The details of subscriptions to the new Central Government loans, the list for which was closed on Wednesday last week after they were fully subscribed, show that the loans have proved to be an outstanding success. The overall subscriptions amounted to Rs. 157.73 crores, of which Rs. 80.52 crores were in the form of conversion of 3 per cent. 1957 loan and the balance in cash. 3½ per cent. 1974 turned out to be most popular with investors, the total subscriptions for the same at Rs. 66.64 crores, being the largest as compared with the other two issues. The short-dated 3½ per cent. 1962 came next with Rs. 57.27 crores. The medium-dated 2¼ per cent. 1967 attracted no more than Rs. 33.82 crores. Details of cash and conversion offer for each of the loans are not available.

The success of the loan had no bullish effect on the Gilt-edged market during the week under review. On the other hand, a subdued undertone followed. Business was negligible, in the absence of any interest. 3 per cent. 1957 was unchanged at Rs. 99-13 and 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 was on offer at Rs. 98-2. 3 per cent. 1963-65 was placed an anna lower at Rs. 95-1. 3 per cent. 1964 was, however, an exception with a rise of one anna to Rs. 95-1. 3 per cent. 1966-68 was marked down by an anna to Rs. 93-3 and 3 per cent. 1970-75 to Rs. 90-5. 3 per cent. 1986 Conversion Loan shed an anna to Rs. 96-10. The new loan 3½ per cent. 1962 was quoted at its issue price, Rs. 98. 3½ per cent. 1961 declined by an anna to Rs. 99-8, as also 3½ per cent. 1964 to Rs. 98-11. 3½ per cent. 1965 was unchanged at Rs. 98-10. The new 3½ per cent. 1967 and 3½ per cent. 1974 were placed at their issue price, namely, Rs. 98-8.

In the foreign exchange section, the rupee displayed renewed weakness in terms of the U.S. dollar during the week under review, in consonance with the similar trend shown by sterling abroad. Banks' selling rate of ready dollars rose from Rs. 478¼ to Rs. 479¼ per $100 and their buying rate from Rs. 474¼ to Rs. 475¼ per $100. In New York, spot sterling weakened from $2.79⅜-2.79⅞ to $2.79.5/16.-2.79.7/16, and three months' forward from $2.78.3/16-2.78.5/16 to $2.77⅜-2.77⅝. Transferable sterling declined from 277.35-277.45 cents to 277.15-277.25 cents.

KIPS FIRM

(*From Our Own Correspondent*)

MADRAS, 23*rd July*

Kip prices remained firm, as sellers were unable to fall in line with importers' lower price levels. E.I. tanners felt that, as arrivals next month would be less and selections poorer, the market, especially for top grades, would be firmer. There was no change in cow calf, buff calf and buff hides prices.

Owing to good enquiries from Japan and the Continent, prices of semi-prime and lining sheep skins advanced appreciably and shippers were active buyers in the market. U.K. demand for prime and semi-prime sheep skins was also in evidence. In the tanned goat market, 11/12 lbs. run was on request and 8/9 lbs. was also enquired for, while 5½/6 lbs. was neglected unless at a low price. Lower grades were difficult of sale.

BULLS PAY MARGIN IN GOLD

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

The two sections of the bullion market displayed contrasting trends during the week under review. While silver remained subdued, gold ruled firm. A notable feature of the week's trading, however, was the steady rise in carry forward charges in favour of bulls in both the metals. In gold, however, the bulls had to pay margin twice during the week. On Thursday last, they had to pay Rs. 7 per tola as the *budla* in their favour rose above As. 12. Yesterday again, they had to pay a heavier margin of Rs. 25 per tola as the *budla* crossed Re. 1-8.

The quiet tone in silver was due to rumours that bulls would not be able to take delivery of all the bars which the bears had arranged to give at the current settlement. Large arrivals of unrefined metal, the report from Kalimpong contradicting the earlier news that the Chinese authorities had restricted the export of Tibetan coins to India, and rumours that there was the possibility of the Reserve Bank taking steps to curb rise in bullion prices were additional factors which affected sentiment in silver.

The strength of gold was due to bull grip over the metal on helpful advices from the ready section, where the offtake was encouraging.

Forward silver (25th July settlement) receded from Rs. 172-4 to Rs. 171-2. In the next settlement, the decline was more precipitate, having dropped from Rs. 171-5 to Rs. 168-11 before closing at Rs. 169-4.

Ready silver (.996 Mint) moved down from Rs. 172-9 to Rs. 171-1, but closed a shade better at Rs. 171-10. The floating stocks of silver are estimated at 1,300 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (24th July settlement) crept up from Rs. 100-7 to Rs. 102-10, before the settlement ran out yesterday at Rs. 102-5. The August settlement moved up from Rs. 99-14 to Rs. 101, but closed at Rs. 100-12.

Ready gold gathered strength from Rs. 100-14 to Rs. 102-12 before finishing at Rs. 102-6. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was 3,000 tolas.

In London, silver prices were unchanged at 78¾*d.* for spot and 78¾*d.* for forward. Gold, however, displayed considerable strength again with a rise from 250s. 2½*d.* to 250s. 7½*d.* In New York, silver was unchanged at 90½*c.*

The following comparative table shows the trend of market during the week under review:

	25-7-56	Highest	Lowest	17-7-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

SUGAR BEARISH

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

A distinctly bearish trend was in evidence in the sugar market during the week under review. While buying enquiries, especially from Malabar side, continued to be slack, arrivals of indigenous sugar were considerable, thanks to improved booking facilities. The total arrivals during the week aggregated 18,800 bags, as against 9,700 bags a week before and 9,600 bags two weeks before. Traders expected that the arrivals in the coming weeks would be larger still, as a result of the usual monthly release of sugar for sale in the free market.

Spot medium grain indigenous sugar was subjected to selling and dropped Rs. 2 to Rs. 91-Rs. 93 per bag. Small grain declined by a rupee to Rs. 89. Bold grain lost a like amount to Rs. 96-Rs. 102. British refined sugar was quiet at Rs. 89 per bag of 2 cwts.

In the forward section, *Shravan* delivery contract for 'C' grade sugar receded from Rs. 92-10 to Rs. 92 per bag.

It is understood that the Union Government has not so far approved of the nomination of the Bombay Sugar Merchants Association's President as a Member of the Development Council for the Sugar Industry. Meanwhile, the Food Ministry is reported to have urged the two sugar associations in the city to amalgamate themselves into one single body. Fresh moves are afoot to bring about such an amalgamation. Recently, there was a joint meeting of the representatives of the two bodies with the Forward Markets Commission.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

COTTON FUTURES REACT

(*From Our Own Correspondent*)

BOMBAY, 25*th July*

The week under review was a short one for the cotton futures market which remained closed on the 19th, 23rd and 24th inst. During this brief period, the market presented an irregular trend. Thus, the market ruled distinctly firm on Friday, but developed a reactionary tendency on the following day which gathered momentum today. Friday's firmness was aided by fears of damage to cotton crop on account of heavy rains in North Gujarat and Khandesh cotton-growing tracts. Buying support ensued, as a consequence, and cotton futures prices moved upwards. On Saturday, however, the market came under the pressure of selling induced by favourable weather reports. This, coupled with heavy profit realising, led to a break in values. The recession was carried a stage further today, thanks to speculative selling. The closing rates were lower than those at the end of last week.

Jarilla Contract (March 1957) which stood at Rs. 666-12 last week-end advanced on short-covering to Rs. 671-8 on Friday. The hammering by bear speculators brought the quotation down to Rs. 662 today. It was, however, a shade better at Rs. 663-8 at the close. Vijay Contract (April 1957), after rising from Rs. 816-8 to Rs. 820, receded to Rs. 810 the next day. After recovering to Rs. 812-8, it finished lower at Rs. 805-8.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	25-7-56	*High*	*Low*	18-7-56
Jarilla (March) ...	663½	671½	662	666½
Vijay (April) ...	805½	820	805	816½

The spot cotton market presented quiet conditions. Turnover was limited and values moved narrowly. Current crop staple varieties evoked some enquiries. The foreign section was very dull. Some transactions were reported in East African and new crop Uganda but at lower prices. As regards American cotton import under Public Law 480, the shipment period (stipulated up to 31st October 1956) was considered to be too short to permit adequate purchases of new crop U.S. cotton by Indian mills. There were rumours of representations being made to the authorities to extend the period by two more months.

The following are the latest available rates from the spot market at Sewri:

Bengal *Deshi* Rs. 620; Berar Jarilla Rs. 760; Khandesh Rs. 770; Vijay Rs. 960; Oomra *Deshi* Rs. 675; Moglai Rs. 680. Delivery contracts: Khandesh Rs. 197/3 December Rs. 130 and Berar December Rs. 112 on Jarilla; 320F December Rs. 65 on Vijay; Vijay 13/16" February-March Rs. 46 on Vijay.

The Karachi cotton futures market continued to rule bearish during the major part of the week under review, but staged a perceptible recovery yesterday. The bearish trend of the market was due to considerable slackness in demand from overseas interests, thanks to the U.S. cotton policy. Selling, therefore, gathered momentum and cotton prices moved further downwards. Yesterday, however, the market picked up strength, as low levels of prices attracted support, and prices recovered. Not only were the earlier losses fully recovered but the closing quotations stood higher than those at the end of last week. N.T.R.G. July delivery dropped Re. 1-6 to Rs. 76 on the 23rd inst., but recovered to Rs. 77-10 on the following day. January delivery, after receding from Rs. 73 to Rs. 72-8, improved to Rs. 73-3. Conditions in the spot market were distinctly irregular, the general trend being easy. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *deshi* 102; Punjab *deshi* 95; 4F Punjab R.G. 78-14, S.G. 80-10; L.S.S. Punjab R.G. 81-10; S.G. 85-2; N.T.R.G. 80-2; S.G. 82-14; 289F Punjab R.G. 86-14; S.G. 93-6.

Easy conditions prevailed in the Alexandria cotton futures market this week, in distinct contrast to the firm tone noted last week. Traders expected that Egyptian cotton would have to meet with growing competition from U.S. cotton in world markets, following the possibility of the latter being offered at lower rates. They were, therefore, inclined to reduce their commitments and prices suffered a break. The decline would have been more marked but for lower ideas of the 1956 cotton crop and fears of late deliveries owing to earlier bad weather. The Egyptian Ministry of Agriculture has placed the acreage of 1956 cotton crop at 1,652,877 feddans, as against 1,816,000 feddans in 1955.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market, with last week's rates given in brackets, are Karnak: July 104.00 (110.00); November 100.05 (101.85); January 96.40 (98.80); Ashmouni: August 71.75 (73.50); October 70.40 (73.45).

For the second week in succession, the Liverpool cotton futures market ruled easy. Business was slow. There was hedge selling in mixed growths contract which led to a fall in prices. The Egyptian contract was inactive, Distant Sudans came under hedging pressure and suffered losses, but near delivery evoked some trade buying. The following are the latest available quotations—in pence per lb.—from Liverpool:

Old contract: July-August 24.00; *new contract*: July-August 27.20; October-November 24.35; December-January 23.55; March-April 23.35; May-June 23.37; July-August 23.15. *American mixed growth contract*: October-November 24.45; December-January 23.45; March-April 23.25; May-June 23.15. *Egyptian Karnak cotton*: July-August, November-December and January-February 54.05. *Sudan contract*: July-August 47.03; September-October 46.30; November-December 44.80.

The reactionary tendency that developed in the New York cotton futures market towards the closing sessions last week gathered further momentum during the week under review. The sentiment of operators was adversely affected by a further downward adjustment in spot cotton values, generally favourable advices and continued quiet conditions in the textile market. These factors let loose persistent hedge selling in December and March positions, which, together with scattered liquidations, resulted in a break in values.

Of the bids received on the 10th inst., the Commodity Credit Corporation accepted 393,629 bales, bringing the total sold under the new export sales programme till that date to 2,865,373 bales. The average price obtained was slightly over 25 cents (basis Middling 15/16") which was 12 points more than the minimum price. On Monday, the 23rd inst., the U.S. Department of Agriculture commenced delivery of export cotton purchased by shippers. The delivery is subject to the condition that the buyers must agree not to ship this cotton abroad or to domestic mills before 1st August 1956, as specified in the export programme. Meanwhile, the rumours of a change in U.S. cotton sales policy have been denied. The spokesmen of the Agriculture Department are reported to have stated at Washington the other day: "We have no information about a report which quotes the Secretary of Agriculture, Mr. Benson, as saying that he has no intention of selling C.C.C. surplus cotton below 25 cents per pound basis middling 15/16 inch." It is reported that the U.S. Senate has passed a proposal to increase the Public Law 480 authorisation by $1.5 billion and permit the sale of cotton and other surplus commodities to Iron Curtain countries at competitive prices. It is also stated that, under the proposal, barter for strategic materials is also permissible. The Senate is said to have voted for increasing the C.C.C.'s capital from $12 billion to $14.5 billion, in view of the need for funds to operate the Soil Bank. Grants for 130,000 bales of cotton to Japan and 167,000 bales to Spain have been announced under Public Law 480. The authorisation of further funds by the Congress for 300,000 bales granted to India is awaiting passage by the Senate.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-7-56	17-7-56	10-7-56
Spot	34.30	35.90	36.55
October	32.32	32.50	32.58
December	32.42	32.62	32.60
January	32.46	32.70	—

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 25*th July*

The yarn market functioned for only three days, as it remained closed on Thursday (*Baker Id*). Monday (Tilak Day) and today as a mark of sympathy to the victims of the Anjar earthquake. During these three days, the market put on a very dull appearance. Operators were greatly distressed at the calamity caused by earthquakes in Kutch State and widespread floods in several parts of North India and were in no mood to do business. Consequently, transactions were limited, with fluctuations in values confined to a narrow range.

Section-wise, cotton yarns were comparatively firm on reports that Burma had invited offers for supply, on cash basis, of cotton yarn for positive shipment by the end of next month, the quantities and types of yarn specified being, respectively, 2,000 bales of 1/20s grey, 2,000 cases each of 2/64s and 2/82s, 300 cases of 1/40s mercerised and 200 cases of 2/42s. Rayon yarns were, however, easy on expectation of large arrivals of imported yarn in the coming weeks. This expectation is based on two factors. First, the licences granted to actual users as well as established importers for the import of art silk yarn during July-December 1956 have been made valid for the import of acetate yarn of 120 and/or 150 deniers of bright finishes up to 5 per cent. of the face value of the licence. The total value of import of these two deniers should, however, not exceed 5 per cent. of the face value of the licence. It is also notified that rayon yarn licences granted for July-December 1956 might be utilised for the import of dull acetate yarn of any deniers without any face value restriction. Secondly, the issue of import licences to actual users of rayon yarn is likely to be decided in the next few weeks. The Silk and Art Silk Mills' Association, Bombay, is reported to have urged the Government to revise upwards the basis of yarn values for granting bulk licences from Rs. 6-Rs. 7 per loom per shift to Rs. 9. Staple fibre yarns lacked support.

In the cotton yarn section, ten counts were somewhat favoured at higher levels. Moderns and Podars picked up As. 4 each to Rs. 14-12 and Rs. 14-8, respectively. Elphinstones hardened by As. 2 to Rs. 14-2. Among 20s, Moderns rose by As. 3 to Rs. 18-8. Hinds gathered As. 2 to Rs. 14-2. Among 40s, Minaxis gained As 2 to Rs. 28-4. Moderns and Gokaks were both unaltered at Rs. 28, as also Maduras at Rs. 28-10. Deals in 80s were put through in 80s Elphinstones which advanced by a rupee to Rs. 67-8. Moderns improved by As. 8 to Rs. 69, but Seksarias receded by As. 8 to Rs. 53-8. Among 60s, Raghuvamshis gained As. 4 to Rs. 57-8, while Moderns were quiet at Rs. 61-8 and Finlays at Rs. 61.

Snia rayon yarn (120 deniers) for August delivery shed Rs. 3 to Rs. 777. October delivery was quiet at Rs. 787. Among spot yarns, 120 Italy lost half an anna to Rs. 3-12-2. 120 Japan and 150 Japan were lower by 3 pies each at Rs. 3-12-6 and Rs. 4-0-6, respectively. 150 Italy was dull at Rs. 3-14. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade slipped by half an anna to Rs. 3-7-3, but 120 Bt. cones 1st grade were better by three pies at Rs. 3-11. The National Rayon Corporation, it is said, has opened forward sales of yarn (July-August-September deliveries). As the offer is at prices higher than expected, buyers would appear to have not come forward with sufficient orders.

The staple fibre yarn section was easy. 40 x 2 August delivery dropped Rs. 3 to Rs. 652. July delivery was dull at Rs. 653. Among spot yarns (40 x 2), Kohinoors receded by six pies to Rs. 3-8. Citys were quiet at Rs. 3-6-9. New Greats, however, met with special buying support and gathered half an anna to Rs. 3-6-6. Centurys were also a shade better at Rs. 3-6-9.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted on the 23rd inst., as compared with those a week and a fortnight before:

	23-7-1956	17-7-1956	11-7-1956
Art Silk yarn **(per case of 200 lbs.)—**	**Rs. a.**	**Rs. a.**	**Rs. a.**

OILSEEDS INACTIVE

(From Our Own Correspondent)

BOMBAY, 25*th July*

Having remained officially closed for four days, the oilseeds market did not evoke much interest of operators during the week under review. On the two days it functioned, namely, Friday the 20th inst. and today, the business done was poor and quotations were more or less nominal. For dealers were not inclined to do any business as their sentiment was affected by the disastrous earthquake in Kutch on Saturday night which caused a large number of deaths and damage to property.

An important feature of the week was, however, the resumption of forward trading in linseed on Friday under the auspices of the Bombay Oilseeds Exchange after an interval of more than 12 years. It was inaugurated by the Chairman of the Forward Markets Commission, Mr. W. R. Nathu. The basic variety for the linseed contract is Bombay Bold and the unit of trading is 25 tons. There will be two delivery contracts, the delivery months being May and September. Provision is also made for delivery against the hedge contract at more than 30 upcountry centres. The margin system applicable to groundnuts will also apply to linseed.

Groundnut, February contract, which closed the previous week on a steady note at Rs. 130-4, and began the week at Rs. 129-8, closed today a shade lower at Rs. 130-2. The spot section, however, kept up a cheerful tone on support by crushers. Bold Fair Average Quality advanced from Rs. 32-8 to Rs. 32-12. August-September too, was better at Rs. 31-9, as against Rs. 31-5. Coramandal put on As. 12 to Rs. 33-12. Khandesh quality rose by As. 8 to Rs. 33-12. The oil section followed suit. Ex-mill was up by As. 12 at Rs. 18, and railway receipt by As. 8 at Rs. 17-12.

The castorseed section, however, reflected an easy trend during the week, on reports of a decline in prices of castor oil in the U.S. September contract opened the week at Rs. 131. On some speculative support it climbed up to Rs. 133-8. But at this stage on account of unloading by longs it came down and closed at Rs. 130. May 1957 contract too, kept the downward trend and closed the week at Rs. 114, a rupee lower than a week ago. In the spot section Madras lost As. 10 at Rs. 26-4 and Kanpur As. 12 at Rs. 25-2 over the week. Oil B.S.S. and Oil Commercial, on the contrary, recovered to Rs. 16 and Rs. 15 (inclusive of excise) from Rs. 15 and Rs. 14-2 respectively, a week ago.

Linseed May 1957 started on Friday at Rs. 25-4 and improved to Rs. 25-8. But it finished the week at Rs. 25-4. In the spot section, however, a slight improvement was in evidence. Bold delivery was higher by As. 2 to Rs. 29-4 and August-September gained As. 4 at Rs. 29-12. Linseed oil ready was quoted at Rs. 17 (with excise) as against Rs. 16 last week.

Among others, *kardi* seeds, August-September, was done at As. 4 higher at Rs. 17-12. But ready Madras (*niger*) lost As. 8 at Rs. 28-8.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	25-7-1956	17-7-1956	11-7-1956

WOOL WELL SUPPORTED

NEW DELHI, 21*st July*

Although the past fortnight preceded the Liverpool auctions and should normally have been a period of waiting, some buying support was, in fact, noticeable from exporters, particularly in white wools of *Dulana* quality which are in short supply. The *Asahri Tillana* wools of U.P. have started arriving in the market as a forerunner of the yellow *Dulana*, due in about three weeks; they are finding good buying support at Rs. 200 to Rs. 210 per maund.

In the Delhi market, black wool was in keen demand from U.P. handspinners and blanket weavers, mostly concentrated in Muzaffarnagar and Meerut Divisions. The American markets which had been silent about Indian wools exhibited some interest, thereby pushing up the markets by 2 to 3 cents. This interest, however, did not prove a steadying factor and the gain was practically set off by the Liverpool auctions held on 17th and 18th July, at which prices tended on the lower side.

The prices (in rupees) prevailing at Delhi on the 18t inst. are given below:

Superior white 3-3 to 3-3-6 per lb. f.o.r. Bombay.

Yellow 2-8 to 2-9 per lb. f.o.r. Bombay.

Black and dark grey 110 to 120 per maund (loose ex-market).

The prices (in rupees) of wool prevailing at Bombay on the 10th inst., the figures in brackets giving rates a fortnight before, are as follows:

Extra sup. white Bikaner 3-11-0 (3-11-0); Sup-white Bikaner 3-6-0 (3-6-0); Sup. pale yellow Bikaner 3-1-6 (3-1-6); Sup. yellow Bikaner 3-14-6 (2-14-6); Sup. white Joria 3-5-0 (3-3-0); Sup. white vicaner (Beawar, etc.) 3-4-0 (3-4-0); Sup. yellow vicaner (Beawar, etc.) 2-10-0 (2-10-0); Clipped black (Hyderabad blacks) 1-0-0 (1-0-0); Clipped grey (Poona, Hubli, etc.) 1-4-0 (1-4-0); Tannery grey (Bombay) 0-13-0 (0-13-6); and Tannery black (Bombay) 0-14-6 (0-14-0).

Bradford (U.K.) (12-7-56): Firmer merino values at Newcastle and London have brought a better tone to the market. Topmakers, who were quoting above the average, have now come into line and quotations are more uniform and firmly based at the lower level of 129*d.* for 64s warp tops. Business is quiet, but more enquiry is apparent than last week. Spinners have reduced quotations, in line with prices paid for merino tops.

London (12-7-56): At the opening of the London wool sales on the 11th inst., all descriptions met with strong demand from the home trade and the Continent. Australian greasy merinos sold freely, with broader qualities advancing upto 5 per cent. on the levels ruling at the close of the last sale on 8th June and unchanged values for the remainder. There was keen competition for greasy comebacks and fine crossbreds, which advanced by fully 5 per cent. The first sale of British wool of the current year's clip will take place at Leicester on the 25th inst. when about 2,300,000 lbs. will be offered by the Committee of London wool brokers on behalf of the British Wool Marketing Board.

Australia: At Newcastle (on the 10th inst.), the firmer tone noticeable towards the end of the Sydney sale in the previous week was confirmed. All descriptions were fully firm. The selection was better than at Sydney, though the 18,700 bales offered included a large quantity of oddments, lambs' wool and crutchings.

QUALITY TEAS ON OFFER

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 19*th July*

Some 1,300,000 lbs. were on offer in sale 20 which was held on Tuesday, 17th July. Quality showed a slight improvement and some of the low medium and medium teas were brighter in cup quality. Some useful high growns were also catalogued. From the outset there was a useful demand, although commonest kinds were generally easier. Improved quality low medium and medium teas were well supported and prices were firm. There was a very strong enquiry for fannings grades and, in particular, good liquoring types. These often advanced in price. Best liquoring teas met with competition and must be quoted dearer. There was a good enquiry for Middle East types. There was a strong demand for whole leaf grades at better prices. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 4 0
Low medium B.O.P.	1 5 0
Medium B.O.P.	Rs. 1-7-6 to 1-9-6
Good B.O.P.	Rs. 2-0-0 to 2-2-0
Well made black leaf O.P.	2 5 6

London Market:—*Sale of 16th July* 1956:—New seasons Dooars and teas of good appearance strong. Others, particularly commonest, 3*d.* lower.

Sale of 17th July 1956:—Market weaker.

Colombo Market:—*Sale of 16th July* 1956:—Good demand. Better sorts slightly dearer. Stalk slightly easier.

Sale of 17th July 1956:—Keen competition best quality, particularly Uvas. Otherwise, less demand; 10 to 15 cents lower.

Calcutta Market:—*Export*:—27,900 packages. Strong general demand for most types with good teas often dearer. Middle East fannings strongest feature several annas dearer, but more ordinary orange fannings neglected. Lower kinds about half to one anna lower. Darjeelings sold well and whole leaf fully firm to dearer.

Internal:—11,700 dust. Good general demand, particularly for Middle East and C.T.Cs., which were strongest feature selling at dearer rates. Mediums were fully firm. Other types irregularly one anna to As. 2 easier. 800 internal leaf. Good demand at around last rates.

Export Quota:—There has been an easier tendency for 1956-57 export quota and in Calcutta business has been done at 30 pies.

Forthcoming Auctions:—Sale No. 21 will be held on Tuesday, 24th July.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 21:—1,500,000 lbs. Good general demand. Stronger at the bottom with improved quality. Low mediums rather higher. Medium B.O.Ps. difficult to sell. Few best liquoring keen competition, whole leaf dearer."

JUTE GOODS QUIETLY STEADY

(From Our Own Correspondent)

CALCUTTA, 24*th July*

The jute goods market witnessed quietly steady conditions during the week under review. The trend in hessians, however, was slightly better than in sackings, for the reason that there were some enquiries from a number of overseas countries, namely, the U.S., Argentina, Uruguay, the U.K. and Russia. But it had no big influence on quotations for hessians. For there was a feeling that the overall offtake might not be such as to absorb the increased production and thus to bring about any appreciable improvement in the stock position. It was pointed out in market circles that the U.S. offtake was likely to be affected adversely by the drop in automobile production, the automobile industry there being a big user of hessians. Again, although Argentina's entry was welcome, albeit late, it was said that, because of large stocks, that country's offtake this year would be much less than in previous years. Further, in the sackings section, the undertone remained quiet, in spite of the fact that Australia was in the market with a fairly large order. The fact that a part of the order had gone to Pakistan was not to the market's liking. Consequently over the week, quotation for jute goods could not go up except by a fraction.

In the hessians section, 40"×10 oz. hessians July position opened the week at Rs. 38-7 and put on only As. 2 to close at Rs. 38-9. August delivery rose by a similar fraction to Rs. 38-12. October-December delivery also improved from Rs. 38-9 to Rs. 38-11. B. twills among sackings, July delivery, improved by As. 4 to Rs. 103-8. August position was slightly better at Rs. 103-14, as against Rs. 103-8. A similar rise was also witnessed in October-December position at Rs. 104-4.

The raw jute market, too, was dull. Mills showed little interest in making actual purchases on favourable new crop reports, since they meant bigger supplies soon. Assam bottoms remained unchanged at Rs. 27 per maund, though some business was done at this rate for August delivery.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley & Co.)

CALCUTTA, 24*th July*

Linseed prices remained almost unchanged this week. Scarcity of supplies continued to be an important factor in the market. Small enquiries were noted chiefly for ready goods, but poor offtake for oil was a discouraging feature. The oil section was generally dull, with shippers showing little or no interest, owing to lack of parity between local and overseas prices.

The latest available quotations are: Ready and July-August Rs. 22 per maund.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 23*rd July*

Quiet conditions prevailed in the foodgrains market during the week under review. Good rainfall reports all over west U.P. was the main unhelpful factor. Wheat average quality which had touched the highest at Rs. 15 and farm quality at Rs. 16, eased towards the week-end to Rs. 14-14 and Rs. 15-14, respectively. Daily arrivals were poor, the average being 150 maunds, which were hardly enough to meet the day-to-day requirements of the locality. Stocks were put at 83 *khaties*, as compared with 128 *khaties* a year before. The Union Food Minister has once again declared that the Government will not revive controls or rationing of foodgrains. The Government has decided to import 1.2 million tons of wheat this year and talks for the import of another 3 million tons are in progress. The Government would make available wheat at Rs. 14 and rice at Rs. 16 per maund whenever it is necessary to arrest grain prices.

Rice prices recorded a modest advance during the week on Bengal advices and were quoted at: *Rangooni* Rs. 19-8, *majnipuri* Rs. 20, *basmati* Rs. 25 to Rs. 32. In accordance with the recent agreement with Burma, the Government of India will import 2 million tons of rice in the next five years and negotiations for the import of rice from China and Thailand are under way. Barley and *bejhar* prices recorded gains during the week, although prices eased slightly towards the week-end, as prospects of *kharif* crop brightened due to latest rains. Sowing season having completed, *jowar* and *guwar* were not in demand and hence prices eased slightly. A heavy quantity of gram is still reaching Hapur from Punjab, but prices continue to rule steady on firm Punjab and Madras advices. Stock position of gram has swelled to 84 *khaties*. The week-end prices were: Gram local Rs. 11-12, *punjabi* Rs. 12-8,

(Continued on page 199)

Notice

THE BIRLA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, Royal Exchange Place, Calcutta, on Wednesday the 22nd August 1956, at 3-30 p.m., for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March 1956.

(2) To declare dividends on Preference, Second Preference and Ordinary Shares.

(3) To elect Directors in place of Messrs. P. D. Himatsingka and K. L. Jatia, retiring by rotation, and in place of Mr. G. D. Kothari, retiring under Section 261 of the Companies Act, 1956.

Mr. P. D. Himatsingka, one of the retiring Directors, has already completed 66 years of age and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as ordinary resolution under Section 281 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Mr. P. D. Himatsingka who has completed 66 years of age be and is hereby re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

Mr. G. D. Kothari is an associate of the Managing Agents and is retiring under Section 261 of the Companies Act, 1956. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Mr. G. D. Kothari, an Associate of the Managing Agents under the Companies Act, 1956, be and is hereby re-elected a Director of the Company."

(4) To appoint Auditors and fix their remuneration.

(5) As special business, to consider and if thought fit, to pass with or without modifications, the following resolutions which will be proposed as ordinary resolutions.

(*a*) "RESOLVED that the Company does hereby approve of and consent to the appointment of Messrs. Sridhar & Co. of Mount Road, Madras, as Sole Selling Agents for sale of Calcium Carbide in the areas allotted to them for a period of six months with effect from 30th May, 1956."

(*b*) "RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000 or 5 per cent. of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater."

(*c*) "RESOLVED that the Company does hereby consent and authorise its Managing Agents or any associate of its Managing Agents to retain any commission or other remuneration earned or to be earned by such agents or associate as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been, or is to be, entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(6) To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 13th August 1956 to 22nd August 1956, both days inclusive.

By Order of the Board,

BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

CALCUTTA, 18*th July*, 1956.

N.B.—(i) The Directors have recommended the following Dividends:—

On Preference Shares at 7½ per cent. less I.T.

On Second Preference Shares at 5½ per cent. free of I.T.

On Ordinary Shares at Re. 1 per share free of I.T.

If dividends on shares as recommended by the Directors are declared at the meeting, the Dividends will be payable only to the Registered Shareholders whose names appear on the Company's Register on 22nd August 1956. No application need be sent for dividends as relative dividend warrants will be posted to such shareholders within 3 months from the date of declaration.

(ii) A Member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) *Explanatory statement in regard to special business to be transacted at the meeting*:

(*a*) The Company has appointed Messrs. Sridhar & Co. of Mount Road, Madras, as Sole Selling Agents for the sale of Calcium Carbide in the States of Madras, Andhra, Travancore-Cochin and Mysore for a period of six months with effect from 30th May 1956 on terms as incorporated in the Company's letter to them bearing the same date. In compliance with provisions of Section 294 of the Companies Act, 1956, ordinary resolution is necessary to approve of the above appointment.

(*b*) The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which is at times in excess of the limits as laid down in Section 293(i) (e) of the Companies Act, 1956. A resolution has, therefore, been proposed to authorise the Directors to contribute to such funds in excess of the above limits.

(*c*) Mr. G. Birla, an Associate of the Managing Agents, is a Principal Agent of Messrs. Ruby General Insurance Company, Ltd., and is entitled to insurance commission from the Company on any insurance contract entered into by this Company with the said Insurance Company. Sanction of the shareholders is, therefore, sought under Section 359 of the Companies Act, 1956, to enable the Managing Agents and/or their Associates to retain commission or other remuneration which they may earn as mentioned in the resolution.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters A and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amounts per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

WORLD BANK MISSION ON SECOND PLAN

THANKS to the enterprise of the New Delhi correspondent of the *Hindu*, we have been able to get a comprehensive account of the impressions of the World Bank Mission of India's second Five-year Plan. It is not clear why the Government of India has not yet released the Mission's report to the public. The earlier it does the better. Be that as it may, it is heartening to find that most of the criticisms of this journal on the Plan have been supported by the Mission which consisted of quite a few experts. There is a general inclination among the powers-that-be to attach greater importance to the views of foreign critics than to those of nationals, more especially of the Press. We are not alone in holding this view, as witness the remarks of Rajaji a few days ago to the effect that the Press in India is having less influence on the Government than it did during the pre-independence and the early post-independence days. It is to be hoped that the observations of this Mission at least will open the eyes of the Planning Commission and the Government to the defects in the second Plan. If they fail, the charge which one often hears these days, namely, that the present Government is easily moved more by flattery and less by honest, well-meaning criticism, will stand strengthened.

At the outset, it must be said that the Mission's appraisal of the Plan is well balanced; its criticisms are friendly and appeal to commonsense; and its praises are measured, having been given only where merited. Its observations differ from those of other observers, individuals and teams, in one important respect. They do not suffer from political predilections. The World Bank is an international business body which views each proposition from a practical, business-like angle. Its representatives can, therefore, afford to be frank in their assessment of a given assignment without importing extraneous considerations. That is all the more reason why their views deserve to be pondered dispassionately. The fact that many critics in India itself share these views only goes to prove, if any proof were needed, that the Mission has examined the Plan solely from the needs and capacity of this country and that it was not influenced by any foreign forces.

The achievements of India under the first Plan have been admitted and admired by the Mission. This acknowledgment is based not merely on such tangible gains as increase in the national income and improvement in the economic strength of the country but also on certain intangibles—"a new buoyancy and hope, a new confidence and an awakening desire for self-improvement." All these qualities are prerequisites to further success in economic planning and development. The Mission has also noted with satisfaction that the Government has been successful in enlisting the participation and mobilising the energies of the people through Community development programme and similar measures for carrying out the planned development. It has found no inclination to complacency, but a readiness to accept constructive criticisms. While the former impression is true, the latter, namely, receptivity to constructive criticisms, deserves to be qualified to some extent, for such criticisms are taken note of only when it suits the fads of our Ministers.

Before proceeding to refer to the Mission's views on the second Plan, it is necessary to draw attention to one of its general comments. And it is that data on actual expenditures are now several years in arrears. This is a serious drawback, for, in the absence of up-to-date progress reports, it will not be possible for the Government to anticipate in time, and evolve suitable measures for removing, bottlenecks. Nor will it be possible for it to make sure that progress in all sectors and regions is well balanced. Again, in the absence of up-to-date data, the Press cannot assess whether the achievements are commensurate with the expenditure undertaken. It is common knowledge that we have yet to have such an evaluation of the first Plan.

One of the features of the second Plan is its flexibility. It provides for annual programming within the broad framework. This has been criticised by some on the ground that it may lead to chaos when some project or other has to be dropped or suspended for want of resources. The World Bank Mission's approach to this aspect of the Plan is pragmatic. While it appreciates the need for a flexible plan, as the Indian economy is still largely agricultural and so liable to marked fluctuations in its fortunes owing to the vagaries of the monsoon, it has urged, very rightly, that "prompt and continuing attention be paid to planning in advance the type of changes which can be made without creating serious imbalances in the programme." It has further pointed out that, "in such advance planning, a distinction would obviously have to be made between the adjustments required by shortfall in foreign exchange resources and those made necessary by a failure to mobilise sufficient domestic resources." This is a very valuable point, for the reason that filling the gap in foreign exchange resources is far more difficult than that in domestic resources. The Government can create at its will rupees but not dollars or sterling or roubles.

On the financial aspects of the Plan, the Mission's advice is wholesome and in accord with the views expressed by many in this country, including this journal. The Mission has thus urged (1) considerable caution in resorting to deficit financing, (2) greater emphasis on raising more revenues through the adoption of more realistic pricing policies for the services and benefits rendered by the Government to the people, and (3) judicious raising of additional taxation, without impairing the incentives for, and the resources available to, the private sector. While the Mission is conscious of the value of deficit financing, it is of the view that the scale of such financing contemplated in the Plan considerably exceeds the capacity of the country to absorb it *without serious consequences to the price level* and the purchasing power of the rupee.

The Mission feels that there is still considerable scope for increasing Government income by raising railway rates, charges for power and water and, in some cases, port charges. It strengthens this suggestion by pointing out that, "in view of the great need to capture a considerable portion of the rise in national income for reinvestment, it is necessary to make certain that Government enterprises, particularly those in the field of power, irrigation and transport, earn large surpluses." This is a perfectly sound line of argument. Very low rates for public services encourage wastage of capital resources and, in many cases, tantamounts to undeserved subsidy to those who avail themselves of such services. But, in following it in practice, the authorities should not act indiscriminately. There is, for instance, a good case for stepping up the passenger fares in railways, internal air services, and certain sections of road transport services. Care and caution are, however, necessary when it comes to the question of freight rates. Similarly, the case for enhancing power rates and water charges rests on good ground; only, it must be applied judiciously, taking into account the needs of certain types of consumers in the case of power and the fertility of the soil, the nature of a particular region, whether it is developed or underdeveloped, etc., in the case of water rates.

Coming to taxation, the Mission has effectively stressed the importance of incentives to investors. Its advice to the Government is to avoid an all-out effort to increase direct taxation just for the purpose of achieving public investment targets, if this can be accomplished only at the risk of substantially undermining the incentives to the private sector and diminishing the resources available to it, because the latter is still expected to contribute the lion's share of the anticipated rise in national income. The Mission has also shown convincingly that taxation of personal incomes is so heavy that it militates against the flow of foreign private capital and technical know-how to India.

While on the subject of finance for the Plan, we may as well refer to the Mission's views on foreign capital. It is now well known that, in view of the large gap between the resources required and the resources available, foreign private capital can be of *immense help to this country*. But, unfortunately, the attitude of the Government and the business community towards this question has been far from realistic. There is a general impression that it is only the Government which is following a negative approach. It is, however, not so well known that Indian business men, in their anxiety to preserve the domestic market for themselves and to avoid competition from

in recent years, been excessively shielded against competition from abroad and from foreign-managed ventures capable of operating in the Indian market. More competition from both sources is likely to improve the quality of Indian manufactures, which, in many respects, is still too low, and to inculcate in Indian business an attitude which will put more emphasis on expanding output at lower unit-costs and profits. There is evidence that foreign enterprise will be attracted to invest in a large expanding market, provided the investment climate is made more favourable. In our opinion, the Indian Government should make a determined effort to enlist foreign capital and management for new ventures."

Proceeding, the Mission sympathises with the desire of the Government to have joint Indian-foreign ventures rather than wholly foreign-owned enterprises. But, at the same time, it believes that this desire should not be pushed so far as to deprive the foreign investor of an effective share in the management of the enterprise, without which he is unlikely to risk his capital. By way of an example, it refers to India's need for development of oil resources and remarks that it would be a mistake to insist on such a large measure of Government participation in the exploitation and development of oil resources as to discourage foreign oil ventures and saddle the Indian economy, which is already short of capital, with the excessive burden of finding the huge amounts of capital which are necessary for an effective programme in this field.

It will thus be seen that the Mission's observations on the subject of foreign capital are based on a full understanding of India's position and needs. We are in full agreement with these views and have no hesitation in saying that nothing but good will accrue to the country in following the Mission's advice. In the larger interest of speedy economic development and of preservation of free enterprise in India, our business men will be well advised to reconsider their stand on this important subject.

While generally approving the broad outlines of development which India proposes to follow, the Mission is of the view that the second Plan is "somewhat too ambitious." This is a very mild criticism, indeed, considering that the Mission has expressed serious doubts, as has been done by several critics in this country, about the short-comings in its transport systems and the wisdom of our planners in depending upon small-scale and cottage industries for the major portion of the increased supply of consumer goods that would be necessary for keeping inflationary pressure under check. It has been argued by the Government that the size of the Plan must be such as to capture popular imagination and to challenge the country to greater efforts. The Mission recognises that there is some force in this argument, but rightly hastens to warn the Government that the targets must be sufficiently realistic to avoid the adverse psychological effects resulting from a marked failure to accomplish them. In saying that the targets seem to be too large in relation to the administrative, technical and financial resources available even on the most sanguine assumptions, the Mission has accurately highlighted the weakest spots in the Plan. The Mission has rendered real service to India by drawing the attention of the authorities to the valuable role which the private sector can play in the economic development of the country and to the danger of attaching exaggerated importance to small-scale and cottage industries as sources of employment and producers of essential consumer goods. The candid manner in which it has examined the latest textile policy of the Government is highly commendable and evokes our respect for the Mission's sense of responsibility and honesty of purpose. Its verdict on this policy is that it is unworkable, a conclusion that fully tallies with ours, expressed in these columns a few weeks ago.

INDUSTRIAL DISPUTES ACT

EXPERIENCE in all countries shows that perfect industrial peace is unattainable in the modern age. It is an age of industrialisation and disputes. No country has ever succeeded in avoiding the disputes entirely. And all labour legislation is, therefore, designed only to ensure that some machinery exists for an amicable settlement of disputes which do inevitably arise from time to time. India has evolved a pattern of conciliation and adjudication for settling such disputes. It is by no means a perfect pattern, for it involves the interference of the Government in the sphere of industrial relations. No one can say that such interference is an ideal method of settling disputes. After all, it is best that the contending parties are allowed to meet across a table and settle their differences. This method, popularly known as the "Giri Approach," has not yet found favour with the authorities. It is not as if they are unaware of the wisdom of this approach. But they are apparently convinced that India has not yet reached a stage where it could be tried with success. There may or may not be a basis for this apprehension. But it is certainly deplorable that no serious attempts are being made by them to move faster in that direction.

The Bill to amend the Industrial Disputes Act, which was passed by the Lok Sabha last week, is open to the charge that it not only does not provide any great incentive for voluntary negotiation but, in certain respects, actually enlarges the area of industrial disputes. The only important clause in the Bill, which could be said to bear the impact of the "Giri Philosophy" of industrial relations, is the one that provides for arbitration. Under clause 8 of the Bill, it is open to the two parties to sign an arbitration agreement and refer the dispute to an arbitrator. It is true that even arbitration implies submission of an internal dispute to an external authority, but it is preferable to conciliation through Government officers and adjudication by labour courts, in the sense that it may tend to be less formal in its procedural details. Excepting for this feature, the Bill sticks by and large to the beaten track and breaks no new ground. Indeed, it is modelled closely on the Bombay Industrial Relations Act which, as is well known, is the Bible for the advocates of adjudication.

Although the Bill thus provides no direct incentive for compromise through voluntary negotiations, it may conceivably further the cause of such agreement in an indirect manner. This hope rests on the consideration that the Bill seeks to abolish the Appellate Tribunal. The Tribunal has no doubt done considerable good in the cause of industrial relations by laying down many healthy norms and regulations. It has proved a very necessary corrective to vexatious awards by industrial courts in the States. But it is also true that its presence has encouraged a singularly litigious psychology. Neither party is willing to abide by a verdict, unless it has been approved or modified by the highest Tribunal. The abolition of the Appellate Tribunal, though it is obviously a concession to labour demand, may still prove to be a blessing in disguise. The absence of an appellate authority may possibly induce a sense of realism among both employers and employees. But the Government will do well to step into the breach effectively by encouraging the formulation of norms which would guide the adjudication authorities. Joint consultations should be frequently organised, so that a body of doctrines, commanding wide acceptance by both sides, could be built up. This would bring the two parties nearer each other. The task of the labour courts and tribunals, too, will be rendered easier if they can constantly refer to some set of principles which have been mutually agreed upon by the employees and employers.

Such agreement among the parties is the only corrective to a situation under which there is no provision for appeal for an award from a labour court or tribunal. The Bill, it may be mentioned here, seeks to set up three types of original tribunal: Labour courts, industrial tribunals and national tribunals. The labour court will have jurisdiction to adjudicate on industrial disputes relating to such matters as propriety or legality of an order passed by an employer under the standing orders, the discharge or dismissal of employees, and illegality or otherwise of a strike or lock-out. An industrial tribunal will adjudicate on disputes relating to matters such as wages, hours of work, bonus, rationalisation and retrenchment. A national tribunal will adjudicate on matters which, in the opinion of the Government involve questions of national importance or which are of such a nature that establishments situated in more than one State are likely to be interested in or affected by the disputes.

Since there is no provision for appeal from each of these three tiers of the adjudication machinery, the employers have naturally attached considerable importance to the question of the qualification of the men who are to man this machinery. Accordingly, the Bill lays down judicial qualifications for these men. A few amendments were moved by the Union Labour Minister, Mr. Khandubhai Desai, during the clause-by-clause reading of the Bill in the Lok Sabha. One of them authorises appointment as the presiding officer of a labour court of a person who has been the presiding officer of a labour court, constituted under a State Act, for not less than five years. The second amendment makes a person who has been chairman or member of the Labour Appellate Tribunal for not less than two years eligible for appointment as a presiding officer of an industrial tribunal. Under the third amendment, a person who has held the office of chairman or any other member of the Labour Appellate Tribunal for not less than two years will be eigible for appointment as a presiding officer of the national tribunal. These amendments are welcome, inasmuch as they will enable the country to make use of the services of persons who have already acquired considerable experience in adjudicating industrial disputes.

Among the changes made by the Bill in the Industrial Disputes Act, mention must be made of the new definition of workman, the requirement of 21-day period for serving a notice of change on employees and the right to refer matters relating to interpretation of standing orders to industrial courts. These changes will be welcomed by employees even as they are deplored by employers. Workers will describe them as the extension of the protection afforded by the labour law to a wider section of their ranks. Employers will naturally look upon the changes as a device to extend the area of industrial disputes. There is no doubt that the scope for industrial disputes has been widened. Thus, the definition of "workman" in the Industrial Disputes Act is enlarged so as to cover technical staff and supervisory personnel whose emoluments do not exceed Rs. 500 per month. The Bill also provides that the employer shall not introduce any change in respect of certain specified matters affecting conditions of work without giving the workmen concerned 21 days' notice of his intention to do so. The employers have rightly complained that it would be difficult to implement this provision in practice. A breakdown of machinery or the declaration of a holiday by the Government or civil unrest may all introduce changes in conditions of work which it would be difficult to anticipate and notify in advance. In certain industries, notably plantation industries, changes in weather may necessitate sudden variations in conditions of work. Obviously, it would be necessary to reach *ad hoc* agreements on these issues, in order to avoid industrial disputes.

Another direction in which the area of industrial disputes will be enlarged as a result of the Bill is in respect of standing orders. The Bill amends the Industrial Employment (Standing Orders) Act, so as to empower both the certifying officer and the other authorities concerned to take into account the fairness or reasonableness of the standing orders before they are certified. Further, a worker is empowered to apply to the certifying officer for modification of the standing orders in the same way as an employer is now permitted to apply for such modification. Provision is made for reference of any question of the application or interpretation of a standing order to the Labour Court by the employer or worker without the intervention of the Government. If these changes are not to lead to vexatious disputes, it is again obviously necessary to evolve some code which both employers and employees will recognise as binding upon them.

A notable concession to employers—not perhaps so much a concession as a vindication of justice—is the provision that an employer may, during the pendency of a dispute, discharge or punish an employee for any misconduct not connected with the dispute. The employer has, in such cases, to pay a month's wages to the worker concerned and apply to the authorities for approval of his action. During the debate on the Bill in the Lok Sabha, this provision evoked considerable protest from labour spokesmen who were afraid that the provision would be misused by employers. The scope for misuse is strictly limited, for the enquiry authority may not approve of the action taken by the employer. In any case, no employer would like to use this provision wrongly and thereby lose the goodwill of the employees. The real value of this provision is that it is conducive to better discipline in industrial establishments. It may be noted here that there have been cases where the employers have found it difficult to dispense with the services of workers who have committed penal offences, merely because some dispute is pending in the labour court. At the same time, we would like to emphasise that employers will do well, in their own interest, to use this provision only where its use is clearly indicated; for any misuse of this provision on their part will only serve to make the workers clamour for its repeal.

SHARE MARKETS UNPERTURBED BY WAR THREATS IN MIDDLE EAST

TEXTILE POLICY—BANK CREDIT—POWER POSITION

THURSDAY, 5 P.M.

THE nationalisation of Suez Canal by Egypt is undoubtedly the main event of the week. It has led to a first class crisis in the international situation, for it is a challenge to the supremacy of the Western powers in West Asia and Africa, popularly known as the Middle East. If this crisis is not resolved amicably and speedily, the consequences may be quite serious to India. It is not merely India's trade with Europe and America that is involved, but its relations with the entire Atlantic powers. Although India's official reactions to this history-making event are not known at the time of writing, there is no doubt that its sympathies are with Egypt. The way in which Mr. Nehru described the event at Poona yesterday supports this impression. In his customary manner, Mr. Nehru said that nationalisation of Suez Canal by the Egyptian Government was one of the signs of the weakening of European domination over the Middle East and Asia which had lasted for over a hundred years.

MARKET GOSSIP

For the first time in free India's history, a critical international development has arisen, over which it may have to take a stand opposed to that of the rest of the Commonwealth, with the possible exception of Ceylon, and of all the N.A.T.O. powers. Such a stand will mean several unpleasant consequences and inconvenient issues to India, in case the Western nations decide to have a showdown with Egypt. The successful implementation of India's massive second Plan rests on good relations with the West. Again, the Indian Government has Rs. 660 crores in London; besides this, there are assets held by Indian nationals in Britain and other Western countries. The sudden freezing of sterling balances held by Egypt by the British Government, which was promptly followed by similar action by France and America, must have, therefore, caused a flutter in the minds of every Indian, especially because it is not always that Britain and India think alike on crucial international problems.

Nevertheless, it is noteworthy that the developments over Suez Canal have caused no disquieting feelings in the share markets. Even shipping shares were not adversely affected. On the contrary, the undertone of all the principal Stock Exchanges—Bombay, Calcutta and Madras—continued to be firm. The rot in tea shares, the outlook for which depends on exports, particularly to Britain, the largest tea consumer in the world, that was in evidence for some days past was arrested, following a revival of investment demand for them.

The unruffled manner in which equities are pursuing the steady upward movement that has been going on for the last few weeks reflects the confidence of operators that, despite the actions and counter-actions by Egypt and Britain since Friday last and the threats of military action held out by both sides nothing untoward would happen which would precipitate a war. This optimism is based on (a) the statesmanlike attitude of the Indian Government so far; it is significant that Mr. Nehru has not rushed in with any pronouncements on the merits of the dispute; and (b) the U.S. hesitation to follow the aggressive line of action indicated by Britain and France and its desire for an early peaceful settlement; and (c) the Egyptian Government's reassuring statements in regard to the use of Suez Canal as an international waterway. The latter Government has caused no embarrassment to friendly nations in regard to the payment of canal dues by ships using the Suez Canal. It has also quickly lifted the embargo on exports to Britain and the sterling area, thereby avoiding a serious headache to countries like India.

The U.S. President's attitude towards Egypt's action is more helpful than was expected. It shows that he will not allow his country to be hustled into action. He is for a quick mediation that will ensure the use of Suez Canal for international navigation. Since Col. Nasser has expressed readiness to honour the international obligations of Egypt under the agreement on Suez Canal, there is room for hope that an amicable settlement of the dispute can be found. Accordingly, the refusal of the share markets to take an unduly alarmist view of the Middle East developments reflects a proper sizing of the situation.

* * * *

The World Bank Mission, in its report on India's second Five-year Plan, has made a special reference to the Government's cotton textile policy. It has expressed serious misgivings about the recently announced compromise for meeting the expected increase in the demand for cotton textiles. It believes that this compromise will prove largely unworkable. In the Mission's judgment, the Government's decision greatly underestimates the practical difficulties of installing and getting into operation the requisite number of Ambar Charkhas and powerlooms on a decentralised basis.

The Mission questions the feasibility of making the installation of automatic looms in the mill sector conditional on the allocation of the output of these looms to exports and of making failure to meet this condition subject to a penalty, the nature of which appears to be unspecified. It is even inclined to doubt whether the mills will have adequate incentive to install the additional spindles necessary to supply a much greater quantity of yarn to the handloom sector, in view of the uncertainty whether the handloom sector will really be capable of producing the increased production expected of it. The fact that the existing quota for spindles has apparently not been taken up in full, it says, appears to bear out its misgivings. It understands that the Government is prepared to review this programme, if experience indicates that the hand-spinning and decentralised weaving sector do not live up to expectations, but it fears that the necessary remedial action might well come too late, in view of the time required to procure and install mill machinery and to reach a consensus of opinion that the programme has really been a failure. The Mission, therefore, believes that the current programme will either jeopardise the supply of an essential consumer item at reasonable prices on the domestic market or bring about a serious curtailment of exports at a time when prospective export earnings appear already far short of what is required. While it appreciates the need for Government measures to support the production of khadi and handloom cloth by various measures, it considers that any such measures should leave the mill sector free to expand in the light of its own judgment of markets.

On the general controversy of small-scale and cottage industries *versus* organised factory industries, while the Mission welcomes (a) the Government's effort to raise the efficiency of the former group, (b) even appreciates the practical necessity of providing moderate subsidies to enable these industries to compete with factory enterprises and (c) grants that promotion of small-scale industries, as distinct from village (or hand) industries, is sound, as it is calculated to encourage a healthy dispersal of industrial ownership, it thinks that the difficulties inherent in an effective expansion of small enterprises are considerably underestimated by the planners, that the impact of the programme will be slow in manifesting itself and that, therefore, the contribution to national income expected from small-scale and village industries under the Plan is substantially over-estimated. Above all, the Mission questions the wisdom of insisting on so-called "common production programmes," whereby the required increase in output of more or less essential consumer goods is allocated between the factory and non-factory sector, thus involving excessive reliance on the unproved ability of the non-factory industries to meet the necessary demand.

The Government of India, however, seems to remain unconvinced by the eminently sensible views of the World Bank Mission on its policy relating to small-scale industries, in general, and to textile industry, in particular. This is evident from Mr. T. T. Krishnamachari's statement in Parliament yesterday as well as at an earlier meeting of Directors of Industries of State Governments, to which reference is made elsewhere. We are sure that he must have read and digested the report of the World Bank Mission long before making these statements. The essence of his observations is that "it is the definite policy of the Government that the increased demand for cloth that will arise in the country during the next 10 years must be met, in a large measure, by decentralised production." By decentralised production, he means, of course, handlooms and powerlooms run on a small-scale. It is not clear as to what was the provocation for Mr. Krishnamachari, who had declared only three years ago that, if the country were to depend on handlooms for the major portion of its clothing needs, its people would have to wear only loin cloth, to announce the Government's textile policy for as long a period as the next decade in such a cavalier fashion. Was he provoked by the report of the World Bank Mission? Whatever may have been the cause, his pronouncement sounds childish.

* * * *

An important feature of British banking tradition, as is well known, is that the banks confine their activities to providing short-term finance. Indian bankers too, nurtured as most of them have been in the British tradition, regard any departure from the short-term finance as something undesirable and unhealthy. There is, however, no doubt that this practice has stood the test of time for the economic history of many a nation records that the banks which broke from this tradition have invariably come to grief. But one may wonder whether a judicious relaxation of this principle in favour of certain well-defined and deserving cases is altogether as bad as the traditionalists would like us to think. In the modern age, there is an insistent demand for large capital resources. The atomic developments themselves indicate what has been aptly termed a second industrial revolution. The leisurely investing class, which could lend and bide its time for a return, has practically disappeared. It is in this context that one has to review the great tradition of the British bankers that it is never safe to place the depositors' money in medium-term or long-term advances.

Such a review was made—in a most cautious manner, of course—by a great British banker himself. Presiding over the annual meeting of the U.K.'s Finance Corporation for Industry, Lord Bruce, after surveying certain trends in British economy, such as the slow progress of its export trade, inflation and workers' attitude to automation, said that there was one matter which brooked no delay. It was the need to provide for financing expansions and developments in industry which were vital to the national economy. Illustrating his remarks by a reference to the steel industry, he said that this industry had formulated plans which involved capital expenditures running into tens of millions of pounds over the next few years. The greater part of the required finance, he said, would be forthcoming from internal resources of the companies concerned. But some money might have to come from outside sources. It was at this stage that Lord Bruce made the proposal that the British banks could play a notable role in providing some industrial finance. Elucidating his suggestion, he said:

"The scale under modern conditions on which finance is required to cover future planning has now reached the point where only the banks command the necessary resources. This fact is being increasingly recognised. In America, the banks now grant what are called 'term credits' and facilities of a similar character are provided by many banks on the Continent. These arrangements undoubtedly conflict with the principles on which the U.K. banks have been so firmly and successfully established and I would not put forward any suggestion for a modification of those principles, if I thought it would in any way impair the strength, stability and flexibility of our banking system. Nevertheless, by virtue of the very strength which they have achieved and in view of the need to cover the finance required for expansions and developments in industry vital to our national economy, I believe they would be well advised to consider the desirability of a limited departure from their existing practice.

"This is neither the time nor the place at which to make detailed proposals regarding this suggestion, but, in broad terms, it is my considered opinion that the banks might well examine the possibility of granting fixed-term loans for this purpose, with a maximum of five to ten years, to an aggregate amount limited to some proportion of their total advances. Such loans should be strictly confined to objectives designed to benefit the national economy and conditioned that the required finance could not be obtained through any of the existing channels.

"Should the banks see fit to adopt the suggestion I have made, an immediate question arises as to how they would put it into operation. I think the practical method would be for the banks as a whole to operate through a chosen instrument. It is a little embarrassing for me to speak on this point as I might well be accused of pressing the claims of your Corporation to be the chosen instrument. I feel, however, that the matter is so important that I do not propose to allow this consideration to weigh with me. The question is one for the banks to decide but I am confident that should they desire the co-operation of your Corporation, it would be your wish that it should be afforded to the fullest possible extent."

The essence of the scheme which Lord Bruce has advocated, lies in the proposal that advances should be made by the banks to industry in the shape of fixed-term loans for a period of five to ten years. The value of this suggestion to India is more than academic. For conditions in India are not materially different from those in Britain. The bankers in India will, therefore, do well to pay some attention to this question. It is true that the Shroff Committee went into it and came to the conclusion that joint-stock banks should not provide medium-term, let alone long-term, finance for industries. But, since then, there has been a change in the situation which merits fresh thoughts on this subject.

* * * *

A timely warning against the danger of a recurrence of shortage of power in the Bombay State after three years, unless arrangements were set in train even from now on for augmenting plant capacity, was sounded by Mr. K. G. Milne, Chairman of the Bombay Suburban Electric Supply Ltd., in the course of his address to the Company's shareholders at their annual general meeting held today. He desired that the plant capacity at either Bhira or Trombay should be stepped up; Koyna power, in his opinion, despite all assurances to the contrary, would become available not earlier than 1961-62. Mr. Milne availed himself of the opportunity to strike this note of warning, in view of the proposed changes in the reorganisation of the Bombay State and in the hope that the authorities concerned might promptly take the necessary steps to ensure that Bombay was not starved of the urgently-needed power for the implementation of the second Five-year Plan. The State has had bitter experience of a power shortage in the past and any repetition of this during the next five years will, as he said, prove calamitous.

During the past one or two years, the Power Shortage Board has been over-cautious in the matter of making available enough power to industries, as a result of which industries in the Bombay region have been deprived of millions of units. Referring to this attitude, Mr. Milne said that it was evidently due to the optimism on the part of the authorities that certain new ventures in the public sector would be able to absorb electric power. Unfortunately, this, as he said, has not materialised. It has now been officially stated that the first 50 M.W. set at Trombay will be brought into commercial use at the end of 1956 and a second set of equal capacity, about six or nine months later. If this expectation actually materialises, the power position in the Bombay region will improve considerably, and it is hoped that it will continue to remain so till about 1959. Mr. Milne, however, anticipates a shortage of power after this period, and, therefore, has drawn the attention of the authorities to take immediate steps to augment the power capacity in this region.

Mr. Milne was at pains to draw attention to the increasing interference of the State Electricity Board in the day-to-day operations of the licensees. While the Board had proved to be of no assistance to the industry by way of providing loans or materials, he said, there had been a "continual pressure amounting almost to harassment" at times, in regard to rates charged to consumers by the licensees in the State and the Association of Electrical Undertakings had to draw the Board's attention that, under the Electricity (Supply) Act, the licensees had full freedom to formulate their rates of supply, so long as they did not violate the provisions of the Sixth Schedule to the Act. As one who had something to do with the drafting of

EQUITIES BUOYANT

T.E.L.CO. IN LIMELIGHT

From Our Own Correspondents

BOMBAY, *2nd August*

THE Stock Exchange ruled firm during the week under review, in refreshing contrast to the dullness in the previous week. Except for a slight reaction on Tuesday last, the trend of prices was distinctly upward on strong speculative support inspired by encouraging corporate news, political developments in Egypt following the nationalisation of the Suel Canal Company, the absence of any confirmation about the rumours of an imminent increase in excise duty on cloth, reports that activity in the cloth market had broadened, and satisfactory technical position as indicated by the narrow carry forward charges. On balance, equities over a wide front scored smart gains.

Bombay Dyeings, Centurys and Shree Niwas among textile shares, Belapurs and Phaltans in the sugar group, National Rayons in the miscellaneous group and Tata Locomotives among engineering shares provided the bright spots in the market. Tata Locomotives, in particular, were in the limelight on strong speculative buying induced by expectations of a maiden dividend after the Tariff Commission's present enquiry into the fair prices of locomotives and boilers manufactured by the Company is completed.

The Stock Exchange remained closed today on account of *Kadmi Pateti*.

In the steel section, Tata Ordinaries resumed on a strong note, moving up from Rs. 203-4 to Rs. 205-12. After reacting to Rs. 203-8 on Tuesday, the shares advanced to Rs. 206-4 at the close yesterday. Indian Irons rallied from Rs. 35-11½ to Rs. 36-10.

Textile shares generally found good support on expectations that the industry would have another prosperous period during the current year. Rumours about the possibility of an increase in excise duty, no doubt, induced some profit-taking on Tuesday, but this proved short-lived. Bombay Dyeings shot up from Rs. 652-8 to Rs. 669-6 and, after receding to Rs. 656-4, recovered to Rs. 663-2. Centurys gained from Rs. 572-8 to Rs. 586. Kohinoors moved up from Rs. 386-4 to Rs. 390, but the Directors' decision to maintain the interim dividend at Rs. 6 per share caused some disappointment and the shares slipped back to Rs. 383-8 at the close. Central Indias gained Rs. 2 over the week to Rs. 162, Ahmedabad Advances Rs. 5 to Rs. 202-8, Bradburys Rs. 3-2 to Rs. 258-2 and Edwards Rs. 6-4 to Rs. 345. Finlays were marked up by Re. 1-8 to Rs. 351, while Indu Ordinaries rose by no more than an anna to Rs. 13-10. Indore Malwas staged a rise of Rs. 8-2 to Rs. 163-12 and Khataus by as much as Rs. 13-2 to Rs. 276-4. Minervas put on Rs. 2 to Rs. 97. Model Mills were done Re. 1-14 higher at Rs. 156-4 and Mysore Spinnings changed hands Rs. 5 better at Rs. 117-8. New City Mills gained Re. 1-4 to Rs. 181-4, while New Greats dropped Rs. 5 to Rs. 258. Phœnix Mills rose by Rs. 3-12 to Rs. 148-12. Shree Niwas were well favoured and the scrip advanced by Rs. 9-6 to Rs. 234-6. Simplex were done at Rs. 215 *ex-div.* as against Rs. 226 *cum-div.* last week. Standards gathered Rs. 4-6 to Rs. 485-10, Svadeshis Rs. 2-8 to Rs. 257-8 and Swans Rs. 3-12 to Rs. 451-4. Tata Mills showed no change at Rs. 57-4.

Bank shares continued to attract investment support and gains were prominent in leading counters. Barodas were picked up Rs. 2-12 higher at Rs. 106-12. Bank of Indias scored a gain of Rs. 3-8 to Rs. 176. Central Banks were, however, a fraction lower at Rs. 56, while their new shares were a shade better at Rs. 58. Punjab Nationals moved up by Re. 1-4 to Rs. 61-4 and United Commercials by Rs. 2-12 to Rs. 59.

The insurance section was dull, but the undertone was steady. New Indias were unchanged at Rs. 50-4, while Indian Mercantiles were in request a rupee higher at Rs. 47. Orientals changed hands Rs. 30 lower at Rs. 3,820. Vulcans rose by Re. 1 to Rs. 16-8.

Electricity shares were featureless and business was at a low ebb. Ahmedabad Electrics were maintained at Rs. 100-10, while Bombay Suburbans shed As. 10 to Rs. 116-14 and Surat Electrics Re. 1-4 to Rs. 118-12. Tata Hydros declined by Rs. 2 to Rs. 128 and Tata Powers by Rs. 8-12 to Rs. 1,312-8. Andhra Valleys were, however, held at Rs. 1,232-8.

The miscellaneous section maintained a steady tone, with several bright features. In the sugar section, Belapurs were in form with a jump from Rs. 242-8 to Rs. 259-8, before closing at Rs. 254-8. Bhopals were As. 3 better at Rs. 18-3. Phaltans gained as much as Rs. 7 to Rs. 167, while Walchandnagars declined by Re. 1-4 to Rs. 271-4. Cement shares were featureless, moving within narrow range. A.C.C.s fluctuated between Rs. 193-4 and Rs. 190-8 before closing at, Rs. 192-4. Digvijayas were dull at Rs. 199. In the engineering and mining group, Alcock Ashdowns were steady at Rs. 377-8. Tata Locomotives rallied from Rs. 150-8 to Rs. 170 and, after reacting to Rs. 163-12, recovered to Rs. 168-8. Larsen and Toubros provided another favourite counter on a favourable reckoning of the outlook for the Company and they spurted from Rs. 16-2 to Rs. 17-4. Premier Constructions were just steady at Rs. 207-4. Shivrajpurs were done As. 8 better at Rs. 91-8 and Indian Coppers As. 1½ higher at Rs. 7-3, while B.B. Petrols were quiet at Rs. 4-5.

Among shipping and transport shares, Scindias were a little erratic, moving between Rs. 19-9 and Rs. 18-15 and closed with a loss of As. 4½ at Rs. 19-2. Great Easterns lost As. 8 to Rs. 20. Hindustan Motors, which were officially listed on the Stock Exchange this week, gained As. 2 to Rs. 10, while Premier Automobiles shed As. 4 to Rs. 99-8. In the miscellaneous industrial group, Bombay Burmahs presented an erratic pattern, but on balance gained Rs. 6-4 at Rs. 731-4. National Rayons moved up by Rs. 6 to Rs. 263. Tata Chemicals attracted good attention and rose by As. 11½ to Rs. 20-11. Tata Oils were steady at Rs. 58-8 and Wimcos at Rs. 185-10.

Calcutta Stock Exchange

CALCUTTA, *1st August*

Trading on the Calcutta Stock Exchange during the week under review, was characterised by limited turnover and narrow price movements. Fresh incentives were lacking and operators did not show much interest in business. Only the speculative counters changed hands. The undertone of the market was quiet to steady.

There was some selling in tea shares on reports that current price realisations on tea were not more than what were required to meet the working costs of companies. Hantaparas dropped Rs. 6 to Rs. 200. Tezpores slipped by Rs. 2-1 to Rs. 24-7. New Champtas receded by As. 4 to Rs. 45-4. Brooke Bonds shed 15 pies to Rs. 22-15. Brahmapootras softened by an anna to Rs. 8-12. Jayshrees were neglected at Rs. 11-10. Methonis, however, met with special buying support and advanced by As. 4 to Rs. 23-10.

The coal section ruled irregular. Some shares failed to evoke demand, while others found buyers. Ballys fell by Rs. 5 to Rs 132. Barnagores suffered a loss of Rs. 2 to Rs. 131. Agarparas eased by As. 2 to Rs. 11-6. Ganges, however, changed hands Rs. 2 higher at Rs. 68. Champdanys and Nationals rose by a rupee each to Rs. 154 and Rs. 24-2, respectively. Nellimarlas gathered As. 9 to Rs. 12-7. Presidencys were done at Rs. 5-12.

Coal shares encountered some support. Bengals picked up Rs. 3 to Rs. 538. Karanpura Collieries hardened by Rs. 2 to Rs. 118. Burrakurs gained As. 4 to Rs. 13-8. Western Bengals were better by an anna at Rs. 6-11. But Central Indias shed an anna to Rs. 7-4. Talchers came in for business at Rs. 3-3.

Engineering shares were easy for want of sufficient enquiries. Richardson and Cruddas receded by Re. 1-1 to Rs. 24-15. Indian Irons retreated by a rupee to Rs. 36-9. Jessop & Cos. declined by As. 4 to Rs. 35-4. Kumardhubis lost an anna to Rs. 10. Bhartia Electric Steels were unchanged at Rs. 17-5. Burn & Cos., on the other hand, were sought Rs. 3-8 higher at Rs. 359. Braithwaites were also favoured well, their quotation spurting by a rupee to Rs. 28-13. Textile Machineries gathered As. 6 to Rs. 22-8.

Among mining shares, Metal Corporations moved down by As. 6 to Rs. 10-10. Burma Mines were unaltered at Rs. 3-5. Deals were put through in Consolidated Tins at Rs. 2-10. Indian Coppers improved by As. 3 to Rs. 6-12.

Activity in the miscellaneous section was marked by sustained buying in paper company shares. Orient Papers rallied Rs. 2-6 to Rs. 39-13, Titaghurs strengthened by As. 5 to Rs. 40-9. Indian Paper Pulps rose by As. 4 to Rs. 25-8. Shree Gopals had a few buyers at Rs. 18-10. Among other miscellaneous industrials, Balmer Lawries were subjected to selling and dropped Rs. 5 to Rs. 181. Sone Valleys climbed down by As. 12 to Rs. 8-13 Rohtas decreased by As. 8 to Rs. 22-15, India Steamships by As. 6 to Rs. 9-3 and British India Corporations by As. 5 to Rs. 11. Metal Box eased by As. 2 to Rs. 30-1. Aluminium Corporations were unaltered at the last week's level of Rs. 10-5. There was, however, good enquiry for Rallis which registered a rise of Rs. 2 to Rs. 42-12. National Carbons also elicited attention and increased by As. 15 to Rs. 28-15. Indo-Burma Petroleums and Dunlop Rubbers, too, were well favoured, their prices rising by As. 10 each to Rs. 39-10 and Rs. 29-13, respectively. Imperial Tobaccos put on As. 6 to Rs. 15-14 and National Insulated Cables As. 3 to Rs. 26-4. B.B. Petrols were done at Rs. 4-5.

* * *

Madras Stock Exchange

MADRAS, *31st July*

After a brief spell of easiness, the Madras Stock Exchange once again sprang to activity during the week under review. All the popular scrips received good attention of operators, with prices recording improvement. Business in the planting section was brisk. Coffee shares were particularly firm, thanks to the publication of the Coffee Board's scheme of financial assistance to coffee growers. Although the average price realised by several tea estates had not been quite encouraging of late, the operators seemed to have taken an optimistic view of the long-term outlook. Banking and insurance shares also met with support. The textile section, too, generally depicted a strong note, the buying fervour being fanned by the persistent upward trend in domestic consumption of cloth and reports of large enquiries from Burma for yarn, as well as cloth. The undertone of the market was steady.

The following are the dividend announcements made during the week under review:

		Dividend per cent.	
		Latest	*Previous*
Cochin Malabar	29-2-1956	25	15
Balmadies Plantations ..	31-5-1956	10	15

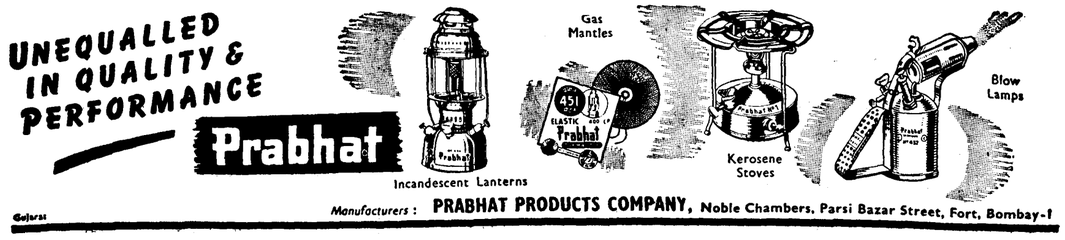
* For eight months ended 31st March, 1956.
† For the year ended 31st July, 1955.
‡ Interim.

Coffee shares provided a bright spot in the planting section. Consolidated Coffees rallied As. 6 to Rs. 21-6. Mysores advanced by As. 4 to Rs. 2-12. Coffee Lands spurted by As. 3 to Rs. 24-14. Amalgamateds were firm at Rs. 12-8 and Kadurs at Rs. 2-14-6 *cum-div.* Among tea shares, Devons picked up a rupee to Rs. 24-8 *ex-div.* Neelamalais rose by As. 6 to Rs. 8-4. The Neelamalai Tea and Coffee Estates Ltd. has purchased "Wooligooly" a coffee estate in Coorg—for Rs. 12 lakhs. The estate has a total area of 428.83 acres, of which 363.39 are coffee bearing. Balanoors and Kalpettas strengthened by As. 4 each to Rs. 24-2 and Rs. 34-12, respectively. Kalasas gathered As. 3 to Rs. 16-4. Among rubber shares, Peninsulars hardened by As. 8 to Rs. 33. Thamarapallys scored a gain of As. 6 to Rs. 32-8 *cum-div.* Rajagiris put on As. 4 to Rs. 24-12. Travancore Rubbers were higher by a like amount at Rs. 24. Pullangodes increased by As. 3-6 to Rs. 4-10 *ex-div.* The Pullangode Rubber and Produce Co., Ltd., proposes to issue, subject to the approval of the Government, ordinary right shares at par in the proportion of one share for every two held, in order to cover a part of the cost of replanting.

In the textile section, Lakshmis evoked enlarged buying enquiries and moved up by Rs. 6 to Rs. 250 final *cum-div.* 'A' shares gathered Rs. 3 to Rs. 125 final *cum-div.* Cannanores and R.C. Ambikais improved by Rs. 5 each to Rs. 181 and Rs. 255, respectively. Coimbatore Spinnings were done Rs. 4 higher at Rs. 117. Rayalaseemas advanced by Rs. 2 to Rs. 155. Loyals gained Re. 1-8 to Rs. 54. Rajapalayams, however, were subjected to selling and fell from Rs. 173 to Rs. 166-8 *cum-div.* Coimbatore Pioneers dropped Rs. 5 to Rs. 335. Anglo-Frenchs receded by Rs. 4 to Rs. 115. Ranga Vilas lost Rs. 2-12 to Rs. 114 *cum-div.*, Vasantas Rs. 2-8 to Rs. 342-8 and Janardhanas Rs. 2 to Rs. 125.

The banking section ruled fairly active. Bank of Mysores firmed up by Rs. 4 to Rs. 252. Indian Banks fully paids spurted by Rs. 2 to Rs. 206 *cum-div.* Punjab Nationals hardened by Re. 1-4 to Rs. 60-12. Indian Overseas were fully maintained at Rs. 153, as also Travancores at Rs. 18-10.

A rise of Rs. 6 in the quotation of Textools which stood at Rs. 210 was the feature of trading in the miscellaneous section. Travancore Chemicals were pushed up from Rs. 15-8 to Rs. 16. Aluminium Industries advanced by As. 14 to Rs. 21-12. Indian Aluminiums hardened by As. 4 to Rs. 22-5. Central Scientifics and Mysore Tobaccos gathered As. 3 each, the former to Rs. 7-6 and the latter to Rs. 7-6. Mysore Stonewares gained As. 2 to Rs. 18-6. Among sugar and breweries, United Breweries jumped up by Rs. 3 to Rs. 185. E.I.Ds put on As. 4 to Rs. 30 interim *cum-div.*



NEWS IN BRIEF

THE question of fixation of ceilings on land holdings will be considered by the Andhra Government after the reorganisation of States and after the integration of Hyderabad with Andhra.

The Rubber Board has been permitted to import natural rubber, in order to meet the requirements of the manufacturing industry in the country. The imported rubber will be made available to manufacturers at the controlled price.

The Government of India has bought heavy machinery worth Rs. 15 lakhs for reclaiming forest land and constructing field channels under the Tungabhadra Project. The machinery is expected to be put into operation in November.

The Co-ordinating Committee dealing with the Neiveli Project has recommended the placing of orders for the purchase of mining equipment valued at Rs. 1½ crores. A decision is expected to be taken by the Ministry of Production shortly.

A five-ton sample quantity of bauxite deposits from Shevaroy Hills in Salem district will be sent to the U.S.A. to be tested for feasibility of extraction of aluminium. The Government of India has under consideration a proposal to locate a 10,000-ton capacity aluminium plant in Salem.

According to a Press note issued by the Commerce and Industry Ministry, the Government of India has decided to allow imports of a reasonable quantity of cycle tyres and tubes during the rest of this year. The Dunlop Rubber Company, *Calcutta*, will import the entire quantity. The imported and indigenous cycle tyres and tubes will be sold at a uniform price.

The Central Tobacco Inquiry Committee, appointed by the Government of India, to review the present working of the structure of tobacco excise tariff and the procedure adopted for its assessment, is expected to submit its report in January 1957. The Committee, which at present is touring the country to collect evidence, is headed by Mr. K. Raghuramiah, M.P.

Pursuant to the recommendation of the Wage Board, the Hyderabad Government has decided to grant a total increase of Rs. 3-8 in the emoluments of workers employed in 12 industries of the State having basic pay of Rs. 26 Osmania currency or less per month. The question of making the rule applicable to other industries is also under consideration.

A 13-man advisory committee has been appointed by the Government of Bihar to enquire into the conditions of employment in the mica industry in the State and to advise it in the matter of revision of wage rates fixed under the Minimum Wages Act, 1948. Mr. R. N. Pandey, Labour Commissioner of Bihar, will be the Chairman of the Committee which consists of five representatives, each of employers and employees and three Government officials.

The Government of India has decided to constitute a customs advisory committee for the Cochin Port, on the lines of similar committees functioning at other major ports. The Committee will consist of one representative each of the Indian Chamber of Commerce, Mattancherry, and the Cochin Chamber of Commerce (European), Fort Cochin, the Deputy Chief Controller of Imports and Exports, Cochin, and an official of the Cochin Port. The Collector of Customs, Cochin, will be the Chairman of the Committee.

An investment of about Rs. 65 crores is envisaged by the Government of India in collaboration with the Burmah Oil Company for the exploitation of the known resources of Assam. Two rupee-concerns will be formed. One of them will explore oil in the four concession areas, comprising 502 sq. miles, held by the Assam Oil Company. The other will refine crude oil thus produced, probably at Calcutta. The establishment of four or five additional drilling companies for prospecting oil, possibly with the help of foreign capital, is also contemplated.

The Bombay Co-operative Societies (Amendment) Bill, 1956, has received the assent of the President. The Act makes provision for the amalgamation of small societies, if it is considered necessary in the public interest. The All-India Rural Credit Survey Committee had recommended encouragement of the formation of large-sized multipurpose societies. The Amendment Act also makes provision for appointing administrators for co-operative societies, in case the affairs of the societies are mismanaged, and simplifies the procedure for settling their disputes.

The Committee set up by the Government of India for suggesting suitable sites for the location of aluminium plants in India is expected to submit its report within four months. According to a survey conducted earlier, bauxite deposits occur chiefly in Bombay, Kashmir, Madhya Pradesh, Bihar, West Bengal, and Madras. The Committee visited some of these places. The recommendations of a team of American experts who had also toured the possible bauxite-bearing areas are expected to be sent along with the project reports.

Mr. Elmer W. Pehrson, Chief of the Division of Foreign Activities, U.S. Bureau of Mines, after visiting the Neiveli Lignite Project has stated that it was a challenging piece of engineering work, because of the artesian aquefers lying beneath the lignite bed. This was the first time in the history of mining, he said, that such conditions were encountered. It was, therefore, highly essential that every care should be taken to ensure that proper development plans were evolved and the water problem tackled satisfactorily. He added that design works were going on for the inauguration of a pilot plant using modern equipment for the utilisation of lignite.

The Government of India has decided to allow substantial imports of certain types of automobile tyres, the demand for which has exceeded the supply. The amount imported will be such as to eliminate the prevailing scarcity. The imports will be handled solely by Messrs. Firestone Tyre and Rubber Company, Bombay, Dunlop Rubber Company (India), Calcutta, Goodyear Tyre and Rubber Company, Ltd., Calcutta and India Tyre and Rubber Company Ltd., Bombay. These companies will sell the imported and indigenous tyres of the abovementioned types at a uniform price from 1st September 1956.

A six-man committee, with Mr. B. B. Saksena, Joint Secretary, Ministry of Commerce and Industry as Chairman, has been appointed, in order to recommend the lines on which expansion of the steel re-rolling industry, as well as of electric furnaces and steel foundries, should take place in future. The Committee will study the raw material requirements of the existing electric furnaces, foundries and re-rolling mills and assess the kind of expansion that is possible. It will also suggest measures for improving the efficiency of the existing units, in order to make them economic and independent of any form of price subsidy.

A Division Bench of the Assam High Court, in a sales tax reference by Bharat Automobiles *versus* the State of Assam, has declared section 29 of the Assam Sales Tax Act, 1947, *ultra vires*, void and inoperative on the ground that it violated the provisions of section 297 of the Government of India Act 1935, and Article 304 and 14 of the Constitution of India because of its discriminatory character. The section made dealers in goods imported from outside Assam liable for registration and payment of sales tax even if their gross turnover was below the taxable quantum. Dealers dealing in goods purchased locally were not made so liable by the Act.

From Abroad

The Soviet Government has decided to give up its oil concession in Northern Iran.

President Chamoun of the Lebanon signed on 25th July a Bill imposing taxation on companies which pipe oil through the country.

The U.S. Export-Import Bank has decided to lend $150 million to Brazil. The loan will be used for railway, power and port development.

A joint conference of the United States Senate and House of Representatives has agreed on a compromise Foreign Aid Bill sanctioning $3,766 million. This is $344 million less than the amount voted by the Senate and $341 million more than that voted by the House of Representatives.

Britain has agreed to increase financial assistance to Libya by £250,000 this financial year and by £750,000 during next year. Libya receives annually from Britain £3,750,000, a payment made under the terms of the 1953 Anglo-Libya agreement by which Britain maintains troops on Libyan soil.

The Ford Motor Company of London, a subsidiary of the American firm, has served dismissal notices on 2,000 men under its employ. The action of the Company follows a strike against one of its principal suppliers, the British Motor Corporation which supplies it with bodies.

The Aluminium Company of America has begun limited production of aluminium truck-wheels for tubeless tyres. The new wheel will sell at prices approximately 20 per cent. higher than conventional aluminium truck wheels and about double the price of steel wheels.

The next British Plastics Exhibition, organised by "British Plastics", one of the Associated Iliffe Press journals, with the full co-operation of the British Plastics Federation, will be held from 10th to 20th July 1957. The Exhibition will represent all sections of the industry.

The Indonesian Government has decided to remove the export duty on rubber. An official announcement in this respect is awaited. It may be recalled that, less than a month ago, the Government had reduced the duty from 18.6 Indonesian cents per kilo to 3.4 cents, in an effort to encourage rubber exports.

The American Can Company plans to build a million-dollar factory at Bayamon, Puerto Rico, in another phase of its expanding economic development programme. The plant will be equipped and operated by the Can Company under a ten-year self-amortising lease. It will have a yearly capacity of 150 million cans.

The 29,000-ton Italian luxury liner, *Andrea Doria*, which sank last week, was insured for $16 million in London and overseas markets. Of the main insurances of $16 million, 50 per cent. is held by Lloyd's Underwriters in London. There are also other subsidiary insurances believed to amount to a further $4 million.

Messrs. Pegson, Ltd. of Colville, manufacturers and contractors of civil engineering plant and industrial pumps, have concluded negotiations for supplying a complete crushing and screening plant for the construction of a new dam at Koyna, India. The order is worth about £200,000. Pegson will be responsible for the erection and starting up of the plant.

China and the Soviet Union signed a draft agreement in Peking on 25th July for extending trade between the two countries. Under the new agreement, which supplements the current trade-pact, the Soviet Union will supply additional industrial products, including machine tools and agricultural machinery, while China will supply natural products like rice, tea, and chemicals.

Mr. John Bell, Director of the International Co-operation Administration Mission in Pakistan, expressed disappointment and concern over the Pakistan Government's failure to deal effectively with the problem of food production. Commending on American aid to tide over the food crisis in East Pakistan, Mr. Bell said that, even after importing from the U.S. wheat and rice to the tune of 235,000 tons and 187,000 tons, Pakistan will still have to import large quantities of foodgrains with U.S. aid resulting in heavy cost to both the countries. He has urged Pakistan to tackle this problem with energy and determination, for an adequate food supply is absolutely essential for the development of a sound healthy and balanced economy.

PERSONAL

MR. A. M. Sahay, Consul-General of India in Hanoi, will succeed Mr. P. A. Menon as Ambassador to Thailand.

Mr. B. F. H. B. Tyabji, till recently Ambassador of India to Indonesia, will succeed Dr. Tara Chand as Ambassador to Iran.

Mr. Sankalchand G. Shah, a prominent yarn merchant, has been elected President of the Yarn Merchants' Association, Bombay, for the year 1956-57.

Mr. P. A. Menon, Indian Ambassador to Thailand, has been appointed High Commissioner for India in Australia and concurrently accredited as High Commissioner for India in New Zealand.

Mr. J. R. D. Tata, Chairman of Tata Industries, who had been to England to attend the Duke of Edinburgh's Conference at Oxford, has returned to Bombay.

Mr. M. P. Mathur, *Charge d'Affaires* of the Indian Embassy at Rangoon, has been posted to Hanoi as Consul-General in North Viet Nam, with the personal rank of Counsellor, *vice* Mr. A. M. Sahay.

Mr. S. Malik, I.C.S., Deputy Secretary, Union Ministry of Communications, has been appointed Officer on Special Duty, with the rank of Joint Secretary, in the vigilance division of the Home Ministry to co-ordinate departmental enquiries into cases of alleged corruption and malpractices.

Mr. Lalji Mehrotra, a prominent business man and an ex-President of the Federation of Indian Chambers of Commerce and Industry, has been appointed Indian Ambassador to Burma, in succession to Mr. R. R. Saksena, who has been appointed General Manager of the Eastern Shipping Corporation.

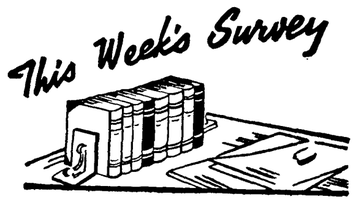
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *1st August*

State Aid for Industries

Bengal has at long last placed on its statute book a State Aid to Industries Act. Benighted Madras beat enlightened Bengal hollow in this respect. Eight long years have elapsed since Madras, which is now in the vanguard of India in both political and economic advancement, passed its State Aid to Industries Bill, followed in quick succession by the then baby province of Bihar and Orissa in 1923. And the Bengal measure, which was adopted in the provincial council last week-end, is modelled on the Madras and Bihar and Orissa enactments of 1923. Even Burma, the Punjab and the United Provinces have their own measures of State aid for industries; but whither Bengal! It was in the first reformed Ministry of Bengal that the late Nawab Sayid Nawab Ali Chaudhuri, who was then in charge of the portfolio of industry, drafted a Bill for affording aid to nascent industries and it was being carefully scrutinised when the term of the first ministry came to an end. The matter was taken up on the formation of the second ministry; but it was too short-lived to make any headway. A revised Bill was then prepared by the Advisory Board of Industries in the light of experience gained in the sister provinces of Madras and Bihar and Orissa; but this does not seem to have made much progress. Three years later, when the Nawab was appointed a member of the Executive Council in Bengal, the provincial legislature adopted, on the motion of Mr. D. P. Khaitan, a resolution for the appointment of a mixed committee of officials and non-officials for the drafting of a Bill for affording Government assistance to industries in Bengal. The next we heard of the subject was when, in the course of its address of welcome to Sir Stanley Jackson in August 1927, the Indian Chamber of Commerce of Calcutta referred to it. Sir Stanley gave an assurance in the course of his reply that the Hon'ble Sir A. K. Ghuznavi, who was then the Minister of Development, had been devoting considerable time and attention to the question.



SUCCESS OF A MERCHANT NAVY

ON what does the real success of a merchant navy depend? This question was very impressively answered by Mr. M. A. Master, a well-known authority on shipping, in the course of his address at the annual prize distribution ceremony of the Directorate of Marine Engineering Training at Bombay on Sunday last. The success of a merchant navy, Mr. Master declared, depended mainly on the selection of (1) ships suitable for the trades in which they are to be engaged, (2) men of knowledge, experience and integrity who have to manage them, and (3) navigating and engineer officers of ability, character, technical experience and devoted service who have to run them.

Among these factors, it is the last one which is of utmost importance in the present context when Indian shipping stands on the threshold of a new era of expansion and development. The second Five-year Plan envisages a rise of more than 50 per cent. in the gross registered tonnage, that is, from 600,707 g.r.t. in 1955-56 to 901,707 g.r.t. in 1960-61. With the achievement of this target, Indian shipping is expected to carry about 12-15 per cent. of the country's overseas trade and 50 per cent. of the trade with adjacent countries. Even the gross tonnage of 901,707 cannot be considered as adequate and will have to be stepped up considerably, if India is to play its role as one of the maritime nations of the world. India's goal is to reach, as soon as possible, the target of 2 million g.r.t. In this context, the need for ensuring an adequate supply of trained personnel to man the vessels can hardly be overemphasised. Indeed, it is, as Mr. Master rightly remarked, "our bounden duty to provide facilities for the training of the number of officers and engineers that we shall need to man our merchant navy of the future and join our various maritime services."

The Planning Commission has no doubt recognised the aforesaid aspect, as witness the special provision made in the Plan for improvement of the Nautical Engineering College and the Directorate of Marine Engineering Training. Incidentally, it is said that, with the passing of the fourth batch of cadets, 189 young men will have left the portals of the college at Calcutta. But, if the programme of acquisition of additional tonnage is fully carried out and in time under the second Plan, India will require a fresh force of 300 marine engineers. Drawing attention to this aspect, Mr. Master observed: ".... the questions of the expansion of Indian merchant navy and of our navigation and engineer officers are closely related and it will, therefore, be the responsibility of both private enterprise and the Government of India to keep a careful and sympathetic watch on the developments in both directions." Mr. Master did well to sketch, in this connection, the great progress that has been made in the field of marine engineering since the date of the early stern-wheelers of 1820. He observed:

"We have proceeded from the triple expansion engine to turbine or turbo-electric with Scotch and water tube boilers either coal or oil fired, and now the diesel has been receiving our favourable attention. The diesel electric and the gas turbines are bound to become more popular in the future. Moreover, from the boilers with a pressure of 25 lbs. per square inch in days of yore, our engineers have now to deal with a steam pressure of between 450 to 850 lbs. per square inch and a steam temperature of between 750° to 950° Fahrenheit. Marine engineering has, therefore, become both a complicated science and a skilful art. Further researches are being made and the use of atomic energy for propulsion may become, at a not very distant date, a practical commercial proposition. There is, therefore, a wide field for obtaining further special knowledge and acquiring further special experience, if our engineer officers have to keep pace and remain in touch with the results of modern research and modern progress. Further, auxiliary machinery is carried for lighting, refrigeration, heating, etc. This varies according to the size and type of ship and for the purpose for which it is to be used in both quantity and complexity."

The foregoing brief extract will indicate the large leeway that has yet to be made up in the training of marine personnel. This is, indeed, a challenge for our training institutes. The institutes should, as Mr. Master averred, provide new facilities for acquiring both theoretical knowledge and practical experience in this sphere.

Another vital aspect of Indian shipping to which Mr. Master made particular reference relates to the manufacture of engines and boilers for ships. Although this question has been considered to be of great and urgent importance for quite a long time now, no steps have been taken yet even towards the formulation of a practical scheme for the purpose; it will be recalled that the Government of India had convened a round table conference to consider the question as far back as March 1948. The shipping companies, however, have had to incur huge expenditure on sending some of their senior officers to study the methods and processes adopted for the fabrication and construction of diesel and other engines in the yards and workshops with which orders were placed by them for their manufacture. Mr. Master, therefore, most earnestly urged upon the Government of India the imperative necessity of building engines and boilers for ships in India and establishing the necessary workshops for the purpose without delay.

Here is a proposal which deserves to be accorded top priority by the planners. When schemes can be drawn for the manufacture of boilers and engines for the railways and for building engines for automobiles and aircraft, there is no reason why similar schemes should not be formulated for the construction of boilers and engines for the merchant navy. Experts have urged and experience has taught us that, even from the viewpoint of the pre-sea training of engineer officers, the establishment of a marine engine building industry is quite essential. Clearly, its establishment should no longer be delayed.

EXPORT OF ORES

In response to the Supreme Court's interim order dated 24th July, 1956, the Union Government has modified its export policy in relation to iron and manganese ores. Export quotas, it has now been announced, will be granted to shippers and mine-owners on the basis of two-thirds of the quotas allotted to them for the half-year July-December 1955. The Supreme Court's order, it may be mentioned, was made after hearing a suit filed by a private exporting firm challenging the validity of the Government's policy designed to "canalise the export of ores in a progressively increasing measure through the State Trading Corporation." The firm, in a petition to the Court, contended that the creation of a monopoly in the export trade in ores in favour of the Corporation would amount to a violation of the fundamental rights of the equality of the citizen before law and the freedom to practice any profession or trade. The Vacation Judge, Mr. S. K. Das, in passing the interim order, directing the Government not to give any export quota to the Corporation, recorded the agreement of the Solicitor-General that the petitioner would be given an export quota to the extent of 66⅔ per cent. of the quota granted to him for the period July-December 1955. The Judge also recorded that the present order had been passed without prejudice to the rights and contentions of the parties.

This order is now the basis of the Government's revised export policy. Export quotas, as already stated, will be granted to mine-owners and shippers on the basis of two-thirds of the quotas allotted to them for the half-year July-December 1955. Further, export quota will be granted separately for each of the ports through which exports are effected. Separate quotas will thus be granted for the ports of Calcutta, Visakhapatnam, Masulipatam, Kakinada, Madras, Bombay, Bhavnagar and Kandla. Shippers and mine-owners who effected exports during the half-year July-December 1955 other than through quotas will be granted quotas on the basis of actual performance. They will receive quotas equal to three-fourths of the total quantity exported through the port concerned during the July-December 1955 period, less such quantity as might have been exported by them against quotas allotted to them for this period. Wagons, it is stated, will be allotted on a *pro-rata* basis to mine-owners on the basis of allotment made during the base period. Finally, quotas will be issued separately for iron and manganese ores. They will not ordinarily be interchangeable but the exchange of iron ore quota for manganese ore will be considered sympathetically.

The Government's modified export policy is in the nature of an interim adjustment pending the settlement of the suit before the Supreme Court. But the Government might usefully review its entire export policy in relation to iron and manganese ores in the light of the criticisms made by the interests concerned and the trade and commercial organisations. Thus, Mr. Manubhai C. Shah, President of the Madhya Pradesh Mineral Industry Association, in the course of his speech at a recent conference of representatives of mineral industry associations, held at Nagpur, denied the allegation that the trade and industry were inadequately equipped to handle the trade in the ores. Characterising the Government's policy, as expressed in the Press note dated 22nd June, as "very vague, ambiguous and misleading," a resolution, adopted at the Conference, averred that such statements would cause irreparable harm to the industry. Another resolution affirmed that the existing trading mechanism, far from being inadequate, possessed not only sufficient but surplus resources in the shape of personnel and capital to handle even a much larger turnover in ores.

Similar sentiments have been expressed by the Indian Merchants' Chamber, Bombay, in a communication addressed to the Government of India. The Chamber has urged the Government to restore the trade in ores to private hands. It has also pointed out that the "experience of State trading in other countries and the limited State trading in our own country during the war and the post-war period are not encouraging and, if anything, should serve as a warning against any proposal for such trading in future." Incidentally, the Chamber has questioned the wisdom of a reported arrangement whereby the Western Shipping Corporation is said to have bought a ship from the Visakhapatnam Shipyard through the State Trading Corporation. The Chamber says that it "would like to be enlightened about the reasons which have prompted the Government to introduce the State Trading Corporation as a middleman in a transaction between two State-owned enterprises." Clearly, the Corporation is creating a great deal of uncertainty and confusion in the public mind. It is time the Government revised its ideas on State trading.

SALES TAX IN MADRAS AND T.-C. STATES

For some time now there has been, as is well known, much agitation by the traders in various States against the multi-point system of sales tax, on the ground that it is highly complicated and irksome, and a clamour for introduction of a single-point levy. The agitation seems to have had the desired effect in the States of Madras and Travancore-Cochin. In the case of Madras, the Government has already decided to levy single-point sales tax on eight commodities, with effect from 1st April 1957, in place of the present multi-point sales tax and the additional sales tax now levied in respect of some of them. Suitable legislation to give effect to this decision is proposed to be taken by the State Government shortly. A Committee, appointed by the Travancore-Cochin Government, has also recommended reversion to the single-point system of sales tax.

The eight commodities to which the single-point sales tax will be applicable in the Madras State, with the rate of tax indicated in parenthesis, are: (1) Coffee—nine pies per rupee at the first stage of sale in the State (pool or first dealer in the State having a taxable turnover); (2) tea—nine pies per rupee; (3) cement—nine pies per rupee; (4) motor cars—one anna per rupee; (5) refrigerators—one anna per rupee; (6) kerosene—nine pies per rupee; (7) chemical fertilisers—six pies per rupee; (8) cane jaggery—nine pies per rupee. Tax will be levied at the first stage of sale in the State in respect of all these commodities. It is noteworthy that, in order to bring the business community into closer contact with the Government machinery, the Madras Government has decided to constitute a Sales Tax Advisory Committee at the State level. This Committee, which is being appointed for a period of two years, will consist of 22 members. The Minister for Revenue, who is in charge of "commercial taxes," will be the ex-officio Chairman of the Committee. The Committee will meet once a quarter to decide issues relating to administration of sales tax. The Government proposes to constitute advisory committees at the district level, too.

The decision of the Madras Government to resort to the single-point levy of sales tax on the eight items referred to will be greatly welcomed by the entire mercantile community. The advantages resulting from this new levy are twofold. In the first place, it will minimise, to a great extent, all chances of evasion and ensure better collection and thereby larger revenue for the Government. Secondly, it will bring great relief to many business men, particularly small traders. There is also no need for all sections of trade to maintain elaborate accounts for inspection. The rates proposed to be levied for the new single-point system by the Madras Government are by no means low, but the change in the system of levy is itself a welcome development. It now behoves the people of the State to give the Government and the Advisory Body the co-operation which they rightly deserve.

As regards Travancore-Cochin, the three-man Expert Committee on agricultural income-tax and sales tax appointed by the State Government has submitted its report. The Committee, after taking into account the pattern of trade and commerce, production and consumption in this region, is understood to have recommended the replacement of the existing multi-point system by a single-point levy at higher rates. While the details of the Committee's recommendations are not known, it is learned that the method suggested by it will be not a combined system of multi-point and single-point tax but a single-point levy on sales and purchases. This will mean that there will be a levy at the first point of sale in respect of goods for internal consumption and on the last point on purchase in respect of goods intended for sale outside the State. The Committee has also recommended the formation of a Sales Tax Advisory Committee at State and District levels.

WATER CONSERVATION

The move of the Central Government to introduce the latest scientific and technological development in regard to water conservation and irrigation is commendable. The target set for agriculture in the second Plan—overall increase of 40 per cent. in output—is so ambitious that the prospect of hitting it will be bleak, unless energetic steps are taken to ensure an integrated development of water and land resources. The Government has invited a team of Australian experts which will visit the country in the coming winter to advise on modern irrigation and water conservation. Before the arrival of these experts, an Indian team comprising Prof. M. S. Thacker and the representatives of the Union Ministries of Irrigation and Agriculture, will make a study tour of Australia next month. Meanwhile, Mr. J. G. Beale, Chairman of the Water Research Foundation in Australia, is in India at the invitation of the Government to assist the Union Food and Agriculture Ministry in designing a modern irrigation system for three tube-well project areas.

Mr. Beale is reported to have already suggested to the Government of India the implementation of a seven-point comprehensive scheme—now in operation in Australia—for water conservation and irrigation. The scheme envisages reduction of evaporation by the use of a chemical called "hexadecanol." This chemical, when applied to the surface of water, spreads a film of one molecule thickness. The quantity of chemical required per acre is only one pound costing not more than Rs. 3. The application of this chemical in tanks and reservoirs with areas ranging from 2 to 20 acres, it is claimed, has reduced evaporation by as much as 20 to 30 per cent. The cost of treatment is calculated at about As. 2 per thousand gallons saved. Further, the scheme envisages placing of a thick impervious membrane sheet 8/1000" made of plastic a few inches beneath the surface of the earth in tanks, lakes and canals. Such a device is said to bring down considerably the percolation losses.

There are three other important features of Mr. Beale's scheme. First, under the technique of "water harvesting," in areas where there is little rainfall, water is stored by individual farms in small tanks, two-thirds of the farm being used as a catchment area to irrigate the rest of the land. The method of sprinkling water on the land is carefully applied. It has been found that the yield from one-third of the farm now is eight times that on the entire farm previously. Secondly, water control device such as sprinkler irrigation equipment and gated pipes are used to make the maximum use of water with minimum wastage. The conventional flooding of land is avoided, and the gated pipes which allow water to flow along with furrows at specified intervals helped the minimum water to be spread over the maximum area. The gated pipes are so light that they can be shifted easily from place to place. Sprinkling through rotating pipes has the advantage of making the water absorb small quantities of nitrogen in the air. Thirdly, crop management in relation to irrigated crops will be more profitable. Such management will include rotation of crops, use of fertilisers, maximisation of the use of pastures, etc. The scheme also contains measures relating to the use of the earth removed in digging ponds in farms for producing the maximum storage space and preparation of a chart to indicate, depending on local conditions, the time for ploughing the land and the quantity of water to be used.

CO-OPERATIVE SUGAR FACTORIES

A PSEUDO-SOCIALISTIC MOVE

From A Correspondent

AT a time when we are overwhelmed by a torrential flow of platitudinous sermons on the virtues of a socialist pattern of society and of Co-operatives as one of its supporting pillars, it is not easy to probe into the ethical as well as the scientific validity of the assumptions underlying the Co-operative Movement as it is now being developed in certain spheres of our economic life. Yet a critical look at these assumptions can no longer be avoided if only to make sure that the so-called Co-operatives are in harmony with the socialist ideal not only in name, but also in substance.

The practical implications of a socialist pattern have not yet sufficiently crystallised. Nevertheless, whatever way this elastic phrase is defined, there is no doubt that its first and foremost objective is to work out, and uphold, the right balance among conflicting social interests. In other words, a particular policy or measure must be fair and equitable to all sections of the community, and, to the extent it fails to do so, it ceases to be truly socialistic.

How far is this crucial test satisfied by the much-advertised Co-operative sugar factories proposed to be established in the State of Bombay? Licences were issued for a dozen such factories; two have already been established and are now in operation; four more have placed orders for the requisite plant and equipment; and the remaining six, it is understood, are now planning to place orders. An objective assessment of the merits of the Co-operative approach must take a few broad facts into account.

First, at present-day prices, a Co-operative sugar factory will, on an average, require a capital outlay of a crore of rupees, or more; the members are expected to pool, at least initially, no more than, say, Rs. 15 lakhs; the balance will have to come from the State Government, or the Central Government, or the State Co-operative Bank. Is it the best policy to divert public funds to fulfil a function which private *entrepreneurs* are both able and willing to fulfil? The question is by no means irrelevant, especially at a time when capital is in short supply and the country desperately needs whatever funds can be found from whichever quarter to finance its massive second Five-year Plan.

Loss of Tax Revenue

Second, a Co-operative factory, unlike a company of the conventional type, is not required to pay any tax even on its business income. This, in any case, is the present position. To that extent, the profits of a Co-operative factory will be earned at the expense of the public exchequer, and this means that the burden will ultimately fall on the taxpayer. The amount of revenue loss can be gauged from the fact that a company-run sugar factory, with a crushing capacity of 800 to 1,000 tons of cane per day, would normally pay an income-tax of five to six lakhs of rupees per year.

And, third, a company-owned factory of the size mentioned above draws its cane supply from an area of 3,500 acres approximately. It is well known that, in Bombay State, sugar factories run their own cane farms which therefore belong to their shareholders. A farm of this size provides employment to 1,500 to 2,000 workers, apart from those employed on a piece-work basis. The workers, whether men or women, are paid at the rate of Rs. 2-3 per day. The wages paid by a Co-operative sugar factory are much lower—around Re. 1-2 per day for male workers, while, for female workers, they amount only to As. 8 to As. 10 per day. A Co-operative enterprise in this particular field will therefore mean a drastic cut in the income of daily-paid workers. The cut will amount to as much as one-half in the case of male and almost three-quarters in the case of female workers!

To put it differently, whereas a company-run sugar factory of the size mentioned above would pay to its farm labourers a sum of Rs. 10 to Rs. 12 lakhs as wages per year, Co-operative factories will get off with an annual wage bill of Rs. 4 to Rs. 5 lakhs. What justification could there be to transfer, in the name of Co-operation, some six to seven lakhs of rupees every year from farm workers to cane-growers or *bagaitdars*?

Amenities for Workers

This is not all. Workers employed on farms of company-run factories enjoy other advantages such as better amenities, provision for leave, fixed working hours, and an annual bonus. In all these respects, they are much better off than field workers employed on behalf of Co-operative factories.

The question of bonus has a special interest in this context. In a company-run factory, all workers, employed whether in the factory or on the farm, receive a bonus every year. This usually amounts to two to four months' basic wages. In the case of a Co-operative factory, however, farm workers get no bonus, since the farms are treated as the property, not of the Co-operative, but of the individual members who are its shareholders. The members can, therefore, reap full agricultural as well as business profits.

Here, then, are the salient facts about the Co-operative sugar factories which are being advocated with so much enthusiasm. On a simple calculation, other sections of the community—taxpayers, workers, and the long-neglected masses of consumers struggling to eke out a living at a dismally low level—are called upon to make a handsome gift of Rs. 12 to Rs. 14 lakhs a year to each Co-operative factory. Why? The answer brings us back to our starting point—because we are so enamoured of the word "Co-operative," so busy to deliver sermons in abstract terms on its high ideal, and so ready to accord exuberant emotional approval to everything that carries his charming label, that we have neither the time nor the inclination to look below the surface and see the bald facts as they are without confusing them with the glowing ideas that we have in our own mind.

A Misnomer

To all this should be added the fact that what passes for Co-operation in India is largely a misnomer. Unlike Co-operation in other countries, it is seldom a spontaneous growth from below, and almost always an artificial imposition from above, spoon-fed by the State, and rigidly controlled by bureaucrats. The elements of true Co-operation, which were never too prominent, are, if anything, fast sinking towards the zero point. For it would be no exaggeration to say that, like so many other private enterprises, our Co-operative Movement, too, is now undergoing a process of "nationalisation," and what invariably goes with it, of bureaucratisation.

How long will such pseudo-co-operative and pseudo-socialist enterprises continue to enjoy such indiscriminate blessings in our socialist pattern of society? The answer is anybody's guess. But without claiming any prophetic quality, I think one can safely make a simple statement: the present trend will continue until our large-hearted ministers are able to descend from their dizzy spiritual heights; until they begin to see the obvious facts that they are ministers, not of some catholic church, but of administrative departments; and that, consequently, their business is to deal less with matters pertaining to the soul and more with facts relating to the bazaar.—*All Rights Reserved.*

IMPLICATIONS OF AGREEMENT WITH STEEL WORKERS

NEW PRICE PATTERN IN THE MAKING

From Our Special Correspondent

NEW YORK, 28th *July*

PAPERS have been signed between management and the steel workers' union and, by the time the great furnaces have been refired, the strike will have lasted about one month. The new contract raises wages slightly. It runs for three years and contains a non-strike pledge for that period.

President Eisenhower, who never intervened in the negotiations, praised the settlement as a stabilising influence for the country as a whole and for the future. As on previous occasions, other industries will no doubt follow the steel contract pattern, whenever their agreements with their unions expire.

All this raises a whole series of question marks. First, a new price pattern is in the making. Steel prices will undoubtedly go up and other goods too, will. This was stated flatly at the time of the settlement and before.

This wage-price pattern has been traditional in United States industry. It is, of course, potentially inflationary; unless productivity catches up with the greater demands by labour, more and more money goes in the spending stream and profit margins of business decrease. The desire to catch up on productivity was one of the reasons why it was the desire of management to obtain as long a contract as possible.

Another overall consideration is, of course, that higher wages by the multitude of people produce greater potential spending power and also potentially higher savings, depending on what the public wants to do with its increased income. Indeed, the question has been raised in many informed quarters whether overall savings will be large enough to provide funds for the ever-increasing installations of automation and other electronic machinery which costs more and more, in order to boost productivity.

So far, statistical evidence is insufficient to point to a future trend. With prosperity at such high levels as at present great cushions have been built up, however, to cope with minor fluctuations in costs both on the household and industrial levels.

The cost of living has risen only fractionally in recent months and certainly cannot be an economic or political Presidential campaign issue, particularly in view of the fact that, during preceding Administrations, the cost of living has doubled and nobody complained about it as long as there was a relative balance between costs and income.

Political Field

In the domestic political field, President Eisenhower is still expected to win the election in November, if nothing untoward happens in the meantime. A mild controversy is raging at the present time who should be the President's running mate.

Ex-Governor Stassen of Minnesota, now special White House assistant, expressed the personal opinion that Mr. Nixon, now Vice-President, should be replaced by Governor Herter. The latter made it clear he was going to vote for Nixon, though, and the President himself has indicated that his preference would be Mr. Nixon, if the Republican Convention agrees.

In the Democratic camp, the odds still favour Mr. Adlai Stevenson who is the titular head of the party, having been the last Presidential candidate. In the meantime, Governor Harriman of New York is making much noise and thinks that with the aid of his chief political lieutenant he can win the Presidential nomination over Stevenson.

While everything is possible, it does not seem likely to this correspondent. It is quite a confusing and incongruous picture. Most of the Southern States have been traditionally Democratic—yet a good many of them voted Republican, because they believed in the liberalism of Mr. Eisenhower personally and they also believed in him as a leader.

Racial Equality

One of the most disturbing events to some elements of the South was the edict of the United States Supreme Court that there should no longer be any segregation between whites and non-whites which has prevailed in the South for generations—in fact, before and ever since the abolition of slavery.

With the clear delineation of governmental authority in the United States, among the executive, the judicial and the legislative branches, Mr. Eisenhower personally was never blamed for that decision even by the most rabid segregationists. Most Administration spokesmen admit that a court verdict cannot uproot overnight such longstanding practices and that the transition must be gradual.

Mr. Harriman, on the other hand, who fancies himself to be a disciple of his idol, the late President Franklin Delano Roosevelt, has come out flatly for an immediate cessation of segregation, hoping no doubt to capture the coloured vote.

Mr. Harriman is probably the richest of all Presidential hopefuls. His father built a railroad empire, the Union Pacific. He comes from a family of Tories and Conservatives, but, as a politician, he tries to build himself up as the friend of the "common man." Mr. Roosevelt succeeded in doing it and he was more than successful, because great economic distress prevailed in the depression years when he had been elected to the White House. By so doing he prevented serious outbreaks. No such necessity exists today and, in my opinion, Mr. Harriman is barking up the wrong tree and will find out for himself.

West Asia

Newspapers and magazines in the United States gave considerable space to the meetings between Prime Minister Nehru, Marshal Tito and President Nasser. The general interpretation here was the *communiques* issued came very close to the Soviet line in opposition to the Western powers, perhaps not in spirit but in semantics. This impression was aggravated by General Nasser's occupation of the Suez Canal, which made sterling tumble in the foreign exchange markets of America, but reportedly did not impede navigation.

Back of all this apprehension about the talks among Messrs. Nehru, Tito and Nasser is fear of another war between the Arab countries and Israel. The U.S. has a substantial stake on both sides of the fence—investments in Israel and oil in political ties in the Arabian countries. So far, it has been just a threatening battle of words, but it is being taken seriously in the United States and by the United Nations.—*All Rights Reserved.*

(Concluded from next column)

They, therefore, want to see proper machinery of negotiation developed which would have as its objective the redistribution of redundant men in other industries without the brutal process of sacking, and also the giving of adequate notice—far more than the traditional week—to find other employment. The narrow issue is one of compensation, following a pattern already made familiar in America, because, with financial compensation, the dismissed man has a chance without hardship of finding himself other employment. The broader issue is really the planning of staff reductions and the taking of every possible measure to mitigate the effect on the employees. That is an issue not only for the B.M.C. but for British industry. It is one which the unions themselves have not yet thought out. Neither they nor the Labour Party have got a plan to meet the times when full employment does not maintain itself without positive action. And the significance of the present negotiations is that they are going to accelerate the thinking towards this new and vital end.—*All Rights Reserved.*

THE NEW MODEL STRIKE

PRODUCT OF WELFARE STATE

From Our Own Correspondent

LONDON, 27th *July*

LONDON LETTER

THE strike which has hit the British motor car industry is of a kind not known before. It is the product of the Welfare State, the product of pledges given by Socialists and Conservatives alike, that mass unemployment was—subject always to the general balance of this country's external payments—a thing of the past. These pledges involved a recognition by Government and industry that they had a responsibility towards the wage earners to see that no unavoidable unemployment was ever caused. In spite of the relatively poor showing of the motor industry in exports over the past year, the balance of payment considerations do not enter into this dispute; nor is it correct that the unions have taken a completely unrealistic attitude and said that they cannot accept redundancy in any shape or form. Nor is the shadow of automation over this dispute as it was over that in the Standard Company. The basic question at issue is whether dismissals should be made arbitrarily by the employers or whether there should be joint consultation between employers and unions before any major action is taken.

The facts in this case are that the largest British motor company, the British Motor Corporation, a combine of the Morris and Austin undertakings, decided, because of falling sales, to lay off 6,000 of their employees. They did this without consultation with the unions, they simply informed the unions on the day before issuing the dismissal notices, and without any compensation. So rooted has the idea of consultation now become in British industry, that B.M.C. by their action have forfeited the goodwill of many, including Members of Parliament and newspaper editors, whose natural sympathies in a matter of this kind might have been expected to lie against the unions.

Union Solidly Behind

Some play has been made with the fact that little over half the employees of B.M.C. have gone on strike in spite of the pressure put on them by the unions, but it must be remembered that a very high proportion of the employees in the motor car industry have been recruited to it from many non-unionist trades, so that in any factory there will be a great many men who have never known union loyalties. The union men are solidly behind the strike, in spite of the fact it had to be decided upon at a very difficult time. When an industry is in depression and just before the holidays, strike action can have a minimum effect. Output at the factories concerned has been halved during the first week of the strike but that is of relatively little moment. The industry is now beginning its fortnight's holiday and both sides are no doubt hoping that the dispute can be resolved by the time the holiday ends.

Meanwhile, there have already been repercussions: the reduction in output of the affected factories is spreading right through the highly interdependent motor car industry, and the Ford Company has also become involved, simply because being short of material, it also decided to sack some employees, leading to a walk-out by the whole staff.

But the unions are convinced that the issue facing them is so fundamental that they cannot take the risk, whatever the difficulties and whatever the repercussions, of having employers return to pre-war practices in the matter of dismissals. The issue, therefore, extends far beyond the particular unions and the B.M.C. But the Trade Union Congress for the time being is leaving the matter to be fought out on a local basis, knowing full well that what happens in this case will be taken as a signal throughout industry.

Government Takes A Hand

The Government, reluctant as always to intervene, has, nevertheless, decided, after one week of strike, that it must call both parties together. It stands to lose from a revival of any form of class struggle, quite apart from the damage which either a prolonged strike or a wave of strikes would cause to British industry.

(Continued in previous column)

T.I.S.CO. EARNS RECORD PROFIT

STEEL OUTPUT HIGHEST IN POST-WAR YEARS

THE performance of Tata Steel ordinary shares on the Bombay Stock Exchange after the release of the Directors' report and audited accounts of the Tata Iron and Steel Company, Ltd. for the year ended 31st March 1956 on Monday evening (30th ultimo) hardly does any justice to the impressive achievements of the Company during the past year. The shares, which had officially closed at Rs. 205-12 on that day, reacted to Rs. 203-4 in the kerb, and at the time of writing are being quoted at Rs. 204-4. The report and accounts disclose that the Company has made all-round progress during the year; production and despatches show a distinct improvement over the year; the sale proceeds have recorded a sizable increase; and the gross profit has risen by about 38 per cent. to a record level.

Another highlight of the report is the satisfactory advance made by the Company with its development and rehabilitation programmes. If, despite this good show, the shares have not responded well, the reason must be found elsewhere. It may be due to technical considerations or the operators must have felt that the prospects of an increase in dividend in the near future are not quite bright.

The gross profit, which had slightly declined in the previous year from Rs. 9.53 crores to Rs. 9.36 crores, has shot up to Rs. 12.97 crores, a level not seen in the forty-nine-year history of the Company, exceeding the previous highest of Rs. 9.65 crores attained in 1951-52. The net profit, after providing for Managing Agents' commission, depreciation, taxation and bonus to employees, amounts to Rs. 5.81 crores, representing an increase of Rs. 2.59 crores over the year.

In accordance with the terms of the agreement with the Government regarding the increased retention prices, which included a special element to be set apart and credited to a development fund for meeting a part of the capital expenditure on the Company's expansion programme, the Directors have set aside a sum of Rs. 2.28 crores to the plant rehabilitation and development fund from the aforesaid net profit, in addition to the usual allocation of Rs. 1 crore transferred to this reserve in fulfilment of the condition on which an extra price was granted to the Company from July 1951. A sum of Rs. 78 lakhs has been added to the development reserve, as against Rs. 10 lakhs in the previous year. This represents the saving in tax liability on a development rebate of about Rs. 1.80 crores admissible for income-tax purposes on new additions of plant and machinery during the year. After these obligatory allocations, the disposable profit, along with the surplus brought forward from the previous year, is actually lower at Rs. 1.95 crores, as compared with Rs. 2.29 crores in the previous year. Consequently, no addition has been made to the general reserve which had received Rs. 31.99 lakhs in the previous year. This also explains why the dividend on ordinary shares has only been maintained at Rs. 10-8 per share. This is the third year in succession for which the dividend is being repeated, after the increase in capital following the conversion of deferred shares into ordinary ones in March 1954.

The following comparative table brings out the progress in the Company's working since 1952-53:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds (net)	40,15.55	35,03.16	35,68.90	35,51.72
Other income	1,77.27	1,78.73	1,65.50	2,22.80

Steel ingots	800	783	780	790
Saleable steel				

* Subject to deduction of income-tax.

It will be noted that the increase of Rs. 5.12 crores in net sale proceeds is offset to the extent of Rs. 1.50 crores by the rise in expenses. Of the expenses, outlay on raw materials, semi-finished and finished products, stores and spares, etc., account for an increase of Rs. 1.29 crores, wages, salaries and establishment expenses for Rs. 35 lakhs, works expenses for Rs. 22 lakhs and other expenses for Rs. 26 lakhs, while the adjustment in stocks accounts for a decline of Rs. 56 lakhs.

The Company's output of steel during the year was the highest achieved in any post-war year. The production of steel ingots rose from 1,040,000 tons to 1,059,000 tons and that of saleable steel from 783,000 tons to 800,000 tons. The entire increase in saleable steel was in semi-finished materials, the output of which rose from 190,000 tons to 223,000 tons, while production of finished steel products declined from 593,000 tons to 577,000 tons. There was no production of ferro-manganese during the year under review. The skelp mill, proposed under the modernisation and expansion programme, to produce skelp and strip for the manufacture of tubes at the new tube-making plant of the Indian Tube Company (1953) Ltd. had originally been scheduled to be completed by December 1955, but did not start operation till 28th March 1956, owing to a strike of dock workers in the U.K. in May and June 1955 which delayed the shipment of the mill equipment from the British suppliers.

The encouraging trend in production has been accompanied by an improvement in despatches also. Total despatches of saleable steel amounted to 756,000 tons, as compared with 749,000 tons in 1954-55, while the quantity of steel retained in the works for construction and maintenance purposes declined from 49,000 tons to 45,000 tons. Despatches of pig iron improved substantially from 79,000 tons in 1954-55 to 130,000 tons, of which exports out of India accounted for about 13,000 tons. Despatches of ferro-manganese from stocks amounted to 2,000 tons, as compared with 12,000 tons in the previous year.

Substantial progress was made during the year on the various projects in the modernisation and expansion programme. The Government of India, it will be recalled, had granted a special advance of Rs. 10 crores to meet a part of the cost of this programme. The Company drew during the year a further sum of Rs. 4.39 crores out of this advance, bringing the total amount drawn up to the end of the year to Rs. 9.19 crores.

The most important development of the year was the Company's decision, in consultation with the Government of India, to expand the Company's production beyond the target of 1.3 million tons of steel ingots, fixed under the M.E.P., to 2 million tons at an estimated cost of Rs. 75 crores. The progress made so far on the execution of the programme is satisfactory. At the close of the year under review, the total value of orders placed amounted to a little over Rs. 16 crores and this has since increased to Rs. 23 crores. The programme is to be financed out of (1) the increase of Rs. 61 per ton in retention price granted last year, (2) a loan of $75 million from the World Bank, an agreement for which was concluded in June last, and (3) the fresh capital issue made in March last, when 1,285,000 new ordinary shares were offered at a premium of Rs. 30 each, the whole of which has virtually been subscribed. Briefly, the terms of the World Bank loan agreement are: (1) the loan carries interest at the rate of 4¾ per cent., and (2) it is for a period of 15 years, repayable in instalments commencing from 1960. The first instalment of $2,355,000 due in 1960 has been taken over by three commercial banks in the U.S., on which the Company has to bear interest at the rate of 4¼ per cent., that is, ½ per cent. less than the World Bank rate. It will be interesting to note that this loan is the largest industrial loan granted so far by the World Bank and the largest single loan ever granted by it in Asia. This fact is a convincing testimony to the financial strength and stability of the Company as well as to the soundness of the expansion project. The financial standing of the Company is also borne out by the offer of three American commercial banks to share the burden of paying back the first instalment at a rate of interest more favourable than that charged by the World Bank.

Besides the financial assistance from abroad on reasonable terms the Company is also assured of supply of expert technical assistance from Kaiser Engineers of the United States. The Kaiser organisation has undertaken, under an agreement signed in December 1955, to provide engineering, procurement, supervision and construction services for the execution of the main part of the 2-million-ton programme, estimated to cost Rs. 62 crores, excluding expenditure on modifications to the works and on development of the Company's mines and collieries and town which will be undertaken by the Company's own engineering department. The Kaiser organisation has undertaken to complete the entire project by 31st May 1958. On completion of this project and of the programme for modernisation and expansion, the productive capacity of the plant will stand at 2 million tons of steel ingots and 1.5 million tons of saleable steel.

The following extracts from the Directors' report give an idea of the progress on the other projects on hand and of the new ones to be taken up by the Company:

"The Fretz-Moon plant for the manufacture of gas, water and steam tubes commenced operation in 1955 according to schedule. Work on the erection of the electric resistance weld mill and the cold-rolling plant is progressing satisfactorily.

"A project for the installation of a seamless tube plant for the manufacture of boiler, industrial, gas list and other seamless tubes, estimated to cost about Rs. 2.5 crores, is proposed to be undertaken by the Indian Tube Company, for which the necessary licence from Government has been applied for.

"To meet the increased requirements of refractories, an agreement was entered into during the year under review with Messrs. Didier-Werke AG., of West Germany, one of the largest refractory manufacturers in Europe, to install a plant in Belpahar, Orissa, with an annual capacity of 60,000 tons at an estimated cost of Rs. 1.86 crores. The plant, expected to come into operation in 1958, will be owned and operated by a new company, in the initial capital of which the Steel Company and Didier-Werke will participate in the ratio of 65 :35.

"Agreements have been concluded with Messrs. Heckett Engineering Inc., U.S.A., for setting up a plant at Jamshedpur by the end of 1957 to recover scrap from slag by the Heckett process. The plant will be operated by Heckett's or their subsidiary in India on payment of recovery charges.

"A plant is to be installed at Joda in Orissa for the manufacture of ferro-manganese in electric furnaces. Orders for the furnaces have been placed with the firm of Electro-Kemisk AS, of Norway, the installation of which will be carried out by Messrs. M. N. Dastur & Company, Calcutta. The plant, with an annual capacity of 30,000 tons, is estimated to cost Rs. 2.14 crores and to commence operation early in 1959, when the Company's 'E' blast furnace, hitherto used for the production of ferro-manganese, will be released for producing pig iron."

The total capital expenditure incurred during the year under review on the various projects of the 2-million-ton programme and the M.E.P. and on normal annual replacements and improvements to the plant amounted to about Rs. 12 crores. The total requirements of finance on all the items of capital expenditure projected for the five years commencing on 1st April 1955 are estimated at about Rs. 113 crores.

The impressive financial position of the Company is fully reflected in the synopsis of its latest balance-sheet presented below against the background of that five years ago:

	As on 31st March	
	1956	1951
LIABILITIES	Rs.	Rs.
Capital	17,33,96,013	10,47,23,360
Reserves, other funds and surplus	14,79,87,036	11,78,07,978
Provision for taxation	3,33,72,305	2,57,06,480
Liabilities	33,29,96,601	17,40,76,925
Total Rs.	74,77,51,954	42,32,15,243
ASSETS		
Gross block	69,39,07,755	42,67,22,240
Less—Depreciation	36,95,00,000	27,60,84,401
Net block	32,44,07,755	15,06,37,839
Stores, spares, etc.	5,44,06,772	5,58,94,006
Stock-in-trade	7,42,74,595	5,90,30,555
Debts, deposits and advances	17,11,79,322	6,70,02,537
Investments	5,86,48,857	2,81,20,090
Cash	6,48,34,653	6,25,29,016
Total Rs.	74,77,51,954	42,32,15,243

The above table also shows how far the Company has been able to strengthen its position during the past five years, in the face of heavy commitments under its present modernisation and expansion programme. As compared with the position a year before, the reserves and surplus shows an increase of Rs. 4.06 crores, which represents the addition to the plant rehabilitation and development reserves made out of the year's profit. The provision for taxation is higher by Rs. 3.45 crores. Current liabilities have gone up by Rs. 7.20 crores, of which special advance from the Government of India for capital expenditure alone accounts for Rs. 4.39 crores and borrowings from banks for Rs. 13 lakhs. On the assets side, the gross block shows an increase of Rs. 10 crores, whereas the actual additions to the block account during the year amount to Rs. 16.37 crores.

The Rs. 75 paid-up ordinary shares of the Company are being currently placed at Rs. 204-4 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 5.4 per cent. per annum, free of income-tax.

U.K. AND COMMONWEALTH ECONOMIC DEVELOPMENT

ITS CAPACITY TO SUPPLY CAPITAL GREATLY LIMITED

BRITAIN'S role as the supplier of capital for the economic development of the Commonwealth came up for discussion at the recent conference of the Commonwealth Prime Ministers and, as readers are already aware, the Government of the U.K. has expressed its "determination to maintain and improve its capacity to serve as a source of capital for development in Commonwealth countries." This determination must be viewed against the background of the ever-expanding capital needs of the Commonwealth and the Colonies, and the increasing competition British exports are faced with in the international markets. In this context, the illuminating article entitled "Britain's Foreign Investment: The Post-war Record," contributed by Professor F. W. Paish to the July issue of the *Lloyds Bank Review*, will be of special interest to our readers.

"Since the war," states the distinguished Professor, "the U.K.'s record as an exporter of capital has been, perhaps, the most disappointing part of its history." Indeed, despite the fact that Britain's real national income today is as much as 25 per cent. higher than the pre-war level and 70 per cent. more than in 1913, its capital exports, which in 1913 were at the staggering level of £800 million at today's prices, have been not more than £60 million a year during the last three years, while they have been negative for the whole post-war period. This factor alone must have accounted for its decline as a world power, as Prof. Paish himself frankly admits.

The Three Phases

Prof. Paish has divided the ten post-war years into three phases: the first is the period of reconstruction from 1946 to 1949 September, when the pound sterling was devalued; the second period from 1950 to 1952 covers the years of the Korean War and its aftermath; and the third from 1953 to 1955 covers a period of "normality." The first of these periods was marked by heavy imports of capital, in addition to substantial withdrawals from the gold reserves following the large deficits in the balance of payments position in 1946 and 1947. In the second and third phases, there was a marked improvement. While in the second phase, out of the favourable balance of as much as £144 million, £30 million a year were utilised for foreign investment, besides replenishing the gold reserves to the extent of £56 million. In the last phase, the favourable balance was £279 million, of which £60 million were utilised for purposes of overseas investment. The addition to the gold and dollar reserves during this period was of the order of £98 million.

Despite this none-too-impressive record of Britain's exports of capital out of its own resources, there was a noteworthy feature, namely, large re-exports of imported capital to the non-dollar world. During the first phase of 1946-49, Britain imported no less than £1,663 million, out of which it re-exported to the non-dollar world as much as £1,100 million, after meeting the adverse balance on its trade account. After 1949, however, imports of capital from the dollar area declined, with the depletion of the loans raised in 1946 and the dwindling of Marshall Aid. Imports of such capital during the second phase (1950-52) amounted to £420 million; in the third phase (1953-55), they were still smaller at £123 million. As a result and in the absence of a commensurate improvement in the balance of payments position of Britain, its exports of capital to the non-dollar world also declined from £1,100 million in 1946-49 to £508 million in 1950-52 and £304 million in 1953-55.

Share of Sterling Area

The exports of capital referred to above took place in three different forms: grants on capital account, net repayments of very large sterling balances held by foreign banks, Governments, etc., in London, and "other capital exports," representing the net balance of a large number of individual items. Of the £1,100 million exported during the first four post-war years under these three heads, the sterling area alone received as much as £757 million, or more than two-thirds of the total. In marked contrast with this, out of the £812 million of capital exported during the next six years, only £154 million, or less than 20 per cent., went to the sterling area. Exports to the non-sterling area, it may be noted here, have been largely involuntary, occurring as the result of realisations by foreigners of sterling assets, rather than of positive British investment. Large sums of foreign-owned sterling balances were withdrawn during this period.

Another feature of Britain's capital exports is that some of the sterling area countries themselves contributed, to a considerable extent, to such exports by maintaining large sterling balances in London. Since these balances are of a short-term nature and as most of the exports to the sterling area have been of a long-term nature, Prof. Paish comes to the interesting conclusion that the sterling area as a whole collectively provided on short term the great bulk of the capital it has borrowed on long term. Thus, as against £775 million of long-term capital exported by Britain during 1949 to 1955 to the sterling area out of a total export of £1,026 million, sterling balances held by the Colonies rose by £650 million. This is another instance of Britain being a re-exporter of capital. The increase in the sterling balances of Colonies in London is attributable to want of local capital markets for investing their funds with safety and liquidity. What enabled the Colonies to gain such large balances was the high price level for their export commodities during the period 1949 to 1952. It is, however, not true to say that the Colonial sterling area was a net exporter of capital. For, according to Mr. Paish, it is probable that, during the last three years, "other capital exports," which include all exports of long-term capital to the Colonies, have been at least as large as their contribution to the sterling balances. This became quite evident especially in the third phase of the decade when the export prices of Colonial commodities suffered a setback and the accretion to sterling balances slowed down.

Looking Ahead

From what has been stated thus far, it will be seen that, while, in the first period (1946-49), Britain was able to pass on a major portion of the grants and aid received from the dollar area mainly to the sterling area, particularly to the non-colonial sterling area, during the second period (1950-52), it continued to act as an intermediary, albeit on a smaller scale, by passing the imports of capital, received from the Colonies in the form of sterling balances, partly back to the Colonies but mainly to the non-colonial sterling area in the form of long-term investments. In the last period (1952 to 1955), the increase in the Colonial sterling balances was barely sufficient to cover the long-term investments even in the Colonies. Looking ahead, Prof. Paish remarks that Britain seems to be "entering upon a fourth period, in which the rise in Colonial sterling balances may slow down, or cease altogether and may provide little or nothing towards the export of long-term capital even to the Colonies." He gives two reasons for coming to this conclusion. These, in his own words, are:

> "One is the fall in prices which has recently occurred in the main export products of the two areas whose sterling balances have risen most in the past—Malaya and West Africa. The other is that it is especially in these areas that the movement towards self-government is proceeding most rapidly. As Colonies achieve self-government, it is reasonable to expect that resources which formerly went to swell the London balances will be increasingly diverted to local uses, either because they no longer reach the various funds at all or because the funds will be encouraged to invest at home, even though in a less liquid form, rather than in London. Indeed, it may well be that there will be a tendency to draw upon the London balances to finance local investment rather than to increase them further. The United Kingdom will, therefore, be unable to rely on this source for finance for other countries, including both the Colonies which are not yet self-governing and the rest of the sterling area."

The U.K. is thus faced with an immense task. On the one hand, the major sources of imported capital have vanished, or in the process of doing so, while, on the other, demands for capital, first, for replenishing the gold and dollar reserves, secondly, for financing the development in the rest of the sterling area, and thirdly, for meeting the realisation of sterling balances, are expanding at a fast rate. The U.K. Government has estimated that an annual surplus of the order of £300 million to £350 million, or more than £1,000 million over the next three years, would be needed to meet these demands. Even this amount may prove to be inadequate. And the task is none too easy, especially when viewed against the background of the inflationary conditions now. The U.K. Government is quite conscious of these difficulties. It has been trying its best to fight inflation in various ways.

Foreign Investments

In contrast to the U.K.'s declining role even as a re-exporter of capital in recent years stands its performance as the owner of foreign investment. Thus, despite the fact that Britain had to realise nearly £1,200 million worth of securities between 1939 and 1953, total income from overseas securities more than recovered its 1938 level during 1953. Mr. Paish, therefore, rightly feels that British residents' performance as owners of assets has been a good deal better than that as suppliers of capital. The composition of the income, however, has changed a great deal. Whereas the income from fixed interest securities fell on balance, from £77 million in 1938 to £37 million in 1953, dividends on shares rose to £88 million in 1953 from £78 million in 1938 after reaching a low level of £59 million in 1945. But the new composition is not without its disadvantages; the greater dependence of foreign investment income on dividends—though it provides a safety valve against losses in the event of rise in world prices—renders the country's balance of payments vulnerable to the effects of a world-wide depression, especially since a large portion of its dividends comes from oil, mines and plantation companies.

Looked against the background of the U.K.'s failure as a source of finance, the capital appreciation thus brought about in its shares in overseas companies, however, provides, perhaps, the only improvement in its present position. The rise of £600 in the value of shares between 1945 and 1953 has made good half the fall in its overseas fixed interest securities. But the value of this improvement is less significant when the net worsening in the whole international financial position of the U.K. is taken into account. Apart from the £1,200 million lost in the value of the overseas fixed interest securities, the excess of short-term sterling liabilities over the value of gold and dollar reserves has risen from nothing in 1938 to over £3,000 million today. Further, the long-term dollar debt to the tune of £2,000 million has rendered the U.K.'s position still worse. Consequently, a surplus of foreign

(Continued on page 251)

PROBLEM OF EDUCATIONAL FINANCE

CANARA BANK'S SCHOLARSHIP SCHEME COMMENDABLE

THE word "education" often brings to one's mind a noble and generous enterprise. This is natural, for education is certainly one of the most beneficent of human activities. And no modern democratic State can afford to neglect it, for a democracy will be strong and active only if the voters are enlightened and intelligent enough to exercise their franchise aright. Now that India has chosen to become a democratic republic and also decided to give itself universal suffrage, education assumes a new significance.

There is, however, another aspect of education. Few people realise that it is one of the costliest of a State's functions. Education means enormous expenditure. In the parlance of modern economics, it is a large capital-consuming project, with a high running cost. And yet, the return on this capital is not so apparent as in certain other investments, say, a factory or a hydro-electric project. This, of course, does not mean that the return on investment in education is less real. Actually, it is far more enduring than the return from other investments. Only it takes the less concrete and measurable form of improved efficiency in all departments of activity. Indeed, an educated worker, whether in the field or the factory, is a great asset to the nation.

Education Needs Money

Nevertheless, education, as stated at the outset, needs money. This is the hard core of the truth about education. In India, where even the achievement of bare literacy for the masses is an unsolved problem, education will need all the money the country can spare. The size of the country, the vastness of its population, the scattered nature of its towns and villages and a host of other factors add to the complexity of the problem.

And yet, the problem must be faced and the necessary finance found if the democratic and economic experiments in the country are to succeed. At present, the allotment to education is perhaps determined less by what the subject deserves than by what the authorities, after meeting other insistent claims, can afford to give. The first Five-year Plan allotted Rs. 169 crores to education, of which the Central Government's share was Rs. 44 crores and the State Governments' share Rs. 125 crores. This has been stepped up to Rs. 307 crores in the second Plan, the Centre's share being Rs. 95 crores and the States' Rs. 212 crores. All this expenditure will barely provide for the minimum educational needs. And, if the contemplated levels of expenditure are the maximum the country can give for education, there is obviously a great need to supplement the Exchequer by private effort.

Fortunately, there has been no lack of private philanthropy in the educational field in this country. Some of the greatest institutions of learning owe their origin or continued existence to private munificence. The leading scientific institute in the country, the Indian Institute of Science, at Bangalore, owes its origin to an endowment from the House of Tatas. The Annamalai University in the South is another instance of charity in education. It is the Birla House that has placed Pilani on the educational map. Bombay, Poona, Saugur, Calcutta, Banares and Kanpur, to mention only a few educational centres, can all boast of institutions which have received generous aid from private sources.

Scholarships

There is yet another kind of educational charity—the institution of scholarships. In almost every seat of learning, scholarships are available for deserving scholars. Founded by private individuals, some of these scholarships have made education possible for many a student who would otherwise have had to go without it. Private effort has been particularly conspicuous in this sphere, the number of scholarships for both general and technical education being very large all over the country.

A notable variety of this form of charity is loan scholarship—money made available to a scholar on the understanding that he returns it after the completion of his studies. Some charitable funds have specialised in the grant of loan scholarships. And their experience suggests that there is immense scope for very valuable work in this field. To the philosophical objectors, who cavil at the thought of mixing up charity with loan, it seems necessary to say that a loan given to a person who deserves it and is in need of it is as much charity as any other form of altruistic aid. Further, every grateful recipient of a loan scholarship is a potential benefactor to society. Having himself been the beneficiary of aid, he is more likely in future years to be prepared to extend a helping hand to deserving causes. From the purely economic point of view, a loan scholarship has one great virtue to commend it. It is self-perpetuating, so that the educational capital, involved in a loan scholarship, remains unimpaired.

Special Qualities Needed

The administration of a scheme of educational loan scholarship, however, calls for certain special qualities. Thus, it is not enough if the authorities are able to spot a candidate who deserves to get it. It is necessary to be able to keep a continuing watch over the recipient, to follow up his career, to know precisely when he becomes capable of returning the loan and, above all, to ensure that the loan is returned. A mere philanthropic sense, though it forms the basis of the scheme, is not the only factor which will make it a success. Clearly, something more is needed. It requires a banker's insight into the creditworthiness of candidates and the banker's organising ability to supervise the return of the loan. A scheme of educational loan scholarship thus implies a healthy combination of educational altruism and financial realism.

It is precisely such a combination that is to be found in a remarkable experiment in loan scholarship that has been initiated by the sponsors of the Canara Bank Jubilee Education Fund. The enterprising authorities have evolved a scheme which seeks to blend the philanthropist's zeal for service in the cause of education with the Bank's organising ability, on the one hand, and to supplement the donor's financial resources with its own, on the other. A look at the scheme will reveal that it is both well conceived and ably devised, so that it ought to commend itself to all lovers of educational charity and, more especially, to those who hold that private banking can and should render genuine public service.

Briefly, the scheme involves the grant of a loan scholarship which will be five times the amount placed by a donor at the disposal of the Fund. Under this novel scheme, the Fund which is created by the donors is pledged as a security with the Bank which, in its turn, has agreed to grant loans up to five times the funds given as security, subject to a maximum of Rs. 5 lakhs. The Canara Bank has itself donated Rs. 20,000 to the Fund and the collections so far made amount to Rs. 1,20,000. There is no doubt that the whole scheme is as economically sound as it is ethically worthy of the highest praise.

Main Features of the Scheme

It seems necessary, at this stage, to bring out some of the main features of the scheme. The Fund, which is a registered body, derives its finances mainly from the donations made to it. It will, of course, be augmented by other sources of income such as interest on investments. The Bank, as already stated, will hold the Fund as a security against the loan it sanctions up to five times the security offered. It will charge only 4 per cent. simple interest on these loans. Besides the financial help it renders, the Bank will make available to the Fund its organisation for the purpose of ensuring the return of the loans given to scholars. The scheme provides that the first instalment of the loan to a scholar is to be repaid not later than one year after the completion of the course of his studies made possible through the scholarship.

A notable feature of the scheme is that it provides for taking out both a life policy on the recipient of the scholarship and third party security on his behalf. The idea is to grant 10 loan scholarships of Rs. 1,000 each year to begin with. The same group of scholars will be granted Rs. 1,000 every year till they complete their studies and, at the same time, ten fresh scholars will be selected for aid every year.

Success of the Scheme

There are several considerations which suggest that the scheme will achieve all the success it deserves. In the first place, loan scholars all the world over are deeply conscious of the value of the help they receive at the impressionable period of their life, and, therefore, grateful. In banking parlance, they are a highly creditworthy lot. Indeed, the experience of other funds which the sponsors of the present scheme have studied has been very encouraging. Secondly, the taking out of a life policy and third party security still further reduces the risk of loss. Finally, it is a scheme which has elements that have an appeal as much to the donor as the scholar.

To the donor, it should have a special appeal, because it enables him to be more generous than his purse can permit. He has the additional satisfaction that his donation will remain intact and be available on a continuing basis to generations of students. He is further relieved of the anxiety to collect the loan, for the Bank will ensure that it is repaid. Nor need he fear that the loan will go to an undeserving person, for the Fund will see to it that it is the deserving scholar that gets the aid. As regards the scholar, he ought necessarily to welcome the scheme which allows him to pursue his studies without financial worries to disturb the even tenor of his academic career. Thus, whichever way the scheme is looked at, it has much to commend itself to all the interests concerned.

Welfare State

Private enterprise in India is on trial. And private banking, as the citadel of this enterprise, owes a special responsibility to the society. It is up to it to vindicate itself through actively aligning itself with schemes which serve the public. If all Indian banks could establish "Educational Funds" on the lines of the Canara Bank's scheme, they would be further adding to their stature in the public eye. Their present detractors would then be compelled to recognise that private banking could be harnessed to the task of rendering efficient public service. This would also enable the community to appreciate the view that it is not necessary to abolish free institutions in order to create a Welfare State.

NEW £5 NOTE

Early in 1957, Britain will issue a new £5 note different in colour and smaller in size. The present £5 notes will, however, continue to be legal tender until they are finally returned to the Bank of Engand. This will take several years. The new £5 note, which will incorporate the head of Britannia, in accordance with the tradition that has kept it on all £5 notes issued since they were first inaugurated in 1793, is being produced mainly in response to requests from people who find the existing note inconveniently large. Its actual size will be 6¼ inches by 3-17/32 inches, which is slightly larger than the present £1 note but much smaller than the 8¾ inches by 5-5/16 inches of the existing £5 issue. It will contain the metallic thread and will be of the same quality as the existing £1 and 10*s.* notes.

AUGMENTING EXPORTS OF TEXTILES

MODERNISATION AND RATIONALISATION IMPERATIVE

IF Mr. Neville N. Wadia, Chairman, Cotton Textiles Export Promotion Council, could not paint, when he addressed the second annual meeting of the Council held at Bombay on Thursday last week, a rosy picture of the future for India's export trade in cotton textiles, he is not to be blamed. As readers are aware, conditions on the international cotton textile front have changed of late and are changing rapidly, so that world trade in this commodity has suffered a distinct setback. In view of the downward trend in the price of cotton, many countries are buying cloth and yarn on a hand-to-mouth basis. So far as India is concerned, the fall in the world price of cotton has almost wiped the advantage which it enjoyed over other countries in the form of relatively low prices for domestic cotton.

The decline in world trade in cotton textiles had been noticed in the past year itself. During 1955, the aggregate world exports of textiles were substantially lower at 4,654 million yards, as against 5,120 million yards in the previous year, representing a drop of as much as 10 per cent. The decline was shared by practically all the leading exporting countries, including India. India could not export more than 815 million yards, as against 898 million yards, or a fall of 9 per cent.; the extent of the fall was, of course, slightly smaller than that in world trade.

The downward trend in cotton textile trade has been the result of four important factors to which Mr. Neville Wadia drew attention. First, the communist countries have entered the world textile market, much of their business being done on a barter basis. Some new countries such as Pakistan and Spain have also turned out to be exporters of textiles. Secondly, new textile mills are springing up rapidly in many countries which formerly imported the bulk of their requirements, and imports by them are bound to be replaced by home production. Thirdly, certain countries have entered into bilateral treaties which canalise trade between them. Fourthly, a few countries have imposed restrictions on imports for reasons of exchange. Commenting, in particular, on the competition from communist countries, Mr. Wadia said: "One cannot but view with apprehension the effect which it is going to have on the pattern of trade (in textiles) which had become established since the war."

Long-term View

Looking from the long-term point of view, however, Mr. Wadia saw one bright prospect, namely, a very rapid rise in cloth consumption of the underdeveloped countries, especially in the Asian region, which is bound to occur, as these countries improve their economies. According to Mr. Wadia, many countries in this region have not yet reached their pre-war *per capita* offtake of cloth, so that not only is there much leeway to be made up, but it can be hoped that increased purchasing power will help millions of people in the areas to acquire more of their essential needs.

While this aspect is quite encouraging, the basic fact remains that, if India is to weather the growing competition in world textile trade successfully, energetic steps must be taken to enhance the competitive capacity of Indian textiles in world markets. Mr. Wadia was, therefore, quite pertinent in stressing the two important factors which influence the quantum of India's cloth exports. These are:

(1) The strength of India's exports lies in cloths manufactured from Indian cotton. A year ago, there was an advantage in price which we enjoyed of approximately Rs. 650 per candy, when comparing Vijay with middling 15/16" American landed at Liverpool. Today, it has dwindled to Rs. 65. The advantage in cotton prices, therefore, has been virtually wiped out. Only an exceptionally good monsoon can help to restore a part of that advantage. This goes to emphasise how vitally important those rains are to every phase of our economy.

(2) The fact that we are unable to export an appreciable quantity of fine and superfine goods is proof positive that our cost of manufacture in this country is greater than those of our competitors. While individual wages are comparatively low as compared with European and American mills, they compare favourably with those in Japan. On the other hand, the Indian mills employ for the same output three and a half times the number of operatives in Lancashire mills, nine to ten times as many as in the U.S.A., and seven to eight times those reported to be employed in Japan. In the case of America which pays the highest wages in the world, the labour cost per unit of production is almost identically the same. The case in Lancashire is similar, but, as far as Japan is concerned, India is at a great disadvantage.

The aforesaid two factors, as Mr. Wadia rightly pointed out, emphasise most clearly how urgent it is for the cotton industry to modernise its equipment and rationalise its methods of production. Incidentally, it may be noted that the Government of India's textile policy envisages installation of 14,600 automatic looms in the mills, with a view to augmenting cloth exports to a level of 1,000 million yards per annum. Although this policy is not all that the industry desires, Mr. Wadia welcomed it from the point of view of exports. At the same time, he urged that, in order to retain the trade which the country has today, the pace of replacing ordinary looms by automatics should be stepped up to a much greater figure. "What is needed is," to quote him, "a greater understanding of this problem by Government, labour and millowners alike, so that they may bring about the rapid change required." Mr. Wadia also urged the importance of encouraging as much as possible all the sectors of the cotton textile economy—mills, handlooms and powerlooms—to expand production, if a shortage of cloth, both internally and for export, is not to be felt within the next few years.

A Very Vital Role

Considering the imperative need for placing India's export trade in cotton textiles on a stable and sound footing, the role of the Export Promotion Council is, indeed, very vital. Nearly two years have elapsed since the Council came into existence; it was formed on 4th October 1954. The progress of work done by the Council in the first year of operation was reviewed in these columns last year—*vide* page 744 of issue dated 15th October 1955. It is proposed to deal now with the Council's activities in the second year, as furnished in Mr. Wadia's speech and also in the annual report of the Council.

Early in the year, a decision was taken to open offices of the Council at strategic places to establish close contact with overseas buyers. A number of officers were engaged and given a thorough training. The first office was opened at Baghdad, in February 1956 and, since then, five more offices have been opened at Singapore, Lagos, Rangoon, Aden and Mombasa.

While little advantage was taken of the scheme of ITEX examination, the introduction of the Factual Inspection Scheme has proved so popular that more inspectors have had to be engaged for this purpose. Fifty mills in Bombay and sixteen in Ahmedabad took advantage of the Scheme, and the total quantity inspected from January 1956 up to 21st July 1956 amounted to 3,131,299 yards; whereas, for the same period, 469,145 yards were passed under the ITEX Scheme, but this quantity is more than the total ITEX figure for 1955. Mills are now welcoming this independent check and are acting upon the information gained thereby. It is also beneficial to overseas buyers to know what the quality of their goods is likely to be, from which they can gauge whether they are suitable for the purpose they have in view.

The Council took a stall in the Industrial Exhibition at New Delhi, which proved very popular. It has also taken part in many exhibitions overseas where Government organised Indian pavilions—to mention a few—the Leipzig Fair, the Pakistan Trade Fair, the Milan Samples Fair. In addition to these exhibitions, the Council also displayed Indian textiles in the permanent showrooms organised by the Indian Trade Commissioners in East Africa, Ceylon, Burma, Singapore, the U.S.A., the Philippines, etc. To inform the industry and trade, a large collection of samples manufactured by India's competitors and sold in world markets is now touring the country.

The Council has undertaken the publication of a handbook—*The Indian Textile Industry*—which has been distributed widely overseas. This is a useful reference for prospective buyers of our goods. A new edition will be published this month.

The Council has recommended three major steps to improve our exports; regulations to set right all too frequent complaints; segregation of shipment of seconds from good quality goods; and a standard contract between mills and exporters. The good offices of the Council have been widely used throughout the year for the settlement of complaints, and it is gratifying to note that about 50 per cent. of the complaints received is being settled without recourse to arbitration or legal action. Both parties are realising the benefit of bringing their disputes to the Council, and the tempo of settlement is increasing from day to day.

The fortnightly *Bulletin*, through which much useful information is made available by the Council, has become very popular. Many foreign enquiries, published in the *Bulletin*, have led to increased business. The Council is now about to bring out an overseas edition, which is expected to prove equally valuable to our customers abroad.

From the foregoing account, it will be seen that the Cotton Textiles Export Promotion Council has done valuable work in putting the textile export trade on a secure basis. But very much more remains to be done, what with the competition in world textile trade getting keener as time goes on. Surely, the success of the Council will be judged by the extent to which it fulfils the task entrusted to it of not only sustaining but also developing export trade in textiles, one of India's major earners of foreign exchange. Having said this, it is necessary to add that, if impressive results are to be achieved, the Council's efforts in this direction will have to be strengthened by the adoption of a sensible and realistic policy by the Government, as well as by the co-operation of workers in the great task of raising the productivity of Indian cotton mills.

SUBSIDY FOR U.S. CLOTH EXPORTS

The U.S. Government has announced its decision to subsidise cotton textile exports. The base subsidy rate has been fixed at 6.58 cents per lb. for the period 21st May 1956 to 30th September next. With effect from 1st October, the rate will be set on month-to-month basis. The subsidy will be paid on exports only to "friendly countries," but excluding Alaska, Hawaii or Puerto Rico, outside the Continental United States. Cotton textile exports to Soviet bloc countries will not, however, be allowed under the Bureau of Foreign Commerce's export licensing prohibitions.

The decision of the U.S. Government to subsidise textile exports is a sequel to the representations vigorously put forward by the domestic manufacturers. Drawing attention to the closing of mills and cutting back of production, Mr. F. E. Grief, President of the American Cotton Manufacturers Institute, recently declared: "The productivity advantage of American mills has virtually disappeared with the equipment of Japanese and other Asian factories with Western type machinery operated by workers receiving oriental wages, about ten times lower than American wages and using cotton purchased on the world market at prices substantially lower than American mills have to pay."

With the grant of Government subsidy, the competitive capacity of U.S. textiles in world markets has been enhanced. The past few years, it will be recalled, have witnessed a continuously downward trend in U.S. cotton textile exports. The aggregate shipments of piecegoods which stood at 940.44 million yards in 1948 declined to 802.48 million yards in 1951, 760.71 million yards in 1952, 620.82 million yards in 1953, 605.08 million yards in 1954 and 542.40 million yards in 1955.

GERMAN VIEW ON HANDLOOMS

The three-man team of West German technical experts, who had been invited by the Government of India for designing suitable small machines for use by small-scale industries, have submitted its report. In the report, the team has recommended a switch-over to the maximum number of handlooms for the production of better varieties of fabrics which the mills cannot produce. Two of the three experts have suggested that the manufacture of machine tools should be licensed and that the licensed units should be subject to strict supervision and control in respect of the maintenance of quality standards laid down by the Government. The Government has also been asked to arrange supply of suitable machinery and equipment for the manufacture of machine tools, raw materials and inspection equipment for the units licensed. Another useful suggestion relates to the conversion of certain leading and *bona fide* units into model enterprises. Mr. G. A. Etter, the other expert, has recommended a phased programme for replacing the bulk of the handlooms by powerlooms. Handlooms should not, according to him, compete with fabrics produced more cheaply by mills such as plain cloth. He has suggested the installation of a large number of Benaras handlooms and Texmaco looms in other handloom centres. Particular emphasis is laid on the need for improving the organisation for the marketing of handloom products.

Mexico is planning to take measures for the improvement of its cotton economy. The Secretary of Agriculture, Gilberto Flores Munoz, has announced that measures adopted by the Government last year will permit Mexico to overcome in part the drop in revenue expected by the sale of U.S. surplus cotton. Government policy is directed at (1) improving the quality of Mexican cotton, so as to place it in a more favourable position on the international market; (2) increasing the per hectare yield and reducing cotton producing zones, thus maintaining the same level of production as in 1955; (3) diversifying crops. Last year 1.05 million hectares were cultivated. Total crop outturn was 2.2 million bales, valued at 2,800 million pesos. According to a plan outlined last year, only 910,000 hectares are being cultivated this year. This works out to 145,000 hectares less than in 1955. It is expected that the use of high grade seeds, as well as fertilisers, will produce almost the same harvest as last year. The 145,000 hectares left free by cotton are being used for cultivation of other crops such as wheat and linseed.

Imports of foreign cotton into India during the first 10½ months of the current season aggregating 558,356 bales show an improvement as compared with 527,602 bales in the same period last season. The increase is remarkable in the case of Egyptian and Sudan cottons which aggregated 217,082 bales and 126,114 bales, respectively, as compared with 129,008 bales and 54,202 bales in the same period of the 1954-55 season. Imports of American cotton, however, registered a sharp decline, from 101,420 bales to 14,388 bales.

DECLINE IN EXPORTS OF CLOTH DURING FIRST HALF OF 1956

FEARS EXPRESSED OVER UNCERTAINTY OF COTTON PRICES

By Our Special Correspondent

MANCHESTER, 24*th July*

EXPORTS of British cotton goods in June would have had to be phenomenally large to counterbalance the disappointing results during the previous months and so provide a favourable comparison for the half-year. As no such improvement occurred, the returns for the first six months continued to show up unfavourably compared with the position a year ago.

MANCHESTER LETTER

The value of export trade last month was £6,965,165 and total shipments of cotton goods during the half-year earned £44,654,499, as against £49,935,285 a year ago. Cotton cloth exported amounted to 236,977,000 square yards, valued at £30,776,636, while shipments of yarn aggregated 18,642,792 lb. worth £7,677,820. These figures compare with 281,859,000 square yards of cloth exported in the first half of last year at a value of £36,093,965 and 18,187,994 lb. of yarn, worth £7,774,102.

The following table shows recent quarterly comparisons:

(Cloth in square yards; yarn in lbs.)

	Exports		Imports
	Cloth	Yarn	Cloth
1954			
1st quarter	176,756,000	11,174,900	50,010,000
2nd ,,	166,249,000	10,164,300	55,960,000
3rd ,,	151,035,000	9,094,600	72,840,000
4th ,,	142,644,000	10,044,700	88,540,000
1955			
1st quarter	165,314,000	10,667,800	99,341,000
2nd ,,	116,106,000	7,510,000	71,600,000
3rd ,,	143,437,000	8,195,200	70,294,000
4th ,,	129,237,000	9,167,800	68,351,000
1956			
1st quarter	120,194,000	9,969,900	74,892,000
2nd ,,	116,783,000	8,673,900	84,870,000

Because exports to the main Commonwealth markets represent the preponderance of Lancashire's overseas business, they have now become more vulnerable to any losses which may be sustained. The reduction in shipments during the half-year has been almost solely confined to these territories and in particular African markets have been keenly affected.

Australia remains the chief customer, having absorbed 39,822,000 square yards, as against 53,653,000 yards a year ago. South Africa's share is virtually unchanged at 28,845,000 square yards and Rhodesia and Nyasaland have taken nearly 2,000,000 square yards more at almost 14,000,000 yards. Exports to Nigeria this year, however, are only 14,000,000 square yards, as against 27,500,000 square yards and sales to the Gold Coast have fallen from nearly 20,000,000 yards to little more than 10,000,000 yards. Trade with New Zealand amounted to 16,883,000 square yards, as against 19,250,000 square yards.

In view of the interest now being taken in business for the Indian sub-continent it is significant that exports to India have risen from 1,500,000 square yards in the first half of last year to 5,356,000 square yards in 1956. The expansion in trade with Pakistan has been from 696,000 yards to 3,402,000 yards.

Shipments of cloth made from rayon and synthetic fibres picked up in June, being 10,878,000 square yards, as against 7,112,000 yards in the same month last year. Over the half-year, however, exports were 63,988,000 square yards valued at £9,501,382, as against 69,004,000 square yards worth £11,132,595 a year ago. The major development has been the emergence of Rhodesia and Nyasaland as the chief consuming area, having taken more than 10,000,000 yards as against less than 7,000,000 yards in the same period last year. Shipments to Australia have fallen from 12,779,000 yards to below 9,000,000 yards but business with South Africa has kept up well at almost 8,000,000 yards.

Imports Swell

Compared with a year ago, arrivals of foreign cotton and rayon goods continue to increase. Only in the case of cotton grey cloth is the volume of imports below the corresponding totals in 1955 but these have been growing in the second quarter of the year. The total cost of imported cotton goods in the first half of this year was £13,009,049 against £13,081,715 a year ago. Comparative figures for yarn and fabric made from synthetic fibres were £6,075,691, as against £5,608,470.

Arrivals of cotton grey cloth amounted to 140,401,000 square yards, as against 155,475,000 square yards, the reduction being solely the result of a decline in purchases from Japan, arrivals this year being less than 20,000,000 square yards, as against 41,353,000 square yards. Imports from India are practically unchanged at 72,841,000 square yards, while Hong Kong has sent 1,000,000 square yards less at 26,255,000 square yards.

Foreign cotton yarn imported this year has aggregated 8,456,000 lb., as against 6,907,000 lb. and arrivals of finished cotton cloth have increased from 15,466,000 square yards to 19,361,000 square yards. A bigger expansion has taken place in arrivals of rayon cloth, which so far amount to 41,538,000 square yards, as against 29,028,000 square yards.

Approach to India

The Cotton Board has taken up the Prime Minister's suggestion that a useful purpose might be served if joint talks were arranged between representatives of the cotton textile industries of Britain and India. Sir Anthony Eden said he had made the suggestion to Mr. Nehru at the Commonwealth Prime Ministers' Conference.

In an official announcement from its Manchester headquarters the Board said it had been decided to seek an early interview with the President of the Board of Trade to discuss the proposal.

The main point involved in any joint discussions is the one on which Lancashire has been expressing anxiety for a considerable time—the large-scale imports of duty-free cotton cloth from India into this country. In the first six months of this year these imports aggregated nearly 73,000,000 square yards worth nearly £3,000,000.

There has been no clear indication of the line that Lancashire representatives might take at a conference with Indian textile leaders, but the view has recently been expressed that it is against India's own long-term interests to make cotton textiles the focal point of its export efforts. The Lancashire industry has reconciled itself to the fact that because of Commonwealth preference the British Government does not intend to subject the Indian cloth to import duty.

Cotton Price

The Liverpool cotton market cannot be expected to function properly until it is freed from the crippling restraints now imposed upon it, Mr. W. T. Winterbottom, Chairman, told the annual meeting of Fine Spinners and Doublers Ltd., the Manchester textile group.

Mr. Winterbottom said the whole of the cotton industry at present was weighed down by the difficult problem of uncertainty of cotton prices. On the one hand there were the sudden and largely unpredictable movements in Egyptian prices and on the other the persistent fear that American cotton prices were likely to be reduced in the near future.

"Above everything else, even above the question of the unlimited and duty-free entry of textiles into this country from India and Hong Kong, which is scandalous enough in itself, the prospects for the cotton industry depend on the existence of rational and orderly markets for our principal raw materials," he said.

Unless customers had confidence in the future course of prices it could hardly be expected that producers could build up a reasonable order book and yet without a reasonable order book it was impossible to run an industry satisfactorily.

The total absence of any understandable American policy of raw cotton was preventing spinners from covering even the cotton they thought they would need. For the same reason, the development of a spot stock of cotton in Liverpool was being frustrated.

"It is strange that the two countries, the United States and Egypt, which have done most to promote the use of cotton, should act in such a manner as to nullify all the good work of their promotional activities," said Mr. Winterbottom.

He said there was a sad lack of co-ordination between political and commercial interests in these countries. The Liverpool market could not be expected to function properly until it was freed from the crippling restraints now imposed upon it.

So far as Alexandria was concerned, the successful operation of this market was known to rely on a Government-held reserve stock which could be used, as necessary, to keep the market stable. Oddly enough, shortly after the market opened, this stock seemed to have vanished with the foreseeable result that the markets went out of control.—*All Rights Reserved.*

MILL CONSUMPTION OF RAW COTTON

INDIGENOUS GROWTH INCREASINGLY FAVOURED

FIGURES relating to consumption of cotton by mills in India in the first nine months of the current season confirm the well-known trend towards increased consumption of Indian cotton *vis-a-vis* foreign cotton. Thus, the total consumption of Indian cotton by mills during the period 1st September 1955 to 31st May 1956 aggregated 3.26 million bales (of 392 lbs. net), whereas foreign cotton consumed accounted for only 445,857 bales. It may be noted here that, during the corresponding period of the 1954-55 season, total consumption of cotton stood at 3.5 million bales of which about 3.05 million bales were Indian cotton and 491,267 bales foreign cotton. Thus, while consumption of Indian cotton in the period under review registered an increase, that of foreign cotton actually decreased as compared with that in the corresponding period of the previous season. It is clear that mills in India is increasingly taking to indigenous variety. This is a happy reflection, to some extent, of the steadily improving quality of Indian cotton.

On the basis of the current rate of consumption of cotton, it may be estimated that, for the entire current season ending 31st August 1956, the total cotton consumption by mills will be 4.9 million bales, of which 4.3 million bales will be accounted for by Indian cotton and about 600,000 bales by foreign cotton. This level is much higher than that in the 1954-55 season, when Indian mills consumed 4.7 million bales, of which 4.13 million bales were Indian and 630.474 bales foreign cotton.

Coming to the principal varieties of Indian cotton consumed by mills during the period under review, it may be noted that, as usual, Jarilla, including Virnar, Malvi and Verum, topped the list, accounting for 796,643 bales, followed by the Punjab American 216-F and 320-F, aggregating 452.368 bales and Broach Vijay accounting for 361,929 bales. During the corresponding period of the 1954-55 season, mills consumed 869.482 bales of Jarilla cotton and 372,952 bales of Broach Vijay. The other important varieties of Indian cotton consumed (in bales) by mills during the period were: Bengal Deshi 100,527; Mathia 30,688; Kalagin 22,105; Dhollera 137,576; Oomra-Deshi 14,663; Kalyan 188,372; Jayadhar 114,858; Laxmi 132,829; Punjab American L.S.S. 91,417; Surti (including Suyog) 132,058.

Among the varieties of foreign cotton consumed by the mills, the most important were East Africans and Egyptians which accounted for 177,824 bales and 143,087 bales, respectively. The following table gives the principal varieties of foreign cotton consumed by mills during the period under review:

Description	Consumption during September 1955 to May 1956	Consumption during September 1954 to May 1955
Egyptians:		
(a) Ashmouni	3,878	229
(b) Zaoras	21	..
(c) Giza 30 and 31	54,956	40,319*
(d) Karnak	74,698	106,482
(e) Menouff	9,148	5,922
(f) Other Egyptians	386	295
Total Egyptian cotton	143,087	153,247
Peruvian	4,371	4,695
Sudan Egyptian	88,802	28,022
Sudan Americans	3,897	283
East Africans	177,824	165,118
Russians	825	*Nil*
Americans:		
(a) U.S.A.	22,182	130,561
(b) Mexico	332	*Nil*
Belgian Congo	1,100	2,302
Other foreign cotton	4,157	278
Total foreign cotton	445,857	

* Giza 30 only.

Stocks of foreign cotton as at the period under review seems to have improved considerably as compared with those a year before, the actual quantity held being 219,318 bales as against 145,907 bales on 31st May 1955. The period of availability of stocks of foreign cotton held, as on 31st May 1956, is 4-2/5 months, as against 2¾ months a year earlier. Stocks of Indian cotton, too, were better; the mills held, as on 31st May 1956, about 1.69 million bales, as compared with 1.59 million bales on the corresponding date of 1955. The period of availability of these stocks at the current rate of consumption is 4¾ months, the approximate period of availability of stocks of all kinds of cotton held by mills being 4-5/8 months.

An examination of the State-wise consumption of cotton shows that Bombay State accounted for 1.4 million bales of Indian and 368,299 bales of foreign cotton, thus continuing to occupy the premier position in the country in respect of cotton consumption. The following table gives an idea of the State-wise consumption of cotton during the period 1st September 1955 to 31st May 1956:

States	Indian cotton		Foreign cotton	
	1-9-1955 to 31-5-1956	1-9-1954 to 31-5-1955	1-9-1955 to 31-5-1956	1-9-1954 to 31-5-1955
Bombay:				
Bombay Island	819,206	776,618	128,926	154,698
Ahmedabad	335,537	307,449	185,919	193,211
Bombay remainder	279,169	245,967	53,454	54,187
Total Bombay	1,433,912	1,330,034	368,299	402,096
Saurashtra	57,843	49,185	1,302	1,603
Kutch	796	68	..	..
Madhya Bharat	211,331	198,914	224	51
Bhopal	10,176	10,449	..	..
Rajasthan	53,642	54,172	..	..
Ajmer Merwara	32,576	30,644	..	..
Punjab and PEPSU	36,403	31,266	142	..
Uttar Pradesh:				
Kanpur	216,279	184,579	877	1,449
Remainder	56,219	63,329	354	256
Total U.P.	272,498	247,908	1,231	1,705
Delhi	115,418	106,901	2,807	2,609
W. Bengal:				
Calcutta	67,476	71,117	3,033	3,128
Remainder	80,885	59,286	12,073	12,910
Total W. Bengal	148,361	130,403	15,106	16,038
Bihar	2,200	2,950	..	3
Orissa	21,130	20,386	909	97
Madhya Pradesh	117,962	133,492	755	1,843
Hyderabad	64,788	68,072	252	190
Madras	540,918	520,124	46,529	49,009
Mysore	79,471	71,668	7,246	6,677
T.-C. State	37,654	34,142	1,055	2,451
Nepal	403	2,099	..	..
Pondicherry	22,209	11,822	..	6,404
Total	3,260,021	3,054,708	445,857	491,267

It will be noted from the table above that Madras occupies the second position of importance as consumer of cotton in the Indian Union followed by Uttar Pradesh and Madhya Bharat. It is noteworthy that, in all the three principal cotton-consuming States, the consumption of cotton has increased during the period under review.

WORLD COTTON POSITION

A welcome development in the world cotton position is the anticipated increase in cotton consumption in the 1955-56 season. This, it is to be expected, will serve to correct, at least in part, the present imbalance between the world supply and demand positions and also have its favourable effect upon the U.S. surplus cotton situation which has continued to remain the major headache of the world cotton trade during the past few years. According to the calculation of the International Cotton Advisory Committee (I.C.A.C.), the increase in world cotton consumption during the current season would be about 400,000 bales over the last year's figure. In the 1954-55 season, world consumption aggregated 27.6 million bales.

The free world output of cotton in the 1955-56 season is placed at 30.3 million bales which is lower than earlier expectation. According to the Committee, the revised lower estimate of production is the result of a decline in yields of cotton outside the U.S. Thus, per acre production of cotton, outside the United States, fell from 176 lbs. to 164 lbs.

Though consumption of cotton has increased in the season that has just ended, the increase in production has been much larger. It is, therefore, obvious that there should necessarily be an increase in world carry-over stocks of cotton. According to the I.C.A.C., the increment to world carry-over stocks on 1st August 1956, may be placed at roughly 1.5 million bales. This will be the fifth successive season to witness an increase in the carry-over stocks; such stocks are expected to aggregate 22 million bales.

(Concluded from next column)

of training the staff required for the installation of powerlooms in the first year will also be met by the Centre.

In the course of discussions at the meeting, a plea was put forward for raising the provision of working capital to about Rs. 1,000 per loom. Another plea was for subsidising power supply to the looms, so that the cost of power will be 18 pies per unit. The setting up of demonstration-*cum*-training units of ten or more powerlooms at selected centres was also recommended. The two other notable suggestions made at the meeting were: (1) Supply of frame-looms and other technical equipment such as take-up motion attachments to weavers, financial assistance being given for that purpose; (2) establishment of workshops in different States for the manufacture of improved looms and other equipment. With regard to the registration of handlooms, the conference was of the view that such registration would be in the interest of weavers themselves, since that would enable the Government to collect the necessary data for the development of handloom industry.

FUTURE SET-UP OF THE TEXTILE INDUSTRY

GREATER RELIANCE ON COTTAGE INDUSTRY?

A BROAD indication of the pattern of development of cotton textile industry in the next decade was given by Mr. T. T. Krishnamachari, in the course of his address at the meeting of State Directors of Industries convened at New Delhi last week to consider measures for speeding up installation of powerlooms in the handloom sector and to review the progress of the handloom industry. Mr. Krishnamachari observed: "The *per capita* consumption of cloth may rise to 30 yards in another ten or twelve years. This will mean an additional production of over 4,000 million yards of cloth. The bulk of the addition will have to be supplied by the decentralised sector, including powerlooms.

While Mr. Krishnamachari's assessment of the trend of cloth consumption in the coming years is realistic, his remark that the bulk of this increased demand for cloth will have to be met through expansion of the cottage units is not. Apart from serious doubts as to the ability of this sector to meet the bulk of the additional demand—estimated at no less than 4,000 million yards—in the next ten or twelve years, there is the question whether the handloom—and even powerloom—industry will be in a position to produce quality cloth at an economic price. When the whole world is thinking in terms of applying the latest technological developments to textile production, it is a pity that Mr. Krishnamachari should have favoured continued reliance on the old and uneconomical sector of cloth manufacture for producing so large a quantity as 6,000 million yards of cloth, the major portion of which will have to be goods required by the masses for their day-to-day use. The question of distributing raw materials and collecting the finished goods of this volume from countless number of producers, not to mention their marketing, will be a stupendous one. The more one thinks of these and other allied problems, the more one feels convinced that Mr. Krishnamachari's idea is a fanciful one.

Supply of Powerlooms

The Commerce and Industry Minister dweit also on the subject of supply of powerlooms. He claimed that indigenous producers could immediately supply 800 powerlooms per month: if necessary, the looms might be imported later to meet the demands from the States. Allotment would be made on a first-come-first-served basis. The Minister suggested formation of co-operatives of carpenters for manufacturing frame-looms and take-up motion attachments. He was of the view that the grant of rebate on sale of handloom cloth should be abolished sooner or later and that the money thus saved should be utilised for providing housing, organising regular yarn supplies and according common service facilities to groups of handloom weavers. Laying special stress on the improvement in living conditions of weavers, he said that such was a prerequisite to the weaver increasing his productive capacity.

At the New Delhi meeting, the Industries Directors of several States indicated their Governments' desire to install, during 1956-57 and 1957-58, about 38,000 powerlooms in the handloom sector in accordance with the decision of the Government of India. The willingness of State Governments to introduce powerlooms must have been backed up by the handloom interests who, it would appear, have realised that, unless handlooms are converted into powerlooms, their living conditions will not at all improve. This demand clearly shows that the criticisms levelled against powerlooms by some of the members of the All-India Handloom Board—led by Mr. M. Somappa—are not only unwarranted but also unjustified.

The meeting considered measures for financial and technical assistance to weavers for working on powerlooms. One such measure relates to the Centre's grant of loans up to 87½ per cent. of the share capital for each weaver in a powerloom co-operative society. The Centre will also give loans to meet the entire cost of powerlooms, as well as electric motors, besides providing working capital as a loan. Financial assistance will be given for capital expenditure on processing plants and workshops and for recurring expenditure on servicing of looms and technical instruction. In addition, assistance will be granted for meeting the cost of transporting powerlooms from factories to handloom centres and of power connection for the looms. The cost

RATIONALISATION OF SUGAR INDUSTRY

U.P. GOVERNMENT EFFICIENCY EXPERTS SUGGEST MEASURES

IT was only last week that we referred in these columns to the apprehensions of the sugar mill-owners of Uttar Pradesh about the future for their industry. We reproduced then a Press report from Lucknow relating to the move of some top industrialists to urge the Government to call a conference to find ways and means of making the State's sugar industry more productive. Hardly has such a conference been held than comes another news despatch from the same place—Lucknow—which says: "Tentative proposals for rationalisation in the sugar industry have been prepared by the U.P. Government's production efficiency experts who are at present gathering the views of the representatives of labour and industry before finalising them.

The need for introducing rationalisation measures in the sugar mills of Uttar Pradesh cannot be stressed too strongly; it has been long overdue. The mills suffer from high cost of production *vis-a-vis* their counterparts in other States, especially in the Deccan and the South, thanks to poor recovery of sugarcane and higher wage bill. In a great many factories in the State, the labour strength, it is said, is enormous from any work-load standards. An enquiry conducted by a private firm of efficiency experts usually employed by the industrialists has revealed that about 40 per cent. of the workers employed in the U.P. sugar industry is surplus. The average number of workers employed in a sugar mill with a daily cane-crushing capacity of 800 tons in the U.P. is 1,000, as against only 400 persons in Java and 250 persons in Australia. The cane-crushing capacity of the sugar industry in the latter countries, it must be noted, is more, being 1,200-1,500 tons and 2,400 tons, respectively. Accordingly, the productivity of labour in these countries is considerably greater than in India, in general, and much more than in the U.P. Thus, on an average, the quantity of sugar produced per worker in India comes to 10 tons only, which compares unfavourably with 40 tons in Java and 144 tons in Australia. Incidentally, in India salary and wages account for 11 per cent. of the total production cost of sugar.

Improving Industry's Economy

Considering the low productivity of sugar labour thus and with a view to improving the economy of the industry, the U.P. Government set up some time ago a Standardisation Committee under the chairmanship of Mr. M. C. Pant, Deputy Labour Commissioner. The report of the Committee was submitted to the Government in 1954. This report, as also the one submitted by a private firm of efficiency experts in 1955, is yet to be published. It is, however, gathered that, in both the reports, the need for drawing up the norms of work-load to highly efficient standards has been recommended. The U.P. Government found it rather difficult to accept the recommendation, for such acceptance would mean, it would appear to have felt, courting unpopularity among the labour ranks. It could not, at the same time, remain completely deaf to the representatives of the sugar industry. It appointed its own production efficiency experts to study the working of the sugar industry in the light of the recommendations made by the Pant Committee and the private firm of efficiency experts. These experts have, as already stated, prepared tentative proposals for rationalisation.

The U.P. Government's production efficiency experts have suggested standardisation of musters, taking into account the capacity of each sugar plant, the machinery used and its layout. On this basis, the number of workers needed at every station, that is, in every process of production in each individual sugar factory, is to be fixed. The implementation of this suggestion is expected to render surplus about 17 per cent. of the present 90,000 workers employed in the 68 sugar mills of Uttar Pradesh. The proposals of the experts do not, however, envisage retrenchment of the surplus staff. For it is suggested that rationalisation should be introduced in the course of the natural wastage of labour—retirement on superannuation or disability—which at present is estimated at 3 per cent. per year. It is accordingly pointed out that full rationalisation would be introduced in about six years.

Time and Motion Study

The Government experts have also evolved a formula for time and motion study which, it is claimed, suits the Indian working conditions. They have not used the patented American formula of the Ibcons. The experts have attached two more important conditions to their proposal for rationalisation. First, before introducing rationalised methods of working, the layout of sugar factories, the machinery and equipment, and the techniques of manufacture must be improved. Secondly, proper wage and salary grades must be fixed for all categories of workers—whether skilled or unskilled. At present, there are no grades and the minimum wage of Rs. 55 is very often the maximum. The wage scales, it is specifically stated, should ensure regular annual increments without any efficiency bars. The abolition of the contract system of recruitment has been specially urged.

The Uttar Pradesh Government does not, however, seem to be anxious to expedite the introduction of rationalisation in the sugar industry. It is, according to informed sources, waiting for the results of rationalisation in the cotton textile industry of Kanpur. The delay on the part of the Government to take a firm decision on this is regrettable. Rationalisation is absolutely necessary, if the consumer is to be assured of adequate supplies of quality sugar at a reasonable price. Indeed, quality and price, as has rightly been pointed out, hold the key to the stimulation of wider demand for sugar. The need for rationalisation is no less imperative from the point of view of bettering the lot of the worker himself. For rationalisation—through minimisation of the various manufacturing processes and modernisation of equipment—will help sugar labour earn higher emoluments and thus raise their standard of living. What is more, the increase in the domestic consumption of sugar and, consequently, in the production, will create more opportunities for employment in the industry. It is to be hoped that the U.P. Government will soon take steps to implement the recommendations made by its own production efficiency experts. After all, it must remember that the sugar industry, or, for that matter, any industry, cannot be a fruitful source of employment, if it is allowed to be in a state of sickness.

SUGAR IN RUSSIA

The Government of Soviet Russia has launched a fairly ambitious scheme for stepping up the sugar-beet harvest in the next five years. If the scheme were implemented with success, the production of sugar-beet would touch a high figure of 50.0 million tons in 1960, as against 39.4 million tons in 1955 (original plan), representing a rise of as much as 26.9 per cent. The target is expected to be hit through the adoption of measures designed to "create all the necessary conditions for the further increase in the yield of sugar-beet and the output of sugar."

One of the important measures relate to the expansion of the acreage under sugar-beet. In the current year alone, about 260,000 more hectares (642,486 acres) were sown to sugar-beet as compared with last year. Favourable weather conditions, it is said, are facilitating "the rapid growth of what should be a bumper crop." Tending of crops is being extensively carried on on the beet plantations of the Ukraine, Kuban, Kursk and Belgorod regions.

The Government is holding responsible the Republic Councils of Ministers and the territorial and regional executive committees of the sugar-beet growing republics for doing everything to extend considerably the application of local fertilisers—manure, peat-compost, ashes, etc.—and green manure in districts with sufficient moisture. The Government decree provides for increased delivery to sugar-beet districts of mineral fertilisers and chemicals for combating pests. The Agriculture Ministry has been specifically urged to intensify its work of propagating new varieties of high-yielding sugar-beet with larger sugar content. The machine-building industry has been asked to supply sugar-beet growers with equipment required for the mechanisation of digging and harvesting of sugar-beet, and for loading and unloading.

The decree also provides for a marked rise in the procurement prices of sugar-beet with effect from the current year's harvest. This measure is designed in the "material interest" of the collective farm men and women which is considered to be "an important condition for the sharp increase in the yield of sugar-beet." In addition, the payment in kind to machine and tractor stations in all sugar-beet districts has been cut. In order to encourage these collective farms which plant sugar-beet for the first time this year, premiums over and above the procurement prices will be paid.

SUGAR PRODUCTION AND STOCKS

The latest Press note relating to sugar production and stocks, issued by the Union Food Ministry, places the total production of sugar up to 15th June in the current (1955-56) season higher than that estimated in the final forecast. According to the Press note, the production amounted to 1,853,000 tons, as against the final estimate of 1,848,000 tons. The figure for the corresponding period of the previous (1954-55) season is 1,583,000 tons.

The aggregate quantity of sugar despatched from the sugar mills during the period 1st November 1955—15th July 1956 was 1,178,000 tons, which represents a rise of 405,000 tons as compared with the 773,000 tons despatched a year before.

The stocks of sugar with the factories as on 15th July 1956 stood at 1,082,000 tons, as against 848,000 tons on the same date last year.

The Central Food Ministry has released a further 158,000 tons of sugar from 1955-56 production for sale in the free market. This quantity brings the total released so far to 1,126,000 tons.

ALCOCK, ASHDOWN & COMPANY, LIMITED

Seventy-third Annual General Meeting

CHAIRMAN, MR. W. A. WILES, ANNOUNCES EXPANSION PLANS

ADDRESSING the shareholders of Messrs. Alcock, Ashdown and Company, Ltd., at their Seventy-third Annual General Meeting held at Bombay on 30th July 1956, Mr. W. A. Wiles, Chairman, drew their attention to the fact that the year 1955 proved to be more profitable for the Company than the previous year. He also announced the expansion plans of the Company to be undertaken in Saurashtra.

The following are extracts from Mr. Wiles's speech:

"Last year, your Chairman, although hopeful that the 1955 results would continue on the path of improvement which our 1954 results showed over the preceding year, forecast the possibility that they might not be as profitable. However, I am pleased to report that this is not so and the results for the year show that the improvement has been maintained.

"The figure of sales and work done, as revealed in the profit and loss account for the year, is approximately Rs. 14 lakhs more than the corresponding figure for 1954, though when adjusted by the opening and closing figures of work-in-progress in order to arrive at the actual value of the work processed during the year, the figure for 1955 works out to Rs. 121.3 lakhs, as compared to Rs. 132.4 lakhs worth of work processed in 1954. In view of this, the increase in the gross profit of 1955 over that of 1954, amounting to Rs. 4,15,372, indicates a noticeable improvement in the ratio of gross profits to total work processed, which together with an improvement in the ratio of net overheads and expenses to gross profits over the same period goes to show that we have been working more efficiently, and hence more profitably in 1955 than in the previous year.

"After providing Rs. 4,75,000 for taxation, there remains a balance of Rs. 4,68,581, of which Rs. 72,286 has been transferred to general reserve, raising this reserve to Rs. 24,50,000 and leaving a balance of profit of Rs. 3,96,295 to which must be added the figure of profit of Rs. 1,35,820 brought forward from 1954 making a total of Rs. 5,32,115 available for disposal. As you will have seen from the Directors' report, your Directors recommend that a dividend of 12½ per cent. be declared, the same as last year, leaving a balance of Rs. 1,14,340 to be carried forward to 1956.

Work in Various Departments

"With the exception of the structural shop, to which I will return shortly, all departments were steadily employed throughout the year.

"In our points and crossings department where we manufacture requirements for the railways, there was a notable increase in the quantity of work handled, and there is hardly need to mention that, with the expansion required by the railways in the second Five-year Plan, their requirements are likely to keep our department busy to capacity for virtually an indefinite period.

"The foundry, which is not normally a busy department, was also kept fully occupied by a steady flow of orders.

"The galvanising department was employed for the greater portion of the year galvanising components of towers for the Hirakud Dam Project, and I am pleased to report the continued high standard of work achieved, which resulted in no rejections at all on this large contract. During the latter part of the year, the amount of large orders fell off, and the prospects for the future are still uncertain.

"The improvement in ship repairs noted at the end of 1954 continued only for the first quarter of the year, and since March last year no repairs of major importance were procured. This, however, was to a certain extent counterbalanced by a very large number of running repairs to ships visiting this port, including ships of the Indian Navy, which has enabled us to maintain satisfactory results.

"I come now to the work of the structural shop which, with the conclusion of certain large projects, and in the absence of any contracts of major importance, has had a disappointing year, being dependent largely upon small local jobs. You will understand that the nature of the work, which this department handles, has been the most highly competitive of all, and without taking the risk of paring our quotations to a dangerous level, it is difficult in times of keen competition, like last year, to procure orders which leave a reasonable margin of profit.

"A contributory factor to our comparatively high base cost in our structural department is the handling of the material in the very cramped space available at our works, which were not originally designed to cope with the kind of work to which we now aspire. This limitation of space places us at a disadvantage with our competitors possessing a more spacious and economic layout and it is partly with these considerations in mind that we have this year embarked upon a scheme of which I shall take this opportunity to apprise you.

New Factory in Bhavnagar

"With the active support and encouragement of the Government of Saurashtra we have already obtained the necessary licence to expand the operation of your Company to that State. We have acquired a plot of land of approximately 28 acres, very favourably situated in the Bhavnagar Port area, and we have applied for a lease of 30 years at a very low rental of Rs. 125 per acre per annum, that is to say, about Rs. 3,500 a year for the whole plot. This lease may be extended for a similar period with Government's option to increase the rental by not more than 50 per cent. To give you an idea of the satisfactory terms of this lease, I will mention that the rental of that portion of your Works in Mazagon, 6½ acres only of which is leased from the Bombay Port Trust, is the equivalent of over Rs. 75,000 a year. This lease expires in 1958 and the Bombay Port Trust have announced a very considerable increase in rent. This factor gave an additional spur to our search for economic breathing space which we feel we have been fortunate to find in Saurashtra where already other large industrial schemes are in process of development, in which we hope to play a major part. We propose in the early stages to erect a small boat-building shed equipped for building barges and for the fabrication of mild steel pipe-lines, for both of which we understand there is a considerable demand in Saurashtra. At a later date, after our workmen have acquired experience in the manufacture of barges, we propose to undertake the building of steel tugs and launches in the same shed, and with the same equipment. We anticipate being ready for production within the next month and we have already secured an order from Government for two large oil barges, with the probability of several additional dry-cargo barges, which should give a good preliminary start to our project.

"Following this preliminary phase, we propose, within the next eighteen months, to erect and equip a structural steel works capable of undertaking the fabrication of steelwork of all descriptions, such as buildings, bridges, water and oil fuel tanks, etc., with a monthly outturn of about 300 tons.

"We hope that this project, which has been sanctioned by the Government of India and has the encouragement of the Government of Saurashtra, will prove a small but worthy contribution to the vast industrial expansion envisaged in the second Five-year Plan, and be able to demonstrate, when given the opportunity and the materials, what we in the private sector are able to achieve in co-operation with and as a necessary supplement to the public sector. To this end we have also already received large orders for steel fabrication for the new steel mills being erected by Government at Bhilai and Rourkela, which work we shall carry out in Bombay.

Closure of Establishment in Pakistan

"You have already been advised of the closing down of our establishment in Pakistan and, although there have been many obstacles to overcome in the implementation of our sale agreement, we are pleased to say that this has now been satisfactorily concluded and, with the remittance of the sale proceeds to India, which we have been permitted as an exceptional case, and which we are informed is one of the only examples of repatriation of capital permitted from Pakistan to India, we hope to turn this capital to more profitable use both in rehabilitating some of the more outdated machinery of your Bombay Works, and also in our new venture in Bhavnagar.

"At this point, however, I must strike a note of warning. Our path of progress in this scheme of expansion is not smooth or straight or lined with roses. Now that the Government of India have made it abundantly clear that the emphasis in the second Five-year Plan is on industrial expansion, and that the engineering industry will be called upon to play an important role in national development, there are four essential requirements that must be met before this industry can embark, with any hope of success, on its venture. These are capital, raw materials, transport and skilled labour. As far as our venture is concerned, I am confident that, possibly with your help at a later date, the first requirement will be adequately looked after, but nowadays it is often easier to raise the capital than to procure the materials which it buys. Easier, too, to procure the work than the material, the tools and the skills to complete it.

Shortage of Steel

"There is today a serious shortage of steel which is not limited only to indigenous supplies, and full requirements of this commodity for industry cannot be expected to be obtained from Government-owned units before at least 1959-60. The success of the second Five-year Plan, and, therefore, the success of our part in it, must depend, to a large extent, on imports of steel and machinery, of which little surplus of the former is available even from the Continent, and although we have sufficient steel in our own limited stocks to fabricate and erect the two small boat-building sheds for the first phase of our Bhavnagar Project, it would indeed have unfortunate results on this venture if, thereafter, we had to sit idle waiting for the steel with which to build the barges, even though this is a Government job, to be built with steel from Government quotas.

"Similarly, although we plan to start the fabrication and erection of our new structural shop during the early part of next year, there is no guarantee that the schedule of our whole scheme might not have to be postponed if we are unable to procure the necessary steel for which we have already placed our orders with the Government. As an example of how our work has been held up during the first half of this year when our structural shop has not been fully employed, we have about Rs. 38 lakhs worth of orders on hand on which work either cannot be started, or completed through lack of the necessary steel. Nevertheless, strenuous efforts have been made and will continue to be made by us to ensure that all necessary supplies, both of machinery and the raw materials necessary, are obtained so as to circumvent, as far as is humanly practicable, any unprofitable delays to the venture.

Transport

"The third factor so vital to our success is transport. Even when machinery and the steel can be obtained, this has to be transported from the area of supply, whether in India or from abroad, to our factory site. The Railway Minister, Shri Lal Bahadur Shastri, has already indicated that the railways' carrying capacity is now short of requirements by about 5 million tons a year, and this shortage is likely to be multiplied many times as the second Five-year Plan proceeds. Similarly, congestion is increasing in every major port, which is aggravated as imports outstrip transport's ability to clear it to the interior.

Labour

"Finally, we come to labour. There is still in this country today an acute shortage of skilled labour and experienced personnel, and on a number of occasions during the year, our ship-repair department has been in difficulties in carrying out its work when the necessary skilled workmen were not available. The scarcity is most apparent in the category of fitters caused by the demand for such men in newly-opened factories and in such establishments as the oil refineries at Trombay. Similarly, in the vital category of supervisors and foremen, in spite of the great opportunities offered, few of these have risen from the ranks, and thus the intimate knowledge of the working conditions of labour, which help so much in harmonious and sympathetic relationship, is often lacking. Nonetheless, I am pleased to report this year a distinct improvement in relations with our workmen, which can be attributed in no small degree to the valuable efforts of our own works committee on which the representatives of the management and the workmen have the opportunity for friendly discussion on matters of mutual interest. As an additional facility a new and spacious canteen has been built and recently opened for our workmen at the cost of Rs. 2,00,000.

"We have today *sub judice* adjudication in which we are associated with other engineering concerns regarding the future wage scale of our workmen, and he would be a most foolish man who ventured to forecast any downward revision of our present scales resulting therefrom, or in any closing of the gap between the output per man and the labour costs per ton.

"It would be ungracious, at this opportunity, if I did not ask you to join with me in expressing our thanks to all the men, both skilled and unskilled, who have contributed to last year's successful progress, as well as to the General Manager, Mr. Campbell, and his supervisory and clerical staff. I express the hope that their efforts will succeed in fostering that harmony between management and labour so essential for the results we expect from our particular endeavours in India's plan for future industrial development, and that labour, with a greater sense of responsibility for their own part in India's industrial progress, will in return realise that, in order to achieve any lasting improvement in their standard of living, the burden of financing this objective in the form of higher wages and greater benefits can only be met by a higher standard of work and a greater productive capacity leading to the greater prosperity of their Company."

DICK'S
JOINTINGS
DICK'S "EAGLE" JOINTING JS. 514
The Economical Jointing for General Steam Work.
DICK'S "DICKTORITE" JOINTING JS. 528
For Highest Pressures and Superheat, Weak Acids, etc.
DICK'S "BESTORITE" JOINTING JS. 501
For all Steam Pressures, Oils, Ammonia, etc.
Supplied in sheets 40 ins. square, in thickness from 1/32 in. upwards.
DICK'S "EAGLE" ASBESTOS MILL BOARD
JS. 520
FOR GENERAL UTILITY WORK
Supplied in sheets 40 ins. square, in thicknesses 1/16" and 1/8"
All Jointings marketed by Dick's Asbestos and Insulating Co. Ltd. London, are manufactured from the finest of materials, and the variety of types will be found to meet almost every Engineering and Industrial application.

EUROPEAN COAL AND STEEL COMMUNITY

PRODUCTION INADEQUATE TO MEET DEMAND

A VERY marked expansion in industrial activity, particularly in the iron and steel industry, was the main feature of general economic development of the six member countries of the European Coal and Steel Community, as in most of the countries of the West, during 1955 and early 1956. Disclosing this, the Fourth General Report on the activities of the Community during the period 11th April 1955 to 8th April 1956, adds that the industrial production index for the Community countries as a whole rose by more than 12 per cent from 1954 to 1955. This expansion inevitably caused a steady increase in the demand for solid fuels which had begun in the autumn of 1954 itself. No doubt, there was an increase of about 2 per cent. in the production of hard coal during 1955, but the upswing in demand, as indicated by the rise of 6.5 per cent. in gross energy consumption, was so rapid that this expansion in production could only meet a fraction of it. Consequently, there was a growing tightness in the common market for coal, especially from the last quarter of 1955 onwards, and regional difficulties in getting adequate supply increased. The general balance between supply and demand in the European Coal and Steel Community as a whole was, however, kept up by withdrawals from stocks and by stepping up imports of American coal.

The main feature of the trend in hard coal production was elasticity in relation to the increase in demand. During 1955, the collieries of the Community produced 246.4 million metric tons, as against 241.7 million tons in 1954, or a rise of less than 2 per cent. An analysis of the production in individual member countries shows that, with the exceptions of Italy, where production was small, but the percentage of increase was the highest, and the Netherlands, the only country where it declined, the rates of increase kept nearly close to the average for the Community. The following table shows the trend of hard coal production in the Community, as compared with that in the other big producing countries of the world, during the past four years:

(In million metric tons)

	1952	1953	1954	1955*	Difference in 1955 over 1954
E. C. and S. Community	238.9	237.0	241.7	246.4	+ 1.9%
U.K.	230.1	227.8	227.9	225.2	— 1.2%
U.S.	458.1	443.0	380.5	448.5	+18.0%
Soviet Union ..	230.0	240.0	259.0	295.0	+13.9%
Eastern Europe ..	110.4	114.7	118.7	122.7	+ 3.4%
Other countries ..	228.4	238.9	252.5	265.2	+ 5.8%
World total ..	1,495.9	1,501.4	1,480.0	1,600.0	+ 8.1%

* Estimated.

The report adds that, although the increase in production was comparatively small in absolute values, the Community achieved greater results in terms of underground output per man-shift (O.M.S.). Thus, for the Community as a whole, the O.M.S. increased by 4.1 per cent., as compared with about 2 per cent. increase in production as noted above. This is accounted for by the falling off in the number of underground workers, particularly in the Ruhr.

Although hard coal production showed very little response to the increase in demand, coke production was more successful in keeping pace with the demand. The coking plants of the Community produced 68.6 million metric tons during 1955, as compared with 59.8 million metric tons in 1954, that is, an increase of 14.7 per cent. Coke production was thus very elastic. In conjunction with the quantity taken from stocks, it was sufficient to cover coke requirements, particularly those of the iron and steel industry, despite an increase of 24 per cent. in pig iron production during the year.

As pointed out at the outset, the increase in production of hard coal was not sufficient to meet the increased demand; it, therefore, necessitated imports of hard coal and generous withdrawals from stocks. Imports of hard coal from countries other than those within the Community amounted to 23.05 million metric tons, as against 13.92 million tons in 1954, an increase of 64.8 per cent. Of these imports, the U.S. accounted for 15.9 million metric tons, or nearly 70 per cent. of the total imports, as compared with 6.2 million tons in 1954. Imports from other countries, with the corresponding figures for 1954 within brackets, were: Soviet Union 1.08 million tons (0.71 million tons), Poland 1.26 million tons (1.16 million tons), the U.K. 4.3 million tons (5.3 million tons) and other countries 0.47 million tons (0.60 million tons). Imports of coke from third countries amounted to 260,000 metric tons, as compared with 100,000 tons in 1954. Withdrawals from stocks of hard coal aggregated 4.9 million tons, as against *nil* in 1954.

Although the supply position in relation to requirements was successfully balanced for the Community as a whole, local supply difficulties cropped up in all the member-countries at the end of 1955 and the beginning of 1956. These were due to the long spell of cold weather and the unsatisfactory transport position, with the railways overloaded and the waterways difficult to negotiate. There was, however, an improvement in the supply position as a whole during the first quarter of 1956. Most countries took to using more American coal and fuel oil to meet their growing requirements.

Dwelling upon the prospects for supply during the next few months, the report says that there will be no serious difficulty. For the increase in consumption bids fair to be less marked than in 1955. Secondly, the production of the Community itself is likely to go up. Thirdly, additional supplies will be easily available from the U.S. The main problem is, however, one of prices; American coal is costlier than Community coal.

COAL MINES PROVIDENT FUND SCHEME

The Government of India has decided to amend the Coal Mines Provident Fund Scheme in order to liberalise, for the benefit of workers, the scales of forfeiture of employers' contributions to the Fund in certain contingencies, as envisaged under the Act. The decision has been taken by the Government of India on the recommendation of the Board of Trustees of the Fund.

According to the provisions contained in the Scheme, full amount of employer's contribution along with interest were forfeited to the Fund, if a member withdrew his accumulations before attaining the age of 50 during a period which was less than 10 years of his membership. If the period of membership was more than 10 years, but less than 25 years, half of employer's contribution was liable to be forfeited.

According to the amended scheme, the proportion of employer's contribution and interest thereon to be forfeited to the Fund will be 75 per cent. if the period of membership is less than three years; 50 per cent. in cases of three years or more, but less than five years; 25 per cent. in five years or more, but less than 10 years; 15 per cent. in 10 years or more, but less than 15 years, and there would be no forfeiture in cases where membership extends to 15 years and above.

Under the existing arrangement, employer's contribution and interest were also forfeited to the Fund in cases of retirement of members whose membership was less than five years, but who had attained the age of 50 years. Under the revised procedure the above category of members would be entitled to get their provident fund accumulations in full.

DEVELOPMENT OF ATOMIC ENERGY

GREAT PROGRESS MADE IN BRITAIN

AT the conference of atomic scientists from India, Burma, Ceylon, Egypt and Indonesia, held last week in Bombay, the Chairman of the Atomic Energy Commission for India and well-known authority on atomic physics, Dr. H. J. Bhabha, did well to stress that very few countries in the world were in a position to carry through the entire development of atomic energy on their own, as they depended on others for the supply of either raw materials or specialised plant and equipment. The Conference itself noted that several European nations were considering close co-operation in developing peaceful uses of atomic energy and that such co-operation was particularly necessary for the comparatively backward countries in Asia and Africa.

There is no doubt that the application of atomic energy to industry and agriculture may open up new vistas of progress not only for the industrially advanced countries but also for the economically underdeveloped regions of the world. Here is a field in which mutual co-operation between nations can produce lasting benefit to the world as a whole. The development of atomic energy is thus a matter of vital concern to all countries. Fortunately, atomic energy is a field full of rich promise, thanks to recent research in both generation of atomic power and industrial application of energy. It is true that, ever since the discovery of radioactivity in 1896, scientists have been aware of the enormous supply of energy available in the heavy atoms. It was, however, only after the last war that research in atomic physics made rapid progress. The U.S. held a commanding lead in all spheres of atomic energy at the end of the war, but, since then, both Russia and Britain have made up much of the leeway. Indeed, starting from scratch, the British effort, as the P.E.P. pamphlet, *Atoms in Industry*, points out, has been "so successful that it has recently been possible to claim that Britain leads the world in some aspects of the development of peaceful uses of atomic energy." This statement is confirmed by the annual report of the U.K. Atomic Energy Authority, published last week. The report says that it will be at least four or five years before electricity is produced from nuclear energy in any country on a strictly commercial basis and adds: "The first nuclear reactor to be built for electricity authorities in this country may be the first in the world to comply with this description."

Programme

The provisional programme for the contraction of nuclear power stations, it may be recalled, was drawn up by the U.K. Government in a White Paper in February 1955. The programme includes :

(i) The construction of two gas-cooled graphite-moderated stations (each with two reactors) would be started about mid-1957. These stations should come into operation in 1960-61.

(ii) The construction of two further stations would be started about 18 months later, i.e., in 1958-59. These would also have two reactors each and would be similar in type to the earlier two stations, but would show an improved performance, particularly in heat rating. Each of the eight reactors in these early stations would have a net output of electricity of 50 to 100 megawatts so that the total output from the four stations, which should all be in operation by 1963, would be somewhere between 400 and 800 megawatts.

(iii) The construction of four more stations might perhaps start in 1960, and then a further four, 18 months later, say, in 1961-62. These might come into operation in 1963-64 and in 1965. It is difficult to specify what type of station these would be, but it is probable that each station would consist of only one reactor, which would be much more highly rated than the reactors in the first four stations. The stations begun in 1960 might be developments of the gas-cooled graphite-moderated type. The last four stations might be of the liquid-cooled type which might by then have been developed sufficiently to be economically satisfactory. The total installed capacity of the eight stations in this group should be well over 1,000 megawatts.

The advent of nuclear power, it is stated, has introduced a significant change into the cost structure of electricity generation. There is an increased importance of capital costs in relation to fuel and operating costs. Estimates of the cost of nuclear stations built primarily for producing power which include the initial charge of uranium as a capital cost, range from £150 to £180 per kilowatt of installed capacity. These may be compared with a capital cost of between £50 and £60 per kilowatt for conventional stations. The probable cost of electricity from the first nuclear stations would, however, be about 0.6d. per unit, the same as the established cost in new coal-fired stations. But still a great deal of uncertainty surrounds this subject This is because nowhere in the world has electricity yet been generated in a nuclear power station on a commercial scale. Further, technical developments are taking place very rapidly and the picture is apt to change rapidly. In any case, it must be remembered that a slight reduction or increase in price per unit is not of material significance to all industries, since, in the case of many industries, the cost of electricity forms only a small proportion of the total cost of a product turned out by them.

Radioisotopes

The importance of development of atomic energy to industry arises from the wide application to which radioisotopes may be put. At the Harwell Atomic Research Establishment in the U.K. a wide range of radioisotopes has been made in quantity and at a cost which have rendered it possible to use them for many purposes in research, medicine, agriculture and industry. So far as industry is concerned, isotopes are essentially tools for purposes of detection, measurement, tracing and inspection. In many cases, measuring instruments may be considered as electronic instruments which employ a radio-isotope as a source of electrons; in the U.K., the three foremost makers of these instruments are Baldwin Instruments, E. K. Cole and Isotope Developments. Versatility and range of application are stated to be the outstanding characteristics of isotopes. And their uses are said to be simple and cheap. The P.E.P. pamphlet gives a simple illustration of the use of isotopes as the "package monitor." Thus, Macleans Ltd., the manufacturers of a well-known brand of toothpaste, have used a package monitor which ensures that each tube is filled with toothpaste perfectly—that is, without any air space in the crimped end. Since isotopes find many uses in industry, there is a great demand for them all over the world. Britain has successfully met this demand. It is the largest exporter of isotopes and one-third of its production is sent overseas.

All this serves to give one some idea of the work that is being done in the U.K. in the sphere of atomic energy. The annual report of the Atomic Energy Authority, to which a reference was made at the outset, throws further light on the development in this field. Thus, the report reveals that a new type of proton accelerator is planned which will produce something like 100 times the intensity of the present U.S. machines and of the new Russian machine. It will incorporate a giant magnet weighing 5,000 tons and measuring 120 ft. in diameter, and will have an energy of 6,000 million volts. Sales of radioactive isotopes—by-products of the industry—have grown steadily during the year. Total sales were valued at £500,000, and more than half this figure was accounted for by exports to over 50 different countries.

The biological applications of irradiation in sterilisation and mutation are being actively studied, says the Authority. Potatoes and onions have been successfully prevented from sprouting. Seeds of cereals and other crops have been dosed with gamma-radiation to induce mutations. A number of agricultural institutions, including two in Italy, have sent seeds for treatment. In the section dealing with new applications for isotopes, the report says sewage-pollution of beaches has been investigated by incorporating radioactive phosphorus into the sewage pit before discharge into the sea. Results so far are satisfactory. Methods of using radioactive solutions to help detect leaks in water mains and oil pipelines have also been devised and have proved successful in lines up to 20 miles in length.

Low-power Reactors

Progress is being made in the development of low-power reactors of the order of 10 MW. These, it is believed, would be more suitable for export than the large stations now being developed for electricity authorities in the United Kingdom. The authority is examining sites with a view to setting up a further major research establishment, as the one at Harwell, Berkshire, has reached the maximum size compatible with efficiency of management and avoidance of pressure on the surrounding countryside.

The report makes it clear that the export of nuclear reactors, whether for research or for power production, will be the responsibility of industry, but the Authority expects to provide natural fuel elements to match whatever volume of export business may be secured in the foreseeable future. The immense atomic-energy development in Britain is illustrated by the report, which points out that at the end of the year under review no fewer than 21 nuclear reactors were either in operation, under construction, or planned. These are additional to the 12 nuclear-power stations envisaged in the Government's 10-year programme.

Commonwealth Projects

The release from security restrictions of virtually the whole of the basic information needed in the research and development programme for peaceful applications of atomic energy, it is stated, has opened up a free flow of information between scientists of all countries. Co-operation with Commonwealth projects has increased, while agreements for co-operation have been made with Belgium, Denmark, France, Israel, the Netherlands, and the United States. Discussions for similar agreements have been held with Norway, Sweden and W. Germany.

The lead in research in and development of atomic energy, which the U.K. has given, may be of immense use to underdeveloped countries. Britain is one of the 12 countries, including the U.S. and Russia, which have proposed an International Atomic Agency under the auspices of the United Nations. This proposal is to be the subject of a conference in September this year. Such an agency could do much to organise co-operation in research and development in this field and also act as an intermediary for atomic materials and plant.

GAS-TURBINE LOCOMOTIVE

A locomotive executive in Chicago disclosed that 25 gas turbine-electric locomotives are hauling approximately 10 per cent. of all the freight on the entire Union Pacific Railroad whose total trackage is over 15,000 miles. Last year these locomotives ran a total of more than 2,500,000 miles. Nine of these gas-turbine units are equipped with 13,000 gallon fuel tenders and can run a distance of 990 miles, without refuelling, according to Globe Press Service. Reviewing results of a ten-year development programme, Mr. Robert Williamson, General Electric's manager of locomotive sales, said this newest form of rail power is now out of the experimental stage and is today a practical, everyday reality. The 25 gas turbine-electric locomotives already in service on the Union Pacific—of 4,500 h.p.—are to be augmented by 15 large units of 8,500 h.p. now on order from General Electric (U.S.A.). In addition, the Union Pacific has expressed an intent to purchase 30 more.

Cold storage experiments conducted in Bombay State show that among the mango varieties the Alphonso is the best keeper in cold storage. Green and hard fruits of this variety can be preserved, experiments show, in a satisfactory condition at 45° to 48° F. for seven weeks. Such fruits can subsequently be fully ripened at ordinary temperature. The cold storage trials have clearly shown that the Alphonso mango can be successfully shipped to foreign markets provided cold storage facilities are available and the time in transit does not exceed a month. Trials also show that the best method of packing these mangoes is to put them in small crates of the size of 18" x 10" x 4½", each holding one dozen fruit in a single layer. Each fruit should be wrapped in tissue paper and packed in wood wool to keep it in position in the crate. If the cold storage and transport is for the internal market, the size of the crate can be 2' x 1' x 1', to hold about 100 fruits.

NEW PRODUCTS AND PROCESSES

Protection for Telephones

PROTECTORS against lightning and electric power lines for telephone exchanges and subscribers' telephones are among the products of a Sydney firm of electrical and mechanical engineers. The firm, G. W. Engineering Proprietary Ltd., designs and manufactures these appliances to the specifications of the Australian Post Office. Equipped with head coils, test apparatus and fuses, the exchange unit provides protection against a current exceeding 1.5 amperes or a line potential exceeding 500/750 volts, where the current is of sufficient magnitude and duration to be dangerous. The protector for a subscriber's telephone works on the same principle, but has no heat coils. The firm also produces other types of telephone and radio apparatus, rotary and heat switches precision parts and plastic moulders. Plastic utilities for the office desk, with a chrome finished and in various colours, are a popular line of G.W. products. The Cal-N-Stand is a perpetual calendar of chrome and plastic on a plastic base. Grooved to carry pens and pencils, its base features a magnetic, spill-proof pin tray. Qik-N-Dex is an alphabetically indexed reference pad for telephone numbers and addresses. Two quick movements make the pad spring open at the required page. Refills for G.W. desk equipment are always available.

A New Etching Process

In another significant invasion, the chemical industry is moving into the field of producing titanium and alloy steel parts for supersonic aircraft, by a process of etching, replacing the standard machining processes. The etching process involves exposing parts of the workpiece to acid, which eats away the requisite amount of metal, instead of this being machined off. Lacquer, or some other type of protective material, prevents the surrounding area from being corroded. It is claimed that much greater thinness can be achieved by chemical etching than by machining. This results in great weight-saving in the construction of high-speed aircraft. It also tends to reduce the number of parts required for assemblies. The process has already been tried effectively in the making of aluminium and magnesium aircraft parts. On the strength of results, plans are being laid to extend the process to titanium. A pilot process plant has been set up in the Los Angels area jointly by the Missile Development Division of North American Aviation and Turco Products, Inc. North American Aviation has played a major part in the development of the chemical etching process, which it calls Chem-Mill. Turco Products developed the process, and has already licensed it to other U.S. aircraft companies. North American Aviation reports that the new process has saved both time and labour in its aircraft production programme, and in work on the Navaho supersonic guided missile.

A Stacking Pallet

A packaging works, Emballage- en palletfabriek Espero, Breevaartstraat, 67, Rotterdam (Holland), makes a sturdy stacking pallet which can very quickly be converted into a box pallet by means of four wooden partitions, without the use of any tools. The box pallet is built up by means of a special locking set, a patent application for which has been filed. The locking device keeps well within the dimensions of the wooden slats, so that there are no protruding parts. When taken apart, the box pallet occupies only 40 per cent. of its volume in assembled condition; this constitutes a great saving on the costs of transport in case of returns. The dimensions of the walls are such as to fit exactly into the stacking pallet, so that the parts can be stored conveniently arranged and exactly on top of each other. These stacking pallets—box pallets can be supplied in various sizes with a loading capacity of up to two tons.

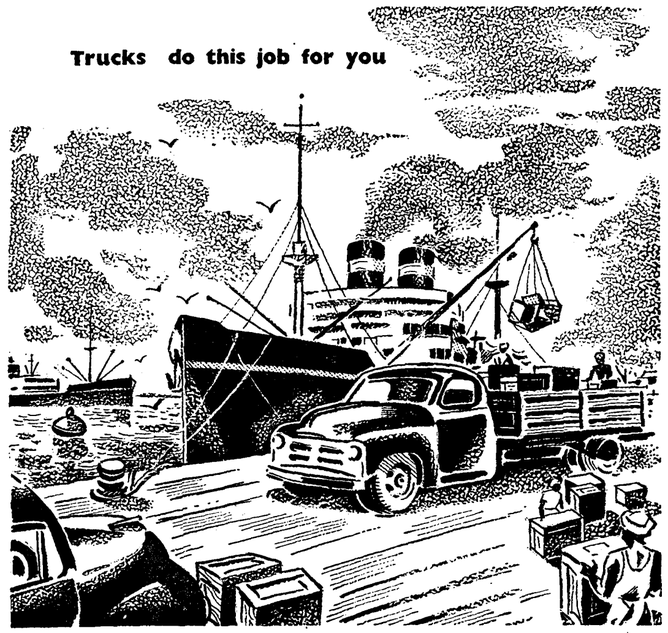
Pipette Filler

To enable laboratory workers to fill pipettes with acids, alkalies and other dangerous fluids without using mouth suction a simple moulded rubber device has been produced; the supplier is Griffin and George, of Ealing Road, Alperton, Wembley Middlesex, England. It consists of a rubber bulb with a three-valve control unit which is operated with the forefinger and thumb. By this means the liquid can be made to enter the pipette and to be discharged from it and the meniscus can also be adjusted to the graduation mark. The filler has a capacity of about 60 millilitras and can be used with bulb or cylindrical pipettes with capacities up to 100 millilitres. It can also be used as a pressure device on the reservoirs of automatic burettes.

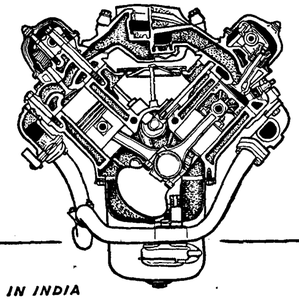
High-Speed Cameras

High-speed cameras that record as many as 15,000,000 pictures a second were described recently by Mr. George T. Eaton of the Kodak Research Laboratories in the United States. Mr. Eaton said that camera units having film wrapped on a revolving drum, or based on a rotating-mirror principle, use short-duration exposure to reach "almost fantastic" recording speeds. Other cameras, with conventional film-sprocket drive, are capable of speeds up to about 10,000 pictures per second. High-speed moving pictures are finding increasing applications in science and industry, Mr. Eaton noted. Some of these uses are the measurement of mechanical and electrical effects, the determination of velocities, study of welding arcs, and analysis of fundamental chemical processes. One superfast camera, called the Hycon Submicrosecond, has an exposure time of only 1/10,000,000th of a second. It is used to study particle motion in blast furnaces and jet engine combustion.

Trucks do this job for you



STUDEBAKER
DOES IT BETTER



Because the V8 is more powerful and economical than the six cylinder engine and can therefore carry more load at less cost.

IN INDIA

ONLY Studebaker Cars and Trucks are fitted with V8 (OVERHEAD VALVE) engines

LIFE INSURANCE POLICIES

MADRAS HIGH COURT DEFINES SCOPE OF ASSIGNMENT AND NOMINATION

IN the course of their separate but concurrent judgments, which discussed the scope of the dispositions of life insurance policies by assignment and nomination, Their Lordships Mr. Justice P. Govinda Menon and Mr. Justice P. N. Ramaswami, of the Madras High Court, held, in a case of an appeal against the judgment of the Subordinate Judge, Salem, that, unless a trust had been created under the Married Women's Property Act (Act III of 1874), the nominees would have to receive the amount, subject to all the liabilities as if the disposition was by means of a testamentary instrument. In effect, they confirmed the judgment of the Subordinate Judge.

The facts of the case may be summarised. A policyholder in Salem had taken out two life insurance policies for Rs. 5,000 each in the National Insurance Company, Ltd., Calcutta. He had become indebted to the Indian Insurance and Banking Corporation Ltd., Salem. This Corporation instituted a suit, as a result of which the two policies were attached in September 1948. The policyholder died on 23rd July 1949, having nominated his wife as the person entitled to receive the policy moneys. The wife died on 26th July 1949. Their minor daughters filed a petition stating that the moneys could not be used to satisfy the decree-debt of their father, since the moneys had become the assets of their mother on the death of their father. The Subordinate Judge negatived the contention of the petitioners. The present appeal arose out of that judgment.

General Law

Dismissing the appeal, His Lordship Mr. Justice Govinda Menon discussed the scope of dispositions of a policy of life insurance. His Lordship pointed out that a policy of life insurance was a security for money payable at a date uncertain but calculable, was well established, for, the sum insured was certain, the premium or consideration for its payment was also certain and the time when the money was payable was also certain where the date was fixed but uncertain if payable on death. As per Porter's "Law of Insurance," a life insurance policy had to be construed as a contract to pay a certain sum in a certain fashion, depending on the duration of human life. Such a policy always formed part of the assets of the assured and might be dealt with at his absolute discretion, such as sale, charity, settlement, or bequest or made the subject of *donatio mortis causa*. Dispositions of life insurance policies could be classed under three heads, assignment, nomination and statutory creation of a trust by reason of the provisions of Act III of 1874. In India an assignment of an insurance policy was payable by virtue of section 38 of the Indian Insurance Act. Under the general law, an assignment was understood as a transfer by an individual of his right or interest in the property to another, resting upon a contract between them. That being the case, if a policy was assigned, it operated so as to completely divest the assignor of any right under it, for the essence of assignment was complete divesting. The assignee was, therefore, clothed with all the rights and liabilities which the insured had before the transfer: that is, there was a substitution for the assured by the assignee, so far as the benefits were concerned. Ordinary love and affection were considered sufficient consideration for the assignment of a policy. In the case of a transfer or assignment, the insurer should recognise the transferee or the assignee named in the notice as the only person entitled to the benefit under the policy and such a person should be subject to all the liabilities and equities to which the transferor or assignor was subject at the time of the transfer or assignment.

Proceeding, His Lordship pointed out that, if, by nomination, a trust was created, then the nominee became a beneficiary. But the difficulty was to find out what the intention was. "Nominated" meant only "to name" and it was in every instance a question of mixed law and fact as to what the intention was. Thus by the expression used, it had to be found out whether the nomination merely created a payee or a beneficiary for whose protection a trust was thereby created. This difficulty arose not on account of the law on the subject, which was very clear, but only on account of the construction to be placed on the language of the declaration made in the face of the document by the assured. A declaration which at first sight might appear to be a nomination of no more than a payee or an agent to receive, might on a proper construction be found intended to create a trust. His Lordship, therefore, felt that if the construction placed by the declaration was that a trust had been created under the provisions of Act III of 1874, the beneficiary would take the assured amount free of all liabilities of the insured, and if it were construed as a mere nomination, the nominee would have no more right than to receive the amount subject to all the liabilities as if the disposition was by means of a testamentary instrument. In the case in question, His Lordship held that the nomination could be construed only as a testament which would be subject to all the liabilities which the assured had to discharge. In conclusion, His Lordship held that the decision of the lower court was correct and the appeal must be dismissed.

Act III of 1874

In the course of his judgment, Mr. Justice P. N. Ramaswami observed that the point for determination was the scope of the nomination under section 39 of the Indian Insurance Act. After examining in detail English and American law bearing on the subject and various decisions, His Lordship said that the law in regard to nominations under section 39 of the Insurance Act and under section 6 of the Act III of 1874, could be summed up thus: (1) Where the nomination is purported to be made in favour of the wife under section 39 of the Insurance Act, section 6 of Act III of 1874 had no application and no trust in favour of the wife is created. (2) In other cases, section 6 of Act III of 1874 was attracted provided the policy on the face of it was expressed to be for the benefit of the wife. Even the proposal was a policy and could be taken into account in promising whether a trust in favour of the wife was created. (3) No set form or words was necessary, provided the intention of the assured could be inferred. The words "payable to my wife" were enough and it was not necessary that it should be expressly stated that the policy was for the benefit of the wife, and to reproduce the phraseology of section 6 of Act III of 1874. His Lordship said that this distinction was important because in the case of the nomination, the nominee took it as under testamentary disposition as property bequeathed by the testator, subject to the liabilities of the testator which that legacy had to satisfy, whereas in the case of a nomination under Act III of 1874, it resulted in the creation of a trust, the benefit of which accrued to the nominee, though subject to the other conditions in the policy, and could not, therefore, be looked upon as available to the creditors regardless of the trust impressed on it. In the result, His Lordship held that the findings of the Subordinate Judge, Salem, were unassailable and dismissed the appeal.

HEAD OFFICE FOR LIFE INSURANCE CORPORATION

The claim of Bombay to become the head office of the life Insurance Corporation have been strongly put forward by the Committee of the Indian Merchants' Chamber in a communication addressed to the Government of India. From all practical considerations, the Committee says, Bombay is the most suitable centre for the location of the Life Insurance Corporation. This city has been the main centre of the insurance business in the country from its very commencement. It is the headquarters of the apex bodies concerning insurance, namely, the Indian Life Assurance Offices Association, the Indian Insurance Companies' Association, the Federation of Insurance Institutes of India, etc. The share of Bombay in the life insurance business of the country is well over 50 per cent. The city of Bombay, therefore, with its rich experience of life insurance business extending over the last so many years, is the most appropriate place for the location of the central office of the Life Insurance Corporation.

Even from the point of view of the facilities which are necessary for enabling the Corporation to discharge its functions satisfactorily, Bombay's claim, to be the headquarters of the Corporation, it is stated, can hardly be questioned. It is necessary that the head office of the corporation is located at a place where it is possible to maintain close and day-to-day contact with the premier stock exchange in the country as well as with the Reserve Bank of India. The Bombay Stock Exchange and the Bombay money market, it will be readily admitted, are the biggest and the most efficiently organised markets in the country. The location of the head office of the Corporation in Bombay will, according to the Committee, facilitate close and daily contact of the Corporation not only with these institutions but also with the head office of the Reserve Bank of India and this would help the Corporation discharge promptly and expeditiously its function relating to the investment of the life funds, which would be one of its most important functions.

Bombay, it is further stated, would also provide the right type of technical staff which would be required by the head office of the Corporation. It is a well-known fact that a high proportion of the technically qualified staff in life insurance business is concentrated in the city of Bombay. Out of a total number of 92 fellows of the Institute of Actuaries, for instance, as many as 40 are in Bombay. Similarly, highly qualified and experienced staff required for the other branches of the insurance administration such as accounts, mechanisation, etc., can also be provided by Bombay in an adequate number. Last but not the least, the central office of the Corporation would require the services of highly qualified and experienced medical persons. Insurance medicine is a highly technical subject and Bombay possesses a large number of doctors who have made a special study of this subject. The services of these experienced medical referees would be readily available to the Corporation, if the headquarters of the same are located in Bombay.

MISAPPROPRIATION OF FUNDS

Since 19th January 1956, when the Government took over life insurance business, five cases of misappropriation of funds have come to light. This information was furnished by the Union Minister for Revenue and Civil Expenditure, Mr. M. C. Shah, in reply to a question by Mr. Tulsidas Kilachand in the Lok Sabha. The five cases are: Presidency Life Rs. 30 lakhs; Palladium Assurance Rs. 5 lakhs; Bangalakshmi Rs. 13 lakhs; Adarsh Bhima Rs. 15 lakhs and Hindusthan Ideal Rs. 11,000. Mr. Shah revealed that investigations were proceeding in some other cases but it would not be advisable to disclose their nature until investigations had been completed. Answering another member, Mr. Shah explained why it was not advisable to disclose cases where investigations were still going on. In one case, some misappropriation was detected, but one of the persons responsible died in suspicious circumstances. It was said that it was a case of suicide. He told another member that any special machinery to conduct investigations would be set up after the Corporation came into being.

Mr. Tulsidas Kilachand asked whether the five cases mentioned by the Minister were the cases the ex-Finance Minister had in mind when during the passage of the Life Insurance Nationalisation Bill, he referred to "very large-scale malpractices in insurance companies in private hands"; now the Minister was saying that the custodians had reported only these few cases. Mr. Shah said that these cases had been reported by the Custodians when they found, on taking over, that securities in respect of the said sums were missing. He added that other cases would have to be investigated. There was, he pointed out, a provision in the Bill which authorised the Corporation to investigate the accounts of the companies for a period of five years preceding the announcement of nationalisation.

LLOYD'S RESULTS

Premium and other income of the 1953 marine, aviation and transit account of Lloyd's, closed at the end of 1955, aggregated £105.3 million, as compared with £105.9 million for the three-year 1952 account and £97.2 million for the 1951 account. The balance of £11.8 million remaining after meeting claims and providing for reinsurance or reserves represented a percentage profit of 11.20, as compared with 9.59 in 1952 and 9.85 in 1951. It may be mentioned here that each annual underwriting account at Lloyd's is kept open for three years, during the second and third of which premiums attaching to business transacted in the first year and received in the later years are added to the first year's premium income. The claims attaching to each year's account which are paid in the second and third years of that account are included in those year's figures. At the end of the third year of each account, provision is made by reinsurance or otherwise, to meet liabilities still outstanding against that account, and the credit balance at the end of the period represents the trading profit.

The business of the 1953 marine, aviation and transit account of Lloyd's was transacted by 3,232 underwriting members, comprising 163 syndicates. During the two years of the 1954 account, business was carried out by 3,436 members in 171 syndicates and in the first year of the 1955 account by 3,697 members in 175 syndicates.

An appeal to the State Governments to extend all co-operation to the Health Insurance Scheme was made by the Union Minister for Labour, Mr. Khandubhai Desai, at the recent meeting of the Employees' State Insurance Corporation, held at New Delhi. He admitted that decentralisation of the scheme was the best way to make it a success. But this had to be achieved step by step with mutual co-operation and understanding of all the interests concerned. Referring to the extension of the scheme to the families of the insured persons, Mr. Desai said that the report of the Actuary was under the active consideration of the Government of India. He hoped that it would be possible for the Government, within certain limitations, the outdoor medical care to the members of the family of insured persons. Unless the scheme was extended to the members of the family, said the Minister, it was not likely to make headway.

Notice

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

THE FORTY-NINTH ANNUAL GENERAL MEETING of the Shareholders of THE TATA IRON AND STEEL COMPANY, LIMITED, will be held on Thursday the 30th August 1956, at 4-30 p.m. (S.T.), at the Registered Office, Bombay House, 24, Bruce Street, Fort, Bombay, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1956.

2. To declare dividends on First Preference, Second Preference and Ordinary Shares.

3. To appoint a Director in the place of Sir Purshotamdas Thakurdas, who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Purshotamdas Thakurdas who has attained the age of 77 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in the place of Sir Cowasji Jehangir, who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Cowasji Jehangir who has attained the age of 77 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

5. To appoint a Director in the place of Mr. Dinsha K. Daji who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Dinsha K. Daji who has attained the age of 83 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

6. To appoint a Director in the place of Mr. Neville N. Wadia who retires by rotation and is eligible for re-appointment.

7. To appoint and/or approve the appointment pursuant to Section 261 of the Companies Act, 1956, of Mr. J. D. Choksi who was appointed a Director at the Ordinary General Meeting held on 25th August 1955, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto:

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Mr. J. D. Choksi, a Director of the Company, who is also a Director, Officer and Member of Tata Industries Private Ltd., the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said section."

8. To consent, pursuant to Section 314 of the Companies Act, 1956, to Mr. S. R. Devitre and Mr. K. Cursetji, who are relatives of Sir Jehangir Ghandy, whom the Managing Agents of the Company, Tata Industries Private Limited, propose to appoint today as a Special Director by virtue of the Articles of Association, holding and continuing to hold offices or places of profit under the Company as employees and, if thought fit, to pass the following resolution as a Special Resolution in respect of which the relative explanatory statement as required by Section 173 of the said Act is annexed hereto:

"RESOLVED that the Company consents to Mr. S. R. Devitre and Mr. K. Cursetji, who are relatives of Sir Jehangir Ghandy, a proposed Director of the Company, holding and continuing to hold offices or places of profit under the Company as employees."

9. To consider and, if thought fit, to pass the following resolution regarding the amendment of the Company's Memorandum of Association as a Special Resolution pursuant to Section 17 of the Companies Act, 1956, the relative explanatory statement in respect of which as required by Section 173 of the said Act is annexed hereto:

"RESOLVED that Clause 3 (r) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:—

(1) To provide for the welfare of Directors or employees or ex-employees of the Company or its predecessors in business and the wives, widows and families or the dependents or connections of such persons by building or contributing to the building of houses or dwellings or quarters or by grants of money, pensions, gratuities, allowances, bonuses, profit-sharing bonuses or benefits or any other payments or by creating and from time to time subscribing or contributing to provident and other associations, institutions, funds, profits sharing or other schemes, or trusts and by providing or subscribing or contributing towards places of instruction and recreation, hospitals and dispensaries, medical and other attendance and other assistance as the Company shall think fit.

(2) To subscribe or contribute or otherwise to assist or to guarantee money to charitable benevolent, religious, scientific, national, public, political or any other institutions, objects or purposes or for any exhibition.

10. To consider and, if thought fit, to pass the following resolution regarding the amendment of the Company's Articles of Association as a Special Resolution pursuant to Section 31 of the Companies Act, 1956, the relative explanatory statement in respect of which as required by Section 173 of the said Act is annexed hereto:

"RESOLVED that the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof be approved and adopted with such modifications, if any, as may be agreed to at this meeting, as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

11. To consider and, if thought fit, to pass the following resolution required by Section 293 of the Companies Act, 1956, an explanatory statement in respect of which is annexed hereto as prescribed by Section 173 of the said Act:—

(A) RESOLVED pursuant to sub-clause (1) (*d*) of section 293 of the Companies Act, 1956, and Article 130 of the Articles of Association and all other enabling provisions, if any, that the Company hereby consents to the borrowing by the Directors for and on behalf of the Company from the International Bank for Reconstruction and Development (hereinafter called the Bank) of the sums of money and on the terms and in the manner mentioned and provided in a Loan Agreement dated the 26th day of June 1956 and made between the Bank and the Company notwithstanding that as a result of such borrowing the moneys thereby borrowed together with the moneys already borrowed by the Company (apart from temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside apart for any specific purpose.

(B) FURTHER RESOLVED that pursuant to the said Section and Article, the company hereby consents to the borrowing by the Directors for and on behalf of the Company from time to time of such sums of money additional to borrowings from the Bank as in the opinion of the Directors shall be required to execute and complete the Project (with such alterations and changes as may from time to time be agreed between the Bank and the Company) described in Schedule 2 of the said Loan Agreement dated the 26th June 1956, notwithstanding that as a result of such borrowing the aggregate amount of such borrowings together with the moneys already borrowed by the Company (apart from temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) and the moneys to be hereafter borrowed by the Company in terms of Resolution (A) aforesaid will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside apart for any specific purpose.

12. To consider and, if thought fit, to pass the following resolution required by Section 359 of the Companies Act, 1956, the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto:

"The Company being satisfied that the insurance premia or other charges made by the New India Assurance Company Limited for insurance in respect of the Company's property, assets and goods are at rates which are not less favourable to the Company than the market rates and are otherwise reasonable, it hereby authorises Tata Sons Private Limited, Associates of Tata Industries Private Ltd., the Managing Agents of the Company, to retain all commission or other remuneration already earned or to be earned by them at any time hereafter as one of the principal agents of the New India Assurance Company Limited in regard to all contracts of insurance or insurance policies which have been or which may at any time hereafter be entered into by the said New India Assurance Company Limited with the Company."

13. To consider and, if thought fit, to pass the following resolution required by Section 373 of the Companies Act, 1956, the relative explanatory statement in respect of which as required by Section 173 of the said Act is annexed hereto:

"RESOLVED that the investment of Rs. 112 lakhs made by the Company in 112,000 fully paid-up Ordinary shares of the face value of Rs. 100 each of the Tata Locomotive and Engineering Co. Ltd., which Company belongs to the same group as the Company, be and is hereby sanctioned, and the Managing Agents be and are hereby authorised to obtain the approval of the Central Government to the said investment."

14. To consider and, if thought fit. to pass the following resolution the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the Companies Act, 1956:—

"RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307, 356-360, 362-372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the registered office of the Company between the hours of 11-00 a.m. and 1-30 p.m. (S.T.) on any working day except Saturdays and between the hours of 11-00 a.m. and 1-00 p.m. (S.T.) on Saturdays, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company, if any, as aforesaid between the times above-mentioned during the period prescribed by sub-section 5(*a*) of Section 307."

15. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, *20th July* 1956.

Notes:—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Transfer Books of the Company were closed from Friday the 6th July 1956 and will remain closed till Monday the 30th July 1956.

(*c*) If dividends on shares as recommended by the Directors are passed at the Meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 30th July 1956. The payments will be made on and after the 31st August 1956.

Explanatory Statement as required by Section 173 of the Companies Act, 1956

In conformity with the Companies Act, 1956, which came into force on 1st April 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to the special business mentioned in the Notice dated the 20th July 1956.

2. In respect of Item No. 3 of the Notice of the Annual General Meeting it is notified that Sir Purshotamdas Thakurdas who retires by rotation and is eligible for re-appointment has attained the age of 77 years and hence he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Sir Purshotamdas Thakurdas joined the Board of the Directors of the Company in 1922. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

3. In respect of Item No. 4 of the Notice of the Annual General Meeting it is notified that Sir Cowasji Jehangir who retires by rotation and is eligible for re-appointment has attained the age of 77 years and hence he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Sir Cowasji Jehangir joined the Board of the Directors of the Company in 1933. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

4. In respect of Item No. 5 of the Notice of the Annual General Meeting it is notified that Mr. Dinsha K. Daji who retires by rotation and is eligible for re-appointment has attained the age of 83 years and hence he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Mr. Dinsha K. Daji joined the Board of the Directors of the Company in 1936. He is a solicitor of the High Court of Bombay of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

5. In respect of Item 7 of the Notice of the Annual General Meeting a special notice has been received from some members as required by Section 261 proposing that the appointment of Mr. J. D. Choksi as Director be made and/or approved in accordance with the provisions of the said section. The Managing Agents of the Company, Tata Industries Private Ltd., have the right to appoint two Directors as Special Directors. One such Director is Mr. J. R. D. Tata, the Chairman, and the Managing Agents propose to appoint Sir Jehangir Ghandy as the other Special Director. As set out in the special notice received by the Company, the reasons which make the above resolution necessary are as follows:—

As Mr. J. D. Choksi is a Director, Officer and Member of the Managing Agents, his appointment as a Director can only be made by a Special Resolution of the Company under the provisions of Section 261 (1) (f). It is also apprehended that by virtue of sub-clause (4) of the same Section, although Mr. J. D. Choksi does not retire from office by rotation at the Annual General Meeting this year, his appointment should be approved or made by a Special Resolution of the Company at the said Annual General Meeting.

Mr. Choksi first became a Director of the Company in 1949 and has, for the last several years, been associated as one of the Directors of the Managing Agents with the management of the affairs of the Company of which he has been the Vice-Chairman since 1953.

As it is in the interest of the Company that it should continue to receive the benefit of his advice as a member of the Board it is desirable that his appointment as a Director be made or approved by Special Resolution in accordance with the provisions of Section 261 of the Act.

6. In respect of Item 8, it is notified that Mr. S. R. Devitre and Mr. K. Cursetji who are relatives within the meaning of Section 6 of the Companies Act, 1956, of Sir Jehangir Ghandy who is proposed to be appointed as a Special Director by Tata Industries Private Limited, the Managing Agents of the Company in terms of the Company's Articles of Association, hold offices or places of profit under the Company as employees. In view of the provisions of Section 314 of the Act, consent of the Company accorded by a Special Resolution is necessary for Mr. S. R. Devitre and Mr. K. Cursetji holding and continuing to hold the offices or places of profit under the Company as employees.

7. In respect of Item No. 9, Sub-clause (*r*) of Clause 3 of the Memorandum of Association of the Company is as follows:

(*r*) To support and subscribe to any charitable or public object, and any institution, society, or club which may be for the benefit of the Company, or its employees, or may be connected with any town or place where the Company carries on business; to give pensions, gratuities, or charitable aid to any person or persons who have served the Company, or to the wives, children, or other relatives of such persons; and to form and contribute to Provident and Benefit funds for the benefit of any persons employed by the Company.

This sub-clause deals with two different classes of objects to which the Company may contribute funds; one to charitable and public objects and institutions of benefit to the Company, and the other relates to the grant of pensions and benefits to employees and their relatives. As these are two distinct objects, it is desirable that they should be set out separately. It is also felt that the clause, insofar as it relates to support of and subscriptions to charitable, public and beneficial objects and institutions, is stated in a form which is rather restricted to suit modern conditions. The industrial policy of Government under conditions today is of vital importance to most industries, and particularly to a key industry like the steel industry. Shareholders are aware that the steel industry occupies a prominent place in the recent statement on Government's Industrial Policy. Industrial Policies which become part of the law of the land are moulded by political parties who form the Government of the day. It is, therefore, in the interests of the Company to be able to contribute to the funds of political parties which in the Company's opinion will serve the interests of industry in general and of the steel industry in particular.

Section 293 (1) (e) of the Companies Act, 1956, clearly recognises the right of a company to contribute to funds not directly relating to its business or the welfare of its employees by providing that the contribution of the company in such cases shall not exceed 5 per cent. of its average net profits or Rs. 25,000 whichever is the higher. In the discussion in the Lok Sabha on this subject it was recognised that this provision covered contributions to political funds and purposes.

It is believed that the existing clause in the Memorandum might enable the Company to make contributions to a political fund, but it is desirable to eliminate any doubt on the subject by a specific provision in the Memorandum of Association enabling the Company to contribute to such political objects and purposes.

It is, therefore, proposed, in place of the present sub-clause (*r*) to provide two sub-clauses, one for the grant of benefits to employees and their families, and another for subscription or contribution to charitable and other objects (including political objects).

Shareholders in their own interests are requested to study the proposed new clauses and to compare them with the existing clause to ascertain the difference between the two.

8. In respect of Item No. 10, the existing Articles of Association of the Company were adopted by Special Resolution on 9th October 1941. Since then the Companies Act, 1956 (hereinafter called "the new Act") has come into force as from 1st April 1956 and has effected considerable changes in the law and procedure relating to Companies. References to the Act made herein are to the Companies Act, 1956.

Several of the changes which came into force as a result of the new Act override or affect various provisions in the Articles of Association of the Company which consequently require amendment to bring them into line with the amended provisions of the new Act, and certain new provisions in the Act for the regulation of Companies need to be incorporated in the Articles.

As the alterations are numerous, it has been considered desirable to substitute a new set of Articles for the present Articles of Association of the Company. The proposed alterations fall into the following categories:—

(a) alterations made to comply with the provisions of the new Act where the present Articles are in direct conflict with such provisions;

(b) alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the new Act, have been rendered necessary or desirable as a result of such provisions;

(c) alterations resulting in either improvement of language used, or made with a view to bring existing Articles into line with modern practice;

(d) deletion of obsolete Articles; and

(e) a few alterations not falling under any of the above categories but considered desirable.

Members are requested to avail themselves of the right of inspection offered in the notice of both the existing Articles and the proposed new Articles and to compare the two sets of Articles with a view to ascertain the changes which are proposed to be effected. Some of the more important of these changes are dealt with below. All references herein to the denoting numbers of the Articles are to the numbers of the proposed new Articles except where the denoting numbers of the present Articles are specifically referred to.

CAPITAL AND INCREASE AND REDUCTION OF CAPITAL

Article 4 substitutes old Article 5 to provide for the present capital of the Company.

Article 9 sub-clause (c) provides as required by the new Act that if there is a provision for payment of premium on redemption this shall come out of profits.

Article 11 provides that the Company shall not have the power to buy its own shares except in the cases provided therein. This has been introduced in order to conform with the provisions of the new Act.

Article 13, *sub-clause* (b): The provision for sub-division of shares conforms to the old Article 12 (b) except that the old Articles provide that the resolution by which the subdivision is determined may provide that as between the holders of the shares resulting from the sub-division one or more of such shares may be given any preference or advantage over others. This proviso has been cancelled because it is doubtful whether it is valid under the new Act without the procedure provided by new Article 14 (old Article 13) for modification of class rights being carried out.

Article 14: The old Article has been retained except that now as required by Section 106 of the new Act the quorum of a class meeting is three-fourths of the issued shares of that class and not two-thirds as provided in the old Article 13.

Article 15 provides specifically for what is generally recognised, that the rights conferred upon the holders of a particular class of shares are not considered to be altered by the issue of further shares of that class ranking *pari passu* therewith.

Article 16 provides that after 1st April 1956 the Company shall not have the power to issue any shares with voting rights which are disproportionate to the rights attached to other shares (not being preference shares) the intention being that voting rights should be in proportion to paid-up capital. This is in conformity with the new Act.

Article 22: Existing Article 24 relating to non-recognition by the Company of any person but the registered holder has been retained in substance but has been rewritten to conform to Regulation 6 of Table A of the new Act.

UNDERWRITING AND BROKERAGE

Article 23: In conformity with the new Act it is provided that commission paid on a debenture issue should not exceed 2½ per cent. of the price at which the debenture is issued in addition to any brokerage which is permissible under the law.

GENERAL MEETINGS

Articles 67 to 77 which provide for the calling of General Meetings, the notice to be given for that purpose, the periods within which the Annual General Meetings should be held and the like, are in conformity with the requirements of the new Act. For instance, Article 71 requires twenty-one days' notice of an Annual General Meeting, in place of fourteen days previously.

Article 87: This Article provides for the qualification for demanding a poll and is on the same lines as the previous Article 76 except that in conformity with the new Act, where less than 5 members demand a poll, they must hold not less than one-tenth of the total voting power, in respect of the particular resolution on which the poll is demanded, in place of one-tenth of the issued capital, as provided in the old Article.

Article 96: This provides, in conformity with the new Act, that no report of proceedings of any General Meeting shall be circulated or advertised at the expense of the Company unless it includes matters required by Section 193, namely, a fair and correct summary of the proceedings of the meeting.

Article 99: This Article sets out the votes of the various classes of shares at a General Meeting of the Company. As required by Section 87 of the new Act, a provision has been inserted that the voting rights of a holder of Ordinary shares shall be in proportion to his share of the paid-up Ordinary capital of the Company. The effect of this is that in respect of the new Ordinary shares which have been recently issued, a shareholder for each new share will have one-third of the voting right of an old Ordinary share because the capital paid-up on the new share is Rs. 25 against the fully paid up old share of Rs. 75. The voting rights of First Preference and Second Preference shares have been set out in a form to conform to the requirements of the above Section but do not differ in substance from the existing voting rights attached to these shares.

Article 101: In conformity with Section 183 of the new Act a provision has been inserted enabling a person to exercise his vote partly for and partly against a resolution.

Article 104: In conformity with the new Act, a shareholder is entitled to appoint a person as a proxy even though he is not a member (the corresponding old Article required him to be a member). The proxy so appointed can vote but has not the right to speak at the meeting unless, of course, he is a member.

Article 108: In conformity with the new Act, proxies are now to be deposited with the Company 48 hours before the time for holding the meeting and not 72 hours.

DIRECTORS

Article 122 sets out the persons who cannot be appointed as Ordinary Directors of the Company, whose office is liable to determination by rotation, except by, or with the approval of a Special Resolution of the Company. These include the following:—

(a) A person who is an officer or employee of the Company or any subsidiary company.

(b) A Director or officer or employee of the Managing Agents.

(c) A person who receives a share of the remuneration paid to the Managing Agents.

Sub-clause (2) of this Article requires, in conformity with the new Act, that special notice should be given of any resolution appointing or approving the appointment of any of the above persons. The notice given to the Company of any such resolution and the notice given by the Company to its members in regard to such resolution shall set out the reasons which make the resolution necessary.

Article 123 limits the qualification of a Director in conformity with the new Act to a holding of shares of a nominal value of Rs. 5,000 in place of Rs. 30,000 as provided by old Article 101.

Article 126 sets out the cases where the office of a Director is vacated and these include, in conformity with the new Act, the following:—

(a) where a Director fails to pay calls in respect of shares held by him, and

(b) he or any of his relatives hold an office or place of profit in the Company without the sanction of the Company in a General Meeting.

Article 130 provides, as required by the new Act, that, except with the previous consent of the Company by Special Resolution, no Director or his partner or relative; and no firm of which he or his relative is a partner and no private company of which he is a Director or member and no Managing Director, Managing Agent or Secretary and Treasurer of such private company shall hold an office or place of profit in the Company except that of Managing Director, Managing Agent, Secretary and Treasurer, Manager, Legal or Technical Adviser, Banker or Trustee for holders of Debentures. Similarly, they cannot hold any of the above offices or places of profit in a subsidiary of the Company unless the remuneration received from such office or place of profit is paid over to the Company. Any contravention of the provisions of this requirement entails disqualification of the Director as Director and also makes him liable to refund any remuneration or benefit received by him.

Article 132 provides, as required by the Act that except with the consent of the Board of Directors of the Company, a Director of the Company or his relative or a firm in which a Director or his relative is a partner or any other partner in such a firm or a private company of which Director is a member or a Director shall not enter into any contract with the Company for the sale, purchase or supply of any goods, materials or services or underwriting the subscription of shares and debentures of the Company provided that in the ordinary course of business goods may be bought or sold up to a cost of Rs. 5,000 in the aggregate in a calendar year.

Article 134 provides in conformity with the new Act that one-third of the Directors who are liable to retire by rotation shall retire in each year. Under old Article 109 one-third of the total number of Directors had to retire.

Article 140 provides in conformity with the new Act that unless a resolution is specifically agreed to for the purpose, Directors' appointments shall be voted upon separately for each Director and that the appointment of two or more persons as Directors shall not be made by a single resolution.

Articles 141 and 142 prohibit the appointment of Directors beyond the age of 65 years unless special notice of a resolution for proposing the Director is sent to the Company and unless the specific requirements of the new Act are complied with. In fact, at the present Annual General Meeting three of your Directors who have passed this age limit have been proposed for re-election in conformity with the new Act.

Article 144 provides for the removal of a Director by the Company in General Meeting. Under the old Article 114 this could only be done by an extraordinary resolution while under Section 284 of the new Act it is now possible for the Company by Ordinary Resolution to remove such a Director provided special notice is given, in conformity with the provisions of the Act and the Articles, of the resolution proposing such removal. Under the same section the Director is entitled to have any representation made by him circulated to the members or read out to the meeting if his representation is not received in time.

Articles 151, 152 and 153 provide specifically for the appointment of a Vice-Chairman and for his presiding at meetings of the Board when the Chairman is not present. For the last several years the Board in fact have had a Vice-Chairman. It is proposed to insert a provision in the Articles providing for his specific appointment.

Article 156 provides for passing of resolutions by circular and is substantially different from the existing Article 123 which requires that a circular resolution should be under the hands of at least four Directors or one-half of the members of the Committee for the time being present in the City of Bombay. Section 289 of the new Act provides a certain procedure for circular resolutions and this has been incorporated in the new Article under which procedure the resolution is to be circulated in draft together with the necessary papers to all the Directors or to all the members of the Committee in India who shall not be less than the quorum fixed for a meeting and to all other Directors who are not in India to their usual address in India, and requires that the resolution by circular should be approved by a majority of those who are entitled to vote on it.

Article 163, in conformity with the new Act, limits the powers of the Board to exercise certain powers except with the consent of the Company in General Meeting. These powers cover:—

(a) Sale or disposal of the undertaking of the Company or substantially the whole of it;

(b) Remission of any debt due by a Director;

(c) Investment otherwise than in trust securities, of the sale proceeds of any undertaking acquired by the Company after 1st April 1956 without the consent of the Company in a General Meeting or of any properties used by the undertaking of the Company and without which the undertaking cannot be carried on or be carried on only with difficulty or only after considerable time.

(This particular sub-clause conforms to the sub-clause (c) Section 293 and the meaning of which is somewhat obscure.)

(d) Borrow moneys which has the effect of causing the total borrowings of the Company to exceed the aggregate of the paid-up capital of the Company and its free reserves.

(e) Contribute to charitable and other funds not directly relating to the Company's business or the welfare of its employees, any amounts the aggregate of which will in any financial year exceed twenty-five thousand rupees, or 5 per cent. of the average net profits.

Article 164 requires that certain powers of the Directors shall only be exercised by a Board meeting. These include—(a) the power to make calls on shareholders; (b) the power to issue debentures; (c) the power to borrow moneys; (d) the power to invest the funds of the Company; and (e) the power to make loans, subject to certain limitations contained in the Article and the Act. This Article conforms to Section 292. The Article in terms of the Section however, enables the Board to delegate to a committee of Directors, or to the Managing Agents the powers specified in (c), (d) and (e) above.

Article 165 sets out in detail certain of the powers of the Board. With two exceptions, these powers are the same as are contained in the existing Article 133, although alterations have been made to conform to the requirements of the new Act. The two exceptions are sub-clauses 15 and 16 which have been drawn up to conform to the proposed alteration in the Memorandum of Association, which is to be placed before the present Annual General Meeting of the Company, which deals with the powers of the Company to provide for the welfare of employees and for making grants to charitable, religious, political and other institutions, objects and purposes.

Article 166, for convenience, sets out the registers, books and documents which have to be maintained in accordance with the requirements of the new Act and the Articles.

MANAGING AGENTS

Articles 171 and 173 provide that Managing Agents in the exercise of their powers must obtain the previous approval of the Board in regard to certain matters, such as, (a) appointment of an officer or a member of the staff on a scale of remuneration in excess of the limits laid down by the Board; (b) the purchase of capital assets except within the limits prescribed by the Board; (c) sale of capital assets except within the limits prescribed by the Board; and (d) power to compound claims or demands made by or against the Company against or by the Managing Agents or an associate of the Managing Agents.

CAPITALISATION

Article 187: While in substance this Article conforms to old Article 152, a number of verbal alterations have been made in the Article.

ACCOUNTS

Articles 188 to 196 provide for the preparation of balance-sheets and profit and loss accounts of the Company and for keeping of books of accounts in accordance with the requirements of the new Act.

Shareholders are requested to study these Articles carefully for finding out the changes introduced by the new Act in respect of matters dealing with a company's accounts.

AUDIT

Articles 198 to 203 provide for the audit of the Company's accounts and for the appointment of the Auditors in conformity with the requirements of the new Act.

Particular attention is invited to Article 202 which sets out the rights and duties of the auditor. Among other duties he has to make a report to the shareholders as to whether in his opinion the accounts of the Company give the information required by the Act in the manner so required and give a true and fair view of the state of the Company's affairs and of its profit and loss for the financial year.

NOTICES

Articles 204 *to* 210: These Articles deal with the subject of notices and other documents sent to the shareholders. These Articles conform to the requirements of the new Act, but do not differ in material respects from the existing Articles 167 to 175. It will be noted, however, that under Article 205, a notice may be given to a member, who has no registered address in India, by advertisement in a newspaper. This advertisement need not state the name of the member as was required under old Article 168 conforming to the requirements of the old Companies Act.

A copy of the abovementioned document containing the draft of the proposed new Articles of Association and a copy of the existing Articles of Association may be inspected at the Registered Office of the Company between the hours of 11 a.m. to 1 p.m. and 3 p.m. to 5 p.m. on any working day except Saturday and the hours 11 a.m. to 1 p.m. on Saturdays.

9. In respect of Item 11, it is notified that the Company has entered into an agreement on the 26th day of June 1956 with the International Bank for Reconstruction and Development, under which the said Bank has agreed to advance to the Company a loan, in various currencies, equivalent to $75 million towards meeting a part of the cost of the expansion programme of the Company, commonly known as the Two Million Ton Programme. As the shareholders are aware, the Company has embarked on this programme of expansion, the cost of which, exclusive of certain ancillary schemes and projects, is estimated at approximately Rs. 75 crores. As stated in the Directors' Report for the year, the well-known American Engineering Consultants, Kaiser Engineers Division of Henry J. Kaiser Company and their associated company, the Kaiser Engineers Overseas Corporation, have been appointed by the Company to provide engineering and construction services for the Two Million Ton Programme, except modifications to the Works and the development of the Company's mines and collieries and town which will be undertaken by the Company's own Engineering Department. The Kaiser organisation have undertaken to complete their work, unless prevented by causes outside their control, by the 31st May, 1958. To enable the Company to borrow the moneys provided in the Loan Agreement with the World Bank, it is necessary under the provisions of Section 293 of the Companies Act, 1956, to obtain the consent of the Company, because the moneys to be borrowed under the Loan Agreement together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed in the aggregate the paid-up capital and free reserves. It is also necessary to obtain the consent of the Company to further additional borrowings, as from what is stated above it would be gathered that substantial additional funds will be required entailing further borrowings to execute and complete the Two Million Ton Programme and ancillary projects and the Modernisation and Expansion Programme which is still to be completed. A copy of the aforesaid Agreement dated the 26th June 1956 between the Company and the International Bank for Reconstruction and Development will be open for inspection of members at the Registered Office of the Company between the hours of 11-00 a.m. and 1-30 p.m. (S.T.) on any working day except Saturday and between the hours of 11-00 a.m. and 1-00 p.m. (S.T.) on Saturdays. Inspection is also offered at the aforesaid place and time of the Agreement dated the 23rd June 1955 between the Government of India and the Company under which the Company undertook to carry out this expansion programme.

10. In respect of Item 12, it is notified that Tata Sons Private Limited who are Associates of Tata Industries Private Limited, the Managing Agents of the Company, are one of the Principal Agents of the New India Assurance Company Limited, with whom the Company places its insurance business. Although it is not clear whether it is necessary to obtain the Company's sanction under Section 359 of the Companies Act, 1956, for greater precaution, the Company has been advised to obtain a resolution in General Meeting. The New India Assurance Company Limited is a leading insurance company and has provided valuable insurance service in the past. Its rates of premia and tariff compare well with other insurance companies of repute and its terms and conditions of policies and contracts of insurance are satisfactory. Tata Sons Private Limited, the holding company of Tata Industries Private Limited, have been one of the Principal Agents of the New India Assurance Company Limited since its inception in 1919. Mr. J. R. D. Tata and Mr. J. D. Choksi are Directors and members of Tata Sons Private Limited and as such they are interested in the commission earned.

11. In respect of Item 13, it is notified that the Company has invested in the aggregate a sum of Rs. 112 lakhs in 112,000 Ordinary shares of the Tata Locomotive and Engineering Company Limited of the face value of Rs. 100 each, of which Rs. 32 lakhs were invested in 1954 when the Tata Locomotive and Engineering Company Limited increased its capital by the issue of additional 120,000 Ordinary shares of Rs. 100 each, which were offered at par to the holders of the existing Ordinary shares. The above total investment of Rs. 112 lakhs represents about 16 per cent. of the subscribed equity capital of the Tata Locomotive and Engineering Company Limited, which company belongs to the same group as the Company. As this investment is in excess of the limits prescribed under Section 372 of the Companies Act, 1956, it requires the sanction of the Company and the approval of the Central Government. The Company's investment in the Tata Locomotive and Engineering Company Limited is considered sound and profitable and the Company has also the right to appoint a Special Director on the Board of the Tata Locomotive and Engineering Company Limited. In order to continue to hold the investment the sanction of the Company is necessary as per resolution mentioned in Item 13 of the Notice.

12. In respect of Item 14, it is notified that under the relevant Sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said registers and documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said Resolution are reasonable and convenient from the administrative point of view.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

STRUCTURAL ADAPTATIONS FOR ECONOMIC DEVELOPMENT

NON-ECONOMIC FACTORS CANNOT BE EASILY IGNORED

By Dr. R. Balakrishna

UNIVERSITY PROFESSOR OF ECONOMICS, MADRAS

UNDERDEVELOPED areas manifest certain peculiar features of economic structure. Their agriculture is predominantly on a subsistence basis; the actual farming being done on small holdings. Heavy industry remains undeveloped, even though the resources for it may not altogether be lacking. Consumer goods are essentially turned out by medium and small-scale establishments. Their financial structure remains unintegrated, owing to the inflexibility of their indigenous sector. The political, administrative and educational institutions are not on all fours with those of their counterparts in more advanced countries. In fine, their social technology is insufficiently refined.

Obviously, the main requisites for economic development are commercialisation of agriculture and the adoption of modern technique accompanied by an increase in the size of the holdings. Generation of power and improvement of transport are indispensable conditions of progress. Heavy industry for capital goods and large establishments for the manufacture of consumer goods are also an essential part of the change. They have also to undergo a process of rationalisation. The financial structure has to be reoriented and special institutions like financial corporations have to be created for the provision of finance to industry and agriculture. A refinement of social institutions and the provision of facilities for technical education are desirable.

Thus, certain essential structural adaptations are necessary for the attainment of economic progress. But there are both technical and ideological impediments to such progress in underdeveloped areas. For instance, the adoption of modern technology in agriculture is impeded by the existence of small holdings and by the fear of a displacement by it of human and animal labour. The development of heavy industry is impeded by a deficiency of capital resources. A rationalisation of consumer goods industries is opposed by labour on account of a fear that it would lead to a disturbance of the social fabric. Ideological considerations, such as the social objectives of land reform movement in India, subordinate economic considerations in the interest of social reform and thus impede a progressive growth of the economy. Finally, the shift of emphasis to welfare as against a maximisation of wealth is prejudicial to an increase in productivity.

Economic Growth

Economic growth means a rate of expansion that can move an underdeveloped country from a near subsistence mode of living to substantially higher levels in a comparatively short period. It is generally associated with industrial expansion, involving necessarily a structural change. The technical factors influencing the structural change are the size and quality of the working force, the national resources, the capital stock, the state of technology, the nature of entrepreneurial activity, the form of Government and the pattern of consumption. The feasibility of structural adaptations would depend upon the co-operation of as many of these technical factors as possible. So a detailed consideration of each of them is essential for envisaging the degree of economic development possible in any underdeveloped area. Ideological objectives may further influence economic growth, but an appraisal of their influence may be deferred for the present.

Taking at the outset the working force, their influence on the character of the economic structure would depend upon the size of the population, its composition and distribution, the rate of growth, the skill of the working force and the degree of effort that it is likely to put forward. The significance of the size of the population consists in the realisation of the full economies of large-scale production. Generally, the populations of backward countries are in excess of this requirement. The ratio of the labour force to the total population may vary from country to country, determining the *per capita* income among them. The sex and age composition of the population would determine the ratio of the labour force in each country. Of the available labour force, only a certain percentage would be actually employed, the rest being in the category of the unemployed. The rate of growth of a population need not necessarily have a direct correlation with employment. The distribution of the working force among different occupations, in conjunction with the rate of growth in different sectors of it, may have an adverse effect if the occupations are already overcrowded. A population may be considered to be of the income-optimum size, when, in co-operation with other income-affecting conditions which are held constant, it is able to have a *per capita* income which could be as high as the other conditions permit. The spatial distribution of the population has also a relevance in estimating the influence of population on economic progress. Urban population may be more receptive to technological developments than rural population. Even the life expectancy of a population may have a reaction on economic development. When it is low, the time horizons of people tend to be short and long-range planning falls outside their purview.

The following tables indicate the distribution and age composition of world population:—

TABLE I

World Population, Age Composition and Density, 1949

Area	Population in millions	Age distribution of population in percentage			Persons per sq. km.
		Under 15 years	15-59 years	60 years and above	
World	2,378	36	57	7	18
Type I : Low Growth Potential—

TABLE III

Gross Fixed Capital Formation Expressed as a Percentage of the Gross Domestic Product

Country	1948	1949	1950	1951	1952
Australia	20.7	24.3	24.8	30.6	25.9
Burma	15.1	8.7	10.3	12.0	15.1
Ceylon	6.0	8.8	10.5	11.6	13.3
Ireland	12.8	12.6	14.1	15.2	13.4
United Kingdom	12.1	12.6	13.1	13.1	13.4
Indian Union	8.3	9.1	9.3	9.8	10.0

N.B.—Figures from the paper on "Capital Formation in the Indian Union" by the Central Statistical Organisation and Economic Division of the Ministry of Finance.

The skill of the working force depends upon the resources which a society has allocated to training. The effort that would be put forward by a working force is derived by its propensity to seek material advance. Material incentives for work may have different reactions according to the premium attached to material advance as opposed to leisure. Thus, structural adaptations are governed very significantly by the character of the working force in a country. Its objective features and its subjective reactions influence economic growth. A positive response from the working force is a *sine qua non* of successful structural adaptations directed towards economic development. In fine, the economic structure would be conditioned by the facts of labour supply in each country. The excess of it is the economic problem of underdeveloped areas and its abnormal rate of growth complicates the issue further.

Natural Resources

Natural resources can make a sustained contribution to economic growth if they are properly used and conserved. Natural resources set ceilings on economic growth, but such ceilings vary according to the technological and cultural setting of each country. Their significance is also relative to the enterprise and capital equipment of each country. No doubt, the process of economic growth in a underdeveloped country may follow a shorter route by skipping some of the intermediate stages, but it would warrant corresponding socio-political changes. The latter have so far been a bottleneck, as it is not easy to adapt existing institutions. Assuming a favourable social environment, resource development would depend upon the existence of technology, capital and labour. The resource development programme should consist of adequate market and economic research, planning, the sharing of costs and responsibili-

Grandfather says the whole world depends on oil. Every Sunday Grandfather takes the oil can and turns the house upside down. He puts oil in the clock to make the wheels go round. He says the oil reaches everywhere— even makes the big machines work. Grandfather is very clever. He knows all about progress. If there was no oil, he says the world would stand still. Not Grandfather—he would still turn the house upside down!

The oil business spells progress which anyone knows means

ties between public and private sectors, maintenance of economic stability and a maximisation of net returns and benefits.

The capital stock of a country depends upon its rate of capital formation. The limits to capital formation are set by the potential output in the country and the proportion of it which ought to be in the form of consumption goods. Of course, the actual output may be made to approximate potential output by a correct allocation of factors of production. Any increase in the rate of capital formation should be at the cost of consumption goods, in view of the additional consumption that would be potentially available through greater investment. But, in an underdeveloped country, the high marginal propensity to consume will lead to inflation whenever investment takes place. This has to be counteracted by an increase in productivity, so that the output will increase. State action would be necessary in such countries to aid capital formation.

Table III gives comparative rates of capital formation among a few selected countries.

The state of entrepreneurial activity and technology is an essential condition for economic growth. *Entrepreneurs* perform the innovating and risk-bearing functions of the economic system. But all *entrepreneurs* may not be equally aggressive in their attempts at innovation and structural change. In underdeveloped countries, there is a great need for the innovating type of *entrepreneurs* for transforming the traditional patterns of economic organisation. The State can aid in generating such entrepreneurial talent by offering information regarding techniques, markets, etc. It can also create a favourable fiscal and monetary atmosphere for the encouragement of entrepreneurial activity. A free capital market with facilities to float securities is an essential condition of development of private enterprise. The State should also break up monopolistic organisations in the sphere of industrial finance.

Technology

In respect of technology, the need in most of the underdeveloped areas is for equipment which would be capital-saving and output-increasing. But the choice would be conditioned by the skill available in each country. However, low-skilled people can also be trained to some extent by experience if the techniques adopted are not too complicated. Thus, structural adaptations are feasible within certain limits. This also depends upon the consumption patterns in any given society. In an economy that is not fully employed, there is scope for an increase both in consumption and investment. They need not necessarily be competitive as in a fully employed economy. But the State can alter the direction of consumption expenditure through physical controls and a suitable fiscal policy. The State has an important part to play in encouraging economic growth. It should generate a creative force to harness enterprise and exploit resources, change consumption patterns wherever desirable, influence investment and direct trade. The form of government for the purpose would depend not only upon the economic circumstances but also on values other than economic.

A few economic factors determining structural adaptations of the economies of underdeveloped areas have so far been considered. But the economic principles of guiding such adaptations have to be harmonised with social conditions and ideological objectives. The latter would obviously interfere with the adoption of growth models which have proved appropriate in advanced countries having different sociological backgrounds. The economic pattern would therefore be determined not only by the inadequacy of resources but also by non-economic factors and extra-economic values obtaining in each of the underdeveloped countries. So the approach to structural adaptations should be both economic and sociological. Society is a living organism and it should be made to grow gradually with an occasional attempt at a gentle grafting of exotic elements. A mere mechanistic treatment would yield only poor results.

In adapting societies to new tasks, the basic social problem is the contact of different cultures. Economic change also involves social change through the adoption of methods foreign to an indigenous culture. Culture is the learned, socially sanctioned behaviour of a people. The values and attitudes of a culture may welcome or resist innovations. They may be resisted if they involve a reshaping of basic habits and a change in culturally prescribed motivation. In certain countries, work may follow a seasonal rhythm or it may be communally oriented. The imposition in such countries of Western methods of regular work may be resisted. Thus, technological and economic developments have to take place amidst a matrix of custom and sanctions. The success of it would depend upon a measured infiltration of structural changes and an induced cultural innovation. Even technical know-how has to be gradually created indigenously instead of foisting foreign technology indiscriminately on a country. Know-how is both a process and a performance. As a performance, it is part of a social change. Hence economic evolution should unfold itself in an atmosphere of social and psychological harmony. Economic development should be conceived as a process of evolving patterns of activity, unfolding and disappearing according to beliefs, attitudes and hopes.

Social Rights

Another non-economic factor conditioning structural adaptation is the level of social technology in each country. It is a comprehensive term, including various social rights and public institutions. For instance, civil rights, the free Press and the democratic process are some of the social rights which it indicates. Free public schools, universities and political bodies of a representative form of government are the institutional set-up under social technology. Modern methods of business management, the idea of mass markets, trade union leadership and the nature of public administration are also indicators of the level of social technology attained by a country. Social technology cannot be just transferred to an underdeveloped area from an advanced country. They should be made to grow slowly in each country working out the applications appropriate in each circumstances. The economic pattern should grow in unison with the development in social technology. With a favourable state of mind, the necessary motivation will be generated for the process of economic growth and adaptation.

India has been attempting a planned development of its economy. Structural changes are bound to occur, but they are not being deliberately made. There seems to be an awareness that the growth model for the country would be different in character from those of other countries for two important reasons. In the first place, the resources available would determine economic policy and, secondly, the ideological objectives may mark a departure from the normal course of economic growth as in other countries. The policy of encouraging and development of small-scale industries is largely accentuated by the plethora of manpower. The land reform movement and the pattern of social fabric that is envisaged thereby are the resultant of the new ideology that is being prescribed. The democratic political institutions are to be fostered while aiming at economic growth. Thus, structural adaptations are circumscribed in India by various factors. Each of them has to be reckoned with in our assessment of the potentialities of economic growth in India.—*All Rights Reserved.*

(Concluded from next column)

cent. on all sales guaranteed by the Banians.

(2) Commission of 1 per cent. on all sales of old gunnies, refractions and waste products.

The Agreement is open to inspection by any Member of the Company at the Registered Office on any working day during normal office hours.

Explanatory Statement for Item No. 6 above.—Under the provisions of Section 360 of the Companies Act, 1956, a special resolution is required to approve a contract between a Company and its Managing Agents, or an Associate of its Managing Agents, for, *inter alia*, the sale, purchase or supply of any property, movable or immovable.

For very many years, the Company has obtained its requirements of Gunny Bags from Messrs. Shaw Wallace & Co., who, as one of the leading Calcutta shippers of Gunnies, are in a position to obtain the Company's supplies for it on favourable terms. It is therefore considered that the Company will benefit by a continuance of this arrangement.

Since the Managing Agents are a Partner in the firm of Shaw Wallace & Co., the latter might be held to be an associate of the Managing Agents within the meaning of the Companies Act, 1956, and this resolution is required to regularise this arrangement and authorise its continuance.

Mr. C. I. M. Arnold, a Director, is an employee of Shaw Wallace & Co., Ltd., and is to that extent interested in the above Agreement.

Notice

THE HOOGHLY FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 p.m., on Thursday the 30th August 1956, for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the half-year ended 31st December 1955.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and to fix their Remuneration.

(5) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that the appointment of Messrs. Chaudri & Co., as Sole Banians of the Company on the terms and conditions set out in an Agreement dated 27th March 1945, for the period 1st January 1945 to 31st December 1959, be and is hereby approved."

(6) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that an Agreement be entered into between the Company and Messrs. Shaw Wallace & Co. for a period of 5 years from 1st April 1956, whereby the Company will purchase from Shaw Wallace & Co. and Shaw Wallace & Co. will sell to the Company goods of the description and quantities set out hereunder at the prices hereunder described, delivery of such goods to be as mutually agreed, such Agreement not to impose any obligation upon either Shaw Wallace & Co. or the Company for the former to sell or the latter to purchase more than the maximum quantities as specified below, but all purchases of goods in excess of such maximum quantities hereunder specified shall be purchased and sold under and in pursuance of the terms of the Agreement above referred to."

Description of Goods.	*Maximum Quantity.*	*Price.*
New Gunny Bags	3,00,000 per annum	Market price prevailing at dates of orders.

The Transfer Register will be closed from the 23rd August 1956 to 30th August 1956, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176 (5) of the Companies' Act, 1956, and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
SHAW WALLACE & CO., LTD.,
Managing Agents.

CALCUTTA, *25th July* 1956.

Explanatory Statement for Item No. 5 above.—Under the provisions of Section 294 of the Companies Act, 1956, the appointment of Sole Selling Agents prior to the 15th February 1955, requires to be confirmed by the Members in General Meeting.

Chaudri & Co. have been actively associated with the Company since its inception and the prosperity of the Company is in no small measure due to their industry, energy and foresight. They have acted as Sole Banians for the Company for very many years and an Agreement, officially appointing them as such for 15 years as and from the 1st January 1945, was entered into on the 27th March 1945. The remuneration currently payable to the Sole Banians under this Agreement is as follows:—

(1) Commission of ½ per cent. on all sales of Wheat Products with an additional ½ per

INDUSTRIAL RESEARCH IN BRITAIN

IMPORTANCE ATTACHED TO IT GROWING

AN aptitude for scientific research is a prerequisite for economic progress. Its *raison d'etre* is to be found in the compelling need for a more efficient machine, better and cheaper product, and more economical use of the materials, in a world of ever-sharpening competition. Indeed, the need is more than imperative in certain countries than in others, and, as the neatly brought out booklet, namely, "Combining for Research," of the Department of Scientific and Industrial Research of Great Britain points out, "the importance of applying scientific knowledge and method in British industry has never been greater than it is today." In Great Britain there are now more than 40 Research Associations, with an annual income of as much as £4.7 million, catering to the needs of industries as diverse as marine turbines, cotton, printing and welding.

A research association is brought into existence by a group of firms to study the scientific and technical problems common to them and to suggest methods for improvement. Though it receives subscriptions from the firms, it has a separate entity as a scientific centre and a number of such associations receives grants from the Government also. The membership of the Association is generally confined to the British-controlled firms doing business in the U.K. Foreign-controlled firms are, however, admitted as associate members, if they are engaged in manufacture in the U.K. The affairs of a research body are managed by a Council elected by the member-firms and composed mainly of the leaders of industry. The Government may, however, nominate its own representatives on the Council if the association in question receives Government grants. A noteworthy feature of research in Britain is the initiative taken by the industries themselves. This is evident from the fact that the major portion of the revenue of research associations comes from them. Thus, in 1954, out of the total income of £4.7 million, grants from the Government aggregated only £1.3 million. In fact, there are several research bodies which are financed solely by member-industries.

Scope

The research programmes taken up by an association depend on the scale of operations and the needs of its member-industries. Many problems are, for instance, concerned with raw materials of the trade. Following the fast depletion of the traditional sources of supply, and ever-changing pattern of international trade, new materials, with characteristics and chemical combinations previously unknown, are being brought into use. Naturally, new processing techniques have to be developed to replace the old, as, for example, in the case of iron ore from the West African mines, which requires to be treated before it can be charged to the blast furnace. In the same way, the development of magnesia bricks for open hearth furnace roofs has greatly improved the efficiency of the production of steel. When nickel-plating ran short, to cite another function, the research association explored ways of achieving thinner coatings without impairing performance.

Realm of Processes

In the realm of processes, again, as the brochure of the D.S.I.R. observes, "there is an almost unlimited field work of immediate practical value." A modest but noteworthy development is the production of a new sensitising solution for use when making lithographic plates by the Printing and Packing Research Association. Improved methods for process control and better methods of analysis for laboratory use are also devised, while new machines for carrying out more economically conventional processes—treating the warp threads with starch in the production of textiles, for instance—have been developed. An interesting result of the Paper Research Association's work is the answer to the problems of industrial affluents. It has shown to a member-firm how to recover four tons of paper-making materials a day from its affluent.

Designing new types of equipment is also the function of certain research associations. A new type of open fire can be fitted in domestic fireplaces which burns solid fuels more efficiently, improves the convective warming of the room, and reduces the heat lost in draughts up the chimney. A Cast Iron Research Association has produced modular cast iron which has exceptional mechanical properties and can replace steel in certain applications. The study of certain problems cannot, however, be done with laboratory-scale plant. It demands large-scale equipment. Even so, certain associations like the textile associations have their own full-scale plant and equipment. The Marine Turbine Association, too, has installed huge equipments for testing the performance of turbines up to 60,000 s.h.p.

The importance of basic research in the context of industrial research cannot be over-emphasised. The brochure of the D.S.I.R. rightly comments that no scientific work can progress without probing into basic physical, chemical or biological behaviour," and goes on to add that "it is, indeed, from these deeper sources that all technical activities are fertilised and nourished." Appropriate scientific equipment and constant contact among the best brains in the research fields are the prerequisites that advance the cause of fundamental research. Although the beneficial results of this long-drawn-out research are felt after prolonged investigation, a significant example is the researches conducted into the structure of wool fibre. A new process—called the technique of Partition Chromatography—was introduced, based on the investigations of the Wool Research Association. For the development of this new technique, as it was applied to the separation of the chemical constituents of the wool fibre, Dr. A. J. P. Martin and Dr. R. L. H. Sygne were jointly awarded the Nobel Prize for Chemistry in 1952.

Bearing on Community

Discussing the bearing of researches on the community through industrial operations, the brochure remarks: "The importance of this relationship between research and the people ultimately affected by it is becoming more widely recognised, as is the capacity of research to improve working conditions and to deal with problems affecting the community." It is heartening to note that several research associations are working in this direction, chief among them being related to cast iron, steel casting, shipbuilding and internal combustion. In this context may be viewed the importance of the deliberations of the Duke of Edinburgh's Study Conference on Human Problems in Industry held recently at Oxford.

The worth of the research associations cannot be exaggerated. In the words of the brochure, the "investment in brains is a business proposition likely to yield exceptional dividends," and "their work will repay many times the money invested by the subscribing members." Although a chain of research laboratories are functioning in India to help industrial progress, industries themselves will do well to emulate the example of British industry in order to improve their competitive position in world trade.

TARPAULINS FROM FLAX

One of the problems of making tarpaulins for road transport is the weight of the finished product. If the cloth is not heavy enough, its performance as a waterproof cover is inadequate. By modifying the weave, a new type of flax cloth which is different from the traditional canvas construction, has been produced by Francis Webster and Sons, of Arbroath. Specially designed for road transport the new cloth is claimed to give greater flexibility and better waterproofing for less weight. Because it is lighter and more pliable it gives less trouble to lorry drivers. Another advantage claimed is that it has great resistance to abrasion and tearing.

PROBLEMS OF INDUSTRIALISATION IN BACKWARD AREAS

MR. J. R. D. TATA STRESSES NEED FOR BALANCED ECONOMY

THE view that industrialisation of the underdeveloped areas of the world is, perhaps, the most formidable task confronting mankind today and one that offers "greater potential rewards for humanity as a whole," was expressed by Mr. J. R. D. Tata in the course of a thought-provoking address entitled, "Industrialisation of a Predominantly Rural Society" at the Duke of Edinburgh's Study Conference at Oxford on 26th July. Emphasising that the process of industrialisation to which millions in Asia look up for deliverance from age-old poverty and misery was well under way in India and over a large part of Asia, he said that a decisive factor making for "the survival and continued progress of the democratic way of life" in Asia would be the measure of success achieved by India in building the prosperity of its people in the years ahead.

Mr. Tata put the whole problem in an entirely new perspective when he pointed out that industrialisation in India was in the nature of a revival, for India had been one of the most advanced countries in the world in the fields of metallurgy, textiles, dyes and drugs up to the end of the seventeenth century. But he did not ignore the fact that there were several initial problems of industrialisation in India. To a certain extent, these problems, he said, had been successfully tackled. In this connection, he shared with the audience the results of social surveys at the steel city of Jamshedpur, the chemical township of Mithapur and Tatapuram. It is interesting as well as instructive to note that these surveys have revealed an improvement in the position of women, loosening of family ties, weakening of caste barriers and increase in literacy and leisure pursuits. Further, the impact of the new townships on the surrounding countryside has also been great in the shape of opportunities for employment, markets for village products and, above all, fuller social and cultural life.

Proceeding, Mr. Tata observed that India was, perhaps, the only country in the world, where the issue of whether or not to adopt large-scale industrialisation to achieve the goal of happiness of the greatest number of people was still discussed. This is a distinction of which this country need not be proud. For the assumptions on which the wisdom of large-scale industrialisation is questioned are clearly wrong. Mr. Tata did well, therefore, to discuss the validity of these assumptions. He said that a certain school of thought in India had fears about the efficacy and suitability of industrialisation as a solution to the problem of raising living standards. One wrong assumption of this school, as Mr. Tata said, is that large-scale industrialisation would result in deterioration of the condition in the villages. This is clearly incorrect, because a country like India would continue to remain largely agricultural in character for some generations to come, however fast may be the tempo of industrial development. Again, the assumption that the masses of the people would willingly forgo the material benefits of industrialisation is not true, for the simple reason that the awareness of better living standards elsewhere would make them more and more impatient at their present plight. Further, a reasonable degree of rural prosperity is impossible without an aggregate industrial establishment of considerable magnitude to support it. In the ultimate analysis, the prosperity of the people could only be achieved on the basis of a balanced economy in which agriculture, industry and services contributed their appropriate share to the total wealth produced.

Turning to the problem of human relations in underdeveloped areas, the Indian industrialist emphasised three important considerations. In the first place, the basic material needs of workers must be provided. Secondly, means should be made available for satisfying their more intangible but equally strong human desire for self-expression and fulfilment of other urges of group life. Thirdly, efforts must be made to remove the causes of unhappiness of those recently transplanted from the villages, for whom the stress of transition is more than for those already accustomed to city life. Mr. Tata made a significant contribution to the conference when he suggested that, "in order to ensure the fulfilment of individual and collective life within the industrial society, an effort must be made to render it possible for industry to be not only a source of employment but also a way of life." In this context, he stressed the importance of the concept of the autonomous plant community. He said that the members of the plant community should be given some say and freedom to participate in the management affairs of the community, thus providing a purposeful extension of the democratic principle. He firmly maintained, however, that the management's duty was to manage. Nevertheless, it was necessary "to be clear about what management is to manage." And the functions of management were neither stereotyped nor static. Indeed, he felt that, where social organisation of the society within the factory did not affect the efficient performance of the enterprise, the assumption of exclusive responsibility by management appeared to him to be unnecessary and a source of irritation and resentment. Apprising the conference about the steps being taken in India to bring about closer association of the workers with the management of industry, he stressed that the experiments in Co-determination in West Germany and with the concept of Workers' Management in Yugoslavia were being followed with interest in India.

Dwelling farther on the problems of management, he hailed the methods followed by the Indian Armed Forces in respect of selection, training and the management of men as of outstanding importance as a piece of social engineering. He, however, hastened to add that he did not mean that military regimentation should be applied to industry. Only, he felt that leadership, stress on human relations and concern for the men's well-being, which formed part of the officer's duty in the Indian Army, were worthy of emulation.

In conclusion, Mr. Tata emphasised that the ideas expressed by him on industrialisation in underdeveloped areas should be taken as being applicable through democratic means as was being done in his own country. Expressing his firm hope that the Indian transition would be all the easier and happier for its being achieved by free men in a free society, he warned that failure of India in its endeavours, in the face of China's success through different methods, to raise the standards of living of the people, would lead to frustration in the underdeveloped areas and, consequently, "the cause of human freedom will have suffered a grievous setback." In this context, he stressed that the challenge which the hovels of Asia and Africa presented was a real and immediate one. If the industrialised areas of the world realised the importance of this challenge and made available what they possessed, namely, technology and capital, to the backward areas, it would be possible, as Mr. Tata himself averred, to usher in, in the foreseeable future, an era of abundance and material well-being for all countries of the world.

MANUFACTURE OF BRISTLE FIBRE

An official delegation, sponsored by the Coir Board, to study the possibilities of starting the manufacture of bristle fibre in India, will tour the coconut-growing States in the country. The delegation, headed by Mr. P. K. Dewar and consisting of seven members proposes to visit Ceylon where large-scale manufacture of mattresses and bristle fibre is being carried on for a considerable time now.

At present, there are a few small-scale units manufacturing mattresses and bristle fibre in the coconut-growing States of Andhra, Orissa, Travancore-Cochin, etc. The methods adopted are on conservative lines and as such have not proved economical. Besides, a large quantity of coconut husks from which mattress and bristle fibre can be extracted is either allowed to go waste or used as fuel, while India is importing this commodity, particularly from Ceylon, for its requirements. The main reason for this is stated to be the lack of retting facilities in most of the coconut-growing States. During 1955-56, India imported 335 cwts. of bristles and fibre for brushes and brooms valued at Rs. 1.92 lakhs, as against 90 cwts. worth Rs. 76,256 in the preceding year. Again, because the country has not developed a highly organised bristle and mattress fibre, it is dependent on foreign supplies of brooms and brushes such as paint, varnish, toilet and other brushes. During 1955-56, imports of these brushes and brooms aggregated 211,878 dozens, valued at Rs. 13,56,683, as against 236,721 dozens worth Rs. 12,86,619 in the preceding year. These imports could be avoided if only the fibrous wealth of the country is exploited on scientific lines. Consequently, the Coir Board's move to investigate the position of these fibres in the country in order to establish an industry, is undoubtedly a timely and useful step. It is to be hoped that both the Central and the State Governments concerned will lend their unstinted support to the Board in this venture.

The O.E.E.C. countries have agreed to extend the period till the end of 1957 applicable to the 90 per cent. trade liberalisation target fixed by them in 1955, according to Mr. Macmillan, the British Chancellor of the Exchequer. They further agreed to study the plan of the Messina group of countries to set up among themselves a common market in the form of a customs union, and its relation to the other members of O.E.E.C. A Study Group will examine, among other things, the possibility of creating a free trade area to include the proposed customs union and the other members of the O.E.E.C. The Chancellor further stated that a further study of the possibility of reducing tariffs on a range of goods called "European commodities" would be undertaken. Mr. Macmillan declared, however, that, if the proposed Study Group failed to offer substantial progress, the European commodities plan would be completed without delay in order that it might be considered and, if acceptable, put into operation by 1st January 1958.

visit the
ZAGREB INTERNATIONAL FAIR

the Oldest, Most Important Fair in S. E. Europe

★

SEPTEMBER 7th to 20th 1956

This year's Fair will be the largest ever staged in Yugoslavia. It will extend over the old site to a new site being developed on the bank of the river Sava. Yugoslavia will again exhibit to the world non-ferrous metals, timber, glassware, textiles, agricultural engineering equipment, leather and footwear, handicrafts, tobacco, medicines, foodstuffs and wine. The Zagreb Fair offers exceptional facilities for buyers and visitors to inspect goods displayed by manufacturers in over 25 different national pavilions. Special reduced rates for rail transport and visas will be granted to holders of Fair certificates.

●

Further information and Fair certificates can be obtained from
Yugoslav commercial and diplomatic representatives, or direct from
ZAGREBACKI VELESAJAM
Savska Cesta 25, Zagreb, Yugoslavia.

CALICO MILLS' PROFIT SHOOTS UP

DIVIDEND RAISED—BONUS SHARES ISSUED

THE general prosperity of cotton textile mills in India during 1955 is fully reflected in the audited accounts of the Ahmedabad Manufacturing and Calico Printing Company, Ltd., familiarly known as Calico Mills (Managing Agents: Messrs. Karamchand Premchand Ltd., Ahmedabad) for the 15 months ended 31st March 1956. The Company's accounting year-end has been changed from December to March, so as to coincide with the financial year-end. Though the results for the 15 months under review are, accordingly, not strictly comparable with those for the previous years, they do indicate a highly encouraging performance. Thus, the gross profit amounts to no less than Rs. 171.35 lakhs, which is more than double that earned in 1954. In fact, it is proportionately higher than that earned in any of the previous years since 1943.

The net profit, at Rs. 83.82 lakhs, also compares very favourably with that of Rs. 14.12 lakhs for 1954. The Directors have added Rs. 10 lakhs to the general reserve and Rs. 21.35 lakhs to the rehabilitation and development reserve out of the profit for the period under review, besides transferring to the latter reserve the surplus of Rs. 8.06 lakhs brought in from the previous year. They have also set aside Rs. 18.50 lakhs as provision for contingencies. In the previous year, except for a small sum of Rs. 25,000 added to the contingency reserve, none of the reserves had received anything. The dividend on ordinary shares has also been stepped up to 19.1/5 per cent. per annum, after having been maintained at 14.2/5 per cent. for the previous four years.

The following comparative table discloses the progress in the Company's working since 1952:

(In lakhs of rupees)

	For the 15 mths. ended 31-3-56	For the year ended 31-12-54	31-12-53	31-12-52
Sale proceeds (gross)	444.30	648.21	624.20	638.07
Raw materials consumed	382.95	290.33	262.80	323.94
Other expenses	363.85	276.65	270.87	252.84
Gross profit	171.35	81.50	90.75	61.80
Managing Agents' commission.	27.38	21.58	19.61	16.50
Provision for—				
Depreciation	23.15	35.00	35.00	26.00
Taxation	37.00	11.00	15.00	..
Net profit	83.82	14.12	21.14	19.30
To reserves	57.91	0.25	0.50	..
,, bonus to employees ..	..	7.94	2.06	..
Dividends—				
Preference	1.65	1.32	1.32	1.32†
Ordinary	30.00 (19 1/5 % p.a.)	18.00 (14 2/5 %)	18.00 (14 2/5 %)	18.00† (14 2/5 %)
Carry forward	2.32	8.06	21.45	22.19

† Dividends paid out of dividend fund (Rs. 10 lakhs) and reserve fund (Rs. 9.32 lakhs).

The increase in sale proceeds, cost of raw materials consumed and other expenses all indicate a substantial expansion in production and turnover. The management took several steps not only to improve productivity but also to have better control on costs. Distribution of cloth was also reorganised. Referring to these, the Directors observe in their latest report:

"In order to obtain higher productivity from capital investment, third-shift working was introduced by stages in all manufacturing departments and all units are now working three shifts. A reorganisation of the management structure was begun with the object of improving lines of communication and effecting the appropriate delegation of authority and responsibility to all levels. Changes in working methods introduced by agreement with workers have resulted in improved quality and lower costs for the Company, and better wages for the workers concerned. The engagement of the Tavistock Institute of Human Relations (a non-profit research organisation of London) as consultants to the Company has greatly helped in the formulation and implementation of these changes. A fully integrated system of accounting, costing and budgetary control was introduced during the period to assist management in better planning and cost control. The cloth distribution system was reorganised in May 1955. Instead of selling cloth to a few wholesale merchants who, in turn, sold cloth to smaller merchants throughout India, the Company now sells directly to over 3,000 merchants in all States through indenting agents. The new scheme entails the Company holding larger stocks of cloth in Ahmedabad, as well as in important centres in other States, to enable the Company to satisfy the spot demand of small merchants in upcountry centres. It is progressively resulting in a wider coverage of the market and steadier flow of cloth throughout India. All Calico fabrics are now sold under the registered trade name 'Calicloth.'"

The Company, it may be remembered, has also a chemical division, manufacturing caustic soda, liquid chlorine, calcium and sodium hydrochlorides and hydrochloric acid. The working of this division during the year was satisfactory. The Company has purchased land near the petroleum refineries at Trombay for the new caustic soda and chlorine factory in Bombay. Orders for plant and equipment have already been placed and, subject to building materials being made available in time, the factory is expected to commence operation by the middle of 1957.

The Company's proposal to issue bonus shares in the ratio of one ordinary share for every ten ordinary shares, by capitalising Rs. 12.50 lakhs out of the general reserve, was sanctioned by the Government of India and approved by the shareholders towards the close of March 1956. The bonus shares do not rank for dividend for the period ended 31st March 1956. Following the aforesaid capitalisation, the paid-up capital stands raised from Rs. 154.33 lakhs to Rs. 166.83 lakhs, of which preference capital represents Rs. 29.33 lakhs. The reserves and surplus amount to Rs. 338.08 lakhs. The gross block of the value of Rs. 461.25 lakhs stands written down to Rs. 222.57 lakhs. The current assets aggregate Rs. 432.50 lakhs, as against which the current liabilities and provision for taxation amount to no more than Rs. 150.16 lakhs.

The Rs. 125 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 581 *cum-div.* (final dividend Rs. 12 per share). On an *ex-div.* basis, the yield works out to 4.2 per cent. per annum.

INDIAN STEEL ROLLING MILLS

A welcome improvement is disclosed in the financial results of the Indian Steel Rolling Mills Ltd. (Chairman, Board of Directors: Mr. C. R. Srinivasan) for the year ended 31st December 1955. Thanks to the higher production of and heavy demand for the Company's products, the gross profit, which had successively dwindled from Rs. 6.21 lakhs for 1952 to Rs. 2.87 lakhs in 1954, has risen to Rs. 3.43 lakhs for the year under review. The provision for depreciation has been reduced from Rs. 46,889 to Rs. 43,544, while that for taxation has been raised from Rs. 90,000 to Rs. 1,20,000. The net profit of Rs. 1.79 lakhs, compares well with that of Rs. 1.50 lakhs for 1954.

The dividend is being maintained for the third year in succession at 7½ per cent., to which level it had been reduced from 10 per cent. per annum for the three years 1950, 1951 and 1952. It may be noted here that the Company declared its maiden dividend in 1950, that is, after a long interval of 16 years. The aforesaid dividend of 7½ per cent. is being paid only after setting aside Rs. 32,500, as in the previous year, to repairs and renewals reserve. After paying the preference dividend, a sum of Rs. 1.04 lakhs is being carried forward.

The demand for the Company's bars and rods continued to be heavy during the year. There was no restriction on power supply. The production of bars and rods rose from 9,096 tons to 13,598 tons, while that of hoops declined from 1,833 tons to 815 tons. The Company's mills could not be put on two-shift operation, as was hoped for provided larger quantities of billets were allocated. Only during the current year have large quantities of imported billets been allotted and it is expected that the mills will be on two shifts shortly.

Towards the close of the year under review, orders were finalised for purchasing various machinery to manufacture wires and wire products. It is expected that all the equipment will be received before the end of the year and production will commence in 1957. In order to finance partly the expansion programme, the Company issued 50,000 ordinary shares of Rs. 10 each at par towards the end of 1955. The issue was oversubscribed, and the paid-up ordinary capital rose from Rs. 13.88 lakhs to Rs. 18.88 lakhs. The Company requires further finance to carry out its expansion programme. The Directors feel that this can be met from either borrowed capital or by issue of new shares at a later date. The Company has obtained permission from the Government to issue further share capital to the extent of Rs. 5 lakhs. Negotiations are also in progress with the Tata Iron and Steel Company, Ltd., for a debenture loan of Rs. 5 lakhs. It may incidentally be noted that the Company and the Tata Iron and Steel Company entered into an agreement in April 1940, by virtue of which the latter, as contractors, is working the former's factory on a profit-sharing basis and is also providing the necessary billets for rolling. The agreement was renewed in April 1946 for a period of 15 years.

The following synopsis of the Company's latest balance-sheet shows its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	23,82,682	Gross block	20,18,037
Reserves and surplus ...	3,34,196	*Less*—Depreciation ...	12,47,756
Provision for taxation ...	1,33,969	Net block	7,70,281
Liabilities ...	3,53,488	Stores and spares ...	3,137
		Debts, deposits and advances ...	18,07,735
		Cash ...	6,23,182
Rs.	32,04,335	Rs.	32,04,335

The Rs. 10 fully paid-up ordinary shares are being quoted on the Madras Stock Exchange at Rs. 14-13 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.3 per cent. per annum, free of income-tax.

PODAR MILLS' PROFIT SHRINKS

DISTRIBUTION TO SHAREHOLDERS, HOWEVER, HIGHER

A MILD setback in earnings is disclosed by the audited accounts of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) for the year ended 31st December 1955. The gross profit, for instance, has dropped from Rs. 13.83 lakhs to Rs. 12.09 lakhs, thus maintaining the downward trend for the third year in succession. It is, however, comforting to note that the recession (Rs. 1.74 lakhs) is not as sharp as Rs. 5.83 lakhs suffered in the previous year. It may incidentally be noted that the profit for 1955 is the lowest since the year ended 30th September 1941. (The accounting year-end was changed in 1947 from September to December.) The net profit, at Rs. 5.99 lakhs, is also a shade lower than that of Rs. 6.54 lakhs for 1954, to which level it had successively declined from Rs. 10.93 lakhs earned in 1951.

After providing Rs. 1.10 lakhs for Managing Agents' commission (as against Rs. 1.29 lakhs in the previous year), the Directors have reduced the provision for taxation from Rs. 5.50 lakhs to Rs. 5 lakhs, in consonance with the decline in profit. No provision for depreciation has been made, for which purpose a sum of Rs. 50,000 was set aside a year ago, because the Directors feel that sufficient provision had been made in previous years. Whereas a sum of Rs. 1 lakh had been added to the rehabilitation reserve and Rs. 99,725 to the contingency reserve out of the 1954 profit, no credit to any of the reserves has been made from the profit for 1955. The distribution to shareholders has, on the other hand, been raised from 10 per cent. per annum paid for the previous four years to 12 per cent. per annum, by declaring a special bonus of 2 per cent. This is the highest distribution to be made on the present capital raised in 1947 from Rs. 30 lakhs to Rs. 50 lakhs.

The following comparative table gives an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December 1955	1954	1953	1952
Sale proceeds (net)	153.21	160.49	154.99	146.65
Other income	1.59	1.70	1.58	2.32
Cotton consumed	83.02	92.39	84.47	78.26
Expenses	59.69	54.27	52.31	47.01
Loss on shares	..	..	0.14	1.06
Gross profit	12.09	13.83	19.66	21.90
Managing Agents' commission.	1.10	1.29	1.89	2.09
Provision for—				
Depreciation	..	0.50	1.00	1.00
Taxation	5.00	5.50	8.00	9.00
Net profit	5.99	6.54	8.77	9.81
To reserves	..	2.00	2.63	5.51
Dividends—				
4 per cent. preference	0.40	0.40	0.40	0.40
Ordinary	4.80 (D.10% +Bs.2%)	4.00 (D.10%)	4.00 (D.10%)	4.00 (D.10%)
Carry forward	3.93	3.14	2.99	1.25

It will be noted from the above table that there has been a decline in the Company's turnover. The drop of Rs. 7.28 lakhs in sale proceeds is accompanied by a fall of Rs. 9.37 lakhs in the cost of cotton consumed. This would have, in normal course, brought about an increase in profit, if other expenses had been maintained at the previous year's level; but expenses have recorded a rise of Rs. 5.42 lakhs, thus keeping up the mounting level for the fifth year in succession. The expenses for the year under review include a sum of Rs. 7.68 lakhs, being the bonus provision for 1954 (Rs. 3.75 lakhs) and 1955 (Rs. 3.93 lakhs) and of Rs. 60,753, being the shortfall in the provision made for 1952 and 1953.

The Company's latest balance-sheet shows a quite satisfactory financial position. The paid-up capital is unchanged at Rs. 50 lakhs, made up of 40,000 ordinary shares of Rs. 100 each and 10,000 4 per cent. (tax-free) cumulative preference shares of Rs. 100 each. Of the ordinary capital, Rs. 20 lakhs represent the capitalisation of reserves in 1947. The entire preference capital has been raised by capitalisation of the reserves, once in 1943 and again in 1944. Even after the capitalisation of such a large sum, the reserves and surplus aggregate Rs. 49.57 lakhs. The gross block of the value of Rs. 39.55 lakhs stands written down to Rs. 16.55 lakhs. The current assets amount to Rs. 148 lakhs, of which cash balances alone, accounting for Rs. 72.28 lakhs, more than adequately cover the current liabilities and the provision for taxation aggregating Rs. 64.98 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 187-8 *cum-div.* (final Rs. 7 per share). On an *ex-div.* basis, the yield on the shares works out to 6.6 per cent. per annum, free of income-tax.

Points From The Chair

Shortage of Steel in India

"THERE is today a serious shortage of steel which is not limited only to indigenous supplies, and full requirements of this commodity for industry cannot be expected to be obtained from Government-owned units before at least 1959-60. The success of the Second Five-year Plan, and, therefore, the success of our part in it, must depend, to a large extent, on imports of steel and machinery, of which little surplus of the former is available even from the Continent, and although we have sufficient steel in our own limited stocks to fabricate and erect the two small boat-building sheds for the first phase of our Bhavnagar Project, it would indeed have unfortunate results on this venture if, thereafter, we had to sit idle waiting for the steel with which to build the barges, even though this is a Government job, to be built with steel from Government quotas. Similarly, although we plan to start the fabrication and erection of our new structural shop during the early part of next year, there is no guarantee that the schedule of our whole scheme might not have to be postponed if we are unable to procure the necessary steel for which we have already placed our orders with Government."

W. A. WILES,
Alcock, Ashdown & Co., Ltd.

Violent Fluctuations in Tea Prices

"Many explanations have been offered to account for the rise and the fall of prices, none of which can be accepted with confidence. The world tea market is an extremely complex affair. Many countries are involved in the production and consumption of tea. All that can be said with any certainty is that no responsibility for the severe price fluctuations rests upon the producer, who, in the short term, can do nothing to influence the price of tea. Price is determined by the laws of supply and demand, and psychology enters largely into the picture. The most experienced buyers may easily form erroneous conclusions. There appears no doubt that at one period buyers throughout the world failed to have cognisance of the extent to which stocks were building up in the thousands of retail establishments and when the position was realised, the fall in price as is often the case in similar circumstances, was overdone. It is, however, somewhat of a shock to see such a disparity between the years 1954 and 1955, although the 1955 figure in itself does not compare unfavourably with past years. I think we have to accept 1954 as a phenomenal year, and leave it at that. As a matter of fact, it is not a condition which we would wish to be repeated. Such violent price fluctuations are disturbing. They are not beneficial to the industry, and create all sorts of difficulties."

SIR THEODORE G. CHAMBERS,
Peacock and Nilambe (Ceylon) Tea & Rubber Estates Ltd.

Position of the U.K. in Export Markets

"Our greatest competitors in the export market *today* are the United States, Western Germany and Japan. Probably, Western Germany is the best country to take as an example of what we are up against. Before the war Britain and Germany each had roughly a 20 per cent. share in the world's exports of manufactured goods. In 1951 the U.K.'s share of world trade was 22 per cent. and Germany had built up her share to 10 per cent. In the years 1952 and 1953 our exports declined and there is little doubt that the decline was due in considerable measure to the increasing competition of Western Germany. In 1955—which was a good export year—our position showed no signs of improvement. The U.K. share of world trade had declined to 20 per cent. and Germany's share had expanded to 15 per cent. In Germany, retail prices rose much less during 1955 than they did in Britain and Germany's industrial production went up 17 per cent., as against 6 per cent. in the U.K. Whilst I have taken Germany as an example, we are, of course, also faced with the competition of the United States and Japan in world markets. The position in 1955 in these countries was much the same as in Germany. In both, production rose to a greater extent than in Britain. Retail prices remained static in U.S.A. and fell by one per cent. in Japan, against a rise of 4 per cent. in this country. In so far as figures for 1956 are available, they indicate a continuance of this trend. The broad picture is shown by the fact that in 1955 our exports went up by some 7 per cent., those of the United States by about 9 per cent., those of Germany by about 17 per cent. and those of Japan by about 27 per cent. In face of these facts is it possible to escape the conclusion that our position in the export market of the world is being progressively undermined?"

VISCOUNT BRUCE OF MELBOURNE,
Finance Corporation for Industry Ltd.

International Tin Agreement

"In my opinion, the International Tin Agreement should achieve the desired objective of reasonable price stability and ordered absorption of the world surplus of tin when the Texas City *Smelter* ceases its operations. The Council decided that the initial contributions to the buffer stock should become due on 15th September 1956. The Agreement provides that not more than 75 per cent. of any such contribution shall be in tin metal, and the balance shall be in cash; alternatively, the whole contribution may be made in cash. The Council announced that producing countries had indicated their intention of making these contributions mainly in cash."

CLIFFORD WAITE,
Consolidated Tin Smelters Ltd.

COMPANY MEETINGS AND DIVIDENDS

NEW BANSDEOPUR COAL CO., LTD. Half-yearly General Meeting, Calcutta, 10th August 1956. Transfer books remain closed from 3rd to 10th August 1956, both days inclusive.

JOST'S ENGINEERING CO., LTD. Annual General Meeting, Bombay, 13th August 1956. Dividend: Rs. 4 per share. Transfer books remain closed from 1st to 13th August 1956, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. (And Reduced). Annual General Meeting, Alleppey, 13th August 1956. Dividend: Rs. 2 per ordinary share. Transfer books will remain closed from 7th to 13th August 1956, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 14th August 1956. Dividend: Rs. 7 per share (final), payable on 16th August 1956. Transfer books remain closed from 24th July to 14th August 1956, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 14th August 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 18th July to 10th August 1956, both days inclusive.

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD. Annual General Meeting, Calcutta, 14th August 1956. Dividend: Rs. 6 per ordinary share. Transfer books remain closed from 28th July to 14th August 1956, both days inclusive.

INDIAN MALLEABLE CASTINGS LTD. Annual General Meeting, Calcutta, 16th August 1956. Dividend: As. 6-2/3 per ordinary share and As. 2 per deferred share. Transfer books will remain closed from 6th to 16th August 1956, both days inclusive.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Annual General Meeting, Bangalore City, 16th August 1956. Dividend: Re. 1 per share (includes bonus of As. 4 per share). Transfer books will remain closed from 3rd to 16th August 1956, both days inclusive.

REWA COALFIELDS LTD. Half-yearly General Meeting, Calcutta, 20th August 1956. Transfer books will remain closed from 13th to 20th August 1956, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 20th August 1956. Dividend: Rs. 10 per share (final). Transfer books will remain closed from 6th to 20th August 1956, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 22nd August 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 13th to 22nd August 1956, both days inclusive.

APOLLO MILLS LTD. Annual General Meeting, Bombay, 23rd August 1956. Dividend: As. 3 per share. Transfer books will remain closed from 6th to 25th August 1956, both days inclusive.

UDAYAGIRI RUBBER CO., LTD. Annual General Meeting, Kottayam, 25th August 1956. Dividend: As. 9-3/5 per share. Transfer books will remain closed from 14th to 25th August 1956, both days inclusive.

NENMENY RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam, 25th August 1956. Dividend: Re. 1-8 per share. Transfer books will remain closed from 14th to 25th August 1956, both days inclusive.

AHMEDABAD MANUFACTURING AND CALICO PRINTING CO., LTD. Annual General Meeting, Ahmedabad, 27th August 1956. Dividend: Rs. 30 per share (includes two interim dividends of Rs. 8 and Rs. 10 per share) for 15 months ended 31st March 1956. Transfer books will remain closed from 15th to 29th August 1956, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 28th August 1956. Transfer books will remain closed from 6th to 28th August 1956, both days inclusive.

TATA IRON AND STEEL CO., LTD. Annual General Meeting, Bombay, 30th August 1956. Dividend: Rs. 10-8 per ordinary share.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tennur, Tiruchirapalli, 31st August 1956. Dividend: As. 8-2/5 per ordinary share (final). Transfer books will remain closed from 7th to 31st August 1956, both days inclusive.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Annual General Meeting, Mettur Dam R.S., 3rd September 1956. Dividend: As. 7 per ordinary share (final). Transfer books will remain closed from 20th August to 3rd September 1956, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION, LTD. Interim dividend of Rs. 225 per original share of Rs. 2,500 each; Rs. 11-4 per share on shares of Rs. 125 each and Rs. 4-8 per share on shares of Rs. 50 paid up, for the year ended 31st May 1956, payable on 3rd September 1956. Transfer books will remain closed from 18th to 31st August 1956, both days inclusive.

BADRA COFFEE ESTATES LTD. Dividend of As. 4-4/5 per ordinary share, for the year ended 31st May 1956. Transfer books will remain closed from 20th to 25th August 1956, both days inclusive.

KADUR COFFEE ESTATES LTD. Dividend of As. 2-2/5 per ordinary share, for the year ended 31st May 1956. Transfer books will remain closed from 20th to 25th August 1956, both days inclusive.

PREMIER MILLS (C.B.E.) LTD. Dividend of Rs. 15 per ordinary share, for the year ended 31st March 1956. Transfer books remain closed from 4th to 18th August 1956, both days inclusive.

DESHERGARH POWER SUPPLY CO., LTD. Dividend of As. 6 per ordinary share, for the year ended 31st March 1956.

NEW DOOARS TEA CO., LTD. Dividend of Rs. 25 per ordinary share, for the year ended 31st December 1955.

Notice

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Twenty-second Annual General Meeting of the Shareholders of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday the 28th August 1956, at 3 p.m., for the following purposes:—

(1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.

(2) To declare a Dividend on the Preference Shares.

(3) To appoint a Director in place of Mr. H. J. Silverston who retires by rotation, but who is eligible for reappointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution.

"That Mr. H. J. Silverston, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, who retires by rotation, be and is hereby reappointed a Director of the Company."

(4) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293 (1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

(5) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 6th August 1956 to 28th August 1956, both days inclusive.

By Order of the Board.
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *26th July* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 28th August 1956, only to those members whose names are registered in the Books of the Company on the 28th August 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. H. J. Silverston is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to reappoint him as a Director of the Company.

2. The resolution under item No. 4 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293 (1) (d) of the Companies Act, 1956.

PROFIT OF JOST'S ENGINEERING DROPS SUBSTANTIALLY

MIDLAND RUBBER CUTS DIVIDEND

Jost's Engineering Co., Ltd.

THE directors of the above Company (Chairman: Mr. T. V. Baddeley, Bombay) submit the audited accounts of the Company for the year ended 31st March 1956.

The year's working after meeting all expenses of operation and management and after allowing for depreciation of stocks, furniture, tools and plant, shows a profit of Rs. 62,291 (Rs. 1,17,555). This amount together with Rs. 2,308 (Rs. 7,840) brought forward from last year makes a total of Rs. 64,598 (Rs. 1,25,394) which sum has been appropriated as under:—

To provision for bonus to employees Rs. 12,000 (Rs. 21,000) and to provision for taxation Rs. 3,000 (Rs. 43,000). This leaves a balance of Rs. 49,598 (Rs. 53,394 after providing Rs. 5,000 to staff gratuity, and Rs. 3,000 to bad and doubtful debts). From this amount the directors recommend payment of a dividend, free of income-tax, of 8 (8) per cent. for the year ended 31st March 1956 absorbing Rs. 48,000 (Rs. 48.000) leaving a balance of Rs. 1,598 (Rs. 5,394) to be carried forward to next year's account.

During the year under review, owing to the indigenous lead acid battery manufacture the Company received no orders for alkaline train lighting batteries, which in some years represented no less than 50 per cent. of the annual business. Despite this loss, the Company achieved a substantial turnover. Owing to very keen competition in the Company's other agencies, however, the profit margin has been considerably reduced. Although margins are lower, every effort is being made and will continue to be made, to expand new agencies in an effort to gradually replace the loss of the battery business. The directors have recommended payment of the same dividend as last year. The Stock has been carefully taken and is fully insured.

Accounts in brief are as under:—

		Cash ...	50,137
Rs.	18,53.750	Rs.	18,53,750

Midland Rubber & Produce Co., Ltd. (And Reduced).

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submit the audited accounts of the Company for the year ended 31st March 1956.

The tea crop secured from Arnakal Estate amounted to 12.46.600 (12,63.966) pounds against an estimate of 11,50,000 (11,00,000) pounds.

It is pleasing to report that the tea crop on Arnakal continues to be satisfactory. The average yield for the year works out at 1,112 lbs. per acre which compares very favourably with the district average. The cost of production on the estate was 126.85 cents as against 116.75 cents for the previous year.

The figures for rubber crop are as follows:—Mukampala Estate—2,22,436 (2,53,609) pounds, Perinaad Estate—6,50,538 (6,22,123) pounds and Sittar Estate—2,57,142 (2,46,342) pounds. Thus the total rubber crop secured amounted to 11,30,116 (11,22,074) pounds against an estimate of 10,60,000 (10,95,000) pounds.

The cost of production of rubber for the year was 68.76 cents against an estimate of 67.14 cents per lb. and 63.59 cents per lb. for the previous year. The increases in costs are mainly due to the higher emoluments that had to be paid to the Estate workers than for the previous year, and leave with wages under the Plantation Labour Act. In the case of rubber the increase in cess from As. 8 to Rs. 6-4 per 100 lbs. has also contributed to the increased cost of production.

The average sale price realised during the year for tea amounted to 166 cents per lb. as against 239 cents per lb. for the previous year and for rubber 146 cents per lb. as against 134 cents per lb. for the previous year.

The increase in price realised for rubber is due to the increase in the statutory price, to cover the enhanced cess. For tea, however, the lower price is due to the shortfall in market prices.

After allowing for depreciation and the outgoings as usual and after making a provision of Rs. 4,80,000 (Rs. 9,10,000) for income-tax, the net profit for the year amounted to Rs. 6.55,033 (Rs. 11 68,979). This, together with the carry forward from previous year of Rs. 1,45,508 (Rs. 99,729) makes a total of Rs. 8.00 540 (Rs. 12,68,708) available for distribution. Out of this sum, the preference dividend for the year amounting to Rs. 1,03 200 (Rs. 1 03,200) was paid, leaving a balance of Rs. 6,97,340 (Rs. 11,65,508) which the directors recommend be disposed of as under:—

Payment of 20 (25) per cent. dividend on ordinary shares absorbing Rs. 5,40,000 (Rs. 6.75,000), transfer to staff pension and gratuity fund (making it Rs. 2,00,000) Rs. 50,000 (Rs. 35.000) and carry forward to new season Rs. 1,07,340 (Rs. 1,45,508 after placing Rs. 2,00,000 rubber replanting reserve, Rs. 1,00,000 to dividend equalisation fund and Rs. 10,000 to bad and doubtful debts reserve).

Estimates for 1956-57 provide for a tea crop of 11,80,000 pounds at a cost of 115.49 cents per pound and a rubber crop of 10,70,000 pounds at a cost of 76.45 cents. per pound. Total capital expenditure will amount to Rs. 6,19,357.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,20,000	Block ...	68,86,271
Reserves ...	29,11,062	Stock-in trade ...	2,69,183

Rs.	91,85,455	Rs.	91,85,455

Nenmeny Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1955.

Acreage:—During the year 54.14 acres of rubber area in Eldorado Estate was sold for Rs. 65,000. This area is deteriorating and is uneconomic to retain and work, on account of its steadily decreasing yield. 50 cents of land in the Redlynch division of the Nenmeny Estate was sold for a nominal price of Rs. 100 to the Church of South India for starting a school. This school was felt a necessity for the education of the children of the employees and workmen of this Estate. The area under mature rubber is 1.262.21 acres and that under immature rubber is 50.00 acres. Tea plantations cover an area of 11.00 acres. Coconut plantations cover 25.50 acres.

Estates:—Both Nenmeny and Eldorado Estates are reported to be in good condition and well maintained.

Crop and prices:—The rubber crop harvested during this year was 5,32,730 (5,18,364) lbs. at 80.95 (78.78) cents per pound. The crop estimated for 1956 is 5,75,000 (5,60,000) lbs. at 90.23 (89.77) cents per pound. The crop was sold at an average price of 142.51 (134.84) cents per pound. The controlled price of rubber was increased by Rs. 12 in February 1955 and Rs. 5-12 in September 1955, the latter to compensate for the increase in excise duty introduced from August 1955.

The net profit after providing for taxes, managing agents' remuneration, etc., is Rs. 1,24,842 (Rs. 1,16.915). To this has to be added the balance from last year of Rs. 13.146 (Rs. 42,480) making a total of Rs. 1,37,987 (Rs. 1,59,396). From this is deducted preference dividend for 1955 paid in February 1956 Rs. 21,000 (Rs. 21,000) leaving a balance of Rs. 1,16.987 (Rs. 1,38,396). The directors now recommend to pay 15 (15) per cent. dividend on ordinary shares for 1955 absorbing Rs. 50,250 (Rs. 50,250) and transfer to debenture redemption reserve Rs. 50,000 (Rs. 75.000) leaving a balance of Rs. 16,737 (Rs. 13,146) to be carried forward.

The capital expenditure incurred during the year is as follows:—On land and development Rs. 13,705 (Rs. 22,339), on buildings Rs. 40,106 (Rs. 25,819) and on machinery and furniture Rs. 2,942 (Rs. 2,179).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6.35,000	Block ...	12,49,598
Debentures ...	3,00,000	Stock-in-trade	1,89,890
Reserves ...	2,81,000	Stores and spare parts	17,780
Provision for taxation ...	78,727	Rubber nursery ...	7,324

Udayagiri Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1955.

The area under tea is 427.93 acres the visiting agent reports that the Estate is well maintained and in good condition.

Crop and prices:—The tea crop harvested during the year was 2,42,910 (2,26,940) lbs. at 138.48 (129.41) cents per pound against an estimate of 2.25.000 (2.25,000) lbs. at 151.91 (132.40) cents per pound. The crop estimated for 1956 is 2,25,000 lbs. at 146.04 cents per pound.

The average price realised for tea was 176.7 (275) cents per lb. During the first two months of the year tea was sold at good prices but prices began to fall steadily from March. The average price realised is about a rupee less than that of the previous year.

The net profit after providing for taxes, depreciation and managing agents' remuneration is Rs. 15,605 (Rs. 57,870). To this has to be added the balance from last year of Rs. 15,274 (Rs. 18,004) making a total of Rs. 30,879 (Rs. 75,874). This is reduced by 7 per cent. preference dividend for 1955, paid in February 1956 Rs. 5,600 (Rs. 5,600). The directors now recommend the payment of a dividend of 6 (25) per cent. on the ordinary shares Rs. 13,200 (Rs. 55,000) leaving a balance of Rs. 12,079 (Rs. 15,274) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	8,17,714
Debentures ...	70,000	Stock-in-trade	49,596

Rs.	9,73,377	Rs.	9,73,377

Futwah-Islampur Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Gross earnings.—Gross earnings for the half-year were Rs. 2,59,890 (Rs. 2,83,842) which is Rs. 23,952 less than the earnings of the corresponding period ended 30th September 1954. There is a decrease of Rs. 26,314 under coaching and are increases of Rs. 2,254 and Rs. 108 under goods and miscellaneous.

Working expenses.—The working expenses for the half-year were Rs. 2,92,906 (Rs. 2,83,455) which is Rs. 9,451 more than the figure for the corresponding period ended 30th September 1954.

Net earnings.—There was a deficit of Rs. 33,016 in net earnings.

Comparative statistics—

Half-year ending	Gross earnings	Working expenses	Due to + Due from — Central Government	Dividend per share
				Rs. a. p.
30-9-1953	2,23,708	2,47,619	— 65,561	0 15 0.0
31-3-1954	2,33,409	3,44,590	—1,55,230	0 15 9.6

Liabilities ...	2,68,900		
Net revenue	33,397		
Rs.	14,39,915	Rs.	14,39,915

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Decimal Coinage

THE Government thinks that the scheme for decimal coinage put forward by Mr. C. Rajagopalachari is not practicable. If this were accepted, it would increase the value of the rupee to Re. 1-9. Such a scheme will upset all the calculations, including budgets, wages of factories, house rents and several other transactions. The International Monetary Fund will have to be approached to fix a new value of the rupee. All the currency notes will have to be reprinted, as the present currency will fall into disuse in Rajaji's system of decimal coinage.

* * * *

Customs and Excise

A new machinery for hearing the revision applications against the orders in appeal passed by the Central Board of Revenue in regard to Customs and Central Excise is expected to be brought into force shortly. The machinery will consist of two senior officers, one from the Ministry of Law and the other from the Ministry of Finance.

* * * *

Expansion of State Bank

Four branches of the State Bank of India have been opened since 3rd May 1956 at Kancheepuram (Madras), Virajpet (Coorg), Coonoor (Madras) and Nuzvid (Andhra), as against the approved list of 100 new centres. The seven branches taken up under the expansion programme previously initiated by the Imperial Bank of India are at Silchar (Assam), Cooch-Behar (West Bengal), Jagdalpur (Madhya Pradesh), Gurgaon (Punjab), Suri (West Bengal), Satara (Bombay) and Beawar (Ajmer).

—*A. C. Guha*

Gold Reserves of Sterling Area

The gold and dollar reserves of the sterling area on 31st May 1956, were $2,369 million. The gold and dollar reserves of the sterling area have no direct bearing on the exchange rate of the Indian rupee. In the past, there had been wide fluctuations in the amount of gold and dollar reserves of the sterling area, but the exchange rate of the rupee had remained the same. During the recent debate in the House of Commons, fears about the devaluation of the sterling were expressed. But the British Chancellor of Exchequer has refuted that there is going to be any devaluation of the sterling or even that the position of sterling has been weakened as a result of the present gold and dollar reserves position of the sterling area.

* * * *

Gold Price

The general tendency since May this year has been for the price of gold to decline. It is a fact, however, that gold prices have increased during the first four months of 1956. This rise was partly seasonal and partly due to rumours about arrival of smuggled gold and the pre-budget rumours about tax changes and deficit financing. Lower output of indigenous gold and enforcement of stricter checks against smuggling also contributed to the rise in prices.

—*B. R. Bhagat*

Income-tax Act

The question of appointing a committee to examine the Income-tax Act is under discussion. It is quite likely that the work will be entrusted to a special committee within the law Commission.

* * * *

Insurance Staff

A fairly comprehensive machinery has been evolved for integrating the existing staff of insurance companies and for appointing them suitably in the Corporation. One committee under the chairmanship of Mr. S. Lall, I.C.S., has been set up to examine and interview officers of all ranks and grades with a view to their being graded appropriately and arranged in some suitable order of seniority. In respect of the other staff, four zonal committees have been set up.

* * * *

Dalmia-Jain Concerns

The question of appointing a commission to enquire into the working of the Dalmia-Jain concerns is under the consideration of Government. If it is decided to appoint the commission, then the terms of enquiry and the personnel will be settled. The proposed enquiry is independent of the investigations going on in respect of the alleged misappropriation of the Bharat Insurance Company funds to the extent of Rs. 220 lakhs. In connection with the the latter, the investigations are being conducted by the Special Police Establishment under the Home Ministry, and they will be completed shortly.

* * * *

Tax Arrears

An amount of Rs. 22 crores recoverable by way of income-tax, surcharge, etc., was locked up on 1st April this year, due to appeals pending with the Appellate Assistant Commissioners. Apart from creating further additional ranges of the Appellate Assistant Commissioners, the problem of reducing pending appeals is being tackled from the organisational angle by the reorganisation unit of the Central Board of Revenue.

—*M. C. Shah*

State Undertakings

The Government has decided to create a central pool of officers of the All-India Service for manning industrial undertakings owned or managed by the State. The pool will be administered by a committee of senior officers representing the Ministries concerned with the pool. The Government is considering what should be the strength of the pool.

—*B. N. Datar*

Regulation of Mines

The Government proposes to introduce a comprehensive Bill providing for the regulation of mines and development of minerals, as soon as all comments received have been examined. The Bill has been circulated to the State Governments.

* * * *

Oil in Cauveri Basin

It is wrong that the Government has discovered oil resources in the Cauveri basin. Arrangements are being made to find technical personnel for the oil exploration work and the Oil and Natural Gas Directorate has already taken steps to train such personnel both in India and abroad.

* * * *

Wind Power Division

The Indian Council of Scientific and Industrial Research has under consideration a proposal to establish a wind power division. No work on solar energy is, however, being carried out at the National Physical Laboratory.

—*K. D. Malaviya*

Payment for Sugarcane

The system of payment for sugarcane on quality basis is proposed to be tried on an experimental basis during the next season in about ten sugar factories situated in different regions of the country. The introduction of this system has been recommended by the Committee which was set up to examine the question of linking the price of sugarcane to recovery.

* * * *

Sales Tax on Foodgrains

In the view of the Government of India, the multiple-point sales tax imposed by the U.P. Government on foodgrains is not justified and the Government has suggested to the State Government to reduce it to single-point tax. Foodgrain prices in the State have risen but not to the extent of 26 per cent. The wholesale price of *atta* at Hapur market was Rs. 14 at the end of March and Rs. 14-12 in the middle of July. At Chandusai, the prices were Rs. 14-8 and Rs. 14-12, respectively. At Kanpur, the prices were Rs. 13-4 and Rs. 14. Sales tax should be added to the price. The retail price of *atta* will, however, be much more, it would be as high as Rs. 2 over and above the wholesale price.

* * * *

Rural Credit Fund

The State Governments have agreed to establish State Agricultural Credit (Relief and Guarantee) Funds and have made necessary financial provision in their second Five-year Plan for co-operative development. It is unnecessary to set up such a fund at the national level as recommended by the All-India Rural Credit Survey.

* * * *

Food Position in Assam

There is not likely to be any serious shortage of foodgrains in Assam during the current crop year, but scarcity may develop next year, as cultivation has been seriously interfered with owing to hostilities. Five villages in Kohima Sub-division and a number of camps at Kohima have been supplied with foodgrains either free of cost or at subsidised rates.

* * * *

U.S. Wheat Supplies

Negotiations between the representatives of the Governments of India and the United States have been going on for obtaining U.S. surplus wheat supplies, but no final decision has yet been reached.

* * * *

Fair Price Shops

One hundred and thirty-four fair price shops were opened in Travancore-Cochin State during March, April, June and July and the Government proposes to open more such shops. The prices of certain commodities have certainly gone up during the last few months, but not enormously. The Government is opening fair price shops in a number of places in South India.

—*A. P. Jain*

Russian Tractors

The Ministry of Food and Agriculture imported from the U.S.S.R. in 1954 four tractors for trial at a cost of Rs. 4,385 each. The U.S.S.R. Government made a gift of one tractor to the Government of India in 1955 and 66 tractors in 1956, besides a considerable quantity of allied equipment. Licences to certain private importers for importing Russian tractors have been issued and, if they utilise the licences, these tractors will be available for sale in the market.

—*P. S. Deshmukh*

Floods

About 70 persons have lost their lives as a result of this year's floods in Assam, Bihar, Uttar Pradesh, West Bengal, Saurashtra and the Punjab. Damage to crops and other property throughout the country has amounted to about Rs. 9 crores. Emergency flood protection schemes implemented in the course of the last two years have covered an area of 4,800 square miles in Uttar Pradesh, Bihar, West Bengal and Assam, with a population of about 50 lakhs. Important local town protection works have been completed. The level of 1,400 village sites has been raised and more than 1,000 miles of embankments have been prepared. This represents a quantum of work not done in the past in the course of many years. The tempo of work on the flood protection programme increased in 1955-56; the expenditure was stepped up to Rs. 8.4 crores from about Rs. 2.5 crores in the previous year. A provision of Rs. 5 crores has been made in the Central budget for the current financial year for assisting the States in their flood control schemes.

—*G. L. Nanda*

Bhakra Power for Delhi State

The entire power requirements of Delhi State will be met by 1960-61 when the generating units of the Bhakra Power House are expected to be commissioned. The Government's original plan to supply power from Bhakra had to be revised from time to time, because of some unavoidable delay in the receipt of power house equipment from abroad and consequent delay in the scheduled construction. The schedule of supply prepared has taken account of the increasing requirement.

—*Jaisukhlal Hathi*

Wage Board

The Government hopes to be able to set up five or six wage boards during the current year for different industries. It is not, however, possible to say which industries will be covered, as a good deal of preliminary work regarding their composition and collection of necessary data is involved.

* * * *

Maternity Benefit

Model minimum standards for maternity benefit legislation for all categories of women workers have been finalised and forwarded to the State Governments for adoption.

—*Khandubhai Desai*

Stores Requirements of Railways

The Railways are experiencing great difficulties in getting their requirements of stores in time, but most of these difficulties will be solved in the coming years. My Ministry had taken up this matter with the Works, Housing and Supply Ministry a number of times in the past. A committee has been set up by the Works, Housing and Supply Ministry to go into this question. Now the railways can indent stores up to a limit of Rs. 10,000. But most of the stores have to be indented through the Director-General of Supplies. There has been shortage of steel and pig iron and the Commerce and Industry Ministry is taking effective steps to import them.

—*Lal Bahadur Shastri*

Purchase of Railway Stores

352 indents for railway stores of a total value of about Rs. 1.87 crores by the Southern Railway have been pending for more than a year.

—*Shah Nawaz Khan*

Taxes on Motor Vehicles

The question of reducing rates of State taxes on motor vehicles is still under consideration of the State Governments. The matter was last considered at the meeting of the Transport Advisory Council in February, but representatives of the States desired to be given more time for consideration of the proposal. The Motor Vehicles Taxation Inquiry Committee, which had gone into this question, had stated that a ceiling of 75 per cent. of the tax levied by Madras would be reasonable. The Committee's recommendations that there should be no double taxation on motor vehicles operating on inter-State routes have been accepted by the Transport Advisory Council. The Council had recommended that States should try to come to mutual agreement in regard to the operation of motor vehicles on inter-State routes. As regards reduction in Central taxes on motor vehicles, these taxes are of indirect nature only and the import duty on automobile components was reduced in 1953. No other proposal for reduction in Central taxes is under consideration at present. The Government is of the view that there should be absolutely no regional or even inter-State restrictions in the matter of road transport. Some States have come to an agreement and some others are still negotiating on this matter.

* * * *

Railway Equipment

The Government of India has placed orders for railway equipment valued at £64,730 with manufacturers in the U.S.S.R. The equipments ordered are three types of 15 loco boilers. Orders have also been placed for rolling stock with manufacturers in East Germany, Yugoslavia, Austria and Poland.

* * * *

Brahmaputra Road Bridge

The alternatives of constructing a road bridge over the Brahmaputra river or a tunnel under the river bed at Jogighopa or near Gauhati are under technical examination. Preliminary investigations in this connection are in hand. It will be some time, before the detailed and complete geological and seismographic data required for taking a final decision in the matter became available.

—*O. V. Alagesan*

Manufacture of Jet Engines

The negotiations now in progress with a British aircraft factory for manufacture of Gnat jet aircraft in the Hindustan Aircraft Factory at Bangalore are expected to be completed very soon. A new factory in the public sector will have to be set up for the manufacture of aero engines.

—*Mahavir Tyagi*

Monazite Deposits

Monazite which contains thorium and a small quantity of uranium has been discovered in the beach sands of the coastal districts of Andhra State. A field party of the Department of the Atomic Energy, working under the supervision of the head of the Geology Department of Andhra University, Waltair, is engaged on the estimation of the reserves of ilmenite and monazite in these areas. The work is still in progress and the final estimates of reserves are not yet available. Most of this work has been done by the students of the University. Uranium has been found in Bihar but not in large quantities.

—*Jawaharlal Nehru*

Notices

THE BRADBURY MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-third Ordinary General Meeting of the Shareholders of the Company will be held on Tuesday the 4th September 1956, at 4-30 p.m. (S.T.) at the Registered Office of the Company, State Bank Building, Bank Street, Fort, Bombay, to transact the following business and for the purpose of considering, and if thought fit, of passing as Special Resolutions with or without modification the Special Resolutions specified below:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st March 1956.
2. To declare a Dividend on Preference and Ordinary shares.
3. To elect Directors in place of those retiring.

Ordinary Resolution

(a) "RESOLVED that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to Mr. Dinsha K. Daji who has attained the age of 65 years and who is, at present, 83 years of age and who retires by rotation. Further resolved that Mr. Dinsha K. Daji be and is hereby appointed a Director of the Company."

Special Resolutions

(b) "RESOLVED that Mr. Madanmohan Ramnarain who is an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company, be and is hereby appointed a Director of the Company."

(c) "RESOLVED that Mr. Radhakrishna Ramnarain who is an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company."

4. To appoint Auditors for the current year and fix their remuneration.

Special Resolutions

5. RESOLVED that the contracts entered into between the Company and the associates of its Managing Agents, namely, Messrs. Indokem Private Ltd., The Vinaya Trading Co. Private Ltd., The Phœnix Mills Ltd. and The Dawn Mills Co., Ltd., between 1st April 1956 and 15th July 1956 particulars of which contracts are entered in the register of contracts maintained under the provisions of Section 360, be and they are hereby confirmed.
6. RESOLVED that this Company hereby approves of contracts being entered into with Messrs. Indokem Private Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company for purchase and/or supply of dyes, colours and chemicals on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, such purchase and supply not to exceed from the date of this Annual General Meeting upto the next Annual General Meeting Rs. 20,000.
7. RESOLVED that this Company hereby approves of contracts being entered into with The Noble Steel Products Private Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company for the purchase and/or supply of goods manufactured by the said Noble Steel Products Private Ltd., on terms of ready or forward delivery and either for cash or on credit, in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, such purchase and supply not to exceed from the date of this Annual General Meeting upto the next Annual General Meeting Rs. 1,00,000.
8. RESOLVED that this Company hereby approves of contracts being entered into with The Vinaya Trading Co. Private Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company for the purchase or supply of foreign or Indian cotton and staple fibre on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, such purchase and supply not to exceed from the date of this Annual General Meeting upto the next Annual General Meeting Rs. 30,00,000 and also for the supply of or rendering of service by them as cotton brokers and/or as insurance agents.
9. FURTHER RESOLVED that this Company hereby authorises Messrs. The Vinaya Trading Co. Private Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company to retain any commission or other remuneration earned or to be earned by them from the aforesaid business of supply of Indian or foreign cotton and staple fibre or the aforesaid business of insurance agents.
10. RESOLVED that this Company hereby approves of contracts being entered into with The Phœnix Mills Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company for the sale, purchase or supply of any goods on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, or for the supply of or rendering of service as dyers and/or processors, such purchase and supply together with the charges for services not to exceed from the date of this Annual General Meeting upto the next Annual General Meeting Rs. 20,00,000 and on the terms that in respect of any goods supplied or sold or any service supplied or rendered by this Company to the said associate company shall make payment to this Company within one month from the date of the supply or sale of the goods or for the supply or rendering of service as the case may be.
11. RESOLVED that this Company hereby approves of contracts being entered into with The Dawn Mills Co., Ltd., an associate of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of this Company for the sale, purchase or the supply of any goods on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, or for the supply or rendering of service as dyers and/or processors, such purchase and supply together with the charges for services not to exceed from the date of this Annual General Meeting upto the next Annual General Meeting Rs. 10,00,000 and on the terms that in respect of any goods supplied or sold or any services supplied or rendered by this Company to the said associate company, the associate company shall make payment to this Company within one month from the date of the supply or sale of the goods or for the supply or rendering of service as the case may be.

GILT-EDGED LISTLESS

(*From Our Own Correspondent*)

BOMBAY, 1*st August*

Conditions in the short-term money market during the week under review were fairly steady, with the supply and demand evenly posed. Although there was a further return of funds from the sugar industry, this was quickly absorbed by the other industries, so that there was no problem of surplus money. On the contrary, banks were still good borrowers at the previous week's rates.

Inter-bank call money was bid at 3½ per cent. among the Exchange banks and the larger Indian banks, though some money was available at 3 per cent. after clearing hours. The rate among the smaller Indian banks was well maintained at 3¼ per cent. House money at call was taken at the self-same rate of 3½ per cent. Short-term deposits were placed at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

The Reserve Bank's statement for the week ended 27th July 1956 shows that the downward trend in notes in circulation has been maintained for the third week in succession, with a further decline of Rs. 15.73 crores during the week. Notes held in the Banking Department have, on the other hand, gone up by Rs. 7.79 crores. The resulting fall of Rs. 7.94 crores in total notes issued is covered by a drop of Rs. 9.94 crores in rupee securities and an increase of Rs. 1.99 crores in rupee coin. In the Banking Department, deposits of the Central Government have gone down by Rs. 7.26 crores and so also those of other Governments by Rs. 6.85 crores. Deposits of banks show a rise of only Rs. 33 lakhs. On the assets side, balances held abroad have declined by Rs. 5.20 crores. Loans and advances to Governments are up by Rs. 52 lakhs, while other loans and advances are lower by Rs. 6.09 crores, of which outstanding advances to Scheduled banks against usance bills account for Rs. 3.44 crores. Fresh advances to banks against usance bills during the week amounted to Rs. 4.12 crores, but repayments have been of the order of Rs. 7.56 crores. Investments have gone down by Rs. 9.79 crores.

A sharp decline of Rs. 6.85 crores in demand deposits and of Rs. 1.70 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 20th July 1956. Inter-bank borrowings are lower by Rs. 3.74 crores. Borrowings from the Reserve Bank have gone up by as much as Rs. 15.51 crores and borrowings against usance bills by Rs. 4.33 crores. Advances have declined further by Rs. 3.65 crores and inland bills purchased and discounted by Rs. 1.15 crores, while foreign bills purchased and discounted are up by Rs. 1.54 crores. A rise of Rs. 5.24 crores is noted in investments. Cash balances and balances with other banks show small variations, while money at call and short notice have been reduced by Rs. 5.56 crores.

With the approach of the States' entry into the capital market drawing near, the Gilt-edged market was listless during the week under review. Institutional investors were inclined to wait for the States' issues and activity was, therefore, very much restricted. In the absence of any heavy offers, prices were nearly maintained, except in 1986 Conversion Loan which kept its sagging tendency.

3 per cent. 1957 was unchanged at Rs. 99-13 and 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 held its ground at Rs. 98-2. 3 per cent. 1963-65 was on offer an anna lower at Rs. 95, while 3 per cent. 1964 was stagnant at Rs. 95-1. 3 per cent. 1966-68 was featureless at Rs. 93-3 and 3 per cent. 1970-75 at Rs. 90-5. 3 per cent. 1986 Conversion Loan declined further by As. 6 to Rs. 76-4. 3¼ per cent. 1962 was on offer ½ anna below its issue price of Rs. 98. 3½ per cent. 1964 and 3½ per cent. 1965 showed no signs of interest at Rs. 98-11 and Rs. 98-10, respectively. 3½ per cent. 1967 and 3¾ per cent. 1974 had sellers half an anna below their issue price of Rs. 98-8.

The State loans were devoid of any interest.

In the foreign exchange section the weakness of the rupee in terms of the U.S. dollar became more pronounced, in sympathy with sterling Banks' selling rate of ready dollars moved up from Rs. 479¼ to Rs. 480¾ per $100 and their buying rate from Rs. 475¼ to Rs. 477 per $100. In New York, spot sterling declined from $2.79-5/16-2.79-7/16 to $2.78¾-2.78¼, the lowest level for the last ten months. Forward sterling (three months) moved down from $2.77¾-2.77⅞ to $2.76-13/16-2.76-15/16 and transferable sterling from 277.15-277.25 cents to 275.90-276.05 cents.

TRADING IN KIPS PATCHY

(*From Our Own Correspondent*)

MADRAS, 30*th July*

Trading in kips for shipment was patchy, due to seasonal slackness in the U.K. Shippers were quoting one penny above U.K. levels for F.A.Q. marks. The little business that was done was in top marks at unchanged prices. Demand was for top selections, which were in short supply. Arrivals of kips into the market were on a moderate scale and clearances fair. Prices ruled firm and sellers of loose lots were not keen to sell at current levels—in all sections.

The tanned goat and sheep skins section ruled firm. There was good call for tanned goat superior tannages 8/9 and 11/12 lbs. Run, but the tanners were in an oversold position and quoted 13*s.* and 12*s. 6d.* per lb., respectively.

BULLION FIRM

(*From Our Own Correspondent*)

BOMBAY, 1*st August*

The bullion market displayed buoyant conditions during the week under review. Activity was mainly inspired by political conditions in West Asia, following the nationalisation of the Suez Canal Company by the Egyptian Government. Forward silver advanced by Rs. 2-1 per 100 tolas over the week and gold by Rs. 2-11 per tola. A feature of the week's trading was the narrowing of the premium for the ready over the forward in both silver and gold. This was due mainly to the spurt in forward. In silver, the premium has narrowed down from Rs. 2-6 at the close of the previous week to As. 8 today and in gold from Re. 1-10 to As. 10.

In silver, the bulls gained the upper hand, following the absorption of 1,600 bars tendered by the bears at the last settlement, thus belying the earlier expectations held in some quarters that they would not be able to take delivery of all the metal. The day-to-day trend was, however, two-sided.

Forward silver (23rd August settlement) advanced from Rs. 169-4 to Rs. 171-4 on Friday. After a dip to Rs. 169-11 on the following day, there was a spurt to Rs. 171-15 on Monday, thanks to political developments abroad. Later, it receded to Rs. 170-6, but closed higher today at Rs. 171-5.

Ready silver (.996 Mint) rallied from Rs. 171-10 to Rs. 174 early in the week and, after retreating to Rs. 171-3, wound up at Rs. 171-13.

The floating stocks of silver are estimated at 1,700 bars. The daily average offtake was 30 bars.

Gold forward delivery (24th August settlement) hardened from Rs. 100-12 to Rs. 103-11, before closing at Rs. 103-7.

Ready gold moved up from Rs. 102-6 to Rs. 104-6 and finished at Rs. 104-2 today.

The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 2,500 tolas on an average.

In London, silver and gold prices moved up due to the weakness of sterling. Spot silver rose from 78¾d. to 78¼d. and forward from 78¼d. to 78⅛d. The upward trend in gold noted in the previous week gained substantial momentum this week, the rate shooting up from 250*s.* 7½*d.* to 252*s.* 1*d.* In New York, silver was unchanged at 90¼c.

The following comparative table shows the trend of market during the week under review:

	1-8-56	Highest	Lowest	25-7-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	104 2	104 6	102 5	102 6

PEPPER STEADY

(*Messrs, Parekh & Co.*)

BOMBAY, 1*st August*

After a lull which persisted for the major part of last week, on account of dormant overseas buying interest, steady conditions revived in Malabar black pepper during the week in the wake of better outside advices, following the news of nationalisation of the Suez Canal Company by Egypt. The latest Suez Canal developments made Indian growers and holders reserved sellers. Alleppey improved from Rs. 687-8 to Rs. 725. After a small sale at Rs. 700 growers are now quoting Rs. 725. Garbled at Cochin, after touching Rs. 118-12, is now being quoted at Rs. 125 with few sellers.

Sarawak black, after reacting to Str. $74, is now quoting Str. $80. Lampong black is reported firm at Singapore because of the report that Indonesia has suspended further export of pepper to Singapore as from 23rd July. This report, however, lacks official confirmation.

Spot in New York improved to $0.32 as Suez uncertainty is causing some concern among dealers there. After higgling for a concession in the price, New York is reported to have bought some afloat parcels of Malabar and parcels to be shipped by the steamer sailing on 30th July at $0.28½. In the A.S.T.A. section, August-September is now quoted at $0.29, and October-December at $0.27½. Delivery section is more active as outside speculators have begun taking more interest because of political uncertainty in the Middle East. Bouyancy in other local market is a supporting factor.

The future of the market now depends upon two factors: one, new developments in the political situation in the Middle East and the other, the size of demand from foreign consumers. The market now requires definite trade buying to support it. The trade in general anticipates good demand from consuming countries as no heavy buying has taken place so far this year and if the demand is to come, it should show itself within the next few weeks. If there is no early amicable settlement of the Suez question and the present tension continues, it is feared foreign buyers who were sitting on the fence so far in anticipation of still lower prices will have to come to cover their fall requirements which they were postponing from time to time.

Today's nominal quotations are: Ready delivery Rs. 94 per Bengal maund, August Rs. 657½-662½ and September Rs. 662½-667½ per candy of 5¼ cwts.

COTTON FUTURES SUBDUED

(*From Our Own Correspondent*)

BOMBAY, 1*st August*

The cotton futures market put on a subdued appearance. This is somewhat surprising, considering the renewed firmness of delivery contracts and adverse weather reports causing damage to cotton crop, especially in Madhya Pradesh, Khandesh and Bihar. But the trend is not altogether unexplainable. Cotton circles are greatly perturbed over rumours of an upward revision in excise duty on cloth, although there are as yet no indications whatever of such a revision. They are also perturbed over the likelihood of prolonged weakness in world cotton prices, following the continued sales of U.S. surplus cotton at progressively lower prices. Operators are, therefore, hesitant to enter into fresh sizable commitments and cotton futures have tended to look down. If, however, the decline has not been sharp, it is because of the expectation of enlarged demand for cotton, thanks to the growing domestic consumption of cloth. The confirmation of the reported decision of the Central Government to import in the next three years about 300,000 bales of American cotton on a long-term loan basis would appear to have had no effect on the market. The market is closed today, on account of the death anniversary of Mr. Bal Gangadhar Tilak.

Jarilla contract (March 1957) opened the week firm at Rs. 667-8, as against Rs. 663-8 last week-end. It receded to Rs. 663 on the 30th ultimo. After recovering to Rs. 669, it again declined to Rs. 666 yesterday on profit-taking by buil operators before closing at Rs. 667. Vijay contract (April 1957) stood at Rs. 3-8 higher at Rs. 809 on Friday. Thereafter, the contract was subjected to long liquidation and fell to Rs. 801 yesterday before finishing at Rs. 802.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	30-7-56	Highest	Lowest	25-7-56
Jarilla (March) ...	667	669	663	663½
Vijay (April) ...	802	809	801	805½

In contrast to the subdued tendency of cotton futures, the spot cotton market exhibited a fully steady trend. Delivery contracts were particularly strong. Mill enquiries were quite encouraging for certain current crop varieties, such as Vijay, Jayadhar, Wagad and Lakshmi. Among exportable styles, new crop Bengals elicited good attention of shippers who were influenced by hopes of an export quota of 25,000 bales. A notable event of the week in the spot section was the reported decision of the Government of India to allow free imports of Egyptian Giza 30, in addition to the Karnak and Menoufi already allowed, as well as all grades of Sudan cotton. Import of American cotton stands suspended, as the monetary ceiling has been reached. The Government is expected to announce shortly the procedure governing the import of U.S. cotton under the Aid Programme. Meanwhile, it is understood that the Government has decided to give licences for import applications which were submitted on or before 23rd June 1956. A new policy of cotton imports from the sterling area is now being considered and an announcement to this effect is expected in a month's time.

The following are the latest available rates from the spot market at Sewri:

Bengal *Deshi* Rs. 620; Berar Jarilla Rs. 760; Khandesh Rs. 775; Vijay Rs. 965; Oomra *Deshi* Rs. 680; Moglai Rs. 685. Delivery contracts: Khandesh 197/3 December Rs. 135 and Berar Rs. 120 and Moglai Rs. 37 on Jarilla; 320F December Rs. 72, 216F Rs. 101, Vijaya 13/16" Rs. 68 on Vijay.

Easy conditions prevailed in the Karachi cotton market during the week under review. The easiness was due to bearish advices from Alexandria, continued slackness in demand from overseas countries and fears of setback in world cotton prices. Operators were, therefore, trying to reduce their stocks and prices suffered a break. Yesterday, however, there was a marked recovery, thanks, to buying support at reduced rates. N.T.R.G. January delivery, which stood at Rs. 74-1 on the 25th July fell to Rs. 73-1 on the following day, but recovered to Rs. 74-1 on Monday. It again receded to Rs. 73-14 yesterday. March delivery was quoted at Rs. 73-7 yesterday, as against Rs. 72-10 on the 26th July. The spot cotton prices staged a retreat. The following are the latest available quotations—in rupee per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 101; Punjab *Deshi* 93-8; 4F Roller 77-7; S.G. 79-15; Punjab Roller 80-7; S.G. 83-7; 289F N.T. Roller 78-11; S.G. 80-3; 289F Punjab Roller 82-11; S.G. 89-11.

The easy trend noted in the Alexandria cotton futures market last week gathered further momentum this week. In fact, the market ruled nervous. Traders feared that the export business in Egyptian cotton would be adversely affected as a result of the strained political relations between Egypt and the U.K., its largest buyer of cotton following the nationalisation of the Suez Canal Company. A fresh wave of selling ensued and cotton futures continued their downward march. An idea of the decline in prices in the past two weeks can be had from the following table:

(In tallaris per lb.)

	31-7-56	24-7-56	16-7-56
Karnak			
November	95.65	100.05	101.85
January	93.05	98.40	98.80
March	92.30	—	—
Ashmouni			
August	67.00	71.75	73.50
October	69.65	70.40	73.45

The recent auctions in Sudan cotton were marked by slow bidding. Buyers felt that the reserve prices were too high. There was widespread expectation that the Gezira Board might reduce the reserve prices. The quantity of cotton lying unsold

with the Board as on 20th July 1956 aggregated 124,024 bales of 425 lbs. each.

Barring Egyptian and Sudan contracts which ruled weak, the Liverpool cotton futures market depicted a firm trend. The firmness was aided by good rate buying and scarcity of offerings. The improvement in trading conditions in the yarn and cloth markets also aided the sentiment of operators favourably. Cotton futures as a consequence, registered an improvement. Following bearish advices from Alexandria, Egyptian cotton contracts suffered a drop in values. The Sudan contracts also eased, on Khartoum reports suggesting a sizable cut in the Sudan Gezira Board's reserve prices for the lower Sakel and Lambert grades cotton. The downward tendency in prices would have been more pronounced but for trade and commission house buying induced by fears of possible difficulties in shipments from Sudan. The following are the latest available quotations—in pence per lb.—from Liverpool:

Old contract: July-August 24.40. *New*: July-August 25.80; October-November 24.55; December-January 23.80; March-April 23.60; May-June 23.52. *American cotton mixed contract*: October-November 24.55; December-January 23.5; March-April 23.40. *Egyptian Karnak cotton*: November-December and January-February 51.40; *Sudan cotton contract*: September-October 46.70; November-December 45.30.

The New York cotton futures market put on a cheerful appearance this week, in contrast to the reactionary trend noted in the last two weeks. There was good trade and commission house buying which was prompted by the Agriculture Department's announcement raising the average loan rate for Middling 1" 1956 crop from the preliminary level of 32.25 cents to 32.74 cents per lb. Some buying was also attributed to reports of larger mill demand for spot cotton for prompt shipment to the South-East. Another helpful factor was the expectation of a further rise in mill demand. The expectation was based on the view that, with the grant of the Government subsidy for U.S. cotton cloth exports, the competitive capacity of U.S. textiles in world markets would be enhanced. The U.S. Commodity Credit Corporation sold on bids opened on 24th *June 1956* for export only 137.122 bales of Upland cotton. The cotton was sold at an average price of 25.11 cents per lb., basis Middling 15/16" at average locations. This brings the total sales of C.C.C. stocks under the 5-million-bale export sale programme to 3,002,487 bales. The U.S. Secretary of Agriculture, Mr. Benson, has assured the shippers that he has no intention of selling C.C.C. stocks below 25.00 cents per lb. (basis Middling 15/16" at average location). It is also officially announced that no cotton export subsidy will be established to replace the present C.C.C. competitive sales programme during the coming twelve months.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	31-7-56	24-7-56	17-7-56
Spot	33.45	34.30	35.90
October	42.46	32.32	32.50
December	32.62	32.42	32.62
March	32.63	32.46	32.70

COTTON YARN FIRM

(From Our Own Correspondent)

BOMBAY, 1st *August*

The yarn market presented distinctly firm conditions during the week under review, with the exception of the staple fibre yarn section which ruled bearish. Cotton yarns met with persistent buying support, induced by Burmese enquiries for a substantial quantity of yarn in exchange for American cotton under the recent Indo-Burmese textile deal. Encouraging advices from the spot cotton market also imparted strength. Cotton yarn prices, as a result, recorded a further handsome improvement. Rayon yarns elicited good attention of operators, thanks to revival of demand for rayon cloth, especially from West Bengal markets. Staple fibre yarns, however, continued to lack support, in the absence of any helpful development.

In the cotton yarn section, forty counts were particularly strong. Moderns climbed up by Re. 1-8 to Rs. 29-8. Minaxis rallied As. 15 to Rs. 29-3. Maduras advanced by As. 13 to Rs. 29-7. Twenty counts were also keenly sought. *Hinds* and *Moderns* spurting by As. 8 to Rs. 19. Among 10s, Moderns rose by As. 4 to Rs. 15. Podars gained a like amount to Rs. 14-12. Deals in 30 counts Maduras were put through As. 4 higher at Rs. 74-8. Apollos were fully maintained at Rs. 22-8. Among 60s, Finlays strengthened by a rupee to Rs. 62. Raghuvamshis put on As. 12 to Rs. 58-4. Moderns were steady at Rs. 61-8. Among 80s, Mahendras increased by a rupee to Rs. 73. Seksarias gathered As. 8 to Rs. 54.

Snia rayon yarn (120 deniers) for October delivery evoked considerable bull support and firmed up by Rs. 8 to Rs. 795. August delivery scored a rise of Rs. 7 to Rs. 784. In the spot section, 150 Japan advanced by As. 2-3 to Rs. 4-0-9. 150 Italy picked up 18 pies to Rs. 3-15-6. 120 Italy gained 15 pies to Rs. 3-13-6. But 120 Japan was a shade easy at Rs. 3-12. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade was better by three pies at Rs. 3-11-3. 150 Bt. cones 1st grade was fully steady at Rs. 3-7.

Staple fibre yarns were subjected to selling and staged a retreat. 40 x 2 August delivery moved down by Rs. 10 to Rs. 642. Spot indigenous yarns (40x2) changed hands lower. Kohinoors receded by nine pies to Rs. 3-7-3. New Greats and New Citys lost half an anna each to Rs. 3-6 and Rs. 3-6-3, respectively. Centurys were quiet at Rs. 3-6-9. Among foreign yarns (80 x 2), H'Races dropped As. 2 to Rs. 5-15. Paramounts declined by half an anna to Rs. 6-1-6. K'Suns eased by a similar sum to Rs. 6-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those nine days and sixteen days before:

	1-8-1956	23-7-1956	17-7-1956
Art Silk yarn (per case of 200 lbs.)-	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Sna August ..	784 0	777 0	780 0
October ..	795 0	787 0	787 0
120 Japan (per lb.)	3 12	3 12½	3 12½
150 Japan (per lb.)	4 0½	4 0½	4 0½
120 Italy (per lb.)	3 13½	3 12½	3 12½
150 Italy (per lb.)	3 15½	3 14	3 14
Staple fibre yarn (per case of 200 lbs.)-			
40 x 2 July	—	653 0	652 0
40 x 2 August	642 0	652 0	655 0
40 x 2 New Great (per lb.) ..	3 6	3 6½	3 6

40 x 2 City (per lb.)	3 0½	3 0½	3 0½
Cotton yarn (per bundle of 10 lbs.)-			
10s Podar	14 12	14 8	14 4
20s Hind	19 0	18 8	18 5
40s Minaxi	29 3	28 4	28 2
60s Raghuvamshi	58 4	57 8	57 4
80s Seksaria	54 0	53 8	54 0

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, 1st *August*

The oilseeds market led by castorseed finished the week under review on a steady note after having experienced irregular movements during the first four sessions of the week. The demand from shippers in castorseed spot, as well as futures, and the brisk enquiries from overseas markets provided good support for the market in the early sessions of the week in contrast with the inactivity witnessed last week. The higher levels evoked realising pressure from influential longs, following rumours that the U.S. had rejected some offers of castor oil. This served to dampen the enthusiasm of the operators to a certain extent. But, lower rates, again, evoked replacement buying from shippers-*cum* speculators and the week finished with a steady tone. Groundnuts and linseed kept a sympathetic movement.

Groundnut, February which finished last week at Rs. 130-2 reached the peak of the week today at Rs. 134-14 and finished at Rs. 134-12, gaining Rs. 4-10. In the spot section, too, the same trend was witnessed. August-September was fractionally higher at Rs. 31-12, and December-January put on As. 8 at Rs. 26-12 over the week. Coromandel witnessed a slight rise of As. 6 to Rs. 34-2 while a similar improvement was noted in Khandesh quality. Groundnut oil ex-mill was nominally higher at Rs. 18-4 while railway receipt gained As. 4 at Rs. 18.

Castorseed September contract having finished the previous week at Rs. 130 picked up strength early in the week and reached the peak of the week on Monday at Rs. 138-8, before finishing the week at Rs. 135-14, or a rise of Rs. 5-14 over the week. May contract followed an almost similar trend, and closed the week at Rs. 117, as compared with the last week's figure of Rs. 114. In the spot section, Madras put on Re. 1 at Rs. 27-4 and Kanpur As. 8 at Rs. 26-4 over the week.

In sharp contrast oil B.S.S. and commercial were a shade lower, obviously due to the rejection by the U.S. of certain offers of castor oil.

Linseed May 1957 contract witnessed only narrow fluctuations during the first two sessions. Later on, however, it showed almost a steady upward trend in sympathy with castorseed. Over the week, the quotations rose by Re. 1-8 to Rs. 26-12. Sutna variety, in the spot section, was quoted at Rs. 28-10, as against Rs. 27-12 last week. August-September was also As. 6 higher than a week ago. Linseed oil ready, however, kept in tune with castor oil, and was somewhat lower at Rs. 16-12.

Among the others, *kardi* seeds Bold Ready was done at Rs. 17-4 as against Rs. 17-10; and August-September lost As. 12 at Rs. 17 while *niger* seed, Madras, was a shade lower at Rs. 28-4.

Presiding over the annual general meeting of the Central Organisation for Oil Industry and Trade on Monday, Mr. Ratilal M. Gandhi, stressed the need for convening a conference at an early date of the representative organisations devoted to the oils and oilseeds trade and industry in various countries. The aim of the conference was to consider common problems and to promote common objectives. He welcomed the move for further enhancing the production of oilseeds made at the Mussoorie Conference of Agricultural Ministers.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	1-8-1956	25-7-1956	17-7-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	134 12	130 2	130 4
Khandesh Quality Ready (per cwt.)	34 2	33 12	33 4

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 1st *August*

The bearish trend noted in the sugar market last week gathered momentum during the week under review. The ex-mill quotations for sugar declined by a rupee per bag in the Bombay-Deccan and by As. 6 in U.P. side, following the further release of 158,000 tons of sugar for sale in the free market. Arrivals of indigenous sugar into the market were also fairly large, being 16,400 bags.

Trade circles were generally inclined to believe that the spot prices of sugar would not go down much below the existing levels. This view was based on the ground that adequate stocks of sugar had yet to be built in the city, in order to meet the post-monsoon demand which would emerge in about a few weeks.

In the spot section, large grain indigenous sugar receded from Rs. 96-Rs. 102 to Rs. 93-Rs. 101 per bag. Medium grain declined by a rupee to Rs. 90-Rs. 92. Small grain was quiet at Rs. 99, same as last week. British refined sugar, however, registered a smart rise of Re. 1 to Rs. 90 per 2 cwts., owing to paucity of sound sugar stocks.

'C' grade sugar for *shravan* delivery lost As. 10 to Rs. 91-5 before being quoted today at Rs. 91-8.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

DEMAND FOR TEA WEAKENS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 27*th July*

Almost 1¼ million pounds were on offer in sale No. 21 which was held on Tuesday, 24th July. Rather more medium tea of rush production was catalogued and there was only a fair selection of high grown teas. The sale opened to a good general demand which weakened towards the close. The main strength of the market was at the bottom where commonest teas were firm, whilst brighter liquoring low mediums were dearer to buy. Medium brokens were rather difficult of sale and fannings grades registered a slight decline. The few best liquoring teas met with some competition, buyers following quality closely. Middle East type fannings were slightly easier. Whole leaf grades were well supported at dearer rates. The following are the quotations:—

	1956 Rs. a. p.	Rs. a. p.
Plain B.P.	1 4 6	
Low medium B.O.P.	1 5 0	to 1 6 0
Medium B.O.P.	1 7 0	to 1 9 0
Good B.O.P.	1 14 0	to 2 0 0
Well made black leaf O.P. ...	2 6 0	

London Market: *Sale of 23rd July 1956*:—Improved demand. 1d. to 2d. dearer.

Sale of 24th July 1956:—Little dearer.

Colombo Market: *Sale of 23rd July 1956*:—Stalk and poorer dusts lower. Others firm.

Sale of 24th July 1956:—Active demand for good tea at dearer rates, coloury mediums firm others easier.

Calcutta Market: *Export*:—28,000 packages. Good general demand. Lower types opened one anna easier, closed slightly dearer. Good liquoring teas very strong. Whole leaf occasionally easier.

Internal:—Dust 14,000. Fair general demand. Middle East strongest. Good liquoring Assams well supported. C.T.C. easier. Leaf irregular.

Dust Sale 'O':—A little over 7¼ lakhs pounds were on offer in dust sale O which was held on 26th July. The sale opened to a good general demand which weakened towards the close. Medium dusts were about steady, but best liquoring dusts met with keen competition and were often dearer. All other types were irregularly an anna to As. 2 easier.

Export Quota:—The present quotation is 30 pies with sellers over.

Forthcoming Auctions:—Sale 22 will be held on 31st July. The auction programme for August is as follows:

Sale 23, Tuesday, 7th August; Dust sale P, Thursday, 9th August; Sale 24, Wednesday, 22nd August; and Dust sale Q, Thursday, 23rd August.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 22*:—1,150,000 lbs. Good demand, particularly best liquoring and improved low medium, which are dearer. Mediums irregular and often easier. Whole leaf very strong."

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 30*th July*

Foodgrains prices ruled firm during the week under review. Despite very good rain reports all over West U.P., the firmness of prices continued. This was due to lower production of both *kharif* and *rabi* crops in the last season, coupled with smuggling of fair quantities of rice to Pakistan. Hoarding was also one of the favourable factors contributing to the rise in prices. Coarse grains were particularly strong, thanks to lower production of small millets during 1955-56. The all-India final estimate of small millets puts the current year's area and production at 13,095,000 acres and 2,103,000 tons, respectively, which shows a decrease of 8.1 per cent. in area and 14.4 per cent. in production over last year.

Wheat average quality was quiet at Rs. 15 per maund. Daily arrivals were at an average of 100 maunds. They were hardly sufficient to meet the requirement of the locality. Farm quality recorded further gains and was quoted at Rs. 16-4 per maund. Local stock of wheat was put at 83 *khaties*, as against 128 *khaties* at this time last year. Rice continued to be steady. Mr. M. V. Krishnappa, Union Deputy Minister for Food after a tour of the rice-growing areas in the country, declared that the prospects of rice crops were very bright. The latest prices are: Basmati Rs. 25 to Rs. 33, *Rangooni* Rs. 19-8, *Mainpuri* Rs. 20-8 and coarse quality Rs. 16.

Large quantities of gram have reached here from Punjab, increasing the local stocks to 107 *khaties*, as against 84 *khaties* a week before and 12 *khaties* a year before. Barley and *bejhar*, however, recorded a slight fall in prices during the week, on good rain report which has brightened prospects of the coming *kharif* crop. *Jawar* and *guwar* were not in demand, as sowings had finished. The latest prices are: Gram local Rs. 12, punjabi Rs. 12-6, barley Rs. 11-14, *bejhar* Rs. 11-7, *jawar* Rs. 16 and *guwar* Rs. 10-4 per maund.

Pulses continued to record a steady trend, on Madras advices as loading to that centre was still restricted. *Peas dara* continued to be quoted at Rs. 11-5 per maund and white quality at Rs. 12-12. Week's offtake was two wagons in the form of pulses. With arrivals at an average of 100 maunds daily, local stock was put at 59 *khaties*. *Arhar* ruled steady at Rs. 11-8 per maund with stocks unchanged at 100 *khaties*. *Masoor* rose by Re. 1 to Rs. 15-8, due to poor stocks. Other pulses ruled quiet at almost unchanged price levels.

Divergent trend prevailed in the pulses future market during the week. While peas white *bhadon* and *urad maha* prices declined during the week, prices in other pulses future ruled quietly easy. The latest quotations as on Monday were: Peas *bhadon* Rs. 11-2, peas *white bhadon* Rs. 11-14; *arhar bhadon* Rs. 11-9-6; *guwar maha* Rs. 8-9 and *urad maha* Rs. 14-14.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, 30*th July*

Conditions in the sugar markets were unchanged during the week. The supply position, however, eased, due to the release of a fresh quota of 158,000 tons for free sale by the Government. This brings the total released out of the 1955-56 production of sugar to 1,126,000 tons. The demand was normal, Delhi, Gujerat and Rajasthan being the principal buyers during the week. Booking by railways was better and the undertone towards the week-end was subdued. Mill delivery prices softened at the close of the week.

The closing rates as on Monday were: Jaswant Rs. 28-12, Simbhauli Rs. 28-12, Mawana Rs. 28-13, Daurala Rs. 28-12 to Rs. 29-12, Amroha Rs. 28-3, Bijnore Rs. 28-2, Mansoorpur Rs. 29-4 to Rs. 30, Rampur Rs. 30-12, retail Rs. 30-10. The *khandsari* markets continued to rule depressed, as demand was negligible. Inferior quality was quoted at Rs. 20-Rs. 23 and superior quality at Rs. 26-Rs. 27 per maund.

Ready *gur* prices appreciated by about As. 12 during the week. Dry quality was quoted at Rs. 12. Stocks of this quality were very small and arrivals from the producing centres had nearly stopped. *Kotha* quality was transacted at Rs. 11 and the week's offtake was 10 wagons. Local stock was put at 18,000 maunds.

Future *gur* prices ruled both ways in speculative bouts of buying and selling. On Monday, *gur phagun* was done at Rs. 10-8, as against Rs. 10-6-6 last week-end.

* * * *

A warning against the danger of permitting the less organised markets to conduct forward trading in *gur* has been given by Mr. Madhusudan Dayal, President of the Chamber of Commerce, Hapur, in the course of a statement to the Press. Mr. Dayal has questioned the justification of the plea put forward by some for recognising Meerut as the centre for forward trading in *gur*. He points out that Hapur is the best organised market for forward trading in *gur*. This view is based on the following facts:

There are four important sugarcane producing districts in West Uttar Pradesh, namely, Saharanpur, Muzaffarnagar, Meerut and Bulandshahr. The principal varieties of *gur* produced (the figures in brackets relate to output and markets covered, respectively), in these districts are: (a) *phatwan* (4.2 million maunds and 22); (b) *chikna pansera* (1.6 million maunds and 9); (c) *khurpapar* (1.5 million maunds and 8); and (d) *chaku* (this is available in the three markets of Muzaffarnagar districts, the total arrivals being about 800,000 maunds). It is thus evident that *phatwan* alone accounts for over 50 per cent. of the total *gur* production in these districts, and covers the largest producing area, ranging from four *tehsils* of Meerut district to districts of Bulandshahr, Aligarh, Mathur and border districts of the Punjab. Deliveries against future contracts can be effected in any of the above four qualities and, while starting a futures market, one has to see that the quality available for delivery is in such large quantity as not to encourage speculative tendencies in the form of cornering or squeezing of stocks at the time of delivery. This purpose can be achieved only by allowing forward transactions in that quality which can command the highest stocks in the markets. *Phatwan gur* is of standard quality, which, besides being tenderable against transferable specific delivery contracts, is also equally tenderable in spot and non-transferable specific delivery contracts, commonly known as bilicut transactions. The extent of such transactions at Hapur alone comes to about 2.5 million maunds. *Phatwan gur*, as already noted, is produced in four *tehsils* of Meerut district and other adjoining districts of U.P.; the dealers in these producing centres mostly enter into forward and ready transactions at Hapur in respect of the stocks of *gur* held by them in their respective centres. This is the reason why the number of forward transactions and deliveries thereof are not only the highest at Hapur but several times larger than those at Meerut or Muzaffarnagar.

RAW JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, 31*st July*

The raw material and manufactured goods sections of the jute market displayed contrasting trends during the week under review. Thus, while manufactured goods ruled quiet, the raw material was very steady. Early in the week, the gunnies section showed some steadiness on reports that shipments, particularly of sackings, during the month of July had been satisfactory and that there would be a decline of stocks by the end of the month. The firmness of raw jute also assisted the sentiment. Latterly, however, a sagging tendency was in evidence, despite the encouraging trend in the raw material section. For, in the absence of any fresh stimulus, some of the mills came out as sellers at higher levels. Very little business was reported during the week.

In the hessians section, 40"×10 oz. July position reacted from Rs. 38-8 to Rs. 38-4, in distinct contrast to the rise of As. 2 in the previous week. August delivery declined from Rs. 38-12 to Rs. 38-7 and, after a short-lived recovery to Rs. 38-9, closed at Rs. 38-8. A similar trend was noted in October-December delivery which closed the week at Rs. 38-8, with a loss of As. 4. Among sackings, B. Twills July delivery hardened early in the week from Rs. 103-6 to Rs. 103-8, but the improvement was not sustained and the quotation declined to Rs. 103-4. August position, after an initial recovery from Rs. 104-2 to Rs. 104-4, moved down to Rs. 103-14. October-December position closed at Rs. 104-2, with a loss of As. 4 over the week, although it had touched a high of Rs. 104-10 earlier.

Notwithstanding the persistent reports that the new crop had not been seriously affected by the floods, raw jute ruled steady, with prices marked up over the week, on fair enquiries from some mills. On the whole, however, mills were confident that the overall supplies would be sufficient to meet their requirements during the current season and that there would be no shortage of raw jute. Indian Northern bottoms, August, advanced from Rs. 28 to Rs. 28-8 and August-September from Rs. 27 to Rs. 28. Assam Upper, August, also rose from Rs. 28 to Rs. 28-8.

The decision of the East Pakistan Government to set up a Jute Commission to plan schemes to ensure fair price for cultivators and to safeguard Pakistani jute interests abroad, did not make any impression in jute circles here. The Commission will be required to report its findings to the Government within four months of its appointment. The Government has already set up a Jute Advisory Committee and a Standing Sub-Committee to offer advice for the stabilisation of jute prices from time to time. The new jute policy is also expected to encourage jute shipping by liberalising the grant of licences, though a strict watch would be kept to prevent malpractices.

To prevent jute smuggling across the Pakistani border, the Government has appointed approved jute dealers in the border belt. With the availability of funds, it is stated, the Government might lift jute from border areas through co-operative societies or authorised agents. The establishment of regulated jute markets at suitable centres, a rural agricultural credit bank and jute warehouses are also proposed under the new scheme. The Government will ban publication of unauthorised jute forecasts in Pakistan and would arrange to issue correct forecasts. The Jute Department created recently may also take over jute regulation work from the Revenue and Agriculture Department.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, 30*th July*

Generally firm conditions prevailed in the linseed market during the week under review. Prices advanced appreciably, following good enquiries. Actual turnover, however, was poor, owing to an acute shortage of ready goods and very firm advices from the centres. The oil section displayed a notable advance in sympathy with mustard oil. Although there was little chance of fresh export business, local enquiries were good.

The latest available quotation is: Ready-August Rs. 22-12 per maund.

HIDES IRREGULAR

(From Our Own Correspondent)

KANPUR, 29*th July*

An irregular trend was in evidence in the hides and skins market during the week under review. Fresh arrivals were not as considerable as those in the previous week. The demand for wet salted cow and buff—the two most important categories—was less keen. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow, 1st grade Rs. 280, 2nd grade Rs. 200 to Rs. 240 and 3rd grade Rs. 150 per score; wet salted buff, 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 180 and 2nd grade Rs. 130 to Rs. 140 per 100 pieces; sheep, 1st grade Rs. 250 and 2nd grade Rs. 160 per 100 pieces.

Notices

THE KATAKHAL LALA BAZAR RAILWAY COMPANY, LIMITED

THE FORTY-FIFTH ANNUAL GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Monday the 3rd September 1956, at 4-15 p.m., to transact the following business:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the year ended 31st March 1955.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. M. R. C. Thomas who retires by rotation, but who is eligible for re-appointment.

   And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the Act, is annexed hereto.

   To be proposed as a Special Resolution—

   "That Mr. M. R. C. Thomas an Associate of McLeod & Co., Ltd., the Managing Agents of the Company who retires by rotation be and is hereby re-appointed a Director of the Company."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 17th August to 3rd September 1956, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 6*th August* 1956.

Note—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

Payment of the proposed dividend, if declared, will be made on or after 17th September 1956 to those members whose names are registered in the Books of the Company on 3rd September 1956 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. M. R. C. Thomas is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to reappoint him as a Director of the Company.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N—Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A and 'B under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion&and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

EXPLOITING INDIA'S OIL WEALTH

GOVERNMENT'S PLANS ESTIMATED TO COST MORE THAN RS. 100 CRORES

By A Special Correspondent

NEW DELHI, 31*st July*

IN sharp contrast to last week, this week in Parliament was marked by hectic activity. The Finance Minister's resignation from the Cabinet and his statement in the Lok Sabha on the reasons which prompted him to take the decision naturally caused great disturbance in political and parliamentary circles. Immediately after this storm came the report regarding the nationalisation of the Suez Canal. This news, comparatively speaking, overshadowed the earlier shock of Mr. Deshmukh's resignation. Parliament lobbies are full of comments and anxious expectations about the latest developments in the Middle East. Every member of Parliament, who otherwise used to enjoy some leisure in the Central Hall, now is very busy looking at the news board anxious to know the minute-to-minute developments.

the Egyptian Government nationalised the Suez Canal Company on 26th July 1956 by an Ordinance, it will not be surprising if one of these days the issue comes up before the United Nations. Meanwhile, one has to face facts as they are. The Security Council cannot function on this issue, if any one of the big powers decides to exercise its veto. And nothing effective can be achieved at the United Nations, unless the Security Council takes an interest in the matter. Three members of this Council, the U.S., the U.K. and France, have already decided on a particular course of action, namely, to discuss and find a satisfactory solution at a conference of the principal countries having a vital stake in the Suez Canal. It is, therefore, only practical politics to realise that it is better for India, as one of the invitees, to attend this conference and try to help the fellow nations of the world to find a satisfactory and speedy solution.

India is interested in the Suez Canal dispute in two ways. First, it is a substantial user of the Canal. It is estimated that 67 per cent. of India's exports and 72 per cent. of its imports in 1955 passed through the Canal. Secondly, India, more than any other nation, needs a peaceful world. It is so very poor, in material terms, that it cannot afford to risk another war. The Suez crisis is a grave one and threatens to engulf the world in a war that may prove disastrous to the mankind. As Mr. Nehru said, it is just possible that the London conference of 24 nations next Thursday might not be able to arrive at a final decision that will end the dispute, because Egypt has decided to abstain from it, but, in view of the serious threat to world peace with which the prosperity of every nation is bound up, it is better to explore all available means of bringing about a settlement rather than sit with folded hands on the ground that the proposed conference seeks to by-pass the United Nations. It is gratifying to find that the U.K. Government has given an assurance that no attempt will be made at the conference to impose on the participants a predetermined solution and that the door will be kept open for arriving at a settlement which will respect the interests, or sovereign rights and dignity of Egypt.

Mr. Nehru was perfectly justified in criticising Britain and France for taking war-like preparations following Egypt's nationalisation of the Canal. These preparations constitute a threat to peace and are contrary to the letter and spirit of the United Nations Charter. It is true that Egypt, too, is not free from blame, but, being much stronger than Egypt in military might, the two Western powers would have lost nothing had they displayed peaceful forbearance. The military steps and the freezing of Egyptian assets by them have aggravated the situation and given rise to strong resentment among Asian nations. They have also revived unpleasant colonial memories, not to mention cynicism about their claim that whatever they are doing at present is in the interests of protecting the rights of the whole world in the Suez Canal. In fact, it will be no exaggeration to say that Britain has, by its hasty actions, lost a part of its goodwill in this part of the world which it had built up by its bold policy of abandoning colonialism. It could have been a little more circumspect in handling this issue. In this respect, Egypt, it seems to us, has displayed greater skill in diplomacy by honouring all its international obligations under the convention of October 1888 and by giving an undertaking to do so in future. It is allowing all ships to pass through and has agreed to accept payment of canal dues either at the headquarters of the Company in Paris or at the Company's office in London, even though such receipts are frozen by the respective countries and as such are not available for its immediate use. By this action, Egypt has won the respect and support of the majority of Asiatic nations.

While Britain, France and the U.S. have conceded, in their joint *communique* issued on the 2nd inst., Egypt's right to nationalise the Canal Company, they continue to use such expressions as "seizure" and "expropriation." Their complaint is that Egypt has acted unilaterally and violated agreements concluded in 1888 and renewed as recently as 1954. This contention is based on the ground that sanctity of contracts must be respected. But it has failed to impress most people in this part of the world. For this, the Western powers themselves are to blame to a considerable extent. It is they, through their Socialist Governments, who taught this part of the world the virtues of mixed economy, and nationalisation of private-owned industries, trade and services. It is from them that the philosophy that the State can, in the name of public interest, take over assets from its citizens with little regard for the sanctity of individuals' right to property has spread to the rest of the world. The Government of almost every country in the world now thinks that it is perfectly in order to assume ownership of assets belonging to its people for the use of the nation on payment of some compensation. And most of the Governments do so without the consent of the owners of the assets concerned. If they are democratic Governments, they naturally act with the consent of Parliament where they are in absolute majority. Egypt's action on the Suez Canal Company is in no way different from these acts of nationalisation. In India, life insurance was nationalised overnight through an Ordinance by President Rajendra Prasad. No consultation took place with the concerned interests and compensation to shareholders was not on the basis of market value of shares but on some arbitrary basis considered equitable by the powers-that-be. And yet several responsible British observers, Tories and Labourites alike, have gone out of their way to shower praises on the Government of India for the way in which it is implementing its development plans.

The reference to this instance may seem irrelevant to the issue under discussion. Perhaps, it is. But the idea in mentioning it is to enable our Western friends to appreciate as to why countries in this part of the world do not regard Egypt's nationalisation of the Suez Canal as a heinous crime and why they feel that the use of such expressions as "seizure," "expropriation," "plunder," and "brigandage" is incorrect and unwarranted. It is no use bandying such offensive expressions. Not only does it fail to carry conviction to this part of the world but it needlessly adds to the heat of the controversy. It is well to remember here that Egypt has offered to pay compensation to the shareholders of the Suez Canal Company in accordance with the closing prices of their shares at the Paris Bourse on 25th July and has placed no impediment to the use of the Canal by the ships of all nations, except, of course, those of Israel for which there are understandable special reasons and quotable precedents. Egypt and Israel are in a state of war with one another. It would appear that there is a clause in the Convention of 1888 which permits Egypt to block the Canal, as a measure of self-defence, for ships of countries with which it is at war. Moreover, several noted historians point out that, in both the World Wars, Britain prohibited entry of enemies into the Canal. It, therefore, does no good to Britain for its propagandists to quote Egypt's denial of the Canal to Israeli ships as an instance to convince the world that even now Egypt is not honouring its international obligations.

The value of compensation offered by Egypt is sought to be minimised by the British by questioning the sincerity of the present Egyptian Government and the capacity of that country to pay. This, however, is a question of confidence for which it is not easy to find an answer, except to say that the countries affected must trust in God and hope for the best. After all, the amount involved is no more than £65 million, a sum much less than that which Egypt has been keeping in London and may be expected to maintain as part of its external reserves. Even now, Egyptian assets in Britain alone are more than £130 million, of which £110 million represent blocked balances. Another point to be borne in mind is that, of the £65 million of total assets belonging to the Suez Canal Company, about two thirds, or £41 million approximately, are invested outside Egypt, mostly in Britain and France, a fact which incidentally does not justify the use of expression that Egypt has "seized" the assets of the Company. An equally relevant point that deserves to be noted, in order to appreciate the value of compensation offered by the Egyptian Government, is that, if it had waited till 1968 when the lease to the Company is scheduled to expire, Egypt would have obtained the possession of the Canal free of cost. By antidating the expiry period of the lease, Egypt is, therefore, conferring upon the shareholders of the Suez Canal Company a gain of £65 million, or, to put it the other way, is incurring a huge loss. It is significant that, so far, no complaint has been heard from Britain about the adequacy of compensation.

While the Suez Canal is an international highway, the Company which owns it is not international. The shares of the Company are held not by the United Nations or by all the countries but mostly by three countries, Britain, France and Egypt. The British Government is the single largest stockholder, owning as it does 44 per cent. of the capital. The share of France is held by a number of French stockholders, while that of Egypt is held by the Government of that country. The U.S. and the Netherlands also seem to have a small, perhaps nominal, holding. The Company itself is a joint-stock enterprise, with an Egyptian charter. It has a governing board of 32 directors, of whom 16 are French, nine British, five Egyptian, one American and one Dutch. It is this Board that determines the dues payable by ships that pass through the Canal and decides the scope of its development. The rest of the world which uses the canal has had no say in the matter. These facts will show to what extent the ownership of the Company is international. At best, it is no more than an Anglo-French Company, operating in Egypt an asset of unique value and great utility to world trade. The asset is, however, within the frontiers of Egypt and, therefore, under that country's jurisdiction. That country has every right to do what it likes with it, just as India has the right to take over any foreign enterprise established within its frontiers. It is, of course, a bad thing for any country to break its contract with another, be it a group of individuals or countries. Such a practice is not conducive to the flow of international capital. Nevertheless, if a country chooses to do so for some reason or other and is willing to pay compensation for premature termination of the contract, there is little that one can do except to take the compensation. The aggrieved cannot certainly go to war on that score.

It is true that the Suez Canal is of world-wide importance. That is all the more the reason why those who are vitally interested in the Canal should have taken special steps to keep Egypt contented and rendered all possible assistance for raising the living standards of the Egyptians, without trying to attach political conditions to such assistance. The Western powers, particularly the U.S. and Britain, have miserably failed to fulfil this condition. After having given high hopes to the present regime in Egypt that they would help it in the construction of the Aswan Dam, they committed the folly of dashing them to the ground, mainly for political reasons which are not wholly convincing and most of which, in any case, are their own creations. The burden of their song now is that they cannot trust Col. Nasser, the head of the Egyptian Government. It implies that a settlement satisfactory to them can be reached only if he is removed from power. This is a condition which cannot be fulfilled, for it means that other countries should have power to decide as to what is the right type of Government for a country and who shall head it. If Col. Nasser is a dictator or a bad ruler, it is for the people of Egypt to change him and establish a new Government.

If the London conference is to succeed, all countries that participate in it should give up the thought of imposing a solution on Egypt. They will be wise to recognise that nationalisation of the Suez Canal, for which the U.S. and Britain provided enough provocation, is now a *fait accompli* and that they have to negotiate a settlement with Egypt for the terms on which the Canal can be used as an international highway. The Canal must be regarded as an economic asset and not as a political prize to be coveted by a few nations. The fear of Egypt putting up the canal dues from time to time in order to meet its national requirements can be removed by offering assistance for its economic development, through international bodies if need be. If Egypt were to put forward very exacting terms, simply because it has the monopoly of a very useful and important highway, the world must be prepared to go without it. The world carried on without the Suez Canal till 17th November 1869 and it can do so in future, too. This will, of course, mean a lot of inconvenience to several countries, but, with the possibility of early introduction of nuclear power in shipping and the availability of other means of transport, the world today is better fitted to face the prospect of doing without the Suez Canal than a century ago.

But there is no need to take such a melancholy view of the future, for it will be unrealistic to assume that any Egyptian Government, including the present regime, will be so reckless as to starve the Suez Canal of traffic and thereby kill the goose that lays golden eggs so badly needed by it. It will be in the interest of Egypt to encourage the maximum use of the Canal by fixing the transit dues at economic levels and by developing the Canal, in order to permit its use by bigger ships and tankers that are coming into vogue. Moreover, Egypt cannot afford to earn the unpopularity of the Arab countries and the underdeveloped nations in the East by hampering the use of the Canal either through fixation of unduly high transit dues or through arbitrary blocking of the Canal for international shipping.

STATES ENTER CAPITAL MARKET

KOLAR GOLD—TOBACCO ISSUE—COTTON TARGET

THURSDAY, 5 P.M.

THE share markets are in good form. The happy ending to the controversy over the future of Bombay City in the States Reorganisation Scheme has removed a disquieting factor. It was feared that the Government's proposal to keep Bombay as a centrally administered city might lead to prolonged strikes in the numerous factories situated in this City and Maharashtra. With the latest decision to have a big bilingual State by integrating all Gujarathi and Marathi speaking areas into one State, there is every reason to feel that the ground for this fear has disappeared. This reading of the situation has strengthened the buying fervour in textile, engineering and miscellaneous counters. A healthy feature of current trading in the share market is the fall in speculative business and expansion in investment demand. The growing concern among the business community over the activities of the State Trading Corporation has not yet adversely affected the sentiment of share markets. This is presumably because, all said and done, industrial profits are steadily rising, the company managements are in a mood and position to declare higher dividends, and the possibility of inflation gathering momentum in the coming months looms large. Above all, investors realise that there is bright scope for expansion of engineering and chemical industries and certain consumer goods lines that do not clash with small-scale and cottage units.

MARKET GOSSIP

* * * *

For some days past, there have been hints that the State Governments would enter the capital market very soon. The Chief Ministers of Southern States actually told the Press men towards the close of last week about the amounts they proposed to borrow, the duration of the loan and the date of announcement. This shows that they have a better sense of publicity than some of the other State Governments or the officials of the Reserve Bank who prefer secrecy till the necessary formal announcement, inviting public subscriptions, is made. Advance information, of course, robs the surprise element, but it whets the public appetite for more news and encourages talk in the investment market. In other words, it adds to the chances of the loans becoming popular and more widely known.

On the next page appears the official notification giving details of the new borrowing programme of State Governments. It will be seen therefrom that 15 State Governments want to raise in all Rs. 64 crores. Last year, only 10 Governments borrowed an aggregate sum of Rs. 48.50 crores. As in the past year, all the loans carry interest at 4 per cent. and are repayable after 12 years; only the Bombay State loan is for a longer period, namely, 14 years. The issue price varies from State to State, the lowest is Rs. 99-4 and the highest Rs. 100. The lists will be open for eight days from 3rd September to 10th September. They may, of course, close earlier, if the response is good and the entire amount invited is received. There is thus an interval of 24 days for the Governments to canvas support from the public by popularising their issues. The period for this purpose will be a month, if the eight days when the lists are scheduled to remain open are taken into account.

All the ten States that borrowed last year are in the market again. These are: Andhra, Bihar, Bombay, Hyderabad, Madhya Pradesh, Madras, Mysore, Saurashtra, Uttar Pradesh and West Bengal. All these want to borrow Rs. 53 crores in the aggregate, that is, Rs. 4.5 crores more than they did last year. The new entrants are: Madhya Bharat, Orissa, the Punjab, Rajasthan and Travancore-Cochin. These five States together want to raise Rs. 11 crores.

The details of each of these issues are given on the following page. It will be seen therefrom that Madras is the biggest borrower, its invitation being for as much as Rs. 12.50 crores. The smallest borrower is Madhya Bharat which wants only Rs. 1 crore. The issue price of loans of Travancore-Cochin, the Punjab, Orissa, Madhya Pradesh, Madhya Bharat and Bihar is Rs. 99-4, that of Andhra, Mysore, Rajasthan, Saurashtra and Uttar Pradesh loans being Rs. 99-8. The yield on the former group is 4.03 per cent. current and 4.08 per cent. redemption, the corresponding figures for the latter group being 4.02 and 4.05, respectively. Madras is the only State to issue the loan at Rs. 99-12, giving a running and redemption yield of 4.01 per cent. and 4.03 per cent. West Bengal and Bombay loans are offered at par, the only difference being that the period of redemption in the case of the latter is 14 years, that is, 2 years longer than that of the former. This is, perhaps, justified by the fact that the current 4 per cent. 1967 Bombay loan is standing at a premium of As. 13, whereas the Bengal loan is at par only. As compared with the terms offered last year, the issue prices of some of them are in favour of borrowers; thus, Bihar is charging As. 4 more and Saurashtra, Mysore and Hyderabad As. 8 more. In the case of others—West Bengal, Andhra, Uttar Pradesh, Madras, Madhya Pradesh—there is no change whatever.

In the case of 4 State loans, provision is made for conversion of the issues that mature this year. These are: Bombay, Madras, Madhya Pradesh and Travancore-Cochin, the outstanding amount of their maturities being Rs. 297.18 lakhs, Rs. 125.10 lakhs, Rs. 50.54 lakhs and Rs. 50 lakhs, respectively, or a total of Rs. 5.23 crores in all. It may be recalled that last year, too, the first three States and the Mysore Government offered conversion facilities for loans aggregating Rs. 6.91 crores.

The response to State loans last year was excellent. So heavy was the demand that as many as seven out of ten States borrowed for the second time after an interval of a fortnight or so. Thus, out of Rs. 48.50 crores raised in 1955, no less than Rs. 11.75 crores were obtained in the second attempt. This time the amount required is larger, while the surplus funds available with investors is probably less. The number of borrowing Governments, too, is bigger. It would not be surprising, therefore, if their success this year were to be a little short of their achievements a year ago.

* * * *

It is a pity that the Government of Mysore, which has had a distinguished record of fair-dealing in both political and economic matters, should give rise to the impression that it is manifestly unjust in its dealings with the Kolar Gold Mining Companies. Such a conclusion is inescapable from a reading of the speech of the Chairman of the Companies, Mr. M. A. Sreenivasan, and of his statement at a Press conference at Bangalore. We have ourselves expressed in the past the view that nationalisation of the Companies was not expedient, let alone inevitable, and that what was needed was some spirit of accommodation on both sides, so that the differences between the companies and the Government could be bridged. From all accounts, such spirit of accommodation is forthcoming from the management, while it is the Government that is determined not to look at any solution other than nationalisation. The agreement between the two parties, reached in 1949, itself provided for settlement through arbitration of any issue arising from the operation of the agreement. It is not clear why the Government is opposed to such arbitration to which the Companies are agreeable.

If the Government, however, is determined to nationalise gold mining, then it is at least reasonable to expect that it will be just, if not generous, in paying compensation to the Companies which have played so notable a role in developing the resources of the State. Any Government ought to be fair in paying compensation to the assets it takes over. But, in the case of the foreign-owned Kolar Gold Mining Companies, the State Government should be particularly careful in paying compensation since it is necessary to avoid creating the impression that injustice has been perpetrated out of national or racial prejudice. Mr. Sreenivasan is not perhaps very much wide of the mark in suggesting that the relationship between the Government and the Companies has been made the "sport" of group and political rivalries in the State. This is deplorable and also perhaps explains the irrational reluctance of the Government to appoint an impartial expert committee which could either suggest the basis of a new agreement or settle the basis of compensation. How unfair is the State Government's offer will be evident from the fact that an expert firm of valuers of international standing had estimated that the correct compensation would be Rs. 8 crores as against the State's reported latest offer of Rs. 119 lakhs. This offer is said to be based on the advice given by the Central Government which had deputed a couple of experts to study the question. At the Press conference, the Chairman referred to the vast and tangible assets built up by the enterprise in the K.G.F. over the last many decades quite apart from and leaving out of account, the valuable gold reserves and new ore bodies discovered. "A mining enterprise is rather like an ice-berg," he continued. "There is more beneath the surface than is visible above it. For instance, there are 600 miles of tunnels underground with rails, small locomotives, engines, pipes, airducts, electrical cables, pumps and fans and lights and telephones." He added: "In the case of one of the Companies, the compensation now proposed would hardly represent the value of the stores held by the Company. It would also far less than the amount spent by the Company in discovering the new ore body."

As against the incorrect stand adopted by the State Government, the Central Government's attitude, according to Mr. Sreenivasan, is one "of calm, detached and sympathetic consideration." It is time the Central Government stepped in more vigorously than it has done and avoided an ugly situation which could have much unfortunate effect on the flow of foreign capital into this country.

* * * *

Readers' attention is invited to the announcement, published elsewhere in this issue, regarding the offer of preference capital for public subscription by the Vazir Sultan Tobacco Company, Ltd., Hyderabad. The Company is offering 22,745 preference shares of Rs. 100 each at par. The shares carry cumulative dividend at the rate of 7 per cent. per annum (taxable) and are redeemable at a premium of Re. 1 each, that is, at Rs. 101 each, on or after 1st April 1968 in whole or in parts. The dividend is payable half-yearly on 1st April and 1st October, the first dividend on the present issue being due on 1st October 1956. The subscription list will open on the 23rd inst. and will close on the 27th, or earlier or later, as the Directors may decide. The preference shares are approved investments within Section 27A(1) (i) of the Insurance Act, 1938.

The present authorised capital of the Company is Rs. 1.55 crores, made up of 1,125,000 ordinary shares of Rs. 10 each and 30,000 7 per cent. cumulative redeemable preference shares of Rs. 100 each. Of these, 1,000,000 ordinary shares of Rs. 10 each and 7,255 preference shares of Rs. 100 each have been issued and fully paid. The entire balance of the unissued preference shares is being issued now. The Raleigh Investment Co., Ltd., London, which holds the majority of the Company's ordinary shares, has decided to forgo its preferential right of subscription to these preference shares, as it wants the public in India to have the opportunity of taking up these shares and obtaining a larger interest in the Company than they do at present.

The Company was incorporated in Hyderabad-Deccan as a public company in 1930, with an authorised capital of O.S. Rs. 10 lakhs and an issued capital of O.S. Rs. 9.91 lakhs, for the purpose of manufacturing cigarettes. It acquired the cigarette factory owned by Messrs. Vazir Sultan and Sons. In 1933, a new factory was built, which has since been developed and expanded considerably. The Company is owner and manufacturer of the well-known brand of "Charminar" and other brands of cigarettes. For many years past, the Company has been associated with the Imperial Tobacco Company of India Ltd. in the marketing of their respective products. The Company proposes to undertake a three-year programme of modernisation at a cost of Rs. 31.35 lakhs. A substantial part of the finance required for this programme is to be met from the proposed issue.

An idea of the extent to which the Company's activities have grown during the last twenty-five years can be had from the fact that the paid-up capital has risen from O.S. Rs. 9.91 lakhs, that is I.G. Rs. 8.49 lakhs to I.G. Rs. 100 lakhs. It may incidentally be noted that the entire increase in capital, that is I.G. Rs. 91.51 lakhs, has been made by the capitalisation of reserves. During the last four years alone, the turnover of the Company has considerably enlarged, as witness the rise in sale proceeds from Rs. 2.80 crores in the year ended 30th September 1951 to Rs. 3.64 crores in 1954-55. The gross profit has risen during these four years from Rs. 31.40 lakhs to Rs. 48.20 lakhs. The dividend on ordinary shares has been maintained at 10 per cent. for the last two years. The latest balance-sheet of the Company shows that its financial position is sound; the net assets amounting to Rs. 150.58 lakhs provide a substantial cover to the present issue, being more than six times the amount offered.

* * * *

The opinion is gaining ground in the country that, irrespective of the wisdom of the Government's present textile policy, it is necessary to ensure that the mills are not starved of the essential raw material, namely, cotton. In the final analysis, whatever may be the proportion of cloth requirement that is met by the mills, or handlooms or powerlooms or handloom weaving mill made yarn or Ambar Charka yarn, almost the entire production of cloth has to come out of cotton. If there is one sphere in which there ought not to be any controversy, it is the sphere of cotton production. India has the land, water, the technical talent and the necessary background of research service in order to ensure that the supply of cotton is maintained at a level high enough to meet the requirement of cloth production. From this point of view, it may be wondered whether the 5.5-million bale target for cotton, set by the second Five-year Plan, is adequate for the country. We ourselves discussed this question ere now (*vide Commerce*, dated 7th July 1956) and reached the conclusion that the authorities would be well-advised to raise the target. It is gratifying to note that this view is shared by Mr. Madanmohan R. Ruia, a well-known industrialist and the new President of the East India Cotton Association.

Addressing the annual meeting of the Cotton Buyers' Association, of which also he is the President, Mr. Ruia averred that mill consumption of Indian cotton was likely to record a significant increase and may range from 46 to 48 lakh bales in the 1956-57 season. He also felt that the succeeding seasons will see "still further strides in mill consumption." He added: "I foresee the possibility that the cotton production target of even 55 lakh bales fixed in the second Five-year Plan may not be able to keep pace with the increase in *per capita* consumption of cloth to 18.5 yards." Indeed, he felt that it was quite likely that, as a result of the forces released by the gradual implementation of the second Five-year Plan, the Government might find it difficult to ensure adequate supplies to the Indian mills, unless they were supplemented by the two alternative measures, namely, either raising the cotton production target to 65 lakh bales or importing large quantities of foreign cotton in the next few years. He asked: "May I avail myself of this occasion to bring these possibilities to the attention of the Government?"

It is to be hoped that the authorities will devote sufficient attention to this problem at an early date, for past experience, especially the experience in the war and early post-war years, shows that, even though textiles can be made to order, cotton cannot behave in accordance with official fiat. In this connection, it may be recalled that the recent conference of Agricultural Ministers at Mussoorie was reported to have raised the target to 5.86 million bales. This, of course, was a tentative decision. It is not clear whether any steps have been taken to work out the details of a plan for reaching a higher target for cotton. In any case, even the higher target of 5.86 million bales, it is to be feared, may fall short of what the country needs. The Commerce and Industry Ministry itself is of the opinion that 6.5 million bales should be aimed as the target to be hit by the end of the second Plan period. The officials of the Ministry pleaded in favour of this target at the Mussoorie Conference. It is, therefore, extremely essential that the country's overall requirements

EQUITIES FORGE AHEAD

BULL SUPPORT GAINS MOMENTUM

(From Our Own Correspondents)

BOMBAY, 9th *August*

A FRESH bout of bullish activity was in evidence on the Bombay Stock Exchange during the week under review. Buying enthusiasm was not confined to a few selective counters, but was broad-based and quite a large number of shares, particularly in the textile section, recorded handsome gains to touch new high levels for the year. Absence of any adverse news to affect sentiment, the precautionary measures taken by Britain on the military front to deal with any emergency in respect of the Suez Canal situation, the encouraging business outlook in the years to come and the dramatic settlement of the dispute regarding the Bombay City by the Parliament's decision to form a bilingual State comprising all Gujerathi and Marathi speaking areas were all factors which kept up the bullish fervour.

Trading on the Stock Exchange remained suspended today, as operators refrained from doing business as a protest against police firing in Ahmedabad where violent demonstrations were staged yesterday and today as a protest against the formation of the bilingual State.

In the steel section, Tata Ordinaries crept up from Rs. 206-4 to Rs. 209, before closing at Rs. 208-4. Indian Irons were a little erratic, moving between Rs. 37 and Rs. 36-8½, but finished with a gain of As. 5 at Rs. 36-15.

Textiles were very cheerful and a large number of counters were brisk with activity. Bombay Dyeings recorded a gain of Rs. 18-12 to Rs. 681-14, Centurys Rs. 3-8 to Rs. 589-8 and Kohinoors Rs. 5-8 to Rs. 389. Finlays jumped by Rs. 22-8 to Rs. 373-8 and Swans by Rs. 28-12 to Rs. 480. In the Tata group, Svadeshis advanced by Rs. 7-8 to Rs. 265 and Tata Mills by Rs. 4-12 to Rs. 62. Shree Niwas rallied from Rs. 234-6 to Rs. 245 and Standards from Rs. 485-10 to Rs. 495. Simplex provided an exception with minor fluctuations and a quiet tone. After a rise from Rs. 215 to Rs. 216, they gave way to Rs. 214-8.

The upward trend in bank shares noted in the previous two weeks was arrested this week and profit-taking was in evidence.

Insurance section did not attract any support, except Indian Mercantile and Vulcans which ruled higher. New Indias were marked down by Re. 1 to Rs. 49-4.

Interest in electricity shares was at a low ebb and, barring a few select counters, prices showed a decline.

Miscellaneous section was generally firm. Sugar group provided an exception, Belapurs being marked down to Rs. 254 after an early rise from Rs. 254-8 to Rs. 257. Phaltans lost Rs. 2 to Rs. 165 and Walchandnagars Re. 1-4 to Rs. 273-12. Among Cement shares, A.C.C. gained Rs. 4 to Rs. 196-4 and Digvijays Re. 1 to Rs. 200. In the engineering and mining group, Alcocks were done at Rs. 361-4 *ex-div.*, as against Rs. 377-8 *cum-div.* a week ago. Tata Locos reacted from Rs. 168-8 to Rs. 161-8 early in the week, but shot up to Rs. 167-8 on revival of strong support. Premier Constructions receded by Rs. 2-4 to Rs. 205. Shivrajpurs dropped a rupee to Rs. 90-8, while Indian Coppers were steady at Rs. 7-4. Shipping shares were in the background, Scindias shedding As. 3½ to Rs. 18-14½ and Great Easterns As. 10 to Rs. 19-6. Automobile shares were firm. Premier Automobiles gaining Rs. 2 to Rs. 102 and Hindustan Motors As. 8 to Rs. 10-8. Among the other miscellaneous industrials, Bombay Burmahs gathered Rs. 3-12 to Rs. 735. National Rayons staged a sharp rise of Rs. 6-8 to Rs. 269-8, Tata Oils were steady at Rs. 58-8. Tata Chemicals were dull at Rs. 20-7, while Wimcos were held at Rs. 185-10.

Conditions on the Calcutta Stock Exchange were quite cheerful during the week under review. Operators were inclined to extend their commitments on expectation of better corporate earnings. Deals put through were fairly large and equities recorded handsome improvement in prices under the lead of speculative counters. Jute and engineering shares were particularly active. Miscellaneous industrials also ruled firm, Imperial Tobaccos providing the brightest spot. Coal shares were fully steady. But tea shares lacked support and suffered a fall in values. The undertone of the market was firm.

The Madras Stock Exchange continued to depict a fully steady trend during the week under review also. There was good investment buying in equities, especially the most popular ones, the offerings of which were somewhat restricted. The market, of course, experienced a setback today, but it was of a minor nature. The closing rates of most of the scrips stood higher than those at the end of last week. Tea shares, however, were an exception, in that they were subjected to selling.

4 PER CENT.
STATE GOVERNMENTS LOANS

			Issue Price.
(1)	Government of Andhra..	Rs. 600 lakhs	Rs. 99-8 per cent.
(2)	Government of Bihar ..	Rs. 200 lakhs	Rs. 99-4 per cent.
(3)	Government of Bombay.	Rs. 750 lakhs	Rs. 100-0 per cent.
(4)	Government of Hyderabad	Rs. 200 lakhs	Rs. 99-8 per cent.
(5)	Government of Madhya Bharat	Rs. 100 lakhs	Rs. 99-4 per cent.
(6)	Government of Madhya Pradesh	Rs. 150 lakhs	Rs. 99-4 per cent.
(7)	Government of Madras..	Rs. 1,250 lakhs	Rs. 99-12 per cent.
(8)	Government of Mysore..	Rs. 400 lakhs	Rs. 99-8 per cent.
(9)	Government of Orissa ..	Rs. 300 lakhs	Rs. 99-4 per cent.
(10)	Government of Punjab..	Rs. 200 lakhs	Rs. 99-4 per cent.
(11)	Government of Rajasthan	Rs. 300 lakhs	Rs. 99-8 per cent.
(12)	Government of Saurashtra	Rs. 250 lakhs	Rs. 99-8 per cent.
(13)	Government of Travancore-Cochin ..	Rs. 200 lakhs	Rs. 99-4 per cent.
(14)	Government of Uttar Pradesh	Rs. 800 lakhs	Rs. 99-8 per cent.
(15)	Government of West Bengal	Rs. 700 lakhs	Rs. 100-0 per cent.

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 3rd September 1968 except that of the Government of Bombay which will be repaid at par on 3rd September 1970.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 3RD SEPTEMBER 1956 AND CLOSE ON 10TH SEPTEMBER 1956 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 3rd September 1956.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1956, 3% MADHYA PRADESH LOAN 1956 and 3% MADRAS GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid upto and including 2nd September 1956.

3½% TRAVANCORE GOVERNMENT, LOAN 1956 will be accepted at PAR for conversion into the new loan of that Government. In addition to the interest due on securities of that loan tendered for conversion, tenderers will be paid interest at the rate of 4 per cent. per annum on the amount of the principal of such securities from 16th August 1956 to 2nd September 1956 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BOMBAY, CALCUTTA, DELHI, MADRAS AND BANGALORE.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the branches of the State Bank of India and at Treasuries and Sub-Treasuries in the case of Andhra, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, Saurashtra and Uttar Pradesh loans.

(ii) At the branches of the State Bank of India in the case of West Bengal loan.

(iii) At the branches of the State Bank of India and at District Treasuries only in the case of Madhya Bharat loan.

(iv) At the branches and Treasury Pay Offices of the Hyderabad State Bank and at Treasuries and Sub-Treasuries in the Hyderabad State in the case of Hyderabad loan.

(v) At the branches of the Bank of Mysore Ltd., in the Mysore State except at Bangalore and at Taluk Treasuries in the Mysore State at places where there is no branch of the Bank of Mysore Ltd., in the case of Mysore loan.

(vi) At Treasuries and Sub-Treasuries only in the case of Travancore-Cochin loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

NEWS IN BRIEF

INDIA may buy 100,000 tons of cement from Yugoslavia for which negotiations are going on between the Yugoslav Export Corporation and the Union Ministry of Commerce.

The Government of India has decided to give priority to construction of an aerodrome for Malabar. An expert committee will be visiting Malabar shortly to select the site.

The Government of India has opened a trade control office at Visakhapatnam under the charge of a Controller of Imports and Exports. The office is under the administrative control of the Joint Chief Controller of Imports and Exports, Madras. It started functioning on the 9th inst.

The total estimated requirements of steel of different Central Ministries during the second Five-year Plan are 12.5 million tons on present calculations, according to Mr. T. T. Krishnamachari. The requirements will be met by increasing the indigenous production capacity and by imports.

The Hindustan Aircraft Factory, Bangalore, is negotiating with a West German firm for the installation of a plant for producing integral railway coaches of good riding type. With the installation of this plant, it will be possible to produce 25 coaches per month, as against the present production of 15 coaches.

According to Jaisukhlal Hathi, Union Deputy Minister for Irrigation and Power, the introduction of a pooled price for cement will affect the cost of the Bhakra Dam and other irrigation and power projects included in the second Five-year Plan. The percentage of rise in cost will vary according to the quantity of cement involved. Generally, it may be one to five per cent.

The estimate submitted by the Chief Engineer (Electricity) of Madras for the execution of the first and second stages of the Kundah Hydro Electric Scheme has been accepted by the Government of Madras. The initial outlay of the scheme is Rs. 26 crores which will rise to Rs. 35.44 crores at the end of the ten-year period of operation.

The proposals submitted by the Indian Steel Works Construction Company for a fabricating shop at Durgapur are being discussed by the Indian Delegation now at London. The delegation is negotiating the final contract for the steel works at Durgapur. It is proposed to review the suggestion for a fabricating shop at Bhilai on the experience gained as a result of the negotiations for the fabricating shop at Durgapur.

The Government of India has decided to convene an All-India Fisheries Conference to discuss the present state of the fishing industry in the country and the programme and development of fisheries in future. The Conference, which will be held at Madras from 19th to 21st September, will be attended by over 100 delegates representing the Government of India, various State Governments, fisheries technologists, specialised agencies like the F.A.O., T.C.M., the Norwegian Project and Private Bodies.

The Government of India has accepted the Tariff Commission's main recommendation that protection to power and distribution transformers should be continued for a period of four years, that is, upto 31st December 1960 at the existing rate of protective duty of 10 per cent. *ad valorem* and that the scope of protection be extended to cover power and distribution transformers upto 3,000 KVA and 37.5 KV on the H.T. side. It has also accepted certain other ancillary recommendations of the Commission for assistance to the industry and propose to implement them as far as possible.

A ten-man trade and economic delegation from South Viet Nam is expected to arrive in New Delhi on the 16th inst. The delegation consists of eight leading business men and industrialists of Saigon, the Director of Economic Affairs in the Foreign Ministry and an official of the Ministry of Commerce. It will have discussions with the officials of the Ministry of Commerce and Industry on the promotion of trade between India and South Viet Nam. It will also tour Bombay, Calcutta, Madras and other cities and visit textile, rayon, chemicals, jute, plastics and engineering factories there.

The Federation of Indian Chambers of Commerce and Industry has convened a meeting at New Delhi on the 24th and 25th inst. to consider questions arising from the Government's announcement regarding State trading in iron and manganese ore and cement. The meeting will also consider the reported proposal for State trading in oils and other commodities. The Government's policy of canalisation of imports through specified channels, too, will be discussed. The items, the imports of which have been canalised include raw silk, soda ash and caustic soda. Besides, the members of the Federation, the interests concerned are being asked to send their representatives to the meeting.

The Tariff Commission's recommendation that the protection granted to the sections of the plastics industry engaged in the manufacture of phenol formaldehyde, moulding powder, and plastic buttons should be continued for a further period of three years—that is, up to 31st December 1959—has been accepted by the Government. The Commission's recommendation that protection to the section of the industry which is engaged in the manufacture of electrical accessories should be discontinued after 31st December 1956, as the fair ex-works prices of electrical accessories are less than the landed cost (ex-duty) of comparable imported articles has also been accepted.

The National Standards Organisations of Commonwealth countries have accepted India's invitation to hold the third Commonwealth Standards Conference at New Delhi from 21st January to 3rd February 1957. The primary object of the Conference is to further the collaboration between the national standards organisations in the Commonwealth countries and to secure agreement on common objectives and principles of operation in the interests of inter-Commonwealth relations and trade. The attainment of these objectives has been much facilitated by the understandings reached at the previous two conferences held at London in 1946 and 1951. The programme of the Conference will include general and technical sessions and visits to factories, laboratories and technical institutions.

• • • •

From Abroad

The International Monetary Fund has granted a $55 million stabilisation loan to Indonesia.

A Government team from the U.K. is expected to visit Canada shortly to conclude a contract with Canada for the purchase of uranium. The deal is expected to involve several million dollars.

The Imperial Chemical Industries (U.K.) has announced that it will stabilise home trade prices of its products during the next twelve months. This decision affects more than hundred products ranging from dyestuffs, explosives, fertilisers, nylons, drugs and plastics.

The Ceylon Government has invited a trade mission from China to visit the island in September next to discuss the question of rubber and rice prices for 1957 under the rubber-rice agreement negotiated in 1952, which provides that prices should be agreed upon every year.

The Imperial Tobacco Company (U.K.) has announced that, subject to circumstances over which it has no control, it will not increase the prices of its goods between now and 30th April 1957. The Company has stated that it strongly supports the efforts now being made by the U.K. Government to combat inflation and desires to keep its price as low as possible.

Swiss bankers have rejected Egyptian attempts to secure finance for the $464 million Aswan Dam project. They are reported to have advised Egyptian business men who have approached them for capital that the project is too huge a venture for private Swiss capital to handle alone. Another reason for the rejection is understood to be the lack of adequate security to back the finance needed for the project.

The Bureau of Mineral Resources, Australia, is making an air survey of certain areas of its territory to assess the oil-bearing potentialities. The place of principal interest is Tennant Creek-mining field which has already produced gold and copper. The survey is also meant to enable the Bureau to assess the value of the areas as possible sources of uranium and other minerals.

The Brno Engineering Works, a Czechoslovakian firm, has secured the contract for supplying equipment for the extension of the Utran-Surat power plant by three turbo-sets of 15 megawatts each and three high performance boilers. The Czechoslovakian Technoexport Foreign Trade Corporation has already supplied India with the first part of the plant for the power station, in the equipment of which the Brno Engineering Works will co-operate with English and Swiss firms.

The world's shipbuilding yards are expected to produce five million gross tons of new merchant vessels this year according to Walter L. Green, Chairman of the Board and President of the American Bureau of Shipping. This production would almost equal the 1954 record for a peacetime year. During the 10 post-war years, 4,758 vessels were constructed, aggregating 32,577,000 gross tons. The world's merchant fleet now comprises 15,148 vessels with a total gross tonnage of 92,944,000.

PERSONAL

THE Raja of Khetri, a Member of the Rajya Sabha, has been appointed Minister of India to Laos.

Mr. Vithal N. Chandavarkar, Director, State Bank of India, has resigned from the Board of Directors of the Bank.

Mr. Lalitchandra C. Devkaran Nanjee, Vice-Chairman of Devkaran Nanjee Banking Co., Ltd., has been appointed Chairman of the Bank, in succession to the late Mr. Pranlal Devkaran Nanjee.

Mr. D. N. Shroff, a prominent business man and industrialist, has been unanimously re-elected President of the Silk and Art Silk Mills Research Association for the year 1956-57. Mr. Shantilal M. Mehta has been re-elected Vice-President of the Association.

Mr. D. S. Savkar, Officer in charge of the Research Department, State Bank of India, has left on a tour of the U.K., U.S and Japan to study the techniques followed by banking organisations in those countries to finance small and medium-scale industries.

Mr. K. Krishnaswami Aiyar, Deputy Registrar of the Supreme Court of India, on the expiry of his term of office, has been appointed Officer on Special Duty in charge of framing rules, under Section 643 of the Indian Companies Act, 1956, for winding up of companies, holding of meetings of creditors and members, etc.

Mr. A. V. Baliga, Chief Engineer, All-India Radio, leader of the four-man Indian delegation to the Consultative Committee of the International Tele-communications Union, along with the other three members, Messrs. S. T. Chari, N. V. Gadhadar and K. R. K. Iyengar, left for Warsaw on Sunday last to attend the meeting of the Union, now being held there.

The American Heart Association has announced grants of more than a million dollars to 180 scientists engaged in cardiovascular disease research. The new grants are in addition to 131 fellowships announced earlier this year by the association. The grants—awarded to scientists throughout the nation—help cover the cost of laboratory equipment, supplies and technical assistance for research on a wide variety of approved projects. The Association is a private organisation.

The Atomic Energy Commission of the U.S. has conditionally approved construction of a privately-owned $40.5 million atomic power plant which would have a generating capacity of 100,000 kilowatts. The plant will be built in Monroe, Michigan, by a group of 26 utility and industrial concerns which are partners in the Power Reactor Development Company of Detroit. The electric power from the plant will be distributed by the Detroit Edison Company, one of the partners.

The new Customs Simplification Act of the U.S. just signed into law is expected to reduce entry-time of imports through customs and speed up the appraisement of duties on incoming goods. The Act will reduce delays and uncertainties in appraisement of imports. One of its most significant provisions establishes new valuation procedures to govern the majority of United States *ad valorem* imports. Export value (the usual wholesale value in the foreign market for home consumption) will become the preferred basis of valuation, instead of foreign value (the usual wholesale value in the foreign market for home consumption.) The new valuation system will not be applied to those imports which will decrease in value by 5 per cent. or more. Consequently, the Bureau of Customs has begun work on a preliminary list of such items and the new procedures will not come into effect for any imports until a final list is published.

Big or small...

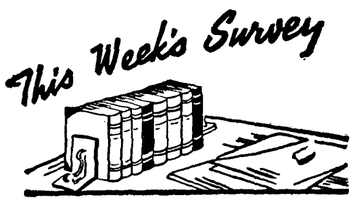
each policy guarantees security and service!

NEW INDIA ASSURANCE gives you security and service born of years of experience... covers every kind of general insurance from marine and fire to accident and burglary... settles your claims promptly... guides and assists you in all matters.

Insure with New India... respected and trusted throughout the East!

THE NEW INDIA ASSURANCE COMPANY LIMITED

Mahatma Gandhi Road, Bombay



STRUCTURE OF WAGES

THE debate in the Rajya Sabha on Mr. Satyapriya Banerjee's resolution calling for the immediate appointment of a wage commission to enquire into wage structure in the country and recommend adequate wages for the workers did not turn out to be as valuable as one might have expected of it. It was vitiated by the fact that the members chose either to dwell on general questions of labour policy or to support a specific demand for a 25 per cent. increase in wages. Perhaps, the debate would have served a more useful purpose, if they had confined their attention to the question of wage commission as such.

There is no doubt that a wage commission could do much to help evolve certain order in the sphere of wages. From this point of view, the stand taken by the Union Deputy Labour Minister, Mr. Abid Ali was hardly convincing. His main thesis was that a wage commission would take several years to complete its labours and that it was, therefore, preferable to have wage boards for important industries. But he overlooked the fact that the *ad hoc* decisions taken by such wage boards might cause considerable harm to the structure of wages in the country. Each wage board would naturally look at problems from the narrow angle of the industry concerned, ignoring the broader considerations of a national wage structure. If, on the other hand, it is contended that the Government would be able to correct any defeat in the recommendations made by the wage boards, then there is no reason why a wage commission should not be appointed. For such a commission would be able to lay down certain broad considerations in relation to wages and thereby simplify the Government's task in settling wages.

The demand for a straight increase of 25 per cent. in wages was put forward by many members. Indeed, in recent months, this demand has been supported by many a spokesman for labour. It is not clear how such a solution can be forced down the managements, irrespective of their ability to bear the increased burden. The only virtue in the solution is its simplicity. But it is an over-simple solution for a very complicated problem. It is certainly too much to expect that all industries, with their differing levels of production, productivity and profits and all units within each industry, with their individual financial problems, would all be able to bear a straight increase of such magnitude in wages. The remedy might conceivably prove worse than the disease.

It is not true that employers, as a class, are opposed to all increases in wages. But they naturally insist that they should be related to productivity. Mr. Lalchand Hirachand, who supported the demand for the appointment of a wage commission, put the problem in a nutshell when he said that wages could be raised only if they accepted modern ideas of production which were being followed in Western countries, including Russia. He rightly declared that, "unless productivity of labour is increased by modern methods of production, it will be impossible to give higher wages to anybody whatever the Government may say." To ignore this sound warning is to invite inflation, with all its attendant evils, and to impede the progress of the second Plan.

And yet, the Government has not so far clarified its attitude towards this demand. It may be recalled that the Government introduced provident fund benefit to workers by means of an ordinance on the eve of the last general elections. On this analogy, and in view of the imminence of the next elections, many observers wonder whether the Government will come out with an ordinance imposing an increase in wages on industrial arrangements. The sooner the Government announces its attitude towards this demand the better it is for all the interests concerned. In any case, an increase in wages could hardly be an appropriate theme for an ordinance. The Government should remember that, if it were to permit a direct increase in wages of industrial workers, it would be faced with demands for a similar increase from other employees as well, including its own. There is already considerable discontentment among the workers in the public sector, as witness the persistent demand for higher wages among the employees of the Madras Government.

ECONOMIC OUTLOOK

What is the economic outlook for this country? This question, which is at all times an interesting one, acquires a new significance in view of the fact that India has already stepped into the first rung of the second Five-year Plan ladder. Appropriately enough, the *Annual Market Review*, 1955, issued by the leading finance, share and bullion brokers in the city, Messrs. Premchand Roychand and Sons Ltd., makes an attempt at peering into India's economic future. After surveying the immediate past, which it calls a year of "mixed gains," in that the year showed much economic progress and serious political setbacks, it proceeds to discuss the economic outlook. While its assessment of the past is, as usual, accurate, comprehensive and objective—the report contains reviews of principal markets and leading industries, supplemented by statistical tables and charts relating to banking, monetary and industrial trends—it is its economic forecast that deserves special notice here.

The Review notes certain disturbing trends in national economy. There are signs that, under the influence of socialist planning, not only will the sphere of private sector be seriously curtailed but the sector placed under further regulation, despite the repeated assurances by responsible leaders that the private sector has a definite role to play in the second Plan. Industrial policy as re-stated recently, enlarges the scope of the public sector in industry; and, in the sphere of trade, the State Trading Corporation is likely to "spread its tentacles far and wide as time goes on." As against these trends, it sets certain encouraging factors. In the first place, in view of the limited number of trained administrative personnel at its disposal for managing State enterprises, it is likely that the Government may, in the immediate future, restrict itself to the "very compact and easily manageable units." Secondly, the Government has not always allowed its ideological predilections to get the better of its economic judgment as witness its refusal to accede to the demand for ceilings on income.

Nevertheless, the authors of the Review have rightly thought it fit to indicate the sources of danger to the country's economy. Such danger, it is pointed out, could some from failure to hold price levels, inability to provide the transport the country needs and paucity of financial resources for expansion and development. They warn that, as more and more money is poured into the system, the inflationary upsurge that will be created may easily upset the Plan. They, therefore, emphasise that restrictions on factory production are unwise measures. Further, there is need to ensure that there is a "network of transport which can efficiently meet the requirements of the Plan." Finally, in view of the fact internal resources for the private sector may get restricted as a result of high taxation, "priorities will have to be given to expenditure on schemes of development in both the public as well as the private sectors on the basis of the urgency of the country's requirements rather than on ideological grounds."

Though the future is by no means very bright for the private sector, it must not make the business men take a defeatist view of their role. It is rightly urged that "they will be candid in their approach to the situation and chalk out their course of action, not like a group of men playing a game of musical chairs but as a responsible group acting in the larger interests of the country." The simile about the "musical chair" is particularly appropriate, in that it clinches the point. In the context of the prevailing political and economic climate, the private sector, as the Review points out, can prolong its span of life only if it plays its part well through efficient management and, what is more, unity and co-operation within its ranks.

INDO-PAKISTAN TRADE

Although barely twenty days remain for the expiry of the trade agreement between India and Pakistan, no move has been made by either country to hold negotiations for determining the future of the agreement. Naturally, the whole commercial and business community in the two countries is at a loss to know as to where it would stand after the agreement expires. For it is not known whether the present agreement will be extended or a new one concluded. In fact, this uncertainty is already reported to be interfering with the flow of Indo-Pakistan trade.

Be that as it may, the Bharat Chamber of Commerce (Calcutta) has done well to suggest, in the course of a communication addressed to the Government of India, a basic change in the very approach of the existing agreement, which, it says, is only a formal, not an effective, one. The Chamber is doubtful whether much benefit can be obtained by such formal agreements. It points out that any effective agreement for the promotion of trade beween India and Pakistan must be based on "the fullest appreciation by the two Governments of three principles. First, trade between the two countries should be visualised on a different basis than the trade of either country with other countries of the world. The trade agreements that either country may enter into with other countries cannot be models for any trade agreement between India and Pakistan. Secondly, there must be a wide and liberal schedule of commodities for virtual free trade between the two countries. Thirdly, customs formalities, transport facilities and banking facilities for remittance of funds must be made effectively conducive to the promotion of trade, and this must be such as may be conveniently availed of by the common run of medium- and small-scale business men in the two countries.

The Committee points out that the agreement of 1951 recognised these principles and the high volume of trade during 1951-52 was the direct result of this agreement. It is observed that the present agreement, while facilitating local marketing of the border people, has not helped the revival of trade between the two countries. The Committee, therefore, pleads for a remodelling of the trade agreement on the pattern of the one entered into in February 1951.

The Chamber has urged the Government of Inida to impress upon the Pakistan Government the fact that a healthy flow of trade between the two countries cannot continue on the basis of a chronic deficit against India. The deficit was of the order of Rs. 11.26 crores in 1953-54, Rs. 9.63 crores in 1954-55 and Rs. 18.35 crores in 1955-56. The value of India's exports to Pakistan during 1955-56 was lower by Rs. 1.49 crores at Rs. 8.26 crores, while its imports rose by Rs. 7.23 crores to Rs. 26.61 crores.

Proceeding, the Chamber has reiterated the view that the Government of India should appreciate the importance of land frontier trade between the eastern States of India and East Pakistan. In its opinion, the principle recognised in the existing agreement in respect of border trade should be extended to small-scale trading. If necessary, some special provision must be made for facilitating such trade through reducing to the minimum the formalities of foreign trade control, customs and transport. The other specific suggestions put forward by the Chamber cover trade with E. Pakistan, effective arrangements for settlement of financial accounts arising from trade transactions, and formation of a Trade Consultative Committee for periodical consultation and review of the working of the agreement. The Chamber believes that, in view of scarcity conditions in E. Pakistan, people there would welcome larger imports from India and that it is possible to arrange for an expanding trade between the two countries to their mutual benefit.

PROGRESS OF PIMPRI

Col. J. R. Dogra, Managing Director of Hindustan Antibiotics (Private) Ltd., and his band of assistants deserve to be congratulated on their successful efforts at developing the penicillin factory at Pimpri to the full-production stage in such a short time as one year. It was only towards the end of July 1955 that the factory went into regular production and the first batch of penicillin was offered to the public on 12th September 1955. Since then, every endeavour has been made by all those in charge of the factory "to attend to the efficiency in the various stages of manufacture in order to obtain the maximum output with the minimum expenditure on raw materials and services." Indeed, the factory, we are told, has surpassed the target of production set for it, the rate of output at present being 15 million mega units per year. It is but appropriate that the first anniversary of the Pimpri factory should have been celebrated in a fitting manner on the 2nd inst., in the presence of several distinguished guests, including Mr. Jawaharlal Nehru.

The Pimpri factory represents a notable example of fruitful international co-operation; the United Nations agencies, such as the U.N.I.C.E.F., the W.H.O. and the Technical Assistance Organisation, have all co-operated in its establishment. The W.H.O. provided technical advice and training to our technical men in penicillin technology, while the U.N.I.C.E.F. gave $850,000 (Rs 40.46 lakhs) worth of equipment for the project. The Government of India bore the cost of land, buildings, equipment procured locally, electric sub-station, sewage disposal unit, residential colony, etc., at an aggregate outlay of Rs. 1.6 crores. The factory produces penicillin, a drug which is of utmost importance in the context of improving the standards of health among the masses in India. Surely, the factory, as Mr. Maurice Pate, Executive Director of the U.N.I.C.E.F., has very pertinently remarked in the course of his message to the factory, "is an arsenal from which India may draw ammunition of war against disease."

The premises of Hindustan Antibiotics Ltd. cover about 20 acres and house modern process equipment capable of producing some 20 million mega units of penicillin every year. The design of the factory readily permits expansion of operation to the extent of 60 per cent. and there are extensive laboratory facilities for fundamental and applied research studies. According to Col. Dogra, the antibiotic research centre set up at a cost of Rs. 15 lakhs—capable of considerable expansion—provides facilities for post-graduate studies in mycology, biochemistry and microbiology, in addition to being the nucleus for research in antibiotics. Provision has also been made for free training of engineering personnel. The present plant is proposed to be expanded to its maximum capacity by the middle of 1957. An additional unit for the manufacture of streptomycin is planned.

The main raw materials for the manufacture of penicillin which are imported include corn steep liquor, lactose, glucose, butylacetate, phenylacetic acid, lard oil, procaine hydrochloride, butylalcohol, octadecanol, teepol, calcium carbonate and isopropyl alcohol. The other raw materials are procured from indigenous sources. Efforts are being made to procure imported raw materials from indigenous sources. The research carried out at Pimpri has revealed that 75 per cent. of the corn steep liquor imported can be replaced by indigenous peanut cake. As for the remaining 25 per cent. corn steep liquor, three local starch manufacturers have been encouraged to produce this product in the country. They are all supplied with specifications, technical information and test procedures. The products manufactured locally are coming into the standard and it may be possible to get this even cheaper than the imported product. This commodity will not be imported in future. Lactose is produced only from milk. The possibilities of manufacturing of this from whey, the by-product in the casein or cheese industry, in the country is being examined. The technique of production of lactose from whey is not complicated and can be undertaken in the country, if sufficient quantity of whey is available in a particular locality. Glucose is being imported at present, but some private manufacturers in India are putting up plants to manufacture this. The feasibility of manufacturing butylacetate and butylalcohol is being studied. The manufacture of phenylacetic acid in the factory is possible and this question is being examined. Lard oil has been replaced by peanut oil. The possibility of manufacturing of material procaine hydrochloride in the factory is also being studied. The quantities of octadecanol and teepol used are too small to think of manufacture locally. The use of the former may even be dispensed with. Calcium carbonate was imported to be sure of the production to start with. Indigenous material can be used and, thereafter, this chemical will not be imported. Isopropyl alcohol was imported to try out a particular procedure of crystallisation of penicillin. The factory can do without it.

The success of the Pimpri factory will be judged by the extent to which it will meet the country's vast needs of high quality antibiotics at a reasonable cost. It is gratifying to be told that the factory is already producing penicillin of the highest quality, as tested by such expert agencies abroad as the Food and Drug Administration (U.S.A.) and the National Institute of Medical Research (London). It is equally gratifying to be told that the factory is well on its way to meeting a large proportion of the country's demand for antibiotics at a cost which is much below what was once thought possible.

Oil is very important—
even to an artist, who oils his brush
which makes it slippery to paint,
so he can't draw a straight line—
as I can.

But, somehow the slippery brush
makes artists work fast and
paint their pictures quickly.
Some artists take many years to
finish one painting. Without
oil they would keep on painting—
goodness knows how long—
and art would not progress.

The oil business
spells progress which
anyone knows means

DEVELOPMENT OF SHIPPING SERVICE

NEW LEGISLATION BEING DRAFTED

From A Special Correspondent

NEW DELHI, *7th August*

DELHI LETTER

"ALL is well that ends well" was the remark made by leading members of Parliament about the welcome turn that events taken as regards the reorganisation of States. The bilingual solution for Bombay, was hailed by almost all members with a sigh of relief and the entire parliamentary lobby, which was greatly concerned over this issue for the last several days, was visibly jubilant. The Prime Minister himself is reported to have called it a historic decision and several other senior parliamentarians were heard to remark that Parliament had succeeded in asserting its collective will and getting the Cabinet decision about Bombay revoked. Now that the protracted and bitter controversy over the city of Bombay has ended happily, it is felt that not only the smooth passage of the States Reorganisation Bill in Parliament is ensured, but the implementation of the second Plan will be taken up in right earnest.

Enquiries made in the Transport Ministry elicited the information that a consolidated Indian Merchant Shipping Bill is being drafted for consideration by Parliament. The object of this comprehensive legislation is understood to be the control and regulation of Indian Shipping in all its aspects. Perhaps, there is an increasing realisation in the Transport Ministry that all is not well with India's shipping trade these years and that, despite the help that the Government has been rendering towards increase of Indian tonnage, the shipping companies have not been able to show satisfactory development. In framing this Bill the Transport Ministry has in mind the example of the Industries Regulation and Licensing Act of the Commerce and Industry Ministry which was put on the statute book by the end of 1951. This Act has been working quite satisfactorily and has, in fact, given considerable stimulus towards the development of industries in the private sector with the guidance of the Government. The Government has been acting as "friend, philosopher and guide" to the private sector and has been able to show a steady rise not only in the field of industrial production but also to achieve considerable success in the diversification and expansion of existing industries. The Transport Ministry also would like to emulate the example set by the Commerce and Industry Ministry.

Proof of the Pudding

The proof of the pudding is in the eating of it. Until now, the policy and the help rendered by Government in regard to the development of India's shipping have been rather haphazard. India's expansion of shipping has not been particularly impressive. The profit-earning capacity of most of the shipping companies has been extremely limited, with the result that they have neither the capacity to plough back large sums of money for development nor are they in a position to attract more money from the investors. As a matter of fact, the confidence of the investors in the shipping companies has been impaired, in view of the fact that most of the leading companies have not been able to report satisfactory working during the past eight or nine years.

At the latest meeting of shipping interests with the Government of India, all the participants drew the attention of the authorities to this fact, namely, that the earning capacity of the ships has been nullified, to a large extent, by the steady increase in the operational costs without a corresponding increase in freight rates. They also emphasised the fact that, while the railways have been able to report satisfactory profits during the last many years, the shipping companies—also another important adjunct in the transport system of the country—could not present a happy picture, largely due to the unsympathetic and step-motherly treatment meted out by the Government. No doubt, the Government has since permitted an increase in the freight rates for certain commodities, but this has not gone a long way towards satisfying the requirements of shipping companies.

The shipping companies also drew the pointed attention of the Government to the fact that it would not be possible for them to expand their coastal fleet, because of its unremunerative character. On the other hand, it appears that the diversion of shipping to certain foreign routes would have been more paying to them, since there is no *rigid* control over freight rates, particularly when these rates are determined in consonance with the operational costs of ships.

Although the Government spokesmen at the meeting pointed out that Government would be taking up certain shipping routes to their exclusive control irrespective of its profit-earning capacity, the shipping companies did not appear to have been satisfied with this statement. In fact, it was suggested to the Government that the routes should be decided only after taking into account the total working capital invested by the companies in this business, as Government has been trying to fix the prices of a number of commodities, particularly for instance, steel, cement, etc. They also emphasised that the targets laid down by the Government in the second Plan were totally inadequate to achieve even the modest target of 20 per cent. share in India's foreign trade. The proposed addition of 300,000 g.r.t. in the second Plan period bringing by the end of 1961 the total tonnage to 900,000 g.r.t., it is pointed out, would not even touch the fringe of the problem.

Although the planners on the side of the Government expect that, with the achievement of these targets the Indian tonnage would be in a position to carry about 12 to 15 per cent. of the country's overseas trade and about 50 per cent. of its trade with adjacent countries, as against the present proportions of 5 and 40 per cent., respectively, the shipping companies' representatives pointed out that all these calculations were bound to prove illusory, as estimating was one thing, while actual accomplishment was quite a different thing.

More Realism Needed

It was further pointed out to the Government that, at least, an increase of another three to four lakh tons in the present target was essential in order to enable the country to achieve its desideratum of capturing about 20 per cent. of foreign trade. The Government's policy, it was pointed out, should be more realistic and constructive, taking into consideration the experience of the shipping companies, their present position, profit-earning capacity, etc. With the possibilities of setting up an oil refinery in Calcutta soon, it is considered necessary and almost imperative that Government should pay particular attention towards expanding the tanker fleet.

The Government participants at the meeting would appear to have been somewhat convinced at the forcible arguments put forth by the shipping companies. It is possible that, at the time of the final framing of the Indian Merchant Shipping Bill, these factors would weigh with the Government. The legislation is likely to be introduced during the coming winter session of Parliament due to commence by the middle of September or so.

The Government has already been committed to the acquisition of new and second-hand ships to augment its tonnage, from any source wherever practicable. However, liberalisation of the terms of loans to shipping companies is also reported to be under the active consideration of the Government.

The Government is also considering another aspect of shipping business. In order to make its shipping policy more realistic and workable, it is paying attention to the development of major and minor ports. More warfs and berths, replacement of out-moded equipment, addition of modern time-and-labour-saving methods by mechanising operation and increased warehousing and railway facilities are some of the more important features of port development which are engaging the attention of the Transport Ministry. It is expected that, if all these schemes are fulfilled without any hitch, by the end of the second Five-year Plan, Indian ports would be in a position to handle safely about 40 million tons of cargo annually, as against the present capacity of 30 million tons.

Shipping companies are, however, watching the situation as it develops. In their opinion, unless the Government takes an urgent view of the whole situation and puts shipping development almost on a war footing, its dreams may not be realised at all. On the contrary, progress of many of the development schemes will be retarded considerably for want of shipping and port facilities.

THE MIXTURE AS BEFORE

THE OPPOSITION DELIGHTED

From Our Own Correspondent

LONDON, *4th August*

THE Government's discussions with private industry, the nationalised enterprises and the Trade Unions have brought forth a mouse. They announce that foreign competition continue to increase in intensity and that this "Renders it more urgent than ever to break the cost price spiral"—as if this had not been the case for years past! Their next momentous point was that economic circumstances "are now favourable to the maintenance of a period of steady prices if we avoid further increase in the domestic costs"—as if it had ever been particularly difficult to maintain steady prices if only costs behaved themselves! Finally, the Government concluded sagely that "the future of the general price level now lies largely in our own hands"—although they were obliged to put in a saving clause with a sidelong glance at Suez, about major disturbances in international relations.

LONDON LETTER

The Government take comfort from the fact that prices have been relatively steady in the last two or three months, that exports in the first half of this year have shown a substantial increase, and that, over six months, the gold reserves have risen by more than £100 million. These points are, indeed, all to the good, but the Government quite rightly say that the improvement is not sufficient and the efforts to keep prices steady "and if possible to reduce them," must continue: though, of course, it did not need consultations with industry and the Unions to establish these facts. Those consultations were for the purpose of seeing what contributions industry and the Unions would make towards the improvement which the Government were seeking. The Government, indeed, believe that the consultations were useful and that all sides understand more the need for joint action to maintain full employment and to increase production. They propose to continue this technique of consulting industry as may be necessary in future.

As part of the same process of keeping in touch with industry, and in order to inform themselves better of what is going on, the Government are taking another leaf out of the planners' book. They are improving their methods of collecting economic statistics, particularly about capital investment and overseas capital transactions affecting the balance of payments. Recognising the significance of profit trends in trade cycle forecasting, they are also seeking to get quarterly estimates of profits. Of course, the Opposition are getting a great deal of delight from seeing their once criticised techniques suddenly become so popular with the Chancellor of the Exchequer and the Prime Minister!

These announcements have followed close on meetings which the Chancellor has been holding with the joint-stock banks to emphasize that credit restriction must go on. He still wants to see the level of bank advances reduced and money tightness maintained on all fronts. There is to be one exception and that concerns capital investment in Northern Ireland which is regarded as a Development Area where there are still ample resources awaiting full employment. But with the exception of this part of the United Kingdom, capital issues will be even more strictly controlled; public capital investment will continue to have the axe applied to it; reductions in Government expenditure will still be sought; hire purchase restrictions will continue to be maintained whatever the affect on industry; bank rate will stay high and the Chancellor will still hope for more savings and a still bigger budget surplus in six months' time.—*All Rights Reserved.*

LATEST ECONOMIC TRENDS IN U.S.

IMPACT OF STEEL STRIKE EXAMINED

DESCRIBING the latest economic trends in the U.S., the August issue of the *Monthly Letter* of the First National City Bank of New York, observes as follows:

"The steel strike is being settled, but its effects will be felt for many weeks to come. About 85 per cent. of the industry's capacity has been closed down for more than four weeks, resulting in the loss of over 10 million tons of ingot production. Strikers forfeited over a quarter of a billion dollars in wages, and additional millions of dollars in wages and profits were lost at companies doing business with the steel mills. Further losses will be suffered before the dislocations caused by the strike are eliminated.

"At this price, the union has won an improved version of the original offer by the steel companies. The 3-year, no-strike agreement provides for increases in wages and fringe benefits estimated by the union as equivalent to 20.3 cents per hour in the first year and 45.6 cents by the third year. In an about-face from its stand in previous contract negotiations, the union demanded and was granted a cost-of-living escalator clause—tacit recognition perhaps that the union members need protection against the wage-price spiral which these substantial wage boosts might well touch off. The steel industry is expected to offset the increase in labour costs by raising steel prices, probably by $10 or so per ton.

"The end of the strike is only the beginning of a long process of reheating coke ovens, blast furnaces, and open hearths, bringing them back into production, and finishing steel to customers' specifications. Repairs necessitated by the shutdown will delay full-scale production, but ingot output may reach a relatively high level in a couple of weeks. Officials of steel companies say it may be anywhere from a few weeks to several months before the quantity and quality of steel flowing from the mills is fully restored to pre-strike levels.

"The impact of the strike upon the economy was cushioned by widespread vacation shutdowns at metal-fabricating plants in early July and by inventories of steel accumulated during the first half as a hedge against price increases and shortages. Reports of plant closings for lack of steel have been scattered and relatively minor. Most firms have been able to dip into steel stocks to maintain business as usual. The automobile industry, in fact, assembled more passenger cars in July than in June and boosted weekly output to the highest rate since late April.

"Altogether, the Federal Reserve Board estimated in mid-July that industrial activity had been cut about 4 per cent. by the strike, equivalent to a drop in the production index to 135 or 136 in July from 141 in June. A rebound is indicated for August as steel mills, coal mines, and other allied industries get back into production.

"The strike also hit heavy construction projects, railroads, and other forms of transportation. Retail sales, however, appear to have been maintained close to the record June level. Department store sales in the first three weeks of July were better than in July 1955, when sales, seasonally adjusted, were second only to the scare-buying in the early stages of the Korean War. Even steel-making centres like Chicago, Buffalo, and Birmingham reported year-to-year increases in department store sales for at least two of the first three weeks of July.

Then and Now

"Inevitably, the current situation invites comparison with the 1952 steel strike and its aftermath. At that time, the end of the strike was followed by a scramble to rebuild steel stocks and an accompanying upswing in business activity which, in four months, carried industrial production 10 per cent. above the level which had persisted with little change for a year and a half before the strike. In due course, inventory accumulation gave way to inventory adjustment and the 1953-54 downturn. Some have called this post-strike period 'a bubble on the boom.' The question today is whether a similar bubble will form only to burst as in 1953.

"This year's strike, like that in 1952, followed an extended period of stability in over-all production, but there are important differences. In 1952, the strike occurred at a time when business had nearly assimilated the previous year's heavy accumulation of consumer goods inventories and defense output was still building up. This year, some inventory adjustment has been under way, but probably it will go farther. Pre-strike stocks of steel were smaller in 1952 and the tonnage lost because of the strikes was twice as great. Except in items that were already scarce, working stocks of steel have not been depleted nor supply 'pipelines' drained this year to the extent they were four years ago. Consequently, the scramble to rebuild stocks may be less vigorous than in 1952, although there will be pressing demand for steel for current operations. Further inventory adjustment in some other lines should moderate the upsurge and help prevent excesses.

"However much the steel strike may have disrupted activity in metal-working lines during the third quarter and however unfortunate its impact on the persons involved, the need to catch up points to a higher level of industrial production in the remainder of 1956. Many of the uncertainties which plagued business during the first half have cleared up now that the strike is over and the economy is still on an even keel. Purchases of steel in the first half had obviously been inflated and some sort of cutback was due. The strike has compressed into a month or so the shakedown in steel inventories which otherwise would have required a much longer period. The automobile industry also has succeeded in reducing its inventories of new cars, and little difficulty is anticipated in clearing the way for introduction of 1957 models in October and November.

"Slowdowns and shutdowns for lack of steel have had the greatest impact on business outlays for new plant and equipment. Heavy construction projects, oil-well drilling, and the manufacture of heavy equipment needed the structural shapes, plates, and pipe which were in short supply even before the strike began. Delays in getting steel for current jobs will push the extensive backlog of plant and equipment contracts further into the future, thus assuring support to the economy from this important sector well into 1957.

"With fewer inventory worries, a strong capital goods outlook, near-capacity operations and fatter payrolls in the steel industry, and improved business confidence, fourth quarter prospects look better than before mid-year.

"Not only has the economy passed the much-heralded $400-billion-a-year mark, but its first half performance was better than generally expected. Fragmentary and preliminary statistics available during the first six months of 1956 gave the impression of a slowdown in many important areas, and some saw in these indicators the beginning of a general downturn. Comprehensive estimates of the nation's total output of goods and services, recently revised and brought up to date by the Department of Commerce and the Council of Economic Advisers, tell a different story. The gross national product during the second quarter rose to the record annual rate of $408.5 billion. The steady advance, from a $403.4 billion rate in the first quarter and $401.9 billion in the final quarter of 1955, makes it clear that the adjustments in process during the first half, while severe for automobiles and other individual industries, were not general or pervasive.

"The cost of living made a relatively sharp advance in both May and June and reached a new record for the first time since October 1953. Wholesale prices have levelled out near their peak. Farm and food prices have been recovering in recent months and no longer afford an offset to increases in industrial prices. In such a setting, with heavy demand continuing in many lines, the substantial wage and price increases in the steel industry will almost certainly spread."

A 'Tushar' water cooler increases staff efficiency, helps to improve quality of work — quickly pays for itself in goodwill

- **Instantaneous cooling:** Continuous supply of instantly cooled water at the touch of a button — no unhygienic refilling or storing
- **Two models available:** Model R-10, capacity 10 gallons per hour (180 cupfuls per hour); and Model R-40, capacity 40 gallons per hour (720 cupfuls per hour)
- **Easy to install:** Needs only a water supply, a drainpipe and an electric plug point
- **Economical to run:** Cools to the temperature you choose, then switches off automatically

Silent working–Anti-splash construction–Handsome design

'Tushar' WATER COOLERS

NATURE AND MANAGEMENT OF MONEY

DEFICIT FINANCING IS NO MAGIC WAND

THE place deficit financing occupies, in the context of the Second Plan, needs no introduction to our readers. It is expected to be as much as one-third, nay, more but not less, of the total outlay envisaged in the Plan. Certain noted economists, Indian and foreign alike, hold that deficit financing of the order contemplated will produce undesirable consequences and certain others, while agreeing with this view, emphasise, at the same time, that it is inescapable, and stress the need for constant vigilance and, where necessary, stringent measures to safeguard the cost of living. In this connection, the series of lectures delivered by Mr. B. T. Thakur under the auspices of the Calcutta University, on "Money, Its Nature and Management" are of special significance. Mr. Thakur, as readers are aware, was the General Manager of the United Commercial Bank Ltd., till last year since its inception and is an economist of distinction.

In his first lecture on "Illusive Money" Mr. Thakur explained that in modern times it was necessary for the citizen not only to protect his money from being snatched away by people who thrive on it as was so common in olden days, but also to save his monetary savings from depreciation in their purchasing power. He pointed out that this danger of depreciation became all the more inescapable once money was divorced from its base—a commodity of comparatively stable value such as gold or silver—or forfeited its right to free convertibility to a stable foreign currency, for the temptation of a careless Government to resort to expansion of currency to solve its economic problems becomes irresistible. When central banks were in private hands, they could meet the pressure of the Governments for currency by diluting their currency reserves, which, according to the speaker, was the most heinous type of indirect taxation on purchasing power and savings. But, what little check there was then, has gone now, thanks to the nationalisation of Central Banks.

Purchasing power of money to-day, Mr. Thakur pointed out, depended on the whims and caprices, or call them policies based on slogans, of the political party in charge of the Government. Money had thus become not only a direct creation of a law, but also an indirect creation of the political party in power. And the party could never make use of it in the most desirable way despite numerous controls, because politicians were ignorant of the terrible and unpredictable force of inflation in the context of human wants and passions. Citing illustrations from monetary history he went on to explain to what incredible depths the value of currency had sunk in the past, wiping out completely whatever people saved in the shape of bank balances, monetary claims and so on. The chief victims of inflation were the common people—with fixed incomes—while the rich were generally able to protect themselves in numerous ways. Continuing the talk the next day Mr. Thakur observed that it was not enough to regulate the currency alone, leaving out the bank money which played such an overwhelmingly important part to behave itself, in order to maintain the purchasing power of money. What was, therefore, very essential for protecting the value of money was, according to the speaker, the backing of every unit of currency issued by the Government by what are known as currency reserves. Among the reserves bullion and foreign assets, he pointed out, were very important, especially from the point of view of international respect for domestic currency.

Deficit Financing

Referring to the effects of deficit financing on the value of money, Mr. Thakur stressed that expansion of currency against domestic obligations, unless supported by adequate increased production and effective steps for mopping up the surplus purchasing power created through such issues, was most dangerous from the point of view of money's value. Posing the two questions—namely, deficit financing, and how to guard against diminution in the purchasing power of money—India is faced with at present, he remarked: "Deficit financing is not Aladdin's Lamp, nor Open Sesame" of Ali Baba and his forty friends. It quickly leads to rise in prices in the absence of productivity, monetary discipline, supply of consumer goods and readiness to postpone consumption in favour of investment. Besides, he points out, it gives rise to frequent economic disputes between various factors of production. Those, however, who are unaffected by inflation and who are already well-off stand to gain.

Turning to the second question, he added that the most satisfying method of maintaining the value of money in such circumstances was the institution of Investment Trusts, fixed as well as flexible. These trusts had many advantages. Investment in stable commodities like gold and silver, as the common man was generally wont, was not helpful. Investment Trusts, on the other hand, made available to the poorer sections of the people diversified investment inequities. And such investments rose in value with inflation, thereby protecting money's buying power represented by them. Furthermore, they would retard the size and intensity of the inflationary forces. Another advantage was that, through Unit and Sub-unit Investment Trusts, a smaller saver got expert advice and protection from fraud which were not available to him otherwise.

Concluding his second speech of the series, Mr. Thakur stressed that the expansion taking place in money incomes consequent on the implementation of the Plans in India had created an urgency for protecting the common man from the dangers of inflation. The need for safety must, at the same time, help him to participate in his own humble way, in the capital programmes of the country. By this, Mr. Thakur evidently meant that people should save as much of their income as possible and divert the savings to productive purposes by investing them in shares, stocks and Government bonds.

Powers of Central Banks

In his third talk in the series, Mr. Thakur dwelt at length on "The Management of Money." Good management, according to the speaker, had become of paramount importance with the withdrawal of the individual's right to demand in exchange for his currency metallic coin or foreign currency. Discussing in general terms the constitution of Central Banks he said that, in order to fulfil effectively the twin functions of maintaining stability in prices and exchange rates, it was necessary for them to be armed with wide powers. Mr. Thakur further pointed out that the central bank must possess powers, in the first place, to control currency, and credit operations of agencies engaged in that business, and, in the second place, to control international movements of capital and money. The methods through which the central institutions sought to apply their policies were then discussed by the speaker. They include *inter alia* (1) varying the reserve requirements of the banking system; (2) issuing directions to banks on lending policy; (3) regulating the speed of circulation of money; (4) regulation of size and flow of credit through changes in the bank rate; (5) expansion and contraction of currency against assets acceptable under law; (6) open market operations in securities, investments and bills, and (7) seeking such other powers from the State as may be necessary for the regulation of internal and external trade and for formulation of *ad hoc* fiscal, production and other policies. Incidentally, Mr. Thakur explained how international co-operation between different central banks directly or otherwise through the I.M.F., the E.P.U., and the World Bank was helpful not only for overcoming the temporary balance of payments difficulties, but also as a means of enduring co-operation for economic development and other matters.

The effective performance of a central bank, however, depended, the speaker observed, on certain pre-conditions such as a well-organised money market, and proper co-ordination between its various components. Unless, again a large proportion of money in circulation formed a part of this market, the effectiveness of the central institution was limited. What, however, was the most important thing for the preservation of money's value, was the men who managed the central bank. They must be technically highly skilled persons and widely experienced. "A Central Banker," to quote him, "is not a book-keeper or a lender of money, but a vigilant and an intelligent observer of all that happens in human desires, moods and passions."

In his next talk "Indian Banking and the Reserve Bank of India," Mr. Thakur traced the history of banking in India, and said, "Although elementary principles of money, credit and interest have been known to the people of India for centuries, . . . modern banking in India based on note currency and cheques as instruments of exchange and payment is only a century old." Moreover, "Banking, Indian in capital and management, is only fifty years old." Alluding to the early failures in banking history, he remarked that every nation had to pay a price to gain knowledge and experience for the development of new enterprises and to give form to new ideas struggling for expression. In view of this, he went on to add, that viewed in comparison with similar histories of other nations, India could be proud of having built up a reliable credit structure relatively cheaply, and without many weaknesses.

Discussing the trends in deposits in Indian banks, he pointed out that the performance in relation to the currency in circulation was far from satisfactory. The position had further deteriorated after the war as could be seen from the figures showing that, while the proportion of deposits of scheduled banks to currency in circulation was 125 per cent. before the war, it worsened to 75 per cent. after the war. In the U.S.A., for instance, the corresponding proportion stood at 500 per cent. while in the U.K. it was nearly 400 per cent. In view of this wide gap, the speaker observed that with so much money outside the organised banking system, it is extremely difficult to adequately regulate the value of money through its currency and credit policies in spite of the powers possessed by the Reserve Bank.

Reserve Bank Overburdened

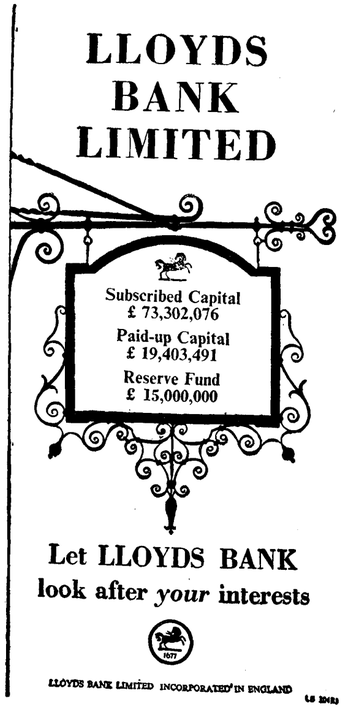
Turning to the operational scope of India's central bank, namely, the Reserve Bank, Mr. Thakur emphasised the need to develop the size of Indian banking through all possible incentives and encouragements. He felt that the Reserve Bank was overburdened with many duties some of which were not relevant to the performance of its task as the monetary authority. A single institution in his view could not do justice to all functions in a vast country like India, and it would be more appropriate to transfer non-monetary duties of the Bank to separate agencies of the State.

Speaking of the recent developments particularly of the affairs of the State Bank of India, Mr. Thakur observed:

"It is most shocking to the bankers of the country that serious struggle should have so soon developed between the management and the bureaucracy on questions of principles and policies so as to oblige the Chairman, Dr. John Matthai and the Managing Director, Mr. Handoo, both of whom are level-headed men, to tender resignation. The bank and its officers have always enjoyed greatest respect for sobriety and paid most scrupulous attention to the propriety of banking tenets. It is bad for Indian banking and Indian money to employ the biggest and oldest commercial bank of the country as a subservient tool to officialdom and to serve political expediencies."

Referring to the relative merits of the Unitary and Federal systems in central banking, the learned speaker was of the view that for a vast country like India, where economic development was patchy, regional Reserve Banks, integrated by a Central Monetary Board possessing wide powers would be better and more useful. He urged that the whole question as to the type of central banking authority suitable to this country should be examined thoroughly by an expert committee. He, however, hastened to add that a change from a Unitary to a Federal type of central banking did not mean a shift in the Governmental responsibilities from the Centre to the States. Only the geographical decentralisation must lead to wiser control over money's value.

A reference to small banks also was made by Mr. Thakur. He stressed that they had a definite place in the Indian banking system. But they lacked experience and knowledge. Instead of liquidating them, it would be much better if they were brought under the influence and responsibility of big banks. "Some such method," he added, "would lead to quicker integration of all agencies and elements which make up the Indian money market, so vital for formulation and operation of correct monetary policy."



STATE FINANCE CORPORATIONS

The Minister for Revenue and Defence, Mr. A. C. Guha, introduced a Bill in the Lok Sabha which provides for the formation of joint Financial Corporations by two or more States to overcome the difficulty of smaller States, particularly those coming under Part C, in establishing their own independent financial corporations. The Bill, which seeks to amend the State Financial Corporations Act for this purpose also provides for the extension of jurisdiction of the existing Corporation of one State to another by agreement. It would appear that the Government has taken note of the difficulties experienced by the Central and State Governments and the Industrial Finance Corporation in dealing directly with industrial concerns wanting accommodation. In other to avoid them, the Bill proposes to empower State Financial Corporations to undertake agency functions on their behalf. It is also proposed to amend section 25 of the Act, so as to enable smaller industrial concerns not having sufficient tangible assets to receive financial accommodation from State Corporations. When the management of an industrial concern is taken over by a State Financial Corporation, the responsibility for its efficient management naturally devolves upon the latter and, in order to bring this about effectively, it is proposed to insert new sections 32-A to 32-F. These are on the pattern of the Industrial Finance Corporation Act, 1948. The Bill also seeks to empower the Reserve Bank to inspect the working of State Finance Corporations.

THE ECONOMICS OF FREEDOM*

DANGER OF INDIA BECOMING A TOTALITARIAN STATE REAL

By M. R. Masani

THE other day, I was talking to an esteemed old friend who holds high office and has a great deal of influence in the ruling party. Talking of the pattern of economic development in this country, he told me that, while he shared my dislike of the system of State capitalism and State landlordism as developed in Russia and China and was opposed to its establishment in India, he wanted the country to press forward towards the socialisation of all large-scale industrial enterprises and the establishment of co-operative farming. I was unable to convince my friend that the destruction of free enterprise and of peasant proprietorship must lead in India, as in Russia, to the same kind of monolithic totalitarian dictatorship as had developed under Stalin. "We shall not allow it to happen," he kept repeating with great sincerity but with what appeared to me to be a singular lack of realism about the fact that human nature is everywhere the same and that Lord Acton's dictum that "absolute power corrupts absolutely" applies to Indians as well as to other species of the human race.

Now, you must all have had experiences similar to mine with friends among socialists, trade unionists and college professors. I suggest it might, therefore, be worth our while spending a few minutes in an effort to ascertain the validity of the assumption that a completely nationalised or socialised economy can co-exist with the kind of political liberty that is guaranteed by our Constitution and that we enjoy in practice today.

Constant Incursions

It may be felt by some that this is a somewhat academic exercise, since nobody in India has yet suggested the complete socialisation of industry, trade and agriculture. While that is undoubtedly true, I venture to suggest that recent developments and trends do not justify too great a measure of complacency. The encroachments in recent weeks and months on services such as life insurance and trades such as the export of iron and manganese ore, on the one hand, and the distribution of cement, on the other, show how constant incursions are being made by the State in unexpected spheres. What is disturbing about these developments is not so much the entry of the State in these spheres, but the fact that, in each case, a monopoly is sought to be established. Where will this process stop? From the export of ores to the export of jute and from the distribution of cement to the distribution of cloth are not steps as distant as may be imagined. Even today, we have reached a state of affairs where a manufacturer cannot go in for the production of a new article without the permission of Government under the Industries (Development and Regulation) Act.

Alongside of all this, the Government of India has just sent to Communist China a delegation to study the methods of so-called agricultural "co-operatives" which are known to students of these developments to be nothing but the collectivisation of the land in accordance with the Stalinist pattern, which led in Russia to the liquidation of millions of peasants and is doing so at present in China.

In the light of these developments, I for one would hesitate to disagree with the *Times of India* for writing editorially as it did a few months ago: "The point is whether, under the cloak of an avowedly socialistic pattern of society, the country is not being driven along totalitarian paths to totalitarian targets. . . Few of us would like to see India converted either into a communist or a fascist state, but the paths we are treading today seem to lead inevitably to that goal."

Fit for Prophets

Having said this, let me make it clear that, to my mind, there are hardly any persons in office today or in control of the Congress Party who have any intention of treading the Soviet path. I am not questioning for a moment the democratic *bona fides* of our planners. I am aware that all they seek to establish is a society fit for prophets to live in but with a marked aversion for profits. What is open to question is whether, by their support to certain policies actuated no doubt by the urge to social justice, they are not creating conditions whereby the liberties guaranteed by the Constitution may be imperilled. Yearning to do good, they believe they can preserve political freedom while hacking away merrily at its economic foundations. They may well be reminded of the observation of Lenin, who was an expert in the manipulation of power: "He who says A, says B."

Some of you may, perhaps, recall in this context the story of the war-time Administrator of Price Controls in the U.S.A. during the last war. Someone once approached him with the proposition that the wage-price line need not be held quite so firmly and that just a little inflation would not do any harm. To this, the harassed official replied: "Well, Joe, you may be right. A little inflation may not do any harm. But the trouble is that having just a little inflation is like having just a little pregnancy—it keeps growing."

Is the Assumption Right

Let us now examine the widespread assumption that we, in this country, can sustain democratic government alongside of a State monopoly of economic ownership of industry, trade and agriculture.

First, let us consider the effects of such a situation on the lives of the worker, the peasant, the investor and the consumer and the man in charge of industrial production. Today, the worker has a right to choose and change his job within the limits of his training and capacity. He can withhold or deny his labour, participate in collective bargaining and, if need be, strike work together with his comrades. If he should lose his job or the strike should fail, he finds other enterprises ready to employ him. In a society where the State is the only employer and every citizen willy-nilly a State employee, to what extent will these precious rights be preserved? Is there any reason to believe that, when there is only one employing authority in the country, it will permit an employee to throw up his job in an economic activity where he is performing a necessary function and allow him to shift at will to some other occupation? Is it likely that a State, exercising a monopoly of production and distribution, will permit its employees to go on strike and thus upset the National Plan?

The Peasant

Or let us take the peasant. Once he is a member of a collective farm or, for the matter of fact, of a co-operative farm—the terminology will not make very much difference—is it to be expected that, when he finds the co-operative farm does not suit him and he wishes to withdraw from it, the original plot of land which he was persuaded to surrender will be restored to him and he will be allowed to go his own way?

As for the small investor who survives, his freedom of choice will be restricted to one of two or more issues of a so-called "voluntary" State Bond to which he will be forced to subscribe. His plight may best be imagined from the report that has just come out from Czechoslovakia, about the finding of an unidentified corpse. The police report said: "Aside from two Government Bonds, no other signs of violence were discovered on the body."

In a free economy, it has rightly been said, the consumer is the king. The consumer who today is, within the limits of his income, able to exercise a wide freedom of choice about how much he shall spend, on what he shall spend, and how much he shall save will then be faced with one universal seller from whom he must obtain all his wants. The range of goods offered to him will be decided and the price fixed by the State Trading monopoly. If the quality or the price do not appeal to him, there will be no other brand of goods to turn to. To meet his basic needs, he must purchase or perish.

Today, thanks to the law of the market—the law of supply and demand—and the discipline of the balance-sheet, it is the consumer who decides for the *entrepreneur whether* to produce and *what* to produce. When a man buys something on the free market, he is casting his vote as a citizen of the national economy. He exercises a free choice which, by affecting the price, influences a decision as to how the economy shall be directed.

An Argument Examined

The exponent of the socialist pattern of society may concede all this but urge that from then on it is the people collectively who will decide through parliamentary elections what kind of planned economy they want. Let us examine this claim. Once the yardstick of profit ceases to operate, the question arises as to how those at the helm of the omnipotent State are to determine what goods to produce and what priorities to establish. In the absence of an impersonal economic law such as that of supply and demand, some other yardstick has to be found. What principles will help in the exercise of these wide and arbitrary powers?

In order to direct all our national activities according to a single plan, it will become necessary that every one of our needs is given its rank in an order of values complete enough to enable the planner to decide how many cattle are to be reared, what crops must be sown, how many buses and trucks are to run, which coal mines are to operate, and at what prices soap and toilet preparations are to be sold. When a choice has to be made between more milk for children and higher prices for the farmer, or between employment for the unemployed and better wages for those already employed, nothing short of a complete system of values will suffice. Can this be evolved democratically?

To say that the people will agree by a majority through parliamentary elections that there must be central planning is not enough. An agreement on central planning without an agreement as to social values and ends is rather like a group of people agreeing to take a journey without agreeing on where they want to go. In the result, they may all have to make a particular journey which most of them do not desire. A parliamentary majority may vote clause by

(*Continued on page 303*)

RATIONALISATION IN KANPUR MILLS

BINDBASNI PRASAD COMMITTEE TO SUBMIT INTERIM REPORT SHORTLY

THE vexed issue of rationalisation in the cotton textile mills of Kanpur would appear to have at last been settled. A recent Press report from Lucknow points out, for instance, that the Rationalisation Committee has almost finalised its interim report which meets the viewpoints of both millowners and labourers to a large extent. This Committee, it will be recalled, was set up by the Uttar Pradesh Government last year—that is, after the 80-days' labour strike in Kanpur textile mills terminated —to go into the question of rationalisation in terms of the principles evolved and agreed upon at the Nainital Conference held in 1954. The Committee consists of Mr. Justice Bindbasni Prasad as Chairman, the labourers and employers being represented in equal numbers.

After the Nainital Conference, a Committee was appointed to examine the issue of rationalisation in Kanpur textile mills. But the Committee had to be dissolved, with the withdrawal of the representatives of labour from it. Then followed the 80-days' strike by workers which resulted in a loss of 10.3 million man-hours. The loss in production was estimated at about 13.17 million lbs. of cotton yarn, 45.07 million yards of cloth and 5.8 million yards of jute goods. The workers suffered most, inasmuch as they lost more than a crore of rupees by way of wages and the usual bonus they would have got if the mills had worked normally. The termination of the strike followed a 14-point agreement entered into between the workers and the Government. It is in accordance with this agreement that the U.P. Government appointed the aforesaid Committee.

The Bindbasni Prasad Committee is expected to submit its interim report to the U.P. Government by the end of this month. The report will cover only three sections—spinning, weaving and doffing. The recommendations contained in the report will be made applicable to all the ten cotton mills of Kanpur, although the Committee's enquiry was confined to only seven mills.

The details of the recommendations made by the Committee are awaited with considerable interest. From the information so far available, it is gathered that the recommendations will be based on the preliminary interim report drafted by the Chairman and circulated to the members. There is reported to be unanimity among the members on one point, namely, that only such machines as have been approved by a proper authority should be permitted to be rationalised. The authority proposed for the purpose will be an industrial committee, composed of production and efficiency experts and the representatives of industry and labour. This Committee will exercise overall supervision as far as the process of introduction of rationalisation and disputes between labour and management arising therefrom are concerned.

The draft report is understood to contain two specific suggestions. First, some technical improvements should be effected in the machines that will be selected for being worked on rationalised basis. Secondly, on the rationalised machines, the worker must be expected to do about 95 to 100 operations per hour. While computing this, proper allowance is to be given for leisure—12 per cent. of the time according to one formula, the rest of the time being divided equally between operations and patrolling and supervision.

The most controversial point in the draft report relates to the emoluments of workers. It is understood that the report includes a suggestion seeking to bring about an adjustment of wage rates in such a way as to enable the workers to earn between Rs. 115-Rs. 125 per month. At present, the workers employed on rationalised basis earn about Rs. 105-Rs. 110, an amount which the millowners consider as quite fair, as compared with Rs. 90 earned by persons working on old basis. The labourers, however, demand the same wage level as prevailing at Bombay and Ahmedabad where workers employed on rationalised basis earn nearly Rs. 140 per month.

Another controversial point relates to the stages in which the scheme of rationalisation is to be introduced. The suggestion in the draft report, it is stated, is that, in the first instance, the machines which are operated by temporary workers in permanent vacancies should be put on rationalised basis. There are about 5,000 temporary substitute workers, of whom nearly one-fourth is employed against permanent vacancies. The permanent workers should be given the option of accepting some gratuity and retiring. The machines vacated must be put on rationalised basis. This should be followed by machines vacated in the process of natural wastage among makers, that is, as a result of superannuation. Such an arrangement, it is claimed, would complete rationalisation in a much shorter period than expected so far.

In the absence of full details of the recommendations contained in the draft report, it is not proper to make any comments. This much, however, can be said and that is, that both the millowners and the workers should approach the problem of rationalisation in a spirit of accommodation. What is imperative is the need for evolving a rationalisation formula which, while avoiding any substantial or sudden dislocation of labour, would promote the long-term interests of the cotton textile industry and help it cater more efficiently to the needs of the home and the export markets.

RAYON INDUSTRY IN JAPAN

An interesting review of the developments in the Japanese rayon textile industry and trade is contained in the June issue of the *Oriental Economist*. The review reveals that rayon goods constitute one of the main props for Japan's export boom. The aggregate value of rayon and spun rayon yarn and fabrics sent out of the country during 1955 was 168 million yen, representing a rise of about 30 per cent. as compared with 1954. The rayon goods became the third largest item of export, next only to cotton goods and iron and steel products. The improvement in exports was particularly marked in the case of spun rayon cloth. Indications are that rayon staple will take, sooner or later, the place of raw silk as the queen of Japan's export trade. Rayon and spun rayon cloth exports from Japan during 1955 aggregated 859 million square yards, closely approaching cotton cloth sales (1,137 million square yards). The exports in the current calendar year are expected to be more than cotton cloth exports.

During 1955, Japan was the biggest producer of rayon staple in the world; the quantity actually produced amounted to 537 million lbs., as against 450 million lbs. in the previous year. Rayon makers have been striving for greater production, particularly in the staple division, by constructing new plants and enlarging the existing ones. The reason for such production growth is not so much the increased consumption at home for mixing with cotton, wool and synthetic textiles and for newly-developed application of rayon staple itself as the ever-mounting overseas sales. Exports in 1955 comprised 34.5 per cent. of the total production for rayon staple and 40 per cent. for rayon filament. The upward trend of both production and exports continued in the first quarter of the current year. Rayon staple was up 23 per cent. in output and up 20 per cent. in export volume, and rayon filament up 11 per cent. and 15 per cent., respectively.

Operating in this industry are six rayon filament firms and 13 rayon staple producers. Stimulated by the high profitability of rayon staple business, these interests have all started campaigns for large-scale expansion with a view to cutting cost through mass production. During the first quarter of 1956, rayon staple output aggregated 153 million lbs. At this rate, the yearly total will reach 612 million lbs. The production goal set by the 14 companies amounts to as much as 759,000,000 lbs. for 1956. This figure is almost the same as the final goal for 1960 of the Government's six-year economic plan. As for rayon filament, too, the scheduled 1956 output is nearly as big as the 1960 official target. In this light, the Ministry of International Trade and Industry has advised rayon makers to restrict in some way or other their reckless production boost. The latter have got together and discussed countermeasures for curtailment. But they have failed in reaching an agreement about the standard for production cut and finally decided to slacken off the tempo of expansion in the first half, so that the 1956 output may be restricted to 650 000,000 lbs. with regard to production restriction in the second half, a decision still remains to be made later.

In the opinion of the *Oriental Economist*, the expansion rivalry in the Japanese rayon textile industry will not slow down for some time to come, as the rayon market is as firm as ever, in spite of the ever-growing production. To quote it: "Even if the market should get stagnant, rayon firms would carry through their plans under way." But the journal considers that the prospects for the rayon industry are not too rosy. In this connection, it has made the following interesting observations:

"Will necessary materials be supplied smoothly, along with the steady growth of rayon production? As for such key materials as pulp, caustic soda and sulphuric acid, a seller's market is developing, because demand is picking up in line with the increase in rayon output. For making 1,000,000,000 lbs. of rayon a year, as projected by rayon companies, 1,170,000,000 lbs. of pulp would be required —a huge amount which cannot be produced at home. Thus far unable to curb the expansion projects of rayon firms, M.I.T.I. (Ministry of International Trade and Industry) is now planning to restrict rayon production indirectly through control of the foreign exchange allocation for pulp and sulphur imports. The second question is: Will rayon exports be as brisk as ever? European products reportedly have been making inroads in the market in China, hitherto enjoyed almost exclusively by Japanese rayon producers. It is doubtful that sales to West Germany, Africa, England, the Netherlands, etc., will continue briskly."

WORLD USING MORE WOOL

The Commonwealth wool marketing season 1955-56 witnessed one of the biggest clearances of wool in the history of the industry. The outstanding feature of the season was the enormous transfer of wool from producing to consuming countries recorded by each of the wool-growing countries of the Commonwealth. During the 1955-56 selling season, Australia offered to the world an all-time record clip, officially estimated at 1,414 million lbs. (greasy), which was 9 per cent. above that of the previous season and 42 per cent. higher than the pre-war average. Although the selling programme was interfered with at times by labour disputes at the source of supply, world demand proved fully capable of lifting the increased wool output, and the end-of-season carryover is estimated at not more than 60,000 bales, which is the approximate average of recent years. In New Zealand, where the season's wool output is estimated by the Commonwealth Economic Committee at 462 million lbs. (greasy), which is 7 million lbs. more than in the previous season and 55 per cent. above pre-war, there were excellent clearances. Sales set up a record at 1,016,555 bales, or 13,692 bales more than in the previous season, though the general level of wool values was such that the return to the producer was slightly less than in 1954-55. South Africa, with a clip estimated at 310 million lbs. (as against 305 million lbs. in the previous season) more than regained its pre-war level of output. The disposals of 1,061,340 bales are reported by the South African Wool Board to be the largest for more than 20 years.

Over the world as a whole, wool production for the 1955-56 season is estimated at 4,815 million lbs. (greasy), or 4 per cent. more than in the previous season, with Commonwealth countries furnishing about half the total. As part of the other half was ordinarily consumed within the countries of production, the proportion of Commonwealth wool which entered international trade was much more than half the total supply of exported wool. Not only did Commonwealth countries dispose of larger clips in this season but other large wool exporting countries—including those of South America—also had similar experience. The reason for these large disposals is that the world is using more wool. It has been estimated by the Commonwealth Economic Committee that, during 1955, world consumption of wool was 4 per cent. higher than in 1954, and, although that may seem a modest proportion, it represents about 80 million lbs. (clean weight). This improvement continued in the first quarter of 1956 when the aggregate increase for the 11 major manufacturing countries was a further 5 per cent., as compared with the preceding quarter, or 10 per cent. if measured against the corresponding quarter of 1955.

An encouraging feature of world wool developments in the 1955-56 season was increased demand from some of the newly developing textile countries, such as Russia and China, while Japan continued to expand its use of the fibre. The U.S.A. showed welcome indications of a return of wool to greater public favour in clothing, while Britain and Continental Europe remained the chief outlets for Commonwealth wool and for much of the wool production of other countries.

Notice

UNIVERSITY OF BOMBAY

Department of Economics
Section in Business Management

APPLICATIONS ARE INVITED FOR THE post of a Lecturer in Business Management. The Lecturer will be required to give instruction in one or more subjects included in the Post-graduate Diploma Course for Business Management.

The Lecturer will also be required to help in the organisation of this Section which, for the present, conducts part-time courses in the evening. Candidates must have high qualifications in one or more of the subjects covered in the Course. Those with teaching experience and/or practical experience in business will be preferred.

The grade of the post is Rs. 300-25-600. The post carries the benefits of Provident Fund and dearness allowance according to scales prevailing from time to time. A higher starting salary may be paid to a person possessing high qualifications. The appointment will, in the first instance, be on probation for a period of two years.

Eight copies of the application in the prescribed form (which can be had from the office of the Registrar) will have to be submitted. Selected candidates will have to present themselves for interview at their own cost. Applications should reach the Registrar, University of Bombay, Bombay 1, latest by 31st August 1956.

T. V. CHIDAMBARAN,
University Registrar.

BOMBAY, *2nd August*, 1956.

U.K. TRADERS DISTURBED BY DOMESTIC AND FOREIGN SITUATION

INDUSTRIAL UNREST SPREADS

From A Special Correspondent

MANCHESTER, *31st July*

TRADERS generally throughout the United Kingdom are profoundly disturbed by various fundamental economic aspects of the industrial situation which are in the news just at present. These setbacks both at home and abroad inevitably bring repercussions and the cotton trade can scarcely hope to avoid the backwash.

MANCHESTER LETTER

Events overseas are always liable to create complications for an industry so dependent on foreign countries for its raw material supplies. Egypt's attitude over the Suez Canal is not conducive to a favourable response from Lancashire spinners, who have only lately been urged to revive their purchases of Egyptian cotton. Even if increased buying from this source was economically attractive, many prospective customers would be deterred from trading with a nation so politically antagonistic. Fortunately, Lancashire's dependence on cotton supplies from Egypt is now relatively slight, so long as no interference with the flow of material from the Sudan ensues.

Sterling

Another adverse factor which continues to cause much comment is the renewed weakness of sterling in the dollar exchange rate. As usual, when such considerations arise, there are rumours of economic action, including the possibility of a further devaluation of the pound. Such drastic measures, involving as they would an increase in the cost of our imports, together with a corresponding rise in earnings from exports, would indeed be proof that the country's finances were in a more precarious state than the people have been led to believe.

Meanwhile, there is evidence to support the view that the Treasury is determined to maintain its grip on the spending power of the nation. Bankers have been given further encouragement to tighten the purse-strings, and any hopes that a more liberal attitude towards borrowing was in sight have been dashed.

When the credit squeeze was first introduced there were some who forecast that such consumer goods as textiles might benefit from the restrictions imposed on the purchases of more durable goods. For a variety of reasons this has not proved the case and the public as a whole continues to favour buying the many modern technical devices now so freely available and have only replaced their textile goods when necessity has arisen. It is doubtful whether any new measures to curtail credit will affect the situation differently.

Industrial unrest in the Midlands has culminated in extensive strikes at car factories and there are already signs that other industries will feel the effect of the curtailment of production. Many speciality textile fabrics are required in the intricate process of manufacturing cars and ancillary products. In the circumstances, replenishments are bound to be held over until the outlook clarifies and, in this way, a section of the cotton industry which has provided satisfactory continuity business for a number of firms faces a dubious future.

Unions Back Strikers

Controversy has arisen over the attitude adopted by the cotton trade unions in relation to the widespread strikes in the motor trade and ancillary industries in Britain. It has been suggested that some of the textile union officials in leading positions were antagonistic to the strikers' calls for assistance in view of the lack of interest taken in other areas when the mills were losing workers at a rapid pace in 1952 and subsequently.

This view, however, has been officially denied by Mr. Lewis T. Wright, General Secretary of the 80,000-strong Weavers' Amalgamation, the biggest cotton union, who is a member of the General Council of the Trades Union Congress. In a statement made in Manchester, he pledged support for the strikers at the British Motor Corporation's works, saying: "Let me make it quite clear that the sympathy of the textile unions is for the strikers and if the need arises this sympathy will be backed by financial assistance." Mr. Wright said he had consulted with Sir Alfred Roberts, General Secretary of the second largest cotton union, and these were also his firm views "despite Press comments suggesting the contrary."

One of the fortunate aspects, from Lancashire's point of view, about the increasing interest in cotton growing being taken in countries outside the United States is that our local industry's dependence on supplies from America is no longer as distinct as it once was. Unfortunately, the implications of the Washington Government's policy on raw cotton affairs generally remain of paramount importance in assessing future prospects.

Whereas in the years immediately prior to the war the main countries supplying British mills with their cotton supplies were the United States, Egypt and India, the situation now shows a definite change. In 1938, imports of raw cotton from the United States accounted for nearly 37 per cent. of all arrivals, Egypt supplied 21½ per cent. and India's share was almost 14 per cent. of the total.

Economic circumstances resulted in the proportion of cotton coming from the United States in 1952 resuming its pre-war pattern, but since then the quantity of American cotton absorbed has been declining, so that last year it was only 27½ per cent. Purchases from Egypt represented less than 4½ per cent. and India and Pakistan provided only 8 per cent.

In contrast, the Empire countries have been making considerable progress. Supplies from the Sudan accounted for more than 11 per cent. of total arrivals last year and Nigeria provided nearly 11¼ per cent.

A similar trend has been maintained during the first six months of the current year, as the volume of cotton coming from the United States has dropped below 25 per cent. for the first time since 1951. Purchases from the Sudan have increased to 12 per cent. but Nigeria has sent less than 9 per cent. of the total. Egyptian cotton reaching Lancashire mills has shrunk to below 4 per cent. of the shipments from abroad.

More Machinery Sold

While exports of British cotton and rayon goods continue to fall behind last year's levels, the makers of textile machinery are managing to expand their overseas trade. During the first half of the current year, shipments of plant aggregated practically 900,000 cwts., an improvement of 100,000 cwts. on the same period in 1955. Earnings from these shipments were £24,494,390 against £20,653,076.

The main reason for this expansion is the much larger supplies taken by India, which have increased from 130,927 cwts. to 237,296 cwts. In contrast, Pakistan has only taken 33,411 cwts. against 156,648 cwts.

Other leading consumers have been the Soviet Union 53,656 cwts. (94,154 cwts. a year ago); Egypt 46,684 cwts. (20,108 cwts.); Mexico 33,887 cwts. (14,856 cwts.); and the United States 29,819 cwts. (22,831 cwts.). In addition, fair quantities of British machinery have been shipped to European countries, including Germany, France, Switzerland and Belgium, each of which have taken between 25,000 and 32,000 cwts.

Yarn Output Drop

Output of cotton and rayon yarn by Lancashire spinning mills fell by more than 24,000,000 lbs. in the first six months of this year.

Figures given in Manchester by the Cotton Board show that the mills spun 437,960,000 lbs. of yarn in the half-year, as compared with 462,260,000 lbs. in the corresponding period of 1955. In the first six months this year spinning manpower fell from 100,190 to 97,640.—*All Rights Reserved.*

RAYON-COTTON BLENDS

Messrs. Courtaulds of the U.K. have organised an exhibition at Manchester, demonstrating the development of blends between rayon staple and cotton. It opened on 20th July and will continue until early September. The exhibition shows the important steps taken in the U.K. during the last five years to expand blended fibre production. Blending, it is claimed, is very advantageous to the trade, thanks to the stability in the price of fibre and to the difficulties of securing right qualities of cotton. The blends have also their own distinctive characteristics and merits. According to Mr. J. G. Smith, Director of Messrs. Courtaulds, the appearance and weaving qualities of blended fabrics are superior to the hundred per cent. cotton or rayon fabrics. A wide range of goods, including both woven and knitted garments, is covered by blended fibres.

That the trade is becoming increasingly aware of the merits of blended fabrics is borne out by the marked rise in output. Thus, the production of blended fibres in the spinning industry which was practically non-existent before the war amounted to as much as 12 million lbs. in 1950. In 1953, output expanded to 35 million lbs. and it is now at the annual rate of 37 million lbs. This quantity represents about 5 per cent. of the total yarn spun by the cotton spinning industry.

WORLD COTTON PROBLEM

I.C.A.C. OUTLINES LONG-TERM POLICY

PRODUCTION of cotton in the free world, according to the International Cotton Advisory Committee, Washington, has exceeded disappearance by a total of 9.6 million bales of 478 lbs. each over the four cotton seasons from 1951-52 to 1955-56. In the 1955-56 season, the output of cotton was of the order of 30 million bales and consumption 28.0 million bales. The increment to free world carryover stocks on 1st August 1956 was estimated at 1.5 million bales, representing the degree of imbalance between production and disappearance during the season just ended. Estimated at 22.1 million bales, the carryover on 1st August 1956 is equivalent to, roughly, 9½ months' supply at the current rate of consumption. This means, therefore, that even a significant reduction in free world production this season would offer little immediate relief to the present over-supply in relation to prospective offtake, except, of course, in retarding or preventing any further stock accumulation.

This staggering build-up of cotton stocks is attributed, principally to three factors. First, the existence of relatively high prices until the beginning of the last season has stimulated both production of cotton and man-made fibres. While the former directly contributed to swell the supply, the latter reduced its demand by effectively competing for the consumer's purchasing plan. Secondly, marked improvements in cotton production techniques have resulted in higher yields. Thirdly, economic progress in a number of underdeveloped countries has brought new areas into cotton production, thus increasing the total output of cotton.

The following table shows the supply position of cotton in the free world.

Free World Cotton Supply Position

	1953-54	1954-55	1955-56
Production—			
United States	16.4	13.6	14.5
Elsewhere	13.9	16.0	15.8
Total ..	30.3	29.6	30.3
Consumption—			
United States	8.6	8.8	9.2
Elsewhere	18.3	18.8	18.8
Total ...	26.9	27.6	28.0
Stocks end of season—			
United States	9.7	11.2	14.7
Elsewhere	9.2	9.4	7.4
Total ..	18.9	20.6	22.1

A significant point to note, says the Committee, is that the surplus stocks from overproduction have mainly accumulated in the U.S. The U.S. cotton stocks increased steadily from 9.7 million bales in 1953-54 to 14.7 million bales in 1955-56. During the same period, stocks outside the U.S. declined from 9.2 million bales to 7.4 million bales. The principal reason for this increase of stocks in the U.S. has been the decline in its exports resulting from the maintenance of prices at a level above those of other producing countries. In 1955-56, the U.S. is estimated to have exported only 1.9 million bales of cotton, as against 3.4 million bales and 3.8 million bales in the 1954-55 and 1953-54 seasons, respectively.

Appropriately enough, the world cotton situation in general, and the U.S. cotton policy in particular, came up for detailed discussion at the recent meeting of the Committee (I.C.A.C.) held in Washington under the Chairmanship of Mr. Marvin L. McLain, the U.S. Assistant Secretary of Agriculture. A somewhat more detailed account of the proceedings of this Conference, than was then published in the Press at the time, has now become available through the Committee's journal *Cotton*. It may be recalled that sixty-two countries were represented at the meeting, thirty-two as members of the I.C.A.C. and thirty as observers. In addition, nine international organisations also were represented by observers. Obviously, such a representative body provides the only appropriate forum for discussing the present economic problems of the cotton industry from an international viewpoint. In discussing the world cotton situation, the Committee, in its report to the Conference, dealt extensively with the factors that contributed to a build-up of world cotton stocks to the second highest level in history, analysed the changes in the U.S. cotton policy in all its bearing upon cotton trade of the rest of the world and outlined a policy to be followed by the member governments in the interest of all concerned.

The Conference naturally discussed changes in the U.S. Government's policy which includes a reduction in the domestic support-price and the establishment of a special export programme in which all quantities of upland cotton in Government owned stocks now are offered for sale at less than the current domestic price on a competitive bid basis. Though this involved some reduction in world cotton price, it would, the Conference believed, lead to an improvement in cotton's competitive position in end-use markets and would offer some disincentives to uneconomic cotton production, thus contributing to a better equilibrium between supply and demand. This point of view has, as is well known, been vehemently opposed by several cotton-growing countries which fear that the U.S. cotton policy will lead to disruption of world markets. From this point of view, the Conference did well to warn against any sudden or substantial decline in cotton prices which would adversely affect the economies of both producing and consuming countries. Such a decline may be particularly harmful to countries like Egypt and Mexico, the national economies of which are mainly dependent on cotton. There is, it was pointed out, uncertainty in the world about the price at which U.S. cotton will be sold under the export programme and the quantities that will be sold in a given period. This uncertainty was heightened, rather than cleared, by the fact that the C.C.C. was instructed to accept any price not higher than the price of cotton of comparable quality offered in substantial quantity by other exporting countries. If this uncertainty continued, it might unsettle world markets, impairing the orderly movement of cotton in world trade, the operations of futures market and the manufacture and sale of cotton textiles.

The Conference also pointed out that the problem in itself was complex enough and appealed to member countries not to make it more complicated by unilateral and ill-considered action. It was convinced that the surplus stocks in the world could not be reduced until the rate of production was reduced below the rate of consumption. It, however, outlined the policy which could be followed in the long-term interest of the industry and of the nations concerned. Thus, it emphasised that increase in cotton acreage and production should be discontinued, until the present excess of production over consumption was eliminated. The price policy, it was urged, should be such as to ensure "reasonable short-term stability to facilitate orderly distribution of crops and long-term flexibility to permit adjustments in cotton supply and demand." A reasonable reduction in cotton price, it said, was desirable, but too drastic a reduction might have a disrupting effect on the economies of cotton producing countries. Dual price arrangements, under which cotton is made available more cheaply for export than for domestic consumption, created concern both from the view point of principle and practical effects. They tended to perpetuate the problem of surplus by protecting U.S. cotton farmers. They hindered price insurance operations on futures markets, thus militating against a build-up of now depleted stocks in cotton-importing countries.

The U.S. delegate pointed out that his Government recognised that there were weaknesses in any form of two-price system. But it was adopted only after they were convinced that there was no other acceptable alternative in the existing circumstances by which its cotton could be made competitive in world markets. In view of this difficult situation, the Committee suggested that the U.S. should consider the desirability of announcing minimum prices below which its cotton would not be offered for export sale and of limiting the amounts to be made available in a given period of time.

The Committee realised that increased cotton consumption offered a positive contribution towards correcting the present imbalance between supply and demand. Accordingly, it urged the member-countries to intensify effects to expand consumption, including greater efficiency in manufacturing and marketing cotton textiles, increased research and more wide-spread promotional activities.

KOLAR GOLD MINING COMPANIES

MR. M. A. SRINIVASAN'S PLEA FOR REFERRING DISPUTE TO INDEPENDENT TRIBUNAL

ADDRESSING the shareholders of the Champion Reef Gold Mines of India (K.G.F.) Ltd. and the Nundydroog Mines (K.G.F.) Ltd. at their Fifth Annual General Meeting held at Oorgaum on 2nd August 1956, Mr. M. A. Srinivasan, Chairman, referred to the recent announcement in the Press by the concerned Minister of the Mysore State Government that the latter had agreed to the Government of India's suggestion for paying Rs. 119 lakhs as net compensation to the Companies, and said that the Companies had not heard anything from the authorities. However, he indicated that, if the report was correct, the compensation was unreasonably low and totally unacceptable. He reiterated the hope that compensation would not be arbitrarily fixed and the Companies' claims would be referred to an independent tribunal.

The following are the relevant extracts from Mr. Srinivasan's speech:

"At the last meeting I dealt at some length with the events leading up to the proposal of the Mysore Government to nationalise the K.G.F. Mining Companies. A circular issued on 15th June this year gave you a brief account of the position up to that date. In my speech last year, I told you how highly critical the Government of Mysore that assumed office in 1952 had been of the agreement entered into in 1949 by its immediate predecessor in office. It is regrettable that a tendency developed in the State in the last few years of dragging the Kolar Gold Mining Companies into the arena of provincial party factions where they were made the sport of group rivalries. It is now more widely known that this unfortunate circumstance has been the root cause of most of the trouble and misunderstanding your Company and its sister Companies in the Kolar Gold Field have had to live through during the past few years.

Plea for Arbitration

"Your Directors and Managers have patiently and painstakingly striven to remove doubts and to clear up misunderstandings. You will recall that, in reply to the unjust accusation made by the Mysore Government that the Agreement had been violated, the Companies requested that the question may be referred to arbitration, as specifically provided in the Agreement itself. The Mysore Government rejected this request and expressed its preference for legislation. It was also represented that, if the Government of Mysore were dissatisfied with the terms of the 1949 Agreement, the Companies would be ready and willing to discuss a new agreement mutually acceptable. In their anxiety to end all controversies, and smooth out differences and see cordial and harmonious relations restored, your Directors did also suggest, in more than one context, that the Government may be pleased to appoint an impartial expert committee of eminent and high-ranking personalities in the fields of justice (such as a retired Chief Judge of the Supreme Court of India), finance, and administration, to whom all the charges and differences may be referred for examination. It was also submitted that, if nationalisation was decided upon, the question of fixing the compensation should also be referred to such an independent committee.

"None of these requests has so far been heeded by the State Government.

"The Companies have reason to be grateful to the Central Government at New Delhi for the calm, detached and sympathetic consideration they have given to our representations.

Companies' Views

"In response to a call from the Ministry of Natural Resources and Scientific Research, Government of India, representatives of the Companies met a committee of three officers of the Government of India at New Delhi between 11th and 16th June 1956 and placed before that Committee the Companies' views and statements relating to the claim for compensation in the event of nationalisation. During the discussions, the Companies' representatives were informed of the Mysore Government's intention to fix compensation on the basis of market quotations of the shares. The Companies' representatives strongly opposed this and took the opportunity to repeat that to take drastic measures, as the Mysore Government had done, that debilitated and crippled the enterprise and brought down the share prices, and then to use the depressed and restricted market quotations as the basis for fixing compensation is to inflict a double injury on the shareholders. Detailed statements were submitted of the valuations of assets and liabilities made by an expert firm of valuers of international standing, as well as of the present position of each Company, its future prospects, etc. Following this meeting and discussions, the Companies wrote to the Hon'ble Minister for Natural Resources and Scientific Research, Government of India, submitting the views and claims of the Companies and requesting that the Companies be given a further hearing before any final decision is taken. No communication on this subject has since been received either from the Central Government or the State Government.

"Neither the findings nor the recommendations of the officers were made known to the Companies; nor are the Companies aware of the advice conveyed to the Government of Mysore.

Compensation

"On 31st July, the concerned Minister of the Mysore Government made an announcement, which was published in the Press, to the effect that the Government of Mysore had agreed to the Government of India's suggestion for the payment of 119 lakhs of rupees as net compensation to the three Companies. If this news report is correct, it is not known how this unreasonably low and totally unacceptable figure was arrived at. The announcement said that the Draft Nationalisation Bill, embodying certain modifications suggested by the Centre, had been sent to the Government of India for their approval and the Mysore Government were now anxious to pass the Bill as early as possible. He is stated to have added that the Centre's approval was, to quote the report, 'now reduced to a formality.'

"As I said, the Companies have received no communication to this effect so far from the Government of India, or the Government of Mysore; and considering the uncertainty and speculation caused by such reports and announcements bearing on the basis and quantum of compensation I would refrain from dilating on this subject at this stage. I would only reiterate your Directors' earnest and assured hope that, if nationalisation of the Companies is decided upon, compensation will not be unjustly or arbitrarily fixed, and that the Companies' submissions and claims will be heard before an independent tribunal."

U.S. STEEL STRIKE

Industry and labour union negotiators in the U.S. announced on 27th July that they had reached a "basis of settlement" for ending the 27-day steel strike. A contract which will be worth $1,332 million to American steelworkers during the next three years was signed by the negotiators. The first three-year "no-strike" contract in the industry's history, it provides—according to the union—a 45.6 per cent. per hour package increase over the three-year period. Total benefits over the period are 28.7 cents per hour. The steelworkers' minimum wage, which is now $1.65 per hour, will increase to $1.82 at once, and then to $1.89 next year and to $1.96 in the following year. Wages for skilled workers will increase from the present $2.58 per hour to $2.89 by the third year. Increases in Sunday, overtime and holiday pay, as well as increased vacations and plans for new agreements on insurance and pensions are included in the contract. It will be "several days" before individual contracts are signed between the union and the companies involved, the negotiators said.

The statement of agreement was issued by Mr. David J. McDonald, President of the United Steel Workers (U.S.W.) of America, a union affiliated with the American Federation of Labour-Congress of Industrial Organisations (A.F.L.-C.I.O.), and Mr. John A. Stephens, Vice-President of the U.S. Steel Company. Mr. Stephens was chief negotiator for management in the effort to settle the strike. The 12 companies involved produce 90 per cent. of the U.S.'s steel output.

INDIA AND WORLD SUGAR AGREEMENT

EXPORT QUOTA OF 200,000 TONS CLAIMED FOR 1958-59

ALTHOUGH not even 30 months have elapsed since the Development Council for Sugar Industry was established, the Government of India has reconstituted the Council. It is not known what considerations weighed with the Government for taking this step. No announcement of the change was made by the Government. We heard about it for the first time only after the reconstituted Council held its inaugural meeting at New Delhi on Tuesday last week. What is worse, the proceedings of the meeting have still not been released to the Press; only the speech of the Chairman was released and that too two days later. Incidentally, it must be emphasised that frequent changes in the personnel of the Council are not conducive to the efficient functioning of the body, inasmuch as continuity of progress of work will be lacking.

The first meeting of the reconstituted Development Council for Sugar Industry was presided over by the newly appointed Chairman, Mr. T. C. Puri, I.C.S., Joint Secretary, Union Ministry of Food and Agriculture. In the course of his address, Mr. Puri disclosed that India had asked for an export quota of 200,000 tons of sugar for being utilised during 1958-59 under the International Sugar Agreement (I.S.A.), provided that could be secured witnout accepting the restrictive clauses of the Agreement. The Agreement, it will be recalled, operates to regulate the world sugar market by allotting quotas of export and import and keeps an eye on sugar prices, so that they remain within the prescribed reasonable limits. The price of sugar considered equitable to both consumers and producers is fixed at a level which ranges between a minimum of 3.25 cents and a maximum of 4.35 cents per lb. (f.a.s. Cuban port).

India had remained outside the Agreement since 1942, because it felt that its association with the Agreement would involve restrictions on the expansion of its sugar industry. It, however, participated in the International Sugar Conference recently held at New York under the auspices of the United Nations. Alluding to this participation, Mr. Puri said: "Since the time has come when India can think in terms of sugar exports, its delegation at the Conference asked for an export quota. This request received the support of a number of countries and the prospect in this connection appeared to be hopeful when the Conference postponed to meet again at Geneva in October next."

Anything May Happen

The desire of the Government of India to make the country an exporter of sugar is doubtless laudable. But the question is whether it is wise in asking for an export quota under the International Sugar Agreement for being utilised in 1958-59 two years in advance. The two-year period is so long that anything may happen to alter the sugar supply position not merely in India but also in the world, generally. It is true that the capacity of the sugar industry is being augmented through the establishment of new units and expansion of the existing units. There is, however, no guarantee that this progress on the manufacturing side will be accompanied by similar progress on the agricultural side, that is, sugarcane development. After all, it must be remembered that the cultivation of sugarcane, just as that of any other agricultural crop, depends principally on weather conditions, as also partly on factors like the trend of agricultural commodity prices and demand for *gur*. All these factors are unpredictable.

Even supposing, for argument's sake, that the supply position of cane will be quite comfortable, there is the uncertainty about the price aspect. One of the prerequisites for the maximum utilisation of the sugar mills' capacity is that the price of cane should be economic. As readers are aware, the cane price accounts for more than 50 per cent. of the total cost of manufacturing sugar. Another prerequisite is the demand for sugar. While domestic consumption of sugar is steadily increasing, there is the possibility of a slackness in world demand for sugar, thanks to sugar production moving up in such countries as the U.S.S.R. and Pakistan which are at present importing large quantities of this commodity. Moreover, Cuba may be forced to sell a larger quantity of sugar in the world market, following the reduction in its share in the U.S. market under the latter's new Sugar Act. If these assumptions were to prove correct—indications are that they will—world sugar prices would suffer a setback in the coming years.

In the circumstances, the question arises whether India will be in a position to offer sugar at such a low level of prices as to withstand competition from other countries. As it is, the price of sugar in India is very much more than the world price. Even if the authorities were to give tax concessions in the form of refund of cane cess and excise duty, the price would be higher. Indeed, Indian sugar cannot sell in world markets so long as the competitive capacity of the industry is crippled by unduly heavy price for cane.

To revert to Mr. Puri's speech at the meeting of the Development Council for Sugar Industry. Mr. Puri claimed that there had been a noticeable increase in the production efficiency of sugar mills during the last season. He disclosed that four new factories out of the total of 50 units licensed so far came into production this year. While expansion of existing units was progressing satisfactorily, some factories had also raised their production capacity by balancing their plants and reducing the time for cleaning by having some spare units.

Solution Must Be Found

Proceeding, Mr. Puri referred to the total area of land under cane cultivation in the coming season (1956-57) and observed: "According to the first forecast which has just been received, the increase in the acreage under cane is of the order of 650,000 acres. Uttar Pradesh alone is to contribute more than 500,000 acres. The country has been faced with the problem of disposal of excess cane in certain areas, particularly in Western U.P. and Bihar. This year, some of the factories had to crush even beyond June. This was not in anyone's interest, least of all in the national interest, and a solution of this problem must be found."

Mr. Puri also drew the attention of the Council to the report of the Expert Committee on the employment of technically qualified persons in the sugar industry. It was a matter for surprise, he said, that there should be a large number of persons holding technical posts in the industry without possessing the requisite qualifications. The position was even worse on the engineering side. Mr. Puri hoped that the sugar industry would co-operate with the Council in ensuring that only qualified persons were appointed to technical posts.

FIRST FORECAST OF CANE CROP

The area under sugarcane during the season 1956-57 is expected to be the highest on record since 1948-49. The all-India first estimate of sugarcane for the season put the aggregate area at 4,717,000 acres, as against the corresponding adjusted estimate of 4,066,000 acres for 1955-56. The anticipated improvement in acreage is to the extent of 651,000 acres or 16.0 per cent. The final estimate of the 1955-56 crop places the area at 4,446,000 acres.

The rise in acreage under cane has been reported by almost all the cane-growing States, especially Uttar Pradesh and Bihar. It is attributed partly to high prices of *gur* at the time of sowing and partly to better irrigational facilities and more favourable weather. In Madhya Pradesh and Hyderabad, however, some minor reduction in acreage has been reported.

The estimate includes, for the first time, information in respect of Travancore-Cochin State which accounts for 18,000 acres of area during 1956-57. It generally covers the period up to the middle of June 1956; till then, the condition of the crop was reported to be satisfactory. It does not cover the entire area sown to sugarcane crop in 1956-57. Past experience has shown that the area at the first estimate stage forms roughly 91 per cent. of the area of the crop finally reported. On this basis, the total acreage under cane may be placed at 5,183 000 acres. Assuming that the average per-acre yield of cane is maintained at the current season's level of 12.76 tons, the aggregate production of cane may be expected to amount to 66.14 million tons, as against the final estimate of 57.75 million tons for 1955-56.

The scheme for establishing the first sugar mill in Assam State is being implemented earnestly. A company, bearing the name of Assam Sugar Mill Ltd., has already been floated. It has just concluded a contract with the Czechoslovak Foreign Trade Corporation of "Technoexport" for the delivery of complete machinery equipment for the proposed factory with a daily cane-crushing capacity of 1,000 tons. The equipment will be manufactured by the Czechoslovak Engineering Works in Hradec Kralove and Plzen. This is the second delivery of Czechoslovak sugar mill equipment for India successfully negotiated by the representatives of "Technoexport" in the current year.

COAL MINES PROVIDENT FUND SCHEME

PROGRESS MADE GOOD

THE Coal Mines Provident Fund Scheme, introduced in the first instance in the coal mines of West Bengal and Bihar in 1947 and later on extended to collieries of other States, has proved to be quite a success during the last nine years of its working. In fact, the workers in coal mines have become more provident fund minded, as is borne out by the numerous requests for consolidation of their accounts, in the event of their migration from one colliery to another, or for modification of nominations, when "family" is acquired. The large number of money orders received by them in repayment of their accumulations in the Fund has dispelled from their minds the doubts and dismay that the deduction in respect of provident fund was a sort of cess on them. The scheme has thus stabilised itself to such an extent that it heralds a new era in its history.

The annual report on the working of the Coal Mines Provident Fund Scheme for the year ended 31st March 1955, the latest year for which the report has been issued by the Board of Trustees of the Fund, shows that it was another period of sustained progress. The total sum realised by way of contributions to the Fund during the year under review was Rs. 64.78 lakhs or a monthly average of Rs. 5.40 lakhs. This represents a slight decline from that of Rs. 66.18 lakhs (a monthly average of Rs. 5.51 lakhs) in the previous year. It, however, compares favourably with Rs. 62.21 lakhs realised in 1952-53.

The number of fresh claims for refunds received during the year shows a rise from 9,673 to 9,982. Of these, 8,984 claims involving a payment of Rs. 7.50 lakhs on account of outgoing members were settled during the year, as against 8,240 claims in 1953-54. The total number of claims received since inception in 1947 upto the end of the year was 32,077, of which 25,154 were outstanding was 4,972.

The statement of assets and liabilities of the fund as on 31st March 1955, shows that a sum of Rs. 319.36 lakhs is standing to the credit of the provident fund account as on that date. The total sum invested in Government securities up to the end of the year is Rs. 443.07 lakhs (at cost), the investment during the year alone amounting to Rs. 72.01 lakhs. The face value of these securities as on 31st March 1955 is Rs. 485.42 lakhs, as against Rs. 408.72 lakhs a year before, the market value as on that date being Rs. 424.46 lakhs. The standard pattern for the investment of the amount belonging to the Coal Mines Provident Fund is 10 per cent. in National Savings Certificates, 40 per cent. in medium-term securities and 50 per cent. in long-term securities. The interest earned on the investments during the year amounted to Rs. 9.72 lakhs. Under the provisions of the Scheme, interest is required to be credited to the account of each member at such rate as may be determined by the Central Government in consultation with the Board of Trustees from year to year. During the year under review the rate of interest allowed to members on their accumulations in the Fund on the appoval of the Government was 3 per cent. per annum. For the year 1955-56, this rate has been increased to 3½ per cent. per annum, on account of better yields.

The Provident Fund Scheme provides that the employers should pay to the Fund a sum equivalent to 5 per cent. of the total contribution. The expenses on the administration of the Scheme are met out of this levy and not out of the provident fund contributions. The administrative charges realised during the year amounted to Rs. 3.39 lakhs, as against Rs. 3.27 lakhs in 1953-54. The administrative account closed with a revenue surplus of Rs. 3.59 lakhs.

The contributions to the Coal Mines Provident Fund Scheme were hitherto based on basic wages earned by workers. It was, however, found that, as the rates of basic wages in the coal industry were low, members could not accumulate in their provident fund accounts amounts sufficient to be a provision worth the name for their old age or for their dependents in the event of their premature death. The Trustees of the Fund, therefore, recommended that contributions should be based on the total emoluments, that is, on the total of basic wages, dearness allowance and cash equivalent of concessional ratios, on the lines of the Employees Provident Funds Scheme. The Government of India accepted this recommendation and amended the Scheme accordingly. The new rates have been in force since 18th July 1955.

HOW TO IMPROVE POSITION OF JUTE INDUSTRY

SOME SUGGESTIONS OF MR. MORE

AN optimistic outlook for the Indian jute industry is envisaged by Mr. Vishwanath More, the outgoing President of the Gunny Trades Association, Calcutta. Addressing the annual meeting of the Association held the other day, he said that the industry was nicely entrenched and its future was ensured for a number of years. He was not unaware of the fact that it would have to face increasing competition from other countries. In fact, he said that such competition would be of a fierce nature. The Pakistan jute industry, for instance, was growing up speedily and it would before long be an industry to be seriously reckoned with. Mr. More was of the view that the loomage strength of the world jute industry was out of proportion to the requirements of jute goods, with the result that there was bound to ensue a keen struggle for the survival of the fittest in the long run. In this connection, he reiterated the suggestion he made some time last year, namely, the formation of a confederation of the jute industries of India and Pakistan and co-ordination of the expansion programme of the two countries.

Besides this, Mr. More offered several suggestions to improve the position of the industry. In the first instance, he said, abundant and cheap supply of raw jute must be made available to mills, so that they would be able to sell goods readily at attractive prices. Secondly, a vigorous sales promotion campaign in favour of Indian jute goods should be undertaken abroad. Thirdly, the mills must introduce new ideas in the production programme and manufacture speciality goods, which would encourage demand for such goods and yield larger return. The prices should at the same time be reasonable. The third suggestion offered by Mr. More was that the industry should take some tangible steps in the matter of standardisation of the quality of jute goods, so as to preserve the goodwill of the gunny trade and industry in the international markets. The unhealthy competition within the industry itself, coupled with unbridled speculation, leads to deterioration in the quality of goods and instability in prices. Wide variations in prices of the packaging material directly encourage the production of substitutes at cheaper prices. The suggestion of Mr. More to stop this undesirable trend was that representatives of the jute mills, gunny trade, gunny brokers and the shippers should put their heads together and work out a satisfactory solution.

Readers are well aware that there has been an accumulation of stocks of jute goods with mills in recent months, due to slackness in demand, with the result that 2½ per cent. of the looms was resealed with effect from 16th July last, so that 7½ per cent. of the total complement of looms now remain out of commission. The total number of looms thus lying idle is 4,800. This unutilised capacity can, in the opinion of Mr. More, be used by diverging production. He called upon the Government to appoint, in consulation with the Indian Jute Mills Association, an expert committee for finding ways and means of using these looms for the manufacture of other fabrics. Some of these looms, he said, may be utilised with slight alteration, if necessary, for producing coarse cotton fabrics or blankets. "Further, these looms," to quote Mr. More, "with either suitable modifications, if at all, or in total replacement therefor, in order to use the idle power factor of the mill unit within the same economic supervisional, administrative and maintenance expenses, can manufacture cross-blended jute fabrics with the mixture and association of other natural or synthetic fibres in conformity with the daily ever increasing human needs, as other progressive countries of the world are doing. A good deal of cheap, artistic and useful 'fashion fabrics' and materials can be manufactured either solely of jute or in any harmonious admixture thereof on these looms, to enable the jute industry to preserve its due place in the industrial chart of the world."

The foregoing suggestions are doubtless of a constructive nature and deserve careful examination by the I.J.M.A. and the Government of India. It must, however, be added that the proposal for an understanding between India and Pakistan on the size of the industry is not timely, in view of the present state of strained relations between the two countries. Any approach by India to Pakistan at this stage will be treated by the latter as a sign of weakness in the former and will induce Pakistan to put forward impractical proposals. The only solution to Pakistan's competition is to meet it boldly and squarely through higher efficiency of production and lower prices. It is from this point of view that we regard the other suggestions of Mr. More as valuable. In fairness to Mr. More, it must be said that he was quite aware of the efforts of the industry to raise its efficiency through modernisation. But, as he rightly pointed out, modernisation alone will not suffice, for the mere manufacture of the stereotyped jute goods even on modern machinery will not be adequate to win the battle for markets. It must be supplemented by production of new types of jute goods and new lines of manufacture for the idle looms.

Another topical subject on which Mr. More dwelt at length was the futures trading in jute and jute goods. The sixteen trade associations of raw jute and jute goods laboured hard in 1955 and prepared a constitution for the futures market under the auspices of the Indian Jute Mills Association. In the course of the discussion on the constitution with the Forward Markets Commission, Mr. More said, an impression gained ground that the Commission had an idea of combining the gunny business, carried on under the I.J.M.A. gunny contract form, with the futures market in jute goods under one and the same organisation. If this was attempted, Mr. More warned, it would upset the whole gunny business. Dilating more on the subject, Mr. More observed:

"I would again impress on the Commission that the forward gunny business done on the I.J.M.A. gunny contract form for forward delivery and the futures trading in jute goods are two different systems of trading, the latter being only an adjunct to the former. The position of jute goods export trade in India is unique in the world, inasmuch as 85 per cent. of the total production of jute goods of Indian mills are exported abroad. In no other country of the world such a magnificent trade has been tied with speculative markets. The futures trading is of a recent origin and has been several times banned by law, but the genuine business in gunnies is going on since 1860, when the first jute mill was set up in India without interruption. In speculative business, only two constructions are to be dealt with, namely, hessian 40"x10 oz. and B. twills 2½ lbs. with four due dates in a year, but in the business on the I.J.M.A. contracts many hundred constructions of different qualities, sizes and weights are dealt with for forward as well as ready deliveries. In futures operations shipping instructions cannot be given, but in the business on the I.J.M.A. gunny contract shipping instructions are given cent per cent of the business done. I would, therefore, request the Government to keep apart the gunny business conducted on the Indian Jute Mills' Association gunny contracts from the futures trading and there are provisions in the Act for such an exemption."

Since the Forward Markets Commission has not taken a decision on the futures trading in jute and jute goods, it may not be too late to consider the suggestion of the Gunny Trades Association President.

BURLAP BAG CUT-UP HIGHER IN U.S.A.

Consumption of burlap textile bags in the U.S.A. increased by 4.3 per cent. during 1955, reports Jute Bulletin of the Indian Central Jute Committee. Cut-up of cotton textile bags, however, dipped 11.7 per cent. below the 1954 figure. Fourth quarter 1955 cut-up of burlap bags rose by 10.3 per cent., while cotton bags declined by 13 per cent. Inventories of burlap and cotton bags in bag plants were generally steady as supplies were plentiful. Similarly, users' inventories of bags were normal as deliveries were prompt. Bag prices were steady for cotton and slightly lower for burlap.

COFFEE PRODUCTION

FIVE-YEAR PLAN TO RAISE ANNUAL OUTPUT BY 9,000 TONS

A FIVE-YEAR plan for expanding coffee production in India by over 9,000 tons per year has been approved by the Government of India, according to a news agency message from New Delhi. No official confirmation of this report is available at the time of writing. The present average annual production is 26,000 tons though the actual output last year was of the order of 33,000 tons and that for the current year is a little higher. The production under the proposed five-year plan will be raised to annual average of 35,000 tons. The programme, estimated to cost Rs. 2.95 crores, will be implemented by the Coffee Board. It is not known whether this said plan forms part of the draft fifteen-year plan submitted by the Coffee Board recently.

The increase in production is sought to be achieved by a number of measures, such as intensive cultivation, extension of acreage under coffee, supply of improved seeds and manures and the setting up of pulping units and demonstration plots. The first measure, namely, intensive cultivation, will be adopted over an area of about 140,000 acres. For this purpose, it is proposed to give loans amounting to Rs. 1.35 crores to coffee growers over the five-year period. The use of manure, better cultivating practices and better plant protection are among the measures to be taken as part of the intensive cultivation. The new area to be brought under coffee cultivation is expected to be 23,700 acres. This will raise the area under coffee at the end of the five-year plan to about 290,000 acres. Loans will be given to growers to extend cultivation.

It will be interesting to recall here the rising trend of acreage and production during the last five seasons. An idea of this can be gained from the following table:

Season	*Planted area* (in acres)	*Production* (in tons)
1950-51	228,629	18,595
1951-52	235,443	21,235
1952-53	240,038	23,565
1953-54	246,600	29,510
1954-55	246,600	27,000
1955-56	264,000	33,410

The bulk of the area under coffee is confined to production of arabica variety which has a better market, though, during the past five years the expansion in area and production has been more marked in respect of robusta variety. Thus, while the area under arabica has risen from 167,075 acres in 1950-51 to 168,440 acres in 1955-56, that under robusta has gone up from 61,554 to 77,565 acres. Similarly, whereas the production of arabica coffee has gone up from 15,266 tons in 1950-51 to 21,970 tons, that is by 6,704 tons, in 1955-56, that of robusta has increased from 3,329 tons to 11,440 tons, that is, by as much as 8,111 tons. It is, therefore, proposed to give particular attention to the cultivation of arabica variety. For this purpose, 40 pulping units will be established in the coffee growing areas to enable small growers to take up the cultivation of the arabica parchment. At the same time, 320 demonstration plots of two acres each will be set up to educate planters to adopt better methods of cultivation, use of manures and plant protection practices.

Of the total cost of about Rs. 2.95 crores, which the programme is estimated to cost, a sum of Rs. 261.42 lakhs will be given by the Government of India to the Coffee Board to be disbursed as loans to the cultivators. The balance of Rs. 33.25 lakhs will be given as non-recoverable grants. Loans will be given by the Coffee Board to planters having plots between 5 and 50 acres. The bigger growers will be helped by larger advances against the value of the crop.

RUBBER PRODUCTION

The production of rubber in India during June 1956 amounted to 1,484 tons, which represents a decline of 499 tons from that in the previous month, although it is higher by 447 tons over the output in June 1955. The aggregate production for the first six months of the current year amounted to 9,631 tons, as compared with 8,863 tons for the corresponding period of 1955. Consumption by manufacturers during the month under review aggregated 2,401 tons, as against 2,168 tons in the previous month and 2,564 tons in the corresponding month of the previous year. With this, the total consumption during the half-year shows an increase from 13,650 tons to 14,199 tons. Thus, the rise in consumption during for the first six months lags behind that in production. Nevertheless, the overall shortage of rubber has not been improved to any notable extent by the increased production. The stocks with estates and manufacturers at the end of June amounted to 5,602 tons only, having declined from 6,381 tons a year before.

INDIA PRODUCES ATOMIC ENERGY

FUTURE PLANS OUTLINED

A NOTABLE event of great significance to scientific and industrial progress of this country took place last week when the first atomic reactor—the only one in Asia so far—went into production at Trombay, less than a score of miles from the heart of Bombay City. At 3-45 p.m. on 4th August, the reactor on which the leading scientists under the inspiring leadership of Dr. H. J. Bhabha had been working unceasingly for nearly 24 hours, showed signs of activity. In fact, the scientists had been at work since 30th July. But it was only on 4th August that they achieved the necessary reaction which could be said to signify the perfect working of the reactor.

The setting up of the reactor is, indeed, a remarkable achievement for this country, especially when one remembers that it is the first of its kind in Asia. Except for the industrially advanced countries like the U.S., Canada, Britain, France, the U.S.S.R. and a few countries in Europe no other country has its own atomic reactor. If India is now in a position to claim that it has set an atomic reactor to work the credit is due to the several scientists who have laboured at it and to the Prime Minister, Mr. Nehru, who had the foresight to give all fillip to the production of atomic energy in this country. A few years ago, atomic energy was still considered to be only a remote possibility or, at best, a scientific curiosity. But the Government of India realised early enough that atomic energy could be pressed into service in the cause of raising India's living standards. In 1948, it set up the Atomic Energy Commission with the object of developing atomic energy for peaceful purposes. Among the tasks assigned to the Commission were the survey of the country for minerals useful in the release of atomic energy, exploitation of those minerals, research and training. It must be remembered, in this connection, that India unlike certain other industrially advanced countries, did not have the benefit of scientists who had directly participated in the development of atomic energy during the war years. This country had to start from scratch, as it were. But the task was lightened by the fact that the authorities could draw upon the services of men who had been trained in the Tata Institute of Fundamental Research, set up in 1945.

As the work of the Commission progressed, it became convinced that it could embark upon a large-scale industrial project in the sphere of atomic energy. Accordingly, the Department of Atomic Energy was set up on 3rd August 1954, under Dr. Bhabha as the Secretary. It is noteworthy that the date of production of atomic energy has synchronised with the second anniversary of the department. In a message of congratulation to Dr. Bhabha, Mr. Nehru said: "I am delighted to learn that the atomic reactor has started production of atomic energy for the first time in India. It is a significant event for us. I know how you and your colleagues have worked in the last few days, day and night. Please convey my congratulations to all those associated with the work"

The production of atomic energy, like all great scientific work, is the result of joint endeavour of many men. Dr. Bhabha has himself generously acknowledged the work of the band of energetic workers, who spent their time in the completion of the reactor. It would appear that about 50 scientists and engineers were associated with the project. At a Press Conference in Bombay, Dr. Bhabha mentioned the work of Mr. A. S. Rao, Mr. N. B. Prasad, Mr Krishnan and Mr Pereira as outstanding. The Trombay scientists have also received considerable assistance from the authorities in the U.K. The fuel elements for the reactor, it may be noted here, have been provided by the U.K. under an agreement signed in October 1955 between the two countries. Appropriately enough, Dr. Bhabha sent a message of thanks to Sir Edwin Plowden, the Chairman of the U.K. Atomic Energy Authority and Sir John Cockcroft, Director of the Atomic Energy Research Establishment at Harwell, thanking them for "supplying the enriched uranium fuel elements for this reactor and for the friendly co-operation of their scientists at Harwell" and expressing the hope that the successful completion of the project would mark the beginning of a "steadily growing collaboration between the two countries." The reply to this message stated: "The work of both our countries on the peaceful uses of atomic energy will gain yet further in importance as time goes by."

Much thought and careful preparation have gone into the making of the Trombay reactor. The reactor which is housed in a hall 100′ x 50′ x 70′ is of the swimming pool type and consists of a rectangular tank 23′ x 10′ x 23′ with massive concrete walls 8½′ thick. The reactor is immersed in this pool water. The core of the reactor is approximately a cube of two feet, which is suspended by a rigid frame from a trolley above, which moves on rails mounted on the sides of the pool. The core consists of from 25 to 30 fuel elements, containing the fissile material Uranium 235 in the form of a sandwich. Each thin plate of uranium 235 aluminium alloy is sandwiched between two plates of aluminium. The fuel elements can be removed or placed in position by long aluminium rods operated from the trolley above. When in operation, the fuel elements generate heat through fission and are cooled by the water which also acts as a "moderator" for slowing down neutrons. The reactor is provided with a number of automatic safety devices which shut it down in a fraction of a second in the event of any danger. Even if all the automatic controls were to fail, the excessive generation of heat would convert the water into steam and the reactor would automatically shut down, because there would be no water left to slow down the neutrons.

The Trombay reactor, it is stated, costs about Rs. 25 to Rs. 30 lakhs. It will be used for training personnel for the bigger and more complicated reactors which are to come, for experiment in physics and for making radio-active isotopes for research in agriculture, industry and medicine. In other words, the reactor is part of the programme for the development of atomic energy and its application to peaceful purposes. The authorities, according to Dr. Bhabha, intend to make their own heavy water; an uranium plant is also being set up in Bombay. The Canadian reactor, on which work is now in progress, is expected to be ready by early 1958. The cost of this reactor is Rs. 7 crores which is shared equally between India and Canada. An atomic power station, generating 100,000 kw., it has been estimated, would cost Rs. 20 crores. The aim of the authorities, it is stated, is to set up several atomic power stations all over the country in the next ten years.

Clearly, the augmentation of the power supply through atomic power stations and the setting up reactors would be of very great benefit to India's industrial and agricultural progress. The entire country will wish all success to the work of the scientists, who are now laying the foundations of such progress.

A factory for turning out 7,000 tons of steel castings a year is proposed to be set up at Chittaranjan at an estimated cost of about six million dollars. The output of the factory can later on be expanded to 10,000 tons of steel castings a year. The Technical Co-operation Mission will assist the Government of India in the setting up of this factory to the extent of two and a half million to three million dollars. This aid will be utilised for the purchase of plant and machinery for the factory.

India's claim to distinction as a country which possessed the world's largest railway platform at Sonepur has been successfully challenged by Sweden. It would appear that Storvik, the headquarters of the Swedish Railways at Stockholm, has a platform which is larger than the Sonepur platform, in that the former is about 923.9 metres or about 2,470 feet, as against the Sonepur platform's length of 2,415 feet.

PROBE INTO RAILWAY ADMINISTRATION

PUBLIC ACCOUNTS COMMITTEE'S CRITICISMS

SEVERAL irregularities in the maintenance of accounts and purchases of stores by the Railway authorities have been pointed out by the Public Accounts Committee (Chairman: Mr. V. B. Gandhi) appointed to go into and report on the Appropriation Accounts of Railways in India for 1953-54 and Audit Report, 1955. While we hope that many of the defects would have been remedied by now, a careful perusal of the Report cannot but make observers feel that more vigorous action on the part of the authorities is necessary in order to ensure that public money is well spent.

The Committee complains that there are considerable delays in the submission of notes containing information called for by the Committee which hampers its work and also in recording its findings in time on merits. It has enumerated several cases of irregular and bad accounting procedures. To mention only a few of them, works have been executed which involve the spending of money far above the amount sanctioned in the budget and, in many cases, expenses have been incurred for which no specific provision was made in the budget and, in the year under review, the expenses under the latter head runs to Rs. 28.39 lakhs. In some cases, cost of materials intended for various works was debited to the accounts of those works much in advance of the physical movement of the stores from the stores depots. Similarly, on the plea that it is difficult to get estimates of store purchases to be made abroad in time, amounts have been provided for in the budget which have practically no bearing to the actual amounts paid for such purchases later.

In September 1948, the Railway Board entered into an agreement with an Indian company for the supply of pig iron which was subsequently to be converted into cast iron sleepers. According to the terms of the agreement, the Board was to pay the Company works cost plus profit and "place extra" by which was meant the freight from the nearest port to destination. Under the arrangements for the distribution of steel, the "place extra" was recoverable irrespective of whether any actual railway freight was incurred or not by the producer in sending the despatches. Since, in this case, the pig iron supplied was used at the Company's works itself and there was no movement, the question of paying any freight in the shape of "place extra" never arose. On a reference, the Iron and Steel Controller was reported to have expressed the view that the "place extra" paid to the Company was in excess of the fair retention price to which only it was entitled. The total freight thus paid to the Company in excess was Rs. 10 lakhs. The question of getting refund for the amount was not taken up with the Company until after two years.

During 1949, the Ministry of Railways entered into an agreement with Schlieren, a Swiss firm for getting technical assistance for the establishment of a factory in India for the manufacture of all-metal light-weight coaching stock. Payments for the first 50 prototype coaches had to be made in Swiss currency. This payment included two incidental expenses one of which was payment to the Swiss Federal Authorities for additional export quota to the value of 217,000 Swiss francs. This levy was however discontinued by the Swiss Government from 25th October 1949. The order for the supply of first 50 coaches was placed by the Railway Board on the Company in December 1949. Before the receipt of the order, however, the firm had obtained on the 7th October 1949 from the Swiss Government on payment a permit for the export of the above coaches. Accordingly, the Railway Board reimbursed the payment of 217,000 Swiss francs to the Company. The Committee feels that the necessity for the payment of the export quota levy "was neither established nor urgent because the formal order was not received by the Company at that time" and has suggested that the Railway Board should make further efforts to get a refund of the amount paid to the Company.

A contract for the supply of 100 "W.G." locomotives had been placed by the India Stores Department, London, with a firm in the United Kingdom. The locomotives were put on the rails in India from September 1950 onwards and the first report about the crack of a cylinder of one of the locomotives was reported in July 1952. Thereafter, to put it in the Committee's own

(Continued on page 289)

NEW PRODUCTS AND PROCESSES

A New Calculator

AN amazingly universal hand-operated calculator, capable of all four arithmetical operations, has been placed on the market by Contina Ltd. of Vaduz in Principality of Liechtenstein (Switzerland), now available to Indian users through their agents. Curta is a complete pocket-size calculating machine of modern design and fine finish coupled with an attractive appearance. It weighs only a few ounces, which makes it convenient to be carried anywhere, any time. Curta is used all over the world by leading business houses. It has been found useful to expeditions on ice-caps and the Himalayas too.

High-class Magnet Alloys

The plant Liezen of the V.O.E.S.T., The United Steel Works, in Austria, took up the production of a high-class magnet alloy under the trade mark V.O.E.S.T.—Ticonal—Spezial." The new alloy has a special crystallographic orientation. This new production item places Liezen in the foremost row of magnet manufacturers in Europe. For a long time the plant has been turning out high-class permanent magnets for Austria's radio and television industry. V.O.E.S.T.-Ticonal is manufactured according to a patent held by Philips of Eindhoven and has proved to be a most active impulse on a general production expansion at Liezen. V.O.E.S.T. has concluded numerous export contracts for the new material.

A New Light Vehicle

The first of the Astra four-wheeled runabouts built by the British Anzani Engineering Company of Hampton Hill, Middlesex, for its associate the Astra Car Company have been delivered. This vehicle, the advent of which was announced in *The Financial Times*, on 11th July, will cost £347 16*s.* including purchase tax and is said to be the smallest and cheapest four-wheeler on the British market. It has four-wheel independent suspension and a rear-mounted twin-cylinder, air-cooled engine of 322 c.c. The Astra can carry two people and up to 250 lbs. of goods or luggage; there is sufficient width, leg and headroom to accommodate three people for short journeys, while for a child there is plenty of room. As a van it can carry 3¼ cwts. of goods. In both versions the entire rear-end panel above floor level opens upwards for loading. Performance claims are a top speed of 55 m.p.h. and a cruising speed of 40-50 m.p.h. Everyday fuel consumption is said to be in the region of 60 m.p.g. The Astra is intended for tradesmen needing transport for small loads, or for commercial travellers and their samples. The engine is an air-cooled rotary-valve two-stroke, mounted under the floor in unit with a three-speed and reverse gearbox, developing approximately 15 b.h.p. at 4,800 r.p.m. Final drive by chain to a differential unit. Under the bonnet is the four-gallon fuel tank and spare wheel, reached through a dummy front grille.

Bespoke Insulation

"Tailor made" plastic based insulating materials which can be manufactured to suit the specific requirements of manufacturers of electronic and electrical equipment are being developed in several industrial laboratories in Europe and the U.S. Experiments with differently balanced compounds of resins and filling materials have shown that when manufacturing difficulties have been overcome it should prove possible to produce relatively short runs of electrical insulating materials having "made to measure" electrical and physical properities for certain types of electronic equipment. Scientists hope that it may later on prove possible to extend the idea of the bespoke manufacturing of electrical insulating materials to cover a wide range of specifications.

Tinning of Cast Iron

A method of tinning cast iron, which removes many of the difficulties usually associated with the process, is expected to add substantially to the number of cast iron products in industry and to increase the use of hot tinning. Known as the direct chloride process, it is easy to operate, inexpensive and has already been approved by a number of important manufacturers in the United Kingdom, and may be taken up by many other countries. Cast iron has always been considered a difficult material to tin by hot-dipping because of the presence of graphite on the rough surface of the casting. This constituent has to be removed by a costly process, or the cast iron must be coated with pure iron or copper before tinning. The problems involved in tinning cast iron have up till now greatly narrowed the field for its use in industry. The new process, first developed by the Tin Research Institute for high-phosphorus iron which was not amenable to tinning by other methods, has now been found suitable for ordinary grey cast irons. With the direct chloride process no previous plating with iron or copper is necessary. One hot bath only is used, with a flux of fused chlorides as a layer on top of the molten tin. This layer, which is one inch thick, is kept in a state of vigorous frothing by frequent additions of water. The surface to be tinned is prepared by blasting with angular steel grit, of a grade below 70 mesh, followed by degreasing with trichlorethylene vapour. The article is then dipped in an aqueous fluxing solution of zinc, sodium and ammonium chlorides (24, 6 and 3 per cent. respectively) containing about 1 per cent. of free hydrochloric acid. Finally it is dipped through the "topping" layer of chlorides (zinc 8; sodium 2 and ammonium 1) into the tin bath at 300-320 deg. C. and held for five minutes.

TRAVANCORE CEMENTS LIMITED

MR. C. S. LOGANATHAN'S SPEECH AT ANNUAL MEETING

THE Ninth Ordinary General Meeting of Travancore Cements Ltd. was held at Kottayam on 30th July 1956. Addressing the shareholders on the occasion, Mr. C. S. Loganathan expressed the view that the curtailment of profit of a heavy and risky industry like the cement industry through State regulation was one of the main reasons for the shortage of cement in India. He also explained to the shareholders how the reduction in the selling price of the Company's cement in November last affected the Company's working during the last two months of the year. Since then, however, the price had been increased partially, but this, he said, did not solve the Company's problem.

The following is the full text of Mr. Loganathan's speech:

"GENTLEMEN,

"I have great pleasure in bidding all of you welcome to the ninth annual general meeting of the Company.

"The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1955 have now been before you for some time and, with your permission, I shall take them as read.

"The year 1955 has been in some respects a good year for this factory but, unfortunately, in other respects somewhat disappointing.

"Your factory has been functioning extremely well during the year. The production of cement has been more than the rated maximum capacity of the factory. We have actually produced during the year about 52,000 tons of cement and, as we had some stocks of cement, we have been able to supply more than 55,000 tons. The supplies of cement from your factory during the year have been approximately 22,400 tons to our State Government and 32,600 tons to the private sector of the T.-C. State.

"You will recollect from my speech last year that the price fixed for our cement by the Central Government included reasonable profit, even if the price allowed by the Central Government was not as high as expected and as recommended by the Tariff Commission. Your Company was making reasonable profit during the first eight months of operation and your Directors had expected that the smooth operation would continue and that we could pay reasonable dividend for the year.

"In other countries, a heavy and risky industry, like the cement industry, is allowed considerably higher profits. In most advanced countries, well-run cement factories are paying dividends ranging from 20 to 35 per cent. Our Central Government, however, will not allow dividend like this, but I personally much regret this policy, because curtailment of profits is, in my opinion, one of the major reasons for the shortage of cement in India.

"Your Directors decided at the Board meeting on 4th September, 1955, to declare an interim dividend of 5 per cent., and I can assure you, gentlemen, that there was every reason to believe that the final dividend for the year 1955 would be about 8 to 9 per cent.

Cut in Cement Price

"However, in the beginning of November, we suddenly got the shock that the Central Government reduced our selling price by Rs. 15 per ton, thus forcing your Company to operate at a loss. Due to the loss incurred during the last two months of the year, the actual profit for the whole year of 1955 was about the same as the profit made for the previous year. Your Directors have, therefore, decided to recommend the same dividend for the year as was paid for the year 1954.

"The reduction made in our selling price came as a shock to us. We had been working well and efficiently and there was, in my opinion, no reason whatsoever for this drastic cut. Your Company represented the matter to the Central Government and this was strongly supported and recommended by the T.-C. State Government. The Central Government increased the price of our cement by Rs. 5 per ton during the beginning of February 1956, but this, unfortunately, does not solve our problem, because we are actually still working without any profit. I have, now, good news from the Central Government regarding this unfortunate state of affairs. We have, only a few days back, received communication from the Central Government that the matter will be considered immediately.

"The cement position in India today is very critical. You will all have seen from the newspapers that the Minister for Commerce and Industries informed the Lok Sabha a few days back that only about 50 per cent. of the cement required in India during the next five years will be available from indigenous sources and that a fraction only of the deficit can be imported into India. You will all realise that this means that the implementation of the second Five-year Plan will now have to be reviewed. Without cement no progress can be made in the country.

Selling Agents for State Trading Corporation

"The shareholders of this Company would also have seen from the newspapers about the State Trading Corporation of India (Private) Ltd., which has been formed by the Central Government recently. I am happy to inform you that your Company has been appointed selling agents of the State Trading Corporation for 'Vembanad' Brand cement produced by us.

"I hope, I have given you some real information about the position of your factory and the position of the cement industry in India today and for the near future. The cement industry in India is one of the most important industries for the development of the country. It is, therefore, hoped that our factory as well as all other cement factories will get the support and help from the Central Government to which they are entitled.

"I am proud to be able to state today, that we, during the year 1955, have had a most cordial relationship between workers and management. We have again had another year during which not a single man-hour has been lost due to disputes and no worker has been discharged for disciplinary reasons.

"I shall now conclude by moving that the agenda for the meeting be taken up for discussion and decisions as the members of the Company consider fit."

SELF-ADHESIVE TAPE

Self-adhesive polythene tape has been introduced by W. H. Henley's Telegraph Works Company for making joints where excellent electrical properties are essential. It is described in a recent issue of the company's house journal, *Distribution of Electricity*, as a pressure-sensitive adhesive elastic strip suitable for making joints between polythene, p.v.c., and natural or synthetic rubber cables, with first-class aging properties and ozone resistance. While it is only slowly softened by mineral oils, it should not be used in conjunction with oil-impregnated cable.

REDUNDANCY PROBLEMS IN THE WEST

USE OF AUTOMATIC DEVICES MAY ACCENTUATE ISSUES

INDIA is not the only country where "rationalisation" and "surplus labour" are grave problems which demand for their solution utmost patience and genuine sympathy. In the West, too, similar problems arise from time to time, either as a result of fall in markets or technological progress. Just now, the U.K. has been rocked by a series of strikes which had their origin in the dismissal of 3,500 operatives by the Standard Motors as a result of introduction of automation. This was followed by the retrenchment of 6,000 workers by the British Motor Corporation. These workers had been rendered "surplus" through a fall in car output necessitated by the curb on the hire-purchase system. The Corporation's employees, dissatisfied with the management's decision to lay off the workers, have struck work. And there is evidence to show that the strike is spreading to other industries.

Serious as the strike situation in the U.K. is, Indian observers will note one point of difference between the attitude of the workers in the U.K. and that generally adopted by labour leaders in India. In the U.K., nobody contends that a manufacturing unit should not, under any circumstances, lay off labour. Nor is it seriously suggested that advanced technological processes, the use of which may frequently involve some retrenchment of labour, should not be adopted at all. The opposition is mainly to sudden retrenchment. The workers also demand that adequate notice should be given before retrenchment is effected and that they should be consulted before lay off is ordered. The difference between this attitude and the Indian attitude lies in the fact that, whereas the British worker recognises retrenchment as a disagreeable necessity under the certain circumstances and seeks means of meeting it, in India, not only labour policy but even the entire industrial policy are regulated by the consideration that no single individual is thrown out of employment. The impact of the Indian attitude towards surplus labour on growth of industries can be—as, in fact, it is—very serious. It makes for inflexibility, failure to pass on the full benefit of science to consumers and a lower level of economic activity all round.

U.K. Government's Attitude

The correct attitude towards the unemployment which might result from the painful adjustments of an industry to changes in market size or technological improvements is the one that was adopted by Mr. Macmillan, the British Chancellor of the Exchequer. Referring to the problem of surplus labour in certain industries, in general, and to the motor industry in particular, he declared, in the course of a recent debate in the House of Commons, that the threat of unemployment came from Britain's unfitness to compete in world markets. He agreed there were many human problems involved in switching labour. But he thought it would be tragic if the difficulties of temporary unemployment or underemployment in certain industries caused premature and reckless abandonment of a broad policy calculated to avoid long-term and massive unemployment, and he urged maximum consultation between all concerned. "Because there are one or two weak spots it would be very wrong to assume that we are in danger of a general recession," said Mr. Macmillan. He referred to the high export rate in the vehicle industry—a much higher rate than last year. At the same time, an overload had shown itself. It was clear, Mr. Macmillan said, Britain should avoid underemployment or concealed underemployment in industries which had lost their market, when there was a severe labour shortage in industries which were still expanding, and where there was the technical capacity to produce more. The motor industry, itself, should not be defeatist. New plant should be completed—modernisation should not be "halted." He said it would be an injury to the men employed in the car industry and to the whole national interest if recent readjustments were represented as anything like a catastrophic collapse. The motor industry, he pointed out, was absorbing an undue share of manpower; its labour force had grown by 40,000 in the last two or three years.

Surplus Labour

Whatever may be the outcome of the present strikes in the U.K., they have had one important result. They have stimulated interest in the problem of surplus labour and the means of solving it in a satisfactory manner. There is an additional reason why the problem has attracted such wide interest in the West. It lies in the fact that people realise that the coming atomic age and electronic devices may give an unprecedented fillip to automation and aggravate the problem of surplus labour. Both managements and labour are becoming alive to these developments. Obviously, they do not wish to be caught napping when these developments overtake them.

Many observers in the U.K. have averred that it is profitable in this connection to study the methods adopted in the U.S. to tackle the problem of surplus labour. In that country, the contracts made between labour unions and employers, it is stated, contain specific clauses relating to this problem. They are said to cover the problem in considerable detail—how to forestall dismissals by agreed restrictions on overtime, by the sacking of marginal employees and the refusal to take on new workers, by a change in the sub-contracting procedure and how to deal with the problem of redundancy by sharing the reduced amount of work available among the whole labour force and how to regulate lay offs (when they cannot be avoided) through consultation. It is also common in the U.S. for men dismissed permanently (through closure of a factory or through technological change) to receive what is called a severance payment, the size of which in relation to service and earnings is usually laid down in the company-union contract.

By and large, there is, in the U.S., a realistic attitude towards surplus labour, particularly towards the use of automatic devices which might accentuate the problem. The workers do not oppose automation. They are, however, determined to see that they also share in the gains which might accrue to industry through automation. This attitude was rightly praised by Professor C. Schmid of Germany. Reporting on automation to the Social Democratic Party Congress, held recently in Munich, Mr. Schmid declared that labour's task was to assimilate automation, not to oppose it. He said that automation would inevitably have three results. The social status of certain groups of skilled workers would be lowered; the number of technical specialists would increase until the ratio of technical specialists to workers would perhaps be something like one to two; and certain categories of employees, mainly in offices, would disappear. It was not true, he said, that this "second industrial revolution" would encompass only very large factories; already American producers of electronic steering instruments were selling a rising part of their output to medium-sized plants. Labour, the German Professor averred, ought to make the best of automation by demanding a guaranteed annual wage, a gradual shortening of working hours until the four-day week was reached and modernising school education so that children of today should be trained in professions that will be in demand in 10 to 15 years.

Automation means so much to employers and workers and may introduce new problems in productive processes and in industrial relations. It is not some isolated development in a single industry or group of industries. It is a complex technological movement with profound significance to industrial set-up. A recent report entitled "automation," issued by the U.K.'s Department of Scientific and Industrial Research, referred to several "streams" of development which contributed to automation. They include transfer devices and advanced handling techniques and their use in automatic production and assembly lines and the development of electronic computers for processing data and for controlling and integrating manufacturing operations. The most important of these developments is that of electronic computers, not only because of their application to the control of machine tools and to the automatic performance of clerical work but also because of the prospects which they open up for the first time for the integrated control of separate manufacturing processes. These developments serve to lend a new urgency to the problem of industrial relations. In the first place, the co-operation of labour is vitally necessary before automation is applied to industries. Secondly, adequate training facilities should be provided by the management, in order to ensure that the necessary skill is acquired by the workers and that automation processes are introduced smoothly and worked effectively.

Resistance in India

What should be the attitude of this country towards automation? Clearly, there is much psychological resistance to any change which may mean even very slight disturbance to employment. But it is wise to recognise that automation is coming to stay, that India cannot for long remain unaffected by these changes. It is, however, not necessary to import into this country every automatic device and thereby cause industrial unrest. For one thing, many of these devices are suited only for countries which are already industrially advanced and which command a large market, as, for instance, the market for automobiles and refrigerators in America. In India, the market for many engineering industries is seriously restricted by the low living standards of the people. Secondly, the countries which adopt automation have no serious shortage of capital; they suffer from an acute shortage of labour. In India, conditions are different, capital being short and labour being plentiful. It must be remembered here that many of these automatic devices are heavy consumers of capital. These factors restrict the scope for applying automation to this country.

Nevertheless, it must be realised that, in several industries, notably cotton and jute textiles, as well as certain engineering industries. India has to maintain a competitive position. If it does not maintain that position, it will lose its export markets. Also, not all automation should be suspect in India's eyes. There are several devices which would reduce the irksomeness of labour involved. Also, there are a few such devices the use of which would mean only very small unemployment but considerable gain to the industry and the workers concerned. It would be obviously wrong to hold up automation in such cases. It is, therefore, time the Government as well as labour leaders changed their attitude towards the employment of automatic devices and the consequent problem of unemployment. Any persistence in their present attitude of shortsighted opposition to all technological changes would mean that this country would miss the second industrial revolution, implied in nuclear power and automation, and would be hard put to make up the leeway at a later date.

MANAGING AGENT'S REMUNERATION UNDER NEW COMPANIES ACT

IMPLICATIONS OF THE RELEVANT SECTIONS ELUCIDATED

By A. Ramaiya
ADVOCATE, MADURAI

AFTER the coming into force of the new Companies Act I of 1956, several managing agents of companies have approached me for opinion and advice as regards doubts and difficulties relating to the drawing of remuneration by them from their managed companies in conformity with the provisions of the new Act; and in view of the general importance of the subject I shall discuss here the exact scope and implications of the sections dealing with managing agency remuneration, especially sections 348 and 353, read with section 198 of the Act.

Section 348 is the main section relating to the remuneration of the managing agent and it provides as follows:

"Save as otherwise expressly provided in this Act, a company shall not pay to its managing agent, in respect of any financial year beginning at or after the commencement of this Act, by way of remuneration, whether in respect of his services as managing agent or in any other capacity, any sum in excess of 10 per cent. of the net profits of the company for that financial year."

In plain language this means that the total remuneration payable in respect of any financial year by a company to its managing agent for all services rendered by him to the company in whatsoever capacity they may be, that is, whether as managing agent or in any other capacity, is not to exceed 10 per cent. of the net profits of the company for that financial year. The net profits are to be computed in the manner laid down in section 349, after deducting from the gross profits all the various items of expenditure mentioned in that section. In particular for determining the managing agent's remuneration, the 10 per cent. of net profits has to be calculated after deducting also all remuneration, whether by way of fees, monthly payments or percentage of profits, payable to the directors.

An Illustration

For determining, however, the quantum of net profits of a company for purposes of section 198, no part of the remuneration, it must be noted, payable to the directors by way of fees, monthly payments or otherwise has to be deducted from the gross profits. Sub-section (1) of that section runs thus:

"Save as otherwise expressly provided in this Act, in the case of a public company or private company which is a subsidiary of a public company, the total remuneration payable by the company to its directors, its managing agent or secretaries and treasurers, if any, and its manager, if any, shall not exceed 11 per cent. of the net profits of the company, computed in the manner laid down in sections 349, 350 and 351, except that the remuneration of the directors shall not be deducted from the gross profits."

The difference in effect of the percentage working in the two cases is significant, and may be illustrated by taking a practical instance. A, a textile mills company, earns a net profit of, say, Rs. 5,00,000, computed in accordance with the provisions of section 349, after deducting also the remuneration paid or payable to its directors, five in number, amounting to Rs. 18,000. The net profits in such case for purposes of section 348 being Rs. 5,00,000, the maximum remuneration payable to the managing agent will be 10 per cent. or Rs. 50,000.

But then, section 198(1) says that the total managerial remuneration for the entire managing organisation (consisting of the directors, managing agent and manager, if any) should not exceed 11 per cent. of the net profits as computed in accordance with section 349 but without deducting directors' remuneration. In the case taken for illustration above, the total net profits so computed, that is, without deducting directors' salaries, etc., will be Rs. 5,00,000 *plus* Rs. 18,000, i.e., Rs. 5,18,000, and 11 per cent. of this comes to Rs. 56,980. Deducting from out of this the Rs. 18,000 paid or payable to the Directors, the remuneration of the managing agent will be only the balance of Rs. 38,920. Though he may be entitled to a maximum of 10 per cent., he cannot draw more than Rs. 38,920 as any amount further drawn will have the effect of contravening the overall limit fixed by section 198(1) and be therefore illegal. The company may, if it should so think fit, reduce the remuneration of the directors to any extent and correspondingly increase that of its managing agent.

Again, if there be also in addition to the directors a paid manager for the company—coming within the definition of "manager" given in section 2(24) and he is paid any monthly salary or other remuneration amounting to, say, Rs. 6,000, his remuneration also will have to be deducted and the balance alone will be available to the managing agent for his remuneration, that is, Rs. 32,920.

Thus, the difference in the methods of calculation of net profits prescribed for purposes of sections 348 and 198(1), if arithmetically worked out, shows that, in all cases where the directors are paid some sizable or appreciable remuneration by way of monthly salaries or otherwise, the remuneration of the managing agent will never reach the 10 per cent. maximum limit allowed to him under section 348. The only possible cases where the 10 per cent. limit can be reached are where the sum total of the remuneration of the directors and the manager together does not exceed, roughly speaking, 1.1 per cent. of the total net profits of the company.

Other Remuneration

Section 348 limits to a maximum of 10 per cent. of net profits the total remuneration of a managing agent for all the services rendered by him to the company whether as managing agent or in any other capacity. This will obviously include all commission and other remuneration payable for services rendered by him as selling agent, buying agent, etc., to the extent permitted by sections 356 to 361. Though section 348 begins by using the words "save as otherwise expressly provided," there is no provision in any of the sections from 356 to 361 or elsewhere in the Act expressly providing that, in addition to the 10 per cent. of net profits, payment of commission or other remuneration for any services rendered may also be made to the managing agent. On the other hand, section 352 expressly and without any qualification lays down that additional remuneration in excess of the limit provided by section 348 read with section 352 may not be paid to a managing agent except with the approval of the Central Government and except where it is required in the public interest. In the face of the express words of section 348 prohibiting the payment of more than a maximum of 10 per cent. of net profits as remuneration for services rendered as managing agent and in any other capacity, it does not appear to me possible to contend that any further remuneration can be paid to a managing agent except as permitted by section 252. The clause in section 198(3) (b) which states that the overall maximum limit of 11 per cent. by way of managerial remuneration laid down by section 198(1) does not affect the operation of sections 356 to 360 has no significance in this context.

Time of Payment

As regards the time of payment of remuneration to a managing agent, section 353 lays down that,

"The remuneration payable to the managing agent for any financial year or part thereof shall not be paid to him, until the accounts of the company for such financial year have been audited and laid before the company in general meeting."

Thus, the right of the managing agent of a company to claim payment of his remuneration in respect of any financial year arises only after the accounts of the company have been audited and laid before the company in general meeting subsequent to, that is, after the expiry of, the financial year concerned. This means that both the audit of the accounts of the financial year and the laying of such audited accounts before a general meeting are conditions precedent to the right of the managing agent to claim payment of his remuneration. In this connection it requires to be borne in mind that the managing agent is not allowed to draw any instalment or monthly payment of even a portion of his percentage remuneration at any time during the currency of a financial year. Section 354 only permits the reimbursement of expenses incurred by the managing agent, all claim to office allowance in any form or shape being prohibited.

The proviso to section 353, which enables the payment to a managing agent of a specified minimum remuneration in suitable instalments, it should be noted, applies only to cases of a minimum remuneration being provided for by a company in pursuance of section 198(4) where the company earns no profits or its profits are inadequate. The provisions of the proviso to section 353 and of sub-section (4) of section 198 are as follows:

"Provided that the minimum remuneration, if any, payable in pursuance of section 198 may be paid to the managing agent in such suitable instalments as may be specified either in the articles of the company or in a resolution passed by the company at an annual general meeting or in the managing agency agreement executed by the company." (Proviso to section 353.)

"Notwithstanding anything contained in sub-sections (1) to (3), if in any financial year, a company has no profits or its profits are inadequate, the company may pay to any director or directors including managing or whole-time directors, if any, its managing agent or secretaries and treasurers, if any, and its manager, if any, or if there are two or more of them holding office in the company to all of them together, by way of minimum remuneration, such sum not exceeding fifty thousand rupees per annum as it considers reasonable." (Section 198 (4).)

Having regard to the context, the expression "inadequate profits" used above, presumably means profits which are not adequate enough to pay the managerial organisation as a whole even Rs. 50,000, if worked out on the maximum 11 per cent. basis prescribed by section 198(1); that is to say, whenever the net profits of a company fall below Rs. 4,54,545. In all cases where the net profits come to more than Rs. 4,54,545, i.e., where there are adequate or more than adequate profits, there is no provision in the Act enabling the payment of remuneration to a managing agent otherwise than as provided in section 353, that is, until after the accounts of a financial year of the company are audited and laid before the company in general meeting.

Of course, this provision works needlessly harshly on the managing agents of prosperous companies earning good profits, inasmuch as it prevents suitable instalment payments out of their remuneration being made to them even within the limit of the minimum allowed in the case of non-prosperous companies. But this is a matter for Parliament to consider.

Transitional Difficulty

In view of section 348 being expressly made applicable only in respect of any financial year beginning at or after the commencement of the new Companies Act, that is, on or after 1st April 1956, a ticklish question is raised as regards cases where the remuneration is due and payable to their managing agents by companies whose financial year had already begun on some date prior to 1st April 1956. In any such case, where the financial year of a company began, say, on 1st January 1956 or on *Diwali* Day in 1955 or on some other date before 1st April 1956 is the remuneration of the managing agent payable to him as provided in the managing agency agreement or do the limitations contained in sections 198 and/or 348 govern? Clearly, section 348 does not apply, as its application is expressly confined to financial years beginning at or after the commencement of the Act. As regards section 198(1), however, in the absence of provision to the contrary, it takes effect from the date of commencement of the Act, that is, 1st April 1956, and this means that the limit of overall managerial remuneration of 11 per cent. fixed by that section for the entire managing organisation comprising the directors, managing agent and manager, if any, should be given effect to in all cases of remuneration accruing, due or payable on or after the commencement of the Act, irrespective of when the financial year concerned began. Section 353 which deals with the time of payment of remuneration and which takes effect from the date of commencement of the Act puts the matter beyond all doubt as it says that, in respect of any financial year (it does not confine itself to a financial year only after the commencement of the Act) the remuneration of the managing agent accrues due and payable only after the accounts are audited and laid before the company in general meeting. As the provisions of section 353 determine when the remuneration of the managing agent accrues due and payable it is clear that the remuneration for a financial year beginning before 1st April 1956 becomes due and payable only after the accounts of that year are audited and laid before the company, that is, after the expiry of the financial year and, therefore, the payment of remuneration for such financial year is also governed by the limits imposed by section 198(1) and there is, therefore,

Application has been made for the market price of the 7 per cent. (Taxable) Cumulative Redeemable Preference Shares to be quoted in the list issued by the Hyderabad Stock Exchange.

The Subscription List will open at 10-30 a.m. on the 23rd day of August, 1956 and will close on the 27th day of August, 1956, or earlier, or later, as the Directors may decide.

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

(Incorporated on 10th November 1930 under the Hyderabad Companies Act, No. IV of 1320 Fasli; now subject to the Companies Act 1956.)

SHARE CAPITAL

AUTHORISED		ISSUED AND FULLY PAID
Rs. 1,25,00,000	Ordinary Shares of Rs. 10 each fully paid	Rs. 1,00,00,000
Rs. 30,00,000	7% (Taxable) Cumulative Redeemable Preference Shares of Rs. 100 each	7,25,500
Rs. 1,55,00,000		Rs. 1,07,25,500

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding.

OFFER OF

22,745 7% (Taxable) Cumulative Redeemable Preference Shares of Rs. 100 each at par payable in full on Application.

Applications must be for a minimum of 5 Shares or for multiples of 5 Shares.

The 7% (Taxable) Cumulative Redeemable Preference Shares now being offered confer upon the holder the following rights:—

Dividend: A fixed cumulative preferential dividend at the rate of 7% per annum (subject to income-tax) on the capital for the time being paid thereon. It is intended that the dividend will be payable half-yearly on the 1st day of April and the 1st day of October, the first dividend being paid on the 1st October 1956, and will be calculated on the full par value of the shares from the date of allotment up to 30th September 1956.

Capital: In a winding-up, whether voluntary or otherwise, repayment of the capital paid up thereon together with a premium of rupees one per cent. and a sum equal to any arrears of the fixed dividend whether declared or not calculated to the date of the commencement of the winding-up (subject to income-tax) in priority to the ordinary shares but shall not entitle the holders thereof to any further participation in the profits or assets of the Company.

Redemption: Subject to the provisions of the Companies Act, 1956, redemption on or after the 1st April 1968 in whole or in part to be selected by drawings at the option of the Company acting through its Directors on not less than three months' notice given by advertisement in some newspaper circulating in Hyderabad (Deccan) at the price of Rs. 101 for each share together with the dividend due to the date of redemption.

The Company will not pay interest on unclaimed redemption money.

Votes: The right to receive notice of and to attend at General Meetings of the Company but to vote thereat only in accordance with the provisions of Section 87 of the Companies Act, 1956, namely—

(*a*) on resolutions placed before the Company which directly affect the rights attached to such preference shares as stated in Section 87 (2) (*a*) and the explanation thereto;

(*b*) on every resolution placed before the Company at any meeting, if the dividend or any part thereof due on such preference shares has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the Meeting.

On all resolutions upon which holders of the preference shares now being offered are entitled to vote, such shares will on a show of hands give such holder present in person one vote and will carry the right on a poll to ten votes for each share.

The rights attaching to the preference shares now being offered may be varied from time to time in accordance with the provisions of the Company's Articles of Association and of the Companies Act, 1956, or any amendment or modification thereto, and in particular under the following Articles.

Increase of Capital: Any of the shares for the time being unissued and any new shares from time to time to be created may from time to time be issued with any such right of preference in respect of dividend and of repayment of capital over any shares previously issued or then about to be issued (subject to the provisions hereinafter contained as to the consent of the holders of any class of shares where such consent is necessary), or at such a premium as compared with any other shares previously issued or then about to be issued, or subject to any such conditions or provisions, and with any such right, on such terms as the Company may from time to time determine.

Modification of class rights: If at any time the share capital is divided into different classes of shares, the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) may, subject to the provisions of Sections 106 and 107 of the Companies Act, 1956, and whether or not the Company is being wound-up, be varied with the consent in writing of the holders of three-fourths of the issued shares of that class, or with the sanction of a special resolution passed at a separate general meeting of the holders of the shares of that class and all the provisions of these Articles relating to general meetings shall mutatis mutandis apply, but so that the necessary quorum shall be two persons at least holding or representing by proxy one-third of the issued shares of the class in question. This Article is without prejudice to the power of the Company under Article 49 hereof and the Company's right in General Meeting to increase its Capital, and the rights conferred upon the holders of the shares of any class issued with preferred or other rights shall not, unless otherwise expressly provided by the terms of issue of the shares of that class, be deemed to be varied by the creation or issue of further shares ranking pari passu therewith.

The ordinary shares carry the right (i) to such dividend as may from time to time be declared on those shares subject to the prior payment of all accrued dividends and dividends in arrears on the cumulative preference shares, (ii) to any balance of assets available for distribution in a winding-up after payment of all amounts due to the preference shareholders as defined above and (iii) at General Meetings on a show of hands one vote for each holder present in person and on a poll one vote for each share on all resolutions.

PATERSON AND COMPANY, 22, Errabalu Chetty Street, Georgetown, Madras 1.

The Company is advised that these Preference Shares are "approved investments" within Section 27A (1) (i) of the Insurance Act, 1938 as dividends have been paid on the Company's Ordinary Shares for the last five years.

The market price of the Ordinary Shares of the Company is quoted in the list issued by the Hyderabad Stock Exchange.

The shares subject to this offer form part of an issue of 30,000 shares which were first offered to the Ordinary Shareholders at par in proportion to their holdings in accordance with the requirements of the Companies Act. The Raleigh Investment Company Limited, the holder of the majority of the Ordinary Shares, decided to forgo its preferential right of subscription as it wished the public in India to have the opportunity to apply for such shares and obtain thereby an increased interest in the Company.

PARTICULARS

History and Business: The Company was incorporated as a Public Company in Hyderabad, Deccan, in 1930 under the Hyderabad Companies Act No. IV of 1320 Fasli, for the purpose of manufacturing cigarettes in Hyderabad State and acquired the cigarette and tobacco manufacturing licence and the cigarette factory owned by the firm of Vazir Sultan & Sons. The Company was incorporated with an authorised capital of O.S. Rs. 10,00,000 of which O.S. Rs. 9,90,650 was issued, and commenced manufacture in that factory. In 1933, manufacture was transferred to the present factory which the Company had built in the then newly developed industrial area of Azamabad on the outskirts of Hyderabad City. Various additions have been made to this factory during the years, and in 1948 further land was acquired on which additional buildings were constructed.

The Company has actively encouraged the growth of suitable types of tobacco for cigarette manufacture in Hyderabad State by advice to farmers on better methods of cultivation, fertilisation and harvesting and by the use of considerable quantities of such tobacco in the Company's products.

The Company has for many years been associated with The Imperial Tobacco Company of India Limited in the marketing of their respective brands. These arrangements have been subject to amendment from time to time and the two Companies have now entered into agreements dated 12th June 1956 in which The Imperial Tobacco Company of India Limited is with effect from 1st November 1956 appointed sole distributor of this Company's brands of cigarettes in certain areas of the Union of India and is authorised to manufacture those brands on the terms and conditions therein contained.

Purpose of Issue: Additional capital is required to modernise the Company's factory and to install modern machinery and equipment in order to meet the growing demand for and to maintain the quality of the Company's products.

FINANCIAL INFORMATION

Auditors' Report: The following is a copy of the report of the Company's Auditors, Messrs. Lovelock & Lewes:—

LOVELOCK & LEWES, *Chartered Accountants.*

MERCANTILE BANK BUILDINGS,
POST BOX NO. 1720, FIRST LINE BEACH,
MADRAS 1. *11th June, 1956.*

The Directors,
THE VAZIR SULTAN TOBACCO COMPANY LIMITED,
POST BOX NO. 126, HYDERABAD, DECCAN.

GENTLEMEN,

We have audited the accounts of The Vazir Sultan Tobacco Company Limited for the five years ended 30th September, 1955, and in accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act 1956 report as follows—

The Profits of the Company for these years were as set out hereunder and have been arrived at after charging all expenses of working and management and after making such adjustments as are in our opinion necessary.

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

	Year ended 30th September				
	1951 Rs.	1952 Rs.	1953 Rs.	1954 Rs.	1955 Rs.
INCOME—					
Sales	2,79,85,080	3,32,94,745	3,28,49,886	3,52,30,463	3,63,76,081
Interest	38	—	3	21	—
Miscellaneous Income	3,55,660	3,67,538	5,06,192	90,446	1,97,038

	2,83,41,956	3,36,62,515	3,33,56,563	3,53,29,093	3,65,75,812
EXPENDITURE—					
Cost of Sales	2,21,89,254	2,67,60,848	2,56,08,820	2,60,72,764	2,77,25,348
Salaries and Wages	23,72,334	30,75,201	33,12,848	36,05,408	36,16,470
Expenses	6,30,906	6,17,519	6,71,546	4,78,670	3,44,611
Interest	9,130	76,915	2,80,085	1,54,521	69,675
Depreciation as charged by the Company	3,46,475	3,89,449	4,64,657	5,29,354	5,63,933
Loss on Sale and Revaluation of Investments	683	540	—	—	125
	2,55,48,782	3,09,20,472	3,03,37,956	3,08,40,717	3,23,20,162
Profit before providing for Taxation	27,93,174	27,42,043	30,18,607	44,88,376	42,55,650
Taxation	11,82,725	12,43,337	10,08,813	19,49,828	18,87,097
	16,10,449	14,98,706	20,09,794	25,38,548	23,68,553
Balance of Profit and Loss Account from previous year as per audited accounts	50,34,635	52,84,177	8,74,181	13,74,720	15,74,464
	66,45,084	67,82,883	28,83,975	39,13,268	39,43,017
Transfer to General Reserve	12,85,715	30,00,000	13,10,714	14,75,000	13,00,000
Transfer to Fixed Asset Replacement Reserve	—	20,705	7,637	2,010	17,659
Transfer to Fixed Asset Realisation Surplus	—	—	—	—	54
	12,85,715	30,20,705	13,18,351	14,77,010	13,17,713
Balance	53,59,369	37,62,178	15,65,624	24,36,258	26,25,304

The profits, etc., set out above, have been arrived at after making the following adjustments to the figures disclosed in the published accounts:—

	1951		1952		1953		1954		1955	
	Increase	*Decrease*	*Increase*	*Decrease*	*Increase*	*Decrease*	*Increase*	*Decrease*	*Increase*	*Decrease*
Taxation	4,33,119	..	..	5,93,976	9,124	..	..	84,284	..	192
Salaries and Wages	2,03,062	..	2,77,410	..	7,05,526	..	1,040	..	..	587
General Reserve	..	..	..	12,85,714	13,10,714	..	1,64,286	..	..	14,75,000

These adjustments were, in our opinion, necessary—

(*a*) in order to substitute the Company's actual tax liability for the provisions made in the published accounts in respect of those years where the assessments have been completed;

(*b*) in order to provide for the increased charges for salaries and wages which became payable in terms of a Labour Tribunal Award published in 1953 and which were charged in the accounts for that year;

(*c*) so that transfers to General Reserve are related to the years out of the profits of which they were appropriated.

We further report that the Dividends paid by The Vazir Sultan Tobacco Company Limited in respect of the five years ended 30th September, 1955, on its issued Share Capital were as follows:—

Year ended	*Issued Share Capital*	*Dividends* Rate	Amount Rs.
30th September 1951	5,00,000 Ordinary Shares of Rs. 8-9-2 each	20%	8,57,143
30th September 1952	10,00,000 Ordinary Shares of Rs. 8-9-2 each	10%	8,57,143
30th September 1953	10,00,000 Ordinary Shares of Rs. 8-9-2 each	9.48%	8,12,500
30th September 1954	10,00,000 Ordinary Shares of Rs. 10/- each	10%	10,00,000
30th September 1955	10,00,000 Ordinary Shares of Rs. 10/- each	10%	10,00,000

The above dividends were paid without any deduction of tax paid by the Company and were paid out of current profits.

The Net Assets of the Company as at 30th September, 1955, based on the audited Balance Sheet at that date were as follows:—

	Original Cost Rs.	*Depreciation provided to 30th September, 1955* Rs.	*Net* Rs.
GOODWILL	5,79,429	—	5,79,429
FIXED CAPITAL EXPENDITURE—			
Land and Buildings	23,21,219	7,38,519	15,82,700
Plant, Machinery and Fixtures	36,82,196	27,97,102	8,85,094

The Company is one to which the provisions of Section 23A of the Indian Income Tax Act, 1922 apply. Application has been made to the Commissioner of Income Tax, in terms of Section 23A (3) of the Act, for relief from the liability to super-tax on undistributed income for the year ended 30th September, 1954; and a further application is expected to be made in due course in respect of the year ended 30th September, 1955. No order has yet been made by the Commissioner. At 30th September, 1955, therefore, there is a contingent liability in respect of super-tax on undistributed income amounting to Rs. 7,42,000 approximately.

No accounts of the Company have been made up for any period subsequent to 30th September, 1955.

The accounts of the Company for the years ended 30th September, 1951 and 30th September, 1952, were maintained in Osmania Sicca rupees and these accounts have been converted into I.G. rupees for the purposes of this report at the rate of Exchange of O.S. Rs. 116-10-8 per I.G. Rs. 100.

We are, Gentlemen,
Yours faithfully,
LOVELOCK & LEWES

Messrs. Lovelock and Lewes have given their written consent to the inclusion of the above Report and have not withdrawn such consent.

Capitalisation of Reserves and Undivided Profits: Since the inception of the Company the following undivided profits standing to the credit of the Company's Reserve Funds have been capitalised and applied in payment up in full of Ordinary Shares of equivalent amount.

1935	O.S. Rs.	6,94,390
1944	"	3,96,260
1945	"	5,18,700
1947	"	12,50,000
1951	"	12,50,000
1952	"	50,00,000
1954	I.G. Rs.	14,28,571

Capital Cover: The value of the net assets of the Company as at 30th September, 1955, as shown by the Auditors' Report included in this Prospectus, is sufficient to cover the principal amount of this issue more than five times.

Prospects: The popularity of the Company's brands, particularly CHARMINAR SPECIALS, has steadily increased over the 25 years since the Company's formation and present turnover is in excess of Rs. 3½ crores per annum. Although the cigarette market is a very competitive one, the Directors consider that with the proposed modernisation and re-equipment of the factory the Company should be able to meet the increased demand for and to maintain its reputation for the quality of its products.

As the result of this modernisation programme, some further increase in turnover can be expected, which should enable the Company to continue to earn a satisfactory return on the capital invested in spite of increasing costs of production.

A contingent liability for additional super-tax of approximately Rs. 3,84,003 and Rs. 3,58,000 exists under Section 23A of the Income Tax Act, 1922 (as amended by the Finance Act, 1955) in respect of undistributed profits for the years ended 30th September, 1954 and 30th September, 1955 respectively. In respect of the former year an application has been made to the Commissioner for relief from this liability on the grounds that the funds need to be retained in the business. Further applications are expected to be made as necessary in respect of the year to 30th September, 1955 and subsequent years in so far as funds are required to be retained in the business in order to finance the Company's development.

STATUTORY AND GENERAL INFORMATION

Miscellaneous: The Company has not issued nor agreed to issue within the two years preceding the date hereof any shares or debentures either for cash or as fully or partly paid up otherwise than in cash.

The Company has not entered into nor does it propose at present to enter into any contract or arrangement whereby any option or preferential right has been given, or is to be given to any person to subscribe for any share or debenture of the company, other than the prior offer to the ordinary shareholders of the shares now being issued in proportion to their holdings of ordinary shares as mentioned above.

The Company has not within the two years preceding the date hereof issued nor does it intend at present to issue any shares at a premium.

The Company has paid no sums within the two years preceding the date hereof nor are any payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect thereof nor is it intended that any should be paid in respect of the present issue. This issue has not been underwritten but brokerage will be paid by the Company as indicated below.

No amount or benefit has been paid to any promoter or officer within the two years preceding the date hereof nor is it intended that such should be paid.

Directors: The Articles provide that the qualification of each Director shall be the holding of ten ordinary shares of the Company.

The Articles provide that unless otherwise determined by the Company in general meeting, each Director other than a whole-time Director, (of which there are at present two), shall be paid remuneration of Rs. 150 for each board meeting attended and that the whole-time Directors shall, subject to the sanction of the Central Government, if necessary, and to the provisions of the Companies Act, 1956, be paid such monthly remuneration as shall be determined by the Directors. The Directors may also be paid any hotel, travelling or other expenses incurred in attending meetings or in connection with the business of the Company.

The Articles also provide that, subject to the sanction of the Central Government, if necessary, the Directors may award special remuneration out of the funds of the Company to any Directors for special services rendered to the Company and that any whole-time Director shall be entitled to participate in and retain for his own benefit any donation, gratuity, pension, allowance or emolument provided by the Company for its whole-time Directors and employees.

The Directors have appointed Mr. Charles Alan Sydney Foulkes, one of the whole-time Directors, as General Manager of the Company, such appointment being without remuneration additional to that paid to him as a whole-time Director of the Company and without any right of compensation for loss of office. Other than this appointment the Company has no Managing Director, Managing Agent, Secretaries or Treasurers or Manager (as defined in the Companies Act, 1956) and it is not the Company's present intention that any such appointments should be made. The Articles do not contain any provision for such appointments other than that of General Manager.

A Director who is absent from or who is about to leave the district in which the Directors' meetings are ordinarily held for a period of three months or more may nominate any person to be an Alternate Director during his absence, subject to such nominee being appointed by the Board of Directors.

Directors' Powers of Management: The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not, by the Companies Act, 1956, or the Articles, required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the Act, which may be made by the Company in General Meeting.

Interest of Directors: Mohamed Sultan and Abdul Hameed Sultan were interested in the promotion of the Company in 1930, being two of the members of the firm of Vazir Sultan & Sons, one of the Company's present distributors whose cigarette manufacturing business was acquired by the Company in that year the purchase price being paid as to O.S. Rs. 1,90,000 by the issue of fully paid shares and as to the balance of O.S. Rs. 6,67,649 in cash. None of the Directors have had an interest in any property acquired by the Company within the two years preceding the date hereof or in the machinery and plant and equipment that will be purchased out of the proceeds of this issue.

Subscription: The amount being raised by this issue and by the Preference Shares already issued is required as additional working capital to finance the proposed modernisation programme which could otherwise only be financed by such reserves as could be set up over a period out of future profits within the restrictive limits imposed by Section 23A of the Income Tax Act. Although the full modernisation programme is estimated to cost Rs. 31,35,000 over a period of 3 years, the Directors consider that the minimum subscription upon which they can proceed to allotment is Rs. 15,00,000 of which Rs. 7,25,500 has already been subscribed by the present shareholders. The balance of the expenditure will, if necessary, be provided by the Company from its future resources. No other property is being purchased out of the proceeds of the issue, nor is there any incompleted purchase or acquisition of property at the date hereof.

Borrowing Powers: The Articles provide that the Directors may from time to time raise or borrow for the purpose of the Company or secure the payment of any sums of money, such powers being restricted under the Companies Act, 1956 to an amount not exceeding the aggregate of the paid-up capital and free reserves of the Company.

Restrictions on Right to Transfer and Vote: The Articles of Association contain no restriction on the transfer of fully paid-up shares.

The Directors may decline to register a transfer of any partly paid-up shares to a person of whom they do not approve and may also decline to register a transfer of partly paid-up shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any general meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

Contracts: The following contracts, not being contracts in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

1. Agreement dated 12th June, 1956 between this Company, The Raleigh Investment Company Limited and The Imperial Tobacco Company of India Limited in which The Raleigh Investment Company Limited is granted the right to nominate any Company as the sole customer of this Company's brands of cigarettes outside the Union of India and this Company agrees not to carry on business outside the Union of India except under the terms of this Agreement.

2. Agreement dated 12th June, 1956 between this Company and The Imperial Tobacco Company of India Limited in which the Imperial Tobacco Company of India Limited is with effect from 1st November, 1956 appointed sole distributor of this Company's brands of cigarettes in certain areas of the Union of India and is authorised to manufacture those brands on the terms and conditions therein contained.

Documents: Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, copy of the Contracts referred to above, the original of the Auditors' Report set out in this Prospectus and the Balance Sheets and Profit & Loss Accounts on which it was based can be inspected at any time from the date hereof until the Subscription list is closed during the usual business hours at the Registered Office of the Company.

Application and Acceptance: Applications, which must be for 5 shares or multiples of 5 shares, must be made on the accompanying official form and will be refused if not so made. The application form, together with a remittance of the full amount payable on application, should be sent to the branch of the Hyderabad State Bank at Gunfoundry, Abid Road, Hyderabad, Deccan or to the branches of that Bank either at Secunderabad, Bombay, or Madras, or to the branch of the State Bank of India at Sultan Bazaar, Hyderabad, Deccan or to the branches of that Bank either at Secunderabad, Bombay, Calcutta, Madras, Guntur, Kurnool, Visakhapatnam or Vijayawada, the addresses of the branches of such Banks being shown on the reverse of the application form. The remittance if not made in cash should be made by cheque or draft drawn either upon the branch of the Bank to which the application form is being sent or upon a Bank situated in the same town provided that an application form being sent to the branch of the Hyderabad State Bank at Hyderabad, Deccan, may be accompanied by a cheque or draft drawn upon any branch of that Bank situated within the State of Hyderabad. Application forms sent with cheques or drafts drawn on Banks other than those stated above may be refused.

Cheques or drafts should be made payable either to the Hyderabad State Bank or the State Bank of India as the case may be for the credit of "The Vazir Sultan Tobacco Company Limited Account Preference Issue" and should for the applicant's protection be crossed "A/c Payee Only." A separate cheque or draft must accompany each application form.

Acceptance will be notified by the despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant. Share Certificates will be available for issue in exchange for Letters of Allotment on or after 15th October, 1956, and each successful applicant for more than 25 shares will receive Share Certificates in lots of 25 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations. Such Allotment Letters and Share Certificates will be despatched by registered post at the applicants' risk.

Brokerage: Brokerage at the rate of Re. 1 per Share will be paid by the Company on acceptances made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Prospectus and forms of application may be obtained from the Registered Office of the Company at Azamabad, Hyderabad, Deccan or from:—

PLAN FOR THEIR SECURITY
with complete assurance

Nothing succeeds without Planning. That's why we have the Five Year Plans to ensure National Prosperity.

Do *you* have a Plan for the security of your family—the tiny State over which you preside?—a plan that will secure, for instance,

- comforts in old age, free from worries right up to the very end,
- adequate resources if the family has to carry on without you,
- welcome funds for the education, start-in-life and marriage of your children?

Do you have, in short, a plan for family security that Life Insurance alone can offer?

If not, better see about it to-day with the complete assurance that, after *nationalisation*, **behind every Policy of Life Insurance you take stands the full guarantee of the Government to pay the benefits in cash.**

NATIONALISED LIFE INSURANCE

MEANS ABSOLUTE SECURITY AND DEPENDABLE SERVICE

BOMBAY SUBURBAN ELECTRIC SUPPLY, LTD.

TWENTY-SEVENTH ANNUAL MEETING

MR. K. G. MILNE'S ANALYSIS OF THE POWER SUPPLY POSITION IN BOMBAY

THE possibility of a shortage of power in Bombay after 1959, unless the authorities took effective steps now onwards to augment the plant capacity, was envisaged by Mr. K. G. Milne, Chairman, Bombay Suburban Electric Supply Ltd., in the course of his address to the shareholders of the Company, at their Twenty-seventh Ordinary General Meeting held on the 2nd inst. Mr. Milne was anxious that the country's second Five-year Plan programme should not suffer from want of adequate power supply. He also gave a detailed analysis of the various problems affecting the electricity generating industry.

The following is the full text of Mr. Milne's speech:

"This time last year I told you how the Company's expansion during its 1948-54 development plan was bearing fruit and how our capacity for taking on new loads was ahead of load releases by the authorities. While the latter position still remains, we have during this year further consolidated on our own distribution network and, as a result, our sales of energy, exceeding 60 million units, have registered an increase of 20 per cent. over the sales of the previous year. At the end of the year, the total number of consumers connected to our mains reached the figure of 46,478. A further cause for satisfaction is the indication of the potential demand brought to light by the response to the Government Press note inviting applications for industrial loads to be sanctioned after the Trombay thermal station is commissioned. No less than 400 applications were received for loads aggregating about 25,000 kw. While it should be borne in mind that even where an unrestricted supply is available there is usually a fairly large gap between the load applied for and that ultimately connected, we can look forward with confidence to the potential growth of load in this Company's area of supply in the immediate future.

Power Shortage After 1959

"It is necessary to ensure, however, that there will not be a repetition of the overcautious attitude shown by the Power Shortage Board during the past year or two, as the result of which industries in the Bombay region were deprived of millions of units due to freezing of potential power which has remained unutilised. This caution was the result of excessive optimism on the part of the authorities of the public sector as to their ability to absorb electric power for certain new ventures which, in actual fact, did not materialise. It has now been officially stated that the first 50 M.W. set at Trombay will be brought into commercial use at the end of this year and a second similar set about six or nine months later. In view of this anticipated accretion of some 100 M.W. of thermal plant within the next 12 months, the power position in the Bombay region will become extremely favourable, and we hope it will continue to remain so till around 1959. Thereafter there is again danger of a shortage of power, unless arangements are set in train now for augmenting plant capacity either at Bhira or at Trombay, entirely independent of Koyna power which I do not anticipate, despite all assurances to the contrary, will become available in Bombay before 1961-62.

"I am taking this opportunity to bring this matter prominently to attention at the outset of my speech to you this year, in view of the contemplated changes in the reorganisation of the Bombay State, and in the hope that the authorities concerned may promptly take the necessary steps to ensure that Bombay is not starved of urgently-needed power during the country's second Five-year Development Plan. We have already had bitter experience of this in the past and a repetition during the next five years would be calamitous.

"The Tata Hydro Companies increased their thermal surcharge from 15 per cent to 24½ per cent. from 1st January 1956. You will appreciate that this surcharge primarily results from the inclusion of the thermal station erected by the Government at Chola in the interconnected system. While the addition of this 54 M.W. of capacity is most welcome in partly relieving the power shortage, from a purely economic viewpoint, the addition is something of a weight, which will be relieved to some extent only when the greatly more efficient Tata Trombay plant comes into full commission, leaving Chola merely as a standby or peaking station.

Tariffs Rates to be Reduced

"Despite the increased cost of electricity to the Company, which I have just mentioned, and the ever-rising spiral of prices generally, of which you are all only too well aware, your Board have decided to give effect to a substantial downward revision in the Company's tariff rates to residential consumers for lights and fans and domestic purposes. Details of the reductions about to be made will be made known to consumers by means of a circular at an early date. The result of the revision will be to bring the rates of supply for residential purposes in the suburbs still closer to the rates obtaining in Bombay City, which is an area far more favourably placed, on account of its compact nature and high concentration of industrial and residential load, to offer more favourable rates than your Company. It may be kept in mind that we supply energy in an area several times the area of Bombay City and with loads scattered over vast distances interspersed by hills, woodland and marshes.

"Our ability to make a downward revision of rates at times when almost every other household necessity is increasing in price is due in great measure to the bold policy adopted by your Board in embarking on the six-year plan, already referred to, for providing a vast distribution network in anticipation of release of load from the interconnected system. Your Directors and Agents have always attached considerable importance to a progressive policy, feeling that, unless a spirit of initiative is maintained, stagnation may all too easily invade the scene. The increased revenues that are now forthcoming are the fruit of such prudent and judicious planning. Although this development has yielded considerable benefit to the community at large, as well as to the Company in the form of increased earnings, it is this very expansion which, strange as it may seem, has reacted to penalise the investor. I have explained this ingrateful phenomenon on several occasions in the past, but will do so again later in this speech, as there seems to be a good deal of genuine, and perhaps some deliberate, misunderstanding about it.

Interference by Electricity Board

"We are still in the dark as to the future of the Bombay State Electricity Board, which at present administers its affairs in the whole of Bombay State. The retention of one board on a regional basis has much to commend it, for that board will then be in the best position to continue to co-ordinate the efforts to provide adequate power in the whole of this part of India. However, this should not be construed to mean that the electric supply industry in the Bombay region has been entirely satisfied with the attitude of the present Board since its inception in November 1954. We had been warned by pessimists that the creation of the Board might result in increasing the difficulties of the electric supply industry in the State, which is already subject in certain directions to the control of the Public Works Department. While, on the one hand, the industry has received practically no assistance from the Board by way of loans or materials, there has been a continual pressure, amounting almost to harassment at times, as regards the rates charged to consumers by the licensees in the State. Constant threats of Rating Committees appear to have become a feature of the Board's administration, and it has become painfully necessary for the Association of Electrical Undertakings, Bombay, to have to draw the attention of the Board to the fact that the scheme of the Electricity (Supply) Act is to allow licensees full freedom to formulate their rates of supply so long as they do not violate the provisions of the Sixth Schedule to the Act. The Board has increasingly tended towards interference in the day-to-day operations of the licensees, not only of the relatively small and recent ones but even of those larger ones which have rendered such yeoman service to the communities in the State over a period of many decades. As one who had something to do with the drafting of the original Electricity (Supply) Bill, I can say with confidence that it was never the intention of the Act that electricity boards should hamstring licensees to the extent that they should be deprived of their legitimate initiative in formulating their financial policies. If electricity boards, taking advantage of the weakness of the smaller licensees especially, seek to put them in a financial straight jacket, they will certainly be defeating a good part of the purpose for which these boards were formed.

Imports of Transformers and Meters

"Although I have recently dealt at some length in my speech delivered at the annual general meeting of one of your sister companies, with the vexed question of import licences for transformers and meters, I must repeat this important fact that, in the interests not only of the electric supply industry but also of many other industries dependent on it for their power supplies, our programmes of expansion should not be impeded by undue restrictions in the import of transformers and meters and other equipment until and unless indigenous sources are able to afford reasonable deliveries. You will perhaps be interested to know that, during the last year, your Company placed orders for 12-250 K.V.A. transformers with a local manufacturer, but so far only two units have been received, though at the time the order was placed favourable delivery periods were quoted by the suppliers. Of an order for 2,600 meters placed eight months ago, only 300 have so far been received, and prospects of future deliveries are equally bleak. As it has turned out, the indigenous manufacturers are not only unable to fulfil their commitments, but unwittingly come in the way of the industry obtaining its requirements from elsewhere. While those indigenous manufacturers who are striving hard to maintain a reasonably high standard in their products deserve every encouragement, there seems to be no justification in adopting a dog-in-the-manger policy with regard to the question of allowing a reasonable volume of imports of transformers and meters in order to fill the gap. If the electric supply industry is to play its part effectively in achieving the target set before it in the matter of power development under the second Five-year Plan, it is absolutely essential that the Central Government should adopt a more realistic policy in the imports of transformers and meters from abroad.

Inadequate Return

"While we have had a satisfactory year from the revenue-producing angle and have earned more than sufficient to pay a 7 per cent. dividend, you will note that we have once again had to withdraw an amount, small though this may be, from the equalisation of dividends reserve in order to maintain that same modest rate as in the past. I will now explain in some detail how this extraordinary state of things comes about because, as I have said, there seems to be misconception about the reason and about who is to blame. As you are already aware, under the Electricity (Supply) Act, the standard of permissible return has been fixed at 5 per cent. of the capital base, which is, broadly speaking, the capital employed in the business. Thus, our ability to distribute a dividend in excess of 5 per cent. is essentially limited by the capital structure and the more fresh money which has been brought into the equity capital of a concern the nearer to unity will be the ratio of the capital base to the paid-up share capital. Therefore, to this extent and so long as the return is limited to 5 per cent., expanding companies like yours are handicapped more than those other companies which, for whatever reason, do not expand greatly. In fact, your Company has almost sextupled its equity capital in the last decade alone, in the course of fulfilling its role in the country's economy and in accordance with the terms of its licence, and the legal maximum of return which we are being allowed on our money in the result is not, and for some years past has not been, enough to cover the moderate dividend rate of 7 per cent. per annum to which we have been accustomed.

"With the passing of proposed amendments to the Electricity (Supply) Act, for which we have so long waited, the position in our case should be somewhat improved, because with the Bank rate standing at its present level the permissible return would be slightly enhanced. However, we still have no news that time can be found for Parliament to take even the preliminary step of referring the amending legislation to a Select Committee.

"Anyhow, the position is, and will remain, that any profit earned above the statutory maximum from time to time has to be dealt with in the statutory manner and thus no blame can attach to anyone, other than our law-makers, if in these circumstances, the resulting amount left for the benefit of investors is considered to be disappointing.

"It is because of our legal obligations that we have had to appropriate from the balance of profit this year a sum of Rs. 70,466 to each of the two statutory reserves, namely, the tariffs and dividends control reserve and the consumers' benefit reserve, thereby finally leaving a deficit of approximately Rs. 12,000 between the amount at the Company's disposal for the year and the requirements for a 7 per cent. dividend. We are thus, as on previous occasions, left with the choice of lowering the dividend or of making a withdrawal from the reserve whose name implies such use, that is, the dividends equalisation reserve. So long as there is hope, and there is hope, that some day the law may allow us that extra which we need, and so long as there is money enough left in the reserve which can be used, I have no doubt in my mind that what your Board have proposed to do is in your best interests and will receive your wholehearted approval.

Net Earning Limited By Law

"There are some people, I believe, who urge that solution to the difficulty lies in increasing the profit by cutting down expenditure. Apart from the fact that the Company could not cut down expenditure without sacrificing efficiency and goodwill, it will be apparent from an intelligent reading of the law that it is the *net* earnings which are limited by the statute irrespective of what the expenditure is. The more profit we earn in the circumstances the more would have to go to the two statutory reserves I have referred to, leaving the final balance available to shareholders unaltered at its legal ceiling. I would, therefore, reiterate that the level of divisible profits in your Company results at present entirely from the two factors I have just mentioned, namely, the inadequacy of the standard return allowed at its present rate of 5 per cent. and the legal ingratitude displayed towards extremely rapid expansion.

Grossing Up of Dividend

"Another subject which, I am sure, has been agitating your minds is the question of 'grossing up' of dividends to entitle you to a refund of income-tax. I have already explained to you in the past how an expanding Company like yours being entitled to considerable income-tax depreciation allowances, including the recently announced development rebate, has had no assessable income for income-tax purposes, although it shows a profit in its commercial accounts which are based on the depreciation laid down under the Electricity (Supply) Act. In spite of all efforts made to convince the income-tax authorities that the effect of the accelerated depreciation allowances under the Income-tax Act is only to defer and not to eliminate the liability for tax, they hold the view that, where no tax is leviable in the hands of a company for a year of account, the shareholders of the company are to be denied the 'grossing up' of dividends in their hands for that year. In fact, no one is more affected by this denial of 'gross up' than your Agency Company itself, and it is contesting a test case on the subject. In addition, the Association of Electrical Undertakings, Bombay, and the Federation of Electricity Undertakings of India, in the activities of both of which your management takes a prominent part, have been representing the injustice to shareholders in this context at the highest level possible.

"Linked with the above problem is that of additional income-tax for which, as you will see from one of the footnotes to the balance-sheet, we have a contingent liability. High hopes were entertained recently that this note would no longer be required with the Company's freedom from the tax definitely established when the High Court pronounced its decision in favour of a company whose position was similar to ours. Since then, however, the Income-tax Department have gone in appeal to the Supreme Court with the inevitable delay and uncertainty which this entails. With the enactment of the Finance Act, 1956, additional income-tax in its past form relative to dividend has been abolished, but a tax applicable to dividends distributed in excess of 6 per cent. has been introduced. This latter, however, is of comparatively small significance to companies like yours whose dividends now inevitably cannot be much in excess of the 6 per cent. which has been adopted as a base for the tax.

"I am glad to say that our relations with the Greater Bombay Municipality on street lighting matters have been of the most cordial nature, and that the reference, which I made last year, to the great need for extension of street lighting in the suburbs has borne fruit, as can be seen from the increase in the number of street lights from 6,559 to 7,295. In addition, a number of conversions to brighter lights are taking place and a number of mercury vapour lamps have been installed among the main thoroughfares. Another significant move is the gradual elimination of half-night lamps which are uneconomic both from the point of view of the Company and the Street Lighting Authority.

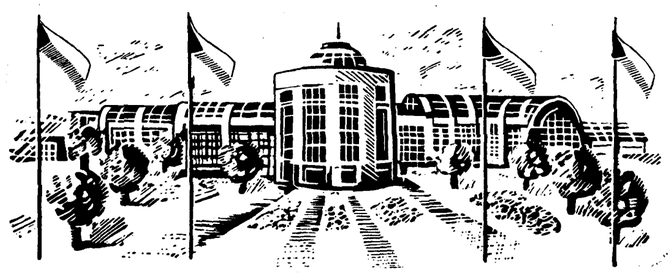
"While the terms on which we render street lighting service have been found acceptable by the Greater Bombay Municipality, the municipalities of Kandivli and Borivli have thought otherwise and resorted to arbitration for determining the rates charged for street lighting. The Arbitrator's Award, published on 18th August 1955, upheld the Company's existing rates which are prevailing since March 1953.

Labour Union

"During the year, the staff union went to arbitration in the matter of several demands dealing with service conditions and bonuses for the years 1950-51, 1951-52 and 1952-53. The Award of the Industrial Court was given in December 1955, but the union chose to go in appeal. A fresh demand for bonuses for 1953-54 and 1954-55 has been referred to the Industrial Court for arbitration. Although your Agents have been in the forefront in recognising and safeguarding the legitimate rights of the workers in the Companies under their control, we are being compelled nowadays to expend more time than ever in courts on industrial matters. So long as labour unions can go to court on the slightest pretexts, this state of affairs is likely to continue. Another tendency which appears to be coming all too prevalent is the use of the cloak of labour union activities to achieve political objectives and without any real heed for the true interests of the workers.

"Apart from the withdrawal of Rs. 12,000 this year from the equalisation of dividends reserve, on reasons for which I have already commented, the only other special reference to the accounts, which, I feel, I need make, concerns the appropriation to employees' retiring gratuities reserve of Rs. 4,26,649. This appropriation, made at the express wish of our auditors, now brings this reserve to the full amount of our present accrued liability in this regard, and thereby relieves shareholders and consumers alike in respect of necessary contributions to meet this obligation. I am sure you will agree as to the wisdom of this step. Otherwise, I think there is nothing particular for me to add in respect of the accounts, which are straightforward, and which together with the notes appended are sufficiently informative.

"The first effects of the Indian Companies Act, 1956, are reflected in the notice convening this meeting, covering, *inter alia*, the retirement and re-election of five of your Directors. I need not enlarge on the necessity for these resolutions as the notice itself is entirely self-explanatory. All five gentlemen have been properly proposed by shareholders for reappointment. As from next year, the accounts will be presented to you in the form laid down in the Companies Act, 1956, in so far as it is applicable to electricity companies, and I trust you will not find merely confusing the changes which that may necessitate."



A visit which will pay for itself!

After last year's great success, the Czechoslovak engineering industry, which ranks among the biggest in the world, arranges the II Exhibition of its products (on a three-times bigger area—more than 100,000 square metres).

This exhibition offers a great opportunity to establish profitable trade relations with the Czechoslovak industry to all people who are interested in rational production.

Czechoslovak products are well known throughout the world both for their traditional quality and for their highly developed technique which is always the last triumph of engineering skill in the design of machines.

Avail yourselves of the special travel advantages which will be given to visitors to the exhibition.

II EXHIBITION OF CZECHOSLOVAK ENGINEERING

BRNO September 8th—30th, 1956

U.N. COUNCIL'S DEBATE ON WORLD ECONOMY

STABILISATION OF COMMODITY PRICES STRESSED

THE main item on the agenda of the twenty-second session of the Economic and Social Council of the United Nations held at Geneva recently was the world economic situation. Chief among the important documents that formed the basis of discussion were the U.N.'s World Economic Survey, 1955, Review of the Recent Economic Developments in the Middle East and Review of Recent Economic Developments in Africa, 1955, Survey of the Water Resources in Africa, Annual Economic Surveys for 1955 of the three U.N. Regional Economic Commissions, namely, the E.C.A.F.E., the E.C.E., and E.C.L.A., and General Review of International Commodity Trade. Mr. Dag Hammarskjoeld, the Secretary-General of the U.N., a reference to whose speech has already been made in an earlier issue of *Commerce*, opened the debate, while, besides the Executive Secretaries of the three Regional Economic Commissions and representatives of I.M.F. and F.A.O., a number of delegates representing various countries participated in the discussion. The members generally agreed on the urgent need for stabilising commodity prices, the fluctuations in which are crucial to the economic plans of the underdeveloped countries. The representatives of the underdeveloped areas, at the same time, emphasised that international assistance was an important prerequisite for achieving rapid economic development in their countries.

Mr. Dag Hammarskjoeld emphasised that advanced economies, both free and centrally planned, were far stronger than before the war, and had built up defences against depressions. But the strength of their defences, he said, had not yet been seriously tested. In view of the increased interdependence among the members of the world community today, he stressed that they had greater responsibility to follow economic policies that were conducive to the economic health of the world. In this connection, he pointed out that, despite the rapid improvement witnessed in production and trade in the developed free economies as well as the centrally planned economies over the pre-war levels, no such stabilising forces were evident in the underdeveloped economies. Drawing pointed attention of the Council to the need for stabilising prices of commodities, he pointed out that certain difficulties came in the way. They were the fluctuations in demand for and yield of agricultural production, and the extremely low price elasticities of most primary products. The establishment of the proposed food reserve, he felt, might help attain commodity price stabilisation, though its capacity to provide an all-sufficient answer to all the problems of economic development was very limited.

Mr. Gunnar Myrdal, Executive Secretary of the Economic Commission for Europe, agreed, significantly, with the view expressed by the Secretary-General that the economy of Western Europe had hardly been conducive to the solution of the problems of countries exporting commodities during the past three years, thanks to the increasing production of synthetic products. Moreover, expanding demands of consumers, inflationary conditions and the heavy pressure resulting from armaments programmes rendered the problem of investment acute. In sharp contrast to this, Eastern Europe seemed to offer promising prospects for the marketing of primary commodities.

In Asian Region

According to Dr. Lokanathan, Executive Secretary of the E.C.A.F.E., the developments in the Asian region highlighted the important fact that its future development depended as much on the assistance to be derived from abroad as on its own internal efforts. An encouraging feature was that, in many cases, the rate of increase in production in Asian countries was greater than that in population. He stressed, however, that the improvement in the standards of living of the population demanded urgent acceleration of economic development. In this connection, he emphasised the importance of stabilising receipts in foreign currency yielded by the export of primary commodities. But, such receipts as might be thus obtained would not be adequate for their development purposes. Be that as it may, what according to Dr. Lokanathan was one of the most favourable aspects in the economic development in Asia was the progress achieved in planning.

The basic problems of Latin America were stressed by Mr. Raoul Prebitsch, Executive Secretary of the Economic Commission for Latin America. He stressed that higher tempo of economic development could not be achieved in the area only by the free interplay of natural factors, but that international assistance was equally necessary. He complained that the progress in the rate of capitalisation was impeded by increase in population, on the one hand, and instability in the prices of export commodities, on the other. The role of exports with their restricted possibilities of expansion, he stated, was limited in financing the development. Mr. A. R. Asmaun of Indonesia expressed his concern at the ever-widening gap between the industrialised and the underdeveloped countries. He drew the pointed attention of the Council to the fact that the progress attained in the advanced countries had not been fully reflected in the backward countries.

The delegate from the Netherlands stated that certain imbalance was in evidence between the agricultural and industrial sectors of the centrally planned economies. Incidentally, he underlined the need for improving statistical data relating to these countries. Referring to the underdeveloped economies, he said that diversification of the economy had shown better results, and it would, therefore, be appropriate for them to adopt balanced plans of development. The representative of the International Federation of Christian Trade Unions stressed that, if the underdeveloped areas were to be benefited, the need for expanding international trade in commodities equally with that of manufactured articles was essential. He pleaded for increased foreign investment in these countries.

Grave Concern

The grave concern in the underdeveloped countries caused by the mass disposal on the international market of surplus farm products by certain industrial countries was expressed by Mr. Jaime Nebot Velasco of Ecuador. The increasing production of synthetic products further increased their concern, he added.

The delegate from the U.K., Lord John Hope, noted that the idea of ensuring economic development was predominant in the thinking of the Governments of the underdeveloped countries. He further pointed out that the reason for the international commodity trade not increasing proportionately with that of the manufactured articles was partly the fact that a larger proportion of manufactures had to be traded for the same quantity of commodities on account of the steady price level of the latter.

The representative of F.A.O., Mr. A. H. Boerma pointed out that it was a welcome sign that the world agricultural production had risen at the rate of 3 per cent. in 1955-56, while population expanded only at the rate of 1.5 per cent. He, however, remarked that the greatest increase in agricultural production had taken place in countries which were suffering from surplus stocks, while, in certain underdeveloped countries the *per capita* production was still lower than the pre-war levels. The two main problems of agriculture, according to him, were increase in productivity and improvements in the processing methods of agricultural products. In order to solve the agricultural problems, he called for planning at the international level.

The French delegate, Mr. Pierre Abelin, while expressing gratification at the unprecedented expansion of production and world trade, felt that the present situation contained certain elements of weakness such as the reduced prices in the agricultural sector when compared with the industrial sector. He expressed concern at the slackening in the expansion of industrialised economies and slower rate of accumulation of dollar reserves. The representative of the U.S.S.R. Mr. A. V. Zakharov, explained that, in his country, industrial production expanded 4.2 times between 1946 and 1955. The annual rate of increase in produce in the U.S.S.R. was 13 per cent. during the period 1951-55, or two and a half times greater than in the U.S. He pointed out that the indications relating to Soviet agriculture contained in the World Economic Survey did not correspond to the facts. The Russian delegate further thought it necessary to devise means, through the U.N., of accelerating economic development in the underdeveloped areas.

The Norwegian representative expressed satisfaction at the improvement witnessed in the world economic situation. He pointed out, however, that dollar shortage continued to maintain an imbalance in the payments position of certain countries. Pointing out that the tendency to advocate an economic sector as far as possible free from Government intervention was dangerous, he said that the changes in the basic conceptions of economic and social problems were responsible greatly for the economic expansion registered after the war. The Yugoslav delegate pointed out that the rate of expansion during the past ten years was so pronounced that it was faster than that noted during the ten years following the First World War. The period also characterised the firm resolve of the industrialised countries to create internal conditions of full employment and increase in productivity. He was also gratified at the rate of expansion of agriculture. Proceeding, he said that political considerations governed the conclusion of bilateral and regional agreements outside of the U.N. He added, however, that the gradual disappearance of the cold war would leave the road open for the development of economic co-operation on a universal plane.

The American delegate, Mr. Baker, said that certain aspects of the world economic development would be noteworthy in the years to come. They included, among others, the increasing part played by international trade and private investments, extension of the process of industrialisation in the underdeveloped areas, and the process of international co-operation within the U.N. He further stated that there was clear evidence, in view of the unprecedented scale of expansion witnessed in the past ten years, that the world could be able to feed a larger population. While the representatives of Pakistan and Egypt pleaded for more outside help for development in Asia, the delegate from Greece stated that the stability of industrialised countries would be reinforced by balanced development of resources of the underdeveloped countries. The members generally pleaded for the elimination of international trade restrictions and efforts directed at attaining stability in the commodity prices.

TOBACCO CULTIVATION

Tobacco occupies an important place in India's agricultural economy. It is also one of India's export commodities. It finds its way to as many as 32 different countries and fetches no less than Rs. 12 crores worth of foreign exchange. Further, as much as Rs. 31.4 crores was collected in 1954-55 as excise duty on tobacco. It is now grown on well over 8.6 lakh acres. India, which produces about 555 million lbs., occupies a place among the world's producers that is next only to the U.S. and China. In India different varieties are grown: Virginia and country tobacco are grown in the coastal Andhra, *bidi* tobacco in North Gujarat and South Maharashtra, *hookah* and chewing tobacco in North Bengal and North Bihar and in Coimbatore. In recognition of the paramount importance of tobacco to Indian economy, the Indian Central Tobacco Committee was constituted in 1945 as a corporate body under the Ministry of Food and Agriculture. The Committee is concerned with the development of all aspects of production and marketing, while the Central Government's Agricultural Marketing organisation exercises quality control over export.

The tobacco grower is confronted with numerous problems—either arising from his ignorance of the scientific methods of growing tobacco, which are very delicate and complicated indeed, or created by the enemies of the plant such as pests and fungal diseases. In this context, a very notable advance was the establishment of the Central Tobacco Research Institute, a specialised body of the Tobacco Committee, in 1947 at Rajahmundry, Andhra. The Institute conducts intensive research into various aspects such as agronomy, chemistry, entomology, pathology, plant-breeding, plant physiology, cylogenetics, and statistics connected with tobacco growing, suggests better and scientific methods of tobacco growing to the farmer and devises effective remedies for the diseases and pests which damage tobacco crop.

An important long-term task taken in hand at present by the Institute relates to the survey of various types of soils on which tobacco can be grown, and collection of precise data pertaining to the influence of soil on the quality of the crop. For instance, salinity has the effect of making tobacco lose its bright colour rapidly, absorb moisture and burn unsatisfactorily. Research conducted into the effects of irrigating Virginia tobacco has shown that, apart from eliminating the danger of making the leaf dark green, early irrigation before the end of December leads to considerable increase in the yield. Again, contrary to the popular view among farmers, fertiliser mixtures containing potash, phosphates and nitrogen are not found to be useful, especially in good soils. Besides, a dosage of as much as 20 lbs. of nitrogen has been determined as a suitable one for flue-cured tobacco. Further researches on the influence of organic and inorganic manures are proceeding apace. Another significant work in the Institute has proved that the inimical effects of high temperatures on germination can be largely overcome by keeping the seeds wet and in a temperature between 50° F. and 75° F. for four to eight days.

Plant organisms like fungus, plants like Orobanche and a myriad insects eating away into the vitals of the tobacco plant constitute a constant source of anxiety to the farmer. Studies at Rajahmundry have shown that chemical dithane is effective in arresting leaf blight, a fungal disease producing dead tissue areas in the leaf. Likewise, spraying of copper compounds in the nursery is found to counteract a disease called anthracnose, and sulphur dust distributed between the rows of plants on the soil is found to be effective against ash disease.

A special variety of parasite living on the roots of the tobacco plant is the Orobanche. The peculiar problem connected with this plant, which consists of a flowering axis, is that its seeds can be quickly disseminated by the wind over a wide area. The Institute is making thorough studies into this problem and is hopeful of achieving localised control. Research has also revealed that caterpillars or cut worms can be fought successfully with D.D.T., and the Institute has also succeeded in finding an effective remedy against the menace of what are called ground bottles through the use of water mixed with insecticide while transplanting tobacco.

Each of the tobacco-growing areas specialises, as is well known, in a particular variety of tobacco. The Government has, therefore, set up a network of research institutions, besides the one at Rajahmundry, in various parts of the country, such as Guntur in Andhra, Vedasandur in Madras, Pusa in Bihar and Dinhata in Cooch Bihar.

MR. RAJAM ON SOME ECONOMIC PROBLEMS

The hope that, under cover of nationalisation, the private sector would not be denied its usual quota of finance it had been getting from the insurance interests and that the promises of the Government in that regard would be fulfilled, was expressed by Mr. T. S. Rajam, in the course of his presidential address to the first quarterly meeting of the Madura-Ramnad Chamber of Commerce, Madurai, recently. Stating that any criticism at this stage of the action of the Government in nationalising life insurance would only be of academic interest, he remarked that, in the field of organisation, the proposal to create five zones, with six divisional offices and forty branches under each of them, did not take into account the variations in the number of policies current in each zone. He suggested that, because of the greater number of policies issued in Madras than in Bombay, Madras State alone should have at least three divisional offices with proportionate number of branches under them.

Turning to the new Industrial Policy Resolution of the Government, he said that, judged by past performances, it was highly doubtful whether the public sector would be able to discharge the responsibilities undertaken by it satisfactorily. He felt that private sector, if not discriminated against in the matter of finance, transport and raw materials, could always put up a better performance than the public sector. The absence of any reference to nationalisation in the policy statement, he said, was comforting. He hoped, however, that such absence did not connote any intention on the part of the Government to "squeeze out" the private sector, but meant its preference to start new industries to taking over existing ones.

Referring to the respective roles of the public and private sectors in the second Plan, he said that the greater emphasis laid on the public sector would hamper growth of production. For so long as an enterprise stayed in Government hands, growth of similar enterprises in the private sector would not be stimulated. According to Mr. Rajam, another aspect tended to weaken the Plan. It was the attempt to relegate the existing well organised consumer industries to the background in favour of "nascent" cottage industries whose capacity for production to meet all the consumer demands is yet to be proved. Increased production of consumer goods would effectively check inflationary forces. In this connection, he welcomed the new allotment of 14,000 automatic looms and two million spindles to the private sector.

Turning to the provision for the development of transport in the Plan, he pointed out that it was too inadequate. Unless further funds were made available, the inadequacy would culminate in "transport chaos." Proceeding further, he said that a constructive solution to the problem of relieving mounting pressure on railways was the development of alternative means of transport such as road transport and coastal shipping. He pleaded for a revision of the taxation and licensing policies of the Government so as to provide incentives for more vehicles being put on the road.

Referring further to the plans of industrialisation, he complained that the South had been neglected. The *per capita* investment in Madras was Rs. 19, whereas it was Rs. 130 in Bengal and Bombay. He urged more industries to be started in Madras State to remove regional disparities. Commenting on State Trading, he observed that the Industrial Policy Statement was violated in transferring cement trade fully to the State Trading Corporation. Despite the large imports of cement contemplated, he felt that a central distributing machine was no answer to the problems facing the country; and by encroaching on cement trade, "Government has once again laid its hands on an asset which has been built up by the hard work of private interests." He, however, hoped that the distribution would be done with the minimum dislocation of the existing channels.

EXPORT OF ORES

The Government of India has decided to issue quotas for the export of iron and manganese ores to parties, who had no performance or quota to their credit during July-December 1955, on the basis of quotas held by them or their performance during the period January-June 1956, according to a Press note issued by the Commerce and Industry Ministry on the 3rd inst. This announcement is for the benefit of those who did not profit by an earlier announcement on 27th July 1956, according to which export licences were to be given only to those who had held quotas or effected exports during July-December 1955. The Press note further states that quotas from the State Trading Corporation for these ores will be issued by the Chief Controller of Imports and Exports within a ceiling of one-third of the total quantity to be allowed for export during this period.

PROFIT OF BIRLA JUTE A SHADE LOWER

MANUFACTURE OF CEMENT AND STAPLE FIBRE TO BE TAKEN UP

THE Indian jute industry had a favourable period of trading during the year 1955 and in the early months of the current year, thanks to the expansion in production of jute goods and the improvement in offtake. The adequate supply of raw jute and the abolition of export duty on jute goods in August 1955, following the devaluation of the Pakistan rupee, also proved to be of considerable assistance to the industry. The advantages gained by such development were, however, offset to a large extent, and in some cases more than offset, by the high prices which the mills had to pay for raw jute, the higher manufacturing cost on account of the rise in wage level, as a result of the award of the Third Omnibus Labour Tribunal in November last, and keen competition in foreign markets from Continental mills, as well as from mills in Japan and Pakistan.

Judged against the above background, the performance of the Birla Jute Manufacturing Company, Ltd. (Managing Agents: Messrs. Birla Brothers, Ltd., Calcutta), during the year ended 31st March 1956 can be said to be highly satisfactory, though the profit shows a slight setback. The gross profit amounts to Rs. 37.73 lakhs, as compared with Rs. 39.08 lakhs for the previous year, to which level it had risen from Rs. 36.32 lakhs earned in 1953-54. The net profit, which had gone up from Rs. 14.51 lakhs to Rs. 19.29 lakhs in 1954-55, has suffered a sharp decline in the year under review to Rs. 12.44 lakhs, the lowest level in the last ten years, following the larger provisions for Managing Agents' commission, depreciation and taxation, the last mentioned item alone accounting for an increase of Rs. 4 lakhs.

No allocations to the reserves have been made, while in the previous year, the general reserve had received Rs. 5 lakhs and the dividend equalisation fund Rs. 2 lakhs. The dividend on ordinary shares has been maintained at 10 per cent. per annum for the third year in succession on the present paid-up capital trebled in January 1954 by the capitalisation of a part of the reserves. On the old capital, the above dividend represents a distribution of 30 per cent., the same as that paid for the three years 1950-51 to 1953-54 prior to the increase in capital. In effect, therefore, the distribution is being repeated for the sixth year in succession.

The following comparative table gives an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956*	1955*	1954	1953
Sale proceeds	412.39	351.40	282.56	325.76
Other income	5.75	4.73	3.70	3.49
Consumption of raw materials	243.25	195.29	161.45	172.79
Manufacturing and other expenses	132.08	111.20	92.42	101.81
Gross profit	37.73	39.08	36.32	61.91
Managing Agents' remuneration	7.85	7.04	5.81	6.82

5½ per cent. II preference	0.76	..	..	..
Ordinary	9.13 (10%)	9.13 (10%)†	9.13 (10%)‡	9.13 (30%)
Carry forward	4.37	3.13	1.27	..

* The figures for 1954-55 and 1955-56 include those relating to calcium carbide factory.

† This was satisfied by distributing the ordinary shares of the Sootah Jute Mills Co., Ltd., at the rate of one share for every 15 shares of the Birla Jute.

‡ On the increased capital of Rs. 91.26 lakhs raised by the capitalisation of Rs. 60.84 lakhs in January, 1954.

The above table shows how far the increase in sale proceeds is offset by the rise in consumption of raw materials and in manufacturing and other expenses. Of the rise in expenses, salaries, wages and bonus alone account for Rs. 10.23 lakhs.

The Company's calcium carbide factory, which went into production in November 1954, attained full production during the year under review. As was expected last year, the factory made a satisfactory profit of Rs. 4.86 lakhs, as against a loss of Rs. 1.79 lakhs in the previous year. After providing Rs. 5.14 lakhs (Rs. 4.06 lakhs) for depreciation, the loss is Rs. 0.28 lakh (Rs. 5.86 lakhs) which has been adjusted against the profit of the jute section. In view of the rising demand for calcium carbide in the country, the Company has applied to the Central Government for permission to increase the present installed capacity of the plant from 10 tons to 20 tons per day.

The Company's activities are not to be confined to manufacture of jute goods and production of calcium carbide. In view of the rising demand for cement, the Directors have decided to install a cement factory at Satna in Vindhya Pradesh. Orders have already been placed for the necessary plant and machinery with a capacity to produce 800 tons of cement per day. The Directors have also decided to put up a staple fibre spinning plant at Birlapur. Machinery for this plant has also been ordered and production is expected to commence in March 1957.

These projects require large additional finance. In fact, a part of this has already been raised by the issue of preference shares. During the year under review, the authorised capital was increased from Rs. 1.45 crores to Rs. 4 crores by the creation of 800,000 additional ordinary shares of Rs. 10 each and 175,000 second preference shares. Out of these, 75,000 second preference shares of Rs. 100 each carrying cumulative interest at 5½ per cent. (free of income-tax) were issued and fully subscribed in October 1955. These shares are redeemable at par 12 years after the date of issue, or earlier, but not before 1960.

The Company's latest balance-sheet discloses a highly encouraging financial position. The paid-up capital, which has gone up from Rs. 115.94 lakhs to Rs. 189.79 lakhs, consequent on the aforesaid issue of second preference shares, is supplemented by reserves and surplus aggregating Rs. 221.86 lakhs. Of the reserves, capital reserve alone accounts for Rs. 145 lakhs, general reserve for Rs. 45 lakhs, dividend equalisation fund for Rs. 10 lakhs and investment reserve for Rs. 14.05 lakhs. The gross block of the value of Rs. 334.10 lakhs has been written down to a book value of Rs. 188.78 lakhs. The current assets amount to Rs. 297.57 lakhs, of which cash balances alone, which have been strengthened from a mere Rs. 4.71 lakhs to Rs. 74.25 lakhs, very nearly cover the current liabilities amounting to Rs. 36.51 lakhs and provision for taxation Rs. 38.20 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being quoted at Rs. 17-12 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 6 per cent. per annum, free of income-tax.

(Concluded from next column)

aside for contingency reserve and the allocation to the staff gratuity fund has been doubled to Rs. 1 lakh. The tariff and dividend control reserve has been provided with Rs. 48,579 (Rs. 41,896) and the reserve for rebates to consumers Rs. 48,579 (Rs. 41,896). The figures in brackets relate to corresponding provisions in the previous year. The dividend on 5½ per cent. (tax-free) first preference shares absorbs Rs. 1.21 lakhs, and that on 5½ per cent. (tax-free) second preference shares Rs. 44,000. The ordinary dividend absorbs Rs. 5.04 lakhs, leaving a small surplus of Rs. 7,738, as against Rs. 50,516 brought in.

The Company spent Rs. 4.32 lakhs on work in progress during the year. The balance of Rs. 7.12 lakhs out of the Government loan of Rs. 11.12 lakhs was availed of in January 1956 and the works for which the loan was taken are making satisfactory progress. The Directors hope to get from the Government a further loan of Rs. 27 lakhs for rural extensions in the Tiruchirapalli-Srirangam and East Tanjore areas. They feel that the necessity for keeping alive certain sinking funds has ceased now, due partly to the redemption of some of the debentures and partly to their decision to redeem the balance after obtaining consent from the debenture-holders.

The Company has received notice of the acquisition of the Pudukhottai State Electric Undertaking during this year by the Government according to the phased programme drawn up by them. As in the case of the East Ramnad Undertaking, here also the Directors intend to reinvest the proceeds of this transaction in the works of the Company.

S. M. ELECTRIC REPEATS DIVIDEND

PROFIT DECLINES SLIGHTLY

IT goes to the credit of the Directors and Managing Agents of the South Madras Electric Supply Corporation Ltd. (Managing Agents and Chief Engineers: Messrs. Seshasayee Brothers Ltd., Tiruchirapalli) that, even after the acquisition by the Government of their East-Ramnad Electric Undertaking on 1st November 1955 which resulted in a loss to the Company to the tune of Rs. 0.59 lakh, they have been able to maintain the dividend for 1955-56 at the record level of 9 per cent. reached last year. The working of the Company for the year ended 31st March 1956 compares fairly satisfactorily with the record level witnessed in the previous year. It cannot, of course, be gainsaid that there have been some shortfalls in certain categories of income and expenditure, but this is due to the forfeiture of the East-Ramnad Electric Undertaking to the Government during the year under review. Proceeds from the sale of energy, for instance, have slightly receded from Rs. 55.91 lakhs to Rs. 53.96 lakhs and the gross profit by Rs. 0.98 lakh from Rs. 17.20 lakhs to Rs. 16.22 lakhs. The net profit, however, is better and the additions to reserves are slightly larger. The table given below will enable the reader to get at a glance a comparative picture of the Company's results of working during the preceding three years.

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds of energy	53.96	55.91	46.99	42.13
Other income	3.21	3.98	3.71	3.81
Cost of distribution	25.10	26.59	22.82	21.55
Other expenses	15.86	16.11	14.56	13.02
Gross profit	16.22	17.20	13.70	11.37
Agents' commission	0.52	0.54	0.39	0.32
Depreciation	5.83	6.51	5.90	5.29
Provision for taxation	1.00	2.00	1.00	0.25
Net profit	8.87	8.15	6.41	5.51
To reserves	1.51	1.29	0.52	0.38
,, staff gratuity	1.00	0.50	0.25	0.25
Dividends—				
5½ per cent. preference	1.65	1.65	1.62	0.92
Ordinary	5.04 (9%)	5.04 (9%)	4.20 (7½%)	4.20 (7½%)
Carry forward	0.07	0.50	0.84	1.01

The dividend on ordinary shares has been maintained at 9 per cent., to which record figure it was stepped up last year from the rate of 7½ per cent. which existed in the previous year. As in the case of last year, the increase in dividend has been effected, by raising the final distribution from 3¾ per cent. to 5¼ per cent. the interim payment having been maintained at 3¾ per cent.

Commenting on the power supply position in the State, the Directors observe:

"During the period under review, we were free from restrictions of power cut. However, contrary to all expectations and forecasts, the monsoon conditions proved unfavourable once again in April and May 1956 and power restrictions were imposed by the Electricity Department, due to loss of generating capacity at all the hydro-electric stations. The power restrictions were in the usual form of cuts on maximum demand and consumption and, beginning with a 25 per cent. cut in April, the cut reached a maximum of 66⅔ per cent. in May, but was relaxed to 25 per cent. from 7th June 1956. With the onset of the monsoon, normal conditions were restored from 1st July."

The quantity of electricity sold by the Company during the year under review amounted to 85.52 million units, as compared with 81.51 million units, thereby breaking last year's record figure by a comfortable margin. The revenue from sale of energy, however, has dwindled from Rs. 55.91 lakhs to Rs. 53.96 lakhs. This is due to the fact that the receipts from supply of power on H.T. supply stand lower at Rs. 11.39 lakhs (Rs. 12.84 lakhs) and those on L.T. supply at Rs. 14.50 lakhs (Rs. 15.19 lakhs). Other income, too, is smaller at Rs. 3.21 lakhs (Rs. 3.98 lakhs). At the same time, expenses also have fallen, though not to the same extent as in revenue. The cost of distribution amounts to Rs. 25.10 lakhs, as compared with Rs. 26.59 lakhs in the previous year; other expenses have come down from Rs. 16.11 lakhs to Rs. 15.26 lakhs.

Out of the gross profit of Rs. 16.22 lakhs, the Managing Agents' Commission absorbs Rs. 52,373 (as compared with Rs. 53,872), provision for depreciation Rs. 5.83 lakhs (Rs. 6.51 lakhs) and provision for income-tax Rs. 1 lakh (Rs. 2 lakhs). A sum of Rs. 38,729 (Rs. 40,363) has been set

(Continued in previous column)

ALL-INDIA GENERAL INSURANCE CO. LTD.

LIFE BUSINESS EXPANDS

A FURTHER satisfactory expansion in life business was the outstanding feature of the working of the All-India General Insurance Company, Ltd., during the year ended 31st December 1955. The business in the general insurance section was nearly maintained at the previous year's level. Following the nationalisation of life insurance business in this country in January 1956, the Company's life business also was taken over by the Custodian appointed by the Government.

The report of the Custodian on the life business during 1955 shows that the Company received 5,143 proposals for assurances amounting to Rs. 129.92 lakhs, as compared with Rs. 3,857 proposals for Rs. 101.19 lakhs in the previous year. As many as 3,440 proposals resulted into policies for Rs. 94.98 lakhs, having gone up from Rs. 76.11 lakhs covering 2,899 policies. The net claims paid and outstanding amounted to Rs. 2.22 lakhs, as against Rs. 1.14 lakhs in the previous year. The net premium income for the year amounted to Rs. 18.73 lakhs, a rise of Rs. 1.20 lakhs over the year. The net interest earned, after deduction of income-tax at source, was Rs. 3.53 lakhs, giving a yield of 3.77 per cent. The number of policies in force at the end of the year was 20,088, assuring a sum of Rs. 463.42 lakhs, as compared with Rs. 426.52 lakhs at the close of 1954, covering 18,121 policies.

With the nationalisation of life insurance, the Company's eleven-year career in this field—the Company commenced writing life business in October 1944—has come to an end. In this short period, notwithstanding heavy odds, the Company has been able to build a life fund of Rs. 102.18 lakhs as at the end of 1955 and to declare bonus to life policyholders. While expressing regret that the life business of the Company had been taken over by the Government, Mr. Ravilal Shantidas, who presided over the annual general meeting of the Company held on 30th July 1956, in the absence of the Chairman, Mr. Pannalal Bansilal Pitty, felt glad that the Company was able to hand over to the Government a "solvent and sound life fund of over Rs. 1.02 crores built at considerable sacrifice and cost to the Company." He also added that the investments were so well managed that at the end of last year it was possible to add to the life fund a sum of Rs. 83,145 which was found superfluous in the investment reserve account.

In the general insurance section, the Company earned an aggregate net premium income of Rs. 15.41 lakhs during 1955, as compared with Rs. 15.71 lakhs in the previous year. The total expenses of management, however, recorded a welcome decline from Rs. 6.24 lakhs to Rs. 5.29 lakhs. As regards the working of individual departments, the net premium income from fire business declined slightly from Rs. 9.80 lakhs to Rs. 9.15 lakhs. There was a fall in the foreign fire premuim income of the Company from inward treaties. This fall was largely due to the Company's inability to reciprocate fully to the treaty companies. Net claims paid and outstanding also declined from Rs. 4.20 lakhs to Rs. 3.02 lakhs. After setting aside 40 per cent. of the premium as reserve for unexpired risks, there is a profit of Rs. 87,272 (as against Rs. 32,206 for 1954). The marine premium amounted to Rs. 1.08 lakhs (as against Rs. 90,883) and net claims paid and outstanding to Rs. 64,940 (Rs. 60,959). There was keen competition for business and rates were found unsatisfactory. The Company has, therefore, restricted its activities in this class of business. After creating a 75 per cent. reserve, the profit amounts to Rs. 18,027, having declined from Rs. 24,853. The net premium income of the miscellaneous department amounted to Rs. 5.18 lakhs (Rs. 5 lakhs) and claims paids and outstanding Rs. 2.68 lakhs (Rs. 2.69 lakhs). A profit of Rs. 15,021 (Rs. 1,960) has been earned in this section after setting aside 40 per cent. of the premium as reserve for unexpired risks.

The aggregate profit of all the departments is Rs. 1.73 lakhs, as compared with Rs. 78,484 for 1954. After raising the provision for depreciation on investments from Rs. 25,000 to Rs. 94,000 and the reserve for doubtful debts from Rs. 20,000 to Rs. 67,000, the balance left to be carried forward, along with the previous year's surplus, is Rs. 74,546, as against Rs. 62,924 a year ago.

Referring to the outlook for the Company, the Chairman observed that, in view of the present unsatisfactory nature of general insurance business, the Company had been concentrating on the development of life insurance business. As a result of the nationalisation of life business, however, the Company had lost a good part of the business built due to special efforts, with the result that the shareholders had lost forever their share of profits in the life valuation, which would have increased in future years. Further, the Company had lost some of the life personnel, who were helping the Company in the development of general insurance business. Apart from the difficulties that had arisen as a result of nationalisation of life insurance, Mr. Shantidas added, an insurer had a certain influence on the selection of individual risks, but he was powerless against the effects of any profound economic changes or of catastrophic events. That was the situation that faced the Company today. He stated that, in these circumstances, a forecast at the present period of profound changes was very difficult; yet, with the increasing tempo of economic activity under the second Five-year Plan, the Company could look forward to the future with cautious optimism.

Points From The Chair

Return to Investors in Electricity Undertakings

"AS you are already aware, under the Electricity (Supply) Act, the standard of permissible return has been fixed at 5 per cent. of the capital base, which is, broadly speaking, the capital employed in the business. Thus, our ability to distribute a dividend in excess of 5 per cent. is essentially limited by the capital structure, and the more fresh money which has been brought into the equity capital of a concern the nearer to unity will be the ratio of the capital base to the paid-up share capital. Therefore, to this extent and so long as the return is limited to 5 per cent., expanding companies like yours are handicapped more than those other companies which, for whatever reason, do not expand greatly. In fact, your Company has almost sextupled its equity capital in the last decade alone in the course of fulfilling its role in the country's economy and, in accordance with the terms of its licence and the legal maximum of return which we are being allowed on our money in the result is not, and for some years past has not been, enough to cover the moderate dividend rate of 7 per cent. per annum to which we have been accustomed."

K. G. MILNE,
Bombay Suburban Electric Supply, Ltd.

Compensation to Kolar Gold Mines

"Your directors and managers have patiently and painstakingly striven to remove doubts and to clear up misunderstandings. You will recall that in reply to the unjust accusation made by the Mysore Government that the agreement had been violated, the companies requested that the question may be referred to arbitration, as specifically provided in the agreement itself. The Mysore Government rejected this request and expressed its preference for legislation. It was also represented that if the Government of Mysore were dissatisfied with the terms of the 1949 agreement, the companies would be ready and willing to discuss a new agreement mutually acceptable. In their anxiety to end all controversies, and smooth out differences and see cordial and harmonious relations restored, your Directors did also suggest, in more than one context, that the Government may be pleased to appoint an impartial Expert Committee of eminent and high-ranking personalities in the fields of Justice (such as a retired Chief Judge of the Supreme Court of India), Finance and Administration, to whom all the charges and differences may be referred for examination. It was also submitted that if nationalisation was decided upon, the question of fixing the compensation should also be referred to such an independent committee. None of these requests has so far been heeded by the State Government."

M. A. SRINIVASAN,
Kolar Gold Mining Companies

Insurance Association Pool

"Another important matter which should not only be disturbing to this trade but to the private sector as a whole is that Government intend to dissolve the 'Indian Insurance Companies Association Pool' and pass on all that business to the three companies which are subsidiaries of the Life Insurance Corporation. You are aware of the declared policy of the Government that, whenever in an industry the private and public sector companies are working, the Government will adopt a non-discriminatory attitude in its patronage, because after all both are indigenous and, therefore, deserve the support of the Government, irrespective of who owns it or manages it. The Central and States Government business which was so long catered for by the 'Pool'—has been distributed in an equitable manner between all the Indian companies. It is, therefore, not right for the Government to deprive these companies of this business and reserve it for the subsidiaries of their Life Insurance Corporation. In doing so, the Government would be going against their declared policy and would be doing injustice to insurers in the private sector. I appeal to the Government not to exclude the companies of the private sector from being beneficiaries of the Government business."

K. M. D. THACKERSEY,
Indian Mercantile Insurance Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

DISHERGARH POWER SUPPLY CO., LTD. Annual General Meeting, Calcutta, 25th August 1956. Dividend: Rs. 6 per share. Transfer books will remain closed from 13th to 25th August 1956, both days inclusive.

KADUR COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 25th August 1956. Dividend: As. 2-2/5 per ordinary share. Transfer books will remain closed from 20th to 25th August 1956, both days inclusive.

AHMEDABAD MANUFACTURING AND CALICO PRINTING CO., LTD. Annual General Meeting, Ahmedabad, 27th August 1956. Dividend: Rs. 30 per share (includes two interim dividends of Rs. 8 and Rs. 10 per share) for 15 months ended 31st March 1956. Transfer books will remain closed from 15th to 29th August 1956, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 28th August 1956. Transfer books remain closed from 6th to 28th August 1956, both days inclusive.

STRUCTURAL FABRICATORS PRIVATE LTD. (First Director: Mr. R. S. Lala Karamchand Aggarwal.) Business: Machinery manufacturers. Authorised capital: Rs. 10,00,000. Private company. Address: 126, Narayan Dhuru Street, Bombay 3.

INDIAN MERCANTILE INSURANCE CO., LTD.

MR. K. M. D. THACKERSEY'S SPEECH

THE Annual General Meeting of the Indian Mercantile Insurance Co., Ltd. was held at Bombay on 2nd August 1956. Mr. K. R. P. Shroff presided over the meeting in the absence of the Chairman, Mr. K. M. D. Thackersey. The following is the text of Mr. Thackersey's speech, together with a brief account of the proceedings:

"GENTLEMEN,

"Before I comment on the annual accounts, I will place before you my views on some of the important questions affecting Insurance Industry.

"You are well aware that our Government has nationalised the life insurance business by promulgating the Life Insurance (Emergency Provisions) Ordinance, 1956, on 19th January 1956.

"In my opinion, the objectives which the Government had in view in nationalising life insurance business could have been better realised by allowing the industry to function in the competitive private sector with proper and effective regulations. But this being an accomplished fact, I wish to offer no comments. I shall be very glad if the pace of progress of life insurance business of the last five years is, if not increased, maintained by the Life Insurance Corporation and that the policyholder continues to receive the same sympathetic service and the rate of bonus as he used to get from the private insurers.

General Insurance

"While nationalising life insurance business it was made clear by the Honourable Finance Minister, Shri C. D. Deshmukh, on behalf of the Government that the Government had no intention to nationalise general insurance business. Government do not consider from the point of view of assistance to second Five-year Plan that general insurance is going to offer any significant help. Moreover, policyholders in general insurance being persons of commerce and industry are capable of looking after their interests. He also said that they were aware of the malpractices in the general insurance business and if there was no significant improvement in that respect, they might have to re-examine the question.

"If the insurers have to work under the constant threat of nationalisation, in which even the malpractices of a few could be made an excuse for taking over the general insurance business, it is but natural that the companies cannot plan and organise their working ahead to meet their responsibilities of handling much larger business which they can hope to secure as a result of rapid industrialisation that is taking place under the second Five-year Plan. The Government, therefore, should categorically make it clear that the industry, like many others, will remain in private sector, so that with their future assured, the companies can conserve their resources and go ahead with their future programmes of expansion. Along with this the Government, through the Executive Committee, can set standards, with a view to putting a stop to malpractices and see that they are effectively maintained by proper regulations by all insurers. This should not mean that the industry has no responsibility in the matter. Each insurer must actively co-operate with Government and Executive Committee and take every step necessary to make the working clean and sound.

Re-insurance Corporation

"Another important facet of general insurance business which worried the Government and the Indian insurance interests was the net drain out of India that occurred every year due to reinsurances. After discussions between the Government, the Executive Committee, Indian Insurance Companies Association and representatives of general insurers it has been decided to set up 'India Re-Insurance Corporation Ltd.' Eighty per cent. of the subscribed capital of this Corporation will be in the hands of Indian insurers and twenty per cent. in the hands of foreign insurers. It will have a base of Indian premium drawn from all insurers registered in India and will try to build up reinsurance relations with companies in all foreign countries. This should substantially reduce the drain and, in course of time, it will be an earner of substantial foreign exchange. You will be glad to know that your Company has agreed to subscribe to the share capital of this Corporation and be one of its promoters.

"Another important matter which should not only be disturbing to this trade but to the private sector as a whole is that Government intend to dissolve the 'Indian Insurance Companies Association Pool' and pass on all that business to the three companies which are subsidiaries of the Life Insurance Corporation. You are aware of the declared policy of the Government that whenever in an industry the private and public sector companies are working, the Government will adopt a non-discriminatory attitude in its patronage, because after all both are indigenous and, therefore, deserve the support of the Government irrespective of who owns it or manages it. The Central and States Government business which was so long catered for by the 'Pool' has been distributed in an equitable manner between all the Indian companies. It is therefore, not right for the Government to deprive these companies of this business and reserve it for the subsidiaries of their Life Insurance Corporation. In doing so the Government would be going against their declared policy and would be doing injustice to insurer in private sector. I appeal to the Government not to exclude the companies of the private sector from being beneficiaries of the Government business.

"You will have noticed from the accounts that the year 1955 has been the best year in the history of the Company, and that too in all respects—profits, premium income, progress made, additions to underwriting reserves and other reserves.

Rise in Earnings

"As a result of our operations during the year under review, our total Indian gross and net premium, including life income, amounted to Rs. 47.09 lakhs and Rs. 50.55 lakhs, respectively, registering an increase of 15.1 per cent. and 13.4 per cent. over the previous year.

"Our total net and Indian gross premium income in general department amounted to Rs. 25.95 lakhs and Rs. 22.85 lakhs, respectively, as against Rs. 22.19 lakhs and Rs. 18.76 lakhs, respectively, last year. Net premium income has increased by Rs. 3.76 lakhs over the previous year; whereas, the gross premium has increased by Rs. 4.09 lakhs over the previous year. This increase in premium income has been the largest so far secured in the history of the Company.

"Of the year's general premium income claims absorb 36.3 per cent., as against 42.5 per cent. last year. Commission and expense of management account for 40.2 per cent., as against 38.1 per cent. last year. Reserve for unexpired risks results into a strain of 12.3 per cent. against a strain of 6.8 per cent. last year. There is an increase of Rs. 1,84,064 in the reserve for unexpired risks over the last year. Thus, there is a relief of 6.2 per cent. on claims, an increase of 2.1 per cent. on commission and expenses of management and a strain of 5.5 per cent. on reserves.

"As a result of the year's working our funds have increased by Rs. 4,99,314. Our funds, excluding life funds, amount to Rs. 50,62,078."

Proceedings

Mr. J. T. Halai congratulated the management for the splendid profits and suggested that outstanding liability of shares be further reduced by capitalising reserves. Mr. G. M. Shah said that, in the alternative, fully paid bonus share of Rs. 40 be issued. Mr. J. P. Khatri stated that the Company's expenses were more and that Company's investments be changed from Government securities to equity shares to get better yield.

The Chairman said that the comments will receive consideration of the Board. The report and accounts were adopted. A dividend of Rs. 3 per share was sanctioned. Mr. K. M. D. Thackersey, Mr. M. D. Madhowji and Mr. K. R. P. Shroff were re-elected Directors. Messrs. S. B. Billimoria & Co., and Messrs. Devidas Vithaldas & Co., were re-appointed joint Auditors.

QUESTION HOUR IN PARLIAMENT

World Bank Loans

A LOAN of approximately Rs. 10 crores for the expansion programme of the Indian Iron and Steel Company and a loan of about Rs. 12 crores for the Bombay Government's Koyna hydro-electric project are being arranged from the World Bank. Negotiations for these two loans have not yet started and, therefore, no particulars about the terms can be given at this stage.

—*Jawaharlal Nehru*

Consortium of Banks

The Government of India feels that the setting up of a consortium of leading banks for underwriting new issues of industrial shares and debentures has to be deferred until the results of the working of the recently established credit institutions and the pilot schemes undertaken by the State Bank of India for financing industries become available. In recent years, there has been a considerable increase in the number and range of financing institutions for industry and the pilot schemes undertaken by the State Bank of India and for the co-ordination of the activities of the different agencies for the grant of credit to small and medium-scale industries. The setting up of a consortium of leading banks and insurance companies under the leadership of the former Imperial Bank was recommended by the Shroff Committee to enable the participation of banks and insurance companies in long-term industrial finance.

Sodepur Glass Works

It has been agreed to sell the assets of the Sodepur Glass Works Ltd. to an Indian company which is being floated by the Asahi Glass Company Ltd. of Japan. This Indian company has not yet been floated; it is expected to be formed very shortly. An agreement has been signed between the Industrial Finance Corporation of India and the Asahi Glass Company Ltd., under which the latter has undertaken to float a public limited company in India to purchase the assets of the Sodepur Glass Works Ltd. from the Corporation. The Corporation, on its part, has agreed to grant to the said Indian company a loan of Rs. 62 lakhs which is the sale price of the assets of the Sodepur Glass Works Ltd.

Life Insurance Corporation

The headquarters of the National Life Insurance Corporation will be located at Bombay. The Corporation will begin functioning from 1st September. Steps necessary under the laws are being taken to constitute the Corporation in time. Arrangements are also being made to organise the business of life insurance, so that, with the establishment of the Corporation, there will be minimum disturbance or dislocation in the flow of new business and in serving policyholders. All employees of the nationalised companies will be provided employment by the new Corporation. An assurance to this effect had been given at the time nationalisation was announced. The question of their permanency will also be considered after the Corporation comes into being. Special committees have been established to go into the pay scales of these officers and lower staff. Tentative decisions in regard to this matter have been taken, although not finalised, in regard to salaries of the lower staff. So far as the highly paid staff is concerned, however, decisions have been taken. Their pay scales will be lower than what they were getting in the various insurance companies previously.

Study of Tax Systems Abroad

The Chairman of the Central Board of Revenue, Mr. A. K. Roy, will head the four-man team of Indian Income-tax experts that is being sent abroad to study the taxation systems in other countries. One expert each will visit the United States, Sweden and Japan, while the fourth will visit all the three countries to co-ordinate and supervise their work and to study the broader aspects of tax administration and organisation. The duration of the visit will be about three months. The taxation systems in these countries have already been studied theoretically, but the experts now propose to study them from a practical point of view as regards organisation and administration.

American Aid

India obtained 114,000 tons of wheat and 2,051 bales of cotton valued at Rs. 4.76 crores from the U.S.A. by way of aid during 1955-56. This was obtained by way of economic assistance in the form of import of surplus agricultural commodities. Under the terms of the agreement, 50 per cent. of the amount was to be utilised for the purchase of surplus agricultural products from the U.S.A. Part of the assistance was in the form of aid and part in the form of loans. An interest of 4 per cent. was to be paid on the loan. The amounts were to be in the form of counterpart rupee funds and to be utilised on projects jointly agreed to by the U.S.A. and India. Negotiations are going on with the U.S.A. for the purchase, under the same scheme, of surplus wheat and cotton. This is essential to make the second Plan a success.

Coal Prices

An increase in the prices of coal became necessary because of the benefits by way of increased emoluments and additional concessions granted to miners by the Tribunal. The upward revision of prices cannot be said to have had any material effect on the masses, except that, in large cities where soft coke is used as domestic fuel, the price of soft coke has been increased by two annas to three annas per maund. Price increase has been agreed to because of the Government's conclusion that it cannot be met from the companies profits.

Methanol Plant

The Russian experts have reported that the methanol plant, obtained as reparation is on the whole in a fairly good condition. In their opinion, the plant can be installed at Sindri for the manufacture of methanol and ammonia after repairs.

New Coal Bed

Coal has recently been found in the Bankura District of West Bengal. The coal-bearing area lies on the southern bank of Damodar River four miles from Durgapur Barrage, D.V.C. It is too early to say anything about the extent of the deposit or the possibilities of opening mines.

Oil Find in Assam

No indication is available yet whether the new oil find at Tengakhet in Assam by the Assam Oil Company has got the possibility of an oil well. Test drilling operation is still in progress. So far, they have reached about 1,000 feet below ground level. There was recently a conference at Dehra Dun of experts in the country engaged in oil exploration for reviewing the work done so far. Some of the Press reports on the conference are unauthorised. I did not make any statement of policy at Dehra Dun.

* * * *

Oil Refinery in Public Sector

A preliminary understanding has been reached between the representatives of my Ministry and the Assam Oil Company for forming one or more rupee companies with Government participation for exploration, production and transport of oil from the areas whose rights are already conceded to the company previously and where oil has been discovered. No formal agreement has, however, yet been reached with the Company. So far as refining of oil is concerned, it is proposed to establish a refinery under the public sector with at least 66⅔ per cent. of Government share. The whole matter is under consideration. The Assam Oil Company has suggested that the refinery be located at Calcutta, but the matter is still under consideration. A committee of experts will be appointed to go into the whole question and take a decision. The refinery will initially have a capacity of 1.5 million tons. The annual production of crude oil from the areas where oil has now been discovered is, according to the Company's experts, one million tons.

ENGINEERING

(*Concluded from page 272*)

words, the cracking of the cylinders became an "epidemic" and by the middle of 1955 about 159 cylinders out of the total 200 fitted in the 100 locomotives supplied by the above firm had cracked. Similar cracking was also observed in about 90 cylinders out of the 268 supplied directly by another United Kingdom firm to the Chittaranjan Locomotive works for fitting into their "W.G." locomotives under manufacture. A technical enquiry held in 1953 established the fact that the cracking was mainly due to defects in their design including a corehole and the poor finish of the castings. Attempts were made by the India Stores Department, London, to get free replacement. While no satisfactory reply was received from the firm which supplied to the Chittaranjan Locomotive Works, the other firm repudiated the claim on the ground that the cylinders were manufactured by them in accordance with the drawings approved by the consulting engineers and that there was no guarantee clause in the agreement. The Committee learnt that the manufacturing firm had adopted the design of "W.P." locomotives but instead of providing a stronger web for the comparatively larger steam load, they had actually reduced the thickness of the web. The consulting engineers did not bring the reduction in the thickness of the web to the notice of the Railway Board and the representative of the Railway Board informed the Committee that the consulting engineers acceped the responsibility for the design, but not the liability, a stand which the Committee could not quite appreciate.

In June 1948, a contract for the supply of 470 locomotives was placed with manufacturers in Canada and the U.S.A. through the India Supply Mission, Washington, the components and fittings for which were to be obtained from manufacturers in the United Kingdom. In order to avoid any delay in the supply by British manufacturers, it was initially proposed that the order should be placed direct by the India Store Department, London. The U.S. and Canadian manufacturers insisted that unless they themselves placed the orders there would be divided responsibility for delivering the locomotives in time. This was ultimately agreed to. In the final analysis, however, the desired objective could not be attained as the deliveries from Canada were considerably delayed and the American locomotives, though delivered in time, arrived without fittings. The fittings were subsequently received in India direct from the U.K. However, payment amounting to $1.7 million for the British-made components had to be made in dollars whereas, it could have been done in sterling if the order on the U.K. had been placed by the India Store Department, London. Further, since 370 out of 470 locomotives were delivered only after the devaluation of the rupee in September 1949, it resulted in a loss of Rs. 20 lakhs to the Government. If only the Government had obtained its components direct from the U.K. on its own orders, this loss could have been avoided. The memorandum furnished by the Railway Board at the instance of the Committee showed the loss on account of freight charges on the Assam Rail Link at Rs. 16.36 lakhs. This loss was a direct consequence of the preferential treatment meted out to the Assam Oil Company in the matter of freight charges and the refund which was given to the Company with retrospective effect from January 1950.

Clearly, some of these irregularities in procedure which have meant financial loss to the railway could have been avoided through prompt attention to details by the authorities concerned. It is to be hoped that such attention would be forthcoming in the future.

NUCLEAR EXPLOSIONS

An objective study of the consequences of the use of nuclear, thermonuclear and other weapons of mass destruction is contained in a book entitled "Nuclear Explosions and Their Effects," released by the Publications Division of the Government of India. Written for the layman as well as the scientist, the book outlines the discovery of atomic energy and the evolution of the atom bomb. The chief burden of preparing the study fell on Dr. D. S. Kothari, Head of the Defence Science Organisation in India. With him were associated many scientists including Dr. Homi Bhabha and Dr. V. R. Khanolkar.

The book deals with the broad scientific principles underlying fission and fusion explosions and includes illustrative charts showing the relative effects of nuclear, thermonuclear and other destructive weapons. In another chapter, the book describes in broad terms the physical and biological effects of nuclear explosions. Describing the devastating blast, heat and radiological effects of high-yield explosions—explosions in which energy unleashed is equivalent to millions of tons of T.N.T.—the book says that it is apparent that a high-yield fusion bomb is primarily a radiological weapon. The study shows how the blast of a single megaton weapon is enough to destroy the very largest of modern cities. Its radiological effect is enough to devastate an area as large as some of the largest States.

The multiplication factor in comparison to the devastation caused by conventional weapons is so big that it becomes extremely difficult to appreciate and assess the seriousness and peril of the new situation. In recent tests, it is estimated that 15 megaton thermonuclear (or H. bomb) explosions have been tried out. A 20-megaton bomb, it points out, releases energy which is of the same order as that of a large earthquake or a hurricane; its energy is equal to 2 per cent. of the annual output of electrical energy in the world. It is pointed out that, if this bomb were to be made from conventional explosives, the mere cost of the explosives will be roughly a thousand million pounds sterling. In contrast, the nuclear weapon is, in terms of destructive power, the cheapest thing the world has ever seen:—cheaper than conventional weapons by a factor of hundreds, if not thousands. By sheer logic of the situation, the book points out, "megaton bombs and cities cannot co-exist for a long time."

The book includes appendices on nuclear explosions and the weather, radio-active contamination of fish and marine organisms and maximum permissible concentrations in air and water for continuous exposure. In the chapter on the genetic effects of nuclear explosions, two points have received special attention: (1) the internal hazard resulting from ingestion (by absorption into a body) of radio-active substances contained in the fallout from test explosions, and (2) the genetic hazard from exposure of the entire world population to ionizing radiation from global fallout. The former injures the individual during his lifetime while the latter manifests itself not in the exposed individual but in his descendants.

In the concluding chapter the book recalls the statement made in July 1955 jointly by Albert Einstein, Percy W. Bridgman, Leopold Infled. Herman J. Muller, Cecil F. Powell, Joseph Rotblat, Bertrand Russel, Hideki Yukawa and Jean Frederic Joliot-Curie. In this statement, the world-renowned scientists and humanists had clearly posed the problem facing humanity: "Here then is the problem which we present to you, stark and dreadful and inescapable: shall we put an end to the human race: or shall mankind renounce war? People will not face this alternative, because it is so difficult to abolish war.... There lies before us, if we choose, continual progress in happiness, knowledge and wisdom. Shall we instead choose death because we cannot forget our quarrels?"

The authors therefore consider it extremely important—while we are still ignorant as to the true scale of hazard—that the radiation exposure is kept down to the lowest possible value. Otherwise, they point out, irretrievable harm may be done to what is literaliy the most precious treasure of mankind—genetic heritage. In conclusion, the study says: "While no one with any understanding of problems of nuclear war has argued that a war with nuclear weapons would be anything less than a total disaster, there are some people who argue that tests can continue, because it is not yet firmly established that, on the present scale, they would lead to any substantial increase in the existing somatic and genetic load of mankind. In effect, this means that tests can continue so long as it is not known with certainty that they would cause serious harm to man. This is a rather strange line of argument. To argue that tests should stop only if it were definitely established that their continuation would bring certain disaster to mankind is a regrettable commentary on 2,500 years of progress since the Buddha."

Notices

BENARES ELECTRIC LIGHT AND POWER COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956 (being the fifty-sixth Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office, No. 12, Mission Row, Calcutta, on MONDAY, the 10th September 1956, at 11-0 a.m., for the following purposes:—

1. To consider and pass the audited Accounts for the half-year ended 31st December 1955, and the Balance Sheet as at that date and to adopt and receive the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 65 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

4. To consider, and if thought fit, to pass with or without modification the following resolution, namely:—

   "Resolved that with effect from the commencement of the Companies Act, 1956, the consent of the Company be and is hereby accorded to the Board of Directors borrowing and continuing to borrow monies for and on behalf of the Company in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained or from time to time to be obtained from the Company's Bankers in the ordinary course of business."

5. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th September 1956 to the 10th September 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,

MARTIN BURN LTD.,
S. N. MUKERJEE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA 1, *7th August*, 1956.

EXPLANATORY STATEMENT

1. In connection with item No. 3 of the above Notice, Mr. P. N. Banerjee, whose first appointment as a Director of the Company dates as far back as 1931, falls within the definition of the Companies Act, of an associate of the Managing Agents. Consequently it will be necessary in accordance with Section 261 of the Companies Act, 1956, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now of the age of 72 years it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

2. The Resolution under item No. 4 of the above Notice is self-explanatory and, when passed, will provide the authority required under Section 293(1) (*d*) of the Companies Act, 1956.

THE FORT WILLIAM JUTE COMPANY LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Company will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Thursday the 30th August 1956, at 3-30 p.m., for the purpose of receiving the Directors' and Auditors' Reports, passing the Accounts for the Half-year ended 31st March 1956, declaring dividends, electing Directors, appointing Auditors and transacting such other ordinary business as may be brought forward.

The Share Transfer Registers of the Company will be closed from 17th August to 30th August 1956, both days inclusive.

By Order of the Board,

Per Pro BANGUR BROTHERS LTD.,
B. D. BANGUR,
Managing Agents.

CALCUTTA, 30*th July*, 1956.

N.B.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

CALCUTTA

NOTICE IS HEREBY GIVEN THAT THE Sixth Annual General Meeting of the members of SEN-RELEIGH INDUSTRIES OF INDIA LTD. will be held at the Registered Office of the Company, Mercantile Buildings, Lallbazar Street, Calcutta, on Tuesday the 28th day of August 1956, at 12 noon, for the following purposes:—

1. To receive and consider the Directors' Report for the year ended 30th September 1955.
2. To receive and consider Audited Accounts for the year ended 30th September 1955.
3. To declare Dividends on Cumulative Preference Shares and Ordinary Shares for the year ending 30th September 1955.
4. To appoint Auditors for the current year and fix their remuneration.
5. To elect Directors in place of those retiring.
6. To transact such other business as may be admissible.

Share Transfer Books and the Register of Members of the Company will be closed from the 7th August 1956 to 28th August 1956, both days inclusive.

Dividends, if declared, will be paid only to members whose names appear in the Register of Members on the 7th August 1956 and Dividend Warrants will be sent to them in due course for which no application will be necessary.

By Order of the Board,
K. D. GANGULI,
Secretary.

MERCANTILE BUILDINGS,
LALLBAZAR STREET,
CALCUTTA-1, 21*st July* 1956.

N.B.—A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company. In order to be effective a completed proxy form must be lodged at the Registered Office at least forty-eight hours before the time fixed for the meeting at which it is to be used.

To all members of SEN-RALEIGH INDUSTRIES OF INDIA LTD. and in particular to:—
Messrs. Binraj Giria, Eric Ensor Baker, L. C. Clarkson, Kamleswari Pd. Chakravarty, Prafulla Kumar Chakravarty, Gopal Krishna Dutta, Jati Madhav Dhar, G. H. B. Wilson, Dhirendra Lal Nag, Kshitish Chandra Pal, P. K. Kuruvilla, A. J. Coelho and Another, Md. Abrar Hassan, Messrs. Raleigh Cycle Co., Ltd., Dr. H. van de Loo, Messrs. Union Sils, van de Loo & Co.

THE BELAPUR COMPANY, LIMITED

GENERAL NOTICE UNDER COMPANIES ACT, 1956, SECTION 412

To

THE MEMBERS OF THE BELAPUR COMPANY, LTD.

TAKE NOTICE THAT IT IS PROPOSED TO make application to the Central Government under the Companies Act, 1956, sections 268 and 326, for approval of

(*a*) the appointment of W. H. Brady & Co., Ltd., a Company incorporated under the Indian Companies Act, 1913, having its registered office at 12/14, Veer Nariman Road, Fort, Bombay, as Managing Agents of the Company for a term of ten years from the 15th January 1957, at remuneration including commission of 10 per cent. per annum on the annual net profit of the Company with the right to appoint two ex-officio Directors of the Company;

(*b*) the amendment of Article 94 so as to enable W. H. Brady & Co., Ltd., as Managing Agents to appoint any persons, not exceeding two in number, as ex-officio Directors of the Company, such persons not to be liable to retire by rotation and not to be required to hold any qualification shares—with the right of removal and reappointment.

The draft Managing Agency Agreement with W. H. Brady & Co., Ltd., and amendments to Article 94 are available for inspection at the Registered Office, between the hours of 10.30 a.m. to 1 p.m. and 2.30 p.m. to 5.30 p.m. on week days.

W. H. BRADY & CO., LTD.,
Managers.

BOMBAY, 31*st July* 1956.

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-third Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Thursday the 13th September 1956, at 4.30 p.m., for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 29th February 1956.
2. To declare a Dividend and Bonus.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 18th day of August 1956 to the 10th day of September 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(The holders of the 4½ per cent. Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting.)

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & COMPANY PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 31*st July*, 1956.

N.B.—The Dividend and Bonus when declared will be made payable at the State Bank of India, Bombay, on and after Wednesday the 26th September 1956, to those shareholders whose names stand on the Register of Members on the 18th August 1956. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

MONEY STEADY

(From Our Own Correspondent)

BOMBAY, 8*th August*

Steady conditions continued to prevail in the short-term money market during the week under review. Though the demand for bank credit was not as keen as before and the return of funds continued to be on a fair scale, the surplus was not large enough to bring down money rates. This was so, because money was still usable. Further, the forthcoming borrowing programme of the States, which will be made public before this issue goes to Press, restrained the institutional lenders to the market from placing their surplus funds at the latter's disposal.

Inter-bank call money still fetched 3½ per cent. among the Exchange banks and larger Indian banks, with some transactions reported at 3 per cent. after clearing hours. The rate among the smaller Indian banks was uniformly at 3½ per cent. House money at call was bid 3¼ per cent. and short-term deposits were placed at 3½ per cent. for one to three months and at 3⅜ to 3¼ per cent. for four to six months.

After three weeks of successive recession to the tune of Rs. 38.22 crores in the aggregate, the notes in circulation have gone up by Rs. 2.87 crores. Disclosing this, the Reserve Bank's statement for the week ended 3rd August 1956 also reveals a fall of Rs. 2.70 crores in notes held in the Banking Department. The fractional rise in total notes issued is covered by the increase in rupee coin. In the Banking Department, a sharp fall of Rs. 15.11 crores in deposits of the Central Government is noted. Deposits of other Governments are also lower, but only by Rs. 97 lakhs. Bankers' balances, too, have shrunk by Rs. 5.45 crores. On the assets side, a decline of Rs. 5.96 crores is noted in balances held abroad. Another notable change is the fall of Rs. 10.17 crores in loans and advances other than to Governments, of which those to Schedule banks against usance bills alone account for Rs. 9.51 crores. This development indicates the easing of pressure on banks for credit.

The Schedule banks' statement for the week ended 27th July 1956 shows a rise of Rs. 3.71 crores in demand deposits and of Rs. 1.89 crores in time deposits. Inter-bank borrowings have also gone up by Rs. 2.61 crores, while borrowings from the Reserve Bank stand reduced by Rs. 6.73 crores. The downward trend in advances persists with a further decline of Rs. 3.38 crores. Bills purchased and discounted have also fallen by Rs. 99 lakhs. Investments show an increase of Rs. 2.16 crores, cash balances of Rs. 85 lakhs and money at call and short notice of Rs. 3.18 crores.

The Gilt-edged market was dull during the week under review. Activity was restricted to very small proportions and the undertone was quiet. The Reserve Bank's purchases of a number of loans against sale of the recently issued Central Government loans at their issue prices failed to improve the conditions, as the latter loans were available in the market itself one anna lower.

3 per cent. 1957 and 1958 were stagnant at Rs. 99-13 and Rs. 99-10, respectively, at which the Reserve Bank continued to be a buyer outright. 3 per cent. 1959-61 was maintained at Rs. 98-2 and 3 per cent. 1963-65 at Rs. 95.3 per cent. 1964 was an anna lower at Rs. 95, while 3 per cent. 1966-68 picked up an anna to Rs. 93-4. 3 per cent. 1970-75 was dull at Rs. 90-5, while 3 per cent. 1986 Conversion Loan lost further ground from Rs. 76-4 to Rs. 75-12. 3½ per cent. 1962 was held at Rs. 98, 3½ per cent. 1961 at Rs. 99-8, 3½ per cent. 1964 at Rs. 98-11 and 3¾ per cent. 1965 at Rs. 98-10.

In the foreign exchange section, rupee ruled steady in terms of the U.S. dollar, as the weakness of sterling abroad had been arrested. Bank's selling rate of ready dollars was unchanged at Rs. 480¾ per $100 and their buying rate at Rs. 477 per $100. In New York, sterling was a little erratic, but the undertone was steady. Spot sterling moved between $2.78-7/16-2.78-9/16 and $2.78-3/16-2.78-5/16, before closing at $2.78⅜-2.78½. Three months' forward closed at $2.76⅞-2.76⅞, as against $2.76-13/16-2.76-15/16 and transferable sterling at 275.65-277.80 cents, as against 275.90-276.05 cents.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 5*th August*

During the week under review, the conditions of the local hides and skins market became stabilised. The new arrival was considerable. There was a keen demand for upper grade cow and buff. The Madras dealers were lukewarm during the week. But country tanners were keen buyers of lower grade cow. The main purchasers were the local tanners. The latest available quotations are: Wet salted cow 1st grade Rs. 280; wet salted cow 2nd grade Rs. 200 to Rs. 220; wet salted cow 3rd grade Rs. 120 per score; wet salted buff 1st grade 2 lbs. 2 ozs. per rupee; wet salted buff 2nd grade 2 lbs. 4 ozs. per rupee; goat 1st grade Rs. 170 to Rs. 180; goat 2nd grade Rs. 130 to Rs. 140; sheep 1st grade Rs. 170 and sheep 2nd grade Rs. 130 per 100 pieces.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 6*th August*

Firm conditions prevailed in the linseed market during the week under review. Although turnover was on a very small scale, prices displayed a notable increase. Sellers were very reserved, owing to lack of selling advices from upcountry for all positions. Despite good enquiries from crushers, the turnover was very small. The oil market was firm. Good local demand, combined with the prevailing high price of mustard oil, resulted in an appreciable advance in prices. Price indications from overseas were still considerably lower in parity.

The latest quotation is: Ready-August Rs. 23-12 per maund.

SILVER MOVES UP FURTHER

(From Our Own Correspondent)

BOMBAY, 8*th August*

A two-sided trend was witnessed in the bullion market during the week under review; the undertone in silver was firm, while that in the yellow metal just steady.

In silver, the buoyancy noted in the previous week did not persist in the earlier half of the week under review. On the contrary, there was a slight reversal, in the absence of any buying enthusiasm due to accumulation of stocks. Despatches of silver bars to up-country centres could not be made on account of the heavy rains which paralysed the transport. Subsequently, however, renewed buying and bear-covering lifted up prices, on rumours that arrivals of coins from Tibet would slacken on account of the rise in price in Tibet itself. Whether these rumours were correct or not, the actual arrivals in recent weeks were not as heavy as the bears had anticipated. Another factor which inspired bullish sentiment was the sudden increase in demand in the ready section and the rise in offtake by Calcutta and other centres, thanks to the improvement in transport during the last few days. Over the week, forward silver scored a gain of Re. 1-4 and ready As. 14.

Gold was a little erratic, but the undertone was steady. The buoyancy noted in the previous was, however, arrested, due to slackness in offtake.

Forward silver (23rd August settlement) shaded off from Rs. 171-5 to Rs. 170-11 earlier in the week, but bear covering and encouraging advices from the ready section pushed it up to Rs. 172-14. The closing was a shade lower at Rs. 172-9. Business in the next settlement commenced today, the carry forward charges being one anna to As. 2 against buyers.

Ready silver (.996 mint) reacted from Rs. 171-13 to Rs. 170-15, before gaining ground to Rs. 173 and closing at Rs. 172-11. The premium which ready commanded over the forward narrowed down from As. 8 to As. 2, reflecting the increase in floating stocks from 1,700 bars to 2,000 bars. The daily average offtake, which was about 10 bars early in the week, later increased to 30 bars.

Gold for forward delivery (22nd August settlement) fluctuated between Rs. 103-13 and Rs. 103, but closed on balance As. 2 lower at Rs. 103-5. Business in the next settlement commenced today, the carry forward charges being As. 3½ to As. 4½ against sellers.

Ready gold showed a decline from Rs. 104-2 to Rs. 103-5. The premium of As. 11 which ready commanded over the forward at the close of the previous week was wiped out in the course of the week under review.

The floating stocks of gold are placed at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 2,000 tolas on an average.

In London, silver prices rose yesterday by ¼*d.* after remaining unchanged at the previous week's levels. Thus, spot silver was up to 79¾*d.* and forward to 78½*d.* Gold was erratic. After declining from 252*s.* 1*d.* to 251*s.* 11½*d.*, it recovered to 252*s.* 1½*d.*, before closing at 252*s.* In New York, too, silver price hardened from 90⅛*c.* to 90½*c.*

The following comparative table shows the trend of market during the week under review:

	8-8-56	Highest	Lowest	1-8-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (99 fine Mint) ..	103 5	104 9	103 1	104 2

SUGAR FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 8*th August*

The week under review was notable for considerable arrivals of indigenous sugar into the market, notwithstanding heavy rains which upset railway traffic. They aggregated as much as 33,300 bags, as against 16,400 bags in the previous week. Despite such heavy arrivals, the market ruled fully steady. Trade circles feel that sugar prices may be well maintained in the coming weeks, what with the impending post-monsoon demand and difficulties of loading due to dislocation of railway traffic.

In the forward section, *Shravan* delivery contract for 'C' grade sugar hovered round the last week's level of Rs. 91-8 per bag. The contract is due to be squared up on the 20th inst. at about Rs. 91. Business in a new forward delivery contract for *Asho* delivery commenced at Rs. 91-1 during the week. The contract was nominally quoted at Rs. 91 today.

In the spot section, large grain indigenous sugar met with good buying support and improved from Rs. 93—Rs. 101 to Rs. 95—Rs. 102. Small and medium grains were firm at Rs. 89 and Rs. 90—Rs. 92, respectively, same as last week. British refined sugar was unchanged at Rs. 90 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

COTTON FUTURES RALLY

(From Our Own Correspondent)

BOMBAY, 8*th August*

The cotton futures market which was subdued last week has since picked up considerable strength. The operators would appear to have taken a bullish view of the statistical position of cotton. This view is based on two factors. First, there are renewed fears of much damage to the quantity as well as the quality of cotton crop caused by continued heavy rains in cotton growing regions, especially Khandesh, Punjab, Berar and Moglai tracts. Secondly, the Central Government has released for export 20,000 bales of Bengal *Deshi* and decided to revalidate for shipment half the quantity—estimated at 45,000 bales—remaining unutilised against export licences up to the end of December next. These factors, coupled with reports of good offtake in piecegoods market, have resulted in a buying spree which have pushed up the prices of cotton futures to impressively high levels. The undertone of the market rules distinctly firm. The Government's decision to issue licences for the import of cotton stapling 1-3/10″ and above from all sterling areas has had no effect on the market. This is only to be expected, considering that many mills are not able to use much long-staple variety. Moreover, the limit of stapling 1-3/16″ and above does not include most of the East African, Syrian, Brazilian and Pakistan growths. The only styles that can now be imported are Giza 30 and Sudanese best styles, in addition to Karnak and Menoufi which are already on the free list.

Jarilla Contract (March 1957) opened the week firm at Rs. 670, as against Rs. 667 on the 31st inst. Induced by heavy short-covering due to unfavourable weather reports and bull buying, the Contract jumped up to Rs. 697 on Monday. After receding to Rs. 691 yesterday on account of profit-taking by longs, it again advanced to Rs. 694-8 today before finishing at Rs. 690-8. The net gain over the week was Rs. 22-8. Vijay Contract (April 1957) was Rs. 7 higher at Rs. 809 on the opening day. It gradually moved up to Rs. 833 on the 6th inst., but eased to Rs. 828 yesterday. The contract, however, soon recovered to Rs. 829 today before closing at Rs. 825. The net gain over the week was Rs. 23.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	8-8-56	*Highest*	*Lowest*	31-7-56
Jarilla (March)	690½	697	668	667
Vijay (April)	825	833	808	802

The spot cotton market presented a firm trend during the week, thanks to the favourable export policy announced by the Government. Shippers were busy making purchases of exportable styles, particularly Bengal *Deshi*. There was also keen mill buying in both current and new crop delivery contracts: Vijay, Laxmi, Jayadhar and Khamaon were specially favoured. The foreign section, too, ruled quite active. Sudans and East Africans elicited good enquiries. The latter registered handsome improvement in prices, in sympathy with the firm trend at Kampala on account of the heavy purchase of Sudan and Uganda cotton by the U.K., consequent on the loss of Egyptian cotton following the Suez Canal Company nationalisation. African B.P. 52 was quoted today at Rs. 1,675, as against Rs. 1,620 on the 2nd inst.

The latest available rates from the spot market at Sewri are:

Bengal Deshi Rs.650; Berar Jarilla Rs. 780; Khandesh Rs. 780; Vijay Rs. 975; Oomra *Deshi* Rs. 700; Moglai Rs. 700. *Delivery contracts*: Khandesh 197/3 December Rs. 124 and Berar Rs. 108 and Moglai Rs. 44 on Jarilla; 320F December Rs. 66, 216F Rs. 95, Vijaya 13/16″ Rs. 65 on Vijay.

Despite the release of 20,000 bales of Bengal *Deshi* for export from India and the simultaneous announcement from New Delhi revalidating for shipment half the quantity of cotton remaining unshipped, the Karachi cotton futures market ruled quiet strong during the week. The chief factor which imparted strength was good overseas demand for Pakistan cotton. The demand was induced by fears that purchases of Egyptian cotton would be adversely affected owing to payments difficulties, following the nationalisation of the Suez Canal Company. Buying support ensued, as a result, and cotton prices tended to move up. N.T.R.G. January delivery advanced by As. 15 to Rs. 74-13 before being quoted at Rs. 74-8 yesterday. March delivery which had receded from Rs. 73-11 to Rs. 72-5 on the 2nd inst. recovered to Rs. 73-6. The spot section depicted a firm trend, with the exception of *Deshi* styles which lacked support. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, the figures in brackets giving last week-end rates:

Sind *Deshi* 99 (101); Punjab *Deshi* 91 (93-8); 4F Roller 78 (77-7); S.G. 80-8 (79-15); Punjab Roller 81 (80-7); S.G. 84 (83-7); 289F N.T. Roller 79-4 (78-11); S.G. 80-12 (80-3); 289F Punjab Roller 83-4 (82-11); S.G. 90-4 (89-11).

Cotton prices in East Africa were firm on reports that the U.K. had started purchasing Uganda cotton in large quantities, consequent on the loss of Egyptian cotton. Sudan cotton also registered a rise in prices, following good buying by the U.K. The Gezira Board has reduced the reserve prices for the lower Sakel and Lambert grades. The reduction has led to more active buying at Khartoum.

The bearish trend noted in the Alexandria cotton futures market in the past two weeks abated during the week under review. In fact, the market showed a steady trend. The steadiness was the result of the reversal of Egyptian Government's order—issued immediately after the announcement of the nationalisation of the Suez Canal Company—banning cotton exports to the sterling area. Traders expected that exports of Egyptian cotton would be maintained in future, on expectation which was based on hopes of an early settlement of the

ments question. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below:

Karnak: November 97.25; January 95.70; March 95.70. *Ashmouni*: August 66.50; October 70.85.

The Liverpool cotton futures market continued to rule strong during the week under review. Traders felt that imports of cotton through the Suez Canal would be adversely affected, thanks to developments in Middle East political situation. American and Sudan Liverpool futures contracts evoked enlarged buying enquiries which resulted in improvement in prices. Business in Egyptian cotton contract was almost at a standstill, following the suspension of all further commercial payments between Britain and Egypt. It was expected that dealers would not be inclined to enter into any new dealings in Egyptian cotton until the Bank of England clarified the new exchange regulation in great detail. The following are the latest available quotations—in pence per lb.—from Liverpool:

American 1" staple contract: October-November 24.80; December-January 23.95; March-April 23.70; *American mixed growth contract*: October-November 24.85; December-January 23.70; March-April 23.45; May-June 23.25; *Egyptian karnak cotton*: November-December, January-February and March-April 52.50; *Sudan cotton contract*: September-October 48.50; November-December 46.90; January-February 46.60.

Cotton futures at New York moved up during the week, owing to active trade buying. Near deliveries advanced on trade price fixing and short covering. Distant deliveries evoked good buying induced by the belief among traders that the current season's cotton crop would be below last year's production by at least 15 per cent.

The new cotton season (1956-57) in the U.S. began on the 1st inst., with an estimated carry-over of 14.7 million bales (the Government holding more than 10 million bales) brought in from the previous season (1955-56). During 1955-56, the total available supply of cotton in the U.S. was of the order of 25.9 million bales, of which opening stocks accounted for 11.2 million bales and production for 14.7 million bales. Of this quantity, 9.2 million bales were consumed domestically and 2.3 million bales were exported outside.

The Bureau of Agricultural Economics has fixed the parity price of cotton as at Mid. July at 35.56 cents, an increase of 12 points as compared with that a month ago and 72 points as compared with the Mid. January parity figure of 34.84 cents. Following the usual practice, the U.S. Department of Agriculture has increased the average price support for the 1956 crop of Upland cotton based on the increased Mid. July parity from 28.85 cents to 29.34 cents for Mid. 1" and from 32.25 cents to 32.74 cents, for Mid. 1". The average loan rate has, therefore, been increased by 49 points, as against the preliminary figure. At the close on 31st July, New York futures contracts October stood at 32.46 cents with December 32.62 cents and March one point higher. At these levels, they were working below the average official support price of 32.74 cents. for Mid 1" cotton. The Commodity Credit Corporation sold on 26th July 1956 a further quantity of 137,122 bales under the New Export Sales Programme. The price for basis Mid. 15/16" at average location accepted was 25.11 cents. The total quantity sold by the C.C.C. thus far under this Programme is 3,002,495 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	7-8-56	31-7-56	24-7-56
Spot	34.00	33.45	34.30
October	32.62	32.46	32.32
December	32.78	32.62	32.42
March	32.73	32.63	32.46

COTTON YARN FIRM

(From Our Own Correspondent)

BOMBAY, *8th August*

Continued firmness in cotton yarn was the feature of trading in the yarn market during the week under review. The firmness was aided partly by enlarged buying enquiries following good offtake in piecegoods markets and partly by the marked rise in raw cotton prices. The quotations for cotton yarn, therefore, moved further upwards, the improvement being shared by all counts. The rayon yarn section ruled steady on encouraging advices from cloth markets and values were fully maintained. Staple fibre yarns, however, were dull, as a result of slackness in demand. "The situation," to quote a report, "has not shown any improvement, in spite of the Suez Canal news, mainly because of the continued pressure of sales in all types of staple fibre yarn from a large number of cotton spinning mills in the South, Bombay, Ahmedabad and several other centres." It is said that, owing to the recent cheap purchases of raw staple fibre, several cotton spinning mills have been pressing sales of staple fibre yarn at lower prices. Even at such prices, they are said to be earning handsome profit as compared with the prices they are able to realise on cotton yarns.

Cotton yarns, as already said, were firm. Sixty counts were particularly favoured. Moderns rallied Re. 1-8 to Rs. 63. Finlays advanced by As. 14 to Rs. 62-14. Raghuvamshis gathered As. 4 to Rs. 58-8. Among 80s, Finlays picked up As. 12 to Rs. 58-12. Moderns were better by As. 4 at Rs. 73-4. Deals in fifty counts were put through at higher prices, Minaxis rising by As. 8 to Rs. 29-11. Maduras by As. 5 to Rs. 29-12 and Moderns by As. 4 to Rs. 29-12. Among 30s, Apollos gained As. 4 to Rs. 22-12-0. Maduras were firm at Rs. 24-8. Twenty counts Moderns put on As. 3 to Rs. 19-3. Hinds hardened from Rs. 19 to Rs. 19-2. Among 10s, Podars and Elphinstones increased by As. 2 each to Rs. 14-14 and Rs. 14-12, respectively. Moderns were done at Rs. 15, same as last week.

Snia rayon yarn (120 dull cones) for October delivery encountered buying support and moved up by Rs. 3 to Rs. 798. August delivery was fully maintained at Rs. 784. In the spot section, 120 Italy and 150 Italy had buyers both half an anna higher, the former at Rs. 3-14 and the latter at Rs. 4. 150 Japan was unchanged at Rs. 4-0-9. 120 Japan was a shade lower at Rs. 3-11-9. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade improved by 18 pies to Rs. 3-12-9. 150 Bt. cones 1st grade were steady at Rs. 3-7.

Foreign staple fibre yarns (80 x 2) were subjected to heavy selling and staged a retreat. H'Races dropped As. 2 to Rs. 5-13. K'Suns slipped by 18 pies to Rs. 6-6-6. Paramounts and Fujis lost an anna each to Rs. 6-0-6 and Rs. 6, respectively. Suicos eased by half an anna to Rs. 6-11. The prices of indigenous yarns (40 x 2) were practically unchanged. New Greats were quoted at Rs. 3-6-3, Citys at Rs. 3-6, Kohinoors at Rs. 3-7-3 and Centurys at Rs. 3-6-9. Staple fibre yarn (40 x 2) for August delivery evoked some enquiries and gathered Rs. 2 to Rs. 644. October delivery were transacted at Rs. 650.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those nine days and sixteen days before:

	8-8-1956	1-8-1956	23-7-1956
	Rs. a.	Rs. a.	Rs. a.

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, *8th August*

The oilseeds market ruled distinctly firm during the week under review. After remaining steady during the first three sessions, the market witnessed a sudden spurt in the two sessions that followed as a result of nervous bear-covering and buying by shippers, crushers and speculative dealers. A factor which influenced demand was reports of crop damage in Saurashtra. The sentiment thus remained bullish and scarcity of contracts gave further support to the trend. Castorseed May futures established a new peak. Today, however, owing to some profit-taking, the market received a minor setback. Nevertheless the market finished the week with a firm tone.

In the groundnut section, groundnut February which finished the previous week at Rs. 134-12 touched a peak of Rs. 139 this week, before finishing today at Rs. 136-8, representing an improvement of Rs. 1-12 over the week. In the spot section, Bold variety gained Rs. 3-8 at Rs. 36, and August-September contract Rs. 1-15 at Rs. 33-11. Groundnut oil ex-mill improved from Rs. 18-4 to Rs. 19-4 while Railway Receipt rose by Re. 1-2 to Rs. 19-2.

Substantial gains were witnessed in the castorseed section. Castorseed September contract, having closed on Wednesday last at Rs. 135-14, rose to the high level of Rs. 145-8, on Tuesday, and finished today a shade lower at Rs. 143-10, picking up as much as Rs. 7-12. The May contract also shot up from Rs. 117 a week ago to Rs. 125-12 today representing a handsome advance of Rs. 8-12. On the spot section, Madras was higher by Rs. 1-12 at Rs. 29, and Kanpur Rs. 1-12 more at Rs. 28 than seven days ago. Oil B.S.S. increased from Rs. 15-8 to Rs. 16-4 and Oil Commercial was a shade higher at Rs. 15-4.

Linseed May contract ruled steady during the week. It improved from Rs. 26-12 a week ago to Rs. 27-10 at the start of the week and touched a peak of Rs. 28-8 on 6th before finishing the week at Rs 27-12. The spot section, too, witnessed a similar trend. August-September hardened Rs. 1-8 to Rs. 31-10. Small Sutna variety put on As. 12 at Rs 29-6. Linseed oil Ready was bid at Rs. 17-6 (with excise) that is, As. 10 higher.

Among the others, *kardi* seed Bold was done As. 12 higher at Rs. 18 and *niger* seed, Madras, was fractionally higher at Rs. 28-8.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	8-8-1956	1-8-1956	25-7-1956
	Rs. a.	Rs. a.	Rs. a.

PEPPER FIRM

(Messrs. Parekh & Co.)

BOMBAY, *8th August*

With conflicting reports on the Suez question Malabar black pepper, during the week under review opened on a cheerful note. New York dealers who were until now selective buyers turned out to be prominent buyers. They bought at every rise. Fair business was reported done for shipment during the first and second week of August from $0.29½ to $0.33. Alleppey went up from Rs. 750 to Rs. 850, Calicut from Rs. 800 to Rs. 875 and garbled at Cochin from Rs. 125 to Rs. 145. There was a lot of bear covering and trade buying. The sentiment which was dull and drooping for the last three months became bright.

The news of insufficient rain in the whole pepper growing belt and consequent adverse effect on the 'spikes' which may ultimately result in shorter crop, proved a supporting factor. A section of the trade believes that if sufficient rain is not forthcoming in the next month or two, Malabar crop may show a short fall by about 25 to 30 per cent. Drought in the area may prove a hindrance to the development of "stone" in pepper berries which is likely to tell upon the quality, if not on the quantity. However, it is too early to form any correct opinion at this stage as to the size of the coming crop.

Sarawak pepper also improved from Str. $81 to Str. $93 owing to bear covering and trade buying on account of Suez crisis. Lampong also improved $0.32 (A.S.T.A.). Shorter crop report of Sarawak, Lampong and Muntok helped the sentiment.

The future of the market now solely depends upon the development of the Suez crisis. Prices may go up still further if the situation worsens. On the other hand if some settlement is arrived at prices are likely to react rather sharply as everywhere overbought position seems to have been created. However, one should not forget that we will soon be in the middle of the consuming season and New York, where most of the dealers are reported to have small inventories, have to come to the market shortly. The spread between ready and forward, having been enlarged, there is a possibility of some investment buying also.

August-September shipment changed hands from $0.29 to $0.33 while October-November-December was done from $0.27½ to $0.31. There was a lot of speculative buying in delivery section and prices in August delivery improved from Rs. 662½ to Rs. 730. Ready pepper encountered good local demand and prices improved from Rs. 94 to Rs. 106.

At the time of writing, however, the market is reported to be a little weak with prices down in A.S.T.A. by two cents and in delivery by about Rs. 20. A section of the trade treats the fall as a technical correction and believes that the prices may once again rise if proper buying support is coming forth from New York. The feeling in the trade is that New York, after a pause, may show interest in the nearby shipment, particularly, for the shipment by 15th August, before the final outcome of the Suez Conference.

Following are today's nominal quotations: Ready delivery Rs. 106 per Bengal maund, August Rs. 720-30 and September Rs. 730-40 per candy of 5¼ cwts.

STRONG DEMAND FOR WHOLE LEAF TEAS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, *2nd August*

Approximately 1,150,000 lbs. were on offer in Sale No. 22 which was held on Tuesday, 31st July. With the exception of medium teas, quality showed some improvement. Low-grown and low mediun teas were often brighter in cup and there was a better selection of best liquoring high growns. The sale opened to a good demand which weakened as it progressed. Low-grown and low medium teas were fully firm and occasionally dearer. Mediums, however, met a very irregular market and proved difficult of sale. The majority of withdrawals were of this type and those which sold must be quoted easier. Best liquoring high growns were keenly competed for and prices advanced. There was a very strong demand for whole leaf grades and, in particular, high grown O.Ps. Middle East types were generally easier. The following are the quotations:

	1956 Rs. a. p.
Plain B.P.	... 1 4 6
Low-medium B.O.P.	... 1 5 6
Medium B.O.P.	to 1 6 6
	... 1 7 0
Good B.O.P.	to 1 8 0
	... 1 14 0
Well made black leaf O.P.	to 2 0 0
	... 2 6 0

London Market—*Sale of 30th July* 1956.—Dearer 1d. to 2d.

Sale of 31st July 1956.—Except plainest market dearer 1d. to 3d.

Colombo Market—*Sale of 30th July* 1956.—Good liquoring sorts firm. Price tea steady. Dusts easier.

Sale of 31st July 1956.—Best Uvas lower, following quality. Otherwise strong general demand for all useful liquoring teas dearer rates. Plain thin liquoring sorts ten cents lower. Middle East types lower.

Calcutta Market—*Export.*—Good general demand. Commons half to one anna, mediums one to two annas dearer. Good tea usually sold above valuations. Medium, Dooars fannings weakest feature, probably owing Middle East situation.

Internal.—13,000 dust. Poor general demand. Black exportable weakest. C.T.Cs four annas easier. Medium Dooars firm to dearer. Commonest irregular. 600 internal leaf. Irregular.

Export Quota.—The market has been very quiet and although there are sellers at 28 pies, no business has been done.

Forthcoming Auctions.—Sale No. 23 will be held on Tuesday, 7th August.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 23.—750,000 lbs. Good general demand. Commons about steady. Improved low medium and medium dearer. *Best liquoring very strong particularly fannings* which are As. 3 to As. 4 dearer. More enquiry Middle East fannings at higher rates."

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, *7th August*

A firm trend prevailed in the jute market during the week under review, both raw jute and jute goods being marked up over the week. The rise in prices of sackings was particularly sharp. The main stimulus for the firmness of raw jute was provided by reports that supplies would be interrupted by the difficult transport situation on account of the rains and that some mills were suffering from the shortage of stocks. Later reports, however, disclosed that supplies were fairly satisfactory and that the requirements of mills were being met to a large extent. Buyers showed some interest in new crop which was reported to be satisfactory both in India and East Pakistan. Harvesting in certain parts of East Pakistan is said to have been completed. These reports, however, did not affect prices. Though business in raw jute during the week was not large, mills were buyers for ready and early delivery and transactions were put through at quoted rates. Indian Northern bottoms and Assam Upper, August, advanced from Rs. 28-8 to Rs. 29 and August-September from Rs. 28 to Rs. 28-8.

The gunnies section was active, particularly in B. twills, in refreshing contrast to the subdued tendency noted in the previous week. The better tone of the market was mainly due to speculative activity, as very little genuine business was reported and overseas buyers were not in a mood to follow the rise. The firm trend in raw jute and rumours that a further sealing of the looms was likely were responsible for the speculative purchases. Reports have it that the sealing of the looms to the extent of 2½ per cent. last month have not been very helpful to the mills in getting a higher margin of profit and stocks of manufactured goods with the mills have not been reduced to any significant extent. On the contrary, it was announced yesterday that the stocks of sackings with mills at the end of July were higher by 8,100 tons (at 91,100 tons) over those at the close of June, thus maintaining the upward trend for the ninth month in succession. Hessian stocks also increased from 37,500 tons to 38,500 tons, thus reversing the downward trend noted a month before, while other manufactures fell by 300 tons to 6,200 tons. The announcement of the stock figures induced profit-taking at the close, but the closing prices were still substantially higher over the week.

In the hessians section, 40" x 10 oz. Ready rose from Rs. 38-4 to Rs. 38-11 before closing at Rs. 38-9. August delivery moved up from Rs. 38-8 to Rs. 38-14, but closed at Rs. 38-13. October-December advanced from Rs. 38-8 to Rs. 38-15. In the sackings sections, the market ruled a little easy early in the week in continuation of the previous week's trend, but soon speculative forces gathered strength to push up the prices. Thus; B. twills ready after an initial recession from Rs. 103-4 to Rs. 102-14, rallied to Rs. 105-6 on Monday this week. Yesterday, however, there was a setback to Rs. 104-14. August delivery came up to Rs. 105-12, after a dip from Rs. 103-14 to Rs. 103-6, but the closing was lower at Rs. 105-2. September finished at Rs. 105-4, as against Rs 103-14, the highest level touched during the week being Rs. 105-14.

FOODGRAINS RISE

(From Our Own Correspondent)

HAPUR, *6th August*

Foodgrains prices were steady to firm during the week. The firmness was more pronounced in the markets in the South. There were reports that more fair price shops were being opened there by the Government of India.

Wheat average quality advanced by As. 2 to Rs. 15-2, due to good buying enquiry from Madras. The week's offtake aggregated five wagons to Raipurma (Madras). Farm quality prices continued to be steady at Rs. 16-4 per maund. Daily arrivals improved to an average of 200 maunds and stock locally had gone down to 81 *khaties*. Wheat prices recorded a steady trend in Punjab and gains were recorded in Madras and Madhya Pradesh. The latest rains have improved the prospects of the *kharif* crops and the hardening factor is the latest world situation created by the nationalisation of Suez Canal. Rice prices ruled quiet at unchanged levels, on reports that the standing paddy crop had improved due to the latest rains.

Gram prices ruled steady at Rs. 11-14 per maund for local quality and at Rs. 12-4 for Punjabi quality, although stock figure here had touched an all-time high level at 115 *khaties*, due to heavy arrivals from Punjab. Barley and *bejhar* prices ruled quiet, as arrivals of new maize crop would begin shortly and the pressure on these grains would be diverted to the new crop. Maize and *bajra* prices eased, on good crop prospects. *Jowar* and *guvar* prices eased on poor demand. The latest prices were: Barley Rs. 12, *bejhar* Rs. 11-12, *jowar* Rs. 15, *guvar* Rs. 10, maize Rs. 11-12, *bajra* Rs. 12 per maund.

Peas in the form of pulses was very much in demand from Madras State and the week-end despatches were about 20 wagons. Arrivals of peas daily were small, the average being 75 maunds and

the local stock was lower by four *khaties* at 54 *khaties*. *Arhar*, on the other hand, recorded a rise by As. 4 to Rs. 11-8 per maund.

HIDES LOOK UP

(From Our Own Correspondent)

MADRAS, *6th August*

Arrivals of E.I. tanned cow hides were on the usual scale and clearance fair-sized. There were more inquiries from the U.K., and higher prices were established. In view of holidays in the U.K. during August, it was hoped that prices would be maintained at origin and confidence restored. Demand for cow calf, buff calf and buff hides was patchy and prices were unchanged.

There was no change in the tanned skins section. Raw markets ruled firm.

Hides and skins shipments during the month of July were: 2,113 bales cow hides, 208 cow calf, 25 buffs, 148 buff calf, 540 goat and 202 sheep to the U.K.; 3 bales cow, 422 goat and 13 sheep to the Continent; 38 cow, 20 cow calf, 75 buffs, 175 buff calf, 146 goat and 75 dry goat to the U.S.A.; 31 goat and 366 bales sheep to Japan.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *6th August*

The sugar market ruled quietly steady this week. Mill delivery prices softened slightly. Demand was normal. Rajasthan, Madhya Bharat and Gujerat were the prominent buyers. The supply position was easy, due to fresh quota release of 158,000 tons by the Government for sale in free market. The first official estimate of sugarcane for 1956-57, which puts the area at 4,717,000 acres, as against the corresponding adjusted estimate of 4,066,000 acres in 1955-56—an increase of 16 per cent.—acted as a dampening factor. The rains during the week have done good to the standing cane crops.

The latest mill delivery prices of sugar are: Jaswant Rs. 28-12, Simbhauli Rs. 28-12, Mowana Rs. 28-13, Daurala Rs. 28 to Rs. 29, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 28 to Rs. 29, Rampur Rs. 30-14, retail Rs. 30-10 per maund.

The *khandsari* market remained depressed, as demand was practically *nil*. Inferior grade was quoted between Rs. 20 to Rs. 23 and superior between Rs. 24 to Rs. 27 per maund.

Ready *gur* dry quality was transacted at Rs. 12.4 per maund and the stocks of this quality were reported to be very meagre. *Kotha* quality was quoted at Rs. 11 per maund, but the week's offtake was small, due to poor loading facilities. Demand from markets in the South was reported to be very low, as it was fully met from the markets in the South where stock position this year had been very good.

NEW COMPANIES ACT

(Concluded from page 276)

no question of the managing agency agreement prevailing over the provisions of the Act.

One other point of difficulty is also raised, and this relates to companies having a firm or a body corporate as managing agent. In the case of a company having an individual as its managing agent, any income derived by him from the company in any capacity will form part of his total remuneration and it is not to exceed 10 per cent. of the net profits of the company as per section 348. Where, if the managing agent is a firm, one or more or all of the partners of the firm or if the managing agent is a company, one or more or all of its directors or members are employed in offices of profit in the managed company and each of them individually receives payment for the services rendered by him to the company in some capacity other than that of managing agent, are the payments received by them to be taken into account and form part of the percentage of net profits payable as managing agency remuneration of the firm or body corporate concerned? Though this question is raised in many quarters, I am definitely of the opinion that, except where the services of any partner of a firm of managing agents or director or member of a managing agency company, as the case may be, are rendered by reason of their connection with the office of managing agent, that is, by virtue of some relationship arising out of their position in the managing agency firm or company, the payments individually received by them are not to be aggregated with the remuneration payable to the managing agent as such. The individual earnings of the partners of the firm are not the property of the firm, unless they are earned for the purposes or in the course of the business of the firm (*cf.* section 14 of the Partnership Act); and still more so, the earnings of the directors or members of a managing agency company which, on account of its being a distinct legal *persona*, has nothing to do with the separate earnings of any of its directors or members, unless there is provision in the memorandum or articles of the company requiring that such earnings, in any given circumstances, are to be refunded to or form part of the earnings or assets of the company.—*All Rights Reserved.*

Notices

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on the 9th August 1956, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 14th September 1956, the payment of a final dividend for the year ended 31st March 1956, of 4 per cent. (free of Income-tax) on the issued Ordinary shares, payable on the 25th September 1956.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,86,71,550.

Two interim dividends, each of 2 per cent. (free of Income-tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1956, were paid on the 17th October 1955 and the 28th March 1956 respectively.

After paying the final dividend amounting to Rs. 60,64,000 and allocating Rs. 50,009 to Capital Reserves, Rs. 35,00,000 to Fixed Asset and Stock Replacement Reserves and Rs. 30,00,000 to General Reserve, the amount carried forward will be Rs. 24,94,274.

The Directors also declared a first interim dividend of 2 per cent. (free of Income-tax) in respect of the year to 31st March 1957, payable on the 25th September 1956.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 14th September 1956 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 25th September 1956. The share transfer books of the Company will be closed from the 28th August to the 14th September 1956, both days inclusive, and transfers received in order at the registered office of the Company up to the 27th August 1956 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
B. GRANGER PEARSON,
Assistant Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA, *10th August* 1956

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Share:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. *Reserves* include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies ch close their accounts yearly, dividends shown are for their financial year.

d by the board of directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
terim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-12 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (b) Investments.
—Dividend for 1955 is on shares of Rs. 10 each. The Albion(an Lothian jute companies have)been amalgamated with New Central Jute Co., with effect from 1st December 1954. (c) For seven month ended 31st March 19

MARKET GOSSIP

(*Concluded from page 255*)

of cotton should be properly assessed, the target revised accordingly and the necessary measures for reaching the new target adopted without delay.

In deciding such a new target, the authorities will have to consider the need for providing for exports of cotton from India. So far, the Government has adopted a policy by which only exports of such cotton as are not needed by the mills, are permitted. Mr. Ruia rightly stressed that this policy deserved "to be not only continued but pursued with greater vigour." On this subject, he made a few observations which are noteworthy. In the first place, he stressed that exports should be permitted, in order to enable India to retain the foreign connections built over a period of long years and secure for Indian cotton a normal share of the world export market. Such a policy, he said, would also forestall this country and appropriate to themselves the markets where Indian cotton is still sought after in large quantities, Secondly, exports of cotton would help augment India's foreign exchange earnings. There is no doubt that this latter consideration is an important one, in that India, which needs a large amount of foreign exchange to finance the imports of capital goods and equipment in the second Plan period, cannot afford to miss any chance of earning such exchange.

It must, however, be pointed out that the world cotton situation is not conducive to larger exports of cotton from this country. This is because

INDIA'S PLAN FOR SUEZ THE BEST

IT is a pity that the Western powers should allow prestige to stand in the way of a speedy settlement of the Suez Canal dispute. This is the only conclusion that one can draw from their negative reaction to the realistic plan presented by the Indian delegation to the 22-nation London conference early this week. All Western countries, including Britain and France, have now conceded that Egypt's nationalisation of the Suez Canal is well within its sovereignty. This is a considerable advance from the stand initially taken by some of them who unashamedly likened Egypt's action to plunder and brigandage. If it is recognised, as the Western powers now do, that Egypt is entitled to treat the Suez Canal as a national asset, there is no substance in the argument that it has no exclusive right to manage it or to make profit out of it. It is on this fundamental point that the Indian plan differs from the one submitted by the Americans. While the former plan has the support of almost all the leading Asian and African countries, as well as of Russia and countries of its way of life, the latter plan has the backing of all the Western countries and one or two Asian and African nations. Accordingly, it will be no exaggeration to say that, though the American plan may have the support of the majority of the countries attending the conference, it is the Indian plan that carries the concurrence of the overwhelming majority of the world. This is doubtless an unpalatable fact to the Western powers, but it is stark reality. If they are unable to reconcile themselves to this fact, then it only means that their statesmen are wanting in sagacity and that for them it is more important to save their faces than to save the world from a critical situation.

Even when Britain and France were fretting and fuming over the nationalisation of the Suez Canal, one of our British contemporaries had the courage of conviction to say that the moves made by these two countries were wrong and expressed the hope that India, which had a corps of skilful mediators, would be able to bring about an amicable settlement of the dispute. We feel that the Indian delegation, headed by Mr. V. K. Krishna Menon, has lived up to the tribute paid by our contemporary. The Indian plan provides for maximum safeguards for protecting the international rights over the Suez Canal consistent with the national interests of Egypt. Thus, it proposes the formation of a consultative body of user interests, charged with advisory, consultative and liaison functions. While not questioning the right of Egypt to determine the Canal dues, it insists that such charges should be just and equitable and that the facilities of the Canal should be available to all nations without discrimination. It also lays down that the Canal should be maintained at all times in a proper condition and in accordance with modern technical requirements relating to navigation. Further, it says that Egypt should accord due recognition to the interests of the users of the Canal. Finally, it provides for the registration of the new agreement to be negotiated with Egypt on the use of the Canal with the United Nations and for the submission to the U.N. by Egypt an annual report on the working of the Canal. Implied in these proposals is that, if, at any time in future, Egypt were to deny arbitrarily the use of the Canal to any country, the intervention of the U.N. should be sought and world pressure brought against it for withdrawing its action. Those who do not believe in wars to settle international disputes and who have faith in the efficacy of the U.N. for checking aggression can ask for, or expect, no more than the safeguards contained in the Indian plan.

The American plan tallies with the Indian plan in almost all but two respects. In the first place, the American plan expects Egypt to be satisfied with a royalty for the use of the Canal and to leave the maintenance and management of the Canal in the hands of an international body about the character of which it is very vague. In other words, under this plan, Egypt's possession of the Canal will be only nominal; it will have no right to fix the Canal dues at levels which the traffic can bear. Secondly, the American plan is not based on confidence in Egypt. It proceeds on the basis of suspicion that it will be risky to leave the control of the Canal in the sole charge of Egypt. It fears that Egypt may deny the use of the Canal to any country with which it chooses to quarrel. No nation with any self-respect will agree to accept either of these contentions. It is fantastic to condemn a whole nation of being unworthy of trust and confidence, more especially when that country has stood by its international obligations. And it is ridiculous to expect a country to give up its right to manage an enterprise that exists within its frontiers, merely on the ground that it is of international importance or that the lives of millions of peoples in the world are dependent upon it. There are several other assets in the world which are, perhaps, even more important to the well-being of millions of people in the world, but there is no international control over their utilisation. Mineral oil is a typical example of it. Will the owners and producers of this commodity agree to an international control of the type advocated in the American plan for the Suez Canal? Steel, chemicals, rubber and even shipping are the monopoly of a few nations. In the production, maintenance and pricing of these, the rest of the world has no say, though its economy is vitally influenced by the decisions of those who control them.

A lot of fuss is being made over the possibility of Egypt raising the Canal dues, in order to augment its revenue. The fact is that the Canal dues are bound and deserve to be raised. They have been fixed at very low levels, not having in mind the interests of Egypt but those of its owner-users. The Canal dues have been reduced seventeen times ever since the beginning, but have such reductions had any favourable effect on freight rates? On the contrary, freight rates have been going up and they are now several times higher than before World War II. The facts are: First, the incidence of Canal dues on the cost of freight is only a f

prices from Japan. It would appear that, "on account of the much larger production and capital investment," the competitive capacity of foreign cycle manufacturers is very great. The international competition is so keen that even the U.S. has found it necessary to give tariff protection to its domestic producers from low-priced British and Japanese bicycles. Other countries, too, have been taking suitable measures for strengthening their competitive capacity. Only last week, there was in Britain an integration of the various cycle manufacturing units, belonging to the Tube Investments Group, into one corporation, the object of this step being "to increase efficiency and lower costs for the battle for overseas markets which is being joined with foreign competition."

There is, therefore, a good case for continuance of protection to the Indian industry till such time as it is able to expand fully and meet such competition. In this connection, Mr. Birla rightly suggested that it would be wise not to permit the setting up of units which use a large proportion of only imported parts in their manufacture of cycles. Many units, according to him, use more than 75 per cent. of such parts for their cycles. Surely, if such units are allowed to be set up, it would, as he pointed out, adversely affect the manufacture of cycles in the country, because imported cycles would then find their way through the "back door." It would also reduce the Indian industry to an "assembly" type of manufacturers, thereby depriving the country of an opportunity to produce real wealth, increase employment and learn and employ new technical know-how. One way of ensuring that a unit does not remain an assembly shop longer than is absolutely necessary is to lay down and enforce a specific time limit for the new concerns to become manufacturers. Mr. Birla was, therefore, right in voicing a demand to this effect.

The cycle industry consists of about 18 large-scale units and a host of small-scale units which turn out a wide range of equipment from a mere part to a whole cycle. This feature of the industry's set-up is a source of weakness, though, if the subsidiary units are properly organised, it might well become a source of strength. The *Programme of Industrial Development*, published by the Planning Commission, has itself pointed out some of the chief defects of the small-scale units. These units, the report says, generally "suffer from lack of standardisation, technical know-how, correct equipment and finance." These defects have to be remedied if the small-scale industry is to reach the target of 250,000 cycles set for it by the end of the second Five-year Plan. The Development Council for the industry has recommended that some constructive steps should be taken to improve the production of small-scale units. A suggested step is the setting up of a finishing and testing centre at Ludhiana. Many such centres will obviously have to be set up in order to enable the small-scale units to make a real contribution to India's output of cycles. Obviously, it would be a mistake to sacrifice quality of cycles in any attempt to extend the policy of decentralised production to an industry that produces a vehicle mostly used by the common man. Quality and price are far more important considerations than provision of employment through this industry. It must be remembered that, in India, a cycle is owned by a family, not merely by an individual. It is an investment which is jealously guarded by all members of the family. They cannot afford to take far too many risks with the life of the vehicle. Nor can they afford to pay unduly high prices.

Clearly, the small-scale units can be of maximum assistance to the consumer only if they "are complementary to large-scale manufactures rather than being competitive." Even in highly industrialised nations, such units do play a vital role in the cycle industry. But they do not necessarily compete with large-scale units. They are essentially "feeder" units and in India, too, it is in this role that they can render great service to the cycle industry. Many of the larger manufacturers have already installed plant and machinery sufficient to turn out a large part of their own requirements of components. What is now necessary is to see to it that the small-scale units concentrate on the production of components for which they are best fitted rather than merely turn out an ill-assorted range of parts of doubtful quality. It is necessary to emphasise that, since cycle industry in India is still in its infancy, it is better to follow a correct policy in regard to the place of small manufacturers right from now, so that complications may be avoided in future. It should not be forgotten that, in the programme for the development of this industry, a provision is made for export of 150,000 cycles. If this goal is to be attained, the efficiency of the industry should be high and comparable to that of its competitors. If the tendency among its competitors is to produce on a mass scale, in order to reduce costs and maintain quality, how can it hope to face the challenge successfully in foreign markets if it is dominated by small producers? The policy-makers will do well to ponder this question seriously before deciding to act.

Finally, it seems essential to emphasise that, though the quality and finish of Indian cycles have improved, there is a widespread belief that the prices of cycles are relatively high. In making this remark, we are not unaware of the fact that, in recent years, there have been some reductions in the prices of Indian-made cycles. Nor is it suggested that the relatively high cost of these cycles is due to the wanton desire of the manufacturer to make large profits. Indeed, it must be conceded that he should be permitted to keep a reasonable margin of profit to build up reserves and attract fresh capital for expanding the industry. Nevertheless, the fact remains that the prices of cycles are higher than the capacity of the people who need them. The causes for this state of affairs deserve to be looked into. It is gratifying to learn that the steps to be taken in order to reduce the prices of cycles are engaging the attention of the Development Council. It is the duty of the manufacturers to see that the prices are lowered to a level at which the Indian cycle will prove even more attractive to the buyer than it has been so far. Any such reduction in prices would widen the market for cycles and thereby place the industry on a firm basis.

PRICE-PAGE SCHEDULE

IN this country, one has only to describe oneself as a "small" man to get all the sympathy and support from the Government. The aversion to things "big" and to institutions that are "large-scale" has formed the basis of the country's industrial policy for a long time now. But one never knew that the infection would spread to other fields of activity also. And yet that is precisely what is happening in the sphere of Government's policy in relation to newspapers. In an effort to build up "small" newspapers, the Rajya Sabha adopted towards the close of last week the Government-sponsored Bill to regulate the prices and pages of newspapers.

It does not require much reflection to realise that whatever may be the virtues of subsidising small-scale industries, a similar policy is singularly inappropriate when it is applied to newspapers. In the first place, India is not a country with "large-scale" newspapers at all. The largest of its newspapers are mere pigmies when they are compared with the leading newspapers in the West or in Japan with their astronomical circulations. Secondly, the "business" of printing and publishing newspapers is not an industry in the sense the word is employed in relation to other productive enterprises. It is a service, an art rather than a science. What is true of competition among industrial units is not necessarily true of newspapers. Further, even those who concede that Governmental control is necessary and vital in the sphere of industry will hesitate to recommend more than a mere overall supervision in the interests of public taste and decency when it comes to newspapers. But the arguments which have been used to support price-page schedule for newspapers bear a strong family resemblance to the logic and the language used by the advocates of small-scale industries. Indeed, it is these ideas which vitiated even the Press Commission's approach to the subject. In a particularly unconvincing section devoted to this subject, the Commission discussed the handicaps of the "small" newspapers in much the same way as those who would plead the cause of small-scale and cottage industries. The Commission pleaded, too, the cause of the "newcomer" which reminded one of the special claims of inexperienced exporters and importers in India's foreign trade. What was ignored was that nobody could help the "small" newspaper man but himself. Another factor that was ignored was that the so-called "big" newspaper man did not arrive on the scene all of a sudden and from above, but was himself a "small" man once and built up his position over decades of hard and sustained effort.

Having been blessed by the Press Commission and supported by several newspapers, the idea of a price-page schedule succeeded in gaining the attention of the Government. Fired by a misplaced enthusiasm for the "weak" man, the Government is now taking powers to control the prices and pages of newspapers. Under the Newspaper (Price-Page) Bill, the Government may issue an order providing for the regulation of prices charged for newspapers in relation to their maximum or minimum number of pages, sizes or areas and for the space to be allotted for advertising matter. The Bill also provides that, in issuing such an order, the Government shall have due regard to the need for "reasonable flexibility with reference to the flow of views, the flow of advertisement and other matters connected with the normal working of newspapers."

The Union Minister for Information and Broadcasting, Dr. B. V. Keskar, in the course of the debate on the Bill, admitted, with refreshing candour, that the Government had not been able to come to any "definite and absolute conclusions about the extent of the advantages of this proposal." He revealed that the Government was itself reluctant to assume these powers which it had taken only after strong pressure from Parliament and the Press. After giving the assurance that the Government would use the powers only after consultation with the interests concerned, he said that it would watch the working of the schedule carefully and proceed further only if it was to the advantage of the Press. It is thus obvious that the Government has been hustled into taking this dubious step.

The question is whether the measure will benefit the "small" newspapers and whether, if it does, it will be to the lasting benefit of the readers—a class which has been sadly neglected in all these discussions. Obviously, the measure will not materially improve the circulation of small newspapers, for the people will generally stick to the newspapers of their choice. But what the small newspapers apparently believe is that the larger newspapers will carry less advertisement and that such in turn will help them get more advertisement for themselves. In other words, it is not the readers whom they wish to serve. They want the advertisers to serve them. It is not likely that all small newspapers will benefit this way. It must be remembered that advertisements cannot and will not be given, nor can they be used, as a subsidy. If the advertisers find that the big and popular newspapers have less space than they need, they will not necessarily divert their advertisements to the "small" newspapers. They will instead concentrate on other media for advertisement—the posters, the cinemas, the moving van or the radio. Indeed, Dr. Kunzru stressed a very important point when he said: "I do not think that the Government will be able to devise any way of equalising the opportunities possessed by the bigger and smaller newspapers over securing advertisements. The ability of a newspaper to secure advertisement will depend largely on the number of its subscribers and the class of people amongst whom it circulates."

The suggestions made by Mr. S. P. Jain for the purchase of small newspapers by the Government and for giving them more Government-sponsored advertisements constitute a remedy which is worse than the disease. Apart from the fact that they imply an additional and wholly unnecessary and unjustifiable burden on the taxpayer, these suggestions raise the much larger question of the freedom of the Press. What freedom will a Government-subsidised press hope to possess for itself? Since the whole difficulty has arisen because advertisers are too few and their budgets are strictly limited, it is just as well that the Government should examine the root of the matter. Advertisement is a by-product of competitive economic activity and free enterprise. It is by stimulating such enterprise, rather than by curbing it, that the Government can hope to increase the income of newspapers through advertisement. The least that the Government should do, therefore, is to take a helpful view of the advertisement budgets of industrial enterprises. It is needless to add that any artificial curb on the size of newspapers will mean a real disservice to readers and also to working journalists. The readers must then be content with a lesser number of pages. This would be a loss as much to the readers as to the Government which wants to enlist the support of the people in the course of its economic programme. Free-Press, will find that their market has shrunk. Some of the larger newspaper establishments may conceivably be faced with the problem of "surplus" staff, while the smaller newspapers may not be in a position to absorb them.

Future of Hedge Trading in Cotton

SUEZ SITUATION DISQUIETING

THURSDAY, 5 P.M.

MARKET GOSSIP

THIS has been a dull week for the markets. Shares have been steady, with values well maintained. There has been some profit-taking here and there, especially in textiles, but the trend has been gradually upward. Steel shares in particular have been well held. The proximity of dividend payment on Tata Steels has been the principal prop for this scrip. Those who had bought long ago want to take the dividend before selling out, while, in recent weeks, many have supported this scrip in the belief that, after ex-dividend, its value will soon rise to the present level, so that they can get a clear profit of at least Rs. 10-8 per share even at its current price. This belief is apparently based on past experience. So far as Indian Iron is concerned, it is deriving its strength from the revival of buying fervour in jute and tea shares in Calcutta, as well as from expectations of an encouraging statement of accounts of the Company for March last. Reports about the Company's current working and future prospects continue to be optimistic and are sustaining the hope that, in three or four years, the shareholders will be amply rewarded in the form of higher dividends and/or a bonus scrip. Even though the interim dividend of Bombay Dyeing is no more than what was paid last year, namely, Rs. 7-8 per share—some in market circles were expecting it to be at least Rs. 10 per share—the drop in prices is not so big as might have been expected. As against a modest fall in this scrip from the peak level touched this week, there has been a handsome rise in Kohinoors and a few other well-known textile shares. A feeling of buoyancy prevails in the Madras share market also.

• • • •

The bullion market has become steady again, after a slightly easier trend earlier in the week. Seeds are a shade quiet on cheerless advices from abroad, but cotton has been presenting a firm front. Jarilla futures contract has come to be quoted well above Rs. 700, a level at which the Government decided to close the forward market eight months ago. The appreciation in the value of ready cotton has been even more marked than in the contract, with several mills anxious to book new crop cotton. Consequently, the futures section has become more fictitious than ever and is misleading the textile men in foreign countries about the real levels at which Indian varieties are standing.

Although it is still early to forecast the size of the 1956-57 crop with any degree of accuracy, the consensus of opinion is that the crop will not be more than five million bales of 400 lbs. each and that the quality will be poorer than in the season now fast coming to an end. With the need for exporting at least 500,000 to 600,000 bales in order to augment foreign exchange earnings, the statistical position of cotton in the coming season is expected to be very uncomfortable to consumers and may impede the smooth working of the hedge contract. Mill consumption of Indian cotton is now of the order of 4.9 million bales. As against this, the new crop available for the domestic mills after allowing for export will be of the order of 4.5 or 4.6 million bales. This means that a further inroad will have to be made into the carry-over cotton, estimated at 1.7 million bales, of which the desirable grades are very limited. Since the arrival of new crop is expected to be delayed owing to adverse weather conditions during the past one month, mills are eager buyers of whatever good cotton that is available. The position has been rendered worse by the release of a fresh export quota of 20,000 bales of Bengal *Deshi* and revalidation of the unused licences to the tune of 45,000 bales early this month. As a result, several varieties of cotton are being quoted at the ceiling, while some popular ones have been practically sold out.

If the present estimates of the new crop were to hold good, if the upward trend in other commodities, as well as foodgrains, were to persist in the coming months and if the authorities were to stick to their view that there should be a ceiling within ceiling for the futures contract—in December last they thought that Rs. 700 per candy was the limit for the Jarilla contract—then it is highly doubtful whether the futures trading in the 1956-57 season will have smooth sailing; indeed, it may have to be suspended sooner than some believe. But the last of the three aforesaid "ifs" is a big one and may not materialise at all for more than one reason.

In the first place, the 1956-57 season coincides with the election year. Since the cotton trade is one of the major supporters of the Congress Party, the Government would hesitate to displease it by suspending hedge trading. Secondly, the Gujerat has already been badly hurt by the Government's sudden decision over the future of Bombay State. The Government would not, therefore, like to take any step designed to bring down cotton prices, lest it should further antagonise the politically conscious cotton-growers of Gujerat. Thirdly, the Minister for Commerce and Industry is a person with a highly flexible mind. Eight or nine months ago, the level of Rs. 700 for Jarilla futures might have appeared to him to be unduly high. It may not do so now or even five months later, when he will probably be too busy fighting the elections to care very much about the price levels. Being a practical-minded economist, he will always produce some plausible reasons to support any level of price for cotton as being reasonable. Once, for instance, he said, that the price of groundnut oil should not exceed Rs. 1,000 per ton. But, actually even when it crossed the Rs. 1,300-mark, he kept his conscience in peace and took no steps to reverse the upward trend. Surprisingly enough, he did not even hold out a threat against the speculators. If there was any reason for this, it was presumably the desire on his part not to place his colleagues in Andhra in an embarrassing position, for, if he had tried to force down the prices of groundnuts in the interests of consumers, the communists would have turned his action to their advantage. And, finally, the new President of the E.I.C.A. is keen on carrying out the directives of the Government, whether they are right or wrong. With such an amiable person holding the chair, there is little prospect of any row between the Government and the cotton exchange. The Government, too, would not like to force a showdown, so soon after its last bitter controversy with the E.I.C.A., because frequent clashes with well-organised markets will not be good for its reputation. Even as it is, the Commerce and Industry Ministry is under a barrage of fire from the trading community all over India for having introduced State trading in the distribution of cement and steel within the country and in the export of iron and manganese ores. Further interference with the trade at this stage or in the near future will, therefore, make it still more unpopular.

• • • •

The London conference on the Suez Canal dispute has not been quite a success. With Egypt not participating, it was, of course, not expected to result in a cut and dried formula for solving the dispute. It was, however, hoped that the conference would find an agreed basis for negotiating a settlement with Egypt. This hope has not materialised. India offered a well-thought-out plan for compromise that would appeal to Egypt. But the majority of the nations attending the conference did not support it. Although the U.S. Secretary of State, Mr. John Foster Dulles, is making frantic efforts for winning the support of Egypt to his plan, he is not likely to succeed, because it has already been rejected by the Egyptian President. This is not surprising, because the Dulles plan only pays lip sympathy to the sovereign rights of Egypt. If Mr. Dulles succeeds in his efforts with Egypt, well and good. If he fails, the situation will become critical. Although the Western powers have declared that it is not their intention to resort to the force of arms to settle the Canal dispute, it is hard to say whether they will not precipitate matters by other means. Instead of a hot war, they may try an economic war.

Egypt has already been placed in a tight financial position, consequent upon the freezing of its foreign exchange resources held in Western countries. Some days ago, Britain had requested several countries in Europe and elsewhere not to give credit to the Egyptian Government. It is not known to what extent this request has been responded so far. But now that all the Western countries, including W. Germany and Italy, both of which have close economic ties

(Continued on page 395)

THE SILLY SEASON

EGYPT'S BEHAVIOUR EXEMPLARY

From Our Own Correspondent

LONDON, 17*th August*

LONDON LETTER

THE sabre rattling in which the British Government is indulging, the evident signs of war-like preparation throughout the country—the call-ups of reservists, the movement of ships and men and of stores at airports and seaports—and the bellicosity (albeit somewhat diminished in the last two days) of much of the Press contrast strangely with the actual atmosphere in which the Conference over Suez is being conducted. The cars of the foreign delegations were bustling about the Foreign Office, Lancaster House and the Embassies on Wednesday morning, and, before the Conference started yesterday, the tone for its opening had already been set. That part of the British Press which is not following the Government is giving a good deal of the credit in the first place to India, and secondly to Russia, for helping towards a more balanced view of the dispute by effectively inducing moderation on Egypt's part. Thus Egypt is, in fact, forgoing the dues on most of the canal shipping—dues which are being paid into blocked accounts in London and Paris—without attempting any reprisals against the shipping concerned. The only interference with freedom of navigation comes from the absence of a number of pilots prolonging their holidays, and, since the canal cannot be navigated safely without pilotage, delays in transit are inevitable. These delays are likely to continue until some peaceful solution is assured. But, since even such a solution is almost certain to imply at the least some substantial measure of control by Egypt over the operation of the Company, it may be that the Company will find itself without many pilots who will not want such a new master.

The view here is that with Egypt represented at the Conference privately, as it were, with Iraq canvassing mediation behind the scenes, with America urging a peaceful solution, with India, Pakistan and Russia almost imposing moderation, a solution will emerge, even though this particular Conference may possibly not provide the final answer. Thus, the ever sensitive stock markets have shown some substantial recovery at the latter end of the week from the depression into which the nationalisation of the canal first threw them.

The Canal Dues

And, if there is a peaceful solution, possibly a compromise between national control by Egypt and international supervision, what are the effects likely to be on dues and the profitability of the Company? It is well known that the Company, whose thirty-two Directors comprise sixteen Frenchmen and nine British, have deliberately kept dues as low as possible and this is not surprising when at least half the British Directors are shipowners. But this is not to say that the canal has not shown profitable results. In its last year, running expenses absorbed little more than half the total revenue, so that substantial dividends were paid to the now dispossessed owners. But Egypt will no doubt seek to raise her share of the revenue by increasing dues. However, the dues themselves amount to an insignificant proportion of the value of the commerce passing through the canal, so that Egypt would be well placed to double, for instance, her total of last year's receipts (some £8½ millions) without the cost of oil or other commodities going through the canal being appreciably affected. Egypt's economic interests, therefore, all point towards action which will increase the flow of revenue and will increase her share of it rather than taking any extreme courses which would cut the revenue off altogether. Her interest indeed lies altogether towards moderation and the City view is that it will be surprising, if, in the final outcome, Egypt does not succeed in getting her fingers on a little more of the gold of the maritime nations.—*All Rights Reserved.*

An *ad interim* dividend of 7½ per cent. less income-tax—same as that for 1955—for 1956, has been declared by the Directors of the National Bank of India Ltd. The dividend is payable on or after 20th September 1956.

The Directors of the Mercantile Bank of India Ltd. have declared an *ad interim* dividend of 7½ per cent. less income-tax on all shares for 1956, the same as that paid last year. The dividend is payable on or after 25th September 1956.

EQUITIES REMAIN STEADY

PROFIT-TAKING, HOWEVER, CHECKS ADVANCE

From Our Special Correspondents

BOMBAY, 23*rd August*

TRADING on the Stock Exchange during the week under review was interrupted by two holidays, on Friday last, on account of *Moharrum*, and on Tuesday this week, on account of *Coconut Day*. Despite this interruption, equities maintained a steady tone, though the pace of advance was checked by some profit-taking. The international situation, affected by the Suez Canal issue showed no change during the week, though towards the close, reports from London indicated that efforts by the 22-nation Conference to bring out a compromise had failed. On the domestic front, expectations of inflationary pressure gathering momentum in the coming years, further encouraging reports of company earnings and reports of good demand for cloth were the main stimulants for keeping the undertone steady.

In the steel section, Tata Ordinaries crept up from Rs. 211 to Rs. 213-8 before finishing at Rs. 213. After an early dip from Rs. 37-6¼ to Rs. 37-3, Indian Irons gathered strength to Rs. 37-13 and closed at Rs. 37-11.

Textile shares were subjected to heavy profit-taking and many counters suffered modest losses on balance. Even where they managed to close higher, the gains were not very marked. Bombay Dyeings displayed an erratic trend. After moving down from Rs. 691-4 to Rs. 687-8 early in the week, they recovered to touch a new high of Rs. 701-14 yesterday. Today, however, the news that the Company had maintained the interim dividend for 1956 at Rs. 7-8 per share caused a sharp setback to Rs. 690. The closing was a shade better at Rs. 693-12. Centurys declined from Rs. 607-8 to Rs. 602-8, but jumped up to Rs. 608-8 today before closing at Rs. 605. Kohinoors reacted from Rs. 393 to Rs. 390-8, but rallied to close at Rs. 400. Central Indias moved up by Rs. 4 to Rs. 167. Edward Textiles by Rs. 10 to Rs. 360 and Finlays by Rs. 5-8 to Rs. 382. Gokaks closed Rs. 3-8 lower at Rs. 250-8, Indu Ordinaries As. 3 down at Rs. 14-4 and Indore Malwas Rs. 3-2 lower at Rs. 165-10. Khatau Makanjis were maintained at Rs. 278-12 and New Greats at Rs. 260. Morarji Goculdas gained Re. 1-4 to Rs. 272-8 and Sassoon Silks Rs. 2 to Rs. 14. Shree Niwas were done Rs. 3-12 lower at Rs. 243-12. Simplex moved down from Rs. 215-8 to Rs. 212, but recovered to close at Rs. 214-8. Standards lost Rs. 3-12 on balance at Rs. 491-4, while Svadeshis gained Rs. 6 to Rs. 276. Tata Mills shed Re. 1-8 to Rs. 63, while Vishnus stood Rs. 2-8 higher at Rs. 193-12.

Very little activity was noted in bank shares, but the undertone was steady. Central Banks were done a fraction lower at Rs. 54-8, while Bank of Indias were maintained at Rs. 172. Barodas gained As. 4 to Rs. 105. United Commercials were unchanged at Rs. 59.

Insurance shares were dull and business was very much restricted. New Indias displayed some weakness and were a rupee lower at Rs. 48-4. British India Generals were placed at Rs. 14 *ex-div.*, as against Rs. 15-2 *cum-div.* last week, and Orientals at Rs. 3,620 *ex-div.*, as compared with Rs. 3,820 *cum-div.* Jupiters gained As. 2 to Rs. 6.

A mixed trend was noted in electricity shares. Ahmedabad Electrics were taken down from Rs. 99-6 to Rs. 98-12, before they closed at Rs. 99-1. Bombay Suburbans picked up As. 10 to Rs. 111-4 and Surat Electrics As. 10 to Rs. 119-8. Tata Hydros moved down by a rupee to Rs. 128, while Tata Powers and Andhra Valleys put on Rs. 10 each to Rs. 1,320 and Rs. 1,247-8, respectively.

Business in the miscellaneous section was marked by several features with sharp gains over the week. In the sugar group, a rise of Rs. 7 to Rs. 169 was noted in Phaltons. Belapurs were marked up by Re. 1-8 at Rs. 255-8. Bhopals were maintained at Rs. 17-12 and Walchandnagars at Rs. 273-12. Small variations were noted in cement shares. Associated Cements moved narrowly and finished with a gain of Re. 1-4 at Rs. 203-4. Digvijays declined by Re. 1-8 to Rs. 204, while Ashokas were done As. 2 higher at Rs. 12-6. Dalmia Cements were unchanged at Rs. 15-8. In the engineering and mining group, a further setback by Rs. 10 to Rs. 345 was recorded by Alcock Ashdowns. Tata Locomotives staged a retreat to Rs. 173-12, after an earlier rise from Rs. 174-8 to Rs. 178. Premier Constructions hardened by Rs. 5-4 to Rs. 217. Larsen and Toubros were a shade quiet at Rs. 18-12, while Mahindras gained As. 6 to Rs. 6. Kamani Engineerings shed As. 10 to Rs. 7-4. Shivrajpurs were just steady at Rs. 90-12 and Indian Coppers, despite the excellent results for the year ended 31st December 1955 and good outlook for the Company, failed to move up. On the contrary, they were a shade quiet at Rs. 7-5¼. B.B. Petrols were featureless at Rs. 4-3.

Among shipping and transport shares, Scindias reacted from Rs. 19-6½ to Rs. 19-3. Great Easterns were dull at Rs. 19-12. Premier Automobiles were in the limelight with a jump from Rs. 102 to Rs. 111-8. Hindustan Motors shed a fraction to Rs. 10-5. In the miscellaneous industrial group, Bombay Burmahs advanced from Rs. 761-4 to Rs. 774-8, but closed lower at Rs. 771-4. British India Corporations were steady at Rs. 10-12. National Rayons fell from Rs. 274-8 to Rs. 268, but regained to Rs. 271-8 at the close. Dhrangadhra Chemicals were well favoured and they recorded a gain of Rs. 2 to Rs. 138. Tata Chemicals gained on balance As. 4 to Rs. 20-11¼. Tata Oils were steady at Rs. 56-12. Wimcos were marked down by Re. 1-4 to Rs. 184-6.

* * * *

Calcutta Stock Exchange

CALCUTTA, 22*nd August*

The week under review on the Calcutta Stock Exchange was noted for dull conditions arising from lack of support. Operators were in a hurry to book their profits, and this resulted in prices moving down. There were clear signs that funds were being kept apart for subscription towards the States loans opening shortly, and until the loans are closed share market activity is not expected to be lively. In the face of such a situation, the addition to the prices of jute goods and a fall in fibre prices did not release a good measure of buying support for jute shares nor did the keen interest shown by buyers and stockists of manufactured goods make any change to the general trend. The increased demand for manufactured goods was certainly due to fears of conflict between Egypt and Great Britain over the Suez Canal issue, but since investment buying was fully satisfied with last week's activity and no fresh incentive had come to the forefront, the week under review was far from lively, though quotations tended to be steady subsequently. The market was closed yesterday on account of *Radkhi Purnima*.

The decision of mills to reduce production further and the improvement in the goods market pushed up jute shares to the forefront once again and some gains were indeed reported. Nationals were quiet at Rs. 25-14, but Indias improved to Rs. 145 from Rs. 135. Budge Budges were better at Rs. 135, as were Kelvins at Rs. 228. At Rs. 180, Anglo-Indias added five points and New Centrals were taken to Rs. 18-4 from Rs. 17-13. Gourepores were keenly sought and in transactions put on Rs. 15 to Rs. 247.

In the coal section, East Indians gained fractionally to Rs. 31-9, but Burrakurs were quiet at Rs. 13-15. Central Indias were unchanged at Rs. 7-6.

Indian Coppers, in the mining section, were fully steady and were bought at Rs. 6-15. The encouraging remarks of the Corporation's Chairman with regard to the proposed expansion and the highly satisfactory working results of the Corporation made the scrip an attractive possession.

Moderate attention was paid to the engineering section, and despite profit-taking, Indian Irons were only a few annas lower at Rs. 37-3. Indian Standard Wagons were shown special attention, which took the quotation up to Rs. 198 from Rs. 177. Hooghly Dockings came to business at Rs. 144, as against Rs. 143 previously, while Texmacos were quiet at Rs. 23-5. Jessop & Cos. declined to Rs. 34-8 from Rs. 35 and Richardson & Cruddas to Rs. 25-1 from Rs. 25-4.

Among cements, Orissas spurted to Rs. 16-2 from Rs. 15-10 following the announcement of an increase in the dividend for the year ended 31st December 1955 to Re. 1-4 from As. 12 per share paid for 1954. Sone Valleys were lifted from Rs. 8-10 to Rs. 8-13 *ex-div.*

Teas were shown selective attention, and Pairakolas improved from Rs. 195 to Rs. 206. At Rs. 16, Dauracherras added Re. 1-12. Tellapparas were pushed to Rs. 228-8 from Rs. 202, while Brooke Bonds eased to Rs. 21-7 from Rs. 22.

A mixed trend was in evidence in the miscellaneous industrial section. Thus, while Assam Saws improved further to Rs. 5-2 from Rs. 4-12, Indian Aluminiums eased to Rs. 24-4 from Rs. 24-9, following reports of labour troubles at the Alwaye factory. Good support was given to Aluminium Corporations which were raised to Rs. 12-4 from Rs. 11-11, but Indian Cables were quiet at Rs. 33-10. India Steamships at Rs. 9-2 lost As. 2.

Madras Stock Exchange

MADRAS, 22*nd August*

Although the buoyancy noted on the Madras Stock Exchange last week abated somewhat during the week under review, trading was quite active and further additions were recorded by equities. The sentiment of operators continued to be bright, thanks to industrial activity being at a high level and prices steadily moving up. Encouraged by satisfactory working of joint-stock enterprises in the past year and expecting better results in the coming years, the operators showed sustained interest in buying shares, especially of companies under sound management. The undertone of the market was firm.

Consistent buying support pushed up the prices of rubber shares. Rajagiris were particularly favoured, with their quotation advancing by a rupee to Rs. 27-8. Travancore-Rubbers and Vaikundams rallied As. 12 each to Rs. 25 and Rs. 33-12 respectively. Cochin Malabars strengthened by As. 11 to Rs. 12-2 *cum-div.* Thirumbadis hardened by As. 3-6 to Rs. 2-9. Pullangodes gained an anna to Rs. 4-10. Tea shares were also well supported, following reports of good offtake at higher price in the recent auctions. Periakaramalais climbed up by As. 8 to Rs. 11-2 *cum-div.* (final). Nilgiris and Talayars rose by As. 4 each, the former to Rs. 13-2 and the latter to Rs. 13-12. Ouchterlonys put on As. 3-6 to Rs. 5-12. Among coffee shares, Balmadies gathered As. 2 to Rs. 4-12 *cum-div.* Anaparis were firm at Rs. 4-15.

Rajapalayams provided the brightest spot in the textile section, registering an advance of Rs. 10 to Rs. 180 *cum-div.* Buckinghams increased by Rs. 2-8 to Rs. 212. Metturs gained alike amount to Rs. 492-8. Coimbatore Spinnings picked up Rs. 2 to Rs. 123. Kotharis gathered a rupee to Rs. 19. Premiers were done at Rs. 232, *ex-div.*, as against Rs. 247 *cum-div.* last week-end. Bangalore Woollens were fully maintained at Rs. 590, as also Pioneers at Rs. 335. Coimbatore Cottons at Rs. 382-8 Kasturis at Rs. 32-8 *cum-div.*, Maduras at Rs. 52-4, Radhakrishnas at Rs. 360 and Pankajas at Rs. 96.

A jump of As. 14 to Rs. 19-4 in Mysore Papers was the feature of trading in miscellaneous industrials. Travancore-Rayons had buyers As. 4 higher at Rs. 15-14. India Cements recorded a rise of As. 4 to Rs 31-14 Andhra Cements were firm at Rs. 16 and Dalmias at Rs. 15-14. Mettur Chemicals picked up As. 4 to Rs. 10-6 *cum-div.* (final). F.A.C.Ts, India Steel Rollings and Spencers appreciated by As. 2 each to Rs. 6-13, Rs. 14-14 and Rs. 17-4, respectively.

Indian Bank shares elicited good support Rs. 95 Paids advanced by Rs. 5 to Rs. 190. Fully Paids by Re. 1 to Rs. 206 and Rs. 70 Paids by As. 8 to Rs. 148. Commercials were transacted at Rs. 42-8, same as last week.

CANADA'S BANK RATE UP

The Bank rate in Canada reached a new high record when the Bank of Canada announced on 9th August that its discount rate had been increased from 3 to 3½ per cent. The new record rate has been attained in five stages beginning in August 1955 when the rate prevailing was 1½ per cent. The latest increase was preceded by certain other monetary measures such as restrictions on bank loans and the establishment of a fixed liquidity ratio. They are an indication of the determination of the Canadian authorities to stem the rising tide of inflation resulting from the increasingly adverse trends in the current balance of payments. As a result of these measures, the interest rates structure has moved forward. Three month Treasury Bilis which were sold at $2.52 at the end-June rose to $2.80 on 2nd August. Moreover, officials of Chartered Bank in Canada have reported an increase of ¼ per cent. in interest rates from 20th August on all types of loans with the exception of certain Government, home improvement and farm improvement loans. At the same time, the banks also have found it difficult to expand their loans as their cash ratio fell short of the statutory 8 per cent. level.

Bank rate, however, has its own limitations in the fight against inflation especially in the conditions obtaining in Canada. In the first place, the rates prevailing in the U.S. determine the limit beyond which the Canadian Bank rate cannot be pushed. While the step taken is aimed at alleviating internal difficulties, it is at the same time capable of producing external problems. The favourable effects at home are already being frustrated to some extent by the persistent inflow of capital from abroad. In the second place, the proportions of this inflow may be all the more disturbing in view of the 21 per cent. increase in capital spending proposed for this year, and the consequent need for huge imports. The scarcity conditions at home further increase the need for imports. And, as the *Financial Times* aptly put it, "it is this persistent inflation and makes it more a difficult to correct." Canada is thus faced with a dual problem. On the one hand, reduction of imports would increase the pressure on inflation at home, and, on the other, checking the inflow of capital would create baiance of payment difficulties. It will, therefore, be interesting to see how far the orthodox Bank rate weapon can fulfil its role in the context of these divergent requirements of Canada today.

WORLD BANK LOAN FOR SUEZ CANAL

The World Bank will be ready to consider the question of financing modernisation of the Suez Canal, provided certain technical problems are solved, according to an authoritative source. Any serious consideration by the Bank however, will have to await the solution of the Suez Canal crisis. The principal technical problem will be the economic and financial strength of the Canal's future management. The Bank further requires assurances as to, firstly, reasonable prospect of a return on its investment, secondly, a loan guarantee from the Government or Governments concerned, and thirdly, participation by other bodies in the loan, since the Bank will be unlikely to provide the entire finance needed for the project.

The Central Government has so far granted licences for the establishment of four new sugar factories in Uttar Pradesh with an aggregate daily cane-crushing capacity of 5,000 tons and for the substantial expansion in 24 existing mills, involving an additional capacity of 15,678 tons per day. Of the new factories, one is expected to commence operation in 1956-57, two others in 1957-58 and the fourth in 1958-59.

NEWS IN BRIEF

AN area of 2,006,000 acres is estimated to have been brought under the Japanese method of paddy cultivation in 1955-56.

India's requirements of mining machinery in the public sector during the second Plan period are estimated at Rs. 41.24 crores.

At a recent meeting of the Indian Chemical Manufacturers' Association, the desirability of establishing an Export Promotion Council for the chemical industry was discussed.

A lighthouse with a beam intensity of three million candle-power will be built at a cost of Rs. 7 lakhs at Dwaraka near Jamnagar. A fog signal equipment will also be installed there.

A new sugar mill will be started at Kicha in the Terai of Naini Tal district of U.P. Production will start as soon as the machinery is delivered by Protos Engineering Co. (Private) Ltd. in co-operation with a German concern.

The "Nepa" mills, which at present produces 65 tons of newsprint a day, is expected to raise its output to 100 tons daily. At the same time, the Government of India also has under consideration a scheme for the manufacture of newsprint from bagasse.

According to Mr. K. D. Malaviya, Minister for Natural Resources and Scientific Research, the Department of Atomic Energy is exploring the possibilities of setting up a High Altitude Cosmic Ray Laboratory in Kashmir Valley.

The Railway Board has recommended the grant of licences to two Indian firms for the manufacture of train lighting dynamos. The railways require about 1,000 of these dynamos per year. It is expected that these two firms, when in full production, will be able to meet half of India's total demand.

The Government of India has set up a high power Oil and National Gas Commission, with Mr. K. D. Malaviya, Union Minister for Natural Resources, as Chairman. The Commission will advise the Central Government on matters relating to exploration, exploitation and refining of oil and natural gas resources.

The Forward Markets Commission is understood to have decided to recommend the Cochin Oil Merchants Association for recognition by Government for conducting transferable delivery transactions in coconut oil at Cochin. The recognition of Alleppey Oil Millers and Merchants Association for conducting forward trading at Alleppey has already been recommended by the Commission.

Over 700 employees of the Indian Aluminium Company, Alwaye, went on an indefinite strike from the 14th inst. following a dispute over the question of bonus. The strike has paralysed the Works of the Company which produces about 15 tons of aluminium daily. The concern, which contributes over 70 per cent. of the country's production of this vital metal, is a joint Indo-Canadian venture.

Work on the electrification of the main line between Howrah and Burdwan and the branch line to Tarakeswar of the Eastern Railway has already begun. The British Insulated Callender's Cables Ltd., in conjunction with its associates the Indian Cable Co., Ltd., has been awarded a contract of the total value of £250,000 for the supply and installation of the underground power and control cables.

The Madhya Pradesh Government is considering a proposal to establish an industrial estate for small industries at Nagpur. The scheme envisages giving ready facilities in the form of buildings, power, gas, transport and industrial housing to small industries. The concentration of small industries in one compact area, it is felt, would ensure a number of mutual benefits to them, which otherwise are not available to scattered units.

The first conference of the proposed Maharashtra Fruit Growers' Association will be held on the 31st inst. at Ahmednagar. The Conference, which will be presided over by Dr. Punjabrao Deshmukh, is expected to discuss such issues as plannng for the future development of fruit cultivation in the Five-year Plan, increasing fruit production and protection from pests and diseases, transport and marketing facilities.

The Kinoshita Shoten Trading Company, a Japanese trading firm, backed by Japanese steel mills, is intending to develop new iron ore resources in Orissa to supply the Japanese steel industry with extra iron ore. The project, costing about $50 million, is similar in size to the tripartite plan now being discussed between India, Japan and the U.S. for exploiting iron ore resources in Rourkela area. About 2 million tons of ore is expected to be exported annually to Japan by putting through this Project.

The Cashew and Pepper Export Promotion Council, Cochin, has decided at a recent meeting, to enforce quality control for export of cashew and pepper. A scheme for introducing factual inspection certificates for all exports of the two products is under preparation. In order to explore the possibilities of extending the market, a four-man trade delegation, sponsored by the Council, will leave for Central European countries on the 29th inst.

The first course for post-graduate training in agricultural marketing, instituted by the Indian Council of Agricultural Research, was inaugurated on the 16th inst. at New Delhi by Dr. Punjabrao Deshmukh, Union Minister for Agriculture. The course gives training in all aspects of marketing, both theoretical and practical, and lays emphasis on the organisation of developmental activities such as regulation of markets, co-operative marketing and warehousing. It is the first of its kind in Asia.

The Physical Research Laboratory at Ahmedabad is to conduct cosmic ray research in connection with the observance of the International Geophysical year 1957-58. India has been chosen for work in this particular fieid, because a large part of the country lies on the magnetic equator which receives stronger cosmic ray radiation from space than the countries of Europe or America. It is proposed to set up cosmic ray recording stations at Ahmedabad, Kodaikanal, Trivandrum, Mount Abu and Gulmarg.

Import licences for goods of the total value of Rs. 517 crores were issued by the offices of the Import Trade Control Organisation in India during January to June 1956. This was considerably higher than the total value of licences for the period July to December 1955 amounting to Rs. 344 crores and for January to June 1955 to Rs. 304 crores. The total number of licences issued during January-June 1956 was 129,506, as compared with 114,065 and 100,126 for the two preceding half-yearly periods.

The Fact Finding Committee on industrialisation, set up by the U.P. Government with Mr. B. M. Birla as Chairman, has expressed the view that almost every industry other than shipbuilding can be developed in the State. For the public sector, the Committee has suggested the establishment of factories for the manufacture of fertilisers, railway equipment, aero engines, aluminium and synthetic rubber. A rayon factory has been advocated for the private sector. The Committee wants the production capacity of textile mills, sugar factories, power alcohol distilleries and cement factories to be increased. It has also recommended rationalisation of the State's tax structure, phased reduction in sugar cess, abolition of duty on electrical energy and uniform local taxation.

The total gross sea and land customs revenue collected in India during June 1936 amounted to Rs. 12.95 crores, as compared with Rs. 13.62 crores in the corresponding month of the previous year, according to the Department of Commercial Intelligence and Statistics, Government of India. Of the total customs revenue collections, import duties accounted for Rs. 10.91 crores, as against Rs. 10.73 crores. export duties for Rs. 1.77 crores, as against Rs. 2.77 crores, and land customs and miscellaneous for Rs. 27 lakhs, as against Rs. 12 lakhs. The total gross collection of Union excise duties during the month under reference amounted to Rs. 14.94 crores, as compared with Rs. 12.96 crores. During the three months, April to June 1956, the grand total of gross customs and Union excise revenue realised was Rs. 80.19 crores, as compared with Rs. 74.43 crores during the corresponding period of the previous fiscal year.

From Abroad

The United States newsprint consumption in the first seven months of 1956 is estimated at 3.9 million tons, as compared with 3.7 million tons in the corresponding period of 1955.

With a view to giving the farmers a chance to sell their forthcoming new crop, the Egyptian Cotton Committee has decided to stop forthwith the sale of any quantity of its cotton stocks either for export or for local consumption.

The British Maritime Syndicate, running regular services between Europe and the Far East, proposes to increase their freight rates by 20 per cent. A final decision will be taken at the Far East Conference scheduled to meet shortly in London.

The Western Union Telegraph Company of the U.S. has announced that it will increase press telegraph rates by 8.22 per cent. with effect from 14th September next, in order to meet increased labour costs. As a result of this increase, the Company's annual revenues are expected to go up by $268,000.

The Malayan Federation Minister for Commerce, Dr. Ismail, has announced that during the year 1957, there would be no restriction on the production of tin in the Federation of Malaya under the International Tin Agreement due solely to the fact that the buffer stock would be in a position to absorb the surplus production of next year.

According to the estimates of the F.A.O., world wheat stocks continue to increase, despite a decline in production in some countries and some pick-up in trade early this year. It has been calculated that the stocks which increased by about one million metric tons during the 1954-55 crop year showed a further increase of about 2.2 million tons by the end of the 1955-56 season.

The ninth international German Handicrafts and Trade Fair to be held at Munich from 15th to 26th May 1957, will represent, as usual, an extensive cross-section of creative craftsmanship in all fields. This fair, apart from being the biggest fair of Handicrafts and their supplying industries in Europe, also displays the most up-to-date examples of artistic and industrial design for handicrafts and small industries.

At an annual conference of trade unions held at Hastings, England, delegates representing three million British workers demanded the lifting of all bans on trade with mainland China. They declared that this would help check the spread of unemployment in Britain and also maintain world peace. In a resolution passed unanimously, the delegates emphatically protested against the blacklisting of an enormous potential market in China when restrictions on trade with the U.S.S.R. were being eased.

The new Indonesian export premiums, payable in rupiahs, range from 5 per cent. on palm oil and palm kernels to 20 per cent. on sisal. The percentages vary for other products like rubber, coffee, tea, pepper, tobacco and copra from 8 to 16 per cent. No premiums, however, will be charged on oil, tin, sugar and quinine. The premiums will be in the nature of negotiable certificates which the Bank of Indonesia will be prepared to buy at 125 per cent. These certificates could be used for the import of articles of luxury and for shipping as well as air-passage tickets.

The U.S. Federal Maritime Board has recommended that permission should be given to American Coal Shipping Incorporated to charter 30 "moth-balled" Liberty ships from the Government reserves in order to carry American coal overseas. The American Coal Shipping Inc. is a corporation formed by coal producers, the United Mine Workers Union and Southern railroads. The conditions recommended by the Board alongside that for chartering are minimum rates to be set by the Maritime Agency, restrictions on the use of the vessels in other trades and a limitation on the period of the charter to twelve months in the first instance, and to be reviewed later.

PERSONAL

MR. Bhimsen Sachar, former Chief Minister of the Punjab, has been appointed Governor of Orissa, in place of Mr. P. S. Kumaraswami Raja, who has resigned owing to ill-health.

Mr. S. Narayanaswami, Deputy Secretary, Union Ministry of Home Affairs, has been appointed the competent authority to whom applications for appointment as Notaries by the Central Government should be made.

Mr. A. J. C. Hoskyns-Abrahall, Chairman, Lever Brothers (India) Private Ltd. and associated companies and Chairman of the Vanaspati Manufacturers' Association of India, has been elected President of the Bombay Chamber of Commerce and Industry, *vice* Mr. J. F. Sinclair, who has resigned.

Mr. Kadidal Manjappa, Minister for Revenue and Public Works, Mysore, in the Hanumanthaiya Cabinet, has been appointed Chief Minister of the State, with effect from the 19th inst. Mr. A. G. Ramachandra Rao, Mr. T. Channiah, Mr. H. Sidaverrappa, Dr. R. Nagan Gowda and Mr. H. M. Channabasappa, have been re-appointed Ministers.

Mr. D. N. Khurody, Milk Commissioner of Bombay, left for Moscow on the 22nd inst., on an invitation from the Soviet Government, to study the dairy industry in that country. Mr. Khurody, who is a Vice-Chairman of the International Dairy Congress, will, after the Soviet tour, attend a meeting of the Congress to be held in Rome on the 24th proximo.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 22*nd August*

Coal *vs.* Oil

Reference was made in our Coal Trade section last week to a representation which the Bombay Coal Merchants' Association has made to the textile mills using crude oil. instead of coal, as fuel. The Association urges these mills to consider the question of coal, instead of crude oil, as fuel from the economic as well as the national point of view. As for the economic point of view the Committee of the Association has gone very carefully into details and has come to the conclusion that the present rates of coal leave no ground for the assumption that crude oil is the cheaper fuel. Coal unquestionably works out cheaper than crude oil, as the actual consumption of two tons and fifteen cwts. of oil at Rs. 36 per ton costs Rs. 99; whereas five tons of good Bengal coal at Rs. 17 per ton costs Rs. 85—a gain of Rs. 14 per every five tons consumed per day. Taking the average of consumption at fifteen tons a day a mill will save Rs. 42 per day and about Rs. 1,050 per month. This is not a small saving. In any case the mill that goes over to coal from crude oil will not be a loser; on the contrary it will be saving money. As for the charges required for converting the boilers from crude oil to coal, the Association is informed on good authority that the estimates vary from Rs. 150 to Rs. 400 per boiler according to the needs of the plants affected. The initial expense of, say. Rs. 1,500—the maximum for a plant using four boilers—is nothing compared with the savings of about Rs. 12,000 a year, if coal is used instead of crude oil.

CEILING ON LAND HOLDINGS

A FEATURE of the current Governmental policy towards agricultural land is that it has not yet definitely crystallised itself in favour of any particular level of ceiling on ownership of land. This is to be welcomed, if it indicates—as it seems to do—that the Government is alive to the complexity as well as the gravity of the issues involved in a fixation of land ceilings. There is, however, no indication to show that the Government has altogether abandoned the idea with which it has been toying for quite a long time now. But it is time that it examined the issues in the light of not only the fundamental rights to hold property and principles of natural justice such fixation would violate but also the administrative, economic and social implications of any break with the historic land policy in the country.

That the Central Government continues to hug the illusion that the ceilings on land are both desirable and practical is evident from the fact that its leading spokesmen continue to pay high, though obviously uncritical, tributes to this subject. In the course of a recent broadcast, Mr. A. P. Jain, Minister for Agriculture, averred that the landless labourer was relegated to the lowest position in the village society, and that, if the present position was left undisturbed, more than 70 per cent. of the country's population would remain outside the scope of the socialist society. Emphasising the need for redistribution of land, the Minister, emulating the well-known and misleading Russian preference for percentages said that, while 60 per cent. of the country's peasants held about 15.5 per cent. of the total cultivable area, 5 per cent. of the "big peasants" held about 34 per cent. of the land—that is, more than double the area held by small peasants. Perhaps, the Minister would have done well not only to mention the source of these statistics but also to give actual (absolute) detailed figures. For opinion on this subject is divided and there is a strong section of informed opinion which holds that the so-called "surplus" land available for distribution is a strictly limited quantity, and that the real land problem in the country is not one of distribution of any "surplus" land but of drawing the surplus labour away from land to more remunerative occupations. In other words, the salvation for agriculture lies in industry. Mr. Jain, however, admitted that since the quality of land was different in various parts of the country, no single standard could be laid down for the whole of India. He revealed that the Planning Commission had proposed the appointment of a Committee of experts to examine the conditions in different States and suggest determination of ceilings.

Such a committee, when it is appointed, will do well to examine the problem in an unbiased manner. It should study conditions on spot, besides gathering evidence from all the interests concerned. Perhaps, the State Governments themselves, if they have not already been carried away by ideological bias, should be in a position to give the committee some idea of the immensity of the problem of imposition of ceilings. For it is noteworthy that some of the State Governments, by reason of their being in more intimate contact with the land problems, are inclined to take a more realistic view of the issue of ceilings on land. Thus, Mr. Charan Singh, the U.P.'s Revenue Minister, stated recently that the State Government had decided against a ceiling on the existing agricultural holdings not because it favoured large farms but because redistribution of land would be of little benefit to the State and instead give rise to problems which in their magnitude and intricacy would more than counterbalance the profit, if any. He explained that the cultivated area in the State was about 45 million acres, whereas the number of peasant families was over nine million. Only 9,000 of them, however, possessed holdings of 50 acres or more—a revelation which runs contrary to the statistics quoted by Mr. Jain. By fixing a ceiling on the existing holdings, the land available for redistribution, according to Mr. Charan Singh, would hardly be about 250,000 acres and that, too, in patches scattered all over the State.

Mr. Charan Singh next dealt with two important aspects of the problem—compensation for dispossession of land and distribution of the land so acquired. He pointed out that the acquisition of excess land would involve payment of compensation to landholders who were not intermediaries but actual tillers. Naturally, the amount of compensation would be huge and its calculation a very complex and formidable affair. Referring to distribution of land, he said it raised certain very intricate issues. Should the land be distributed among the landless or those who held uneconomic holdings? Distribution among the former, he contended, would increase the number of uneconomic holdings as well as pressure on land, while distribution among the latter would not be practicable, inasmuch as land was not a movable commodity. Finally, he rightly stressed that the problem facing the State was not of providing land to the landless who constituted only 6.7 per cent. of the agricultural population of the State but of lessening the pressure on land and stepping up production.

The Andhra State Government, after an impartial examination of the issues, has reached a similar conclusion. A note placed by the Government on the table of the State Assembly says that a "rigid application of the ceilings on land holdings would be neither possible nor desirable." It says:

> "The fixation of a ceiling in terms of acreage or assessment will involve a continual revision of the ceiling according to the rise or fall in the prices of agricultural commodities. As a ceiling has at all times to be related to income, it would seem both necessary and desirable to express it directly in terms of income instead of indirectly in terms of acreage or assessment. It seems also desirable that the ceiling should be prescribed if at all per individual instead of per family, each member of an undivided Hindu family entitled to separation being treated as a separate unit."

It quotes from the report of the Subba Rao Committee on land reforms to show that, if a low ceiling were fixed, the more enterprising agriculturists would migrate to towns in search of more profitable avenues of investment. Such a situation, it is rightly pointed out, would deprive the rural sector of its "most progressive element on whom the prospects of agricultural and other advancement in villages depend." Proceeding, it adds: "Perhaps the most serious difficulty in applying the ceiling to existing holdings would be that the State Government, in its present financial position, would not be able to acquire the surplus area released as a result of imposition of the ceiling. Nor will it be possible for the beneficiaries to bear the financial burden, since most of them will be landless poor persons or men of meagre means."

The aforesaid considerations apply as much to the rest of the country as to Uttar Pradesh and Andhra States. It is, therefore, a pity that the authorities should persist in advocating a policy of ceiling on landholdings. There may be a need for fixing fair rents and for assuring the tenants a certain security of tenure. But there is no justification for rushing through a policy of ceilings on land. Such a policy would seriously interfere with production, distort the rural social pattern, and create more discontentment in the villages. Further, it would be a piece of socialist measure imposed from without and not a reform for which the demand has come from the people concerned. Above all, an attempt at fixing ceilings on land is an essentially negative, narrow and escapist solution of a complex social and economic problem in the rural areas. It is wise to recognise that it is complex rather than try to over-simplify it on paper in a vain effort to find a neat and simple solution.

ELECTRICITY BILL

The statistics relating to the working of the electricity undertakings which Mr. Gulzarilal Nanda quoted in the course of the debate in the Lok Sabha on the Electricity (Supply) Amendment Bill, now referred to the Select Committee, make interesting reading. For a long time now, the managements of the undertakings have complained that the statutory return (on investment) allowed to them under the Act is so low that it makes even the maintenance of their undertakings difficult, let alone its affording sufficient incentive for expansion. It is in partial response to this demand that the Bill seeks, in effect, to raise the rate of return to 5½ per cent. from the present 5 per cent. Under the Bill, the rate of return will be linked to the Bank rate so as to give a margin of 2 per cent. Since the Bank rate is now 3½ per cent. the rate of return will work out to 5½ per cent.

It would appear that before the Government finally decided to give even this small increase in return, it undertook an extensive examination of the accounts of 290 licensees. It was found that only 131 undertakings actually earned clear profits upto the maximum permissible return of 5 per cent. plus interest, while 72 undertakings earned profits which were less than the permissible return under the Act and 87 undertakings actually worked at a loss. This means that 159 undertakings could not earn the maximum permissible profits even under the existing provisions of the Act. Commenting on the working of these 159 undertakings, Mr. Nanda said: "The inference follows that their business conditions were such as would not permit them to enhance their rates of supply to secure the maximum clear profit permissible under the Act. The question of their increasing the rates of supply with a view to earning an even higher return is, therefore, not likely to arise in actual practice." Thus, the majority of the undertakings, investigated by the Government, would not be able to avail themselves of the small gift of additional return promised under the Bill.

The accounts of the remaining 131 undertakings, according to Mr. Nanda, indicate that some of them will have to raise the rate of supply in order to earn the permissible return of 2 per cent. above the Bank rate under the Bill. Out of these undertakings, only seven undertakings may have to increase their rates by an average of 4.25 per cent. On the other hand, the rates charged by 31 undertakings would remain unaffected by the Bill, whereas 93 undertakings would actually have to reduce their rates of supply by an average of 4.86 per cent. Thus, the overall effect of the Bill is to reduce, rather than to increase, the rates of supply. Indeed, Mr. Nanda calculated —the Hon'ble Members of Parliament will, as he hoped, be "pleased" to note this—that the net effect of the Bill will be a reduction of 3.86 per cent. in the rates of electricity supply.

As against the small increase in the statutory rate of return it gives, the Bill seeks to take away certain advantages which the managements enjoyed hitherto. The "abuses" which, according to Mr. Nanda, the Bill seeks to check include: (1) Charging by the licensees of managing agent's remuneration and office allowance, in addition to the pay of a managing director, or manager, employed for the purpose of managing the undertaking; (2) charging interest on loan and debentures as an item of operating expenditure, in addition to the earning of "reasonable return" thereon, resulting in the earning of double return by the licensees; (3) earning "reasonable return" on amounts invested out of their depreciation reserve outside the business of power supply, in additon to the earning of interest or dividends thereon, resulting in earning of double return by the licensees; and (4) earning by the licensees of "reasonable return" on security deposits of the consumers and assets financed out of the tariffs and dividends control reserve created out of consumers' money.

An apparent advantage, though in reality a great handicap, is the provision in the Bill which seeks to give to the industry the benefit of the development rebate created by the Finance Act, 1955. Licensees are "free" to utilise the reserve for the expansion of their supply and distribution systems but will not be permitted to earn the "reasonable return" on assets financed from this reserve. This is an excellent example of a gift, which, while it is flattering to the giver, is a source of no small embarrassment to the recipient. It remains to be seen whether the Select Committee will alter the relevant provision, so as to make it possible for the undertakings to avail themselves fully of this rebate.

METRIC WEIGHTS AND MEASURES

Although there is a certain section of opinion which believes that a change-over to the metric system of weights and measures is unnecessary, there is no doubt that there is a large volume of opinion which favours a uniform system for the whole country. It is, however, generally recognised that any change-over should be gradual and cause minimum disturbance to trade and commerce. The Government, as is well known, has decided in favour of metric system. But it has taken care to see that the transition is effected gradually. The official Bill, introduced in the Lok Sabha last week, seeks to establish a uniform system of weights and measures based on the metric standard. It will be recalled the Government of India recently set up a Standing Metric Committee to prepare a draft covering the standards of weights and measures. After much deliberation, the Committee prepared a draft which was, however, subsequently revised so as to cover, in addition to standards of weight, length, area, volume and capacity, standards of mass, time, temperature, electric current and luminous intensity. The revised draft was approved in May last, and the Bill now introduced in the Lok Sabha seeks to give effect to it.

The Bill lays down metre as the primary unit of length and kilogram as the primary unit of mass. It also lays down, as already stated, standards for time, temperature, etc. It will repeal not only the two Central Acts, namely, the Standards of Weight Act 1939 and the Measure of Length Act 1889 but also every State Act, in so far as it establishes any standard of weight or measure. A maximum period of ten years has been provided for the complete adoption of the system. But, during the transition period, which will be gradual and according to a phased programme, the use of the standards now prevailing will, to the extent necessary, be permitted. While the specific provision for the gradualness in the introduction of the measure is quite welcome, a far too leisurely pace may, as the Bill itself admits, defeat the purpose of the reform. The date for the introduction of the system in certain sectors has been tentatively fixed as 1st January 1958.

The need for enforcing a uniform system of weights and measures throughout the country is well known. As readers are aware, there is chaotic diversity in weights and measures. The investigations conducted by the National Sample Survey in about 1,100 villages revealed the use of as many as 143 different systems of weight —measurements. The situation was reported to be even worse in respect of measurement of volume and land area. Moreover, the same term often represents different units of weights in different areas and in different trades even within the same area. This state of affairs must be attributed to the lack of effective enforcement of the standards—seer, pound, yard and their multiples and sub-multiples—laid down in the aforesaid two Central Acts.

This meaningless diversity in weights and measures which constantly enter into common transactions of daily life hampers trade and provides opportunity for the exploitation of people by unscrupulous traders. The worst sufferer is the illiterate agriculturist in the rural areas. On account of the wide variations in the weights and measures from place to place, the agriculturists do not often secure a fair price for their produce in the markets within their own States and also in other States. The adoption of the metric system of weights and measures throughout the country, as envisaged in the Bill, together with the decimalisation of coinage, will greatly facilitate commercial transactions. It may be noted here that the system is in vogue in as many as 70 countries, besides being recognised in all the countries of the world. Surely, the adoption of the system will facilitate trade with rest of the world and strengthen national solidarity.

WAGONS TO WORK HARDER ?

With the major shift in emphasis from agriculture to industry in the second Plan, the problem of transport facilities assumes a new significance. The railways, carrying 80 per cent. of the goods traffic and 70 per cent. of the passenger traffic, occupy a premier position in the country's transport system. Realising the importance of the railways in the industrial development of the country, the Planning Commission has made an allotment of Rs. 900 crores for their development in the second Plan. This amount is no doubt more than twice the sum earmarked for the same purpose in the first Plan. But, when it is assessed in relation to the traffic that will have to be carried during the period, it will be found to fall far short of actual requirements. Even during the first Plan period, the actual expenditure on railway development programmes, though it exceeded the allotment by about Rs. 32 crores, was not adequate to meet the increased transport needs. Thus, in the final year of the Plan, that is, 1955-56, the railways are estimated to have carried only 115 million tons of originating traffic, as against the estimated demand for freight of 120 million tons, leaving a gap of 5 million tons.

With the increased tempo of development envisaged under the second Plan, an additional traffic of 60.8 million tons is expected to arise by the end of the Plan period. The total traffic requiring to be handled by 1960-61 will, therefore, be 180.8 million tons. With the resources so far allocated for their development, the railways may not be in a position to carry all this traffic and the facilities provided by them may fall short of requirements by about 10 per cent. in respect of rolling stock and 5 per cent. in respect of line capacity. In many quarters, it is felt that this estimate of the Planning Commission is at best a conservative one and that the inadequacy of the provision made for transport may turn out to be a major defect in the second Plan. Fortunately, the Planning Commission itself realises this and it has promised to review the position year after year.

Some relief, however, is expected to be provided by (1) the retention of replaced stock found in serviceable condition, and (2) using, to the maximum extent possible, the existing rolling stock and line capacity with a view to achieving progressively greater efficiency and economy. In this connection, it is heartening to note that, in order to realise the latter objective, the Railway Board has launched a vigorous campaign to increase the carrying capacity of the railways with the slogan "our wagons must work harder." That it is not a mere slogan but a well-drawn up purposive programme of concrete action is borne out by the appointment of an additional whole-time member of the Railway Board, entrusted with the task of seeing that the wagons are utilised to the maximum extent possible. Thus, it is hoped to fill, at least in part, the big gap between the demand for wagons and their supply. It is understood that the general managers who met at New Delhi recently have pledged to keep the existing wagons rolling. The chief operating superintendents of the seven zonal railways are also expected to meet the Railway Board to discuss the question of the actual implementation of the programme. Upon their enthusiasm and co-operation will depend, to a large extent, the success of the measure, for they are the real "wagon bosses."

In order to create new wagon space, tarpaulins will be used to convert open wagons into closed ones and this, it has been found, will help carry even sugar and salt bags. By this simple device, the wagons which had hitherto returned empty to their bases after delivery of their contents at destination will now be usefully employed on their return journeys. Steps will also be taken, it is stated, to ensure that detentions of wagons at various points are drastically cut. To enable the wagons to carry bigger loads, a more scientific system of loading will be adopted. The net effect of all these measures, it is expected, will be to "create" new wagons, thus reducing the existing shortage.

While there is no doubt that, if the programme is implemented with vigour and imagination, it can increase the existing capacity of the railways to some extent, it will, by itself, be clearly inadequate to cope with the increasing transport needs of our expanding industries. Nevertheless the measure deserves to be welcomed in the spirit of something is better than nothing.

The Government of Bombay has revised the conditions under which financial assistance is granted to housing colonies of weavers' co-operatives. Accordingly, while the grant-in-aid will continue at 33⅓ per cent. of the cost of construction, the entire balance of 66⅔ per cent. will be given as a long-term loan. Efforts will be made to bring down the cost of the houses by a few hundred rupees. In other words, the cost of such houses will be between Rs. 3,000 and Rs. 3,600. The latter figure will continue to be the ceiling. Funds will also be provided on a loan basis for the entire expenditure on the provision of water supply, drainage, layout of roads and other amenities. The loans will be on a 25-year basis, bearing the normal rates of interest as at present, that is, 4½ per cent. Every effort will be made to induce the handloom weavers to contribute their share in free labour, which will decrease the overall cost of the houses to that extent. In such cases, the grant and loan of 33⅓ per cent. and 66⅔ per cent., respectively, will be given on the net cost of the house.

PLANNING COMMISSION'S NOTABLE ENTERPRISE

DR. APPLEBY'S RECOMMENDATIONS FOR RAISING EFFICIENCY OF ADMINISTRATION

From A Special Correspondent

NEW DELHI, 21*st August*

THE Planning Commission has to be congratulated for having brought out a comprehensive volume covering over 400 pages in close print, detailing the development of various industries during the last few years. The publication contains innumerable details concerning various industries which are proposed to be taken up by both the private and the public sectors for development during the current Five-year Plan. Considerable prominence has been given to the industries that fall within the group of public sector. Among these special mention may be made of iron and steel, ferro-manganese, aluminium, industrial machinery, structural fabrication, railway rolling stock and shipbuilding. Even in the arrangement of the various chapters, the Planning Commission's awareness of the importance of the development of heavy industries is clearly reflected.

DELHI LETTER

The publication also sets forth the aims and objectives of the Government's industrial development and outlines, broadly speaking, details regarding the development of various industries, on an annual basis. At the same time, even a cursory perusal of the publication would suffice to bring forth the lacuna in the implementation of the several schemes, particularly during the first Plan period. It is stated that new investment on industries in the public sector during the first Plan was expected to amount to about Rs. 94 crores. The actual outlay, however, according to the latest estimates, has only been of the order of Rs. 57 crores. In other words, there has been a shortfall of about Rs. 37 crores, which means that the Government was able to implement only about 60 per cent. of the contemplated plans in the public sector.

Private Sector

In sharp contrast to this picture stands out the performance of the private sector during the first Plan period. Investment by the private sector on new projects and expansion programmes was expected to be of the order of Rs. 233 crores and the latest estimates indicate that the actual investment has been of this order. It is, however, a moot point whether the Government appreciates the achievements of the private sector. Be that as it may, the expenditure on replacement and modernisation of plant and machinery in various industries in the private sector has, however, been considerably lower than anticipated. It has been only about Rs. 105 crores, as against the original estimate of Rs. 230 crores, which leaves apparently a considerable volume of arrears still to be made up during the early part of the second Plan.

Taking both the private and the public sectors together, new investment in industries, excluding investment and replacement and modernisation of plant and machinery, has been of the order of Rs. 293 crores, as against the projected outlay of Rs. 327 crores.

It is a truism to say that new investments in organised industries during the second Plan will be very much greater than during the first. In the public sector, a provision of Rs. 524 crores has been made, excluding about Rs. 35 crores to be invested by the National Industrial Development Corporation. An investment of approximately Rs. 535 crores is required to be made in the private sector, if the proposed targets of capacity are to be fulfilled. Thus, taking all things together, new investment of the order of not less than Rs. 1,094 crores is envisaged by the second Plan for purposes of industrial expansion.

While, in the first Plan, the Government was able to spend only about Rs. 57 crores in the public sector, it has to spend nearly Rs. 569 crores during the second Plan on industrial programmes. In other words, there has to be a tenfold increase in governmental industrial programmes during the next five years or so. In order to achieve this purpose, the Government will have to be more alert and should be in a position to take quick decisions in the matter of implementing its various projects. Calculated to help Government achieve this desideratum are the valuable suggestions of Dr. Paul Appleby, American Consultant in Public Administration. He points out that "the greatest strain on the Government will arise in the area of greatest novelty and new emphasis, namely, the area of industrial and commercial enterprise." He adds that, "if success is to be attained in this field by the old method of shifting attention of key personnel to an almost exclusive special handling of these new matters, what has been done will become undone, and what is newly to be done will be found to require much more than the present personnel resources can make at all possible."

State of Emergency

Dr. Appleby is of the view that solutions to the various administrative problems, particularly in the economic field, must be developed by Indians, in terms of the Indian context and very much in terms of the Indian urgency. According to him, India is, in fact, in a state of emergency quite comparable to the conditions of a nation if it were at war. Any success in this emergency would thus depend largely upon the rapid decision-making and rapid action. The present emergency is most acute on the front where new enterprises are in the building. As in war, the emergency dictates the establishment of procedures that have a maximum potential of acceleration consistent with the maintenance of democratic values. The American expert does not seem to favour fragmentation of responsibility in regard to commercial undertakings. He is of the view that, if the Government's economic activity were to be incorporated or co-related to the policies outside governmental sphere, then, perhaps, something good would result. Otherwise, he suggests, if the Government's activities were to be allowed to continue uncorrected, they would certainly lead to a total proliferation of special organisations within the Government itself of such numbers and variety as to be unmanageable by the Government.

In the industrial field itself, developments must be directed towards grouping of the three fertiliser plants and a similar grouping of the three steel plants. This should be followed up at a later stage by a consolidation of domestic and international airways. The primary necessity for a sound and rapid industrial development of a vast country like India is to have a close and interacting relationship between each two contiguous levels—not sharp and wide distinctions—but of close association and co-ordination. This, at present appears to be lacking totally, with the result that many schemes, however good, had to be delayed for lack of proper co-ordination between the various departments concerned.

Shorten Procedures

The long-established practice of review of a project from its financial aspect by the Finance Ministry and by the Home Ministry and a further review of the activities of these governmental departments by Parliament and too frequent references to Ministers in the Cabinet are, for example, definitely hostile to the expansion of a particular programme. The result, as may be seen in the case of many programmes, is general delay, frustration and confusion almost amounting to a subversion of top policy in a dimension which could well mean the difference between reasonable success and substantial failure of the second Plan. If, therefore, the ambitious undertakings outlined in the second Plan were to succeed according to schedule, the most urgent requirement is for the Government to act in a proper perspective and to do away with the existing pattern of job-titles, and the rigidities of class, service, cadre and grade pay differentials which are all confining and, therefore, impediments to a rapid growth.

While generally agreeing with the outlines of industrial development envisaged in the second Plan Dr. Appleby does not fail to indict the Planning Commission in no small measure. He says that most of the members of the Planning Commission are not professional planners in the usual sense of the term. Nonetheless they are planners. Membership of the Commission is a small edition of the Government itself. The Commission does not assume to itself any direct responsibility for specific administrative direction but closely follows and appraises the performance. This position of the Commission seems to be upheld by Dr. Appleby. If the Commission were to assume direct administrative responsibility for the execution of the various schemes contained in the plan, it would, in his opinion, be bogged down and its total performance would be less distinguished and effective.

The American Consultant also gives a number of suggestions for improvement in the administrative field, particularly in relation to the execution of the industrial programmes. He dislikes the system of attaching one of the employees of the Finance Ministry as a "financial adviser" to any programme of industry. This practice, in his opinion, would be detrimental to the proper and healthy growth of the industry, because it would indirectly undermine and ultimately fritter away responsibility. Perhaps, he says, this system is the remnant of age-old colonial rule of India and it would take some time before India could get out of the old rut. But India has to shake off all shackles of colonial administration if she were to progress quickly.

Expenditure Programmes

Still another evil in the present system of control is that only a sort of negative attention is paid to certain items of expenditure. Curtailment of various heads of expenditure is suggested, with a view to bringing about some measure of economy. Only at the year's end is there a hurried calculation of how far the programmes have fallen short and then a somewhat feverish effort is made to get expenditures up to the target. This means an imbalanced and unregulated programme which moves in jerks at the end of a particular period. Actually, there may not be any tempo of development at all; all that takes place is a hurried attempt to show up some expenditure which in its very nature is illusory. To remedy this state of affairs, what is needed is a close and continuous study of expenditures, careful and frequently modified projection of expenditures and changes in action indicated by these projections. The Finance Ministry should pay more attention to better budgeting and has to shift its attention away from detailed expenditure control after budgeting. Details of the working of the budgeted amount should be left to the special agencies in charge of those programmes.

Especially for the success of industrial and commercial enterprises, Dr. Appleby points out that there should be delegation of authority as well as responsibility at all levels. Citing the well-known dictum in professional administrative circles—"the surest way to ruin your boss is to do exactly what he tells you to do, that is, literally what he tells you to do, without intelligence, without discrimination, without judgment and without imagination"—the American expert condemns the system prevailing in India of distrusting junior officers and of a handful of top-ranking executives dictating to them how the precedents should be strictly adheared to. Excessive concern for precedent is quite like an excessive concern for the literal. Even in a non-revolutionary setting, concern for precedent has little practical value. Much less in a country which is surging with activity and which is determined to go ahead with its plans.

Key to Success

The key to the success of the second Plan, to quote the distinguished American expert, "lies rather exclusively on administrative reform to make the Government as an organism equal to its identified goals." He pleads for a general encouragement of courage, imagination and dynamism in management. This could develop only if the man in charge of an industry is invested with full discretion and direct responsibility, instead of frightening him with disciplinary action and public prosecution. The actions of a high official should, of course, be subject to a general scrutiny by the Cabinet, but too much of public criticism of the official is bad for the development of responsibility. The general rule, of course with some exceptions here and there, should be that "the higher the level of consideration, the more general should be the matters to be considered and the more general the judgment that is expressed." At higher levels, there should be great insistence on getting the materials that justify general judgments, and constant selection pointed towards highlighting the more important information.

The above measures of improvement suggested by Dr. Appleby in the particular context of India's developing economy, are now engaging the special attention of the Planning Commission as well as the Cabinet.

HOW PRIVATE ENTERPRISE HAS SERVED SHIPPING

REMARKABLE ACHIEVEMENTS IN THE POST-INDEPENDENCE ERA

By M. A. Master

WE read, on the Independence Day, the appreciation of the Government of what they had done for shipping. Let us now examine how shipping progressed under private enterprise. It is well-known how private enterprise stabilised shipping at tremendous sacrifice before India became free. The fleet built by it and depleted by war consisted of 42 vessels of 98,286 G.R.T. on 1st January 1946. During the period from 1st January 1946, till the beginning of the first Plan period, that is, 1st April 1951, private enterprise added 73 ships of 318,615 G.R.T. to the Indian merchant navy. Mixed economy, dominated by the Government, could add only 2 ships of 14,433 G.R.T. during that period of 5 years and 3 months. Twenty ships of 45,105 G.R.T. were either sold, lost, or scrapped during that period. The net addition to the Indian fleet during the pre-Plan period came to 55 vessels of 287,943 G.R.T.

Mixed economy did not, however, make much headway. Private enterprise financed the acquisition of additional tonnage at a cost of Rs. 22 crores between 1st January 1946 and 31st March 1951. The entire finance was raised from private resources. Mixed economy spent only Rs. 45 lakhs during that period.

After taking into account the tonnage of the steamers that were under construction on 31st March 1956, the contribution of private enterprise to India's navy of supply during the first Plan period came to 254,508 G.R.T. and that of mixed economy to 45,064 G.R.T. 32 vessels of 88,435 G.R.T. were either sold, lost or scrapped during that period. On 31st March 1956, the Indian shipping fleet consisted, therefore, of 120 vessels of 495,714 G.R.T.—81 ships of 237,060 G.R.T. engaged in the coastal trade and 39 vessels of 258,654 G.R.T. employed in the overseas waters. When the steamers under construction are delivered, the contribution of private enterprise during the last ten years will have been 439,649 G.R.T., and that of mixed economy 59,497 G.R.T. Adding the 42 ships of 98,286 G.R.T. owned by private enterprise on 1st January 1946, the total tonnage will come to 137 ships of 597,432 G.R.T. : 86 with a tonnage of 259,112 G.R.T. will be coastal ships and 51 with a G.R.T. of 338,320 will be overseas vessels. Private enterprise will be owning 90 per cent. of the entire fleet of India.

Creditable Performance

Private enterprise has spent Rs. 44 crores for the acquisition of tonnage in the first Plan period. Of this sum, Rs. 21.48 crores were raised by private enterprise from its own resources and the balance of Rs. 22.52 crores represented advances to it by the Government as loans. Mixed economy has spent only Rs. 7.50 crores, of which Rs. 1.62 crores represent loans from the Government.

As the savings of the country were progressively mobilised by the State, difficulties experienced by private enterprise for capital formation became more and more pronounced. It was, therefore, creditable of private enterprise to have been able to raise a sum of Rs. 21.48 crores for a hazardous industry like shipping, from its own resources, during the first Plan period.

History would give the place of pride to private enterprise for starting shipping services in international waters. The India-America service was started in March 1947. The India-U.K./Continental Service was started in February 1948. The India-U.K. Passenger Service was established in 1948. The India-Persian Gulf Service was started in 1954-55. It is not the ships of mixed economy, but it is the steamers of private enterprise that were the pioneers to open the overseas trades to national ships. It is the initiative, foresight and courage of private enterprise which opened new fields for Indian shipping to enter in the service of India.

Private enterprise made it possible for the students passing out of the Training Ship "Dufferin," and the Marine Engineering College, Calcutta, to find employment on national ships to fill in their sea time for obtaining their Certificates of Competency. Indian shipping companies gave a number of scholarships to the navigating and engineering cadets to become officers in the Indian merchant navy. They also spent lakhs of rupees for sending young Indians to the shipbuilding yards and the workshops for the manufacture of engines and boilers in foreign countries to enable them to obtain their Certificates of Competency as Masters and Chief Engineers. This is not a small service which private enterprise rendered in building up the sea personnel of independent India.

The contribution of private enterprise to the foreign exchange resources pool of India has not been negligible. During the year 1954, private enterprise earned Rs. 11.17 crores by way of freight and passage money in the coastal trade. Its earnings in the overseas trades exceeded Rs. 7.76 crores. Its net contribution to the exchange resources pool exceeded Rs. 3 crores. With the delivery of the new overseas vessels, this is bound to rise to nearly Rs. 5 crores per annum. Everyone will, therefore, agree that shipping, as a contributor to the foreign-exchange resources of the country, deserves all possible encouragement.

Who can, therefore, deny that private enterprise has not played a very important and active role both during the pre-Plan and the Plan periods for carrying the flag of Indian shipping forward in all directions? While it added (acquisitions less depletions) 439,649 G.R.T. to the Indian fleet during these ten years, mixed economy added only 59,497 G.R.T. Again, while private enterprise spent Rs. 66 crores for acquiring the additional tonnage, mixed economy could spend only Rs. 7.50 crores during the last decade. No impartial person can, therefore, fail to appreciate the services which private enterprise rendered during the period to a risky venture like shipping.

Tanker Service

It has already been stated that private enterprise led the way in starting new services in international waters. It is again private enterprise that has been the first in the field for opening a tanker service. Private enterprise has responded to the call of the Government and placed its six ships on the Indo-Russian Service, despite the fact that cargo may not be or will not be available both on the inward and the outward runs. Private enterprise has now been organising an entirely new service for carrying for the first time cross trades, that is, trades between two foreign countries, namely, between the ports of West Africa and the ports in the Mediterranean. Private enterprise has thus shown that it has been able to raise and invest the money and to take the risks involved not only for acquiring new tonnage, but also for widening the scope and the area of activities of the Indian merchant navy.

What has, however, been the reward for building up in this active and efficient manner the navy of supply for India? Mixed economy no longer holds the field. The Eastern Shipping Corporation has, as already announced by the Government spokesmen in the Lok Sabha, now been completely owned and managed by the State. The Western Shipping Corporation, recently started, is a cent per cent. Government organisation. Apart thus from disowning and discrediting the gospel of mixed economy, the Government of India have also made another fundamental change in the national shipping policy of the country. Although private enterprise has proved by its actions that it was willing to raise the capital for expanding Indian shipping and to take risks involved in an uncertain industry like shipping from the viewpoint of economic results, the Government have now decided not for the inability or the unwillingness of private enterprise to serve shipping, but purely on ideological considerations that they should put up new Units of shipping in the public sector and make the public sector more and more dominant in the field of shipping.

It is estimated that the movement of crude oil and refined products will soon reach the mark of 7 million tons. That trade is likely to grow further in the near future. This tanker trade will no longer be open to private enterprise in the future. Decision, it is reported in responsible quarters, has been taken to make it the complete monopoly of the State. Ships of private enterprise will not be allowed to run services on the routes on which the ships of the State will be running. Moreover, the sums of money that may be advanced to private enterprise for financing the acquisition of fresh tonnage in the future may not be treated as loans, but may be treated as equity capital. Not only is this view announced by the Prime Minister and the Deputy Chairman of the Planning Commission, but it has also been definitely laid down in the Resolution on the new Industrial Policy for India. If such loans are treated as equity capital, the result would be the nationalisation of the shipping industry through the back door. It may be noted here that such loans are not treated as equity capital in other leading maritime countries. Moreover, even Great Britain has, in spite of its highly developed shipping industry, been more liberal in giving loans. Loans of several million pounds were given under the Trade Facilities Act. Millions of pounds were given to the Cunard only a few years ago at 1½ per cent.—repayment to be made in forty years. Shipping being an international industry, no reasonable government can ignore its obligations to enable its national shipping to maintain its competitive capacity.

If the shipowners sustain losses in running their shipping services they can only look upon the shareholders to stand by them. If the State, however, incurs losses in running its ships, it can call upon the taxpayers to make them good by imposing fresh taxes. It is, therefore, not difficult to imagine where the Indian shipowners will be driven as a result of this new shipping policy of the Government of India. Mahatma Gandhi summed up the unequal fight between Indian and British shipping in his memorable words "Indian shipping had to perish so that British shipping might flourish." The future historian may have to write that "private shipowners had to surrender their flag, so that the flag of the State alone can fly both in the domestic and in the international waters."

Shipbuilding

Shipowners have not only rendered service in furthering the cause of shipping. They have also been the pioneers in establishing the shipbuilding yard in India. The only shipbuilding yard which India now has was established in pre-independent days at Vizag by private enterprise. The spirit of enterprise shown by shipowners for doing so was hailed by Babu Rajendra Prasad, while laying the foundation-stone of the yard, as "the economic independence and regeneration of our country." It was characterised by the late Sardar Vallabhbhai Patel as "a triump of persistence over adversity, of faith over scepticism and of hope over despair." Ships built in that yard by private enterprise have proved to be of the highest standard. Despite repeated assurances given by the Government spokesmen from the Prime Minister downwards, the Government pleaded inability to give subsidy to the yard for the construction of ships. As soon as the yard was taken up by the Government in 1952, they announced that subsidy would be given to the ships built in that yard. The Government could not find finance for subsidy till December 1951 when the shipyard was owned by private enterprise. They could find lakhs of rupees from 1st January 1952, when the yard was taken up by the State. We will leave it to the readers to decide for themselves whether this step-motherly attitude on the part of the Government towards private enterprise was in consonance with one of the fundamental objectives of the Constitution, namely, the granting of equal opportunities to all concerned and whether private enterprise, which had brought the industry into existence at considerable sacrifice and against heavy odds, deserved such treatment.

True to the spirit of nationalism, Indian shipowners placed several orders during the first Plan period for the construction of ships with the Vizag yard. The dates of delivery of the ships were progressively delayed. Private enterprise lost the opportunity of earning freight. Despite this sad experience, private enterprise, in tune with national endeavour, has placed further orders for the construction of ships at the Vizag yard during the second Plan period. Who can, therefore, say that private enterprise is not cooperating to the best of its ability with the Government of India in their great endeavour for building up a new India of the future?

This is the naked story of the endeavours, struggles and achievements of private enterprise in the field of shipping. Does not private enterprise, therefore, merit a word of appreciation, deserve active encouragement, and is it not entitled to ask for all reasonable facilities, assistance and opportunities to play its progressive role in the building up of national shipping of at least two million tons in the coming years?—*All Rights Reserved.*

U.S. INVESTMENT GUARANTY PROGRAMME

AN AID TO ECONOMIC DEVELOPMENT ABROAD

By Charles E. Houston

CHIEF, INVESTMENT GUARANTIES STAFF, I.C.A.

THE purpose of the U.S. Government's investment guaranty programme is to assist the development of friendly foreign countries by encouraging and assisting the investment of private U.S. capital in them. The investment guaranty programme, which is administered by the International Co-operation Administration, contributes in several ways to the movement of U.S. private investment abroad.

First, it provides a specific insurance for prospective U.S. investors who hesitate to proceed without protection against the risks that can be covered through the programme. Also, the availability of guaranties has encouraged some U.S. investors to explore investment opportunities abroad and to make foreign investments without actually obtaining guaranty contracts.

Secondly, participation in the programme by foreign countries is based on a specific agreement between the United States and the country concerned. Thus, the programme furnishes a convenient way for countries to demonstrate their desire to attract U.S capital, and their willingness to take the steps reasonably open to them for that purpose.

Significant Achievement

In this connection a significant achievement of the programme should be mentioned—the completion with more than 20 countries of agreements providing for compulsory international arbitration of claims which may arise in the event of a guaranteed investment being expropriated. The programme is concrete evidence of the intention of the United States, as a national policy, to encourage and assist private U.S. capital to go abroad.

It has been stated, repeatedly, that it is the U.S. policy to encourage foreign investment; the creation of the investment guaranty programme is one of the principal specific actions that has been taken to further that policy. When first authorized in the Foreign Assistance (Marshall Plan) Act of 1948, the purposes and coverage of the programme were somewhat limited. The purpose was primarily to encourage a movement of U.S. private capital to supplement or replace public funds in the programme of European recovery, and the only risk that could be covered was the partially-financial, and partially political, risk of exchange blockage.

Since 1948, the programme has developed along two lines:

The first was the extension of the guaranty principle to cover not only exchange blockage but a broader range of political risks which deter U.S. private foreign investment. Such a broadening was proposed in 1949 and a limited extension of the insurable risks was achieved in 1950, when guaranties against loss from expropriation or confiscation were authorised. A second line of development was the extension of the programme from the Marshall Plan countries to all countries receiving U.S. aid and, in 1953, to any friendly country.

Deserving Support

These developments clearly suggest that the programme is now regarded in a broad sense as a means to further the general national policy to encourage the development of friendly countries through private capital and private institutions, including, but not confined to, a substitution of private for public funds in foreign aid activities. In other words, the programme is designed to demonstrate that the values, often largely intangible, that accompany private investment and private enterprise deserve support in their own right.

The programme of how to bring about a free flow of private capital in a troubled world is not an easy one. The guaranty programme alone is not the answer to it, but the programme is making an increasing contribution and it should be thought of as one means to obtain the benefits of private investments.

As of 31st March 1956, the total of guaranty contracts issued under this U.S. programme amounted to more than $107,000,000. After deducting cancellations, reductions, and expirations, the face value of the contracts outstanding was more than $85,000,000.

It is expected that a number of substantial contracts relating to a variety of projects in Asia, Europe and Latin America will be issued in the near future. The flow of applications received indicates an increasing interest in the programme in the American business community. On 31st December 1955, applications in process approximately amounted to $273,000,000. Since the beginning of 1956, more than $70,000,000 of new applications have been received.

Applications in process cover a wide range of enterprises and countries and range in size from a few thousand dollars to several millions of dollars. At the end of March 1956, fees collected from the U.S. insured companies totalling $1,489,000 had been collected. No losses have been paid since the inception of the programme. The annual operating cost of the programme is estimated at $92,000.

Geographical Scope

During 1955, the geographical scope of the programme was broadened through the completion of guaranty agreements with 10 new countries, raising the total of participating countries to 30. Eight of the 10 countries that came into the programme in 1955 are Latin American countries. Thus, for the first time, the programme has a significant area of operation in Latin America. A number of applications for guaranty of investments in Latin America are in process and more are being received. The first guaranties covering an investment in a Latin American country—Guatemala—was recently issued. Other contracts covering investments in that area are nearing completion.

Negotiations in connection with guaranty agreements are in process with a number of countries in Latin America, the Middle East, and Asia.

Countries participating in the U.S. Government Investment Guaranty Programme, grouped by calendar year of first participation, are as follows:

1955—Bolivia, Colombia*, Costa Rica, Ecuador, Guatemala, Honduras, Ireland, Pakistan, Paraguay, and Peru*.

1954—Japan and Thailand.

1953—Haiti, Portugal, and Spain.

1952—Belgium, China (Formosa), Denmark, Israel, Philippines, Yugoslavia.

1951—Turkey*.

1950—Germany.

1949—Austria, France, Greece, Italy, and Netherlands.

1948—Norway and United Kingdom*.

U.S. PRIVATE INVESTMENTS ABROAD

The U.S. private investments abroad during the year ended 31st December 1955 amounted to $2,400 million, bringing the total investments up to the end of the year to $29,000 million. A further substantial increase in such investments is expected during the current year. Of the total investments, as much as $19,000 million represent "direct" investments, that is those in which the U.S. investors have control over the companies they organise abroad, and $10,000 million in indirect investments such as purchases of foreign stocks and bonds and real estate. The direct investments amounting to $19,000 million as at the close of 1955 constituted a post-war increase of $12,000 million.

A country-wise analysis of the total investments shows that Canada accounted for the largest sum, namely, $10,600 million. Latin America came second with $8,200 million. Investments in Western Europe amounted to $5,400 million and in other countries $4,800 million. So far as direct investments were concerned, Canada and Latin America accounted for about $6,500 million each, Western Europe for $3,000 million and other countries for the balance. Industry-wise, manufacturing industries attracted $6,300 million, petroleum $5,800 million, and mining and smelting $2,200 million. The balance was scattered over a number of other industries.

A more detailed analysis of direct investments in each country shows that about $300 million were added last year to investments in Latin America, where manufacturing industries have been claiming the attention of investors on a larger scale than any other industry since 1953. Investments in these industries during 1955 amounted to $125 million, including a record sum of $52 million in Mexico, and sizable amounts in Brazil, Argentina, Colombia and Venezuela. Investments in petroleum also rose substantially and the rate of investments in mining began to rise, once again, during the year. Further investments are scheduled for these two industries.

An important feature of U.S. private investments abroad in recent years is the rapid expansion of direct investments in Europe. During 1955 alone, investments in manufacturing plants rose by $200 million, mainly in the U.K., France and the Federal Republic of Germany. Additions to investments in the petroleum industry amounted to about $100 million. Large increases in direct investments were also noted in Australia, the Union of South Africa, mainly in petroleum and manufacturing, and moderate increases in Indonesia and Japan.

INFLATION IN INDONESIA

The fundamental defect in Indonesia's economy is that supply of money has been increasing at a more rapid rate than production, according to Dr. Sjafruddin, the President of the Bank of Indonesia. In his latest annual report he says that economic causes for the decrease in production lie mainly in the disparity between costs and prices. Costs in Indonesia have been constantly rising as a result of the inflationary influences produced by deficit budgets. The big budget deficit expected for 1956 will neutralise the anti-inflationary measures taken in September last. Another difficulty is that, while investments are urgently needed, they cannot be realised, unless further disturbances of the monetary situation are prevented.

In order to create a more stable economy, the President of the Bank urges broadening of the basis of Indonesian exports, especially minerals for the exploration of which technical know-how should be attracted from abroad. While stressing that increasing the production of export products and elimination of the budget deficits are not less important, he observes that monetary equilibrium is a *sine qua non* for the success of all these measures.

Expressing the fear that the Budget deficit for 1956 may be as much as 2,800 million rupiahs as against the original estimate of 1 000 million rupiahs, he has called for urgent anti-inflationary measures the importance of which cannot be overemphasised in the context of the execution of the Five-year Plan. He has also emphasised the need for strict control of the activities of the private banks, numbering 75, which, he says, are no less responsible for the increase in the inflationary tendencies.

RESTRICTION ON DOLLARS

An important step in the liberalisation of foreign exchange restriction is the decision of the Reserve Bank of India to allow authorised dealers in foreign exchange to deal in U.S. and Canadian dollars at rates which will be decided by market conditions. This permission will take effect from 3rd September 1956. This does not mean that there will be no control on transactions in dollars. Such transactions will continue to be subject to foreign exchange control. All that is meant by this relaxation is that the authorised dealers will be free to square up their position in these dollars at competitive rates within the spread between the floor and the ceiling fixed by the Bank of England. In other words, as from the specified date, all spot transactions between banks and their customers and between authorised dealers will be effected between the official buying and selling rates of the Bank of England. In addition, authorised dealers will be permitted to deal in forward at market rates.

*Agreement covers only convertibility guaranties.

WHAT IS THE RECENT RISE IN PRICES DUE TO?

QUEST FOR GADGETS TO RENDER INFLATION NON-INFLATIONARY FUTILE

By Prof. B. R. Shenoy

DIRECTOR, UNIVERSITY SCHOOL OF SOCIAL SCIENCES, GUJERAT UNIVERSITY

THE prevailing uptrend in prices dates back to May 1955. The General Index of prices had risen, in a year, by about 14 per cent. This reflected, principally, a 31 per cent. rise in the prices of food articles which account for a 31 per cent. of the internal (wholesale) trade of the country. Manufactured articles, which are about equal in market importance to food articles, remained remarkably steady by comparison, (the index of the group varying between 369 and 376). Industrial raw materials and semi-manufactures went up by about 20 per cent. and 15 per cent., respectively. Equities of manufacturing industries and gold gained in money value by about 13 per cent. each. The working class cost of living rose by about 9 per cent.

This uptrend was preceded by a fall of about 17 per cent. in the General Index, spread over a period of about 20 months. The fall, principally, reflected a decline of 32 per cent. in food articles. The prices of manufactures, as during the period of the price rise, were strikingly steady, the prices of industrial raw materials declined by about 19 per cent., and of semi-manufactures by about 10 per cent.

Though the reversal of the price trend may, in certain cases, contain elements of a corrective to the preceding price decline, speaking generally, it is difficult to construe it as a case of climbing back to an equilibrium position. The price structure of August 1953, when the decline in prices had commenced, had many elements of instability. With the steep rise in agricultural prices in the latter part of the war, the traditional relationship between industrial and agricultural prices had remained reversed since 1943-44. Though the price decline in 1954-55 was due to a complex of forces, it involved a return to the more normal order of relationship between the two prices. The current uptrend had upset this process.

A rise in prices may be due (cyclical price movement apart) to a shortage of output or an increase in money (incomes) supply. Statistics of agricultural production do not indicate pronounced shortages. In the second year (1952-53) of the First Plan, as a result of the Plan effort and favourable monsoons, agricultural production had spurted up to 105 from 95 in the preceding year and to 120 in 1953-54 (*Eastern Economist* index, 1938-39=100). It rose to 121 in 1954-55. Crop forecasts for 1955-56 indicate a 4 per cent. increase in the output of rice, which accounts for about 35 per cent. of agricultural production in India, and an increase of about 8 per cent. in the acreage under wheat. Nevertheless, the price of rice had risen, in a year, by about 38 per cent. and of wheat by about 42 per cent.

Monetary Phenomenon

Changes in money supply seem to provide a more satisfactory explanation of the phenomenon. During the past more than a year, except for about three months of the slack season (July, August and September 1955), money supply had been continually on the upswing. It had risen to record levels since November 1955, reaching a peak of Rs. 2,228 crores in April 1956. Since May 1955, the rise had amounted to about 13 per cent. (Rs. 253 crores), or 1 per cent. less than the rise in the General Index. The disproportionately large rise in the prices of foodgrains may be attributed to the fact that, in a poor economy, where consumption of food by vast masses of the people was below nutritional standards, a rise in money incomes was apt to be spent first on foodgrains.

The expansion in the money supply ensued from accelerated deficit financing of the Plan, and an increase in the public debt holdings of the banking system, and in commercial bank credit. Though total deficit financing (Rs. 425 crores) of the First Plan was much less than had been contemplated, in 1954-55 it cpurted to Rs. 142 crores from Rs. 81 crores in the preceding year, and amounted to Rs. 99 crores in 1955-56. Judging from net issues of treasury bills, deficit financing is currently taking place at an annual rate of Rs. 220 crores.

Unlike in the immediate past, the expansionary effect of deficit financing was reinforced, during the past two years, by an accelerated increase in the public debt holdings of the banking system (including the Reserve Bank), and in commercial bank credit. In 1955-56, the public debt holdings of the Reserve Bank rose by Rs. 189 crores and of the commercial banks by Rs. 17 crores, and Scheduled bank credit expanded by Rs. 133 crores. As an accumulated effect of these forces, money supply had outpaced output and had caused prices to rise. During the 20 months ended April 1956, money supply had risen by (Rs. 456 crores) about 26 per cent., while the annual rate of increase of real national income during the five years of the First Plan had been 3.6 per cent.

An Overworked Theory

Too much has been made of the fact that, notwithstanding heavy deficit financing, until the current price rise, we had been faced with a problem, not of soaring prices but of an undue price decline in the agricultural sector, and that prices at the end of the First Plan were lower by 13 per cent. than at the beginning of it. This is no evidence that the Indian climate has special monetary laws of its own and that we might very well go ahead with deficit financing at the rate contemplated in the Second Plan. First, the amount of the deficit financing during the first three years of the First Plan was moderate. In the first year of the Plan, there was an overall surplus of Rs. 45 crores and total deficit financing of the period amounted to about Rs. 101 crores. Secondly, its expansionary effect was counteracted by the sale (Rs. 55 crores) of Government debt to the public by the banking system (including the Reserve Bank), and the heavy withdrawals (Rs. 131.20 crores) from the currency reserves to cover balance of payments deficits, both of which had the effect of withdrawing money from circulation. Thirdly, unlike in the last two years of the Plan, there was next to no expansion of Scheduled bank credit during the period. The net result was reflected in the narrow limits of the variation in the money supply of the period. This, coupled with the spurt in agricultural production, the low elasticity of demand for foodgrains, and the export restrictions on the latter, conspired to depress agricultural prices.

Hoarding Not a Cause

Some have mentioned hoarding, floods, and transport bottlenecks as being contributory to the current price rise. These latter explanations have a habit of emerging whenever prices rise unduly. Hoarding is more a consequence, than a cause, of inflation, though it fans its flames. Transport bottlenecks may explain regional price variations, and floods might account for a bulge in the prices of the commodities affected.

The former Finance Minister is reported to have ascribed the current rise in prices to a deficit output of *jowar*. Deficit financing is stated to have made no contribution whatever to it. The forecasted shortfall in *jowar* output, relatively to 1954-55, was about 24 per cent. only, but its prices have risen by about 130 per cent. since May 1955. Again, it accounts for only 5 per cent. of the agricultural output in India and cannot, therefore, explain the current price rise which extends over the entire agricultural sector, the semi-manufactured articles, and the stock and the bullion markets. Shortages of individual commodities may explain variations in individual prices. When price variations are general, the explanation must be sought in overall cyclical or monetary factors. Our analysis indicates that the current price rise is almost wholly a monetary phenomenon.

Futility of Credit Controls

That a correct diagnosis is half the cure applies to economic ailments as well. Allied to the erroneous explanation of the upward trend in prices is the prevailing belief that we have discovered a specific whereby we may, on the one hand, engage in deficit financing of development and, on the other, hold in check, with fair success, any inflationary pressures that may ensue. The fact of the matter, however, is that, once inflationary finance is resorted to, there is no escape from the price and other consequences of it. Our policy seems to be based on the belief that food and cloth constitute the "critical fronts" in the matter of inflationary pressures. We have seen that, in a poor economy, such as ours, a rise in money incomes is apt to produce a bulge in the prices of food and cloth. Our effort now would seem to be to flatten the bulge which had emerged in the general upsurge in prices. Towards this end the textile policy has been liberalised to permit an increased output of (mill) yarn and cloth, it is proposed to build up adequate stocks of rice and wheat by imports, and the Planning Commission is reported to have urged the Ministry of Agriculture and the States to step up the production of foodgrains by 40 per cent. "within the existing allocations," and to reduce their prices by about 20 per cent.

These policy measures, however, work at cross purposes. Firstly, deficit financing was occasioned by a shortage of resources (savings) for development. Our effort to feed the home market with more consumer goods either by imports or by increased production would divert scarce resources from capital formation into consumption activity. This must retard the pace of development. Rather than stimulate consumption by inflationary finance, and be worse off in the end, it would seem to be far wiser to limit investment to the available resources. We would, then, retain the benefits of stability, avoid a dissipation of savings, and, therefore, permit a maximum of economic progress.

Secondly, it was not as if a flattening of the bulge in the prices of cereals and coarse cloth would make it safe for further doses of deficit financing. The impact of deficit financing will, then, fall on other commodities and, under the

inducement of larger profits, essential supplies and resources would be drawn into their production. Capital formation will, thus, continue to suffer so long as inflation lasted. We cannot, therefore, view with indifference the prospects of a rise in the prices of comforts and luxuries.

Thirdly, a stepping up of the production of foodgrains by 40 per cent. within the existing allocations (the gift of the gods by way of bumper harvests apart), would cause reduced production in other sectors. Aggregate output, and, therefore, the overall inflationary position, may, then, show no improvement. If the Plan has been well planned, there can be little room for a spurt in production in any sector without increased allocations. The feeling, akin to irritation, of the Minister of Agriculture and of the State Ministers at the Mussoorie Conference, over the circular of the Planning Commission is easily appreciated.

Nor are foodgrain prices like wax in our hands to be moulded down at will. When markets are free, price fiats will not work. In the present case, until the real incomes of the masses rose high enough and their foodgrain consumption reached the nutritional standards, a price bulge in cereals as money incomes grew would be difficult to avoid in ordinary circumstances.

Superficial Reasoning

The other anti-inflationary measures in the armoury of the Government, judging from the recent amendment to the Reserve Bank Act, would seem to include drastic credit restrictions. The theory seems to be that the rise in commodity prices ensued from speculative hoarding of stocks. As stocks were generally held on bank credit, denial of credit for speculative hoarding may prevent an undue rise in prices. This reasoning is rather superficial. The dealers hold stocks because of a prospective rise in prices which inflationary finance may cause. We cannot remove the cause by tampering with one of its consequences, the stimulated demand for credit for holding stocks. Though restriction of credit to stockists would, doubtless, handicap their operations, the self-adjusting forces in the economy are apt to device ways of overcoming the handicap. Some of these are mentioned below:

Firstly, the friends or agents of the stockists, or the indigenous bankers, may borrow from the banks and pass on the funds, in cash, to the stockists. The statistical decline in bank credit advanced against stocks (of the banned commodities) may be, then, accompanied by a reciprocative rise in bank credit, under permissible heads of borrowing, against other securities.

Secondly, induced by remunerative interest rates, lending and borrowing outside the (Scheduled) banks may grow.

Thirdly, trade and industry may use more and more of cash, which was not subject to restrictions, and less of credit. Monetary statistics reveal the emergence, in 1955-56, of a trend in favour of the use of cash. This is a retrograde trend from the standpoint of monetary progress and is a warning that we cannot tamper with impunity the functioning of the monetary mechanism. With drastic measures of credit control, this trend may grow to the detriment of banking development.

Fourthly, if specialist stockists were handicapped by a non-availability of credit, so long as hoarding was a profitable undertaking, farmers and others might step into the breach. This may lead to credit from co-operative societies and other semi-official agencies being drawn for the finance of hoarding.

And, finally, the velocity of circulation of money may increase and counteract the effect of credit restrictions.

The combined effect of these developments, which are beyond the reach of the weapons of credit control, would be that speculative hoarding of stocks may continue whilst the root cause of it, inflationary deficit financing, remained operative. In the process, the Scheduled banks will be penalised as they would be compelled to hold unnecessarily large reserves. This would increase banking cost and the banks, in self defence, may raise the charges for banking services or withdraw from their marginal business. In an economy so ill-equipped with banking facilities, this would be unfortunate.

The former Finance Minister is reported to have stated at Madras recently that the present was an opportune moment to go ahead boldly with a large dose of deficit financing, particularly in view of the undrawn amounts of foreign loans. The facts of the situation suggest the opposite. We seem to be on the threshold of inflation. If prices must be prevented from rising, steps must be taken to curtail investment programmes to the available resources, so as to avoid further deficit financing. The only alternative is a substantial stepping up of foreign aid to match the gap in resources. Foreign aid helps to avert resort to inflationary finance. It is not an occasion for more deficit financing. To derive full value from foreign aid, it must be utilised for capital formation. It gets dissipated if employed to combat inflation.

The quest for gadgets to render inflation non-inflationary is futile. Development rests on real resources. Inflationary finance does not add to them. It retards the pace of development. Revival of controls and rationing would be a national misfortune of the first magnitude. Without remedying the uptrend in prices, it will create further problems. Price controls in a background of inflation will, on the one hand, lead to corruption and black-marketing, and, on the other, reduce the output of foodgrains, as honest farmers will be compelled to shift to the production of uncontrolled commodities. This will accentuate food shortages and cause an increasing drain of foreign exchange for the imports of foodgrains. Any drastic measures, to be fruitful, must be applied not in the sphere of controls but for gaining administrative and other economies. The best protection against inflation is to prevent it by adjusting investment programmes to the available resources.

INTERNATIONAL INVESTMENTS

The Economic Committee of the U.N. Economic and Social Council passed a resolution recently recommending that the General Assembly modify its request to the Secretary-General contained in paragraph six of its resolution 824 (IX), so as to provide for the submission of the report therein on a triennial basis and for the submission annually of a report containing a review of developments and a statistical treatment of the flow of capital.

It further requests the Secretary-General to submit to the Council for consideration at its summer session *ad hoc* reports on particular aspects of international investment and to advise the Council periodically of the studies which are under way or projected both at head quarters and at sites of the regional economic commissions. The resolution further invites the Governments to develop and disseminate such information as may be necessary, both of statistical and non-statistical nature respecting the flow of investment.

REACTION TO INDIAN COMMENTS ON EXPORTS OF CLOTH TO U.K.

NO APPRECIABLE DECLINE IN U.S. COTTON SURPLUS ANTICIPATED

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 14*th August*

CONSIDERABLE interest has been taken in Lancashire at the comments made in a recent issue of *Commerce* on the controversial issue of Indo-British trade in textiles. Statements setting out the Indian viewpoint were widely puplicised in local and national papers in Britain but reactions in Lancashire trade circles were not altogether favourable.

Leaders of the United Kingdom industry hope that joint talks can be arranged following the suggestions made by the Prime Minister but some of the claims put forward by India are regarded as too general in character and it is felt that they fail to recognise the local significance of the impact of Indian cloth arriving in this country. In particular, there is some reluctance to accept the idea that other countries, said to be better placed than Lancashire in the matter of raw materials, labour and markets, should supersede this traditionally manufacturing area.

Many traders consider that by yielding even a small part of its domestic trade to other countries Lancashire would be permitting the thin end of the wedge into its already contracted industry. It is contended that once imports of any magnitude are thoroughly established in Britain's home market there is no knowing where the flood of goods from abroad would stop.

At the same time, the Indian contention that its former advantage over prices of the raw material has now been lost through the cheaper rates being quoted by the United States is felt to be largely true. The outcome of such a change in the situation is being awaited with keen interest but Lancashire traders are by no means convinced that their troubles in this respect are over. They consider that Indian competition, even at a reduced price level, will be sufficient to make inroads on British export trade, as well as to maintain its recent gains in the home market.

Price Pacts

The campaign against restrictive practices in British industry is now under way. With the passing of the Act designed to curb the collective systems introduced in numerous sections of various trades the outline of future action can be assessed. The first order covering a wide range of price agreements, local tendering, and arrangements to impose conditions and collective boycotts has been published and, if approved by Parliament, will come into effect at the end of November.

The next stage is the registration of firms and organisations which consider themselves to be affected by the scope of the order. Enquiries into the practices involved should follow before another year has passed.

Discussions are still going on within the cotton industry as to whether the price arrangements now in force are contrary to the provisions of the Act. There has already been much controversy as to how the legislation should be interpreted and a strong body of opinion among those directly affected holds the belief that the methods of controlling yarn margins need not be regarded as restrictive practices in the legal sense of the term.

While this uncertainty remains in at least one section of the trade a similar attempt to establish basic prices in another branch has been unable to command sufficient support. The scheme proposed by the Cotton Manufacturers' Association to provide a stabilising background to cloth prices, covering a standard range of fabric constructions, has been shelved due to the inability of the sponsors to secure adequate backing from the weaving industry. A minority of about one-fifth of those concerned have denied the rest the chance of introducing a restraining influence on a section of the trade which has been sadly prone to price-cutting in recent years.

Surplus Cotton

No appreciable fall in the quantity of American cotton available for distribution is likely during the current season. This is the unmistakable message of the first official estimate of the United States crop indicating a production of 13,552,000 bales. Compared with the first report, a year ago, the probable output is more than 800,000 bales higher, mainly as a result of the larger prospective yield. If the crop improves in quantity to the same extent as last season there will be another substantial output from a restricted area under cultivation.

So far, the yield per acre is forecast at 394 lb. as compared with 367 lb. in the first report a year ago and the 1945-54 average of 283 lb. The final record-breaking figure for the whole of last season was 417 lb. per acre, but modern harvesting devices, the widespread use of fertiliser and the sowing of the best available land should enable farmers to maintain this favourable average yield. In the circumstances another fair-sized crop must be anticipated, adding to the unwieldy surplus which already exists. If the historic laws of supply and demand were still the dominating influence on prices some decline in values might be expected, but so many artificial hindrances to such developments exist that it is by no means certain that lower rates will follow during the season which has just started. The glut of cotton which has persisted for some years may perhaps be slightly reduced by the efforts of the United States Government in selling supplies at competitive prices. More than 3,000,000 bales from current stocks have already been earmarked for shipment abroad in this way but even if the goal of 5,000,000 bales is successfully achieved the size of the new crop will largely nullify this ambitious project.

In such circumstances, it is useless to expect the cotton futures markets of the world to operate freely. Hand to mouth purchases, both of finished goods and raw material, are entirely the order of the day. The futures markets can no longer offer effective hedge protection to spinners and the larger combines in Lancashire are content to make their purchases direct from shippers and stand the risk. The marketing arrangements introduced by the American Government have so hampered the activities of traders in New York and Liverpool that it is difficult to see how the existing deadlock can be resolved. Cotton futures trading in New York in the year to the end of June was at its lowest level for the past decade.

Fabric Output Falls

Cotton and rayon cloth production from Lancashire weaving firms in the first six months this year declined by more than 135,000,000 linear yards as compared with the same period a year ago. Cotton Board figures issued in Manchester showed aggregate output for the six months at 1,214,700,000 linear yards as against 1,350,350,000 linear yards.

The loss was entirely made up of cotton cloth production as the mills turned out more rayon and mixture fabrics than in the corresponding six months of 1955, the comparative totals being 378,260,000 linear yards and 365,610,000 yards. Output of all types of cloth in June averaged 48,070,000 linear yards weekly as against 46,860,000 yards per week in the same month last year.

Operatives on the books of employers in spinning, weaving and doubling fell by nearly 20,000 by the end of June compared with the same date a year previously. The latest manpower total is 247,900 as against 267,350 in 1955.

Rainwear Firm Changes

The last Mandleberg has gone—and a century-old family link with J. Mandleberg & Co., the Pendleton, Manchester, waterproof garment firm has been broken.

For a hundred years there has been a Mandleberg helping to run the firm. But last week it was announced that Mr. J. Harold Mandleberg, chairman since 1948 and a director for over 30 years, had resigned.

His resignation, along with another director Mr. J. F. Rawsthorn, was in accordance with the terms of a recent merger with two other garment firms, G. Strauss & Sons and Martin Gilchik (Rainwear).

An official of the firm explained: "Mr. Mandleberg is 70 and I think he wants to take things a bit easier." The firm was started by Mr. Mandleberg's grandfather as a small manufacturing clothiers at Cheetham, Manchester. Now they have two mills at Pendleton employing a thousand workers.—*All Rights Reserved.*

PROGRESS OF COTTON MILL INDUSTRY IN FIRST FIVE-YEAR PLAN

TARGETS SET NOT ONLY HIT BUT ALSO EXCEEDED

THERE are few sectors of India's economy in which the progress achieved under the first Five-year Plan was as marked as in the cotton mill industry. The industry not only achieved the targets envisaged in the development programme but exceeded them by comfortable margins on both the spinning and the weaving sides. The aggregate spinning capacity of the mills rose during the Plan period by nearly 1.11 million spindles, as against 708,968 spindles anticipated. The total number of spindles installed as on 1st January 1956 was 12,051,209, which compares favourably with 10,942,245 as on 1st April 1951 and the target of 11,342,241. Similarly, the weaving capacity was augmented, the increase in the number of looms being 8,490, as against the expected addition of 7,052. The total number of looms in place at the beginning of this year was 202,901, as against 194,411 on 1st April 1951 and the target of 195,849. Incidentally, it may be noted that the programme of development formulated for the industry did not envisage any expansion of loomage beyond what would accrue from the completion of schemes which were already under implementation at the commencement of the Plan. The increase achieved in excess of the targets must be attributed to two factors, namely, (1) expansion of a few uneconomic units, and (2) conversion of some of the purely spinning mills into composite mills on the basis of approval given for spindleage and loomage capacity under the post-war expansion schemes.

Expansion

The improvement in the spinning and weaving capacity of the mill sector was brought about partly by the establishment of new units and partly by the expansion of the existing units. The number of spinning and composite mills rose from 103 and 275 at the beginning of the Plan to 121 and 291, respectively, five years later. Up to December 1955, the Government of India had given licences for the establishment of 86 new cotton textile mills with a spindleage of 1,085,806 and for the substantial expansion of 89 existing units involving the installation of 952,806 spindles. In addition, permission was given by the Textile Commissioner to 115 units to effect normal expansion involving the addition of 455,659 spindles. Thus, a total of 2.49 million spindles had been sanctioned. Five new mills with a spindleage of 52,168 have already come into existence, and five other new units have installed a part of the spindles sanctioned, the number so far installed being 23,492. About 16 mills have completed substantial expansions by installing 125,778 new spindles and 22 other mills have effected a part of the expansion with 116,004 new spindles. Out of the 115 mills permitted to effect normal expansions by the Textile Commissioner, 45 units have completed the work with 142,476 spindles, while 27 units have effected a part of their expansion with 79,647 spindles. Thus, a total of 539,765 new spindles have already been installed.

Two new mills licensed for 16,000 spindles did not take effective steps within the prescribed time and their licences were revoked. Besides, in the case of 4 mills licensed for 22,296 spindles, the question of revocation is under consideration. Deducting the new spindles already installed and the spindles for which licences have been revoked or are likely to be revoked, there are 1.91 million licensed spindles which are still to be installed.

The geographical distribution of the mills at the beginning and end of the Plan period and the State-wise increases in spindleage and loomage are shown in the table below. It will be seen from this table that the expansion in spindleage has taken place primarily in the States of Madras and Andhra, Ahmedabad City, Bombay City and rest of Bombay, West Bengal, Uttar Pradesh and Hyderabad. Loomage has increased mainly in Bombay City, Saurashtra, Madhya Bharat, Uttar Pradesh, West Bengal, Orissa, Hyderabad, Madras and Mysore.

Fuller Utilisation

Side by side with the expansion of the installed capacity, the cotton mills endeavoured to make fuller utilisation of the existing capacity. The quantity of cloth that actually came off the looms in the calendar year 1955 amounted to 5,094 million yards, as against the target of 4,700 million yards and the capacity of 4,779 million yards assessed on the basis of double shift operation for 305 days per annum. In the case of yarn, however, the actual output in 1955 was less, being 1,630 million lbs., as against the target of 1,640 million lbs. and the assessed capacity of 1,722 million lbs.

In the handloom sector also, production of cloth registered an improvement, from 805 million yards in 1950 to 1,480 million yards in 1955. This, of course, fell short of the target of 1,700 million yards set in the Plan by 220 million yards. The production of powerloom cloth, too, increased from 148 million yards in 1950 to 273 million yards five years later. The total production of cloth—mill, handloom and powerloom—during 1955 stood at as high as 6,847 million yards, which compares very favourably with 4,618 million yards in 1950. Excluding exports and consumption by defence, etc., the *per capita* availability of cloth during 1955 was 15.8 million yards, as against 9.7 million yards five years before. The target set in the Plan was 15 yards.

During the first Five-year Plan period, about Rs. 20 crores were estimated to have been spent on the establishment of new mills and expansion of the existing ones. Taking into account the value of cotton textile machinery imported and indigenously produced, as also the ancillary investments on land, buildings, electrical machine, etc., it is estimated that a total investment of Rs. 80 crores was made by the cotton textile industry on new units, expansions and modernisation. The capital investment in the industry in 1950 amounted to Rs. 203 crores, comprising fixed capital of Rs. 66 crores and working capital of Rs. 137 crores, according to the *Census of Manufactures*.

Thanks to the implementation of the development programme for the cotton mill industry, employment opportunities expanded. The daily average number of workers employed in the mills during 1955 was 758,043, as against 676,523 in 1950. The rise in the daily number of workers employed was shared by all the shifts. In 1955, first, second and third shifts accounted for 419,236, 262,225 and 76,582, as against 402,325, 233,973 and 40,225, respectively, in 1950.

HANDLOOMS IN MALABAR

The view that in the matter of development of handloom industry, Malabar district (Madras) had not been overlooked was expressed by Mr. M. Bhaktavatsalam, Minister for Agriculture, Government of Madras, in the State Assembly last week. Mr. Bhaktavatsalam was replying to the criticism by a communist member that the Government had failed to allot to the Malabar district its due share from the Handloom Cess Fund. The member said: "Since 1952, a sum of nearly Rs. 5 crores has been allotted to the State. Malabar has 53,000 handlooms and, on this basis, the share of the district will be in the neighbourhood of Rs. 90 lakhs. But only a sum of Rs. 5 lakhs has been spent." Referring to this criticism, the Agriculture Minister declared that, if it had not been possible to achieve better results, it was due not to the neglect on the part of the Government or of its officers but to the special features of the handloom industry in Malabar. According to him, the industry "has developed under a factory system under capitalists, reducing the weavers to the status of *coolies;* latterly with the closure of some of the factories owing to labour disputes, the experiment of making the workers also owners of the factories on a co-operative basis was devised." The Minister drew attention of the members to the following steps taken by his Government to assist the handloom industry in Malabar:

When there was large-scale unemployment among weavers two years back as a result of the closure of several handloom factories, the Government of Madras decided to try an experiment of setting up factories on co-operative basis, consisting of persons who had been thrown out of work from the private factories. Two units which had closed down—one at Thottada and the other at Chowa—were converted into handloom industrial co-operatives with financial aid from the Cess Fund. The member-workers are the owners, steady work with regulated wages being assured. A system of bonus on wages earned is also provided for. The weavers are given share capital loans to become members, as well as working capital loans. In the initial stages, staff from the Co-operative Department is employed to assist the Board of Directors to run the industrial co-operatives on sound lines. Interest-free loans of Rs. 68,690 and Rs. 43,613 have been granted from the Cess Fund to the aforesaid two co-operatives.

Mr. Bhaktavatsalam claimed that the above experiment was the first of its kind in the whole of India. He further claimed that the working of the co-operatives during the past one year and more had fulfilled the expectations. The average monthly income of the worker was Rs. 45 to Rs. 60 at Chowa and Rs. 55 at Thottada, "which is likely to go up to Rs. 75 and more in due course." Proceeding, the Minister revealed that steps were being taken to form a few more industrial co-operatives in Malabar in the near future.

AMBAR CHARKHA YARN

Replying to a question in the Rajya Sabha the other day, Mr. Nityanand Kanungo, Union Minister for Consumer Industries, revealed that licences for the installation of 200,000 more spindles had been granted, in addition to the 2.1 million spindles already allowed to be installed. The Minister said that the distribution of the new spindles would be based on three considerations, namely, (1) claims of States having a refugee problem, (2) claims of cotton growing areas, and (3) additional employment to be provided in the handloom industry.

Intervening over questions relating to the yarn from Ambar Charkha and mills, the Prime Minister declared that on no account would Government take the risk of yarn shortage arising in the country. He said that the expansion of mill yarn production would not conflict with the Ambar Charkha scheme and drew attention to the assurance given by the Commerce and Industries Minister that all good yarn produced from the Ambar Charkha would be purchased. Asked whether a guarantee was not necessary that there would be no conflict, the Prime Minister said: "The question is based on assumptions which do not exist. The whole question is that they should not be short of yarn. There is a grave danger of shortage. Therefore, the Government has decided to provide for production of yarn. Ultimately, it will be found that, even with all these, the production of yarn may not be sufficient. At the end of the year, the question about Ambar Charkha can be reviewed."

NEW COTTON FABRICS

Two new 100 per cent. cotton fabrics for tropical wear—Helikon for suits, slacks and skirts and Cepea 56, a cotton shirting—were publicly shown at Manchester the 8th inst. Mr. Robert Cowan, Oversea Director of the Calico Printers Association Ltd. The new fabrics are the result of two years' research and experiment, and the chief recommendations are their extreme lightness in weight, crease-resistance, and unshrinkability. The new cotton fabrics, it is claimed, will revolutionise trade in both men's and women's wear for tropical and sub-tropical conditions. First lengths of the fabrics have already been put on the Far Eastern market. Marketing in Commonwealth countries will begin within the next few weeks, and it is planned to introduce the fabrics to the American market. Helikon suits weigh rather less than 2 lbs. and have the appearance and feel of linen in hot climates. The suits remain perfectly smart for two days, and are reasonably presentable after four days' wear, without laundering. The suits can be washed with ease. The other new fabric—Cepea 56—has the same crease-resistant properties, and can be as easily washed and worn without ironing. Another advantage is that the dyes are absolutely fast, and the marketing price should be about 20 per cent. cheaper than crease-resistant linen. The range of colours covers 17 shades. Both fabrics are self-coloured and are without patterns or designs.

PROSPECTS FOR PAKISTAN COTTON

DANGER OF U.S. COMPETITION REAL

AMONG the countries directly affected by the U.S. surplus cotton export programme, Pakistan is a notable one, exporting as it does about one million bales of raw cotton annually. Even during the current season now fast drawing to a close, the U.S. announcement relating to the sale of one million bales of cotton of 15/16" staple and shorter at competitive prices has had its adverse effect upon the price structure of Pakistan's medium staple varieties, namely, L.S.S. and 4F. In fact, the drop would have been more pronounced but for the fact that China and Japan made sizable purchases by the end of the third quarter of the season. Fortunately for Pakistan, by the time the effect of C.C.C. sales was beginning to be felt acutely, it had disposed of the bulk of its cotton crop.

But the prospects for the next season beginning in September next appear to be bleak. There is always the fear that the U.S. may follow an aggressive sales policy. With the U.S. cotton crop for the current season and carry over stocks estimated at 13.5 million and 14.7 million bales, respectively, and with the prospect of no significant decline in the cotton output of other producing regions, it is evident that Pakistan will have to face keen competition in selling its cotton. In the light of these facts, it is understandable that Pakistan cotton interests should demand the abolition of, or at least reduction in, the export duty and sales tax.

Pakistan started the 1955-56 season with a very low carry over of 78,000 bales and an estimated crop of 1.6 million bales. Due to unfavourable weather and flood in the Punjab, subsequent estimates put the figure lower at 1.45 million bales. When the actual movement of the crop began, it appeared that the damage was considerably overestimated and that the crop would not, in any case, be lower than 1.6 million bales. But actual realisation showed that the crop was, indeed, a very good one, about 1.8 million bales, despite the ravages of unfavourable weather. Had nature been more considerate, it is no exaggeration to say that a record crop of nearly 2 million bales would have been harvested. Be that as it may, this season's outturn of 1.8 million bales is higher than the previous season's by 300,000 bales and is the highest on record.

As is well known, a substantial portion of Pakistan's cotton is exported. Nevertheless, it is noteworthy that internal consumption has been increasing very rapidly. In the 1954-55 season total intake of cotton was of the order of 800,000 bales, as compared with 534,000 bales in 1953-54, and 273,000 bales in 1952-53. Aggregate consumption of cotton, including foreign, in the 1955-56 season is estimated at 850,000 bales, an all-time record. Though both production and consumption increased appreciably the difference between the two, that is the exportable surplus, was also the highest at 1 million bales, including the carry over of the previous crop.

Quality Poor

Although quantitatively the 1955-56 crop was good, qualitatively it was poor. Hence pass quality, in accordance with Fine Standard boxes of Karachi Cotton Association, was scarce throughout the season and, consequently, commanded on unusually heavy premium. At the beginning of the season, overseas demand was slack, but local mill demand was encouraging. Later, the export demand increased and sizable sales were made. By about April, however, the market was again in the doldrums, until China entered it towards the end of April and made large purchases. N.T. Roller, which stood around Rs. 79, advanced to Rs. 88 in the futures market. In the first instalment of its purchase China concentrated on *Deshi* cotton, the price of which consequently advanced from Rs. 79-8 to Rs. 102 for Sind quality. Other staple varieties also moved up in sympathy, though not so sharply.

Then came the U.S. Farm Bill, which was signed into law on 28th May and directed the Commodity Credit Corporation to accept bids at even 25½ cents per lb. for basis Mid. 15/16" gross weights average location. The Bill also provided that, should competition from cheaper priced comparable foreign growths retard the attainment of the export objective of regaining the historical share of the U.S. in the world market, the C.C.C. could accept even lower prices to meet such competition. Thus, sales made under the provisions of the new legislation had an adverse effect on other cotton growing countries and Pakistan was no exception. Values began to fall in the futures section of the Karachi market and demand for ready cotton, too, became weak. But, by this time, the bulk of Pakistan's cotton crop had been disposed of and the little that remained was of inferior quality. Karachi cotton circles believe that, had the U.S. not dumped its cheap good quality cotton into the consuming markets, even poor quality cotton lying in and around Karachi would have been lifted at favourable prices by now.

Trend of Prices

The following table gives an idea of the price trend for N.T. Roller in the Karachi futures market for the current season:

	Maximum	*Minimum*
1955		
September	95.5	85.0
October	88.6	80.4
November	89.4	82.4
December	88.6	79.14
1956		
January	84.12	78.0
February	90.6	84.8
March	87.11	79.9
April	88.8	81.11
May	99.8	88.0
June	90.2	83.6
July	85.12	78.0

The prospects for marketing the next season's crop, on present reckoning, do not appear to be bright. It is believed that the new crop will have to bear the brunt of U.S. competition and this appears inevitable, as no revision of American policy is in prospect in the absence of any acceptable alternative for disposing of its surplus cotton. There are already indications of a weak market for Pakistan's cotton, as is evident from the fact that, up till now, very little business has been transacted in new crop cotton. At the same time, the crop prospect for the next season is encouraging. Barring unfavourable weather and floods, the coming season's crop, it is estimated, will be not less than 1.8 million bales. Assuming that the present rate of consumption by mills will be maintained, Pakistan will have to find an outlet for one million bales. At the same time, there is no likelihood of any significant reduction in the output of other cotton producing countries. Although the output of cotton in the U.S. for the 1956-57 season is estimated at 13.5 million bales, which is a million bales lower than the figure for the season just ended, the U.S. is still burdened with an aggregate carry over of 14.7 million bales of cotton. Viewed against this background, Pakistan cotton cannot be expected to have an easy sale in the international market.

Plea for Tax Relief

This state of affairs has caused a flutter among the cotton interests in Pakistan and they are naturally agitating for an immediate revision of the Government's cotton policy. It is urged that the existing sales tax on all raw cotton exported should be abolished forthwith and that the heavy export duty, which, in the context of the new developments, is thought to be the bane of Pakistan's export, be substantially reduced if not altogether abolished. These measures, if adopted promptly, will, it is felt, go a long way towards increasing the competitive capacity of Pakistan cotton so necessary to withstand the onslaughts of cheap American cotton in the international markets.

EGYPTIAN COTTON EXPORTS

Egypt's cotton exports during the first eleven months of the season just drawing to a close aggregated 859,921 bales (of 720 lbs. each), as compared with 660,822 bales during the corresponding period of the previous season. This improvement was the result of the keen interest shown in Egyptian cotton by many of its customers, particularly, Czechoslovakia, India and China. India, accounting for 101,638 bales of cotton, still maintains the second place in Egypt's export trade. France, which was so far the single largest buyer, has been pushed to the third place, the first having been occupied by Czechoslovakia. The offtake of Egyptian cotton by Czechoslovakia in the period under review was of the order of 146,109 bales as against 35,629 in the same period, last season. It is also noteworthy that China lifted during the period double the quantity it took in the previous season, while Russia's purchase was lower by 11,572 at 29,667.

REPORT OF SUGAR DELEGATION TO AUSTRALIA AND INDONESIA

MILLOWNERS ENDORSE RECOMMENDATIONS

IT is deplorable that, although more than a year has elapsed since the Indian sugar delegation to Australia and Indonesia submitted its report, the Government of India has still not published the full text of the report for the information of the public. In March last, only a summary of the conclusions and recommendations of the delegation was made available. We do not know how the Indian Sugar Mills Association has been able to secure a copy of the full report. It could not have had it without the concurrence of the authorities. We do not grudge the Association being favoured with a copy of the report, but we do not see why the same privilege should not have been extended to the Press also. It is to be hoped that at least now the Government should make good its lapse.

Meanwhile, the Association has addressed a communication to the Government in the course of which it has examined, fairly in detail, the contents of the report of the sugar delegation. It has expressed appreciation "for the able manner in which the Indian sugar delegation to Australia and Indonesia have studied the progress of the industry in these countries and drawn lessons for the industry's working in India." It has "noted with interest the statistical information collected by the members of the delegation."

One of the important recommendations made by the delegation, which the Association has done well to endorse, relates to the opposition for setting up a marketing organisation for sugar. The sorry episode of the former Indian Sugar Syndicate hardly encourages one to believe that a central marketing body for sugar would serve the general interests of the country. The conditions existing at present on the sugar front do not at all warrant the establishment of such a monopolistic body. As readers are aware, the second Five-year Plan contains an ambitious scheme for the development and expansion of the sugar industry. If the scheme is to be implemented successfully, it is imperative that the industry should be accorded as much freedom as possible with regard to prices and distribution, with least interference from the authorities. After all, it must be remembered that, in an expanding sector, undue regulations and controls stand in the way of proper development. As the Association has rightly remarked, it will be detrimental to set up any body like the marketing organisation which will only stifle the proper development of the sugar industry.

Linking Cane Price to Quality

With regard to the payment of cane on quality basis, instead of on quantity, as suggested by the sugar delegation, the Association has not expressed its views. All that it has said is this: "The Association has already submitted its views in detail to the Expert Committee appointed for the purpose. It would like to await its report when a further consideration of the matter can be possible." But there is no reason why the Association should not have come out with its clear views and definite stand on the question of linking cane price to quality. So far as this journal is concerned, it must be repeated that the system of paying for cane on the basis of weight and the policy of fixing a minimum cane price are both defective, in that they ignore completely the quality aspect. What interests the cane-grower most is the yield of cane per acre and, naturally, little attention is paid to the need for growing cane with high sucrose-content. If the sugarcane cultivator is to be made conscious of not merely yield but also sugar-content of the cane he grows, the payment must be based on both the weight of the cane and the percentage of sugar contained in it. The introduction of such a system, together with the judicious adoption of a policy in regard to the price of sugar and *gur*, will, there is no doubt, do away with the need for distributing the extra profits made by the factories between them and the farmers. Viewed thus, it is gratifying that the Association has not objected to the delegation's suggestion for constituting a Standing Advisory Committee—consisting of an equal number of representatives of cane growers and factory owners with an independent Chairman, preferably a judge—to advise the Government on the level at which the price of cane should be fixed every year. It, of course, says that the present arrangement under which the Government consults the representative organisations of cane-growers and factory owners works quite satisfactorily.

The Association has also endorsed the sugar delegation's view that the expansion of the capacity of the existing sugar-producing plants should be preferred to the establishment of new units. Urging the Government to give immediate consideration to this suggestion, the Association reiterates that the potential capacity of the existing units, together with the new units installed up to February last, more than achieves the target of production—2.25 million tons—set in the second Plan. In this connection, it stresses the need for introducing rationalisation in the sugar mills and observes: "The statistics collected by the delegation show that, whereas a factory with an average capacity of 2,400 tons in Australia employs only 250 workers and, in Java, a factory with a capacity of 1,200-1,500 tons employs only 400 workers, in India a factory with an average capacity of 800 tons employs as many as 1,000 workers. This unduly high number of workers employed in sugar factories in India gives a production ratio of 10 tons per worker, as against as high as 40 tons in Java and 144 tons in Australia."

Must be Avoided

It will be evident from the foregoing that the low productivity in our sugar industry is due to the high labour ratio. Consequently, the cost of sugar production is very high. If the cost is to be reduced, it is obvious that the high labour ratio must be avoided. Such can be done only by proper rationalisation and adoption of measures designed to help the sugar mills work more efficiently than at present. Among the latter, the sugar delegation has laid special stress on (1) facilities for the import of such sugar machinery and agricultural implements as are not manufactured in India, (2) improvement of roads in factory areas, (3) arrangements for wagons with collapsable gates, (4) provision for enlarged and cheap credit, and (5) supply of cheap electric power for farm operations. In view of the importance of these measures, the Indian Sugar Mills Association has fully endorsed them. It is, however, oppossed to the Government giving any special assistance to co-operative sugar mills. Drawing attention to the practice in Australia where the co-operatives run on equal basis with other companies, it says: "There is no need for making any departure in India."

By-products

The Association has done well to invite the Government's attention to the recommendations of the sugar delegation with regard to the utilisation of the by-products of sugar industry. They cover research work on molasses to make it fit for consumption by cattle in larger quantities; survey to find out the possibilities of setting up factories for the manufacture of insulation and building boards and paper from bagasse and various chemicals from molasses; research work on the refining of cane wax so as to make it usable in various industries and to find new industrial uses for the wax.

The need for the implementation of the aforesaid recommendations requires no emphasis. The by-products of sugar industry, if exploited efficiently, will go a long way towards lowering the production cost of sugar, not to speak of the provision of additional employment. With the vast expansion of sugar industry now planned, the production of such waste products as bagasse, press mud and molasses will register an increase. It is this factor and the rising demand for the various goods produced from the by-products of sugar industry following the improvement in the standard of living that impart urgency to the need for a vigorous drive for developing industries which provide an outlet for these by-products.

There are in Uttar Pradesh 115 sugarcane co-operative unions, with a membership of 1.5 million cane growers. The unions together supply as much as 95 per cent. of the total quantity of cane crushed in the sugar mills in that State.

HIGHER WAGES FOR COKE PLANT WORKERS

INDUSTRIAL COMMITTEE'S DECISION

SEVERAL important subjects relating to the welfare of coal miners were discussed by the Industrial Committee on Coal Mining at a three-day session which concluded in New Delhi on the 9th inst. The Committee, which was set up in 1948, is tripartite in character based on the I.L.O. pattern. It is essentially an advisory body, dealing with the problems regarding labour in the coal industry and its decisions are, therefore, only recommendatory in nature. Nevertheless, much weight is attached to the recommendations of the Committee, in view of the fact that the Committee is fully representative in character, the Union and State Governments, the coal mine owners and colliery workers being represented on it, and are usually accepted and implemented by the Government.

The agenda for the meeting consisted of: (1) the formation of a pool of retrenched colliery workers to avoid waste of technical experience and to enable their mobility to places of prospective employment; (2) extension of the benefits of wage increase, etc., under the Industrial Tribunal (Colliery Disputes) Award announced recently, to workers in coke plants; (3) abolition of the contract labour system; (4) amendment of the Mines Act to bring some of its provisions in line with the I.L.O. Conventions; (5) amendment of the Coal Mines Bonus Scheme; (6) prohibition of women from working in open-cast mines; (7) discussion on model standing orders for coal mining; and (8) consideration of the revised code of Draft Regulations under the Mines Act, 1952.

An official Press note containing some of the decisions taken by the Committee is reported to have been issued after the conclusion of the three-day session, but a copy of it has not been made available to us. A broad idea of these decisions is available from reports appearing in a section of the press.

Coal mine workers are often retrenched when a section or a pit of coal mine is exhausted. Almost simultaneously employment opportunities might open up in a new pit or a section in a mine being brought into operation. There is, however, no arrangement at present to match the supply of such trained personnel with the demand. The formation of a pool of such retrenched workers with technical experience, from which to feed the new mines, was, therefore, one of the important subjects discussed at the meeting. The decision of the Committee is, however, not known.

As regards the second item on the agenda, the Committee agreed to extend the wage increase and other benefits awarded recently to coal miners by the Industrial Tribunal to workers numbering 20,000 employed in the coke and tar plants. The question of giving higher wages and other benefits to workers in coke plants, it will be recalled, was not discussed by the Industrial Tribunal, as the coke plants are governed by Factory Laws administered by State Governments. The Central Government, while considering the case for a revision of coal prices, obviously felt that the impact of the Tribunal's Award would be felt by the managements of coke plants also. Accordingly, it raised the prices of hard coke also along with the rise in coal prices. It was, however, left to the managements of coke plants and the workers concerned to come to an agreement mutually on the question of higher wages and other benefits. It has now been agreed, as already stated, that the benefits should be extended to coke plant workers also.

The Committee is reported to have accepted the general principle of early abolition of contract labour. It was, however, considered necessary to retain the contract system in certain categories of workers. The workers and employers were asked to submit to the Government proposals within six weeks in respect of the abolition of contract labour. The Government will take a decision after considering these proposals.

The Committee also recommended that women workers be allowed to continue to work in open-cast mines. As regards standing orders, the Committee decided that draft standing orders for the coal industry should be prepared and circulated by the Central Government within three months and that efforts should be made to finalise them in consultation with the employers' and workers' organisations within a period of six months. The Committee also accepted the principle of workers being associated in the administration of welfare amenities.

RUBY GENERAL INSURANCE CO., LTD.

MR. B. M. BIRLA'S SPEECH AT ANNUAL GENERAL MEETING

THE Twentieth Annual General Meeting of the Ruby General Insurance Company, Ltd. was held in New Delhi on 6th August 1956. Addressing the shareholders on the occasion, Mr. B. M. Birla, Chairman of the Company, referred "with a feeling of frustration and apprehension" to the attempts being made in certain quarters to persuade the Government to transfer its insurances from the Indian Insurance Companies Association Pool to the subsidiary general insurance companies of the nationalised insurance companies. In this connection, he drew the Government's attention to the fundamental draw-back in underwriting risks and said that the Government-owned companies should be satisfied with continuing their membership of the Pool and share their business as was being done now.

The following is the full text of Mr. Birla's speech:

"GENTLEMEN,

"The report of the Directors and the audited accounts for the year 1955 have been with you for some time and I expect you would allow me to take them as read.

"The following figures will reveal the progress of the Company:

Net Premiums

	1953	1954	1955
	Rs.	Rs.	Rs.
Fire	25,00,000	32,76,000	36,67,000
Miscellaneous	36,42,000	37,11,000	45,41,000
Marine	10,48,000	12,78,000	15,76,000
	71,80,000	82,65,000	97,84,000

"Our total reserves have increased this year to Rs. 60,21,000 from Rs. 52,53,000 of the last year.

Fire Department

"The fire department has shown a very satisfactory underwriting profit. The overall picture would have been still better had the Company not lost a substantial amount on account of the devaluation of the 'Rupee' by the Government of Pakistan.

Motor Department

"In spite of the selective underwriting policy adopted by the Company, I am sorry to observe that this department continues to show a loss. This is also the case with most other insurance companies. It is high time that the accident associations take up the question of an upward revision of rates, because of more private car traffic on the roads and the high cost of repairs and the premium rates having again fallen below the economic level.

Marine Department

"As is the case with all other insurers all over the world, this department continues to show losses. In spite of the very strict underwriting policy adopted by the Company, there has been no satisfactory improvement in this department.

"The amended Indian Companies' Act has already come into force as from 1st April 1956. It requires various statements to be submitted to the Government. One feels that insurance companies could be exempted by the Government in the matter of certain sections of the Act as we are already submitting to the Government all such requirements under the Insurance Act. I hope the Government will consider this point and avoid duplication of work necessitating additional staff and increased expenses of management.

Future

"I am now compelled to refer to another topic of the day, namely, the future of the general insurance business in this country. We have been given an assurance by the Government that general insurance will not be nationalised, provided we put our house in order. The Government has said that general insurance being closely interlinked with trade and commerce and industry, which are mostly in the hands of the 'private enterprise,' they had no intention of nationalising general insurance also. Lately, there have been certain statements made by the Government that, unless the alleged rebating practice in the industry is removed, the Government would also consider nationalising general insurance. Because of this threat on the part of the Government the Indian Insurance Companies Association, Calcutta, appointed a Committee to examine the present Code of Conduct with a view to improving the conditions of the industry. There seems to be a feeling in certain quarters that in order to eradicate the alleged deficiencies, further Government support in the form of more stringent legislation should be sought. The Committee feels that this will be a very wrong step. The Committee also feels that the legislation which is already in force is adequate, provided the machinery in charge of administering it is alert. In this connection, the Committee has suggested certain measures for improving the situation.

Pool

"With a feeling of frustration and apprehension I refer to the recent attempts being made by interested parties to persuade the Government to transfer their insurances placed with the 'Indian Insurance Companies Association Pool' to the Government acquired subsidiary general insurance companies. The 'Pool' is the only Association where every Indian insurance company is united both in its policy and in its liability. It was after the great efforts of the late Mr. J. C. Setalvad and others that the 'Pool' was built up and brought to its present position. The 'Pool' has rendered service to the Government for over 15 years and through this Association the Government has been able to distribute its insurance business to every Indian insurer, in this country. The Government should know that no one or two or three Indian companies are in a position to retain entirely such Government risks on their 'Own Account.' They must reinsure their surpluses outside India. In view of this fundamental underwriting draw-back, one cannot understand why the Government-owned Companies should not be satisfied to continue to enjoy the membership of the 'Pool' and share their business in a manner that is now being done.

"I now move that the Directors' report and audited accounts and balance-sheet for the year ended 31st December 1955 be approved and adopted."

The resolution relating to the adoption of the accounts the declaration of dividends and re-election of Directors, Shri M. R. Sonthalia and Shri M. L. Shah were carried unanimously. The appointment of Messrs. Singhi & Co., as the Company's auditors for 1956 was duly approved by the shareholders.

MORE ABOUT THE DECISION TO CUT PRODUCTION OF JUTE GOODS

EXPECTED OFFTAKE FAILS TO MATERIALISE

THE Indian Jute Mills Association sprang a surprise on the jute market last week with the announcement of its decision to re-seal 5 per cent. of the looms in its member mills with effect from 17th September next. Though it had been expected for some weeks past that a cut in the production of jute mills would be effected by re-sealing a part of the looms, to overcome the effect of the rising stocks of jute goods with mills, and a hardening of prices had been noted in view of this prospect, it was quite unexpected that the extent of cut in the looms in work would be as much as 5 per cent. The market's surprise was duly reflected in the sharp jump in prices of jute goods, ready hessian 40" x 10 oz. moving up from Rs. 39-1 (on the eve of the announcement) to Rs. 39-14 per 100 yards and B Twills from Rs. 104-12 to Rs. 107 per 100 bags.

The latest decision to re-seal 5 per cent. of the looms will take effect just two months after the re-sealing of 2½ per cent. of the looms with effect from 16th July last, thus bringing the number of idle looms to 12½ per cent. of the total, the position that existed from 1949 till the first week of January this year. It will be recalled that, in December last, the I.J.M.A. decided to unseal 2½ per cent. of the looms with effect from 10th January 1956. This was followed by a further unsealing of 5 per cent. from 20th February onwards. These relaxations were made, in order to prevent scarcity of jute goods in the country, as stocks with mills were found to have dwindled considerably. With the unsealing of 7½ per cent. of the looms in two successive, but quick, stages, not only the aforesaid object has been achieved but the mills have had to face a glut of stocks, because the offtake of goods lagged considerably behind the production. Thus, the stocks of manufactured goods at the end of last month amounted to 135,800 tons, as against 63,500 tons at the close of December 1955.

As compared with the position at the end of June last, the latest month-end stocks show an increase of 8,800 tons, thus maintaining the upward trend for the ninth month in succession. The following table shows the trend of stock-position as at the end of the last three months, as also at the close June 1955:

Jute Goods Stock
(In tons)

	As on			
	31-7-1956	30-6-1956	31-5-1956	31-7-1955
Hessian	38,500	37,500	40,800	42,100
Sacking	91,100	83,000	71,700	36,900
Others	6,200	6,500	6,400	2,900
Total	135,800	127,000	119,700	81,500

It will be noted from the above table that the welcome decline in stocks of hessian noted at the end of June was not maintained in the following month. On the other hand, there was an increase of 1,000 tons. The increases in stocks of sackings, however, was not as large as in June. Nevertheless, the overall rise in stocks was greater than that noted a month before, despite a substantial fall in production during the month under review. The output for July 1956, the first month of the current season, 1956-57, amounted to 94,100 tons, representing a decline of 4,800 tons from that for the previous month. This fall, which is much more than a day's production, is probably due to the fact that the number of hours worked during the month is lower at 200.5, as compared with 206 hours in June and 212 hours in May, and that 2½ per cent. of the looms remained idle for in the latter half of the month.

The following table shows the trend of production during the last three months and in July 1955:

Jute Goods Production
(In tons)

	July, 1956	June, 1956	May, 1956	July, 1955
Hessian	34,300	35,000	35,800	34,300
Sackings	52,900	57,300	59,000	45,000
Others	6,900	6,600	6,300	4,800
Total ..	94,100	98,900	101,700	84,100

The decline in production is shared to a larger extent by sackings than by hessian. The fall in production by 4,800 tons, accompanied by a rise in stocks to the tune of 8,800 tons, shows that the demand for jute goods during the month must have substantially slackened. The report of the I.J.M.A. for the month of July says that trading throughout the month was dull, in the overseas markets as well as in domestic markets. It adds:

"In the hessian section, the U.S.A. continues to buy small lots on a hand-to-mouth basis. Stock figures (spot and afloat) for June in the U.S. show a reduction of 7 million yards from the previous month, but consumption, at 62 million yards, is disappointing when compared with 75 million yards during June 1955. The much talked of Argentine hessian business is also disappointing and, according to normally reliable sources, is not expected to be as large as originally anticipated. Russia is reported to have purchased further quantities of hessian bags for October-December shipment.

"Heavy goods have received some support from Australia in the form of woolpacks and cornsacks, but shipment is spread upto June next year and it is reported that requirements are now almost covered for shipment this year. The heavy rains and flooding in Australia have seriously affected the size of this season's wheat harvest and, as a result, the demand for cornsacks from that market is likely to be considerably less than last year. Generally inactive conditions have prevailed locally, with only small business being reported in the sacking section."

The aforesaid conditions are already reflected in the figures of despatches of jute goods (given below) during the month under review, as compared with those for the previous month and for the corresponding month of 1955:

Jute Goods Despatches
(Figures in tons)

	July, 1956	June, 1956	July, 1955
(a) *For export*—			
Hessian	31,928	36,296	33,864
Sacking	34,636	37,086	37,095
Others	4,330	4,005	3,376
Total ..	70,894	77,387	79,335
(b) *For local purposes*—			
Hessian	1,349	1,931	1,848
Sacking	9,963	9,438	8,701
Others	1,991	1,893	1,701
Total ..	13,303	13,312	12,250
Grand total of (a) and (b)—			
Hessian	33,277	38,277	40,712
Sacking	44,599	46,524	45,796
Others	6,321	5,898	5,077
Total ..	84,197	90,699	91,585

The decline in despatches is mainly accounted for by the export markets. Despatches for export purposes show a fall of 6,500 tons after two months of successive rise from 62,600 tons in April to 77,400 tons in June. The downward trend in the offtake for internal consumption noted in the previous three months (from 20,400 tons in March to 13,300 tons in June), however, seems to have been arrested, though no actual reversal of the trend has occurred during the month under review.

The aforesaid trading conditions are somewhat depressing, and may seem to justify the I.J.M.A.'s decision to re-seal next month 5 per cent. of the looms. There are, however, some who feel that the I.J.M.A. would have done well to watch the situation for some time more, as the full implications of the re-sealing of 2½ per cent. of the looms last month have not yet been visible and American buying can ee expected to increase, as stocks of hessian in the U.S. are very low. Another ground on which the above decision has been based is the raw material position. The I.J.M.A. says that, alongside the mounting level of stocks, "the mills have been faced with an acute problem by the depletion of their raw jute stocks in recent months, owing to their high level of consumption, and the need for overcoming this scarcity of raw materials has also been an important factor leading to the present decision." But even this factor is only a temporary one, as new jute crops are reported to have started coming into the market. Advices from Calcutta indicate a large crop for the season, so that prices will tend to come down in the coming months. As the I.J.M.A. decision is to take effect only three weeks hence, it may not be late to reverse it, if conditions take a turn for the better. Anyway, the country has the assurance of the I.J.M.A. to this effect.

(Concluded from next column)

outmarkets. Although teas in Calcutta and Colombo would not obviously benefit to the same extent as 'spot' teas in London, these distribution centres must also participate in a further strengthening of the market, unless there is a complete stoppage of the shipping programme, a possibility which is most remote. In the meantime, demand for clean black dusts, suitable for export to Egypt, may temporarily disappear. However, in the long run, it is considered that India's exchange position will compare favourably with that of Ceylon and this producing centre may, therefore, secure a comparatively larger percentage of the Egyptian trade."

TEA PRICES RULE FIRM

SUPPLY POSITION NOT UNFAVOURABLE TO GROWERS

THE performance of the North Indian tea at the export auctions held in Calcutta last week has served to dispel the fears and anxieties about the prospects for tea, following the nationalisation of the Suez Canal. It was feared that the step taken by the Egyptian authorities would affect India's export of tea to Britain, the main consumer of Indian tea, and there was a slight reaction in prices on that account. These expectations would appear to have not materialised. On the other hand, the buying from Britain has actually been on a larger scale. Apparently, the anxiety about the Suez Canal situation must have induced buyers in the U.K. to replenish their stocks. Buying from Egypt is also said to have been resumed and prices for these varieties showed a hardening trend.

A feature of last week's auctions was the recession in the Best C.T.C. Assam B.P. varieties on account of a decline in their quality, while common and medium varieties enjoyed good support, as British buying was extended to all grades of tea. The following table will give an idea of the trend of prices of the main varieties in export auctions during the current season so far:

	12-8-1956	6-8-1956	16-7-1956	25-6-1956
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	1 15 0	1 15 0	1 15 0	1 13 0
		to 2 0 0	to 2 0 0	to 1 15 0
Plain B.P.	1 10 0	1 8 0	1 8 0	1 7 0
		to 1 9 0	to 1 8 6	to 1 8 0
Medium Assam B.P. ..	2 6 0	2 8 0	2 2 0	1 14 0
	to 2 8 0	to 2 8 0	to 2 4 0	to 2 0 0
Best C.T.C. Assam B.P.	4 0 0	4 0 0	4 0 0	3 0 0
	to 4 8 0	to 5 0 0	to 5 0 0	to 3 8 0

Another cause for the strength of the market was the improved statistical position of the crop. The North Indian tea crop for the month of July amounted to 80.57 million lbs. which was only 1 million lbs. higher than that for the corresponding month of 1955. This increase was much less than expected. The total North Indian crop up to the end of July aggregated 205.6 million lbs., as compared with 194.9 million lbs. for the corresponding period of last year, that is, a rise of 10.7 million lbs. This increase is no cause for alarm, as the crop in other parts of the world shows a shortfall and, if allowance is made for this, the total world production would be more or less at the same level as last year. The following table shows the latest crop position in the major producing countries of the world, as compared with that in the previous two years:

(In million lbs.)

	1956	1955	1954
North India (April-July)	205.6	194.9	191.0
South India (Jan.-June)	65.2	68.0	70.3
Pakistan (April-June)	13.2	11.1	13.1
Ceylon (Jan.-June)	203.2	207.1	207.3
Indonesia (Jan.-May)	39.6	43.3	41.5
Total ..	526.8	524.4	523.1

The North Indian tea crop for the month of August, which will be known only by the middle of next month, will be of greater significance, because it will provide a more precise idea of the final crop position for the season. The crop figures for the early months of the season have very little bearing on the final position; it is only the crop in August and September that will considerably influence the market trend. In this connection, the following extract from the report of Messrs. J. Thomas & Co., Calcutta, for the month of July will be read with interest:

"No major improvement in the price of common and low medium tea is anticipated, unless there is an unexpected and marked reversal in the crop figures of India and Ceylon. It is possible, however, with the seasonal decline in quality, that markets in the months of August and September may show a reduction in the present disparity between the price of quality and non-quality teas. Best liquoring teas are likely to register a considerable decline with the seasonal drop in quality now due, and this fall may enable the world buyers to pay more for their common and low medium price reducers. Teas of medium quality from Assam are likely to sell readily for the next two months, and Fannings grades will probably appreciate in value."

Commenting on the implications of the Suez Canal crisis to the tea industry, they observe rather cautiously:

"If normal movement of tea is possible, no change in the present market is visualised; if, however, it should become necessary to deviate from the normal shipping route, it is almost certain that the market for 'spot' teas in London would show a very appreciable advance. The stocks in the London and Provincial Bonded Warehouses in the middle of July have, for the first time, exceeded the figures of 1955, but in the present circumstances these are likely to be absorbed and there might possibly be an attempt at further stock piling by most

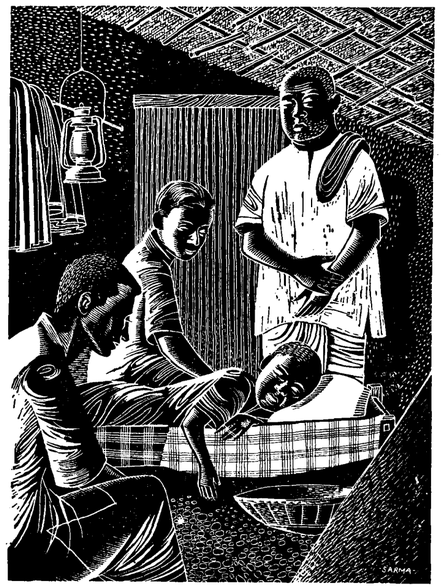
In India, at the present time, there are not enough healing hands... not enough trained doctors and nurses to bring skilled medical care to all who need it, especially to those who live in the villages. But in the Second Five Year Plan, the sum allotted for the improvement of rural medical and health care is twice that in the 1951/56 Plan. By 1961 it is proposed to establish over 3,000 'health units' in community project, national extension and other areas. Hospital accommodation will increase by about 26% and there will be 30,000 more hospital beds available throughout the country.

The healing hands are coming...



Burmah-Shell supply larvicidal oils and residual sprays in increasing quantities for the national malaria and filaria control programmes. We distribute petroleum based insecticides throughout the land. SHELL petroleum chemicals—aldrin, dieldrin and endrin—protect the country's food supplies: chemicals derived from petroleum are also being used in the manufacture of antibiotics.

IRRIGATION AND POWER PROJECTS

NEED FOR EXPEDITING THEIR IMPLEMENTATION

THE recent rise in foodgrain prices in certain parts of the country and the consequent demand for fair-price shops in these regions underline the importance of not relaxing any effort whatever on India's food front. In other words, India cannot afford to "go slow" in the matter of construction of irrigation works, especially if the inflationary forces which might be generated through deficit financing are to be held under check. Not only should the major hydro-electric projects which have been taken in hand or contemplated under the second Five-year Plan be executed expeditiously but efforts should be made to complete the minor irrigation projects which, by their very nature, cost less and also yield quick results.

During the period of the first Five-year Plan, the country's larder was augmented by 20 per cent. additional food as compared with the output of food in 1949-50 when it was 54 million tons. The last five-year period witnessed an addition of 16.3 million acres to the 51.5 million acres in 1950-51, thanks to the execution of major and medium irrigation projects which added 6.3 million acres and of the minor irrigation works which added 10 million acres. When the major and medium irrigation works taken up under the first Five-year Plan are completed, they will irrigate about 22 million acres. In the field of power, generation of electricity has gone up from 6,575 million kilowatt-hours in 1950-51 to 11,000 million kilowatt-hours in 1955-56 and the installed capacity from 2.3 million kilowatt to 3.4 million kilowatt. The total cost of irrigation and power projects included in the first Plan was of the order of Rs. 970 crores, of which irrigation accounted for Rs. 720 crores, including Rs. 80 crores spent before the Plan began. The irrigation and power gains made in the first Plan have laid the foundations for agricultural and industrial progress. They have served to curb inflationary trends and reduced the drain on the nation's finances on account of food imports.

Power Supply to be Doubled

Realising that these gains, significant as they are, do not exhaust the scope for irrigation and power generation, the Planning Commission has included 195 projects in the second Five-year Plan in addition to those which have been continued from the first Five-year Plan. The total provision for major and medium irrigation works during the second Plan is Rs. 381 crores. This includes Rs. 209 crores for continuing schemes from first to second Plan. Through these 195 projects it is hoped to bring an additional area of 12 million acres under irrigation, apart from nine million acres through minor works. If these plans materialise, in 1961, the country will have a total irrigated area of 88 million acres. As regards power, the 54 power projects included under the second Plan at an estimated cost of Rs. 427 crores, will raise the installed capacity of 3.5 million kilowatts to 6.9 million kilowatts; generation of power is expected to be 22,000 million units in 1960-61 or almost double the number of units generated in 1955-56.

A notable feature of the irrigation programme under the second Plan is the marked preference that has been shown for medium-sized schemes. Out of the 195 schemes included under the Plan, ten schemes will cost between Rs. 10 and Rs. 30 crores, seven between Rs. 5 and Rs. 10 crores and all the rest less than Rs. 5 crores. Some of the irrigation projects to be started in the second Plan are Ukai, Khadakwasla and Narmada in Bombay with a respective irrigation potential of 614,000 acres, 204,000 acres and 1,157,000 acres, Tawa in Madhya Pradesh 590,000 acres, Purna in Hyderabad 157,000 acres, Vamsadhara in Andhra 306,000 acres, Kangsabhati in W. Bengal 950,000 acres, Banas in Rajasthan 250,000 acres, Bhadra in Saurashtra 90,000 acres and Boothankettu in Travancore-Cochin 63,000 acres.

Of the target of 12 million acres to be irrigated during the second Plan, new projects will benefit three million acres, while nine million acres will be covered by the first Plan projects now under execution. The new projects have an ultimate potential of about 15 million acres. Important among the first Plan projects due for completion in this Plan are the Bhakra-Nangal in Punjab; the Tungabhadra in Andhra, Mysore and Hyderabad; the Hirakud dam (Stage I) in Orissa; D.V.C. schemes in Bihar and West Bengal; the Chambal scheme (Stage I) in Madhya Bharat and Rajasthan; the Kosi (Stage I) in Bihar; the Koyna in Bombay; and the Rihand in U.P. A brief account of these projects is given below:

Bhakra-Nangal: The Rs. 170-crore Bhakra-Nangal project envisages the construction of a 680-ft. high dam across the Sutlej, two power houses at the foot of this dam, a diversion dam downstream at Nangal, the Nangal hydel channel, two power houses at Ganguwal and Kotla on the channel and the Bhakra canal system. All the components, except the Bhakra dam, and its two power houses and the transmission system have been completed. The project, when completed, will irrigate more than three million acres in Punjab and P.E.P.S.U. and have a total installed capacity of 954,000 kw.

Tungabhadra Project: The Tungabhadra project comprises a dam across the Tungabhadra, a tributary of the Krishna, and two canals one on either side, to irrigate an area of 91,589, 156,913 and 580,000 acres in Mysore, Andhra and Hyderabad States respectively. The Dam power house is expected to be completed in all respects by December, 1956, and the Humpi power house by April, 1957. The total installed power capacity will be 63,000 kw.

Hirakud Dam: The Hirakud multi-purpose project (Stage I) will be substantially completed by August, 1956, and water for irrigation for about 100,000 acres and 24,000 kw. of power from the first unit will be made available. In the next season, the remaining three generating sets will be commissioned which, in total, will generate 123,000 kw. of power. Ultimately by 1958-59, 4.54 lakh acres of land will receive irrigation supplies.

Damodar Valley Corporation: The D.V.C. has completed dams at Tilaiya and Konar, the Durgapur barrage, the Bokaro thermal power station and major portions of the canal system and transmission lines. Work is now proceeding on the Maithon and Panchet Hill dams, the two other components of the scheme. The Maithon dam is expected to be completed by the end of this year and the Panchet Hill Dam by 1957-58.

Chambal Project: The Chambal multi-purpose project involves the construction of three dams across the Chambal with a power house at each, a barrage near Kota, and canal networks on both sides. The project will ultimately have an installed capacity of 210,000 kw. and irrigate 14 lakh acres of land. Work is now in progress on State I of the project, namely, one dam, called the Gandhi Sagar Dam, the Kota Barrage and the irrigation system.

Kosi Project: Out of about 150 miles of embankments, nearly 114 miles have been completed. The other major parts of Stage I of the scheme, a barrage and the irrigation system are yet to be taken up.

Koyna Project: Bombay is going ahead with its Rs. 40.44 crore Koyna multi-purpose project. A 207.5 ft. high dam will be built across the Koyna river with an underground power house having four units of 60,000 kw. each.

Rihand Project: In U.P. preliminary works are on hand for the Rihand project, which comprises a concrete gravity dam across the Rihand river. A power house equipped with five units of 50,000 kw. each will also be constructed. The project will also help irrigate 21 lakh acres through tubewells in U.P. and Bihar.

Nagarjuna Sagar Project: Work is also making headway on the Nagarjuna Sagar multi-purpose project. A 387-ft. high dam across the Krishna near Nandikonda village will ultimately be constructed. It will irrigate 34.02 lakh acres and have an installed capacity of 75,000 kw.

Containing Process

The formulation of plans for power projects has to be on a long-term basis and is a continuous process. The first Plan set a 15-year target for additional power capacity at 7 million kilowatts. In view of the progress and the demand for power, the target has been tentatively revised and fixed at 15 million kw. by 1965. It may be necessary and adjustments become inevitable for raising this target. It is estimated that the power demand will necessitate the installation of about 2.7 million kw. of additional capacity. Allowing for standby units, the power target in the second Plan is 3.5 million kw. Of this, 2.9 million kw. will be provided by State-owned undertakings, 300,000 kw. by the electricity supply industry and the balance by the lignite project and heavy industry factories which will have their own generating plants. The break-up of 2.9 million kw. in the public sector is 2.1 million kw. from hydro-power projects and 800,000 kw. from thermal stations.

Of the forty-four power projects, ten will cost over Rs. 10 crores, four between Rs. 5 and Rs. 10 crores, 18 between Rs. one and Rs. five crores and 12 less than Rs. 1 crore. Twenty-five are hydro-electric schemes and 19 thermal. Most of these schemes will start yielding results during this Plan period. A number of schemes, which require further investigations, are likely to be started in the later half of the Plan period.

About Rs. 160 crores out of the total outlay for power will be spent on continuing schemes, about Rs. 245 crores on new schemes to be completed in the Plan period and about Rs. 22 crores on schemes to be finished in the third Plan. The major continuing schemes are Tungabhadra, Hirakud (Stage I), D.V.C., Chambal (Stage I), Koyna, Periyar, Umtru (Stage I) and Rihand. The Periyar hydro-scheme envisages the utilisation of the waters of the existing irrigation project for power generation to the extent of 100,000 kw. The Umtru project in Assam comprises the construction of a 50-ft. high weir across the Umtru river, a tributary of the Kallong. The scheme is expected to produce 5,000 kw. of power in the first stage. Among the new power schemes included in the Plan are Tawa in Madhya Pradesh with an installed capacity of (30,000 kw.); Purna in Hyderabad (10,000 kw.); Chambal (Stage II) in Madhya Bharat and Rajasthan (92,000 kw.); Umtru (Stage II) in Assam (5,000 kw.); Kundah in Madras (180,000 kw.); Matatila hydel scheme in Uttar Pradesh (15,000 kw.); Durgapur thermal station in West Bengal and Bihar (150,000 kw.); Bhadra in Mysore (33,000 kw.); and Sharavathy in Mysore (142,000 kw.).

Grid System

The Plan recognises the importance of the grid system and provides for its development. Large blocks of power can now be economically transferred over distances of 300 to 400 miles. This makes it possible to harness hydro-electric and thermal power potentials in various regions and utilise this power in widely separated industrial centres and rural areas in the neighbourhood of transmission lines. The laying of a total length of 35,000 miles of 220 kw. to 11 kw. transmission and sub-transmission lines, nearly twice the length in the first Plan, is contemplated during this Plan period. Out of the allocation of Rs. 427 crores a sum of Rs. 235 crores will be spent on generation, Rs. 92 crores on transmission systems, Rs. 25 crores on distribution lines in urban areas and Rs. 75 crores on small town and rural electrification.

Rural Electrification

The second Plan aims at extending power facilities to all villages and small towns with a population of over 10,000. Out of 585 medium and small towns with a population of 20,000 and above, 550 had been electrified during the first Plan period and in the next population range of 10,000 and 20,000, 350 out of 856 had been covered. In towns and villages with a population of less than 10,000 electrification raises difficult problems, especially in villages. It is recognised that in these cases electrification would not be an economic proposition and would call for subsidy. Most of the villages are comparatively distant from developed power resources. If all the villages in the country were to be electrified, the cost would exceed Rs. 3,000 crores, an investment which the nation can ill-afford at the present juncture. Hence rural electrification in this sector will have to be a phased process. It is however, proposed to continue the scheme for expansion of power facilities for providing employment opportunities. Under this scheme the Government of India had in 1954-55 set apart Rs. 20 crores for distribution as loans to State Governments on easy terms of repayment. This programme will be completed in another year.

During the last few years, the rate of utilisation of power has been more rapid than expected and is likely to increase further during the second Plan period. The Government has for this reason taken up a power load survey on a national basis. The survey will be completed in the next three years.

The country has yet a long way to go to utilise fully its water resources. It is computed that the annual water flow of India's rivers is 1,356 million acre-ft., of which 450 million acre-ft. can be put to beneficial use. Up to 1951, 76 million acre-ft., representing 5.6 per cent. of the entire river wealth, had been harnessed. This percentage will rise to 10 by the end of current year. With the fulfilment of the irrigation and power targets in the second Five-year Plan, food production should go up by 10 million tons from 65 million tons at the end of the first Plan. The development in power will have set in motion the wheels of industry in several new directions, particularly, in steel production and the manufacture of heavy machinery and other industries.

Technicians from countries of South Asia and the Middle East who have received training in the United States will be able to keep in touch with U.S. scientific developments under a programme announced recently by the U.S. International Co-operation Administration (I.C.A.). Under the new programme, American scientific organisations will be encouraged to offer technicians in other countries organisation membership, subscriptions to technical journals, personal answers to requests and aid, if desired, in forming professional societies.

The I.C.A. said contracts had been signed with seven U.S. professional organisations and 15 would be added later. Ultimately, 140 professional associations and societies may participate in the programme. The programme, it is stated, was launched because many technicians after completing training in the U.S. had expressed a desire to keep in touch with scientific developments in the U.S. through contacts with scientific organisations. The programme is especially designed to help technicians in newly developing countries where few professional associations are available.

Nearly half of the 31,000 technicians who have received training in the U.S. under I.C.A. programmes have come from newly developing countries. In interviews with 500 participants in 16 countries, the I.C.A. found that without exception they welcomed the opportunity to keep in touch with their American colleagues.

NEW PRODUCTS AND PROCESSES

Caseless Control Lamp

FOR the benefit of owners of cameras with flash units, the concern Philips' N.V. Eindhoven Holland, has put on the market a caseless control lamp, with which the electric wire up to and including the flash contact in the camera can be controlled. Mishaps with photographs in consequence of defective contacts or exhausted batteries are thus prevented. The lamp is contained in a special synthetic resin holder, the cap of which has a transparent green colour. Lamp and holder can be fitted direct into any flash unit that is suitable for the use of caseless flash bulbs. In the case of flash units requiring an adapter for the caseless flash bulbs, this adapter must, of course, also serve for the control lamp.

"Intercom" System

A new streamlined intercommunication system designed for use in offices has been produced by Communications Systems, Strowger House 8, Arundel Street, London, W.C. 2. According to the manufacturers, the new "intercom' master station has a highly sensitive microphone housed in a circular grill and improved performance has been achieved by new circuitry. By keeping the loudspeaker entirely separate from the microphone and keying unit, it is added, the risk of feed-back has been eliminated. Master station calls take priority over those from sub-stations and connection can be obtained immediately by pressing the appropriate key. The lifting of a hand receiver housed at the side of the microphone unit automatically disconnects the loudspeaker when privacy is required. Normal lamp and buzzer signalling is provided and the equipment has been designed to accommodate 10, 15 or 20 sub-stations.

Tachygraph

An Austrian electrical engineering firm, Messrs. Tachographia, Maria Theresienstr. 19, Vienna 9, has taken up the manufacture of a 8-day tachygraph. The tachygraph, which comes on the market under the trade mark "Testis," registers on an indicator roll the time the vehicle was in movement or standing, the speeds, the mileage covered, and the manner in which the driver operated the car. It is also equipped with an optical control and warning device signalling the moment a chosen speed limit is surpassed. The new tachygraph is an excellent means of safeguarding the economic operation of any automative vehicle and protecting as far as possible the motor, the coupling, the chassis, the gears, etc. Fuel and oil savings can be achieved and the safety on the road improved. The "Testis" tachygraph can either be attached to the dash-board in any desired angle or mounted to a support.

Steam Turbines

An engineering works at Amersfoort (the Netherlands), N.V. Bronswerk Brabantsestraat 12-16, has taken in hand the manufacture of steam turbines which consist of few component parts and which operate according to the constant-pressure principle. The turbines are made in 0.5 to 1.500 h.p. designs, whereby the diameters of the blade rims are standardised in five sizes. The small models are specially suitable for driving generators, boiler feed pumps and cooling water pumps, fans, centrifuges, etc. These small types usually operate with one jet pipe and one so-called reservible segment, by means of which the steam passing from the blades is conducted back to the blade rims. The larger models have Curtis wheels with one or more jet pipes and speeds and are applied for the same purposes as the small models, but in larger designs, for marine and land use. By using the turbine as an ancillary turbine for an existing turbine unit it is possible to apply higher steam pressures and temperatures and thus to attain considerably better thermal efficiencies. These turbines can also be used for working up exhaust steam from reciprocating engines, for stationary as well as marine equipment. They operate with revolutions of up to 10.000 per minute with or without toothed gears; they are now in quantity production.

New Insulated Roofing

The Universal Asbestos Manufacturing Company announces a new type of insulated roofing, which will help keep British factories warm and their fuel bills down next winter. A unique "sandwich" of asbestos cement and mineral fibre will cut heat losses by as much as 85 per cent. compared with a single thickness of ordinary asbestos cement sheeting. The sandwich is fitted, simply and speedily, over the building framework: first an asbestos cement inner lining, specially designed to form an attractive ceiling; then the insulating layer; finally a corrugated asbestos cement outer weathering skin. Four different types are available to meet varying needs, and all but one are eminently suitable also for insulated factory walls. Research into heat loss problems has continued since the company introduced insulated deckings for flat roofs last autumn. It was felt that adequate warmth in factories contributed not only to employee comfort but also to higher productivity. It was also recognised that fuel bills in factories represent an important factor in overall costs and that they must be kept to a minimum if export industries in particular are to remain fully competitive. The purpose was, therefore, to devise a highly efficient form of insulation as an integral part of a simple, economical, easy-to-fix roofing and cladding system that would also be adaptable to various needs and would require little or no maintenance. In the "sandwich" constructions this aim has now been achieved.

4 PER CENT.
STATE GOVERNMENTS LOANS

			Issue Price.
(1)	Government of Andhra	Rs. 600 lakhs	Rs. 99-8 per cent.
(2)	Government of Bihar	Rs. 200 lakhs	Rs. 99-4 per cent.
(3)	Government of Bombay	Rs. 750 lakhs	Rs. 100-0 per cent.
(4)	Government of Hyderabad	Rs. 200 lakhs	Rs. 99-8 per cent.
(5)	Government of Madhya Bharat	Rs. 100 lakhs	Rs. 99-4 per cent.
(6)	Government of Madhya Pradesh	Rs. 150 lakhs	Rs. 99-4 per cent.
(7)	Government of Madras	Rs. 1,250 lakhs	Rs. 99-12 per cent.
(8)	Government of Mysore	Rs. 400 lakhs	Rs. 99-8 per cent.
(9)	Government of Orissa	Rs. 300 lakhs	Rs. 99-4 per cent.
(10)	Government of Punjab	Rs. 200 lakhs	Rs. 99-4 per cent.
(11)	Government of Rajasthan	Rs. 300 lakhs	Rs. 99-8 per cent.
(12)	Government of Saurashtra	Rs. 250 lakhs	Rs. 99-8 per cent.
(13)	Government of Travancore-Cochin	Rs. 200 lakhs	Rs. 99-4 per cent.
(14)	Government of Uttar Pradesh	Rs. 800 lakhs	Rs. 99-8 per cent.
(15)	Government of West Bengal	Rs. 700 lakhs	Rs. 100-0 per cent.

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 3rd September 1968 except that of the Government of Bombay which will be repaid at par on 3rd September 1970.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 3RD SEPTEMBER 1956 AND CLOSE ON 10TH SEPTEMBER 1956 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 3rd September 1956.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1956, 3% MADHYA PRADESH LOAN 1956 and 3% MADRAS GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid upto and including 2nd September 1956.

3½% TRAVANCORE GOVERNMENT LOAN 1956 will be accepted at PAR for conversion into the new loan of that Government. In addition to the interest due on securities of that loan tendered for conversion, tenderers will be paid interest at the rate of 4 per cent. per annum on the amount of the principal of such securities from 16th August 1956 to 2nd September 1956 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BOMBAY, CALCUTTA, DELHI, MADRAS AND BANGALORE.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the branches of the State Bank of India and at Treasuries and Sub-Treasuries in the case of Andhra, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, Saurashtra and Uttar Pradesh loans.

(ii) At the branches of the State Bank of India in the case of West Bengal loan.

(iii) At the branches of the State Bank of India and at District Treasuries only in the case of Madhya Bharat loan.

(iv) At the branches and Treasury Pay Offices of the Hyderabad State Bank and at Treasuries and Sub-Treasuries in the Hyderabad State in the case of Hyderabad loan.

(v) At the branches of the Bank of Mysore Ltd., in the Mysore State except at Bangalore and at Taluk Treasuries in the Mysore State at places where there is no branch of the Bank of Mysore Ltd., in the case of Mysore loan.

(vi) At Treasuries and Sub-Treasuries only in the case of Travancore-Cochin loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

SCHEME FOR IMPROVEMENT OF INDIAN COASTAL SHIPPING—I

NEW DESIGN OF MULTIPLE COASTER, THE "AMBAR JAHAJ"

By U. Shanker Rao

[It is admitted by all that transport is the main bottleneck that must be widened as early as possible, if the production targets aimed in the second Plan are to be hit. While speaking of transport, most people think in terms of railways and roads and not of ships and boats. India has a vast coast line, studded with a large number of minor ports. Coastal shipping, if organised on right lines, can, therefore, play a very useful role in relieving the congestion in railways and roads. Unlike the latter two modes of transport, it does not require vast sums for building and maintaining the track. Sea transport, therefore, offers the cheapest mode for moving men and materials.

In the second Plan, the Government has doubtless provided for development of coastal shipping, though the provision is much less than what is necessary. But what is provided is almost entirely for big ships. Little thought has been given for the introduction of power-operated small boats analogous to the "coasters" used by several Continental countries. Yet, there is no doubt that operation of fleets of "coasters" will serve to ease the pressure on available internal transport, provide fair-sized employment to the large sea-faring people in India's east and west coasts, and bring more prosperity and life to the numerous minor ports which are at present just dead-ends on the transport map of India. In this article and in another to follow, the author, who has devoted considerable thought to the subject of inland and coastal navigation, pleads for the introduction of such small vessels in coastal shipping. He has coined the appellation "Ambar Jahaj" for such vessels. Lest the use of the expression "Ambar" should cause misgivings even at the outset because of its adoption in another context, albeit highly controversial, we hasten to add that this mode of transport does not appear to suffer from the defects of Ambar Charka, the economics of which are dubious. Indeed, the suggestions made by the author are, in our view, worthy of consideration not only by the Government of India but also by business men, for there seems to be money in his proposition.—ED.]

THE inadequacy of transport facilities for the execution of the second Plan has been recognised in many quarters. Transport difficulties and the problems that have surrounded them have been examined from time to time by several competent authorities. Few recommendations, however, have given any permanent relief to the growing transport requirements of the country. Currently, another committee, namely, the Rail-Sea Co-ordination Committee, is once again investigating the various aspects of our transport problems and covering, more or less, the same ground, as was done before. But what is essential to be borne in mind is that there are certain handicaps to Indian shipping—almost beyond normal control—which influence its becoming a rough and ready auxiliary to our primary transport system, the railways. The difficulties of acquiring suitable new tonnage, world shortage of shipping, heavy pressure on our major ports, high coastal freights, and frequent dock labour disputes are some of the problems that confront the natural and rapid development of Indian shipping.

Standardisation of Ships: New Type Needed

The Government has recently announced its decision regarding the standardisation of ships. This is a step in the right direction. But, while this measure would serve the purpose of providing transport facilities between major ports, there is, at present, no reliable and seaworthy class of sea carrier—like the ubiquitous jeep—that can run regular inter-port feeder services, make a better use of rail and road heads in our coastal areas, and help to dovetail the overflow of rail traffic into sea movement.

The absence of a suitable sea link in our coastal movement is a serious handicap to our transport economy. The subject has received little attention, particularly from the technical point of view and few small vessels have been specially designed to suit local conditions. Thus, today, there is no handy carrier for transhipment facilities of "over carried" cargoes, a feature which has become inevitable in modern transportation by conference lines. Reliable feeder services are an essential part in shipping economy. It may be relevant to mention here that one of the contributary factors which had helped to break the London dock labour strike was the facility available to the shipping industry for quick diversion of cargoes from London to other ports which maintained regular transhipment facilities.

Value of A "Coaster"

In Europe, the value of the small ship, popularly known as a "coaster" has been fully recognised. They can load and discharge in small ports, clutter around big ships, navigate shallow drafted rivers and canals, maintain railway schedules, and provide innumerable services between the bigger ports and the smaller ones. As a result of collaboration between shipbuilders, bankers, and captain-owners, the modern coaster has contributed in no small manner to quicker despatch and turn round in British and Continental ports. The Dutch coaster, well known for its efficiency, has been one of the primary stabilising factors in freight rates in coastal operations as Liberty vessels have influenced tramp charter markets. European coasters' mostly owned and operated by captain-owners, range between 250 to 750 tons and carry the products of all West European countries, Belgium, France, Portugal, Mediterranean ports, and even as far as Paraguay, on the Parana river, across the Atlantic. Several prominent shipping companies run their own services between Britain and the Continent using large ships for long distance routes and small coasters for the transport of cargoes to big *entrepots*.

In India, the sailing vessel has more or less served a similar purpose but with many limitations. After the War, many have realised the value of mechanisation and the need for small shallow drafted craft that can run between Bombay and a number of coastal ports. There is a growing demand for transport between Saurashtra and the West Coast, where, owing to rapid industrialisation and the absence of suitable railway facilities, movement by small craft has become inevitable. Today, there is a fairly large collection of heterogeneous ex-naval craft that has been converted for commercial purposes and operate a number of feeder services. A visit to the Tank Bunder (Bombay) would show what a wide and amazing variety of disposal craft—mostly unsuited for local trade—await the end of the monsoon for working in the coastal trade.

Sorley Committee

During the War, the utility of the sailing vessel was geared to relieve pressure on the railways. As a result of the Sorley Committee recommendations and the War Transport Department of the Government of India, the carrying capacity of the sailing vessel fleet had been raised to 1,900,000 tons, that is, 400,000 tons more than in peace-time. Later on, it was possible to divert 680,000 tons per season from the railways to coastal transport.

But, though the sailing vessel has a definite place in our coastal economy and plays an important part, yet its inherent handicaps fail to tackle many of the present-day requirements of coastal transport. Large quantities of steel, machinery, and other goods are being imported to carry out projects in the second Plan. Irregularity of movements, dependence on sail, irresponsible ownership, fraudulent jettisoning, and, above all, unreliability of services are some of the primary difficulties in the sailing vessel industry. Mechanisation will help to a certain extent but would have obvious limitations.

Most of the steamers that operate in the coastal trade, particularly on the West Coast, are second-hand vessels that were not designed or built for the trade, and thus do not meet all the special requirements of Indian coastal ports. As a result, the cost of their operations are high.

Rail Heads are "dead" ends in Ports

As conditions are at present rail-heads in ports are only "dead" ends. This is particularly so in minor ports. Coastal ships do not offer much continuity for rail movement. Thus, there is a break in our coastal transport economy. To add to this difficulty, there is also the problem of limited line and junction capacity on the railways, break of gauge for transhipment, and shortage of wagons. To complicate matters further, the disparity in rail tariffs and coastal freights create many difficulties, thereby limiting full advantage of coastal transportation.

The Nanjundiah Report on minor ports had only divided them into two classes—intermediate and minor. This classification was mostly done on the volume of trade handled, finances available, and other considerations. But a further analysis of the ports on the Indian coast would show that there can be a new subdivision of minor ports. For practical purposes, however, all ports in India can best be classified under two important categories major ports and open roadsteads. A new subdivision in the latter class would be "minor ports" where there is a least depth of 10 feet of water in the entrance channel. From a technical point of view, this depth is of considerable commercial value, such at present not being used by Indian shipping.

Thus, ports like Veraval, Porbandar, Jaffrabad, Mangalore, Tuticorin, Masulipatam, and Cocanada, can enable small coasters of 9 feet draft to go right inside and discharge on the jetties. Most of these ports have warehouses, road and canal connections, jetties and cranes, and a number of other facilities, particularly railway terminals. But, with the present size in our coastal ships, their deep drafts, do not permit them to enter inside and take full advantage of the present rail-heads and other facilities. A case of noteworthy importance is in Mangalore and Tuticorin. The former has a depth of 11 feet, while the boat canal in Tuticorin, which is being regularly dredged, has 12 feet of water. Both have important railway terminals and also a growing trade which demands better transport facilities. But today vessels have to anchor outside the ports and discharge into lighters or country boats and stay as far as 3 to 6 miles off the shore. This involves additional handling costs ranging between Rs. 5 to Rs. 8 a ton in the coastal freights, besides exposing the cargo to damage, pilferage, and delay in turn-round.

The financial position of some of these minor ports do not encourage large-scale undertaking of port improvement and conservancy measure such as dredging and deepening of the bar in the entrance channel. Besides, some of the schemes are of a long term nature and, in our present difficulties of transport, would not offer immediate relief to the problems of the day.

"Ambar Jahaj" or Sea Jeep

What, then, is the answer? To solve our present difficulties in coastal transport and tackle a number of problems such as congestion in major ports, phasing of imports, and rail/sea co-ordination, it is essential to introduce a new design in our coastal ships. This would help to provide reliable, all weather, feeder services. This new type of vessel which may popularly be known as the *Ambar Jahaj*—Universal Ship—would help to dovetail the overflow of rail traffic into coastal movement and provide the basic link in the scheme for improvement of Indian shipping.

The *Ambar Jahaj* is a new design in coastal ships. It is a small and handy diesel-engined coaster, which can combine the cheap and ubiquitous economy of our present sailing vessel with the advantages of the modern coastal steamer. Its special features are shallow draft, seaworthiness, good speed, and a favourable cargo carrying capacity. It is specially designed to work in our new classification of minor ports—the 10-foot depth ports on the coasts and in the estuaries of the Hooghly River, Mahanadi, and in the Gulf of Cutch and Cambay. The vessel has been modelled after the famous Dutch coaster and all the advantages of such design have been included to suit the special requirements of Indian ports.

For practical purposes, a depth of 10 feet of water in the entrance channel enables a cargo load of approximately 275 tons. This load, is more or less, the average optimum usually handled by minor and intermediate ports and thus would ensure full cargoes for such small vessels as the *Ambar Jahaj*. There will thus be no waiting in ports for cargo—a common feature in our coastal trade and a bugbear of owners. Its size and tonnage enable it to working on sailing vessel economy and thus cut down cost of operations.

Proposed Design and Specifications of Ambar Jahaj

Before coming to any conclusions on the basic design and principal specifications for the Ambar Jahaj, the following factors were taken into consideration:

(*a*) Government Rules and Regulations in the Indian Merchant Shipping Act for Home Trade Vessels and Sailing Vessels.

(*b*) Port facilities existing at present such as length of jetties, cranage, and moorings.

(*c*) Pilotage and navigational depths in the entrance bars.

(*d*) Prevailing weather conditions, both in the monsoons and in the good weather season.

ADMINISTRATION OF RAILWAYS

DIVISIONAL VERSUS DEPARTMENTAL SYSTEM

By Prof. A. S. Deshpande

ON a number of occasions in the past, the Railway Board was accused of conservatism, lack of imagination and absence of spirit of experiment. Since Independence, however, whatever its failings might have been, it cannot be accused of lack of courage or of desire to experiment. Its bold experiments in the field of passenger classification for example are fresh in the public memory and are a testimony to its courage to experiment.

It is with the same spirit that it has now decided to replace the existing departmental system of organisation on its railways by the divisional one. This decision of the Railway Board, it is generally agreed, will exercise a decisive influence on the working of our railways in the next few years. The railways, as everybody knows, are the lynch-pin of the second Five-year Plan. In spite of this, however, the Planning Commission could allocate to them only Rs. 1,125 crores as against Rs. 1,400 crores which the Railway Board had asked for. It is, therefore, feared that, with this reduced amount, the railways may not be able to handle all the traffic that will be generated during the second Plan period. The certainty about the inability of the railways to handle all the traffic that would be offered to them has been highlighted by the recent report of the World Bank Mission. There is thus general agreement that transport bottlenecks may hamper our efforts to reach the production targets laid down in the second Plan. This has thrown a challenge to the Ministry of Railways which must put their shoulder to the wheel, boldly and wholeheartedly, and direct all their energies to the fulfilment of the great task allotted to them.

Naturally, commonsense should dictate that all extensions of railway lines which are being undertaken, not primarily for the purpose of lifting the traffic that will be generated under the impetus of industrialisation given by the second Plan but rather as a concession to vociferous politicians who have sought to obtain a favour for their own particular areas, should be scrapped forthwith, and the money thus saved should be diverted to other directions where the railways would profitably utilise it to lift the additional traffic. An expansion of the railway system, where it is planned to meet a purely local demand or to satisfy the economic yard stock that no town or conglomeration of villages will be more than 100 miles away from a railway line, cannot obviously be financed at a time when there is such a stringency of funds. The use of scarce materials, the deployment of staff, the burden on administrative machinery—all these must be avoided at a time when the energy of a country should be bent towards meeting its unavoidable needs.

Immensity of the Task

If a region has been without a railway line for 100 years, nothing calamitous can happen if it is not provided with it for another five years; but, if bottlenecks are caused by increased inability to undertake the necessary measures for want of funds, the whole plan for the rapid industrialisation of the country, and for the uplift in the standard of living of the people may be jeopardised. Similarly, if there is administrative failure, even though the men and materials are available, then railways can be taken to task for hamstringing a country-wide effort in achieving the nation's goal.

The Railway Board, therefore, must decide, first, to utilise the limited financial resources allocated to them most economically and efficiently to increase the capacity of the railways by adding to the rolling stock and by widening the bottlenecks; and, secondly, they must try to concentrate all their energies on improvement of the operational efficiency of the railways. In fact, it has been urged that a substantial improvement in operational efficiency is imperative, in order to enable the railways to bridge the gulf between the estimated requirements during the second Five-year Plan period and the actual allocation of funds for the various programmes of rehabilitation and expansion.

It is, in this context, that the amazing claim has been made by the Railway Board that, in order to increase operational efficiency and to improve administration in general, the divisional system is being brought in on all the railways which have been run on a departmental system. It is claimed that the divisional system, based on the principle of decentralisation, will ensure better co-ordination at lower levels and help improve operational efficiency to a considerable extent.

Before examining this claim of the Railway Board, it is necessary to describe the two systems. Accordingly, a brief outline of the two systems of organisation is given below:

A railway organisation, having widely varying activities and conducting them in many places, can divide its work in two different ways, namely, functionally and regionally. That is to say, all the activities of the undertaking are first classified and grouped and each group of activity is entrusted to a set of officers whose education and training have suitably equipped them for the discharge of their particular functional responsibilities. Then, the area in which the undertaking operates is divided into regions of a size that one functional officer can efficiently discharge his functional responsibility throughout one region.

Next, an organisational system has to be so contrived as to ensure that the work of all these officers can suitably be directed, co-ordinated and controlled. This can be achieved by a General Manager as the Executive Head, assisted by a group of functional advisers. Efficient co-ordination between these officers at the headquarter and those working in the regions may be secured by two different methods of organisation.

The first is departmental organisation, in which each regional officer is directly responsible to the chief officer of the particular functional department at the headquarters. The second is the divisional organisation, in which a divisional superintendent is appointed for each region to whom all regional officers in his region are responsible. The divisional superintendent in turn is directly responsible to the General Manager and his principal officers as the chief functional advisers.

Merits

Now to examine their merits. Fortunately, our work has been made easy by the Railway Enquiry Committee of 1947 which made a careful study of the working and of the operational efficiency of both these systems. The Committee found that the speed of goods train in miles per hour was definitely better on all railways with a departmental system. The same was also generally true of other activities as well, except under 'locomotives awaiting repairs' where the divisional railways made a good showing. The Committee felt that it was difficult to draw any firm conclusions as to whether good or bad performance of a railway was primarily due to its organisation. Nevertheless, it was of the view that, from the general trend of available data, it was apparent that, whatever the reasons might be, the railways organised on a departmental basis had generally produced far more satisfactory results than those run on divisional lines.

The Committee also expressed the view that, under the departmental system, the Divisional Officer, with a smaller beat and residing well within it, had a more direct control over, and intimate contact with, his staff, the result being a better standard of discipline and efficiency, as compared with the conditions on a railway worked on a divisional basis. The pressing need at present being constant contact between the officers and the men, the departmental system, the Committee felt, would appear to be superior to the divisional system. Even the then Railway Board, which was consulted by the Committee, was of the view that the divisional system had not necessarily produced better results.

In the face of such an adverse verdict against the divisional system, the latest decision of the present Railway Board is, indeed, a bold one. It is true that eight years have passed since the Committee came to its conclusions and much water has flown under the bridge since then. Conditions might have changed during this period and the Board might have felt that the divisional system would yield better results now. It is, however, difficult to share this confidence of the Railway Board, because, first, the wisdom of the past embodied in the proverb warns one against 'change of horses in mid-stream'; secondly, the Railway Board on its part has not tried to convince the public that the divisional system is equally, if not more, efficient, as the departmental system and that the present time is opportune for this change of system. Had its decision been endorsed by an expert committee, it would have given added strength to its case and helped to remove doubts born of the observations of the 1947 Enquiry Committee.

No Concrete Proof

Thus, on the one hand, there is no concrete proof to justify the conclusion that the divisional system on our railways will be as efficient as the departmental system; on the other, there are many reasons to fear that its introduction at the present juncture will adversely affect the efficiency of the railways. In the first place, this changeover will create a host of administrative problems. It is well known that the Divisional Superintendent has to be an all-rounder, if the system is to function efficiently. Such men, however, are not born but have to be trained over a period of time. They will not, therefore, be available in sufficient numbers in the initial and the most critical period. The Divisional Superintendents will be only specialists in one of the branches of the railway operation and, given the best efforts and intentions on their part, they may not prove equal to the tasks they are called upon to shoulder. Operational efficiency will, therefore, be the first victim of this change. Secondly, severe dislocation and, therefore, loss of efficiency are bound to be caused by wholesale transfer of administrative and technical personnel. Already, notices of strike have been served by the local unions from a number of centres and, if, unfortunately, strikes do take place, they will seriously hamper the working of the railways. Thirdly, wholesale transfers will also create the problem of rehabilitation which will direct the attention and the energies of the top officials from the urgent task of lifting the ever increasing volume of traffic. Lastly, wholesale transfer of administrative and technical personnel will impose a psychological strain on those who are so uprooted; their efficiency is, therefore, bound to suffer.

For these reasons, it is to be earnestly hoped that the Railway Board will re-examine its decision to introduce the divisional system at the present moment and that it will not allow its sense of prestige to stand in the way of the larger national interests which demand that the railways must utilise their limited resources in the most efficient way and help the country to reach the targets of increased production.

The Government is considering a proposal to set up a metre-gauge coach manufacturing factory round about Bareilly in Uttar Pradesh. This was revealed in Parliament by Mr. Shah Nawaz Khan, Parliamentary Secretary to the Railway and Transport Minister. Replying to a question on the cost of coach building, he said that the cost of a coach manufactured in Perambur coach factory was Rs. 180,000 plus Rs. 60,000 for furnishing, while that of coach produced in the Hindustan Aircraft factory was approximately Rs. 140,000. According to him, the Government had made arrangements for meeting the requirements of 6,156 broad-gauge and 4,786 metre-gauge coaches for the Indian Railways during the second Plan period.

The mariner and the marabou

WE have nothing against the Leptopilus Marabou. In fact, we can't but admire his magnificent detachment from the world's worries, his ability — if not to rise above it — at least to look above it.

But let's face it — a marabou is not a packageable item. Catch him with both legs on the ground, and you have some hope. Grab him when he's contemplating and you're faced with a sort of isosceles triangle, topped off with a lot of (very pretty) cotton wool. So we gulped a little when a Japanese naval officer asked us to send his latest acquisition after him. (Marabous hate sea voyages — the horizon keeps moving up and down.)

Maybe you are thinking of sending something to Japan? If you are, don't forget we fly twice a week to Tokyo — and whatever you send takes just 24 hours to get there.

Marabous and mica, mangoes, mice and machinery — Air-India International's Cargo Department handles them all. Let's hear from you.

Cargo by air:
* saves money on insurance
* gets goods on the market quickly
* involves less tied-up capital

WORLD BANK MISSION ON ECONOMIC PROGRAMMES AND POLICIES

PRIVATE SECTOR SHOULD BE GIVEN ADEQUATE RESOURCES AND INCENTIVES

[In view of the numerous enquiries we have received from our readers, asking for a copy of the full text of the report of the World Bank Mission on the second Plan and the economic policy of the Government, we publish on these pages the observations of the Mission in full, even though we have already made fairly detailed references to it in our issue dated 4th August 1956. Strictly speaking, it is not correct to call it a report; it is more a memorandum than a detailed report. This memorandum was submitted to the Finance Minister, Government of India, on 30th June 1956, on a personal basis, in response to his and his colleagues' request, expressing an interest in receiving the views of the economic Mission. As the Chief of the Mission, Mr. Thomas H. McKittrick, says in his covering letter to Mr. C. D. Deshmukh, the then Finance Minister, the observations contained in the memorandum are only those of the Mission and do not reflect the views of the Bank's management. The Mission will shortly be submitting a separate detailed report to the World Bank for the latter's information and use. While it is possible that a copy of this report may be sent by the Bank to the Government, there is no likelihood of it being made available to the Press and the public.—ED.]

THE Mission has been very much impressed by the progress made in India during the last five years. This progress is not susceptible of expression purely in terms of rising national income and improving conditions of life. It is reflected also in intangibles—a new buoyancy and hope, a new confidence, and an awakening desire for self-improvement, all of which will help to give momentum to a continuing development programme. Moreover, it is evident that development is not considered simply a process planned and carried out by the Government, but one which is enlisting the participation and mobilising the energies of the people through the community development programme and similar measures. This is a sound and democratic approach.

We are convinced that there is still a large economic potential in India which will make possible a gradually accelerating advance in both industry and agriculture. The rate at which this potential can be realised depends as much on the development of the capacities of the Indian people as on the volume of investment.

In general, we have been impressed by the intelligence and thoroughness with which development programming in India is being carried out, as well as by the understanding shown of all of the problems involved. Wherever we have been, we have found little inclination to complacency and a widespread receptivity of constructive criticism. Taking advantage of this spirit, the Mission would like to record some critical observations which it is making entirely on its own initiative and without in any way engaging the responsibility of the Bank.

Too Ambitious

We believe that the second Five-year Programme is somewhat too ambitious. While realising that the size of the Plan must be such as to capture the popular imagination and to challenge the country to greater efforts, the targets must at the same time be sufficiently realistic to avoid the adverse psychological effects resulting from a marked failure to accomplish them. The Plan seems too large in relation both to the administrative and technical resources and to the financial resources likely to be available on even the most sanguine assumptions. Having, however, now committed itself to the Plan and the targets in it, the Government must henceforth concentrate on widening the administrative, technical and financial bottlenecks, on the one hand, and prepare itself to make such timely adjustments in the programme as circumstances may require.

The administrative sphere, we understand that the Government is fully seized of the problems involved and has recently received a report from a foreign expert on public administration which points the way to certain administrative reforms designed to expedite the transaction of public business. In this connection, we would lay great stress on the need to have the various Ministries charged with carrying out development make prompter, more frequent and more up-to-date reports on their actual development expenditures and the physical progress of projects under their jurisdiction. We are struck by the fact that data on actual expenditures are now several years in arrears. Only by having up-to-date progress reports at their command can the Cabinet and the responsible Ministers take timely action to anticipate and remove developing bottlenecks and keep progress in all sectors in balance.

We fully appreciate the emphasis laid on flexibility in the Plan and on the need for year-by-year programming within the broad framework of the Plan in the light of changing circumstances. While realising that significant adjustments can be made only in connection with the preparation of the annual Budgets, we would urge that prompt and continuing attention be paid to planning in advance the type of changes which can be made without creating serious imbalances in the programme. In such advance planning, a distinction would obviously have to be made between the adjustments required by a shortfall in foreign exchange resources and those made necessary by a failure to mobilise sufficient domestic resources. The need for flexibility in planning is all the greater in an economy which is still largely agricultural, and where marked fluctuations in the agricultural output, owing to variation in the incidence and distribution of rainfall, are bound to recur. Past experience, and particularly experience in the last year, has demonstrated that even small changes in the harvest produce disproportionately large changes in the availability of food to the market sector of the economy and correspondingly large fluctuations in food prices and in imports. The Government has rightly stressed the importance of maintaining stability in the prices of foodstuffs, which represent such a critical portion of the people's consumption. In this connection, we wonder whether it would not be appropriate for the Government to consider raising the target of foodgrain buffer stocks which are necessary to keep the price of food more stable in the interest of avoiding urban unrest.

Financial Sphere

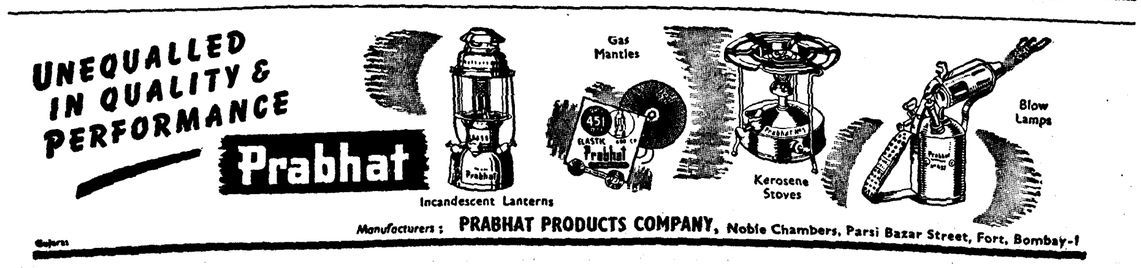
In the financial sphere we would urge (a) considerable caution in resorting to deficit financing, (b) a greater emphasis on raising more revenues through the adoption of more realistic pricing policies for the services and benefits rendered by Government to the people, and (c) care in raising the additional taxation required to avoid such increases as might seriously impair the incentives of, and the resources available to, private business. While we recognise that a certain measure of deficit financing may well be necessary to make money supply fully responsive to the needs of an expanding economy, the measure of such financing proposed in the Plan will produce an expansion of money supply considerably exceeding the requirements of the economy. Quite apart from the possibility of raising more tax revenue, we believe that there is still considerable scope for increasing Government income by raising railway rates, charges for power and water and, in some cases, port charges. In view of the great need to capture a considerable portion of the rise in national income for reinvestment, it is necessary to make certain Government enterprises, particularly those in the field of power, irrigation and transport, earn larger surpluses. In raising more taxes, we think it important that the Government avoid an all-out effort to increase direct taxation just for the purpose of achieving public investment targets, if this can be accomplished only at the risk of substantially impairing the resources and incentives of the private sector; for the latter, as we shall later point out, is still expected to contribute the lion's share of the anticipated rise in national income.

We are deeply concerned about the transport situation. As we travelled about the country, we were impressed again and again by the inability of the railways to cope with the existing traffic, and by the congestion in the ports, which was itself partly due to inadequate rail facilities. While the Plan contemplates a substantial increase in railway investment, and port congestion is being relieved to some extent by expansion of physical facilities and the introduction of incentive schemes for stevedoring labour, we are by no means fully assured of the adequacy of these measures. We urge that the Government review its whole transport policy and programme with a view to maximizing transport by all available means—by rail, roads, coastal shipping and inland waterways. While we are unable to suggest in detail how this might be accomplished, we consider it important that both the level and structure of railway rates be revised promptly so as to provide more incentive for the utilisation of other means of transport. We are inclined to discount the objection that an upward revision of rates would impose an excessive burden on the economy, because there is no justification for maintaining rates at economically unrealistic levels, particularly if these result in a transport bottleneck which would make it impossible to achieve the production targets of the Plan. Nor are we impressed by the fact that, on the present system of accounting, the railways are already earning a substantial profit; it is clear that the provision made for depreciation in the past has been quite inadequate to meet replacement needs in full and we feel that the railways ought to be financing a much larger proportion of their current development programme out of their own resources.

How to Overcome Transport Difficulties

As additional measures to overcome transport difficulties, we would suggest that the Government consider: (a) more energetic measures to remove State and inter-State restrictions on road transport; and to reduce tax rates bearing on road transport; (b) greater emphasis on the use of special wagons for the movement of coal and ore and on the establishment of fully mechanised loading and unloading facilities, in order to reduce the time during which such capital-intensive facilities as railway wagons and ships are kept immobilised; (c) the possibility of changes in the present system of allocating coal wagons to the collieries on a day-to-day basis; (d) examination of the feasibility of a fully mechanised coal and ore port on the West bank of the lower Hooghly, in order to relieve congestion in Calcutta and as a possible alternative to the plan for the expansion of ore exports through Visakhapatnam; and (e) lifting, at least for a time, the prohibition on the chartering of coastal vessels so as to increase the carrying capacity of the coastal fleet.

Above all, we urge that every effort be made to improve the operating efficiency of the railways for which there is apparently still considerable scope. While it is tempting to meet the developing railway bottleneck by still greater investment, the prospective shortage of resources makes it imperative to resist this temptation as far as possible and to exhaust all possible means of improving efficiency, especially in view of the already large foreign exchange requirements of the railway programme. We realise that the Railway Board is aware of this problem and has engaged a team of American experts to devise various ways and means of coping with it. We trust that the team's recommendations will receive full consideration, and that it will be given every opportunity to suggest improvements in operating procedures and methods which will economise on the investment required. We appreciate that changes in established procedures can only be introduced gradually, and that the necessary retraining of staff will be a long process. But the great progress made in recent years in the application of modern techniques to Indian industry encourages us to believe that on the railways, too, significant results could be achieved even within the period of the Second Plan by the adoption of more efficient and up-to-date methods of operation.



Cottage and Small-scale Industries

We have substantial doubts about some parts of the Government's programme relating to cottage and small-scale industries. We fully endorse the Government's effort to raise the efficiency and standards of these industries, and we sympathise with the Government's concern to increase employment opportunities. We also understand the practical necessity of providing moderate subsidies to enable these industries to compete with factory enterprise, at least until modern industrialisation has made greater advances in India. In particular, we consider the programme for the promotion of small-scale industries, as distinct from village (or hand) industries, to be soundly conceived and calculated in the long run to encourage a healthy dispersion of industrial ownership. At the same time, we think that the difficulties inherent in an effective expansion of small enterprise are considerably underestimated, that the impact of the programme will be slow in manifesting itself, and that, therefore, the contribution to national income expected from small-scale and village industries under the Plan is probably substantially overestimated. Above all, we question the wisdom of insisting on so-called "common production programmes" whereby the required increase in output of more or less essential consumer goods is allocated between the factory and non-factory sector, thus involving excessive reliance on the unproved ability of the non-factory industries to meet the necessary demand.

Textile Policy

In this connection, we have especially serious misgivings about the recently announced compromise for meeting the expected increased demand for cotton textiles. We believe that this compromise will prove largely unworkable. In our frank judgment, it greatly underestimates the practical difficulties of installing and getting into operation the requisite number of Ambar Charkhas and powerlooms on a decentralised basis. We question, too, the feasibility of making the installation of automatic looms in the mill sector conditional on the allocation of the output of these looms to exports and of making the failure to meet this condition subject to a penalty, the nature of which appears to be unspecified. We are even inclined to doubt that the mills will have adequate incentive to install the additional spindles necessary to supply a much greater quantity of yarn to the handloom sector, in view of the uncertainty that the handloom sector will really be capable of producing the increased production expected of it; the fact that the existing quota for spindles has apparently not been taken up in full appears to bear out our misgivings.

We understand that the Government is prepared to review this programme if experience indicates that the hand-spinning and decentralised weaving sector does not live up to expectations, but we fear that the necessary remedial action might well come to late in view of the time required to procure and install mill machinery and to reach a concensus that the programme has really been a failure. We, therefore, believe that the current programme will either jeopardise the supply of an essential consumer item at reasonable prices on the domestic market or bring about a serious curtailment of exports at a time when prospective export earnings appear already far short of what is required. We understand the need for Government measures to support the production of *khadi* and handloom cloth by various measures, but we believe that any such measures should leave the mill sector free to expand in the light of its own judgment of markets.

For all the assurances we have received to the contrary, we remain unconvinced that sufficient attention is really being given in the Plan to the promotion of exports. Quite apart from the harm which may be done to exports by restrictions on the output of cotton textiles, we believe that more could, and should, be done actively to assist exports in other fields. It is our impression, for instance, that tea exports are being adversely affected by inadequate facilities for transport to Calcutta, by shortage of coal on the tea estates, by constant pressure for higher wages, bonuses and improved social amenities and, on some of the more progressive estates, by the restrictions on re-planting. These are all matters which can, in varying degrees, be influenced by the Government, and we feel that the Government has not always used its influence in the way best calculated to foster the competitive power of this vital export industry. We would urge, too, that greater emphasis be placed on the production of other cash crops for export, particularly vegetable oils and cotton. In this connection, we respectfully suggest that the policy of imposing restrictions on exports of commodities such as groundnut oil, in order to conserve supplies for domestic consumption, is generally a misguided one, and that it will usually be in the best interests of the economy to allow producers to export whatever they can.

Private Enterprise

The importance of private enterprise in the continuing economic development of the country is another factor which we would like to stress. We appreciate that the Second Five-year Plan offers an opportunity for the "co-existence" and simultaneous expansion of both the public and private sector and we have noted with gratification that the Prime Minister and other responsible Ministers have emphasised the need for private enterprise. Nevertheless, we believe that the importance of private business has not yet been sufficiently recognised and publicised. The record bears out the fact that private enterprise has performed creditably during the last five years with respect to both investment and production. In the organised sector of manufacturing and mining, private business has contributed 90 per cent. of the increase in net output during this period. Owing to the capital-intensive nature of much of the contemplated public investment in industry and mining during the Second Plan, Government plants and mines are expected to contribute only 29 per cent. of the anticipated increase in net output of mining and manufacturing, as compared with a 54 per cent. share in the total planned investment. On the other hand, private business in this sector is expected to account for 71 per cent. of the rise in net output. Considering the probability that the village and small-scale industries may fall considerably short of the targets set for them by the Plan, the importance of the organised private sector becomes even more evident. It is, therefore, vital that the private sector be given adequate incentives and resources to enable it to make its requisite contribution.

We recognise that the Government has assisted, and is continuing to assist, private business financially and in other ways, and that the Government is also providing basic facilities and an expanding market for private business through rising expenditures on development. Under favourable circumstances, there is no reason why private business should not continue to expand to the benefit of the whole economy. From its numerous conversations with Indian businessmen in all parts of the country, the Mission became convinced that private business is definitely "expansion-minded", that it still has sufficient incentive to forge ahead, and that a substantial increase in investment is currently taking place.

Foreign Capital

We wish to add one final observation regarding private foreign enterprise and capital. At this stage of development, India certainly needs the contribution which can be made by foreign technology, private capital and management. The Plan itself counts on private foreign investment to an amount of Rs. 100 crores. It is evident, however, that this target is impossible of attainment, unless positive measures are taken to encourage and facilitate foreign investment and enterprise. At present, the attitude of both the Government and Indian business towards foreign capital and management is too negative and grudging and can at best be regarded as tolerating rather than encouraging foreign participation. In the post-war experience of many countries, there are striking examples of the constructive contribution which foreign capital and enterprise has made to national welfare. In India, foreign or joint Indian-foreign ventures can have a useful leavening effect on the economy. In our opinion, Indian business has in recent years been excessively shielded against competition from abroad and from foreign-managed ventures capable of operating in the Indian market. More competition from both sources is likely to improve the quality of Indian manufactures, which, in many respects, is still too low, and to inculcate in Indian business an attitude which will put more emphasis on expanding output at lower unit costs and profits.

There is evidence that foreign enterprise will be attracted to invest in a large expanding market, provided the investment climate is made more favourable. In our opinion, the Indian Government should make a determined effort to enlist foreign capital and management for new ventures. We urge that a single agency or department be made responsible for publicising the opportunities for participation by foreign capital and for expediting all necessary approvals and clearances for foreign investors. We would suggest also that the National Industrial Development Corporation, which has been established to fill the "gaps" in India's industrial structure, make every effort to invite the participation of foreign as well as Indian private capital and management in any new ventures which it regards as feasible. In this connection, we believe that further consideration will need to be given to the whole question of the taxation of foreigners working in India, particularly in respect of perquisites. We recognise that the Government has given sympathetic consideration to representations made by the foreign business community following the 1955 Budget, and that certain concessions have been made—for instance, over passages. We are aware also of the three-year tax exemption granted to foreign technicians. But we doubt whether these concessions go far enough to make a career in India reasonably attractive to the senior staff of foreign firms, and unless firms can find members of their staffs ready to work in the country, we fear that the full opportunities for foreign investment may not be realised.

We sympathise with the desire of the Government to have joint Indian-foreign ventures rather than wholly foreign-owned enterprises. At the same time, we believe that this desire should not be pushed so far as to deprive the foreign investor of an effective share in the management of the enterprise without which he is unlikely to risk his capital. In our view, for example, it would be a mistake to insist on such a measure of Government participation in the exploitation and development of oil resources as to discourage foreign oil ventures and saddle the Indian economy, which is already short of capital, with the excessive burden of finding the large amounts of capital which are necessary for an effective programme in this field.

The observations which we have made should not be regarded as detracting from our general approval of the broad outline of development which India proposes to follow. They are offered only in the confidence that the Government fully appreciates a frank outside appraisal of its development programmes and policies.

EXPORT CREDIT INSURANCE

COMMITTEE RECOMMENDS SETTING UP OF RS. 5-CRORE CORPORATION

THE Export Credit Guarantee Committee, (Chairman: Mr. T. C. Kapur) appointed last year by the Government of India to investigate the question of export credit insurance scheme for India has submitted its report to the Government. The Committee, it may be recalled, was asked (1) to examine the nature and scope of export credit guarantee scheme, and (2) to make recommendations in regard to (*a*) the nature of the risks to be covered, (*b*) the basis on which premia should be fixed, (*c*) the structure of organisation that will be required for the implementation of this scheme, and (*d*) any other matter necessary for the implementation of the scheme. The broad principles of the scheme which the Committee has recommended appear to be unexceptionable. The main feature of the Committee's recommendation is that the Government should set up a State-owned Export risks insurance corporation, with a capital of Rs. 5 crores, to operate a scheme of voluntary export credit insurance scheme. The Committee has emphasised that the scheme should be implemented without delay, in view of its importance as an export promotion measure.

Making out a case for instituting a scheme of export credit insurance, the Committee has expressed the view that such a scheme is an important export promotion measure. It has adduced certain additional reasons for starting the scheme. These are: (*a*) The demand for credit terms is being made for all exports and is likely to increase even for traditional exports such as jute fabrics, tea, minerals, and cotton textiles. (*b*) More small and medium-sized firms are coming into the export business and this class of firms has a great need for insurance. (*c*) Export credit insurance makes export finance facilities more readily available. (*d*) Insurance helps the exporter to develop new markets. (*e*) Competition from exporters from other countries having insurance facilities can be met if, other things being the same, Indian exporters are placed in a similar position as their competitors in regard to credit insurance. (*f*) There is a pressing need to earn foreign exchange. The majority of members of the Committee have proposed that the scheme should be worked as a voluntary basis for a reasonable period. Mr. S. C. Roy, a member of the Committee, in a minute of dissent, however, has proposed that the scheme should be made compulsory forthwith. The majority view is that, if, after the facilities of the organisation have been available for a reasonable period, a request is made by a substantial section of any particular trade that all exports on credit basis should be covered by the scheme, their request should be examined. Where all exports of a particular trade are insured, a rebate in premium rates of 15 per cent. to 25 per cent., it is stated, should be possible. Similar arrangements might be made, if the Government is satisfied that the use of credit insurance by all exporters of a particular commodity is in the interests of the export trade as a whole and of the individual trade concerned.

Risks

Both commercial and political risks, including any cause not being within the control of the exporter or of the buyer, are recommended to be covered. In the case of commercial risks, the Corporation should cover 80 per cent. of the risks and in the case of political risks, 85 per cent. For promotional policies, 50 per cent. of unrecouped expenses should be insured. Among the risks which are beyond the exporters' control and which arise in India, only export control risk is to be covered. The Committee has also recommended that risks involved in exports on consignment basis or for exhibition at an overseas fair, moneys due from services rendered and development of foreign markets should be covered. Repudiation, exchange fluctuation and devaluation risks will not be covered. The exporter may wish to insure the pre-shipment risks as well. This means that insurance will commence at an earlier date and the period for which the risks will be covered will be longer than that for which post-shipment risks are covered. Pre-shipment risks are to be covered for a period of four months preceding the date of shipment. Post-shipment risks in the case of raw materials will be covered for three to four months, consumer goods up to six months, light capital goods up to two years and capital goods up to three years from the date of shipment, provided, where risk of more than six months is to be covered, certain essential conditions will have to be satisfied.

The exporters, according to the Committee, should normally be required to insure all their exports of the trade in a period of twelve months. In special cases, however, exclusion of export to any one or more countries may be agreed to, provided, in the opinion of the Corporation, what is left after this exclusion allows a proper spread of risks and provided also the exporter agrees to pay an additional premium. Exporters dealing in goods which belong to more than one trade should be allowed, in appropriate cases, to insure only a substantial group of exports which come under a single reasonable category. The exporters will have the option to insure both the commercial and political risks together or only political risks.

Premium Rates

As regards premium rates, it is pointed out that, in fixing them, all relevant considerations should be taken into account. These considerations include the types of risks and their causes, the markets to which the goods are exported, the types of goods, the period for which the risks are covered, the past experience of the exporter and the spread of risks offered by him for insurance and the expenses of management. The Committee has recommended that, for purposes of fixing premium rates, the countries should be classified into six groups and commodities into three groups. It has also recommended that the scheme should be worked on a no-profit-no-loss principle and that the premium rates should be kept as low as possible.

The Committee has laid down a schedule of maximum periods for settlement of claims. In the case of insolvency of the foreign buyer, claims should be paid as soon as the buyer is adjudged insolvent and in that of c.i.f. and diversion risks on proof of loss being finished. Claims in respect of promotional policies should be settled within sixty days after the final audited accounts are finished and in respect of those of default and transfer risks six months after the due date. In all other cases, the claims should be settled within six months after the date of the event which is the cause of the loss. Recoveries made after payment of claims should be divided between the insurer and the insured in the same proportion in which they carry the risks. In order to infuse confidence in the minds of exporters, the Committee has suggested that every policy issued by the Corporation should carry a Government guarantee. Premiums, as well as claims, it is suggested, have to be paid at the rate of exchange effective on the date of commencement of the risk.

The capital of the Corporation, as stated at the outset, will be Rs. 5 crores, of which Rs. 50 lakhs will be paid up. The Committee believes that, with such a capital structure, the Corporation would be able to carry at any time a risk up to Rs. 50 crores which is considered to be the maximum that could be achieved by the end of the first five years. The registered office of the Corporation will be at New Delhi though it may open branch offices at different centres. The management of the affairs of the Corporation, it is recommended, should vest in a board of directors, consisting of seven members, including either a whole-time chairman or a whole-time managing director. The directors may delegate powers for day-to-day administration to the principal officer, whether he be the chairman or the managing director.

Among other recommendations, made by the Committee, mention may be made of the following:

(1) Since premium rates are to be kept confidential, if any rule or regulation requires an exporter to show the premium paid separately in any return or statement, suitable amendment should be made to such rule or regulation. (2) The export credit insurance organisation being a non-profit making concern, reserves built up by the Corporation should not be treated as profit in the commercial sense and should not be made liable to income-tax. For this purpose, necessary legislative or administrative action should be taken. (3) The premiums paid by an exporter to the Corporation should be an allowable deduction for the purposes of income-tax. (4) The Corporation should become a member of the *Union D'Assureurs Pour Le Controle Des Credits Internationaux* (Union of Insurers for the Supervision of International Credits).

A notable feature of the Committee's report is that it envisages the association of non-official representatives at different levels in the working of the Corporation. It recommends that an advisory council consisting of not more than 21 members representing the export trade, banks engaged in financing exports, export promotion councils and commodity boards, should be set up. The Council will advise the Corporation regarding the insurance needs of the export trade, the changes taking place in the export trade and the steps to be taken to provide for new conditions. Two of the Corporation's directors should be elected by the Advisory Council. Again, as and when branch offices are set up, there should be local advisory boards to help and advise such branch offices.

EXPUNCTION OF REMARKS ON COMPTROLLER

The Speaker of the Lok Sabha, Mr. Ananthasayanam Ayyangar has ordered the expunction of certain remarks on Comptroller and Auditor-General made by the ex-Finance Minister, Mr. C. D. Deshmukh in the course of the debate on Life Insurance Corporation Bill. It may be recalled that in the Bill (as in the Act now) no provision was made for audit of the Corporation by the Comptroller and Auditor-General. At the time the Bill was being debated by the Lok Sabha, a note, which the Comptroller is said to have circulated among the members, criticised the exclusion of his jurisdiction over the affairs of the Corporation. The Finance Minister defended his decision and revealed that, when he took the initiative in suggesting nationalisation of life insurance to the Cabinet, he had said that he would not recommend the course if the Corporation was to be audited by the ordinary audit machinery. He also took strong exception to the note which had been circulated among the members. It was then that he made the remarks which are now to be expunged from official records. The order of the speaker said:

"I have received a representation from the Comptroller and Auditor-General that certain references to the office of the Comptroller and Auditor-General made by the Finance Minister during the debate on the Life Insurance Corporation Bill on the 21st and 22nd May 1956, might be expunged from the records as being derogatory to the dignity of his office. I have carefully gone into the matter, as also the relevant debates. I am of opinion that certain expressions, which I reproduce below, are unparliamentary and may not have been used with reference to the Comptroller and Auditor-General who is a high dignitary under the Constitution and who is expected to conduct on behalf of Parliament an independent audit of public transactions.

"The words to be expunged are: (I) 'Shall we say, in desperation.' (II) 'The Comptroller and Auditor-General should be like a ghost haunting the debates of the House.' (III) 'Certainly, as the Hon. member said, if the Comptroller and Auditor-General wanted to proclaim his views from the housetops, there was nothing to stop him. But, that is precisely what he failed to do. He did not go to the housetops, but he went to the basement in order to circulate these notes—that is my objection on the ground of constitutional propriety.'"

In the Lok Sabha, a reference to this order was made during question-time. One member wanted the Speaker to let the House know the procedure to be followed in a matter of this kind. The Speaker replied that he had ample powers to exercise his discretion in expunging portions of speeches made in the House.

HYDERABAD UNITED INSURANCE CO., LTD.

A slight increase in the aggregate net premium income from Rs. 3.40 lakhs to Rs. 3.71 lakhs denoting a certain expansion in business is the feature of the working of the Hyderabad United Insurance Co., Ltd. (General Manager: Mr. H. D. Mehta, Hyderabad, Deccan), during the year ended 31st December 1955. With no appreciable change on the claims side, the profit for the year stands slightly higher at Rs. 80,353 as against the previous year's Rs. 27,922.

An analysis of the working of individual departments shows that the net premium income of the fire department has gone up from Rs. 2.38 lakhs to Rs. 2.80 lakhs. Claims paid and outstanding have not been quite favourable in that they have increased from Rs. 47,780 (20.6 per cent. of the net premium income) to Rs. 70,737 (25.2 per cent.). After raising the reserve for unexpired risks and additional reserve from Rs. 1.19 lakhs to Rs. 1.40 lakhs, the profit for the year amounts to Rs. 44,603 as against Rs. 51,494. The net premium income of the miscellaneous department has fallen from Rs. 75,283 to Rs. 63,741. The loss ratio which had sharply shot up to 62.4 per cent. from 23.5 per cent. in 1953 declined to 45 per cent. The reserve for unexpired risks and additional reserve amount to Rs. 31,870 as against Rs. 37,642 made in the previous year. With a lesser claim and a smaller provision for reserve, the department has recovered from a deficit of Rs. 33,349 to a profit of Rs. 3,410. The net premium income of the marine department has staged a minor increase from Rs. 26,400 to Rs. 26,962 and the losses have been slightly lower at 44.3 per cent. as against 52.8 per cent. The reserve for unexpired risks has been maintained at 100 per cent. and even with that, the department has been able to make a profit of Rs. 9,093 as against the previous year's loss of Rs. 9,722.

The reserve for bad and doubtful debts has received Rs. 20,000 as against Rs. 9,919 and the taxation reserve Rs. 25,000 as against Rs. 5,000. The surplus left to be carried forward is Rs. 9,883 as compared with Rs. 12,991 brought in.

The Company's paid-up capital stands at Rs. 10.81 lakhs supplemented by reserves and surplus amounting to Rs. 3.62 lakhs, inclusive of a fire fund of Rs. 1.40 lakhs, marine fund of Rs. 26,961, and miscellaneous fund of Rs. 31,870.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Ordinary General Meeting of the Company will be held on THURSDAY the 20th September 1956, at the Mysore Chamber of Commerce Buildings, Kempegowda Road, Bangalore City, at 3 p.m. to transact the following business:

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1956 and the reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

(i) Capt. Rao Bahadur A. Thangavelu Mudaliar, one of the Directors, who retires by rotation under Article 109 of the Articles of Association of the Company and is eligible for re-election will be 69 years of age at his next birthday on 6th October 1956 and a resolution that the age limit prescribed in Section 280 of the Companies' Act of 1956, shall not apply to him is necessary.

Special Notice of the following resolution for exempting him from the age limit as required by Section 281 is hereby given.

"RESOLVED that Capt. Rao Bahadur A. Thangavelu Mudaliar who has completed 68 years of age be and is hereby re-elected a Director and that the age limit prescribed under Section 280 of the Indian Companies Act, 1956, shall not appply to him."

Explanatory statement is annexed to the Notice posted to the Shareholders separately.

Note.—Special Notice signifying intention to move the above resolution has been received from a shareholder.

(ii) To appoint a Director in place of Sri V. T. Padmanabhan who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.

(iii) To appoint a Director in place of Sri K. Subbarao Ramaswamy who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.

4. To appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 7th September to 20th September 1956, both days inclusive.

NOTE.—A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and **a Proxy need not be a member of the Company.**

By Order of the Board,

C. V. RAMACHANDRA RAO,
Secretary.

23rd *July* 1956.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
P.B. 570, GANDHI NAGAR P.O.
BANGALORE-9.

N.B.—The Board of Directors have recommended payment of Dividend at 6¼ per cent. plus Bonus 3¾ per cent. or Re. 1 on every share of Rs. 10 for the year.

The Dividend when declared will be made payable at the Bank of Mysore Ltd., Bangalore, or its Branches on and after the 4th October 1956.

The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 7th September 1956.

NEW INDIA INVESTMENT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Ordinary General Meeting of the Shareholders of New India Investment Corporation, Ltd., will be held at the Registered Office of the Company, at 9, Brabourne Road, Calcutta, at 4-00 p.m., on Monday the 24th September 1956, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December 1955.

(2) To declare Dividends recommended by the Directors.

(3) To appoint a Director in place of Rai Bahadur Moongtu Lal Tapuriah, who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to provisions of Section 281 of the Companies Act, 1956, Rai Bahadur Moongtu Lal Tapuriah who has attained the age of 69 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To appoint and/or approve the appointment pursuant to Section 261 of the Companies Act, 1956, of Mr. K. P. Goenka, who was appointed a Director at the Ordinary General Meeting of the Shareholders held on 28th June 1955 and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the said Act, has been received by the Company and the relative explanatory Statement concerning which as required by Section 173 of the said Act, is annexed hereto.

"Resolved that Mr. K. P. Goenka, who is a partner in the firm of Messrs. Ramdutt Ramkissendass and is retiring under Section 261 of the Companies Act, 1956, and where as it is desirable that his valuable advices may be available to the Company, he be and is hereby re-elected as a Director of the Company."

(5) To appoint Auditors and fix their remuneration.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries.

CALCUTTA, 14*th August* 1956.

Notes.—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The transfer books of the Company will remain closed from 15th to 24th September 1956, both days inclusive.

(*c*) If the Dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 24 September 1956. The payments will be made on and after 1st October 1956.

EXPLANATORY STATEMENT

as required by Section 173 of the Companies Act, 1956.

To
The Shareholders,
New India Investment Corporation, Ltd.

Dear Sirs,

In conformity with the Companies Act, 1956, which came into force on the 1st April 1956, the following explanatory statements as required by Section 173 of the aforesaid Act, set out all material facts relating to the special business mentioned in notice dated 14th August 1956.

In respect of item No. 3 of the notice of the Annual General Meeting it is notified that Rai Bahadur Moongtu Lal Tapuriah who retires by rotation and is eligible for re-appointment, has attained the age of 69 years—hence he cannot be appointed as a Director of the Company—except by a special resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a Special Notice from a member notifying his intention to move the resolution as set out in the said item. Rai Bahadur Moongtu Lal Tapuriah has been a Director of the Company since its very inception and it is most desirable that the Company should continue to avail of his experienced guidance.

In respect of item No. 4 of the Annual General Meeting, a Special Notice has been received from a member of the Company as required by Section 261 proposing that the appointment of Mr. K. P. Goenka as Director be made and/or approved in accordance with the Provisions of the said Section.

Mr. K. P. Goenka has been a Director of the Company since 1943 and has been actively connected with the business of the Company and it is most desirable that the Company should continue to avail of his valuable advices by re-electing him as a Director on the Board of the Company.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-fifth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37 Chowringhee, Calcutta, on the 14th September 1956, for the following purposes:

1. To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.
2. If considered desirable to declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 28th August to the 14th September 1956, both days inclusive.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

9*th August* 1956.
VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA.

Notes.—The Dividend, if approved, will be paid on the 25th September 1956, to the Shareholders whose names are registered in the books of the Company on the 14th September 1956, or their mandatees.

Transfers received in order at the registered office of the Company by the 27th August 1956, will be in time to be passed for payment of the Dividend to the transferees.

Shareholders are requested to notify the Company immediately of any change in address.

A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Belapur Company, Limited, will be held at the Registered Office of the Company at Brady House, 12-14 Veer Nariman Road, Fort, Bombay, on Monday, the 10th day of September 1956, at 4 p.m., (S.T.) for the purpose of considering and if thought fit passing Special Resolutions and Ordinary Resolutions as detailed in the printed Notice already posted to all Shareholders of the Company.

By Order of the Board,

LIBERALISATION OF TRADE RESTRICTIONS

SUBSTANTIAL PROGRESS MADE LAST YEAR

A BRIEF survey of the principal trends that were witnessed during the past year in the field of international trade was made in these columns in our issue dated 23rd June 1956. Since then, however, the very comprehensive and neatly brought out annual report of the Contracting Parties to the General Agreement on Tariffs and Trade, popularly known as G.A.T.T. has been received. A study of the changes in the commercial policies of the various countries on which the chapter in the Report is very exhaustive and instructive, is of special significance, when viewed against the background of the efforts that are being made by such international bodies as the I.M.F. and regional bodies as the O.E.E.C. in the direction of freeing trade from restrictions. To India, which is participating in world trade on a rising scale, the developments elsewhere in the world constitute information of significant value. Accordingly, a review of these developments even after eight months of the period to which they relate, is of more than historical importance.

The year 1955 was notable for two main features in the sphere of international trade. In the first place, the ground covered in respect of liberalisation of the trade restrictions was being maintained—and, it may be relevant to recall in this connection the I.M.F.'s recent review of Exchange and Trade Restrictions (*vide* page *Commerce* dated 28th July)—and far from any general tendency towards any increase in the protective tariffs, some progress in liberalisation was noted in the spheres of import and export duties and quantitative restrictions. In the second place, the year saw the emergence of the U.S.S.R. and other East European countries as more active participants in world trade, especially with Asia, Middle East and Latin America. While, on the one hand, the binding of import duties entered into by the member-nations under the G.A.T.T. continued to give stability to a large part of their customs tariffs, on the other, additional reductions and bindings were negotiated in connection with the accession of Japan to the G.A.T.T. Besides, twenty-three contracting parties were also engaged in negotiations for further exchange of concessions. As for the rates of duty which were not bound under the G.A.T.T., the report states that the reductions appeared to be at least as important as the increases. Moreover, in a number of countries, where the establishment of industries was being encouraged there was a tendency to overhaul the tariff structure and to introduce higher duties, with the intention of eliminating administrative measures governing the movement of goods and of restoring most-favoured-nation customs tariffs. An equally important development during the year was the special measures taken by certain Governments to boost their exports. Consequently, fears were expressed in many quarters that any such widespread resort to incentives of various sorts would distort the pattern of trade and eventually hamper the development of international commerce.

Tariff Reforms

The year under review saw the continuation of tariff reforms in a number of countries, accompanied, generally, by either an upward or downward adjustment of protective duties, and changes in fiscal tariffs. In the countries of Europe, tariff reforms during the year took, broadly, the form either of adoption of the standard nomenclature approved in 1955 by the Customs Co-operation Council in Brussels, or of conversion of most tariff rates from *specific* into *ad valorem* or both. Chief among the countries that come under this category were France, Austria, Denmark and the Federal Republic of Germany.

In Brazil, on the other hand, introduction of the Brussels nomenclature was accompanied by higher rates of duty, especially on many luxury goods. In Central American countries, the distinctive feature, however, was that the tariff reform, as in the case of Nicaragua, Honduras and Costa Rica, was based on customs nomenclature (the so-called NAUCA) approved by the Central American States. The revision of the Nicaraguan tariff was meant to serve principally fiscal rather than protective purposes.

In Asia, tariff reform took the shape of increases in duties on luxuries and reductions on raw materials. Iraq, for instance, while replacing the League of Nations nomenclature with that of Brussels, reduced the rates on raw materials needed for industrial development. In Philippines, again, an extensive increase of the tariff rates to as much as 30 per cent. and in the case of some luxuries to even 30 times their former rates, became effective from 1st January 1956. Thailand, too, increased its import duties. A more significant development in Viet Nam was that, as a result of an extensive change in the tariff system, minimum rates were made applicable to imports from thirteen countries on a reciprocal basis, while imports from other countries were charged maximum rates which were twice as high as the minimum rates. In India and Pakistan, however, no noteworthy changes took place in the general level of their import tariffs.

Import Duties

A number of countries reduced the import duties on specified raw materials or semi-finished products in order to assist industrial development generally. Included in this category were Canada, Ceylon, France, Germany, India, New Zealand, the U.K., the U.S.A., and a few others. Many other countries, however, either reduced their import duties or completely removed them when the raw materials were intended for particular industries, especially those newly established. Apart from certain Latin and Central American countries, Iraq, Philippines, Rhodesia and Nyasaland adopted these measures. Certain other countries, as for instance, Ceylon and Greece, reduced the rates on farm machinery and raw materials, in order to assist agriculture. Reduction for social and similar reasons were not uncommon. In Germany, for example, extensive reductions were effected for anti-inflationary purposes, while Benelux countries reduced duties on educational, scientific and cultural materials. Furthermore, numerous reductions and concessions took place as a result of negotiations between Japan and seventeen other countries in connection with its accession to the G.A.T.T. The greatest number of concessions—some of which were on a triangular basis—were granted by the United States as a major contribution for enabling the rest of the world to reduce the dollar gap.

Increases in import duties were few and far between and, where effected, they were primarily for providing protection to domestic industries especially to textiles, and agriculture. In some cases, increases were effected for fiscal reasons as well. But, in either case, the number of instances was more limited in 1955 than in 1954. While Ecuador and Sweden, to mention a few of them, increased the duties for protecting their textile industry, certain others such as the U.S.A., Greece and Pakistan aimed at giving protection to other industries. Some countries made provision for the levy of special duties to afford protection against dumping, or to deal with imports from State-trading countries. In Belgium, for example, the Government made provision for the levy of what is called, safeguarding duty on low priced imports. Syria, Ceylon and Nicaragua raised the import duties on a few luxury items for augmenting their revenue.

A few significant changes, involving a departure from the application of most-favoured-nation treatment took place in 1955. The year also witnessed new developments in the plans for the formation of customs unions. The most important of these unions were those between France and Tunisia, and among the Central American States, Caribbean States, Scandinavian countries, and between South Africa and Rhodesia and Nyasaland. Another noteworthy feature was the preferential treatment granted by Italy to imports emanating from the members of the European Steel and Coal Community. The Economic Council of the Arab League also recommended that tariff preferences should be granted to the products of the member countries.

In the realm of export duties, on the other hand, most of the alterations witnessed during the period under review were in the nature of adjustments to changes in commodity prices on world markets. The adjustments were, by and large, in the downward direction. The most extensive downward changes occurred in Indonesia and Libya. In Pakistan, however, there were several increases in specific duties following the devaluation of its currency.

The steep fall in the price of coffee, for instance, from 62 cents at the beginning of 1954 to 53 cents at the end of 1955 in New York, led to wide adjustments in the export duties of the coffee exporting countries, namely, Indonesia, India, French West Africa and Guatemala and Belgian Congo. In regard to tea, however, the rate of duty which was related, by and large, to its price, varied between As. 4 and As. 12 per lb. in India in 1955. Similar changes were in evidence in Pakistan, Ceylon and Indonesia. While the duties on rubber witnessed an upward adjustment, those on cotton saw a downtrend, except in Pakistan. The lowering of the duties was also mostly in evidence in oils and oilseeds. Belgian Congo, however, increased the duty on raw palm oil. In a bid to encourage its engineering industries, India abolished all export duties on iron and steel products, which in some cases, amounted to 45 per cent.

Quantitative Restrictions

Discussing the general trends ruling in the sphere of quantitative restrictions, the G.A.T.T. Report points out that, following the improvement recorded in the balance of payments positions of the Western European countries in 1953 and 1954, the restrictions that were previously imposed has been gradually relaxed to a large extent. Especially the year 1954 saw substantial reductions in the discriminatory element in the restrictions made applicable to imports from different sources. In 1955, further progress was noted, though more gradual than in the preceding years. Another salient feature of the year, the Report goes on to add, was that aggregate gold and dollar holdings of the countries outside the dollar area rose by $1.6 billion, as against a rise of $2.6 billion in 1953 and $1.9 in 1954. In sharp contrast to this, the aggregate holdings of the sterling area declined. The increase, therefore, was largely confined to Western Europe. The Report notes with satisfaction the "tendency for countries faced with balance of payments difficulties to seek solutions through measures other than the introduction or intensification of restrictions on trade." This tendency was, as the expert rightly suggests, the result of the realisation that import restrictions could not in themselves provide a satisfactory solution to the balance of payments difficulties and that, at the most, they might prevent further deterioration in a country's reserve position but not a fundamental corrective remedy. Turning to this connection, to the importance of internal fiscal and economic measures, the Report remarks that, by and large, since 1952 when they were first adopted, they helped relieve pressures on domestic prices and demand and "can make an effective contribution to the alleviation of a country's balance of payments difficulties." As an evidence of their usefulness, the report cites the occasion when attention was again focussed on them in the face of declining central reserves of the sterling area in 1955 and early 1956. In Australia, however, conditions were different. Faced with rapidly declining reserves and lower export prices of wool, import restrictions were tightened "only in order that the internal measures, which had been adopted to meet the inflationary pressures resulting from the high foreign exchange earnings of the previous years, would have time to exert their effects on the balance of payments." In certain other countries, inflationary pressures were countered through corrective measures of a general nature, notably through increases in bank rates.

This, however, the Report observes, was no occasion for complacency, "for a substantial part of the world trade still remains under licensing control or quota restriction, often involving discrimination." Only in the dollar area imports were free from such impediments. It is true that in most industrial countries outside the dollar area, imports had been greatly liberalised in recent years, but restrictions were still being applied on the imports of agricultural products in some of them. What, however, was a striking feature of the pattern of liberalisation of dollar imports was that it did not apply to manufactured articles to the same extent as it did to industrial raw materials and primary commodities. The remaining restrictions are what are termed as "hard core" cases, where the Contracting Parties to the G.A.T.T. are convinced of the special reasons warranting their continuance. It is expected, according to the Report, that better balance of payments position for a few years more will eliminate the *raison d'etre* of these "hard core" restrictions, and pave the way for freer trade.

The case of the areas which are in the process of economic development is different. Their programmes of industrialisation involved increased capital imports and, consequently, put a premium on their export earnings, the precariousness of which is naturally heightened by the sudden fluctuations in their prices. Rationing of foreign exchange and certain import restrictions are, therefore, logical and inevitable. The selection of products for restriction for the purpose of limiting the foreign exchange expenditure is, therefore, determined in many cases by the availability of like domestic products and the capacity of local production. India was a prominent country that applied these principles in its import restrictions in 1955.

Sterling Area: Dollar Imports Liberalised

Reviewing briefly area-wise, the developments in 1955 in the field of import restrictions applied principally for the balance of payments reasons, the Report points out that the aggregate gold and dollar holdings of the sterling area declined by $501 million during the twelve-month period ended September 1955 as against $347 million during the previous twelve months. The reserves of the U.K., however, fell by a greater amount—as much as $642 million—to a level of $2,120 million. Nevertheless, in order to achieve a surplus to match external obligations, the Government announced in 1956 a series of measures to restore equilibrium. No resort was, however, made to further import restrictions.

Dealing with those restrictions which effected dollar imports, the Report says that notable among the steps taken in the U.K. was the increase in the number of products which might be imported under World Open General Licence from all sources including the dollar area. During the year, moreover, the list was enlarged four times to include many new items. In New Zealand, the list of "scheduled countries" from which imports were restricted was narrowed to include only dollar area and Japan. Besides, the products in the World Exemption List were enlarged from 95 to 153. But imports of machinery and plant from the dollar area which were liberal during 1954 continued to be so in 1955.

The Union of South Africa, on the other hand, withdrew a number of items from what was called the "restricted list" of goods. Quotas for some consumer goods were increased to as much as 53 per cent. of 1948 imports, and some additions were also made to the list of goods which could be imported without licence. In addition, fixed quotas were also abolished for a number of goods in favour of control through special permits which could also be converted for the purpose of importing items on the "restricted list." The Federation of Rhodesia and Nyasaland, too, extended its list of goods which could be imported free of restriction from all sources except Japan. Allocations for dollar imports were also raised.

Burma was obliged to intensify its restrictions in March 1955 on account of continuous erosion of foreign exchange reserves. The suspension of the licences in respect of dollar imports imposed earlier was, however, withdrawn later. In India, the substantial trade surplus witnessed with the dollar area early in 1955 led to slight liberalisation of imports from that area, mainly for essential goods. In the second half of 1955, quotas were increased for as many as fifty-five items. Pakistan went a step further and abolished the distinction between dollar and non-dollar import licences with effect from 1st January 1955, and licences were rendered valid for imports from all countries, except for special permits issued for certain imports from France and Japan to fulfil bilateral trade agreement commitments. The first half of 1955 saw the provision for more imports both in terms of value and number. From the second half, however, certain restrictions were tightened. More imports were again permitted in the first half of 1956.

Non-dollar Imports

Turning to the non-dollar imports into the sterling area, the Report points out that a high proportion of imports from Western Europe, with further additions during the year, continued to be free from restrictions. There were, however, no significant changes in respect of imports subject to quota system. In this context the deliberations of the O.E.E.C. which recently met in Paris to review their liberalisation drive would be of special significance. The Federation of Rhodesia and Nyasaland also considerably relaxed its restrictions on imports from O.E.E.C. countries, and several others who were contracting parties to the G.A.T.T. in the second half of 1955. The liberalised goods for which unlimited licensing was introduced represented 90 per cent. of the total imports.

Although there were no changes in the basic structure of the import policies adopted by India during the period under review, one striking feature was that the import policy was related more closely than before to domestic industrial development. Quotas for goods which were needed by the industry were raised, while, at the same time, the imports of those goods the indigenous production of which was sufficient to meet the internal demand were reduced. In Burma, again, a number

COCHIN MALABAR'S BUMPER PROFIT

CUT IN DIVIDEND RESTORED—AREA UNDER RUBBER ENLARGED

THE ordinary shares of the Cochin Malabar Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikhode, Malabar) have been a strong feature in the planting section of the Madras Stock Exchange during the last few weeks, having crept up from Rs. 9-7 early in July to Rs. 11-7 *cum-div.* last week. Though this rise is partly in tune with the general uptrend in equities, it cannot be denied that it is fully justified by the excellent results of the Company for the year ended 29th February 1956, which has enabled the stepping up of the dividend from 15 per cent. to 25 per cent.

It may, however, be noted at the outset that the results for the year under review are not strictly comparable with those for the previous years, because of the acquisition of an additional estate during the year and the increased crop resulting therefrom. If, nevertheless, such a comparison is made, it is done with a view to enable readers to get a rough idea of the progress made by the Company during the year. The gross profit for the year amounts to Rs. 13.82 lakhs, as against Rs. 8.88 lakhs for 1954-55. The net profit, at Rs. 7.16 lakhs, is Rs. 2.22 lakhs higher than that for the previous year even after raising the provision for depreciation from Rs. 0.90 lakh to Rs. 1.13 lakhs and that for taxation from Rs. 2.73 lakhs to Rs. 5.20 lakhs. The Directors have set aside a sum of Rs. 3 lakhs to the general reserve, which had received Rs. 2 lakhs in the previous year. The dividend on ordinary shares, as already stated, has been stepped up from 15 per cent. to 25 per cent., thus restoring in full the cut made last year and bringing the rate back to that paid for 1952-53 and 1953-54.

The following comparative table shows the progress of the Company's working during the last three years:

(In rupees)

	For the year ended February			
	1956	1955	1954	1953
Sale proceeds	21,82,844	19,09,888	18,11,231	16,52,067
Closing stocks	8,60,985	2,79,060	4,20,658	5,60,938
Other income	86,268	67,963	28,111	..
Expenditure on estates and replanting	17,18,529	13,45,205	13,04,703	12,51,051
Other expenses	34,756	23,946	66,404	82,752
Gross profit	13,81,712	8,87,760	8,88,893	9,22,106
Managing Agents' commission	31,879	29,904	29,957	30,122
Depreciation	1,13,133	89,955	75,649	57,960
Taxation	5,20,130	2,73,423	37,436	49,100
Net profit	7,16,520	4,94,478	7,45,851	7,84,915
To reserves	3,00,000	2,00,000	3,00,694	3,70,066
Dividends—				
7% preference	7,931	7,931	7,931	7,931
Ordinary	4,48,547 (25%)	2,69,128 (15%)	4,48,547 (25%)	4,48,547 (25%)
Carry forward	79,711	1,19,669	1,02,250	1,13,571
Crop harvested (in lbs.) ..	1,853,088	1,510,886	1,605,848	1,660,334
Cost of production per lb. ..	As.14.80	As.14.24	As.13.00	As.12.05
Average price realised per lb.	As.26.28	As.23.18	As.22.17	As.21 26

The rise in sale proceeds and closing stocks of rubber is accounted for by the increase in crop harvested and higher price realised. The increase in crop is due to the addition of seven months' crop from the Chemoni Valley Estate, a well-equipped estate of 1,762.37 acres, purchased during the year (on 1st August 1955) at a total cost of Rs. 13.31 lakhs. The full benefit of this purchase will be realised in the current year. But for this addition to the estate, the Company's crop for the year under review would have fallen short of the full estimate by about 77,000 lbs., half of which is attributable to the go-slow policy adopted by labour on one estate for a period of two months.

A gratifying feature of the year's working is that the pace of increase in cost of production per lb. of rubber has been checked. Thus, as will be seen from the above table, the rise in cost of production during 1955-56 is considerable less than that in either of the previous two years, thanks to the considerable sum which is being expended year after year on estates to keep them in good order and to improve their yield. The average price realised per lb. of rubber was also higher by As. 3.10, due to the increase in the controlled price of rubber granted by the Government of India in February 1955, that is, from Rs. 138 to Rs. 150 per 100 lbs. on the basis of R.M.A.I., as also to the increase in the Company's business in the premium grades of rubber.

The total acreage of the Company has gone up from 7,269.69 to 9,091.46, of which the area under rubber accounts for 6,971 acres, as against 5,334.61 acres in the previous year. The increase in acreage is mainly due to the acquisition of the Chemoni Valley Estate.

Thanks to the judicious policy of ploughing back a good part of its profit year after year that has been followed by the Directors the Company has a strong financial position now. Even after the capitalisation of Rs. 7.18 lakhs in March 1952, the reserves and surplus as at the close of the year under review stand at the impressive level of Rs. 21.91 lakhs, as against a paid-up capital of Rs. 19.07 lakhs, made up of 2,266 (7 per cent.) preference shares of Rs. 50 each and 598,062 ordinary shares of Rs. 3 each. There has been an increase of Rs. 15.87 lakhs in the fixed capital expenditure, of which the purchase of the Chemoni Estate accounts for Rs. 10.78 lakhs, buildings for Rs. 1.98 lakhs, machinery for Rs. 1.06 lakhs and development expenditure for Rs. 1.70 lakhs. The total gross block of the value of Rs. 49.25 lakhs stands written down by Rs. 4.72 lakhs to a book value of Rs. 44.53 lakhs. The current assets amount to Rs. 16.40 lakhs, while the current liabilities (Rs. 14.95 lakhs) and provision for taxation (Rs. 4.99 lakhs) aggregate Rs. 19.94 lakhs.

The crop for the current year (1956-57) is estimated at 2,101,000 lbs. at an f.o.b. cost of 96.7 cents (As. 15.48) per lb. The Company's visiting agent reports that the estates are being maintained in good order and the development programme is being well executed.

The Company's Rs. 3 fully paid-up ordinary shares are being quoted on the Madras Stock Exchange at Rs. 11-7 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7 per cent. per annum.

EVASION OF COMPANY LAW

Addressing the Bharat Chamber of Commerce in Calcutta last week, Mr. B. R. Bhagat, Union Deputy Minister for Finance, said that it was not the intention of the Government to make use of punitive measures prescribed by law against unwary persons for casual defaults in complying with the provisions of the Company Law. He added that the measures of reform of the Company law were not meant to suppress the companies or obstruct the issues of capital or dealing in securities. These were intended to streamline and gear up the important machineries through which the bulk of the trade and industry was carried on.

Mr. Bhagat regretted that there was a tendency on the part of some companies to evade the law in spirit, if not in letter. The Government, he said, had received a number of complaints about such evasions. The Deputy Minister said that some of the managing agents had given up their managing agencies to avoid certain provisions of the law and had taken up sole selling agencies at more lucrative terms. These moves were certainly against the spirit of the new law, he said.

(Concluded from next column)

assets amount to Rs. 42.91 lakhs, as against which current liabilities and provision for taxation aggregate only Rs. 25.72 lakhs.

The Company is one of the oldest in the field of biscuit manufacturing in this country, having been established in 1918, and occupies a position of pre-eminence. Its factories, which have in recent years been expanded and modernised, have ample capacity for further expansion of production, as the demand for quality biscuits is increasing. The trade has, however, become highly competitive. There are now 39 organised factories, with a capacity of about 33,750 tons per annum; besides, there is a large number of small units catering to local needs. The Federation of Biscuit Manufacturers of India estimates the present demand at about 12,000 tons per year and envisage that it will rise to 15,000 tons by 1960-61. As the present capacity is sufficient to meet the estimated increase in demand, no further increase in capacity is envisaged. In the programme of industrial development during the second Five-year Plan, the emphasis will, therefore, be directed to securing an increase in exports. The success of these efforts will depend on the improvement in quality. The outlook for the industry should, therefore, be viewed against this background. So far as the Britannia Biscuit Co. is concerned, the Directors look to the future with confidence, in the absence of any adverse circumstances over which they have no control.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 15-8 *cum-div.* (final div. 7 per cent.). On an *ex-div.* basis, the yield on the shares works out to 6.7 per cent. per annum.

BRITANNIA BISCUIT KEEPS UP PROGRESS

DIVIDEND MAINTAINED

A RISE of Rs. 1.79 lakhs to Rs. 17.75 lakhs in gross profit is disclosed by the audited accounts of the Britannia Biscuit Co., Ltd. (Managing Director: Mr. K. Julian Scott, Calcutta) for the year ended 31st March 1956. With this increase, not only the upward trend in earnings has been maintained for the third year in succession but the sharp setback noted in the years 1951-52 and 1952-53 has almost been made good. Thus, the Company's gross profit, which had dwindled from a peak of Rs. 17.99 lakhs in 1950-51 to Rs. 5.72 lakhs in 1952-53, has grown to Rs. 17.75 lakhs in the year under review.

The dividend has been maintained at 10 per cent. for the third year in succession, after having been raised from 5 per cent. paid for 1952-53. It must, however, be noted that the distributions for 1954-55 and 1955-56 are on the increased capital of Rs. 45.97 lakhs raised in November 1954 by the capitalisation of Rs. 15.32 lakhs from out of the reserves. The dividend has been maintained at 10 per cent. only after setting aside to the general reserve Rs. 1.67 lakhs, as against Rs. 1.81 lakhs in the previous year, and transferring to the reserve for tax contingencies Rs. 2 lakhs, as compared with Rs. 1.50 lakhs added a year ago. This latter allocation is in addition to the sum of Rs. 4.52 lakhs set aside as provision for taxation which is more than double that provided last year. The heavier incidence of income-tax for the year under review, the Directors explain, is due to the cessation of depreciation allowances on the initial phase of the Company's building and expansion programme.

The Company's progress during the past three years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	133.72	128.69	124.16	97.95

Carry forward	1.79	1.98	1.64	0.96

† On the increased capital of Rs. 45.97 lakhs raised in November 1954 by the capitalisation of Rs. 15.32 lakhs from the reserves.

It will be observed that there has been a substantial rise in sale proceeds during the last three years, reflecting the successful efforts of the Company in expanding its activities in a developing market. The benefit of such expansion in sales has, however, been offset to a large extent by the rise in expenses. The increase in expenses during the year under review was mainly accounted for by higher distribution expenses.

Referring to the trading conditions, the Directors observe:

"The increasing costs of wages and railway freight continue to place a heavy burden on the business but, as in previous years, every effort is being made to absorb these extra costs in order to avoid increases in selling prices, and develop new markets for our products. The policy of your Directors to accelerate the plant replacement and modernisation programme has enabled the Company to expand production during the year and, now that we have commenced to install the very latest type of manufacturing and packaging machinery, we consider ourselves equipped to secure a generous share of the business available."

The Company's financial position, as seen from its latest balance-sheet, is sound. The paid-up capital stands at Rs. 46.12 lakhs, of which preference capital accounts for a nominal sum of Rs. 15,450. Of the ordinary capital, as much as Rs. 30.64 lakhs represent capitalised reserves. This was done in two stages, once in August 1951 and again in November 1954. Even after these bonus issues, reserves and surplus aggregate as much as Rs. 32.91 lakhs. There is also a debenture capital amounting to Rs. 15 lakhs issued in January 1953, carrying interest at 5½ per cent. and repayable in 1963-68. In pursuance of its programme of modernisation and expansion, the Company has spent during the year under review Rs. 10.70 lakhs on additions to the gross block, bringing the total value of the block account to Rs. 110.56 lakhs, the present book value of the same being Rs. 76.69 lakhs. The current

(Continued in previous column)

PERIA KARAMALAI MAINTAINS DIVIDEND

PROFITS, HOWEVER, LOWER

IN spite of a slight diminution in sale proceeds from the record figure of Rs. 86.65 lakhs touched last year to Rs. 83 31 lakhs for the year ended 31st March 1956, and the consequent fall in profits, the directors of the Peria Karamalai Tea and Produce Co., Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode—Malabar) have maintained the dividend at 45 per cent. to which record figure it was stepped up last year from the previous low of 35 per cent. declared for the year 1954. This has been effected by declaring a final dividend of 30 per cent. the interim having been paid already at 15 per cent. as in the case of last year. In sympathy with the fall in sale proceeds, the gross profit also has fallen by Rs. 5.13 lakhs from last year's record of Rs. 46.73 lakhs to Rs. 41.60 lakhs. And that has happened when the sales of tea in terms of quantity have actually gone up from 3,492,000 pounds in the previous year to 3,632,000 pounds during the year under review. The reason for this divergent trend is obviously to be found in the fact that the average price realised per pound of tea had fallen from the previous year's record of As. 38.85 to As. 36.88. At the same time, the expenditure on estates was up by about Rs. 20,000 to Rs. 50.88 lakhs and the coffee crop had fallen from 341 cwts. to 278 cwts. The table given hereunder will enable the reader to make a comparative study of the Company's working and progress during the preceding three years.

	For the year ended 31st March			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.

Dividend	15,64,817 (45%)	15,64,617 (45%)	12,16,323 (35%)	13,58,175 (40%)
Carry forward	50,800	89,057	62,659	1,48,975
Tea crop (in lbs.)	3,992,935	3,984,382	3,674,714	3,827,311
Coffee crop (in cwts.)	278	341	456	356
Cost of production per lb. of tea .. .. As.	19.92	19.77	17.57	15.73
Average price realised—				
Tea per lb. .. As.	36.88	38.85	30.61	27.84
Coffee per cwt. .. Rs.	180	180	181	179

The net profit, after providing for managing agents commission, depreciation and taxation, has fallen from last year's record by Rs. 8.65 lakhs to Rs. 21.56 lakhs. The directors have, however, thought it fit to increase the provisions for depreciation and taxation, the former from Rs. 3.22 lakhs to Rs. 3.85 lakhs and the latter from Rs. 11.80 lakhs to Rs. 14.70 lakhs. The directors have transferred only Rs. 6 lakhs to general reserve, as against Rs. 14 lakhs added in the previous year.

The production of tea during the year at 3,992,935 lbs. was again a fresh record for the Company breaking the last year's record of 3,984,382 lbs. and the estimated crop of 3,950,000 lbs. The position in regard to coffee, however, was not quite satisfactory, production having fallen from the previous year's output of 341 cwts. to 278 cwts. This is not unusual, because a good coffee crop is invariably followed by a low one. That is the peculiar feature of coffee industry. Owing to higher labour costs, the cost of production of tea per lb. has gone up slightly at As. 19.92 ppr lb. as against the previous year's figure of As. 19.77, the increase in the size of the crop notwithstanding the price realised for coffee was maintained at Rs. 180 per cwt.

The latest balance-sheet of the Company as at 31st March 1956, shows the capital unchanged at Rs. 34.77 lakhs. Against this, the reserves and surplus stand at Rs. 42 lakhs. The gross block standing at Rs. 76.13 lakhs has been written down to Rs. 59.55 lakhs. The total additions to the gross block during the year aggregated Rs. 9 81 lakhs. The current assets stand at Rs. 47.15 lakhs of which cash balances alone, amounting to Rs. 22.43 lakhs, provide a substantial cover to the current liabilities and provision for taxation aggregating Rs. 29.94 lakhs. The Company's financial position thus appears to be quite sound and satisfactory.

The Rs. 2 fully paid-up shares are being currently quoted at Rs. 11-2 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.8 per cent., free of tax.

COMPANY MEETINGS AND DIVIDENDS

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 6th September, 1956. Dividend: Rs. 15 per share. Transfer books remain closed from 23rd August to 6th September, 1956, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 6th September, 1956. Dividend: Rs. 25 per share. Transfer books remain closed from 23rd August to 6th September, 1956, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Calcutta, 7th September 1956. Dividend: Re. 1 per share (incudes interim dividend of As. 4-4/5 per share). Transfer books will remain closed from 6th to 13th September 1956, both days inclusive.

WEST COAST PAPER MILLS LTD. First Annual General Meeting, Bombay, 11th September, 1956.

JAYBIRPARA (DOOARS) TEA CO., LTD. Annual General Meeting, Calcutta, 13th September, 1956. Dividend: *Nil*. Transfer books will remain closed from 30th August to 13th September, 1956, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 13th September, 1956. Dividend: Rs. 20 per share. Transfer books will remain closed from 30th August to 13th September, 1956, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 13th September 1956. Dividend: Rs. 6 per share (final). Transfer books remain closed from 18th August to 10th September 1956, both days inclusive.

FERTILISERS AND CHEMICALS (TRAVANCORE) LTD. Annual General Meeting, Eloor, Alwaye, Travancore-Cochin, 14th September, 1956. Dividend: *Nil*. Transfer books remain closed from 24th August to 14th September, 1956, both days inclusive.

IMPERIAL TOBACCO COMPANY OF INDIA LTD. Annual General Meeting, Calcutta, 14th September 1956. Dividend: As. 6-2/5 per share (final), free of income-tax. Transfer books will remain closed from 28th August to 14th September 1956, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 18th September 1956. Dividend: Rs. 250 per whole ordinary share and Rs. 62-8 per quarter ordinary share, payable on 19th September 1956. Transfer books remain closed from 20th August to 18th September 1956, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1956. Dividend: Rs. 225 per ordinary share, payable on 19th September 1956. Transfer books remain closed from 20th August to 18th September 1956, both days inclusive.

WESTERN INDIA SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th September 1956. Dividend: Rs. 225 per ordinary share, payable on 19th September 1956. Transfer books remain closed from 20th August to 18th September 1956, both days inclusive.

MYSORE PAPER MILLS LTD. Annual General Meeting, Bangalore, 20th September, 1956. Transfer books will remain closed from 7th to 20th September, 1956, both days inclusive.

EAGLE ROLLING MILLS LTD. Annual General Meeting, Calcutta, 28th September, 1956. Transfer books will remain closed from 11th to 28th September, 1956, both days inclusive.

SHREE DIGVIJAYA WOOLLEN MILLS LTD. Annual General Meeting, Jamnagar, Saurashtra, 28th September, 1956. Transfer books will remain closed from 14th to 28th September, 1956, both days inclusive.

KUMARDHUBI FIRECLAY AND SILICA WORKS LTD. Annual General Meeting, Calcutta, 28th September, 1956. Dividend: Re. 1-8 per share. Transfer books will remain closed from 11th to 28th September, 1956, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, 29th September, 1956. Dividend: Re. 1-4 per share. Transfer books will remain closed from 3rd to 29th September 1956, both days inclusive.

CENTRAL SCIENTIFIC SUPPLIES CO., LTD. Final dividend of As. 4 per ordinary share, for the year ended 31st March, 1956. Transfer books will remain closed from 1st to 6th October, 1956, both days inclusive.

CAUVERY SPINNING AND WEAVING CO., LTD. Dividend of As. 12 per ordinary share, for the year ended 31st March, 1956. Transfer books will remain closed from 27th August to 10th September, 1956, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Final dividend of As. 10 per ordinary share and As. 6 and Ps. 8 per new ordinary share, for the year ended 31st March 1956. Transfer books will remain closed from 17th to 29th September, 1956, both days inclusive.

MADRAS SAFE DEPOSIT CO., LTD. Dividend of 4-1/16 per cent. on ordinary shares, for the year ended 30th June, 1956. Transfer books will remain closed from 3rd to 10th September, 1956, both days inclusive.

KALASA TEA AND PRODUCE CO., LTD. Dividend of 10 per cent. on ordinary shares, for the year ended 31st March, 1956.

COMPANY REGISTRATIONS

CHANDULAL T. PARIKH PRIVATE LTD. (First Director: Mr. R. C. Parekh.) Business: General traders. Authorised capital: Rs. 30,00,000. Private company. Address: Kanji Bhuvan, 299, Sandhurst Road, Bombay 4.

Notice

THE DEHRI ROHTAS LIGHT RAILWAY COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held on Friday, 21st September 1956 at 11.30 a.m., at the Registered Office of the Company at Dalmianagar to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March 1956.
2. To declare dividend of Rs. 1-4 per share.
3. To elect Directors to fill up the vacancies caused by the retirement of Shri Harkishore Kejriwal and Shri A. K. Jain under Article 84 of the Articles of Association of the Company. The retiring Directors, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible offer themselves for re-appointment.
5. To transact the following as an item of special business, special notice of which is hereby given, to consider and if thought fit to pass with or without modification the following resolutions, which will be proposed as Special Resolutions:

"Resolved that the Articles of Association of the Company be altered in the manner following:

(*a*) For Article 32 the following shall be substituted, namely,

"32. The Company shall have a first and paramount lien upon all the shares (not being fully paid up shares) registered in the name of each member (whether solely or jointly with others) for all moneys called or payable at a fixed time in respect of such shares, and such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien (if any) on such shares."

(*b*) For Article 33 the following shall be substituted, namely,

"33. For the purpose of enforcing such lien the Directors may sell the shares subject thereto in such manner as they think fit, but no sale shall be made until notice in writing of the intention to sell shall have been given to such indebted member or to his executors or administrators and default shall have been made by him or them in the payment of moneys called or payable at a fixed time in respect of such shares for 30 days after such notice."

Explanatory Note: The shareholders are informed that the Company has been enlisted on the official list of quotations of the Bombay Stock Exchange. It has, however, been required by the said Exchange that Articles 32 and 33 of the Articles of Association of the Company with regard to lien on shares be amended in the manner as set out in the proposed resolutions (a) and (b) above."

The Share Transfer Books of the Company will remain closed from 6th September 1956 to 14th September 1956, both days inclusive.

By Order of the Board,
for SAHU JAIN LIMITED,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, *1st August* 1956.

Payment of dividend when declared will be made only to those members whose names are registered in the books of the Company on the 5th September 1956 or to their mandatees.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

COCHIN MALABAR'S BUMPER PROFIT

CUT IN DIVIDEND RESTORED—AREA UNDER RUBBER ENLARGED

THE ordinary shares of the Cochin Malabar Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikhode, Malabar) have been a strong feature in the planting section of the Madras Stock Exchange during the last few weeks, having crept up from Rs. 9-7 early in July to Rs. 11-7 *cum-div.* last week. Though this rise is partly in tune with the general uptrend in equities, it cannot be denied that it is fully justified by the excellent results of the Company for the year ended 29th February 1956, which has enabled the stepping up of the dividend from 15 per cent. to 25 per cent.

It may, however, be noted at the outset that the results for the year under review are not strictly comparable with those for the previous years, because of the acquisition of an additional estate during the year and the increased crop resulting therefrom. If, nevertheless, such a comparison is made, it is done with a view to enable readers to get a rough idea of the progress made by the Company during the year. The gross profit for the year amounts to Rs. 13.82 lakhs, as against Rs. 8.88 lakhs for 1954-55. The net profit, at Rs. 7.16 lakhs, is Rs. 2.22 lakhs higher than that for the previous year even after raising the provision for depreciation from Rs. 0.90 lakh to Rs. 1.13 lakhs and that for taxation from Rs. 2.73 lakhs to Rs. 5.20 lakhs. The Directors have set aside a sum of Rs. 3 lakhs to the general reserve, which had received Rs. 2 lakhs in the previous year. The dividend on ordinary shares, as already stated, has been stepped up from 15 per cent. to 25 per cent., thus restoring in full the cut made last year and bringing the rate back to that paid for 1952-53 and 1953-54.

The following comparative table shows the progress of the Company's working during the last three years:

(In rupees)

	For the year ended February			
	1956	1955	1954	1953
Sale proceeds	21,82,844	19,09,888	18,11,231	16,52,067
Closing stocks ..	8,60,885	2,79,060	4,20,658	5,60,938
Other income	86,268	67,963	28,111	..
Expenditure on estates and replanting	17,13,529	13,45,205	13,04,703	12,51,051
Other expenses	34,756	23,946	66,404	32,752
Gross profit	13,81,712	8,87,760	8,88,893	9,22,106
Managing Agents' commission	31,879	29,904	29,957	30,122
Depreciation	1,13,183	89,955	75,649	57,960
Taxation	5,20,130	2,73,423	37,436	49,100
Net profit	7,16,520	4,94,478	7,45,851	7,84,915
To reserves	3,00,000	2,00,000	3,00,694	3,70,066
Dividends—				
7% preference	7,931	7,931	7,931	7,931
Ordinary	4,48,547 (25%)	2,69,128 (15%)	4,48,547 (25%)	4,48,547 (25%)
Carry forward	79,711	1,19,869	1,02,250	1,13,571
Crop harvested (in lbs.) ..	1,853,088	1,510,886	1,605,848	1,660,334
Cost of production per lb. ..	As.14.80	As.14.24	As.13.00	As.12.05
Average price realised per lb.	As.26.28	As.23.18	As.22.17	As.21 26

The rise in sale proceeds and closing stocks of rubber is accounted for by the increase in crop harvested and higher price realised. The increase in crop is due to the addition of seven months' crop from the Chemoni Valley Estate, a well-equipped estate of 1,762.37 acres, purchased during the year (on 1st August 1955) at a total cost of Rs. 13.31 lakhs. The full benefit of this purchase will be realised in the current year. But for this addition to the estate, the Company's crop for the year under review would have fallen short of the full estimate by about 77,000 lbs., half of which is attributable to the go-slow policy adopted by labour on one estate for a period of two months.

A gratifying feature of the year's working is that the pace of increase in cost of production per lb. of rubber has been checked. Thus, as will be seen from the above table, the rise in cost of production during 1955-56 is considerable less than that in either of the previous two years, thanks to the considerable sum which is being expended year after year on estates to keep them in good order and to improve their yield. The average price realised per lb. of rubber was also higher by As. 3.10, due to the increase in the controlled price of rubber granted by the Government of India in February 1955, that is, from Rs. 138 to Rs. 150 per 100 lbs. on the basis of R.M.A.I., as also to the increase in the Company's business in the premium grades of rubber.

The total acreage of the Company has gone up from 7,269.69 to 9,091.46, of which the area under rubber accounts for 6,971 acres, as against 5,334.61 acres in the previous year. The increase in acreage is mainly due to the acquisition of the Chemoni Valley Estate.

Thanks to the judicious policy of ploughing back a good part of its profit year after year that has been followed by the Directors the Company has a strong financial position now. Even after the capitalisation of Rs. 7.18 lakhs in March 1952, the reserves and surplus as at the close of the year under review stand at the impressive level of Rs. 21.91 lakhs, as against a paid-up capital of Rs. 19.07 lakhs, made up of 2,266 (7 per cent.) preference shares of Rs. 50 each and 598,062 ordinary shares of Rs. 3 each. There has been an increase of Rs. 15.87 lakhs in the fixed capital expenditure, of which the purchase of the Chemoni Estate accounts for Rs. 10.78 lakhs, buildings for Rs. 1.98 lakhs, machinery for Rs. 1.06 lakhs and development expenditure for Rs. 1.70 lakhs. The total gross block of the value of Rs. 49.25 lakhs stands written down by Rs. 4.72 lakhs to a book value of Rs. 44.53 lakhs. The current assets amount to Rs. 16.40 lakhs, while the current liabilities (Rs. 14.95 lakhs) and provision for taxation (Rs. 4.99 lakhs) aggregate Rs. 19.94 lakhs.

The crop for the current year (1956-57) is estimated at 2,101,000 lbs. at an f.o.b. cost of 96.7 cents (As. 15.48) per lb. The Company's visiting agent reports that the estates are being maintained in good order and the development programme is being well executed.

The Company's Rs. 3 fully paid-up ordinary shares are being quoted on the Madras Stock Exchange at Rs. 11-7 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7 per cent. per annum.

EVASION OF COMPANY LAW

Addressing the Bharat Chamber of Commerce in Calcutta last week, Mr. B. R. Bhagat, Union Deputy Minister for Finance, said that it was not the intention of the Government to make use of punitive measures prescribed by law against unwary persons for casual defaults in complying with the provisions of the Company Law. He added that the measures of reform of the Company law were not meant to suppress the companies or obstruct the issues of capital or dealing in securities. These were intended to streamline and gear up the important machineries through which the bulk of the trade and industry was carried on.

Mr. Bhagat regretted that there was a tendency on the part of some companies to evade the law in spirit, if not in letter. The Government, he said, had received a number of complaints about such evasions. The Deputy Minister said that some of the managing agents had given up their managing agencies to avoid certain provisions of the law and had taken up sole selling agencies at more lucrative terms. These moves were certainly against the spirit of the new law, he said.

(Concluded from next column)

assets amount to Rs. 42.91 lakhs, as against which current liabilities and provision for taxation aggregate only Rs. 25.72 lakhs.

The Company is one of the oldest in the field of biscuit manufacturing in this country, having been established in 1918, and occupies a position of pre-eminence. Its factories, which have in recent years been expanded and modernised, have ample capacity for further expansion of production, as the demand for quality biscuits is increasing. The trade has, however, become highly competitive. There are now 39 organised factories, with a capacity of about 33,750 tons per annum; besides, there is a large number of small units catering to local needs. The Federation of Biscuit Manufacturers of India estimates the present demand at about 12,000 tons per year and envisage that it will rise to 15,000 tons by 1960-61. As the present capacity is sufficient to meet the estimated increase in demand, no further increase in capacity is envisaged. In the programme of industrial development during the second Five-year Plan, the emphasis will, therefore, be directed to securing an increase in exports. The success of these efforts will depend on the improvement in quality. The outlook for the industry should, therefore, be viewed against this background. So far as the Britannia Biscuit Co. is concerned, the Directors look to the future with confidence, in the absence of any adverse circumstances over which they have no control.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 15-8 *cum-div.* (final div. 7 per cent.). On an *ex-div.* basis, the yield on the shares works out to 6.7 per cent. per annum.

BRITANNIA BISCUIT KEEPS UP PROGRESS

DIVIDEND MAINTAINED

A RISE of Rs. 1.79 lakhs to Rs. 17.75 lakhs in gross profit is disclosed by the audited accounts of the Britannia Biscuit Co., Ltd. (Managing Director: Mr. K. Julian Scott, Calcutta) for the year ended 31st March 1956. With this increase, not only the upward trend in earnings has been maintained for the third year in succession but the sharp setback noted in the years 1951-52 and 1952-53 has almost been made good. Thus, the Company's gross profit, which had dwindled from a peak of Rs. 17.99 lakhs in 1950-51 to Rs. 5.72 lakhs in 1952-53, has grown to Rs. 17.75 lakhs in the year under review.

The dividend has been maintained at 10 per cent. for the third year in succession, after having been raised from 5 per cent. paid for 1952-53. It must, however, be noted that the distributions for 1954-55 and 1955-56 are on the increased capital of Rs. 45.97 lakhs raised in November 1954 by the capitalisation of Rs. 15.32 lakhs from out of the reserves. The dividend has been maintained at 10 per cent. only after setting aside to the general reserve Rs. 1.67 lakhs, as against Rs. 1.81 lakhs in the previous year, and transferring to the reserve for tax contingencies Rs. 2 lakhs, as compared with Rs. 1.50 lakhs added a year ago. This latter allocation is in addition to the sum of Rs. 4.52 lakhs set aside as provision for taxation which is more than double that provided last year. The heavier incidence of income-tax for the year under review, the Directors explain, is due to the cessation of depreciation allowances on the initial phase of the Company's building and expansion programme.

The Company's progress during the past three years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953

Carry forward	1.79	1.98	1.64	0.96

† On the increased capital of Rs. 45.97 lakhs raised in November 1954 by the capitalisation of Rs. 15.32 lakhs from the reserves.

It will be observed that there has been a substantial rise in sale proceeds during the last three years, reflecting the successful efforts of the Company in expanding its activities in a developing market. The benefit of such expansion in sales has, however, been offset to a large extent by the rise in expenses. The increase in expenses during the year under review was mainly accounted for by higher distribution expenses.

Referring to the trading conditions, the Directors observe:

"The increasing costs of wages and railway freight continue to place a heavy burden on the business but, as in previous years, every effort is being made to absorb these extra costs in order to avoid increases in selling prices, and develop new markets for our products. The policy of your Directors to accelerate the plant replacement and modernisation programme has enabled the Company to expand production during the year and, now that we have commenced to install the very latest type of manufacturing and packaging machinery, we consider ourselves equipped to secure a generous share of the business available."

The Company's financial position, as seen from its latest balance-sheet, is sound. The paid-up capital stands at Rs. 46.12 lakhs, of which preference capital accounts for a nominal sum of Rs. 15,450. Of the ordinary capital, as much as Rs. 30.64 lakhs represent capitalised reserves. This was done in two stages, once in August 1951 and again in November 1954. Even after these bonus issues, reserves and surplus aggregate as much as Rs. 32.91 lakhs. There is also a debenture capital amounting to Rs. 15 lakhs issued in January 1953, carrying interest at 5¼ per cent. and repayable in 1963-68. In pursuance of its programme of modernisation and expansion, the Company has spent during the year under review Rs. 10.70 lakhs on additions to the gross block, bringing the total value of the block account to Rs. 110.56 lakhs, the present book value of the same being Rs. 76.69 lakhs. The current

(Continued in previous column)

PERIA KARAMALAI MAINTAINS DIVIDEND

PROFITS, HOWEVER, LOWER

IN spite of a slight diminution in sale proceeds from the record figure of Rs. 86.65 lakhs touched last year to Rs. 83 31 lakhs for the year ended 31st March 1956, and the consequent fall in profits, the directors of the Peria Karamalai Tea and Produce Co., Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode—Malabar) have maintained the dividend at 45 per cent. to which record figure it was stepped up last year from the previous low of 35 per cent. declared for the year 1954. This has been effected by declaring a final dividend of 30 per cent. the interim having been paid already at 15 per cent. as in the case of last year. In sympathy with the fall in sale proceeds, the gross profit also has fallen by Rs. 5.13 lakhs from last year's record of Rs. 46.73 lakhs to Rs. 41.60 lakhs. And that has happened when the sales of tea in terms of quantity have actually gone up from 3,492,000 pounds in the previous year to 3,632,000 pounds during the year under review. The reason for this divergent trend is obviously to be found in the fact that the average price realised per pound of tea had fallen from the previous year's record of As. 38.85 to As. 36.88. At the same time, the expenditure on estates was up by about Rs. 20,000 to Rs. 50.88 lakhs and the coffee crop had fallen from 341 cwts. to 278 cwts. The table given hereunder will enable the reader to make a comparative study of the Company's working and progress during the preceding three years.

	For the year ended 31st March			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.

Tea crop (in lbs.)	3,992,935	3,984,382	3,674,714	3,827,311
Coffee crop (in cwts.)	278	341	456	356
Cost of production per lb. of tea .. .. .. As.	19.92	19.77	17.57	15.73
Average price realised—				
Tea per lb. .. As.	36.88	38.85	30.61	27.84
Coffee per cwt. .. Rs.	180	180	181	179

The net profit, after providing for managing agents commission, depreciation and taxation, has fallen from last year's record by Rs. 8.65 lakhs to Rs. 21.56 lakhs. The directors have, however, thought it fit to increase the provisions for depreciation and taxation, the former from Rs. 3.22 lakhs to Rs. 3.85 lakhs and the latter from Rs. 11.80 lakhs to Rs. 14.70 lakhs. The directors have transferred only Rs. 6 lakhs to general reserve, as against Rs. 14 lakhs added in the previous year.

The production of tea during the year at 3,992,935 lbs. was again a fresh record for the Company breaking the last year's record of 3,984,382 lbs. and the estimated crop of 3,950,000 lbs. The position in regard to coffee, however, was not quite satisfactory, production having fallen from the previous year's output of 341 cwts. to 278 cwts. This is not unusual, because a good coffee crop is invariably followed by a low one. That is the peculiar feature of coffee industry. Owing to higher labour costs, the cost of production of tea per lb. has gone up slightly at As. 19.92 ppr lb. as against the previous year's figure of As. 19.77, the increase in the size of the crop notwithstanding the price realised for coffee was maintained at Rs. 180 per cwt.

The latest balance-sheet of the Company as at 31st March 1956, shows the capital unchanged at Rs. 34.77 lakhs. Against this, the reserves and surplus stand at Rs. 42 lakhs. The gross block standing at Rs. 76.13 lakhs has been written down to Rs. 59.55 lakhs. The total additions to the gross block during the year aggregated Rs. 9 81 lakhs. The current assets stand at Rs. 47.15 lakhs of which cash balances alone, amounting to Rs. 22.43 lakhs, provide a substantial cover to the current liabilities and provision for taxation aggregating Rs. 29.94 lakhs. The Company's financial position thus appears to be quite sound and satisfactory.

The Rs. 2 fully paid-up shares are being currently quoted at Rs. 11-2 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.8 per cent., free of tax.

COMPANY MEETINGS AND DIVIDENDS

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 6th September, 1956. Dividend: Rs. 15 per share. Transfer books remain closed from 23rd August to 6th September, 1956, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 6th September, 1956. Dividend: Rs. 25 per share. Transfer books remain closed from 23rd August to 6th September, 1956, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Calcutta, 7th September 1956. Dividend: Re. 1 per share (includes interim dividend of As. 4-4/5 per share). Transfer books will remain closed from 6th to 13th September 1956, both days inclusive.

WEST COAST PAPER MILLS LTD. First Annual General Meeting, Bombay, 11th September, 1956.

JAYBIRPARA (DOOARS) TEA CO., LTD. Annual General Meeting, Calcutta, 13th September, 1956. Dividend: *Nil.* Transfer books will remain closed from 30th August to 13th September, 1956, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 13th September, 1956. Dividend: Rs. 20 per share. Transfer books will remain closed from 30th August to 13th September, 1956, both days inclusive.

Notice

THE DEHRI ROHTAS LIGHT RAILWAY COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held on Friday, 21st September 1956 at 11.30 a.m., at the Registered Office of the Company at Dalmianagar to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March 1956.
2. To declare dividend of Rs. 1-4 per share.
3. To elect Directors to fill up the vacancies caused by the retirement of Shri Harkishore Kejriwal and Shri A. K. Jain under Article 84 of the Articles of Association of the Company. The retiring Directors, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible offer themselves for re-appointment.
5. To transact the following as an item of special business, special notice of which is hereby given, to consider and if thought fit to pass with or without modification the following resolutions, which will be proposed as Special Resolutions:

"Resolved that the Articles of Association of the Company be altered in the manner following:

(a) For Article 32 the following shall be substituted, namely,

"32. The Company shall have a first and paramount lien upon all the shares (not being fully paid up shares) registered in the name of each member (whether solely or jointly with others) for all moneys called or payable at a fixed time in respect of such shares, and such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien (if any) on such shares."

(b) For Article 33 the following shall be substituted, namely,

"33. For the purpose of enforcing such lien the Directors may sell the shares subject thereto in such manner as they think fit, but no sale shall be made until notice in writing of the intention to sell shall have been given to such indebted member or to his executors or administrators and default shall have been made by him or them in the payment of moneys called or payable at a fixed time in respect of such shares for 30 days after such notice."

Explanatory Note: The shareholders are informed that the Company has been enlisted on the official list of quotations of the Bombay Stock Exchange. It has, however, been required by the said Exchange that Articles 32 and 33 of the Articles of Association of the Company with regard to lien on shares be amended in the manner as set out in the proposed resolutions (a) and (b) above."

The Share Transfer Books of the Company will remain closed from 6th September 1956 to 14th September 1956, both days inclusive.

By Order of the Board,
for SAHU JAIN LIMITED,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, 1*st August* 1956.

Payment of dividend when declared will be made only to those members whose names are registered in the books of the Company on the 5th September 1956 or to their mandatees.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

SHARP FALL IN TEA PRICES AFFECTS NEW DOOARS

KUMARDHUBI ENGINEERING REPEATS DIVIDEND

New Dooars Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 6,00,000 out of the amount standing to the credit of general reserve, referred to in the directors' last report, was granted in September 1955, and the issued and subscribed capital of the Company has been increased by the addition of 6,000 new ordinary shares of Rs. 100 each, issued as fully paid up to ordinary shareholders at the rate of three new ordinary shares for every four ordinary shares held by them on 16th November 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the Auditors in their report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 accounts.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year. Provision has also been made in these accounts for the estimated amount of labour bonus due to be paid in respect of the year ended 31st December 1955. The auditors have commented on both these points in their Report.

After providing Rs. 71,249 (Rs. 58,788) for depreciation, Rs. 1,68,420 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a profit of Rs. 6,83,263 (Rs. 28,14,662). After bringing in the balance of Rs. 2,73,662 (Rs. 1,76,020) from last year, providing Rs. 2,98,000 (Rs. 8,48,000) for taxation and transferring Rs. 1,00,000 (Rs. 8,00,000) to general reserve, there remains a balance of Rs. 5,58,925 (Rs. 11,66,662) at the credit of profit and loss account. From this the directors recommend the payment of a preference dividend of Rs. 6-8 per share, absorbing Rs. 13,000 (Rs. 13,000) and a dividend on the ordinary shares of Rs. 25 (Rs. 110) per share, absorbing Rs. 3,50,000 (Rs. 8,80,000), leaving a balance of Rs. 1,95,925 (Rs. 2,73,662) to be carried forward.

In February 1955, after agreement between labour and employers representatives on the West Bengal Minimum Wages Advisory Committee for tea garden labour in the Dooars and Terai, labour and staff wages were increased with retrospective effect to 1st January 1955.

A crop of 20,444 maunds was secured and sold at an average price of Rs. 1-15-2 per lb. This compares with a crop of 19,405 maunds manufactured in 1954, which sold at an average price of Rs. 3-1-3 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1955 crop, in comparison with the prices realised the previous season.

Estimates for the current season have been framed for a crop of 20,000 maunds to cost Rs. 21,88,488. At the beginning of the present season, crop was lost owing to part of the garden sustaining hail damage; however the area affected has since recovered to a large extent and it is hoped that the estimated crop will be secured. Crop to the 21st July 1956, amounted to 5,230 maunds compared with 6,547 maunds secured to the same date last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	8,81,963

Kumardhubi Engineering Works, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1955.

The profit and loss account, including Rs. 32,501 (Rs. 31,614) brought forward from the previous year and after allowing for sundry charges, depreciation, taxation, etc., placing Rs. 25,000 (*nil*) to general reserve, Rs. 67,500 (Rs. 72,500) to reserve for tax contingency and Rs. 24,500 (Rs. 56,700) to development rebate reserve, shows a credit balance of Rs. 3,36,425 (Rs. 3,47,501), which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 5 per cent. per annum without any deduction for income-tax paid by the Company Rs. 60,000 (Rs. 60,000), in paying a dividend on the ordinary shares at As. 8 (As. 8) per share without any deduction for income-tax paid by the Company Rs. 2,55,000 (Rs. 2,55,000) and in carrying forward Rs. 21,425 (Rs. 32,501).

The Company's order book continued to be well filled during the year under review and there was a very marked increase in enquiries and orders from about the middle of 1955, when the intentions of the Government of India's Second Five-year Plan began to emerge. Unfortunately the shortage of steel supply and of transport continued to limit production and in particular difficulty in supply of foundry scrap reached serious proportions during the latter part of the year.

Following the Government's publication of the Five-year Plan, it became obvious that the Company's expansion plans would require revision and it was considered desirable to employ a Consultant to advise on how best to expand, to take advantage of the greatly increasing business volume. The directors currently have proposals for expanding the Structural Shop and the Foundry under consideration. Relations with labour were satisfactory during the year under review.

Accounts in brief are as under:—

Choonabhutti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 3,00,000 out of the amount standing at the credit of general reserve, referred to in the last report, was granted at the end of November 1955, and the issued and subscribed capital of the Company has been increased by the addition of 3,000 new ordinary shares of Rs. 100 each issued as fully paid up to ordinary shareholders at the rate of one new ordinary share for every two ordinary shares held by them on 28th December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

After providing Rs. 50,047 (Rs. 53,229) for depreciation, Rs. 1,28,209 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a profit of Rs. 3,98,498 (Rs. 17,59,622). After bringing in the balance of Rs. 2,58,011 (Rs. 1,26,390) from last year, providing Rs. 1,77,000 (Rs. 5,75,000) for taxation and transferring Rs. 1,50,000 (Rs. 5,00,000) to general reserve, there remains a balance of Rs. 3,29,509 (Rs. 8,11,010) at the credit of profit and loss account. From this the directors recommend the payment of the preference dividend of Rs. 6-8 per share, absorbing Rs. 13,000 (Rs. 13,000) and a dividend on the ordinary shares of Rs. 20 (Rs. 90) per share, absorbing Rs. 1,80,000 (Rs. 5,40,000) leaving a balance of Rs. 1,36,509 (Rs. 2,58,010) to be carried forward.

In February 1955, after agreement between labour and employers representatives on the West Bengal Minimum Wages Advisory Committee for tea garden labour in the Dooars and Terai, labour and staff wages were increased with retrospective effect to 1st January 1955.

A crop of 13,536 maunds was secured and sold at an average price of Rs. 1-15-11 per lb. This compares with a crop of 13,361 maunds manufactured in 1954, which sold at an average price of Rs. 3-1-4 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1955 crop, in comparison with the prices realised the previous season.

Estimates for the current season have been framed for a crop of 14,500 maunds to cost Rs. 14,77,575. Crop to the 21st July 1956, amounted to 5,244 maunds compared with 5,479 maunds secured to the same date last year. At the commencement of the present season crop was lost owing to part of the garden sustaining hail damage: however, the area affected has since recovered to a large extent and it is hoped that the estimated crop will be secured.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Engo Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

Early in the present year it was agreed with Government that a bonus would be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 account.

After providing Rs. 19,030 (Rs. 21,835) for depreciation, Rs. 29,696 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a loss of Rs. 48,282 (profit of Rs. 1,06,363 after paying interim dividend of Rs. 40 per share absorbing Rs. 48,000). After bringing in the credit balance of Rs. 29,760 (Rs. 7,397) carried forward from the previous year, the balance at debit of profit and loss account amounts to Rs. 18,522 (credit of Rs. 1,13,760 from which the directors paid a final dividend of Rs. 70 per share absorbing Rs. 84,000 and carried forward Rs. 29,760). The directors recommend that no dividend be declared and that the debit balance in the profit and loss account be carried forward.

A crop of 2,659 maunds was secured, which has been sold at an average price of Re. 1-10-9 per lb. This compares with a crop of 2,810 maunds manufactured in season 1954, which sold at an average price of Rs. 3-1-1 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1953 crop, in comparison with the record prices realised the previous season.

Estimates for the current season have been framed for a crop of 3,000 maunds to cost Rs. 4,02,314 and it is expected that a crop in the region of 3,000 maunds will be secured, provided normal weather conditions prevail. An increased manure application has been made and the planted area is in good condition. Crop to the 14th July 1956, amounted to 1,299 maunds compared with a crop of 1,262 maunds at the same date the previous year.

Benares Electric Light & Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The boiler and turbo alternator ordered in the year 1954 are at present under erection and it is expected that the boiler will be commissioned by the end of August and the turbo alternator by November this year.

Applications have been received for supplies of electrical energy to the extent of approximately 2,000 kws. and with the present industrial development, it is doubtful whether the Company can meet its obligations under its licence without further extending its generating plant capacity, as present indications are that the Government Rihand Dam scheme will not be available for supplying power to licensees until the year 1962 at the earliest, therefore, provision has to be made for meeting the additional capital expenditure in providing new plant, and as will be seen in the following notes in regard to accounts, a sum of Rs. 1,75,000 has been placed to general reserve. The Company's present financial commitments in respect of loans taken from the State Government also necessitate acceleration in building up the general reserve, to ensure the meeting of loan repayment instalments and interests when such fall due.

The following schedule indicates the progress that has been made during the year under review:—

Half-year ended	*Units sold*	*Revenue* Rs.
30th June 1953	10,983,183	14,38,649
31st December 1953 ...	11,071,085	16,24,041
30th June 1954	11,233,253	14,49,894
31st December 1954 ...	11,582,601	16,21,616
30th June 1955	13,298,217	15,79,101
31st December 1955 ...	14,635,884	20,05,122

After providing for all charges and placing Rs. 21,843 (Rs. 21,181) to statutory contingencies reserve, Rs. 58,400 (Rs. 58,400) to reserve for redemption of debentures, Rs. 5,000 (*nil*) to reserve for bad and doubtful debts, Rs. 31,378 (*nil*) to tariffs and dividends control reserve and Rs. 1,75,000 (*nil*) to general reserve, there remains a balance of Rs. 1,44,757 (Rs. 1,45,030) including Rs. 40,517 (Rs. 42,675) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 85,000 (Rs. 85,000), an additional payment of As. 2 (As. 2) per share Rs. 21,250 (Rs. 21,250) and carrying forward to next half-year Rs. 38,507 (Rs. 38,780).

Accounts in brief are as under:—

Murphulani (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 1,25,000 out of the amount standing to the credit of general reserve, referred to in the last report, was granted at the end of September 1955, and the issued and subscribed capital of the Company has been increased by the addition of 12,500 ordinary shares of Rs. 10 each, issued as fully paid up to shareholders at the rate of one new ordinary share for every two preferred ordinary or ordinary shares held by them on 16th November 1955.

Early in the present year it was agreed with Government that a bonus would be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 account.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year. Provision has also been made in these accounts for the estimated amount of labour bonus due to be paid in respect of the year ended 31st December 1955. The auditors have commented on both these points in their report.

After providing Rs. 16,277 (Rs. 18,161) for depreciation, Rs. 53,857 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a profit of Rs. 2,58,740 (Rs. 4,33,147). After bringing in the balance of Rs. 50,536 (Rs. 34,889) from last year, providing Rs. 1,19,000 (Rs. 1,70,000) for taxation and transferring Rs. 1,00,000 (Rs. 1,25,000) to general reserve, there remains a balance of Rs. 90,276 (Rs. 1,73,036) at the credit of profit and loss account. From this the directors recommend the payment of a dividend of Re. 1-12 (Rs. 5) per share on the preferred ordinary shares, absorbing Rs. 35,000 (Rs. 1,00,000) and Re. 1-4 (Rs. 4-8) per share on the ordinary shares, absorbing Rs. 21,875 (Rs. 22,500), leaving a balance of Rs. 33,401 (Rs. 50,536) to be carried forward. The ordinary dividend to be paid in 1955 is on the increased capital of Rs. 1,75,000. In the previous year the ordinary capital stood at Rs. 50,000.

A crop of 5,162 maunds was secured, which has been sold at an average price of Rs. 2-7-7 per lb. This compares with a crop of 4,497 maunds manufactured in season 1954, which sold at an average price of Rs. 2-11-11 per lb. Although the tea market fell sharply during the course of the season as regards poorer quality teas, the Company's teas sold at satisfactory prices.

Estimates for the current season have been framed for a crop of 5,500 maunds to cost Rs. 6,86,150. Crop to the 14th July 1956, amounted to 1,468 maunds compared to 1,240 maunds to the same date the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,75,000	Block	4,10,684
Reserves ...	5,05,000	Stock-in-trade ...	3,97,185

Radha Krishna Mills Ltd.

The directors of the above Company (Managing Agents and Bankers: Messrs. A. G. Gurusamy Naidu & Co., Peelamedu, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1955.

After meeting all expenses and providing a sum of Rs. 3,44,297 (Rs. 10,06,241) towards depreciation, the year's trading has resulted in a net profit of Rs. 7,55,615 (Rs. 4,30,648). Adding to this the carry forward balance of last year's profit amounting to Rs. 28,607 (Rs. 1,458) the total amount available for distribution was Rs. 7,84,222 (Rs. 4,32,095) which the directors disposed of as under:—

Transferred to contingency reserve Rs. 2,75,000 (*nil*), paid a tax free dividend at the rate of 20 (16) per cent. on the paid-up share capital Rs. 5,04,360 (Rs. 4,03,488) and carried forward to next year Rs. 4,862 (Rs. 28,607).

The directors report that trade conditions were more or less normal and satisfactory during the year. However, payments in respect of compensation to workers retrenched in 1948 amounting to Rs. 38,492, bonus to staff and operatives for 1954 amounting to Rs. 2,45,325 and income-tax amounting to Rs. 1,89,465 for the years 1953 and 1954, making in all a total of Rs. 4,73,282 had to be met out of the current year's profits as no provision had been made for them in the respective years. In the circumstances, the profits earned must be considered satisfactory.

The Government sanctioned in April 1955, an additional 10,000 spindles for the expansion of the mills. Out of the above 4,000 spindles have already been erected as on date and the balance 6,000 spindles will also be installed shortly. There has been considerable delay on the part of foreign makers in supplying the blow-room machinery and other replacement materials ordered and therefore the expansion and renovation programme could not be completed during the year under review itself. It is expected that such machinery will be received and put into commission during the current year itself.

The gross block of the Company stands at Rs. 83,60,150 (Rs. 73,90,455) and deducting depreciation provided amounting to Rs. 49,86,177 (Rs. 41,41,878) the net block is Rs. 33,73,973 (Rs. 32,48,577).

As reported in the previous year, the directors are keeping up the programme of expansion of the spindleage capacity of the mills and modernisation of the old machinery to enable the Company to meet the competition from mills which are equipped with the latest types of machinery. The Company has therefore been investing heavily on capital expenditure during the last few years and consequently depreciation had to be provided on a large scale taking advantage of the concessions offered in this respect by the Income-tax Act. The capital expenditure to be incurred by the Company in the immediate future on buildings, machinery and equipment for expansion and renovation including the cost of air-conditioning is expected to be Rs. 20,00,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,30,420	Block ...	33,73,973
Reserves ...	20,00,000	Stock-in-trade ...	20,88,990
Liabilities ...	15,68,953	Stores and spare parts	2,17,350
Profit and loss account	7,84,222	Debts, deposits and advances ...	4,63,098
		Investments	3,11,387
		Cash ...	4,28,797
Rs.	68,83,595	Rs.	68,83,595

Star Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Bajoria & Co., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

The profit and loss account for this period, after allowing debenture interest, managing agents' commission and other charges, showed a credit balance of Rs. 3,60,123 (Rs. 4,75,622). After writing off the sum of Rs. 1,00,820 (Rs. 86,153) on account of depreciation and bringing forward the sum of Rs. 4,492 (Rs. 1,569) being the credit balance of the last half-year, the sum of Rs. 2,63,795 (Rs. 2,31,038) was available for distribution, which, the directors disposed of as follows:—

In paying a dividend on the preference shares of the Company at 5 per cent. per annum (free of income-tax) Rs. 25,000 (Rs. 25,000), in paying a dividend on the ordinary shares of the Company at As. 12 (As. 8) per share (free of income-tax) Rs. 1,50,000 (Rs. 1,00,000), in paying a dividend on the "A" ordinary shares of the Company at As. 12 (As. 8) per share (free of income-tax) Rs. 75,000 (Rs. 50,000) and in carrying forward Rs. 13,795 (Rs. 6,038).

During the period under review, the Mill was shut for renovation for about one month. The directors report that since last few months the renovated plant is giving most satisfactory production, both in quantity as well as in quality.

The directors are now going ahead with the scheme of expansion of the existing plant by installation of a further machine of modern design. For this purpose share capital of Rs. 60 lakhs is being raised by issue of 3,00,000 ordinary shares of Rs. 10 each and 30,000 cumulative and tax-free, 6½ per cent. preference shares of Rs. 100 each. After the implementation of the scheme there will be a large increase in production at the Mills, resulting in better prospects for the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	93,71,005	Rs.	93,71,005

Bhulanbararee Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

In conformity with the provisions of the Companies Act, 1956, there will be no half-yearly accounts in future. From now on therefore the Company's accounts will be closed and audited as at the 31st December each year and the first annual closing will be for the 12-month period ending 31st December 1956.

Raisings and despatches.—76,243 (84,832) tons of coal were raised and 80,965 (1,02,138) tons were despatched during the half-year. The figures for the previous period were 90,473 tons and 77,447 tons, respectively.

Sand got and transported by the ropeway installation was 73,366 tons compared with 85,791 tons for the same period last year. The poor monsoon greatly affected sand supplies, the results of which will be apparent in succeeding periods.

The delay in actual receipts of the stowing subsidy has resulted in a decline in income from this source of some Rs. 20,000 compared with last half-year.

Transport.—Although the daily average wagon figures improved from 3,176 to 3,347 during the last two six monthly periods, it was noticeable that the industry failed to benefit by what is known as the spare capacity period which occurs normally between July and October. In 1955 there was no such period and while the railway's performance has undoubtedly shown an improvement on previous figures, the directors are yet to be convinced that transport plans are geared to the vast requirements of the second Five-year Plan.

The profit and loss account, after providing Rs. 28,513 (Rs. 33,766) for depreciation, Rs. 1,308 (Rs. 1,308) for taxation and including the debit balance of Rs. 1,65,136 (Rs. 2,04,456) brought forward from the previous period, shows a debit balance of Rs. 1,87,446 (Rs. 2,17,803) which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,15,000	Block ...	15,24,038
Reserves ...	15,11,080	Capital expenditure in progress	39,253

		Stores ...	76,115
		Debts and advances ...	6,39,984
		Investments	64,105
		Cash ...	4,616
		Profit and loss account ...	1,87,446
Rs.	27,22,139	Rs.	27,22,139

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; and this fact has been commented upon by the auditors in their report.

After providing Rs. 18,050 (Rs. 22,655) for depreciation and crediting an excess liabilities provision of Rs. 13,687 (*nil*), the accounts for the half-year show a profit of Rs. 51,420 (Rs. 26,604) to which must be added the balance of Rs. 14,968 (Rs. 8,676) brought forward from the previous half-year. The directors have transferred Rs. 30,000 (*nil*), to general reserve, leaving a balance of Rs. 36,388 (Rs. 30,280) at the credit of the profit and loss account out of which they recommend a dividend at the rate of 15 (12½) per cent. per annum absorbing Rs. 20,438 (Rs. 17,031) leaving to be carried forward Rs. 15,950 (Rs. 13,249).

The raising contract at Ena colliery continues to work satisfactorily. Raisings during the half-year were 70,722 (58,577) tons compared with 61,890 tons during the previous half-year, and despatches were 70,589 (65,074) tons as against 64,686 tons. The Coal Board have recently indicated that sandstowing should be undertaken generally in No. 10 Seam, and this matter is being considered by the directors.

Hitherto half-yearly accounts have been issued by this Company to its shareholders, but in the opinion of the board of directors this is no longer practicable in view of the provisions of the Companies Act, 1956, regarding annual general meetings and the accounts to be presented at such meetings. Accordingly yearly accounts will be issued in future, commencing with those for the year ending 31st March 1957. This will not preclude the payment of half-yearly dividends, subject to the Company's results permitting, as the Company's Articles authorise the payment of interim dividends. It is, therefore, the Board's intention to consider the payment of interim dividends in the light of the Company's results up to 30th September each year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,72,500	Block ...	4,42,488
Reserves ...	2,85,193	Stores ...	20,226
Provision for taxation ...	5,096	Debts and advances ...	5,29,625
Liabilities ...	5,66,846	Cash ...	1,53,246
Profit and loss account ...	15,950		
Rs.	11,45,585	Rs.	11,45,585

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Income-tax Arrears

THE total amount of arrears of income-tax on 31st March 1956 was Rs. 182.85 crores. This amount included Rs. 19.53 crores as arrears for 1952-53 and Rs. 30.60 crores as arrears for 1954-55. After taking all the necessary steps for the recovery of the taxes due, as prescribed under the Income-tax Act, if it is found that no recovery is possible on account of the assessee having no assets, or not being traceable, having left India, the arrears of tax are written off. The amounts of arrears written off during the last five years were Rs. 9.84 lakhs in 1951-52, Rs. 34.05 lakhs in 1952-53, Rs. 10.53 lakhs in 1953-54 and Rs. 12.12 lakhs in 1954-55. Information for 1955-56 is not available.

* * * *

Reinsurance Corporation

A reinsurance corporation will be set up shortly by insurance companies transacting general insurance business. The delay in setting up the corporation was due to various difficulties. The Government had to consult the general insurers. At one time, the Government felt that it should have some shares of the proposed corporation. But it has now decided that the corporation should be set up by the insurance companies themselves.

—*M. C. Shah*

Transfer of Assets to Overseas

As far as the Government is aware, no transfer of assets to foreign countries by Indian citizens is taking place. Under the Foreign Exchange Regulation Act, 1947, no such transfer can be made without the prior approval of the Reserve Bank.

* * * *

State Bank of India

The supply of rural credit by the State Bank of India will not be significant unless the co-operative societies are developed. The functioning of the State Bank in this matter is very closely linked with the work of the warehousing corporations and, unless these corporations are working, the State Bank can only function in a limited manner. The State Bank's role in this matter will, therefore, be significant only after some progress has been made in the working of the co-operative warehouses. The State Bank is to lend money to such warehouses on authorised securities for rural credit. Apart from this, the branch expansion of rural areas and by providing extended remittance facilities and other assistance to co-operative institutions connected with agricultural credit, the pilot schemes undertaken by the State Bank on an experimental basis at selected centres for the provision of credit to small-scale industries is also likely to prove beneficial for the grant of credit to such industries in rural areas. The State Bank has opened 35 branches so far in rural areas. I am sure the State Bank will now take steps to accelerate the progress.

* * * *

Rise in Prices

The recent increase in the prices of food, cloth and other consumer goods may not all be due to deficit financing. The main reasons for the increase are the somewhat smaller production of foodgrains, particularly of coarse grains, and the increased tempo of developmental expenditure in the country. Speculative trading is also somewhat responsible for the rise in prices of foodstuffs. It should, however, be remembered that the recent increase in prices, confined mainly to agricultural commodities, is, to some extent, also a corrective to the sharp decline that had taken place earlier in 1954-55. The increase due to development expenditure in the country was one of the main reasons. Surely, that would also include whatever amount may have been spent on deficit financing. I might say that the deficit finance that might have been incurred this year is very small, because, in the first four months, there had been rather a budget surplus of Rs. 10 crores, as against a budget deficit of Rs. 32 crores in the corresponding period last year.

—*A. C. Guha*

Heavy Engineering Industries

A heavy engineering mission from the U.K. is expected to visit India shortly to advise the Government on the development of heavy machinery and engineering industries. The mission will be financed partly by the Federation of British Industries and partly by the Colombo Plan Administration.

—*T. T. Krishnamachari*

Trade Treaty With Japan

A request has been received from the Japanese Government for the extension of the period of the conclusion of a trade treaty between the two countries. The Government of India has urged the Japanese Government for the consideration of all the relevant matters pertaining to the Indian assets in Japan before finalising the treaty. I have no figures relating to the value of Indian assets in Japan.

* * * *

Import of Copra and Oil

No reduction in the import quota for copra and coconut oil further to that announced for July-December 1955 period is considered necessary. The reduction then was from 100 to 75 per cent. The Quilon Oil Millers' and Exporters' Association has urged the Government to impose some restrictions on the import of copra and coconut oil from Ceylon. A fall in coconut oil prices and consequent heavy loss to the local oil milling industry and trade have been cited as grounds for this demand.

—*D. P. Karmarkar*

Coir Factories in T.-C.

It is proposed to organise a few mats and matting factories and one or two rope factories on a co-operative basis in Travancore-Cochin under the Second Five-year Plan. The total number of coir factories in Travancore-Cochin during 1955 was 121, as compared with 128 in 1954, 116 in 1953 and 125 in 1952. These factories are run by private firms. About 10,069 workers were employed in these factories in 1955, as against 10,786 in 1954. 10,399 in 1953 and 8,257 in 1952.

—*Nityanand Kanungo*

T.-C. Fertiliser Factory

The Technical Committee appointed by the Government to study the question of expansion of the Fertilisers and Chemical, Travancore, Ltd. has estimated that the cost of production of ammonium sulphate would be brought down, provided the following changes in the manufacturing process and expansion in capacity are achieved: (1) Production of ammonia from electrolytic hydrogen and nitrogen from liquid air; (2) increase in capacity for ammonia production to 70 tons per day; (3) increase in capacity for ammonium sulphate production from 135 tons to 200 tons per day; (4) adoption of acid neutralisation process for manufacture of ammonium sulphate; and (5) production of new fertilisers like ammonium phosphate. The total additional investment required for securing expansion on the above lines is estimated at Rs. 2.56 crores.

—*Manubhai Shah*

Inglis Report on Kosi Project

The Government invited Sir Claude Inglis, well-known hydrologist, to advise on the Kosi project. Sir Claude has drawn attention to (i) the special problem of silt control in the Kosi; (ii) the effect of high-pond level of the barrage on the upstream embankments and the necessity of continued observations and gradual raising of the pond level; and (iii) construction of dams on tributaries for sand control. All these points were known to the Government beforehand and have been taken into consideration in the preparation of the present Kosi scheme.

—*Jaisukhlal Hathi*

Merchant Shipping Act

The Government is considering the question of revising the Indian Merchant Shipping Act. A Bill is being drafted for introduction in Parliament shortly.

* * * *

Purchase of Ships

Apart from the orders placed with the Hindusthan Shipyard Ltd., Visakhapatnam, the Indian shipping companies have during 1956-57 placed orders for construction of ships in Germany, Belgium and Yugoslavia.

* * * *

Shipping Freight Rates

The investigations of the Officer on Special Duty, appointed to look into the allegations of discrimination in the shipping freight rates, have been completed. The charge of discrimination cannot be proved beyond doubt. The investigations, however, have revealed that there are instances of disparity in freight rates. Such instances have been taken up with the Conference Lines concerned, as a result of which the rates have been lowered in certain cases.

—*O. V. Alagesan*

Postal Services

About 18,000 post offices, covering villages with a population of 2,000 or more, were opened in the country during the first Five-year Plan. There have been exceptions in the case of a few villages, which have expressed themselves against the necessity of opening post offices there. I do not think it is necessary to have post offices in each and every village of the country, irrespective of the population there. The maximum loss the Government can incur on a post office is Rs. 750, but even this limit will go upto Rs. 1,000 in the case of backward areas. Regarding the provision of savings bank facilities in the rural post offices, it is more complicated to have the cheque system in the rural post offices not only for the man who deals with the cheques but also for the man presenting the cheques.

MONEY STEADY

(*From Our Own Correspondent*)

BOMBAY, 22*nd August*

For yet another week, the short-term money market maintained steady conditions, with the demand for funds keeping pace with the supply. At times, however, a shortage of floating funds was felt, but it was only a temporary phase, thanks to an improvement in the return of money from up-country centres. The supplies were, however, not large enough to place borrowers in a comfortable position and to bring down interest rates. Accordingly, money rates continued to hold their levels; inter-bank call money was unchanged at 3½ per cent. among all sections of banks. House money at call was bid at the self-same rate of 3½ per cent. Short-term deposits were placed at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

A drop of Rs. 6.34 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 17th August 1956, in contrast to the rise of Rs. 4.64 crores in the previous week. Notes held in the Banking Department have also declined by Rs. 2.30 crores, following a fall of Rs. 4.33 crores in the previous week. The aggregate recession of Rs. 8.65 crores in total notes issued is covered by a fall of Rs. 10 crores in foreign securities and an increase of Rs. 1.35 crores in rupee coin. In the Banking Department, deposits of the Central Government, which had declined by Rs. 7.01 crores in the previous week, have recorded a negligible drop. Deposits of other Governments have gone down by Rs. 81 lakhs, while those of banks have risen by Rs. 2.40 crores. There has been an increase of Rs. 2.27 crores in balances held abroad. Loans and advances other than to Governments are lower by Rs. 3.06 crores, while in the previous week they had accounted for a rise of Rs. 9.48 crores. The previous week's increase was mainly due to the large advances to banks against usance bills to the tune of Rs. 12.79 crores, of which repayments amounted to Rs. 4.20 crores, so that the outstanding advances showed an increase of Rs. 8.59 crores. In the week under review, however, fresh advances aggregated only Rs. 2.28 crores, while repayments were of the order of Rs. 5.45 crores.

The Scheduled banks' statement for the week ended 10th August 1956 shows a small rise of Rs. 38 lakhs in demand deposits and of Rs. 1.74 crores in time deposits. Inter-bank borrowings have also gone up by Rs. 1.25 crores and borrowings from Reserve Bank by Rs. 8.02 crores. On the assets side, a further small decline of Rs. 1.39 crores is noted in advances, while bills purchased and discounted have risen by Rs. 1.37 crores. Cash balances have gone down by Rs. 81 lakhs, while money at call and short notice are higher by Rs. 2.07 crores.

The Gilt-edged market ruled quiet, with further marking down in values in most of the loans, due to lack of support and predominance of sellers. The volume of business was meagre.

3 per cent. 1957 was maintained at Rs. 99-13, while 3 per cent. 1958 was placed at Rs. 99-9 *ex*-voucher, as against Rs. 99-10 *cum*-voucher last week. 3 per cent. 1959-61 was quoted at Rs. 98-1 after payment of half-yearly interest on the 15th inst. 3 per cent. 1963-65 was further marked down by an anna to Rs. 94-14. 3 per cent. 1964 shed an anna to Rs. 94-15. 3 per cent. 1966-68 held ground at Rs. 93-3, while 3 per cent. 1970-75 lost an anna to Rs. 90-2. 3 per cent. 1986 Conversion Loan had sellers at Rs. 75-1. The new loan, 3½ per cent. 1962, was unchanged at Rs. 98. 3½ per cent. 1961 declined by an anna to Rs. 99-6, at which level also there were sellers. 3½ per cent. 1964 attracted sellers at Rs. 98-11. 3½ per cent. 1965 was an anna lower at Rs. 98-9, while 3½ per cent. 1967 and 3½ per cent. 1974 were unchanged at Rs. 98-7.

In the foreign exchange section, a notable development during the week was the announcement by the Reserve Bank of India that authorised dealers in foreign exchange will be permitted, with effect from 3rd September next, to deal in the U.S. and Canadian dollars at competitive rates, but within the spread between the floor and the ceiling fixed by the Bank of England. At present, the authorised dealers deal only at common rates fixed by the Exchange Banks Association.

There was no change in the rupee-U.S. dollar exchange rates, banks' selling rate being Rs. 480¾ per $100 and their buying rate Rs. 477 per $100. In New York, sterling gained strength in terms of the dollar. Spot sterling hardened from $2.78.3/16-2.78.5/16 to $2.78.7/16-2.78.9/16 and three months' forward from $2.76.9/16-2.76.11/16 to $2.77⅛-2.77⅛. Transferable sterling, on the other hand, declined from 275.45-275.55 cents to 275.30-275.40 cents before gaining ground to 275.40-275.50 cents.

KIPS FIRM

(*From Our Own Correspondent*)

MADRAS, 20*th August*

There was no noticeable change in the kip market during the week under review. Sellers of F.A.Q. types quoted very high prices which the U.K. importers did not follow. A few top marks, however, registered a slight increase in price, and sellers were reserved. There was no change in the prices of tanned skins F.A.Q. tannages, but there were several enquiries for top grades superior tannages.

The quantities available for sale during the London tanned skins public auctions which are to commence on the 27th inst. are 1,015 000 goat skins and 485,000 sheep skins. It is believed that 40 per cent. of the goat skins are of fifths and lower selections without corresponding run. This was likely to result in lower prices being realised for them.

BULLION RECEDES

(*From Our Own Correspondent*)

BOMBAY, 22*nd August*

A reactionary trend in bullion prices was noted during the week under review, both silver and gold recording modest losses over the week. The recession was mainly influenced by the political developments abroad. Prospects of an armed conflict on the Suez Canal issue having receded, bulls were inclined to book their profit. Meagre ready demand for gold, rumours of large unauthorised arrivals of the yellow metal, the widening of carry forward charges against bulls in silver and fears of additional imports of silver coins from Tibet were the other factors which chilled the bullish fervour.

Silver forward (23rd August settlement) declined from Rs. 173-3 to Rs. 171-8 on Saturday. After a mild rally on Monday this week to Rs. 172-9 it closed today at Rs. 171-15. The next settlement receded from Rs. 173-9 to Rs. 172, before gaining ground to Rs. 173-2. The closing was, however, lower at Rs. 172-11. The carry forward charges against buyers widened from As. 6 to As. 12.

Ready silver (.996 Mint) moved down from Rs. 173-3 to Rs. 171-8 and closed at Rs. 171-15.

The floating stocks of silver are estimated at 2,300 bars. The daily average offtake was 15 bars.

The decline in gold, though not very marked, was significant, in that the upward trend noted for some weeks past could not be sustained and buyers were inclined to book their profits. Another notable development in the gold section was the reversal of the carry forward charges; they were in favour of bulls till Monday, while at the close of business today—the last day of the August settlements—they turned against them.

Gold for forward delivery (22nd August settlement) was marked down from Rs. 105-3 to Rs. 103-10. After a temporary recovery to Rs. 104-4 it reacted again to Rs. 103-3 at the close. The September settlement declined from Rs. 104-10 to Rs. 103-9.

Ready gold lost ground from Rs. 105-2 to Rs. 103-13.

The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was also of the same order on an average.

In New York, silver was unchanged at 90¾c., while in London both spot and forward silver declined by ¼*d.* to 78¾*d.* After remaining steady earlier in the week, gold in London, disclosed some weakness, reflecting the strength of sterling. On balance, the yellow metal was marked down from 251*s.* 6¾*d.* to 251*s.* 3¾*d.*

The following comparative table shows the trend of market during the week under review:

	22-8-56	Highest	Lowest	14-8-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

SUGAR STEADY

(*From Our Own Correspondent*)

BOMBAY, 22*nd August*

A distinctly steady trend was in evidence in the sugar market during the week under review. Several spot houses were reported to have purchased an aggregate quantity of 50,000 bags of indigenous sugar, consisting of Raza, Buland, Hardoi, Hargaon, Gola, etc. The purchases were made at a time when arrivals of indigenous sugar were at a lower rate; the total arrivals during the week amounted to 18,700 bags, as against 21,200 bags a week before and 33,300 bags two weeks before. Consequently, sugar prices tended to look up. The improvement would have been more marked but for the anticipated announcement of the usual monthly releases next week. A section of traders also expected a fall in the ex-mill quotations of Bombay-Deccan sugar in line with the overall parity of sugar prices in the North and South.

Shravan delivery contract for 'C' grade sugar was squared up at Rs. 91-8, that is, As. 8 higher than what was expected. Delivery orders for a couple of thousand bags were, of course, adjusted at Rs. 91. *Asho* delivery met with sustained buying support and advanced from Rs. 91-3 to Rs. 91-14 before being quoted today at Rs. 91-10.

In the spot market, British refined sugar was keenly sought and hardened by Re. 1-12 to Rs. 92 per 2 cwts. Among indigenous sugar, medium grain evoked good demand and rose by a rupee to Rs. 91-Rs. 93. Small grain was firm at Rs. 89. Large grain was done at Rs. 94-Rs. 101.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

COTTON FUTURES IRREGULAR

(*From Our Own Correspondent*)

BOMBAY, 22*nd August*

The cotton futures market had another very short week, the number of business sessions being limited to only three days; it remained closed on the 17th, 19th, 20th and 21st inst. During this brief period, cotton futures ruled irregular. On Thursday they were much depressed, as operators were hesitant to enter into fresh commitments at more than Rs. 700 for fear of Government intervention as was done in December last. The lack of any report pointing to the possibility of a reduction in or abolition of the export duty on cotton also dampened the enthusiasm. Selling ensued and prices slipped back. A distinct recovery was, however, in evidence on Saturday, thanks to firmness of stock and commodity markets consequent on the Suez crisis. The market again staged a relapse early today on renewed unloading by bulls in view of favourable weather reports, but picked up strength towards the close on speculative purchases by bulls. The earlier losses were completely made up and the closing rates were slightly higher than those at the close on Tuesday last week.

Jarilla Contract (March 1957) opened the week at Rs. 701, as against Rs. 702, and receded to Rs. 696-8 on the same day. After recovering to Rs. 703-8 on the 18th inst., the Contract again eased to Rs. 699-8 today before finishing higher at Rs. 704-12. Vijay Contract (April 1957) opened Rs. 2-8 lower at Rs. 830-8 and fell to Rs. 827-8. After rising to Rs. 833, it retreated to Rs. 827 before closing at Rs. 832-8.

The following is the trend of prices of the two Contracts during the week under review:

(In rupees per candy of 784 lbs.)

	22-8-56	*Highest*	*Lowest*	14-8-56
Jarilla (March) ...	704¾	705½	696½	702
Vijay (April ...	832½	833	827	833½

Conditions in the spot cotton market continued to be active. Most of the popular varieties came in for business. Attention was particularly concentrated on Kalyan Wagad, Lakshmi, Jaydhar and Vijay. Transactions were also put through in delivery contracts. The buying spree in exportable styles noted last week, however, somewhat abated, thanks to lack of encouraging calls from overseas purchasers. Japan, it was reported, was not at present much interested in making large purchases, owing to shortage of sterling. The Continental countries would also appear not to have been inclined in buying Indian cotton at the currently prevailing prices. In the foreign section, East Africans met with considerable buying enquiries and forged ahead. The enquiries were induced by expectation of reduced availability of supplies, as a result of the hectic purchases by the U.K., following the freezing of payments between this country and Egypt. Moreover the mills were eager to buy as much quantity as was available in view of the fact that the varieties of East African cotton such as lower B.P. 52, Jinja and Busoga are excluded from the list of varieties officially recognised as conforming to the 1.3/16″ staple stipulation for import of cotton from sterling area countries.

The procedure governing the allocation of quotas for the export of Bengal *Deshi* cotton has been announced. Accordingly, out of the 20,000 bales allowed for export, a small quantity has been reserved for co-operative societies; the entire balance will be distributed among established exporters and registered dealers. The percentage of allocation of individual quota will be 1.36 with a minimum of 4 bales for established exporter and 0.16 (maximum of 24 bales and minimum of 3 bales) for registered dealer. Dealers having a turnover in excess of Rs. 45 lakhs are not entitled to receive a quota higher than that admissible to dealers with a turnover of Rs. 45 lakhs. For the conversion of turnover, Rs. 300 will be taken as the average price per bale. The validity of licences will be up to the end of December 1956.

The latest available prices—in rupees per candy of 784 lbs.—from the spot cotton market at Sewri, the figures in brackets giving last week's rates, are given below:

Bengal *Deshi* 720 (700); Berar Jarilla 785 (785); Khandesh 785 (785); Vijay 975 (975); Oomra *Deshi* 750 (735); Moglai 740 (730); Delivery contracts: Khandesh 197/3 December 123 (128), Berar 106(112), Moglai 44 (47) on Jarilla; 320F December 76 (77), 216F 102 (105), Vijay 13/16″ February-March 68 (68) on Vijay.

For the third week in succession the Karachi cotton market presented a cheerful tone. Enquiries from abroad continued to be quite encouraging and traders expected that the trend would be maintained in the coming weeks also. This expectation, coupled with the possibility of late arrivals of new crop cotton into the market, lent good support to cotton the prices of which registered a further improvement. N.T.R.G. January delivery strengthened by Re. 1-1 to Rs. 76-15. March delivery picked up As. 14 to Rs. 75-12. As the stocks of cotton with traders had been reduced at the end of the season, the spot prices of cotton were fully firm. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 100; Punjab *Deshi* 92; 4 F Punjab R.G. 81; S.G. 83; L.S.S. Punjab R.G. 84; S.G. 87; N.T.R.G. 82, S.G. 83; 289 F Punjab R.G. 85-12; S.G. 92-12.

The Alexandria cotton futures market put on a steady appearance during the week under review too. With the suspension of cotton sales by the Egyptian Cotton Commission from the 11th inst., traders were forced to meet their requirements by purchasing cotton from farmers who, naturally, sought to put up prices. Another helpful factor was the reduction in cotton acreage during 1956-57 revealed in the figures released by the Egyptian

Ministry of Agriculture; the acreage is estimated at 1,652,877 feddans, as against 1,815,697 feddans in 1955-56. There was, besides, hopes of enlarged overseas demand, following the relaxation of restrictions on payments by the Egyptian exchange control authorities. The payment for cotton shipped to the U.K. or any sterling area country is now required to be made in one of the four currencies, namely, Swiss francs, Beloina francs, Deutsche marks or Portuguese escudos. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below:

Karnak: November 99.75; January 97.60; March 96.60; *Ashmouni*: August 68.75; October 72.85; December 72.75.

The firm trend noted in the Liverpool cotton futures market last week abated during the week under review. In fact the market ruled distinctly easy. Near positions came under long liquidation and hedging. Business in mixed growth contracts was also slow and there was some commission house selling. The Egyptian contract tended to follow Alexandria, but bids above the market failed to attract offers. The Sudan contract eased, as there were light hedge offers. The following are the latest available quotations—in pence per lb.—from Liverpool:

American mixed growth contract: October-November 24.76; December-January 24.50; March-April 24.30; May-June 24.20; July-August 24.05; *Sudan contract*: September-October 48.50.

There was a further rise in cotton futures prices at New York, induced by trade buying reflecting unfavourable crop reports from some sections, while offerings were light. There was some short-covering in near October. Demand for filling August shipment spot cotton was reported to be good in the Atlanta area.

The following are the latest available quotations from New York, as compared with those eight days and fifteen days before:

(In cents per lb.)

	21-8-56	13-8-56	7-8-56
Spot	34.35	34.45	34.00
October	33.55	33.43	32.62
December	33.49	33.35	32.78
March	33.25	33.20	32.73

PEPPER IRREGULAR

(Messrs. Parekh & Co.)

BOMBAY, 22*nd August*

Malabar black pepper moved both ways during the week according to the day-to-day reports, whether optimistic or otherwise, from London on the Suez Conference. The undertone of the market, however, remained uncertain. The earlier buying fervour immediately following the news of the nationalisation of the Suez Canal has subsided, but New York is now reported to be slowly reverting to selective buying. After paying $0.33 for the shipments per named steamers, New York marked down its buying price to $0.29½ and did some buying from $0.29½ to $0.32, all for the nearby shipments. Singapore reduced its price for Sarawak to Str.$85 with temporary improvements to Str.$91.

Alleppey after revising its price to Rs. 612½ once again reduced it to Rs. 787½ with undertone soft, sellers being more anxious to meet buyers. Garbled at Cochin moved between Rs. 135 and Rs. 140. It is generally believed that the present prices of Malabar black cannot be maintained unless there is a continuous buying from New York as growers are anxious to sell as much as possible before the start of the new season. Primary sellers are also said to be fearing competition from Lampong in the very near future. Since the spread between the price of the spot and the shipment is now widening, a section of the trade is entertaining the fear that a lot of unsold consignments will be going from India. If this happens the prices of spot pepper in New York will go down, if not now, at the time of arrivals thereof, thereby affecting once again the whole structure of the prices of the world pepper.

Locally, September shipment changed hands from $0.32 to $0.30½, while October-November-December from $0.31 to $0.29½ with buyers and sellers preferring to wait for a new development before operating. In the delivery section most of the business is confined to a short covering, new buying at higher rate being conspicuous by its absence. Following are today's nominal quotations: Ready delivery Rs. 106 per Bengal maund; September delivery Rs. 725-35 per candy of 5¼ cwts.

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 22*nd August*

The yarn market was devoid of any notable development during the week under review. Trading was dull, thanks to the none-too-happy events at Ahmedabad and other areas in Gujerat. Section-wise, rayon yarns were depressed on account of slackness in demand. Staple fibre yarns, however, evoked very good support, although, towards the close, there was selling induced by fresh sales of yarn by two important local mills. Trading in cotton yarns was dull; the finer counts were particularly neglected and suffered a setback.

Rayon yarns for forward deliveries were subjected to selling. Snia rayon yarn (120 dull cones) August contract dropped Rs. 7 to Rs. 778. October contract fell by a like amount to Rs. 794. In the spot section, 150 Japan eased by half an anna to Rs. 4-2-6. 120 Japan was quiet at Rs. 3-13, as also 120 Italy at Rs. 3-14-6. 150 Italy, on the other hand, elicited good attention of operators, who feared reduced supplies of yarn from Italy following the Suez crisis. The quotation for this variety moved up by 18 pies to Rs. 4-1-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade slipped by half an anna to Rs. 3-6-6. 120 Bt. cones 1st grade was unchanged at Rs. 3-12-9.

The prices of staple fibre yarn—forward and spot—recorded a handsome improvement in prices. 40×2 October delivery firmed up by Rs. 15 to Rs. 676. August delivery rallied Rs. 12 to Rs. 664. Ready 40×2 Citys were on request As. 2 higher at Rs. 3-8-6. New Greats and Kohinoors hardened by 21 pies each to Rs. 3-8-3 and Rs. 3-9-6, respectively. Centurys gained 18 pies to Rs. 3-8-3. Foreign yarns (80×2), however, came in for selling and tended to move down. Fujis, S'Sellos and H'Races lost an anna each to Rs. 6-3-6, Rs. 6-2 and Rs. 6-1, respectively. Paramounts eased by half an anna to Rs. 6-4-6.

In the cotton yarn section, sixty counts were subjected to selling. Moderns receded by As. 8 to Rs. 63. Finlays declined by As. 6 to Rs. 62-10. Raghuvamshis lost As. 4 to Rs. 58-8. Deals in 40s were put through at reduced rates. Minaxis decreasing by As. 10 to Rs. 28-14, Gokaks by As. 4 to Rs. 28-12 and Maduras by As. 2 to Rs. 29-12. Among 80s, Mahendras were dull at Rs. 73-4 and Seksarias at Rs. 55. Elphinstones, however, rose by As. 8 to Rs. 69 on special buying enquiries. Among 10s, Podars eased by As. 2 to Rs. 14-14. Elphinstones were unaltered at Rs. 15-3. Twenty counts Hinds were quiet at Rs. 19-10 same as last week, while Moderns gathered As. 2 to Rs. 19-10. Among 30s, Maduras gained an anna to Rs. 24-13. Apollos were better by As. 4 at Rs. 23.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days and fourteen days before:

	22-8-1956	14-8-1956	8-8-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)—			
120 Dull Cone Snia August ..	778 0	785 0	794 0
October ..	794 0	801 0	798 0
120 Japan (per lb.)	3 13	3 13	3 11½
150 Japan (per lb.)	4 2½	4 3	4 0½
120 Italy (per lb.)	3 14½	3 14½	3 14
150 Italy (per lb.)	4 1½	4 0	4 0
Staple fibre yarn (per case of 200 lbs.)—			
40×2 August	664 0	652 0	644 0
40×2 October	676 0	661 0	650 0
40×2 New Great (per lb.) ..	3 8½	3 6½	3 6½
40×2 Century (per lb.) ..	3 8½	3 6½	3 6½
40×2 City (per lb.)	3 8½	3 6½	3 6

80s Mahendra	73 4	73 4	73 4

OILSEEDS BEARISH

(From Our Own Correspondent)

BOMBAY, 22*nd August*

After witnessing a strident advance during the previous week, the oilseeds market registered a sharp reaction during the week under review. The chief reasons for the downward trend were favourable weather reports and the rumours that the U.S.A. had withdrawn as a buyer from the castor-oil market and that Brazil was offering castor-oil at competitive rates to the U.S. Having opened the week on a firm note on Thursday, the 16th, the market reacted sharply on active offerings from the speculative quarters. Although, subsequently, uncertain international situation and professional bear covering enabled the market to stage technical recovery on the 18th instant, the market continued its downward course, registering sizable losses by the end of the week. The market was officially closed on Monday as a mark of respect to Mr. Morarji Desai, Chief Minister of Bombay, who has gone on an indefinite fast, and on Tuesday on account of Coconut Day.

In the futures section, groundnut February 1957 contract, having closed the previous week at Rs. 141-10, opened on 16th on a steady note at Rs. 141-12, finishing up at Rs. 144, the highest of the week the same day. On 17th, however, the quotation declined sharply to Rs. 139-10, and after registering a small rise on 18th, it closed the week at Rs. 139-10, shedding Rs. 2 over the week. On the spot section, too, the same trend was witnessed. Bold variety lost Re. 1 at Rs. 34-4 while August-September eased by Re. 1-2 to Rs. 33-10. Groundnut oil ex-mill fell by As. 12 to Rs. 19-2 and Railway Receipt was Re. 1 lower at Rs. 18-12.

Castorseed September contract, moreover, opened the week on a firm note at Rs. 151-6 gradually climbed down to Rs. 144 on the 18th inst., closing the week at Rs. 143-14, losing over the week as much as Rs. 9-14. Castorseed May 1957 contract followed a similar trend. Over the week it lost Rs. 4-8 at Rs. 129-12. In the spot section, Ready variety was down by Rs. 2-2 at Rs. 28-10, while Kanpur slumped to Rs. 27-4 from Rs. 29-12. Oil B.S.S. declined by As. 10 to Rs. 16-12 and Oil Commercial by a similar amount to Rs. 15-12.

Linseed May 1957 contract ruled dull during the week shedding on balance As. 6 at Rs. 27-10. In the spot section, Bold variety fell by As. 14 to Rs. 31-6 and August-September by Re. 1 to Rs. 31-6. Linseed oil Ready reacted to Rs. 17-8 from Rs. 18-8 last week.

Among other oilseeds, Kardiseed Bold Ready was dull at Rs. 18-12 as against Rs. 19 a week ago. Niger seed Ready was quoted at Rs. 28-8 and Ready Madras was done at Rs. 29, both As. 8 less than in the previous week.

The Bombay Oilseeds Exchange Ltd., in a telegram to the Ministry of Health, Government of India, emphasised the serious handicaps which the oil industry and trade would be faced with if the amendment to Rule No. 8 regarding the conditions for licences published in the Gazette of India Extraordinary dated 24th September 1955 was put into effect. The Exchange stated that the enforcement of Rule No. 8 would seriously handicap crushers, wholesalers, exporters and retailers. Moreover, the same oil mills manufacture both edible and non-edible oils and store them in different containers alongside each other. Wholesale dealers dealing in both the oils also keep them in same godowns in different containers. So also exporters. If the Rule No. 8 were enforced, the Oilseeds Exchange complains, the same man would not be able to carry on trade in both edible and non-edible oils unless he has separate shops and godowns. Acute shortage of storage space, more especially in Bombay, would crippie the trade. Moreover, enforcement of the Rule would involve more shops and more staff and consequently lead to higher prices for the oil. The Exchange further points out that the Rule is most impracticable and has urged that it should not be enforced.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	22-8-1956	14-8-1956	8-8-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
February 1957	139 10	141 10	136 8

Ready	17 8	18 8	17 6

METALS ACTIVE

(From Our Own Correspondent)

CALCUTTA, 21*st August*

Higher activity was reported in the metal market during the week under review. Stockists of the base metals made less offers in anticipation of prices increasing further. Attention was naturally given to the London talks on the Suez Canal, and it was realised that, in the unfortunate event of blockade of the Canal for some reason or other, metal imports to India would greatly be affected. Prices would go up as freight round the Cape would cost more. Manufacturers of non-ferrous metal products reported good order position with consumers and stockists pressing for earlier delivery. With the higher industrial activity in the country, it had been expected that factories producing such products as electrical cables and fittings, joints, brass hinge sections, copper and brass tubes, rods, hexagons, wires and sheets and electrical sections would speed up their activity; even so, it was the nationalisation of the Suez Canal which gave a fillip to keener activity in these factories.

There was moderate activity in copper, and importers entered into commitments for the import of sizable quantities electrolytic wire bars, the ready delivery of which changed hands at Rs. 228 per cwt. Oversea advices, especially from London, were encouraging. I.C.C. fire-refined ingots were priced at Rs. 224. Tin was fully firm at Rs. 522, which was one rupee above the replacement cost.

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 21*st August*

Prices of jute goods improved, while those of raw jute receded—this was the feature of this week's trading in the jute markets. The cause: it was the announcement in the beginning of the week that mills have decided to re-seal 5 per cent. of the looms as from the week commencing 17th September. Two and a half per cent. of the looms were re-sealed as from mid-July, and the consequent reduction in production by 3,000 tons a month would be fully noticed only from this month onwards. As such, there is a feeling in some quarters that the present decision of the Indian Jute Mills Association, which would further reduce output by 5,500 tons a month, is premature. Most traders, however, felt that this move was timely, as an analysis of recent figures of production, sales and stocks showed that the monthly production was running ahead of demand by about 8,000 tons. This has caused huge losses to mills in recent months. For, while prices of jute goods were falling, the need for mills to consume more fibre, coupled with the wagon shortage, resulted in a very steady raw jute market. Even as recently as a couple of weeks ago, an artificial scarcity in ready fibre further boosted the prices of raw jute. Mills were naturally anxious to return to economic working, which could be ensured only if there was a reasonable relationship between demand and production.

With the present decision, the proportion of the looms that would remain idle would rise to 12.5 per cent. which was the same for the last several years excepting for the break in the past eight months. The present step, it is thought, will bring down production more or less equal to demand. But a shortage for jute goods is not anticipated. Stocks at the end of July were as much as 135,800 tons, and by the end of this month they would be surely more than 140,000 tons. It will not be several months before the present decision will have an effect on stocks, as the fall in output will only bring the monthly production equal to demand.

Announcing the decision, the I.J.M.A. described the re-sealing as a temporary and moderate readjustment necessitated by changed market conditions. The I.J.M.A. also stated that the decision could be reversed in the event of more favourable

market conditions developing. The announcement rightly described the adjustment of production as emanating from the industry's desire to maintain a realistic relation between suppiy and demand.

In the jute goods market, there was moderate activity. Fair business was done with shippers, there was good covering demand, and speculators were active, as they thought that prices were bound to go up. All these factors raised the prices of jute goods. Sacking goods, the prices of which had gone down in recent weeks, made a strong bid at recovery and, as the week progressed, the gap between the prices of ready and forward deliveries widened noticeably. At the same time, both the positions advanced.

The announcement of the proposed re-sealing of looms was made on Tuesday last, and the immediate reaction was a spurt in ready B. twills to Rs. 106-14 from Rs. 104-12. The Jan.-March position advanced by 2 points to Rs. 107, and near delivery Oct.-Dec. goods gained nearly three points to Rs. 108. Hessian 40"×10 oz. also registered the higher trend with the ready goods at Rs. 40 gaining by one point. A similar rise was registered in all forward positions, Oct.-Dec. quoting Rs. 40-4 and Jan.-March Rs. 40. The market was closed on Wednesday on account of Independence anniversary. On Thursday, the feature of Jan.-March B. twills gained further by As. 2 to Rs. 107-2, while the ready position lost by As. 2 to Rs. 106-12, and the Oct.-Dec. goods lost by As. 6 to Rs. 107-10. On the other hand, in hessian all positions receded by a few annas each, the ready delivery losing As. 4, Jan-March As. 2 and Oct.-Dec. also As. 2. However, both the sections soon recorded keen activity, with mills being eager sellers. It was the latter circumstance that arrested the uptrend for the day and reduced the gains. On Friday, business activity continued and the slight recession of the previous day was reversed. Ready B. twills recorded a high of Rs. 107 with the Jan.-March goods gaining markedly to Rs. 107-14 and Oct.-Dec. to Rs. 108-2. Hessian 40"×10 oz. regained to the former high levels in all the positions. Thus, Jan.-March goods were taken up to Rs. 40, Oct.-Dec. to Rs. 40-4 and the ready to Rs. 39-15. The market was closed on Saturday last on account of 'Moharum,' and reopened yesterday on a steady note. Prices improved further during yesterday's trading. Ready B. twills gained further to Rs. 107-10 with Oct.-Dec. moving to Rs. 108-12 and Jan.-March to Rs. 108-4. Ready hessians 40"×10 oz. was also higher at Rs. 40-6, with Oct.-Dec. at Rs. 40-10 and Jan.-March at Rs. 40-3.

The re-sealing announcement and the consequent prospect of mills consuming smaller quantities of raw jute in the face of an extremely good crop introduced an easier trend in the raw jute market. Miils were also less keen than in the past to enter into commitments in an earnest bid to push down prices to reasonable levels. Stockists were, however, disinclined to discount rates, but a recession in prices for most constructions could no longer be resisted and soon followed. In the coming weeks, the downward trend is expected to receive further momentum, and the prospects of stockists making "easy" money at the expense of mills have been removed. Upper Assam bottoms were quoted at Rs. 28-8, local daissee bottoms at Rs. 29-8 and Indian Northern bottoms at Rs. 28-8, as against Rs. 29, Rs. 30 and Rs. 29, respectively, earlier in the week.

LINSEED ARRIVALS POOR

(Messrs. A. Bradley and Co.)

CALCUTTA, 20*th August*

After a somewhat weaker opening, linseed prices have displayed a steady advance and very firm conditions have been observed at the close. Firm advices from the centres and poor arrivals of seeds have resulted in a scarcity of goods in this market. There is fair demand from crushers, but sellers are reserved. Prices in the oil section are very well maintained, thanks to good local demand. No fresh business from overseas is as yet possible, owing to a large disparity in prices caused by the high export duty on linseed oil. The latest quotation is August-September Rs. 24-8 per maund.

TEA FIRM

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 17*th August*

Due to the reversion to fortnightly auctions there have been no sales in Cochin this week. Sale No. 24 is due to be held on Wednesday, 22nd August, and contains 1,475,000 lbs. Since the last sale there has been some activity for unsold teas and world markets with the exception of Ceylon, have shown a firm to dearer tone.

Dust Sale Q will be held on Thursday, 23rd August, and offerings total approximately 475,000 lbs. The majority of unsold dusts have been moved since the last sale.

London Market:—*Sale of* 13*th August* 1956:—Good demand at dearer rates for quality sorts. Thin liquoring weak lowest sorts dearer.

Sale of 14*th August* 1956:—"Good quality dearer. Plainest irregular sometimes easier."

Colombo Market:—*Sale of* 13*th August* 1956:—Off grades generally dearer, particularly fannings. Black and Powdery Dusts lower.

Sale of 14*th August* 1956.—Good demand for Middle East types and low mediums at five to ten cents advance. Better sorts reacted sharply. Good mediums declined ten to twenty cents, high growns generally forty to eighty cents lower.

Calcutta Market—Export.—50,200 packages. Good general demand with stronger tendency for lower types and useful support from Irish buyers. Good liquoring strong but tippy types rather irregular. Middle East types dearer.

Internal.—15,000 packages dust. Strong and active demand. Middle East types strongest feature As. 4 to As. 8 dearer. C.T.C.s well supported medium Assam As. 2 to As. 3 dearer. Cachars and Dooars As. 1 to As. 2 dearer. 850 packages internal leaf. Market irregularly steady.

Export Quota.—The market has again shown a stronger tendency and a fair amount of business was done at 24 pies. There are now buyers at 27 pies.

Forthcoming Auctions—Sale No. 24.—Wednesday, 22nd August and Dust Sale Q.—Thursday, 23rd August.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 24.—1,450,000 lbs. Quality generally improved. Very strong general demand. Low mediums As. 1 to As. 2 dearer. Mediums fully firm. Best liquoring keen competition As. 4 to As. 6 dearer. Whole leaf tippy types good demand dear rates. Fannings best feature."

SLIGHT RECESSION IN EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 21*st August*

During yesterday's export saie prices for most descriptions eased following a decline in quality. Stocks in Great Britain being low, buyers for the U.K. were busy. For they were anxious to purchase as much as they could for early shipping as a precautionary measure in the event of interruption of traffic in the Suez Canal. Until the Suez Canal crisis came to the forefront, buyers were slow in entering into commitments as they knew that production was running higher than last year and that, as such, there would be no difficulty in getting their requirements whenever they needed. Although output in Ceylon, Indonesia and South India is so far less than that for the corresponding period of last season, the marked increase in the North Indian production and the small increase in Pakistani output have so far made world output higher by 2 million lbs. than in 1955. In the month of July, the North Indian tea production was 1 million lbs. higher, at 80.57 million lbs. Including the figure for July, North Indian production is 10.75 million lbs. greater at 205.64 million lbs. compared to the corresponding period last year.

Indeed, a shortage of the higher quality teas is anticipated; but a glut in supply in the poor qualities, such as mediums and commons, cannot be prevented at the same time even with the greater attention the gardens are paying for the production of more quality teas. At the moment, tea traders' attention is rightly centred around the London conference on Suez, as on a successful solution of the dispute depends the prospects of tea. In the meantime, the higher trend would continue in the auctions. However, the fear that traffic through the Canal may be interrupted looks unwarranted at the present time if it is remembered that Egypt has declared that the Canal would continue to be as free as in the past; at the same time London declarations do not hint at the possibility of any armed conflict between Great Britain and Egypt, the movement of troops to the Mediterranean being only a precautionary measure in the event of Egypt blocking the Canal.

A quantity of 52,000 packages was on offer during yesterday's export auctions. Demand was fair, despite a decline in quality. Some withdrawals were also reported. The strongest feature of the sale was the rise by several annas in the price of fannings with clean black appearance. On the other hand, C.T.C. Assams gave way by As. 4. Dooars brokens and medium Assams declined by an anna to As. 2, and tippy teas received less attention. Stylish whole leaf grades were fully steady, but Darjeelings were very weak. The flavoury lots among Darjeelings lost by one rupee. Quotations were: best C.T.C. Assam B.P. Rs. 3-12 to Rs. 4-2, medium Assam B.P. Rs. 2-4 to Rs. 2-6, clean black pekoe Re. 1-15 to Rs. 2, and plain B.P. Re. 1-9.

Export quota changed hands at As. 2¼, but subsequently buyers offered only As. 2-1. However, it is expected that, since the quantity to be released for export during this season would be the same as last year and since a portion of last season's licences have been used for export this year, export quota rights would be available in plenty and that the demand for the rights in the open market may fall.

During last week's sale for domestic consumption, there was strong demand. Prices were pushed up. Dusts offered aggregated 15,105 chests, and the strongest feature of the sale was black leaf teas, prices of which on good support from buyers, on behalf of the Middle East, registered an increase of As. 4 to As. 8 per lb. Medium Assams possessing useful liquors improved by As. 2 to As. 3, and the poorer kinds were bought at firm rates. Although C.T.C. Assams received the attention of buyers, prices were quiet, but leafy teas enjoyed a good market. Residue teas were fully steady. Prices of Dooars and Cachars gained by an anna to As. 2. Quotations were: best Assam C.T.C. Rs. 3-8 to Rs. 3-10, medium Assam C.T.C. Rs. 2-10 to Rs. 2-14, medium Assam grainy dust Re. 1-12 to Re. 1-13, and medium Dooars Re. 1-10 to Re. 1-10-6.

Leaf chests on offer numbered 889. Prices were fully firm on good support.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 20*th August*

The sugar market ruled quietly steady during the week. Demand for small quantities was received from almost all consuming centres, but offtake was small, due to heavy rains. Mill delivery prices moved within narrow limits. The week-end prices were: Jaswant Rs. 28-9; Simbhauli Rs. 28-11; Mowana Rs. 28-8 to Rs. 29-8; Daurala Rs. 29 to Rs. 30; Amroha Rs. 28-2; Bijnore Rs. 28-2; Mansoorpur Rs. 29 to Rs. 30; Rampur Rs. 31; retail Rs. 30-10.

The *khandsari* market continued to be dull and depressed in the absence of buying enquiry. Prices ranged between Rs. 23 to Rs. 27 per maund, according to quality.

Dry quality *gur* prices advanced further by As. 8 to Rs. 13-8 per maund, as stocks of this quality were very poor. Kotha quality was transacted at Rs. 11 and the week's offtake (mostly of this quality) aggregated 10 wagons. Local stock dwindled to 24,000 maunds. Heavy rains were received during the week in all the western districts of Uttar Pradesh benefiting much the standing cane crops. After an early fall on bear pressure influenced by good rain reports, *gur* futures again advanced on revival of bull support. Opening at Rs. 11-2-1½, *fagun* delivery touched the lowest at Rs. 10-9 but swiftly recovered to Rs. 11-1-3 today.

PULSES ADVANCE

(From Our Own Correspondent)

HAPUR, 20*th August*

Foodgrains prices were steady during the week. Mr. A. P. Jain, Union Food Minister, announced in the Rajya Sabha that the Union Government proposed to open a large number of fair price shops for selling wheat at Rs. 14½-Rs. 14½ and rice in regulated quantities to consumers at Rs. 13-8 per maund. The House was further assured that the Government had fairly big stocks to run such shops. The Central Government had turned down the request of some State Governments to ban inter-State movement of grains, and the Government was of the view that shortage of foodgrains in any part of the country should be met by arranging liberal issue of foodgrains from Government stocks. Various steps, he said, had been taken by the State Governments of Madhya Bharat, Bhopal, Punjab, Assam, West Bengal and U.P. to check the upward trend in prices.

Wheat prices ruled unchanged at Rs. 15-4 per maund for average quality, while quality prices eased slightly to Rs. 16-4 per maund, due to Government pressure by selling heavy quantity of wheat in Delhi, small quantity of which was brought here to be sold at Rs. 15-8 per maund. The U.P. State Government has received 25,000 tons of wheat from the Centre, which is being sold through a chain of relief shops in the five big towns of the State. Some quantity of such wheat has also been received in Meerut and Muzaffarnagar. Local arrivals from the producing areas are small, at an average of 100 maunds daily, due to rains, and stocks have run down by two *khaties* to 81 *khaties*, which is very small as compared with the last year's figure of 128 *khaties*.

Rice ruled quietly steady at unchanged levels. Advices from Madras and other markets of the South continued to be firm. *Basmati* was done at Rs. 25-Rs. 30, *rangooni* at Rs. 19, *mainpuri* at Rs. 20 and coarse at Rs. 16 per maund. Arrivals of new *kharif* crop have not yet begun and pressure of consumers' demand is still concentrated on *rabi* grains. Gram prices advanced further on firm Punjab and Madras advices, although fresh arrivals from Punjab resulted in swelling local gram stock to 125 *khaties*. Barley and *bejhar* continued to find support from consumers as the market was faced with good demand and poor stock. *Jowar* and *guwar*, however, ruled quiet for want of buying enquiries, the latest prices as on Monday being gram local Rs. 12-8, *punjabi* Rs. 13-1, barley Rs. 12-4, *bejhar* Rs. 12, *jowar* Rs. 14, *guwar* Rs. 10-4 and maize old Rs. 12, *bajra* Rs. 12-4 per maund.

Pulses prices continued to be firm, on good demand from the South, and good loading facilities in the week-end resulted in an offtake of ten wagonloads of peas and peas pluses to Madras. Demand from Assam side is also keen and the Union Government is arranging some specials to be sent to Assam to meet this demand. Peas *dara* green has improved to Rs. 12-4 and white quality to Rs. 13-12 per maund, and as local arrivals were negligible, due to rains during the week, the local peas stock was put at 55 *khaties*. *Arhar* prices also registered a further gain of As. 10 to Rs. 12-12 per maund, although local stock was heavy at 100 *khaties*. Prices of other pulses, too, advanced on reports of heavy loss to crops in the producing areas of the South due to excessive rains. The prevailing prices are: *Urd* Rs. 19 to Rs. 20-4, *moong* Rs. 14-12 and *masoor* Rs. 15-12.

Pulses futures advanced in successive sessions. The latest quotations as on Monday were very near the highest levels of the week. Peas *bhadon* was quoted at Rs. 12-2-3, *mangsir* Rs. 12-6-9, peas white *bhadon* at Rs. 12-7-6, *mangsir* at Rs. 12-15-3, *arhar bhadon* at Rs. 13-0-9, *mangsir* at Rs. 13-7-6, *guwar maha* at Rs. 9-11, and *urd maha* at Rs. 16-6.

HIDES DULL

(From Our Own Correspondent)

KANPUR, 19*th August*

During the week under review, the hides and skins market ruled dull. Owing to rains and *Moharram* festivals, activity was restricted. Demand for high grade wet salted buff was as keen as usual. There was, however, a fall in the demand for high grade cow or goat. The Madras dealers were lukewarm during the week. The main purchasers were the local tanners. Fresh arrivals were considerable, despite certain bottlenecks of transport.

The latest available quotations are: Wet salted cow 1st grade Rs. 280 and 2nd grade Rs. 200 to Rs. 230 per score; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat 1st grade Rs. 170 to Rs. 190 and 2nd grade Rs. 130 to Rs. 140 per 100 pieces; sheep 1st grade Rs. 180 and 2nd grade Rs. 130 per 100 pieces.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures N=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary (capital)" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. C and 12, for instance, indicate the month of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and similar for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

‡—Managed by the board of directors. ‡ Less income-tax. (a) Okra Mills have paid dividend at Rs. 10½ on bonus shares, for the year, 1955. * Intending bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s For seven month ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Alliance and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

SCHEME FOR IMPROVEMENT OF INDIAN COASTAL SHIPPING—I

(*Concluded from page 366*)

(*e*) Rail head terminals. Approximate volume of cargo available.

As a result the following dimensions and special features are suggested:

Motor Cargo Vessel (*Ambar Jahaj*): Gross Tons: 265 tons. net tons: 127, D. W. 310 tons and cargo carrying capacity: 273 tons. Loaded Mean Draft 9 feet. Sea Speed 8 knots. Load Line. Classification. (Government of India).

Hull Design: (Dutch coaster type) Engines and accommodation aft. Built up hull, open shelter deck, raised forecastle head and peak tanks. If built of steel, the vessel could have ballast tanks and on inducement carry vegetable oil in bulk.

Material: Could be built of wood, steel, or composite construction. Both wood and steel are expensive. but, owing to shortage of steel, wooden coasters could be built. A new feature that may be att

PLANTATION INDUSTRY

THE plantation industry ranks high among the industries which are vital to the economy of India. Being an agro-industry, it is highly labour-intensive. Its direct employment potential is, perhaps, the largest and, thanks to the high standard of amenities for labour and hygienic conditions that are now being maintained, the environments of work are ideal. Those who doubt this statement are welcome to make a comparative study of the data relating to birth, death, sickness, literacy, housing and medical facilities in the large-scale plantation areas with those for the neighbouring parts in their respective States or for India as a whole. On such a study, they will find that the plantation areas stand a favourable comparison with the rest. Besides being a source of large-scale employment of a gainful nature under ideal conditions, the plantation industry derives its importance as a valuable earner of foreign exchange and of large sums of money to the Exchequer by way of taxes. Another factor that adds to its importance is that it provides two mild and yet cheap beverages, without which life in this modern world will become dull, if not dreary, and one strategic commodity, namely, rubber, which is finding increasing uses in transport and industry.

Although the industry's utility to the economy is understood by the Government, the planters have found it necessary to look to the Government often for its support and appeal to the public for its sympathy. The reason why this is so was ably stated by Mr. W. W. Kilgour in the course of his presidental address at the sixty-third annual conference of the United Planters' Association of Southern India (U.P.A.S.I.) held at Coonoor on Wednesday last. The conference was inaugurated by His Highness the Rajpramukh of Mysore State, the birth place of coffee in India. Mr. Kilgour's address was characterised by commendable moderateness in tone and humility of approach. He sought the understanding of the Government and workers not as a spokesman of employers but as a servant of industry. By and large, it was a factual statement of the problems confronting the plantation industry, particularly of South India. Considering that this industry in the South covers various products besides tea, unlike its counterpart in North India which consists almost entirely of tea, the addresses of Mr. Kilgour and Mr. M. M. Varghese, Chairman of the Planting Committee, are of considerable interest to those who wish to have a sound knowledge of this industry. Describing the industry as a "vital and integral part" of Indian economy and the U.P.A.S.I. itself as the servant of the industry, Mr. Kilgour stated that it was their duty to the industry as a whole to place their views before the Government as and when required. Such advice as the Association gave was received. In the true spirit of co-operation for the good of all those engaged in the industry.

From the economic angle, it must be stated that the cost of production is an aspect which should engage the immediate, as well as the proximate, consideration of every business man and industrialist. It is a particularly important aspect for those who are primary producers and who have to place their produce in a competitive market. The central theme of Mr. Kilgour's address was, appropriately enough, a study of the cost of production in relation to Government policy. Planters, he said, were never really free from the fear of a rising cost of production and he thought that this was a theme which merited more consideration at the hands of the Government and the trade unions than it has received in the past. "The cost of production," observed Mr. Kilgour, "is a hard fundamental economic factor that no amount of political and ideological speechifying or legislation can eliminate. In fact, cost of production has got us all, at whatever level we work for the industry, in its cold calculating clutches."

Having thus impressively emphasised the cost aspect, Mr. Kilgour rightly proceeded to state the various channels through which the cost of production has been allowed to rise. Improved employment conditions and welfare provisions for labour, higher taxation and rise in the cost of materials were some of the factors which are steadily pushing up the production cost. As though this is not sufficient, the industry has been told that further costly measures connected with labour welfare are to be enforced, although, when the Plantation Labour Act was first mooted, the industry had gained the impression that no further obligations in this field would be imposed. Mr. Kilgour's pertinent observations on this subject should command attention and sympathy, for, as everyone knows, the Plantation Labour Act is certainly not an omnibus piece of legislation that it was intended to be, replacing all previous or existing legislations in the field of plantation labour. And what is, perhaps, more important is that this Act is still by no means the last legislation of this sort. Nor does all this spate of legislation appear to have been strictly necessary for the plantation industry, because, as Mr. Kilgour pointed out, even the I.L.O., which zealously guards the workers' right throughout the free world, has given a good certificate of the conditions of work found in Indian plantations. Thus, the report of the third session of the International Labour Organisation Committee on Work on Plantations, held at Geneva in October 1955, clearly states that almost the whole of the recommendations on working and employment conditions adopted by the Committee for implementation in plantations throughout the world are already in force in the plantation industry in India.

These remarks of the I.L.O. Committee raise the question whether it is not necessary to cry a halt at least now to any further legislation favouring plantation labour. Relief in this respect would surely mean a great help to the industry at the present juncture. In making this statement, we are not unaware of the possible reactions to it in certain quarters, particularly labour leaders and some sections of Administration. It may be pointed out by them that planters are exaggerating the increase in costs and as proof of their contention may refer to the financial results of tea companies and the big dividends that are being declared by many of them. This, however, is a misleading argument, because, apart from the fact that the financial results relate to the past and the dividends to a capital structure incomparably small in relation to the capital employed, the warning sounded by Mr. Kilgour relates to the future. The full effect of the cost of the various fresh burdens that have been imposed on the industry is yet to be felt on the profits of the industry and will increasing

as labour charges. Those who levy taxes on plantation industry seem to think that it is a milch cow which can be subjected to endless strain. They are, of course, wrong in thinking thus and must study past history to be convinced. Mr. Kilgour instanced the case of China which, by the introduction of heavy imposts on the export of its tea, accidentally gave India and Ceylon the golden opportunity of extending their operations in world tea markets at its expense, and finally gave India the position of the largest producer and exporter of tea in the world. Today, other countries are entering the field and, where India, Ceylon and Indonesia were virtually the sole producers of tea a quarter of a century ago, there will soon be a considerable increase in the number of producers by the addition of East Africa, Nyassaland, South America, New Guinea, Australia, Russia and Iran, while Indonesia also will return to its pre-war scale of production. Undaunted by dry weather, even Egypt is said to be trying to grow tea on a commercial scale. India has, therefore, no reason to assume that its position as the largest producer of tea is unassailable.

Consideration of cost of production and labour legislation naturally leads one to the relevant question of the industry's attitude towards trade unions. The plantation industry, it will be remembered, is one in which there is considerable trade union activity. While Mr. Kilgour categorically stated that the U.P.A.S.I. would welcome healthy trade union organisation in the plantation industry, he uttered a warning that rivalry, fostered by a number of unions striving for supremacy or of unions being used for political ends, would benefit no one. As a practical representative of employers, he said that he would like to see one union for one industry and the exclusion of non-employees from among union executives. These remarks are realistic, in the light of our own knowledge of the troubles recently experienced in South India by reason of discord and rivalry among different unions operating in the plantation industry.

Apart from problems of cost and labour, the plantations of South India are facing other problems relating mainly to production and marketing and these were touched upon by both Mr. Kilgour and Mr. Varghese. Referring to the economics of tea industry, Mr. Varghese drew attention to the somewhat rapid and alarming decline in tea prices witnessed in 1955. This decline in price and the possibility of its recurrence have set the industry thinking as to what should be done to arrest such a development in future. There was evidence to show that the recession in 1955 was in part due to an excess of world supplies over world demand. Once again, Mr. Varghese stated, the industry's thoughts went back to the measures which were adopted to cope with similar situations in the past, and particularly to a scheme to restrict crop production. North Indian associations of planters were especially keen to adopt some form of crop regulation, as that was, in their view, the most practical and effective method of dealing with the problem. But such a method had already been tried in South India during the slump of the 'thirties and, under present conditions, it would hardly be regarded as suitable or desirable. Today, voluntary regulation could bring no cure, unless it was tried on an international level. Mr. Varghese pointed out that there was at present no international agreement, nor even a gentleman's agreement, by which the producing countries could co-operate in a scheme of this sort. He opined that there was no point in India trying to adopt a voluntary crop regulation scheme unilaterally and yielding ground to other countries which did not believe in such a scheme either now or in the future.

These arguments of Mr. Varghese are sound as far as they go, but the question is what is South India's solution to the threat of overproduction. While disapproving any suggestion of voluntary regulation, Mr. Varghese stated that quantitative restriction should be caused not by any artificial process of cutting down the crop on a straight percentage basis, but rather from a natural process of reducing the production of inferior quality teas which could not be sold for a profit. This pre-supposes that good quality teas will always command a premium in the world markets, and, judging from the market and price trends in recent months, the assumption is not unwarranted. It is only quality teas that are commanding a good market at profitable rates, while most of the poor teas are selling below cost. We are accordingly inclined to feel that the suggestion outlined by Mr. Varghese is practical and merits an honest trial not only in the South, where medium quality teas predominate, but also in the North, where more of high quality is being grown. It is obvious that there can be no other basis except quality on which tea can stand competition in the world markets of the future, and it is just as well that India uses the present opportunity to secure a steady improvement in the quality of its tea.

EXPORT CREDIT INSURANCE

THE rapid growth of India's export trade, the continuing change in the composition of the trade towards a larger proportion of semi-finished and finished goods (as against mere raw materials), and the emergence of the buyers' market are the three principal factors which invest the recent attempt by the Government of India to institute a scheme of export credit insurance with a new significance.

Although when the idea was first mooted, about seven years ago, the response was distinctly discouraging, there has more recently been a wider as well as a livelier appreciation of the importance of covering export risks. The trade and industrial organisations, without officially committing themselves, have by and large realised what a well-organised scheme of export credit insurance could do in order to promote exports. Obviously, it is this response that has encouraged the Export Credit Guarantee Committee (Chairman: Mr. T. C. Kapur) to take a constructive view of its task and recommend a modest scheme of export credit insurance.

A scheme of export credit insurance or, as it is sometimes called, export credit guarantee, is intended to offer to the exporter in a country cover against risk of loss arising from such factors as political instability in the importing country or insolvency of the buyer. Like all forms of insurance, export credit insurance can work successfully only if it acquires a large clientele that will enable it to average and spread the risks. The Export Credit Guarantee Committee, the report of which was released last week, has rightly emphasised that the organisation undertaking export credit insurance should have "as wide a spread of risk by countries, by traders, by buyers and over time, as possible, in order to ensure that it operates on a sound basis." This is, indeed, the crux of the whole matter. But the Committee has been so impressed by the opposition to compulsion voiced by several trade organisations and witnesses that it has found it necessary to advocate only "voluntary credit insurance." Thus, it will be open, under the scheme the Committee has drawn, for an exporter to avail himself of the facility of credit insurance or not. But will a voluntary scheme command the necessary clientele that will permit the scheme to be operated economically and successfully? In a brief, but well-thought-out note of dissent, Mr. S. C. Roy, a member of the Committee, has emphasised precisely this point. His contention is that the scheme should be made compulsory, or, alternatively, the Export Credit Corporation, which, according to the Committee is to be a State-owned one, should confine itself to covering only political risks, leaving the other risks to be covered by private enterprise. While Mr. Roy's analysis of the problem is both clear and commendable, the fact must be faced that private enterprise has not so far shown any readiness to start an organisation for covering even internal credit risks, let alone export credit risks. In these circumstances, the Committee has obviously had no choice in the matter but to recommend a "voluntary" scheme of credit insurance under the auspices of a State-owned corporation. The Committee is, however, alive to the need for gradually widening the spread of risks. With this end in view, it has advocated that the scheme could be made compulsory once it becomes popular and a substantial body of exporters in any particular line of exports demands the application of the "compulsion" principle of insurance to that line.

Since the scheme is to be a "voluntary" one, it should be obvious that its success will depend only on its intrinsic merits. From this point of view, the scheme, though it does not cover all the risks which the witnesses appearing before the Committee wanted it to assume, offers a reasonably wide coverage. Besides covering the risk of the insolvency of the buyer and war and civil war risks, which any scheme worth the name of export credit insurance ought necessarily to cover, the scheme is so designed as to include diversion risk (arising out of interruption or diversion of voyage to the exporting countries), import control risk (due to the cancellation of import or exchange licence of the buyer) and the risk of repudiation or default by the buyer. It will also cover, during the pre-shipment period, the risk of non-renewal or cancellation of the export licence or the imposition of fresh restrictions on the export of goods. In special circumstances, the scheme will also cover c.i.f. risks arising out of an increase in freight or insurance rates, risks of exports on consignment basis and expenses incurred on market surveys, publicity and other promotional measures. But the scheme will not cover exchange fluctuation and devaluation risks, and, during the pre-shipment period, ban on restrictions on the import of raw material or semi-manufactured goods which may be necessary to manufacture the goods to be exported, imposition of a new export duty or changes in export duties, non-availability of railway transport, shipping space or berthing space for steamers and strikes.

Although the risks the scheme covers are wide enough, it is a moot point whether they are the risks which frequently beset export trade. This again is an important issue which will help determine the popularity of the scheme. Perhaps, there can be no finality about the extent of the risks the scheme should cover, for nothing will prevent the assumption of larger and wider risks after a period of successful working of the scheme. Again, the scheme envisages the assumption by the Indian Corporation of 80 per cent. of commercial risks and 85 per cent. of political risks, the balance in each case is to be borne by the insured. The principle of allocation of risks rests on the consideration that, in its absence, there will be a tendency towards over-trading on the part of exporters. But the Indian interests actually wanted a higher percentage of risks to be assumed by the organisation than the level now advocated by the Committee. This, however, is a minor detail, for the magnitude of the risks covered could be increased at a later date through suitable adjustments in premium rates.

Indeed, in the ultimate analysis, it is the premium rates that will determine the success of the scheme. The information on this subject is scanty, because premium rates are regarded as a matter of utmost secrecy in all countries. Even so, the Committee would have done well to calculate at least the probable range of premium rates under Indian conditions on the basis of the information it has collected from the overseas countries, for that would have enabled exporting interests in India to have some idea of the financial implications of a scheme of this kind. But the Committee has given no indication whatever of the premium rates, though it is true that, so far as India is concerned, there is difficulty in arriving at any particular level of rates, in advance. The Committee has, however, recognised that the rates must be low if the scheme is to succeed. It remains to be seen whether the rates will be sufficiently low to prove attractive to exporters. A vicious circle is involved here, for, unless the scheme becomes popular, premium rates cannot be lowered, whereas the popularity of the scheme itself will depend on the premiums being low. What makes us underline the importance of premium rates is that one class of exporters (textile exporters), in the course of their evidence before the Committee, has held that they will not be able to pay even ½ per cent. by way of premium, whereas the premium rate for an exporter with a medium-sized business even in the U.K., with all its rich traditions of export trade, is said to work out at about 1 per cent.

From the broader angle of the country's export trade, what is the role of export credit insurance? There is no doubt that such a scheme is or could be a valuable aid to export trade. But it is easy to over-estimate its significance, for export trade is essentially a matter of price and quality rather than the availability of export credits or of facilities to cover certain kinds of export risks. Nevertheless, it must be admitted that, in a world where many countries possess or will soon have export credit insurance facilities, India will face a severe handicap through absence of similar facilities. Even now, the Committee has gone on record by stating that it has been brought to its notice that "in one foreign market, Indian goods are not being preferred, because Indian exporters insist on letters of credit being opened." A scheme of the kind, now formulated by the Committee, could prevent loss of export trade on such avoidable ground. Further, it will encourage the exporters to trade more vigorously with foreign countries and also to undertake and finance special expert promotion measures on an extensive scale.

FEAR OF RISE IN CLOTH EXCISE DUTY UPSETS MARKETS

REPORT ON TEA NOT BEARISH—T.I.S.CO. MEETING

THURSDAY, 5 P.M.

MARKET GOSSIP

ALL markets have followed a distinctly downward trend this week. Prices of commodities began to drop first, to be followed by bullion and shares. The prospects of a hot war over the Suez Canal having receded, speculators who had gone long in them began to square up their outstandings. The successful conclusion of a commodity agreement by India with the U.S., under which it is assured of a supply of 3.5 million tons of wheat, 600,000 bales (of 400 lbs. each) of cotton, 200,000 tons of rice, six million lbs. of tobacco and some quantity of milk powder in the next three years, has also checked the bullish fervour in markets. The main significance of this agreement to Indian economy is obvious. It is that the chances of heavy inflation, consequent upon the large-scale development expenditure envisaged in the Second Plan, are now less than they were before. The Government's capacity to deal with the disturbing rise in the prices of foodgrains has been visibly strengthened and, to that extent, it should induce confidence among the people and discourage hoarding by traders. Another significance of this agreement is that India's relations with the U.S. have not suffered so much as had been generally believed and that, once the Suez Canal dispute is satisfactorily settled, the scope for economic assistance from Western nations will improve perceptibly.

More than the commodity agreement with the U.S. referred to above, the fear of a stiff increase in the excise duty on cloth has played havoc both in the cotton and the share markets. While the Government can do anything at any time, this fear seems to have been inspired by interested parties. There is a section in the cotton market which is very eager to see that the Jarilla hedge contract does not go above Rs. 700 per candy, lest it should evoke the ire of the Government. This section is, therefore, doing everything possible to keep the futures prices depressed. It would not be surprising, therefore, if the rumour of an increase in excise duty had emanated from this source. It is even likely that this section may have actually advised the Government to resort to this method, in order to push down cotton values. In any case, it is interesting to note that, in recent weeks, the rumour relating to the excise duty has always been stronger in the cotton market than in the share market.

While cotton futures have dropped substantially during the past few days, values in the ready cotton market are still quite steady. If there is any basis in this rumour, mills will have stayed their purchases and prices of ready cotton will have gone down. A week ago, Jarilla March futures stood at Rs. 706 and Vijay April at Rs. 832-8. Today, they are at Rs. 681 and Rs. 810-8, respectively. In other words, the former has receded by Rs. 25 and the latter by Rs. 22 per candy. There has, however, been no comparable fall in ready cottons and the disparity between the futures and the spot is so ridiculously large as to make the former the laughing stock of the cotton world. The fictitious character of the hedge contract will be self evident when it is remembered that even 11/16" cotton is commanding a premium in the ready market over the Jarilla contract the basis of which is 25/32" staple. It is needless to add that, if the rumour about excise duty were to prove false, there might be a big jump in cotton futures, unless, of course, reports about the new crop were to turn out to be extremely bearish in the meantime.

* * * *

An increase in excise duty on cloth is not warranted. Some time ago, there was a proposal to replace the sales tax by a Union excise the proceeds of which will be distributed by the Centre to the States later on, the idea being to prevent evasion of sales tax believed to be on a fairly large scale. It, however, seems that the majority of State Governments are averse to this proposal. What then are the grounds on which the excise duty on cloth can be raised? One is that the mills are making much bigger profits than they should. Another is that the price of cotton requires to be reduced. A third one is the need for discouraging domestic consumption of mill-made cloth, so that the mills may be forced to export more cloth. A fourth one is that the handloom industry requires still greater protection.

None of these grounds sounds convincing to us. The assumption that mills are making excessive profits may not be wholly true. On the contrary, several coarse and medium count mills are said to be getting a margin of profit which is only 75 or 80 per cent. of what they could get in 1955. The reasons for this are two, namely, higher raw cotton prices and increased labour charges, owing to enhanced dearness allowance necessitated by a rise in the cost of living index. The fine and superfine mills may be faring better than they did last year, but the incidence of excise duty on these products is already so high that to raise it further would be scandalous. In any case, even conceding, for argument's sake, that the mills are making big profits, the better way to mop up the excess profit would be to introduce an excess profits tax rather than enhance the excise duty. In times such as the present one, when the demand for mill-made goods is tending to exceed the supplies available for domestic consumption, any increase in excise duty will be easily passed on to consumers either by a corresponding increase in the price of cloth or by a further reduction in quality or by both the means where convenient.

For this very reason, the suggested or contemplated step will not have any material and sustained effect on cotton prices either. It may scare the bulls for a while, as the rumour has already done, but that will only prove to be a passing phase. If the object of bringing down the prices of cotton to well below the present ceilings is to be achieved, then the Government should resort to direct methods, such as, lowering the ceilings, procurement of cotton from the growers and distribution among the mills through the quota system. In other words, the physical controls should be reintroduced. There is, however, no need for resorting to such a drastic course, as the present ceilings for cotton are not unduly high. What may be required if the current crop turns out to be very inadequate is prevention of a runaway increase in cotton values. This object can be served by arranging for larger imports. The steps now taken to import U.S. surplus cotton may themselves prove sufficient for this purpose.

The argument that exports of cloth can be stimulated by enhancing the excise duty as a sort of penalty on the mills that fall a victim to the temptation of an attractive domestic market is a dubious one. What if the mills prefer to pay this excise, in order to sell in the domestic market rather than strive to find export outlets for their manufactures? At a time when there is a sellers' market inside the country, the task should present no insuperable difficulty. A factor that may make the mills choose the domestic market is the stiff competition in export markets and that at a time when their competitive capacity has been greatly impaired by (1) the rise in Indian cotton prices, in the face of a fall in world cotton prices which has strengthened the ability of foreign cotton mills to compete effectively, and (2) a decline in the productivity of workers. In distressing contrast to the improvement in that of workers in Lancashire and Japan. In any case, it sounds strange to be told that consumers of cloth in a poor country like India should be asked to pay more, so that their counterparts in other parts of the world could get Indian cloth cheap.

Equally dubious is the contention that a still higher excise duty is needed, in order to protect the handloom industry. There is already a closed market for the latter, thanks to the ceiling on the production of mill-made cloth. If it is unable to expand even under the present state of buoyancy in the cloth market and the large subsidy that is already being given at the expense of mill-made cloth, it does not deserve any further protection. If the authorities were to decide in favour of such protection, they would only encourage the handloom industry to become an even more uneconomic unit.

Whatever may be the grounds on which excise duty is raised, the result will mean dearer cloth and/or poorer quality for consumers. This in turn will raise the cost of living and occasion a corresponding fall in living standards, as cloth is an item of necessity, next only to food. If the cost of living goes up, the cost of implementing the second Plan will also increase. In fine, such a step will conceivably lead to a vicious circle. Thus, looked at from any angle, an increase in excise duty, which is already very high in all conscience, will prove to be a case of remedy becoming worse than the malady it seeks to cure.

* * * *

The share market seems to have placed an unduly alarming interpretation on some of the recommendations of the Plantation Enquiry Commission pertaining to distribution of profits to shareholders and issue of bonus shares. The report of this Commission has already been outdated by many developments subsequent to its drafting. Or, if it had been drafted only after these developments, then its authors have apparently failed to take note of them. To give an instance. Referring to managing agents' remuneration, the Commission says that it is based partly on a percentage of gross sales and partly on a percentage of gross profits and that, besides, a specific minimum in each case has also been prescribed. That this is not the position at present every one knows, because the new Company Law has drastically reduced the managing agents' remuneration and curtailed the scope for profit-sharing arrangements for working directors. Similarly, the restriction suggested by the Commission in regard to issue of bonus shares is also already in force. The Commission has suggested that no tea company should be allowed to write up its paid-up capital by issue of bonus shares from reserves created out of revaluation of its assets. There is nothing novel in this suggestion. The Controller of Capital Issues has been following this criterion for a long time in the case of companies belonging to all industries. But for this condition, the number of companies issuing bonus shares will have sharply gone up by now. Indeed, the conditions to ge fulfilled for issuing bonus shares under Capital Issues Control order are far more rigorous than the simple one advocated by the Plantation Enquiry Commission.

As regards dividend, the Commission has not, so far as we can see from the detailed summary of its report—the full text is not available at the time of writing—has not proposed a ceiling on dividends at 50 per cent. of their present levels as has been reported by some. All that it has said is that "the withdrawal from reserves, other than dividend equalisation reserve, for the purpose of declaring dividends is unsound and should cease." We do not think that this recommendation, even if accepted by the Government and enforced by it, need be interpreted in such a bearish fashion as has been done by a few commentators. In the first place, no company, least of all a tea company, will pay a dividend from reserves when its current profits are satisfactory. Secondly, the proposal made by the Commission is meant to be applied only when the tea industry makes no profit and has to fall back on the reserves built up in the past. Neither the current position of the industry nor the immediate future is so bad as all that. Thirdly, it is a moot point whether the recommendation of the Commission will be legally valid. And, fourthly, we do not think that the Governent will impose a control on dividends of tea companies alone in such an arbitrary fashion. The case for a limitation of dividend will hold good, only if labour agrees to a freeze on its emoluments.

A careful study of the summary of the Commission's report gives rise to the impression that it is more favourable to genuine investors than is generally assumed. Some of the curbs proposed by it are aimed at (1) preventing speculation in tea estates and their cornering by "money bags" with the aim of making quick profits and (2) improving the stability of tea industry. The Commission's suggestion for a contribution of Rs. 50 per acre to a specific fund under the control of the Tea Board is for the purpose of ensuring rehabilitation of tea gardens which are old. This proposal will not affect those tea companies which have already built up sufficient reserves for this purpose. In short, there is nothing very adverse in the Commission's report that will affect the investors in shares of first class and soundly managed tea companies. On the contrary, the Commission has put forward a few suggestions, which, if accepted by the Government, will give some relief in the taxes paid by the industry, as well as enhance its scope for getting finance from banks on favourable terms. All this does not mean that the Commission's report is free from controversial issues. There are quite a few of them, but they concern the managements of tea companies and dealers in tea more than the investors. Incidentally, it may be mentioned that the Commission's report had found premature publication in a section of the Madras Press. And yet it had no effect on tea shares on the Madras Stock Exchange which is a far more important market for tea scrips than the Bombay Stock Exchange. Indeed, several tea scrips, especially those belonging to the Peirce Leslie Group, had registered a perceptible rise in their value.

* * * *

A notable feature of the proceedings of this year's annual meeting of the Tata Iron and Steel Co., Ltd.—the Chairman's speech is published in full elsewhere—was the keen interest evinced by many shareholders in getting the maximum return from the Company by way of either dividend or bonus shares. And many ingenious suggestions were put forward by them for this purpose. They were particularly anxious about the dividend for the current year (1956-57), in view of the recent issue of new shares, on which further calls would be made in the coming months. Some of them wanted to know when exactly the calls would come. One of them suggested that the new shares should be made *pari passu* with the old one before 31st March 1957. In his reply to the shareholders, Mr. J. R. D. Tata, the Chairman, said that an extra dividend could come only out of the additional profit the Company made on the extra steel produced. So far as the current year is concerned, he drew the attention of the shareholders to his remarks on this issue at the last annual general meeting. He had then stated that there was no reason why, pending the completion of the project, the return on the enlarged capital on the basis of the then market values could not be maintained, that is, at a level which would give a yield of 5 per cent. Illustrating this statement by giving an example, Mr. Tata said that, on the Rs. 35 paid-up share, the return on a 5 per cent. yield basis would be Re. 1-12 per annum. The Company had already been paying a dividend of Rs. 10-8 per share. Thus, the total dividend on the increased capital would be at the rate of Rs. 12-4 per share which would be distributed in proportion to the paid-up value of the shares. This would mean that the old shares would get Rs. 9-3 per share and the new share Rs. 3-1. The distribution on the new shares would be made up of a tax-free dividend of Rs. 2-1 and an interest of Re. 1 per share.

As regards the two calls that are pending, Mr. Tata said that the first one would be made by the end of 1956 and the other some time next year. It was evident from Mr. Tata's reply that the new shares would not be made *pari passu* with the old ones by the end of March 1957.

Some of the shareholders reminded the Chairman of the fact that next year the Company would be completing 50 years and desired that a Jubilee bonus should be issued to the shareholders. Several suggestions were made by them in this connection. One of them said that, after all the calls on the new shares were paid, the premium collected on them would work out to Rs. 15 per share on all the shares. This sum along with a part of the reserves, could be utilised for raising the paid-up value of ordinary shares to Rs. 100 per share. In other words, he wanted the share premiums to be capitalised next year. Another shareholder drew the Chairman's attention that the premium collected some years back on the now extinguished deferred shares could be utilised to issue bonus shares. Yet another suggestion made was that the Company should distribute its holdings of Tata Locomotive shares as bonus to the shareholders of the T.I.S.Co. A fourth suggestion was that the existing shares of Rs. 75 each should be split up into shares of Rs. 25 each before issuing bonus shares. One of the share-

SHARP REACTION IN EQUITIES

HEAVY SELLING AT CLOSE

(From Our Own Correspondents)

BOMBAY, 30*th August*

AN all-round heavy selling pressure witnessed today, particularly in textiles, following rumours of an impending increase in excise duty on cloth, was the outstanding feature of trading on the Stock Exchange during the week under review. The wave of selling not only brought down equities over a wide front well below the best levels of the week but also resulted in a sizable loss over the week. During the earlier part of the week, conditions were quite cheerful, as the bout of bullish activity noted for some weeks past gathered fresh momentum in the new account, which opened on Monday last, and pushed up several leading scrips to new high levels. The encouraging tempo of industrial activity, schemes by a number of industrial houses to expand their lines of activity, the efforts of the Government to check rise in prices of agricultural commodities by building up adequate reserves and continued flow of good corporate news were all factors which sustained the bullish enthusiasm. The sharp gains recorded, as a consequence, were more than wiped out in the heavy shakeout which ensued today.

In the steels section, Tata Ordinaries, after an initial softening from Rs. 213 to Rs. 211-4, shot up to Rs. 216-8 in the new account. Today, however, they slipped back to Rs. 212-12. Indian Irons were marked down from Rs. 37-11 to Rs. 36-14½ before gaining strength to Rs. 37-7½. At the close, they gave way to Rs. 36-10.

Among textiles, Bombay Dyeings were a little erratic. After receding from Rs. 693-12 to Rs. 676-14, they rallied to a new high of Rs. 702-8, but, in the reaction which set in today, they fell to Rs. 677-8. Centurys which touched a high of Rs. 607-12, as against the previous week's close of Rs. 605, receded to Rs. 584-8. Kohinoors slumped to Rs. 379, after moving up from Rs. 400 to Rs. 402. Central Indias were marked down by Rs. 8 to Rs. 159, Finlays by Rs. 8 to Rs. 374, Gokaks by Rs. 2-8 to Rs. 248 and Indu Ordinaries by As. 9½ to Rs. 13-10½. Khataus provided one of the exceptions with a rise of Rs. 18-12 to Rs. 297-8. Minervas shed Rs. 5-10 to Rs. 105-10. Shree Niwas lost Rs. 3-12 to Rs. 240. Simplex hardened from Rs. 214-8 to Rs. 220, but receded to Rs. 213-8 at the close. Standards dropped Rs. 17-8 to Rs. 473-12. Swadeshis Rs. 14 to Rs. 262. Swans Rs. 10 to Rs. 477-8. Tatas Rs. 3 to Rs. 60 and Vishnus Rs. 3-12 to Rs. 190.

Banks were featureless with very little activity. Barodas were done at Rs. 102 *ex-div.*, as against Rs. 105 *cum-div.*, a week ago. Centrals changed hands at Rs. 53 *ex-div.*, as against Rs. 54-8 *cum-div.* Bank of Indias were unchanged at Rs. 172, while United Commercials were As. 8 lower at Rs. 58-8.

Miscellaneous section followed the pattern of the market, with a sharp reaction today wiping out the earlier gains. In the sugar group, Belapurs moved up from Rs. 255-8 to Rs. 259, but receded today to Rs. 254-8. Phaltans were maintained on balance at Rs. 169, while Walchandnagars managed to close with a gain of Rs. 3-12 at Rs. 277-8. In the cement group, A.C.Cs. were taken up from Rs. 203-4 to Rs. 209 before being pushed back to Rs. 205-4. Digvijays were steady at Rs. 204-12. Dalmias were a shade lower at Rs. 15-6, while Ashokas were unchanged at Rs. 12-6. Among engineering and mining shares, Alcocks showed a gain of Rs. 2-8 at Rs. 347-8. Tata Locomotives advanced from Rs. 173-12 to Rs. 185-8, but slipped back to Rs. 176 at the close. Premier Constructions declined by Rs. 2-8 to Rs. 214-8. Larsen and Toubros were lower by As. 4 at Rs. 18-8. Shivrajpurs moved down by Rs. 3-4 to Rs. 87-8. Indian Coppers gained a fraction to Rs. 7-4.

In the shipping and transport group, Scindias were marked down from Rs. 19-3 to Rs. 18-10, while Great Easterns were held at Rs. 19-12. Premier Automobiles gave way from Rs. 111-8 to Rs. 109 and Hindusthan Motors from Rs. 10-5 to Rs. 10-1. Among other industrials, Bombay Burmahs provided a feature with a rise from Rs. 771-4 to Rs. 800, but, in the reaction today, they came down to Rs. 762-8. National Rayons closed at Rs. 265, after rising from Rs. 271-8 to Rs. 275-8. Sen-Raleighs were marked up by As. 8 at Rs. 15. Tata Chemicals shed As. 11½ to Rs. 20, while Dhrangadhra gained Re. 1 to Rs. 139. Tata Oils were steady at Rs. 57. Wimcos were done Re. 1-4 lower at Rs. 183-2.

* * * *

Calcutta Stock Exchange

CALCUTTA, 28*th August*

The appearance of the Calcutta Stock Exchange during the week under review was somewhat bright, in contrast to the dull conditions noted last week. Induced by good corporate news, traders evinced interest in business and equity prices tended to look up. Jute shares, in particular, encountered sustained buying support, following firm advices from jute goods market. Coal shares also came in for some business at higher rates. Several miscellaneous industrials, too, had buyers. Engineering and mining shares were steady. Tea shares, however, were neglected on account of lack of follow-up support. The general undertone of the market was steady.

Further gains were recorded in the jute section. Anglo-Indias firmed up by Rs. 8 to Rs. 188. Unions rallied Rs. 6 to Rs. 163. Nationals advanced by As. 10 to Rs. 26-8. Howrahs gathered As. 8 to Rs. 24-1. Bengals were done at Rs. 16-5 and Reliance at Rs. 10-5.

Among coal shares, Burrakurs hardened by As. 10 to Rs. 15-3. Western Bengals gained an anna to Rs. 7-10. Central Indias were fully maintained at Rs. 7-8. Bengals found purchasers at Rs. 542. Karanpuras at Rs. 119. Raneegunjes at Rs. 13-5 and Standards at Rs. 23.

In the engineering section, Braithwaite and Cos. registered a rise of Re. 1-2 to Rs. 30-12 on capital reorganisation news. Indian Standard Wagons were well supported and improved by a rupee to Rs. 202. Bhartia Electric Steels were better by an anna at Rs. 18-12. Indian Irons, however, eased by As. 3 to Rs. 37-4. Jessop and Cos. and Textile Machinerys were transacted at Rs. 34 and Rs. 23-9, respectively.

Among mining shares, Burma Mines gathered an anna to Rs. 3-6. Indian Coppers were firm at Rs. 6-14. Business at Rs. 2-10 was reported in Consolidated Tins. Tavoy Tins changed hands at As. 14.

Among miscellaneous industrials, Indian Cables attracted good attention of operators and advanced by Re. 1-6 to Rs. 34-8. Interim dividend rumours lent support to India Steamships which spurted by As. 9 to Rs. 9-12. Dunlop Rubbers rose by As. 8 to Rs. 29-13 on investment enquiry. Indian Aluminiums gained As. 4 to Rs. 24-9. Calcutta Electrics were fully maintained at Rs. 13-14, B.B. Petrols at Rs. 4-4 and National Insulated Cables at Rs. 25-14.

* * * *

Madras Stock Exchange

MADRAS, 28*th August*

The Madras Stock Exchange maintained its air of buoyancy during the week and values continued to push their way upwards. There were renewed expectations of inflationary pressure gathering momentum, thanks to persistent high tempo of industrial investment and enlarged retail sales. The consensus of opinion among market circles would appear to be that companies might generally pay out a higher proportion of earnings to shareholders. Investment demand for shares, as a result, broadened greatly. In fact, there was a scramble for scrips of leading companies, the offerings of which were somewhat restricted.

Trading in textile section was particularly quite hectic, the chief inspiring factor being the continued excellent domestic offtake of cloth. Even rumours of an upward revision in excise duty on cloth failed to have any effect. Premiers provided the brightest spot, their quotation forging ahead from Rs. 232 *ex-div.* to Rs. 253 *ex-div.* Radhakrishnas jumped up by Rs. 15 to Rs. 375. Coimbatore Cottons and R.C. Ambikas rallied Rs. 10 each to Rs. 392-8 and Rs. 285, respectively. Dhanalakshmis advanced by Rs. 7-8 to Rs. 435. Palani Andavar 'A's rose by Rs. 4 to Rs. 172, Cannanores by Rs. 3 to Rs. 193, Kotharis by Rs. 2-2 to Rs. 21-2 and Vasantas by Rs. 2 to Rs. 345.

Rubber shares were keenly sought in the planting section. Thamarapallys picked up Re. 1-8 to Rs. 31-8. Travancore Rubbers and Vaikundams spurted by Re. 1-4 each to Rs. 26-4 and Rs. 35, respectively. Cochin Malabars scored a gain of As. 14 to Rs. 13 *cum-div.* Malankaras strengthened by As. 8 to Rs. 35-12. Tea shares ruled steady. Kil Kotagiris hardened by As. 4 to Rs. 9-3. Lucky Valleys gathered As. 8 to Rs. 14-8. Chembras were better by an anna at Rs. 5-1 *cum-div.* Among coffee shares, Rajendras elicited good enquiries from buyers and climbed up by As. 12 to Rs. 10-8. Kumergodes put on As. 3-9 to Rs. 7-13. Mysore Coffees were firm at Rs. 3-1-6. Consolidated Coffees, however, receded by As. 4-6 to Rs. 22-7-6. Coffee Lands were also lower by As. 4 at Rs. 27.

In the miscellaneous section, Textools received buying support and advanced by Rs. 2 to Rs. 217. Jeypore Minings increased by Re. 1-8 to Rs. 181-8 and India Cements by Re. 1-2 to Rs. 33 *ex-right.* Rallis rose by Re. 1 to Rs. 42-8. Mysore Papers gained a like amount to Rs. 20-4 *cum-div.* Mysore Lamps moved up by As. 12 to Rs. 15 *ex-div.* F.A.C.Ts. gathered As. 8 to Rs. 7-5 and Mettur Chemicals As. 7 to Rs. 10-13 *cum-div.* (final). Travancore Rayons rose by As. 5 to Rs. 16-3.

(Concluded from next column)

this does not mean that monetary policy in the coming weeks will not be dragged into the oratorical limelight.

President Eisenhower's renomination and that of Vice-President Nixon gave a lift to the stock markets. After a decline of four to five days, quotations rallied. An optimistic feeling was also generated by the somewhat peaceful conclusion of the Suez Canal conference. Public opinion here is that the London discussions, just concluded, with their relatively mild recommendations, have removed much of the danger of open military conflict. Even Soviet Russia's position was considered reasonable as a whole, as well as that of Prime Minister Nehru of India. Therefore, the general atmosphere at the moment is one of supreme confidence in the future, domestically and internationally. It should help business and industry and general business conditions which have now fully recovered from the statistical effects of the steel strike.—*All Rights Reserved.*

AMERICAN LETTER

DISCOUNT RATE RAISED

MARKETS REGAIN CONFIDENCE

From Our Special Correspondent

NEW YORK, 23*rd August*

THE two major political conventions of both the Republican and the Democratic Parties in the United States have concluded with the expected results. President Eisenhower and Vice-President Richard Nixon were renominated to their respective offices virtually unanimously. Mr. Adlai Stevenson, former Governor of Illinois, and Senator Estes Kefauver, were nominated to the respective posts by the Democratic Party with a considerable majority. The Democratic convention was exciting and wrought with dissension over civil rights and other issues. Since the South of the U.S. is traditionally Democratic and has for generations practiced segregation of whites from non-whites, the civil right dispute is understandable, particularly because of the U.S. Supreme Court decision ordering the ending of segregation.

The nomination of Mr. Stevenson was also a slap in the face of former President Harry Truman who had advocated the nomination of Governor Harriman of New York. The latter received only some 200 votes out of more than 1,300. Mr. Harriman was relying on the support of Mr. Truman, but greatly overestimated his voice and that of his principal political advisor Carmen de Sapio, who heads a New York political organisation known as Tammany Hall which in the past enjoyed a somewhat unsavoury reputation. Perhaps, the most amazing aspect was that Mr. Truman disappeared as a "has been" from the political scene, while other ex-Presidents have remained quite influential. Moreover, he made quite a mistake in saying Mr. Stevenson could not win.

The Republican convention, on the other hand, could not have been more harmonious. President Eisenhower received a tremendous ovation at his Party's San Francisco gathering. The Republicans benefited by the mistakes made by the Democrats a week previously at Chicago. The President's popularity even in Democratic quarters was brought out by the statement from the floor that Mr. Eisenhower had been offered the Democratic nomination for President by Mr. Truman in 1948. Republican prestige also rose because of such accomplishments as the balancing of the Federal Budget, expansion of social security and the success in keeping inflation at a minimum by wise monetary policy and the freeing of many previous controls. As of this writing, there can hardly be any doubt that Mr. Eisenhower will be re-elected, unless there is another serious relapse in his health which is unpredictable, but certainly not probable.

Fight Against Inflation

The fight against inflation continued in the last few days and weeks. The Federal Reserve banks, at least more than one half of the twelve, have raised their discount rate to 3 per cent. from 2½ per cent. The remaining banks are expected to follow suit. There have also been increases in the prime lending rate of commercial banks which now stands at 4 per cent., and also boosts in rates for commercial paper, bankers acceptances and brokers' loans. The general tightening is based on the potential inflationary aspect of higher industrial wages and prices, higher employment, the new Federal highway construction programme and high bank loans to business, industry and agriculture.

Holders of about 40 million savings accounts of all descriptions are expected to benefit from higher interest rates. Quite a number of the savings banks in New York State now pay 3 per cent. on depositors' balances and moves are now under way to boost that rate to 3½ per cent. between now and the end of the year. American corporations will benefit as well. Banks are apt to reap higher earnings on all classes of indebtedness and so will insurance companies, investment companies and others, so far as securities' income is concerned. Mutual savings banks' deposits reached a new high of $29,261 million on 31st July, but the $76 million increase for the month was somewhat lower than in previous months. This may reflect withdrawals made during the steel strike by families who were out of income during that period.

Borrowings have risen as well. The sharp increase in loans by banks to business was reported to be one of the primary elements which prompted the Federal Reserve Board to tighten the credit reins. Among individuals, too, there has been a gain in indebtedness, but there have been offsetting boosts in savings. Incomes have been rising and so have been prices on a long list of items. Recent wage-price boosts in the steel, aluminium, rubber and other industries represent the eleventh round in the potentially inflationary spiral in the post-war period which higher interest rates and official credit policy desire to stem.

It is generally agreed that monetary policy will be a hot political issue in the forthcoming Presidential election, but, obviously, only the end result of relative stability counts. It is somewhat ironical to recall that, in January and February last, many people believed the Federal Reserve was going to ease money to help "re-elect the Republican Administration." On the basis of all factors under consideration, it is quite obvious that the credit authorities and the private markets in their moves for tighter money acted merely on the basis of bare facts with no political motives in mind. However,

NEWS IN BRIEF

A CHINESE agricultural delegation is to visit India next month to study Indian methods of farming. The team will stay in India for about two months.

The Uttar Pradesh State Flood Control Board has approved of a Rs. 14-crore scheme for the construction of a reservoir on the river Rapti in Nepal, 50 miles east of Nepalganj.

The Government of India has received a gift of tube-well drilling equipment worth about Rs. 16 lakhs from the U.S. Government under the Indo-American Aid Programme.

A factory for the manufacture of railway rolling stock, including railway wagons, will soon be established at Santragachi in Howrah district. It will be a private venture and give employment to 2,300 persons.

According to Mr. B. N. Datar, Deputy Minister for Home Affairs, the Government of India has set apart Rs. 5 lakhs for setting up a technical institute in Imphal, in Manipur, for imparting technical training to tribal students.

A special Soviet delegation is expected in India soon to finalise the contract regarding the shipment of 350,000 tons of Russian steel to this country in 1957. The steel is to be supplied in accordance with the terms of the Indo-Soviet trade agreement.

A Rs. 2½-crore scheme for starting a shipbuilding yard in Cochin has been put forward by the private sector for the consideration of the Travancore-Cochin Government. The yard proposes to manufacture boats of capacity of 3,000 to 4,000 tons.

Mr. M. C. Shah, Union Minister for Revenue and Civil Expenditure, introduced in the Lok Sabha on 27th August a Bill seeking to make the Public Debt Act of 1944 applicable to securities issued by the Governments of Part B States other than Jammu and Kashmir.

The Government of Madras has sanctioned the opening of five *parishramalayas* in the State for training spinners in the production of yarn on Ambar Charkas. Each *parishramalaya* will train 400 persons per year during four courses of three months duration. The scheme is expected to cost nearly Rs. 9 lakhs.

A team of technical experts from West Germany is expected to visit India in September to work out details of the Technical Institute which the latter had offered to set up in India. The team would also discuss matters relating to the offer of scholarships for Indians by the West German Government and Universities.

The Government of Madras has sanctioned the proposal submitted by the Chief Engineer for the erection of two auxiliary power houses, one at the foot of the Papanasam Dam and the other at the Pykara Dam. The installed capacity of the two power houses will be 4,000 k.w. and 3,000 k.w., their estimated cost being Rs. 40.8 lakhs and Rs. 27.2 lakhs, respectively.

The Government of India proposes to send abroad a delegation to study the system of associating labour with management of industries obtaining in a number of European countries, particularly Yugoslavia. The delegation will include representatives of the various employing ministries, such as Railway and Production, and possibly some nominees of selected State enterprises as well.

The South Viet Nam trade delegation, which is touring the country, at present, held discussions with the Committee of Administration of the Cotton Textiles Export Promotion Council. Mr. N. H. Chau, leader of the delegation, told the Council that his country would be willing to receive more cotton goods from India, if the supplies were regular. India is already receiving the most-favoured-nation treatment from South Viet Nam.

The Union Government will set up at Kargali, in Bihar, the biggest coal washery in the East, with a capacity of washing 500 tons of coaking coal per hour. Mr. A. B. Guha, Chief Mining Engineer, Government of India, recently visited Tokyo for finalising the details for the construction of the plant with a Japanese film. The venture is estimated to cost Rs. 1.56 crores and will be completed by January 1958. Eight Indian experts will be sent to Japan to study the technique of operating the washery.

Experiments for growing tea in Egypt are reported to have proved successful, causing concern to Indian exporters. It is feared that any attempt to grow tea on a commercial scale in Egypt would give a severe blow to the exports from India. It is learned, however, that no large-scale cultivation of tea in Egypt is contemplated at present. Cultivation of tea on a commercial scale in that country is considered difficult, because Egypt is practically a rainless country.

A tentative agreement has been reached by the Government of India to terminate the partnership of the Oerlikons, the Swiss firm, with the Government in the Hindusthan Machine Tools Factory, Bangalore. This was disclosed by Mr. Satish Chandra, Union Minister for Production, in the course of a press interview, at Bombay. He said that, after the partnership was terminated, Oerlikons would function only as technical advisers to the factory.

The cost of the three steel plants at Rourkela, Bhilai and Durgapur is expected to exceed the present estimate of Rs. 350 crores by Rs. 40 to Rs. 50 crores on account of the rise in costs. With the rise in the international prices of steel and other materials, the external cost of the Durgapur and the Rourkela plants, in particular, is likely to go up as they require more steel. The internal cost of the three plants will also be affected by the rise in civil engineering costs within the country.

The Railway Board has booked capacity with Indian wagon manufacturers for 17,500 goods wagons under the rolling stock programme for 1957-58. The total cost of these wagons is estimated to be about Rs. 22 crores. Coach building capacity in the country has also been booked for the manufacture of 700 coaches, including motor and parcel vans. The Railway Board has also placed orders for 767 petrol tank wagons, the entire capacity in the country, for the manufacture of this type of wagons. An order for 423 tank wagons has also been placed with a firm in Italy, whilst a British firm secured an order for nine cranes of five-ton capacity each.

The Hindustan Shipyard at Visakhapatnam has increased its production in 1955-56 by nearly 17 per cent., as compared with the previous year. The total production during the year was valued at Rs. 2.46 crores, as against Rs. 2.1 crores in 1954-55. The first two diesel ships of modern type were completed and delivered during the year, and third ship in the series was also ready by the end of the year. Despite considerable difficulties in the supply of essential materials like steel and cement, the Shipyard made remarkable progress during the year in executing its development plan. The fourth berth for shipbuilding was completed and a new keel was laid on it. Two travelling cranes of 4/8 tons capacity were erected—one on the berths and the other on the fitting-out jetty. The Machine Shop was augmented by a 10-ton crane and four lathes. Four overhead travelling cranes, a plate bending roll, an oxy-planing and cutting machine, a megatome profile cutting machine and a beam bending machine were added to the Hull Shop. The Plumbing Shop had its share of additional machinery. A new 3,000 c.ft. giant air compressor was also put into commission.

* * * *

From Abroad

A British company will invest £1 million at Daulatpur in Pakistan for the manufacture of jute carpets. The mill will have 500 looms and is expected to go into production within a year.

The Afghan National Assembly has approved of the agreement for a $100 million loan granted by the Soviet Government to the Afghan Government. The agreement was signed on 28th January 1956.

A British Company, namely, Portals of Laverstoka Mills, Witchurch, Hants has been awarded a contract worth £663,716 for the supply of bank note paper to the Reserve Bank of India.

Pakistan has signed a trade agreement with Czechoslovakia for one year renewable at short notice. Under the agreement, Pakistan will buy machinery, iron and steel, newsprint, diesel-generators and a number of other finished goods.

New Soft Coal (lignite) deposits, estimated at 30 million tons have been found near Zagreb, the capital of the Republic of Croatia. The coal from the new deposits will be shortly exploited to supply a new power plant in the suburbs of Zagreb.

China, which is making a strong bid to top the Soviet Union in the Middle East trade and economic penetration, has acquired 12,000 square feet, or the largest floor space among over 30 countries attending this year's third international Syrian Trade Fair at Damascus.

A Franco-Brazilian trade agreement signed at Rio de Janeiro provides for the inclusion of France in the Hague Club group of countries trading multilaterally with Brazil. Under the agreement, France will be committed to take at least 800,000 bags of coffee annually.

Canada's wheat carry-over at the beginning of the 1956-57 crop year on 1st August amounted to 527.5 million bushels, or 27.8 million bushels over the 499.7 million bushels on hand at the end of the previous year. The record carry-over was 601.7 million bushels in 1954.

The Japanese Atomic Energy Commission is planning a larger budget for a programme to put *Japan in the forefront* of atomic development for industry. It is understood that the Commission will ask the Government to approve a £12 million budget for the coming year. The current budget is £3.6 million.

Due to a temporary shortage of sterling, the Soviet Union may delay placing orders for September and October rubber shipments from London. The business booked for July is still incomplete. Eight to ten thousand tons of rubber from the East are due in London for August transhipment to the Soviet Union.

The Sheikdom of Kuwait has asked for the transfer of 600 million pounds sterling of its oil revenues from Britain to Kuwait. The British Government is reported to have answered that a month's time is necessary to examine the transfer of Kuwait's credit from the British bank, where they are now deposited, to the Kuwait Bank.

Some important relaxations in currency restrictions were made by the Bank Deutscher Lander last week. As a result residents of West Germany can now transact forward dealings at foreign bourses. As far as the German bourses are concerned, however, the ban imposed in 1931 continues. Besides, German residents may pay hard currencies for soft currency shares and securities. Moreover, the difference between "authorised" banks and others has been abolished. Consequently, all German banks are now permitted to deal in foreign currencies or open accounts abroad.

The Mexican concern, *Celulosa de Chihuahua*, S.A., one of the largest engaged in the manufacture of cellulose and paper, has signed an agreement with Kinberly Clark Corporation of the U.S., according to which the latter will give technical assistance to the Mexican undertaking. American technicians and machinery will be placed at the disposal of the firm and Mexican specialists will be trained by the U.S. firm. American experts will advise on the planning of the conservation of Mexican timber reserves, as well as on sales organisation.

The Norwegian Government is to take measures to ensure that the cost of living does not rise above the level of 150. Earlier this year, the Government had indicated that the cost of living index would be kept steady at this level. To secure this, the price of milk would be cut from 1st September four pence a pint by means of an additional annual subsidy of £2,000,000. The cut, it is estimated, will lower the living cost index by almost one point. As part of a longer-term scheme to keep down prices, the Government is also considering to put more foreign goods on the market by free-listing footwear and clothing and certain categories of raw materials and machinery. A more elastic policy for the import of fruit, vegetables, and meat is also contemplated. The increased supply of imported goods, it is expected, would stimulate competition and encourage reduced profit margins.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN,
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:
38, BISHOPSGATE, LONDON, E.C. 2.
Branch: 28 Charles II St., Haymarket, London S.W.1.

Bombay 1. Manager.

PERSONAL

MR. R. N. Thapar, Secretary, Union Ministry of Food and Agriculture, has returned after a three-week tour of China.

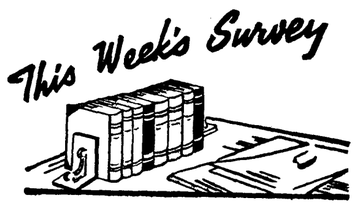
Mr. Sudhir Kumar Sen, Chairman of Sen-Raleigh Industries of India Ltd., Calcutta, has been elected President of the Cycle Manufacturers Association for the year 1956-57.

Mr. Luis de Olivares y Bruguera, Count de Artaza, has been appointed Ambassador Extraordinary and Minister Plenipotentiary of Spain to India.

Mr. C. D. Deshmukh, former Finance Minister, has resigned his membership of Lok Sabha on his appointment as Chairman of the University Grants Commission.

Mr. H. V. R. Iengar, Secretary, Union Ministry of Commerce and Industry, has been appointed Chairman of the State Bank of India, in succession to Dr. John Matthai. Pending his taking over charge, Mr. Vaikunt Lal Mehta, Vice-Chairman of the Bank, will carry on the duties of the Chairman.

Mr. U. K. Ghosal, I.C.S., Chairman of the Tea Board, Mr. J. P. H. Bent, Chairman of the Indian Tea Association, Calcutta, and Mr. N. M. Lingam, M.P. will form the delegation of the Tea Board to the meetings of the Tea Councils of the U.S. and Canada. The delegation of which Mr. Ghosal will be the leader will leave for the U.S. in the second week of September.



BUSINESS COMMUNITY

THE business community in India feels aggrieved that it is not being consulted by the Government even on matters which affect it. It is obviously finding it difficult to adjust itself to the new political set-up under which it has no voice in the shaping of policies. For a long time, it enjoyed special representation in legislatures. With the advent of freedom, and the new democratic Constitution, this had to be abolished. But at no time was there so much need for this kind of representation than now, thanks to the increasing pace of economic and industrial legislation.

Perhaps, the need for such representation arises also from another consideration. In the legislative bodies, the business men are frequently made the target of uncritical and wholly unjustifiable attacks. In the absence of representatives of the business community, these criticisms go practically unanswered. As Mr. S. Anantharamakrishnan, a leading South Indian industrial and business man, who was inaugurating the third Anti-Multipoint Sales-tax Conference at Madras, pointed out the "stock of business men is very low in the estimation of the public, because there has been so much propaganda to the effect that the merchants are very bad people, black-marketeers and that they never pay the taxes and so on." He contrasted the position in India with that in foreign countries where business men are highly respected. He reminded the public that the merchant community had been there, serving the people long before the politician came and had also contributed in a significant measure to the freedom movement. He deplored that the private sector, which was by far the biggest economic sector responsible for 95 per cent. of the economic activity in the country, should be repeatedly subjected to attacks of a derogatory nature by politicians; he calculated that, in the Madras State alone, there were 20 million business men or nearly one-quarter of the population. He advised the business community to secure proper representation both at the Centre and in the States.

There is no doubt that, unless the business men are willing to come out of their ivory towers and place their case before the public, they will soon face ignominous neglect, if not extinction. Their case also deserves to be presented at the highest legislative councils. In this connection, Mr. Anantharamakrishnan referred to the clause in the electoral rules which practically prevented business men from becoming legislators. The clause says that the persons who have any dealings with the Government cannot stand for elections. As Mr. Anantharamakrishnan put it, the "dealings" with the Government could be interpreted to mean even a "small postal contract costing Rs. 50."

Surely, this clause deserves to be changed in the interests of the business community, nay, of democracy itself. For one thing, the growth of Governmental activity, implied in the accepted goal of socialist pattern of society, will mean that it will become more and more difficult for people not to have any business "dealings" with the Government. This will reduce the section of the public from which the candidates for legislatures can be drawn. Secondly, it is absurd to impose such a special disability only on the business community. Laws are passed affecting all sections of the public, the lawyers, the doctors and so on, and nobody contends that these classes of persons should not take part in legislative work. Indeed, at the time the Constitution was framed the criticism was made—how amply justified it has been that the lawyers had got together and evolved a Constitution which would yield them a harvest of briefs.

Finally, the clause deserves to be changed in the interests of efficient functioning of democracy itself. Business men, by nature, conviction and experience, are men of the earth. They have more intimate knowledge of the people than any other section of the public. They are men who are schooled in the business of life, who have faced knocks, tribulations and suffering, and can normally be expected to take correct and realistic decisions. They would be an asset to any political party, to the Government itself, especially when its main function in future will be economic. Indeed, are not the Government spokesmen paying an unconscious tribute to business men when they repeatedly emphasise that public enterprises should be administered in a "business-like" manner? Why then prevent men who have done "business" all their life from becoming legislators? Whichever way the matter is looked at, it should be clear that the electoral rule which seeks to prevent business community from contesting the elections deserves to be changed.

INFRUCTUOUS EXPENDITURE

It is not ideological considerations alone that influence the Governmental economic policies in India; sometimes, superstition and belief in occult powers, too, have their sway. The Government of Madhya Bharat, for instance, incurred last year an expenditure of Rs. 2.46 lakhs, not a small sum for a poor country, in digging a well at a site selected not by an expert but by a person possessing occult powers, according to the audit report for 1955. The work on the well was commenced in October 1951, but was given up after two years, when it became evident that the yield of water from the well would not be adequate. By then, a sum of Rs. 1.68 lakhs (excluding Rs. 78,000 representing the cost of machinery) had already been spent. This is certainly an "infructuous" expenditure. What is worse, the Government is reported to have sought to absolve itself of the responsibility by stating that the work was in the nature of an experiment undertaken with the *bona fide* intention of making water available to the public at a low cost.

Another instance of financial irregularity of the Madhya Bharat Government cited in the audit report relates to the extra expenditure of Rs. 1,18,450 incurred without adopting the tender system. For the construction of quarters estimated to cost Rs. 17 lakhs, the Government first invited tenders. About 14 tenders were received and all were rejected. The Government then came out with a contract based on a more or less *ad hoc* schedule of rates. The very object of inviting tenders was thus defeated. The loss would be even more, if account were taken of further work valued at Rs. 8,87,900 allotted in November 1949 and 1950 to contractors who had not responded to the original invitation for tenders. In several cases, the rates given in accordance with the aforesaid schedule were higher than the lowest tendered rates and, in a few cases, higher than the highest tendered rates. As a result, the contractors who tendered lower rates were paid substantially higher amounts. The main reason adduced by the Government for this unusual procedure, is expeditious completion of works. But this is hardly convincing, since there was a delay from 3 to 12 months in the matter of the completion of the project. Even if the Government had considered it administratively necessary to distribute the work among several contractors for expeditious execution, it could have, as the audit report points out, done so either at the lowest tender rates, or, if some of them were unworkable, by giving the contract at the next higher rates.

PRODUCTIVITY EXPERIMENTS

An enlightened section of both management and labour has consistently held that there is scope as well as need for raising the productivity of labour and that any rise in wages should be related to such increases. Normally, one associates increased productivity with the installation of labour-saving machinery or harder work or more hours of work. But, as those conversant with efficiency systems of management only know too well, it is possible to increase productivity of labour by a more rational use of even the available equipment. This view gains additional support from the almost astounding results of the work carried out by the I.L.O. productivity team in India. The team, a summary of the final report of which is published in the July issue of the *Indian Labour Gazette*, was able to increase the productivity of engineering labour in Calcutta by 200 per cent. and of textile labour in Bombay and Ahmedabad by 5 to 250 per cent.

The I.L.O. team, which consisted of five experts from the U.K., came to India in December 1952 and carried out its experiments in Bombay and Calcutta during the years 1952-54. The experts advised several units, such as Bombay Telephone Workshop, Sindri Fertiliser Factory, Hindusthan Shipyard, Vidarbha Mills and Integral Coach Factory on matters relating to productivity. But its main work was done in Bombay and Calcutta. The Mission divided itself into two teams of two experts each, one team taking up engineering industry in Calcutta and the other textile industry in Bombay and Ahmedabad. The Calcutta team attached itself to five engineering firms. It trained five trade unionists and eight technicians. In order to avoid retrenchment, emphasis was placed on the desirability of studying processes which were "bottlenecks" in production and on products for which there was an unsatisfied demand. The aim of the team was to find more effective methods of working, ways of reducing waste of equipment, power and materials. In general, it is claimed that the Mission could increase productivity upto three times the original level, though nothing more was done than re-arranging lay-outs and work places and providing simple jigs and fixtures.

The Bombay team started pilot productivity studies in three mills each in Bombay and Ahmedabad. It trained some selected employees of the mills in handling of materials, method study, motion economy, work measurement and principles of incentives. As the large majority of processes in the textile industry are machine-controlled, the improvement of machine utilisation was of the first importance for the team. Much gain in output and quality of product was effected through better maintenance of equipment. Increases in actual or anticipated output, as stated at the outset, ranged from 5 to 250 per cent.

On the basis of the tangible results achieved in Bombay, Ahmedabad and Calcutta, the team has made the following suggestions:

(1) Substantial increases in productivity could be achieved without capital investment.

(2) Work study techniques can be applied in India with marked success in raising output and wages and reducing physical effort.

(3) The improvement of working conditions is a highly important factor in raising productivity and can often, by itself, lead to large increases.

An important point made out by the I.L.O. team is that, since 40 per cent. of the wages bill in typical Indian factories have been established by awards of Industrial Courts without the aid of work measurement or job evaluation, the resultant anomalies in the relationship between earnings and work have an adverse effect on incentives. It has, therefore, recommended that a thorough study should be made in each industry of relative levels of wages; such a study could materially assist in fixation of minimum wages in a scientific manner. It also recommends that consideration should be given to an extension of the system of payment by results, such as piecework system of wages, to jobs which have been traditionally paid on a time-work basis. The team is against the present system of paying an annual profit bonus which raises controversy every year. It feels that that this form of profit-sharing could, with advantage, be replaced by equitable payment by result schemes, with payment on a weekly basis, which would give the workers as much as the present awards. Other notable suggestions of the team include improvement of physical conditions, proper selection, education and training of supervisory staff, introduction of adequate machine maintenance procedures and, in the textile industry, greater flexibility in the allocation of duties among different jobs.

Finally, the team has emphasised that attitudes conducive to higher productivity can only prevail, if human relations within the enterprise are based on mutual respect. It is also necessary, according to the team, to convince the workers that modern techniques to raise productivity will not only be used to improve their earnings and conditions of work but also that their employment opportunities, far from being diminished, will be directly or indirectly increased. While commending the team's suggestions and recommendations to the attention of all the interests concerned, we would urge the Government of India to publish the full report of the Mission's work in India, for we are sure that it would prove to be of great value to all industrial managements.

KHARAGPUR INSTITUTE

The Central Government's decision to accord national importance to the Indian Institute of Technology, Kharagpur (West Bengal), deserves to be commended. The official Bill declaring the Institute to be an institution of such importance was passed by the Lok Sabha on Saturday last. The Institute, it will be recalled, started functioning in 1952 and is one of the four regional institutes for higher technology. Established on the lines of the Massachusetts Institute of Technology in the U.S., it seeks to meet the country's need of engineers and technologists. About 1,200 students are at present studying or doing post-graduate research at the Institute. A distinguishing feature of the Institute is that it not only imparts training in specialised subjects but also carries on research of the highest order. It is, therefore, only appropriate that the Institute, as Dr. Mono Mohan Das, Union Deputy Minister for Education, rightly pointed out while moving the Bill for consideration, should have an honourable status in the country and that can be conferred only by the supreme legislature of the land.

The Bill seeks to retain the individuality of the Institute by declaring it to be an institution of national importance under Entry 64 in List I, Schedule Seven of the Constitution. The Institute will develop patterns of teaching in undergraduate and post-graduate, as well as of research in various branches of engineering and technology. It will also have the power to grant degrees, diplomas and other academic distinctions. The Institute will maintain the departments covering various fields of engineering and technology for training different types of technical personnel. Finances required by the Institute for exercise of its powers and discharge of its functions shall be payable by the Central Government in the shape of grant-in-aid each year. Since the development of the Institute will be according to the programme approved by the Government, the funds will be in accordance with proposals accepted by the Government of India, and will depend on the number of courses and departments which may be opened by the Institute as determined by the Government to fulfil its obligation to the industrial needs of the nation.

There was a brief but interesting debate on the Bill. While some members availed themselves of the opportunity to criticise the way in which the Education Ministry had been tackling educational issues, a few others put forward pertinent suggestions to improve and widen the scope of technical education in the country. Special mention may be made of the suggestion relating to the reduction in the fees charged by the technical institutions. It is common knowledge that several institutes charge fees which are too high to enable children of low-income groups to receive technical education. Mention may also be made of the plea for immediately setting up a number of high-grade technical institutions in the various regions. The institutions should provide facilities on an extensive scale for advanced work and research in various branches of engineering and technology, in order to meet the increasing needs of well-trained personnel, arising out of the implementation of the development programmes for industry and agriculture. Alluding to this, Dr. Das revealed—and this is reassuring—that the Government had decided to open five more engineering colleges and 21 technical schools. He further revealed that it was proposed to establish the Western Technological Institute during the first half of the second Plan period and the southern and northern ones in the second half.

PLANT PROTECTION

The importance of pest control and eradication of plant diseases in effectively increasing the total agricultural production was rightly stressed by the Union Minister for Agriculture, Dr. Punjabrao Deshmukh in his inaugural address to the Plant Protection Conference, held this week at New Delhi. The Conference of State Ministers of Agriculture, held at Mussoorie last June, it may be recalled, came to the unanimous conclusion that, in the higher target of 16.4 million tons as against the 10-million-ton target laid down in the Plan, the plant protection measures alone could account for one million tons. It is gratifying to be told that, with improved methods in protection and technique and with our own increasing knowledge and experience gained as a result of the various Community Projects and National Extension Service Blocks, even the average farmer now thinks in terms of protecting his crops from pests and diseases.

Be that as it may, the problem is whether the cultivator really gets the advice and attention which he deserves and whether adequate machinery exists in all the States to control the outbreak of plant diseases. This question was raised by the Minister himself in his address. In this connection, it may be mentioned that the Central Directorate of Plant Protection, Quarantine and Storage was established in 1946. Since then, practically all the States have established plant protection organisations of their own and the importance of this aspect of agricultural activity has been increasingly recognised by the Governments, the Planning Commission, farmers and others. Further, during these last ten years, four Plant Protection Conferences have been convened, the last of which was held in April 1952.

GOVERNMENT OF UTTAR PRADESH

FINANCE (BUDGET) DEPARTMENT

Dated Lucknow, August 10, 1956

PRESS NOTE

4 Per cent. Uttar Pradesh State Development Loan 1968

The Government of Uttar Pradesh are floating a loan of Rs. eight crores in order to finance their irrigation works, electricity projects and other State development schemes. The main terms of the loan are that the issue price will be Rs. 99-8-0 for every Rs. 100 of the loan applied for. The loan will have a currency of twelve years from 3rd September 1956 and will be repaid at par on 3rd September, 1968 and will bear interest at the rate of 4 per cent. per annum from 3rd September, 1956 payable half-yearly on 3rd March and 3rd September and is subject to income-tax. Subscriptions for the loan can be made in the form of cash or cheque, and will be received at the branches and treasury pay offices of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch or treasury pay office of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-6453/X—88-1956, dated August 10, 1956, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. *Financial Position of the Government of Uttar Pradesh*—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last twelve years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1944-45	2,747	2,330	+417
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3,876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,626	5,626	..
1950-51	5,189	5,184	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	..
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,451	8,330	+121

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1955-56 were 78 lakhs in the U.P. Road Fund, 73 lakhs in the Hospitals Fund, 4 lakhs in the Famine Relief Fund, 1,118 lakhs in the Revenue Reserve Fund, 18 lakhs in the Sugar Research and Labour Housing Fund, 2,913 lakhs in Zamindari Abolition Fund, 10 lakhs in the Depreciation Reserve Fund—Irrigation, 179 lakhs in the Depreciation Reserve Fund—Government Bus Services, 333 lakhs in the Depreciation Reserve Fund—Electricity, 12 lakhs in Contingency Reserve Fund—Electricity and 48 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,786 lakhs.

Debt Position—On March 31, 1956 the debt of Uttar Pradesh amounted to 13,382 lakhs consisting of 1,053 lakhs representing the consolidated debt due to the Central Government and 8,123 lakhs taken from that Government for development purposes and 828 lakhs for Relief and Rehabilitation Schemes *plus* 3,209 lakhs representing the amount of public loans floated by this Government from time to time *plus* 169 lakhs as Uttar Pradesh Encumbered Estates Act Bonds. Apart from this the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 3,304 lakhs the liability on account of which will be met, by annual equated instalments, from the extra revenue from Zamindari Abolition over a period of 40 years. Sinking Funds for all the public loans and the loans taken from the Central Government for development purposes have been formed and they are invested in Government of India Securities.

Assets of the Government.—Against the outstanding debt of 13,382 lakhs there are assets in the form of the Ganga, Yamuna and Sarda Canals, various other small canals, the State tube-wells and the Hydro-Electric Grid, Electric Supply undertakings, Cement Factory and Government Bus Services, in which about 11,607 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 3,220 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

State Balance at the close of 1955-56.—The Uttar Pradesh Government had a free cash balance of 1,397 lakhs at the end of 1955-56.

FOOT NOTE.—The accounts for 1955-56 have not yet been closed finally. The figures for 1955-56 mentioned in the Press Note are based on the March (Final) 1956 Accounts as revised up-to-date by the Accountant General, Uttar Pradesh.

INDIA TO SIGN ANOTHER LONG-TERM LOAN AGREEMENT WITH THE U.S.

BUSINESS MEN ON STATE TRADING

From A Special Correspondent

NEW DELHI, *28th August*

ENQUIRIES made in the Ministry of Finance reveal that the Government of India will soon enter into an agreement with the United States for obtaining a loan of $360 million (Rs. 172 crores) for the purchase of surplus American farm products, particularly wheat and cotton. Under the specific terms of the agreement, which is most likely to be signed today, it is provided that India will take 3.5 million metric tons of American wheat and 600,000 bales (400 lbs. each) of long-staple cotton over a three-year period. In addition, India will also purchase 200,000 tons of rice from the U.S.A. during the current year. Other commodities covered by the agreement are 6 million lbs. of tobacco and a quota of dairy products. This long-term loan is to be repaid by India over a period of 40 years and the rate of interest is also comparatively lower than what prevails in the U.S.

DELHI LETTER

Despite the seeming differences of views between India and the U.S. on certain political matters, there appears to be an abiding co-operation between the two countries in the economic field. The present agreement is another instance in point. It may be remembered that a similar wheat loan agreement, entered into by India with the U.S.A. in 1952 when India was facing an acute scarcity of food, had been responsible to a large extent for helping India steer clear of the difficulties then. Once again, when India is facing a temporary crisis in foodgrains consequent upon floods and other natural havocs, the present American agricultural loan will be quite welcome.

It will also be remembered that the Government of India has already concluded an agreement with Burma for the purchase of about two million tons of rice to be spread over the next five years. The agreement with America will definitely strengthen the Indian economy, especially on the important food front. The supplies of American wheat and cotton will be made in the next three years, at any rate before the end of July 1959. In other words, the Government will be sure of having five million tons of wheat and rice so that it can build up its food reserve which will enable it to tide over any unforeseen difficulties. While the supply of wheat and American cotton will serve to mop up the surplus purchasing power in the country and strengthen the hands of the Government in controlling possible inflationary trends, the conclusion of the rice agreement with Burma for obtaining two million tons of rice from that country will also help the Government in expanding its export trade with Burma. This is a welcome feature, especially when it is to be borne in mind that, during the last one or two years, India's export trade with Burma has suffered considerably on account of the inroads made therein by many foreign countries, particularly by Japan.

Internal Output to be Raised

The Government of India, however, does not appear to be content merely by trying to safeguard its economy through concluding trade and loan agreements with Burma and America in regard to its food supplies. The Agriculture Ministry, as also the Planning Commission, is very much alive to the motto that 'self help is the best help.' Both of them are anxious to become more and more self-reliant, if not self-sufficient, and they feel that the best way to maintain a steady and satisfactory price level in the country will be by stepping up the indigenous output of not only foodgrains but also other cash crops and many other industrial consumer goods. Beginning from the first week of September, a series of meetings and individual consultations have been planned between the Central Government and the concerned State authorities with a view to studying detailed plans for stepping up agricultural production in the country. These meetings are naturally the follow-up of the conference of Agriculture Ministers of the Centre and the States held in Mussoorie sometime in May last where the Planning Commission's spokesmen emphasised the need for increasing the country's level of agricultural production by 40 per cent. as compared with 15 per cent. originally contemplated by the Agriculture Ministry.

Even now there are considerable misgivings in Government circles as to whether the Agriculture Ministry will be capable of achieving the target of a 40 per cent. increase as laid down by the Planning Commission. It is to be hoped that the series of forthcoming conferences with the representatives of different States will come to brass tacks with the problem, instead of indulging in vague deliberations and exchange of platitudes.

The Agriculture Ministry will also consider the question of stepping up the output of important cash crops like oilseeds, jute and cotton on which the economy of India depends to a considerable extent. It is realised in Government circles that, although it may be difficult for the country to step up production of foodgrains to the extent of 40 per cent., any success achieved in this sphere will considerably help India to maintain and stabilise its economy. There may be some shortfalls but even so a moderate rise above the original target will enable the Government to step up its exports as well as help it conserve its exchange resources to a large extent.

No Setback to be Allowed

The Planning Commission is anxious that the proposed reorganisation of States should not interfere with the implementation of its schemes for increasing food production in the country. The Commission is now understood to be actively engaged in a rational study of the entire matter in relation to the reorganisation of States, with a view to avoiding possible setbacks and offering new suggestions to minimise, if not totally avoid, such setbacks. These views of the Planning Commission will also be put forth to the representatives of the State Agriculture Ministries in the forthcoming series of conferences.

Indications are that, in the financial sphere, the Government's aims and aspirations are likely to be more than fulfilled, particularly in respect of external finances. The second Five-year Plan, for instance, has fixed a target of Rs. 800 crores for external aid in the next five years. At the present time, the possibility of help from foreign countries towards the implementation of the Plan is becoming brighter with the conclusion of the wheat loan agreement with the United States Government. It may also be mentioned here that the Government of India has also secured assistance from other foreign countries for financing its development plans. The U.K., for example, is to give Rs. 20 crores as loan and another sum of Rs. 15 crores as export credit in connection with the Durgapur steel plant. The U.S.A. has offered Rs. 40 crores for the purchase of commodities and for equipment for development programmes. The U.S.S.R. has offered financial aid to the extent of Rs. 63 crores as export credit for setting up the Bhilai steel plant. The U.S.A. and Commonwealth countries have also made available other considerable amounts of money as grants. In addition to Rs. 36 crores to Tatas, the International Bank has yet to give Rs. 26 crores for other specific projects under the second Five-year Plan. Against the background of these developments and the annual financial aid of about Rs. 50 crores to India by the U.S. Government under its foreign aid programme, India will be in a good position in the coming few years so far as its external financial position for implementation of the second Five-year Plan is concerned.

State Trading

A rather disquieting development, which is expected to have definite repercussions on the country's economy, is the fact that the private trade is very much worried over the Government's recent decision to enlarge its sphere of State Trading in a number of directions. Particular mention should be made of the misgivings of private traders in respect of the decision of the Government in the so-called encroachments on the rights of the trader in dealing with the distribution of cement and the export of manganese and iron ores. During the last week, a series of meetings were held in New Delhi under the auspices of the Federation of Indian Chambers of Commerce and Industry during which the spokesmen of private trade tried to impress forcibly on the inherent incapacity of the Government of India to enlarge its State Trading activities in the present circumstances. Addressing the trade interests, Mr. B. M. Chinai, Vice-President of the Federation, gave details of the changing conditions not only in India but all over the world where the State had been slowly encroaching into the sphere of private enterprise. Although Mr. Chinai was not completely against State Trading by Government, he nonetheless laid emphasis again and again on the necessity for the Government to take the established private enterprise and traders into confidence. His suggestions, though critical of the ways of the Government, were not destructive. On the contrary, he tried to put forward certain constructive ideas to the Government, so that private trade also could be associated with Governmental activities, thereby enabling the nation to reap the full benefits accruing from State Trading.

Full Co-operation Offered

Mr. Chinai desired that the Government should make use of the existing channels of established private trade and utilise their services for implementing their schemes. What he deprecated was the tendency of the Government to go ahead and go on discrediting the private enterprise altogether. This attitude of the Government, in his opinion, as it may well be in the opinion of scores of others also, involve the Government in unforeseen whirlpools, with the result that, due to lack of adequate knowledge and experience in trade matters, the Government might get entrapped into a mesh. He, therefore, proposed that there should be a consultative body of important private traders in which the leading exporters should be associated to the largest extent possible. His contention was that, in negotiating with foreign Governments, particularly in regard to the disposal of important minerals like manganese, iron ore, etc., the Government of India might not be in a position to get first hand knowledge of the state of world markets in view of its inadequate experience and lack of knowledge in this specialised field.

The Federation's Vice-President emphasised this idea and pointed out that the existing exporters, who have already established valuable and longstanding contacts in almost all export markets of the world, should be fully associated with Governmental activities in the field of State Trading. This would certainly go a long way towards strengthening the hands of the Government and enable the State to widen its sphere of activities to the best advantage of the nation. It may be mentioned, in this connection, that it will not be in the Government's own interests to ignore the offer of co-operation by private traders. If the Government keeps insisting on its full pound of flesh, the private interests would be constrained to seek other remedies. It is possible that, if the Government were to expand its octopus in the sphere of trading, the private trade will also try to put its spokes and take up the matter with the Supreme Court. The Constitution of India fully guarantees freedom of trade to the citizens of the country and this issue may have to be fought out in the highest judicial court in India one of these days.

STATE FINANCIAL CORPORATIONS (AMENDMENT) BILL

SOME PROVISIONS EXPLAINED

THE Bill to amend the State Financial Corporations Act, 1951, which was introduced in Lok Sabha on 30th July 1956, was taken up for discussion on the 24th inst. But the consideration of the Bill was postponed without a time limit by the Deputy Speaker, who was in the Chair, for a technical reason. Immediately after Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, had finished his long introductory speech setting out the main features of the Bill, some members complained that the information about the working of the various State Financial Corporations had been made available to the House only on the previous day, thereby not giving sufficient time to the members for making a proper study of it. The Deputy Speaker agreed that this grievance was a legitimate one. The House then adopted a motion moved by one of the members for postponement of further discussion.

The main objects of the amending measure are: (1) to remove certain difficulties experienced in the actual working of the Act during the last few years; (2) to enable a group of two or more States to establish, by agreement among themselves, a joint financial corporation for them; (3) to provide for the extension of the jurisdiction of an existing financial corporation of a State to another State by agreement; (4) to empower the State Financial Corporations to undertake agency functions on behalf of the Central Government, a State Government or the Industrial Finance Corporation of India; (5) to enable the State Financial Corporations to take short-term loans from the Reserve Bank; (6) to provide for the grant of financial accommodation by the Corporations to small-scale and cottage industries, not having sufficient tangible assets, against the guarantee of a State Government or a scheduled bank or a co-operative bank; (7) to vest the Corporations with certain powers for the efficient management of the industrial concerns taken over by them; and (8) to empower the Reserve Bank to carry out, at the instance of the Central Government, inspection of the working of State Financial Corporations.

Before making a detailed analysis of the various provisions of the Bill which seek to achieve the aforesaid objects, it will be useful to refer here to the background to the Bill. The State Financial Corporations Act was passed in 1951, in order to enable the State Governments to establish Financial Corporations for providing long-term credit to small scale and medium-scale industries. Since then, 13 such Financial Corporations have been established, some of them having worked for three years and some only for a few months. Their total authorised capital is about Rs. 25 crores and their issued and subscribed capital a little over Rs. 10 crores. Out of the subscribed capital, the State Governments have taken Rs. 4.33 crores, the Reserve Bank has subscribed Rs. 1.70 crores, Scheduled banks, insurance companies and other investment institutions have together taken Rs. 3.72 crores and some private parties Rs. 53 lakhs.

Role of State Financial Corporations

The main objectives of the second Five-year Plan are rapid industrialisation, increase in national income, creation of more employment and removal of disparity in income and wealth. While the rapid industrialisation of the country is sought to be achieved mainly through the help of basic and big industries, it is recognised that small- and medium-scale industries have also an important role to play in this drive. Moreover, the Planners feel that the small- and medium-scale industries are better suited to create more employment and to remove the disparity in incomes. They have, accordingly, given some special importance to them. In order to enable these industries to play their assigned role, they have to be given financial aid of a long-term nature, especially in view of the fact they will find it difficult to raise the required funds from the capital market. So far as the big industries are concerned, their requirements of long-term loans are being met by the Industrial Finance Corporation of India, the National Industrial Development Corporation and the Industrial Credit and Investment Corporation. As regards the small- and medium-scale industries, only the Financial Corporation in that particular State is in a position to help. In addition to the State Financial Corporations, the Government of India has started, under the Commerce and Industry Ministry, an organisation, called the Small-scale Industries Corporation, to help the small-scale industries, but its sphere of activities is entirely different from that of the former. Moreover, the small- and medium-scale industries are scattered over the whole country and it is not possible for a central organisation, such as the Small-scale Industries Corporation, to render appropriate aid to all of them. The State Financial Corporations are, therefore, better suited for the purpose and will be of much use.

Referring to the functions of these various Corporations, in his speech on the Bill, Mr. Guha said that there was no risk of overlapping of their functions. He said that the I.F.C. did not give any loan less than Rs. 10 lakhs, which was just the maximum which the State Financial Corporation could give. The latter gave loans up to as low an amount as even Rs. 10,000 or Rs. 20,000. The Minister was not quite correct in saying that the I.F.C. granted loans less than Rs. 10 lakhs. A perusal of the I.F.C.'s annual reports will show that there have been cases where they have granted loans in amounts far less than the minimum mentioned by him. Similarly, many State Financial Corporations do not give loans for less than Rs. 75,000, as the Director for State Aid to Industries looks after the applications for loans smaller than that amount.

Defects in Act

Speaking on the working of the State Financial Corporations during the last two or three years, the Minister said that he could not claim that their working had been very much satisfactory. He added that they had not been able to render any considerable financial help to small-scale and medium-scale industries. In reply to a question by a member, the Minister said that the total amount disbursed by them so far to small-scale industries was a little over Rs. 2 crores. The failure of these Corporations to render adequate financial aid was attributed by the Minister partly to the "defects" in the provisions of the Act itself and partly to the structure and nature of the small-scale industries themselves. He said that these industries were not so well organised and that they had not got the appropriate machinery to approach the Corporations for aid. One of the objects of the Bill is to remove these defects.

Referring to the "defects" in the Act, Mr. Guha observed:

"About two years ago, this matter came before the Reserve Bank. I think the Members will recollect that on a number of occasions questions have been put in this House about the working of these corporations, and the House expressed on many occasions its dissatisfaction about the working of these Corporations. So, the whole matter was taken up by the Reserve Bank. It convened a conference of the representatives of the different State Financial Corporations, and certain recommendations were made. The main function that the Reserve Bank has been performing is to help these State Financial Corporations and to arrange a sort of co-ordination. Though there is no such provision as yet in the Act, all these Corporations voluntarily agreed to have some periodical inspection by the Reserve Bank, so that the defects in their working may be examined by the Reserve Bank and rectified. The different State Governments also welcomed the intervention by the Reserve Bank in this matter. This will just show that all these Corporations, as well as the different State Governments, were really eager that these Corporations may do their assigned duty in a proper manner."

Now to the main provisions of the Bill. Clause 2 of the Bill seeks to widen the scope of the activities of the State Financial Corporations. In the definition of the various kinds of industries which are entitled to get financial aid from the Corporations, the term "processing of goods" has been found to be somewhat ambiguous and it is not sure what industry will come under this definition directly. It is, therefore, proposed to give a wider, but precise definition of this term, so as to include "any art or process for producing, preparing or making an article by subjecting any material to a manual, mechanical, chemical, electrical or any other like operation." As a result of this wider definition, the State Financial Corporations will be able to decide which of the industries will be legally entitled to get help from them. The removal of this handicap on the working of the Corporations will also enable them to widen much of their financial activities and also to help the different industries in getting the necessary aid from the Corporations.

Clause 4 of the Bill is a new provision which seeks to enable a group of two or more States to establish, by agreement among themselves, a joint financial corporation for them. As it is, some of the States, including Part C States, are experiencing some difficulty in establishing separate financial corporations of their own. The Delhi State, for instance, is not in a position to maintain a separate Financial Corporation of its own. It is, therefore, proposed to have a Joint Corporation for the Delhi and the Punjab States. The new provision in the Bill will enable several such States to join together and set up combined corporation. The participating States will also enter into an agreement under this clause providing, among other things, for: (a) the fixation of the authorised capital of the Joint Financial Corporation, the number of fully paid-up shares into which it shall be divided, and the allocation among the participating States of the shares to be distributed under clause (a) of sub-section (3) of Section 4; (b) the sharing of the liability for the guarantee under section 6 or section 7; (c) the number of directors to be nominated to the Board by each participating State Government; (d) the apportionment among the participating States of expenditure in connection with the Joint Financial Corporation; (e) the division among the participating States of the surplus profits payable by the Joint Financial Corporation under sub-section (3) of section 35; (f) determining which of the participating State Governments shall exercise the several functions of the State Government under this Act, and references in this Act to the State Government, in relation to the Joint Financial Corporation, shall, save as otherwise expressly provided, be construed accordingly.

Extension of Jurisdiction

Another provision in the Bill which is of a similar nature (as that of clause 4) is contained in clause 24. This provides for the extension of the jurisdiction of a State Financial Corporation to other States by agreement. Under this clause, where a Financial Corporation has been established for any State and any other State desires that the Corporation should serve its needs, the States, after consultation with the Reserve Bank, can enter into an agreement for such extension of jurisdiction. They can also enter into an agreement similar to the one under clause 4.

Clause 6 seeks to amend Section 7 of the principal Act, in order to enable the State Financial Corporations to borrow money from the Reserve Bank. The main Act provides for raising capital by the issue and sale of bonds and debentures, and also by accepting deposits from the public. Issue of further capital and raising money by sale of bonds and debentures would, the Minister explained, mean a permanent liability on the Corporations to give dividend or interest. Such methods are not, therefore, suited for raising the necessary funds in an emergency. In such cases, the Corporation will be entitled to take a short-term loan from the Reserve Bank for a period of not exceeding 90 days, against the securities of the Central or State Governments.

Clause 9 provides for the removal of the managing director of a Corporation from his office by the State Government, after consulting the Board, before the expiry of his term of office, which under the Act is fixed at four years. He will however, be given an opportunity to show cause against his removal and to give an explanation to the charges levelled against him.

Agency Function

Clause 12 is an important provision, amending Section 25 of the principal Act. Under sub-clause (a) of the Clause, the State Financial Corporations will be given agency functions, that is,

(*Continued on page 439*)

INFLATION IN AUSTRALIA

WAGE-PEGGING AND SELECTIVE PRICE CONTROLS FAVOURED

IT is the economic stability of the individual countries comprising the sterling area that is more important today than anything else for the economic progress of the Commonwealth as a whole. The pattern of relationship of these countries, which formerly belonged to the same Empire, has been so developed that any economic disturbance in any part of this area is likely to upset the equilibrium in other countries. More especially, in the context of the huge plans of economic development taken in hand by a number of countries of this area, the future of sterling area depends upon the economic stability of individual member-countries. The Sydney Conference of the Commonwealth Finance Ministers held early in 1954 took pains to emphasise this important aspect. More recently, the Conference of Commonwealth Prime Ministers reaffirmed the need for stable economic condition in the Commonwealth.

Much water, however, has flowed under the bridge since the Sydney Conference. Inflationary forces have been active in almost all the Commonwealth countries, though in varying degree, with the result that there has been a considerable depletion of the gold and dollar reserves of the sterling area as a whole. At $2,405 million as at the end of July last, these reserves are down by $612 million as compared with June 1954, that is, four months after the Sydney Conference. At one time, that is by the end of 1955, the reserves were as low as $2,120 million, the improvement witnessed since then being due to the efforts made by Britain to arrest the deterioration in the situation. The country to be hit most by inflation and, therefore, the greatest contributor to the drop in the central reserves of the sterling area is Britain. This country has, however, been trying to hold inflation at bay for the past one year. Though it has not yet succeeded, there are enough indications that it has made good progress in that direction. But a Commonwealth country that is still in the grip of inflation is Australia. In fact, this country seems to be worse off than any other belonging to this group, excepting perhaps Pakistan. New Zealand has nearly succeeded in bringing this evil under control. In India, it is just raising its head. In Canada (a Commonwealth country but not a member of the sterling area), too, inflation is active, and the Bank rate there was raised a few days ago to keep it under check. It is, however, not so acute as in Australia, where the State Governments have not so far agreed upon a common programme of action against the evil. Indeed, the malady of inflation is said to be so acute that a certain section of public opinion in Australia is rather critical of Australian Prime Minister's prolonged stay in Britain. It is of the view that Mr. Menzies should be at Home dealing with inflation rather than undertake the thankless task pulling out Britain's chestnut out of Suez fire.

The Problem

In a nutshell, the present difficulties of Australia are persistent adverse balance of payments, high and rising costs in industry as a result of increasing wages, and high expenditures. The adverse balance of payments has been continuing month after month almost without interruption for nearly two years now. In 1953, Australia imported £A510.5 million worth of goods and exported goods worth as much as £A850 million in 1955, so that it had a favourable balance of no less than £A339.5 million. In 1955, however, the imports aggregated as much as £A841 million, while exports declined to £A760.4, giving rise to an adverse balance of as much as £A81.3 million. This adverse trend still continues. For the first quarter of 1956 alone the deficit was as high as £A50 million. As a result of this continuing deficit in the external payments position, Australia's gold and dollar holdings sharply declined, from $1,362 million in 1953 to as low as $835 million by the end of 1955.

The chief factors contributing to the worsening situation were, on the one hand, the high and rising costs of industry at home in the face of lower prices in the export markets, resulting in a decline in exports, and, on the other, the increasing development and defence expenditures, which necessitated larger imports. The quarterly adjustments of wages in some States followed by increasing costs in industry and in prices have set in motion a wage-price spiral. While the wholesale prices increased between 1953 and March 1956 by as much as 5 per cent. Wages in the manufacturing industries increased between 1953 and December 1955 by no less than 13 per cent. The cost of living again, increased by 7 per cent. between 1953 and January 1956 and in the month of June alone by as much as 2½ per cent. The Federal Arbitration Court's recent decision to grant an increase of 10s. in the basic wage, and the quarterly automatic adjustments in the wages of workers applied by a majority of State Governments have further accentuated the problem. Moreover, the prospects for reducing expenditure do not appear to be bright. The drain on the National Welfare Fund, as a result of a general increase in the pension rate and in the number of retiring persons, is expected to be one of the main factors responsible for an increase in expenditure. Defence demands are also rising owing to general cost increases. The provisional estimate of defence expenditure is £A17 million more than in the previous year. The recent international developments arising from the nationalisation of the Suez Canal may give further fillip to defence expenditure.

Measures Taken

In order to arrest the disturbing economic trends, a number of measures have been taken by the Commonwealth Government as also by certain States. The principal among them are import restrictions, in the realm of foreign trade, and increased sales-taxes and excises and credit restrictions, in the fiscal field. But the results achieved by the fiscal measures have been largely nullified, by the influence of wage-price spiral. The restrictions on imports have, however, helped to reduce the adverse trade balance, but this policy has accentuated the high costs of Australian secondary industry, through the shelter provided by quantitative import controls as well as high tariffs.

The crux of the problem is thus wage-price spiral. The increase of 2½ per cent. in the cost of living in June gave a new urgency to the problem. At the root of the problem is the resort by a majority of the States to the Federal courts awards granting automatic quarterly wage adjustments which cover about half the Australian work force.

Very recently, the State Chief Ministers and the acting Prime Minister of the Commonwealth met in conference to resolve this problem. The Treasury believes that wage-pegging would restore the stability which the country enjoyed for more than a year after the Federal Court had discontinued the automatic adjustments of wages in 1953. Certain States, however, hold the view that wage-pegging alone will not suffice, unless accompanied by ceilings on prices and profits. New South Wales, for instance, called for a series of measures, including control over prices and capital issues, abolition of payroll tax, introduction of excess profits tax, and a review of the existing scale of immigration, and imposition of restrictions to curb luxury imports with simultaneous measures to make available basic raw materials. The Acting Prime Minister, representing the Commonwealth Government at the Conference, pointed out that the Commonwealth wanted an orderly, rational and harmonious system of fixing wages to overcome the near chaotic situation caused by disparities between Federal and State wages. The broad approach should be, he went on, to seek a remedy to the problem through stimulating production and restraining excessive demand. He further maintained that the proper way was to cure the condition of excessive demand from which excessive profits sprang. He, however, suggested that private managements should re-examine their policies on profit margins and mark-ups.

Ceilings on Profits and Prices

While, thus, the stand taken by the acting Premier is sound logic, the views expressed by certain State Governments, chiefly, Victoria and New South Wales, which did not toe the line of the majority of the members at the Conference, that wage-pegging should be accompanied by a ceiling on profits and prices in order to spread the burden and to "prevent the value being drained out of the pegged-wages by new burst of inflation," deserves utmost consideration. The fact that there is some disillusionment among the workers—although they are not agreeable to pegging—about the value of wage increases which continually generate a new crop of higher prices, has already been stressed. Wage-pegging, therefore, in the absence of limitation on prices and profits is likely to hit the workers hard. Furthermore, under the conditions obtaining in Australia, no one remedy can be fool-proof or a panacea to the malady. Advocates of price control, for instance, argue that the cost of living was the greatest during the period when free trading was continued. Nevertheless, it has its own limitations. For example, it is reported that substantial increases in prices took place, despite controls in limited fields, in a number of States including those in which wages remained pegged.
