, 1955 which is being considered by Parliament as these lines are being written is of more than ordinary significance to business men. It reflects the Government's anxiety to maintain the present good relations between the employer and the employed, with a view to accelerating the economic progress of the country. In Government circles, there is considerable appreciation of the fact that labour has so far been co-operating fully with the authorities in their efforts to step up industrial production during the last three or four years. It is their desire to keep the present good relations in future also.

One object of the present amending Bill is to alter the existing provisions in the Industrial Disputes Act, 1947, so as to provide that, where, during the pendency of proceedings in the Industrial Court, an employer finds it necessary to proceed against any workman in regard to any matter unconnected with the dispute, he may do so in accordance with the Standing Order applicable to the workman. But, where the action taken involves discharge or dismissal, he will have to pay the workman one month's wages and simultaneously file an application before the authority, before which the proceedings are pending, for its approval of the action taken.

Another object of the amending Bill is to repeal the Industrial Disputes (Appellate Tribunal) Act, 1950, and to substitute at the same time the present system of tribunals by a three-tier system of original tribunals, manned by personnel of appropriate qualifications. References to the National Tribunals will be made by the Central Government and they will cover disputes which involve questions of national importance or which are of such a nature that establishments situated in more than one State are likely to be interested in, or affected by, the disputes.

The Labour portfolio is being handled by an experienced trade union leader like Mr. Khandubhai Desai. It is being hoped that there will be better relations between the labour and the employer during the second Five-year Plan period in this respect. Already, some transformation is taking place, in the sense that the Government is increasingly appreciative of the need for giving some representation to labour in management. But, at the same time, the Government wants to proceed cautiously and with care so as not to bring about any sudden change in the employer-employee relations. It is certainly not for taking any precipitate action which will retard the pace of production in the coming years. It is trying to follow a policy of gradualism in this matter and await the result of such experiments before launching upon a more dynamic labour policy.

The Government is also anxious to clarify certain definitions in the labour laws, for instance, in regard to the term "workman." The present definition of "workman" in the Industrial Disputes Act has led to a certain amount of uncertainty, particularly in the case of technical and supervisory personnel. It is, therefore, thought desirable by Government spokesmen to enlarge the definition to cover supervisory, as also technical personnel, whose emoluments do not exceed Rs. 500 per month.

Members of Parliament have given general support to the stand taken by the Government. Great interest is being taken by the House, as evidenced by the granting of an extra hour for consideration of this Bill today. The Prime Minister promptly took the initiative and announced the enhancement of time when trade union leaders pressed home the need for allotting a little more time for this Bill.

AMERICAN LETTER

OUTLOOK CHEERFUL, DESPITE STEEL STRIKE

VICTORY TO REPUBLICANS ASSURED

From Our Special Correspondent

NEW YORK, 15*th July*

CONTINUED good business in the United States for the rest of the year is virtually assured. However, there is a short-term and a long-term outlook. In the short-term area, a decline of business is inevitable with some 800,000 workers idle. Of that number, 650,000 are steel workers. The rest have been laid off in related industries, such as railroads and trucking, etc., as well as other businesses handling steel. Further layoffs must be expected in the immediate future.

As could be expected, the sensitive weekly business indices show a marked decline with previous reporting periods. Insiders are still bracing themselves for a long strike, because management and labour are far apart in their respective demands. The main issue is that of the length of the new contract. Management wants a five-year agreement and the union leaders are talking in terms of two years.

That there will be an increase in wages and steel prices is taken for granted and no particular problem appears to present itself on that score. The optimists say, rightly or wrongly, that steel furnaces can hardly be expected to be re-fired before 1st August 1956. Others suggest the strike may last longer than that.

Secretary of Commerce, Mr. Sinclair Weeks said the other day that "business has come along even better than I thought," but he added it was impossible to make a firm economic forecast for the second half of 1956, "because no one can predict either the length of the strike or its effects on individual industries."

So far as the long-term outlook is concerned, an extended steel strike would help to work off the rather substantial inventories by fabricators and other steel consumers. This must create a pent-up demand and it should carry peak production levels well into the future, once work is resumed.

In other words, while there may be a slowdown in heavy construction and plant expenditures owing to the strike, temporarily, there is bound to be accelerated activity in all fields after work resumes.

Expenditures for plant and equipment were scheduled to reach an annual rate of $36,700 million in the third quarter of 1956, against $32,800 million in the first three months. Depending on the duration of the steel strike, the projected July to October figures may not be achieved, but the general prosperous conditions plus the backlog of savings would seem to indicate that the overall 1966 picture should be more than satisfactory.

Another long-term optimistic factor is the new Federal highway programme. Congress passed a Bill calling for Government expenditures of $33,000 million. It was signed by the President. In peak periods of construction, the highway programme is expected to add 650,000 to the labour force in this country and be a considerable stimulant to production and other business activity.

Housing starts in the first half of 1956, in terms of numbers after final statistics have been compiled, will probably fall 13 to 14 per cent. below the levels of the same period last year. In other words, seven houses are being built currently for every eight houses last year.

In terms of dollars, however, the decline is much less pronounced. The new 1956 houses are somewhat larger than their 1955 counterparts. Also construction costs have risen, so that expenditures for residential construction are only about 6 per cent below 1955 levels.

The decline in the rate of housebuilding began last fall. It reflects, in part, the tightening of the mortgage market which, in turn, is an outgrowth of restrictive monetary policies plus heavy loan demands by business, industry and individuals.

Indicative of the latter factor was a report by the Federal Reserve Bank of New York which placed the average rate of interest, charged by the large New York City banks, at 3.89 per cent., in the second quarter of 1956 for short-term loans, against 3.64 per cent. in the quarter ended 31st March.

Employment in the U.S. in June, before the steel strike began, exceeded 66.5 million persons. There were 2.5 million more people in jobs at the mid-year term than there were on 30th June 1955. The total of people working for Federal, State and local governments was 7.1 million, against 6.8 million twelve months previously. Manufacturing jobs were placed at 16.7 million.

The construction industry added more than half a million workers, the service trades, from radio repairmen to plumbers, increased their forces by more than 300,000 workers and wholesalers and retailers employed 50,000 more than they did last year.

On the political side, the American public is watching with keen interest overseas developments. The visit of Prime Minister Nehru with President Nasser of Egypt and Marshal Tito of Yugoslavia has aroused particular curiosity.

India's policy of neutrality in the East-West struggle is not too well understood. It needs clarification to convince the American public of its sincerity in the perspective of succession to Mahatma Gandhi. The man in the street here does not know anything about it. Mr. Nehru and Marshal Tito as well as General Nasser are suspected here as having red ties to the point where they are not exactly enemies of the Western world, but lending a helping hand to further penetration of Soviet policy.

President Eisenhower's statement that he would be a candidate again, together with Vice-President Nixon, is an additional optimistic factor in the U.S. After his successful operation, the President seems more than fit to perform the duties of his office and none of the Democratic candidates seems to have made much of an inroad in his popularity as an honest man and a leader.—*All Rights Reserved.*

IMPERIAL PREFERENCE OR COMMON MARKET?

BRITAIN'S DILEMMA

From Our Own Correspondent

LONDON, 21*st July*

LONDON LETTER

THIS week's Paris Meeting of Ministers in the Organisation for European Economic Co-operation has revived British interest in the idea of a European common market. A number of Members of Parliament of both parties have pressed upon the British Government to take active part in the European discussions on the proposal. The only difference in approach between the two parties has been that the Government's supporters envisage that Britain will participate in the European free trade area *after* this has been established, while the Socialists go somewhat further and expect the Government to take a lead in the establishment of the free market.

But, on the Continent of Europe the matter has been carried much further, for the Benelux countries who created the practical concept of a common market have gained the adherence of France, Western Germany and Italy to the principle of establishing what would be virtually a Customs Union between the members of which no tariffs would exist and which would have a common tariff to countries outside the Group. This is not quite the same as free trade as is sometimes represented. The idea is that the member-countries of the Group would begin with a list of items on which they could agree to abolish tariffs between themselves, and that they would then gradually add to this list and so move towards free trade. Thus the common market would, in the first instance, be a free trade market between the six countries for *a limited range of goods.* It is to this grouping of countries that it is now suggested the United Kingdom should adhere.

The countries mentioned are more forward-looking than Great Britain in the matter of reducing tariffs; the U.K. has attracted a certain amount of argument against its apparent rigid policy of preference and it must be admitted at once that the U.K., which is a high-tariff country, has been much more interested in preaching the gospel of trade liberalisation to Europe than in readiness to reduce tariffs. Thus, with all the O.E.E.C. countries pledged to a 90 per cent. liberalisation from quotas, the U.K. has already achieved 85 per cent. and by the end of this week with the freeing from quotas of paper-making materials such as wood-pulp, board etc., the U.K. will have achieved 94 per cent. liberalisation a good two months before bound to pass the 90 per cent. mark. But this country's Continental neighbours now point out that liberalisation of trade by way of abolishing quotas has been superseded in importance by liberalisation of trade by abolishing tariffs.

The old battles will have to be fought all over again but this time Britain must fight them with two faces, one towards the Continent and one towards the Commonwealth and the Colonies. The first objection which the Government has towards participating in the programme of tariff reduction in Europe, is that its commercial treaties require the strict operation of the "most-favoured-nation" clause; thus the granting of low tariffs to the common market countries would mean similar concessions through the Commonwealth and with the countries to which Britain is treaty bound—and this without reciprocity. The second point is that the U.K. is required to maintain preferences in favour of the Commonwealth countries and reductions in tariffs to the common market countries; this must mean equal reductions to the Commonwealth countries.

But the British Ministers in Paris have proposed to examine the problem of participation in the common market not only for the U.K. but for the other O.E.E.C. countries, and this examination will, of course, seek ways of reconciling the obligations of membership of the common market with the existing obligations of "most-favoured-nation" clauses and Imperial Preference. It is not yet clear, however, whether the Government have decided to reconsider their whole philosophy towards tariffs. The O.E.E.C. may well be the centre from which a new doctrine may infiltrate into Britain. The philosophical issue is whether "most-favoured-nation" clauses and Imperial Preference are compatible with the concept of a free trade world. Both concepts were born in a time when the world was more protectionist than the U.K. and their inspirers had no thought that, in time, they could become stumbling blocks to freedom of trade. Without reciprocity, there can be no freedom. The six countries of the common market recognise this and, if the U.K. is to join the market, it will assuredly have to find a way of doing so on terms which either do not affect the Commonwealth or which involve the mutual participation of the Commonwealth.—*All Rights Reserved.*

DEVELOPMENT OF BANKING IN INDIA

IMPORTANCE OF TRUST AND CONFIDENCE

SPEAKING at Bangalore on the occasion of the Golden Jubilee of the Canara Bank Ltd., Mr. C. H. Bhabha, President, Indian Banks Association, Bombay, expressed bitter disappointment at the periodical sermons from highly placed leaders on the service the country expected from banks and other institutions. This disappointment becomes all the more poignant when the advice comes from "leaders who have never successfully run any organisations or even employed half a dozen assistants during their whole career." It will be more so, when it is noted that the sermons are hardly ever followed up by any concrete action as would justify the vague talks of these leaders which, while pleasing the ignorant and uneducated masses, would create in their minds erroneous impressions regarding the service rendered by the banks to the country.

Mr. Bhabha, therefore, did well in reminding such leaders of the role which the banks have played and are yet to play in the development of the Indian economy. He pointed out that Banking in India had very heavy responsibilities to shoulder in the context of the national objective of improving the standard of living of the growing population of the country. Since India was one of the most under-banked countries in the world, it needed many more banking offices throughout the length and breadth of the subcontinent for inculcating the banking habit amongst the people, for mobilising resources for national objectives and for developing the habit of thrift. While this huge task of building up banking lay ahead, Mr. Bhabha said that it should not be used as an argument to dispute the service already rendered to the nation by banking institutions in the country during the past few decades, despite serious obstacles, hardships and difficulties. He added:

"It is Indian banking institutions like the Canara Bank which have enlarged their service and opened out branches, without any fear or favour, without order or directive and without any subsidy or artificial support. Again, it is Indian banks which are shareholder-owned public institutions, as distinct from State ventures, which have been rendering this useful service to the country quietly and without any drum-beating or fanfare. It is, therefore, heart-rending to find that there is no recognition of all the good work that has been done or is being done by these institutions, so vital for our economy."

To Mr. Bhabha, nationalisation of the Imperial Bank stood as a concrete example of the non-recognition of the services rendered by banks to the nation. He remarked that it was easy to expropriate such well organised and soundly built institutions as the Imperial Bank, built after decades of hard and honest work, and try to run them in some fanciful or ideological manner, ostensibly with a view to providing more branches and better facilities. But "it is only in course of time that history will judge and expose the myth of these fanciful experiments and only then will the unwary public come to know of the huge national loss."

Example of Canara Bank

The President of the Indian Banks Association took the instance of the Canara Bank to point out how the building up of banking was a slow and steady process. He had been told that, during the first few years of the Bank's existence, it could not have a single branch office. This, in his opinion, was no cause for any regret at all. For any undue haste or hurry for expanding this business would have caused great loss, if not ruin. He, therefore, paid a tribute to the wisdom of the founders of the Canara Bank for not rushing in, in pursuit of crazy business. He averred that banking business was essentially a business based on trust and confidence and that by no stretch of imagination could Government officers be expected to have the monopoly of that confidence or even of patriotism. It was through the result of experience learned by various nations through centuries that bankers in those countries had been able to build up solid and sound banking structures for their countries and these structures withstood all tests of times and circumstances. It was by emulating these examples that banking in India could expect to find a place of honour in the world and to fulfil its mission of service for the regeneration and development of the country. Evidently in making those observations, Mr. Bhabha seems to have had at the back of his mind the futility of the present move by the Government of India to get 400 new branches established by the State Bank of India within five years of its coming into existence.

Mr. Bhabha drew the attention of his audience to the encroachment made by the State on the rights of bankers by amending section 37 of the Income-tax Act as embodied in the Finance Bill of 1955. As a result of this amendment, it may be mentioned here, bankers are expected to divulge their customers' secrets in certain circumstances and even, according to Mr. Bhabha, indirectly to spy on the customer's business transactions. This, as he rightly opined, was greatly injurious to the Indian economy as a whole, since a banker was, in honour, bound to maintain the secrecy of his customer's business with him. It is needless to add that a rapid growth of banking will be possible only if banks are able to attract deposits and that this will depend, to a large extent, on the confidence of people that banks will not give away their secrets to the Government. Mr. Bhabha regretted that the Reserve Bank of India which, as the guardian of bankers had the responsibility of zealously protecting the fundamental basis of banking business, namely, secrecy between a banker and his customer, did not pull its weight against the amendment when it was adopted. In this context, he referred to several controls, regulations and fetters to which bankers were subjected in India and alleged that some of them were purely for Government's political purpose. He considered that some of these controls definitely stood in the way of a healthy and sound growth of the banking structure. He felt that Government interference should be reduced to the barest minimum, if a strong banking system were to be developed in the interests of the country's future prosperity.

Five Decades of Service

Congratulating the Canara Bank on the completion of five decades of useful service to the nation, Mr. Bhabha stated that the Bank's present strong position was largely the result of solid foundations laid by its sponsors, like the late Mr. Subbarao Pai, first Chairman of the Bank, who gave their best for ensuring its success. Unlike other banks in India, the Canara Bank, he mentioned, commenced as a small Fund, which undertook organised and regulated banking business. From such small seed, it has blossomed into an institution of national importance, thanks "to the honesty of purpose, sincerity of spirit and ideal of service as well as devotion to the cause" of the founders of the Bank. The example of the Canara Bank shows, as Mr. Bhabha aptly remarked, that big businesses and institutions generally have humble beginnings. It also shows that, contrary to popular belief, small institutions can grow into big ones without State controls and State subsidy, provided they are run efficiently and enterprisingly. In this connection, he paid a well-deserved tribute to all those who shouldered the responsibility of building the Bank during these five eventful decades. He took care to compliment not only the directors and high officers of the Bank but also the workers who are responsible for its day-to-day work. He noted with pleasure the endeavours of the Bank to keep abreast of the times and adjust its working according to circumstances, so that it might continue to play its useful role in the development of the nation. A concrete evidence of this adjustment was the undertaking of foreign exchange service by the Bank. "In its usual thorough fashion," to quote Mr. Bhabha, "the Foreign Exchange Department has been so organised that, even within this short period, it plays a very important role not only for the Bank, but also for the country, even *vis-a-vis* the strong and long established foreign exchange banks in India." This venture of the Canara Bank in the field of foreign exchange business added, he said, strength to the few Indian banks which were already rendering this service for the development of India's foreign trade.

TRADE LIBERALISATION IN EUROPE REVIEWED

The economic difficulties posed by the preponderating creditor position—to the tune of nearly $600 million up to last month—commanded by West Germany in the European Payments Union was one of the pressing problems that came up for discussion when the 17-nation Ministerial Council of the Organisation for European Economic Co-operation met recently in Paris. The main problems before the Council, however, were to review the results obtained by the trade liberalisation drive started in January 1955 when a 90 per cent. liberalisation target was set for the member-countries, and to consider whether the target could be maintained, and what further steps could be taken for further lowering of the trade barriers in the year ahead.

An average reduction of as much as 86.6 per cent. of the restrictions effected by the O.E.E.C. countries by 1st June 1956 augurs well for the future. The U.K., however, went a step further and raised its proportion from 85 to 94 per cent. recently by freeing certain paper and paper-making products from controls. Low tariff countries, such as Scandinavian nations and Switzerland, maintained that consolidation of the barriers at 90 per cent. of their level in 1955 would not be effective, unless other trade barriers like high tariffs, restrictive State trading practices and artificial aids to exports were also tackled.

The consensus of opinion at the conference was that the ground gained in respect of liberalisation must be maintained. A proposal was also made to appoint a special ministerial committee to study the balance of payments problems, with special reference to those created by Germany's creditor position. Germany which was not less anxious to find a way out of its extreme creditor position, made a suggestion that the European exchange parities, particularly the value of sterling might be discussed at the conference. Such a discussion in the O.E.E.C. was, however, ruled out, and the British Treasury declared: "All discussion and rumours about impending changes of the parity of, or margin for, sterling are unrealistic and irrelevant."

I.F.C. CHARTER COMES INTO FORCE

The International Bank for Reconstruction and Development (World Bank) announced last week that, with 31 member-nations subscribing, the charter of the International Finance Corporation (I.F.C.) had come into force. The I.F.C, an affiliate of the World Bank, is designed to help finance productive private enterprises, particularly in less-developed areas of the world. Its charter requires that, at least, 30 member-countries join, to provide at least $75 million of the authorised capital of $100 million.

With France and Germany, two new members, the Corporation now has 31 members and capital subscriptions amount to $78,366,000. Other members are Australia, Bolivia, Canada, Ceylon, Colombia, Costa Rica, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, Finland, Guatemala, Haiti, Honduras, Iceland, India, Japan, Jordan, Mexico, Nicaragua, Norway, Pakistan, Panama, Peru, Sweden, the United Kingdom, and the United States.

The basic difference between the proposed I.F.C. operations and the loan practices of the World Bank is that the I.F.C. will be in a position to advance loans on meritorious projects without the guarantee by the Government of the country where the enterprise is located. It has authority to invest in any kind of private enterprise—including agricultural, financial and commercial undertakings—but its main emphasis is likely to be on industry. It will be the purpose of the I.F.C. also, to act as a catalytic agent in so far as it will attract private capital in various countries which, in partnership with I.F.C. capital, will help promote meritorious projects.

Membership in the I.F.C. is open to Governments which are members of the World Bank. In addition to the present 31 members, 20 other countries have indicated their intention of becoming members of the Corporation.

The President of the World Bank, who is Chairman of the Bank's executive directorate, will also be Chairman of the I.F.C. Board of Directors.

LOK SABHA PASSES RESERVE BANK AMENDMENT BILL

LOCAL BOARDS TO BE RETAINED

THE Reserve Bank of India (Amendment) Bill, 1956, introduced in Parliament on 2nd May last, is one of the few legislative measures to be quickly passed by the Lok Sabha during its current session. After a two-day debate, the Bill was passed on the 20th inst. The legislation seeks to streamline the powers of the Reserve Bank to tackle the two main problems which will arise as a result of the creation of credit for financing the second Five-year Plan.

In the main, it provides for: (1) a minimum holding of Rs. 400 crores in foreign securities and Rs. 115 crores in gold in the Issue Department of the Reserve Bank; (2) the revaluation of gold at the rate agreed to by the I.M.F., that is, at 2.88 grains of fine gold per rupee, instead of 8.47512 grains; (3) the temporary suspension of asset requirements in respect of foreign securities, without payment of any tax to the Government, and (4) the strengthening of the machinery of the Reserve Bank for credit control, by vesting in the Bank powers to vary the reserve requirements of Scheduled banks within the range of 5 to 20 per cent. in respect of demand liabilities and 2 to 8 per cent. in respect of time liabilities, instead of a fixed reserve ratio of 5 per cent. and 2 per cent., respectively, as at present.

The other two provisions of the Bill seek: (1) to authorise the Reserve Bank to make advances from the newly created National Agricultural Credit (Long-term Operations) Fund to State co-operative banks for agricultural purposes and (2) to abolish the local boards of the Reserve Bank.

The Bill was passed without any serious opposition to its provisions, but only after the Government's withdrawal of the clause relating to the abolition of local boards. The House almost unanimously demanded the retention of local boards, on the ground that they can function effectively as representatives of territorial and economic interests and the interests of co-operative and indigenous banks.

The objects and reasons of the main provisions of the Bill were explained in detail in our issue of 12th May 1956 (*vide* page 899) and do not, therefore require to be stated again.

Foreign Exchange Reserves

Moving the Bill for consideration by the House, Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, said that the existing provisions relating to foreign exchange reserves would seriously limit the Reserve Bank's capacity to expand the currency during the second Plan period to meet the growing requirements of a developing economy. The targets of development expenditure in the public as well as private sectors and the magnitude of deficit financing envisaged under the second Plan would inevitably involve a substantial increase in the note issue simultaneously with a decrease in foreign balances. It is estimated that deficit financing would be of the order of Rs. 1,200 crores and the sterling assets would be brought down by Rs. 200 crores. Under the existing provisions of the Act, the additional amount of currency that could be issued, the Minister pointed out, was only Rs. 189 crores and an expansion of this order in currency would be far from adequate to meet the requirements of an economy in which national income would increase by 25 per cent. Mr. Guha drew the attention of the House that even an increase in currency of this order would not be possible with an adverse balance of payments. Hence the urgency to amend sub-sections 2 and 4 of section 33. Mr. Guha added that the principle of linking foreign exchange reserves to note issues was in one sense a relic of the past and many countries had modified this principle in the last two decades. The Government of India, however, did not propose to go so far as many other countries have done in this respect, but only wanted to prescribe an absolute minimum of reserves both in foreign exchange and gold in order to ensure that some cushion was left against unforeseen emergencies.

Explaining the amendment relating to revaluation of gold holdings of the Reserve Bank, Mr. Guha said that hitherto the gold held by the Bank was being valued at a very low price, much lower, in fact, than the parity for the Indian rupee which had been agreed to by the I.M.F. The revaluation proposed, at 2.88 grains of fine gold per rupee or Rs. 62-8 per tola, would raise the value of the gold held by the Bank from Rs. 40 crores to a little over Rs. 115 crores. This change was only formal and was intended to reflect more accurately the value of India's gold reserves in terms of the official parity of the Indian rupee. Simultaneously with the revaluation of gold, the minimum limit for the holding of gold by the Bank was also being raised from Rs. 40 crores to Rs. 115 crores, in addition to the minimum holding in foreign securities of Rs. 400 crores mentioned above.

The provision relating to foreign exchange and gold reserves met with very little opposition from the House. One of the members of the Opposition benches, Mr. Gurupadaswami, however, was of the view that it was "highly dangerous" to abolish the currency reserve ratio. He also suggested that the State Trading Corporation should take over purchase and sale of gold instead of leaving it to private hands which encouraged hoarding. Another member, Miss Annie Mascarenes, termed the move as an unwise step. She said that the country had hardly recovered from the effects of inflation as a result of the Second World War and that an increase in note issue at this stage would result in inflationary conditions.

Currency Ratio

Mr. G. D. Somani and Mr. V. B. Gandhi wanted the continuance of the ratio pattern of currency reserves. They suggested that the ratio could, however, be reduced from 40 per cent. to 20 per cent. Mr. Somani warned that, if any lack of confidence was created by the undue expansion of currency and by a low level of gold or foreign securities, then that might have some repercussions which they should avoid. The reduction of the ratio from 40 per cent. to 20 per cent. would, on the one hand, enable the Reserve Bank to meet the requirements of the expanding economy and, on the other, would ensure the necessary confidence and stability in the country's economy. Mr. Gandhi said that, with the lower reserve ratio of 20 per cent. it would still be possible to have a note circulation of the order of Rs. 2,500 crores—just the level the country expected to reach by the end of the second Five-year Plan. Parliament could review the situation at the end of the five-year period and decide whether this ratio should be further changed or given up in favour of a fixed amount reserve of the kind suggested in the Bill. One serious shortcoming of the fixed amount reserve was that it gave Government an entirely free hand in the matter. In his reply, Mr. Guha assured the House that the Reserve Bank would continue to exercise the greatest care in expanding the currency.

The other clause of the Bill which evoked some debate in the House was that relating to the strengthening of the machinery of the Reserve Bank for credit control. Speaking on this provision, the Minister said that increased deficit financing would also result in a large increase in bank resources and their capacity to create credit. One of the main methods of credit control was the lowering or raising of minimum reserves to be kept by commercial banks in the form of credit balances with the central bank. This was considered an additional and more effective means of enabling the central bank to expand or contract credit-creating capacity of commercial banks. Mr. Guha added: "Under the present economic conditions, bank rate policy and open market operations may not prove quite effective or feasible means for credit control. In view of the limited efficacy of the traditional instruments of credit control, it has now been suggested that banks should be asked to keep a certain percentage of their deposits with the central bank and that the latter should be authorised to vary this percentage from time to time."

Credit Control

Mr. Gurupadaswami said that Scheduled and other banks had dealt with distribution of credit in a reckless manner and all the powers of the Reserve Bank had not been used to control their activities. He wanted that one agency should control both creation of credit and distribution of credit. Mr. Somani described the powers that were taken under the Bill to control credit were far more than warranted. He was of the view that, even now, the Reserve Bank had adequate powers to ensure that commercial banks formulated their credit policy in conformity with the policy of the Government and the Reserve Bank.

Mr. V. B. Gandhi, on the other hand, welcomed the idea of giving wide powers to the Reserve Bank to regulate the expansion of bank credit and to control bank credit. The central bank in the country should have these powers, especially in the context of inflationary possibilities that were envisaged as a result of the planned development programme. He was, however, of the view that the powers as provided in the Bill were rather of an extreme kind and hoped that the Reserve Bank would use them only in cases of grave emergency. Mr. Avinashilingam Chettiar wanted to know what interest the Reserve Bank would pay to Scheduled banks on the additional reserves maintained by them with the former. He also wanted to know whether the notification calling for higher rates of reserves would apply to all banks in the country or only to banks in certain areas. Another Congress member suggested that the provision should apply only to banks with deposits of more than Rs. 10 crores. Otherwise, he felt smaller banks catering to the needs of agriculturists and petty shopkeepers would have to close down.

Mr. Guha, in reply, said that the provision relating to reserves to be maintained with the Reserve Bank would apply to all Scheduled banks uniformly. This would be calculated on an average basis, so that all the Scheduled banks might bear this burden equitably. As regards the additional reserves to be maintained, they would be calculated on the basis of increase in the deposits of banks during a particular period. In view of the wide variation in rates of interest allowed by Scheduled banks, he felt that it would be better to give the Reserve Bank the

MECHANISATION OF HANDLOOM WEAVING

FEARS OF UNEMPLOYMENT UNFOUNDED

ONE of the features of the Government of India's cotton textile policy subjected to severe criticism by the spokesmen of the handloom industry relates to the modest beginning that has been proposed in the mechanisation of handlooms. At a Press conference held in Bombay the other day, these spokesmen declared that the installation of powerlooms in the handloom sector would spell the ruin of the industry by creating large-scale displacement of weavers. Speaking on behalf of the industry, Mr. M. Somappa, a member of the Handloom Board, characterised the proposal as thoroughly unfair, for, in his opinion, the handlooms had not been given a "fair trial." Mr. Somappa even claimed that the handloom industry was quite capable of standing on its own feet and that it did not need any financial assistance from the Government. He urged the Government not to implement any policy which would curtail the market for the industry.

The criticism levelled against the conversion of handlooms into powerlooms is, to say the least, unjustified. The very claim on which the criticism is based, namely, "the handloom industry is quite capable of standing on its own feet," is clearly exaggerated. To test the validity of this claim, subsidies to handlooms should be withdrawn. We do not think that Mr. Somappa and his colleagues will welcome the application of this test straightaway, even though the cloth market is passing through a boom, owing to failure of supply to keep pace with the demand.

The Only Way

The only way in which handlooms can be made economic is to increase their productivity. The surest way of doing so is to convert them, as early as possible, into powerlooms. Such a changeover is, as Mr. Nityanand Kanungo, Union Minister for Consumer Industries, rightly pointed out in the course of a statement in the Lok Sabha on Saturday last, "an inevitable stage" in the improvement of production techniques, in order to enable the weaver to secure higher earnings and raise his standard of living.

The apprehensions of large-scale unemployment among handloom weavers as a result of conversion to powerlooms are also unfounded. The Kanungo Committee had, of course, stated that the introduction of one powerloom would displace 20 handlooms. Presumably, the figure is with reference to the production capacity of the handloom industry. This view has, however, been questioned by the Union Commerce and Industry Ministry sources. Refuting the statement as "entirely incorrect," these sources observe: "The Kanungo Committee had estimated production of powerlooms at 30 yards a day, as compared with 6 yards by the handlooms. It is unlikely that this high rate of production can be achieved; the average is not likely to be more than 20 yards a day."

Even supposing, for argument's sake, the Kanungo Committee's ratio is taken as correct, the conversion of handlooms into powerlooms will not at all result in large-scale unemployment among weavers, because the additional production of cloth will require more hands for processing, not to speak of other activities, as, for instance, marketing. While thus fewer persons will be required for weaving on the looms, a larger number than at present will find employment as helpers and processors. Then, there is the fact that conversion will not take place overnight; it will be gradual. Emphasising this aspect, Mr. Kanungo assured the House that the changeover would be regulated in a manner that would be in relation to the additional demand for cloth and that, too, only after care had been taken to see that full employment was provided to the existing handloom weavers.

In this connection, Mr. Kanungo cited certain statistics to prove that the installation of powerlooms was proposed in order to meet only a part of the additional demand for cloth during the second Five-year Plan period.

According to Mr. Kanungo, the additional demand for cloth in the Plan period is taken as 1,700 million yards, out of which a bare 200 million yards are intended to be produced through powerlooms. The existing production of handlooms is about 1,500 million yards. Not only will this remain unchanged, but, out of the additional demand, 1,000 million yards have been reserved for production by the handloom, making a total of 2,500 million yards.

It is stated that there are 2.8 million handlooms in India and that, after making allowance for idle looms, the balance of 2.2 million looms can produce 4,000 million yards at the rate of 6 yards per loom per day. But the figure of 2.8 million handlooms, it is observed, was collected in 1951, that is, at a time when there was an acute shortage of yarn and the numbers were inflated, in order to secure additional yarn supplies. The figure of 2.8 million is thus unreliable. Realising this, the Kanungo Committee carried out sample surveys. On the basis of these surveys, the Committee assessed the number of active commercial looms at no more than 1.24 million. Another myth exploded by the Committee was that the handloom industry was a valuable source of part-time employment to under-employed agriculturists. The Committee found that, except in one or two places, the actual handloom weaver was a whole-time weaver by occupation. This finding has been borne out in the Census Report of 1951 which puts the number of full-time handloom weavers at 1.28 million.

Quite Apparent

In order to produce the 2,500 million yards earmarked for this sector, no less than 1.40 million handlooms will be required, assuming that the looms will be working full time for 300 days a year at the rate of 6 yards a day per loom. This figure is actually less than the number of active commercial looms estimated by the Committee. It will be quite apparent, therefore, that there need be no fear of any unemployment or of any "paralysation of the handloom industry," as mentioned in the statement by certain members of the Handloom Board.

The cotton textile policy of the Government of India envisages the conversion of no more than 35,000 handlooms into powerlooms during the first two years of the Plan. These powerlooms will normally be allotted to co-operative societies of weavers. Besides making available loans and grants for purposes of conversion, the Government is making arrangements for providing technical facilities. It is, for instance, reported to have asked the State Governments to select immediately five or six suitable technically qualified persons and send them to Gwalior for receiving training and instruction in the installation and working of powerlooms. The period of training is about three months. The Central Government is reported to have also asked the States to draw up schemes for the installation of powerlooms (through co-operative societies) in their areas, indicating the number of such looms they would require in the next two years. Meanwhile, a meeting of the Directors of Industries of nine States where the handloom industry is concentrated has been convened by the Centre at New Delhi for discussing the measures for implementing the conversion programme. The meeting is due to be held at the week-end.

BONUS FOR BOMBAY MILL WORKERS

The 225,000 workers employed in the City's cotton mills will receive a total of more than Rs. 2 crores as bonus for 1954. The bonus will be distributed at the rate of three months' basic wages in the case of 16 large mills covering about 100,000 workers and at the rate of 15 days' basic wages in the case of 30 mills covering 75,000 workers which suffered losses during 1954. Nine other mills will pay varying amounts of bonus. The bonus payments include additional bonus for 1953, ranging from 3 to 11 days' basic wages in respect of six mills, which have already distributed bonus for this year.

The payment of bonus for 1954 is for the second year of the five-year bonus pact entered into between the Millowners' Association, Bombay, and the *Rashtriya Mill Mazdoor Sangh* early this year. The agreement, it will be recalled, covers 55 out of the 57 mills in existence and provides for payment of a maximum of three months' and a minimum of 15 days' basic wages as bonus for the five years 1953 to 1957, irrespective of whether the mills suffer losses or not during the period. The quantum of bonus to be paid by each mill to its workers is decided on the basis of the "full-bench formula" of the Labour Appellate Tribunal. The bonus for the first year—that is 1953—was paid soon after the agreement was signed.

The Praja Socialist-led Cotton Mill *Mazdoor Sabha* has asked the workers—numbering 75,000—in 30 mills not to accept the 15 days' bonus for the years 1953 and 1954. The *Sabha* has urged the Government to constitute a Court of Enquiry for investigating "the irrational system of management" of a number of mills, especially in respect of sales, purchase, cost accounting and audit, which, it is alleged, is responsible for the low quantum of bonus.

In 1955, India exported rayon fabrics of the order of 2.9 million yards, valued at Rs. 51.70 lakhs. Ceylon's share is the largest, amounting to over 1 million yards valued at Rs. 22 lakhs. Aden comes second, total exports to that country being 259,883 yards valued at Rs. 3,81,183. The following table gives the country-wise exports of rayon fabrics in 1955.

Country	Quantity (yards)	Value (Rs.).
Aden	259,883	3,81,183
Afghanistan	222,109	3,33,684
Ceylon	1,040,298	22,07,937
Kenya	41,235	47,601
Tanganyika	164,201	1,67,428
Sudan	146,465	1,54,664
Other countries	1,058,624	18,78,139
Total ..	2,922,785	51,70,636

In the same year, India exported 70,559 yards of silk goods mixed with other materials, 198,300 yards of silk piecegoods and 22,782 yards of other silk fabrics valued at Rs. 3,00,682, Rs. 23 lakhs and Rs. 5,86,150, respectively.

An official committee has been set up by the Portuguese Government to study conditions in the depressed cotton spinning and weaving industry. It is by far the most important single manufacturing industry in Portugal. The textile industry, according to the Ministry of Economy, has an investment in machinery and equipment of about $140 million. It gives employment to about 70,000 workers, whose annual wage bill amounts to $17.5 million. The Ministry of Economy observes that constant modernisation of equipment has been found to be necessary for the textile industry to compete effectively in foreign markets. But it will take care to promote balanced expansion and modernisation, as it believes that unregulated modernisation through the use of automatic machinery can cause serious economic and social difficulties.

The Government of West Bengal has decided to refer to a Tribunal the State's cotton textile workers' demands for a revision of wages, as well as other grievances. The decision is a sequel to the lack of agreement at the tripartite meetings of the representatives of millowners, the workers and the Government. The workers' demands are based on the ground that the emoluments of workers in jute and engineering industries have been reviewed in recent years thrice and twice, respectively, while those of cotton mills was reviewed only once and that too eight years ago. There are in West Bengal 17 composite cotton mills, 8 spinning units and over 20 powerloom factories with a total of 10,000 looms. All the units together provide employment to 40,000 workers.

Much headway has been made by the Egyptian cotton textile industry in the matter of completion of units and renewal of machinery and plant. The spindleage aggregated 700,000 at the end of 1955 and is expected to reach the figure of 926,000 under the expansion programme for the current year. Production of textiles touched a record of 70,000 tons by November 1955, as against 63,000 tons in 1954. This improvement in production was reflected in the enhanced exports of yarn and cloth. Egyptian mills exported 11,300 tons of yarn and 3,150 tons of fabric, valued at £E6.65 million during the period September 1954 to August 1955, as against 10,740 tons of yarn and fabrics valued at £E4.64 million during the corresponding period of the previous year.

The import of cloth from the U.K. into India during 1955-56 rose by 4.3 million yards over the previous year. The imports had risen from 2.6 million yards in 1954-55 to 6.9 million yards in 1955-56. It is difficult to assign precise reasons for the increase. Partly it might be due to the reduction in import duty, made last year and partly due to the increase in internal demand for new varieties of cloth.

MANPOWER TRENDS IN U.K. TEXTILE INDUSTRY

U.S. COTTON POLICY HITS LIVERPOOL MARKET

By Our Special Correspondent

MANCHESTER, *17th July*

FLUCTUATIONS in trading since the war have led to a series of "see-saw" movements in the labour force available for spinning and weaving mills in Lancashire. Not for long has manpower remained stable as throughout the past 10 years; it has been either regaining ground lost after adverse conditions or wastage has been persistently exceeding recruitment.

MANCHESTER LETTER

The history of the recovery from war-time concentration to a peak of nearly 321,000 operatives on the books of spinning and weaving employers is well known. The subsequent recession, limited recovery and current decline are equally part of a well-established train of events. Comparable figures covering the period are given in the table below:

Date	Spinning	Doubling	Waste Spinning	Weaving	Total
1939 (Oct.)	..	..	..	..	332,000
1945 (Oct.)	81,920	24,840	3,700	107,540	218,000
1946 (Dec.)	98,250	27,030	6,030	117,160	248,470
1947 (Dec.)	105,280	29,260	6,150	125,570	266,260
1948 (Dec.)	113,530	31,130	6,710	139,000	290,370
1949 (Dec.)	117,110	30,860	7,110	146,870	301,950
1950 (Dec.)	121,660	32,050	7,170	153,420	314,300
1951 (Nov.)	124,830	32,240	7,330	156,680	320,880
1952 (Aug.)	101,530	23,870	6,610	130,620	262,630
1952 (Dec.)	106,070	24,490	6,970	134,700	272,230
1953 (Dec.)	113,190	26,780	7,250	140,960	288,130
1954 (May)	114,490	27,060	7,200	141,870	290,620
1954 (Dec.)	113,410	25,210	7,150	140,660	286,460
1955 (Dec.)	100,130	22,250	7,070	126,630	256,050
1956 (June)	98,240	21,810	7,220	122,910	250,180

Now a new landmark has been reached in that the numbers available have fallen below 250,000 for the first time since early 1947. In spinning alone there has been a further reduction of 500 workers since the latest total shown above.

To the employer his labour force is an important asset which is only dispersed when real necessity arises. Many firms during the adverse conditions of the past few years in Lancashire have held on to their operatives as long as possible, but the time eventually comes—as it now appears to have done in the motor industry—when this attitude is no longer economically sound.

Trend of Workless

Unemployment does not necessarily follow the same trend as manpower in view of the natural inclination of workers to drift from the industry when times are bad. The number of those registered as cotton operatives out of work reached its peak last autumn and then declined, but there have lately been signs of a renewed seasonal increase in unemployment.

The total number of jobless in the North-West region is now lower than at any time for the past two years, with the exception of December last. The ratio of those unemployed in the cotton and rayon industry, however, has risen compared with the general experience in the area, as the following table shows:

	Spinning	Weaving	Finishing	Total cotton and rayon	Total N.W. region
1955					
June	8,213	3,482	794	12,489	41,440
July	7,827	2,409	660	10,896	37,522
August ..	6,652	3,950	495	11,097	40,132
September ..	8,200	4,894	298	13,392	42,908
October ..	5,040	3,260	285	8,585	39,543
November ..	3,214	2,159	288	5,651	38,186
December ..	1,716	1,566	206	3,488	34,449
1956					
January ..	2,021	1,785	393	4,199	41,213
February ..	2,303	1,335	322	3,960	40,771
March ..	1,443	1,459	540	3,442	39,651
April ..	2,552	1,642	438	4,632	40,977
May	1,813	1,864	620	4,297	38,250
June	2,368	2,198	355	4,921	35,982

Questions are now being asked as to the current occupations of the many thousands of workers who are no longer employed in cotton mills. There must be many answers, from the married women who have decided to stay at home to the men who have taken jobs in entirely different trades. It is never clear what the reaction of these former workers would be to a sudden revival of demand for textiles. Some at least could be persuaded to return, but the tragedy of this all too frequent reversal of fortunes is that the skill of many former highly qualified operatives has been lost for ever to the industry.

New Hedging Prospects

If proof were needed that the existing cotton futures markets were no longer adequately sensitive to the time-honoured laws of supply and demand, the initial estimate of the acreage for the new American cotton crop would seem to supply the answer. The report was taken to indicate that production would again be in the region of 14,000,000 bales, yet its immediate effect on futures quotations was limited in the extreme.

There may yet be a larger abandonment of acreage than is usual due to the soil bank scheme offered to the U.S. farmers, providing compensation for ground taken out of cultivation, but it appears inevitable that a further substantial quantity of cotton will be grown which is unlikely to be absorbed through normal trade channels. Prices, in such circumstances, might have been expected to decline in sympathy but the response in Liverpool and New York was sluggish.

The Liverpool Cotton Association has now adopted its latest device to attract business back to a market which has been signally stagnant for months past. The reasons for the reluctance of spinners to use futures as a hedge are well established. Now that the American Government's plans for the disposal of its surplus stocks have undermined the authority of the New York market, users are left with inadequate opportunities of covering themselves against price movements.

Facing the Situation

To introduce an American-type contract, as opposed to one based solely on a single growth, has meant a departure from conventional methods of trading which have been used in futures markets in the past. That the Directors of the Liverpool Cotton Association recognise the position is borne out by their statement that present world trading conditions, which are likely to continue, are definitely hostile to the effective operation of futures markets in their accustomed role of providing an accurate hedging medium for those trading in cotton and cotton products. Recent experience has shown that traders in American type cottons have frequently found that attempts to hedge their position in a single growth contract have proved to be a greater speculation than remaining unhedged.

Those sponsoring the introduction of the new contract assert that it should do much to rectify this position. It is believed that the artificial maintenance of raw cotton prices at levels well above the world economic cost of production is already threatening to break down. In such circumstances, sellers of hedge contracts will inevitably face the disadvantage of forward discounts.

The new contract, its supporters contend, should remove the added disadvantage of over-inflated near months, as the current trading position should closely reflect the spot value of the most competitive growth in the American type group. Looking ahead, perhaps a little optimistically, they believe that forward premiums might eventually be re-established when more realistic price levels are attained.

Research

Collaboration between scientists and those responsible for using the latest mechanical aids at mill level has been stimulated by the efforts of Shirley Developments Ltd., the organisation set up to bridge the gap which formerly existed between the industry and the Shirley Institute.

Despite the difficult conditions prevailing in the trade, instruments and accessories sold by the development company in the past year were valued at £14,021 against the previous year's total of £13,776. What is more, the rate of delivery has already increased in the first quarter of the current year by about 25 per cent.

In the past there has been adverse comment at the number of Shirley openers sold to customers overseas, but ten of the machines have lately been installed in this country. Another appliance now attracting attention is the miniature spinning plant produced by the Shirley scientists and the first batch of orders is now being completed. These machines enable small quantities of yarn to be spun rapidly for experimenting in different blends and mixings of fibres.

Still in the prototype stage is the new loom which the Institute has invented for production of rayon cloth. The next move is its transfer into a weaving shed to be run under ordinary mill conditions. If this is successful a small batch of looms will be manufactured and undergo large-scale trials in the trade.—*All Rights Reserved.*

COTTON GROWING IN THE PUNJAB

REMARKABLE PROGRESS MADE AFTER PARTITION

FEW sectors of Indian economy suffered so grievous a damage through the partition of the country as cotton and jute. And in both these sectors efforts are being continuously made to remedy that damage. So far as cotton is concerned, it still cannot be said that the lost position has been won entirely. Nevertheless, much noteworthy progress in cotton cultivation has been made in East Punjab which, after partition of undivided Punjab, was left with only a small portion of the original area under cotton. The qualitative and quantitative improvement in cotton grown in this region has been succinctly described in an article by Mr. L. S. Negi, Economic Botanist, Cereals, Cotton and Oilseeds of the Punjab Government, in the April issue of the *Indian Cotton Growing Review*. In view of the fact that the Punjab stands at the threshold of a new era of cotton expansion, as a result of the Bhakra Canal Project, this article is of considerable topical value.

Appropriately enough, the author commences his article with a description of the cotton economy in undivided Punjab. The Punjab then occupied an important position in the cotton economy of the country, accounting as it did for 19.5 per cent. of the total area under cotton in India and 34.6 per cent. of the production. In the (pre-partition) cotton year 1946-47, the Punjab had 2.89 million acres under cotton out of a total area of 14.86 million acres for the country as a whole and accounted for an output of 1.22 million bales out of the total production of 3.56 million bales (official estimate). The Punjab was also the biggest producer of medium- and long-staple cotton, with Punjab-American (long-staple) cotton constituting 25.2 per cent. of the total crop. The other leading cotton-producing States, namely, Madhya Pradesh, Bombay and Hyderabad, although they commanded as much area under cotton as the Punjab, produced only 462,000 bales, 395,000 bales and 295,000 bales, respectively.

A number of favourable factors contributed to give the Punjab its pre-eminent position in the country's cotton economy. Improved strains were largely grown only in this region. Such strains covered about 89 per cent. of the area in Punjab, of which 70 per cent. was under improved Punjab-American cotton. As against this, improved strains accounted for only 45 per cent. of the area under cotton for the rest of the country. Cotton improvement work in the Punjab consisted, primarily, of isolating improved strains of *deshi* cotton and acclimatisation of American cotton in the canal colonies and selection of suitable strains therefrom. The measure met with considerable success resulting in the production of improved strains like the 4F which was selected from acclimatised upland Georgian cotton at Lyallpur and 289F which was also selected from Lyallpur. The latter became very popular in certain districts, namely, Montgomery, Multan and Muzaffargarh. The Indian Central Cotton Committee sanctioned the Punjab Botanical Scheme in 1925 for solving the problem of periodic failure of American cotton in the canal colonies. This was one of the earliest promotional measures adopted by the Committee and it gave a fillip to the improvement and development of American cotton in the Punjab. The aim of cotton improvement work was to evolve improved strains with high yield, high ginning percentage, long-staple, resistance to pests and adaptability to specific agro-climatic conditions. The method adopted was pure line selection either from established strains or new introduction. Under the scheme, many improved strains were evolved, the most important among them being L.S.S., 289F/43, 289F/K25, 124F later renamed as Victory and 199F later renamed as Sultani.

A fact that deserves mention here is that almost the entire work on cotton improvement was confined to the canal colonies. Of the seven breeding, one physiological, one seed distribution and eight other research schemes operated by the Committee at a cost of Rs. 17 lakhs during the previous 23 years, only one scheme was in operation outside the canal colonies. Even this scheme came into operation only a couple of years before the partition. With the partition, the canal colonies went over to Pakistan, so that very little of the benefits of the cotton improvement work carried out by the Committee, accrued to the region now forming E. Punjab. Out of a total area of 2.59 million acres under cotton in 1947-48 in the United Punjab, 2.14 million acres went to the share of Pakistan. Out of 1.85 million acres under medium and long-staple cotton, only 64,000 or 3.5 per cent. came to the share of East Punjab. The position with regard to improved strains was even worse. Excepting two improved strains of *deshi* cotton, no suitable strain of American cotton was available in East Punjab.

Thus, the partition gave a stunning blow to the cotton economy of the Punjab—that is, so far as the Indian side of the Punjab is concerned. It made the cotton position of the E. Punjab State *vis-a-vis* other cotton-growing areas weak. This affected the supply position of cotton and mills in India began to experience acute shortage of medium- and long-staple cotton. This is evident from the fact that, out of 2.41 million bales of cotton with staple 13/16" and above consumed by mills in India in 1946-47, 650,000 bales were accounted for by cotton produced in regions now belonging to Pakistan, and 1.06 million bales by imports from foreign countries.

Such was the position of the Punjab soon after the partition. It is against this background that the subsequent work in cotton cultivation in this region has to be assessed. Realising the damage done to the cotton economy of the Punjab through Partition, the Indian Central Cotton Committee gave considerable attention to the task of improving that economy.

Much assistance has since been given by the Indian Central Cotton Committee, in order to help E. Punjab to expand its cotton economy. Particular emphasis has been laid on breeding suitable strains of American cotton and efforts are being made to restrict the cultivation of short-stapled *deshi* cotton only to those regions where American cotton is not suitable. Breeding work is being carried on, on a regional basis, at three different stations, namely, Hansi, Jullundur and the Abohar stations in Ferozpore district. Improvement work under various breeding schemes is pursued both by selection and hybridisation and all improved strains evolved so far are the products of natural selection. Hybridisation has been very helpful in evolving strains which combine extra long and fine staple and high ginning percentage.

Work done after the partition to improve the purity of L.S.S. has met with success, resulting in higher yield and purer lint. The area and yield of this type of cotton have increased from 42,902 acres and 22,628 bales in 1948 to 177,600 acres and 124,012 bales in 1952 respectively.

The first improved variety evolved after the partition is the Punjab-American 216F. It is a long-stapled variety, with a mean fibre length of 0.93". It has become very popular in Hariana tract and has replaced *deshi* cotton in that tract. Punjab-American 320F, the second improved variety to be released after the partition, is a selection from L.S.S. but it is earlier in maturity. It is adaptable to a wide range of soil and climatic conditions. It was recommended

EFFECT OF COAL AWARD ON RAILWAYS

EFFICIENCY IN CONSUMPTION CAN MORE THAN MAKE GOOD RISE IN COST

THE recent increase in coal prices granted by the Government of India, consequent on the award of the All-India Industrial Tribunal (Colliery Disputes), has focussed attention on the likely financial effects of such an increase in fuel cost on the general economy of the country. This aspect of the problem was, in fact, anticipated by the Tribunal itself. Accordingly, it devoted an entire chapter for analysing the memorandum submitted by the State collieries on the likely financial effect of an increase in wages upon the general economy of the country. Assuming an increase in the price of coal, as a result of the Award, and adopting Bengal and Bihar as the basis, the Tribunal found that this increase would not have any material effect on the general economy of the country.

So far as the railways (the single largest consumer of coal) are concerned, it was submitted by the Coal Commissioner that, with an increase at an average of Re. 1 per ton in the price of coal, the railway bill would go up by about Rs. 114 lakhs, or in other words, an increase of Rs. 3 per ton in the cost of fuel would raise the fuel burden by Rs. 3.42 crores. It was evident from the Coal Commissioner's memorandum that a sizable part of the increased cost of fuel should be borne by coal freights. The Tribunal, however, found that the increase in fuel cost would mean a rise in the cost of operation of the railways of just under 2 per cent. "This in itself," it added, "should not very greatly affect the general economy of the country, particularly when it is borne in mind that transport represents only a part of the cost." So far as the effect of fuel cost on the freight rates of coal is concerned, the Tribunal said that it was a matter for internal policy of the railways and that a change in freight rate could be and was brought about even without reference to the fuel cost.

There are 11 State collieries owned and managed by the Government of India, Ministry of Production, in the three States of Bihar, Orissa and Madhya Pradesh. Eight collieries are situated in Bihar, two in Orissa and one in Madhya Pradesh. Up to 31st May 1944, the State collieries had been managed by the Railway Board. Thereafter, the management of these collieries was taken over by the Department of Supply and subsequently by the Ministry of Production. They account for an annual production of about 3 million tons, or about 8 per cent. of the total output in the country. On behalf of the State collieries, it was submitted to the Tribunal that six collieries were generally running at a loss and that it was only one or two collieries which gave a high profit that were responsible for setting off these losses. The Tribunal, on the other hand, pointed out that, while there was nothing wrong in utilising the profits of one group of collieries to pay the losses of the others, it was necessary to find out the causes of losses arising in the collieries that were responsible for the same. It added:

> "A mere statement that high wages are responsible for losses does not seem satisfactory. Proper investigation into this is necessary and it is desirable that the Government should see that the collieries are managed efficiently and are in a position to set an example of efficient management to the market collieries. This is imperative, particularly at a time when the State is intending to undertake larger responsibilities in the matter of production, in general, and coal production, in particular, during the second and future Five-year Plans."

It is evident from the above quotation that a large measure of saving in the fuel bill of the railways should be possible through efficient management of State collieries. This is also borne out by another investigation. The latest report of the Estimates Committee on the Ministry of Railways, for instance, says that the annual coal bill of the railways is over Rs. 30 crores. In 1954-55, it was about Rs. 38 crores. Apart from the increase in price, the report adds, there has been an increase in both the quantity consumed and the quantity per unit of service. To assess the loss suffered by the railways due to the deterioration in the consumption per unit of service, the Estimates Committee undertook an evaluation of the performance statistics in conjunction with costs for the years 1953-54 and 1954-55. It also ascertained how much less the coal bill would have been in these years if performance had been maintained at the levels of the best performance years since 1938-39. The price of coal was, however, taken at the same level as had been paid in the respective years. The report also draws attention to the fact that, since 1947-48 the percentage of higher grade coal, namely, selected A, selected B and grade I, has steadily gone up from 75.1 (in 1947-48) to 85.7 (in 1954-55). It is, therefore, reasonable to conclude, as the Committee itself has done, that the quality of coal supplies has recently been more favourable to the railways.

The Estimates Committee found that, had the efficiency of coal consumption been maintained at the best performance in the years since 1938-39, the railways could have saved 1.5 million tons of coal during 1953-54 and 1.4 million tons in 1954-55. Taking the average cost of coal (including freight) used on railways at Rs. 32 per ton for 1953-54 and Rs. 33 per ton for 1954-55, the Committee found that the monetary savings that could have been effected in these two years were Rs. 4.80 crores and Rs. 4.62 crores, respectively. On the basis of the assessment made by the Fuel Economy Enquiry Committee, otherwise known as the Driver Committee, the saving on fuel that could have been achieved during the two years 1953-54 and 1954-55 by the various measures recommended by them in 1953 would be about Rs. 6 crores.

It will be noted from the above analysis that the railways can have no grouse against the increase in fuel cost as a result of the Tribunal's award. For they could still make a saving after implementing the Award if only they cared to economise their consumption of coal, as stated by the Estimates Committee.

FEARS OF U.P. SUGAR MILLOWNERS

STEPS FOR MAKING INDUSTRY MORE PRODUCTIVE URGED

THE sugar millowners of Uttar Pradesh would appear to be very apprehensive of the future for their industry. Evidence of this is provided by a recent news despatch from Lucknow which says: "U.P.'s sugar industry faces the threat of competition from other sugar-producing parts of the country, as more sugar factories come into being in these parts. And some of the State's top industrialists will urge the U.P. Government to call a conference to find ways and means of making the State's sugar industry more productive, so that it can successfully meet the competition threat."

The apprehensions of U.P. sugar millowners are not unfounded. As readers are aware, during the last few years, the share of Uttar Pradesh in sugar production has declined, while Bombay, Hyderabad and Madras (as also Andhra) have gained considerably. Thus, the share of Uttar Pradesh in the country's aggregate sugar output during 1955-56, comes to only 51.4 per cent., as against 66.6 per cent. in 1943-44. In contrast, the percentage proportion of sugar produced in Bombay to the total output has gone up in the same period from 6.7 to 11.2. Similarly, the percentage share for Hyderabad is higher at 3.4, as against 1.4, and for Madras (and Andhra) at 7.2, as against 3.2.

Cane Cultivation

The importance of Uttar Pradesh in the field of sugarcane cultivation has also declined *vis-a-vis* the aforesaid three States, as will be seen from the figures given below:

	Percentage share in the total cane acreage		Percentage share in the total cane production	
	1955-56	1943-44	1955-56	1943-44
Uttar Pradesh ..	58.8	60.0	50.5	50.5
Bombay	5.0	3.2	10.7	8.0
Hyderabad	1.7	1.7	2.6	2.4
Madras (and Andhra) ..	5.0	4.3	10.4	8.5

Again, the sugar industry in Uttar Pradesh compares unfavourably with its counterpart in other States from the point of view of per-acre yield of sugar. Not only is the yield of cane per acre very low but the quality also is poor. Thus, one acre of land devoted to sugarcane in U.P. gives on an average 12 tons of cane, as against the all-India average of 14 tons and of 28 tons in Bombay, 27 tons in Andhra, 26 tons in Madras and 22 tons in Hyderabad. Likewise, the recovery per cent. of sugar in cane is low, the average being 9.89, which is below the all-India figure of 9.95 and compares even more unfavourably with 11.68 for Bombay, 9.25 for Andhra and 10.21 for Hyderabad.

The sugarcane economy is backward especially in the eastern region of Uttar Pradesh. Thanks to lack of regular and adequate supplies of cane at an economic price, the sugar factories in this region—numbering 37—have not been able to crush for a reasonable period. The average duration of crushing season comes to only 90 days in East U.P., as against 178 days in the Western region, where there are 34 factories. It is accordingly felt that, if the duration of crushing were extended—say, by 50 days to 140 days—the sugar production of the State could be stepped up by 150,000 tons annually. To quote a report: "The sugar factories in East U.P. will be able to keep cane-crushing going for 140 days, if they are assured of adequate supplies of cane. A programme of intensive cane development should be launched for the purpose." While the force of this argument cannot be over-emphasised, the fact remains that the sub-tropical climate of Uttar Pradesh is less suitable for cane development than the tropical conditions of South India. Consequently, sugarcane in Uttar Pradesh will continue to account for a higher proportion of the cost of making sugar as compared with other parts.

The Solution

What then is the solution for the ills of the sugar industry in Uttar Pradesh? The solution lies in the dispersal of those factories—in both the eastern and western regions of Uttar Pradesh—which are located in areas with poor production of sugarcane to places where there are plentiful supplies of cane. Although the question of dispersal has been engaging the attention of the Government of India for a considerably long time, nothing worthwhile has yet been achieved. The Development Council for the Sugar Industry had appointed an expert committee to examine the matter in detail. It is unfortunate that the report of the Committee and the decisions taken thereon by the Government have not still been made known. It will be recalled, in this connection, that, addressing the annual meeting of the Indian Sugar Mills Association at New Delhi in March last, Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, asked the Association to suggest, with the consent of the units concerned, schemes for shifting the unsuitably located sugar units to better sites. We do not know what steps the Association has taken in this direction.

The problem of shifting sugar factories is by no means an easy one. It is computed that the cost of shifting a factory comes to roughly Rs. 18 lakhs. Wherefrom is this amount to come? The sugar millowners of Uttar Pradesh clearly point out that, unaided by the State, no sugar factory will be able to shift, for none possesses the necessary resources. They, therefore, urge that the State should provide the requisite aid. According to them, the Central Government should offer each such factory a shifting subsidy amounting to Rs. 9 lakhs, in addition to adequate quota of steel, cement and coal. The State Government should provide the balance—Rs. 3 lakhs as subsidy and Rs. 6 lakhs as an interest-free loan repayable in two years.

It is rather difficult to support the plea for State subsidy. Of course, the Governments—Central and State—will be able to get from every sugar factory that is shifted large revenue every year by way of sugarcane cess, excise duty and other taxes. But this consideration applies as much to the shifting of a sugar mill as to any other industrial purpose, so much so that all industries can put forward claims for State subsidy on the ground that the State would derive larger revenue following rise in production. Viewed thus, all that the sugar millowners can justifiably ask is grant of financial assistance in the form of long-term loans at very low rates of interest. The shifting of unsuitably located sugar factories will benefit the millowners themselves more than the Governments.

WORLD SUGAR

Indicative of the improvement in world consumption of sugar is the firm trend displayed by the world sugar market. The New York spot price of raw sugar (No. 4 world contracts) now stands at 3.41 cents per lb., as against 3.34 cents two weeks ago. The firmness in sugar prices has been aided by enlarged buying enquiries from Pakistan, Uruguay, the Sudan, Japan and Germany. The disposal of about 200,000 tons of sugar at a price of 3.34 to 3.37 cents per lb. f.a.s. by the Cuban Institute to operators has also imparted strength. With this disposal, the stocks lying unsold with the Institute have declined to negligible quantities. Incidentally, it may be noted that the Cuban sales of sugar have been "going extremely well," the quantity actually sold so far in the current calendar year being as much as 1,843,200 tons, as against 1,569,800 tons in the corresponding period last year. One of the important buyers of Cuban sugar has been Japan. This country's requirements of Cuban sugar may not, however, be so large in the coming years, because Japan has completed negotiations with Formosa for the purchase of sugar.

Business in U.K. refined sugar is reported to be quiet, such being mainly confined to the Middle East. And a shortage of freight space to the Persian Gulf of late is restricting trade in this quarter too. Sugar is currently quoted in the London market at £34 7*s*. 6*d*. per ton.

SUGARCANE IN MADRAS

The sugarcane crop in Madras State has suffered a distinct setback in the current (1955-56) season. The aggregate quantity of cane actually produced during the season is estimated at 3,313,590 tons, as against 3,512,150 tons in 1954-55, representing a fall of 5.7 per cent., according to the final official forecast issued by the Department of Statistics, Government of Madras. The reduction in cane output is attributed to two factors. First, the area under cane has declined from 134,630 acres to 130,900 acres, or a decrease of 2.8 per cent. Secondly, the pre-acre yield has gone down, the average for 1955-56 being 25.3 tons, as against 26.1 tons in the previous season. The seasonal factor for the State as a whole works out to 94 per cent. of the normal, which compares unfavourably with 96 per cent. As compared with the average for the five-years ended 1954-55, however, both the sugarcane area and the yield in Madras during 1955-56 stand higher by 24.7 per cent. and 21.0 per cent., respectively.

The *gur* industry development scheme of the U.P. Government is reported to be making all-round progress. The scheme envisages introduction of improved appliances and juice clarificants for the manufacture of superior quality *gur* and adoption of scientific methods for storage during off-season. In order to intensify the activities under the scheme, the State's Industries Department is carrying out a survey of villages for the purpose of assessing the possibilities of organising model villages for the industry. Special stress, it is said, is being laid on the introduction of co-operation in *gur*-making.

The U.S. Department of Agriculture has raised the sugar quotas for 1956 by 125,000 tons to a total of 8,575,000 tons and revised their distribution under the new Sugar Act. Practically the entire benefit of higher quotas goes to domestic producers. Only 1,250 tons of the addtional quantity is to be provided from foreign sources.

General Electric's New eyes for Safer, Easier Night Driving
For years, G.E. Research has been working to produce a headlamp which will provide clear vision over adequate distances in all kinds of weather. With the tremendous increase in motor traffic at night, a demand was made from all sources including the American Association of Motor Vehicle Administration for designing a safer headlamp. The "All-Weather" sealed beam headlamp is G.E.'s answer.
The new G.E. "All-Weather" sealed beam headlamp has no inner bulb to blacken—it is one big bulb that gives about 25 per cent more light than the *ordinary headlamp*. The filament shield blocks the "uncontrolled upward light", reduces "kick back" glare to a minimum, and makes *all* night driving easier and safer. Not only will motorists see better in rain, fog, dust and clear weather, but they'll get more light farther down the road—upto 80 feet more on the lower beam.
The G.E. "All-Weather" is the most important advance in night driving safety since the sealed beam headlamp came out in 1939—another valuable contribution from G.E.'s world famous research laboratories.

PAKISTAN'S RAW JUTE EXPORTS

DECLINE IN INDIA'S OFFTAKE

THE latest reports from East Pakistan indicate that jute available during the 1955-56 season just ended, was of the order of 6.7 million bales, including a carryover of more than a million bales. This is about 600,000 bales less than the revised estimates of the crop for the season. Thanks to relatively better exports of raw jute and consumption by the local jute mills in Pakistan, the season would appear to have ended with almost no carryover for the season 1956-57.

The season which ended on 30th June last is stated to have proved to be the best in the past four years for exports of raw jute from East Pakistan. The total exports during 1955-56 amounted to 5.70 million bales, as compared with 5.14 million bales in the previous year. The following table gives an idea of exports of raw jute from Pakistan since 1949-50 when the figures were recast :

(In million bales)

Year	India	Other countries	Total
1949-50	1.69	1.73	3.39
1950-51	2.55	4.21	6.76
1951-52	1.67	3.21	4.88
1952-53	1.52	3.78	5.30
1953-54	1.32	3.77	5.09
1954-55	1.29	3.91	5.14
1955-56*	1.47	4.23	5.70

* Estimates.

The table above reveals some notable trends. Pakistan's exports of raw jute to India, which registered a marked rise from 1.69 million bales to 2.55 million bales in 1950-51, have since steadily staged a decline every year, till it touched a low of 1.29 million bales in 1954-55. There was, however, a slight improvement in 1955-56, but the total was still below the quantity exported before 1952-53. The steady decline in the Indian offtake of raw jute from Pakistan may be attributed generally to the unhelpful export policy of the Pakistan Government which rendered the flow of raw jute from Pakistan tardy and its prices costly to Indian mills. Even the Indo-Pakistan Jute Agreement, entered into during this period, was not of much avail. The fact that Pakistan concentrated on developing a steady export market at the expense of India is evident from the fact that the average exports to non-Indian markets remained steady during the five-year period ended 1955-56 at 3.78 million bales, as against a steady decline in exports to India during the period. This policy of deliberate discouragement of exports to India compelled India to rely more and more on the indigenous jute as is evident from the figures in the table below :

Year	*Imports of raw jute at Calcutta and mill stations from* India	Pakistan	Total
	(In million bales)		
1952-53	4.15	1.32	5.47
1953-54	3.73	1.48	5.21
1954-55	4.43	1.25	5.68
1955-56*	4.89	1.47	6.36

*Estimates subject to revision

It is seen from the table above that actual arrivals of raw jute at Calcutta and mill stations amounted to 6.36 million bales or 680,000 bales more than those in 1954-55. Of the total arrivals, receipts from Pakistan accounted for 1.47 million bales, as against 1.25 million bales in 1954-55, or an increase of 220,000 bales. Arrivals of indigenous jute amounted to 4.89 million bales last season as compared with 4.43 million bales in 1954-55. Arrivals during April, May and June this year, it may be mentioned here, were about 100,000 bales less than those during the same three months in 1954, a period when total arrivals from Pakistan were the lowest since Partition. This fall is an indication of the difficulties that might lie ahead in the coming season also, if the present restrictions on export of jute to India were to continue.

Although arrivals of Indian jute are considered satisfactory, the fact that much attention has not been paid in India to the improvement in quality as well as in the percentage yield of fibre per plant is regretted in jute circles. It is pointed out, in this context, that there is a limit to the total weight of green crop that can be taken off from one acre, even when fertilisers are used. There is a limit, again, to the quantity of fertilisers available. The lighter the total weight of the crop the less the general drain on the soil. Consequently, whatever the yield of the green crop per acre, it is desirable that as much of it as possible should be useful fibre. If it is possible to double the percentage of fibre in each plant, all costs of cultivation up to the stage of washing and drying the retted fibre will be nearly halved. Says Mr. C. R. Nodder, Principal, Institute of Jute Technology, in a recent issue of the *Jute Bulletin* : "To produce the same amount of fibre, we should require only half the quantity of retting water, as well as half the acreage, half the labour and half the fertilisers. A better quality of fibre is likely to be found in smaller plants with a higher percentage of fibre than in larger plants with a lower percentage." He rightly complains that the question of raising the percentage of fibre in the plant was never discussed at the meetings of the Indian Central Jute Committee by those concerned with the administration of research.

As for prospects for Pakistan jute crop for the current season, namely, 1956-57, the weather conditions in jute-growing areas are stated to be favourable. Damage from floods this year is considered to be no more than about 10 to 20 per cent. Unofficial estimates place the crop at 6.8 million bales, of which about 1.5 million bales are expected to be utilised by the domestic jute mills. The balance will be available for export.

AUDITOR'S REPORT.

I have examined the above Balance Sheet of the Lakshmi Mills Company Limited as at 31st March, 1956, and also the annexed Profit and Loss Account of the Company for the year ended on that date with the books and vouchers at Coimbatore and Kovilpatti and report that

(a) in my opinion and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required and the above Balance Sheet gives a true and fair view of the state of the Company's affairs as at the end of the financial year namely as on 31st March, 1956, and the Profit and Loss Account annexed hereto gives a true and fair view of the Profit for its financial year ended 31st March, 1956,

(b) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of audit,

(c) in my opinion proper books of account as required by law have been kept by the Company so far as appears from my examination of those books, and

(d) that the Company's Balance Sheet and the Profit and Loss Account dealt with in this report are in agreement with the books of account.

(Sd.) D. V. SUBBACHAR, B.A., F.C.A.,
Chartered Accountant.

(Sd.) P. SESHADRI, B.COM., F.C.A.,
Internal Auditor.

COIMBATORE, 20th June, 1956.

The above Balance Sheet, to the best of our belief, contains a true account of the Capital and Liabilities and of the Property and Assets of the Mills.

CANNES CONFERENCE APPROVES OF NEW PATTERN OF AIR FARES

REVOLUTION IN TRANS-ATLANTIC SERVICES

A REDUCTION in tourist and first class air fares over the North Atlantic and the introduction of a special excursion fare over the route are the two important decisions reached at the International Air Transport Association (I.A.T.A.) Traffic Conference, held recently at Cannes. These proposals, which have of course to be ratified by the respective Governments of the member-countries in the Conference, are claimed to indicate a revolution in trans-Atlantic air services, in that they will make possible air-travel along these routes at a particularly attractive level of fares.

Under the agreements reached at Cannes, airlines operating over the North Atlantic will reduce tourist fares by about 20 per cent. and cut first class fares by 10 per cent. They will also introduce a special excursion fare beginning this October and set up a de luxe class service in 1957. Further, they have all agreed to bring in an entirely new class of low fare services for mass transport over this key world route early in 1958. As a result of these agreements, a trans-Atlantic trip on a scheduled air service may cost as little as $232 one-way between New York and London—almost 60 per cent. less than the first post-war I.A.T.A. Conference fares for the route.

The North Atlantic agreements, if approved by the Governments concerned, will come into effect in three phases over the 18-month period beginning from 1st October 1956, when the present agreements expire. From October next, the airlines will offer a new low 15-day excursion fare on present tourist class service, available all the year round, at $425 round trip between New York and London, nearly $100 cheaper than the normal tourist fare. The currently effective basic fares for first and tourist class will remain unchanged until 1st April 1957. Off-season round trip reductions normally offered during the winter months will be abolished. However, off-season family fare reductions will be continued, although they will not be applied to the excursion tickets because of their already low level. A special emigrant fare will be offered from 1st November through 31st March 1957 for westbound traffic to the U.S. and Canada from European countries, excluding the United Kingdom, Spain and Italy, where other emigrant air transport schemes exist. It will cost 40 per cent. less than the normal one-way tourist fare. From 1st April 1957, the first class fare structure will be revised to provide two levels of first class service —de luxe and normal first class. The first class fare will be $400 one-way and $720 round trip, and de luxe $450 and $810, as against the present undifferentiated first class fare of $440 and $792. The de luxe accommodation will include sleeperette types of seating. Berths will be available in both first class services at an extra charge. During this period, the tourist fare will not be changed and the 15-day excursion fare and family plan discounts will continue.

As a final step in the programme, the airlines have committed themselves to institute on the North Atlantic as from 1st April 1958, a new class of tourist-type mass transport service at fares as low as $232 one-way and $417.60 round trip, with full 12 months' validity. This new low fare will be made possible by greater seating densities and by the elimination of all non-essential luxuries. Other terms and conditions of the new low-fare, high density class will be determined at the next I.A.T.A. Conference in 1957 when carriers will also decide what other classes of service they will offer as from 1st April 1958 and what the relationships between them will be. On the mid-Atlantic route, the airlines will introduce a similar 15-day excursion fare beginning from 1st October this year, at $97 below the normal round trip tourist fares. The first class fare will be reduced $30 one-way and an additional charge of $50 one-way for sleeperette will be introduced. The off-season fares will be abolished and family fares retained.

In announcing the North Atlantic agreements, Mr. Keith Granville, Chairman of the Conference and the Commercial Director of British Overseas Airways Corporation, pointed out that these "quite revolutionary decisions come only after three years after the institution of world-wide tourist services and at a time when the airlines must also be preoccupied with preparing for the jet era only a few years ahead." They demonstrate, he said, the determination of the scheduled airlines to give the public the largest possible quantity of high-quality transport at the lowest possible price. There is no doubt that the new fares, as the Chairman himself emphasised, will be most attractive to thousands of vacationers, students and business men and will make the Atlantic a "two-way street by rendering trans-Atlantic flight a practical economic reality for Europeans as well as North Americans." Indicating the impact of these decisions on the working of the airlines, he said:

"They will require the airlines to make extensive changes, not only in their tariffs, but also in their equipment and operating plans. The new agreements involve projecting our fares and rates levels as much as two years into the future in the face of uncertain cost prospects. Upto now, this industry has been able to run on 12-month agreements at the longest."

To revert to the decisions of the Conference. Fares over the South Atlantic route, which do not expire under present Government approval until 31st March 1957, were left unchanged, subject to further discussion and mail vote later this year. Similarly, international passenger fares patterns in other parts of the world were left largely unchanged by the Cannes Conference. The European fares pattern will, however, show slight upward adjustments with the extension of special night, off-peak, and other promotional fares between many specific points. Special inducements will be offered to encourage inclusive tours. There will be some upward adjustments in fares from Europe to the Middle and Far East, from Europe to Africa, and between some African points, due to increased costs. But many regional fares within the Middle East will be reduced by about 10 per cent. On the north and mid-Pacific routes, between Asia and North America, first class fare reductions of $10 to Tokyo and $25 to other Asiatic points have been agreed. The tourist fare will not be changed, but the vice-presidents of the airlines concerned will meet next Spring to consider a possible low fare excursion similar to that proposed for the North Atlantic.

It was also agreed that fares between Europe and Tokyo via the North Pole will be the same as those between the same points via India. Polar fares between the West Coast of North America and Europe will generally equal fares for similar journeys via East Coast gateways and the North Atlantic. The latter polar services will adopt the same separation of de luxe and normal first class service as voted for the North Atlantic. General adjusments have been made effective from 1st January to cargo rate levels to render it possible to carry further the development of new types of cargo traffic on many routes by additional low rates for specific commodities. The new fares will generally come into effect this fall or next spring and will remain in effect until 31st March 1958.

A NAUTICAL MUSEUM

A plea for setting up a nautical museum in India has been made by Mr. U. Shanker Rao, a keen student of shipping and inland navigation, in the course of a communication to us. He deplores that maritime consciousness and interest in nautical antiquities are sadly lacking in India, and feels that a nautical museum would greatly stimulate public interest in this field. He adds:

"From time to time, ships' figure heads, bells, masts, and other relics are discovered. In the absence of a suitable place for keeping them, such treasures are lost, and though there are a number of archæological museums, public libraries, and fish aquariums there is today no special place where the public could gain nautical knowledge or learn modern developments in shipping, fisheries and waterways, and canals. I would suggest two sections in the nautical museum—ancient and modern. The former could house ancient relics and literature. The naval exploits of the Mahrattas and shipbuilding activities of the famous Wadia family and Haji Kasem on the Bombay coast can provide scope for nautical research. A modern section in a nautical museum would be necessary where models of modern ships, paddle steamers, navigation, and life-saving equipment could be displayed so as to give the public an opportunity to learn something about the sea and the ships. I would specially emphasise life-saving equipment—the method of using a life-jacket or a life-buoy. Many deck and ferry passengers are illiterate or ignorant of the correct method of using life-saving equipment. Simple, diagramatic description would help to diffuse necessary knowledge particularly among women and children who are often the worst sufferers in marine disasters.

"A nautical museum would pay for itself. For example, visitors during 1954-55 to the Taraporevala Aquarium aggregated 340,213 and the gate-fee collections made it a self-supporting institution. While on the subject of the Aquarium, may I emphasise the urgent need to increase its educative and industrial value? This aspect needs special attention. At present, the Aquarium provides pleasant entertainment and it is just nice to watch the fish swim and play. But with the need for marine industrial expansion the Aquarium could provide wider scope for creating commercial interest. Modern fishing with motor boats and trawlers provide scope for large-scale employment of educated middle-class young men. Standardised fishing boats could be worked like "baby taxis" and offer lucrative income besides helping to increase food production.

"A tribute must be paid to Mrs. Shanti Kumar Morarji for her work in making the public 'sea-minded' during the last Railway Centenary Exhibition. This was a step in the right direction and every attempt must be made to carry on the fine work started by this distinguished lady by giving a permanent place for nautical exhibits. In England, the work of the Ship Adoption Society, the Seafarers Education Service, and the Society for Nautical Research, to mention only a few of the non-technical bodies, have contributed in no small measure to Britain's sea power."

OIL RESOURCES

Some further light on the Union Government's efforts at exploring new oil resources and expanding refinery capacity was thrown by the Minister for Natural Resources, Mr. K. D. Malaviya, in the course of his reply to a series of questions on the subject in the Lok Sabha last week. The Minister said that the Government proposed to explore oil resources in the Cauvery basin in South India. He said that the area contained sedimentary rocks of marine origin which were usually the source rocks for oil but their thickness, extent and structure were matters for investigation. As regards the Bhakra canal region, much further work, including geophysical prospecting and drilling, was necessary before the presence of oil could be established. He further revealed that the natural gas which had been discovered in the Broach and Amreli districts of the Bombay State, was under no great pressure.

The Minister admitted that the Assam Oil Company had estimated that one million tons of oil per year would be available from the Maherkatiya oil wells in Assam. He added that the number of wells in the Digboi area in Assam was nearly 1,000, in Maherkatiya 13 and in Hugriyan and Moran 2. Of these, approximately 580 in Digboi and nine in Maherkatiya were at present producing crude oil.

As regards oil refinery, Mr. Malaviya said that there was a proposal to set up an oil refinery in the public sector. He added that the decision would be taken shortly. It may be mentioned here that, according to certain Press reports, the Government is carrying on negotiations with the Assam Oil Company for the formation of two rupee concerns—one for refining oil and the other for exploiting the oil resources of Assam. The Government is stated to insist that it must hold a majority interest in the proposed refinery.

Although the Government is thus interested in acquiring majority interest in any new refinery that may be set up, it is noteworthy that it has no intention to place any restriction on the existing oil refineries. In reply to a question in the Lok Sabha whether the Government proposed to restrict the profits of the oil refineries in Bombay, the Union Minister for Works, Housing and Supply, Mr. Swaran Singh, stated that there was no such intention but the profits made by the refineries would be taken into consideration while fixing the price of motor spirit.

NEW DIESEL LOCOMOTIVES

A new universal diesel-electric locomotive, capable of working at altitudes as high as 4,483 metres and suitable for use in climates ranging from 53° C. to *minus* 53° C., has been developed by the General Electric Company. A diesel-electric locomotive is essentially an electric locomotive with a diesel power plant. The diesel engine develops the mechanical power which is used to drive the main generator. Electric power from this generator operates the driving motors which are geared to the locomotive's axles. The new diesel-electric locomotive consists of nine different models, ranging from 330 to 1,800 h.p. The models are equipped to operate on tracks varying in gauge widths from 914 mm. to 1,676 mm. In addition, they offer different brake systems and couplers of flexible heights. Adaptability, versatility and economy of operation are claimed to be the chief features of these locomotives.

The Australian mineral industry had experienced a wave of prosperity in 1955 and the first five months of 1956 owing to a strong world demand for mined products, stated the Federal Minister for National Development, Senator W. H. Spooner, last month. The total value of mineral output in 1955 was estimated at £A.195 million, a record due to increased production as well as higher prices. Mineral exports in 1955 were worth £A.71.5 million, compared with £A.58 million in 1954. The exports in 1956 are expected to be still higher. The lead-zinc industry continued to provide the bulk of mineral and metal exports, with totals of £A.28.7 million for lead products and £A7.4 million for zinc products. The highlights of the mineral industry in 1956 would be the construction of a uranium mining centre at Mary Kathleen and a new tin dredge at Mount Carnot, both in Queensland, the operation of an ammonium sulphate plant at Risdon, Tasmania, and more minerals from beach sands.

NEW PRODUCTS AND PROCESSES

A New De-gassing Agent

ONE of the major problems in the production of sound castings in non-ferrous alloys is the absorption of gases, chiefly hydrogen, by the molten metal. Unless precautions are taken, the subsequent gas release on cooling and solidification in the mould can result in a porous casting. The general method by which a "melt" is de-gassed is by the release under its surface of another gas which will not dissolve or react with the metal. This insoluble gas sweeps out the undesirable gas in solution. Where copper-based alloys are used, gaseous nitrogen is frequently used and is let into the "melt" by means of a probe. This method has certain disadvantages in small foundaries because of the size of the equipment and the degree of control required to obtain satisfactory results. A recent development, according to the British Oxygen Company Bridgewater House, Cleveland Row, London, S.W.1, is a new solid de-gassing agent based on calcium cyanamide called Calcyan, which can be used with high-melting point non-ferrous metals and alloys. This product can be held beneath the "melt" surface by means of a perforated plunger, nitrogen being evolved by thermal decomposition and driving out the unwanted gas. It is also claimed to contribute to the prevention of oxidation of the molten metal.

Rubber Bags

A revolutionary method of transporting bulk supplies of petrol in synthetic rubber bags instead of steel drums would help develop the Central Highlands of New Guinea by reducing fuel costs, said Mr. Athol Townley, Australia's Minister for Civil Aviation, recently. It might also be useful in laying down supplies of fuel at inaccessible points in central and northern Australia, Mr. Townley added. This method of fuel distribution has been devised by the Vacuum Oil Company Proprietary Ltd., of Melbourne, Australia, to service the Goroka region in the Central Highlands from the port of Lae. The petrol will be pumped from the storage depots at Lae into four 200-gallon rubber bags harnessed to the floors of aircraft operating between the port and Goroka. Self-sealed and vented, the bags will occupy the whole cargo floor space of the aircraft. On arrival at Goroka, 120 miles from Lae and 5,000 feet above sea level, the fuel will be emptied into storage tanks by pumping or gravitation, ready for delivery to customers in the normal way. The empty bags are folded, thus leaving almost the whole cargo space available for return loading. Mr. Townley said the new method could be applied to other operations on the Australian mainland.

Material for Joining Metals

An American product called Devcon that can be used for joining metal to metal, building up broken metal parts, filling holes in castings and making forming dies is now being marketed in the U.K. by E. P. Barrus (Concessionaires) of 12-16, Brunel Road, Acton, London, W. 3. Originally developed for making inexpensive tools, jigs and moulds in the metal-working industry, the material is stated to be a combination of powdered steel (80 per cent.) and plastic (20 per cent.) and is said to be as easy to handle as modelling clay. It is available either as a viscous liquid which can be poured, or as a "putty" which can be applied to a vertical surface without running or sagging. Both forms have the same proportions of steel and plastic. When used a special hardening agent is added to it and stirred in. It can then be poured or pressed into the required shape and, on setting, becomes a permanent, tough and rigid metallic component. Among the advantages claimed for this product are excellent resistance to many acids, alkalies and solvents, adherence to steel, aluminium, bronze, brass and cast iron and high resistance to abrasion.

Oil Burners

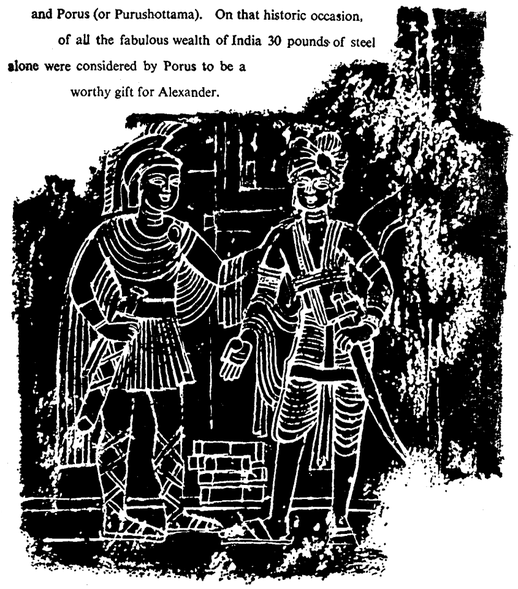
A range of oil burners for light industrial and domestic purposes is being imported from Sweden by Bentone Oil Burners (102, Chepstow Road, London, W. 2). The burner is a fully automatic low-pressure model for very small boilers and it is claimed to be very economical in operation. It burns light fuel oil at rates adjustable between 0.3 and 0.75 gallons per hour. Air, which mixes with the oil in the burner's nozzle, is supplied from a built-in blower and the amount of mixture passing through the nozzle can be controlled by turning a screw. The unit is powered by a ¼-h.p. electric motor.

Doors from Straw

A new flush door which is claimed to give greater strength and resistance to impact and is 40 per cent. more sound-proof than the normal "skeleton" door of this type is being produced by Thames Plywood Manufacturers, (Barking, Essex), England. Known as the Thamesply-Werno door and originating from Sweden it has a core which is a solid pack of short lengths of straw, uniformly cut and so tightly compressed together that each square foot contains many thousands of straw tubes. These straw tubes are glued at right angles to the faces of the door by a special adhesive and they provide innumerable air pockets which are stated to form an almost complete sound suppressor. The closed cell structure is said to make doors of this type outstandingly efficient in heat insulation and the straw filling reduces a tendency to vibrate. The doors are built up on a wooden frame into which the straw is packed under pressure by a specially designed machine. They are then faced with hardboard or plywood for painting or varnishing, or faced with a decorative veneer.

The gift of a warrior

ON THE BANKS OF THE JHELUM, after a mighty battle, two great warriors of the West and the East met as friends. They were Alexander and Porus (or Purushottama). On that historic occasion, of all the fabulous wealth of India 30 pounds of steel alone were considered by Porus to be a worthy gift for Alexander.



That was 2,300 years ago when India was already famous as the home of quality steel. Today, once again, steel is very much to the fore in the nation's thinking. India's steel-making capacity is being rapidly enlarged to provide a sure and solid basis for the country's industrial advancement.

I.L.O. CONFERENCE AT GENEVA

A NEW CONVENTION OUTLAWING FORCED LABOUR TO BE ADOPTED

THE general conference of the International Labour Organisation which concluded its session at Geneva recently, was notable not only for the record attendance of over 800 delegates from 73 member-countries but for the many important issues relating to workers' welfare which came up for discussion and consideration. There was a lively debate over the report of the Director-General, Mr. David A. Morse. A notable feature of the conference was the renewed interest which was shown in labour problems in rural areas and in the problem of economic development in industrially backward regions. Mr. Morse, in the course of his concluding remarks, was particularly emphatic on the issue of technical and economic aid to backward countries, declaring that the "first essential" was to increase such aid to the countries of Asia, the Near and Middle East, Africa and Latin America.

Indian delegates distinguished themselves by the comprehensive review which they made of some of the larger labour problems. Mr. Naval H. Tata, the employers' delegate from India, deplored the disparity in living standards between the rural and urban areas. While he did not advocate any restriction on wages of the urban industrial workers, he drew pointed attention to the ever-growing demand for an improved wage structure from an industrial worker of an urban area and to the comparatively low standard of wages, amenities and social security of the non-industrial worker of the rural area. The employees' delegate, Mr. K. P. Tripathi, too, made a reference to this theme. He regretted that the rural-urban employment relationship, as a result of higher standard of living in industrial employment, had led to a "remarkable shift" of population; this was "often causing concern to the seasonal requirements of agriculture." Referring to labour-management relations, he said that the most significant development was the "increasing co-operation between employers and workers at different levels and extending upto participation in management and even co-ownership." Discussing the same theme, the Government delegate, Mr. M. Bhaktavatsalam, stressed the importance of "bringing about cohesion between employers and workers" and, in this connection, urged that measures should be adopted in order to "promote active participation of workers in the actual running and management of industrial undertakings."

Labour Welfare

Before the conference voted the $7.62-million budget for 1957, representing an increase of 3.06 per cent. over 1956, it discussed and adopted several resolutions relating to labour welfare. It adopted a resolution on reduction of hours of work, noting that rapid development of technical and scientific progress and the rise in output open up new possibilities for the reduction of hours of work." This question, it is resolved, should be put on the agenda of an early session of the conference. The conference also agreed to place the question of weekly rest in "commerce and office" on the agenda next year for final action. The proposed convention on the subject includes the stipulation that weekly rest should be not less than 24 uninterrupted hours and, wherever possible, should be granted simultaneously to all workers in each establishment. The recommendation should provide, among other things, that the weekly rest should be so calculated as to include the period from midnight to midnight and that young workers below 18 years of age should be granted at least one-and-a-half days' uninterrupted rest each week. The I.L.O. conference noted that discrimination in wages based on sex still existed in certain countries which were urged to ratify the I.L.O. convention on the subject "of equal pay for equal work."

The conference adopted a formal recommendation on vocational training in agriculture. The recommendation lays down the principles and objectives of training, its scope as well as the methods that might be used, including vocational training, agricultural instruction in schools, training on the farm, extension services, training of teachers and rural leaders. The I.L.O.'s recommendation concerning welfare facilities for workers provides guidance with regard to feeding and rest facilities in or near the undertaking, recreation facilities and transportation facilities. It provides that the specified facilities may be provided through laws and regulations, by a competent authority after consultation with employers' and workers' organisations, or through collective bargaining.

The conference took preliminary action with a view to the adoption next year of a new convention outlawing "forced or compulsory labour, concentration camps, or the deportation of national minorities" as a means of achieving certain specified objectives. Those three methods would be banned in the following connections:

As a means of political coercion or education; as a method of mobilising labour for economic development; as a means of labour discipline; as a punishment for strikes; as a means of racial, social, national or religious discrimination; as a consequence of methods of payment to the worker where the deferring of payment makes it possible for the worker to quit his job, or where work is exacted from the worker in the form of debt, bondage or peonage.

By a unanimous vote of employer, worker and government delegates, the conference decided to place the question of forced labour on the agenda next year for final discussion. It also called for early revision of the 1930 Forced Labour Convention and in the meantime appealed to member-States to ratify and implement it.

The resolution on automation, adopted unanimously, emphasised the profound impact of automation on all aspects of social and labour policy and urged action to help countries to adjust themselves in an orderly manner to technological change. It said early and co-ordinated measures should we taken to "avoid or hold to a minimum the social dislocations and human costs which may be involved in technological progress and to ensure greatest possible benefit to all sectors of the community." It also pointed out the possible beneficial effects of automation in terms of higher productivity, expanding national economies, rising employment and higher standards of living for the peoples of the world.

Underdeveloped Countries

A reference to the speech of the Director-General, Mr. Morse, deserves to be made here, for he discussed some very fundamental issues relating to economic development and freedom. In the course of his reply to the debate on his report, Mr. Morse urged the conference to bear in mind the differing emphasis on freedom that exists in various parts of the world. He added:

"Over large areas of the world where living standards are the lowest, it is indisputable that the primary objective of people is a higher material welfare. This is at the top of their scheme of values. We may like it or not, but it is a fact. It is a fact full of hope but also full of danger. These millions in Asia, and increasingly in Africa, are aware that a better material life is possible for themselves and for their children. Their Governments, in many cases new and seeking a stable basis in national life, are committed to provide this better future. But the problem is growing all the time. As the Minister of Labour from Pakistan said, new jobs are not being created fast enough to keep pace with the growth in population. Inflation is reducing the level of real wages and wiping out the workers' vision of greater material satisfaction just as he has come to see it as his future right. If these hopes, which have been so confidently aroused, are permitted to turn into disillusionment, the reaction could be sudden and it could be catastrophic, not only for the newly established regimes but for the security of areas of the world which are vital to peace."

The I.L.O., according to Mr. Morse, faces its greatest challenge in the underdeveloped areas of the world; it has to prove that social progress can be pursued effectively in conditions of freedom and through institutions which themselves will strengthen and guarantee freedom. He said:

"The first essential, as I see it, is to increase economic and technical aid to countries of Asia, the Near and Middle East, Africa and Latin America—to accelerate the process of economic development. There are some hopeful signs that statesmen, who have long been aware of this problem, may now be better able to find ways of making additional resources available towards its solution. The second essential, as I see it, is to ensure that the social problems which are inevitably generated by economic development meet with a constructive and imaginative response from the people. Otherwise, industrialisation may bring serious social disorganisation in its train. It may create conditions under which people begin to think and act through force or violence, undermining the social and political stability which economic development was supposed to strengthen."

Mr. Morse dwelt on the problem of balance of employment between rural and urban areas, a problem facing India today. He said that the problem meant a revolution in countless individual lives—a complete change of environment with all the disturbance and fear which this could engender in human spirit. It meant the decline of some communities, the creation of others, the growth of new social relations, the crisis of old ones. The problem thus touched upon orderly social development and political stability. He added:

"In Asia and much of Africa, despite the great and wonderful antiquity of some Asian cities and their contribution to civilisation, the village rather than the town, I believe, has through the ages been the focus of social life. The problems of transition to industrial conditions are posed in an at once more radical and more urgent terms. People in these continents have to create for themselves from the beginning the associations and social institutions they will need to live happily and in peace with industry. And they have to do this rapidly because the aim of industrialisation, their great hope for better life, cannot be postponed. Urban industrial community life is now passing, therefore, through formative years. The future will long bear their imprint. A social revolution is in progress which, like all revolutions, is uncertain in its pace and unpredictable as to its outcome. This makes it all the more needful to strengthen the broad base of society—the rural villages—so that change can be sustained in continuity. Community development is one fruitful idea which has come in response to this need. It is a method for building greater prosperity through the common enterprise of traditional village life. Forms of co-operative organisation have lent themselves well to this objective. Small-scale industries are being set up in rural areas with the same general purpose in mind."

Economic Development

An important point made by Mr. Morse was that the process of economic development must be accelerated in conditions of freedom. "We all know," he said, "that material welfare can be pursued without freedom. Indeed, to some it may appear more efficient to work for force and coercion. When the deadweight of human misery is greatest and the effort and urgency of moving it most keenly felt, there lurks this fascination for coercive methods. This is the danger." In conclusion, he referred to the future role of the I.L.O. and said:

"Our job in the I.L.O. will never be done so long as there are free men on this earth. There can be no absolute solution of the social problems, in my humble opinion: it can only be solved in a stagnant state of slavery, where mankind sinks to the condition of a well-kept contented herd. The point is that as long as men are free there will be adjustments to make. May this always be so and may it increasingly be so that all men share in the ennobling suffering of responsibility. Meanwhile, we here in the I.L.O. will set our face firmly to this work, and we can work in this cause. I am confident we shall always continue to do so."

Mr. Morse has done a signal service to the cause of democracy by placing the problem of economic development in its correct perspective. The danger to which he has referred, namely, the sacrifice of precious values of freedom and human dignity for the sake of economic development, is real. The temptation to regard freedom as an impediment in the way of economic progress is very great. But to yield to this temptation is to create a society of comfortable well-fed slaves, who will have lost all those values which really make life worth living on this planet. This danger is particularly great in underdeveloped countries. It is, therefore, necessary to ensure that, when economic progress in these countries takes place, there is no attempt to sacrifice democratic principles.

TRADE UNIONS IN BOMBAY

Being the premier industrial State in India, the Bombay State accounts for a large number of trade unions in the country. It is, however, disconcerting to note that many labour unions in the State do not carry out an important obligation cast upon them by the Trade Union Act, namely, to submit their annual returns to the authorities. Indeed, the position is so bad that as many as 110 unions were struck off the register in 1954-55 for non-submission of their annual returns. This information is contained in the Annual Administration Report for the year 1954-55, submitted to the Government of Bombay by the Registrar of Trade Unions, Bombay State. It would appear from the Report that, in 1954-55, only 760 unions submitted their annual returns for 1954-55 by November 1955, only 420 unions having submitted their annual returns by 31st July. Many unions had to be repeatedly reminded of their obligation to submit returns. Further, out of the 760 returns received, only 523 were found in order and could be accepted for the purpose of the Report. The Registrar says:

"It is noted with regret that the unions have not adequately appreciated the provisions of the Act laying down the obligations of registered unions, as could be seen from the number of unions which failed to submit the annual returns by the prescribed date and the defective returns submitted by others. Even some unions of very considerable standing had to be struck off the register for their failure to comply with the statutory requirement."

It is a sad commentary on the way the trade unions are conducted that they do not send in their annual returns promptly enough to the Registrar.

CAN ROAD TRANSPORT PROVIDE RELIEF TO RAILWAYS?

YES, IT UNDOUBTEDLY CAN, AND THAT AT ECONOMIC COST

By B. V. Vagh

VICE-PRESIDENT, INDIAN ROADS AND TRANSPORT DEVELOPMENT ASSOCIATION

IN an article under the above caption appearing in the first issue of *Indian Railways* dated 16th April 1956, Mr. K. B. Mathur, Member (Transportation), Railway Board, poses the question whether road transport can provide relief to railways and replies to it in the negative. The second issue of *Indian Railways* publishes another article by Mr. Mathur based on a talk by him at the Delhi Rotary Club on 17th April in which he has referred to the same topic and repeated his conclusions. The figures arrived at by Mr. Mathur have also been referred to in public by Mr. Neogi, Transport Member of the Planning Commission, and this Association has received a number of enquiries about them. Hence, it is proposed to deal with these articles and the figures mentioned therein.

It is necessary to say, at the outset, that, in the writer's opinion, this is not an opportune time for a controversy of this nature as our objective is not this or that interest. The supreme need of the moment is to devise ways and means of providing the necessary transport for the successful implementation of the second Plan. In this objective, no one interest can or should try to dominate at the cost of others as all these interests are indigenous and have to be developed to the best advantage of the country. That this view is shared at high level will be seen from the following facts:

(1) The report of the Study Group of the Ministry of Transport, recommending some diversion of railway traffic to roads and shipping;

(2) the appointment of a Railway/Shipping Co-ordination Committee by Government;

(3) the projected appointment by Government of a committee to review the position of road transport in the country;

(4) the provision in the second Plan for nearly quadrupling the production of motor trucks; and

(5) the following resolution adopted recently by the A.I.C.C. at Bombay:

"The programme of development envisaged in the second Five-year Plan will cast a heavy burden on all transport services and more especially on the railways. It is necessary, therefore, to explore and utilise all possible methods of transport such as waterways and road to *reduce this burden on the railways.*" (Italics ours.)

The unmistakable trend of all these is definitely to devise steps to "provide relief to railways." It is a strange phenomenon that a member of a Government Department should try to prove that this is not possible and that too, on data still to be proved!

The Railways' Case

The reasons on which Mr. Mathur's negative reply is based are as follows:

(i) Of about 60.8 million tons of estimated extra traffic, steel, its raw products and coal account for about 38 million tons for which "road transport, admittedly, is unsuited."

(ii) In regard to the remaining about 22.8 million tons (which, it is presumed, Mr. Mathur concedes as suitable for road transport), Mr. Mathur's findings are:

(*a*) Per million tons of traffic, the cost of road vehicles alone will be about Rs. 11.6 crores, as against an estimate of "roughly" about Rs. 4 crores for the railways.

(*b*) The road freight is about As. 6 per ton-mile, while the rail freight for certain commodities and raw materials listed by Mr. Mathur ranges from about As. 1¾ to As. 3¾.

(*c*) Therefore, it "would not be in the interests of our economy to burden the industries with such a high incidence of transport cost."

(*d*) "The initial investment in road transport will also be greater and the assets will have to be renewed every five or six years entailing considerable drain on our foreign exchange."

(*e*) "Even in the U.S.A., where road transport has been extensively developed, the volume of goods traffic carried by road constitutes only 10 per cent. of the total."

(iii) Finally, Mr. Mathur concludes that "on economic grounds, it (road transport) can cater only to short-distance traffic within a range of 40 to 50 miles and that too only to the high-rated traffic, where incidental costs and other considerations outweigh the advantages of rail transport."

Its Analysis

In regard to (i) above, the writer would like to point out, without admitting Mr. Mathur's claim to decide for which commodities "road transport admittedly, is unsuited," that the case for diverting a portion of railway traffic to coastal shipping and road transport is based not on earmarking particular commodities for shipping or roads but on leaving it open to such commodities as choose to be so diverted. At present there is no open door. Therefore, the assumption that steel and its raw products cannot be diverted, if in point of fact they cannot, has no bearing on this point. Before the restrictions of Chapter IV of the Motor Vehicles Act of 1940 came into force, road transport handled a portion of the traffic in cotton, jaggery, groundnuts, betel leaves, turmeric and a number of other commodities "over distances up to 1,000 miles." The Technical Sub-Committee of the Subject Committee on Transport, Government of India, has recorded in its 1943 Report on page 14, that "there was in the past on certain routes substantial diversion of long-distance goods traffic to the roads and, in the years 1938-40, road rates were advertised for distances up to 1,500 miles." Both these statements have been taken from official records and should be sufficient to establish that:

(i) There are a number of commodities which, in the light of past experience, can be diverted to roads and shipping; and

(ii) such diversion on long distances is feasible. It is, therefore, absolutely beside the point to try to show that the estimated extra traffic of the second Plan cannot be diverted to roads/shipping. In its place some of the present traffic can.

In regard to (ii), the figures on which Mr. Mathur has tried to establish his case are as follows:

(i) "the investment required on the railways for the movement of an additional million tons works out roughly to Rs. 4 crores, except in cases where extensive improvement in line capacity works is required";

(ii) "the total investment for lifting one million tons of goods by road will be about Rs. 11.6 crores";

(iii) "the average freight per ton-mile on the railways including incidentals for certain commodities ranges from about As. 1¾ to As. 2½, while that by road is about As. 6."

It is necessary to examine these figures.

In the second Plan, the railways aim at (i) a certain amount of rehabilitation and (ii) catering for an increase of 15 per cent. in passenger traffic and lifting 47 million tons of extra goods traffic. On the basis of "roughly" Rs. 4 crores per million tons as per item (i) above, the cost of lifting 47 million tons of goods works out to "roughly" Rs. 188 crores, while the total provision in the Plan for railways is Rs. 1,125 crores. Does this mean that the difference between these two figures amounting to "roughly" Rs. 937 crores represents expenditure on rehabilitation and an increase of 15 per cent. in passenger traffic?

Break-down of Railway Allotment

The break-down of the provision of Rs. 1,125 crores for the railways has been given on page 466 of the Second Plan and repeated on pages 68 and 69 of the May-June issue of *Indian Railways*. From it, in so far as it can be ascertained, the cost of rehabilitation appears to work out approximately as follows:

(i) Rolling Stock—Rs. 197 crores (excluding Rs. 183 crores for development).

(ii) Bridges—Rs. 18 crores (excluding Rs. 15 crores for Ganga and other bridges).

(iii) Track renewal—Rs. 100 crores.

(iv) Other items in the break-down of which the entire cost may not be for development, say—Rs. 25 crores.

Total Rs. 340 crores or, say Rs. 350 crores.

The balance is thus (Rs. 1,125—Rs. 350)= Rs. 775 crores. Out of this, Rs. 95 crores, say, Rs. 100 crores, being Rs. 15 crores on passenger amenities and Rs. 80 crores on electrification, presumably solely for the benefit of passenger traffic, may be taken as expenditure on amenities. This leaves Rs. 675 crores (Rs. 775—Rs. 100) as the probable development expenditure on the carriage of the estimated extra traffic of the Plan, which is 15 per cent. in passengers and 47 million tons in goods.

According to revised estimates, the passenger earnings of railways for 1955-56 were about Rs. 109 crores and goods earnings about Rs. 180 crores. Therefore, on the basis of an investment being proportionate to earnings in a service, as it ought to be, the railway investment on passenger and goods traffic in 1955-56 works out in the ratio of about 109 to 180. As mentioned above, the increase in passenger traffic by 1960-61 over that in 1955-56 is 15 per cent.; the 47 million tons of extra goods traffic estimated to be available by 1960-61 is equivalent to an increase of about 41 per cent. of the 1955-56 estimated traffic of 115 million tons. The relative *extra* investment on these items by 1960-61 would, therefore, work out as shown below on the basis of 1955-56 investment:—

Passenger traffic	...	109×.15=16.35, say 1
Goods traffic	..	180×.41=73.80, say 4.5
	Total	... 5.5

This means that, out of the estimated development expenditure of about Rs. 675 crores on the carriage of passengers and goods, excluding expenditure on amenities, about 80 per cent. (4.5 out of 5.5), that is, about Rs. 540 crores is for lifting 47 million tons of goods traffic. This works out to an outlay of about Rs. 11½ crores for lifting one million tons of goods by the railways against "roughly" Rs. 4 crores mentioned by Mr. Mathur. And the approximate break-down of Rs. 1,125 crores works out as follows:

	Rs. crores
(i) Rehabilitation	350
(ii) Passenger amenities including electrification	100
(iii) Cost of carriage of 15 per cent. extra passenger traffic by 1960-61	135
(iv) Cost of carriage of extra goods traffic by 1960-61	540
Total ...	1,125

These figures have been arrived at on the basis discusssed in detail above. It will be interesting to have the Railway Board's figures of their provision on these items.

Rolling Stock at Current Prices

Let us see what the cost of the railway rolling stock alone would work out to on the basis employed by Mr. Mathur for arriving at the cost of road transport, namely, current prices. The passenger traffic in 1955-56 has been estimated by the railways at 1,360 million passengers. That by 1960-61 has been estimated at 15 per cent. more i.e., a total of 1,564 million passengers. Converting this traffic, at 200 lbs. per passenger including luggage, into tons, since locomotive power required for their carriage has to be proportionate to the load carried, it is found that about 46 per cent. of the locomotives expected to be on the line by 1960-61 will be required for this traffic and about 54 per cent. for the goods traffic. Then, on the basis of the rolling stock on the line in 1954-55, which is the latest year for which information is available, about 63 per cent. of our locomotives are B.G. and about 37 per cent. M.G. and N.G., while about 71 per cent. of the wagons are B.G. and about 29 per cent. M.G. and N.G. Finally, it has been mentioned that the average current prices of locomotives and wagons are approximately as follows:

	Rs.
B.G. locomotive	5 lakhs
M.G. locomotive	3 lakhs
B.G. wagon	14,000
M.G. wagon	10,000

Applying this data to the 10,168 locomotives (about 6,406 B.G. and 3,762 M.G. and N.G.) and 3,49,444 wagons which are estimated to be on the line by 1960-61, the cost position of the rolling stock, at current prices, required for goods traffic works out as follows:

B.G. locomotives 54% of 6,406=	3,459 at Rs. 5 lakhs	=Rs. 17,295 lakhs.
M. & N.G. locomotives 54% of 3,762=	2,031 at Rs. 8 lakhs	=Rs. 6,098 lakhs.
B.G. wagons 71.5%* of 3,49,444=2,48,105 at Rs. 14,000		=Rs. 34,785 lakhs.
M. & N.G. wagons 29% of 3,49,444=1,01,339 at Rs. 10,000		=Rs. 10,184 lakhs.
		Rs. 68,257 lakhs.
		Say Rs. 682 crores.

For lifting 162 tons (115 M.T. for 55/56 plus 47 M.T. extra) ∴ cost per million tons : 4.21 crores.

*N.B.—This percentage is on the low side, having been based on 1954-55 figures. By 1960-61 new wagons on the line will be 1,07,247 of which B.G. wagons will be 84,454, i.e., about 79 per cent.

In other words, the cost at current prices of railway rolling stock alone is about Rs. 4.25 crores per million tons of goods traffic!

Prove Your Figures

It is important to note here that Mr. Mathur's figure of "roughly Rs. 4 crores" per million tons of traffic does not relate to rolling stock alone, since his wording is "investment required on the railways," "except in cases where extensive improvement in line capacity work is required." Evidently, his figure of "roughly" Rs. 4 crores is clearly inclusive of line capacity. Therefore, on the basis of the provision made for the railways in the second Plan excluding probable expenditure on rehabilitation and passenger amenities and in proportion to the passenger and goods traffic expected to be carried the average cost of lifting one million tons of goods by the railways works out to about Rs. 11½ crores including line capacity and about Rs. 4¼ crores for rolling stock alone, at current prices against Mr. Mathur's figure of "roughly Rs. 4 crores" "except in cases where extensive improvement in line capacity works is required." The Railway Board will place the public under a debt of obligation by throwing light on these figures, reconciling them with the provision in the second Plan proportionate to the extra passenger and goods traffic to be carried and excluding expenditure on passenger amenities and rehabilitation.

Road Costs

Mr. Mathur's figure of Rs. 11.6 crores for lifting one million tons of goods traffic by road has been arrived at as follows:

(i) Pay load	6 tons
(ii) Mileage p.a.	20,000
(iii) Load factor	3/4th
(iv) Ton/miles p.a.	90,000
(v) Ton/miles per million tons on railways.	1,000,000×300
(vi) No. of trucks for (v)	3,333
(vii) Cost of truck	35,000
(viii) Cost of (vi)	11.6 crores

For about Rs. 35,000 ex-works, it is possible to get a truck in India carrying a pay-load of 7½ tons and the average run of a public passenger vehicle is about 30,000 miles per annum. There is no doubt that, with sufficient traffic, a goods truck can cover a good deal more than this distance. But at 30,000 miles per annum, a pay-load of 7½ tons and, a load factor of ¾th, the ton-miles per annum will be about 1.7 lakhs, that is, about double of Mr. Mathur's figure of 90,000 and the number of trucks per million tons carried 300 miles and their cost will be half of his figure, that is, Rs. 5.8 crores, or say, Rs. 6 crores in place of his figure of Rs. 11.6 crores. Even with smaller trucks carrying a pay-load of about 4½ tons and costing about Rs. 20,000 each, the initial investment on trucks will be no higher. What is generally not understood in this country is that when one talks of goods transport by road on a big scale for long-distance hauls on arterial roads, one does not mean the normal small-capacity truck in use at present for the limited traffic made available to it under the present restricted laden weights but a truck/trailer or tractor/trailer combination which has become an acknowledged feature of long-distance road transport all over the world. For instance, a truck with a pay-load of about 7½ tons is said to be capable of carrying another about 6 tons in a trailer. A combination of this kind is said to cost only about 30 per cent. more and will, therefore, reduce the above figure of about Rs. 6 crores to about Rs. 4½ crores.

Mr. Mathur's figure of As. 6 per ton-mile has been based on the data of nationalised undertakings. They are comparatively new to the truck-operating line and many of them have not yet had time to "find their feet." To be guided by their figures is like framing the present railway estimates on a 10-year old data. This is unfair both to the nationalised undertakings and to the public. The Study Group has mentioned that the rate per ton-mile of a big transport undertaking in the South is about As. 3 per ton-mile. With a truck-trailer combination and the use of diesel fuel, this rate will be still lower.

Track Costs

The cost of lifting per million tons of traffic including line capacity and the cost of rolling stock for the same traffic has been discussed above in detail for railways and roads based on current prices. To complete the picture it may be useful to compare track costs also. The recent railway budget gives the following information of some new railway lines:

	Miles	Rs.	Rs. per mile
Barkakana/Rourkela ..	124	9.80 crores	7.90 lakhs
Rourkela/Talditi or Dumaro..	89	2.83 ,,	7.25 ,,
Bilisi/Thalli	60	4.00 ,,	6.66 ,,
Noamundi/Banaspani ..	18	1.31 ,,	7.28 ,,
Barseti/Basirhat	44	2.00 ,,	4.54 ,,
Champa/Korba	5	0.50 ,,	10.00 ,,
	290	20.44 crores	7.05 lakhs

According to these figures, the average cost of constructing one mile of railway track appears to work out to Rs. 7 lakhs. It is important to note that none of these lines is in difficult terrain and they do not require major bridge work. At current prices, the estimated cost of the Nagpur Road Plan is about Rs. 744 crores, of which about Rs. 355 crores are on improvements to existing roads and about Rs. 389 crores are on new construction. Of this amount, about Rs. 89 crores are for the construction of about 76,000 miles of earth roads and about Rs. 300 crores for the construction of about 35,000 miles of arterial hard-crust roads suitable for motor traffic. This gives an average cost of construction per mile of a hard-crust road suitable for motor traffic, at current prices, at about Rs. 85,000 which is less than one-eighth of the cost of a railway mile of Rs. 7 lakhs.

Wasting Assets

The point about the road assets having to be renewed every five or six years and "entailing a considerable drain on our foreign exchange" is novel. All assets, whether they are of road or rail transport, have to be renewed. The comparison should, therefore, be whether railways or roads require more expensive renewals. Taking the case of the track, a railway track requires renewal of sleepers, rails, fishplates, etc., and the materials removed are just a waste. No such waste is involved in the case of roads, which are built up in layers from time to time according to requirements. In regard to foreign exchange, no foreign exchange is involved in regard to road materials, and, in regard to vehicles, they are produced in this country on a progressive plan, entailing limited imports, which, in comparison with railways, are very small. It would be interesting to know Mr. Mathur's estimate of the foreign exchange, which, in his opinion, is likely to be involved on road transport during the second Plan and how it compares with the Railways Board's proposed foreign exchange of approximately Rs. 425 crores during that period.

Experience in the U.S.

Mr. Mathur's statement that "even in the U.S., where road transport has been extensively developed, the volume of goods traffic carried by road consists of only 10 per cent. of the total is not borne out by facts. In 1953, the latest year for which information is available, road transport accounted for 210 billion ton-miles of freight out of a total of 1,167 billion ton-miles, that is, nearly 20 per cent. But the point at issue is not what the present percentage of traffic is, since, as between railways and roads, the latter is a late-comer, but what the present trend is, that is, whether it is in favour of extending the railways or other modes of transport. On this point the following information may be useful:

"During the period 1939 to 1953, goods traffic in the U.S.A. increased by 118 per cent. but the corresponding increase in road traffic was 289 per cent., while that in railway traffic was 83 per cent. The proportion of road to railway goods traffic was about one-sixth in 1939. In 1953, it rose to about one-third. Of the additional goods traffic between 1939 and 1953, the railways carried 45 per cent., the balance going to other modes of transport (roads 25 per cent., water 13 per cent. and pipe lines 17 per cent.)"

Mr. Mathur's gracious and perhaps grudging concession to road transport to ply on distances of 40 to 50 miles makes strange reading against the Study Group's suggestion to raise the limit to 150 miles in place of the present 75 miles in restricted areas and the fact, as pointed out earlier, that road transport had actually been plying in the past up to distances of from 1,000 to 1,500 miles. Even at present, passenger and goods vehicles ply up to about 400 miles in certain States, while private trucks transport goods from Bombay to Delhi, a distance of 880 miles, when railway wagons are not available. The Minister of Transport has said publicly that, apart from railways, the expansion in the country's transport has to take place mainly through road. The contacts which this Association has had with the Transport Ministry indicate that the Ministry is fully aware of the need to develop road transport and this Association happens to know the various schemes which are being considered by the Ministry for that purpose. Is it likely that the Railway Board are against the policy of their Ministry and have been ventilating their views in their magazine? If it be so, then the matter is serious.

Summary

To summarise the position is as follows:

(1) Before the restrictions on motor transport under the Motor Vehicles Act of 1940 became effective, motor transport was plying, according to official statements, over distances up to 1,500 miles, carrying a number of commodities.

(2) Even at present, in spite of these restrictions, which are mainly for the railways' benefit, and a number of other handicaps, for which it will be difficult to find a parallel in other countries, road transport has been plying in certain cases and certain circumstances up to 880 miles, against Mr. Mathur's gracious, though perhaps, grudging, concession of 40 to 50 miles.

(3) There is no wastage of assets in roads, which are built in most cases on the principle of adding up from time to time according to traffic. On the other hand, railway tracks have to be completely renewed.

(4) In regard to vehicles, whether of road or railway, their depreciation is covered in rates per ton-mile and, therefore, the question of wastage, if renewals are to be called a wastage, does not arise in their case.

(5) In all economies, and particularly in an underdeveloped economy, a certain amount of foreign exchange is inevitable, but its extent in road transport will be comparatively small, as compared with the railways' need for foreign exchange of about Rs. 425 crores during the second Plan.

(6) Based on the provision for railways during the second Plan, the cost of lifting one million tons of goods by railways works out to about Rs. 11½ crores, as against Mr. Mathur's figure of "roughly" Rs. 4 crores.

(7) At current prices, the cost of railway rolling stock alone for carrying one million tons of traffic works out to about Rs. 4¼ crores.

(8) At current prices, the cost of road trucks for the same traffic works out to about Rs. 4½ crores, as against Mr. Mathur's figure of about Rs. 11.6 crores.

(9) At current prices, the cost per mile of railway track in normal terrain works out to about Rs. 7 lakhs, as against about Rs. 85,000 for a hard-crust road suitable for motor traffic as per the current estimate of the Nagpur Plan.

(10) The cost per ton-mile by road by private operators is about As. 3 against Mr. Mathur's figure of As. 6 by nationalised undertakings. With the use of trailers, the cost will be less still.

Case for Road Transport

Apart from relative costs, the case for road transport rests on other grounds also. They are as follows:

(i) *Modern trend* all over the world is definitely in favour of extending road transport in preference to railways. Experience in the U.S.A between 1939 and 1953 has been referred to earlier. A further indication may be had from the following table showing a progressive decline of the railways in the U.S.A. since 1935:

RAILWAY IN THE UNITED STATES

Year	*Locomotives in service*	*Goods trucks in service*	*Passenger trucks in service*
1935	40,541	1,867,381	42,426
1940	44,338	1,684,171	38,808
1945	46,268	1,787,073	38,633
1946	46,511	1,766,400	38,627
1947	44,344	1,759,758	39,057
1948	44,474	1,786,067	39,406
1949	43,272	1,778,811	38,006
1950	42,951	1,745,778	37,359
1951	42,473	1,777,878	36,326
1952	39,697	1,788,352	34,942
1953	37,251	1,801,874	34,106

A still further indication is the newly proposed appropriation by the President of the U.S.A. of 101 billion dollars for the development of roads in the U.S.A. in a period of 10 years.

(ii) *Railway transport requires far more steel than road* transport and, in the present condition of our economy, steel is so vital to our progress that it is absolutely essential to cut down to the minimum its use when the same service can be had from other materials.

(iii) *Road transport is far more labour-intensive than railway transport.* The addition of about 2 lakhs of trucks will provide employment for at least 12 lakhs of extra hands, against the present railway figure of about 10 lakhs for a traffic of about 1,360 million passenger and 115 million tons of goods. If our economy is such that, in spite of a difference in the price of mill-made yarn and that produced by the Ambar Charkha, the latter had to be preferred because it is labour-intensive, then it follows that, for the same reason, in spite of a difference in freight rates, if there be any, road transport has to be preferred to rail transport.

(iv) *Capital for the development of the railways has to come from Government* and it can come only by starving production of essential commodities which are so vital to us. Capital for road transport will come from the private sector.

(v) *The automobile industry is extremely flexible* and can be put to a number of uses both during peace and war. Its development has been found most beneficial in other countries and will be so found in our country also. We must go right out to elevate it to play its proper role in our economy.

(vi) For the same reasons for which the second Plan takes into account "the possibility of a larger proportion of passenger traffic being carried by road transport" (page 465), it is necessary to provide for the carriage by roads of a larger proportion of goods traffic also. The objective in both cases is clearly and definitely "to provide relief to railways." There is absolutely no doubt that road transport will deliver the goods.

DALMIA CEMENT (BHARAT) LIMITED

FOURTH ANNUAL GENERAL MEETING

MR. J. DALMIA ON STATE TRADING IN CEMENT

ADDRESSING the shareholders of the Dalmia Cement (Bharat) Limited at their Fourth Annual General Meeting held on 20th July 1956 at the registered office of the Company at Dalmiapuram (Madras State), Mr. J. Dalmia, Chairman of the Company, explained the circumstances that had led to State trading in cement. He recalled that the Directors of the Company had been insisting upon the National Government the desirability of rationalising the transport of cement and equalising the price of cement throughout India or fixing zonal price. Nothing could, however, be done as the industry was a divided house. That was why, he said, the Government had to introduce State trading.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I have great pleasure in meeting you and welcoming you to the fourth annual general meeting of your Company. The audited accounts for the year 1955 along with the Directors' report thereon have been in your hands for some time. With your permission I shall take them as read.

"I hope you are satisfied with the results of the working of your Company for the year 1955 which have been quite good and compare favourably with others. They have been due to the vigilant care of your Managing Agents, the able guidance, supervision and control of your Directors and the co-operation of the officers, who have been working as a team, and not least to the reasonably peaceful atmosphere maintained by all the employees and workers.

"In their report, the Directors have recommended that those ordinary and deferred shareholders who so desire may be given ordinary shares of Orissa Cement Limited at par (which are quoted in the market at premium) in lieu of the dividend for the accounting year 1955 upto the extent of 75 per cent. of their ordinary and deferred dividend. The preference dividend was proposed to be excluded from the option as the preference shareholders are entitled to only fixed cumulative dividend.

Legal Advice

"Certain preference shareholders objected to the exclusion and threatened legal proceedings. The matter was, therefore, placed before legal advisers who have advised against giving the shares in lieu of the dividend. I, therefore, regret that it has been decided by the Directors to request this meeting not to take into consideration the recommendation of the Directors with regard to payment of the dividend in *specie*. I apologise on behalf of the Board to those who have sent in their option forms asking for shares in lieu of the dividend, for the inconvenience and the disappointment.

"To overcome the difficulty arising out of the circumstances, I suggest to the meeting that the dividend recommended by the Directors in respect of ordinary and deferred shares may be approved and declared by the members as interim dividend payable fully in cash for the accounting year 1955 for the time being and the balance surplus may be left unallocated for the present. The Board of Directors will consult the Stock Exchanges where these shares are quoted and recommend to declare some further dividend if deemed desirable and/or necessary. Allocation of the surplus will also be decided at that time. If any further dividend is recommended and declared, the same would be payable only to those registered shareholders of the Company whose names appear in the register of members on today's date.

State Trading in Cement

"You must have learnt from the newspapers, that the target of cement production is being further raised for the second Five-year Plan from 125 lakh tons to 200 lakh tons per year, to avoid the scarcity already felt on account of the increased demand for various development works and the people getting more and more cement-minded. To meet the immediate needs, the Government is importing good quantity of cement from foreign countries. Foreign cement is very costly. But to do justice to the common man and the ordinary consumer, who cannot obtain low-cost indigenous cement, the Government has decided to pool together high-cost imported and low-cost indigenous cement and distribute it at an equalised price at all railheads through the State Trading Corporation established by the Government and the existing channels of distributors and stockists. These measures have necessitated a slight increase in the price of cement. The State Trading Corporation has introduced rationalisation in movement of cement. All foreign cement will be mostly consumed at the ports and indigenous cement will be supplied to the consuming centres as far as possible from the nearest source of supply.

New and Old Factories

"The Tariff Commission, while submitting its report to the Government in the year 1953 for revision of the price of cement, recommended, after thorough investigation, the desirability of equalising the high and low cost cement of new and old factories, respectively, and also rationalising the movement of cement in order to reduce the strain on rail transport. But the Government did not see its way to accept that recommendation at that time. Your Directors too have been impressing upon the Government since the National Government took over the reins, when the late Dr. Shyama Prasad Mukherjee was in charge of the Ministry of Industry, the desirability of rationalising the transport of cement and equalising the price of cement throughout India or fix zonal prices. But nothing could be done as the industry was a house divided within itself. Even now when the cement industry is a highly organised one with centralised direction, it is unable to form an Association of its own to represent and discuss matters of common interest and solve problems which affect all equally. All efforts to sit together to settle common questions have failed so far. That is why the Government has to introduce State Trading to achieve the object. If the industry continues to be incapable of union, sacrificing individual interest for the common interest of the industry and the country, I am afraid, the Government may have to interfere much more than they are doing today.

Opportunities for Expansion

"The cement industry must realise the great opportunities it has for expanding itself and increasing its service to the country. The cement production in the country during the year 1955 has been about 45 lakh tons. The present annual installed capacity, which may be put at about 50 lakh tons taking into account the units which have gone into production by the middle of the year 1956, will be increased by the end of 1956 to about 63 lakh tons. But the total production of cement during the year 1956 is expected to be near about or little more than 50 lakh tons. During the year 1957 the capacity of units expected to go into production would be about 4 to 5 lakh tons. By the end of 1957 the annual installed capacity of the cement industry in the country is expected to be about 67 to 68 lakh tons and the production of cement in 1957 is likely to be near about 62 to 63 lakh tons. The benefits of such increase cannot be reaped in full, unless the distribution has a high degree of rationalisation and the efficiency of the transport system is maintained at a high pitch.

"A good deal of development has taken place in the country as a result of the first Five-year Plan and a good deal more is envisaged for the next five years. The success of the second Five-year Plan would be more assured and more impressive but for the differences on States Reorganisation which have shaken the solidarity of the country and tried the wisdom and patriotism of the people and the leaders. Let us pray that good sense will prevail and we will continue to make more and more progress casting aside the petty-mindedness of provincialism and making ourselves so strong that no force in the world will be able to divide us.

"With your permission now, I beg to move that the agenda of the meeting be taken up *seriatim* for consideration, discussion and decisions as the members consider fit."

sealed-in-flavour

wrapped in TRAYOPHANE* MOISTURE-PROOF FILM

To the fastidious smoker, Trayophane film packing means that he can trust the cigarettes to taste good!

Trayophane moisture-proof film opens your goods to buyer's eyes—but shuts the weather out! Whatever you wrap—cigarettes, tea, coffee, sweets, biscuits—your goods remain fresh longer, not affected by moisture-vapour!

Trayophane Moisture-proof film is tough— No cracking, no tearing!

Trayophane can be heat-sealed—just run a hot iron along the seam.

Trayophane is cheaper than other transparent packing material. Available in sheets and rolls. Write for our free samples catalogue.

LABOUR

(*Concluded from page 174*)

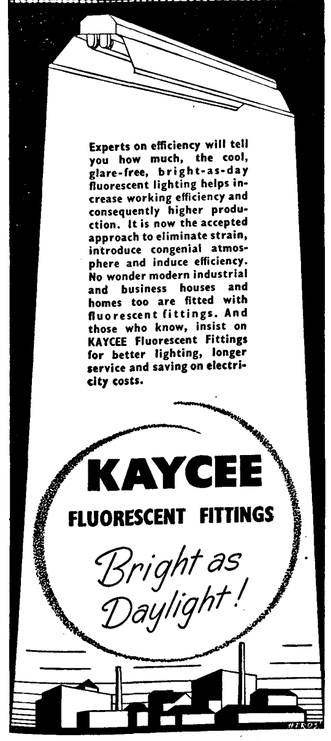
It is also regrettable to note that, although the Registrar had given all the necessary instructions for filling up the returns, several unions could not send in correct returns. The trade union movement will suffer a setback if the union executives do not discharge this elementary obligation of submitting their returns promptly and correctly. It is to be hoped that, in future, they will avoid placing the Registrar in a position to make the kind of charge he has been compelled to make.

To revert to the Report. There were 912 unions on the register at the end of the year 1954-55, of which 870 were State Unions, including one federation, and 42 central unions (i.e., unions, the activities of which are not confined only to this State), including four federations. The total membership as reported by 518 unions (excluding five federations), included in the Report, was 321,599 at the beginning of the year and 395,597 at the close of the year. The total income of the 518 unions (excluding five federations), during the year under report, was Rs. 18.35 lakhs with a balance of Rs. 11.88 lakhs at the beginning of the year, while their total expenditure for the same period was Rs. 15.82 lakhs with a balance of Rs. 14.41 lakhs at the end of the year. The five federations (one State and four central) had a total income of Rs. 3.25 lakhs during the year, with an opening balance of Rs. 2.67 lakhs while their expenditure during the same period was Rs. 3.02 lakhs with a closing balance of Rs. 2.91 lakhs.

A NEW PLEDGE

Mr. S. R. Vasavada, President of the National Federation of Indian Railwaymen, said at Ahmedabad, that henceforth every railway worker seeking admission to the Federation would be required to sign a three-point pledge. The three clauses of the pledge would be: (1) No bogus union would be tolerated; (2) truth and non-violence would be followed in his activities and (3) strike would not be resorted to in the case of disputes which could be solved through arbitration. He revealed that the two groups in the Federation—one led by himself and the other by Mr. Guruswami—had agreed at a joint meeting in Delhi last week that before the merger of the two groups and new elections, every worker belonging to the railway unions would have to sign the pledge. He added that only those workers who signed the pledge would be allowed to vote in the elections to be held for the merger of the unions.

HIGHER PRODUCTION



Experts on efficiency will tell you how much, the cool, glare-free, bright-as-day fluorescent lighting helps increase working efficiency and consequently higher production. It is now the accepted approach to eliminate strain, introduce congenial atmosphere and induce efficiency. No wonder modern industrial and business houses and homes too are fitted with fluorescent fittings. And those who know, insist on KAYCEE Fluorescent Fittings for better lighting, longer service and saving on electricity costs.

TRAINING OF MANAGEMENT PERSONNEL

MERIT, BEST CRITERION FOR SELECTION

THE problem of securing management and technical personnel for manning industrial undertakings in both public and private sectors is a live one. It presents itself persistently before the boards of directors of all concerns and, in a period of expanding economy, it assumes increasing importance. For highly qualified and experienced personnel is not born but is the product of hard and intelligent work spread over a period of years. Consequently, in an economy that wants to expand rapidly, a shortage of business executives is bound to be felt. In India, the execution of the first Plan brought into bold relief the scarcity of administrative, managerial and technical staff when it came in the way of expanding employment opportunities. The need was, therefore, felt for undertaking planning for training well in advance in order that the future supply may be adequate for meeting the probable demands. And arrangements have since been made for starting training centres for imparting training to young men for all cadres of employment. Nevertheless, the urgency for recruiting administrative personnel has been so great that the Government is perforce compelled to hold *ad hoc* examinations for selecting personnel even at the cost of sacrificing quality and merit, the hallmark of the former Indian Civil Service, which has evoked admiration in many parts of the world. Although this expediency is unavoidable, it is to be hoped that every effort will be made to restore to the Indian Administrative Service the efficiency that is associated with the former civil service.

Unilevers' Procedure

While on this subject, it is only appropriate to refer here to the experience of Unilever Ltd., one of the biggest international commercial organisations, in meeting its requirements of managerial staff. This organisation, which rose from very humble beginnings, is today having on its staff, in its units all over the world, some 22,600 managers, out of a total labour force of 270,000. Managers thus form 8 per cent. of the total. Inside the general pattern, however, the proportion of managers to the whole varies from one part of unit to another, and from one country to another.

At one end of the scale is businesslike plantations in Nigeria and the Cameroons where both the country and the operations are simple. Here, the managers form only 3 per cent. of the whole force. At another point is Indonesia, where the business is confined to producing detergents and edible facts; here the proportion has risen to six. In the U.K., where detergents, edible fats and other foods, oilmilling and toilet preparations are manufactured, the proportion of managers to the total staff employed there is 11 per cent., and in Holland, with the same range of operations, it is about the same. But, in the U.S., where a higher degree of mechanisation and more sophisticated environment exist, the percentage is still higher at 15.

Three Categories

The managers of Unilevers fall into three main categories. At the base of the pyramid, there are the junior managers numbering about 16,400. Of these, some 5,000 are in the U.K. and 800 in Holland. This category includes foremen, supervisors, the men and women on the factory floor or in the office who are the first to carry responsibilities for the running of a small group and who know the art of handling other people.

Next comes middle and senior managers numbering about 6,000. And, at the apex, there is the top management, the two or three hundred people who take on themselves the decisions which make or mar the success of the business as a whole.

The procedure that is being followed by Unilevers for selecting the managers for manning its various jobs of responsibility was the subject of a talk by Lord Heyworth, Chairman, Unilever Ltd., at the last annual meeting of the Company held at London. The talk is noted not so much for the procedure itself as for the problems facing them in making the selection. In choosing the subject for his talk, he said: "The topic is of particular moment now when, with full, or overfull, employment in most parts of the world, the competition to secure the services of those who show an aptitude for management is keener than ever before. ... Even when you have caught your potential manager young, there is always the chance that, on his way up the ladder, you will lose him to someone else. The question is, therefore, one which today we must take very seriously."

Unilevers attach great importance to selecting the best men for their managerial posts. Managers are important to shareholders, because without good managers, no business could thrive. They are important to employees; for, without good skippers, there will be no happy ship. And they are important to the communities, because they help achievement of increased productivity upon which the improvement of standards of living depends.

In view of the importance of the manager, the only test applied to determine a man's suitability is the test of merit. There is no question of demanding any particular social or educational background. Although an increasing proportion of prospective managers have had a university training, many Unilever managers have come from the lowest levels "by the hard way" and whose qualities of leadership developed after they had joined the business. Unilevers paid attention to the fact that, in its business, there is always a ladder by which a man with the right qualities can climb to the next stage. Care is taken to see that, at every level of its management, there are men whose only University is the "University of Hard Knocks."

Higher Grades

One basic principle followed by the Company when assessing candidates for the higher grades is that the qualities of the potential recruit are assessed not merely by individual interview but also by seeing him perform as one of a group, which lets him show whether he possesses such obviously desirable qualities as intelligence, commonsense, organising ability and the ability to get on with others. Unilevers know that this procedure is not perfect, since it is exposed to the danger of "choosing the pleasant talker or an easy mixer to the exclusion of the rough diamond and the gifted eccentric." It is, however, felt that this procedure enables the management to make fewer mistakes than any other form of selection which it has been able to devise.

Attention is also paid to the fact that the actual selectors are active executives from all parts of the business with whom rests the final decisions. Because these are the men who know by the hard test of practical experience the sort of men they want as managers, they are spared the time from their ordinary duties to take part in the business of selection.

For some managerial posts, a knowledge of production techniques is required, and for others a knowledge of accountancy is essential. Consequently, men are picked primarily for their specialist knowledge and then special attention is paid to developing their general management ability in business. But the man must have the germ of leadership within him. And then the road is made open for him to climb to the next level. It is the job of every company chairman to watch for talent, to nurse and train it, and when the man is ready, to bring him forward for consideration.

It is interesting to refer here to the practice adopted in the U.S. Education, specifically, for a career in industry, has long been more highly developed in the U.S. than in Europe and a much higher proportion of those who graduate do so in economics or commerce. In addition, there are in the States many schools of business administration which have no counterpart in the U.K. The reasons for this difference, given by Lord Heyworth, are worth noting. The status and prestige of industry in the States is second to none, whereas in many other countries, it has taken a longer time to become recognised as a first class career. Until the Great Depression, comparatively few young men in the States were attracted to Government employment, nor were there opportunities for Imperial Government service abroad. A higher proportion, therefore, tended to go into industry and commerce and the universities allowed for this trend in the education which they provided. And it is not only the attitude of universities to industry which affects the issue but of industry to the universities. In this respect, the climate is changing fast and, over the last generation or so, industry in the U.K. and Holland has, it is stated, been rapidly losing its traditional resistance to the employment of graduates, while the universities, on their part, are increasingly ready to co-operate with industry.

Method of Training

The most important training is done individually and on the job. It is both flexible and selective. There is no general scheme of training into which everyone will fit. A prospective manager is put on the job in which he starts learning. The man above him is expected to spend a good deal of his time and trouble in training his subordinate. This training of the men under them is a vital part of the work of all managers in Unilevers and a man who neglects it is unlikely to reach the heights.

There are two courses which provide a valuable reinforcement to training on the job. One is primarily intended to give the man a broad picture of industry and its economic background and to tell him something of Unilevers as a whole. The second course is a specialised one. The main instructional content is devoted to a particular technique, such as production study, accountancy, advertising or some technical process. For more senior managers, the opportunity may arise of going to an outside institution such as the Administrative Staff College at Hanley in the U.K. and Nijmegen in Holland. The duration of courses is usually about three months, though, in America, courses of twelve months are beginning to be developed. In the U.S. there are plenty of men in academic life who have had sufficient contact with the industrial world to be able to act as instructors, but in Europe there is a shortage of people with these qualifications. Says Lord Heyworth: "Industry, therefore, should make a contribution not only by ensuring that the quality of those whom it sends as students is high but also by seconding first-class men to assist on the instructional side. I for one like to see this kind of secondment becoming a two-way traffic. If, as one hopes, the universities are going to develop the teaching of business administration, I would favour the experiment of seconding the university teacher to industry for a year or two and so giving him an inside view of how industry works before he returns to the university to teach." This is an advice which India can follow to its benefit.

Conference of Managers

Apart from courses and secondments, conferences of managers are also held. In these conferences, some twenty to a hundred senior managers are brought together for an intensive study of questions which are of general interest to them all but are outside their daily run of business. Besides, study groups of senior managers are also set up when faced with new problems such as launching into a new field or provision of office accommodation or framing the budget of departments or companies.

It is believed that a man cannot develop his full qualities in his job, unless those above him give him scope to do so. This means the practice of delegation, by which it is not meant to give the junior a job and then to look over his shoulder to make sure that he is not making a mistake. This tendency is discouraged outright, since it encourages delegation only to those who are regarded as men who will play safe. Consequently, the managements should see to it that every manager gives the greatest possible scope to those below him to develop. At no stage is a man considered to be fully trained, for it is held that all can and should go on learning right up to the time of retirement.

WORLD RICE TRADE

It is comforting to hear for one in India, where rice is the staple food of the bulk of its population, that during 1956 total world exportable supplies of rice would be 20 per cent. more than the exports in 1955. In the latter year, world rice exports according to the U.S. Department of Agriculture, amounted to 11,322 million lbs. On this basis, the total exports this year would be about 13,556 million lbs.

On 1st January this year, Burma is stated to have held 30 per cent. of the total exportable surplus. 25 per cent. was in the U.S., 23 per cent. in Thailand, and 22 per cent in other countries. Rice supplies available from Asian countries are estimated at a little less than the actual exports in 1955. Indications are that 1956 sales from Burma and Thailand will absorb all but normal working stocks. In the U.S., export surplus are three times as large as its 1955 exports. Heavy shipments from the U.S., under surplus disposal programmes, indicate a reduction in stocks.

Commenting on the world rice exports in 1955, the Department observes that they rose 8 per cent. over the 1954 figure and exceeded the previous largest post-war exports of 1952. Exports (including re-exports) in 1955 from all countries were, as stated at the outset, 11,322 million lbs. as compared with 10,451 million lbs. Some improvement was noted in the surplus countries of Asia towards regaining rice exports as compared with pre-war trade. The increase in exports was primarily due to the disposal of large surpluses by the principal exporting countries of Asia, Burma and Thailand. Pakistan and Taiwan also had the largest exports in several years.

The total world rice imports in 1955 amounted to 10,753 million lbs., as compared with 10,080 million lbs. in 1954.

RECORD TRADE PREDICTED FOR 1956

The U.S. National Foreign Trade Council's Balance of Payment Group estimated recently that the U.S. imports and exports for the year 1956 would reach an all-time record level. According to the group, the imports of goods in 1956 would be of the value of about $12,500 million, $1,100 million higher than in 1955, and exports $16,100 million, $2,700 million more than in the previous year. These estimates were based on the assumption that the record volume of trade witnessed in the first half of the year would be maintained for the rest of the year.

The Group which consisted of economists serving with manufacturers, exporters, importers, bankers and transportation companies, forecast that the trade totals would go up as a result of the U.S. expenditures on international transportation, trade and miscellaneous services to $3,500 million, while an amount of about equal size would be spent by foreign countries on similar U.S. services.

Consequently, the Group estimated that the exchange of goods and services between the U.S. and the rest of the world would exceed $35,000 million in the year 1956.

TATA OIL MILL EARNS RECORD PROFIT

PREMIUM ON SHARES TO BE CAPITALISED

THE ordinary shares of the Tata Oil Mills Company, Ltd. (Managing Agents: Messrs. Tata Industries Ltd., Bombay), have been one of the firm features on the Bombay Stock Exchange in recent months, with a steady rise from Rs. 47 at the end of April to a high of Rs. 60-8 last week, on strong support induced by hopes of a higher dividend for the year ended 31st March 1956 and prospects of a bonus issue. These expectations have proved correct with the announcement of the Directors' decision to raise the dividend from 8 per cent. to 12 per cent. and to capitalise a part of the reserves and issue bonus shares in the ratio of one share for every five shares.

The Directors' decision to step up the dividend level is fully justified by the results of working of the Company during the year under review. The gross profit has more than doubled itself from Rs. 21.15 lakhs to Rs. 47.33 lakhs, at which level it constitutes a record in the history of the Company, exceeding even the war-time high of Rs. 45.73 lakhs earned in 1943-44. A substantial part of this rise in profit has been absorbed by Managing Agents' commission and provisions for depreciation and taxation, so that the increase in net profit is only Rs. 10.33 lakhs to Rs. 17.04 lakhs. Nevertheless, it is gratifying to note that the net profit for the year under review exceeds the aggregate net profits for the previous three years. Consequent on this encouraging performance, the Directors have been able to set aside Rs. 1 lakh to the development reserve, Rs. 1.50 lakhs to the sales promotion reserve, Rs. 3 lakhs to deferred taxation reserve and Rs. 0.50 lakh to reserve for bad and doubtful debts, none of which had received anything in the previous year.

The transfer to development reserve represents the saving in income-tax for 1954-55 and 1955-56, as a result of the development rebate of 25 per cent. on new plant and machinery allowed under the Finance Act of 1955. This sum has, accordingly, been set aside for development purposes and a development reserve has been created for the first time this year. The Directors have also thought it fit to initiate a deferred taxation reserve, by setting aside Rs. 3 lakhs, as stated above, from the profit for the year under review, in order to provide for increased tax liabilities in future years when the special allowance of initial depreciation is worked off. The sales promotion reserve was created two years ago with an allocation of Rs. 2.75 lakhs for launching special advertising campaigns for new products or for carrying on sustained propagandas for old ones, particularly in undeveloped regions. Due to low profit, no allocation was made last year to this reserve.

In stepping up the dividend level from 8 per cent. to 12 per cent. the Directors have not only restored the cut made last year (from 9 per cent. paid for 1953-54) but raised the rate to the level for 1943-44. It must, however, be noted that, in between these years—in 1946, to be precise—the paid-up ordinary capital of the Company was raised by the issue of 45,200 new shares of Rs. 25 each and 3,402 old shares previously forfeited and subsequently sold in open market. On the old capital, the latest dividend is equivalent to 14.5 per cent.

The salient features of the results of the Company's working during the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds (gross)	503.10	458.39	435.20	415.28
Other income	11.43	9.40	8.34	7.91

"	(12%)	(8%)	(9%)	(7%)
Carry forward	0.11	0.13	0.10	0.09

The turnover of the Company for the year under review has recorded a substantial rise, as witness the increase in sale proceeds to a record level, cost of raw materials and stores consumed and administrative and other expenses. Commenting on the causes for the rise in profit, the Directors observe:

"The greater turnover of laundry soap, toilet soap and glycerine, the Company's careful purchasing policy in respect of raw materials and the stable prices of almost all vegetable oils, excepting groundnut oil—the price of which tended to rise considerably towards the end of the year—contributed to the higher profits. Increased sales of soap and *vanaspati* accounted for a proportionately larger payment of excise duty amounting to approximately Rs. 31.93 lakhs, as against Rs. 24.46 lakhs paid last year. Apart from the heavy duty on soap and *vanaspati*, the Government of India levied, from 1st March 1956, an excise duty at the rate of Rs. 70 per ton on all vegetable non-essential oils. Owing to this new taxation measure, the Company was again obliged to raise the prices of both laundry and toilet soaps by about 3.5 per cent. and it is regrettable that consumer products like soap and *vanaspati* are now subject to duty at both the raw material as well as the finished product stages."

The Company's paid-up capital, at Rs. 99.96 lakhs, is supplemented by reserves and surplus aggregating Rs. 34.20 lakhs. Additions to gross block during the year amount to Rs. 12.24 lakhs, bringing the total value at the end of the year to Rs. 192.47 lakhs, as against which a depreciation fund of Rs. 117.21 lakhs has been built up. The current assets, aggregating Rs. 282.61 lakhs, exceed the current liabilities (Rs. 199.92 lakhs) and provision for taxation (Rs. 18.48 lakhs) by Rs. 64.21 lakhs.

The Directors have decided, as stated at the outset, to capitalise a sum of Rs. 14.02 lakhs out of the amount standing to the credit of share premium account and utilise the same for issuing 56,086 fully paid-up ordinary shares of Rs. 25 each to the existing shareholders in the ratio of one share for every five shares held now. This proposal is, however, subject to the sanction of the Controller of Capital Issues. Since the bonus issue is out of share premium, the Company is not liable to pay the bonus tax introduced in the last budget.

Since the close of the year under review, the Company has purchased a small soap factory at Calcutta at a cost of about Rs. 9 lakhs. The factory, which is equipped with suitable machinery for the manufacture of both laundry and toilet soap, is expected to go into operation shortly after the installation of some additional equipment.

The Rs. 25 fully paid-up shares of the Company are being currently quoted at Rs. 58-12 *cum-div.* On an *ex-div.* basis, the latest dividend gives on the shares a yield of 5.6 per cent. per annum, free of income-tax.

BURMAH-SHELL REFINERIES

The working of the Burmah-Shell Refineries Ltd. during the year ended 31st December 1955 has resulted in a gross profit of Rs. 606.33 lakhs. After setting aside a sum of Rs. 123.17 lakhs for depreciation, the Directors have utilised Rs. 15.84 lakhs to write off expenses in connection with the issue of 5½ per cent. debentures and Rs. 0.35 lakh to write off preliminary expenses and expenses incurred in converting the Company into a public limited one. They have also set up a taxation equalisation reserve by allocating Rs. 281 lakhs from the year's profit. Due to additional and initial depreciation allowances as well as development rebate, there are no taxable profits for the year under review. The Directors have decided to spread the benefits accruing from these special allowances over a number of years and hence the aforesaid taxation equalisation account. No provision for debenture redemption has been made and the Directors have decided to skip over the dividend for the year and to carry over a surplus of Rs. 185.97 lakhs to the current year's account.

The Company's refinery, with an initial capacity of about 2 million tons, commenced operations at the end of January 1955 and the quantity of Qatar, Kuwait and Iranian crude oil processed during the subsequent 11 months amounted 1.81 million tons. The gross income from refining was Rs. 969.93 lakhs, while refinery operating expenses, including royalties, materials, etc., aggregated Rs. 205.39 lakhs.

During the year under review, a further call of Rs. 10 on each of the "A" and "B" ordinary partly-paid shares was made. The call was fully paid in cash, making the shares Rs. 60 paid-up. The authorised ordinary capital is Rs. 23 crores, of which Rs. 13.82 crores have been called and paid-up. There is a balance of over Rs. 2.92 crores on loan account, representing unsecured advances made by the shareholders towards cost of construction; this will be utilised towards meeting further calls. The originally planned additions to main plants are well in hand and scheduled to be completed during the latter half of 1956. The cost of construction of the refinery as on 31st December 1955 amounted to Rs. 22.62 crores and the full cost on completion of the current construction programme will be about Rs. 30 crores, excluding working capital.

LAKSHMI MILLS' BUMPER RESULTS

DIVIDEND MAINTAINED—OUTLOOK BRIGHT

THE striking feature of the results of the Lakshmi Mills Company Ltd. (Managing Agents: Messrs. G. Kuppuswamy Naidu & Co., Coimbatore) for the year ended 31st March 1956 is the spectacular advance staged by the gross profit, against the background of an all-round improvement in its activity. The gross profit, which amounted to Rs. 33.04 lakhs for 1951-52 and Rs. 53.54 lakhs for 1954-55, has shot up to Rs. 67.67 lakhs for the year under review, thus keeping up the upward trend for the fourth year in succession. It is noteworthy that the pace of expansion in profit has been greater than in 1954-55; as against an increase of 15.3 per cent. in 1954-55, the profit has gone up by as much as about 26.3 per cent. for the year under review. Besides, the gross profit for the year has exceeded the record (Rs. 56.22 lakhs) set in 1948-49 by no less than Rs. 11.45 lakhs, thereby setting a new record. The net profit, at Rs. 20.14 lakhs, though somewhat lower than the level attained in 1953-54, is, nevertheless, substantially higher than that for the previous year by Rs. 2.03 lakhs. This increase is, of course, modest as compared with that in gross profit, but such is due mainly to the larger provision for depreciation and taxation, as we shall show presently. The dividend, which was raised to 25 per cent. last year from a rate of 10 per cent. the year before, is being maintained for the year under review. For the third year in succession, a generous amount of Rs. 1 lakh has been set aside to charity for education and medical relief.

The following comparative table shows at a glance the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	272.22	252.31	225.90	175.57
Closing stocks	28.80	49.71	29.97	47.99
Cotton, stores, etc., consumed..	162.83	161.60	143.69	114.70
Expenses	42.80	40.87	37.09	28.18
Gross profit	67.67	53.54	47.75	34.01
Managing Agents' remuneration	8.27	7.03	6.12	4.36
Depreciation	20.36*	11.40	10.95	12.34
Taxation	19.00	17.00	8.87	7.25
Net profit	20.14	18.11	21.81	10.06
To reserves	..	3.26	10.00	4.65
,, donation	1.00	1.00	1.00	..
Dividend	13.36	13.36	10.69	5.35
	(25%)	(25%)	(20%)	(10%)
Carry forward	6.62	0.74	0.29	0.14

* Including Rs. 10.61 lakhs initial depreciation and development rebate.

The sale proceeds of the Company, as can be seen from the above table, have been increasing without a break since 1952-53, when they stood at the low level of Rs. 175.57 lakhs. While a part of the rise reflects the increase in cost of production, an expansion in turnover seems to account for the major part. This is evident from the fact that gross profit has almost doubled during the three-year period under review. The notable rise in profit during 1955-56 is chiefly the outcome of an increase in sale proceeds accompanied by a corresponding fall in closing stocks.

In appropriating the profit, the Directors have followed a judicious policy. They have sharply raised the provision for depreciation from Rs. 11.40 lakhs to Rs. 20.26 lakhs by providing for development rebate allowed in the last Budget, in addition to the usual and initial depreciation. Although the profit is large enough to pay a higher dividend, they have not done so; instead, they have merely maintained it. It is true that no provision has been made for reserves, but the undistributed surplus has been kept as high as Rs. 6.52 lakhs, against a mere Rs. 74,000 brought in. This surplus is twice as large as the addition, made to the reserves last year. The provision for taxation is raised from Rs. 17.00 lakhs in 1954-55 to Rs. 19.00 lakhs during the year under review, obviously to meet adequately the liability on that account.

The balance-sheet of the Company as on 31st March 1956 is a picture of financial soundness. The paid-up capital, which stands unchanged at Rs. 53.46 lakhs, is strongly supplemented by reserves and surplus aggregating Rs. 73.08 lakhs. The latter consists of an undistributed surplus of Rs. 6.52 lakhs, machinery replacement reserve at Rs. 24 lakhs, general reserve at Rs. 14 lakhs, deferred dividend reserve at Rs. 13.26 lakhs, cotton fluctuation reserve at Rs. 10 lakhs, and depreciation reserve Rs. 5.30 lakhs. The balance-sheet also reveals additions to the tune of Rs. 49.80 lakhs to the gross block which stands at Rs. 161.18 lakhs. This is well written down by Rs. 95.51 lakhs. The current assets, valued at Rs. 121.89 lakhs, are Rs. 60.89 lakhs higher than the current liabilities and provision for taxation. Of the current assets, the investments of the Company in Government securities and shares, etc., amount to only Rs. 7.16 lakhs, while cash and bank balances aggregate Rs. 41.42 lakhs. A synoptic view of the latest balance-sheet against the background of that five years before is presented in the following comparative table, so that readers may get an idea of the extent to which the Company's finances have been strengthened by the wise policy of its management:

	As on 31st March	
	1956	1951
LIABILITIES	Rs.	Rs.
Capital	53,46,150	53,46,150
Reserves and surplus	73,07,614	44,62,088
Provision for taxation	20,91,215	19,83,196
Current liabilities..	40,09,599	18,44,038
	Rs. 1,87,54,578	1,36,35,452
ASSETS		
Gross block	1,61,18,089	65,72,640
Less—Depreciation	95,51,436	32,60,958

The Directors report that, during the year 1955-56, there were 59,988 spindles and 201 looms working in Coimbatore and 25,920 spindles in their branch mills at Kovilpatti. A new 'B' Mill is being constructed at Kovilpatti and as many as 25,200 spindles are expected to be installed before the end of 1956. Even by about the middle of March the installation of 7,560 spindles had been completed. A further expansion is also envisaged by addition of 7,560 spindles at Kovilpatti and 13,824 spindles at Coimbatore.

The outlook for the textile industry as a whole is bright, in view of the steady expansion in the demand for cloth and yarn. The Company's management has been trying to profit by this favourable climate for the industry by modernising the mills and expanding their capacity. This forward-looking policy of the management will yield still better returns in the years ahead.

The Rs. 50 fully paid-up and Rs. 25 partly paid-up shares of the Company are currently quoted at Rs. 240 and Rs. 120, respectively, *cum-div.* (final div. 15 per cent.). On an *ex-div.* basis, the yield on these shares works out to about 5.3 per cent. per annum, free of income-tax.

CAWNPORE TEXTILES

The shareholders of the Cawnpore Textiles Ltd., (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur), have every reason to feel gratified that the shares of the Company have returned to the dividend list after a lapse of a year, with the Directors' decision to distribute 5 per cent. for the year ended 31st March 1956. It may, however, be noted that the latest dividend is only half of that paid for the year 1953-54, notwithstanding the fact that the profit for the year under review is substantially higher than that for 1953-54. This is explained by the fact that the profit for 1953-54 was supplemented by E.P.T. refunds and excess provision for taxation written back.

The gross profit for the year under review amounts to Rs. 10.80 lakhs, in refreshing contrast to the fractional loss of Rs. 0.09 lakh suffered in the previous year. What is more noteworthy is that this improvement in working results marks the reversal of the downward trend in the Company's earnings noted during the previous six years, that is, from a gross profit of Rs. 43.16 lakhs in 1948-49 to a loss of Rs. 0.09 lakh. The net profit, after making provision for Managing Agents' remuneration, depreciation and taxation, amounts to Rs. 5.33 lakhs, as against a loss of Rs. 2.93 lakhs for the previous year. While the loss for 1954-55 had been covered by writing back Rs. 1.46 lakhs being the adjustment for finished goods and goods in process not relating to the year and Rs. 1.50 lakhs being the provision for taxation no longer required, the profit for the year under review has enabled the Directors to set aside Rs. 3.50 lakhs for rehabilitation reserve, to utilise Rs. 26,000 for writing down investments and to declare a dividend of 5 per cent.

The profit for the year under review would have been higher still but for the difficult manufacturing and trading conditions experienced during the year. Referring to this, the Directors observe in their report:

"The unsettled attitude of labour has seriously affected working efficiency. Shortly before the end of the previous financial year, the entire mill was brought to a standstill, because of the refusal of a small number of workers to operate a revised working system, though at increased wages. Due to the general strike in all local textile mills, which started on 2nd May 1955, it was not possible to re-start the mills until the end of July 1955 when the strike was called off."

The Company's balance-sheet as on 31st March 1956 discloses a satisfactory financial position. The paid-up capital of Rs. 30 lakhs is supplemented by reserves and surplus aggregating Rs. 29.88 lakhs. The current liabilities amount to no more than Rs. 10.68 lakhs and provision for taxation stands at Rs. 1.27 lakhs. The gross block of the value of Rs. 61.78 lakhs has been substantially written down to Rs. 8.48 lakhs. The current assets aggregate Rs. 63.40 lakhs providing a substantial cover to the current liabilities and provision for taxation.

The Company's commitments for capital expenditure amount to about Rs. 12.63 lakhs; these are in respect of extensive capital development programme. The bulk of the expenditure is intended to be utilised for the construction and equipment of a new bleaching department to enable the Company to increase its saleable varieties of cloth.

The following comparative table presents the salient features of the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 31st March

Points From The Chair

Scope for Cement Industry

"THE cement industry must realise the great opportunities it has for expanding itself and increasing its service to the country. The cement production in the country during the year 1955 has been about 45 lakh tons. The present annual installed capacity, which may be put at about 50 lakh tons taking into account the units which have gone into production by the middle of the year 1956, will be increased by the end of 1956 to about 63 lakh tons. But the total production of cement during the year 1956 is expected to be near about or little more than 50 lakh tons. During the year 1957 the capacity of units expected to go into production would be about 4 to 5 lakh tons. By the end of 1957 the annual installed capacity of the cement industry in the country is expected to be about 67 to 68 lakh tons and the production of cement in 1957 is likely to be near about 62 to 63 lakh tons. The benefits of such increase cannot be reaped in full, unless the distribution has a high degree of rationalisation and the efficiency of the transport system is maintained at a high pitch."

J. DALMIA,
Dalmia Cement (Bharat) Ltd.

Self-sufficiency in Jute

"....the new crop now in the ground will have a total outturn somewhere in the region of 12 million bales, viz., India 5 million, Pakistan 7 million. With the carryover from the 1955-56 crop there will probably be a visible supply of about 14 million bales, and as this should prove more than sufficient for world requirements, some recession in minimum prices and export duties in Pakistan seems inevitable. It will be noted that the estimated crop in India is now given at 5 million bales, and this must be regarded as satisfactory taking into consideration that India was only producing about half this quantity at the time of partition. Nevertheless, India is still dependent on Pakistan to the extent of about 25 per cent. of her raw jute requirements. The Government of India is keenly aware of the Indian jute mills' necessities and are encouraging multiplication of jute seed to improve both yield and quality, which programme, when properly developed, should bring nearer to India that self-sufficiency in jute which is so essential to the welfare of the industry and prosperity of the country generally."

G. A. MASON,
Samnuggur Jute Factory Co., Ltd.

India a Country of Expanding Growth

"In India the Bank's two branches at Bombay and Calcutta, opened just over two years ago, have made satisfactory progress and are providing an important service to the country's overseas trade between India and the Middle East (or 'Western Asia' as the area is now called in India). Our activities embrace as well a wide field of general commerce from and to India and the Far East, Africa, America and Europe. We are operating in India within a well developed and highly competitive structure. The raising of the Bank of England rate, acting as a disincentive to the use of London funds, has resulted in increased demands by the banks for rupee funds and higher local borrowing rates for such funds. With no corresponding increase in lending rates, the already narrow margins obtainable have been further reduced. India today is a country of expanding growth and vital ambitions, and her leaders show no lack of energy or slackening of endeavour to maintain the inspiring work of development of the country's economy and improvement in the standard of living."

SIR DALLAS BERNARD,
British Bank of the Middle East.

COMPANY MEETINGS AND DIVIDENDS

UNITED PROVINCES SUGAR CO., LTD. Annual General Meeting, Calcutta, 31st July 1956. Dividend: Re. 1-8 per share. Transfer books remained closed from 18th to 31st July 1956, both days inclusive.

LAKSHMI MILLS CO., LTD. Annual General Meeting, Coimbatore, 3rd August 1956. Dividend: Rs. 7-8 per share (final) on shares of Rs. 50 each and Rs. 3-12 per share (final) on 'A' class shares of Rs. 25 each. Transfer books remain closed from 21st July to 3rd August 1956, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd August 1956. Dividend: Rs. 3-12 per share. Transfer books remain closed from 19th July to 3rd August 1956, both days inclusive.

KARANPURA DEVELOPMENT CO., LTD. Half-yearly General Meeting, Calcutta, 4th August 1956. Dividend: Re. 1 per ordinary share. Transfer books remain closed from 21st July to 4th August 1956, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 4th August 1956. Dividend: As. 4 per share. Transfer books remain closed from 18th July to 4th August 1956, both days inclusive.

HYDERABAD CONSTRUCTION CO., LTD. Annual General Meeting, Hyderabad-Deccan, 4th August 1956. Dividend: O. S. Rs. 6 per share, on shares of Rs. 100 and O. S. Rs. 4-8 per share, on shares of Rs. 75. Transfer books remain closed from 23rd July to 4th August 1956, both days inclusive.

NEW MANBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 7th August 1956. Dividend: *Nil*. Transfer books will remain closed from 31st July to 7th August 1956, both days inclusive.

BURMAH-SHELL REFINERIES LTD. Annual General Meeting, Trombay, Bombay, 9th August 1956.

JOST'S ENGINEERING CO., LTD. Annual General Meeting, Bombay, 13th August 1956. Transfer books will remain closed from 1st to 13th August 1956, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. (And Reduced). Annual General Meeting, Alleppey, 13th August 1956. Dividend: Rs. 2 per ordinary share. Transfer books will remain closed from 7th to 13th August 1956, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 14th August 1956. Dividend: Rs. 7 per share (final), payable on 16th August 1956. Transfer books remain closed from 24th July to 14th August 1956, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 14th August 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 18th July to 10th August 1956, both days inclusive.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Annual General Meeting, Bangalore City, 16th August 1956. Dividend: Re. 1 per share (includes bonus of As. 4 per share). Transfer books will remain closed from 3rd to 16th August 1956, both days inclusive.

SAUGOR ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 16th August 1956. Dividend: As. 4 per share. Transfer books will remain closed from 10th to 16th August 1956, both days inclusive.

BAREILLY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 16th August 1956. Transfer books will remain closed from 10th to 16th August 1956, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 20th August 1956. Dividend: Rs. 10 per share (final). Transfer books will remain closed from 6th to 20th August 1956, both days inclusive.

UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 20th August 1956. Transfer books will remain closed from 14th to 20th August 1956, both days inclusive.

AMAR DYE-CHEM. LTD. Annual General Meeting, Bombay, 20th August 1956. Transfer books will remain closed from 1st to 21st August 1956, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Final dividend 5½ per cent. on ordinary shares (making in all 9 per cent.) for the year ended 31st March 1956. Transfer books will remain closed from 7th to 31st August 1956, both days inclusive.

COORG TEA CO., LTD. Final dividend of Re. 1 per ordinary share for the year ended 31st March 1956. Transfer books will remain closed from 15th August to 1st September 1956, both days inclusive.

ANANDAM RUBBER CO., LTD. Dividend of Rs. 2-8 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 1st to 8th August 1956, both days inclusive.

KASTHURI MILLS LTD. Dividend of Re. 1-14 per ordinary share, for the year ended 31st March 1956. Transfer books will remain closed from 17th August to 14th September 1956, both days inclusive.

KARANPURA DEVELOPMENT RESUMES DIVIDEND AFTER FIVE YEARS

RESULTS OF U.P. SUGAR BETTER

Karanpura Development Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

In conformity with the provisions of the Companies Act, 1956, there will be no half-yearly accounts in future. From now on therefore the Company's accounts will be closed and audited as at the 31st December each year and the first annual closing will be for the 12-month period ending 31st December 1956.

Litigation.—The directors are able to announce the successful outcome of the protracted litigation with the Raja of Ramgarh over the Company's title in the Karanpura Coalfield. This title was originally negotiated by Bird & Company in 1913 with the Court of Wards shortly after the death of the present Raja's grandfather, the title and all its rights and obligations being subsequently taken over by the Company on its floatation in 1921. The Raja's father died in 1919, within a few days of coming of age, so that the Estate remained continuously under the management of the Court of Wards from 1913 until 1937. Almost immediately on attaining his majority in August 1937, the present Raja, Kamakshya Narain Singh, challenged the validity of the Company's concessions, and as a result title-suits and counter-suits were filed, the Raja claiming *inter alia* possession of the entire coalfield and nearly Rs. 2 crores by way of damages. These suits were filed in 1940, in the Court of the Additional Subordinate Judge of Hazaribagh, who in 1943, decided substantially in the Company's favour. The Raja then appealed to the Patna High Court which in 1949 reversed the verdict of the Hazaribagh Court and declared the Company's title invalid. An appeal was thereupon preferred to the Supreme Court of India, which after a hearing lasting for three weeks has now, in March 1956, decided in the Company's favour. The matter was further complicated by the abolition of the Raja's own rights through the Bihar Land Reforms Act of 1950, and it was therefore also necessary to secure the confirmation of the Company's title by the State Government of Bihar.

In view of the importance of this litigation to the Company, challenging as it did the Company's whole existence, it was thought desirable to obtain the highest available legal talent, and the Company was fortunate to have been represented at the Supreme Court hearing by the Attorney-General of India and other distinguished senior Counsel. Litigation of such a protracted and costly nature, however, which is unfortunately all too common a feature of the Indian legal system, has been a disastrous drain on the Company's resources, and the total expenditure on law charges over the years amounts to no less than a third of the paid-up capital of the Company. A victory as been won, but it has been a very costly one.

Shareholders will naturally wish to have an indication of the future prospects of the Company, and here the directors are prepared to say without hesitation that with the country's economic expansion, an outstanding feature of which is the large planned increase in coal production, they *ought* to be bright. Unfortunately, the increasing interference of the Government of India with private enterprise dominates the scene today; the aspects of Government policy which principally affect this Company are the abolition of salami, the fixation of rates of royalty the dislike of intermediaries, and the reservation to Government of a very large portion of new development in the mineral field. With all of this hanging over, the future can, at best, be described as uncertain.

Raisings and despatches.—During the period 420,481 (394,142) tons of coal were raised and 408,966 (395,633) tons were despatched from the undernoted properties:

Subsidiary Company.—According to the managing agents, the future prospects of Scott and Saxby (Private) Ltd. are good.

The profit and loss account after providing Rs. 573 (Rs. 5,718) for taxation, Rs. 5,354 (Rs. 11,648) for depreciation, transferring Rs. 3,00,000 (*nil*) from general reserve and including the debit balance of Rs. 30,704 (credit of Rs. 26,088) brought forward from last half-year shows an available balance of Rs. 3,17,839 (credit of Rs. 16,731) which the directors propose to dispose of as follows:—

In paying a dividend on the founders' shares at the rate of Rs. 3 (*nil*) per share without any deduction for income-tax paid by the Company Rs. 1,50 000 (*nil*), in paying a dividend on the ordinary shares at the rate of Re. 1 (*nil*) per share without any deduction for income-tax paid by the Company Rs. 1,50,000 (*nil*) and in carrying forward Rs. 17,839 (Rs. 16,371).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	31,59,936
Reserves ...	24,32,396	Limestone & fireclay

Liabilities ...	29,51,066	Stores ...	73,804
Profit and loss		Other assets	12,000
account ...	17,839	Debts, deposits and advances ...	20,51,738
		Investments	25,41,146
		Cash ...	20,168
Rs.	78,64,781	Rs.	78,64,781

United Provinces Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta), submit the audited accounts of the Company for the year ended 30th September 1955.

The profit on sugar account amounts to Rs. 4,24,423 (Rs. 4,22,423), the profit on estates account Rs. 55,659 (loss Rs. 5,369), and the profit on sale of motor vehicles and furniture Rs. 2,212 (Rs. 6,826) making a total profit for the year of Rs. 4,82,294 (Rs. 4,23,880). From this has been deducted net provision for Central and State taxation Rs. 2,56,033 (Rs. 1,90,000) and cost of acquiring Bhumidari rights Rs. 4,758 (*nil*) leaving a balance of Rs. 2,21,502 (Rs. 2,33 880) to which falls to be added the credit balance brought forward from last year Rs. 39,061 (Rs. 5,181) leaving a balance available for distribution of Rs. 2,60 564 (Rs. 2,39,061). This amount the directors recommend should be dealt with as follows:—

Payment of a dividend of 15 (12½) per cent., for the year to 30th September, 1955 Rs. 2,40,000 (Rs. 2,00 000) and leaving a balance to be carried forward to credit of profit and loss account of Rs. 20,564 (Rs. 39,061).

The balance-sheet and the profit and loss accounts have been recast in conformity with the requirements of Schedule VI of the Companies Act, 1956; this necessarily involves a break with the forms adopted previously.

The depreciation charge at the usual rates absorbed Rs. 75,207 (Rs. 71,194). In accordance with the practice adopted hitherto, the expenditure on furniture and wiring amounting to Rs. 3,559 has been written off together with the sum of Rs. 4,758 spent on the acquisition of "Bhumidari" rights under the U.P. Zamindary Abolition and Land Reforms Act, 1950.

The acquisition and compensation proceedings under the above Act have still to be finalised by the Government of Uttar Pradesh; meantime, since the close of the year under review, a sum of Rs. 52,821 has been received as compensation for which no credit has been taken in the accounts except to the extent of Rs. 17,745. Full provision has been made in the accounts for Central and State taxation.

The crushing season opened on 22nd November, 1954 and finished on 4th April, 1955 with a total crush of 24,84,000 (18,96,330) maunds of cane and recovery of 10.16 (10.05) per cent. Of the cane crushed, 3,13 467 maunds were supplied from lands cultivated by the Company.

The sugar production in the country during the year was in the region of 16 lakh tons which added to the 6 lakh tons imported by the Government amounted to 22 lakh tons as against an estimated annual consumption of 16 lakh tons; there was accordingly a continuous fall in prices. Despite the decline in the prices of sugar and the increase in the excise duty by Re. 1-6 per maund as from 1st March 1955, the profit for the year was maintained at very nearly the same figure as in the last year as a result of the larger crush and a slightly improved recovery rate.

The cane price continued at the rate of Re. 1-7 per maund at the factory gate and Re. 1-5 per maund at outstations. Cane cess and cane co-operative societies' commission remained at 3 annas and 9 pies per maund respectively.

Company's Estates.—The profit resulting from the Company's farming operations was mainly attributable to the improved cane yields. There was no major item of capital expenditure during the year.

Season 1955-56 Prospects.—Although this season's crush at 24,24,797 maunds and recovery at 10.17 per cent. are considered to be satisfactory, the results for the current year will depend largely on the prices to be realised on sugar which will be affected by the large carryover and the anticipated total production of 18 lakh tons this year. If the present price is maintained, the results should be satisfactory. A satisfactory profit from the Company's farming operations is expected.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Investment and Finance Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August 1955.

Including the sum of Rs. 9,201 (Rs. 8,837) brought forward from the previous half-year and after providing Rs. 20,000 (*nil*) for taxation and transferring Rs. 25,000 (Rs. 15,000) to general reserve and Rs. 25,000 (Rs. 5,000) to revaluation investments reserve, the profit and loss account shows a credit balance of Rs. 36,065 (Rs. 27,717). It is proposed to dispose of this available balance as follows:—

In paying a dividend on the 1st cumulative preference shares at the rate of 5 per cent per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000), in paying a dividend on the 2nd cumulative preference shares at the rate of 6 per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425), in paying a dividend on the ordinary shares at the rate of 7½ (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 18,750 (Rs. 12,500) and in carrying forward Rs. 7,890 (Rs. 5,792).

Market.—Throughout the period under review prices fluctuated within narrow limits but with a slight tendency to fall, the result being a slight reduction at the end of the half-year in the total market value of the Company's portfolio.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Investments	11,53,432
Reserves ...	2,35,590	Debts and advances ...	12,479
Provision for taxation ...	34,111	Cash ...	86,954
Liabilities ...	75,274		
Profit and loss account ...	7,890		
Rs.	12,52 865	Rs.	12,52,865

Mysore Stoneware Pipes and Potteries Ltd.

The directors of the above Company (Managing Agents: The Mysore Industrial Development Co., Bangalore City) submit the audited accounts of the Company for the year ended 31st March 1956.

The surplus available for the year after providing Rs. 51,373 (Rs. 42,354) for depreciation and Rs. 83,000 (Rs. 61,340) for income-tax, super-tax and surcharge is Rs. 89,555 (Rs. 72,597). With the carry over of Rs. 1,060 (Rs. 603) from last year, the total sum available for distribution is Rs. 90,615 (Rs. 73,560). The directors recommend the following appropriation:—

To declare a dividend of 7½ (7½) per cent. plus a bonus of 2½ (*nil*) per cent. free of income-tax on 60 000 shares of Rs. 10 each, absorbing Rs. 60,000 (Rs. 45,000), to transfer to general reserve Rs. 20,000 (Rs. 17,500), to transfer to dividend equalisation fund Rs. 10,000 (Rs. 10,000) and to carry over to the next year Rs. 615 (Rs. 1,060).

With the addition proposed above, the general reserves will amount to Rs. 2,70,000 (Rs. 2,50,000). The provision made till now towards depreciation fund on fixed assets is Rs. 5,43,877 (Rs. 5,07,504). The sum available in the dividend equalisation fund, after the above addition is Rs. 20,000.

Both production and sales were better this year than during the previous year. In spite of higher costs of services and stores, better profits have been earned as a result of increased production and efficiency. The demand from both in and outside the State for the Company's products is good.

The Factory is now supplying increased quantity of quality firebricks to the Government of India and is now a recognised supplier to the Railways in the south.

Accounts in brief are as under:—

Attock Oil Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Steel Brothers & Co., Ltd., London) submitted the audited accounts of the Company for the year ended 31st December 1955.

Group profit for the year attributable to members of the Company after writing off all expenditure on well boring has amounted to £1,140,344 (£1,523,450). There has been set aside for depreciation of fields and refinery plant, motor vehicles and chattels £161,148 (£163,201). Pakistan and United Kingdom taxation on the year's accounts amounted to £537,305 (£726,855 only Pakistan taxation.) Exchange difference arising in 1955 in excess of reserves as at 31st December 1954, has been deducted costing £28,753 (*nil*), there remained an available balance of £413,138 (£633,394). The directors paid an interim dividend on 2nd March 1956 (free of United Kingdom income-tax) of 7d. per £1 unit of stock which absorbed £52 500 (£49,500) and a final dividend on 25th July 1956, to members on the registers as at 9th July 1956 (free of United Kingdom income-tax) of 2s. 4d. per £1 unit of stock £210,000 (£207,000). After adding the unappropriated profits brought forward from 1954 of £64,795 (£237,901), there is a balance of £215,433 (£614,795). From this the directors have transferred to general reserve £150 000 (£550,000) leaving a balance at credit of profit and loss account to be carried forward to 1956 of £65,433 (£64,795).

Trading profit of the Company for the year amounted to £1,180,959 which compares with £1 553,854 for 1954. Profits arising in Pakistan in 1955 have been converted at exchange 1s. 5-31/32d. the rate ruling at the end of the year whereas in 1954 the rate taken was 2s. 1-27/32d.

The Subsidiary Company—Pakistan Oilfields Limited.—Incurred a loss in 1955 of £16,190 (made up of rents and licence fees, establishment charges, general expenses, directors' fees and managing agents' office allowance) and the portion attributable to the parent company (£11,301) has been provided for in the accounts. The reduction in the figure of investment in subsidiary company in 1955 as compared with the figure for the previous year is occasioned by the above loss written off the investment coupled with an exchange loss of £8,654 arising from the conversion of Pakistan Oilfields Limited's rupee balance sheet at the rate ruling at end 1955.

Depreciation and taxation.—The directors consider that the amount set aside for depreciation and the provision made for taxation are adequate.

Accounts in brief were as under:—

Liabilities	£	Assets	£

Upper Ganges Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

In the last report it was mentioned that due to the relaxation of Government restrictions on the connection of new services, 530 additional consumers had been connected during the six months covered by the report, and it is pleasing to be able to state that a further 1,449 consumers have since been connected to the mains.

The connection of additional services herein referred to has brought about an increase in revenue of over Rs. 90,000 however, working expenses have increased by approximately Rs. 40,000, nevertheless, the working results show a satisfactory improvement as will be seen from the following:—

Half-year Ended	*Units Sold*	*Revenue* Rs.
30th June 1953	3,491,623	5,63,794
31st December 1953 ...	3,539,501	6,03,387
30th June 1954	3,555,244	5,87,679
31st December 1954 ...	3,861,862	6,14,170
30th June 1955	3,923,868	6,28,668
31st December 1955 ...	4,214,945	7,05,546

After providing for all charges and placing Rs. 4,175 (Rs. 3,325) to statutory contingencies reserve Rs. 4,843 (*nil*), to tariffs and dividends control reserve and Rs. 27,500 (*nil*) to general reserve, there remains a balance of Rs. 38,022 (Rs. 35,233) including Rs. 8,329 (Rs. 6,123) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (8½) per cent. per annum free of income-tax for the half-year Rs. 29,925 (Rs. 26,184) and carrying forward to next half-year Rs. 8,097 (Rs. 9,049).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Bareilly Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

An additional 1,250 k.w. turbo alternator was commissioned on the 26th May 1956. To cater for future load developments, negotiations are proceeding with the Uttar Pradesh Government to take a bulk supply from its Hydel Department. Normal progress has been maintained as will be seen from the following schedule:—

Half-year Ended	*Units Sold*	*Revenue* Rs.
30th June 1953	3,910,519	7,41,773
31st December 1953 ...	3,682,856	7,36,411
30th June 1954	4,252,655	7,75,596
31st December 1954 ...	4,119,991	7,79,404
30th June 1955	4,885,872	8,92,718
31st December 1955 ...	4,617,914	8,82,280

After providing for all charges, and placing Rs. 10,635 (Rs. 10,117) to statutory contingencies reserve, Rs. 17,166 (Rs. 17,166) to reserve for redemption of debentures, Rs. 72,596 (*nil*) to tariffs and dividends control reserve and Rs. 40,000 to general reserve, there remains a balance of Rs. 59,748 (Rs. 58,718) including Rs. 20,090 (Rs. 17,119) brought forward from the previous half-year, available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 40,000 (Rs. 40,000) and carrying forward to next half-year Rs. 19,748 (Rs. 18,718).

Accounts in Brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	26,02,628

		Cash ...	5,46,713
Rs.	40,02,416	Rs.	40,02,416

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September, 1955.

The revenue account shows a profit of Rs. 29,820 (loss of Rs. 1,602) as a result of the half-year's working, and after debiting and crediting sundry items, there is a gross loss for the half-year of Rs. 25,330 (Rs. 52,592). After adjusting this and other sundry items in respect of the previous half-years amounting to Rs. 18,863 against the balance brought forward from the previous half-year, the profit and loss account shows a debit balance of Rs. 7,767. This amount has been adjusted against Rs. 10,000 an amount transferred from general reserve, leaving a net credit balance of Rs. 2,233 (Rs. 2,485 after adjustments) on profit and loss account to be carried forward.

Raisings and despatches:—The raisings for the half-year under review amounted to 57,768 tons, despatches being 51,847 tons. This compares with 70,480 tons and 57,522 tons respectively for the previous half-year and with 62,220 tons and 61,393 tons respectively for the corresponding half-year in 1954.

Prospects:—Reorganisation of the Colliery through introduction of a stowing scheme is now under consideration. The directors are pleased to report that the Coal Board has agreed to provide the Company with certain items of plant and machinery for stowing valued at Rs. 2,50,000, on what amounts to hire purchase terms. The draft of the agreement to be executed, is now being examined by the Company's Solicitors.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	11,47,019
Reserves ...	75,000	Stock of coal	54,901
Liabilities ...	11,71,257	Stores ...	1,88,270
Profit and loss account ...	2,233	Other assets	76,046
		Debts, deposits and advances ...	3,41,807
		Investments	36,936
		Cash ...	3,511
Rs.	18,48,490	Rs.	18,48,490

Anandam Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: A. V. George & Co. Ltd., Kottayam) submit the audited accounts of the company for the year ended 31st December 1955.

Estates.—Both Pookulam and Kannambra Estates are reported to be in good condition.

Crop and Prices—Tea.—Tea crop harvested during the year was 2,34,003 (2,05,610) lbs. at an estate cost of 112.17 (108.03) cents per pound against an estimate of 2,10,000 lbs. at 129.14 cents per pound. The crop estimated for 1956 is 2,30,000 lbs. at 126.29 cents per pound. The tea was sold at an average price of 172.92 (262.5) cents Re. 1-11-8 (Rs. 2-10) per lb. *Rubber:* The rubber secured during the year was 1,20,724 (1,16,420) lbs. at 61 (57.34) cents per pound. The crop estimated for 1956 is 1,35,000 lbs. at 82.37 cents per pound. The average price realised for rubber is 143.1 (125.75) cents per pound. The controlled price of rubber was increased by Rs. 12 in February 1955 and Rs. 5-12 in September 1955, the latter to compensate for the increase in excise duty introduced from August 1955.

The net profit after providing for managing agents' commission, depreciation, taxes, etc., Rs. 1,00,817 (Rs. 1,64,341) to this has to be added the balance from last year Rs. 34,979 (Rs. 30,637) making a total of Rs. 1,35,795 (Rs. 1,94,979). After deducting preference dividend for 1955 paid in February 1956 Rs. 17,500 (Rs. 17,500) there is a balance of Rs. 1,18,295 (Rs. 1,77,479). The directors now recommend to pay 25 (25) per cent. dividend on the ordinary shares absorbing Rs. 62,500 (Rs. 62,500) and transfer to reserve for capital expenditure Rs. 20,000 (Rs. 80,000) leaving a balance of Rs. 35,795 (Rs. 34,979) which is proposed to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	9,78,678
Debentures ...	78,800	Stock-in-trade ...	67,546
Reserves ...	4,70,000	Stores and spare parts	16,134
Provision for taxation ...	87,796	Other assets	2,075
Liabilities ...	72,465	Deposits and advances ...	12,307
Profit and loss account ...	1,35,795	Investments ...	81,238
		Cash	1,86,878
Rs.	13,44,856	Rs.	13,44,836

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notice

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

METTUR DAM R.S.

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the Members of the above Company will be held at the Registered office of the Company at Mettur Dam R.S., on Monday, 3rd September 1956, at 4 p.m., for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited Balance Sheet as at 31st March 1956.
2. To declare a Dividend.

   (The Board of Directors have recommended payment of a final dividend of 3 per cent. tax-free on Preference Shares and 4⅜ per cent. tax-free on Ordinary Shares bringing the total for the year to 6 per cent. tax-free and 7½ per cent. tax-free respectively.)
3. To elect Directors in place of those who retire in rotation and/or otherwise.
4. To appoint Auditors for the year 1956-57 and fix their remuneration.
5. To pass special and ordinary resolutions as per notice annexed to the Balance Sheet.

By Order of the Board,
SESHASAYEE BROTHERS PRIVATE LTD.,
Managing Agents.

METTUR DAM R.S.,
DATED 18*th July* 1956.

Note: (1) The Register of Members and the Share Transfer Books of the Company will remain closed from 20th August to 3rd September 1956 both days inclusive.

(2) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

SUN-POWERED RADIO

The world's first commercial sun-powered radio receiving set has been put on the market in the United States. Its makers are the Admiral Corporation, a leading radio and television set manufacturer. The radio is a sleek, tubeless portable model, which can be powered by the sun, by batteries, or even by a small electric light bulb. Electricity from the sun is obtained by the use of a "Sun Power Pak." The Pak plugs into the back of the radio cabinet and converts the sun's rays into electrical energy. The principal element in the sunshine-harnessing device is pure silicon. It contains 32 cells, or thin wafers, made of this material. In this respect, it resembles the sun-powered battery which was produced in 1954 by the Bell Telephone Company. The new solar radio contains six transistors in place of vacuum tubes. Transistors are tiny devices, about the size of a pea, which perform many of the functions of a vacuum tube, such as amplifying sounds. They are much smaller than vacuum tubes, however, and require much less electricity to operate. It is claimed that there is nothing to wear out since the new radio has no moving parts.

GRAND AUCTION SALE

Under instructions from the Director of Supplies and Disposals, Bombay. On 31-7-1956 at 10-30 A.M. at Holding Depot, Haji Bunder, Bombay—Bridges Reamers, Counter Sinks etc., etc.

QUESTION HOUR IN PARLIAMENT

Foreign Aid

THREE countries—the U.S.A., the U.K. and the U.S.S.R.—have offered to advance loans and export credits to India to finance the second Five-year Plan. A loan of about Rs. 40 crores has been authorised by the U.S.A. to be utilised for the purchase of commodities and equipment for development purposes. Out of this, a sum of about Rs. 38 crores is still to be drawn. The loan is repayable over a period of 40 years in half-yearly instalments. The rate of interest will be 4 per cent. per annum, if repaid in rupees, and 3 per cent., if repaid in dollars. The United Kingdom has offered to advance Rs. 20 crores for the setting up of the Durgapur steel plant and an export credit to the extent of Rs. 15 crores for the same purpose. The U.S.S.R. has promised an export credit of about Rs. 63 crores for the setting up of the Bhilai steel plant. In addition to the above, as in previous years, considerable amounts have been offered by the U.S.A. and some Commonwealth countries as grants. The International Bank for Reconstruction and Development has also authorised loans for certain projects under the first Five-year Plan (the Damodar Valley Corporation, the Indian Iron and Steel Company, the Trombay Hydro-electric Works and the Industrial Credit and Investment Corporation of India). The balance of these loans left over for utilisation during the Plan is about Rs. 26 crores. The Bank has also agreed to authorise a further loan of about Rs. 36 crores for the Tata Iron and Steel Company's expansion scheme. We accept loans from friendly countries when no political strings are attached to them. There is no distinction between one country and another.

—*B. R. Bhagat*

Cement Imports

Till the end of June this year, a total of 13,300 tons of cement had been imported from Rumania, West Pakistan and East Pakistan. Negotiations are now going on for the import of about 190,000 tons of cement from the U.S.S.R., Rumania, Yugoslavia, Poland and Japan. The estimated demand for cement is of the order of 10 million tons every year. The indigenous capacity of production is expected to rise from 5.3 million tons to 6 million tons per year by the end of March next year. It is anticipated that the country will be able to import some 800,000 to 800,000 tons of cement. Therefore, it will not be possible to satisfy all the demands for cement. India's efforts to buy cement which Burma has received from the U.S.S.R. have failed.

* * * *

Illegal Futures Trading

The Forward Markets Commission will soon set up an Inspectorate to detect illegal futures trading in various parts of the country and to assist State Governments in taking action against defaulters. Action has been initiated against over 100 people for carrying on unlawful forward trading. It is, however, not in public interest to disclose the names of the markets in respect of which allegations are now under investigation. In order to discourage the tendency to resort to illegal practices, the number of recognised markets for different commodities has been suitably increased to provide adequate facilities for forward trading.

* * * *

Tea Consumption

The consumption of tea in India increased from 175 million lbs. in 1952-53 to 183 million lbs. in 1954-55. The area under tea cultivation during the period expanded from 787,378 acres to 789,471 acres.

—*T. T. Krishnamachari*

Metric System

The Union Government has not yet decided on the date for the introduction of the metric system of weights and measures in the country. Proposals in this connection will be placed before Parliament during the current session.

—*Nityanand Kanungo*

Oil Refinery in Public Sector

A decision on the proposal to set up an oil refinery in the public sector will be taken up shortly. Questions as to when and where it will be located and the extent to which private enterprise will be allowed to participate in the venture are all under the Government's consideration at present. Senior technicians of the Standard-Vacuum Oil Company will soon be in India to give lectures to geophysicist apprentices. The 77 apprentices whom the Government proposed to train will suffice to meet the requirements in the first phase of the Plan. The Assam Oil Company has envisaged the possibility of the Naherkatiya oil wells in Assam yielding one million tons of oil per year for the next 20 years. Out of nearly 1,000 wells drilled in the Digboi area and 13 in Naherkatiya area, 580 in Digboi and nine in Naherkatiya are at present producing crude oil.

—*K. D. Malaviya*

Profits of Oil Refineries

There is no intention to place any restriction on the profits made by the oil refineries in Bombay. But the question of price fixation for motor spirit requires Government's approval. The profits made by the refineries will be taken into consideration while fixing the prices. Whatever contractual obligations have been entered into by the Government with the refineries will remain. There is no finality with regard to prices and the situation is always under review from time to time. Wherever it is found that the situation requires intervention by the Government, the Government will not hesitate to intervene. As transport is very important, it is the Government's policy to ensure that supplies of oil are made available in all parts of the country at prices which are not excessive.

—*Sardar Swaran Singh*

Flood Control

The latest position in regard to the scheme submitted by the West Bengal Government on flood control and the development of Sunderbans and 24 Parganas is that provision cannot be made for the scheme under flood control allocation. The Government of West Bengal has been told that it may provide for the scheme partly through readjustment of the Plan under the ceiling that has been sanctioned and partly through assistance from the Union Government under the heads of rehabilitation and reclamation.

—*G. L. Nanda*

Indus Water Dispute

India has not actually agreed to the World Bank's latest plan to settle the Indus waters dispute between India and Pakistan, but has suggested in its reply to the Bank's *aide memoire* that, if any co-operative work is to proceed, it should proceed on the basis of the proposals made in 1954. The features of the new scheme outlined in the *aide memoire* of the Bank can be disclosed only by agreement amongst all parties concerned.

* * * *

Electric Supply

There was a 12.5 per cent. increase in the generation of electricity in India during 1955 as compared with that of 1954. About 9.577 million kw.h. of electricity were produced during 1954.

* * * *

Flood Control

The details of the flood protection measures in North Bihar are: As regards Kosi, 114.5 miles of embankments, out of which 20 miles are in partial section about the high flood level, were constructed during the last two working seasons. Of these, 54.5 miles were taken up in the 1954-55 working season and 60 miles in the 1955-56 working season. In other places of North Bihar, about 440 miles of embankments were constructed during the last two working seasons. Of these, about 235 miles were completed in the 1954-55 working season and about 205 miles in the 1955-56 working season. Except for minor damages to the small bunds constructed along the Bagmati near Sugia Pardesoa, the embankments constructed so far are withstanding this year's floods well. The embankments constructed along the Kosi have afforded protection against floods to about 1 million acres of land and the other embankments to an area of about six lakh acres in North Bihar.

—*Jaisukhlal Hathi*

Western Shipping Corporation

The Western Shipping Corporation, which will begin its operations from 1st October 1956, will function along the India-Persian Gulf, India-Red Sea, India-Poland and India-Russia routes. If there are any Conference lines already operating along these routes, the Corporation will become a member of such line.

* * * *

Steamer Fares

A 10 per cent. increase in the existing steamer passenger fares along the Konkan Coast has been recommended by a Government-appointed Board.

* * * *

India-Tibet Link Road

It will take about five years to complete the India-Tibet link road in all respects up to Chini and another five years up to the Tibet border. Each section of the road is being opened to vehicular traffic as soon as it is able to take traffic. So far, the road has been opened to vehicular traffic up to Rampur. A sum of Rs. 71.26 lakhs had been spent on the project till the end of February this year.

—*O. V. Alagesan*

Food Imports

The Government purchased from the internal market 123,500 tons of foodgrains in 1955 at a cost of Rs. 2,985 crores and, in 1956, 22,100 tons valued at Rs. 1,051 crores. Imports of foodgrains aggregated 378,700 tons, valued at Rs. 15,641 crores, besides 15,000 tons of wheat taken on loan from Pakistan. At the beginning of July, the Central godowns in various States had 248,700 tons of rice and 54,000 tons of wheat. There was also a total stock of 115,300 tons of foodgrains with the different State Governments.

* * * *

Damage by Kosi

About 250,000 acres of culturable and unculturable land were flooded by the Kosi River last month. A population of about 300,000 was affected by the floods.

—*A. P. Jain*

Aerodrome Near Hubli

The site for an aerodrome near Hubli has been selected and the work of construction will start after the necessary land is acquired. The site is midway between Hubli and Dharwar. The aerodrome, estimated to cost Rs. 18 lakhs, is expected to be completed in 18 months.

—*Jagjivan Ram*

Bhavnagar Refinery

After examining a proposal for a refinery at Bhavnagar, the Government has come to the conclusion that it should not be pursued at present.

* * * *

Small Collieries

A report of the committee enquiring into the question of amalgamation of small collieries is expected to be ready by the end of next month. The report was to have been submitted last month. But, since many of its sub-committees studying special aspects of the problem have not concluded their work, the time for the submission of the report by the main committee has been extended.

—*K. C. Reddy*

Burmah-Shell Refinery

While there is no Indian participation in the ordinary share capital of the Burmah-Shell Oil Refinery, debentures of the value of Rs. 8 crores have been issued in India and preference shares of the value of Rs. 2 crores are about to be issued.

COTTON

(*Concluded from page* 166)

originally for the central districts of E. Punjab, where it displaced *deshi* cotton, and is now spreading to Ferozpore district, where it is displacing L.S.S. H.14 is a better strain approved for distribution in the Hariana tract.

Although after the partition particular emphasis was laid on the improvement of American cotton, the *deshi* styles were not neglected. The improved *deshi* strains now being grown are Mollisoni 39 and Mollisoni 60A2. Though they are good yielders and possess high ginning percentage, they are short-stapled and are capable of spinning only 6-8 counts. A new improved strain, namely, 231 Rosea, has been evolved and it is proposed to cultivate it in areas where American cotton cannot be profitably grown.

It is clear from the above account that much progress has been made in evolving improved strains of American cotton. The evolution of 216F and 320F has disproved the prevailing notion that American cotton is unsuitable for cultivation over the major part of the Punjab. Today, both these strains together account for 60 per cent. of the total acreage under cotton in the State. Efforts are also directed towards development work like distribution of manure, propaganda for the adoption of improved methods of cultivation and pest control. As a result of these combined efforts, the Punjab has emerged from the position of being a predominantly *deshi* cotton area to be a region growing largely American cotton, as is shown by the table below:

E. Punjab—Area and Output of Cotton

Year	Area (in thousand acres)		American cotton in percentage to total	Production (in thousand bales)		American cotton in percentage to total
	Total (acres)	American cotton (acres)		Total (bales)	American cotton (bales)	
1948-49 ..	238	44	14.3	78	17	21.8
1949-50 ..	321	88	24.3	155	50	32.3
1950-51 ..	440	153	34.8	191	82	42.0
1951-52 ..	504	208	41.3	226	103	45.8
1952-53 ..	509	266	52.3	278	163	58.6
1953-54 ..	588	373	63.4	365	252	69.0
1954-55 ..	759	575	75.8	440	350	79.5

It may be noted that the area and production of cotton in 1954-55 were respectively 3.2 and 5.6 times those of 1948. The increase in area and production of American cotton is even more marked, being respectively 13.1 and 20.6 times those of 1948. This is clear proof of the remarkable progress made in improving the cotton position in the State. But it has much leeway to make up, in order to regain its former pre-eminent position in the country's cotton economy. In 1954-55, it occupied the seventh position in respect of acreage and the third position in respect of production. But it has the distinction of producing the highest yield per unit area, namely, 243.3 lbs. of lint per acre, as against the all-India average of 90.5 lbs. Thus, the Punjab occupies at present a position of no mean importance in the cotton economy of the country.

What is more, the future seems to hold out more fruitful promise. It is estimated that the Bhakra dam project will provide, on completion, irrigation facilities to 4.2 million acres in the Punjab. Out of this, about 600,000 to 700,000 acres are likely to come under cotton. It is envisaged that, within the next ten years, the Punjab will be able to produce over a million bales of cotton, thus becoming a leading cotton-growing region in India. Under the various schemes of the Indian Central Cotton Committee, cotton-breeding work is believed to be progressing satisfactorily and there is every likelihood that strains better than the existing ones will be evolved.

MONEY RATES UNCHANGED

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

The short-term money market was a little active during the week under review and the turnover was slightly larger, despite the heavy withdrawals for subscription to the Government of India loans in the previous week. This was due to a sizable influx of funds from mofussil centres, but all available supplies were quickly absorbed. There was, therefore, no notable change in interest rates.

Inter-bank call money was done at 3 to 3½ per cent., much of the business having been put through at the higher rate. House money at call was bid at 3½ per cent. Short-term deposits were placed at 3½ per cent. for one to three months and 3¼ to 3⅜ per cent. for four to six months.

A shrinkage of Rs. 14.58 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 20th July 1956. With this decline, the contraction for the last two weeks is of the order of Rs. 22.49 crores. Notes held in the Banking Department have also declined by Rs. 4.16 crores, so that the fall in total notes issued is Rs. 18.75 crores. This is covered by a withdrawal of Rs. 10 crores each in foreign securities and rupee securities and a rise of Rs. 1.25 crores in rupee coin. In the Banking Department, there has been an increase of Rs. 31.39 crores in deposits of the Central Government, obviously due to subscriptions to the new loans, and of Rs. 6.75 crores in those of other Governments. Deposits of banks are slightly up by Rs. 36 lakhs. On the assets side, a rise of Rs. 6.33 crores is noted in balances held abroad. Loans and advances to Governments have gone up by Rs. 1.32 crores and other loans and advances by Rs. 16.13 crores. Of the latter, outstanding advances to Scheduled banks against usance bills alone account for Rs. 4.33 crores. Investments have gone up by Rs. 21.88 crores.

The Scheduled banks' statement for the week ended 13th July 1956 shows a rise of Rs. 1.77 crores in demand deposits and of Rs. 1.46 crores in time deposits. Inter-bank borrowings also are higher by Rs. 3.18 crores, while borrowings from the Reserve Bank are lower by Rs. 6.31 crores and those from the State Bank by Rs. 1.20 crores. Advances reveal a decline of Rs. 6.34 crores and bills purchased and discounted of Rs. 2.14 crores. Investments are lower by Rs. 91 lakhs. No notable variation is seen in cash balances, while balances with other banks in current account have declined by Rs. 41 lakhs; money at call and short notice have risen by Rs. 1.97 crores.
