Be that as it may, the decision of a majority of the State Premiers at the Conference to introduce wage-pegging along with selective price controls is to be welcomed. To render the fight effective, it is necessary that there should be a collective front of all the States, on the one hand, and an attack from all the angles with such weapons as control of capital issues, excess profits tax and the like, on the other. In order to keep up the supply of essential articles adequate and their prices under check, it will be necessary to relax the import restrictions applicable to such goods.

The views recently expressed by Mr. W. S. Reid, Chairman of the Commercial Bank of Australia, are quite pertinent. He said that import restrictions of the present dimensions were clearly unhealthy for the economy, because they tend to reduce standards of living and increase costs by removing the stimulus of competition. Further, curtailment of expenditure by the Government is no less important. As Mr. Reid pointed out, no purpose can be served by asking the banks to pursue a monetary policy which, in effect, led to the curtailment of only private spending but not that of the Government.

As a compromise between the majority and minority views among the States, it is suggested that wage-pegging should be followed by regular reviews of basic wage by the Federal Court on the basis of the capacity of the industry to pay. This method, it is rightly stated, would ensure wage justice, while freeing the economy from the dangers inherent in automatic adjustments. It is to be hoped that the minority states would see the wisdom of this suggestion and fall in line with majority in order to make the fight against the inflationary menace effective.

A serious drawback in Australia is that the Commonwealth Government lacks the power to enforce its policy. Although it has the power to determine the amount of loan allocations for the works programmes of States and can refuse to reimburse the budget deficits in certain circumstances, on a wide variety of issues it is obliged, constitutionally, to seek the agreement of the member-States. For instance, despite the fact that the Commonwealth Government sees the virtue of capital issues control in the present conditions, it has not been able to bring round all the States to its view. On an emergency occasion like the present one, there is need for quick and concerted action before it is too late. It is to be hoped that the Commonwealth Government will succeed in its endeavours and bring economic stability to the country at an early date.

WORK OF EMPIRE COTTON GROWING CORPORATION

U.K.'S DEPENDENCE ON U.S. REDUCED

THE Empire Cotton Growing Corporation, since its inception in the early twenties of the present century, has been doing commendable work in fostering the development of cotton cultivation in the Dominions, Colonies and protected territories of Britain. It has already achieved a substantial measure of success in this direction, and this has helped Britain to reduce its dependence on the U.S. cotton. The mills in Lancashire are now increasingly depending for their supplies of cotton on colonial territories. Thus, during the period between 1st August 1955 and 31st April 1956, over a quarter of the cotton used in Britain was supplied by Sudan (now an independent country) and Nigeria alone. The territories served by the Corporation now produce nearly 1.25 million bales. Although this is a comparatively small portion of the total world crop, it accounts for a very large proportion of the total consumed by Lancashire.

In order to understand, in full measure, the significance of this development, one has only to refer to the position that obtained a few decades ago. In the early years of the present century, about 75 per cent. of the cotton consumed in Britain came from the U.S. The cotton trade was naturally concerned at this dependence on one country for its raw material. It was felt that unfavourable climatic conditions or an unexpectedly severe attack of pests or diseases could seriously interrupt supplies and that it was only by broadening the basis of supply by extending cotton growing to other countries that such dangers could be overcome. These considerations invested the question of cotton growing in the Empire territories with a measure of urgency and steps were promptly taken to tackle it. The establishment of the Empire Cotton Growing Corporation in 1921 was one of them.

The Corporation was established, in the words of its Royal Charter, with the object of "extending and promoting in the interests of our empire the growing and cultivation of cotton in our Dominions, Colonies, Protectorates, Protected States and in any country or place over which we have or may have any mandate or control." A capital grant of nearly one million pounds was provided by the Government, supplemented by a levy on all cotton spun in the country. This levy has since 1948 been replaced by an annual grant from the Cotton Board which itself collects a levy from the cotton industry. Since the British Cotton Growing Association was already in existence to deal with the commercial side, the Corporation concentrated on research and experimentation, so that new cotton growing industries could be built on sure and firm foundations in suitable territories. The Corporation realised that its objects could best be achieved, not by attempting to grow cotton on a large scale by itself but by encouraging others, particularly the native peasants, to produce the crop. Much of its work has, therefore, been accomplished behind the scenes, by giving a helping hand here and an occasional push there, quite apart from undertaking with the Corporation's own staff much of the basic research work necessary for the evolution of new varieties. The ultimate aim of the Corporation is to increase the yield of cotton lint, whilst retaining the lint quality unchanged where it already meets the market demand and improving quality where it does not do so. Although the aim is thus simple, the work involved is extremely complex, embracing trials and research on all aspects of cotton growing from the preparation of the land before sowing to the testing of the lint after harvesting.

A nucleus of experienced officers was first obtained chiefly from the Indian Agricultural Service and a scheme of awarding studentships for specialised training was started, in order to produce a steady flow of trained men not only for the Corporation's service but also to supplement the staffs of the Colonial Agricultural Departments. Between 1921 and 1952, £86,000 has been spent by the Corporation in training men and in grants to the Imperial College of Tropical Agriculture, Trinidad. Over a hundred men have been trained in this way. In the early years, the Corporation also stationed officers in almost all territories in the Empire, where cotton appeared to offer possibilities.

In order to avoid unnecessary duplication of works and also to take advantage of the facilities provided by the local departments of agriculture, the members of the Corporation's staff work on Government Experiment Stations. Much of the work of the Corporation has dealt with the production of new strains. Farmers everywhere (and Africa is no exception to this) are naturally reluctant to adopt new methods until they are certain that they are an improvement on their present well tried practice. It is, therefore, a slow and laborious task. But the introduction of a new and higher yielding variety calls for no such change at all in the existing methods of cultivation. The Corporation believes that the evolving of new strains and popularising it among the farmers offer the greatest chance of an immediate return with the least dislocation to existing arrangement. Accordingly, efforts were directed to evolve new strains. Whenever new strains are produced, it is essential to make sure that the lint will be suitable for the requirements of the spinners and so samples are sent to the Shirley Institute for spinning tests and reports on fibre characteristics. The results of these tests enable the cotton breeders to eliminate plants with poor lints and concentrate their efforts on the most promising strains.

Apart from this direct aid, the Corporation has also helped, if only indirectly, in many other fields. Its total expenditure, in the 31 years since it was established till 1952, has amounted to £2.5 million, of which some £750,000 was contributed by the cotton industry by means of a levy or in the form of a grant from the Cotton Board. Of the total of £2,500,000, some £150,000 have been spent on cotton development in Sudan, £189,000 in East Africa, £250,000 in Central Africa, £73,000 in Nigeria and £25,000 in Australia.

The cumulative effect of all these measures has been a progressively higher output in the cotton growing regions with which the Corporation has been concerned. Average annual production (in bales of 400 lbs.) in the three-year period 1918 to 1921 in the regions was only 117,000 bales. By 1942-45, it had increased over five times and during the period 1948-51 the average annual production stood at 923,000 bales, representing an increase of about 800 per cent. In the season 1954-55, for the second year in succession, production in areas where the members of the staff has been stationed aggregated over 1.2 million bales.

This increase in production of cotton in the Empire territories has enabled Lancashire to reduce its dependence on the U.S. for the supply of raw cotton and the position today is vastly different from what it was when the Corporation was founded. Whereas in 1921-22 over two million bales or 70 per cent. of the cotton used in Lancashire came from the U.S., this had dropped to 1 million or 38 per cent. immediately before the war and had fallen still further to just over half a million or 28 per cent. in 1954-55. In the same period, the consumption of cotton from Sudan, East Africa and Nigeria increased from 82,000 bales to well over half a million bales.

The following table shows the progress made in cotton production in the individual territories after the establishment of the Corporation.

(In bales of 400 lbs.)

	1954-55	1944-45	1934-35	1924-25
Sudan	486,063	374,296	296,121	44,912
Uuganda	299,935	272,064	253,242	196,038
Kenya	12,963	5,384	8,773	2,250
Tanganyika	120,588*	40,421	58,540	21,724
Nyasaland	15,407	8,302	21,006	7,718
S. Rhodesia	402	1,227	566	4,907
S. Africa and Swaziland	41,000	338	2,966	16,936
Nigeria	187,741†	15,893	58,851	39,137
W. Indies	6,377	4,525	4,720	4,186
Others	..	4,040	23,186	22,715
Total ..	1,203,892**	726,400	727,981	360,523

*Estimate. **Estimated. † Exports only.

The expansion in output has been obtained not only by increasing the area under cotton but also by improving the per acre yield. A precise calculation of yield per acre is difficult, because, in most territories of Africa, cotton is grown by peasant cultivators on small and scattered holdings and, what is more, cotton is usually interplanted with other crops. Some idea of the yield can, however, be obtained from the following table:

(Yields of lint in lbs. per acre)

	1951-52	1952-53	1953-54	1954-55
Sudan—				
Gazira—irrigated	313	474	536	440

From what has been stated in the foregoing paragraphs it is clean that the British cotton textile industry has a direct interest in the continuance of the Corporation's work, in order (1) to ensure supplies of cotton from the sterling areas, (2) to encourage the partners in the work—Colonial Governments and others—to continue the grants they make for this purpose, and (3) to influence the policy which governs the types of cotton produced so that the lint may continue to suit British needs. In view of the U.S. cotton surplus disposal policy, the Corporation will have the additional responsibility of helping Commonwealth cotton to maintain its position. In the words of the President of the British Board of Trade "a period of intensive competition may well follow the U.S. decision to sell cotton for export at lower prices than the domestic price." In this context, Commonwealth cottons, as the President himself recognised, will be faced with the task of not only maintaining but improving their quality and consistency.

HANDLOOM INDUSTRY

Whatever may be the considerations underlying the Government of India's policy for the development of handloom industry, it must be said that, so long as handloom weavers are scattered and lack organisation, their conditions will continue to be none-too-happy. Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, did well to emphasise this aspect once again, when he addressed the special meeting of the All-India Handloom Board at Bombay on Sunday last. The Government, he declared, was determined to see that the lot of the weaver was improved and, for the purpose, "every weaver must come within an organisation; the co-operative movement is the only movement which will help him." Incidentally, the special meeting of the Board was called to consider the methods to be adopted for producing an additional quantity of 700 million yards of cloth though the handloom sector during the three years ending March 1959.

Judging by the progress of expenditure on the development of handloom industry up to March last, Mr. Krishnamachari claimed that, by and large, the State Governments had done well; the work done in the last three years had produced some good cumulatively, though the progress varied from place to place. Nevertheless, he admitted that what had been done fell short of what ought to have been done and that there was considerable leeway to be made up. In this connection, he alluded to four specific suggestions put forward by some members of the Board for augmenting output of handloom cloth. These are: (1) Provision of working capital at an enhanced rate of Rs. 300 per loom for all looms within the co-operative fold; (2) a planned programme of replacing as many existing pitlooms as possible by frame fly-shuttle looms; (3) liberalisation of loans for marketing; and (4) grant of short-term financial assistance to weavers' co-operative societies, in order to maintain production during slack seasons.

The Commerce and Industry Minister agreed that all looms should be eligible for working capital at a uniform rate. He also agreed that it might be necessary to give financial aid for repairing or improving houses of weavers, with a view to accommodating frame fly-shuttle looms. In fact, he assured that the Government would consider such cases sympathetically.

ANOMALIES IN INTERNATIONAL COTTON SITUATION

WAGE CUT FOR WEAVERS PROPOSED

From A Special Correspondent

MANCHESTER, 21*st August*

MANCHESTER LETTER

EVENTS in the American and American type futures contracts in Liverpool have been attracting the attention of traders since the beginning of the month due to the narrowing of the difference between near and distant positions. This development has resulted in quotations being more in line than at any time for over a year past. It has even been suggested that distant months may shortly be offered at a premium compared with nearby deliveries.

Such a state of affairs has not existed since the early part of 1955 when the gap between current month quotations and future deliveries began to widen perceptibly. It has always been a maxim in the industry that futures at a discount tend to curb the enterprise of buyers of yarn and cloth and it has certainly been so over the past twelve months and more. A change in the situation, bringing a revival in demand, would be a very agreeable prospect for producers.

The strength of forward quotations in the futures market has followed more trade calling and scattered buying pressure. Business has not been extensive but the opinion is gaining ground that the world surplus of supplies is being stabilised, if not substantially reduced.

The latest summary of the international cotton situation contains a number of anomalies which may conceivably be straightened out during the course of the new season. The carryover figure at the beginning of August was nearly 22 million bales, an increase of 1.4 million bales during last season. Supplies are now twice as large as at the time of the Korean crisis and are equal to nine months' consumption at the current rate.

An extra 3 million bales has been added to the volume of stocks in the United States which are now around 14.5 million bales. This is the largest carryover on record, exceeding the previous peak of 13 million bales in 1939. On the other hand stocks outside of the United States fell last season by nearly 2 million bales to 7.4 million bales. This was the lowest carryover figure since the International Cotton Advisory Committee began keeping records.

Distribution of Cotton

Total arrivals of raw cotton in this country during the season just ended were not appreciably affected by the continuing uncertainty over price levels and the abundance of supplies held in producing areas. Imports were a little lower than in the previous season and the level of purchases is now distinctly smaller than in years gone by.

Considerable interest is always taken in the variations which occur in the quantity of cotton secured from the ever more numerous list of supplying countries. As the table below shows, the trend last season was away from the traditional cotton growing areas and towards the countries which have only recently undertaken this form of agriculture:

(In bales)

	1955-56	1954-55	1953-54
American	270,349	475,700	427,349
Mexican	139,918	81,510	39,035
Nicaraguan	15,952	10,767	*
Brazilian	165,177	194,698	216,448
Argentine	1,913	52,742	44,448
Peruvian	66,571	40,654	102,133
Egyptian	24,507	40,835	139,441
Sudan	222,612	136,570	209,048
East African	42,556	37,628	98,289
Nigerian	167,210	135,039	220,033
Congo	44,301	20,673	†
Turkish	3,504	2,778	†
Syrian	33,503	52,256	*
Pakistan	66,140	72,870	105,063
Indian	75,986	37,382	27,577
Russian	62,267	89 700	*
Others	105,341	95,840	126,502
Total ..	1,510,807	1,578,232	1,755,366

* Included in "others." † Included in "Nigerian."

In view of the many uncertainties connected with the American cotton position during last season and the anticipation of lower prices, the fall in the quantity of United States cotton imported is no surprise. On the other hand, Mexico has provided increasing supplies of comparable qualities, although the purchases from South American sources have noticeably declined compared with recent seasons.

Egypt is another old-established cotton growing centre the offerings of which are being neglected by former customers. Supplies of Egyptian staple have been sold in fair quantities to Eastern European countries during the season, but the mills using this cotton have not always been located in these countries. Lancashire firms have renewed their purchases of Commonwealth cotton, in particular from the Sudan and West Africa. A noticeable increase has taken place in arrivals of Indian cotton.

Wage Cut Proposed

Employers in the Lancashire textile weaving industry have again urged their case for wage reductions for up to 25,000 rayon weaving operatives at a joint meeting with trade union officials. It is the first attempt to cut wages in the industry since 1932.

After a meeting in Manchester lasting about an hour it was announced in a joint statement that the trade union representatives would examine the employers' statements and attend a further joint meeting to give their reply. The statement disclosed that the gross wages of some operatives would be affected to the extent of about 15 per cent. In other cases it would be less.

The employers' application is confined to rayon weavers whose earnings are still linked to the old uniform list system of payment. This system provides special premium payments up to 40 per cent. higher than in cotton weaving. At the time of their introduction rayon was a comparatively new textile fibre and the employers' case is that this no longer applies and that the present differential is not justified.

The employers first tabled their application nine months ago and officials of the Weavers' Amalgamation have since made it clear they will oppose it. Their argument is that instead of clinging to the old uniform list system, which provides few incentives, employers should modernise and re-equip their plants and adopt the system of payment suggested by the Cotton Manufacturing Commission.

No Workers' Bonus

More than 4,500 workers employed by Tootal, Ltd., the giant £11,000,000 Manchester textile group, are the latest to suffer from the Lancashire mill slump. Instead of sharing in a £75,000-pay-out from profits, as they did last year, there will be no 1956 bonus, the directors of the Company have announced.

The group's profit-sharing scheme is dependent on the amount of dividend paid to shareholders. This has been cut from 10 per cent. to 7½ per cent., and means, an official of the Company said, that there will be no bonus for the employees.

Difficult trading conditions in the textile industry more than halved the untaxed earnings of the Company in the past twelve months, according to the Directors' report. After charging £17,253 for taxation, against £520,018, net profit for the year was £182,953, against £338,483.

In the past six years £465,684 has been distributed in bonuses under Tootal's profit-sharing scheme.

Careers in Cotton

A new mill apprentice training scheme which opens the door to £1,000-a-year jobs has been welcomed by the Manchester-based Textile Officials' Association. "It is apparent that unless the youth of today know what possibilities the future holds for them in an industry it will not command their respect," said the Association in a report.

In the past there has been nothing in the trade's "shopwindow" to attract young people, especially boys. Employment advisers had never been in a position to tell these potential heads of department what the trade offered to those seeking advancement.

The apprentice scheme has been introduced by the Lancashire Cotton Corporation, the world's biggest spinning group. Six apprentices will be accepted in the initial stages. Apprentices will attend Bolton or Oldham technical colleges for one day a week and one or more evenings at the Company's expense. Practical training in the mill will dovetail with the technical college courses and apprentices will be members of the mill staff.—*All Rights Reserved.*

SUGAR UNDER SECOND FIVE-YEAR PLAN

CAPACITY TO BE STEPPED UP BY 760,000 TONS AT A COST OF RS. 51 CRORES

THE tempo of activity in the sugar trade will be considerably accelerated in the next five years. So ambitious is the scheme of development drawn up for the sugar industry, the full details of which are now available, thanks to the publication of the *Programmes of Industrial Development* (1956-61) by the Planning Commission. The sugar industry is one of the six industries which account for the largest outlay. Thus, out of the aggregate expenditure of Rs. 1,094 crores earmarked for industrial expansion in the public and private sectors, the share of this industry comes to Rs. 51 crores, or 4·7 per cent. of the total. The amount represents an increase of as much as Rs. 46 crores as compared with the estimated actual investment of Rs. 5 crores in the first Plan period. It will be spent on the implementation of schemes for augmenting the rated capacity of the industry by 760,000 tons, in order to achieve the capacity target of 2.5 million tons and the production target of 2.25 million tons by 1960-61. The capacity, it may be noted, is calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent. In addition to this amount, the cost of replacing old machinery and modernising the equipment of the existing units is placed at about Rs. 50 crores, as against Rs. 10 crores incurred during the first Plan period for normal repairs, minor additions, modernisation, change in process, etc. The establishment of the additional capacity of 760,000 tons of sugar is expected to provide employment to nearly 30,000 persons.

The first Five-year Plan, it will be recalled, did not envisage any expansion in the rated capacity of the sugar industry. For the Planning Commission considered that the capacity of 1.54 million tons (1950-51) was quite sufficient to meet the total estimated requirements of 1.5 million tons at the end of the Plan period (1955-56). It was accordingly visualised that no new sugar factories need be set up during the Plan period. Emphasis was, of course, laid on adoption of measures designed to utilise the idle capacity by shifting the unfavourably located units to more suitable sites, to expand uneconomic units, and to raise the supply of sugarcane to mills, so that the average number of working days might be increased from 100 to 120. The planners' estimate of sugar consumption, however, proved wrong. Following decontrol of sugar towards the end of 1952, consumption began to rise steeply and touched a high of 1.81 million tons in 1953-54. In order to bridge the wide gap between demand and production, large quantities of sugar had to be imported.

Policy Reviewed

Thanks to the changed situation thus, the policy of restricted development was reviewed in 1954 and it was decided to license additional capacity freely, so as to augment the capacity of the industry to not less than 2.0 million tons, which, it was presumed, would be sufficient to give a production of 1.8 million tons of sugar per annum for meeting fully the requirements of the country under conditions of decontrol. Accordingly, licences were issued for the establishment of 43 new sugar factories and substantial expansion of 42 existing units. The total additional capacity approved up to the end of March 1956, amounted to 725,000 tons. Of this, a capacity of 85,000 tons went into production in 1955-56. A capacity of 220,000 tons is expected to come up in 1956-57, about 250,000 tons in 1957-58 and the balance of 170,000 tons in the following years. The State-wise distribution of the additional capacity licensed is indicated below:

	Sugar factories existing in 1955-56		New factories	Expansions	Additional capacity licensed (000 tons)

* Calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent.

A special feature of the additional capacity licensed is the provision for establishing a large number of cane-growers' co-operative sugar factories. Of the 43 new factories proposed to be set up, 22 are co-operative enterprises—14 in Bombay State, 3 in the Punjab, 2 in Mysore and 1 each in Uttar Pradesh, Madras and Assam.

The crushing capacity of sugar factories operating in the country varies from 220 tons to 3,200 tons of sugarcane per day. Under present day working conditions, a factory with a crushing capacity of 700-800 tons of cane is considered to be an economic unit. In the first Plan period, three uneconomic units expanded their capacity to 700 tons and above. Of the 143 mills which worked during 1955-56, 31 mills had capacities below 700 tons. Nine of these have been granted licences for raising their capacity above 700 tons. A majority of factories which remained idle during 1955-56 have a capacity below the economic level.

Co-operative Ventures

The aggregate capacity of sugar industry as on 1st April 1956 stood as already stated, at 1.74 million tons of sugar. When the unutilised licensed capacity of 640,000 tons—out of the approved capacity of 725,000 tons—is installed, the annual capacity of the industry will be about 2.38 million tons. The Planning Commission has approved in principle the establishment of 35 co-operative sugar mills on the basis of proposals put forward by the various State Governments for inclusion in the second Plan. Two of these have already been licensed. The remaining 33 units are expected to add a capacity of another 330,000 tons, raising the total capacity to 2.71 million tons, including the idle factories' capacity of 50,000 tons.

With regard to the licensing of additional capacity, it has been decided to permit generally the expansion of existing mills, provided enough sugarcane is available in the factory area and to give, in the case of new factories, preference to growers' co-operatives, particularly those sponsored by the State Governments in accordance with their approved development programmes. Nevertheless, it is emphasised that the licensing policy should remain open and that every application, whether co-operative or private, should be examined on its merits. At the same time, it is stressed that licences for new factories must be granted only when it is known that sufficient supplies of cane are already available or are expected to be available within a reasonable period around the proposed sites. It is further stated that, in granting licences, preference must be given to States in which there has been no or inadequate development of sugar industry or in regions, such as the Tarai area in Uttar Pradesh, where the sugarcane grown cannot be utilised for any other purpose.

Rehabilitation

In the development programme for the sugar industry, the Planning Commission has done well to attach special importance to the problem of replacement of old and worn-out machinery. This is only as it should be. As we have ourselves pointed out on more than one occasion, several factories have machinery and equipment most of which were purchased about twenty years ago. During the Second World War and the period immediately following, even normal replacements could not be carried out, as the parts were not easily available. The prices of sugar machinery were and are still high and substantially large funds are required to carry out replacements on any significant scale. The total cost of replacement is estimated by the Commission at Rs. 50 crores.

The Planning Commission has also drawn attention to the need for encouraging conversion of sugarcane-crushing plants from steam drive to electric operation. The heat economy of several factories, it is pointed out, is not properly balanced. Consequently, the factories not only turn their entire production of bagasse for raising steam for processing sugar and for generating power but also consume appreciable quantities of extra fuel in the form of coal and firewood. To the extent improvement in this matter is effected, the cost of sugar production will be reduced, surplus bagasse released for setting up subsidiary industries and the country's transport system relieved of the strain of carrying extra fuel to the sugar factories.

COAL MINING IN U.S.S.R.

PROGRESS TOWARDS COMPLETE AUTOMATISATION

THE Indo-Soviet economic co-operation in the sphere of coal mining envisages the stay in this country of a group of Soviet experts for a period of six months, with a view to rendering technical aid by training Indian engineers to handle the new coal drilling equipment which the Soviet Union has undertaken to supply to this country. The first consignment of such drilling equipment was recently shipped to India for use in the State coal mines and consisted of twenty rigs, including boring machines for test drilling and self-propelled drilling installations. It is noteworthy that consultation and aid on the part of Soviet specialists are not included in the price of machinery and are given free of charge.

The outfit of test drilling included in the aforesaid shipment is said to be of an improved design and exploitation qualities. It is said to be the best model of a mobile unit. It is also said to be a compact unit, equipped with all the necessary drilling tools, so that its installation at a new drilling spot takes very little time. This unit, it is further claimed, has won wide international recognition. It has been displayed at many industrial exhibitions and received a high rating of experts in various countries. Argentine and Lebanon are among the latest countries which have purchased such outfits.

The growing popularity of Soviet equipment for coal mining is evidently due to the substantial progress made in that country in the manufacture of the most modern machinery, necessitated by its bid to automatise completely coal mining. Not only has mechanisation fundamentally changed the conditions of work in mines but also raised labour productivity manifold. The cutting machine does the work of scores of miners and the coal "combine," that is a combination of machines performing several operations simultaneously, does the work of even more. An idea of its production efficiency can be had from the fact that it is capable of producing as much coal in a month as three miners working by hand can produce in three and a half years. Coal production in the U.S.S.R. now amounts to 390 million tons per annum. During the last five years, labour productivity increased by 25 per cent. and cost of production per ton of coal was reduced by 14 per cent.

The use of "combines" in coal mining is not however, free from short-comings. Besides consuming a lot of electricity, it results in 40 to 50 per cent. of the seam turning into small bits or coal dust in the process of extraction. Scientists are, therefore, seeking persistently new and more economical ways of extracting coal. The "combines" do the work of cutting, breaking up and loading the coal on the conveyor. Though these operations are important by themselves, there are other important processes of production, such, for instance, as the timbering and transportation of coal. The mechanisation of these processes also is being attempted. Numerous types of conveyors for transporting coal have been developed and are being tested.

Before long, the Soviet coal industry will be using extensively a new type of machine which will make it possible to automatise completely all labour-consuming processes. Energetic steps are being taken to develop a unit consisting of a set of machines simultaneously extracting, loading and hauling the coal and combined in a single design with mobile mechanised props. Operation of all the mechanisms is to be centralised and handled by the operation with one or two assistants from a control panel located in the nearest drift. The world's first mining unit of this kind has already been designed and built. When the whole process of coal mining is thus automatised, there will be no people at the "face," for the first time in the history of coal mining. That day is said to be not far off.

Another important step forward in the mining of coal in the U.S.S.R. will be the use of water for extraction. Plans have been drawn up for building in the Urals the first two mines to extract coal by hydraulic methods. Each mine is designed for a daily output of 1,000 tons of coal. The breaking and extraction of coal will be affected by water fed at a pressure of 40 atmospheres. From the coal station located underground at a depth of 100 to 150 metres, the pulp will be brought up to the surface by suction pumps to be sintered and dehydrated there. The Soviet Union's sixth Five-year Plan provides for the introduction of the hydraulic method of coal mining on a fairly large-scale. the quantity expected to be produced by 1960 being 12 mn. tons.

TEA CONTROL AND MARKETING IN 1955-56

U.P.A.S.I.'S ANNUAL REPORT

THE many problems which confronted the plantation industry of South India during the past twelve months and the manner in which they were dealt with are described exhaustively in the Annual Report of the United Planters' Association of Southern India which held its sixty-third annual conference in Coonoor, Nilgiris, this week.

Scientific research in tea appears to have received special consideration during the year. We see from the Report that the Tea Board has recently approved and forwarded to the Government of India a scheme of expansion of research which involves a capital grant from the Board to the U.P.A.S.I. of a sum of Rs. 14,66.900. This sum would be used to establish a central research station and a sub-station in one of the tea districts.

Referring to tea control and marketing, the Report states that, pending the finalisation of the new rules for the grant of permits for extension of tea areas, applications for permission to extend tea areas were being dealt with under the provisions of the Indian Tea Licensing Committee (New Planting) Rules of 1951. But the Association has drawn the Board's attention to the fact that a number of members are unable to make preparations for new planting until the general policy with regard to extensions is actually known.

Early this year, the Tea Board had drawn up a scheme for the licensing of packers, distributors and exporters of tea with the object of keeping under check the sale, distribution and export of sub-standard teas. It was intended that the scheme of licensing should, in the first instance, be enforced only on two categories, the packers and the exporters. The Association had informed the Tea Board that, while it fully recognised the need for some form of control over dealings of sub-standard teas, it did not consider that the scheme as proposed would help this object. In the first place, it would be improper to exclude distributors initially from the scheme, as to do so would not only be unfair discrimination against packers and distributors but would also imply that distributors were not concerned so much in the sale of adulterated or sub-standard teas. It was also pointed out that, in respect of details, the scheme placed many unnecessary restrictions on trading, and that it would adversely affect the marketing and distribution of tea, particularly in the rural areas. The Board had now appointed a sub-committee to go into the scheme with a view to simplify the procedure and to apprehend the real offenders involved in the sale, distribution and export of sub-standard teas, without undue harassment of the honest dealer.

The Report deals exhaustively with the efforts made by the Association to secure a suitable revision in the scales of the present export duty and particularly a reduction, if not the abolition, of the minimum rate of 4 annas a lb. The present system of levy has placed South Indian tea at a considerable disadvantage, because of the fact that, for several months since January 1955, South India teas had fetched prices which were considerably below those fetched by North India teas and yet South India teas have had to pay the same rate of duty. The Association had also proposed suitable revision in the scales of duty so as to ensure that no duty would have to be paid when the price of tea was uneconomically low. The Government had, however, replied in April 1956 that it was not feasible to have different rates of duty for North and South India and that, the market having firmed up, they did not consider that the present level of duty was calculated to hinder the exports or to deny a fair return to the producer.

Imports of tea machinery into India being rigidly controlled, the growers of tea had difficulty in obtaining certain types of machinery. The Tea Board had declined to recommend applications from planters for certain machinery on the ground that these were available from indigenous manufacturers. Some planters had, however, complained that the machinery were either not obtainable in India in the exact sizes required, or if they were available, the manufacturers were taking an unduly long time to make the supplies.

ANNUAL MEETING OF SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

MR. S. K. SEN ON INDIAN BICYCLE INDUSTRY

THE view that India will soon take its place amongst the premier bicycle manufacturing and consuming countries in the world was expressed by Mr. Sudhir Kumar Sen, Chairman of Sen-Raleigh Industries of India Ltd., in his address to the shareholders of the Company at their Sixth Ordinary General Meeting held in Calcutta on 28th August 1956. He also disclosed that, in order to make its contribution in the fulfilment of the plan for the industry's development under the second Five-year Plan, the Company had applied to the Government for permission to increase its production to 200,000 bicycles per annum and 500,000 sets of components. Mr. Sen indicated that a further call on the shareholders would be made to meet a part of the finances required.

The following is the full text of Mr. Sen's speech:

"It is my pleasant duty to place before you the accounts for the year ended 30th September 1955. You will no doubt agree with me that the Company has made definite strides during this year. The results are encouraging and satisfactory.

"The net turnover recorded a further increase from the previous figure of Rs. 88,20,000 to Rs. 1,12,95,110—an increase of Rs. 24,75,110 over the previous year's sales. The net profit for the period has risen by over Rs. 6.5 lakhs to Rs. 11,07,056 and this has fulfilled the expectation held out in my speech last year about the early payment of ordinary dividends. Operating results this year have allowed your Directors to recommend payment of the first Dividend of 6 per cent. free of income-tax for the ordinary shares of the Company, whilst maintaining payment of the 5 per cent. tax-free dividend on preference shares. This has been made possible after writing off all previous losses, initiating the creation of a general reserve, and writing off normal depreciation. The total depreciation written off in four years of operation has been to the extent of Rs. 21 lakhs.

"Another notable event benefiting the shareholders has been the acceptance of the shares of the Company by the Native Share and Stock Brokers' Association for enlistment on the Bombay Stock Exchange. Members will be pleased to learn that reports from Bombay indicate that the ordinary shares have been at a premium since enlistment.

"The shares of the first and second issue, not being fully paid up, have been forfeited and steps have also been taken, to re-issue the forfeited shares out of the first issue.

A Welcome Feature

"A welcome feature of the bicycle trade in 1955 appeared to be the acceptance by the Indian market of Indian bicycles as a mainstay of the trade. This resulted in profit margins being established on almost all Indian products as opposed to the feature in previous years when the profit arose mainly from the very restricted imports, and the Indian products were held to be a secondary source of supply.

"This reorientation of thought amongst the Indian traders was a necessary corollary for further expansion and consolidation of the Indian bicycle industry. I have often called for a realistic attitude and objective for dealers, and I am glad to say that within my lifetime I have lived to see the day when the Indian bicycle is standing on its own, in quality and consumer demand, against all comers, and returning a reasonable profit to dealers.

"Your Company closed the year with record orders on its books for both bicycles and components. All products recorded increased sales, and orders, as usual, were in excess of production capacity in all lines, except in the case of bicycle chains. The position in regard to chains had been affected due to large imports at low rates of duty, under various heads other than as bicycle accessories, and this had created a glut on the market. Repeated and continuous representations to Government have produced some check on such activities, and it is hoped that the position regarding chains will improve in the near future. It is admitted that our chains stand supreme for quality, endurance and value.

Government's Import Policy

"Government policies regarding imports continued to follow the pattern set in 1954 of fairly liberal licences for bicycles and components. Liberalisation to this level, however, did not affect the indigenous manufacturers' sales to any great extent, although the imports did bring down profit margins on the imported bicycle range. If, however, the experiment is continued, it may endanger production by the Indian industry, and care should be taken by the Government in framing future import policies, so that the expanding industry is not affected adversely. The demand for bicycle in this country has grown continuously over the past few years, and the year 1955 was not only a record production year for your Company but also for the Indian industry. With a production of about 550,000 cycles, and an import of 150,000 bicycles, the consumption of bicycles this year constitutes an all-India record.

"All indications are that India will take its place amongst the premier bicycle manufacturing and consuming countries in the World, and I am glad to say that bicycles have been given reasonable prominence in the second Five-year Plan by the Indian Government. The Development Council for Bicycles, a body formed some years ago by the Government of India, representing industry, trade and consumers, to advise on the Indian bicycle industry to the Commerce and Industries Ministry, had been asked to submit to the Indian Government its views on what targets should be framed for the bicycle industry in the second Five-year Plan, and a target of 1.25 million bicycles to be made in India by 1961 was advocated by the Council and accepted by the Planning Commission. Your Company expects to play a prominent part in the fulfilment of the Second Plan as it has done in the First. To this end, applications have been made some time back to the Government of India for increases in capacity to be allowed to your Company to raise production in the bicycle wing to 200,000 bicycles, and the component wing to half a million sets of components. Plans for such expansion are already under active preparation at associate factories in the U.K. and the continent at the instance of your Directors.

Finance for Expansion Plan

"These expansion plans, along with the plan for manufacture of freewheels, and bottom bracket axles, for which plant is now in order, or on the way, will make further calls on the capital of the Company, and it has been thought prudent by your Directors to approach the Industrial Finance Corporation for a further loan of at least Rs. 15 lakhs. They have also considered the advisability of getting the balance of the Company's share capital subscribed.

"All the expansions are expected to take place within the second Five-year Plan period, and to help in the implementation of these plans, Mr. L. C. Clarkson, Works Director of Raleigh Industries Limited, visited India early in 1956 for a first-hand assessment of the situation.

"Whilst considering the second Five-year Plan, your Company has also considered the wider aspects of the Government's policy for raising the standard of living in the country and, as its contribution on the social side, has planned an extension of housing benefits to cover the majority of its Asansol factory workers at Kanyapur. A start was made with 200 houses last year, of which 144 have already been built, and 56 are help up due to the cement shortage. Further quarters for housing executive staff, clerical staff and workers are expected to be developed during the Plan period.

Small-scale vs. Large-scale Industries

"Encouragement of the small-scale and cottage industries and co-operatives as a policy

BARNAGORE · CALCUTTA

STEEL AND ITS FIVE CHIEF RIVALS

THEIR RESPECTIVE COMPETITIVE QUALITIES

NOW that India has practically finalised the initial arrangements towards increasing the production of steel from the present 1.25 million tons to over six million tons by 1960-61, it is of the utmost importance that steel does not lose its position of technical excellence. This is not, of course, a matter on which one's wishes could be the determining factor. Much will depend on the trend of steel prices. If prices of steel moved up steeply, then there would be some consumer resistance to the use of steel. In this respect, India is fortunate, in that it possesses abundant supplies of high-grade ore and economic location of other raw materials. So, there is no immediate danger of the cost of steel going up to unduly high levels. But the fact is that steel cannot be considered in isolation. Other materials, notably, aluminium, are actively engaged in competing with steel for consumer preference.

What inroads have these materials made into the steel market? To what extent are they a threat to steel? These are difficult questions and perhaps no definite answer could be given to them, what with the continuing technical progress in this field and the complex nature of the inter-relationship of these metals. But the steel interests will no doubt feel gratified by the verdict of the Economic Commission for Europe which, in a report entitled *Steel and its Alternatives*, avers that the inroads made by alternative materials into steel are quantitatively small and will probably remain so in the near future. The report, however, warns that there is considerable and growing competition.

What are the comparative advantages and disadvantages of steel and its five chief competitors, namely, aluminium, plastics, asbestos-cement, concrete and timber? All the five materials, the report notes, are lighter than steel, and all, except wood, have a higher corrosion resistance. As regards heat resistance, all materials concerned, except perhaps concrete, are inferior to steel and this applies to strength and elasticity.

Complex Factors

While a variety of complex factors go into the estimation of relative prices, aluminium, generally speaking, is considerably more expensive than steel; so are plastics, though, with many important developments recently, it seems likely that the price ratio will tend to narrow; asbestos-cement is less expensive as is concrete (and both are more limited in use); timber has become steadily more expensive in relation to steel and there is no reason to expect a reversal of this trend. As a rough generalisation, the E.C.E. report states, it may be assumed that installation cost will be normally lower for all the competing materials owing to their lightness, although the degree of difference is bound to vary according to the material. Maintenance cost (largely dependent on corrosion resistance) of all materials, except timber, will generally be lower than that of commercial steel. The main points where competitive materials have the advantage over steel, the report says, are: price for equal volume as compared with price for equal weight, installation and maintenance cost.

Steel has met some resistance from prestressed concrete in the sphere of bridge building. Other construction work in which substitutes are used for steel include reservoirs for water, gas and oil; hangars and industrial buildings, poles and towers, and residences. In noting the advances of other materials in use in this field, one should remember that these materials also compete among themselves. In the motor vehicle industry aluminium and plastics have so far been the principal competitors with steel, their main advantages being lightness and resistance to corrosion, though steel is far stronger and appreciably cheaper. In the manufacture of commercial vehicle bodies, a variety of factors tends to offset the higher cost of aluminium or plastics. First, the saving of deadweight increases the payload; secondly, there is a decrease in maintenance cost; thirdly in many European countries, where commercial vehicles are taxed on the basis of weight and horse-power, any saving in weight reduces the tax.

These advantages apply less to passenger car bodies, since their weight saving is only slightly reflected in lower costs. Up to now, plastics have been little used in production of passenger car bodies. But there are certain advantages such as lightness, lower tooling costs and streamlining which are clearly substantial and their influence on the decisions of motor car manufacturers will grow if prices of reinforced plastics decline relatively to steel sheets. The competition which confronts steel in railways arises mainly from aluminium rolling-stock and from timber and concrete sleepers. Again, plastics have played but a minor role. The principal value of the competing materials has been in their lightness, a factor which also influences their position in shipbuilding.

In shipbuilding, steel competes with aluminium and on a smaller scale with plastics. Timber also was a competitor in the past, but, by now, the respective fields of steel and timber have been more or less established. In the future, a three-sided competition among steel, aluminium and plastics may be expected. In addition to its advantage of lightness, aluminium has high corrosion resistance and wide possibilities of prefabricaton. These advantages are offset by a number of disadvantages, mainly that of low strength. Plastics have been used so far mainly in the construction of light craft such as sport boats and barges used on inland waterways demanding small craft.

Tubes

Only recently have tubes begun to be manufactured from materials other than steel or cast iron, that is, from asbestos-cement, plastics and aluminium, the report declares. Asbestos-cement piping has been used for some time for carrying wafer. The corrosive effect of oil on cement does not allow its use as an oil carrier and its low tensile strength is against its use as gas piping. Aluminium tubes have been used on only a very small-scale. An experimenter in the United States has however, produced an aluminium oil pipe which is claimed to be cheaper than steel pipe. Tubes made from plastics are coming into use on an ever-increasing scale. The chief materials are polythene, polyvinylchloride and butyrate. They have served mainly for cold water, seldom for oil, since their strength and heat resistance are relatively low. However, these technical shortcomings may be overcome sooner or later as new products are developed.

No definite answer is, however, possible for the question as to the precise amount of steel displaced by the competing materials. Yet in the sector of the steel industry making thin flats and tubes, competition, it is stated, is not insignificant. The report recognises that the steel industry is well placed to meet the competition from other materials. In any case, it should be clear that it is all to the good of consumers that such competition should exist, for it is only under such conditions that there will be marked incentive for producers to reduce production costs.

OIL AND NATURAL GAS COMMISSION

A high-power oil and Natural Gas Commission has been set up by the Government of India to undertake exploration, exploitation and refining of mineral oil. Mr. K. D. Malaviya, the Union Minister for Natural Resources will be the Chairman of the Commission, while its two other members will be Mr. A. M. N. Ghosh, Director, Oil and Natural Gas Directorate, and Mr. C. S. Menon, Joint Secretary, Ministry of Finance. The Commission, which will absorb the Directorate of Oil and Natural Gas, will have its headquarters in Dehra Dun. It will be armed with powers of administration and implementation of the agreement between the Government and the oil companies for joint operations. It has been empowered to inspect the oil fields held by private concessionaires for ensuring systematic development of India's oil wealth.

The Commission will conduct geological and geophysical surveys, drilling and prospecting independently or with other Government or private organisations to prove and estimate the workable reserves of oil deposits. It will organise laboratory investigations in connection with the work of exploration, production or refining of oil, collect and publish statistics relating to oil and natural gas, and maintain information regarding world production, trade, mining rules and other related matters. Excepting certain investigations for petroleum carried out by the Geological Survey of India as part of its normal field programme, geophysical surveys, prospecting and exploitation of oil reserves have so far been carried out entirely by foreign oil companies.

NEW AIR PORTS

Eight new aerodromes are expected to be constructed during the period of the second Five-year Plan—at Calcutta (for use of the Calcutta Flying Clubs), Hubli, Shillong, Nowgong, Ratnagiri, Bhagalpur, Behalia and Kozhikode. This information was given by Mr. Raj Bahadur, Deputy Communications Minister, in reply to a question in Rajya Sabha. He added that two airfields—one at Malda and the other at Haldwani—would be ready by 1958.

INDO-STANVAC OIL PROJECT

DRILLING OPERATIONS TO COMMENCE

AN intensive search for oil in West Bengal will commence shortly, thanks to the Indo-Stanvac Petroleum project. A drilling rig of the latest design for use in the State, according to Mr. T. T. Conger, General Manager of Standard-Vacuum Producing Division, has been ordered from the U.S. This rig, he further stated, was "tailor-made to meet the specific needs of the area." The site for commencing drilling operations has not yet been chosen. But this selection is expected to be made shortly.

The Indo-Stanvac oil project is the result of an agreement concluded between the Government of India and the Standard-Vacuum Oil Company in 1953, in order to explore jointly, and if successful, produce oil in an area of 10,000 square miles in W. Bengal. One of the first requirements of any exploration is uncontested title to sub-soil rights. Such rights were not established until April 1955, when, as a result of the West Bengal Estates Acquisition Act, these titles became vested in the Government of Bengal. Even before this legislation was passed, the Stanvac had commenced preliminary surveys. Thus, the reconnaissance gravity meter surveys were commenced in May 1954 and seismic surveys in December 1954. But these surveys, it is stated, have not revealed the "probable existence of outstanding geological features where oil might be found and more extensive and detailed investigations have been necessary." The Government is expected to issue exploring licences for the Indo-Stanvac Project in the near future and subsequently a prospecting licence will be applied for.

The preliminary surveys have been carried out by the Stanvac at a cost of about Rs. 1.25 crores. It is believed that, when drilling commences, much heavier investments will be involved. The drilling rig and equipment alone will cost about Rs. 40 lakhs, while other expenditure will be incurred in the purchase of local equipment and supplies. It remains to be seen whether success will soon attend these drilling operations. Even in regions where drilling operations have been undertaken extensively and considerable knowledge of the local and regional geological picture is at hand, the ratio of success to failure is very small—about one in nine. Perhaps, the ratio will be much less in West Bengal. For, in this basin, described as a "wildcat" territory, there has never been a deep test well and the knowledge of the existing sub-surface geological conditions is practically *nil*. Based on experiences generally accepted elsewhere, the ratio of success to failure will be at least one in twenty.

The drilling project will be manned by qualified and experienced American and Indian drilling technicians. The overseas personnel will be hand-picked experts in drilling with years of experience and they will aid in the training of Indians. The whole project new employs about 300 skilled and semi-skilled workers. This number includes 28 Indian technicians and 10 foreign technicians. The 28 Indian technicians are undergoing on-the-job training in field camps and in geophysical and geological offices. The Stanvac has also sent four Indians to foreign countries for additional training in highly specialised fields. An additional eight Indian technicians are also being trained in the U.S. by a Stanvac's drilling contractor; these personnel will, however, be under no obligation to the Stanvac on their return to India. The Company has also made available to the Government of India the services of Mr. G. F. Kaufman, an expert with 30 years' experience in the business of oil search in Mexico, South America, Indonesia, India and the U.S.

Ships from India, Pakistan, and Ceylon will benefit from the deep-water berths at Dar-es-Salaam, Tanganyika (East Africa), which is now operating as an open port, although the official opening ceremony will not take place until the visit of Princess Margaret on 8th October. The official take-over of the deep-water berths and installations by East African Railways and Harbours from a British firm of consulting engineers was effected on 1st August, last. The largest transit shed in East Africa forms part of the £4.000,000 deep-water quay installation at Dar-es-Salaam. The Tanganyika Shed—as it will be known—is considerably longer than two football pitches placed end to end. With a length of 975 ft., together with a width of 150 ft., the shed provides 146,250 sq. ft. of floor space for cargo handling. The shed is spanned by structural steel trusses that obviate the use of pillars. Under the roof are double-storeyed customs offices and inspection rooms.

NEW PRODUCTS AND PROCESSES

New Milling Process for Vegetable Oil

A NEW solvent-extraction process for producing vegetable oils has been developed by the United States Department of Agriculture (U.S.D.A.) economies. According to U.S.D.A. scientists the new process saves both time and money, increases the yield of oil from the raw materials, yields high quality oils and is especially suitable for use in small and medium-sized mills. The present method of solvent-extracting vegetable oils from oilseeds requires many steps including moisture adjustment, cooking, cooling and pre-pressing. These steps are expensive and special machinery and extra labour and power are required, especially in the processing of high-fat-content oilseeds such as peanuts, sesame and castor beans. The new process eliminates the need for pre-pressing high-oil-content seeds and reduces initial installation and power costs. It also requires a low proportion of the solvent (hexane) to oilseed meats, as well as smaller solvent equipment than with present conventional processes. In the new filtration-extraction process, the oilseeds are rolled, cooked and crisped in the equipment used for the conventional hydraulic and screw-press mills. Only minor additions and modifications are needed. Specific conditions suiting each oilseed are selected for these operations. This processing yields a granular material in which the objectionable "fines"—material that is too finely crushed—are consolidated into larger agglomerates. This granular material is soaked with an oil-solvent mixture to dissolve the oil and then put on a vacuum filter. The strong oil-solvent mixture is separated from the meal in the filter and refiltered through the meal bed to reduce its "fines" content. The meal remaining on the filter is washed and drained several times before its removal. It then contains only 25 to 30 per cent. of solvent and its oil content is one per cent. or less. The solvent is removed from the oil and meal in conventional equipment now generally used.

Case-hardening

Following a successful running-in period the E.N.V. Engineering Company of Willesden, London, N.W. 10, has taken into full production a new £55,000 mechanised gas carburising furnace for case-hardening gears and other components. The furnace, which has been constructed and installed by Birlec of Tyburn Road, Erdington, Birmingham, 24, has a rated output of 600 lbs. of work per hour and at present about 30 tons of components pass through it each week. Material treated at E.N.V. Engineering consists of a variety of transmission gears for motor vehicles, industrial machinery, aero-engines and marine drives. The gears are loaded on 18-inch square heat-resisting trays which are moved through the furnace on three parallel tracks. Each tray is capable of carrying up to 150 lbs. of gears. The furnace is heated by means of gas-fired radiant tubes arranged transversely above and below the conveyor tracks. Full output is obtained with a gas consumption of about 4,200 cubic feet per hour. Carburising atmosphere is formed from propane gas supplied by Shell-Mex and B.P. which delivers it to storage tanks by means of road tank wagons. A feature of the furnace is the extent of mechanisation and automatic control which has been incorporated in the work handling system and which enables the plant to be run at full output with only two men. Designed by Birlec for a specified range of duties, the new furnace is claimed to be particularly suitable for the flow-line requirements of factories engaged in the large-scale production of gears. It has been developed from a series of mechanised heat treatment furnaces and is stated to bring the carburising process into line with modern ideas on methods of production.

Paper-covered Wood

The U.S. Department of Agriculture's forest products laboratory at Madison, Wisconsin, has developed a paper-covered wood that has many qualities of Grade A lumbers. Low-grade lumber covered with resin-impregnated paper, it can be used for house siding, house trim, cabinet partitions, shelving, panelling, signboards and many other uses. The paper cover makes the use of cheaper lumber possible, masking such defects as knots, pitch pockets and splits. In tests, paper glued to pine wood reduced lateral swelling 25 to 40 per cent. When glued on oak, one layer of paper overlay reduced swelling 20 per cent. and a double layer 35 per cent. The paper-covered wood cannot be resawed or planed, limiting its commercial use to finished products. However, at present low-grade species of trees are growing faster in the U.S. than they are being used. This and other new uses which make it profitable to cut these trees allows foresters to make room for growing better trees.

Wheat Yields

Tests conducted with the co-operation of growers in the Columbia Basin wheat growing area of the United States Northwest by Oregon State College and U.S. Department of Agriculture, agricultural scientists have disclosed that nitrogen fertilisers improved both yield and quality of the soft white wheats grown in the area. In experiments last year it was found that protein content, important because millers and bakers prefer soft white wheats with protein levels from 8 to 10 per cent., was increased when nitrogen fertiliser was added to the soil. Wheat on test plots receiving no nitrogen contained less than eight per cent. protein —lower than millers and bakers prefer—despite a season drier than normal, a condition when protein levels are usually higher. In plots where nitrogen was added both yields and protein content rose appreciably, the protein level satisfying milling and baking requirements.

4 PER CENT. STATE GOVERNMENTS LOANS

			Issue Price.
(1)	Government of Andhra	Rs. 600 lakhs	Rs. 99-8 per cent.
(2)	Government of Bihar	Rs. 200 lakhs	Rs. 99-4 per cent.
(3)	Government of Bombay	Rs. 750 lakhs	Rs. 100-0 per cent.
(4)	Government of Hyderabad	Rs. 200 lakhs	Rs. 99-8 per cent.
(5)	Government of Madhya Bharat	Rs. 100 lakhs	Rs. 99-4 per cent.
(6)	Government of Madhya Pradesh	Rs. 150 lakhs	Rs. 99-4 per cent.
(7)	Government of Madras	Rs. 1,250 lakhs	Rs. 99-12 per cent.
(8)	Government of Mysore	Rs. 400 lakhs	Rs. 99-8 per cent.
(9)	Government of Orissa	Rs. 300 lakhs	Rs. 99-4 per cent.
(10)	Government of Punjab	Rs. 200 lakhs	Rs. 99-4 per cent.
(11)	Government of Rajasthan	Rs. 300 lakhs	Rs. 99-8 per cent.
(12)	Government of Saurashtra	Rs. 250 lakhs	Rs. 99-8 per cent.
(13)	Government of Travancore-Cochin ..	Rs. 200 lakhs	Rs. 99-4 per cent.
(14)	Government of Uttar Pradesh	Rs. 800 lakhs	Rs. 99-8 per cent.
(15)	Government of West Bengal	Rs. 700 lakhs	Rs. 100-0 per cent.

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 3rd September 1968 except that of the Government of Bombay which will be repaid at par on 3rd September 1970.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 3RD SEPTEMBER 1956 AND CLOSE ON 10TH SEPTEMBER 1956 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 3rd September 1956.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1956, 3% MADHYA PRADESH LOAN 1956 and 3% MADRAS GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid upto and including 2nd September 1956.

3½% TRAVANCORE GOVERNMENT LOAN 1956 will be accepted at PAR for conversion into the new loan of that Government. In addition to the interest due on securities of that loan tendered for conversion, tenderers will be paid interest at the rate of 4 per cent. per annum on the amount of the principal of such securities from 16th August 1956 to 2nd September 1956 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BOMBAY, CALCUTTA, DELHI, MADRAS AND BANGALORE.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the branches of the State Bank of India and at Treasuries and Sub-Treasuries in the case of Andhra, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, Saurashtra and Uttar Pradesh loans.

(ii) At the branches of the State Bank of India in the case of West Bengal loan.

(iii) At the branches of the State Bank of India and at District Treasuries only in the case of Madhya Bharat loan.

(iv) At the branches and Treasury Pay Offices of the Hyderabad State Bank and at Treasuries and Sub-Treasuries in the Hyderabad State in the case of Hyderabad loan.

(v) At the branches of the Bank of Mysore Ltd., in the Mysore State except at Bangalore and at Taluk Treasuries in the Mysore State at places where there is no branch of the Bank of Mysore Ltd., in the case of Mysore loan.

(vi) At Treasuries and Sub-Treasuries only in the case of Travancore-Cochin loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

LABOUR AND WAGES POLICY

IMPLICATIONS OF DEMAND FOR OMNIBUS INCREASE IN PAY-PACKET

THE two important issues in the sphere of labour, which continue to attract attention, are the impact of the Industrial Disputes (Miscellaneous Provisions Amendment) Bill on the future course of labour policy and the implications of the demand of industrial workers for a straight increase of 25 per cent. in their wages. The Bill, which has now been passed by both the Houses of Parliament makes, as is well known, several far-reaching changes in the machinery for the settlement of industrial disputes. The other issue, namely, the demand for a wage rise is the subject of active discussion, for the demand is being voiced by several sections of labour opinion backed by the I.N.T.U.C., the most influential labour union.

Among the changes introduced by the Bill, mention must be made of the abolition of the Appellate Tribunal. During the discussion of the Bill in the Rajya Sabha, Mr. Shriyans Prasad Jain expressed the fear that, as a consequence of the abolition of the Appellate authority in labour disputes, industrial awards might vary from State to State or even within the same State. He suggested that, in order to ensure that the awards of industrial courts were impartial and free from executive influence, the judges of the courts should be appointed by the High Courts rather than by the State Governments. This suggestion was, however, not acceptable to the Government. Replying to the debate, the Union Deputy Minister for Labour, Mr. Abid Ali said that the appointment of judges for tribunals should be the job of the Government and that this responsibility could not be abdicated in favour of the courts. Defending the provision about the Government's powers to modify awards, he hoped that there would be no occasion in future to use the powers. He pointed out that, so far the Central Government had used these powers only once and the State Governments of the U.P., Assam and Travancore-Cochin on one occasion each.

The two issues, namely, the abolition of the Appellate Tribunal and the selection of personnel for industrial courts, were also discussed by Mr. Naval H. Tata, Vice-President of the Indian Merchants' Chamber, Bombay, in the course of his speech at the quarterly meeting of the Chamber held last week. After emphasising that he was particularly concerned at the absence of any provision for appeal against the decisions given by any sector of the three-tier system, namely, Labour courts, Industrial Tribunals and National Tribunals, Mr. Tata said:

"It is too much to expect of a quasi-judicial authority, however competent it may be, that its decisions would invariably be free from doubt and that, therefore, there would be no scope or room for a review of such decisions from the point of view of the parties aggrieved. In the light of past experience, it is reasonable to suggest that unless there is some machinery for reviewing the decisions of various tribunals which are sought to be brought into existence by the new legislation, at least on occasions when there is a miscarriage of justice, the future course of industrial relations in the country is bound to be seriously affected. While there are many who feel that the abolition of the Appellate Tribunal would result in bringing about conditions under which the essential factor of uniformity in the underlying principles governing industrial awards and decisions would be seriously jeopardised, I would, at this stage, particularly like to emphasise that Government should be persuaded to incorporate, at an early date, changes designed to permit a procedure for review whenever found necessary over the decisions of the new system of tribunals. There is also the question of the choice of the presiding officers for the new Tribunals; in terms of the provisions of the Bill, they are to be appointed by Government. It is but appropriate that Government should announce that they would be guided by a convention in terms of which all such appointments should be made by the Chief Justice of the High Court or the Chief Justice of the Supreme Court, as the case may be. Under the Bill, Government have power to reject an award made by a tribunal, or modify the same if Government feel that it will not be expedient, on public grounds, to give effect to it. Here also, Government should agree to develop a convention under which awards of Tribunals would not be varied except through a judicial review. It is a matter for disappointment that suggestions made by representative organisations for achieving changes in the above directions have not been given due consideration by the Ministry of Labour."

Clearly, the abolition of the Appellate Tribunal casts a special responsibility on the Government to ensure that the awards follow a certain pattern, that there are no significant differences in the awards given, in different States or in respect of awards in any particular State. This involves not only the selection of proper personnel, of men with a judicial outlook and some knowledge of industrial conditions to man the industrial courts but also the evolution of a body of agreed norms or principles which command a wide measure of support from both employers and employees. It is obviously in the interests of all the three principal parties concerned, the Government, the employers and the employees, that such a body of principles should be evolved, so that it could serve as a basis for reference by the tribunals in deciding industrial disputes.

An immediate issue is the demand by the workers for a 25 per cent. increase in wages. While this demand, as stated at the outset, continues to be made by the representatives of labour, the Government unfortunately continues to maintain its attitude of silence towards this issue. Analysing the implications of the demand, Mr. Murarji J. Vaidya, President of the Chamber, said:

"If the anticipated increase in national income is to be counterbalanced and frittered away by an immediate wage increase, the consumer will gain no benefit and industry as a whole will be worse off than it is at the moment. In a country like the U.K., they had the wisdom in the immediate post-war period to agree upon the freezing of wage level. A similar wage truce or freezing of wage levels is called for in India also, if we are not to dissipate the advantages gained through increase in national output, on the one hand, by uncalled for concessions to only a small and vocal section of the community, on the other. It might be argued that, when we are expecting labour to agree to a wage level freezing in the interests of preventing a rise in the cost structure of the manufacturing industries in the context of the existing inflationary trends manufacturers themselves should give the necessary lead by checking their own share of the benefits resulting from industry in the shape of profits. I may point out here that this is already done by the introduction of a graduated penal tax on additional dividends which, besides checking large distribution of profits, would automatically lead to a greater quantum of profits being ploughed back for developmental purposes. Only to the extent that we are able to preserve the gains for the benefit of the community as a whole, without clamouring for sectional advantages, shall we be able to make a real contribution to the building up and growth of a stable and solid economic structure of the India of our dreams."

Although no employer will or should suggest that there should be no increase in wages at all, it is certainly reasonable to contend that an omnibus increase of the type now demanded by certain sections of labour opinion would distort the pattern of industrial costs, and introduce grave complications in the wage structure. It would also distort wage differentials in each industry and thereby lead to considerable discontentment among the ranks of labour itself. In any case, the problem is much too complex to be solved by the simple expedient of a straight rise in wages. From this point of view, it is certainly deplorable that the Government has not yet defined its attitude towards this demand. Its silence is interpreted in some quarters to mean that it has accepted the demand and is only awaiting a favourable opportunity to spring a surprise on the country by means of an ordinance.

INDUSTRIAL HYGIENE

With the expansion of the pace of industrialisation there has arisen a need for investigating the problems of industrial hygiene. This subject has only recently attracted attention. It is, however, gratifying to note that the Tatas, in keeping with their tradition of enlightened management, are running an industrial health department. The report of the working of this department for the year 1955, covering five Tatas factories, Ahmedabad Advance Mills, Svadeshi Mills, Tata Mills, Tata Oil Mills, Sewri and Tata Chemicals, Mithapur, will be read with interest. The total clientele served by the department comes to about 18,000 and the staff employed consists of 9 doctors, 7 safety engineers and three training officers.

The introductory note to the report makes a very interesting reading. It rightly points out that the adage, "health is wealth" is nowhere more true than in industry. It adds: "But there are many in industry who are not in full health. Most of them have little idea of their disability as they somehow go through their daily chores. Besides, the cause of their ill-health is often as subtle as it is complex. It may be physical, mental or social in nature, or a puzzling combination of all the above factors. Not to solve the puzzle is to let loose tensions which may breed discontent, misunderstandings, disputes and lowered production. To tackle it is to enter an obstacle race.

An important factor which hinders production is employee absenteeism. Here, the report makes an interesting distinction between actual absenteeism and invisible absenteeism. It says:

"The absence is invisible when an employee is present in person but not in terms of production. One of the aims of industrial medicine is to help the production drive by removing as many causes of absenteeism as possible. India is fast industrialising, for increased production is the need of the hour. There is no lack of enthusiasm or talent, and money is being found; but the snag here is man with his many and changing moods. His mother-tongue is human values, while the language of industrial management is logic. Logic without human values makes so little sense to the industrial worker that he often holds up the best plans of efficiency engineers even though sound logic and good intentions may have gone in their framing. Researches, however, have been made and many studies indicate that the worker readily responds to all projects which aim to increase his efficiency through work studies, wage systems, promotion schemes, merit-rating schemes, financial incentives and so on, when those sponsoring such schemes take the trouble of considering the human aspects of such studies and schemes."

The report points out that technology leads to what it calls "management logics" of policies, costs, methods, standards, controls and so on. But the worker must understand the need to meet standards, the need to be cost-conscious, the need to be quality-conscious and safety conscious, and the need for co-operation. He can only do so when his sentiments, values and assumptions receive due consideration. It, therefore, stresses that "the major problem of industrial relations is with the minds of men." It adds "but body and mind are Siamese Twins. The behind-the-scene interplay between them is intimate. Moreover, both are acutely sensitive to their physical and social surroundings. Nor is that all. Man's many interests vary from time to time and place to place in rhythm with the changing environment, yet all of them have to be served if the target is his total health, and the target cannot be lowered if industry is to prosper."

WORKERS IN VANASPATI INDUSTRY

Though unknown to Indian industrialists about 30 years ago, the *vanaspati* ghee industry has today come of age. The second largest food-processing industry in the country, next only to sugar, it now provides employment to some 125,000. The number of *vanaspati* factories has doubled since the achievement of independence—from a total of 24 factories in 1947, to 46 in 1950 and 48 in 1954. *Vanaspati* provides direct or indirect employment to about 75,000 workers, while about 50,000 dealers are engaged in the trade of selling the produce. It was introduced in India, through imports, after the First World War. It became popular, and the first factory for its manufacture was set up in 1930. Subsequently, the levy of an import duty gave impetus to the industry, and more factories came into being. Increased demand from the armed forces as well as the civilians during the Second World War provided further impetus to the industry. In 1954, there were 48 factories in India with a capital investment of about Rs. 25 crores and an annual production capacity of about 335,000 tons.

In 955, the Labour Bureau of the Government of India conducted a survey into the working conditions in the industry. The Bureau issued a questionnaire to 30 factories, of which 23 responded. The rates of wages vary from factory to factory and State to State. The average earnings were the highest in Bombay (Rs. 1,114-5-1), followed by Delhi (1,086-10-8), Madras (1,027-12-3) and West Bengal (1,002-11-11). During 1954, the average earnings of a worker were Rs. 816-10-3. Most of the factories observe a 45-hour week in the continuous process shift and 48-hour general shift. All units grant weekly holidays and varying leave privileges. Fourteen units provide housing facilities to their workers, while two paid house rent allowance and another two paid shift allowance. An equal number of units maintained well-equipped first-aid dispensaries, while five others depend upon the Employees' Insurance Scheme. Thirteen units run canteens and six provide educational facilities for the children of their workers. Co-operatives are run by six units. Provident Fund facilities exist in 13 units. All units, except one each in Bombay and Madhya Pradesh, have framed standing orders to regulate working conditions. Eleven units have works committees. Trade union organisations exists in 15 factories; only four of these unions are not recognised by the managements.

The Union Government has decided to extend the piece-rate system of wages for port workers to the Calcutta and Madras ports, since the system, enforced in Bombay had resulted in a "marked" improvement in the loading and unloading rates in Bombay. This information was given by the Deputy Minister for Transport, Mr. O. V. Alagesan, in the Lok Sabha.

In reply to another question, Mr. Alagesan said that the Government had appointed a special officer to consider the question of introduction of the incentive-bonus scheme, now prevailing in the Chittaranjan Workshop, to other railway workshops. The Railways, according to Mr. Abid Ali, Deputy Minister for Labour, are now considering the question of associating labour with management through the formation of management councils.

BILATERAL TRADE AND EXPORT PROMOTION POLICIES

SOME RECENT TRENDS REVIEWED

IN our last issue, we dealt with some of the changes in the commercial policies in different countries in the course of the article entitled "Liberalisation of Trade Restrictions." Some notable changes, which took place in 1955 occurred in the spheres of Bilateral Trade Agreements and Export Promotion and to these changes, too, attention deserves to be drawn. A feature of the trends has been the change witnessed in the character of the bilateral agreements. Although the number of such agreements is almost the same as before, comparatively few of them have been designed to balance the total trade between the partners, as was the case in the earlier post-war years. A number of agreements negotiated, especially between East European countries and China, however, covered the whole range of trade between the partners. Morover, as a result of the increasing transferability of the currencies, the enjoyment by certain countries still using bilateralism as a major method of commercial policy of the reciprocal advantages inherent to such agreements has become difficult. The Report of the G.A.T.T. points out that, although the scope and rigidity of bilateral trade was further reduced in 1955 and there was a general awareness of the limited advantages that would accrue from them, the general elimination of such agreements was not within sight, chiefly because of the desire of some of the countries to maintain their exports as well as export prices, and to protect themselves, in the absence of a general renunciation of the bilateral arrangements by all the countries, against competition.

A distinctive feature of the developments during the year making for the avoidance of rigidity and inconveniences attending on the bilateral agreements was that of bringing more than two parties into payments relationships. The partly convertible D-Mark of the Federal Republic of Germany, for instance, which was transferable for current payments among a number of countries previously, was made further transferable among some more countries during the period under review. Finland, again, entered into what are called "flexible agreements" with a number of E.P.U. countries, according to which it could make payments for imports from any of them out of its export earnings from them.

More Turnover

Turning to the discussion of some significant developments in various parts of the world, the Report points out that trade agreements concluded between Western European countries aimed generally at increasing the trade volume in the sectors of the imports which remained under restriction. In certain cases, increasing trade resulted also from the substitution of volume quotas for quotas expressed earlier in value. Motor cars which remained under restriction in many European countries, for example, figured prominently in the bilateral arrangements between many of them. Certain of them, such as Norway and Sweden, also negotiated for increased imports of cars from the U.S.S.R. and Czechoslovakia. Although, again, a large proportion of the trade between Western European countries and Latin American countries still conformed to bilateral pattern, a number of agreements concluded during the year reflected a tendency towards liberalisation, as, for instance, in the agreement between Chile and Switzerland. In the Far East, too, there was a reduction in the proportion of trade conducted by Japan through bilateral clearing or barter. It had thus modified a number of its payments agreements including those with Germany, Italy and Sweden.

Turning to the Communist bloc countries which practise State trading, the Report observes that they had, during the year, entered into a number of bilateral agreements with other countries. Several Eastern European countries, for instance, concluded agreements with Yugoslavia, and the U.S.S.R. with Austria. "With these developments," the Report observes, "the net work of bilateral trade arrangements between East and West European countries became all but complete." East European trade, moreover, expanded most noticeably with Asia, Middle East and to some extent Latin America. The year 1955 will also be remembered for the re-orientation effected in the trade policies of the Communist bloc countries in relation to Asia, Middle East and Latin America. Increasing technical aid to these nations was also the result of the new policies. An agreement signed between the U.S.S.R. and Israel provided for the exchange of petroleum products for fruits. Under another arrangement, the U.S.S.R. agreed to supply investment goods to Syria in exchange for cotton, wool and other products.

Export Promotion

Discussing the trends in export promotion the Report submits, that studies in regard to export promotion, which falls into three divisions, namely, subsidies, export incentive schemes, and programmes for the disposal of surplus stocks, were limited for want of authoritative statements from most Governments. The information obtained, however, indicated that there was no substantial increase either in the level or in the scope of direct export subsidies.

In the field of export incentives, however, a number of measures involved the remission of direct taxes, the refund of social welfare charges, export trade guarantees, long- and short-term advances to exporters on favourable terms, schemes for currency retention and import entitlement, and preferential rates for the conversion of export earnings into domestic currency. A number of O.E.E.C. countries either reduced or abolished some of these incentives in compliance with the decision taken by the Council of the O.E.E.C. in January 1955 calling for the abolition of certain types of artificial aids. Some of the aids so withdrawn were the remission of income and profit taxes on exported products, refund of the fiscal charges on wages. But certain export credit guarantee and insurance schemes still remained in many European countries. Government Finance Departments in some countries issued directives to the banking system to make more liberal advances to firms manufacturing for export.

In Asia and Latin America, the steps directed at increasing the exports included exemption from the corporation tax on profits in respect of export transactions, provision of credit at rates cheaper than those prevailing in the market, supply of raw materials and the like. In Latin America, moreover, multiple conversion arrangements were provided to facilitate the conversion of foreign currency proceeds at favourable rates. Certain bilateral agreements also provided for guaranteed prices which were lower than those prevailing in the country of export.

As regards disposal of surpluses, the report rightly points out that agricultural price support policies followed by certain Governments led to the accumulation of large surplus stocks of many basic commodities. It adds that "the mere existence of these stocks and the manner of their disposal are likely to have an unsettling effect on international trade, and are therefore of great concern to countries exporting commodities involved." The Canadian Government, for example, supported the domestic butter market by offering to buy all surpluses. It also gave support to wheat. While the price prevailing at home was as high as 58 cents per pound, Canada sold to Czechoslovakia 314,000 lbs. of butter at 37 cents per pound. France also sold substantial quantities of wheat below the guaranteed domestic price. In the U.S., the stocks held by the Government under the Commodity Credit Corporation were valued at $6 billion at the end of 1955. The disposal of stocks of the value of $1,100 million abroad in the calendar year 1955 was carried out under two legislative Acts, namely the Agricultural Trade Development and Assistance Act, 1954 and Section 402 of the Mutual Security Act. Under the former Act, the U.S. contracted with 22 countries to dispose of commodities worth as much as $504 million in 1955. Under the second Act, again, disposals were valued at $355 million. The items mainly included wheat, cotton, food-grains, rice and tobacco.

It will thus be seen that, over the whole year, there was a certain measure of relaxation in the sphere of trade restrictions and flexibility in the sphere of bilateral trade agreements. It is to be hoped that this progress would be maintained in future and that it will be possible for the countries to reach a stage of freer trade and freer convertibility which are the *sine qua non* of economic stability and prosperity in the world.

FOREIGN EXCHANGE FOR SECOND PLAN

EXPANSION OF EXPORTS URGED

THE view that the success of the second Five-year Plan would depend to a large extent on measures taken to augment the availability of foreign exchange was expressed by Mr. K. P. Goenka in the course of his presidential address at the first quarterly general meeting of the Indian Chamber of Commerce, Calcutta, recently. Discussing the possibility of achieving the targets fixed in the Plan, he pointed out that the Plan itself was not over-ambitious. In view of the expanding industrial and agricultural production witnessed in the country during the period of the first Plan, it should be possible, provided the economic policies of the Government were conducive to the growth of industry and business, to muster the necessary resources for the implementation of the Plan. He felt that extension of the five-year period of the Plan to six or seven years would only slow down the pace of development which was not desirable.

Alluding to the large gap of Rs. 650 crores in foreign exchange resources in the Plan even after taking into account the present foreign exchange reserves and external assistance; he said that the gap gave rise to great concern, particularly because exports were not increasing at the desired rate. To add to this, the cost of imported plant and machinery was also rising continually which would further increase the strain on the meagre foreign exchange resources. Discounting the possibility of obtaining foreign capital to the extent adequate enough to cover this gap, he went on to add that the fulfilment of the targets in the industrial sector would be seriously jeopardised, if the gap was not made up. The framework of the Plan, he ventured to suggest, reflected thus a weakness, inasmuch as no adequate attention was paid for augmenting the country's foreign exchange resources.

Balance of Trade

Discussing the possibility of bridging the gap in the current balance of trade, Mr. Goenka pointed out that, during the last three years, the deficit in the country's trade balance had been on the increase continuously, because of increase in imports for purposes of development during the first Plan and of less than proportionate increase in the exports. The problem, therefore, could be tackled in two ways. In the first place, export trade in the commodities which India was in a position to supply should be expanded and, secondly, imports of those goods which were made available, or could be made available with expansions of the existing units internally, should, at the same time, be restricted. Dwelling further on the question of expanding exports, Mr. Goenka stressed that, in recent years, there had been no substantial expansion in exports, despite the steps taken by the Government in that direction. Cotton textile exports, for example, dropped by as much as 6 per cent. during the first quarter of 1956 as compared with those of the corresponding period last year. Moreover, Japanese competition and the ceiling imposed on the production of mill cloth combined to produce adverse effects. On the export trade, he pertinently remarked in this connection, "it is difficult to reconcile the limitations imposed on the production of mill cloth with a policy of encouraging exports which is bound to curtail internal supplies." He, however, welcomed the decision taken by the Commerce and Industry Ministry to allow installation of additional looms in textile mills for export purposes, and pointed out that any measures which tended to push up the cost of production of the industry should be avoided. He also hoped that Government's anxiety to develop cottage industries would not result in such measures as might cause permanent harm to the long-term interests of this vital industry.

Turning to jute manufactures which are another item of major exports, Mr. Goenka welcomed the recent decision for sealing 12½ per cent. looms as a step in the right direction. While pointing out that competition in that field had been increasing, he suggested the need for devising measures which would give outright assistance to the industry for developing its export trade. He further stressed the need for taking permanent measures for keeping the production of the industry at its optimum level. Referring to tea which was another important item of exports, the speaker emphasised the need for adequate propaganda abroad and pointed out

THE VULCAN INSURANCE COMPANY LIMITED

THIRTY-SIXTH ANNUAL MEETING

CHAIRMAN ASKS FOR CLEAR ASSURANCE OF NO NATIONALISATION OF GENERAL INSURANCE

THE Thirty-sixth Annual General Meeting of the Vulcan Insurance Company Ltd. was held at Bombay on 24th August 1956 under the Chairmanship of Sir Behram N. Karanjia, Kt. The following is a summary of the Chairman's speech on the occasion and the proceedings of the meeting:

The Chairman, Sir Behram N. Karanjia, Kt., before dealing with the Company's activities during the year, referred to the great and irreparable loss suffered by the Company by the sad and untimely death of Shri Mangaldas B. Mehta in January last and paid a great tribute to the late Shri Mangaldas, who was a Director of the Company for about 20 years and Chairman of the Company after the death of Shri J. C. Setalvad in 1951, and said that Shri Mangaldas was a tower of strength to all his colleagues on the board and his wise guidance was of great value and assistance in the present growth of the Company.

Sir Behram N. Karanjia thanked his colleagues on the Board for having elected him as the Chairman of the Company and hoped that the same confidence would be placed in him as had been done in the late Shri Mangaldas and Shri Setalvad in carrying out the responsible and onerous work of the Company.

Nationalisation of Life Insurance

Referring to the nationalisation of life insurance business by Ordinance issued by the Government in January last, he said it had been the most important event affecting the insurance industry, although it did not affect directly the companies transacting general insurance business.

While nationalising life insurance business Mr. C. D. Deshmukh, the then Finance Minister, made it clear on behalf of the Government that the Government had no intention to nationalise general insurance industry. He, however, said that they were aware of the malpractices in the general insurance business and, if there was no significant improvement, the Government might have to re-examine the question. Such constant threat made it difficult for companies to plan and organise their working ahead to meet their responsibilities of handling much larger business and cope up with the rapid industrialisation taking place under the second Five-year Plan. Therefore, Sir Karanjia urged the Government to make a categorical assurance that general insurance industry will remain in private sector like many other industries, so that the companies can conserve their resources and go ahead with their future programme of expansion and development. He suggested that the Government through the Executive Committee can set standards, with a view to preventing any unhealthy practices, and requested all insurers should co-operate in order to make the working clean and sound.

He further referred to the Re-insurance Corporation, which is shortly coming into being, and said that it would be a source of strength to the national economy as it would save a lot of foreign exchange. He added that the Vulcan Insurance Company would be one of its promoters having agreed to subscribe to share capital. Eighty per cent. thereof would be in the hands of Indian insurers and twenty per cent. in the hands of foreign insurers. It will try to build up reinsurance relations in foreign countries.

He informed that the Head Office building under construction would be ready for occupation early next year, if not by the end of the year.

"Pool" Business

"Another question which has been seriously disturbing the insurance trade as a whole" Sir Karanjia said "is that Government intend to dissolve the Indian Insurance Companies' Association Pool and pass on that business to the three Companies which are subsidiaries of the newly established Life Insurance Corporation." Proceeding, he observed:

"You are aware that your late Chairman and Founder of the Company Shri J. C. Setalvad, played a very important part in the formation of the 'Pool' by which the insurance business emanating from the Government and semi-Government sources was secured for all Indian Insurance Companies through the 'Pool.' In view of the declared policy of the Government that whenever in an industry where both the private and public sector bodies are functioning, the Government will, it is hoped, adopt a non-discriminatory attitude in its patronage, because, after all, both are indigenous and deserve the support of the Government irrespective of who owns it or manages it. The Central and States Government business which was catered for by the 'Pool' has been distributed in an equitable manner between all the Indian companies. In fairness and equity, therefore, the Government should continue to distribute the 'Pool' business amongst those Companies, as was done hithertofore, instead of giving preference only to companies which are now owned by the new Life Insurance Corporation and thus do justice to the insurers in the private sector as per their declared policy and I appeal to the Government not to exclude the companies working under the private sector from getting the benefits of the Government business, but to continue the present distribution of the said business of 'Pool' undisturbed.

Income Higher

Referring to the Company's accounts he said that there had been an all-round increase in the premium income of all the departments; the expenses of management and commission, however, showed a slight increase which could not be avoided.

After providing the reserves for unexpired risks at 50 per cent. in the fire and miscellaneous departments and 100 per cent. in the marine department and additional reserves, as shown in the accounts, the Company made a profit of Rs. 4,07,448 in the fire department, Rs. 17,533 in the marine department and Rs. 38,677 in the miscellaneous department. He pointed out that a slight change was made in the presentation of the balance-sheet, as a result of eliminating some of the reserves under various headings which had been transferred to one account as 'general reserve' amounting to Rs. 12,80,000 and departmental reserves aggregate Rs. 22,85,246. The total profit in all departments amounted to Rs. 4,63,678, which he said, would be considered satisfactory.

"The income from Investment showed steady increase as the market value thereof is well over book value; however, the Directors considered it prudent to write off Rs. 24,733 as depreciation on investments that have actually depreciated. As already stated in the report, the investments have been written down to book value or market value whichever is less and the amount standing to the credit of investment reserve is now transferred to general reserve.

"The total income from interest, dividends and rent after deduction of income-tax thereon amounted to Rs. 2,23,776.

"After making necessary provision for other expenses, loss on sale of investments, etc., a sum of Rs. 6,78,470 has been transferred to profit and loss appropriation account subject to taxation. A provision of Rs. 5,60,000 has been made in the profit and loss appropriation account as reserve for taxation for the assessment years 1955-56 and 1956-57.

"Total net premium income from all the departments has increased to Rs. 32,04,151 from Rs. 30,09,583 in the previous year, while the total reserves of the Company, including the departmental reserves, amounted to Rs. 36,22,250 against Rs. 34,14,614 in the previous year, that is about 113.04 per cent. of the premium income of the Company."

In response to the requests of several shareholders at the last Annual General Meeting, the Directors recommended an increase in dividend to Re. 1-4 per share from Re. 1 in the past. The Chairman said that shareholders would find the working of the Company satisfactory showing and maintaining good results.

In view of satisfactory results, two months' salary by way of bonus was granted to the officers and the members of the permanent administrative staff. He placed on record the appreciation of work done by the General Manager, officials and staff both at the Head Office and branches and by the agents and field workers.

Shareholders' Tribute

Shri Gulabchand M. Shah, a shareholder of the Company, associated himself in expressing tribute paid to the late Shri Mangaldas who regarded the Company as his own. He congratulated the Company for maintaining good results and increasing dividend and said that this is one of the few companies in India which can be regarded as truly a well established concern. He welcomed the new Chairman and hoped he would give fruitful service to the Company for years to come.

Shri Gulabchand made a request to consider issuing bonus share in view of the Company having built up general reserve of Rs. 12,80,000 apart from other additional reserves against a paid-up capital of Rs. 15,99,270 and the Chairman replied that the suggestion will be considered by the Board.

In view of the hand bills handed over to some of the shareholders by some members of the Staff it was enquired of the Chairman as regards increase asked for in their emoluments. It was replied that it was already being considered and the needful will be shortly done.

The report and accounts were adopted. Dividend of Re. 1-4 per share was sanctioned. Sir Behram N. Karanjia, Kt., and R. B. Seth Rajkumarsingh Hukamchandji were re-elected Directors. Messrs. N. M. Raiji & Co. were appointed auditors and bonus was sanctioned to the officers and administrative staff.

(*Concluded from previous page*)

that Government's policy could influence, to a great extent, the competitive power of the industry through a change in its policy affecting labour, wages, taxation, and such other measures as having a bearing on the cost of production.

Mr. Goenka made a number of valuable suggestions for expansion of exports, such as sending of trade missions abroad, standardisation of exportable products, and expansion of the propaganda machinery in foreign countries. He further pointed out that, in many countries, Indian goods were hardly known and the limited machinery of the Government and the trade officers were not sufficient to cope with the problem. The speaker suggested, therefore, the setting up of permanent showrooms displaying Indian products in all prominent centres abroad.

Closely connected with the question of the country's foreign exchange deficit is the need for creating favourable climate to attract more foreign investment into the country. In this context, double taxable relief demands special consideration. Alluding to this, Mr. Goenka said that it was also necessary to create favourable conditions for the existing foreign enterprises to retain their interests in the country. Mr. Goenka observed that, at a time when all possible efforts were needed to develop India's export trade and mobilise all possible sources of energy and initiative of trade and industry towards that end, the decision of the Government to set up a State Trading Corporation to take over export trade of certain commodities was not helpful. He felt that State trading at this stage, besides dislocating the existing trade channels, would not result in augmenting the quantum of trade in any way. He hoped that, in view of the need for expanding the country's exports, the Government would reconsider the whole issue in all its aspects before it decides upon a policy of extending the activities of the State Trading Corporation.

In conclusion, Mr. Goenka stated that the achievements of the targets of the second Five-year Plan would necessitate the maximum effort of the nation, and, in that context, any controversy between the public and the private sector was out of place. He rightly pointed out that, so long as the development of the country's economy was the goal, all sections of the people had to give their best towards the fulfilment of the objective. The second Plan was thus a challenge to all sections, and a failure to implement it would lower the prestige of the country as a whole.

TATA IRON AND STEEL COMPANY, LIMITED

J. R. D. TATA'S SPEECH AT FORTY-NINTH ANNUAL GENERAL MEETING

TASK OF ECONOMIC DEVELOPMENT IS NOT BEYOND THE CAPACITY OF FREE ENTERPRISE

THE following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Forty-ninth Annual General Meeting of the shareholders of the Tata Iron and Steel Company, Limited, on Thursday, 30th August 1956:

'LADIES AND GENTLEMEN,

"Much has happened, since our last Annual Meeting, to confirm the views on economic trends to which I had given expression in previous speeches. You will recall that, in these speeches, I had, apart from dealing with events and problems directly concerning our Company, taken a great deal of your time in sharing with you my hopes, doubts and fears about some of the economic policies of our Government. In particular, I had sounded a note of warning against some developments which seemed to me to threaten the balance of the mixed economy to which I thought we were committed: for instance, the trend towards a highly centralised form of State "capitalism;" the nationalisation of Life Insurance; the use of ordinances as a means of implementing economic policies; the frequent recourse to Constitutional amendments; and some of the provisions of the new Companies Act.

"While pointing to the dangers inherent in such developments, I had consistently made it clear that free enterprise in India unreservedly accepted the national objectives of increased production and equitable distribution and was anxious to co-operate with Government in the building of a practical Welfare State in which State enterprise and free enterprise joined hands in the common task.

Concentration of Economic Power

"If I took such pains to elaborate my views on these matters, it was not only because I felt that they were of vital interest to you as shareholders of this Company, but also because I hoped, that what I had to say might, perhaps, have a hearing in quarters where policy was fashioned. While I do not wish to waste your time in any repetition of the views previously expressed, I feel I must reiterate the concern with which I and many others view the ever increasing centralisation of economic power in the hands of Government.

"Nearly fifty years ago Woodrow Wilson said:

> 'The history of liberty is the history of the limitations of governmental power, not the increase of it. When we resist. . . . concentration of power, we resist the powers of death, because concentration of power is what always precedes the destruction of human liberties.'

"We are witnessing in India an uninterrupted growth of Governmental power in the economic field and are already well on the way to a strange and unnatural combination of political democracy and economic autocracy. The question that should agitate the minds of all of us is whether our political freedoms can long survive if our economic freedoms continue to be whittled away. Once all economic power is centred in Government, will it not be found equally necessary to curtail other freedoms in the interests of the people? Although there may be no danger that the able men in power today, motivated as they are by democratic ideals, will abuse their powers, history shows that the danger lies in the very existence of unlimited power which may one day fall into less worthy hands.

Nationalisation of Life Insurance

"The extent to which Government's economic powers can be exercised was strikingly demonstrated during the year by the sudden nationalisation of Life Insurance. Although spokesmen of Government have stated in the past that ideology played no part in the formulation of their economic policies, it is noteworthy that, during the debate in Parliament on the Life Insurance Corporation Bill, the then Finance Minister said:

> 'There was no need for Government to make out a case that private enterprise had failed in order to effect nationalisation. Nationalisation could be justified on grounds of ideology and philosophy.'

"This statement, coupled with the fact that every practical object which the Government sought to achieve could have been secured without recourse to nationalisation, must lead to the conclusion that political or ideological considerations were largely responsible for the measure and that they are likely to motivate future economic decisions. The fact that, in normal times, the Government should have invoked emergency powers to implement this decision by ordinance, without first consulting Parliament and sounding public opinion, cannot but add to one's uneasiness.

State Trading

"Another cause for apprehension lies in the recent entry of the State into the field of trading. During the brief period of its existence, the State Trading Corporation has already taken over or entered trading in a number of important commodities and, through its operations, Government are in a position to exercise powers of control over the whole field of industry even more sweeping than those they already possess.

Private Sector's Performance

"We are told that, in India, capitalism has failed to deliver the goods, that it has shown no initiative and that it cannot, in an economically backward country like ours, produce the dynamic results obtained in the highly developed economies of the West. So, it is argued, it must be replaced by socialism which, alone, can produce results. This view seems to overlook a number of facts such as that the Private Sector has fulfilled and in some cases exceeded its production quotas under the first Five-year Plan; that private enterprise in India has not up to now had the freedom of action and the incentives it enjoys in the countries where it has proved so strikingly successful; and that there is enough evidence available that the introduction of socialism of the kind, and by the means, contemplated in India has not proved an unqualified success in other countries. Still, even if we accept the premise that the magnitude and urgency of the task in India render its performance beyond the capacity of free enterprise alone, the correct solution, which until not so long ago seemed to have been accepted by Government, lies in a mixed economy in which both free enterprise and State Enterprise are harnessed to the country's needs.

"I feel the charge that free enterprise in India has shown no initiative in recent years is particularly hard to take. I for one am in fact surprised at the amount of initiative displayed considering the discouragement and disincentives to which it has been subjected. While saying this, it is only fair that I should acknowledge the help and advice which industry in the private sector has received in recent years from our dynamic Minister for Commerce and Industry. It is a measure of the man that his socialistic views have not prevented him or his Ministry from extending assistance to industries in need of it for purposes of agreed schemes of development. Without his encouragement and quickness of decision, our Two Million Ton Project might not have come into being or would still be at the stage of discussion and correspondence. We are grateful to him for his support.

"Indian industry needs no compulsion to induce it to collaborate with Government or to make its full contribution to the economic development of the country. It is prepared to take the necessary risks and to make the necessary sacrifices, but it asks to be left in reasonable peace to do its allotted job.

Indian Companies Act, 1956

"Instead, the restrictions from which it suffered in the past have been aggravated by the new Companies Act. While the many wholesome provisions enacted for the protection of the investor are to be welcomed, the strait-jacket into which the Act places Management goes beyond all reasonable requirements. Those of you who have taken the trouble to study this Act will appreciate the waste of time and energy caused by a number of its provisions as illustrated by the thirteen pages of the notice and its annexure in this year's Report as compared to the one-page notice in previous years.

"The Act has gone to extraordinary lengths in its attempt to regulate the operations of joint stock companies, including such provisions as those pertaining to family relationships, of which no less than eighty-six degrees, both legitimate and illegitimate, have been covered in the relevant section. The Act is not only the cause of much waste of time and energy but also of much avoidable expense. In a country in which there is such a dearth of administrative personnel—in some places a total absence of it—to care for the basic needs of the people in the countryside, it is sad to see so much administrative machinery and expenditure diverted to such relatively unproductive ends.

Agreement on National Objectives

"To sum up this part of my speech, let me say that we all realise that, since Independence, our Government have performed a tremendous task. Faced with an unprecedented array of political, economic and social problems, they have discharged with ability, devotion and success an appalling burden of responsibility. We also realise that their task in the coming years will remain a formidable one; that the success of India's plans of economic development is essential to the future prosperity and happiness of our people. We, in the industrial and business field, are, therefore, at one with Government in their objective of a prosperous, democratic and happy nation emerging from the years of toil ahead. Where we differ is in the respective roles of the State and of the individual in the economic activity of the nation. We sincerely feel that some of Government's policies are based on economic theories on capitalism and socialism which no longer fit the facts, if ever they did. They seem to ignore the lessons of the social and economic experiments undertaken elsewhere in the world during the last few decades; for instance, the fact that, apart from the U.S., countries in Europe, which have relied largely on free enterprise and given it the necessary support and encouragement, have achieved not only economic prosperity but also, through realistic fiscal and administrative measures, the socialist dream of an equalitarian Welfare State.

Financial Results

"Coming to matters of more direct and immediate concern to us, you may wish me to amplify the briéf reference in the Report to the profits and to tell you something about the progress of our expansion scheme and also about the important understanding we have reached with the Tata Workers' Union which was widely publicised in the Press.

"The financial results of the year's operations were characterised by a decrease of Rs. 34 lakhs in disposable profit largely due to lower sales of ferro-manganese and by the large accretions—exceeding Rs. 4 crores—to the Plant Rehabilitation and Development Fund and the Development Reserve under Government's new retention price scheme. No ferro-manganese was produced during the year under review and, as a result, the tonnage despatched was some 10,000 tons less than in the previous year. We have upto now been making ferro-manganese in our blast furnace plant and primarily for our own consumption, only the surplus being sold. For operational reasons, ferro-manganese is made intermittently and sales have, therefore, been themselves intermittent. Last year's sales were exceptionally large. Once the electric ferro-manganese plant which we are now in the process of building at our Joda manganese mines is completed and in operation in the latter half of 1958, ferro-manganese will no longer be made in the blast furnaces, the whole capacity of which will be reserved for the manufacture of pig iron. Some of the output of the Joda plant will be for sale, but, in view of our greatly increased requirements for steel making, the tonnage available will be relatively small until the plant's capacity is increased.

"As shareholders will have noticed, the amounts set aside this year for Plant Rehabilitation and Development and to the Development Reserve exceed the corresponding provisions of the previous year by nearly Rs. 3 crores, of which Rs. 2.28 crores represents the net increase in retention prices after taxes and Rs. 68 lakhs the additional tax saving on the Development Rebate. The increase of about a crore in the provision for taxes is itself mainly in respect of the additional price element.

"Ever since the war, we have protested both to the Tariff Commission and to the Government of India against the excessively low retention prices enforced on the steel industry, which made it impossible for the industry to set aside monies for development or to attract fresh capital. We pointed out that the difference between the retention prices and the imported prices amounted *each year* to a figure which far exceeded the total value of protection received by the industry during the whole of the seventeen years in which protective duties were imposed. We are happy that at long last Government have adopted a price policy which has enabled the industry to undertake a large-scale expansion.

"The Development Rebate granted from last year for tax purposes, in accordance with the recommendation of the Taxation Inquiry Commission, will provide out of tax savings a further valuable source of development finance. We are grateful to Government for their realistic policies which will result in immense benefits to the country in the years to come.

Two Million Ton Programme

"Our expansion scheme, although still largely at the preparatory stage, made considerable progress since the last Annual General Meeting. I then stated that the preliminary studies made of the proposal to increase our ingot capacity from 1.3 million tons per annum, which we expected to reach on the completion of the current Modernisation and Expansion Programme, to two million tons, indicated that the project was sound, could be completed within three years and would require about Rs. 60 crores to be spent on the new plant.

"Our main efforts in the subsequent months were directed at the two principal objectives of entering into the necessary engineering, construction and purchase contracts and of securing the funds required to finance the project.

Appointment of Kaiser Engineers

"The technical preparations were completed in record time. It was clear from the start that to complete a project this magnitude and complexity under three years would require a high degree of co-ordination of its various parts and phases for which it was essential to place under a single organisation the responsibility for all the engineering, procurement, construction and supervision services. We, therefore, entered into a contract with two Divisions of the Henry J. Kaiser Corporation of Oakland, California, known for their industrial and engineering experience and their ability to get things done quickly.

"Even while the agreement with Kaiser's was being negotiated, much of the preliminary work was begun and world-wide inquiries sent out for the major items of plant and machinery included in the programme. The first orders for the principal items, such as the three main rolling mills and electrical equipment, were placed as early as March 1956. A group of Tata engineers were sent to Oakland, the headquarters of Kaiser's, and a Kaiser team began to be built up at Jamshedpur from February 1956. Today, some 55 members of the Kaiser Organisation are already at work in Jamshedpur and their number will grow to about 100 at the peak of construction activities. The Indian work force engaged on the project will similarly grow to a maximum of 6,000 men.

"The completion of the entire project in a matter of two and a half years will be an unequalled achievement in the industrial field in India. While Kaiser's may have under-estimated some of the local problems and difficulties, we have every hope they will be able to adhere to their time-table.

"Rail and road transport difficulties, bottlenecks in steel fabrication and congestion in the Calcutta Docks are amongst potential sources of delay which will require constant and sustained attention. On the other hand, our chances of completing the job in time are improved by the co-operation and assistance extended to us from the start by the Ministry of Commerce and Industry and also by the Finance Ministry in general and the Exchange Control Department of the Reserve Bank in particular, in the expeditious disposal of innumerable applications, requests and references submitted to them. We are grateful to them all for their assistance.

Project Cost

"With the disposal of the main technical issues of the project, the procurement of the large funds required to finance it became the main subject of attention and effort on our part. In my speech last year, I mentioned a figure of approximately Rs. 60 crores as the estimated cost of the new plant. This figure was based on rough estimates which proved commendably accurate, as the final figure including contingencies now comes to Rs. 62 crores. This, however, represents only the estimated cost of the new plant itself, including the cost of all the work and services entrusted to Kaiser's. In addition, a certain amount of related work has to be undertaken departmentally by the Company. This includes such things as site clearing, modifications to existing shops and mills to tie them into the Two Million Ton Programme, the provision of rolling stock and other items. These will cost a total of approximately Rs. 9 crores, spread over a period of four years upto and including 1959-60. In addition, approximately Rs. 2.65 crores will be spent on the collieries and ore mines and quarries to meet the added requirements of the expanded programme, and about Rs. 2 crores on the electric ferro-manganese plant, to which I referred earlier in my speech. The total thus comes to Rs. 75 crores, which, however, does not represent the full measure of the Company's estimated capital expenditure during the five years from April 1955 to March 1960, as it does not include such items as the cost of completing the current Modernisation and Expansion Programme, annual renewals and replacements, our investments in the Indian Tube Company and a new refractories company and other ancillary schemes.

World Bank Loan

"I stated in my speech last year that a good part of the moneys to be spent on the new plant would have to be raised in the form of a loan from abroad. In consultation with the Government of India, who kindly agreed to sponsor an application to the International Bank for Reconstruction and Development, popularly known as the World Bank, discussions were initiated with the President and other officials of the Bank in February this year. These were followed by detailed negotiations and the presentation of a formidable mass of data, and finally by the signature, on the 26th June 1956, of an agreement for a loan of 75 million dollars, equivalent to Rs. 36 crores, in various currencies and on the principal terms mentioned in the body of the Report. A striking aspect of this loan, from which we may well derive satisfaction, is the fact that it is the largest loan granted upto now by the World Bank to an industrial undertaking anywhere in the world and also the largest single loan granted for any purpose to any country in Asia.

"While it is true that the loan is guaranteed by the Government of India, the financial strength and credit-worthiness of the Company, painstakingly built up by the conservative financial policies followed all these years, was a major factor in the Bank's ready acceptance of our proposals.

"One aspect of the negotiations with the Bank which I should like to mention is the remarkable speed at which they were conducted and concluded. We are thankful to Mr. Eugene Black, the distinguished President of the Bank, and to his associates for so kindly expediting, in response to our request, the detailed and complex procedures which the Bank normally follows in disposing of loan applications. Their co-operation was, I believe, another reflection of their confidence in the Company and its Management.

"This loan and the additional share capital, for the issue of which you passed the necessary resolutions earlier this year, will provide us with about Rs. 50 crores out of the Rs. 75 crores required for the Two Million Ton Programme. The balance of about Rs. 25 crores will be secured from retained earnings accruing to the Plant Rehabilitation Fund and the Development Reserve between 1955-56 and 1959-60 and, from further borrowings. The funds required to finance the other items of capital expenditure, to which I have referred earlier in my speech, will be met largely from internal resources and borrowings.

Agreement with the Union

"A brief reference has been made in the Report to the conclusion during the past year of a comprehensive agreement between the Company and the Tata Workers' Union. This Agreement, which seeks to place the relationship between the two parties on a still firmer foundation of goodwill and mutual security, sets out the rights and obligations of the Company and the Union and records agreement on a number of outstanding issues. A special feature of this Agreement was that it contained an important declaration of intention to bring about a closer association of employees with Management in the working of the industry.

Association of Employees

"In furtherance of that provision, the Company and the Union subsequently held further discussions and reached complete agreement on the subject. Under a Supplemental Agreement signed on 4th August 1956, the considerable machinery already in existence at Jamshedpur for joint consultation will be rationalised and, with the exclusion of matters concerned with collective bargaining or grievance procedures, will be brought within a three-tier structure of Consultative Councils. These will be set up for all departments of the plant, for the Works and the Town as a whole, and finally, at the top Management level where a Consultative Council of Management will provide a meeting ground for consultation and for an exchange of views on the general working of the Company and the industry. While the functions of these Councils will all be of an advisory character and Management will remain, as before, in control of the Company's affairs, due weight will naturally be given to the views and recommendations of the Councils.

"The subject of associating employees with Management is admittedly a difficult and controversial one. It has been the subject of considerable attention and discussion on the part of Government and the Planning Commission who have expressed themselves in favour of the principle, and also of the Joint Consultative Board of Industry to whom the task of formulating specific proposals has been entrusted.

"The question whether the Company should not have waited until an all-India policy had been evolved on the subject was discussed by the Company's Board who ultimately decided to ratify the draft agreement. This decision, which I am convinced was right, is in consonance with the accepted view that freely negotiated agreements are much to be preferred to imposed settlements. The Agreement was negotiated in a fine spirit of mutual frankness and co-operation and represents an honest attempt to devise means of understanding each other better and working closer together. I have every hope that it will prove workable in practice, provided both parties respect the intentions recorded in the Agreement and try to read into its provisions neither more nor less than they contain. This will apply particularly to the Joint Consultative Council of Management.

No Fetters on the Council

"So far as we are concerned, we shall not seek to fetter the discretion of this Council in discussing such matters as will enable its members, and particularly those representing labour, to acquire a better understanding of the industry and its problems. At the same time, the Company has no intention of surrendering its managerial functions and responsibilities. I for one do not believe in the concept prevalent in some labour circles that factories, whether owned by the State or by shareholders, should ultimately be handed over to workers who would provide both the labour and management of the enterprise. In my opinion, such a view is both unsound and impractical, and its pursuit can only lead to barren disagreements and ultimate disillusion.

"The Management of mechanised industries is becoming more and more complex and requires increasingly high standards of technical and administrative experience and competence. Any worker, however humble his beginnings may have been in the industry employing him, should have the opportunity of rising in the organisation, his progress being determined by merit and his ability to discharge his allotted responsibilities. But this obviously implies that at a certain stage such a worker leaves the ranks of labour and becomes part of Management. This is a very different proposition from that of handing over the management of a factory to the workers collectively.

"I hope, therefore, that time and energy will not be wasted in a fruitless pursuit of the concept of workers' management which is unworkable, except possibly in very small-scale industries run on co-operative lines.

"Having said that, I should perhaps mention that somewhat different considerations may

apply to functions concerned primarily with the fulfilment of individual and social life within the industrial community as distinct from functions and activities directly concerned with production, sales, finance or administration. Jamshedpur is for our employees a place in which to live as well as to work. The Jamshedpur community is now nearly half a century old. Many of its members were born, have taken up jobs and founded families there, and I believe there is ample talent, interest and civic sense to be found among them which could be harnessed to constructive and responsible work of a civic nature. For instance, many of the activities of the city could well be guided by its own citizens within clearly laid down budgets and procedures. So long as the Steel Company furnishes the funds required for running the town, it would naturally retain financial control. Real democracy works from the roots up and we, as a Company, should welcome and encourage opportunities to develop the democratic qualities involved in collective work selflessly undertaken in the interests of the community.

"To sum up, I feel that, in entering upon these agreements with the Union, we have crossed the threshold of a new era of co-operation and goodwill in our relations with our employees at Jamshedpur. We have not undertaken this experiment in a vainglorious desire to be pioneers or to set ourselves up as an example to others. We have done so in a spirit of humility.

"We have already come a long way in developing sound industrial relations at Jamshedpur for which I feel both the Management and the leadership of the Union deserve credit. We have not by any means solved all our problems; discipline, morale and productivity are not yet what they should be. No doubt, our standards of management themselves can be further improved; but I think it can be said that the present Management of the Company and of the Union have the will to co-operate for the good of the industry and the country as a whole. I am confident that, with this background, the experiment is well worth trying. If we succeed, nothing but good can come of it for all concerned, including shareholders and employees. If we fail, little harm will have been done so long as the failure will not have been due to lack of goodwill.

"We shall, in the next few years, have many difficult problems to face as a result of the expansion of our plant and operations. I believe the burden will be the lighter for its being shared by those who work for and with us.

"Ending on this note, I should like on your behalf to thank all the members of our Management, staff and labour force throughout the Organisation for the excellent work they have put in during the past year."

Note.—This is not a report of the proceedings at the above Annual Meeting, of which proceedings a separate report will be published.

4%

BOMBAY STATE DEVELOPMENT LOAN, 1970

ISSUE PRICE Rs. 100 PER CENT.

OPEN ON THE 3rd SEPT. 1956

The loan will be closed as soon as a total of approximately Rs. 750 lakhs has been subscribed, and in any case not later than the close of business on the 10th September 1956.

The applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore, at the branches of the State Bank of India in the State of Bombay and at the treasuries and sub-treasuries in the State of Bombay.

Full particulars can be obtained at any of the offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Bombay.

Please sign that light bill, Mr. Accountant!

But have a look at it for a moment. How much electricity did you use last month? And how much did you use *before* you installed Fluorescent Lighting? Your bills are now about *one-third* of your previous bills, aren't they? How did this happen?
Your technical staff will tell you that Philips Fluorescent Lamps and Fittings provide more than *three times* as much light with the same consumption of electricity! And the light given by these lamps is even, glare-free. Working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have an average burning life of 7,500 hours.
Good judgement to switch to Philips Fluorescent Lamps and Fittings!

INDIAN COPPER'S RESULTS EXCELLENT

DIVIDEND RAISED FURTHER—OUTLOOK BRIGHT

THE consistent rise in the world price of copper, the maintenance of a high production standard and satisfactory despatches are the factors that were responsible for the remarkable progress made by the Indian Copper Corporation Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co.. Ltd., Calcutta) during the year ended 31st December 1955. The gross profit has jumped up from £966,469 in the previous year to £1,585,326 during the year under review, creating a fresh record in the annals of the Corporation. It may be noted here that the 1954 profit itself was a record fill then, having been attained after two years of successive decline in prices.

Quite in conformity with the sizable increase in earnings, the distribution to shareholders has been sharply stepped up from 25 per cent. paid for last year to 45 per cent. free of income-tax. The distribution, however, is made up of a dividend of 20 per cent. and a bonus of 25 per cent., against the previous year's classification of 15 per cent. dividend and 10 per cent. bonus. There is some significance in the composition of the return on capital in this manner. It is that, while only a dividend of 20 per cent. can legitimately be expected to be repeated in the coming years, the balance of 25 per cent. representing bonus is the result of fortuitous circumstances, which may not continue for long. Indeed, the Directors do not expect these boom conditions in copper trade to continue for any appreciable length of time which sentiment has found expression in their reference to the rapid decline in the world price for copper to approximately two-thirds of the peak reached.

As in the case of last year, the higher distribution has been proposed only after making proportionately larger allocations for depreciations, taxation and reserves as could be seen from the following comparative table:

(In thousands of £'s sterling)

—	For the year ended 31st December			
	1955	1954	1953	1952
Net sale proceeds and adjustment of stocks	2,745	2,409	1,401	1,986
Other income	274	182	98	151
Expenses	1,434	1,264	1,060	1,413
Gross profit	1,585	966	439	724
Managing Agents' remuneration	110	68	28	37
Depreciation	175	100	90	115
Taxation	683	284	171	265
Net profit	617	534	150	307
General reserve	200	150	75	185
Provision for gratuities and superannuation	..	120	..	..
Dividend	411 (D. 20% +B. 25%)	229 (D. 15% +B. 10%)	91 (D. 10%)	114 (D. 12½%)
Carry forward	117	112	76	93

D—Dividend and B—Bonus.

Full provision has been made for depreciation and the general reserve has been further strengthened by an addition of £200,000. This policy has been justified by the Chairman thus: "Although the liquid resources of the Corporation are at present satisfactory, further heavy capital expenditure is anticipated during the next few years in order to develop the mine."

During the year, the mill treated 381,896 short tons of ore, averaging 2.311 per cent. copper, as compared with 367,737 short tons, averaging 2.352 per cent. copper, for the previous year. Against 33,737 short dry tons of an average value of 24.755 per cent. copper in 1954, the concentration plant produced 34,127 short dry tons of concentrates of an average value of 24.942 per cent. during the year. The output of refined copper amounting to 7,281 tons was 81 tons above the record production in 1936 and 120 tons more than the output in the previous year. The overall recovery from ore to refined copper was better at 93.007 per cent., as against 92.61 per cent. in 1954. The output of rolled products was only 5,769 long tons, as compared with 6,261 long tons in the previous year.

Despatches of products for sale during the year under review amounted to 10,791 long tons (including 4,028 tons of copper ingots) as compared to 8,800 tons (including 4,290 tons of copper ingots) during the previous year. The average selling prices of the Company's products during the past four years were as follows:

	(£ per ton)			
	1955	1954	1953	1952
Copper ingots	309	233	222	241
Rolled brass	243	230	228	270
Yellow metal circles ...	266	241	241	281
Rolled copper	357	288	251	275

There was no restriction on the export of kyanite ore and the despatches totalled 19,234 tons, as against 12,012 tons in the previous year. The average export price was maintained at approximately £20 per ton.

The latest balance-sheet of the Company discloses a sound financial position. The reserves and surplus aggregate £1,572,583, as against a paid-up capital of £914,200. The gross value of the block is £21,32,083 of which mining rights and permanent works account for £73,399 and buildings, machinery, plant, etc. for £2,058,684. The additions during the year to buildings, machinery and plant amount to £99,496 and on shaft sinking £3,82,873. The written down book value of the fixed assets is £876,054, the aggregate depreciation provided so far being £1,256,029. The current assets amount to £3,063,090 of which the liquid assets alone (investments and cash balances) total £1,376,169 and cover the current liabilities and provisions (£1,054,805) and reserve for taxation (£397,556) by a considerable margin.

Commenting on the proposed capitalisation of a part of the reserves, the Directors state as follows:

"Your directors consider that the present issued capital does not really represent the actual capital position of the Company and they consider it desirable to increase the Company's issued capital. As the Company has adequate funds to the credit of its general reserve account, your directors recommend that such reserves to the value of £457,100 be capitalised and that this amount be utilised as a special capital bonus, free of income-tax, to be satisfied by an issue of 4,571,000 new shares of 2s. each, credited as fully paid-up, to the holders at the close of business on 2nd November 1956, of 9,142,000 units of stock of 2s. each of the Company at present issued in the proportion of one new share of 2s. for every two units of stock of 2s. each then held by them and that the units of stock into which these new shares will be converted on allotment pursuant to the resolution of the Company in general meeting dated the 10th September 1947, shall rank in all respects *pari passu* with the existing units of stock, save and except that they will not participate in dividends declared prior to the date of allotment of these new shares.

"In order to permit the issue of these shares, it will be necessary to increase the authorised capital of the Company and the directors recommend for your approval that the capital be increased from £1,000,000 to £2,000,000 by the creation of 10,000,000 new shares of 2s. each."

The Company is going ahead with its plans for developing its mines still further. Thus, an extensive programme of prospecting and development has been prepared which has already made sufficient headway in conformity with the principles underlying the second Five-year Plan. The expansion programme is mainly directed towards increasing the output of the mines and, if the results of the present exploration are encouraging, it is pound to result in making the country less dependent on imports of this metal. Considerable development in depth has been effected in the existing Mosaboni mine during the year under review in order to counteract the diminution of ore reserves in the adjoining mine the life of which is limited. An actual increase in production will depend upon the success of prospecting now in progress to the worth of present working area. Such schemes of expansion reflect the confidence of the Company's management in the future. Apparently, it is satisfied with the Government's recent industrial policy announcement which allows the private sector to operate certain industries, including copper, belonging to schedule A, that is, industries which are primarily, if not exclusively, meant to be owned and operated by the public sector.

The 2s. fully paid-up shares are being currently quoted at Rs. 7-5 *cum-div.* On an *ex-div.* basis and taking the dividend at 45 per cent., the yield on the shares works out to 8.76 per cent. per annum, free of tax.

EASTERN SHIPPING CORPORATION

The Government of India formally took over the management of the Rs. 10-crore Eastern Shipping Corporation Ltd., in Bombay, on the 16th inst., from the Scindia Steam Navigation Company, which was managing the Corporation since its inception in March 1950.

The Managing Agency of the Scindias was declared terminated as from the 15th inst. and the management of the Corporation was taken over by Mr. R. R. Saxena who has been appointed by the Government as the new Managing Director.

The Eastern Shipping Corporation, which has a fleet of six ships at present, operates passenger and cargo services to the ports of British East Africa and to ports in East Asia and Australia.

In a statement issued on the occasion of the taking over of the management, Mr. Saxena said that the intention of the Government in taking over the Corporation was to cater to the needs of the interests of the trade and to strengthen the overseas shipping services of the Corporation.

IMPERIAL TOBACCO'S PROFIT RISES SHARPLY

LARGE ADDITION TO RESERVES

IMPRESSIVE are the results of working of the Imperial Tobacco Company of India Ltd. (Chairman, Board of Directors: Mr. G. H. J. Clarke, Calcutta) during the year ended 31st March 1956. The gross profit has jumped up from Rs. 363.57 lakhs to Rs. 415.71 lakhs and this rise follows an increase of Rs. 58.65 lakhs recorded in the previous year. Thus, in the course of the last two years alone, the profit has gone up by no less than Rs. 110.79 lakhs or over 36 per cent. Such an encouraging performance during the year under review has not, however, been accompanied by an increase in the distribution to the shareholders.

The final dividend of 4 per cent., together with the two interims of 2 per cent. each, makes the total distribution for the year 8 per cent. This is the same as that paid for 1954-55, after having been raised from 6 per cent. paid for 1953-54. The decision of the Directors to maintain the dividend at 8 per cent., despite the sizable expansion in earnings noted above, may be viewed with some disappointment by the shareholders, but the heavy incidence of taxation and the need for building up substantial reserves do not permit of an increase in the dividend level. Further, in a company of the size of the Imperial Tobacco, with a huge capital structure, a rise in dividend of even one half of one per cent. would require quite a few lakhs.

Although the gross profit is higher by Rs. 52.14 lakhs, the net profit, at Rs. 186.71 lakhs, shows an increase of only Rs. 17.84 lakhs over the year. This is due to the increase in the provision for depreciation from Rs. 45.39 lakhs to Rs. 49.12 lakhs and that for taxation from Rs. 149.31 lakhs to Rs. 179.88 lakhs. The allocation to the reserves has been raised from Rs. 48.68 lakhs to Rs. 65.50 lakhs. The transfer to the capital reserve has been cut from Rs. 3.68 lakhs to Rs. 0.50 lakh, while that to the fixed asset and stock replacement reserve has been raised from Rs. 25 lakhs to Rs. 35 lakhs. Such a large allocation to this reserve is justifiable, because, in a competitive industry such as the tobacco, the maintenance of adequate stocks of good quality raw materials and periodic replacement of existing machinery by the latest types, in order to maintain the productive efficiency, call for large investment. The future expansion of the Company also calls for adequate resources and the Directors have, accordingly, strengthened the general reserve by adding Rs. 30 lakhs out of the year's profit, as against Rs. 20 lakhs set aside last year. These allocations leave a sum of only Rs. 121.21 lakhs, which is hardly sufficient even to maintain the dividend at 8 per cent. and the Directors have had to a draw, albeit on a very small scale, on the surplus brought in from the previous year. Thus, the dividend absorbs Rs. 121.28 lakhs, leaving to be carried forward Rs. 24.94 lakhs, as against Rs. 25.01 lakhs brought in.

The successful efforts of the Company to maintain the profit-margin by increasing the volume of sales is reflected in the rise in sale proceeds from Rs. 28.44 crores to Rs. 30.36 crores. It must, however, be noted that the increase (Rs. 1.92 crores) does not compare favourably with that (Rs. 3.01 crores) noted in the previous year, indicating evidently the keen competition which the Company is facing. The expansion in sale proceeds has been offset to a substantial extent by the rise in the cost of goods sold from Rs. 21.44 crores to Rs. 22.59 crores and in other expenses from Rs. 3.56 crores to Rs. 3.85 crores.

The balance-sheet of the Company as on 31st March 1956 shows that the total assets stand at Rs. 26.48 crores, of which goodwill and trade marks (at cost) account for Rs. 4.90 crores and written down value of fixed assets for Rs. 2.52 crores. The gross value of the fixed assets amounts to Rs. 4.15 crores, including an addition of Rs. 87 lakhs during the year, and this has been written down by Rs. 1.63 crores. The large addition to the block account justifies the Directors' decision to place to the fixed asset and stock replacement reserve as much as Rs. 35 lakhs out of the year's profit. Investments amount to Rs. 95.49 lakhs (having gone up from Rs. 33.81 lakhs at the end of March 1955), of which those in Government securities (at market value) alone account for Rs. 91.22 lakhs. The other current assets aggregate Rs. 18.09 crores, including stocks of raw materials and manufactured goods at Rs. 8.69 crores, debts and advances at Rs. 4.33 crores and cash balances at Rs. 4.52 crores. The current liabilities and provision for taxation aggregate Rs. 3.18 crores. The net assets thus amount to Rs. 23.30 crores and these are represented by paid-up capital amounting to Rs. 15.16 crores and reserves and surplus Rs. 8.14 crores. Of the reserves, general reserve accounts for Rs. 4.50 crores and fixed asset and stock replacement reserves for Rs. 2.85 crores. It will be seen from the above figures that cash balances alone more than adequately cover the current liabilities and the provision for taxation.

The outlook for the Company depends to a large extent on the economic prosperity of the country. To the extent to which the second Five-year Plan succeeds in making even the remotest villages share the prosperity, the Company can also look forward to increasing its business. There are, however, some adverse factors also, such as the heavy taxation of tobacco products, the keen competition in the industry, etc. Further, the industry is a highly specialised one and the need for maintaining the quality of the products calls for huge liquid resources. In view of these factors, the Company cannot be expected to be very liberal in the matter of distribution of dividends.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 16 *cum-div.* (final div. 4 per cent.). On an *ex-div.*, basis the dividend for the past year provides a yield of 5.13 per cent. per annum, free of income-tax.

SONE VALLEY RAISES DIVIDEND

A modest increase in dividend from 5 per cent. for 1954 to 6 per cent. is the outstanding feature of the working of the Sone Valley Portland Cement Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 31st December 1955. This increase represents a reversal of the downward trend which had commenced three years earlier. It may be noted here that the Company had paid a dividend of 10 per cent. for 1952, 7½ per cent. for 1953 and 5 per cent. for 1954. In contrast to the trend of dividend, that of profit, however, is still declining. The gross profit has fallen from Rs. 12.76 lakhs in 1954 to Rs. 12.40 lakhs. Although this by itself is not very significant and is practically negligible, what is most disheartening is the steady downward trend in profits, now for the fourth year in succession. The net sale proceeds and the manufacturing as well as other expenses stand almost at the same levels as those for the previous year. Indeed, the manufacturing expenses would have even gone higher, if adequate care had not been taken to keep the cost of raising of coal from the Hutar Colliery under control.

The net profit, after making a lower provision for depreciation at Rs. 3.66 lakhs, as against Rs. 4.12 lakhs for the previous year and Rs. 2.35 lakhs for taxation against Rs. 3.18 lakhs, stands higher at Rs. 5.53 lakhs against Rs. 4.57 lakhs. While the Directors had made no allocation to the reserves from the profits for the previous year, the higher net profit for 1955 has enabled them to credit the reserve for railway claims with Rs. 25,000, general reserve Rs. 1 lakh and the reserve for rehabilitation of plant and machinery Rs. 25,000. The higher dividend at 6 per cent. absorbs Rs. 4.50 lakhs, as against Rs. 3.75 lakhs in the previous year which was the lowest during the preceding four years.

The table shown below will enable a comparative study of the Company's trading and financial results during the past four years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net) ..	125.08	126.26	111.53	132.72
Stocks	0.77	0.83	2.76	3.93
Manufacturing expenses ..	104.60	110.99	93.54	155.78
Other expenses	8.47	1.13	4.80	1.98
Gross profit	12.40	12.76	18.11	22.75

The Company's production and despatches of cement have progressively declined, now for the fourth year in succession with 1951 as the base year, as will be seen from the following figures:

(*In tons*)

	1955	1954	1953	1952
Production ...	195,000	196,910	213,900	232,640
Despatches ...	195,374	200,227	210,878	238,657

It will be remembered that the corresponding figures for production and despatches for 1951 were 250,330 and 245,082 tons, respectively.

Renovation of plant and machinery was carried out during the year. The erection of Kiln No. 4 intended as a stand-by for the old No. 1 Kiln still in production, was completed towards the end of the year under review. The retention price for the Company's cement has been fixed by Government at Rs. 50-4 per ton exclusive of excise duty and cost of packing which is the same return f.o.r. Works as at present.

There has been no change in paid-up capital of the Company at Rs. 75 lakhs. As against this, the reserves and surplus amount to Rs. 22.87 lakhs. There has been an addition of Rs. 8.89 lakhs to the fixed capital expenditure during 1955, bringing the total value of the block account to Rs. 191.72 lakhs. This has been written down to a book value of Rs. 46.27 lakhs. In addition to the capital expenditure just mentioned, the Company has spent during the year Rs. 2.17 lakhs on renovation and remodification of plant and machinery, the total expenditure incurred on this account up to the end of the year being Rs. 11.54 lakhs. The prospecting and development expenditure on Hutar coalfield amounts to Rs. 2.14 lakhs. The current assets aggregate Rs. 79.73 lakhs, while the current liabilities and provision for taxation at Rs. 41.80 lakhs are just above half of such assets.

The Rs. 5 paid-up shares of the Company are being currently placed at Rs. 9-2 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 3.4 per cent. per annum, free of tax.

The introduction of State trading in cement on a uniform destination price basis with effect from 1st July 1956, will not affect the Company's profit, for the price payable for the Company's production provides for the same rate of return as before. The only changes that have occurred as a result of State trading are that consumers all over India will get cement at a uniform price, namely, Rs. 102-8 per ton, as against varying prices in the past and that the selling agents have come under the employ of the State Trading Corporation on a contract basis for two years.

UNIVERSAL FIRE AND GENERAL

The audited accounts of the Universal Fire and General Insurance Co., Ltd. (Managing Director: Mr. I. U. Patel, Bombay) for the year ended 31st December 1955, show that the aggregate net premium income from the Company's general insurance business has been nearly maintained at the previous year's level amounting as it does to Rs. 26.51 lakhs, as against Rs. 26.58 lakhs in 1954—despite the setback in the fire premium income. The profit for the year has, however, recorded a sizable increase, after providing for the higher losses in the miscellaneous and marine departments, and this has enabled the Directors not only to strengthen the reserves further but also to declare a higher dividend of Re. 1-8 per share (of Rs. 10 each), as against Re. 1 per share paid for 1954.

An analysis of the working of individual departments shows that the net premium income of the fire department has slightly gone down from Rs. 19.85 lakhs to Rs. 17.47 lakhs. To some extent, this is due to a reduction in premium rates effected in the earlier part of the year. Claims paid and outstanding amount to Rs. 6.65 lakhs, as against Rs. 6.73 lakhs in 1954. As a result of the decline in premium income, however, the claims ratio has gone up from 33.92 per cent. to 38.06 per cent. After providing reserves at 50 per cent. amounting to Rs. 8.74 lakhs and an additional reserve of Rs. 65,000, the profit for the year amounts to Rs. 2.32 lakhs, as against Rs. 1.17 lakhs for the previous year. The net premium income of the miscellaneous department has gone up from Rs. 6.08 lakhs to Rs. 7.68 lakhs. The claims ratio has fallen slightly from 59.9 per cent. (Rs. 3.64 lakhs) to 52.8 per cent. (Rs. 4.06 lakhs). After maintaining reserves for unexpired risks at 50 per cent. (Rs. 3.84 lakhs), the loss for the year has risen from Rs. 9,825 to Rs. 84,083. This department, as the Chairman pointed out in his speech at the recent annual meeting of the Company, "is the one branch of our business which continues to cause headaches and heartaches not only to us but to almost all the other insurers in the country." The net premium income of the marine department stands higher at Rs. 1.35 lakhs, as against Rs. 64,910. The loss ratio has also fallen from 55.45 per cent. (Rs. 35,990) to 41.47 per cent. (Rs. 56,149). After providing for reserves at 50 per cent. (Rs. 64,697), the loss for the year amounts to Rs. 22,826, having risen from Rs. 13,047 for 1954.

After providing for the losses in the miscellaneous and marine departments, the year's working has resulted in a profit of Rs. 1.89 lakhs, as against Rs. 1.30 lakhs in 1954. The reserve for taxation has been raised from Rs. 50,000 to Rs. 60,000. In addition, the general reserve has been strengthened by Rs. 30,000 (as against *nil*). The dividend has been raised from 10 per cent. to 15 per cent. This is the third year in succession for which the dividend is being stepped up.

The total reserves of the Company as at the close of 1955 amount to Rs. 15.53 lakhs, of which general reserve accounts for Rs. 1.44 lakhs, fire reserve for Rs. 9.39 lakhs, miscellaneous reserve for Rs. 3.84 lakhs and marine reserve for Rs. 0.68 lakh.

CENTRAL INDIA INSURANCE CO., LTD.

A further improvement in premium income and underwriting profit is the outstanding feature in the working of the Central India Insurance Co., Ltd. (Managing Director: Mr. Rajendra Singh Bhandari, Indore) during the year ended 31st December 1955. The net premium income of the fire department, which had improved from Rs. 1.33 lakhs in 1953 to Rs. 2.64 lakhs in 1954, rose further to Rs. 3.31 lakhs during the year under review. The percentage of claims, which had fallen from 27.8 per cent. in 1953 to 16.6 per cent. in 1954, however, slightly increased to 21.2 per cent. The reserve for unexpired risks has been increased from Rs. 1.06 lakhs in 1954 to Rs. 1.32 lakhs in 1955. The net premium income of the miscellaneous department, which had similarly increased from Rs. 1.25 lakhs in 1953 to Rs. 1.73 lakhs in 1954, recorded a further increase to Rs. 3.15 lakhs during the year under review. The percentage of claims, however, rose from 32.5 per cent. to 36.0 per cent. The reserve for unexpired risks has been sharply stepped up from Rs. 69,065 in 1954 to Rs. 1.26 lakhs in 1955.

The net underwriting profits of the two departments together amounted to Rs. 53,257, as compared with Rs. 41,406 for 1954 and Rs. 16,527 for 1953. After providing Rs. 25,000 for doubtful debts (same as in the previous year) and Rs. 30,000 (Rs. 20,000 a year ago) for general reserve, the Directors have declared a maiden dividend of As. 8 per share, free of tax. The Company's paid-up capital stands at Rs. 9.84 lakhs supplemented by reserves and surplus amounting to Rs. 2.12 lakhs, fire fund Rs. 1.32 lakhs and miscellaneous fund Rs. 1.26 lakhs.

During the year under review, the Company's life business was transferred to the Indian Mercantile Insurance Company Ltd.

STANDARD-VACUUM REFINING CO., OF INDIA LTD.

The operations of the Standard-Vacuum Refining Company of India Ltd. during the year ended 31st December 1955 have resulted in a net surplus of Rs. 85.67 lakhs, after making provision for deferred taxation. This represents a return of 3.71 per cent. on the Company's gross business income and 5.06 per cent. on capital employed at the year-end. The Directors have recommended that no dividend be paid to common shareholders for the year under review.

During the year the refinery at Trombay processed 8,395,753 barrels (1,125,472 tons) fuel products to meet the country's expanding oil requirements, the main items distributed in the order of their volume being motor gasoline, industrial fuel oil, diesel oils and kerosene. Sales of refinery products amounted to 278,457,614. Imperial gallons, of which the internal consumption alone accounted for 233,987,532 gallons. The entire balance of 44,470,082 gallons was exported. A sum of Rs. 7.43 crores was paid to the Government of India by way of excise duty. The Company's programme of rapid Indianisation of staff for responsible posts is making commendable progress.

The gross investment representing the Company's total property and assets at the end of the year stood at Rs. 18.29 crores, which included new capital investment during the year to the tune of Rs. 65.82 lakhs for completing the initial refinery construction programme and to add a catalytic polymerization plant.

COMPANY MEETINGS AND DIVIDENDS

BALMADIES PLANTATIONS LTD. Annual General Meeting, Madras, 10th September 1956. Dividend: As. 3 1/5 per share. Transfer books will remain closed from 3rd to 10th September 1956, both days inclusive.

MADRAS SAFE DEPOSIT CO., LTD. Annual General Meeting, Madras, 10th September 1956. Dividend: Rs. 3-4 per share. Transfer books will remain closed from 3rd to 10th September 1956, both days inclusive.

INDIA PAPER PULP CO., LTD. Annual General Meeting, Calcutta, 17th September 1956. Dividend: As. 11 1/5 per share. Transfer books will remain closed from 3rd to 17th September 1956, both days inclusive.

DEHRI ROHTAS LIGHT RAILWAY CO., LTD. Annual General Meeting, Dalmianagar, 21st September 1956. Dividend: Re. 1-4 per share. Transfer books will remain closed from 6th to 14th September 1956, both days inclusive.

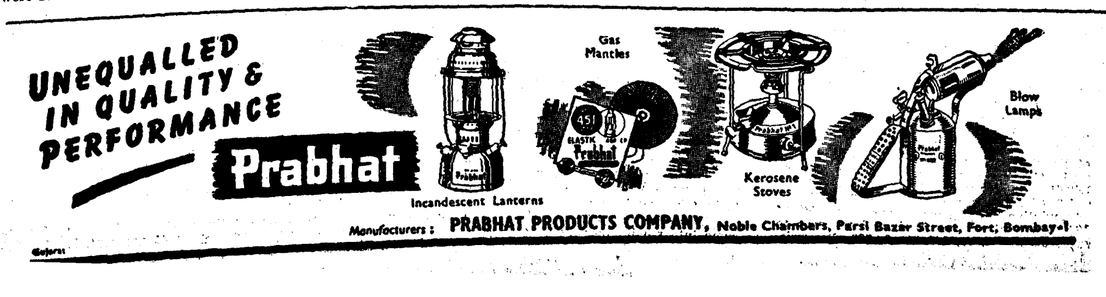
ESTRELA BATTERIES LTD. Annual General Meeting, Bombay, 28th September 1956. Transfer books remain closed from 30th August to 28th September 1956, both days inclusive.



INDIA PAPER TO ERECT NEW MILL

RESULTS OF MYSORE SPINNING ENCOURAGING

India Paper Pulp Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co. Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; and this fact has been commented on by the auditors in their report.

After providing Rs. 2,90,000 (Rs. 2,70,000) for depreciation and Rs. 3,15,000 (Rs. 1,70,000) for taxation, there is a balance at the credit of profit and loss account of Rs. 3,41,441 (Rs. 1,53,366). Rs. 83,945 (Rs. 2,34,329) has been brought forward and Rs. 30,000 (Rs. 33,000) has been credited in respect of the excess taxation provisions in previous years, making the balance available for distribution of Rs. 4,55,387 (Rs. 4,20,695). From this the directors recommend a dividend of 7 (7½ per cent. for the half-year absorbing Rs. 4,41,000 (Rs. 2,10,000) and leaving Rs. 14,387 (Rs. 2,10,695) to be carried forward.

Hitherto half-yearly accounts have been issued by this Company to its shareholders, but in the opinion of the board of directors this is no longer practicable in view of the provisions of the Companies Act, 1956, regarding annual general meetings and the accounts to be presented at such meetings. Accordingly yearly accounts will be issued in future, commencing with those for the year ending 31st March 1957. This will not preclude the payment of half-yearly dividends, subject to the Company's results permitting, as the Company's Articles authorise the payment of interim dividends. It is therefore the Board's intention to consider the payment of interim dividends in the light of the Company's results up to 30th September, each year.

Production and sales during the half-year ended 31st March 1956 remained at the same level as in the preceding half-year. The higher provision for taxation is due to the fact that it was necessary to provide in these accounts for additional supertax on the dividends for two half-years.

Shipment of the main plant under the Mill Expansion Scheme is expected to commence towards the middle of next year, but the Board regret that all work on the extension of factory buildings is at present held up owing to a general shortage of cement and steel in the country.

Although a final decision has not yet been reached regarding the proposed new pulp mill, negotiations with the Government of Assam, where it is proposed to erect the pulp mill, have now reached an advanced stage, and the Board hope to be able to give shareholders further details of this project shortly.

Accounts in brief are as under:—

Mysore Spinning and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. N. Sirur and Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 29th February 1956.

The Company's operations during the year show a profit of Rs. 8,35,919 (Rs. 5,11,702) after charging a sum of Rs. 43,013, being the bonus paid to the clerical, technical and supervisory staff of the mills in respect of the two years ended 28th February 1954 and 28th February 1955. Adding to this profit the balance of Rs. 23,708 (Rs. 22,997) brought forward from the previous year's account, the total comes to Rs. 8,59,627 (debit of Rs. 11,283 after deducting Rs. 5,45,982 paid to workers as per award of Industrial Tribunal).

From this sum the directors have declared an *ad-interim* dividend of Rs. 3 (Rs. 3) per share on 49,670 ordinary shares, absorbing Rs. 1,49,010 (Rs. 1,49,010 from reserve fund) and an *ad-interim* dividend of Re. 1-2 (Re. 1-2) per share (less income-tax) on 14,901 4½ per cent. cumulative preference shares absorbing Rs. 16,764 (Rs. 16,764 from reserve fund). They have also allocated to depreciation on buildings Rs. 53,808 (Rs. 35,084 from reserve fund), depreciation on machinery Rs. 2,87,732 (Rs. 2,23,396 from reserve fund) and to reserve fund Rs. 18,488 (*nil*) leaving a balance of Rs. 3,33,825. The directors propose to dispose of the same as under:—

Final dividend of Rs. 3 (Rs. 3) per share and a bonus of Rs. 3 (*nil*) per share for the year on 49,670 ordinary shares of Rs. 50 each (making a total of Rs. 9 (Rs. 6) per ordinary share for the year or 18 (12) per cent. per annum Rs. 2,98,020 (Rs. 1,49,010 out of reserve fund), final dividend of Re. 1-2 (Re. 1-2) per share on 14,901—4½ per cent. cumulative preference shares Rs. 16,764 (Rs. 16,764 out of reserve fund) and to carry to next year's account Rs. 19,041 (Rs. 23,708 after writing off the debit balance of Rs. 1,77,057, in profit and loss account). In the previous year the directors transferred Rs. 6,25,019 out of reserve fund to profit and loss account, in order to pay dividends and write off loss.

As it is estimated that the Company will have no assessable profits for the year under report because of the depreciation allowance and development rebate admissible under the Indian Income-tax Act, the profits of the Company may not be liable to income-tax. It is therefore decided not to deduct income-tax on the final dividend payable on the 4½ per cent. cumulative preference shares.

As regards the *ad-interim* dividend already declared and made payable from 1st February 1956, the directors are considering as to how the income-tax already deducted therefrom should be dealt with.

With reference to the remark made by the auditors in their report to the shareholders that "as the Company's financial year ends on the 29th February 1956, the balance sheet and profit and loss account have been drawn up in accordance with the Indian Companies Act, 1913, and, therefore, do not give the information required by the *Companies Act, 1956*, in the manner so required," the directors have to state that the old form adopted for the balance sheet and profit and loss account for the year under report accords with the clarification issued by the Central Government in that behalf and gives all the information as heretofore.

It will be observed that a sum of Rs. 1,512 being the expenditure incurred on construction of quarters for labour during the year under report, has been transferred from labour colony fund to reserve fund. With this addition, and with Rs. 18,488 transferred from profit and loss account this year, the reserve fund now stands at Rs. 41,50,000.

Although trading conditions in the cloth trade were more satisfactory than in the previous year, the demand and prices realised for yarn were poor and improved only with the turn of the year.

The mill property and stocks are insured for the sum of Rs. 3,20,28,090 and the profits and standing charges for Rs. 1,04,00,000 for 24 months' benefit (that is Rs. 52,00,000 annually) out of which wages/salaries estimated at Rs. 76,00,000 are covered 100 per cent. for the initial 15 weeks and 25 per cent. for the remaining 89 weeks of the 24 months' benefit period.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	32,29,960	Block ...	43,79,635
Reserves ...	30,54,035	Stock-in-trade	52,93,926
Provision for taxation ...	3,09,871	Stores and spare parts	11,04,442
Liabilities ...	63,85,386	Loose tools	56,986
Profit and loss account ...	3,33,825	Debts, deposits and advances ...	13,99,571
		Investments	30,02,707
		Cash ...	75,810
	Rs. 1,53,13,077		Rs 1,53,13,077

Balmadies Plantations Ltd.

The directors of the above Company (Managing Agents: Messrs. Planting Agencies (Private) Ltd., Madras) submit the audited accounts of the Company for the year ended 31st May 1956.

The result of the Company's working for the period under review is a profit of Rs. 67,002 (Rs. 47,474). To this has to be added a sum of Rs. 22,734 (Rs. 34,760), being the balance brought forward making a total of Rs. 89,736 (Rs. 82,234). The directors have appropriated to taxation reserve Rs. 32,000 (Rs. 25,000) leaving a balance of Rs. 57,736 (Rs. 57,234) which they recommend be appropriated as follows:—

To pay a dividend of 6 per cent. per annum tax-free on the preference shares for the year ended 31st May 1956, Rs. 4,500 (Rs. 4,500) and to pay a dividend of 10 (15) per cent. on the increased capital of the ordinary shares Rs. 30,000 (Rs. 30,000) leaving a balance of Rs. 23,236 (Rs. 22,734) to be carried forward to next year.

Crop.—The crop harvested during the year under review was 1,577½ (1,044) cwts. as against an estimated crop of 1,300 cwts. This was a record crop for this estate. The crop has been valued at a conservative rate of Rs. 2-2-0 per point. The Government are allowing larger quantities of coffee for export and hence a higher realisation per point may be expected.

Estate expenditure.—The total crop of 1,577½ cwts. was harvested at a cost of Rs. 122-12-8 (Rs. 148-3-7) per cwt. This large expenditure was due to heavy manuring, rejuvenation work, a full spraying programme and certain cultivation practices adopted during the year, with a view to raise the estate yield. So far, yields on the lower average levels were being harvested resulting only in marginal profits. A crop of over 75 to 80 tons a year is anticipated in future years owing to the intensive cultivation methods now being adopted.

Capital expenditure.—As mentioned in our last report, the school building and a teachers'-*cum*-midwives' quarters were completed at a cost of Rs. 8,000 and the school has been functioning from July 1953. With the construction of these buildings, the estate has provided labour amenities satisfactorily. All the labourers are now housed in quarters conforming to the Government standards. The building of four more tenements may require to be taken up later on.

New clearings.—The 1952 new clearing will come into partial bearing next year.

Estimate for 1956-57.—A conservative estimate of 55 tons at a cost of Rs. 138 per cwt. has been made for this year. This low estimate is due to the new leaf rot disease that suddenly appeared during the year. Steps have been taken to keep the disease under control.

General.—Due to the deletion of Rule No. 10 of the Madras Agricultural Income-tax Act, the Company had to pay Rs. 36,146 as agricultural income-tax for the year 1954-55. But the tax liability for 1956-57 season is considerably less.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ..	3,75,000	Block ...	3,61,144
Reserves	1,60,000	Stores ...	9,962
Provision for taxation ..	41,938	Debts, deposits and advances ...	1,67,370
Liabilities ...	16,308	Investments	23,865
Profit and loss account ..	57,736	Cash ...	88,641
Rs.	6,50,982	Rs.	6,50,982

West Coast Paper Mills Ltd.

The directors of the above Company (Chairman: Mr. Gobindlall Bangur, Bombay) submit the audited accounts of the Company for the period ended 30th June 1956.

In terms of the prospectus, a sum of Rs. 2 lakhs has been paid as underwriting commission to The Industrial Credit and Investment Corporation of India Ltd. on the Public Issue of Rs. 1 crore and Rs. 98,620 as brokerage to various brokers, banks and investment corporation, etc.

The directors inform, that they have been able to obtain the services of Mr. H. K. Collinge of a well-known firm of international repute, Messrs. Lignicell Limited of Canada, as technical consultant for the Company and Government's approval has been received.

The Company has entered into an agreement with the Government of Bombay for the lease of forest ranges and other concessions, which was executed on 13th August 1955, and consequently the Company was allotted 200 acres of land near Dandeli, the factory site of the Company. The lease of land is for a period of 30 years renewable for a further term of 60 years with such covenants, provisos and stipulations as may be agreed upon between the lessor and the lessee.

The Company's representative has visited Europe during the period under review and has almost finalised, in consultation with the technical persons, practically all the orders for plant and machinery, and the directors expect the same will begin to arrive in India early next year. According to schedule chalked out, the plant is expected to come into operation by middle of 1958. Whether it shall be possible to adhere to this programme depends on various factors, many of which are beyond control.

It may be of interest to note that as per our earlier plans the Company was to have pulp and paper at 60 tons per day, but after technical consultations and looking to the increased demand of the paper products, it was decided to arrange the purchases of machineries in such a way that at the next stage of expansion of the Company's plants, the production of the pulp and paper can be increased to 90 tons per day. The above contemplated increase in capacity resulted in the increase of cost of the plants to a bigger investment. However, it was thought fit as it would reduce the cost per ton as well as increase the production with smaller investments at that stage. The prices of the plant and machinery have also increased due to increase in the cost of labour and materials in Europe. The total cost of the project as a result of these changes has increased from Rs. 3 crores to Rs. 4 crores approximately. In order to cover part of this increase provision has been made for deferred payment to machinery suppliers of Rs. 90 lakhs instead of Rs. 40 lakhs as mentioned in the prospectus. The mortgage deed for the loan of rupees one crore sanctioned by The Industrial Finance Corporation is under progress of finalisation.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	80,00,000	Block ...	6,67,464
Calls received in advance	9,375	Stores, loose tools, etc.	4,67,947
Liabilities ...	2,16,627	Debts, deposits and advances ...	48,27,193
		Miscellaneous expenditure and losses	4,81,057
		Net revenue expenditure	2,52,039
		Investments	3,97,690
		Cash ...	1,32,612
Rs.	82,26,002	Rs.	82,26,002

Orissa Cement Ltd.

The directors of the above Company (Managing Agents: Messrs. Dalmia Agencies Private Ltd., Rajgangpur) submit the audited accounts of the Company for the year ended 31st December 1955.

The production during the year has been well maintained. The working results of the Company during the year under report after providing for all expenses of operation and depreciation, show a profit of Rs. 45,25,706. Out of this amount, the directors propose to set aside for meeting income-tax liabilities, a sum of Rs. 15,50,000, this leaves for distribution among shareholders Rs. 29,75,706. The directors recommend that the following amount be distributed among shareholders as dividend:—

On 40,000 fully paid cumulative preference shares of Rs. 100 each at 4½ per cent. Rs. 1,80,000 and on 6,78,650 fully paid ordinary shares of Rs. 10 each at Re. 1-4 per share Rs. 8,48,312, leaving out of the current year's profit a surplus of Rs. 19,47,394. According to the decisions of the shareholders in the last annual general meeting, out of the last year's profits amounting to Rs. 35,09,456, a sum of Rs. 7,48,726 was utilised in payments of arrears of dividend upto 31st December 1954 and a sum of Rs. 5,10,000 was set aside and carried over for payment of dividend to ordinary shareholders, and the balance of Rs. 22,50,730 were set off against accumulated losses of Rs. 35,95,921, leaving a balance loss of Rs. 13,45,191 to be carried over. Out of the above referred sum of Rs. 5,10,000 set aside for dividend to ordinary shareholders, the directors declared a dividend of As. 12 per ordinary share which absorbed a sum of Rs. 5,08,988, leaving a surplus of Rs. 1,012, which was retransferred to profit and loss account and set against the carried over loss of Rs. 13,45,191, leaving a balance of Rs. 13,44,179 to be set off and adjusted against future profits, which the directors hope, will find approval of the shareholders. The directors propose to completely write off the balance accumulated losses of Rs. 13,44,179 against the surplus of Rs. 19,47,394 of the accounting year 1955 left over after making a provision of dividends as referred above and the balance surplus of Rs. 6,03,215 is proposed to be carried over to next year.

The completion of the extension of the Cement Works has been slightly delayed due to not getting the kiln shells ordered in India in pursuance of the policy of the Government of India, which ultimately had to be ordered in Europe and are received very recently. The extension plant is expected to go into production by the end of this year.

The Company has also undertaken to put up a modern refractory plant in collaboration with some German experts, which will have a capacity of annual production of 80,000 tons to cater the growing needs of the country in general and the steel plants in particular.

The Company is also sponsoring jointly with Dalmia Cement (Bharat) Ltd., by subscribing to the capital of Dalmia Iron and Steel Ltd., to establish a cast iron and steel foundry in Calcutta to manufacture special heat resisting and wear resisting parts of the cement machineries.

To finance all these schemes, the Company is taking a secured loan of rupees one crore from the Industrial Finance Corporation of India and has also decided to offer for subscription the balance issued and unsubscribed ordinary share capital, thus increasing its ordinary subscribed and paid up capital to rupees one crore which will be offered in the first instance to the shareholders of the Company, for which a separate circular is already issued. The directors further propose that out of the 50,000 issued preference shares, the 10,000 shares which remain unsubscribed, be cancelled.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,07,86,500	Block ...	93,44,645
Reserves ...	32,02,416	Expenses on construction in-progress	8,37,976
Liabilities ...	52,44,377	Stock-in-trade	5,56,978
Profit and loss account ...	31,81,527	Stores, etc.	69,43,026
		Other assets	1,308
		Debts, deposits and advances ...	21,13,291
		Investments	80,529
		Cash ...	25,37,067
Rs.	2,24,14,820	Rs.	2,24,14,820

India Linoleums Ltd.

The directors of the above Company (Secretary: Mr. R. K. Chhaochharia, Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1956.

The accounts show a profit of Rs. 6,18,915 earned during the year. After adjusting this sum against the debit balance of Rs. 7,12,719 brought forward from the previous year, there remains a net debit balance of Rs. 93,804 in the profit and loss account which the directors feel, should be carried forward.

On account of there being a debit balance still to be carried forward, it has not been possible this year also to provide depreciation in the accounts. The total amount of unabsorbed depreciation carried forward is thus Rs. 19,14,857.

Sales of finished goods show further improvement during the year. Bulk of the sales were effected for internal consumption while some exports were also made to overseas countries. The closing stock of finished goods has been taken at estimated realisable value.

Messrs. Hindustan Investment Corporation Ltd., resigned their office as managing agents of the Company with effect from 1st April, 1956, and this was approved by the shareholders in the Extra-ordinary General Meeting held on 31st March, 1956. At the request of the directors, the managing agents have agreed to forgo their commission on profits for the year 1955-56.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Block ...	27,84,411
Liabilities ...	19,37,540	Stock-in-trade	9,07,375
		Stores ...	1,07,538
		Debts, deposits and advances ...	5,15,050
		Cash ...	29,362
		Profit and loss account ...	93,804
Rs.	44,37,540	Rs.	44,37,540

N.B.—Figures within brackets relate to the corresponding period of the previous year.

ANNUAL GENERAL MEETING OF THE APOLLO MILLS LIMITED

CHAIRMAN OUTLINES MODERNISATION PLAN

ADDRESSING the shareholders of the Apollo Mills Limited, at their Thirty-sixth Ordinary General Meeting, held at Bombay on 23rd August 1956, Mr. C. P. Wadia, Chairman of the Company, disclosed that the Company had applied to the Central Government for permission to install 500 automatic looms, in pursuance of the scheme for renovation and modernisation undertaken by it. He added that the Directors believed that, if the scheme visualised by them was successfully implemented, the shareholders could look forward to a good future for the Company.

The following is the full text of Mr. Wadia's speech:

"GENTLEMEN,

"The audited financial accounts for the year ended 31st December 1955 and Directors' report have been in your hands for some time past and I believe I have your permission to take them as read.

"At the outset, I feel compelled to refer to the most unfortunate, premature and tragic demise of our Labour Officer, Mr. D. W. Kale, who was assaulted by some persons while travelling in a car with the Manager and the Engineer on the 4th instant, subsequent to the workers having adopted 'go-slow' tactics from 19th July 1956, on the issue of bonus for the year 1954. The management took all steps to persuade the workers to resume normal working, but, as all methods of pursuasion failed, were reluctantly compelled to put up a notice of closure and, in fact, the Mill was closed on and from 29th July 1956, but has resumed normal working from the 13th instant. The Directors wish to express their feelings of condolence and sympathy to the bereaved family of our Labour Officer, who died while discharging his duties and I have no doubt that you will all associate yourselves with one voice in the expressions of such sympathy and condolence. The late Mr. Kale had given complete satisfaction in the discharge of his duties which he carried out impartially and judiciously and he was an ideal liaison between the management and the workers and a true friend of both. It is a great pity that the Company should have been deprived of his services in such tragic circumstances. As a mark of respect to his memory and a tribute to his departed soul, I would request all of you to unanimously join in our expression of sorrow by all of us standing in silence for two minutes.

"You must have observed that the profit of Rs. 10,65,689 is arrived at after deducting a sum of Rs. 1,17,209 being the debit balance of last year and also after adjusting about Rs. 2,00,000 for bonus and difference in D.F.A. and increments to the mill clerical staff for past years and these figures, when compared with those of the last year, will be found by you to be satisfactory.

Modernisation Programme

"You are aware that the Directors, being alive to the necessity of modernisation of your Mills plant and machinery with a view to reducing the cost of manufacture, have undertaken the task of rehabilitation and renovation and replacement of the existing machinery by modern machinery consistent with the resources of the Company. This piece of information has already been made known to you in the Directors' report. Since then, the Directors have put in an application to the Central Government for permission to install 500 automatic looms for expansion under the new scheme of the Government of India allowing increase in loomage. If the Company's application were granted, wholly or substantially, for which every effort is being made by the Directors, it will result in the expansion to the extent of 50 per cent. of the present capacity and this will go a long way to reduce the manufacturing cost and thus increase the earning capacity of the Mills. The Directors hope that even if the full number of looms applied for be not granted, they will be definitely allotted a portion thereof. I believe our position justifies the hope that our application will be granted in its entirety, since we have recently replaced winding, warping and sizing with modern automatic machines and have also replaced ring frames with new ones so that the yarn produced with these new ring frames will stand the test of working the automatic looms. Much will, therefore, depend on the decision of the Government in this behalf. Apart from what has been reported in the Directors' report, this would involve additional capital expenditure for which arrangements will have to be made by the Directors. The Directors believe, if the scheme visualised by them is successfully implemented, you can look forward to a good future of the Company.

Dividend

"You must have observed from the Directors' report that a provision has been made for the rehabilitation and development fund from this year's profit, which is in consonance with the general policy of the Directors. I hope that the raising of the dividend from As. 2 declared last year to As. 3 this year will meet with your full satisfaction. The Directors have, after due consideration of all factors and with the full benefit of the shareholders at heart, thought it fit to resist the temptation to declare a larger dividend which you may think might be justified by the profits of the year. But we do urge upon you a long-range view of the capacity of the Company to maintain a healthy condition of its finances and to keep up the dividends in leaner years, particularly in view of uncertainty of future events and the fulfilment of the ambitious expansion programme envisaged by the Directors.

"The total number of spindles and looms worked during the year was 41,143,232 and 800,438, respectively, while the total number worked for the preceding year was 36,411,964 and 799,427, respectively.

"Consequent upon the coming into force of the Companies Act, 1956, certain resolutions have become necessary as mentioned in the notice of the Meeting. The explanatory notes for those resolutions, as required by the provisions of the Act, have also been submitted to the shareholders and I feel it is unnecessary for me to recapitulate them here.

"I would like to express my thanks to the technical, administrative and other personnel who have worked for the institution with zeal and devotion to duty for the common benefit of the workers and shareholders.

"Before I move that the Directors' report, the profit and loss account and the balance-sheet for the year ended 31st December 1955, be adopted I would answer questions that may be put by you relating to the accounts under review."

All the resolutions proposed at the Ordinary General Meeting were unanimously passed by the shareholders.

General Manager.

Lockheed Aircraft engineers believe they have developed the world's tiniest television camera. The camera measures 1¾ by 2 by 5 inches. The midget telecaster weighing one and a half pounds can relay to a 27-inch screen inside test planes. It will enable test pilots and engineers to view immediately operations in hard-to-see spots such as landing gears. Such operations as landing gear raising and lowering against the slip-stream now are photographed by movie cameras and viewed later. The television camera is designed to detect any trouble without delay.

Notices

THE SINGARENI COLLIERIES COMPANY, LIMITED

(Incorporated in Hyderabad-Deccan)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-fifth Annual General Meeting of the Shareholders of The Singareni Collieries Co., Ltd., will be held on Friday the 21st September 1956, at 3-30 p.m., at the Registered Office of the Company, "Meher Manzil," Red Hills, Hyderabad-Deccan, to transact the following business:—

1. To read the Minutes of the Thirty-fourth Annual General Meeting of the Company held on 16th September 1955.
2. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December 1955.
3. To sanction the declaration of a Dividend.
4. To approve donations paid by your Directors.
5. To appoint Directors in place of—
   (1) Dr. G. S. Melkote
   (2) Mr. S. J. Tarapore
   (3) Mr. M. R. Patny

   who retire in accordance with Section 256(1) and (2) of the Companies Act, 1956, and being eligible offer themselves for re-election.
6. To appoint the Auditors for the current year, viz., 1956, and fix their remuneration, subject to the approval of the Central Government in accordance with Section 619(2) of the Companies Act, 1956.
7. To consider and if thought fit to pass the following Ordinary Resolution:—

   "Resolved that consent of the Company be and is hereby given to the future borrowings by the Board of Directors from time to time of all monies deemed by it to be requisite or proper for the carrying on of the business of the Company notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate paid-up capital of the Company "and its free reserves, that is to say, reserves not set apart from any specific purposes."
8. To consider and if thought fit to pass the following Special Resolution:—

   "Resolved that all contracts already entered into as from 1st April 1956 or to be entered into in future by the Company with Messrs. Praga Tools Corporation Ltd. and Nizam Sugar Factory Ltd., who are the associates in pursuance of Sub-Section 4 (b) (ii) of Section 2 of Indian Companies Act, 1956, of the Industrial Trust Fund, The Secretaries of the Company, for the supply of coal to them on the usual terms and conditions, viz., f.o.r. Collieries and payment of the value of supplies in advance, be and are hereby approved as also any contracts already made by the Company as from the aforesaid date or to be made in future with Messrs. Praga Tools Corporation Ltd., on the usual terms of payment after satisfactory verification of materials on receipt at Collieries' site provided that the prices or amounts charged to the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and provided further that if credit is to be afforded to the above said concerns for the supply of coal to them, the Industrial Trust Fund or the said concerns shall make payment to the Company within one month from the date of supply."

EXPLANATORY STATEMENT

Ordinary Resolution 7

The Expansion Scheme of the Company, for raising the production to 3 million tons by 1961 at an estimated cost of Rs. 9.28 crores has been included by the Government of India under the Public Sector in the second Five-year Plan. For this purpose loans will have to be taken from the Government of India and other sources.

As per the new Companies Act, 1956, the Board of Directors cannot without the consent of the shareholders in General Meeting borrow from time to time monies in excess of the limits as laid down in Section 293(1) (*d*) of the above Act.

Special Resolution 8

The Company has to enter into transaction for selling coal to the companies referred to in the Resolution and for purchasing machinery parts from Praga Tools Corporation, associates of the Industrial Trust Fund, Secretaries of the Company. Contracts for such transactions can be entered into only with the approval of shareholders of the Company in General Meeting in pursuance of Section 360 of the Companies Act, 1956.

9. To transact any other business that may be brought forward by the Chairman.

The Transfer Books of the Company will remain closed for the purpose of dividend from 8th to 21st September 1956 (both days inclusive).

By Order of the Board,
For and on behalf of
THE SINGARENI COLLIERIES CO., LTD.,
INDUSTRIAL TRUST FUND,
GOVERNMENT OF HYDERABAD,
R. DWARKA PERSHAD,
Secretaries.

"MEHER MANZIL,"
RED HILLS,
HYDERABAD-DECCAN,
22nd *August* 1956.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself, and that a proxy need not be a member.

2. Subject to the Directors' recommendation being accepted, Dividend Warrants will be posted on 15th October 1956.

3. Shareholders are requested to give immediate notice to the Company of any change of address.

KESORAM COTTON MILLS, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office of the Company, at 8, Royal Exchange Place, Calcutta, on Friday the 28th September 1956, at 3-00 p.m., to transact the following business—

(*a*) to receive and consider the Directors' Report and pass the Audited Accounts of the Company for the year ended 31st March 1956,

(*b*) to declare Dividends on Preference and Ordinary Shares,

(*c*) to elect Directors in place of Shri Ramkumar Bhuwalka and Shri Hiralal Somani, who retire by rotation,

(*d*) to appoint Auditors for the current year and to fix their remuneration,

(*e*) to approve and confirm the payment of donation of Rs. 2,27,775, details of which will be placed in the General Meeting,

(*f*) as a special business, to consider and if thought fit, to pass the following ordinary resolution with or without any modification:—

"RESOLVED that the Company do hereby approve of and consent to the appointment of Messrs. Poddar Auto Dealers of Exhibition Road, Patna, as the Sole Selling Agents of the Company for the sale of Company's goods in Nepal for a term of two years with effect from 1st day of May 1956 on the terms and conditions contained in the agreement of even date entered into by the Company with them."

(*g*) to transact any other business that may be brought forward with the permission of the Chairman.

The Share Transfer Register will be closed from 15th September to the 28th September 1956, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

CALCUTTA, 21st *August*, 1956.

N.B.—The Directors have recommended the following Dividends on Preference Shares at 7 per cent. free of Income-tax, on Ordinary Shares at Re. 1 per share free of Income-tax.

If dividends on shares as recommended by the Directors are declared in the meeting, the Dividends will be payable to the Registered Shareholders whose names appear in the Company's Register on 28th September, 1956 or to their order or to their bankers. No application need be sent for the dividends as the Dividend Warrants will be posted to them within three months from the date of declaration.

The instrument appointing a proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the above meeting.

The member entitled to attend and vote at the above meeting is entitled to appoint proxy to attend and vote in place of himself and a proxy need not be a member.

Explanatory statement in regard to special business to be transacted at the meeting.

The party mentioned in the ordinary resolution has been appointed Sole Selling Agent for Nepal. The agreement entered into with them is open to the members for inspection at the registered office of the Company during business hours. In compliance of the Section 294 of the Companies Act, 1956, the agreement will be placed before the shareholders at the above meeting.

By Order of the Board,
A. C. T. BLEASE,
Agent.

P-4 MISSION ROW EXTENSION,
CALCUTTA, 23rd *August*, 1956.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 29th *August*

The short-term money market experienced fairly comfortable conditions during the week under review, thanks to the large influx of funds from upcountry centres. Though the demand for bank credit had not abated, the supplies were large enough to enable banks to get their requirements from the market to meet the demand without much difficulty. There was, however, no change in short-term interest rates, which were well maintained at the levels noted in the previous week.

Inter-bank call money rate was unchanged at 3½ per cent., but business continued to be done at 3 per cent. also after clearing hours. House money at call was placed at 3½ per cent. and short-term deposits at 3½ per cent. for one to three months and at 3½ to 3¾ per cent. for four to six months.

A shrinkage of Rs. 13.82 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 24th August 1956. Notes held in the Banking Department are slightly higher by Rs. 40 lakhs, so that the decline in total notes issued is of the order of Rs. 13.42 crores. This is covered by a fall of Rs. 14.90 crores in rupee securities and a rise of Rs. 1.48 crores in rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 7.86 crores and of banks by Rs. 2 crores. On the assets side, balances held abroad have declined by Rs. 5.61 crores and so also loans and advances other than to Governments by Rs. 5.81 crores. Of the latter, advances to Scheduled banks against usance bills account for Rs. 2.64 crores.

The Scheduled banks' statement for the week ended 17th August 1956 shows a rise of Rs. 5.22 crores in demand deposits and of Rs. 0.91 crore in time deposits. There has also been an increase of Rs. 1.11 crores in inter-bank borrowings, while borrowings from the Reserve Bank have declined by Rs. 3.72 crores, of which those against usance bills account for Rs. 3.17 crores. On the assets side, advances are lower by no more than Rs. 0.51 crore. Inland bills purchased and discounted have fallen by Rs. 1.72 crores and foreign bills by Rs. 0.49 crore. A rise of Rs. 3.27 crores is noted in cash balances, of Rs. 0.44 crore in balances with other banks in current account and of Rs. 2.28 crores in money at call and short notice.

With only a few days to go for the opening of the lists for State Governments' new loans, the Gilt-edged market was devoid of any interest. The listless conditions witnessed in the previous weeks persisted during the week under review also. The medium and long-dated issues of the Central Government and some of the State loans, particularly 4 per cent. 1963 and 1964, were on offer. In the absence of any buyers, however, there was very little activity in the market.

In tune with the current trend of the market, the Reserve Bank of India reduced during the week its buying rate for 3 per cent. 1957 by an anna to Rs. 99-12 and of 3 per cent. 1958 to Rs. 99-9 after payment of half-yearly interest. 3 per cent. 1986 Conversion Loan had sellers, after a rise of an anna to Rs. 75-2 earlier in the week. 3 per cent. 1970-75 was marked down by an anna to Rs. 90-1. 3 per cent. 1966-68 proved an exception, with a rise of an anna to Rs. 93-4. 3 per cent. 1964 and 1963-65 attracted sellers at Rs. 94-15 and Rs. 94-14, respectively. 3 per cent. 1959-61 was stagnant at Rs. 98. 3½ per cent. 1962 was featureless at Rs. 98, 3½ per cent. 1961 at Rs. 99-6 and 3½ per cent. 1964 at Rs. 98-11. 3½ per cent. 1965 was on offer at Rs. 98-9 and 3½ per cent. 1967 and 3¾ per cent. 1974 at Rs. 98-7. Among State loans, 4 per cent. Madras 1963 and 1964 shed an anna each to Rs. 100-2 on predominance of sellers. A similar recession was noted in 4 per cent. U.P. 1963 and 1964 at Rs. 100-2.

In the foreign exchange section, there was no change in the rupee-U.S. dollar exchange rates, banks' selling rate being Rs. 480¾ per $100 and their buying rate Rs. 477 per $100, despite the weakness of selling abroad. In New York, spot sterling reacted from $2.78-7/16-2.78-9/16, to $2.78-3/16-2.78-5/16, before closing at $2.78¼-2.78⅜. Three months' forward shed 3c. to $2.77-2.77⅛. Transferable sterling receded from 275.40-275.50 cents to 275.30-275.40 cents.

WOOL PRICES MAINTAINED

DELHI, 21st *August*

The heavy rains still restricted arrivals into the wool market. The U.S. which was active in the beginning of this month has shown no interest lately. As this is the holiday period for many U.K. mills, demand from there is small. Prices are firm, in spite of lack of demand. The rates prevailing at Delhi as on the 17th inst. were: Superior White Rs. 3-4 to Rs. 3-5, Yellow Rs. 2-10 to Rs. 2-11 per lb. f.o.r. Delhi; Grey Rs. 100 per maund.

Bradford, U.K. (10-8-56): The Suez dispute had little effect on the Bradford market until this week, but top quotations have now been raised protectively by about 1*d.* per lb. In the London futures market, there has been some hardening in the prices as a result of the crisis, but this has been limited and the danger of a hold-up in supplies of wool has not been regarded as great by the trade as a whole.

Australia: The opening sale at Melbourne has been cancelled, owing to delay in the shearing and in the transportation of wool, reports the London Committee of the National Council of Wool Selling Brokers in Australia. The sales at Sydney and Perth will open on the 27th inst., as scheduled.

New Zealand Crutching Sales: At Wanganui on the 2nd inst., values were slightly easier at the opening, but there was good competition from the United States, Britain and Australia. At Napier, prices were slightly higher than at Wanganui, with the United States the main buyer.

BULLION DRIFTS LOWER

(From Our Own Correspondent)

BOMBAY, 29th *August*

Trading in the bullion market was characterised by narrow movements in prices. The underlying trend was, however, downward, thus maintaining the recession—albeit small—for the second week in succession.

Early in the week, silver staged a mild spurt on encouraging offtake in the ready section and on apprehensions about the Suez Canal issue, but this rise proved short-lived and a setback soon set in. The weakness of commodity markets, reports of arrivals of Tibetan coins in Calcutta and fears that ready demand might not improve until after three or four weeks induced profit-taking. Consequently, the closing prices were well below the week's best levels.

Gold also exhibited a firm trend at the opening of the week, thanks to good offtake in the ready section. Subsequently, it moved down in the absence of any incentive and in sympathy with silver. Rumours of large unauthorised arrivals in the country also exerted a bearish influence on the metal. The seizure of about 32,500 tolas of contraband gold near Cannanore, North Malabar, had only a temporary bullish effect on the market.

The market remained closed today on account of *Janmashtami*.

Silver forward (23rd August settlement) advanced from Rs. 171-15 to Rs. 172-13 before the settlement ran out at Rs. 172-4. The next settlement (22nd September) hardened from Rs. 172-11 to Rs. 173-10, but soon reacted to Rs. 172-1 on Saturday. On Monday this week, however, it rebounded to Rs. 172-15, but only to finish lower yesterday at Rs. 172-6.

Ready silver (.996 Mint) improved from Rs. 171-15 to Rs. 173-2, but gave way to Rs. 172-2 at the close.

The floating stocks of silver are estimated at 2,200 bars. The daily average offtake was 25 bars.

Gold forward (21st September) moved up early in the week from Rs. 103-9 to Rs. 103-13, but languished yesterday to Rs. 102-10, the lowest level in the past four weeks.

Ready gold closed Re. 1-3 lower at Rs. 102-10, after an early advance to Rs. 104-1.

The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas and the offtake also was of the same order.

In New York, silver maintained its level of 90¾c. In London also, silver prices were unchanged at 78¾d. for both spot and forward. Gold, on the other hand, gained strength from 251s. 3¾d. to 251s. 6¾d., but at the close shaded off a little to 251s. 5¼d.

The following comparative table shows the trend of market during the week under review:

	28-8-56	Highest	Lowest	22-8-56

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 27th *August*

The kip market ruled firm, though several U.K. importers were cautious and did not follow the prices at origin. As values advanced by 10 per cent. on the levels ruling in April last, and U.K. dressers were not been able to obtain an equivalent increase for their productions, it was believed that prices had reached top levels, and a setback was not ruled out. E.I. tanners were paying high prices in the raw centres in the hope of obtaining increases for their tanned productions.

Arrivals of kips into the local bazaar were moderate and clearances steady. There was good call for cow calf, but no demand for F.A.Q. buff calf.

There was good clearance of tanned sheep skins, presumably for shipment to Japan, and fair demand for top grades in superfine tannages of goat skins in all weights, but sellers required lower grades also to be sold combined.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 25th *August*

During the week under review, the hides and skins markets ruled fully steady, despite considerable new arrivals of the main categories of wet salted cow and buff. The main purchasers were the local tanners and the Madras dealers. Offtake of goat and sheep was not as heavy as that in the previous earlier week.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat 1st grade Rs. 170 and 2nd grade Rs. 160 per 100 pieces; sheep 1st grade Rs. 200 and 2nd grade Rs. 160 per 100 pieces.

COTTON FUTURES WEAK

(From Our Own Correspondent)

BOMBAY, 28th *August*

It looks as though the morale of the cotton futures market has been lost once again. The market is now in the grip of bears, while the bulls who were hitherto powerful have receded to the background. There are thick and persistent rumours of an upward revision in excise duty on mill cloth. There are also apprehensions of Government intervention in cotton trade; the Forward Markets Commission is reported to have expressed concern over the recent rise in cotton prices. "The Government," to quote one report, "is keeping a watch on the price trends in the cotton and cloth markets and has already all the arrows in the armoury." On top of these, expectations of a setback in world cotton prices following news regarding American cotton subsidy have imparted weakness to the market. Naturally enough, adroit shorts have seized the opportunity to hammer down values. On the other side, the bulls are nervously liquidating their stocks, thanks to reports of favourable weather conditions in the cotton growing tracts and of the new crop moving fast in the Punjab.

Over the week, M.G. Jarilla March Contract has dropped as much as Rs. 19-4 and Vijay April Contract Rs. 17-8. Jarilla March opened the week at Rs. 704 and, on nervous long liquidation, toppled down to Rs. 685-4 yesterday before closing at Rs. 685-8. Vijay April stood at Rs. 831 on the opening day, as against Rs. 832-8 last week-end. The Contract was subjected to sustained bear pressure and slumped to Rs. 815 today, at which rate it wound up the week.

The following is the trend of prices of the two Contracts during the week under review:

(In rupees per candy of 784 lbs.)

	28-8-56	Highest	Lowest	22-8-56
Jarilla (March) ...	685¼	705½	685¼	704¾
Vijay (April) ...	815	832	815	832½

The spot cotton market depicted a distinctly easy note. Mill enquiries for Indian varieties were generally somewhat slack. The delivery contract bases suffered a break. Exportable styles failed to evoke adequate interest. Shippers, it is said, have not been able to make much progress with regard to sales of cotton against the revalidation of unutilised export quotas issued in the current season. This is attributed to the fact that the styles permitted for export, namely, cotton stapling ¾" and below, do not attract foreign buyers at the current advanced prices on account of paucity of supplies and the high export duty of Rs. 100 per candy. Foreign cottons were neglected, with the exception of Sudan varieties which attracted some attention. The latest available prices—in rupees per candy of 784 lbs.—from the spot cotton market at Sewri, the figures in brackets giving last week-end rates, are given below:

Bengal *Deshi* 720 (720); Berar Jarilla 780 (785); Khandesh 790 (800); Vijay 965 (975); Oomra *Deshi* 750 (750); Moglai 740 (740); *Delivery contracts*: Khandesh 197/3 December 115 (123), Berar 102 (106). Moglai 35 (44) on Jarilla; 320 F December 72 (76), 216 F 97 (102) and Vijay 13/16 February-March 58 (68) on Vijay.

Of much importance to the cotton market is the Pakistan Government's decision to raise the export duty on *Deshi* and Comilla varieties by Rs. 20 to Rs. 80 per bale. The rise in duty, some traders point out, has brightened the export prospects for Indian cotton. Others, however, feel that the export business in Indian cotton is difficult for the present, on account of the heavy unofficial premia demanded for export licences, which are said to be around Rs. 150 per candy for Bengals and Rs. 30 for other varieties. With regard to the cut in the export duty on Pakistan cotton from Rs. 135 to Rs. 115 per bale, cotton circles are of the opinion that it may not induce importers to buy this cotton, which is still costlier than comparable indigenous varieties.

At its meeting held on Friday, the East Indian Cotton Association approved of regulations for dealings in foreign cotton imported into India. One of the regulations provides for arbitration in India by the Association in case of any dispute between the importer and the exporter. The present by-laws of the Association, it may be noted here, do not provide for such arbitration and disputes are being referred to the Liverpool Cotton Exchange for arbitration. The by-laws of the Association will suitably be changed after the Forward Markets Commission gives its sanction.

The ban on imports of American cotton continues and nothing definite is still known as to when it will be lifted. Licences covering about 12,500 bales of American cotton issued recently under Trade Notice 160 dated 17th July 1956, have been issued *pro rata* and applicants have received licences for only 73 per cent. of the quantity applied for. This, it is stated, has caused great difficulty for shippers due to disruption of freight arrangements and it is hoped that the balance licences will be issued without further delay.

The firm trend noted in the Karachi cotton market in the last three weeks abated this week. In fact, the market ruled bearish. The upward revision in export duty on *deshi* cotton—from Rs. 60 to Rs. 80 per bale—announced by the Pakistan Government was the chief unhelpful factor. The reduction of Rs. 20 to Rs. 115 in the duty on staple cotton also failed to influence the sentiment of the operators, who thought that the reduction was not quite sufficient to encourage enlarge overseas demand, what with growing competition in world markets. Current crop styles were neglected N.T.R.G. January delivery fell by Re. 1-15 to Rs. 75 per 82 lbs. March delivery receded by Re. 1-6 to Rs. 74-6. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Punjab *Deshi* 88; 4F Roller 77-8; S.G. 80; Punjab Roller 79; S.G. 82; 289F N.T. Roller 78; S.G. 80; 289F Punjab Roller 83; S.G. 89.

The Alexandria cotton futures market continued to present a cheerful tone. Traders showed renewed interest in buying cotton from farmers, induced by the suspension of sales by the Egyptian Cotton Commission and lower ideas of 1956-57 cotton crop. The buying fervour was also fanned by reports that the Egyptian Government would permit reimbursement in rupees in respect of cotton exports to India for any sterling amount outstanding against shipments already made. The Government is also expected to accept 100 per cent. in rupees for cotton shipped during September 1956. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below:

Karnak: November 102.03; January 99.38; March 98.38; *Ashmouni*: August (deleted); October 73.33; December 73.03.

There was no development worth noting in the Liverpool cotton futures market during the week under review. Business put through was restricted. American mixed growth contracts came in for some mill fixing and trade support, while Egyptians were idle and Sudans were quiet with buying limits at lower rates unattractive to sellers. The following are the latest available quotations—in pence per lb. —from Liverpool:

American cotton 1" staple contract: October-November 24.80; December-January 24.65; March-April 24.25; May-June 24.35; July-August 24.25; *American mixed growth contract*: October-November 24.85; December-January 24.70; March-April 24.50; May-June 24.45; July-August 24.45; *Egyptian Karnak*: November-December 54.20; January-February and March-April 54.25; *Sudan contract*: September-October 48.15 November-December 48.00; January-February 47.70.

The gains recorded by cotton futures at New York in the last two weeks were further extended this week on trade buying in near-month and commission house demand for May and later deliveries. The upturn in current crops reflected continued lack of aggressive hedging and lower crop ideas, while the Soil Bank programme influenced buying in far distants.

The U.S. Commodity Credit Corporation sold 157,400 bales of cotton against bids received on the 21st inst., bringing the total quantity sold to-date to 3,277.641 bales. The Agriculture Department has authorised Burma to buy U.S. cotton worth $14.25 million covering about 100,000 bales against Burmese currency. Of this quantity, 65,200 bales will be shipped to Japan. 17,380 bales to the U.K. and 17,300 bales to West Germany. These countries will manufacture textiles for shipment to Burma.

The following are the latest available quotations from New York, as compared with those six days and fourteen days before:

(In cents per lb.)

	27-8-56	21-8-56	13-8-56
Spot	34.45	34.35	34.45
October	33.70	33.55	33.43
December	33.76	33.49	33.35
March	33.64	33.25	33.20

RAYON YARN MOVES UP

(From Our Own Correspondent)

BOMBAY, 28*th August*

Trading in the yarn market during the week under review was characterised by distinct firmness in rayon yarns, the prices of which registered an improvement. Operators were interested in extending their commitments on expectation of enlarged demand from powerlooms in Surat. The expectation was based on the report that the Chief Controller of Imports had reduced the import quota of factories not registered under the Factories Act. The result of the reduction, it was said, was that about 8,000 powerlooms out of the 15,000 in Surat would get a half-yearly import quota of the value of only Rs. 150 per loom, as against their original quota of Rs. 1,000. Staple fibre yarns, however, was easy, owing to slackness in buying enquiries. Cotton yarns were also easy, thanks to weak advices from the cotton market.

Snia rayon yarn (120 dull cones) for August delivery climbed up by Rs. 5 to Rs. 783. October delivery hardened by Rs. 4 to Rs. 798. In the spot section, National Rayons 120 Bt. cones 1st grade met with good buying support and advanced by 18 pies to Rs. 3-14-3. 150 Bt cones 1st grade was fully maintained at Rs. 3-6-6. Among indigenous yarns, 120 Italy gathered half an anna to Rs. 3-15. 120 Japan was firm at Rs. 3-13 and 150 Italy at Rs. 4-1-6. 150 Japan, however, came in for selling and lost six pies to Rs. 4-2.

Spot indigenous 40 x 2 staple fibre yarns staged a retreat due to selling pressure. Citys receded by 15 pies to Rs. 3-7-3. Kohinoors lost nine pies to Rs. 3-9-9. New Greats and Centurys both eased by three pies to Rs. 3-8. Foreign yarns (80 x 2) were somewhat favoured at higher prices. Paramounts picked up As. 2 to Rs. 6-6-6. Fujis, K'Suns and H'Races rose by an anna each to Rs. 6-4-6, Rs. 6-12 and Rs. 6-2, respectively. Suicos and S'Sellos were firm at Rs. 6-2. Staple fibre yarn (40 x 2) October delivery declined by a rupee to Rs. 675. August delivery was quiet at Rs. 665.

In the cotton yarn section, sixty counts were subjected to selling Raghuvamshis shed As. 8 to Rs. 38. Finlays eased by As. 4 to Rs. 62-6 and Moderns by As. 2 to Rs. 62-14. Among 80s, Mahendras gave way from Rs. 73-4 to Rs. 72. Moderns lost As. 4 to Rs. 70. Elphinstones were unchanged at Rs. 69 and Seksarias at Rs. 55. Deals in 20s were put through at lower levels, Moderns losing As. 2 to Rs. 19-8 and Hinds an anna to Rs. 19-9. Among 10s, Moderns declined by As. 2 to Rs. 15-1. Podars and Elphinstones were dull at Rs. 14-14 and Rs. 14-12; respectively. Thirty counts Maduras eased by an anna to Rs. 24-12 and Apollos were unaltered at Rs. 23. Among 40s, Maduras decreased by As. 2 to Rs. 29-10. Moderns lost an anna to Rs. 29-7. Minaxis, however, received special buying support and strengthened by As. 6 to Rs. 29-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days and fourteen days before:

	28-8-1956	22-8-1956	14-8-1956
Art Silk yarn **(per case of 200 lbs.)—**	**Rs. a.**	**Rs. a.**	**Rs. a.**

60s Raghuvamshi	58 0	58 8	58 12
80s Mahendra	72 0	73 4	73 4

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 29*th August*

The oilseeds market reflected on the whole an easy trend over the week under review. In the groundnut section, weaker advices in the upcountry markets following favourable weather conditions and the apprehensions regarding further Governmental actions to check the buoyancy of the produce markets were chiefly responsible for the setback. The hedge pressure from the producing areas accentuated the situation. In the castorseed section, on the other hand, sustained liquidation by the longs in view of the approaching maturity of the September 1956 contract was chiefly responsible for the reaction, though the prices offered some measure of resistance to the downtrend under the influence of the demand from some shippers-cum-speculators and also of the fair prospects of export business in the castor oil with the U.S.A. Moreover, linseed section, having remained soft during the greater part of the week, made some headway towards the close of the week on reports of depletion of stocks resulting from brisk buying by up-country consuming centres. Higher prices of linseed oilcake have also increased the crushers' demand for spot goods, while reports of rise in rapeseed and rapeseed oil prices helped the trend. The market, however, closed on a steady tone, especially, in castorseed section.

Groundnut February contract after finishing the previous week at Rs. 139-10 started this week at Rs. 139-2. It declined, however, to the low figure of Rs. 133-12 at the end. In the spot section, Bold shed Re. 1 to Rs. 33-11, while December-January fell by Re. 1-2 to Rs. 26-15. Groundnut oil ex-mill lost, on the other hand, As. 8 at Rs. 18-6, and R/R followed suit with a loss of As. 6.

September delivery in the castorseed section opened the week steady at Rs. 144-14, that is, Re. 1 higher than the closing level the previous day. But, it declined to the lowest level of the week at Rs. 140-8 on 25th and on bear covering moved up again to a high of Rs. 145-2 on 28th before finishing at Rs. 143-6. It, thus, lost only As. 8 over the week. May contract, however, declined steadily from Rs. 129-12 in the previous week to Rs. 124-12 at the close of the week, representing a steep fall of Rs. 5. In the spot section, in contrast to the trend in futures, Bold Ready remained steady, while Ready Madras and Ready Kanpur put on As. 4 each at Rs. 28-12 and Rs. 27-8 respectively over the week. Oil B.S.S. and oil commercials both declined by As. 5 each at Rs. 18-6.

Among other seeds, *kardi* seed bold Ready shed As. 6 at Rs. 18-6 and *niger* seed Ready and Madras too, eased by As. 8 to Rs. 28 and Rs. 28-8, respectively.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	28-8-1956	22-8-1956	14-8-1956
Groundnuts—	**Rs. a.**	**Rs. a.**	**Rs. a.**

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 29*th August*

The sugar market ruled distinctly bearish during the week under review. The ex-mill quotations of sugar fell by Re. 1-8 to Rs. 2 per bag in Bombay-Deccan and by As. 4 to As. 6 in the North, following the release of 160,000 tons of sugar for sale in free market. The local traders were, therefore, forced to accept lower rates for their offerings. The fall in sugar prices would have been more marked but for reduced arrivals of indigenous sugar into the market, which aggregated 13,600 bags, as against 18,700 bags in the week before and 21,200 bags in the week preceding the latter.

In the spot section, British refined sugar receded by As. 12 to Rs. 91-4 per bag of 2 cwts. Among indigenous sugar, medium grain declined by As. 8 to Rs. 90½-Rs. 93½. Large grain was quiet at Rs. 95-Rs. 101 and small grain at Rs. 89.

Asho delivery contract for 'C' grade sugar was subjected to selling and slipped by As. 6 to Rs. 91, with sellers at that price.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

By the third week of July 1956, all the sugar mills in India had stopped crushing for the season 1955-56, according to the Indian Sugar Mills' Association. The aggregate production of sugar in the season is finally estimated at 1,857,015 tons, as against 1,583,000 tons during 1954-55. In the month of July, about 8,127 tons of sugar were produced.

The total offtake of sugar from factories during the nine months ended July 1956, amounted to 1,270.000 tons, which represents a rise of 437,000 tons as compared with the offtake of 833,000 tons in the corresponding period of 1954-55. During the month of July alone, the offtake was 175,000 tons, as against 124,000 tons a year before.

The closing stocks of indigenous sugar as on 31st July 1956, aggregated 991,000 tons, the figure for the same date last year being 788,000 tons.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 28*th August*

Malabar black pepper, after ruling steady during the earlier part of the week following some selective purchases by New York, ruled quiet with prices tending lower for want of further support from overseas. New York is reported to be restricting its buying to shipments by named steamers or afloats only. Some of the Indian holders, therefore, are shipping part of their stock as unsold consignments and are selling them either as afloat or by named steamers. So far they are successful in marketing their consignments without difficulty. This has apparently helped the local market to maintain itself as they replace such sales by buying forward locally. But, once New York stopped buying, it was feared that the market in New York as well as in India would go down owing to pressure of selling by exporters both for their consignments and nearby shipments. When the afloats were not sold, they (Indian shippers) would try to hedge their unsold parcels by selling forward in the local market. This would, most likely, affect the market.

Since a week or two listless conditions prevailed in our market. It seems that the market is having a pause before turning a corner. It may be either upwards or downwards. Presumably, the Suez development, despite the conclusion of the 22-Nation London conference, is still exercising its influence on sentiment.

The general opinion of the majority among the traders, however, is reported to be veering round to the bear side for the following reasons (among others), provided the Suez crisis does not worsen in the meanwhile:

(1) Approaching new season of Malabar black and consequent selling pressure of old crop by growers; (2) news of the sale of about 1,000 tons of Lampong by Indonesia to China-Russia—further sale is also reported to be under negotiation; (3) introduction of bonus system for the export of pepper in Indonesia; (4) shipment of unsold consignments to New York and Europe by Singapore, Indian and Indonesian interests as spot prices there are said to be attractively higher than those for the shipments; (5) recent heavy purchases by overseas consumers and importers in view of the disturbed political development resulting from the Suez crisis; (6) fear of Dock strike in the U.S.A. during the month of October; (7) higher estimate of production of Sarawak Pepper; and (8) overbought conditions of the exporters in almost all the supplying markets, most of the shortsales having been covered during the recent rise.

The only relieving features of the market are the low prices of pepper, the present tight position of spot stock in New York and consequent chances of development of better Autumn demand.

In the earlier part of the week, New York bought a few parcels by the named steamers at $0.31 to $0.31¾. These purchases by the New York dealers are reported to be a replacement against earlier buyings which remained unshipped by one of the defaulting Madras shippers.

Alleppey is reported quiet at Rs. 775 with sellers anxious but small buyers. Garbled at Cochin moved between Rs. 132½ and Rs. 137½. In delivery section trading is neglected as new buying is absent. Everybody is waiting for a new development.

Following are today's nominal quotations: Ready delivery Rs. 102 per Bengal maund; September delivery Rs. 715-25 and October delivery Rs. 710-20 per candy of 5¼ cwts.

FANNINGS IN KEEN DEMAND

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, 24*th August*

Almost 1,450,000 lbs. were on offer in Sale 24 which was held on Wednesday, 22nd August. Quality showed an all round improvement, particularly amongst the low medium and medium teas. There was some attractive high grown teas with

flavour catalogued. From the outset there was a very strong general demand and buyers competed keenly for fannings grades. Low medium teas sold well and prices advanced by an anna to As. 2. Medium teas were rather irregular, but improved quality were often dearer. Best liquoring teas were extremely well supported and, in particular, fannings grades. Advances of As. 4 to As. 6 per lb. were registered and occasionally higher rates. Middle East type fannings and tippy teas sold well and must be quoted dearer. There was a good demand for whole leaf grades and prices advanced. The following are the quotations:—

	1956 Rs. a. p.	Rs. a. p.
Plain B.P.	1 5 0	
Low medium B.O.P. ...	1 10 0	to 1 11 0
Medium B.O.P.	1 12 6	to 1 14 6
Good B.O.P.	2 4 0	to 2 5 0
Well made black leaf O.P. ...	2 10 0	

London Market.—Sale of 20th August 1956:—Strong demand between 8s. and 10s. for C.T.Cs. from Assam. Heavy withdrawals of plain tea.

Sale of 21st August 1956:—Best strong others easier.

Colombo Market:—*Sale of 20th August 1956*:—Fair demand. Generally lower, except for good liquoring fannings.

Sale of 21st August 1956: Active and generally dearer, particularly better qualities. Persian Gulf types slightly easier.

Calcutta Market:—*Export*. 52,926 packages. Less general demand. Strongest feature commonest and Egyptian types. Remainder easier, especially where quality declined.

Internal:—16,400 packages dust. Strong general demand, particularly Middle-East types. Cachars dooars medium Assams advanced As. 1 to As. 2. Grainy C.T.Cs. well supported. Other types this category upto As. 4 easier nonwithered dooars As. 2 to As. 3 dearer.

Dust Sale 'Q':—Offerings in Dust Sale Q which was held on Thursday, 23rd August amounted to 4,50,000 lbs. The sale opened to a very strong general demand and prices were As. 2 to As. 3 dearer for all types. Good medium dusts and best liquoring sold well. Middle East types met strong competition and were As. 4 to As. 6 dearer.

Export Quota:—After touching 30 pies in Calcutta, the market receded to 27 pies and there are now sellers at this figure.

Forthcoming Auctions:—Sale No. 25 will be held on 4th September and Dust Sale R on 11th September.

JUTE BUOYANT

(From Our Own Correspondent)

CALCUTTA, 28*th August*

A state of buoyancy prevailed in the jute markets during the week under review. There was a flood of orders from overseas buyers for both hessian and heavy goods. There was covering demand from shippers. In the circumstances, speculators were fully active. The result was a sizable addition to prices of jute goods, and such made possible simultaneous business in raw jute and jute goods after a long time. Speculators anticipated a further increase in prices, but sober elements thought that, once the first rush was over, the rates would decline and steady around somewhere mid-way between the present highest levels and the recent lowest from where the uptrend commenced. In the present enthusiasm, the news report that, during the month of July, burlap consumption in the United States declined by 1 million yards to 61 million yards was hardly taken notice of. It became known that stocks were lower and, since the decision of mills to further curtail production, a good many orders for hessian from the U.S. has been received. When these orders are executed, they will strengthen the stocks in the U.S. which had been depleted by the low buying during recent months. By and all, the decision of mills to reseal from mid-September the remaining 5 per cent. of the looms that had been unsealed is once again putting the industry on a healthy basis; but, in the market, the fears that, if prices move up further, substitutes may make inroads are also heard.

Another factor which caused the report of lower consumption in the U.S. last month pale into insignificance was the fact that consumption from January to July at 476 million yards was higher by 11 million yards, as compared with the figure for the corresponding period of 1955. In view of the higher activity in the market, the month of August is naturally expected to be a good shipping period, the impact of which will be shown in the stock figures that will be available early next month. Traders look forward to these figures with considerable interest. But, as stocks of hessian and sacking goods are considerable, it would be several months before the decline in production and the better demand begin to have any perceptible effect on the stocks.

Contrary to expectations, raw jute prices also moved up, the gain being about one point for most constructions. It had been anticipated earlier that prices would decline, on the assumption that, when the cut in production was enforced, mills' requirements of raw jute would fall by 125,000 maunds a month. But the opposite trend was due to lower arrivals of the fibre from Pakistan. Imports from East Bengal would further be affected, for, in pursuance of its aim to place as many impediments as possible in the way of India importing raw jute from Pakistan and apparently knowing that Indian mills are now realizing better prices for their products (the fact that, in recent months, mills had suffered heavy losses and that the present high prices are giving them only an opportunity to work on an economic basis need not be taken into account by Pakistan, as also the extreme unlikelihood that the present prices for goods would stabilised), the Pakistan Government has raised the export duty on cuttings from Rs. 5 to Rs. 10 a bale of 400 lbs. with effect from the 23rd inst. It will be remembered that this variety of Pakistani jute is bought by Indian mills in great quantities. There is no change in the export duty on *habbi jabbi* which is classified as long jute for purposes of export. This is also a variety of Pakistani jute imported into India in large quantities. But the duty on cut ropes, however, has been stepped up from Rs. 5 to Rs. 10 per bale of 400 lbs. The Indo-Pakistani trade agreement expiring by the end of this month is likely to be extended by a couple of months before its renewal. This was stated here on Friday last by Mr. C. C. Desai, Indian Commissioner in Pakistan, but his further statement that Pakistani views on the Indian proposal had not been received was another factor for the uptrend in raw jute prices. Arrivals of the indigenous fibre have, however, tended to improve, but prices in outstations are above Calcutta's parity.

In jute goods, there was profit-taking earlier, after which prices began to rise. Moreover, there was moderate covering demand which raised ready B. twills to Rs. 108-8 from Rs. 107-10, and hessian 40"×10 oz. to Rs. 40-13 from Rs. 40-6. Mills displayed no eagerness to sell, but covering demand continued. Genuine business was also effected. All this put up B. twills to Rs. 110-6 and hessian 40"×10 oz. to Rs. 41 on Wednesday. On the following day, B. twills gained further to Rs. 108 but hessian 40"×10 oz. was unchanged at Rs. 41. On Friday and Saturday, there was heavy speculative activity, and prices registered a substantial gain. B. twills ready advanced to Rs. 110-6 and hessian 40"×10 oz. to Rs. 42-4. Yesterday, the market opened on quiet tone, but soon after speculative support raised the quotations. Thus, ready 40"×10 oz. hessian gained further to Rs. 42-8 and B. twills to Rs. 110-12.

Forward rates also kept pace with the upward trend. But there was a difference between the upward movements for these positions in the two constructions. While B. twills forwards were higher than the ready, 40"×10 oz. hessian for all forward positions was lower than the ready rate. This feature was noticeable throughout the uptrend of this week. Thus, January-March B. twills and hessian were earlier quoted at Rs. 109-8 and Rs. 40-12, respectively, as against Rs. 108-8 and Rs. 40-13 for the ready goods. Later, the forwards rose to Rs. 111-12 and Rs. 41-14, respectively, as against Rs. 110-12 and Rs. 42-8 for the ready goods.

The factors responsible for the rise in raw jute prices have already been dealt with., Local *daissee* advanced from Rs. 29-8 to Rs. 30-8, Assam Upper from Rs. 28-8 to Rs. 30, and Indian northern from Rs. 28-8 to Rs. 30, all basis bottoms.

TEAS EASY

(From Our Own Correspondent)

CALCUTTA, 28*th August*

With the prospect of a peaceful settlement over the Suez Canal dispute, easier conditions were in evidence during the export sale yesterday. Earlier it had been felt that, since the possibility of Egypt entering into negotiations with the Western powers to discuss the latter's demand for internationalisation of the Suez Canal was not bright, shippers would like to see through the Canal as much tea as possible during the interval. If, however, in the event of shipments taking the way of the Cape of Good Hope, it had been foreseen that there would naturally be an increase in prices for ready tea in London. However, this is now a remote possibility, as the Canal continues to be free and is likely to remain so.

The tea industry is awaiting fuller details of the recommendations of the Plantation Inquiry Commission. From the summary published, it is not clear what the Commission has suggested to place the industry on a healthier foundation. However, what is commonly known is that cost of production has gone higher with increased labour wages and other statutory obligations. The Government of India can do away with the export duty on tea in the same way it had abolished the duty on jute goods; this would go a long way in placing with the industry some funds for modernisation.

Offerings during yesterday's auctions aggregated 56,900 packages. The fair general demand evinced at the opening of the sale was only a temporary feature. However, buyers for internal consumption were fairly active, and this resulted in prices for fannings and common brokens moving up. There was strong support for fannings with useful sizes and prices for these gained noticeably. On the other hand, mediums brokens gave way by 2 to 4 annas a lb. Keen competition was offered to the very best C.T.C. fannings. However, C.T.C. brokens and the fannings of an ordinary description received less support and lost by as much as 4 to 6 annas. Although there was good support, prices for good liquorings eased. Stylish leaf grades were steady, but Darjeelings were a quiet market. Tippy teas also eased. The quotations per lb. were: best C.T.C. Assam B.P. Rs. 3-8 to Rs. 3-10, medium Assam B.P. Rs. 2-1 to Rs. 2-3, plain B.P. Re. 1-9-6 to Re. 1-10, and clean black pekoe Re. 1-14.

In the sales for internal consumption, dusts offered totalled 16,180 packages. Conditions were steady, as there was strong demand. Grainy C.T.C. teas were bought at firm rates, while the rest of this category eased by As. 4. Good support was given to medium Assams, clean Cachar Dooars, and black leafy teas, prices of all of which improved by As. 1 to As. 2. The rates per lb. were: best Assam C.T.C. Rs. 3 to Rs. 3-8, medium Assam C.T.C. Rs. 2-10 to Rs. 2-14, medium Assam grainy Re. 1-15 to Rs. 2, and medium Dooars Re. 1-11 to Re. 1-12.

Rates for leaf grades were also steady. The quantity on offer aggregated 1,066 chests.

UPTREND IN METALS ARRESTED

(From Our Own Correspondent)

CALCUTTA, 28*th August*

With the possibility of a breakdown in the relationship among the Big Powers over the Suez Canal affair receding to the background, the uptrend in the prices of base metals was arrested. Stockists of manufactured goods cried halt to their activity and began to delay accepting deliveries from manufacturers. From Rs. 220, electrolytic copper lost to Rs. 218, but the subsequent recovery on the London Metal Exchange made good the local loss and the price was again quoted at Rs. 220. The same trend was in evidence in I.C.C. fire-refined ingots, which, although usually lower than the rate for the electrolytic material, were priced at par with the latter, in view of the good demand for the indigenous copper. Clean wire scrap also realised as much as Rs. 220, in view of the shortage in this. Tin ready improved to Rs. 526 from Rs. 523 and the local quotation was several points above the replacement cost. The withdrawal of the threat of strike in Malayan mines did not have any effect on Singapore quotations, as the demand for higher wages would be taken up by the employees and the principle of collective bargaining applied. From Rs. 67, electrolytic zinc gave way to Rs. 66-8. Activity was little, and this was reflective of the good supply position in this metal. Lead was quoted at Rs. 83 with consumers putting off entering into commitments.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 27*th August*

Foodgrains prices tended to slide down, following the Government's decision to open more than 10,000 fair price shops in the country for the distribution of wheat and rice in a bid to arrest the upward trend in prices. The latest revised Government plan envisages the distribution of imported foodgrains throughout the country to eliminate local shortage and over 50,000 tons of wheat have already been sent to various States and the stocks with the Government are claimed to be fully adequate to implement the revised policy.

Wheat prices recorded a fall during the week to Rs. 15 per maund for average quality and to Rs. 16-4 for farm quality. Selling pressure by Government at Delhi and arrivals of 1,000 tons of wheat for such sale at Meerut have been the main depressing factors. Local arrivals during the week were small, the average being 50 maunds daily and part of the local demand was met by imported wheat from Delhi. Local stock was put at 81 *khaties*.

Rice prices ruled slightly depressed, on reports that heavy rains during the week had proved beneficial to standing paddy crops. Gram prices lost As. 8 to Rs. 12 for *desi* quality and to Rs. 12-8 for Punjabi quality, and stocks were heavy at 131 *khaties*. Barley and *bejhar* prices eased in sympathy with wheat and gram prices and expectations of early arrivals of new *kharif* crops. Barley was quoted at Rs. 12 and *bejhar* at Rs. 11-12 per maund. Prices of *jowar*, *guwar* and *bajra* were depressed on want of buying enquiry.

Ready pulse prices also eased on want of support at high prices. Peas *dara* was quoted at Rs. 11-12 and white quality at Rs. 13-4, with stock position unchanged at 58 *khaties*. *Arhar* lost As. 4 to Rs. 12-4, with heavy stock position at 100 *khaties*. Prices of other pulses also recorded modest fall in all sections. *Urd* was done at Rs. 18 to Rs. 19, *moong* at Rs. 13-12, *massoor* at Rs. 15.

Pulses futures declined in all sections. The quotations as on Monday were very near the lowest levels of the week, on continued bear pressure from Bombay and Punjab.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 27*th August*

The sugar market ruled quiet during the week, despite better offtake from factories. The supply position of sugar is easy, following further release of 160,000 tons for free sale by the Government. The total releases in the current season are now put at 1,296,000 tons. Total production of indigenous sugar during the season ending July 1956 was 1,857,015 tons, as against 1,583,000 tons during the previous season and the closing stocks with the factories as on 31st July were 991,000 tons, as against 788,000 tons at the close of the previous season. Owing to the latest heavy rains which have proved beneficial to cane crop, the standing cane is making satisfactory progress and increased production is expected, as the sugarcane acreage has gone up by about 16 per cent. Mill delivery prices moved within fractional limits. The latest quotations as on Monday were: Jaswant Rs. 28-10, Simbhauli Rs. 28-12, Mowana Rs. 29 to Rs. 30, Daurala Rs. 29-4 to Rs 30, Amroha Rs. 28-3, Bijnore Rs. 28-4, Mansoorpur Rs. 29 to Rs. 30, Rampur Rs. 31, retail Rs. 30-10 per maund.

The *khandsari* market ruled depressed, thanks to poor demand. Inferior grades were quoted at Rs. 20 to Rs. 23 and superior at Rs. 24 to Rs. 27 per maund.

Despite good demand from Madhya Bharat, which alone recorded an offtake of eight wagons during the week mostly of wet quality, ready *gur* prices showed a downward trend. Dry quality lost As. 4 to Rs. 13 and wet kotha quality to Rs. 11 per maund. The fall in ready *gur* prices was due to better crop prospects and fall in future prices. Local stock were lower at about 22,000 maunds.

Gur fagun future delivery prices registered a steep fall during the week on bear pressure influenced by good rain reports. Opening at the highest level of the week at Rs. 11-1-3, prices recorded a fall in successive sessions and stood today at near the worst level of the week at Rs. 10-1-9.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly P=Company has Preference shares. T=Company has Debentures N=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M.—Managed by the board of directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares (e For seven months ended 31st March 1954
* New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

MARKET GOSSIP

(*Concluded from page 399*)

olders proposed that the shares of Tata Locomotive eld by the T.I.S.Co. could be sold to the share- olders of the latter company.

In his reply, Mr. Tata said that the share- olders' suggestion for commemorating the Golden ubilee of the Company would be carefully con- idered by the Directors. Referring to the premium ollected on the old deferred shares, he observed hat this had been used in the past for writing down ome asset. He was not, however, sure and pro- nised to look into the question. As regards the roposal for the distribution of Tata Locomotive hares, the tax position was explained by Mr. J. D. hoksi, Vice-Chairman of the Company. He said hat, if instead of dividend, the Company were to istribute the shares of the Tata Locomotive, it ould be construed as a dividend and be taxed as uch. As regards the sale of these shares to the .I.S.Co. holders, Mr. Choksi said that it would be ifficult to do so without infringing the law, as the umber of Tata Locomotive shares held by the .I.S.Co. fell very much short of the number of hareholders in the latter.

The other points from Mr. Tata's replies to the hareholders' queries which will be of interest to eaders of this column are as follows:

Out of the new capital issue, only 27,265 shares orth Rs. 9 lakhs have not been applied for. The ompany does not propose to take any action for he present in respect of their allotment. It is uite possible that the shareholders who have not pplied may come forward later on. There is there- ore, no question of Government interference in espect of the allotment of these shares or their ale in the open market.

The Company's investment in the Indian Tube ompany aggregates Rs. 1.47 crores and will go up o Rs. 3.20 crores. If and when the Indian Tube Co. xpands and issues fresh capital, it will be offered o the public.

No penalty clause or incentive

COTTON TEXTILE POLICY FAILS

THE sharp increase in excise duties on all varieties of mill-made cloth which came into force from the 1st inst. is a natural sequel to the unsound textile policy of the Government of India. It is a case of one wrong step leading to another. In its undue anxiety to expand employment in the handloom sector, the Government decided, much against the advice of practical-minded persons and well-meaning friends from abroad, to ban all expansion in the weaving capacity of mills. This was a retrograde step, because the population was rising and a large programme of development was undertaken, resulting in a perceptible rise in the volume of money in circulation. Against this background, any other country would have automatically taken suitable steps to bring about a quick increase in the supply of an essential consumption item such as cloth at reasonable prices. But the powers-that-be in India decided in their wisdom to rely on the unorganised, ill-equipped, low-productive handlooms. They refused to listen to the advice, repeatedly given, that the handlooms would not be able to step up their production at reasonable cost and *in good time* to catch up with the steadily expanding demand. It is for their folly that people have to pay more now for the cloth which they cannot do without.

Many, of course, had thought

encouraged the Government to resort to it. Another factor that may have encouraged the Government to follow this policy is that the vast majority of politicians, labour leaders and demagogues have been outdoing the Government in propagating the policy of preventing expansion of mill industry and of boosting the handloom industry. As a result, the only people who can make the masses conscious of the basic defects in the Government's cotton textile policy will not try to do so. All this, however, does not answer the criticism that the measure is a very inequitable one to the vast majority of the people.

An equitable method of restricting consumption to available supply of cloth would be direct controls, that is, control on production, prices and distribution, as well as rationing at the retail end. A shorter version will be opening of fair price shops. These expedients, however, were tried in the past and found wanting. They led to black-marketing and corruption from top to bottom. Every one was tired of it and none, except academicians and the leftists who fish in troubled waters, will welcome it. The public's experience of controls is so bitter that it would rather prefer to pay a higher price for cloth than accept rationing. If controls were introduced, instead of being busy with productive efforts, the Administration also would be wasting its time over unproductive measures. Further, controls invariably result in a fall in production. What is more, rationing of mill cloth will adversely affect the long-term future of handloom industry, for it is a more effective form of advertisement for mill-made cloth than any other. Considering all this, it is not surprising that the Government is strongly opposed to the re-introduction of controls and rationing.

As the more equitable method of distributing the available supply of cloth among the people (that is, through physical controls and rationing) is not a practicable proposition and as it is not right to make the poor pay a price determined by the law of supply and demand in a sellers' market, the only solution open to the Government is to allow the mill sector to expand rapidly, for it is only this sector that can make available cloth at a price which the vast majority of people can afford to pay. It is no use depending upon the handlooms to fill the yawning gap between supply and demand. They will not be able to deliver the goods in time and at a price consistent with the capacity of consumers to pay. Clearly, the experiment tried during the past four years has provided enough evidence to conclude that the policy of reserving markets for handlooms by pegging mill production has let down the people. It has not only made cloth needlessly costlier for the domestic consumer but has also jeopardised the export trade in cloth at a time when India needs more foreign exchange. Besides, it has led to a fall in the quality of cloth and provides a premium on inefficiency. If things continue at this rate, there will be a marked deterioration in the health of this premier industry. And it will soon go the way the jute industry, another premier industry and important foreign exchange earner, has gone. It will thus be suicidal for the country to persist in following the present foolish textile policy.

ECONOMIC FREEDOM

SPEAKING at the annual general meeting of the Tata Iron and Steel Co., Ltd., the Chairman, Mr. J. R. D. Tata, felt that the charge that free enterprise in India had shown no initiative in recent years was particularly hard to take, for, he was, in fact, "surprised at the amount of initiative displayed, considering the discouragement and disincentives to which it has been subjected." Mr. Tata has, indeed, put the whole issue in a nutshell. Those who make such sweeping charges against private enterprise, ignoring all its positive achievements, will do well to consider the serious handicaps under which it has had to work in the past.

What these critics badly need is a pair of well-tested historical glasses. They obviously ignore the fact that free enterprise has never had a fair or free field in this country at all. India missed the bus of the first industrial revolution, because its onset elsewhere in the world synchronised with great internal turmoils, leading eventually to political domination by an alien power. For nearly a century and a half, the energy of the best of our men was canalised along political and agitational channels. Consequently, no economic progress comparable with that in the West could be made. The leading political party in the country, the Congress, itself recognised that economic progress had to await political freedom. Nevertheless, it was during this period that Indian enterprise, working under very heavy odds sufficient to crush the bravest of *entrepreneurs*, built up some of India's leading industries, such as textiles, iron and steel and shipping. In those palmy far-off days, the Congress and the few brave spirits that were engaged in economic enterprise worked hand in hand, both moved by the same patriotic motive of raising India's living standards. It was tacitly recognised that political freedom, though it had necessarily to be the immediate objective, was a means to an end, the end being wider opportunities for social and economic progress. This climate lasted right down to the time of India's independence.

It is now less than a decade since India became free. Now, this is the only period during which free enterprise may be said to have functioned under conditions of political freedom. In judging its performance during this period, it is well to bear in mind at least two important considerations. In the first place, a decade is hardly a very long period in the history of a nation. The progress made by free enterprise within this brief span cannot certainly be compared to what has been achieved by its counterpart in other countries which have enjoyed several centuries of political freedom and State patronage. In the economic race, India has had a late start. Further, it has also been handicapped by the fact that, whereas, in other countries, all the welfare legislation, restrictive of enterprise, came at the end of a long period of economic prosperity, such legislation has been enforced in this country even before a reasonable level of prosperity has been achieved. This is not intended as a criticism of welfare legislation but is mentioned only as a factor to be taken into account for making a sober assessment of its impact on Indian economy.

The second consideration, which must be borne in mind in judging the performance of free enterprise in India, is whether it has been free at all. In other words, has political freedom brought more freedom for economic enterprise? How free has free enterprise been in the last few years? This is by no means an academic question, for the whole issue impinges on the practical work-a-day world of business men and industrialists. It is well to recall that, at the time of the attainment of independence by this country, the whole world was so busy repairing the damages of the war that it could not spare even a nut or a bolt, let alone elaborate plant and equipment, for India. The best that Indian enterprise could do was to keep the blue-prints for economic progress ready, so that it could translate them into action as soon as world conditions permitted it to do so. But, before it could do anything of the kind, the whole climate for economic enterprise in India underwent a startling change. The Government felt that it must have a larger share in the country's economic activity. "Mixed Economy" was a phrase that held the field till only a few years ago. Although many men doubted whether such a dichotomy of economic functions was strictly necessary—there used to be some lively debates over the respective proportions of the two ingredients in that mixture—Indian enterprise was perfectly willing to play its allotted role under the new dispensation, leaving the Government to pursue what it considered to be the best for the country. In the last two years, the phrase "mixed economy" too has been abandoned, its place having been taken by a more sonorous but less precise "socialist pattern of society." And, it is in the name of socialism that the Government has repeatedly assailed the private sector not only by compelling it to work under a series of crippling legislative enactments but also by directly invading its sphere through such measures as State Trading and the nationalisation of a part of commercial banking and the whole of life insurance. And it is not by these measures alone that the Government has curbed free enterprise. For, in many authoritative pronouncements, it has abundantly made it clear that free enterprise is only tolerated, not wanted, and that the only freedom it will have is to hand over its activity to the Government as and when it is called upon to do so.

It is against this background that one has to assess the achievements of free enterprise in this country. Undeterred by the handicaps to which it has been subject, Indian *entrepreneurs* have gone full steam ahead. They have more than fulfilled their share allotted to them under the first Five-year Plan. The industries which they have started or expanded are so numerous and embrace so wide a range that it will be difficult to name one which was open to the private sector to exploit and to which this sector has not turned its attention. Indeed, nearly all the industrial progress that has been made by this country can be attributed only to this sector. What is surprising is not that it should not have accomplished more but that it should have achieved what it has—and that, in the face of some of the vilest propaganda by political extremists and much lack of sympathy, if not active antipathy on the part of the Government.

And yet, it is this enterprise that is now sought to be discredited. This would not be a serious matter at all, if its displacement were calculated to lead to the achievement of certain higher values. Actually, the danger is that the country would lose, through the displacement of free enterprise, not only economic efficiency—a large enough consideration in itself—but also the values that one generally associates with a democratic set-up. The question is whether the State should be allowed to grow at the expense of the individual and all the men turned into wage earners working for a system of State capitalism. Should the State be allowed to add to its unquestioned political power all the capacity for controlling the economic destinies of individuals? Should the State be allowed to bestride the economic world like a colossus? These are the doubts that one is compelled to entertain by the recent trends in Governmental policy. Mr. Tata did no more than voice these sentiments when he said:

> "We are witnessing in India an uninterrupted growth of Governmental power in the economic field and are already well on the way to a strange and unnatural combination of political democracy and economic autocracy. The question that should agitate the minds of all of us is whether our political freedoms can long survive if our economic freedom continue to be whittled away. Once all economic power is centred in Government, will it not be found equally necessary to curtail other freedoms in the interests of the people? Although there may be no danger that the able men in power today, motivated as they are by democratic ideals, will abuse their powers, history shows that the danger lies in the very existence of unlimited power which may one day fall into less worthy hands."

Mr. Tata has raised certain fundamental issues, the settlement of which brooks no delay. The danger that the large powers which the Government is acquiring day after day—no session of Parliament ends without passing some legislation or other which tantamounts to a clear encroachment on the freedom of individuals—might fall easily into less "worthy hands" should make the ruling party more conscious of the need for preserving democratic values in this country. In many countries, the historical paradox has been that the men who successfully fought tyranny and fought for freedom have been among those most eager to forge new fetters for the people. It is to be hoped that the Congress Party will so conduct the affairs of the country that a similar charge will not be brought against it by posterity.

INDIA'S NEW FINANCE MINISTER

MINING RULES FAVOURABLY MODIFIED

THURSDAY, 5 P.M.

THE consensus of opinion in the country is that, in asking Mr. T. T. Krishnamachari to take over the Finance portfolio at the Centre, Mr. Nehru has acted wisely. Indeed, even when it became clear that Mr. C. D. Deshmukh's exit from the Cabinet was inevitable, it was widely believed that T.T.K., as he is affectionately called, would be asked to take his place. It was, therefore, a matter for surprise when Mr. Nehru himself took over the responsibility from Mr. Deshmukh. The inference from this action was that he preferred to leave T.T.K. where he was and find out some one else for managing the Finance Ministry, because none seriously expected him to carry this onerous burden for long in addition to his heavy duties as the Prime Minister and Minister for External Affairs. It was felt that he might ask Mr. Morarji Desai to come over to the Centre, after the problem of reorganisation of States was satisfactorily settled, either as the Finance Minister or as the Home Minister, in case Mr. G. B. Pant was willing to shift to the Finance Ministry. Perhaps, the happenings in Gujerat after the decision to have a bigger bilingual Bombay State and the subsequent fast of Mr. Morarji Desai, had changed Mr. Nehru's mind. Since the bilingual Bombay State is a vast one, Mr. Nehru might have felt that Mr. Desai should continue to be its Chief Minister at least for some more years. That at any rate is the view of many people in this city. It is also possible that Mr. Pant might have been reluctant to take over the heavy responsibility of piloting the second Plan successfully, in view of his advancing age and delicate health.

MARKET GOSSIP

Even if either of them had been chosen for the Finance Ministership, it would not have been a happy decision. Although Mr. Morarji Desai has proved himself as an able administrator and a strong disciplinarian, he has not all the equipment necessary to be a successful Finance Minister. He is not an economist and his sense of idealism will be a liability rather than an asset. As for Mr. Pant, his age and health are a serious handicap to preside over such a key ministry as Finance. It is, therefore, gratifying to find that neither of the two was asked to handle the Finance portfolio and that Mr. Nehru's choice ultimately fell on the most suitable person available in the Party. T.T.K. has proved his mettle as Minister for Commerce and Industry, a Ministry which had been the target of criticism both in and outside Parliament before he took it over but which is now praised as the most efficient one at the Centre. He is a practical economist. But this does not mean that his knowledge of economic theory is poor. He has, perhaps, read more books on economics than many Doctors of Economics have done. His good grasp of economic problems is evident from the realistic decisions he took on such issues as protection for domestic industries, Imperial Preference and those arising from India's association with the G.A.T.T. He has also vision. It was he who was the first to think in terms of 12 million tons of cement and 6 million tons of steel as targets for the second Five-year Plan. When he first mentioned these figures, even the best brains in the Planning Commission were sceptical. But now the country is actually going ahead with plans for achieving these goals. An unsolicited tribute to T.T.K. was paid by Mr. J. R. D. Tata the other day when he addressed the shareholders of the T.I.S.Co. Said Mr. Tata:

> "I feel the charge that free enterprise in India has shown no initiative in recent years is particularly hard to take. I for one am in fact surprised at the amount of initiative displayed considering the discouragement and disincentives to which it has been subjected. While saying this, it is only fair that I should acknowledge the help and advice which industry in the private sector has received in recent years from our dynamic Minister for Commerce and Industry. It is a measure of the man that his socialistic views have not prevented him or his Ministry from extending assistance to industries in need of it for purposes of agreed schemes of development. Without his encouragement and quickness of decision, our two million ton project might not have come into being or would still be at the stage of discussion and correspondence. We are grateful to him for his support."

T.T.K. is a tough negotiator, as many foreign commercial and industrial delegations which have visited this country to enter into business deals will testify. Even the Russians realised it when the question of finalising the deal on the Bhilai steel plant fell to his lot. In fact, one of T.T.K.'s uncontradicted claims is that he has, as the Minister for Commerce and Industry, helped many an Indian business man to revise in his favour the deal already concluded by him with foreigners for technical collaboration and supply of capital in part. He has done a lot, through persuasion, for Indianising a part of the administrative staff of foreign concerns. He has also succeeded in inducing some of the exclusively foreign-owned industrial concerns operating in this country to give an opportunity to Indian investors to participate in their prosperity. Although this has meant repatriation of some foreign capital from the country at a time when it is badly needed, it has brought about a welcome increase in the number of blue-chips quoted on the Indian Stock Exchanges.

Although T.T.K. is not a cent per cent. Congress Party man—we do not think he ever actively participated in any of the Civil Disobedience Movements aimed at freeing the country from foreign rule—he has done more than any fullfledged Congress man to give as practical a shape as possible to the ruling party's vague and unrealistic economic policies and programmes. Evidence of this will be found in the practical steps he has taken for stimulating employment in rural areas and semi-urban centres through small-scale and cottage industries. It was he who first propagated the idea of socialisation of the economy without actual nationalisation. His approach is this: Why should the State own a concern when it can effectively direct its working through suitable controls? Left to himself, it is unlikely that he would have nationalised either the Imperial Bank of India or life insurance, although at one time in the past he used to advocate that course. He is fully conscious of the weaknesses of the Government to run industrial concerns. It is significant that, though he was the "jailor of private enterprise," as he once aptly described himself, he did not commit the mistake of taking over any of the badly managed concerns, even though he had enough powers and excuses for doing so. Some of the cotton mills, for instance, had placed themselves in a position to evoke State-ownership. The introduction of the State Trading Corporation is an instance of his experiment at socialisation without ownership. This action of his has, of course, come in for a considerable amount of justifiable criticism from the business community, but he seems to have met many of these criticisms quietly by yielding back to the private sector a part of the ground which he had hurriedly occupied on the ore export front.

T.T.K. started his business career as a salesman and made a remarkable success of it. This experience has stood him in good stead in his political career too. Not only has he been able to put through many successful business deals as the Minister for Commerce and Industry but he has also done the work of a Public Relations Officer for the Government more efficiently than the Minister for Broadcasting and Information. He has a knack for getting on with journalists and maintaining most cordial relations with them without letting out a single State secret to them. Similarly, he has successfully sold the idea of socialist pattern of society to many foreign observers from the West. He has made them believe that, as private enterprise in India is not sufficiently enterprising in establishing heavy industries, it has become necessary for the State to plan, promote and establish such industries.

In espousing the cause of the ruling party and in trying to defend some of its dubious economic policies, T.T.K. has said many harsh things about the private sector and taken certain measures which have hurt that sector in many places. All the same, there is no doubt that he has done so much for the private sector that many of his critics in the Congress Party and in the Government regard him as a great friend of private enterprise. It is also true to say that many in the business world regard him as one who knows his job and has helped them to increase their effective contribution to the economic well-being of the country.

It is now fairly public knowledge that T.T.K. is a man of strong likes and dislikes and that he is particularly harsh on those who try to be smart with him. On such occasions, he is apt to disregard even well laid-down rules, let alone conventions, and use the discretionary powers vested in him as a Minister in a ruthless manner. His handling of the controversy over futures trading in cotton towards the close of 1955 and early this year is an instance in point. Another instance was provided by his rough handling of the plantation industry some two years ago. This particular trait of his, coupled with his knowledge of business methods, has evoked a certain amount of fear among the business community. It will indeed be no exaggeration to say that a part of the respect he commands in the commercial world is due to the fear complex which he has engendered among businessmen. As a believer in action, T.T.K. is not a stickler for orthodoxy. This is his strength and weakness alike. His success as the Finance Minister will depend, to a large extent, on the manner in which he displays this quality.

* * * *

Unfortunately for T.T.K., his very first act as the Finance Minister had to be an unpleasant one for the public, in general, and the markets, in particular. It fell to his lot to announce a large increase in the excise duty on an essential article such as cloth which is calculated to net in an additional revenue of Rs. 17.5 crores to the Exchequer in the remaining six months of the current fiscal year. This action aroused considerable opposition even among the Congress Members of Parliament, but he finally succeeded in getting the support of his party. It has been criticised by almost all sections of the Press also. T.T.K. is, however, not to be blamed for this proposal, because it is the direct outcome of a defective cotton textile policy of his party which he has been trying to implement in an adroit manner. As many are aware, he is not a wholehearted supporter of this policy. He has many mental reservations about it. Perhaps, he is not true to himself by pursuing a policy which he knows very well is defective in many respects. But, in politics, one has to compromise, if one is to survive as a successful leader. That is exactly what he has done.

T.T.K. has assumed charge of the country's finances at a time when inflationary tendencies are rife. He is almost in the same position as Sir Jeremy Raisman was shortly after the outbreak of war. If he is to keep inflation under effective control, he cannot be a friend of the bulls in the markets. The bears will be his bosom friends. The increase in excise duty on cloth has already cost the bulls on the Stock Exchanges and in the commodity markets fairly heavily. Many are wondering whether he will give any more shocks to them. Will he raise the interest rates? Will he tighten the credit further? Will he impose more taxes? These are some of the questions that are now worrying the operators and have engendered a feeling of hesitancy in the markets.

* * * *

Investors in India have been understandably chary of risking their money in certain mining enterprises. This is as it should be, considering that all mining operations carry a certain element of risk, and, even where they are demonstrably successful, they are essentially concerned with a wasting asset. But the investors' disinclination also stems from the uncertainties about the Government's mineral policy. For one thing, the recent amendment of the Constitution has exposed mining rights to a new risk. The Constitution has now been amended to the effect that no law providing for the extinguishment or modification of any rights accruing by virtue of any agreement, lease or licence for the purpose of searching for, or mining any mineral or mineral oil or the premature termination or cancellation of any such agreement shall be deemed to be void on the ground that it is inconsistent with the rights to property guaranteed by the Constitution. Further, even if compensation is paid for premature cancellation of a lease, the issues relating to the quantum of compensation cannot be taken to the courts. Secondly, the latest Industrial Policy Resolution makes certain major changes in the Government's mineral policy. Under this Resolution, the minerals and mining processes, the future development of which will be the sole responsibility of the State are: iron and steel, heavy plant and machinery for mining, coal and lignite, mineral oils, mining of iron ore, chrome ore, gypsum, sulphur, gold and diamond, mining and processing of copper, lead, zinc, molybdenum and wolfram. Next comes the list of minerals or mining industries which will be progressively State-owned and in which the State will take the initiative in establishing new undertakings but in which the private enterprise will also be expected to supplement the effort of the State. This list includes all other minerals (except the minor minerals as defined in Mining Concession Rules), aluminium, non-ferrous metals not included in the first category and manufacture of ferro-alloys and tool steels.

It should thus be clear that a very wide field is reserved for the public sector and that the State has also large powers for entering into a wide range of mining industries. Nationalisation is a potential threat to many of these industries. In this connection, it is interesting to note what the Union Minister for Natural Resources, Mr. K. D. Malaviya, stated, in the course of the debate on Mining Concession Rules, in the Lok Sabha, last week. Mr. Malaviya said: "Personally, left to me, I would have nationalised more mines and in a more expeditious way than we are able to do at present. That is my view. But the national trend is visible and cannot be resisted by either a group of members or even by the Government." Investors would probably hope and pray that things were not entirely left to Mr. Malaviya. But his statement indicates the Government's mood, its intentions and the objectives of its policy, though no nationalisation is presumably contemplated immediately.

So much for the broad lines of the Government's mineral policy. These are certainly not calculated to inspire confidence in the minds of existing or potential investors. The Mining Concession Rules which were adopted by the Lok Sabha last week, however, belong to a different category. Generally speaking, investors need not be unduly perturbed by these Rules, which are designed to place mining leases on a more scientific basis. The Government is certainly on firm ground when it insists that such leases should conform to a certain pattern. There is no doubt that some chaos has prevailed in this field. Many holders of mining leases have adopted a sort of "dog in the mine" policy. They will neither exploit the leases they hold nor sell them to those who will. Also, some of these leases were obtained many years ago and for unconscionably long periods. Mr. Malaviya quoted an instance of a lease which had been granted to a particular party for 999 years. Again, in the Ranchi District (Bihar State), a party had won a lease, covering an area of 15,200 acres, for a period of 95 years; during the last 22 years, that party had prospected only an area of 37.8 acres. Briefly, the Mining Concession Rules seek to fix the area for a mining lease at 10 square miles and the maximum duration of a lease at 30 years, with rights of renewal. Explaining the scope of these Rules, Mr. Malaviya said: "The Rules do not contemplate any rigid enforcement of the 10-sq. mile limit. The idea is that the case of each lease will be considered on merits with reference to the potentiality of the area and the technical workability of the mines. All these will be taken into consideration against the background that, if a large area lies unnecessarily and undesirably with one party, it should be curtailed to the standard unit of 10 square miles." He revealed that, in framing the Rules, the Mineral Advisory Board, on which important mining interests were represented, was consulted and some of the Rules had been re-drafted, in order to accommodate the suggestions made by the private sector.

The Government's mineral policy is defective not by reason of the Mineral Concession Rules it seeks to enforce, but by its failure to provide the necessary fiscal and other incentives to prospectors and its decision to reserve for itself the right to exploit a very wide range of minerals. This decision, which stems mainly from the ideological bias of the Government, carries its own danger. For it may well happen that the Government, in its turn, will also play the "dog in the mine" policy, refusing others entry into mining and itself being unable to exploit the mineral wealth to the full.

EQUITIES RETREAT

HIGHER EXCISE DUTY ON CLOTH INDUCES SELLING

(From Our Own Correspondents)

BOMBAY, *6th September*

THE two outstanding events of the week under review, which were greeted by the share markets in a divergent manner, were the appointment of Mr. T. T. Krishnamachari as Finance Minister, Government of India, in succession to Mr. C. D. Deshmukh, and the levy of higher excise duty on cloth. While Mr. Krishnamachari's choice as Finance Minister was generally welcomed in commercial and trade circles, his almost first act as Finance Minister, namely, the heavy increase in the excise duty on mill-made cotton cloth in order to check the recent rise in cloth prices and to mop up the extra profits of mills, was not to their liking. Though this higher levy was anticipated in market circles last week itself, as was indicated by the selling pressure in textile shares on Thursday last week, there were quite a few who were inclined to take these rumours as baseless. To such operators, the introduction of the Bill in Lok Sabha. on Friday last, came as a shock and brought forth fresh selling pressure in textile shares on Monday and Tuesday this week, the only two days on which the Stock Exchange remained open during the week under review. Further recession in textile shares was, however, checked by the fact that the news had already been discounted in prices. Moreover, trading on the Stock Exchange during the week was interrupted by four holidays, that is 31st August, 1st, 5th and 6th September, which restricted the selling pressure.

In the steel section, Tata Ordinaries (which were listed *ex-div.* on 31st August) were done at Rs. 202-4 *ex-div.* on the 3rd inst. before closing at Rs. 199-12 *ex-div.* (div. Rs. 10-8). as against Rs. 212-12 *cum-div.* a week ago. Indian Irons slipped down from Rs. 36-10 to Rs. 36-3½ before finishing at Rs. 36-5½.

Textiles, as is only to be expected, bore the brunt of the selling pressure. Bombay Dyeings, which had been hammered down from a high of Rs. 702-8 to Rs. 687-8 towards the close of the previous week, were further pushed down this week to a low of Rs. 647-8. The closing was, however, a shade better at Rs. 653-12. The drop in Bombay Dyeings was not as much as that in Century which shed Rs. 18 over the week to Rs. 566-8. This disparity was due to the fact that Century, as a producer of fine and superfine quality cloth, would be worse affected if it is unable to pass on the levy to the consumers, while Bombay Dyeings would not be much affected, because the bulk of the mills production is exported. Kohinoors declined from Rs. 379 to Rs. 365-8. Central Indias dropped Rs. 5-8 to Rs. 153-8, Finlays Rs. 18-8 to Rs. 355-8, Gokaks Rs. 4 to Rs. 244 and Indu Ordinaries As. 11 to Rs. 12-15½. Khataus fell by Rs. 41-4 to Rs. 256-4, Minervas by Rs. 3-2 to Rs. 102-8, and Models by Rs. 7-8 to Rs. 183-12. New City lost Rs. 5-10 to Rs. 183-2 and New Greats Rs. 8 to Rs. 252. Podar Mills declined by Rs. 11-4 to Rs. 176-4, Phœnix by Rs. 3-12 to Rs. 160 and Shree Niwas by Rs. 8-12 to Rs. 231-4. Simplex moved down by Rs. 4 to Rs. 209-8. Standards by Rs. 11-4 to Rs. 462-8, Svadeshis by Rs. 8-8 to Rs. 253-8, Swans by Rs. 27-8 to Rs. 450 and Tata Mills by Rs. 3-8 to Rs. 56-8.

Bank shares were again featureless. Transactions were few and variations in prices were negligible. Barodas were done a rupee lower at Rs. 101. Bank of Indias, however, gained As. 8 to Rs. 172-8, while Centrals were unchanged at Rs. 53 and their 'A' ordinaries were done As. 8 lower at Rs. 56. United Commercials changed hands As. 8 lower at Rs. 58.

Insurance shares also ruled dull, with hardly any activity. New Indias were unchanged at Rs. 48, Orientals at Rs. 3,650 and Industrial Prudentials at Rs. 31 *ex-div.*

Transactions in electricity shares were few and far between. Where, however, business was put through it was in favour of buyers. Ahmedabad Electrics were done As. 10 lower at Rs. 99-1. Bombay Suburbans shed Rs. 5 to Rs. 110-5. Surat Electrics were unchanged at Rs. 119-6 and Tata Hydros at Rs. 128. Tata Powers were bid Rs. 7-8 lower at Rs. 1,297-8, while Andhra Valleys were maintained at Rs. 1,242-8.

Miscellaneous section ruled quiet, with the general trend of prices downward. In the sugar group, Belapurs were hammered down from Rs. 254-8 to Rs. 249. Phaltans declined by Rs. 6 to Rs. 163 and Walchandnagars by Rs. 7-8 to Rs. 270. Bhopal Sugars were, however, unchanged on balance at Rs. 17-12. Among cement shares, Associated Cements received some support and were lifted up from Rs. 205-4 to Rs. 207-8. The closing was, however, lower at Rs. 205-8. Digvijays gave way from Rs. 204-12 to Rs. 200-4. Ashoka Cements were As. 2 lower at Rs. 12-4. as also Dalmia Cements at Rs. 15-4. Among engineering and mining shares, Alcocks closed Re. 1-4 lower at Rs. 346-4. Tata Locomotives shed Rs. 2 to Rs. 174. Premier Constructions were steady at Rs. 215 and Larsen and Toubros at Rs. 18-7. Mukund Irons were done As. 6 lower at Rs. 13-10. as also Kamani Engineerings at Rs. 6-8. Shivrajpurs were marked down by Rs. 3-8 to Rs. 84. Indian Coppers shed an anna to Rs. 7-3. B.B. Petrols declined by As. 5½ to Rs. 3-12½.

In the shipping and transport group, Scindias attracted some support early in the week and rose from Rs. 18-10 to Rs. 19-4, but reacted at the close to Rs. 18-13½. Great Eastern Shippings shed As. 4 to Rs. 19-8, while India Steamships were done As. 3 better at Rs. 9-13. Premier Automobiles changed hands Re. 1-8 lower at Rs. 107-8, while Hindustan Motors held ground at Rs. 10-1. Among miscellaneous industrials. Bombay Burmahs (old), after an initial recovery from Rs. 762-8 *cum-div.* to Rs. 770 *ex-div.* (div. Rs. 11-4) reacted to Rs. 736-4 before advancing to Rs. 750 at the close. National Rayons were initially marked up from Rs. 265 to Rs. 270, but this improvement proved short-lived, the shares receding to Rs. 263 at the close. Dharamsi Chemicals were unchanged at Rs. 51, while Tata Chemicals declined by As. 5 to Rs. 19-11 Dhrangadhra Chemicals were steady at Rs. 139-8. Tata Oils shed Rs. 2 to Rs. 55 and Wimcos Rs. 3-2 to Rs. 180.

Calcutta Stock Exchange

CALCUTTA, *5th September*

Steady conditions were in evidence on the Calcutta Stock Exchange on Thursday and Friday last, but since Monday the undertone was somewhat quiet. Mr. T. T. Krishnamachari's appointment as Finance Minister was a special cause for the earlier steadiness since it was anticipated that in formulating Government's financial policy he would have a better appreciation of the pits and pinnacles of private enterprise than his predecessor. Mr. Krishnamachari established new standards in the Commerce and Industry Ministry, and the speed with which he pushed up schemes encouraged the operators and the investors alike to look to the future with more confidence.

The earlier steadiness was, however, short-lived, as the steep rise in the rate of excise duties on cloth announced on Saturday last acted bearishly, on the fear that the duties might affect the profits of mills. The Plantation Enquiry Commission's recommendation to limit dividends, as well as to permit repatriation of profits after ensuring necessary financial provision for replanting also caused selling pressure for a time. In spite of the encouraging reports from the jute goods market and the subsequent decline in fibre prices, jute shares recorded some recession mainly by way of profit-taking.

(An interesting news of the week in this part of the world was the opening of a stock exchange in Narayanganj in East Pakistan on 1st September. It will deal in shares of jute mills, paper mills, public utility concerns, and tea gardens. Active members on the exchange number 34 with provision to have 16 more. The exchange, styled as the East Pakistan Stock Exchange Association Ltd., has an authorised capital of Rs. 3 lakhs divided into 150 shares of Rs. 2,000 each.)

For reasons already stated, textile shares were marked down. From Rs. 19-11, Kesorams lost to Rs. 18-12. At Rs. 27-10, Elgin Mills disclosed a loss of almost one point, Cawnpores, however, were unchanged at Rs. 9, while Bowreahs changed hands at Rs. 150, as against Rs. 171 previously.

Coals were quiet. Contrary to earlier expectations, the proposal to amalgamate the Burrakur Coal Co. and the Standard Coal Co. has not yet been finalised. This caused selling pressure in Burrakurs which gradually lost to Rs. 14-10 from Rs. 15-5, while Standards gained to Rs. 23-14 from Rs. 23. Khatras Jherriahs came to business at the unchanged rate of Rs. 60-8, while Raneegunges were quiet at Rs. 13-5. Equitables moved down from Rs. 31-5 to Rs. 30-12.

Good counters in jutes attracted funds and gains were recorded. On interested support, Northbrooks were raised to Rs. 27-8 from Rs. 26-4, and Unions realised Rs. 166, as against Rs. 163 previously. New Centrals were wanted at Rs. 17-2, but subsequently fell to Rs. 16-9. On the other hand, Nationals declined to Rs. 24-12 from Rs. 26-7 and Champdanies to Rs. 165 from Rs. 167.

In common with the general trend, minings also looked down. Indian Coppers were pushed down to Rs. 6-11 from Rs. 6-14, and Burma Mines to Rs. 3-2 from Rs. 3-6.

Among engineering shares, Indian Irons opened at Rs. 36-15 and, after moving narrowly either way, declined to close at Rs. 36-5 on profit-taking. Braithwaites were, however, fractionally better at Rs. 31-4, as were Texmacos at Rs. 24-4. On fresh support, Jessop & Cos. looked up to Rs. 34-6 from Rs. 34-2 before easing to Rs. 33-12.

Tea shares were shown less interest. Teliaparas were unchanged at Rs. 220, with Brook Bonds declining to Rs. 21 from Rs. 21-8. Dhelakhats were extremely quiet at Rs. 22-8. Dauracherras were bought at Rs. 15, as against Rs. 15-9 previously.

The usually steady miscellaneous industrials were also affected by the generally dull wave. However, selected counters touched higher levels. Indian Aluminiums were pushed further to Rs. 25-1 from Rs. 24-9, and National Carbons received attention at Rs. 29-4. Associated Hotels were for a time higher at Rs. 11-6 before closing at Rs. 11. From Rs. 18-8 Calcutta Tramways hardened to Rs. 19-4. At Rs. 12-14, Aluminium Corporations picked up Re. 1-6. India Steamships were fully steady at Rs. 9-12.

Madras Stock Exchange

MADRAS, *4th September*

The air of buoyancy noted on the Madras Stock Exchange in the past fortnight abated during the week under review. In fact, the market ruled distinctly bearish. The operators were inclined to feel that the chances of heavy inflation had receded, at any rate for the time being. This belief was based on the recession of the danger of a hot war over the Suez Canal and the Government's determination to take energetic measures to check the rising tendency in prices. It is, however, not so much these factors as the steep upward revision in export duty on mill cloth and fears of lower yields from plantation companies as a result of the implementation of the Plantation Enquiry Commission's recommendations that imparted weakness to the market. Selling pressure was quite pronounced and equity values suffered a setback over a wide front.

In the planting section, rubber shares were particularly depressed. Nilamburs were on offer at Rs. 17-4 *cum-div.*, as against Rs. 17-4. despite the announcement of higher dividend by the directors of the Nilambur Rubber Co., Ltd., of 15 per cent. for 1955, which compares favourably with 10 per cent. for 1954. Malankaras climbed down by As. 12 to Rs. 35, Midlands by As. 11 to Rs. 21-9 and Rajagiris by As. 10 to Rs. 26-8. Thirumbadis dropped As. 2-6 to Rs. 2-6-6. Kailas receded by 18 pies to Rs. 7-9 *cum div.* Pullangodes lost an anna to Rs. 4-8-6. Tea shares were also subjected to selling. Nilgiris slumped from Rs. 13-2 *ex-div.* to Rs. 12-10 cum-div., reflecting operator's keen dissatisfaction at the greatly reduced dividend of 6¼ per cent. for the year ended March 1956, as against 15 per cent. for the previous year. Kil-Kotagiris fell by As. 6-6 to Rs. 8-12-6. Neelamalais slipped by As. 5 to Rs. 7-14. Devasholas, Peermades and Waterfalls declined by As. 4 each to Rs. 25, Rs. 36-8 and Rs. 6-15, respectively. Talayar Teas eased by As. 3 to Rs. 13-10. Ouchterlonys lost a like amount to Rs. 5-8-6. Coffee shares, too, lacked support. Consolidateds were hammered down by As. 13-6 to Rs. 21-10. Coffee Lands were pushed back to Rs. 26-10 from the last week-end rate of Rs. 27. Kadurs were quiet at Rs. 2-12 *ex-div.* Mysore Coffees, however, were somewhat favoured As. 2 higher at Rs. 3-3-6.

Textile shares reacted adversely to the enhanced excise duty on cloth. Coimbatore Spinnings retreated from Rs. 122 *ex-div.* to Rs. 118 *cum-div.*, notwithstanding the higher dividend of 16 per cent. for 1955, as against 12 per cent. for 1954. Cannanores dropped Rs. 3 to Rs. 190. Lakshmis and Metturs fell by Rs. 2-8 each, the former to Rs. 250 and the latter to Rs. 490. Loyals receded by Re. 1-12 to Rs. 57-8. Rajalakshmis lost Re. 1-8 to Rs. 190. Janardhanas. Pankajas, Vijayakumars and Vijayamohinis declined by a rupee each to Rs. 124, Rs. 94-8, Rs. 147-8 and Rs. 93-8. *respectively.* Cauvery Spinnings eased by As. 4 to Rs. 14 *cum-div.* Bangalore Woollens were done at Rs. 582-8 *ex-div.*, as against Rs. 595 cum-div.

Sugar shares were neglected. Kirlampudis receded by a rupee to Rs. 43. E.I.D.'s declined by As. 4 to Rs. 31-8. Deccans suffered a loss of As. 2 to Rs. 12-14 *ex-div.* Travancores eased by an anna to Rs. 14-9. Jeypores were quiet at Rs. 14. The Jeypore Sugar Co., Ltd. has announced that it will receive applications or renunciation letters from sellers up to the 20th inst. for the issue of 100,000 ordinary shares of Rs. 10 each at par.

Among miscellaneous industrials, Mysore Spuns were subjected to selling and moved down by As. 6 to Rs. 6-13. Aluminium Industries and Mysore Papers declined by As. 6 each to Rs. 22-12 *cum-div.* (final) and Rs. 19-14 *cum-div.*, respectively. Bruntons gave way from Rs. 6-12 to Rs. 6-8 F.A.C.Ts lost As. 3-6 to Rs. 7-1-6.

KOLAR GOLD MINING COMPANIES

Replying to a short-notice question in the Lok Sabha on Friday last week, the Minister for Natural Resources and Scientific Research, Mr. K. D. Malaviya stated that negotiations between the Mysore Government and the Kolar Gold Mining Companies in regard to compensation to the latter had not yet been completed. Proceeding, the Minister said that, on a reference by the Mysore Government of certain questions regarding the workability of the mines to the Central Government, a committee of experts deputed by the Government of India had submitted a report after visiting the mines. This had to be considered by the Mysore Government. Replying to another question, the Minister stated that the higher compensation recommended by the Central Government was due to certain other factors which were again referred to them by the Mysore Government. Intervening in the debate, the Prime Minister stated that the question of compensation was decided on certain principles taking into account the question of working the mines efficiently. Mr. Malaviya also stated that the Government had not thought of appointing a committee to fix compensation.

That additional depreciation is permissible for five years in regard to new buildings, plant or machinery erected after 31st March 1948 according to Section 10(2) (VI-A) of the Income-tax Act, in spite of the business changing hands, was the ruling given by the Chief Justice and Mr. Justice Tendolkar of the Bombay High Court. The dispute arose as a result of the Parle Bottling Co., Ltd., claiming normal depreciation allowance for the assessment year 1953-54, and in addition, the additional depreciation allowance under the above section on the basis of the written down value of the machinery and plant of the Parle Bottling Company which it took over.

In the accounts in brief of the West Coast Paper Mills Ltd., as on 30th June 1956, published on page 424 of our issue dated 1st September 1956, the cash balances were shown as Rs. 1,32,612, whereas they should have been Rs. 11,32,612.

NEWS IN BRIEF

ESTATE duty collections in India during 1955 aggregated Rs. 1.44 crores.

Train lighting dynamos of the value of Rs. 15 lakhs were manufactured in India during 1955.

The Government proposes to enact a comprehensive law for regulating the working conditions of motor transport employees.

The Soviet Union purchased 500 tons of Indian coffee during January-August 1956, as against an export allocation of about 8,000 tons from the 1955-56 crop.

India's contribution to the F.A.O. for 1955 works out to $267,995. Of this, $10,850 are due to India out of F.A.O.'s working capital Fund. The balance of $257,145 (Rs. 12,24,500) has been paid to the organisation.

The Uttar Pradesh Handloom Board has accepted a proposal to introduce powerlooms in the State and has decided to ask the Industries Department of the State Government to work out the details of the scheme.

Production and consumption of indigenous rubber in India in July last increased by 246 tons and 247 tons, respectively, over those of the previous month. The quantity of imported rubber during the month was 847 tons.

The Government of India is considering a proposal to set up a factory to manufacture basic refractories to the extent of 30,000 tons annually. The details of the factory are yet to be finalised. The present output of refractories in the country is 280,000 tons.

The Government of India has issued a notification fixing the price of teas for the purpose of determining the export duty at Rs. 2-11-5 per lb., as against Rs. 2-8-5 per lb. in force from 1st August. There is, however, no change in the existing rate of duty of annas six per lb.

A special cell has been set up in the Ministry of Commerce and Industry, headed by Mr. U. K. Ghosal, Chairman of the Tea Board, to examine the recommendations of the Plantation Enquiry Commission on the tea industry and to consider action to be taken by the Government on them.

The Employees' State Insurance Scheme is to be implemented in five industrial areas of the Travancore-Cochin State. The Scheme will be inaugurated on the 16th inst. at Quilon, Alleppey, Alwaye, Ernakulam and Trichur and will benefit 31,000 employees working in about 200 factories.

Following the suggestion of Dr. Nicholas Kaldor, the well-known British tax expert, the Ministry of Finance has deputed three officers, namely, Mr. N. H. Nagvi, Mr. S. Chandrasekhar and Mr. A. K. Mukherji to visit the U.S., Sweden and Japan to study the working of tax systems in those countries.

The Governments of India and Pakistan have decided to extend the present Indo-Pakistan trade agreement, which was concluded in July 1955 and was operative until 31st August, for a further period of two months. The extension is being made pending the completion of negotiations for a new agreement between the two countries.

A Development Co-ordination Cell has been set up as part of the Railway Equipment Directorate of the Railway Board to assist in the development of specialised railway equipment manufacture in the country and to provide technical guidance to prospective manufacturers. A recommendation that such a cell should be set up was recently made by the Railway Equipment Committee.

The Select Committee on the Electricity (Supply) Amendment Bill met on 31st August at New Delhi and decided that interested bodies desirous of submitting memoranda on the Bill to it should send 50 copies each of their memoranda to the Secretary, Lok Sabha Secretariat, Parliament House, New Delhi, so as to reach him on or before 8th October 1956. The Committee will meet next on 19th October 1956.

Messrs. Gannon Dunkerley & Co., Ltd., Bombay, will shortly be putting up a factory to manufacture 50,000 liquified petroleum gas cylinders. This factory is expected to go into production sometime in the second half of 1957. It will involve a capital investment of about Rs. 15 lakhs. These cylinders will be used for marketing gas, a by-product of oil refinery, and will save a good amount of foreign exchange. The factory will have technical assistance from a U.K. firm.

The Hindustan Aircraft Factory is expected to produce 300 light weight, all-metal, welded integral railway coaches per annum within five years from now under an agreement between the factory and a West German firm signed on 21st August at New Delhi. The entire coaches will be manufactured at the Factory. The agreement with the German firm covers manufacture of the rolling stock of different types, including integral coaches, providing technical assistance and training of a number of the factory's personnel in West Germany.

Pending the final agreement on the question of sharing of waters of the Tungabhadra between the Governments of Hyderabad, Andhra and Mysore, a tentative agreement has been reached between the Governments of Andhra and Mysore to share the waters flowing through the low level canal in the ratio of 5:4. In regard to the water flowing through the high level canal, a final agreement has been reached between the Governments of Andhra and Mysore to share the waters in the ratio of 65:35.

India and Canada concluded a convention on 30th August, at Ottawa, concerning the priority of patents and invention. It provides that India and Canada will extend, reciprocally, the provisions of each country's legislation with regard to extensive protection of patents to citizens of the other contracting party and to the bodies incorporated or registered under its appropriate legislation. Thus the benefits of the Indian Patents and Designs Act will be enjoyed by Canadian citizens and incorporated bodies and, likewise, the benefits of the Canadian Patents and Designs Act by Indian citizens and incorporated bodies. The convention will come into force after three months.

* * * *

From Abroad

According to President Ngo Dinh Diem, South Viet Nam has decided to join the I.M.F. and the World Bank.

At the request of the Portuguese Government, South Africa has agreed to make available 4,000 tons of coal at the Portuguese East African Port of Lourenco Marques during the second half of October for shipment to Goa for its railways.

The Thailand Government has appointed a Committee to seek a revision of the agreement with the Shell and Standard-Vacuum Oil Companies which would, in effect, end the fuel oil trade monopoly now enjoyed by the two enterprises in Thailand.

With a view to meeting its urgent requirements of bags, the Pakistan Government has frozen all stocks of 'B' twills in East and West Pakistan. Exports of 'B' twills against licences already issued are, however, allowed, but the future licensing policy is yet to be determined.

British oil experts will attend meetings due to be held in New York to discuss ways of meeting any oil famine that may be caused by an interruption of tanker and pipeline supplies from the Middle East. It will be recalled that thirteen U.S. oil companies established a "Middle East Emergency Committee" shortly after Egypt nationalised the Suez Canal.

An order for 12,000 tons of electrically welded oil pipes, valued at $2.5 million, has been received by the Middle-East Tube Company Acre, Israel, from the Texas Oil Company of the United States. The same company is also producing pipelines for the Haifa-Tel Aviv pipeline as well as pipes for the Israeli Oil Prospectors' Company.

Italy will sign an agreement with the World Bank under which the latter will grant the former a loan of $70 million. The Bank has already granted loans for developing Southern Italy amounting to $90 million. The proposed loan will be utilised mainly for the realisation of large industrial development projects, including the construction of a Fiat Motor Company assembly plant near Naples.

The National Bulk Carriers, Inc., the United States Shipowners' Company, has announced that it would step-up construction in a Japanese shipyard of giant oil tankers which would render the Suez Canal obsolete as far as oil transportation is concerned. The Company has already launched an 84,700-ton oil tanker and is building another of the same type. In addition, the Company also plans to seek the Japanese Government's authorisation to build four 87,000-ton tankers.

According to the *Journal of Commerce*, a new source of capital for overseas subsidiaries of U.S. Corporations is being opened up in more than 25 foreign countries. The money will come from $1,000 million worth of foreign currencies which the U.S. has accumulated by the sale of surplus farm commodities. Instructions had been sent to all foreign aid missions and embassies to work out arrangements, where possible, with the foreign governments concerned to make part of these funds available for loans to affiliates of U.S. companies.

The main effect of the Suez Canal crisis on Hongkong has been a tendency for some importers to specify that goods should not be despatched from Europe in British or French vessels. There is also a strong disinclination to place orders with the U.K. and Europe. Enquiries for raw materials have been switched over to Japan and the U.S. Lately, however, a steadier tendency has set in, influenced partly by high hopes of a peaceful settlement, and partly by the rise in the value of dollar and the shortage of raw materials in Japan.

World beer consumption during 1955 rose by 179 million gallons. or 2.8 per cent. to 6,520 million gallons according to figures prepared by the National Trade Development Association, the joint organisation of brewers and licensed victuallers. The biggest actual increase in consumption was in Western Germany, where the total rose by 75.7 million gallons over the year to 774.4 gallons. Consumption in the U.S.—the largest individual consumer—rose by 37.6 million gallons to 2,166.6 million gallons, while French consumption increased by 37.3 million gallons to 226.1 million. Consumption in the U.K., where beer carries the heaviest taxation, also rose by 11.9 million gallons to 901.8 million gallons.

Vickers-Armstrongs (shipbuilders) has won a £10 million contract from Orient Steam Navigation Company to build a 40,000-ton passenger liner—the largest to the built in the U.K. since the Queen Elizabeth was ordered. The ship, which will come into service in 1960, will be used on the U.K.-Australia route which it will cover in three weeks—a week less than the fastest liners on service at present. A feature of the liner will be that all the superstructure will be built from aluminium instead of steel, thus saving 1,000 tons in weight. The Peninsular and Oriental Steam Navigation Company, which controls the Orient Steam Navigation, is also planning to build a 40,000-ton passenger liner to be plied on the same route.

PERSONAL

MR. H. C. Kothari has been re-elected Chairman of the Association of Planters of the State of Madras for the year 1956-57.

Mr. M. S. Calderwood, a leading planter of Travancore-Cochin, has been elected President of the U.P.A.S.I. for the year 1956-57.

Dr. J. N. Mukherjee, Scientist and Palit Professor of Chemistry, Calcutta University, has been appointed member of the Union Public Service Commission.

Sardar Swaran Singh, Minister for Works, Housing and Supply, has been appointed to hold charge, in addition, of the Ministry of Commerce and Consumer Industries.

Mr. C. V. Narasimhan, the newly appointed Executive Secretary, E.C.A.F.E., in succession to Dr. P. S. Lokanathan, assumed charge on 1st September 1956.

Mr. T. T. Krishnamachari, Minister for Finance and Iron and Steel and Mr. V. K. Krishna Menon, Minister without Portfolio, have been appointed Members of the Planning Commission.

Mr. Govind Ballabh Pant, Union Minister for Home Affairs, has been appointed to hold charge, in addition, of the Ministry of Heavy Industries, with effect from 1st September 1956.

Dr. G. Watts Padwick of the Central Agricultural Control of Imperial Chemical Industries Ltd. has been appointed a Director of Plant Protection Limited with effect from 1st September 1956.

Mr. D. P. Karmarkar, Minister for Trade, and Mr. Nityanand Kanungo, Minister for Consumer Industries, will be attached to the Ministry of Commerce and Consumer Industries and Mr. M. M. Shah, Minister for Heavy Industries, will be attached to the Ministry of Heavy Industries.

Mr. T. T. Krishnamachari, Minister for Commerce and Industry and Iron and Steel, relinquished charge of the Ministry of Commerce and Industry and took charge of the Ministry of Finance from the Prime Minister from the 1st inst. He will thus hold charge of the Ministries of Finance and Iron and Steel.

Mr. H. M. Patel, I.C.S., Secretary, Union Ministry of Finance, has been appointed Chairman of the Life Insurance Corporation of India. Messrs. L. S. Vaidyanathan and A. Rajagopalan have been appointed Managing Directors of the Corporation. The Executive Committee of the Corporation will consist of: Mr. H. M. Patel (Chairman), Mr. Mohammed Hasham Premji, Mr. Dhiren Mitra, Mr. L. S. Vaidyanathan and Mr. A. Rajagopalan. The members of the Investment Committee are: Messrs. H. M. Patel, K. R. P. Shroff, H. T. Parikh, Chaturvedi, L. K. Zha, K. R. P. Ayyangar and L. S. Vaidyanathan.

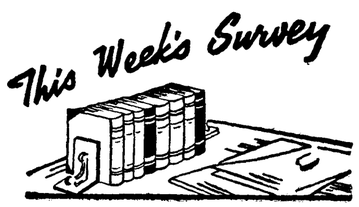
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *5th September*

Insurance in India

The Indian Insurance Year Book for 1930 is the first of the series issued by the Indian Actuary to the Government of India. A redeeming feature of the publication is the omission from it of any criticism, such as we have been accustomed to, under the regime of Mr. H. G. W. Meikle, the first incumbent of the office. A hue and cry was raised about this time last year when, in the last publication under his care—that is, the year book for 1929—Mr. Meikle pointed out certain defects of indigenous concerns with his own comments on them and the Indian Insurance Institute of Calcutta submitted a representation to the Government of India stoutly protesting against the inclusion in an official blue book of remarks concerning a particular class of concerns which the Indian Insurance Institute considered as uncharitable and invidious. The Indian Actuary has been more wary and has made his publication a mere mine of information which every blue book published by the Government of India should be. Mr. N. Mukherji, the present Actuary, is, however, constrained to observe that, although most of the indigenous companies transact life assurance business on scientific principle, there are still some which carry on business on the dividing plan under which the sum assured is not fixed, but depends on the division of a portion of each year's premium income amongst the claims arising in that year. This form of life assurance business, the Actuary says, is unsound. The life assurance business of indigenous companies has steadily increased during the past ten years; but ample leeway has yet to be made up if India is to hold its own in comparison with other countries of the world.



LIFE INSURANCE CORPORATION

THE Life Insurance Corporation of India commenced its career on the 1st inst., a bank holiday for Bombay, where its Head Office is situated. Whether such a quiet beginning is auspicious or not is a matter for concern to those who are superstitious. But the fact remains that insurance has now become a part of the activities of a mighty Government, though technically it will be a distinct and separate function of the State-owned Corporation. Thus, the first stage of the process of nationalisation, which began on 19th January 1956 with the promulgation of the Life Insurance (Emergency Provisions) Ordinance, has been completed. The Government as well as the employees of the former privately-owned insurance companies, both high and low, deserve to be congratulated on the successful manner in which they have effected the transition from private to nationalised life insurance. The task of integrating the business of 180 life insurance offices, of varying sizes, was by no means easy. And it called for the highest qualities of administration. Even now, much remains to be done in the sphere of integration of staff, for there is considerable discontentment in the ranks of employees. Given goodwill, on the part of the staff, and some imaginative handling, on the part of the authorities, it should be still possible to work out smoothly the details of staff integration. In his broadcast on the eve of nationalisation of life insurance, Mr. Manilal C. Shah, the Union Minister for Revenue and Civil Expenditure, appealed to the employees to make the new set-up a great success. This co-operation, we are sure, will not be denied, considering that the employees themselves have been among the interests which were ardent advocates of nationalisation.

Mr. Shah, however, struck a somewhat disharmonious, if not exactly a jarring note, when he said that this "socialist experiment in a hitherto untried field will engender in some quarters goodwill, in others the opposite feeling." Perhaps, the Minister had in mind the private sector when he referred to "some quarters." It is true that the private sector was stoutly opposed to nationalisation of life insurance and is even now not convinced that the decision was correct. But it is not so uncharitable as to harbour "opposite feeling" towards what after all is a national decision, taken by an elected Parliament. The Corporation may enter upon its duties with no fear of "ill-will" from any quarter. There might be some indifference, but no ill-will. For, in a country where democratic traditions are not so deep-rooted, the danger that a nationalised institution has to encounter is public apathy. "It is a Government affair, none of our concern," may aptly sum up the general public attitude. The Government, by refusing to provide for elected representatives of policy-holders in the Corporation, has given no scope for that healthy public interest in the Corporation's affairs which would continually make the organisation responsive to people's needs.

Obviously, it will be the duty of the Corporation to conduct itself in a manner which will inspire confidence and enthusiasm in the public mind. Its success will naturally be judged by five standards—expansion of business, reduction in lapses, lower expenses, higher bonus rates and better service. These are the standards by which the private insurance was judged and, according to the Government, was found wanting. It is by these standards that the Corporation will be judged. And it would be unchivalrous on the part of the Government to refuse to be judged by them.

WAGE BOARDS

The Central Government has decided to set up wage boards for individual industries. To start with, the boards will be constituted for industries chosen from among the industries covered under the Employees' Provident Fund Act. The Act, which formerly covered only six industries, namely, cement, cigarette, electrical, mechanical or general engineering products, iron and steel, paper and textiles, has been extended with effect from 31st July 1956, to a group of 14 industries. These industries include matches, edible oils and fats, printing processes, tea, rubber and rubber products, sugar, electricity, glass, glass products, stoneware pipes, sanitary wares, electrical porcelain insulators, refractories and tiles. Referring to the constitution of wage boards, Mr. Abid Ali, Union Deputy Minister for Labour, said in Parliament the other day that the State Governments were being consulted as to the industries for which such boards should be established. The authorities concerned, he added, had been instructed to make arrangements for collecting data for the various industries and it was only after the collection of data had sufficiently advanced that the wage boards would be set up.

An analysis of the causes responsible for industrial disputes will reveal that wages and allied matters are the major source of friction between employers and employees. It is common knowledge that the existing machinery for the settlement of disputes, namely, the Industrial Tribunals, has not succeeded in satisfying either of the parties concerned. A more acceptable machinery for settling wage disputes will, as the Planning Commission has rightly recognised, be one which gives the parties themselves a more responsible role in arriving at decisions. Surely, an authority such as a tripartite wage board, consisting of an equal number of representatives of employers and workers and an independent chairman, will ensure more acceptable decisions.

It is not, however, clear what the functions of the wage boards are going to be. If the boards are intended to go into the question of wage structure in the different industries, the danger is that each wage board will lay down a schedule of wages which will have no relation to the overall wage structure in the country. In other words, there will be no co-ordinated wage pattern for industry as a whole. From this point of view, a wage commission, which could settle the broad principles of wages, would have been welcome, for such a commission would simplify the wage boards' task of fixing wages for workers in different industries on lines consistent with the general economic picture of India.

EXPORT OF ORES

It is gratifying to note that the Government of India has conceded an important demand put forward by owners of manganese and iron ore mines and shippers of these ores to the effect that the Government's export policy should be formulated on an annual basis. Thus, the export quotas of iron and manganese ores granted for the half-year ending December 1956—on the basis of two-thirds of quotas allotted in the second half of last year—have been doubled. Secondly, the period of validity of the doubled quotas is extended up to 30th June next. The mine-owners and shippers are permitted to select either of the two basic periods, namely, July-December 1955 and January-June 1956, whichever is more advantageous to them. The firms are not required to choose the same basic period for all the ports. Again the Government has recognised the need for extending to mine-owners, who made no shipments on their own account in the past, facilities for moving ores to the ports in areas where transport situation is not too tight. This question is said to be engaging the attention of the Government and an announcement will be made in due course.

With the aforesaid revision in the export policy for iron and manganese ores, the mine-owners and shippers are, of course, now in a somewhat better position to plan their mining, contracting and booking of freight. Even so, one wonders if the Government could not have done away with the system of quotas. By doing so, the Government would have given the mine-owners and shippers full freedom to augment exports of iron and manganese ores, thereby improving the much-needed foreign exchange earnings. For, even after the doubling of quotas to private traders, the balance left for the State Trading Corporation is a fairly large one. The Government has now sought to continue the system of quotas and also to impose export duties on manganese ore, though it must be admitted that there should be no difficulty in passing on the burden to buyers abroad.

The new export duty is being levied on manganese ore with manganese-content of 39 per cent. and over. The rates of duty per ton—these came into effect from the 1st inst.—are Rs. 10 for ore with manganese-content of 39 per cent. but not exceeding 40 per cent., Rs. 20 for ore with manganese-content above 40 per cent. but not exceeding 44 per cent., and Rs. 30 for ore with manganese-content exceeding 44 per cent. The imposition of export duty on manganese ores will help earn larger foreign exchange, as well as mop up a part of the large profits that middle men were said to be making, and thus meet one of the Government's allegations against private trade that the latter has been bringing less foreign exchange than India's ores can get. Incidentally, it may be asked whether, in view of the fact that the Government has now taken steps to increase foreign exchange earnings, as well as its revenue, it could not give up its stand in favour of a progressive extension of the activities of the State Trading Corporation in the export trade in ores.

BURMA'S ECONOMY

The progress achieved in Burma during 1955-56 in the economic field should be a matter for special gratification to its close neighbour, India. For some time past, Burma's economy deteriorated and called for stringent measures, chiefly in the sphere of international trade. The highlights of the survey of the economic position during 1955-56 presented by the Burmese Finance Minister to the Chamber of Deputies are the improvements witnessed in the level of exchange reserves and in the exports of rice. The exchange reserves improved from the level of Rs. 51.6 crores—the lowest for the last four years—to Rs. 65 to Rs. 70 crores at the end of the financial year. This betterment was mainly due to the drawings from the I.M.F., and, secondly, to the increased sales of rice abroad. The arrangement made for a sterling loan from India, although it was not found necessary to draw upon it, provided more freedom of action, than would have been possible otherwise. Other noteworthy developments during the year were the agreement concluded with World Bank for a long-term loan of $20 million intended for effecting improvements in the port of Rangoon and for rehabilitation of the Railways. Besides, an agreement was also reached with the U.S.A. for the supply of Rs. 10 crores worth of surplus agricultural products in Burmese currency.

In the field of exports, it is stated that rice marketing was extremely successful. Burma exported, during the year under review, 1.8 million tons of rice. Another noteworthy deal concluded was for the export of rice to the tune of 2 million tons to India during the ensuing four years. Barter credits are expected to be no more than Rs. 6 crores by the end of 1955-56. This should be a specially heartening piece of information to India. For, as the survey rightly points out, this would make it easier for Burma to select sources of supply for its consumer and capital goods without the need to commit itself for a number of years beforehand. Moreover, it would render the existence of import restrictions largely superfluous.

Turning to imports, the survey notes that the increase in the import prices had been checked to a large extent. It was, however, felt necessary to bring them under further control by importing a large volume of textiles and other consumer goods. The survey has also stressed the need for checking hoarding and speculation in order to bring down prices.

During the year under review, appreciable rises in farm output have also been recorded. The survey has noted with satisfaction the establishment of a pharmaceutical plant, two sugar mills and a teak-packing plant in the industrial sector.

It is to be hoped that the progress made by Burma will be maintained as well as improved. Incidentally, it would strengthen the economic link between India and Burma which is being forged by the trade agreement that is being concluded between the two countries.

POSTAL RATES IN NAYA PAISA

In about less than a year from now, India will join the group of more than 50 countries in the world which have the decimal system of coinage in vogue. It will be remembered that, the Indian Coinage (Amendment) Act, 1955 was passed by Parliament in August of last year. The new coins which will be known as naya paisa will have denominations of 1, 2, 5, 10, 25, 50 and 100 naye paise, a rupee being equal to 100 naye paise. The introduction of this new system on 1st April 1957 which is supposed to replace entirely the present system in three years is bound to bring in its train several new changes in the existing order of things, one of which will be that in the postal rates. Accordingly, a Bill specifying the postage rates in terms of naye paise for letters, postcards, registered newspapers and other categories of postal articles was introduced in the Lok Sabha on 27th August 1956 by the Minister for Communications, Mr. Jagjiwan Ram, and was adopted by the House on Saturday the 1st inst. after a brief debate lasting for a few minutes. The Bill which seeks to give effect to the new rates by amending the First Schedule of the Indian Post Office Act, 1898 has an explanatory note which states that, in fixing the rates, the principle kept in view was that there should be an approximate equivalence between the new rates and the existing rates.

The new rates will be as follows:

Letters: For a weight not exceeding one tola—13 naye paise, for every tola, or fraction thereof exceeding one tola—6 naye paise.

Postcards: Single—5 naye paise, reply 10 naye paise.

Book, pattern and sample packets: For the first five tolas or fraction thereof—six naye paise; for every additional two and a half tolas or fraction thereof in excess of five tolas—three naye paise.

Registered Newspapers: For a weight not exceeding 10 tolas—two naye paise, for a weight exceeding 10 tolas and not exceeding 20 tolas—three naye paise, and for every 20 tolas or fraction thereof, exceeding 20 tolas—three naye paise; in the case of more than one copy of the same issue of a registered newspaper being carried in the same packet—for a weight not exceeding 10 tolas—three naye paise, for every additional five tolas, or fraction thereof in excess of 10 tolas—two naye paise, provided that such packet shall not be delivered at any addressee's residence but shall be given to a recognised agent at the post office.

Parcels: For a weight not exceeding 40 tolas—50 naye paise, for every 40 tolas, or fraction thereof, exceeding 40 tolas—50 naye paise.

In the course of the debate on the Bill, Mr. Raj Bahadur, Minister in the Ministry of Communications, said it was not possible to give the exact equivalents of the present rates. The Government had, therefore, rounded off the figures. In doing that, it became necessary to increase the rates in some cases and lower it in others. In the case of letters not exceeding one tola, for instance, there would be an increase of 4 per cent. Inland letter cards would rise by 6.6 per cent. and registered envelopes by 15 per cent. On the other hand, the rate for letters weighing more than a tola would decrease by 4 per cent.

The new rates have, however, been criticised on the ground that they constitute a new burden on the poor man. Thus, commenting on the new postage rates, no less a person than Mr. C. Rajagopalachari observes that the principle of approximate equivalence envisaged in the Bill would be at the expense of the poor man who would be the hardest hit all over the country. Substantiating this view, he states that, while at present three rupees will buy 64 postcards, in future they will fetch only 60 postcards. Again, a one-tola letter which in terms of the new money now costs 12½ naye paise will in future cost 13 naye paise. He, therefore, advocates that the changes in troublesome fractions should, instead of being forced at the bottom, be made at the top where it could be done with less trouble and at no cost.

Similarly, Mr. A. R. Bhat, President of the Indian Languages Newspapers' Association, contends that the new rates would increase the burden on newspapers by 33 per cent. in the first slab. He further says that, while the increase in postal rate for newspapers which would operate on the introduction of naya paisa would adversely affect almost all daily newspapers, it would do so more in the case of papers of smaller size. He, therefore, suggests that, if the first slab of 10 tolas was changed to five tolas with the rate at one naya paisa, the small and medium papers giving not more than eight standard demi-size pages would not be adversely affected by the change. It is to be hoped that Government would give due consideration to some of these genuine criticisms and devise such measures as would save the common man from bearing the heaviest part of the burden of the changeover to the new system of coinage.

A co-operative match factory is to be set up at Banaras for which the Government of India has sanctioned Rs. 2.85 lakhs. The factory will provide employment to about 500 women in the lower income groups. Its production is expected to be 500 gross matches per day. This is the seventh co-operative match factory to be sanctioned by the Government of India so far. The other factories already sanctioned are at Allahabad, Perambur, (near Madras), Vijayawada, Musheerabad and Asafnagar (Hyderabad) and Poona. The Government of India has given 50 per cent. of the capital expenditure as grant and the balance as loan, while the entire working capital required by these factories is advanced as loan.

LATEST ECONOMIC TRENDS IN U.S.

EMPLOYMENT TOUCHES RECORD HIGH LEVEL

DESCRIBING the latest economic trends in the U.S., the September issue of the *Monthly Letter* of the First National City Bank of New York observes as follows:

"The seasonal revival of business activity which usually gathers speed after Labour Day promises to be intensified this year by the after-effects of the steel strike. Where the strike caused slow-downs, industry is now busy catching up. Prices and incomes are rising, and in general optimism is more pronounced than it was earlier this year. The recent tightening of credit has not touched off a wave of pessimism as it did in the spring; instead, many regard these moves as a confirmation that good times lie ahead—times so good that they require restraint to keep them from getting out of hand.

"One reason for this feeling of optimism is the ease with which most of the economy rode out the steel strike. Total employment set a new record in July, and, on a seasonally adjusted basis, so did retail sales and construction activity. Despite the strike, overall industrial output dipped only 3½ per cent. Fortunately, most steel-consuming firms had sufficient stock on hand to maintain production during July; manufacturers of machinery and most other producers' equipment and consumer durable goods increased their rates of output on a seasonally adjusted basis.

"The speedy resumption of steelmaking and the continuing heavy retail demand promise a boost in overall production in August and September. The steel industry's recovery has been as rapid as repairs and wildcat strikes would permit; by the end of August its operations were back to 96.5 per cent. of capacity. Retail sales in August appear to have held close to the record levels of the preceding three months, and Government officials predict that August employment figures will show another new peak.

"Inevitably, the strike intensified the difficulty which certain industries were having in obtaining the types of steel needed. Heavy goods lines generally are plagued with unbalanced steel stocks and uncertain delivery schedules. It will be many months before this situation is cleared up, particularly in structural steel.

Sixty-six Million Jobs

"Total civilian employment rose to 66,655,000 persons in July, the greatest number in the nation's history. Altogether, 152,000 more people had jobs than in June and 1,660,000 more than in July 1955. The Census Bureau includes in these employment totals all persons who have jobs but who currently are not working because of vacation, illness, or strikes. However, even if the striking steelworkers had been excluded, employment would still have been a million or more above last year's level.

"Some persons view with concern the fact that unemployment still totalled 2,833,000 persons in July, equivalent to 4.1 per cent. of the civilian labour force, and was 362,000 greater than in July 1955. A closer look at the figures, however, shows that the growth of unemployment is a misleading indicator of economic trends. Actually, the increase in employment during the past year has been 300,000 greater than the overall growth in the population of working age, although normally only part of this added population would enter the labour force. During the last 12 months, the civilian labour force has increased by more than 2 million, nearly triple the usual annual increase. Over and above population growth, the prospect of high wages and plentiful jobs has attracted into the labour force since July 1955 about 360,000 teenagers and 369,000 women 20 years of age and over. Most, but not all, of these added job-seekers have succeeded in finding work, but nearly 90 per cent. of the net increase in unemployment has come from these two groups. The 'unemployment problem' then has not involved a failure of employment opportunities to expand, but a superabundance of job-seekers, many of them inexperienced or temporary workers.

"Between record-breaking employment and the pattern of substantial wage boosts which reached its climax with the steel settlement, it is a little wonder that consumer income is setting new records. In June, personal income achieved the seasonally adjusted annual rate of $324 billion, topping June 1955 by $18 billion. As might be expected, consumer expenditures also have risen to new heights. However, roughly one third of the advance in dollar sales during the first half of 1956 represented higher prices rather than increased physical volume. The question now is: How much of the widely anticipated increase in consumer buying power in the months ahead will be dissipated on rising prices and how much will be left to support a growing volume of production?

"Business news in recent weeks has been highlighted by numerous announcements of price increases at both wholesale and retail. The most important of these was the boost in steel prices, averaging $8.50 per ton or 6.25 per cent., announced by U.S. Steel on 6th August. Other steel producers soon followed. Prices and wages in the aluminium industry also advanced during August, while prices of several basic commodities firmed during the Suez crisis.

"A great many durable goods producers found in the steel price rise an opportunity for catching up with other cost increases—labour, raw materials, and freight—and by the end of August prices were up for a wide range of products, from small components to heavy machinery. However, the price advance is still far from being general, even among steel-consuming industries. Depending on their competitive situation, some firms are absorbing higher costs, others are marking time until they can determine the full extent of their cost increases, and still others, as in the automobile industry, are holding the line on prices of current models but plan higher prices on forthcoming new models.

"Consumer prices have tended higher. After three years of virtual stability, during which the

LONDON LETTER

Our customary London Letter appears on page 481.

B.L.S. consumer price index fluctuated fractionally within an overall range of 1 per cent., prices have risen 2 per cent. in the three months ended 15th July to a new record. Officials anticipate a further but more moderate rise in August. The three-month rise has been due primarily to a jump of 5 per cent. in retail food prices, but prices in other major categories have also been edging upward. The rise in the cost of living has brought automatic wage increases of 3 to 5 cents to about 1,250,000 workers in the automobile, aircraft, electrical machinery, and other industries with escalator clauses in their union contracts. These higher wages will in turn add to the cost-push and demand-pull for still higher prices.

"It remains to be seen how much of the recent price increases in steel and other basic commodities will seep through the economy to the retail level. The inflationary potential of such basic price boosts is largely a matter of the speed and the intensity with which they spread and the extent to which they are absorbed. The experience at wholesale shows that, between 1947 and July 1956, prices of steel mill products rose 80 per cent. (not including the latest price boost), while prices of producers' finished goods increased 48 per cent. Consumer durable goods prices rose only 26 per cent. at wholesale. At retail the rise has been much less, reflecting a narrowing of distributors' margins.

"Part of the explanation for the slower rise in prices of consumer and producer durable goods than in steel prices lies in the greater overall stability of other costs. In addition, producers have limited price increases on many of these products because of highly competitive conditions and consumer resistance. Where increases in efficiency and productivity have lowered unit costs, higher steel prices have often been wholly or partially absorbed; even in firms where such cost-cutting has not occurred, competitive pressures have often forced absorption of higher materials costs at the expense of profit margins.

"Some observers have viewed this squeeze on profits as imperiling the high rate of business investment which has been one of the mainstays of our prosperity. However, a substantial share of expenditures on new plant and equipment—probably a larger share than is generally realised—goes for modernisation and replacement of existing facilities rather than for expansion of capacity. Business men have recognised increasingly in recent years that to stay competitive they must redesign products, provide newer machinery, streamline operations, and otherwise promote greater efficiency and productivity.

"At any rate, there is little indication as yet that rising prices, pinched profit margins, or tight money policies are causing a measurable reduction in the current capital goods boom. Nor is inventory reduction likely to be much of a brake on business activity in the second half. The general atmosphere of rising prices, employment, and income, heavy demand from consumers, business, and Government, and widespread optimism and confidence seldom goes hand-in-hand with inventory liquidation. It is more likely to lead to an inventory build-up, accentuating the strain on the nation's resources of manpower, materials, and industrial capacity, and adding to the pressure on credit.

Interest Rates Up

"Effective 24th August, the Federal Reserve Board approved increases from 2½ to 3 per cent. in the discount rates of the New York, Chicago, Philadelphia, and Richmond Reserve Banks. By the end of the month the 3 per cent. rate, which had prevailed for the San Francisco and Minneapolis Districts since 13th April had become applicable to member bank borrowings throughout the country. The 3 per cent. rate is the highest for New York since May, 1933. Prior to 1930, 3 per cent. was the bottom of the range of discount rate fluctuations. Under boom conditions, the rate went as high as 6 per cent. in 1929 and 7 per cent. in 1920.

"The move of the Federal Reserve authorities to a uniform 3 per cent. discount rate level did not come as any great surprise. It was a relief to bankers and brokers who had become fearful of an advance beyond 3 per cent. The announcement came after open market money rates, bank loans rates, and bond yields had completed general upward adjustments under the pressure of insatiable demands for credit.

"Under the weight of credit demands, beyond their ability to meet, principal banks, beginning 21st August in Boston, raised their loan rate to prime commercial customers from 3½ to 4 per cent. More particularly under the influence of the Treasury borrowing, short-term open market rates worked upwards, in many cases to the highest levels since 1933. New issues of 91-day Treasury bills were awarded at rates up to 2.83 per cent., exceeding the previous peak of 2.79 per cent. in April. Bankers acceptances were moved up ⅜ per cent.; commercial paper ¼ per cent.

"In the background of these latest money rate advances is the unparalleled size of construction programmes which continue to demand more funds than are being saved. In 1955, it was individual borrowing to buy homes and cars that overstrained the credit supply. This year business borrowings, to cover record plant and equipment programmes, have been the central feature. This loan expansion raises a question whether the restrictive credit policy is really working. In this connection, it needs to be borne in mind that the Federal Reserve authorities did not seriously attempt to restrain credit until last summer and by that time expansion had developed such momentum that it has not been easy to slow. It needs also to be borne in mind that the objective of the authorities is not to kill off the boom but simply to hold credit expansion within limits consistent with a stable price level.

"That business loans should be rising in the face of a restrictive credit policy, and, despite the discouragement of rate increases, is evidence of the force of credit demands—not to mention the fact that commercial lending is the primary business of commercial banks. We will never know how much larger the business loan expansion would have been in the absence of a restrictive policy. Banks feel the effects in the restraint imposed on the growth of their deposit resources, in the higher rates they must offer competitively for savings deposits, in the increased losses they must take when they sell bonds, and in the culling they must do over the excess of loan applications. Borrowers feel the effects through higher interest costs, difficulties in raising funds, and advice from lenders that they need more equity in their projects.

"The whole process helps build a soundly growing economy, in which the saver gets a fair return, the borrower is discouraged from overextending himself, savings and investment are held in balance, and the stability of the economy as a whole is sustained."

GADGETS TO SPUR SAVINGS

NO SUBSTITUTE FOR SOUND MONEY

[India needs a vast amount of savings for raising the living standards of its teeming millions. Realising full well that the task which they have set before the nation is beyond its current rate of savings, its planners have programmed to find a part of the resources through "deficit financing", a respectable term coined by this country to cover inflationary financing. This has given rise to a tendency among people who know what inflation means to the purchasing power of the currency to take a cynical view of the future. The prospect of a fall in the future value of money deters them from saving. On the contrary, it encourages them to spend more and live well. Fear of inflation thus renders the Government's task of collecting savings more difficult. In such circumstances, is there any effective method for garnering savings and, if so, what is it? An answer to this question will be found in the following article, culled from the September issue of the Monthly Bank Letter *published by the First National City Bank of New York. The writer traces, in a very interesting manner, the various methods tried by several countries to stimulate savings among the people and to attract them for purposes of investment. His review is a timely contribution of great relevance to India.* —ED.]

MOST every youngster considers *Robinson Crusoe* a top-flight adventure story. Few young readers are aware, however, that Daniel Defoe's Eighteenth Century novel also presents a crude illustration of one of the oldest economic principles: the contribution savings make to a rising living standard. By saving some of his fish catch over a period of time. Robinson Crusoe was able to spend his days building a boat instead of having to go fishing. When the boat was completed he could catch more fish in less time and was free to build a house.

The same basic principle applies in the Twentieth Century. Economic prosperity and growth depend on the availability of money savings. Business relies on savings to help finance plants and equipment needed to produce and distribute an expanding volume of goods. Savings invested in mortgage loans make possible wider home ownership. Governments tap savings with bond issues to pay for their multifarious projects.

If Crusoe saved too little he went hungry. If we save too little in the complicated modern world, we experience our deprivations by shortages of goods in the market and rising prices.

The post-war period has been one of growing scarcity of saving, pretty much throughout the world. The trouble is that, while increased saving has been discouraged by low interest rates and inflation, programmes to utilise saving have grown apace. People want to have their cake and eat it too: spend current incomes to the full and also enjoy the things that have to be financed with borrowed money.

Economists in many countries are busy devising schemes to invigorate savings habits, and some of these schemes are being given practical trial. The most orthodox method is to let interest rates rise, giving a practical financial inducement to postponement of expenditure and creating a greater deterrent to borrowing. That is what has happened, for example, in this country, in Canada, and generally in Europe and Latin America.

Special Expedients

Where income is taxed heavily, even interest rates that seem high may not amount to much after tax. Thus tax incentives sometimes have been brought into play. Great Britain, for instance, is exempting from income-tax interest up to $42 a year on savings deposits. Sweden last year began offering tax-free bonuses to savers which go as high as 20 per cent. for savings kept in a bank for five years. West German officials have proposed that taxpayers be allowed special deductions based on the amount of their savings. A scheme of this sort—developing out of efforts of U.S. railway employees to gain tax concessions on retirement contributions—was discussed but voted down by the House Ways and Means Committee earlier this summer.

Enjoying a new vogue is the loan with a lottery feature. Although there are differences from country to country, the principle is the same: bondholders are eligible for prizes if their names get pulled out of a hat. This means, of course, that many bondholders get no return on their savings, or, at best, a considerably smaller interest payment than if no lottery feature was attached.

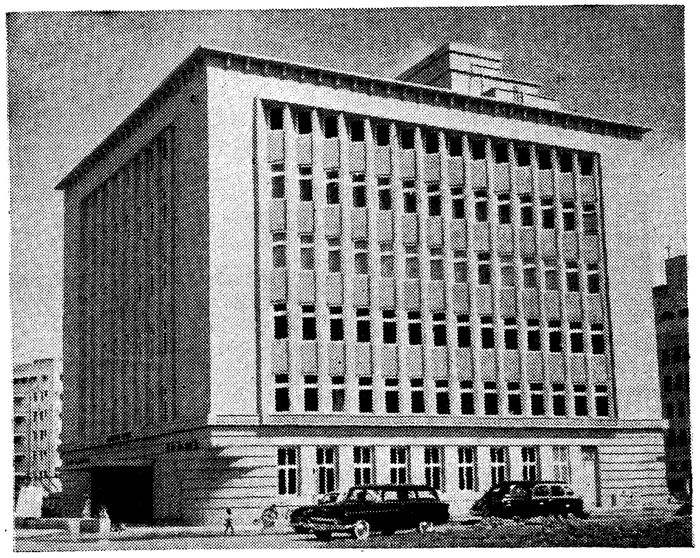
Great Britain is the latest major country to adopt the lottery bond. In November, the British Treasury will appeal to the gambling instinct of Britons with a $2.80 savings bond (no interest paid) which will pay off (for a few lucky winners) with top tax-free prizes of $2,800 and a number of smaller prizes. Belgium has raised some $300 million with lottery bonds since the end of World War II. A lottery bond issue in Greece offers a top prize of $50,000 in cash. Russia raises roubles with a lottery bond which offers a number of small prizes. Other European countries that have sought savings via the lottery bond route include Norway, France, Italy, Finland, West Germany, Sweden, and Denmark.

Additional ways of attracting savings have been devised so as to appeal to people who have doubts about the future value of their currency. The idea is to offer protection against an inflationary spiral which would reduce the real value of money savings.

France, for instance, has been suffering from inflation for a long time, partly as a result of continuous Government deficit financing. Many Frenchmen have found gold the safest and surest store of value. In these circumstances the Pinay Government in 1952 issued a loan with the redemption value linked to the free market price of gold coin. Increased prices would be reflected in the market price of gold and hence in the value of the bond. The state-owned Societe d'Electricite issued bonds in 1952-54 with the value, as well as the annual interest, varying with the price of electric energy. The nationalised coal mines and railroads have issued bonds linked to the wholesale price of coal and to passenger coach fares. And last May the French Government sold "growth" bonds—interest payments are to be revised annually in line with increases in national industrial output.

In Finland, nearly all financial institutions give their depositors the choice between ordinary savings deposits and deposits which pay a lower rate of interest but are linked to a price index. In similar fashion, the Finnish Government last year sold bonds the value of which was tied to wholesale prices. If the wholesale price index in September of any year, for instance, is 5 per cent. higher than the September 1955 index, the face value of the bonds as well as the interest payments will be increased by a corresponding 5 per cent.

(*Continued on page 491*)



The beautiful new six-storeyed "Malatlal House", Bombay, was designed, right from the start, for air conditioning — every nook and corner of it. The entire air distribution system on the fourth floor has been specially designed to match the interior decoration! The building has, of course, been air conditioned with 'Carrier' equipment by VOLTAS — the people who know air conditioning best!

Air Conditioning
— a new force in Industry and Business

WHEREVER men and machines work, air conditioning helps them to work better. It creates comfortable, hygienic working conditions, and protects valuable equipment from harmful dust and moisture. That is why more and more leading business houses are using air conditioning in their offices as well as in their factories.

VOLTAS are the pioneers in the field of air conditioning and refrigeration in India. Backed by a wealth of accumulated experience, our engineers have made original and progressive contributions in projects of widely-differing natures, and scores of industries throughout the country have benefited by their efforts.

Air conditioning by VOLTAS can help your business, too! It's effective, economical . . . as a talk with a VOLTAS expert will prove. Contact VOLTAS today!

EGYPT'S FINANCIAL DIFFICULTIES

EASTERN NATIONS RALLY TO ITS AID

EGYPT'S Achilles' heel is its economic dependency to a great extent on the West. Britain and France have thus hit Egypt in its most vulnerable spot when they froze Egypt's sterling balances and bank accounts. A similar action by the U.S. has made Egypt's position more difficult. This should be an eye-opener to the weaker nations, especially in Asia, which are in the habit of tying themselves up economically wholly with the West. So long as nations depend largely on a particular bloc for trade, capital and other things essential for economic development, the danger to their freedom of action continues, as is now being witnessed in the case of Egypt.

As a result of the blocking of its balances by the U.K., the U.S. and France, Egypt has lost all access to the foreign exchange reserves it normally reckons to fall back upon for making good the deficits in its balance of payments. The deficits were as high as £30 million per annum in recent years. Besides, its exclusion from the sterling transferable system has deprived it the use of sterling as a medium of exchange for conducting its trade with other countries. As a consequence of it, it has been denied credit facilities in sterling normally provided by the British banks to finance its trade. In these circumstances, the only course left open for Egypt is to draw upon its non-sterling reserves, chiefly made up of gold and dollars—which together were of the order of £80 million—for covering the payments gap and meeting the commitments, arising from its exclusion from the sterling transferable account. But the problem facing Egypt has become all the more serious, as the U.S. authorities, following the British announcement, have temporarily frozen the Egyptian Government's and Suez Canal Company's funds in the American banks.

The steps, thus taken by the U.K. and France, followed by the U.S., have been further strengthened by the co-operation extended to them by the majority of other Western countries, which, on their part, refrained from doing anything that would weaken the impact of the steps already taken by their allies.

The Eastern nations, however, have rallied to Egypt's aid. Japan, for instance, has announced that it will permit to defer payment for its exports to Egypt. Indonesia also has expressed its willingness to defer payments for its exports. India has announced that Egypt would be free to finance the whole of its trade with it in Rupees and that the Government would take all necessary steps to maintain the trade in the event of the Suez affairs becoming still more complicated. Besides, China has expressed its determination to maintain its trade with Egypt by paying for the Egyptian cotton in Swiss francs, instead of in sterling as has been the case hitherto. It has also credited the Egyptian account with the Swiss banks with 20 million francs to help it overcome the financial difficulties. Syria has entered into an agreement with Egypt under which both will co-operate closely in economic and financial matters. With this end in view, they have decided to float a new bank, the Bank of Syria and Egypt and a Syria-Egypt Foreign Trade Company. Furthermore, Egypt is reported to have made new arrangements to finance the cotton crop which the French and British banks used to finance prior to the Suez imbroglio. The Government itself is advancing a loan of £10 million to the Agricultural Credit Corporation for this purpose. The Egyptian banks will be asked to supply the balance needed for financing the crop. With a view to conserving its foreign exchange resources, Egypt has begun to refuse licences for import of the U.S. goods, a step which the U.S. propagandists are describing as a retaliatory measure to the U.S. freeze order.

In view of the various 'neutralising' measures taken by the Eastern nations, commentators in the West find it exceedingly difficult to assess the ultimate effect of the sterling freeze applied by Britain and its Atlantic friends. It is, nevertheless, pointed out that the combined effect of Eastern nations' help could be considerable. It is, however, stated that, although Egypt may succeed to emerge unscathed from the economic sanctions applied by the West in the short-term, its financial situation in the long-term may become worse, in case it fails to come to an agreement with the West on the main issue. In the first place, Egyptian economy is too much tied up with the pound sterling to enable it resort to other channels readily. Secondly, it is largely dependent on Western products, particularly spare parts for western-made machinery with which Egyptian industry is equipped. Above all, the prospects of obtaining Western capital and know-how for economic development at home will grow dim.

American commentators have lost no time in giving expression to certain fears they have been entertaining in connection with the new trends taking shape in Egypt's trade relations with the Soviet bloc. They point out that the deal entered into with the Soviet bloc countries by President Nasser, which has mortgaged Egyptian cotton—accounting for 85 per cent. of its total exports—that is yet to be grown for the supply of arms and other goods, will make Egypt in course of time an economic dependency of Moscow. A columnist of the *New York Times* goes so far as to say, that "the consequences for the West eventually could cause more troubles than has been stirred up by the Suez trouble." Moreover, it is further stated that nearly 28 per cent. of Egyptian exports are now going to the Soviet bloc countries, in return for only 11 per cent. of its imports. This would make Egypt more and more vulnerable to the communist pressure. Close on the heels of this columnist's reading of the situation comes the news from Moscow that Egypt and Russia are soon expected to sign an agreement providing for "comprehensive development and consolidation of ties . . . in all domains of culture."

Western commentators are largely right when they say that Egypt's trading with the communist bloc at an abnormal level in relation to its poor economy will reduce it to the position of an economic dependent. For it is common knowledge now to what level the West is trying to reduce Egypt, because of its dependence on it. If, therefore, Egypt is trying to diversify its customers, is it not largely because of the lesson taught by the West itself?

INFLATIONARY FORCES IN THE U.S.

Signs of inflationary pressure in the American economy have been clear enough for some months past to call for timely measures. Consumer prices during July rose by 0.7 per cent. to a record level of 117. In view of the rises witnessed during the two preceding months, it is stated that the July increase means pay rises of 5 to 6 cents an hour for 1½ million workers. Moreover, further increases in food, rent, transportation and recreation costs are also within sight. On top of all this, farm prices have been on the increase for the past six months. Further, the soil bank programme is expected to add $250 million to the purchasing power of the farmers. Wage settlements in various industries such as steel, rubber, and aluminium are likely to increase further the purchasing power of the people. Steel workers

STATE FINANCIAL CORPORATIONS BILL

LOK SABHA PASSES MEASURE

THE State Financial Corporations (Amendment) Bill, the discussion on which was postponed for a few days, as reported in these columns last week, was passed by the Lok Sabha on 30th August 1956, after a three-hour debate. The main objects of the Bill are: (1) to remove certain difficulties experienced in the actual working of the Act during the last few years; (2) to enable a group of two or more States to establish by agreement among themselves a joint financial corporation for them and (3) to provide for the grant of financial accommodation by the Corporation to small-scale and cottage industries not having sufficient tangible assets against the guarantee of a State Government, or a scheduled bank or a co-operative bank.

Opening the debate, Mr. G. L. Bansal drew the attention of the Government that the State Financial Corporations set up so far had not functioned efficiently. He also complained that their administrative expenditure had been high, as compared with that of the Industrial Finance Corporation of India or similar Corporations in other countries like the U.K. He, therefore, suggested that these State Financial Corporations be integrated with the State Bank of India. The State Bank was already granting short-term credit to industrial and commercial houses and it could also grant medium- and long-term loans. He further suggested that the State Bank could organise three separate sections—commercial, industrial and agricultural—to look after the requirements of the respective sectors of the economy.

Dr. Lanka Sundaram said that the paramount obligations undertaken by the Government to help the medium- and small-scale industries during the second Plan would be met by the present Bill. He, however, felt that the rate of interest charged by the various State Corporations, ranging from 5½ per cent. to 7 per cent. was so high that small-scale industries could not afford to pay them. He, therefore, suggested that these Corporations should charge uniformly low rates of interest in all States.

A few other members also complained about the high rates of interest charged by the Corporations. They said that so many restrictions were being placed by the Corporations that the applicants were "completely disabled to take advantage of the credit facilities" offered to them.

Replying to the debate, Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, drew the members' attention that the expense ratio of the Corporations could go down only after the third or the fourth year of their working. In support of this contention, he pointed out that the expense ratios of the Finance Corporations of the Punjab, Bombay and West Bengal had been going down year after year. Answering the criticism that the rates of interest were high, Mr. Guha said that these rates depended on the Bank rate and the rates at which even an organised industry could get loans from a commercial bank. They could not, therefore, be considered high. Anyway, there had been no cases of major default in the repayment of the instalment of principals or in the payment of interest on the part of those who had taken loans from the Corporations. The Government, the Minister said, was anxious to establish some uniformity in the working of the State Corporations and that was why the Reserve Bank was being brought into the picture. The Reserve Bank would conduct annual inspections of the activities of the Corporations.

(*Concluded from previous column*)

alone are expected to get as much as $300 million more during the ensuing twelve months.

Capital expenditure on new factories at $36 billion—$5 billion more than in the previous year—is expected to increase the prices of many building materials. In the sphere of industrial production, total employment is reaching new records. As a result of all-round increases this year, personal disposable income for the six months was calculated at $282.5 billion, that is, $18 billion more than in 1955.

It was time to hold the inflationary forces in check. The first step was taken by commercial banks in the country which raised the prime rate—the interest charged to their biggest customers—from 3½ per cent. to 4 per cent. This was followed by the other banks which raised the rate on broker loans from 4 to 4½ per cent. The Central banking authority, too, followed up quickly. The Federal Reserve discount rate was raised on 23rd August from 2½ per cent. to 3 per cent. in five Reserve districts. This was the sixth time for the discount rate to be raised since April 1955 when it was only 1½ per cent. The new rate is expected to become applicable in all the twelve districts in two weeks from the date of announcement.

GROSS PRODUCT AND PRIVATE CONSUMPTION EXPENDITURE

TRENDS IN FREE WORLD ANALYSED

BY far the best indicator of economic growth is the rate of increase in the gross national product, while the percentage of this increase that goes into private consumption expenditure gives a measure of the consumers' welfare under any form of economic order. Statistics regarding gross product and private consumption expenditure of different countries are thus invaluable in the comparative study of the growth trends of its economies and the welfare of the consumers. In making available the relevant data, the Statistical Office of the United Nations is doing a distinct service to the cause of scientific studies of economic progress. It is interesting to note in this connection, that the June issue of the *Monthly Bulletin of Statistics*, published by the Statistical Office of the United Nations, gives an illuminating account of the trends in gross product and private consumption expenditure in the free world.

The article notes a long-term rising trend in real *per capita* product in the majority of countries. But real *per capita* private consumption expenditure, though rising simultaneously, is not keeping pace with the rate of expansion of the former. This growing divergence between product and consumption is attributed mainly to the substantial rise in defence expenditure and the increased outlay on gross fixed capital formation. A comparison of private consumption expenditure in various countries, though difficult because of the presence of a multiplicity of concepts and classifications, reveals (1) a relative stability in the proportion of total private consumption expenditure allotted for food, (2) a decline in the percentage of expenditure on rent, and (3) a fall in the proportion of expenditure on household operations.

U.S. and Canada

In the U.S. and Canada, the long-term growth in real *per capita* product* has averaged 2 per cent. per annum. But, during the war years 1939-45, annual *per capita* growth was substantially higher at 3 per cent. per annum, because the war necessitated the operation of the economy at a higher level of output. In the post-war years, however, the historic growth trend has been resumed. In both the countries, the real *per capita* private consumption has generally paralleled the long-term movement in *per capita* product, albeit at a slower rate of growth. But the gulf between growth of product and consumption tended to widen during the war years due to two reasons. In the first place, the expenditure on national security increased substantially during the war period. Secondly, the outlay on gross fixed capital formation also increased and this trend has continued even after the war. In the four years 1950-54, these two elements of final expenditure have accounted for 13 per cent. and 16 per cent., respectively, of the gross national product in the U.S. and 8 per cent. and 22 per cent., respectively, in Canada.

In Western Europe, the real *per capita* product dropped sharply during the war years mainly due to the destruction of the productive machinery of the belligerent countries. But, by 1950, owing to the rapid progress of post-war reconstruction programme, most countries had regained their post-war level, the figure for the region as a whole being 4 per cent. higher in 1950 than in 1938. During the period of reconstruction between 1945 and 1950, the *per capita* product had expanded at as high a rate as 7 per cent. per annum. The rate of growth for Western Europe as a whole has since been maintained at 3 per cent. per annum. Over the period 1950-54, the gains in *per capita* product have ranged from 5 per cent. in Denmark to 32 per cent. in West Germany.

Real *per capita* private consumption for the whole region has developed correspondingly since 1950, but not to the same extent as the *per capita* product. Measured against 1938, the latter has improved by 20 per cent. during the period 1950-54, whereas the former showed an increase of only 12 per cent. over the same period. This divergence is explained largely by the greater expansion in gross fixed capital formation and by the relative rise in defence expenditure. The latter two components of final expenditure now constitute about 17 per cent. and 6 per cent. respectively, of the gross product of the region.

*The terms "real product" and "real consumption" are used to denote the value of gross product and private consumption expenditure at constant market prices, respectively.

The rise in real *per capita* product has averaged 4 per cent. per annum in Latin American countries in the post-war period till 1951. This expansion has since been followed by a levelling off in the rate of growth at less than one per cent. per annum. *Per capita* private consumption has developed more slowly in the immediate post-war years, due, principally, to the rapid rise in general Government consumption expenditure and gross fixed capital formation. A serious handicap in the expansion of *per capita* consumption in Latin America, as in other underdeveloped countries, is the annual rate of increase of its population. Latin America has to contend with an annual increment in population of 2.5 per cent., as compared with 1.6 per cent. in North America, 1.4 per cent. in South-East Asia and 0.8 per cent. in Western Europe.

In E.-S. Asia

In South-East Asia, trends vary from country to country and, consequently, overall averages for the regions tend to be misleading. Judging from the available data, it appears that expansion of real *per capita* product and consumption in recent years has been limited to Japan, the Philippines, Ceylon, and Burma.† As compared with 1938, real *per capita* product was 82 per cent. greater in Ceylon in 1954 and 58 per cent. higher in Thailand in 1953. The *per capita* product of Japan and Burma in 1954 was 11 per cent. and 31 per cent. short of their pre-war levels. The annual rate of growth of agricultural production over the last six years is estimated at two per cent. for the entire South-East Asian region. But, taken in conjunction with the annual increment in population, this implies that *per capita* gain per annum in agricultural production has been somewhat less than one per cent. Unfortunately, the publication under reference does not give data relating to *per capita* consumption. Accordingly, the picture about Asia is incomplete.

A precise comparison of the distribution of private consumption expenditure of different countries is rendered difficult by the differences in concepts and classifications adopted by various nations. However, in making this comparison, some general points deserve to be noted. In the first place, the distributions do not reflect accurately the disposition of real resources in meeting consumer demand. The absolute figures from which the percentages are derived are values at market prices and not at factor cost. They, therefore, include elements of indirect taxes and subsidies which vary from country to country. For example, in the U.K., the outlay on beverages and tobacco constituted 16 per cent. of total private consumption expenditure in 1954. Recalculated on a factor cost basis, the figure falls to 8 per cent. as a result of the exclusion of the high excise taxes.

† In the case of India, while the real *per capita* product is estimated to have increased by 8 per cent. over the period 1948-53, real *per capita* consumption appears to have remained virtually constant.

Secondly, certain types of expenditures which are classed as capital outlay in one country are treated as consumption expenditure in others. In Australia, for instance, purchase of private cars is treated as capital formation and is not, therefore, included in consumption expenditure, whereas most other countries regard it as consumer expenditure on a durable commodity. Thirdly, the provision of educational health and other services is, in varying degrees among countries, a matter of state initiative rather than of private purchase. A relatively low percentage of "personnel care and health expenses" will be found in countries where the provision of health services is mainly the responsibilty of the State.

Despite these limitations, the available data indicate many interesting developments. Thus, the proporton of total private consumption expenditure allotted for food during the period under review, has been relatively stable for countries like Australia, Canada, West Germany, Norway, Ireland, Sweden, the U.K. and the U.S., though the relative proportion has differed considerably from country to country. Again, in the majority of Western European countries, a substantial decline has been evident in the percentage of private consumption expenditure on rent. This reflects, in a large measure, State intervention directed towards the control of rents and housing development. Finally, the pattern of spending has been characterised by a drop in the proportion of expenditure devoted to household operation in many countries, due mainly to a reduction in purchase of domestic services.

The following table gives the level of real *per capita* gross product and private consumption in 1954 for a large number of free countries:

"Per capita" Gross Product and Consumption

1950=100

Countries	*Gross product*	*Private consumption*
North America	106	103
United States	106	103
Canada	102	103
Latin America	105	107
Western Europe	116	112
Austria	124	118
Belgium	110	101
Denmark	105	103

Pakistan (3)	92 (2)	..
Philippines	119 (1)	124
Thailand (3)	92 (1)	..

Note :—The figures for individual countries represent indexes of *per capita* gross national product and private consumption expenditure in constant market prices.

(1) Gross domestic product at market prices.
(2) Net domestic product at market prices.
(3) Indices refer to 1953.
(4) 1949=100.

RAISING PRODUCTIVITY OF HANDLOOMS

AGITATION AGAINST POWERLOOMS TAKES POLITICAL TURN

IT now looks as though the Government of India's policy for raising the productivity and incomes of handloom weavers through the introduction of powerlooms may receive a distinct setback. For the policy has evoked a bitter attack not merely from the self-appointed handloom leaders but also from the political parties. In fact, the agitation against the policy has taken a full-fledged political turn, completely divorced from economic considerations. At this meeting held at Bhavani in Coimbatore District, the Executive Committee of the Tamil Nad Congress expressed itself against the introduction of powerlooms. The Committee decided to urge the All-India Congress Committee not to give effect to the policy, in view of the stiff opposition from weavers to the move. No further reasons for the decision have been disclosed. From the Press report, it is gathered that the Committee felt that the problem was of great concern to the weavers of the whole of South India, as there were more handlooms in this region than those in the rest of the country. The views found favour with Acharya Vinoba Bhave and Mr. C. Rajagopalachari. Both of them have opposed the Central Government's move to introduce powerlooms.

It is not the Congress leaders of Tamil Nad alone who have launched the agitation against powerlooms; the communists also have joined hands. A communist-sponsored meeting of the representatives of handloom weavers from all over Madras State, held at Kancheepuram recently, passed resolutions opposing the introduction of powerlooms and automatic looms. The present policy of the Government, it was declared, was detrimental to the interests of handloom weavers.

In the meantime, some of the non-official members of All-India Handloom Board have reiterated their threat to resign jointly, if the Government is not prepared to give up its latest policy. Characterising the scheme of replacing handlooms with powerlooms as "unwanted and harmful," Mr. M. Somappa observed in Bombay the other day: "The scheme is calculated to put out of employment large sections of weavers and thus further worsen the economic position of several million people who are dependent on the handloom industry, particularly at this juncture, when the industry is being rehabilitated and is capable of meeting the entire additional demand for cloth, anticipated towards the end of the second Five-year Plan."

Deplorable

The continued agitation against the introduction of powerlooms in the handloom industry is deplorable. As this journal has ere now pointed out, the conditions of weavers have not improved much, despite all the encouragement and assistance given by the powers-that-be. For, since the industry is labour-intensive, the productivity is at a low level, so that production is uneconomic. It is computed that, on an average, a weaver cannot weave more than 6 yards of cloth per day on a handloom, while he can weave as many as 30 yards on a powerloom. If, therefore, the handlooms are to be made a more economic means of production and the incomes of those engaged in it are to be stepped up, their productivity must be raised. The only surest way of doing so is to convert them into powerlooms. Such a change-over is an inevitable stage in the improvement of production techniques, in order to enable the weaver to secure higher earnings and raise his standard of living.

It is very unfortunate that this simple, fundamental aspect is being overlooked by those who claim to represent the handloom industry. Do these interests want to perpetuate handloom weaving as a permanently depressed occupation, depending on heavy subsidies from the State and based on low wages? Surely, the weavers cannot for all time look to the Government and continue to eat out its hand. Further, how long do they expect the consumers and cotton growers to make sacrifices? Are not the latter two, who outnumber the weavers, to get a square deal? What is wanted, therefore, is a long-range plan for the rehabilitation of handloom industry and for placing it on a solid foundation. The introduction of powerlooms is part of such a plan. After all, it must be remembered that the solution to the handloom industry lies in the production of attractive cloth at a cost which is within the purchasing power of the consumer.

The apprehensions expressed by the handloom industry that the introduction of powerlooms would result in a large-scale displacement of weavers and the progressive elimination of the industry are clearly exaggerated. As was pointed out in these columns a few days ago, the additional production of cloth on the handlooms envisaged in the second Plan will require more hands for processing and for other activities such as marketing. Moreover, the conversion will not and cannot take place overnight; it will have to be gradual. The Government of India has repeatedly given the assurance that the conversion programme will be so phased as to avoid any competition between powerlooms and handlooms and unemployment among the weavers.

Assurance Reiterated

Explaining the position to Pressmen at Madras last week, Mr. M. Bhaktavatsalam, Minister for Industry, Madras, reiterated the assurance that, if the introduction of powerlooms were to prove prejudicial to the interests of weavers, his Government would not hesitate even to withdraw the steps taken by it. In this connection, the Minister observed:

"There are more than five lakhs of handlooms, according to the statistics collected by the organisations of weavers. Before the introduction of the Cess Fund, there had been 96,000 handlooms under the co-operative societies and this number has now increased to 1,57,000. Another 5,000 looms will come under the co-operative societies shortly. As against this increase, production of cloth by weavers in the co-operative sphere has trebled itself. The Government of India, which has made substantial allotment to the tune of Rs. 5 crores for the rehabilitation of weavers in the second Five-year Plan, is agreeable to this allotment being spent even during the first three years. Therefore, there cannot be any reasonable apprehension. It is needless to add that the Government which has been taking so much interest in the permanent rehabilitation of the handlooms would adopt any measure that might injure the interests of the weavers. Repeated assurances have been given that nothing will be done to affect a single weaver or a pie of his wages."

The above statement of Mr. Bhaktavatsalam should dispel the doubts and fears expressed by the so-called spokesmen of the handloom industry about the conversion scheme. They would do well to realise that, to the extent, technological improvements are effected in the handloom industry, production will rise, cost will decline, demand will grow and with that employment also.

EXCISE DUTY ON CLOTH

In conformity with its declared policy of keeping a close watch on the movement of prices and mopping up of excessive profits as and when they arise, the Government of India announced on 31st August an upward revision in the excise duty on cotton cloth. This action was endorsed by the Lok Sabha on the 3rd inst. after a critical debate. The statement of objects and reasons of the Bill embodying the new proposals observes that, as a result of the increase in agricultural prices and the adoption of restrictive policies in respect of production of cloth in the mill sector, the prices of cloth have been increasing in recent times, resulting in excessive profits for the trade and industry at the expense of the consumer. The statement further says that the increase has been particularly marked in the case of medium and coarse varieties of cloth, which account for more than 80 per cent. of the consumption of cotton textiles in the country. Hence the Bill proposes to double the duty on medium cloth from the existing rate of one anna per square yard to two annas and that on coarse varieties—other than *dhotis* and *saris*—from one anna per square yard to one anna and six pies. No change is made in the existing duty of six pies per square yard on *dhotis* and *saris* of the coarse type. The prevailing duty of 2½ annas on superfine cloth will be raised to 4 annas and that on fine cloth by one and a quarter anna to three annas a square yard. All duties are exclusive of handloom cess and came into effect at mid-night on 31st August. These duties are expected to bring in an additional revenue of Rs. 17.5 crores to the Central Exchequer in the remaining part of the current financial year.

Introducing the Bill in the Lok Sabha, Mr. T. T. Krishnamachari, Finance Minister, observed that the duties had been so designed as to act as a brake on the rise in prices in the present state of the market.

A feature of the Bill is that it provides for a ceiling of As. 4 per square yard on coarse and medium count cloth and As. 6 per square yard on fine and superfine cloth. The Government is thus given power to vary the rates of duties in an upward direction through executive action.

As a sequel to the rise in the excise duties on mill-made cloth, the Government has also enhanced the compounded levy in respect of cotton cloth produced on powerlooms, in conformity with the increase in the basic rates. A Press note issued by the Ministry of Finance indicates that the revised rates will be Rs. 50, Rs. 40 and Rs. 30 per loom per shift, per month according to the number of looms employed. Manufacturers employing not more than four looms will, however, continue to be exempt from this levy.

COTTON TEXTILES IN PAKISTAN

A Press report from Karachi avers that grey cloth and cotton yarns produced in Pakistan are steadily capturing markets in the Far East, the Middle East and the U.K. Encouraged by the recent excellent performance, a delegation of both officials and traders, it is said, will shortly be proceeding to explore the possibilities of expanding exports in Burma, Thailand, Malaya, Indonesia, Persian Gulf Ports, Iraq and Saudi Arabia. The Press report even avers that, price-wise, Pakistan yarns and grey cloth have been able to squeeze out the Indian products from some of their markets.

It is rather difficult to believe the report. True, the capacity of the cotton textile industry in Pakistan has considerably expanded in recent years, leading to a marked rise in output of textiles. Nevertheless, the gap between supplies available and the actual domestic requirements was until recently quite wide. One, therefore, wonders if Pakistan is really in a position to export textiles and that at competitive rates.

Be that as it may, the textile industry in Pakistan is now reported to be producing cloth at an annual rate of 455 million yards, as against 127.5 million yards in 1951. The rise in production has followed an expansion in loomage, from 5,984 in 1951 to 26,000 in 1955-56. The rate of yarn output is estimated at 275-300 million yards, which compares favourably with about 55 to 60 million lbs. four years before. Of this quantity, about 110 million lbs. are said to represent exportable surplus. The total number of spindles installed in Pakistan is estimated at 1.7 million, as against 333,126 in 1951. The capital invested in the industry is approximately Rs. 60 crores.

This notable expansion in the size of the textile industry must be attributed to three factors. First, there has been a severe restriction on imports; in the past two shipping periods, no licences for cloth imports were issued. Secondly, the industry is protected by an import duty of 60 per cent. *plus* sales tax. Thirdly, the industry has been able to get a liberal supply of cotton of appropriate quality and staple length at relatively low prices.

The prices of cotton textiles manufactured in Pakistan, it is claimed, have suffered a fall in the past year. Grey long cloth (Adamji 30") is said to be now available at As. 9 per yard, as against As. 10 a year before. Similarly, twenty counts cotton yarns are now quoted at Rs. 18 per bundle of 10 lbs., as against Rs. 18-8. This trend is in sharp contrast to that in India where prices have been rising.

HANDLOOM DESIGNS

Mr. Julian Seeber, a well-known American fashion designer, who has been invited by the Government of Bihar to advise it on handloom designs, has offered some constructive suggestions for consideration by the Union Government to make handloom products popular in foreign markets, particularly in the United States. During his thirteen months' stay in India, Mr. Seeber toured the entire country, acquainted himself with the problems and prospects of the handloom industry, and worked at various handloom centres, including those in Malabar and Bihar. Having thus obtained an idea of the potentialities of the industry, he has expressed his belief that American markets could absorb millions of yards of Indian handloom products. But he hastens to add that the American consumer is rather "fastidious" about his taste and the price payable for the fabrics. Mr. Seeber, therefore, has urged the Government of India to undertake a "little bit of market research" in America before instructing the handloom producers in this country on the vast and ready markets remaining to be tapped there. He has also emphasised that there must be a planned production of goods of the required quality to ensure to the foreign consumer a steady supply of the cloth he requires. Expressing the desirability of a mixed group of handloom experts visiting the United States to study consumer requirements there, Mr. Seeber observes: "Your producers must know what we want and it is not enough if your Government and a few experts know our requirements. Sending officials and some higher-ups to study window-dressing will not solve your problems."

According to Mr. Nityananda Kanungo, Union Minister for Consumer Industries, in the month of June 1956, about 170 composite textile mills were working three shifts, 98 mills two shifts and nine mills one shift. Of the spinning mills, 54 were working three shifts, 51 mills two shifts and 10 mills one shift. The following table gives the number of looms and spindles worked in different shifts.

Shifts	*Looms*	*Spindles*
3 shifts	51,106	4,976,818
2 shifts	171,434	10,168,910
1 shift	182,535	10,579,096

Replying to a question in the Lok Sabha, Mr. K. C. Reddy, Minister for Production, said that the Government of Assam had taken steps to establish a spun-silk mill of 3,000 spindles. He disclosed that a Japanese silk expert had been invited to prepare the scheme for the spun-silk mill and that the Government of India had also agreed to contribute towards the capital cost. The Minister also said that similar proposals from the Governments of Bihar, West Bengal and Jammu and Kashmir for the establishment of spun-silk mills were under the consideration of the Central Silk Board.

BRITISH FIRM TO MANUFACTURE NON-WOVEN FABRICS

IMPORTS OF CLOTH MAINTAINED

By Our Special Correspondent

MANCHESTER, *28th August*

MANCHESTER LETTER

A DEVELOPMENT which may be of far-reaching importance to the British textile industry has been announced in Manchester by Tootal Ltd., the £10 million group. In his annual review the Chairman, Mr. A. V. Symons, announces that the group is in the process of forming a new British company to undertake the manufacture in Britain of non-woven fabrics in conjunction with the American concern, West Point Manufacturing Co., of Georgia.

The idea of bonded fabrics has been discussed for some time past in textile circles but the fact that a group of the standing of Tootal Ltd. should embark on actual production is considered to be of great significance for the British textile industry. "For many years we have felt that sooner or later the laborious processes involved in the spinning and weaving of cloth, which date back to time immemorial, must give way to the inventive mind of modern times," stated Mr. Symons in his announcement. The Transatlantic link-up put at the disposal of Tootals the "very considerable know-how" in this field of the American company. The association would be of "great value" in the future.

A spokesman of Tootal would not go beyond the official statement but it is understood that production of non-woven fabrics is likely to start in about twelve months' time. The implications of a method of textile manufacture which dispenses with the traditional spinning and weaving processes have not yet been examined in detail in the British textile industry. While it is recognised that there can be no large-scale change-over in the near future to this revolutionary system it is clear that great new issues, both technical and social, are looming before the textile industries of the world as science and technology march forward.

Trade Situation

Leaders of the trade unions in the Lancashire cotton industry are to summon another special conference of members to discuss the situation in the industry. This was announced following a meeting of the legislative council of the United Textile Factory Workers' Association, the central assembly of the cotton unions. The conference will take place in November and will be attended by 230 delegates from the mills, each of them representing about 1,000 workers.

Mr. Harold Bradley, secretary of the legislative council, said the conference would discuss recent moves to alleviate the plight of the cotton industry and the possibility of further action.

The council had decided to postpone for the time being consideration of a suggestion that a monster petition calling for Government help and signed by everyone in the industry should be organised and sent to Whitehall.

Sir Raymond Streat, Chairman of the Cotton Board, described the position of the industry as "serious but not calamitous." The industry had many problems but they were not problems which could not be solved. Conditions had been worse before.

He said the industry's export trade was facing difficulties but the specially formed cotton exports committee, made up of the Board of Trade on the one hand and the cotton industry on the other, had already helped the situation and would continue to do so.

Sir Raymond said the first impact of the cotton industry's £250,000 publicity campaign to promote sales of British cottons would "break" in September. He was not in a position to enlarge on that statement at the moment.

Imports of Cloth

Little change has recently occurred in the flow of overseas cloth into British ports. The volume of goods arriving in this country has been fully maintained, with imports of loom-state cotton cloth at 164,193,000 square yards for the seven months, against 180,642,000 yards, and finished cloth at 21,813,000 square yards against 17,164,000 yards. Larger shipments of rayon fabric continue to be received, bringing the aggregate total to 47,283,000 square yards against 33,866,000 yards.

Arrivals of grey cloth from India have now just exceeded the level at the end of July last year, being 85,481,000 square yards against 85,070,000 yards. Supplies from Hong Kong have been equally well sustained at 31,093,000 yards against 31,533,000 yards. Japan's share of imports into Britain, however, has continued to decline from 47,595,000 yards to 22,240,000 yards. Arrivals from unspecified "other foreign countries" have been doubled this year at 13,561,000 square yards.

The cost of imports of cotton goods in the seven months has now for the first time this year exceeded the amount spent on foreign material in 1955. To the end of July imports were valued at £15,107,468 against £15,023,501.

Home and Export Trade

Supplies of cloth available for distribution in the first half of the year show a marked decline from the quantity passing through the pipeline in recent similar periods. The reduction can be attributed wholly to the fall in output, which has resulted in production of cotton and rayon cloth being lower than at any time since 1952. Due to other factors, however, the supply of goods surplus to export requirements, and therefore available for the home trade, remains at a level comparable with the last year or two.

The following table indicates the latest comparative supply and distribution statistics for cotton and rayon goods:

(In million yards)

Year	Output (*a*)	Imports (*b*)	Total (*a*) & (*b*)	Exports	Balance for Home Trade
1937 ..	4,122	75	4,197	2,001	2,196
1947 ..	2,012	174	2,186	639	1,547
1948 ..	2,440	248	2,688	966	1,722
1949 ..	2,592	400	2,992	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	476	3,436	1,105	2,331
1952 ..	2,102	210	2,402	871	1,531
1953 ..	2,632	143	2,775	895	1,880
1954 ..	2,775	395	3,170	812	2,298
1955 ..	2,479	365	2,844	688	2,156
6 months					
1953 ..	1,280	70	1,350	420	930
1954 ..	1,438	142	1,580	439	1,141
1955 ..	1,350	200	1,550	351	1,199
1956 ..	1,215	201	1,416	301	1,115

Part of the falling off in production of Lancashire-made cloth has been offset by the continued high level, of imports, chiefly from India and Hong Kong. But the continued decline in export trade has been marked. As there is nothing in the existing outlook to indicate any likely expansion in business for overseas markets, the volume of cloth disposable for various purposes domestically is dependent on local production and the steady flow of imports.

There has been some comment during recent months on the maintenance of output in view of the disappointing reports from distributors as to the offtake. Although supply shortages would not appear to be imminent from these figures, the situation is complicated by the persistent labour losses which make any assessment of future prospects extremely hazardous should there be any large-scale revival in demand.

The quantity of goods in stock or in the pipeline is fully adequate to meet current needs and would withstand some pressure for supplies. Whether output could be increased sufficiently to keep delivery dates relatively short in the event of a sudden call for goods arising remains to be seen.

Exports

The best that can be said about the latest overseas trade returns is that the figures relating to cotton goods have not shown any further deterioration. Lancashire traders are fully aware of the many hampering developments which have caused the curtailment of shipments over a long period and there is no evidence for the belief that conditions will improve in the near future—if at all. Meanwhile, the struggle persists, but the outlook cannot be regarded as at all encouraging.

In the seven months to the end of July the value of cotton yarn and manufactured goods exported was £51,823,388 against £57,598,541 in the corresponding period a year ago. Most of the decline is accounted for by the continued reduction in the quantity of piecegoods sold in foreign markets. The volume so far this year has shrunk from 323,287,000 square yards to 276,884,000 square yards, the respective values being £51,703,732 and £35,708,375.

From month to month the position of the leading consumers of these goods shows little change, with Commonwealth countries still the main buyers but the quantities involved tending to decline. Australia has, for example, taken 49,000,000 square yards against more than 61,000,000 yards and shipments to Nigeria and the Gold Coast are little more than half their 1955 level, being 28,000,000 yards against 54,500,000 square yards.—*All Rights Reserved.*

OUTLOOK FOR WORLD COTTON IN THE CURRENT SEASON

CONSUMPTION TREND ENCOURAGING

AN objective appraisal of the prospects for world cotton in the new season, which began on 1st August last, necessitates an analysis of its supply in relation to the demand for consumption and the stock position obtaining at present. The beginning of the new season happily coincides with a period which holds out promise of increased economic activity which is likely to be reflected in the tempo of cotton consumption. Though the outlook for consumption in the new season is encouraging, the overall outlook for cotton is not very bright, unless the consumption goes up to a much greater extent than is envisaged now or the output registers a decline. As the scope for any marked rise in consumption is, however, distant, the performance of the cotton trade will depend, to a large extent, on the possible outturn of the 1956-57 (current) season's crop. It will be interesting, therefore, to project the production prospects in the current season, based on the results of the previous season and the preliminary estimates for this season.

The most distinguishing feature of the 1955-56 cotton crop, according to the latest review of the cotton situation by the International Cotton Advisory Committee, Washington, was the tremendous increase in yields per acre in the United States, while, outside the United States, yields registered a marked deterioration. Thus, while the United States achieved an all-time record yield of 417 pounds per acre, yield in the rest of the free world declined from 177 lbs. per acre in 1954-55 to 165 lbs. in 1955-56. The comparison is particularly striking when taken in the context of the actual acreage statistics. In the United States area under cotton in 1955-56 declined from 19.2 million acres to 17.5 million acres. Though the acreage was thus lower, the exceptional yields resulted in an increment in production of about 1 million bales (running bales) over the previous year's figure of 13.6 million bales. In contrast, countries outside the United States increased the area under the crop by about 3.5 million acres but their output was only 15.8 million bales (of 478 lbs. each), as compared with 15.9 million bales in the previous season.

The record yield of the United States is attributed to extremely favourable weather, reduced planting on marginal land, more intensive cultivation, heavy use of fertiliser and light pest and insect infestation. Reduced yeld per acre in the rest of the world, notably in India, Brazil, Argentina and the Central American Republics was mostly due to inopportune rains. Moreover, the fact that acreage increased sharply probably had the effect of bringing more marginal land into production, which also tended to lower average yields. In fact, Egypt and Argentina recorded their lowest yields of the post-war period, whereas yield per acre in Mexico, though it dropped sharply from the peak level of the preceding year, was still the second highest on record.

To turn now to the current season. It is reported that acreage under cotton has been reduced in three principal producing countries, namely, the United States, Egypt and Mexico. In countries like Brazil, Uganda, Tanganyika and Sudan, an increase in acreage has been reported. The actual outturn of the crop will, however, depend on the yield per acre.

The first cotton report of the United States, issued on 9th July, placed acreage in cultivation as on 1st July at 16,962,000 acres. This is three per cent. less than the 17,506,000 acres under the crop in the previous season and 5,784,000 acres less than the ten-year (1945-54) average of 22,746,000. In fact, it is significant to note that the 1956-57 acreage is the smallest since the early 1880's. According to the report, growers planted the highest percentage allotments on record—97.3 per cent. as against 96.4 per cent. in 1955-56 and 92.4 per cent. in 1954-55. Weather conditions at the time of planting are also said to have been favourable. Much needed rains were received in late July. In the extreme South Texas, prospects are very good for an increased outturn over the last year. The Far West continues to report excellent progress and a record yield is predicted in this high yielding, irrigated area. Though the danger of boll weevil infestation is not yet over, poisoning and dusting operations have so far been effective. It may be mentioned here that the U.S. Agriculture Department's first (8th August) crop estimate places the current season's outturn at 13.55 million bales (500 lbs.), as against the 1955-56 crop of 14.72 million bales.

Outside the United States small reductions in acreage appear to be general. In Mexico, area under cotton has fallen from about 2.6 million acres in 1955-56 to 2.2 million in the current season. The principal reductions are in Sonora-Sinaloa and Mexicali regions. The average yield, however, is expected to be somewhat higher than in 1955-56. Accordingly, production is tentatively placed at roughly 2 million bales, as compared with 2.2 million in the previous season. On this basis, some 1.5 million bales would be available for export.

Reduction in acreage is noted in Egypt also. The first estimate of the Egyptian Government placed the 1956-57 area at 1,716,000 acres, as against 1,885,000 acres in the previous season—a decline of about nine per cent. Elsewhere in the Middle East, acreage is reported to have declined in Turkey and early estimates place the crop at about 550,000 bales, as compared with 600,000 in 1955-56. If the actual production more or less approximates to this estimate, Turkey will have very little cotton for export from the new crop as the needs of its domestic textile industry are rapidly approaching the estimated production. Based on present conditions, Iran and Greece should be able to maintain the *status quo*, the outturn approximating 280,000 bales in each country, the same as in the previous season. In Syria and Spain, due to increased acreage, production may reach new records. Prospects are for an increase of about 10 to 20 per cent. In North Brazil, whereas, in Central America, though the acreage is reported to be less, outturn is likely to exceed the previous years, because the latter was a record poor crop.

Crop progress in India and Pakistan, as is well known, is satisfactory and should weather conditions continue to remain favourable, a better crop than the previous one is likely to be harvested. Outturn in the current season is expected to aggregate about 5 million bales (400 lbs. each) in India and 1.8 million bales (400 lbs. each) in Pakistan. Though little information is available regarding the colonial areas of Africa, indications are that the new season will be characterised by a marked improvement in output. It is reported that early plantings were running well ahead of the previous year in Uganda and prospects are good for a possible record crop in Tanganyika. In view of the favourable statistical position of extra long-staple cotton, acreage is unlikely to be reduced in Sudan.

From what has been said above, it is clear that, in the new season, there is likely to be a fall in the total output of cotton, as a result of reduction in the acreage under the crop. But the validity of this statement depends upon an important variable, that is, the yield per acre, which in its turn is the result of an inter-play of various factors climatic as well as technological. If the yield remains the same as before, a less aggregate output is likely to result, at least in many of the major producing countries.

As regards consumption, the season just ended is expected to have registered a record consumption aggregating 28.2 million bales. In fact, this is about half a million bales more than the 1954-55 figure and represents a increase of 4.5 million bales over the post-war base year of 1949-50. It may be noted, incidentally, that much of the rise in consumption of world cotton has been due to accelerated activity in Japanese textile mills. As against this factor of increased consumption, the overall supply position in cotton is twice as large as at the time of the Korean crisis. At present rates of consumption, available raw cotton would be sufficient to keep the world's spinning machinery at work for nine months without any additional supplies. The U.S. with its stocks of 14.5 million bales, has the largest carryover on record, but, in other areas, a drop of nearly 2 million bales last season has reduced the end of season surplus to 7.4 million bales.

The outlook for consumption in the current season appears, on present reckoning, to be bright. World population has been increasing and business conditions in general are satisfactory, so that there is every reason to hope for a steady increase in the demand for textiles which would necessarily be reflected in the tempo of cotton consumption. Though it is true that many of the leading cotton consuming countries have suffered loss of export markets, this is more than offset by the growth of cotton textile industries in many of the underdeveloped countries. Another factor which is likely to boost consumption is the fall in the price of cotton over the season. This will increase its competitiveness *vis-a-vis* other natural and artificial fibres.

MILL CONSUMPTION OF COTTON

The textile mills in India consumed 351,109 bales of indigenous cotton and 52,156 bales of foreign cotton during the month of June 1956, as compared with 345,169 bales and 47,713 bales, respectively, in the same month of the previous season, according to the statistics compiled by the Office of the Textile Commissioner.

The following table gives an idea of the trend of cotton consumption during the first ten months of the 1955-56 season in juxtaposition was that of the 1954-55 season.

	1955-56		1954-55	
	Indian	Foreign	Indian	Foreign
September	382,979	45,174	328,024	60,784

PROTECTION FOR U.K. COTTON MILLS

NO JUSTIFICATION FOR AGITATION IN LANCASHIRE AGAINST INDIA

By Neville N. Wadia

ONCE again, the agitation against imports of Indian cotton piecegoods into Britain has gained prominence in the British press. It, therefore, seems desirable to present some of the facts from the Indian angle to the British public.

Soon after the publication of my article in *The Manchester Guardian* on 4th January 1955, which was generally supported by a conciliatory editorial, Lancashire sent a delegation to this country, under the leadership of the Hon. Mr. Angus D. Campbell, in order to undertake a market survey for British textiles and to secure a reduction of import duties. The talks that ensued were most cordial and there was a genuine desire on the part of both the Government of India and the Indian producers to understand and accommodate Lancashire's plea for the liberalisation of imports of British textiles into this country.

As a result of these negotiations, the Indian Government scaled down the import duties from rates of between 60 per cent. and 80 per cent. to a level of 25 per cent. This was India's second major concession which was preceded in September 1954 by the abolition of quota restrictions on imports of cotton piecegoods into this country. Evidently, the British mission was satisfied with the Indian gesture and, at the time of its departure, expressed the belief that, under these conditions, Lancashire would be able to send between 10 to 15 million yards of cloth per annum to this country. These expectations are now being realised, as shipments of British piecegoods during the last two months are at the rate of over 12 million yards a year.

As for Indian exports to the United Kingdom, the delegation was concerned with the apparently rapid increase in shipments rather than with the level at which they stood at the time of the delegation's visit. Exports from India to the U.K. in 1955 actually show a drop of 16 per cent. as compared with 1954. It is interesting to note that 95 per cent. of our exports are grey goods and, therefore, require to be processed before use. During the talks with the mission, it was agreed that the new arrangement should be tried for a period of twelve months, whereafter it could be brought up for review. However, it was not long before Lancashire resumed her agitation and made further representations to the Board of Trade to curtail imports of Indian cloth.

No Unfair Advantage

Basically, the British industry's case against India is twofold. It holds that the Indian Mill Industry enjoys an "unfair advantage" by having access to cheap home-grown cotton and by paying low wages to its workers. Let us see how far these charges are tenable.

Since the British delegation was in India last year, there has been a radical change in the position regarding Indian cotton. In April 1956, the price of American middling 15/16", quoted in Liverpool, was 31*d.* per lb., while the quotation in Bombay at that time for an equivalent Indian cotton, namely, Vijay, was approximately 16.1*d.* Today, the prices of these two cottons are 24*d.* and 22½*d.*, respectively, showing a negligible difference of 1½*d.* per lb. Surely, for a country which grows its own cotton, this cannot be said to be anything but a normal advantage.

Already the drop in the prices of American cotton has been reflected in the sharp cuts announced on 1st August by the Yarn Spinners' Association. The subsequent reduction in prices of Lancashire cloth will greatly help to improve her competitive power both in the home and in the export markets.

Again, the number of workers employed for a unit of production is in the ratio of 1 in Lancashire to 3.5 in India. According to the latest available data (Ministry of Labour *Gazette*, September 1955), the average weekly wage of a Lancashire operative is £7/6 or Rs. 410 per month of 26 working days. The earnings of a Bombay mill worker are Rs. 119 for the same period, so that, in order to achieve an equivalent output, the Bombay mills are required to pay Rs. 416, as against Rs. 410 by the U.K. industry. In addition, they have to pay an annual bonus, ranging from 15 days' to three months' basic wage—a burden from which Lancashire is free.

The Indian mill industry is not, therefore, a low-wage cost industry. Its real advantage over its British counterpart consists in the greater use that is being made of its productive equipment. Nearly all cotton mills in India work two or more shifts, despite the fact that the plant and machinery of many of them are old and worn out. By such intensive working, they are in a position to reduce their overhead and depreciation charges.

But in Lancashire a large number of mills work only one shift which inevitably deprives them of the benefit of economic production. The statistics, issued by the International Federation of Cotton and Allied Textile Industries, regarding the average hours worked per spindle in the United Kingdom and in other textile producing countries provide an illuminating study in contrast. In the twelve months ended 31st July 1955, the number of spindle-hours worked was:

U.S.A.	5,498.58
Germany	3,497.37
Japan	4,375.68
India	5,494.80
U.K.	1,676.56

The following comparative statistics regarding the number of idle looms and weekly average hours worked as on 31st January 1955 bring out equally vividly the extent to which Lancashire has been making inadequate use of its equipment:

	Idle Looms.	*Weekly average hours worked.*
U.S.A.	17,588	112.03
Germany	15,169	56.69
Japan	12,195	78.49
India	15,331	91.54
U.K.	66,005	37.57

Turning now to modernisation of plant and machinery, although in recent years Lancashire has taken big steps forward in that direction, it has still a good deal of leeway to make up. The Cotton Board's recent pamphlet, entitled *The Cotton Industry and the Consequences of Unlimited Imports*, shows that as much as 47 per cent. of the total spindleage in Lancashire still consists of mules. Meanwhile, the textile industries of the United States, Japan and Europe have forged ahead by adopting modern machinery and methods on a large-scale.

Rearguard Action

This point has been well brought out by Mr. R. V. Stevens in *The Director* for May 1956. He points out that Lancashire has been fighting a rearguard action even against the so-called high-cost industries of Germany, Belgium and Holland. To quote the author: "Even in markets from which low-cost competition is almost absent, the industry is being outstripped." This, he says, is the sorriest part of the story.

To give one more example, in an instructive report prepared after his recent visit to the United States, a senior technician of an important Indian mill points out that, although the American mills pay astoundingly high wages to their operatives, they are in a position to economise on their production costs by making the fullest use of modern techniques. A mill in South Carolina visited by him has 72,768 spindles and 1,900 looms, but it employs only 826 operatives for all the three shifts worked. With the aid of efficient machinery and with a minimum labour force, this unit is able to keep its costs to the absolute minimum.

I have cited these examples, not to sit in judgment on the state of the British cotton industry, but to show that imports of Indian cloth into the United Kingdom have by no means been solely responsible for the difficulties experienced by Lancashire. It is, moreover, wrong to say that the plight of Lancashire is desperate—a statement which is not borne out by last year's company results. According to an independent analysis, the average profit of 60 spinning mills in 1955 was £27,745 per company, as compared with an average of £31,226 for 67 companies in 1954 and £27,546 for 79 firms in 1953. Cloth manufacturers announced equally good results in 1955. The profits of 27 weaving concerns showed an average of £42,285 per company, as compared with £40,920 in 1954.

Indian Exports Falling

An explanation of recent developments in India will perhaps help to allay the apprehensions of Lancashire. During the last five years, the Indian cotton mills were virtually prevented from expanding their weaving capacity as part of the Government's policy of encouraging the handloom weaver. Meanwhile, under the impact of the first Five-year Plan, there has been a steady increase in the domestic consumption of cloth. With mill production showing no appreciable increase, the pressure of demand in the home market on available supplies has been so effective that India's export trade in cloth has suffered a setback. The fall in exports is most noticeable in the current year. Since cotton piecegoods are among the major earners of foreign exchange, of which this country is in great need for financing its development schemes, the Government of India has felt constrained to review its textile policy. Last June, it was decided to permit the mills to acquire 14,600 automatic looms in order to produce 350 million yards of cloth for export. Perhaps, several years must elapse before the industry is in a position to take full advantage of the concession. In these circumstances, Lancashire's assumption that India enjoys a formidable competitive advantage over it has no foundation in fact.

Need for Broader View

Before I conclude, I would like to make an earnest appeal to Lancashire to take a broader view of Indo-British trade relations. Cloth is just one of the numerous items that figure in the business dealings of the two countries. In the five months from January to May 1956, imports of British goods into India were of the value of £71 million, while Indian exports to that country amounted to £63 million.

India's second Five-year Plan lays great emphasis on the development of basic industries and for this purpose it will be necessary to import machinery and equipment averaging £200 million a year. Both on account of its intimate and long-standing relations with this country and the high quality of its engineering products, Britain can confidently look forward to securing a fair share of India's orders for capital goods. Already a consortium of British steel firms has agreed to build a large steel plant in this country at a cost of £80 million. The mutual interests of the two countries should, I suggest, be viewed from this wider perspective.

In view of the large amounts of foreign exchange required for the second Five-year Plan, the import programme will have to be scrutinised very carefully. India will not be able to afford any appreciable increase in the import of consumer goods such as textiles.

During the recent visit of the Indian Prime Minister to London, Sir Anthony Eden is reported to have suggested that talks should be held between the textile interests of the two countries. As their relationship has always been most cordial, discussions on this question and on many other problems of mutual interest are bound to be most useful.

EXPORT CREDIT GUARANTEE

The report of the Export Credit Guarantee Committee, as is now well-known, envisages the setting up of an Export Credit Corporation and the assumption by that body of 80 per cent. of commercial risks and 85 per cent. of political risks, the balance in each case being borne by the insured. The Corporation will not cover exchange fluctuation and devaluation risks, and, during the pre-shipment period, ban or restrictions on the import of raw material or semi-manufactured goods which may be necessary to manufacture the goods to be exported, imposition of a new export duty or changes in export duties, non-availability of railway transport, shipping space or berthing space for steamers and strikes. Again, the scheme is only intended to be voluntary and no compulsion is envisaged.

Commenting on the above proposals, the Federation of Indian Chambers of Commerce, in a communication addressed to the Ministry of Commerce and Industry, suggests that the risks arising out of non-availability of transport or enhancement of export duties subsequent to entering into a contract should be covered by the proposed scheme. It also feels that the percentage of cover in guarantees against risk, recommended by the Committee, is rather rigid. It suggests, instead, a slab system of risk coverage. It would like the Corporation to assume variable proportions of risks at the option of the exporter. The suggested slabs are 25 per cent., 50 per cent. or 75 per cent. of invoice value, the premium depending upon the extent of the cover demanded. On the question whether the scheme should be optional or compulsory, the Federation points out that an element of compulsion may be necessary, in order that the Corporation may stabilise itself and become self-supporting in as short a time as possible. Referring to the exclusion of imposition or increase in export duties and non-availability of transport from the risks proposed to be covered by the Corporation, the Federation observes that, during certain periods, many export interests feel that these are the only two risks worth covering, inasmuch as shortages in transport have become frequent and export duties an established and variable device of the tax system.

FIRST ALL-INDIA CONFERENCE OF "GUR-KHANDSARI" PRODUCERS

MECHANISATION OF MANUFACTURE IMPERATIVE

WHEN the representatives of the *gur-khandsari* industry revealed some days ago their intention to convene for the first time an all-India Conference, one thought that their object was to bring pressure on the authorities to accord greater importance to this industry at the cost of the white sugar sector. This expectation has, however, happily not proved correct. It is gratifying to find that the Conference, held at Lucknow last week, generally took a realistic view of the problems confronting the industry, although there were one or two speakers who put forward a fantastic suggestion for levying a cess on white sugar to finance the development of *gur-khandsari* industry. The credit for this must be given to Mr. V. L. Mehta, Chairman of the All-India Khadi and Village Industries Board, who presided over the Conference. In the course of his address, Mr. Mehta emphasised that the *gur-khandsari* sector worked as complementary to the white sugar sector.

There is considerable force in the statement. The second Five-year Plan envisages that, along with the increase in the output of white sugar, the production of *gur-khandsari* also will rise and that the latter will continue to be the most important means of cane disposal. In the Plan, the target of sugarcane production is fixed at 77 million tons. Of this quantity, the factories will consume only 25 million tons. while 39 million tons will be utilised by the cottage sector for producing 4 million tons of *gur* and *rab*. It means an increase of 1.2 million tons over the present production of 2.8 million tons. The total production of 4 million tons of *gur-khandsari* is expected to be quite sufficient to meet the domestic requirements fully and even make available some quantity for export.

None-too-Happy

It will be evident from the above account that the *gur-khandsari* industry plays a vital role in the country's economy. As it is, the industry consumes as much as 58 per cent. of the sugarcane grown. It provides direct employment to about 2.1 million persons on a seasonal basis and to 70,000 on a whole-time basis in the rural parts. The aggregate value of production is estimated at Rs. 100 crores, if not more. Despite such importance, the conditions actually obtaining in the industry at present are none-too-happy. As Mr. Mehta said, the methods of manufacture are crude and wasteful; in all areas, the industry is unorganised; modern facilities for stocking and transport are non-existent; and marketing is in the hands of middlemen. In view of these defects, the All-India Khadi and Village Industries Board has done well to lay stress on improvement in the quality of *gur-khandsari* and reduction in costs. The development programme drawn up by the Board thus aims at:

Augmenting output by 20 per cent. through the introduction of improved types of *kolhus* giving extraction of 65 to 70 per cent., as against 55 per cent. generally obtained on the *kolhus* now in use in most parts of the country; this is estimated to result in an additional income of Rs. 18 crores per annum to the cane-grower.

Improving the quality by the use of juice clarificants, better types of pans and furnaces; even a *premium* of Rs. 2 per maund for quality is expected to add another Rs. 18 crores a year to the income of the cane-grower.

Raising the general level of the price for *gur*, the methods adopted being regulation of supplies, avoidance of a glut of *gur* in markets by providing facilities for storing *gur*, linking prices of *gur* to those of white sugar, and export to foreign countries; the additional income arising from this is put at Rs. 18 crores.

The development programme for the *gur-khandsari* industry must be examined in the light of the Karve Committee's findings. The Committee has frankly admitted that it is difficult to foresee any large shift in demand in favour of either *gur* or *khandsari* and that the *gur-khandsari* industry offers relatively small and unimportant opportunities of additional employment. It, therefore, lays greater stress on the need for improving the quality of the product and reducing costs through technical improvement of the process of manufacture. Mr. Mehta did well to draw the attention of the Conference to this aspect. He observed: "An urgent need of the industry is to chalk out a detailed programme for research and investigation to improve the technique of manufacture at various stages—crushing, boiling, juice clarification, crystallisation and centrifuging. Valuable work has already been done by the Council of Agricultural Research, the Departments of Agriculture of various States, the Indian Institute of Sugar Technology, Kanpur, and other institutions. But there is need for further work in all directions. The problems facing the industry should be sorted and assigned to different institutions—departmental and private—and to universities. All of them should thus help the Board in improving the technique and making its programme of development better more effective and beneficial both to the producer and to the consumer."

As readers are aware, the waste involved in the production of *gur-khandsari* is very large. Thus, when cane is crushed for making *gur-khandsari* in cottage units, the sugar recovered is considerably less, being 6 per cent., as against the recovery of 10 per cent. obtained when it is crushed in factories for making white sugar. The loss of sugar is of the order of 40 per cent. There is, therefore, no exaggeration in the statement of Mr. C. B. Gupta, U.P.'s Minister for Industries, Planning and Civil Supplies, that the *gur-khandsari* industry practises wasteful methods, leading to colossal waste. There was, he said, vast room for improvement; "as the industry is worked intensively and extensively at disintegrated scale, any improvement, however small it may be, will mean a considerable addition to the income of cane-growers."

The Main Objective

If the *gur-khandsari* sector of the sugar industry is to be made more economic, it is imperative that manufacture must be mechanised through introduction of power-driven crushers. This, indeed, should be the main objective of the planners. Equally imperative are the need for adopting measures designed to (1) improve pans and other equipment on the technical side; (2) improve the keeping quality of *gur*, cleanliness in the places of production, proper storage and packing; and (3) standardise quality on the marketing side. The initiative for taking such tangible steps must come from the industry itself. All that the Governments—Central and State—can do is to render financial assistance and tender technical advice.

At the end of its three-day session, the All-India *Gur-Khandsari* Conference passed an important resolution urging the State Governments either to exempt the product from payment of sales tax or to grant such relief as is possible. The Conference further wanted the Central and State Warehousing Corporations to give preference to *gur-khandsari* co-operative organisations while considering proposals for financial and other assistance towards construction and management of godowns at prominent centres. It was emphasised, in this connection, that the godowns constructed for the storage of other commodities cannot be utilised for stocking *gur-khandsari* products. The Conference also put forward three other suggestions. First, adequate wagon facilities must be given for the transport of *gur-khandsari* and the possibilities of providing insulated wagons must be explored. Secondly, the Village Industries Board should examine the possibilities of *gur* exports to foreign countries through the Indian trade commissioners. Thirdly, the Central Government should collect statistics relating to *gur* industry with regard to production, recovery and employment.

SUGARCANE DEVELOPMENT

Two important decisions pertaining to sugarcane development during 1956-57 were taken by the agricultural officers of the Central and State Governments at their conference held in New Delhi recently. First, the target of the total area that is to be covered by the scheme for intensive manuring of sugarcane crop is fixed at 1.5 million acres. In the previous two seasons—1955-56 and 1954-55—only 806,000 acres and 179,000 acres had been covered. Secondly, efforts should be made to step up cane yields by the adoption of better methods of cultivation and guarding against cane pests, diseases, etc. The officers also discussed issues relating to the district-wise State targets for cane development, means of achieving them, allotment of and transport facilities for various fertilisers, utilisation of loans granted by the Union Government under the Sugar Development Schemes, and application of suitable fertiliser mixture to the crop for augmenting the per-acre yields.

COAL TRIBUNAL'S AWARD

IMPLEMENTATION NOT SMOOTH

ALTHOUGH more than three months have elapsed since the All-India Industrial Tribunal (Colliery Disputes) gave its award—the announcement was made on 26th May 1956—it would appear that the award has still not been implemented in right earnest. Thus, replying to a question by Mr. R. K. Malaviya in the Rajya Sabha the other day, Mr. Abid Ali, Union Deputy Minister for Labour, revealed that some strike notices had been received from coal workers over the alleged non-implementation or wrong implementation of the award. In this connection, Mr. Abid Ali alluded to a number of complaints received from workers. These relate to (1) increase in work-load, the monthly workers being placed on weekly pay-rolls; (2) change of designation of workers, with a view to placing them in lower categories; (3) discontinuance of some existing facilities such as light allowance, supply of kerosene oil and screening allowances; (4) non-payment of underground allowance and arrears for the period from 26th May-25th June, 1956, and (5) improper deduction of house rent, piece-rated women workers being paid less than men workers.

It is rather difficult to say how far and to what extent these complaints are true. If they are true, it perhaps indicates that the burden imposed by the award on the collieries is so heavy that the collieries have not been able to meet the demands of workers fully. Nevertheless, the fact remains that the implementation of the award cannot be avoided in the interest of industrial peace. It is gratifying to be told that the Employers' Organisation has agreed to implement the award and has advised its members accordingly. The industrial relations machinery has been holding discussions with employers and workmen, with a view to facilitating early implementation of the award by all the collieries. If necessary, tripartite meetings will also be held.

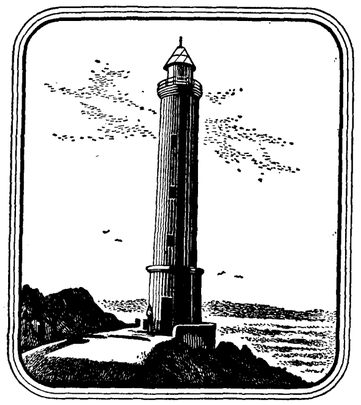
Commendable Gesture

Mr. R. K. Malaviya asked the Labour Minister whether it was not a fact that, due to wrong implementation of the award, monthly-rated staff and most of the engineering and skilled workers had been affected, and that they had refused to accept payment. To this question, Mr. Abid Ali stated that the complaints had been referred to the Conciliation Officers and the Regional Labour Commissioners. Mr. Abid Ali also disclosed that the colliery owners had agreed to extend the benefits of the award to the workers in coke-oven plants also. Although this question is not covered by the award, the gesture of colliery owners, is, indeed, commendable. Mr. Abid Ali offered the Government's good offices to see that other workers also benefited, if cases of workers not covered by the award were brought to the notice of the Government.

The colliery workers are somewhat dissatisfied with the Provident Fund facilities accorded to them under a separate scheme. Drawing attention to this aspect, a communist member from Andhra said in Lok Sabha that service in the case of coal workers was counted only from the date they became members of their Provident Fund scheme, while it was counted, in the case of workers coming under the Employees' Provident Fund Scheme, from the date of joining work. The member, therefore, urged for the adoption of more social security schemes for colliery workers. The aforesaid criticism was completely disputed by Mr. Abid Ali who said: "Only those who have put in one year's service can join the Employees' Provident Fund Scheme, while, in the case of colliery workers, they are entitled to join the scheme if they have put in 54 days of service. There is also a board of trustees with regard to the Provident Fund for coal workers. Whatever suggestions the trustees make unanimously, the Government will be prepared to accept." The Minister further said that no representation was given to the All-India Trade Union Congress on the board of trustees, as it failed to supply information about the membership of their unions, in spite of repeated reminders. He claimed that the colliery workers were satisfied with what the Government was doing for them.

The proposal to have a uniform price for coal all over the country is under the examination of the Government of India. The principle has already been accepted in the case of iron and steel, cement and fertilisers. The proposal for a uniform coal price is being examined consequent on the recommendations made by the Railway Equipment Committee and the Estimates Committee.

AGA



Throughout the world the lighthouse is a symbol of absolute unfailing reliability.
Marine lighting in India relies on 'Aga' equipment supplied by us just as industry relies on the welding and cutting equipment we supply.

MARKETING OF INDIAN COFFEE

PROBLEMS TO BE FACED BY THE BOARD

THE season 1955-56 is an eventful one for Indian coffee industry in that production during the season was a record one at 33.500 tons. This is very largely the result of the utmost care and attention paid during the past several years and the improved strains of coffee established in the industry. There has no doubt been an increase in the area under coffee since 1946 and, according to the latest figures, the area under this plantation has exceeded 252,000 acres. With the increase in output of coffee and the prospects of further rise in production in the coming years, the problem which is agitating most of the planters is that relating to the marketing of the excess production. It is to this problem that Mr. M. M. Varghese, Chairman of the Planting Committee, referred at length in his address to the annual conference of U.P.A.S.I. last week.

The industry has normally been used to handling 18.000 to 22,000 tons of coffee and the present output of over 33,000 tons has proved to be more than the channels of movement, all the way from the estates to the market, can bear. Mr. Varghese, therefore, did well in drawing the attention of the planners to this problem of transport and in asking them to deal with it adequately. There were quite a few other problems also to which Mr. Varghese referred in his speech. With a larger output, he said, the producers have to be paid a larger sum of money, because a part of the increase is also shared by the small producers who are usually paid in advance on the delivery of their crops. The transport and the curing works have to handle and store a much bigger crop than they have been accustomed to and the Board has to market a larger quantity of coffee. These in their turn create a series of new problems.

Irrespective of its size—even if it doubles itself—the entire crop comes to the pool only within the course of four or five months. Thus, in December 1955, the new season's crop started coming in and the subsequent arrivals were so large that the stock built up in the subsequent period were unusually high. It is quite possible, as Mr. Varghese pointed out, that crops may be even higher in future and it is, therefore, of utmost importance that the marketing policy of the Coffee Board should take care of its disposals sufficiently early in time, so that an undue accumulation of stocks does not take place, thereby creating, perhaps, some deterioration even in quality, which, were it to happen, would badly damage the high reputation which Indian coffee enjoys.

Surplus Coffee

Internal consumption of coffee has no doubt been going up and is expected to exceed 23,000 tons during the current season. Even if this estimate were realised, it would still leave a substantial surplus to be carried over to the new season or to be disposed of during the rest of the season. The problem is thus one of disposing of the surplus coffee. Even if this question is answered to the satisfaction of the planters, there is still one more, namely, that relating to the export policy. It is being asked whether the Board should not decide on its export allocations in the first two months of the new year, so that the bulk or a substantial part of the surplus, is disposed of before the rains. As it is, the Board has made a preliminary estimate of 34,000 tons in June and, assuming that it is not an underestimate of the same magnitude as last year's, planters feel that they will have about 10,000 tons in excess of the probable requirements within the country.

Viewed against this background, the report that the Coffee Board is actively considering ways and means of not only promoting the internal market to take care of at least a part of the increasing crop but also to find an export market is gratifying. It shows that the Coffee Board is seized of the problem.

A survey of the world coffee market at the present time shows that, contrary to earlier expectations, world price of coffee has been rising. One cause for this increase in world price is said to be the adverse weather conditions in the Latin American countries and the consequent reduction in world supplies. But, for the adverse weather in Latin America, the world coffee market would have made a plunge; it is still feared in some quarters that it may do so in any of the coming years. It is in order to meet this threat that South American producers propose to organise a world coffee council to regulate supplies to consuming centres. Producers in Africa have already agreed to join the council.

Expanding Output

So far as India is concerned, it is in a fortunate position both to expand its production and to absorb the increased output, thanks to its large population and the high quality of its coffee. A survey is being conducted by a special officer to determine suitable areas for coffee expansion. He has also been deputed to the Andamans to explore the possibilities of planting coffee in those Islands. The Coffee Board has drawn up three five-year plans for the development of coffee. When the plans were drawn up, the estimated average production was taken as 26,000 tons, made up of 18,000 tons *arabica* and 8,000 tons *robusta*. Basing itself on this figure, the Board fixed the following targets for coffee production for the three five-year period ending 1970:

Expected Increase

(Tons)

	Arabica	Robusta	Total	Arabica	Robusta	Total
At the end of 1st five-year period—1960 ..	21,900	13,790	35,690	3,900	5,790	9,690
At the end of 2nd five-year period—1965 ..	27,700	19,520	47,220	9,700	11,520	21,220
At the end of 3rd five-year period—1970 ..	37,700	21,520	59,220	19,700	13,520	33,220

Thus, the plan envisages an increase of 9,690 tons, 21,220 tons and 33,220 tons, respectively, at the end of each of the five-year periods as shown above.

Under the programme of monetary aid, it is estimated that, during the first five years ending 1960, 44,800 acres (*arabica* 31,000 and *robusta* 13,800) will come under intensive cultivation and the area to be brought under new cultivation will be 16,700 acres (*arabica* 14,000 and *robusta* 2,700). In addition, it is expected that during this period, by voluntary effort a further 95,000 acres of coffee will come under intensive cultivation and about 7,000 acres more will be planted with new coffee. So, during the five-year period under reference, the sum total of the area expected to be brought under intensive cultivation is 139,800 acres and under new coffee 23,700 acres. The loan aid for extension of acreage by opening new areas is for the present limited to existing coffee growers only.

COCONUT CULTIVATION IN INDIA

The area under coconut cultivation in India has increased by 8 per cent. between 1948-49 and 1954-55, that is, from 1.461.000 acres to 1.577.000 acres. During the same period, the increase in production is 22 per cent. that is, from 3 148 million nuts to 3,855 million nuts. Thus, both the acreage and the yield per acre have recorded an increase. Under the second Five-year Plan Rs. 92 lakhs have been allotted to coconut cultivation, of which Rs. 40 lakhs are for research schemes and Rs. 52 lakhs for developmental expenditure. The results of research schemes will reach the cultivators through the Community Projects and National Extension Service Schemes which between themselves will cover the whole country by the end of the second Five-year Plan.

These facts about the Indian Coconut were disclosed by Mr. Ajit Prasad Jain, Minister for Agriculture, in his reply to the debate in the Raja Sabha on the Indian Coconut Committee (Amendment) Bill on the 1st inst. The Bill, which seeks mainly to effect changes in the structure of the Committee and enlarge its membership, was passed after an hour's debate as passed by the Lok Sabha earlier. Some of the members availed themselves of the opportunity to impress upon the Minister to ensure to the cultivators adequate return on the cultivation of coconuts. Some others drew the Minister's attention to the affliction of trees in Travancore-Cochin by the leaf and root disease. They wanted that the results of the Committee's research should be carried to the cultivators.

Mr. Jain, in his reply, said that control of pests and diseases by means of spraying on a no-profit-no-loss basis had been undertaken since October 1949. A scheme had also been submitted by the T.-C. State Government for spraying at a cost of about Rs. 25 lakhs and this was under the consideration of the Central Government. Mr. Jain said that he was aware that the cultivator must get ade-

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. We were born when the motor industry was born, and we've grown up together. How young we were when the horseless carriage first shyly accepted the advance of the celluloid-cased accumulator! How old must one be to recall a day when 'battery' and 'Exide' were not synonymous to the motorist?

Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electrical Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

PROGRESS OF INDIAN SHIPPING

AMPLE SCOPE FOR DEVELOPMENT IN PRIVATE SECTOR

AS in many other fields of economic activity in India so in the sphere of shipping, the principle of mixed economy has been adopted, both public and the private sectors being jointly responsible for the development of the shipping services. But this feature continues to cause misgivings in the public mind, especially in the minds of the existing as well as potential investors, for it is feared that the public sector may grow not only in relation to the private sector but even at the expense of the latter. These fears have increased ever since the Planning Commission declared that the Government should participate in the equity capital of concerns rather give them money as loans. Since the Indian shipping industry, like its counterpart in all parts of the world, continues to receive State aid in the form of loans, the Planning Commission's observations have been generally interpreted to mean that the Government must not only expand shipping on its own but also become a partner in the private shipping concerns. This is not a climate in which private investor can enthusiastically risk his savings in an industry in which the return even otherwise is very low. In this context, it is reassuring to note that the Union Railway and Transport Minister, Mr. Lal Bahadur Shastri, affirmed, in the course of his speech at the annual meeting of the Indian National Steamship Owners' Association, held last week at Bombay, that the private sector had "ample scope" to expand and develop within the high target of two million tons set by the Shipping Policy Committee.

Challenge

While Mr. Shastri's statement was thus reassuring to a degree, it must be noted that he also warned that the Government could not be expected to remain inactive if the response from the private sector to the call for expansion was not encouraging. In that case, the Government, he said, would have to make a "combined and determined effort to build up our shipping industry so as to attain more than one million tons gross during the second Plan itself, besides, of course, the addition to it of tanker tonnage." He added:

"Any fine distinction between the public and private sectors, in so far as the development of shipping is concerned, does not appeal to me. The basic problem is increase in the tonnage and both the sectors, public and private, have to achieve that objective. This, as you are all aware, is in full consonance with the Government's Industrial Policy Resolution. The Government has to step in, because the problem does not brook any further delay and time is of the essence of the matter."

We would urge the private sector to take this friendly challenge in the right spirit and show that it is capable of expanding the mercantile marine. At the same time, the Government should recognise that the record of private enterprise in the sphere of shipping, as that great master of shipping problems, Mr. M. A. Master, pointed out in the course of an article in *Commerce*, dated 25th August 1956, is not inconsiderable. Indeed, given the necessary incentive and the kind of assistance which the industry in other countries has received from their Governments, there is no doubt that the private sector in Indian Shipping too will be able to show an even more brilliant record than it has been able to establish so far or the public sector, which has two shipping corporations now, is capable of. From this point of view, it is noteworthy that Mr. Shastri has himself recognised that the Indian shipping industry has had to contend against certain special difficulties. For, he said: "I am aware of the special problems which confront the shipping companies in regard to acquisition of additional tonnage. Prices have rocketted sky-high and naturally, the Indian shipowners expect the Government to afford financial assistance on more liberalised terms than at present."

Terms for Loans

The Minister also recognised that the shipowners have an "arguable case" for liberalisation of terms for loans to be given under the second Plan period. He revealed that this question was now engaging the serious attention of the Government. Further, he averred that he could "categorically assure private shipping companies that adequate loan money would be at their disposal for acquisition of tonnage." Indeed, he was not "much worried" over the allotment made to the Transport Ministry for shipping, as he believed in "doing the work first and then asking for more funds." He declared: "If we are able to show results in the next two years, I have no doubt that more funds would be forthcoming. I personally believe in less criticism and more of work in every direction." Again, he said he would "state clearly" that it is not the Government's intention that "shipping in the public sector should run in competition on routes on which existing private shipping companies have established themselves." There is no doubt that these are very reassuring words. It is to be hoped that the Government will at all times be willing to implement these assurances and that the private sector, on its part, will prove itself worthy, as in the past, of the Government's confidence in its ability and the help given by the Exchequer.

Missed The Bus?

Mr. Shastri then referred to the progress of Indian shipping. At the beginning of the first Plan, India had 390,707 G.R.T., while the Plan aimed at a target of 600,000 tons. By the end of March 1956, India's actual tonnage stood at 480,000 G.R.T. while a further 120.000 tons gross are expected to be added to it before the middle of next year. The second Plan aims at an addition of 300,000 tons gross (besides the provision for the obsolescence of 90,000 tons gross) so as to reach the target of 900,000 tons gross. Mr. Shastri emphasised that it was most important that steps should be taken to acquire additional tonnage so as to achieve the target. This, he said, was all the more important in the context of India's expanding overseas trade and the difficulties that are now being experienced in finding adequate shipping space for the large orders of such goods as machinery, equipment and iron and steel that are being placed in foreign countries both on Government and private account. He, therefore, stressed that the acquisition of tonnage should be "accelerated." Although the Government, as well as the private shipowners, thus realise the importance of augmenting India's tonnage, the facts of the international shipping situation do not permit rapid acquisition of new tonnage. As Mr. Vasant J. Sheth pointed out:

"The international boom is there, but having no shipping strength we are unable to take advantage of it. Nay, the boom is a source of weakness for us, because it has brought about a great rise in tonnage prices and we are unable to add tonnage at a fast pace. The shipbuilding berths practically all the world over have been booked for our second Five-year Plan period and we cannot purchase second-hand ships except at very prohibitive prices. It is an unfortunate coincidence that development plans for the second Five-year Plan and the generous offer of assistance by the Government perhaps on a more favourable basis have come at a time when there is great scramble for tonnage all the world over. I am afraid, it looks as if we have missed the bus, unless we are fortunate enough to receive the assistance of foreign Governments in the acquisition of tonnage."

A somewhat disturbing aspect of the development of Indian shipping is that the progress on the "coastal" front is really not as rapid as one would wish. Mr. A. Ramaswami Mudaliar, Chairman of the Association, made a pointed reference to this aspect of the problem. He pointed out that it was significant that the "tonnage expected to be added in the first Plan period in coastal shipping fell short by 63,000 tons but the tonnage expected by the overseas shipping went up by nearly 55,000 tons." This is something of a paradox for the coastal routes offer a sheltered market, whereas the overseas routes are open to international competition. Explaining this paradox, Mr. Mudaliar attributed the lack of progress on the coastal front to the fact that the general freight available for coastal shipping was gradually declining, while the costs of operation as well as of those of new or second-hand ships had gone up. It is to be hoped that the Government, which controls the freight rates, will take a realistic view of the problem. Mr. Shastri, on his part, expressed the hope that it would be possible for the Government to come to a definite conclusion as soon as the Rail-Sea Co-ordination Committee, now engaged in the task of studying the problem, submitted its report.

As regards overseas shipping, Mr. Mudaliar admitted that the Government's favourable loan policy had been a turning point in its development. But overseas shipping had its special difficulties which arise from the fact that it meets competition on an international plane. In this connection, he made a special appeal to Indian shippers. He said: "While I acknowledge with gratitude the patriotism of many of the Indian shippers, I must, however, confess that we are still to make much leeway in this direction, especially in relation to the patriotism of foreign shippers which is exploited for the benefit of their national shipping." This appeal should evoke, as it deserves to get, a sympathetic response from all exporters, Indian and foreign alike.

THE TRAVANCORE BANK
LIMITED
Head Office: **TRIVANDRUM**
Under the patronage of and largely supported by Travancore-Cochin Government
Branches at
BOMBAY, MADRAS AND OTHER IMPORTANT CENTRES IN SOUTH INDIA

NAGARJUNA SAGAR DAM

The Nagarjuna Sagar Control Board, at its meeting held at Kurnool last week, decided that the Dam should be built of rubble masonry and that 1:4 of cement mortar could be used for its construction in parts where the principal compression did not exceed 15 tons per square foot; on the upstream face of the Dam, a higher mixture 1:3 with Pozzolana would be desirable, even though the stress were below 15 tons. This decision was taken after an examination of the report of a Committee which had been set up to investigate whether the Dam should be of the masonry type or of the concrete type. The chief reasons which, according to the Chairman of the Central Water and Power Commission, Mr. Kunwar Sain, who attended the meeting of the Control Board, prompted the Committee to recommend masonry type of construction are: the saving in overall cost to the tune of Rs. 4 to Rs. 5 crores, the saving in consumption of cement, a scarce commodity, less equipment requiring the expenditure of foreign exchange and increased employment opportunities for considerable manual labour available in the vicinity of the Dam. It would further appear that the Committee has stressed that, by mechanising the means of supplying stone and mortar to the project site, it should be possible to complete the construction of the Dam in ten years, as against the probable period of eight to nine years if the Dam were constructed in concrete.

NEW G.E.C. AUTOMATIC ANNOUNCER

A novel automatic announcing system which can reproduce, at the touch of a button, any one of 25 pre-recorded announcements or signals, which can then be relayed over a loudspeaker system, has been developed by the General Electric Co., Ltd., represented in India by the General Electric Co. of India Private Ltd. In this system, the messages are recorded side by side on a special loop of 3 in. wide magnetic tape, and the appropriate one selected by push-button when required. To make the system fully automatic, particular announcements such as shift changes, meal breaks or other messages can be triggered off by a master clock mechanism without the need for any human attendance. Also, of course, the push-button can be mounted remotely from the instrument so that the announcements, emergency calls such as fire alarms, or whatever broadcast is desired can be initiated from other parts of the premises.

The automatic announcer, it is stated, was originally developed by the G.E.C. for British Railways (Eastern Region) and first installed at Stratford Station. In this installation the platform announcements for passengers are automatically initiated by the trains themselves, first as they approach the station and then again as they come to a standstill at the platform. Equipment of this type has now been adapted for general industrial use and may be applied in any situation where numbers of routine broadcasts have to be repeated fairly frequently.

The paper-backed magnetic tape used is made in the form of a continuous loop 3½ in. wide, which normally lasts 30 seconds. Special loops can be supplied, however, having any duration between 10 seconds and about 4 minutes. A short length of metallic foil is spliced in at the point where the two ends of the loop join. At the end of the announcement the foil completes the circuit between two contact fingers, automatically switching off the mechanism and preparing it for the next announcement.

NEW PRODUCTS AND PROCESSES

Lightweight Engine

AMERICAN Motors Corporation has developed a V-4 engine that is said to result in great savings in space and weight in motor power plants. It can be produced in units of two, four, six and eight cylinders, either V-type or horizontally opposed, according to the company. Lightness is increased by extensive use of aluminium. The new V-4 occupies only about half the space of a conventional car engine. In U.S. terms the horse-power is 62. The displacement is 108 cubic inches, and the compression ratio 7.5 to 1. The engine is air-cooled. American Motors expects to find a market for its new engine in small passenger or commercial vehicles, in airborne military vehicles, and as power for stationary equipment, such as generators. The company reports that extensive military field tests have been carried out with it.

Telephone for the Deaf

A telephone which looks like a normal desk model has been devised for use by deaf persons. It is being made by Siemens Brothers and Co. (Siemens House, 3, Avon Trading Estate, Avonmore Road, West Kensington, London, W. 14). This development has been made possible by the use of a junction transistor, a small germanium crystal triode, which enables the large amplifier generally used in conjunction with the telephone instrument to be dispensed with. The miniature amplifier in the new instrument is powered by a small torch battery which is also contained within the telephone. No external wires are required and the only noticeable difference is a small volume control knob on the top of the instrument. This enables the level of speech at the receiver to be adjusted to the needs of the individual user.

A New Coal Mining Unit

A new coal mining unit of the "DU-1" type has just been tested in the Donets basin in the U.S.S.R. This type of machine consists of a narrow span combine, which extracts at high speed a strip of coal layer one metre long, of a self-propelled conveyor, hinged props and support for the caving in of the roof. The use of timber for propping is almost completely eliminated and many manual operations are abandoned altogether. It has been decided to manufacture 100 similar units for Donets basin mines. The design of the "DU-1" unit is one of the new items of work lately completed by the designers of the "Dongiprouglemash" institute. The "Donbass-7" combine, also designed at the institute, has been tested in the Kuznetsk basin. This combine is used for mining coal in medium depth strata 1.8 to 2.8 metres high.

Outside Lifts

A firm on the West Coast, known as Glass Elevator, Inc., of San Diego, California, is marketing lifts that operate on the outside instead of the inside of buildings. The claim is made that this results in substantial space saving indoors. The first installation has been made at the El Cortez Hotel, in San Diego. It cost about $100.000, and carries passengers up 15 storeys to two roof lounges. It has been in operation since last April. The lift is of the hydraulic-ram type. To create additional safety conditions, a "stabiliser" rides midway between the elevator car and the ground. The cab is of Plexiglass, so that passengers can enjoy the view in transit. Glass Elevator, Inc., is now prepared to make other installations. It expects to use the hydraulic-ram system up to 25 storeys high. Beyond that, lifts can be installed using exterior cables.

Electronic Brains

Giant electronic brains are "growing up." They no longer have to be spoon-fed their information but are being equipped with automatic devices with which to feed themselves, according to Dr. Nicholas Metropolis of the Los Alamos Scientific Laboratories in the United States. Many computers are now "fast, flexible and faithful" enough to process experimental evidence directly, thus relieving scientists of time-consuming routine chores, Dr. Metropolis said. Electronic brains are now important laboratory tools, he added. At the University of California, they are being used to calculate what happens when atoms are bombarded with electrified particles. At Los Alamos, a computor is making calculations in "eighteen-dimensional space" in an attempt to tell what happens when charged particles called pions hit the nuclei of hydrogen atoms. The aim of this research, Dr. Metropolis said, is not to produce a complicated set of numbers, but "to extract a simple idea" from such numbers which will tell scientists more about the structure of matter.

Using Low-grade Iron Ore

Recently perfected methods of mining and processing taconite, or low-grade iron-bearing rock, have created a new large-scale industry in the United States. The new method will make it possible to use an estimated 5,000,000,000 tons of taconite in the Lake Superior region. Until recently taconite, one of the hardest substances known to man, was too difficult to quarry. Now, a searing flame makes holes for blasting. After blasting, the rock is pulverized. The iron dust is separated and rolled into small pellets which are hardened by heating. The pellets have a 62 per cent. iron content, which is much higher than most natural ores.

Better Insecticides

Radioactive materials—peaceful products of atomic energy—are now being used in the United States to tag insecticides. The purpose is to develop new insecticides that will be more effective than those now in use. Some stubborn insects have resisted all the insecticides that are now available. By adding a tiny amount of a radioactive material to an insecticide, scientists can follow its course through an insect's body. This research yields clues as to how an insect can convert a poisonous

ANNUAL MEETING OF SONE VALLEY PORTLAND CEMENT CO., LTD.

CHAIRMAN, MR. ANANDILALL PODDAR, OUTLINES EXPANSION PROGRAMME

PRESIDING over the Annual General Meeting of the Sone Valley Portland Cement Company Ltd., held at 36 Chowringhee, Calcutta, on 31st August 1956, Mr. Anandilall Poddar, M.L.A., Chairman of the Company, observed as follows:

"GENTLEMEN,

"It gives me great pleasure in extending to you a hearty welcome to this, the thirty-third Annual General Meeting of your Company. The Directors' Report and the Audited Balance Sheet and Profit and Loss Accounts of the Company for the year ended 31st December 1955, have been in your hands for some time. I seek your permission to take them as read.

"During the last few months, following the enforcement of the Companies Act, 1956, there has been some change in the administration of the Company. Messrs. Martin Burn Ltd., the Managing Agents during the year under review, tendered their resignation and, from the 1st August 1956, the active management has been taken over by your Board of Directors. Some of the earlier Directors who resigned or could not continue under the new Companies Act were replaced by new Directors and the change over was effected with the utmost co-operation of Messrs. Martin Burn Ltd., for which I want to place on record our sincere thanks and appreciation of their good offices. Your Directors will endeavour to maintain the progress and the high standard of management in conducting the affairs of the Company which was achieved by Messrs. Martin Burn Ltd., as the Managing Agents and on the excellent foundations laid. It will be their privilege to forge ahead with schemes for substantial renovation and considerable expansion.

Role of Cement

"You are aware of the plans for rapid industrialisation and large-scale development in the Indian economy during the Second and subsequent Five-Year periods. It is, perhaps, needless for me to state that, in the building up of the New India of our dreams, cement has to play a leading role and, in appreciation of its great importance, the target of cement production is being further raised for the Second Five-year Plan from 125 lakh tons to 200 lakh tons per year, realising the assured future of the industry and fully conscious of the part your Company has to perform in contributing to the economic advancement of our motherland and with your good wishes I hope I give you some satisfaction to know that your Directors have already set afoot measures to achieve that end.

"It is just a month we have been called upon to manage the affairs of the Company directly and, during the period, we have felt that, in order to ensure more economic working and reduce the costs which have been high due mainly to worn out machinery requiring constant repairs, the present machinery require thorough overhaul and renovation. Immediate steps have been taken accordingly. You are aware that the Company produced in 1953 210,878 tons of cement. This went down to 196,190 in 1954 and to 195,000 tons in 1955. The main reason for this setback was the wear and tear of the plant and machinery due to age. There is a limit to what a smart jockey can do to spurt on an aged and run-down horse. Your Directors have set themselves to renew and repair the existing machinery without delay and they hope to regain the earier efficiency in a few months, so that, by the time we meet again, we shall be able to report having exceeded the maximum of annual production achieved in the Company's years of prosperity.

Slag-Cement Works

"We are not going to rest on our oars at that and we are looking ahead with schemes for substantial expansion and development. Negotiations have been initiated for additions to the plant at Japla, with a view to raising the capacity by another 750 tons and the setting up of a suitable Slag-Cement Works in West Bengal near Durgapur, capable of utilising about 500 tons of slag from the Durgapur Steel Works and about 200 tons of clinkers or limestone from Japla, in co-operation with the Steel Project and the Government, is under active consideration. As soon as the necessary encouragement from the Government of West Bengal and the licence from the Government of India are secured, we propose to go ahead with our Slag-Cement project.

"The finances of your Company also need rehabilitation and, immediately after assumption of the management on the 1st of August last, your Directors have intimated to the Government of India their readiness to accept the addition of Rs. 4 per ton on our production by way of rehabilitation price, which, the previous management did not like to accept. We are expecting the official confirmation of this payment very shortly and just at present I am not in a position to give you the news. On the assumption of our estimated production of 2,00,000 tons a year, this addition to the retention price so far allowed will mean an additional revenue income of Rs. 8,00,000 a year.

"In addition to our efforts to increase our income and resources in various ways, your Directors have already approached the Industrial Finance Corporation for suitable assistance in putting our rehabilitation and expansion schemes into early action and we confidently hope that ample support both from Private and from Public Sectors will be forthcoming.

State Trading

"As has been mentioned in the Directors' Report, the distribution of cement in the Indian market has been taken over by the State Trading Corporation from the 1st of July last under circumstances explained therein. The Cement Industry of India cannot but view the encroachment into this field by a Government machinery with dismay and the dangers have been duly represented. We shall be prepared to extend our full co-operation to Government, however, and we hope the authorities will appreciate at least two things vital to us in this regard.

"You are aware of the high reputation acquired and always maintained by the product of your works in their 'Rohtas' Brand cement, which, in normal times, always fetched a higher price in the market and had never failed to attract customers. It is not understood how far your Company can be remunerated by the State Trading Corporation for manufacturing a high quality material and your Directors are thinking of making proper representation in that regard.

"Representations have already been made to the Government for a suitable revision of the retention price for cement ex-factory, as determined on the basis of the Tariff Commission in 1954, in view of the substantial increase in the items of costs, particularly for coal, wages and railway freight as also the threatened increase in the price of gypsum since the examination of the costing by the Commission two years ago. Should our representations succeed, and there is no reason why they should not be found reasonable, the future of cement industry generally and of your Company in particular will be doubly assured.

"Gentlemen, with your co-operation, we hope to be able to present you with a better account of ourselves next year and I thank you for the interest you have shown in coming over to this meeting this day.

"I also take this opportunity to convey the thanks of the Directors to all the staff and labour of the Sone Valley Portland Cement Company with whose co-operation and active service this Company has forged ahead of all such concerns in the country and on whom the future success will also largely depend. I thank you all."

(Concluded from first column)

substance into a harmless one. Scientists then may be able to develop poisonous insecticides that the insect will not be able to resist.

Paint for Asbestos-Cement Products

The painting of products made from asbestos-cement presents special difficulties. It must be correctly primed and, according to the Turners Asbestos Cement Company, Trafford Park, Manchester, 17, a chlorinated rubber-based paint should be used. This company has recently produced a special type of finish for asbestos-cement called Colourglaze finish. It is available in a range of 14 colours and when applied gives the appearance of a glazed surface. It is stated that due to its chemical composition the finish bonds to the asbestos-cement and does not readily fade or wear. It is at present being made available on rainwater goods, roofing products, soil pipes and bath panels.

LIFE INSURANCE CORPORATION INAUGURATED

THIRTY-THREE DIVISIONAL OFFICES SET UP

IN the history of Indian life insurance, 1st September 1956 will go down as an important landmark, in that it signifies the end of the era of free enterprise in the field and the birth of total State monopoly. It was on that day that the Government-owned Life Insurance Corporation was brought into formal existence, thereby completing the first stage of the process of nationalisation of life insurance which commenced on 19th January 1956 with the promulgation of the Life Insurance (Emergency Provisions) Ordinance. The day was marked by a country-wide advertisement campaign, acquainting the people with the birth of the Corporation with a singularly reassuring motto *Yogakshemam Vahamyaham*—"I bring security." Appropriately enough, the occasion of the inauguration of the Corporation was regarded as a solemn one, for it denotes the commencement of an experiment in nationalisation which is without a precedent or a parallel in any country in the world.

Nearly all the messages received on the occasion stressed the significance of the event of nationalisation of life insurance and the great responsibility that rests on the persons in charge of the Life Insurance Corporation. The President, Dr. Rajendra Prasad, in the course of the message, stated that the Corporation had set before itself "high and difficult" objectives. He added:

"Thus, while on the one hand it will encourage the habit of thrift among the people and help them to provide against the rainy day, it will, on the other hand, enhance the resources at the disposal of the Government for the economic development of the country. Its expansion will mean that life insurance has been carried to every corner of the country and that the savings of the people are being mobilised for nationalised activities. It is an experiment on a colossal scale in a new field and will demand and should be able to command the best that all employed in it can offer to make it successful."

The Corporation, the Union Vice-President, Dr. S. Radhakrishnan was happy to note, was being set up, in order to "consolidate the progress already made by the insurance business, to remove the weaknesses which have crept into it and to improve its character." Prime Minister Nehru said that life insurance had a fairly long history in India, and, in the course of these years, a number of great organisations were built up by private enterprise. And yet, it was true, he said, that, "compared to many other countries, progress made in India was not great." He added:

"At the beginning of this year, the Government of India took a significant step in declaring that life insurance would in future be a State concern. Since then, many steps have been taken to give effect to this declaration. Life insurance thus becomes one of the major State undertakings in India. It is an important step in our march towards a socialist society. Its objective will be to serve the individual as well as the State. The profit motive goes out of it and the service motive becomes much more dominant. I trust that this Corporation will serve an ever-increasing number of our people and will do this work in the true spirit of service."

"Business-like Manner"

In his message, the new Finance Minister of the Union Government, Mr. T. T. Krishnamachari, said it was of the utmost importance that the adventure should succeed not only because it was an attempt at enlarging the public sector, but also because of the benefits that insurance at reasonable rates with sufficient guarantee could afford to the common man in India. The Chief Minister of Bombay State, Mr. Morarji Desai, stressed that the establishment of the Life Insurance Corporation was a unique venture without a parallel and had immense possibilities. He hoped that the institution would be conducted in a "business-like manner." He added: "No doubt, this is a monopoly now, but it is a public monopoly and as such it will be answerable to the public for its deeds .... I have no doubt that the Corporation will know its great responsibility and discharge it efficiently in the interest of our nation."

The Corporation, now established, takes over the business of life insurance in the country. When the Life Insurance (Emergency Provisions) Ordinance was promulgated, it was only the management of the life offices—180 insurance companies and 70 provident societies, with a total business in force and total funds amounting to Rs. 1,250 crores and Rs. 380 crores, respectively —which vested in the Government of India and not the ownership. For purposes of management, the Government appointed custodians to administer the companies on its behalf. Thereafter, the Government got the Life Insurance Bill passed by Parliament. The Act provided for the Corporation to be brought into being on an "Appointed Day" to be fixed by the Government. Accordingly, it was decided that 1st September should be the date on which the Corporation should come into existence. It is in terms of this decision and in accordance with the provisions of the Act that the Corporation has been set up and started functioning as a separate entity but owned by the Government.

Managing Directors

The Corporation consists of 15 members with Mr. H. M. Patel, Secretary to the Ministry of Finance, as Chairman. The other members of the Corporation are: Messrs. Mohammed Hasham Premji, D. G. Karve, Dhiren Mitra, S. M. Ramakrishna Rao, C. K. Jain, V. L. Mehta, Raghuraj Swarup, L. K. Jha, I.C.S., B. K. Kaul, I.C.S., L. S. Vaidyanathan, A. Rajagopalan, K. R. Srinivasan, V. H. Vora and D. P. Guzdar. Among these members, the last-mentioned five, namely, Mr. Vaidyanathan, Mr. Rajagopalan, Mr. Srinivasan, Mr. Vora and Mr. Guzdar will be full-time employees of the Corporation. Section 20 of the Act provides for the appointment of one or more persons to be Managing Directors or Directors of the Corporation. It would appear that it has been suggested to the Corporation that Mr. Vaidyanathan and Mr. Rajagopalan may be appointed as Managing Directors and that Mr. Srinivasan, Mr. Vora and Mr. Guzdar may be designated as Executive Directors. It is believed that the Corporation will take up the question of these appointments at its first meeting. It is also expected that the Corporation will establish a convention in terms of which the three Executive Directors will not exercise their right to vote.

The Act, as is now well known, divides the country into five zones—the Central Zone, the Eastern Zone, the Southern Zone, the Western Zone, and the Northern Zone, with the headquarters at Kanpur, Calcutta, Madras, Bombay and Delhi, respectively. The head office of the Corporation will be located at Bombay. Under each zone, there will be several divisional and branch offices. To begin with, it has been proposed to have 33 divisional offices and about 180 branch offices in all under them. The divisional offices will be located at the following centres:

Central Zone: Lucknow, Agra, Banaras, Indore and Jabalpore.

Eastern Zone: Calcutta, Jalpaiguri, Asansol, Patna, Muzzafarpur, Jamshedpur, Gauhati and Cuttack.

Southern Zone: Bangalore, Udipi, Madras, Coimbatore, Madurai, Trivandrum, Hyderabad and Masulipatam.

Western Zone: Bombay, Poona, Nasik, Satara, Nagpur, Ahmedabad, Surat and Rajkot.

Northern Zone: Delhi, Jullundur, Ambala and Ajmer.

Obviously, much preparatory work was necessary in connection with the setting up of the Corporation and of the divisional and branch offices. It would appear that a comprehensive review of office procedure was undertaken, and, as a result, an office manual has been drawn up. Forms of accounts have been devised. In the past, the working of the insurance companies had been highly centralised. Practically all work was being done at the head offices, the branches being concerned mostly with the procuration of new business. The authorities of the Corporation have now decided that the divisional offices should be responsible for the servicing of the policies. For all practical purposes, a divisional office will be the equivalent of the head office of a medium-sized insurance company, the only important difference being that it will not be concerned with the investment of funds. The one consideration in deciding the question of the location of the divisional and branch offices has been that the policyholders, wherever they might be living, would have some office or the other of the Corporation not far from their place of residence. This has been done with a view to bringing insurance facilities within the easy reach of the actual as well as the potential clientele the Corporation is intended to serve.

F. K. F. NARIMAN • General Manager

VULCAN INSURANCE CO., LTD.

The report and accounts of the Vulcan Insurance Company Ltd. (General Manager: Mr. K. C. Desai, Bombay) for the year ended 31st December 1955, reflects an all-round increase in the premium income of the Company. Thus, the net premium income from the three general departments—fire, marine and miscellaneous—amounted to Rs. 32.04 lakhs in 1955, as against Rs. 30.09 lakhs in the previous year. The underwriting profit, however, was again lower this year at Rs. 4.63 lakhs, as compared with Rs. 4.94 lakhs in 1954. A dividend of Re. 1-4 per share (of Rs. 10 paid up), free of income-tax, as against Re. 1 per share, free of income-tax, for the previous year has been declared.

The following table shows the working of the Company during the three years ended 31st December 1955:

(Rs. in lakhs)

	1955	1954	1953
Fire Department			
Net premium income	22.50	20.92	22.80
Net claims paid and outstanding	6.93	8.02	8.69
	% (30.81)	(38.35)	(38.98)
Commission and expenses	11.03	9.85	10.13
	% (49.02)	(47.08)	(45.43)
Profit	4.07	4.11	4.24
Fire fund	14.70	13.71	19.40
Marine Department			
Net premium income	2.65	2.57	2.37
Net claims paid and outstanding	1.39	1.25	0.55
	% (52.30)	(48.61)	(23.25)
Commission and expenses	1.05	0.84	0.93
	% (39.66)	(32.08)	(39.12)
Profit	0.17	0.34	0.26
Marine fund	2.92	2.71	2.37
Miscellaneous Department			
Net premium income	6.89	6.59	6.71
Net claims paid and outstanding	3.15	3.37	3.28
	% (45.72)	(51.23)	(48.95)
Commission and expenses	2.28	2.90	3.01
	% (47.57)	(43.97)	(44.82)
Profit	0.39	0.49	0.66
Miscellaneous fund	5.23	4.73	4.45

The Directors' policy of strengthening the reserves of the Company is again reflected in their creation of an additional reserve to the tune of Rs. 13,600 in the marine department in addition to the usual 100 per cent. reserve for unexpired risks. Similarly, in the accident department, an additional reserve of Rs. 1.79 lakhs, besides the customary reserve for unexpired risks amounting to 50 per cent. of the premium income, has been created.

The balance of the profit and loss appropriation account was Rs. 6.78 lakhs which together with Rs. 2.81 lakhs brought forward from the previous year's account aggregated in all Rs. 9.60 lakhs. The provision for taxation amounted to Rs. 5.60 lakhs; transfer to general reserve absorbed Rs. 50,000, to additional reserve in the accident department Rs. 35,900, to additional reserve in the marine department Rs. 13,600 and to gratuity reserve Rs. 15,000. The payment of a dividend of Re. 1-4 per share took up Rs. 1.91 lakhs, leaving a balance of Rs. 38,775 to be carried forward.

The financial position of the Company continues to be strong. As against a paid-up capital of Rs. 15.99 lakhs, it has reserves and funds amounting to Rs. 35.75 lakhs. This includes the fire fund of Rs. 14.70 lakhs, marine fund of Rs. 2.92 lakhs and miscellaneous fund of Rs. 5.23 lakhs.

INSOLVENT INSURANCE FIRMS

Replying to a question in the Lok Sabha, as to what steps the Government proposed to take, in order to safeguard the interests of policyholders of such Indian life offices as had been found insolvent, the Union Minister for Revenue and Civil Expenditure, Mr. M. C. Shah said that steps had been taken to get valuations made of the companies of doubtful financial standing. He stated that the Life Insurance Corporation would study these valuations and, if they disclosed insolvency, submit for consideration of policy contracts of the companies concerned. The Government, he recalled, had already given the assurance that such cases would be dealt with as generously as possible.

MAKING ALL OF INDIA YOUR NEIGHBOUR!

When an economy develops rapidly, the pressure on its communications systems increases greatly.

During the Second Five Year Plan 1609 locomotives, 66,610 wagons and coaches will be built, 60 major bridges will be constructed. The capacity of our ports will increase by 30%. 20,000 new post offices will ease the task of our overburdened postal system.

In this expansion, paper will play an important role as an essential and indispensable means of communication.

SCHEME FOR IMPROVING COASTAL SHIPPING—II

ECONOMIC ASPECTS OF "AMBAR JAHAJ" DISCUSSED

By U. Shanker Rao

IN the first article published a fortnight ago, we had discussed the difficulties of coastal transportation and had explained how the introduction of a new type of a small, shallow drafted, handy, cargo carrier—the *Ambar Jahaj* (Universal Ship)—could help to co-ordinate rail/sea movement and improve traffic facilities in coastal shipping and sailing vessel industry. Let us now consider the economic aspects of the *Ambar Jahaj*, how it can help to standardise trade practices, prevent anti-social elements, malpractices, and above all tackle the "problem of problems"—jettisoning. The primary advantage of the *Ambar Jahaj* is that it can be operated on the basis of sailing vessel economy. Essentially designed to improve traffic conditions by providing the industry with an efficient, reliable, seaworthy, carrier that can be covered for all marine risks, the *Ambar Jahaj* lends itself for co-operative ownership and operation. Thus, its introduction would mean a scientific improvement of the present type of country craft, without disturbing the present economic structure of the industry. On the contrary, it would constitute a valuable auxiliary to our coastal steamers and the railways and meet the increasing demands of transportation in the second Plan.

Economic Stability—First Requisite

No one doubts the utility of sailing vessel traffic. Especially for a country like India with a vast coast line and a number of small ports, some of them situated up rivers and creeks, estuaries and bays, the sailing vessel is, indeed, the only answer. But, with a sizable gap in our coastal shipping—from 25 to 30 ships—to attain coastal self-sufficiency, the whole industry can achieve amazing economic value and tackle in a seaman-like manner the innumerable contingencies and eventualities that arise in our transport economy from day to day.

Whatever be the outcome of the Suez Canal dispute, it will inevitably mean a further demand for coastal tonnage and an increase in our transport requirements. The first essential to stabilise the sailing vessel industry would be to put it on a sound economic basis. It is, therefore, essential to show to the industry how the *Ambar Jahaj* can be operated in the present trades and routes followed by sailing vessels and yet earn a handsome return for the capital invested. In order to illustrate this, a typical route which has considerable traffic potentialities, if worked on a regular basis, is taken—the Bombay-Mangalore route. Mangalore comes under our new classification of minor ports—the 10 ft. Class—where a shallow drafted vessel drawing 9 feet could enter inside the port and discharge at the jetty taking advantage of the terminal rail-head, instead of lying 3 miles outside the port.

Operating Cost: Gross Income

Bombay-Mangalore route: Distance 388 miles. (No railway link at present).

Current freight range (1955 season) at Rs. 10 to Rs. 25 a ton for sailing vessels. Conference rates (higher) for steamers.

Working on an average flat rate of Rs. 15 a ton as freight, the *Ambar Jahaj* with 275 tons capacity, would earn: 275×15=Rs. 4.125.

Round trip Bombay-Mangalore: Rs. 8,250.

Average of three round trips a month: Rs. 8,250 ×3=Rs. 24,750.

Working for eight months in the season: Rs. 1,98,000 (gross income).

Working Expenses

	Rs.
1. Depreciation at 5 per cent. per annum on the capital cost of the vessel, namely, Rs. 5.00.000 ...	25,000
2. Insurance on hull at 1 per cent. ...	5,000
3. Interest on borrowed capital at 6 per cent. per annum. repaid at Rs. 25,000 yearly	15,000
4. Interest on working capital of Rs. 25.000 at 6 per cent. per annum.	1,500
5. Port. pilotage and custom dues ...	1,000
6. Registration, licence fees	2,500
7. Cost of eight crew at Rs. 3.000 per month	36.000
8. Cost of fuel at 1.200 gallons per trip and oil at 75 gallons per trip. 24 trips per year	31.000
9. Annual survey, dry docking, repairs, etc.	5.000
10. Office, agency and brokerage ...	5.000
11. Stores and water	1,000
Total working expenses ...	1,28.000
Freight earnings on 24 trips ...	1.98.000
Surplus	70.000

The annual surplus of Rs. 70,000 subject to income-tax, would represent a gross yield of 14 per cent. per annum on the invested capital.

N.B.—In working out the expenses for running the *Ambar Jahaj* (at present non-existent), a common base had to be derived from the running expenses of a modern coastal steamer now running between Bombay and Colombo and the large Kotiya class of mechanised sailing vessel. A further basis for calculating the costs was also made from the running expenses of certain ex-naval vessels already running on the coast. Such vessels have been converted for commercial use and are, more or less, of the same size as the *Ambar Jahaj*, except that the latter has a larger cargo carrying capacity.

2. A number of items not generally included in the present sailing vessel economy have been included, as it is expected that, with the introduction of a better class of standardised vessel, it would attract the higher freighted cargo. Only the *minimum* freights have been considered and are based on what mechanised sailing vessels would get.
3. An *Ambar Jahaj* would be able to get a higher rate than a sailing vessel but lower than the conference rates for a coastal steamer.
4. Coastal freights (conference rates) are charged for delivery outside Mangalore port in barges in open sea.
5. Shippers save lighterage and handling charges Rs. 5 to Rs. 8 a ton. This saving will apply to any port of the 10 ft. class. Ninety per cent. of damage and pilferage is in between shore and ship—now avoided in *Ambar Jahaj*.
6. Though office, agency, and brokerage have been mentioned, sailing vessels do not maintain an office. Most of the cargo is arranged through *dalals*. The income from an *Ambar Jahaj* is capable of keeping a small office or contacts with brokers, so as to avoid middle men.
7. Similarly, for pilotage, annual survey, dry docking, and other contingencies, as the vessel would have a Load Line and carry all the prescribed L.S.A. and conform to the requirements of the Mercantile Marine Department.
8. The *Ambar Jahaj* can operate in the monsoon—if not on the West Coast—at least on the East Coast. Earnings have been calculated for eight months only but higher income is possible if a vessel is run for 12 months of the year.

Financial Outlay

Cost of *Ambar Jahaj*—First prototype Estimated at Rs. 6,00,000.

Subsequent cost to private sector at Rs. 5,00,000.

Government loan for new construction or parity price as in the case of Vizag built ships at 75 per cent. of new cost or Rs. 3.3 lakhs approximately.

Balance from private sector Rs. 2,00,000.

Operating surplus for *Ambar Jahaj* per season Rs. 70,000.

The calculations, made above, though purely hypothetical, have been made more on the basis of a small Home Trade vessel running on the coast and yet show a surplus of Rs. 70.000. From the evidence submitted before the Sailing Vessel Committee, the conclusion was that, inspite of sufficient cargo being available for carriage, the industry was in a poor state of economic condition, confused, disrupted, and not much of a paying proposition. The initial cost of the *Ambar Jahaj* could be cut down by pre-fabrication, the use of Tata's untested steel, simple machinery, and other measures. The first prototype of any type of vessel would need a higher initial cost. The U.S. Maritime Commission, for example, had made a considerable provision in its budget for the first prototypes of the various classes of vessels and the subsequent prices paid by individual operators who had taken most of the Liberty and Victory type vessels on Bare Boat Charter was only one-twentieth of the original cost.

European Coaster Economy

While considering the economic possibilities of working the *Ambar Jahaj* in our coastal transport, it would be relevant to refer here to certain aspects of the European coaster in British and Continental trades. The Groningen district, in Holland, is the cradle of the European coaster. Prior to the War, there were only 250 vessels in the Netherlands. Today, there are some 850 vessels under the Dutch flag. Similarly, there has been considerable expansion in coaster ownership in the Scandinavian countries, Norway and Denmark, as well as in Belgium and West Germany. Indeed after the war, the coaster was the backbone of maritime transport and had contributed in no small manner for the rapid recovery and great industrialisation of European economy. Many continental ports had suffered war damage and the coaster provided cheap and easy communications carrying raw materials, distributing Marshall Aid and E.R.P. cargoes, and helped to re-habilitate all phases of commercial life.

The primary success of the coaster as an efficient, commercial-cargo, carrier, which in Europe can compete with land, air, rail, and larger ships of the conference lines, lies in the fact that the vessel is run on co-operative lines. The captain-owner is the principal operator. Crew generally consist of family members or alternatively from men selected by the captain. Few are certified hands, with the exception of the captain and mate. On vessels under 300 tons gross, no engineer is taken but only an oilman as the engines are operated from the bridge by the captain himself. These aids reduce running costs. W/T for communication with either the shore or agent is done by the captain of the vessel. There are no regular working hours or "watches" as on board larger ships and the crew is reduced to the minimum. But, on every trip, there is a bonus for the crew if employed on a salary basis or alternatively a "share" in the total profits.

All coasters have very good accommodation, food and living conditions. Vessels are classed under the Lloyds or Bureau Veritas and conform to all international regulations, modern navigation equipment, radar, and can undertake even Atlantic voyages. Size range is between 250 to 750 tons. For practical purposes, the coaster observes a rule of thumb basis for its earning capacity—one mile per ton—and a coaster's tonnage more or less, regulates its trading range. In our case, the *Ambar Jahaj*, a 300 ton vessel, could have a range of 300 miles but not confine to any definite limits and can go further on inducement.

Credit Facilities

A feature that has helped the rapid expansion of coaster operation is the provision of initial credit facilities for building new tonnage. Captain-owners have their credit co-operative societies and loans are available through banks, insurance companies, and shipyards. Shipyards in Europe take a prominent part in supplying the initial outlay—a feature now absent in India—as most of the shipyards here are generally repairing yards and, with the exception of tugs and barges, no coasters or cargo vessels have been built. Like the system of long-term chartering in the oil trade it is not uncommon for a shipyard on the Continent to build a new vessel for a captain for which there was only a small initial payment. Easy payments and good credit facilities have been some of the important factors of the coaster economy. For example, a well-known shipyard in Holland builds coasters on easy payments and the following is an illustration of how the payment for new tonnage may be made:

25 per cent. when the order is passed for building a vessel.

20 per cent. when the keel is laid.

20 per cent. when two-thirds of the frames have been fitted.

25 per cent. when the vessel is launched.

10 per cent. when the vessel is delivered.

Other aids to financing is through the Ship Mortgage Banks. In the post-war years, owing to lack of finance, Continental Governments copied the well-known American system of giving vessels on Bare Boat Charter terms to the captain and his groups. The best investment that is expected from the captain is his individual reputation for integrity, honesty, and business knowledge. Co-operative working reduces the heavy "overheads" and what is more the long delays which have become a part and parcel of big ship operation.

Coats Quoted

Finally, in order to understand the competitive nature and the value of the coaster in European shipping economy, it would be relevant to quote the words of Mr. J. W. Coats, the late Chairman of the Short Sea Liners Section of the U.K. Chamber of Shipping. Mr. Coats, while speaking in relation to a demand by Conference-members for putting up freights on the U.K. Coast, had said:

"Naturally, the question of a general increase in freight rates has been under consideration, and it is felt that the time will soon arrive, when we shall be forced to do something about it, but uptill now, competition, especially by small motor vessels, in the Short Sea Liners Trades has *increased to such an extent as to make the various Conferences hesitate to increase their rates.* This competition is felt in various ways. For example, a small tramp can take a full cargo of, say, not more than 200 tons at an f.i.o. rate and outside operators have been able to charter these small vessels at rates which enable them to run services to and from the Continent and underquote the Conference rates."

An interesting counterpart of the European coaster, a legacy of the Dutch trade—is the large number of small motor schooners and others operating in Singapore, Malaya, and Borneo. Popularly known as "copra vessels," they are run on many inter-island trades and serve a useful purpose. The Straits Steamship Company, one of the largest shipping concerns in the Far East, have a fleet of coasters ranging from 200 to 500 tons running in the Far East.

In India, the sailing vessel is run on a similar basis as the European coaster. But poor returns and an uneconomic type of craft have made conditions in the industry precarious. But one encouraging factor is that the bulk of seamen and others engaged in the industry from time immemorial are, indeed, a fine type of people, honest, god-fearing, and hard working. Their knowledge of seamanship and navigation is good and thus an important feature that is already provided by the industry is trained personnel who can undertake the operation of the new *Ambar Jahaj*.

Comparative Efficiency: "Ambar Jahaj" *versus* Rail Wagon

Since one of the primary objects of this scheme is to relieve pressure upon the railways by diverting traffic to sea movement, it would be relevant to compare the efficiency of the *Ambar Jahaj with that of a rail wagon.*

The Sorley Committee in 1942, in its enquiry into sailing vessel traffic on the West Coast of India, had calculated that a railway wagon per ton was 12 times more efficient as a country craft per ton. This enormous difference in efficiency between a rail wagon and a country craft was attributed to quicker turn round, faster speed of railways, uniformity of control by railway managements, fixed tariffs known to consignors and consignees in advance, and certainity of bookings.

The Committee had also estimated that the carrying coefficient of the country craft was only 7 tons per registered ton. The Committee attempted to raise this to 9 tons per registered ton. The consequent effect of such increase was to improve the carrying capacity of the country craft fleet by 400.000 tons per season, that is, if each of the 200,000 tons of craft then plying (1942) on the coast could take an extra 2 tons during the 7½ months of the sailing season.

The *Ambar Jahaj*, which has been specially designed so as not to suffer from any of the inherent and chronic handicaps of the present day sailing vessels, would be comparatively far superior and efficient than a country craft. The "lay up" in the monsoon is an economic handicap as its earning power is very much reduced—only approximately to 8 to 9 months of the year. Fears regarding working in monsoons for small craft are very much exaggerated in India. Normal weather, as was experienced this year in Bombay, is not a dangerous state of weather and small vessels can ply in coastal services. The apprehensions are a legacy of the old Haji Kassem days on the West Coast when ships were laid up for the duration of the monsoon. This, incidentally, was not due to the seaworthiness of the ships, but because *the ports had to be closed down* owing to lack of communications for landing passengers and goods in the small ports, which had no harbour facilities. For example, it was demonstrated during the War that many vessels of the Bombay Steam Navigation Company, which were usually laid up for the monsoon, were extensively used in many theatres of the War, right through the year, on light patrol, mine sweeping, and as escort vessels by the navy. This would show that there is little danger in working in the monsoons. Moreover, our monsoons are more or less a "settled" state of weather with wind force hardly going beyond 5, moderate sea and swell, barometer 29.56. This kind of weather in Europe is only taken as "half a gale" and all fishing boats and cargo coasters carry out their normal work. There is no such thing as "laying up" in Europe for weather, as gales can spring up at any time of the year in the Channel or round the British Isles unlike our monsoons which have definite seasons.

Carrying Efficiency

On a fair estimate, the carrying efficiency of the *Ambar Jahaj* as compared with a rail wagon is as follows:

One *Ambar Jahaj* (275 tons) is equivalent of 12½ B.G. rail wagons, or 14 B.G. tank wagons, or 15 M.G. rail wagons.

Current prices of rolling stock for comparison with Ambar Jahaj—

B.G. locomotive—Rs. 5 lakhs.

M.G. locomotive—Rs. 3 lakhs.

Cost of *Ambar Jahaj*—Rs. 5 lakhs.

B.G. wagon—Rs. 10,000.
B.G. tank wagon—Rs. 17,800.
M.G. tank wagon—Rs. 24,500. } (For carriage of oil in bulk)

At current prices, the cost of railway rolling stock for carrying 1 million tons of traffic amounts to Rs. 4½ crores.

Average cost of constructing one mile of rail track—Rs. 7 lakhs.

Average cost of constructing one mile of hard crust road as per Nagpur Plan—Rs. 85,000.

Foreign exchange needed to rehabilitate railways—Rs. 425 crores.

Ambar Jahaj: Can be put to service right now —On the basis of sailing vessel economy—without undertaking large-scale port improvement, dredging, or conservancy schemes offering immediate relief to railways, major ports, coastal shipping, and all transport problems of the day.

Speed of *Ambar Jahaj* at eight knots full load —192 miles a day.

Wagon miles per day—43.3 for B.G.
Wagon miles per day—28.4 for M.G.
Average goods haul (miles)—239.
Average goods train speed (miles per hour)—10.1 B.G. and 8.7 M.G.

Speed of Vizag built ships—10 knots first year, and nine knots subsequent speed.

Speed of present coastal steamers—nine knots and under.

Sailing vessels—20 miles a day (average) Bombay-Cochin run.

The Railway Board has recently introduced its new slogan "Wagons Must Work Faster," with a view to closing to the largest practical extent the present uncovered gap between freight traffic likely to develop under the Second Plan period and the resources available for carrying it. Express goods trains have been proposed. However the present timings are of relevant interest:

Calcutta-Madras coal movement—15 to 20 days.

Bombay-Saurashtra—10 days.

Bombay-Calcutta—20 days.

In the case of the *Ambar Jahaj*, it would be able to provide "jetty to jetty" service, that is, it can go where a sailing vessel can go now, as its shallow draft is less than a large *Kotiya*. New links, rail-*cum*-sea, could be opened up on a regular and reliable basis and services operated, say, between Bombay/Mangalore; Bombay/Saurashtra; Mangalore/Saurashtra; Cochin/Tuticorin; Madras/Vizag/Calcutta; Mangalore/Laccadive Isles; Madras/Andamans.

Conclusions

To sum up, the *Ambar Jahaj* Scheme would help the following:

(1) Develop and expand sailing vessel traffic now needing considerable organisation and stabilisation into a valuable ancillary marine industry;

(2) facilitate rail-*cum*-sea movement and relieve pressure on the railways. The railways could enable consignors "through booking" facilities and thus help to divert considerable quantities of goods to sea movement;

(3) increase the capacity of our major ports by providing regular feeder services between *major* and *minor* ports;

(4) utilise the present rail heads in minor ports;

(5) meet the needs of the trade and industry in "smalls" who have to depend now, in the absence of suitable and reliable ships, primarily upon railways. The pattern of internal trade is movement in "smalls". Owing to the larger size of our present day coastal ships, movement in "smalls" cannot be extended to coastal transport;

(6) increase employment facilities, for one of the basic requirements for a sound national shipping policy is the existence of good auxiliary marine industries;

(7) build up a small but useful merchant fleet that has high strategic value. Every coaster of the *Ambar Jahaj* type can be converted almost overnight into an efficient anti-aircraft defence vessel, mine sweeper, naval supply tender, and undertake light coastal defence services; and

(8) phasing of imports to avoid congestion. Importing vessels could be classified into two categories: (*a*) vessels with cargoes that can discharge outside into lighters or direct into the *Ambar Jahaj*; (*b*) vessels that have cargoes that have to go into docks. "Off loading" into the *Ambar Jahaj* would provide a new service, as there is a considerable shortage of lighters and tugs, both in Calcutta and Bombay.

Besides the foregoing, commodities for export could also be sent in bulk and the *Ambar Jahaj* could go along side the exporting vessel and unload directly into the vessel, a facility which would be of especial help to our export drive. Further, special types of the *Ambar Jahaj* could be built for carrying ore, coal, and cement in bulk and thus provide the State Trading Corporation with a new class of cargo carrier which can cut down handling costs and delay.

IMPORTS OF STEEL

The imports of steel, according to the Minister for Heavy Industries, Mr. M. M. Shah, have so far been satisfactory. Replying to a question on the subject in the Lok Sabha, Mr. Shah said that, out of a million tons of steel ordered from abroad, so far about 854.595 tons had already arrived. These imports included 147,000 tons from the U.K., 136.000 tons from Japan, and 93.000 tons from Russia. Mr. Shah informed the House that an agreement had been concluded with a West German firm in March 1956, for the import of 205,000 tons during 1956-58, of which 45.000 tons would be supplied during the current year, 8,000 tons next year and the same quantity in 1958.

CYCLOSTEEL

A new process for making a crude form of steel without the use of blast furnaces, it is stated, has been discovered by the British research scientists. The details of the process were given recently by Sir Charles Goodeve, Director of the British Iron and Steel Research Institute. Under the new process, known as the "Cyclosteel" process, fine drops of liquid iron ore are heated to 1,600 degrees C. and blown through a hot reducing gas (powdered coal and oxygen). As a result of this process, a crude form of steel is formed. It is, however, pointed out that the process is still in the experimental stage and not yet within the scope of commercial feasibility. But it is reported to have "good chances of coming off" as a commercial process.

NATIONAL HIGHWAYS

The Rajya Sabha passed, last week, a Bill declaring 13,800 miles of existing highways as national highways to enable their effective maintenance by the Central Government. The Bill has already been passed by the Lok Sabha. During the debate on the Bill, the Deputy Minister for Transport, Mr. O. V. Alagesan revealed that the question of formulating a regular physical plan for road transport was engaging the attention of the Government. He said that his Ministry would shortly appoint a special officer to prepare a plan, comprising not only national highways but also other categories of roads. The plan, he said, might be included in the third Five-year Plan.

Seeing is believing

...AND WHAT THEY SEE IN TRAYOPHANE* PRINTED BAGS THEY BUY!

Many tests with manufacturers and retailers have shown that Trayophane bags bring in bigger sales. The customers like them because they're hygienic, convenient, weather-proof. The shop-owners know that Trayophane bags reduce waste, save time at the counter!

Now for the first time Trayons offer these colourful eye-catching bags in a range of sizes—up to 12.5/8" x 23.1/32". You can order your own special bag—with your name printed on it. Write for particulars today!

TRAYOPHANE* PRINTED BAGS — ECONOMIC! HYGIENIC! CONVENIENT!

TR 852

RECOMMENDATIONS OF PLANTATION ENQUIRY COMMISSION ON TEA

NEED FOR REPLANTING FUND AND LOWER RETAIL PRICES

IN April 1954, the Government of India appointed a Plantation Enquiry Commission, under the Commissions of Enquiry Act 1952, to make a comprehensive study of the economic condition and problems of three plantation industries, namely, tea, coffee and rubber and to suggest remedies. This was an omnibus body of three persons, consisting of Mr. P. M. Menon, I.C.S., as chairman, and Mr. K. G. Sivaswamy and Prof. M. V. Mathur as members. It was asked to submit its report within a year, but, even after plodding for over two years, it could complete its report only on one industry, namely, tea. This report was presented to both houses of Parliament on 28th August 1956, with a summary thereof released to the press. The full text of the report has not yet reached our hands, but, according to the Press summary, the Commission expects tea production in the country to rise to 710 million lbs. per year by the end of the second Plan, an increase of about 45.5 million lbs. over the present level of production. One of the members—Mr. Sivaswamy—has appended a minute of dissent to the Report.

While we have to defer our comments on the report until the receipt of the full text of the Report, we give below the official summary thereof in response to numerous enquiries from our readers for fuller information about the Commission's recommendations:

India's First Place in Tea

The tea industry provides direct employment to over a million workers in the country and is, thus, the largest employer of organised labour. The Report says that, although the internal consumption of tea in India has been progressively increasing during the last few years, the major part of the production is exported. India occupies the first place both in acreage and production, amongst the principal tea-producing countries of the world who participate in international trade. The large volume of exports gives the industry a place of great importance in Indian economy as a substantial earner of foreign exchange. The tea industry is also the mainstay of the plywood industry.

In North India, the Dooars and Terai region of West Bengal has the highest yield per acre and Ranchi the lowest, excluding Almora. In South India the yield is highest in the Anamalis. Unlike North India, tea is made throughout the year in the South.

Commenting on the structure of the tea industry in India, the Commission observes that the total capital investment in tea is estimated at Rs. 113.06 crores. Of this Rs. 40.51 crores (35.8 per cent.) is Indian and Rs. 72.55 crores (64.2 per cent.) non-Indian. Between 1939 and 1953, the figures of shareholdings reveal an overall fall of 10.4 per cent. in the shareholdings of the non-Indian sector and a corresponding rise in the Indian sector.

Concentration in Industry

Thirteen leading agency houses in Calcutta control over 75 per cent. of the tea production in North India. Out of these, seven companies control more than 50 per cent. and five companies as much as 36 per cent. of production. Eight agency houses of producers in Calcutta and their associate firms purchased over 50 per cent. of the tea at the Calcutta auctions in 1954. The retail distribution of tea in India is controlled by two leading firms to the extent of 85 per cent. The Commission points out that in an industry in which capital is so largely in the hands of foreign business houses and 75 per cent. of the production is controlled directly by a limited number of agents of these firms. it is inevitable that there will be a high degree of concentration.

The proportion of reserves to total assets in 1953 was higher in the Indian group than in the non-Indian group. The growth in the paid-up capital from 1939 to 1953 for the companies under various types of managements shows that the increase is not very significant. What little increase there has been is also wholly accounted for by the issue of bonus shares or rise in the face value of the share.

The Commission feels that there is need for exercise of more rigid scrutiny before sanctioning new capital issues, especially in cases arising out of purchase of proprietary estates, conversion of sterling companies into rupee companies and issue of bonus shares as a consequence of revaluation of fixed assets. It points out that the growth in the internal resources of the companies has not been commensurate with the needs of the industry in respect of maintaining the fixed assets in the normal condition. A limitation of dividend by half would itself have enabled most companies to increase their internal resources by about 25 per cent.

Cost of Production

Discussing the question of cost of production of tea in India the Commission reports that the cost in 1950 was Rs. 118.15 per hundred pounds which gradually rose to Rs. 140.36 in 1952, but decreased to Rs. 131 per hundred pounds in 1953. The Report says that the cost was generally higher in sterling and non-Indian rupee estates than in Indian estates. The highest total cost was among sterling companies, Rs. 135.66 per hundred pounds in 1953. while the cost of the Director-controlled Indian public limited companies was the lowest at Rs. 102.11.

The Commission finds that, after a certain point, there is no decrease in the cost of production as a result of an increase in the size or yield of estate. It points out that, in tea estates, most of the operations relating to cultivation and gathering of crop, etc., are done by hand and, therefore, the possibility of significant reduction in cost by increasing the size of the estate is limited. It, therefore, feels that to bring about economy in cost of production the size of the estate should be related to managerial efficiency and the crop required to maintain a tea factory. The Commission's conclusion is that the optimum size for a tea estate may be anywhere between 800 to 1,000 acres. This will mean employment for about 1,000 to 1,500 labourers, which is almost as much as an efficient estate manager can supervise.

Need for Reduction

The Commission observes that the future of the tea industry is closely linked with the cost of production. India has to produce good quality tea at reasonable cost in order to face successfully the growing competition in international market and to develop. as far as possible, the internal market also. It, therefore, says that increased production per acre should be achieved by the improved method of production and increased productivity of labour. It points out that "General Charges" and "Payment to Labour" form the largest parts of the total cost of tea production. The Commission suggests the following measures to reduce the cost of general charges:

(1) a decrease in the remuneration paid to managing agents and secretaries, (2) abolition of the commission paid to managers. etc. (and instead giving them a consolidated salary). (3) increasing Indianisation of managerial personnel and reduction in the number of the non-Indian managerial personnel to the minimum and (4) rationalising of the salary structure of the managerial cadre.

The Commission has recommended that the Tea Board should undertake a well-planned and regular study of cost data for keeping the industry informed about its economic efficiency and competitive position. A "Cost of Production" Section should be set up in the Tea Board for this purpose.

Replanting Fund

Alluding to the maintenance and upkeep of tea bushes, the Commission observes that, in spite of the need for a programme of replanting for the very existence of the industry in the long run, progress has been tardy. The Commission feels that each tea garden should be required to lay aside every year a certain sum of money for the purpose of financing programmes of replanting. In the area covered by the replies received, as much as 28.79 per cent. of the plants are more than 55 years old. having been planted before 1900. Assuming the economic life of a tea bush to be sixty years all this area will be due for replanting without undue delay. The larger proportion of old plants, i.e., those planted before 1900 are under non-Indian ownership.

The Commission has, therefore, recommended that the Tea Board should draw up, in consultation with the producers, a programme of phased replanting as well as replacement and renewal of machinery and equipment. Government should ensure that the tea gardens make the necessary financial provision for this programme before they declare dividends or repatriate profits. The Tea Board should appoint development staff to assist the States in framing such programmes and to co-ordinate and implement them.

Another suggestion of the commission is that Government should arm itself with powers to make investigations and issue directions necessary for the proper maintenance of fixed assets including replanting in any tea estate. It has recommended that a Tea Replanting Fund should be created in the Tea Board to which each garden should contribute Rs. 50 per acre every year. The amount would be held in the Fund by the Tea Board to the credit of the garden concerned. Tea gardens should be allowed to withdraw from the fund such amounts as may be necessary for the purpose of replanting according to a programme approved by the Tea Board. The scheme may be applied only to gardens of 100 acres and above. As the major portion of the acreage and production are accounted for by estates over 100 acres the scheme will cover 96.1 per cent. of the total acreage and 99 per cent. of the production in the country.

The figure of Rs. 50 per acre has been arrived at by the Commission only as an approximation, and on the basis of the cost of replanting an acre and tending it for five years before plucking being taken at Rs. 3,000 and the economic life of a tea bush at 60 years. It says that a detailed investigation should be made by the Tea Board regarding a suitable figure.

The Commission has further recommended that when tea gardens of 100 acres or more are sold the approval of the Tea Board should be obtained. The Board should make an assessment of the age of the tea bushes in different blocks of the garden and the money required to finance the replanting of the existing bushes at the end of the economic life. The contribution to the Replanting Fund, based on this assessment, by the new buyer of an estate should be prescribed as a condition necessary for his registration by the Tea Board. Also in the case of sales of sterling capital estates repatriation of sale proceeds should be permitted by the Reserve Bank of India only after it has ascertained from the Tea Board that the necessary contribution to the Replanting Fund for the estate has been made.

Financial Help

After examining the financial requirements of the industry, the Commission says that the yearly average of the working capital requirements for the three years 1951 to 1953 for North India works out to Rs. 1,290 per acre and for South India Rs. 727 per acre. Apart from their own resources like reserves and advances by managing agents. the external sources of finance on which the Companies and other large producers depend are the commercial banks and brokers. The total bank advances during the three years ending 1953 were on the average Rs. 36.82 crores per year. The advances made by brokers, though much smaller than those made by the banks, were not inconsiderable.

The Commission observes that the urgency, adequacy and availability of finance for every agricultural producer emphasised in the Report of the Committee of All-India Rural Credit Survey have equal application to the tea industry. It considers the levy by some of the banks of a charge on gross sale proceeds in addition to interests as unjustified and recommends that the Reserve Bank should use its good offices with the banks and if necessary, use legal powers for the discontinuance of the levy. The Commission is of the opinion that the financial difficulties of the Indian Section of the industry can only be removed by the State Bank providing finance in an abundant measure. It. therefore, recommends that in its programme of extension of branches the States Bank should give high priority to opening of branches in tea plantation areas.

It also recommends that the Industrial Finance Corporation and the Finance Corporations of the States in which the tea gardens are situated should meet the needs for long-term finance. It has also made recommendations for redemption of past debts of tea estates. The Commission has also suggested that the State Finance Corporations should appoint a panel of experts in consultation with the Tea Board to evolve a common policy in the matter of grant of loans. The Tea Board should also have a Plantation Finance Committee to keep a close watch on the financial needs of the tea industry. It feels that the response of the capital market to debentures issued by tea companies should be favourable and recommends that tea companies should tap this source of finance for future capital in an increasing measure.

Primary Sales

Dwelling upon the marketing of tea—primary sales—the Commission observes that the brokers have come to occupy an unusually strong position in the marketing of tea in Calcutta. The business is concentrated in a few hands. There is every reason to think that the valuation of the broker, which in his dual capacity, he communicates both to the seller and the prospective buyer, plays an important part in deciding the relative prices of the produce at the auctions. The Commission, therefore, recommends that the selling and buying brokers should be separate. They should not be connected in any way with the management or be a major shareholder in any tea estate or have any connection with the trade and exports of tea.

The Commission has recommended that the Tea Board should assume the functions of regulating the sale of tea in the Cochin and Calcutta auctions. The rules governing the auction, sales and other matters pertaining to the primary marketing of tea should be made by the Tea Board. The Commission has suggested that the Tea Board, in conformity with its objectives of promoting co-operative effort among growers and manufacturers, should give every facility to producers for co-operative marketing of tea. The Board should also go into the matter of warehousing and brokerage charges about which complaints have been made. The tea exported under forward contracts and direct sales should be included within the ceiling prescribed for direct shipments to London.

Export Quotas

The Commission recommends that the export quota system should be abolished. This will affect to some extent the income of the small producers. The Commission has made recommendations that these producers should be granted assistance like subsidised issues of manures and supplies of equipment accompanied by technical assistance.

Regarding the retail distribution of tea, the Commission finds that packed tea sold in India was on the average 52.94 per cent. of the total amount of tea estimated to be available for internal consumption during the four years 1951 to 1954. The effect of a higher rate of excise duty on tea sold in packages than on loose tea has been to stimulate the retail distribution of tea in loose form rather than in packages. The Commission considers this to be undesirable since it has the effect of stimulating the distribution of an article of human consumption in a less hygienic form. It has, therefore, recommended that the differential rates of excise duties on packed and loose tea should be abolished and the old uniform rate of duty of three annas per lb. on all tea restored. The Commission has also recommended that for all producers whose total production does not exceed 5,000 lbs., a year, the excise duty should continue to be levied at the present rate of one anna per lb. only.

Reduction in Price

The Commission feels that, if blenders reduce their overheads and quantum of profits, at least in respect of the popular grades, it will give fillip to increased consumption of tea internally which is very necessary to bring stability to the industry. The prices are high and need to be reduced if internal consumption is to be increased. The Tea Board should make arrangements for packing and distribution under its own distinguishing labels, 50 per cent. of the quantity of dust tea now packed and sold in India. Distribution can be arranged by the Tea Board through its tea houses as well as by ordinary commercial channels.

The Commission has recommended that the Tea Board should make a special investigation of the difficulties under which the smaller packaging firms are suffering so that positive steps should be taken to increase their competitive capacity. In its opinion ceilings on the production of existing concerns as well as the units which may be established hereafter should be fixed at the average of the last three years' production or six million lbs.. whichever is more. Blenders co-operatives should be organised and promoted in every way. The Commission has stressed that the objective should be to ensure that tea is vended only in package form within the shortest possible time. Regarding adulteration the Commission emphasises that the administration of food laws should be pursued with vigour and recommends that the tea waste rules should be promulgated and enforced at an early date.

Managing Agents

Examining the profits earned by the industry, the Commission says that generally speaking the ratio of gross profit to total capital employed in the industry has been high. Regarding the remuneration paid to managing agents, the Commission says it is based partly on a percentage of gross sales and partly on a percentage of profits, a specific minimum in each case also being sometimes prescribed. This, the Commission says, results in substantial payment having to be made as managing agents' commission, even when profits are low or non-existent as in 1951 and 1952. The managers and senior staff are also in most cases paid a commission based on profits. The report says that there was a higher increase in profits between 1946 and 1953 as compared with profits between 1939 and 1946. Indian companies showed a higher increase than sterling and non-Indian companies which is explained only by the high production cost of sterling and rupee non-Indian companies. The Commission says that withdrawals from reserves other than dividend equalisation reserve for the purpose of declaring dividends is unsound and should cease.

As regards taxation, the Commission has made several recommendations. For determining the world price of tea for fixation of the slab for export duty, instead of taking only the previous month's weighted average of the London auction prices, the previous six months average may be taken. The rules and conditions regarding the levy of agricultural income-tax on tea plantations in different States should be made uniform. The Central income-tax authorities should collect both taxes and pass on the agricultural portion of the collection to the States. Sales tax on tea which figures in inter-State commerce should be made Central. The Commission has also recommended the abolition of the tax of one anna per lb. levied on all tea consigned to any dealer in the Municipal limits of Calcutta and the districts of 24 Parganas and Howrah as this is inconsistent with the policy of encouraging the auctions in Calcutta. The abolition of the levy made by the Government of Assam on tea moved by road or inland waterways in the State is also recommended.

Labour Welfare

Alluding to labour welfare, the Commission has recommended the setting up of a Plantation Labour Welfare Organisation controlled by the Central Government. The Commission has estimated the total cost of providing the required number of standard houses for tea labour both in the North and the South at Rs. 60 crores on the basis of Rs. 2,000 for a new house and Rs. 1,000 for remodelling an old house. It, however, thinks that a reduction in the cost may be possible if locally procurable building materials could be used wherever possible. The Commission feels that considering the magnitude of the capital expenditure for housing, the matter should be discussed with the Planning authorities in the country and co-related to other capital expenditure.

The Commission anticipates a net addition of Rs. 50.63 per acre per year, to the internal resources of the companies in the next five years. It thinks that this is a rather limited amount to meet the obligations under the Plantation Labour Act and to meet the other important needs of the industry. This will have to be taken into consideration in phasing the implementation of the Plantation Labour Act. The Commission has recommended that the plantation industry should be eligible for loans under the industrial housing scheme.

Regarding the payment of bonus, which has been a source of industrial disputes in recent years, the Commission says that any scheme that may be evolved should incorporate the following essential requirements:

(1) Depreciation allowance should be separately funded and drawn upon only for expenditure on replacement and renewal of fixed assets; (2) the tea Re-planting Fund should be set apart; (3) after providing for taxation, a statutory reserve for meeting developmental expenditure and unforeseen charges should be built up; (4) a minimum dividend should be provided for as a percentage on share capital from what is left over; and (5) the remainder should be divided between the shareholders and labour and staff according to a suitable formula, the details of which should be worked out.

As regards the working of tea companies, the Commission says that when co-operative institutions, as recommended by it, for supplies, insurance and marketing are fully developed and financial assistance is provided by the State Bank of India and State Finance Corporations, the need for managing agency system in the tea industry should disappear. It has recommended that remuneration to staff should take the form of a fixed salary. It has suggested that the Tea Board should be empowered to examine cases of disproportionately highly paid staff working in tea companies and when necessary exert its influence in reducing the disparities that exist at present. It has recommended that an increasing number of Indians should be appointed in the managerial cadre of the tea companies. All tea plantation companies should be required to seek the permission of the Controller of Capital Issues before increasing their capital.

Sale of Estates

As to the sale of tea estates, the Commission observes that a good many tea estates owned by foreign companies and individuals have been purchased by Indian nationals and in the majority of these estates, which included also the marginal ones, re-planting was overdue at the time of sale for which the buyers often made no provision. If a return of at least four per cent. on the purchase price per acre is to be obtained over a long period, the prices paid in some of these cases were excessive. The Commission recommends that. if a seller or the prospective buyer so desire, the Tea Board should send its expert evaluator to assess the price of the Tea estate. The Commission has emphasised that the buyer should be aware of his obligations to the workers employed and take responsibility for their continued employment on the same terms as before. There should be a stipulation in the deed of transfer that the buyer takes this responsibility.

International Tea Agreement

After studying the working of the International Tea Agreement, the Commission says that the restrictions imposed by the agreement do not appear to have hampered normal expansion of the tea industry in India since even the extension of acreage permitted under the agreement has not been fully utilised. But the increase in production of tea during the period was much more than proportionate to the increase in acreage. The Commission thinks it would be desirable to continue the machinery provided by the International Tea Agreement, so that all problems of the industry concerning production and absorption may be kept under constant and close study by the international committee. The Commission, however, says that while entering into an international agreement the power should be reserved to enable the Government to allow the necessary expansion of cultivation in new areas to take place without restriction.

The Commission has repeatedly emphasised the need for efforts for a steady increase in consumption of tea in the internal market. In its opinion, the potentialities of the internal market are very great and a large and growing internal market is necessary for the stability of the industry. For promotion of exports, it suggests that the Tea Board should appoint an Export Promotion Committee consisting mainly of exporters of tea to look after the expansion of Indian tea sales abroad. It has suggested that a Marketing and Tea Promotion Directorate should be set up in the Tea Board which will make studies of various marketing problems in India and abroad.

Transport Facilities

For improvement in transport facilities, the Commission has recommended that the Central Water and Power Commission should investigate the existence of shifting sands in the Brahmaputra which sometimes cause unexpected and abnormal delays in the navigable channels. Attention of the Railway authority has been drawn to the need of keeping the line connecting Dhubri with the Central Dooars free from breaching to provide an alternative river route to Calcutta even when the rail route is disrupted. The Commission has also recommended that at Stations where there are bookings of tea, covered accommodation should be provided for tea awaiting despatch. Only leak-proof wagons should be used for the transport of tea.

The Commission points out that there is considerable room for improvement in the road communication in many parts of the tea districts. Regarding South India, the Commission says the main difficulty is about shortage of wagons in

(*Continued on page 491*)

Notices

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

EXPLANATORY STATEMENT

ON 21ST AUGUST 1956 THE COMPANY posted to its shareholders with the Report and Accounts for the year ended 31st March 1956 a Notice dated 9th August 1956 convening the Forty-fifth Annual General Meeting of the Company on 14th September 1956.

By an accidental omission, the hour of the Meeting was not specified in the Notice but the Company posted a further Notice dated 22nd August 1956 specifying the hour of the Meeting as 3.30 p.m.

The Directors' attention has since been drawn by certain of the shareholders to the fact that the further Notice dated 22nd August 1956 did not give them twenty-one days' notice of the Meeting to be held on 14th September 1956. The Directors have now been advised that the Notice convening the Meeting, including the further Notice, is not sufficient and that any proceedings on the basis of such Notices will not be valid.

The Directors have decided that a fresh and new Notice should be issued calling the Forty-fifth Annual General Meeting and they do hereby issue such Notice in the terms following:—

NOTICE OF MEETING

NOTICE is hereby given that the Forty-fifth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on 27th September 1956 at 9 a.m., for the following purposes:

1. To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.
2. If considered desirable to declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

In accordance with the Notice already issued and dated 9th August 1956, the share transfer books of the Company have been closed from 28th August to 14th September 1956, both days inclusive, and further notice is now given that the share transfer books of the Company will remain closed from 15th September to 26th September 1956, both days inclusive.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

3rd September 1956.
VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA.

Notes.—The dividend, if approved, will now be paid on 28th September 1956 and not on 25th September 1956, to the shareholders whose names are registered in the books of the Company on 26th September 1956, and not on 14th September 1956, or to their mandatees. Transfers received in order at the registered office of the Company by 27th August 1956, remain in time to be passed for payment of the dividend to the transferees.

Shareholders are again requested to notify the Company immediately of any change in address.

A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

The Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon were forwarded to shareholders on 21st August 1956.

THE MYSORE SPUN SILK MILLS LIMITED
CHANNAPATNA

NOTICE

THE TWENTIETH ANNUAL GENERAL Meeting of the Shareholders of the above Company will be held at 3-30 p.m., on SATURDAY the 29th September 1956, at the Company's Registered Office, Channapatna, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1956.
2. To elect two Directors in place of
   (i) Shri K. H. Srinivasan, and
   (ii) Shri M. S. Ganesha Aiyar who retire by rotation. Shri K. H. Srinivasan being eligible offers himself for re-election. Shri M. S. Ganesha Aiyar who has attained the age of 73 years exceeds the age limit prescribed in Section 280 of the Companies Act, 1956, does not seek re-election.
3. To appoint Auditors for the year 1956-57 and fix their remuneration.
4. SPECIAL BUSINESS: Special Notice:—To consider and if thought fit, to pass the Ordinary Resolution to authorise the Directors of the Company, to borrow moneys with or without security and without limit.
5. SPECIAL BUSINESS: Special Notice:—To consider and if thought fit, to pass the Special Resolution regarding the re-appointment, as Salesman, of Shri Mahomed Pir, who is a relative of Shri K. Shamsuddin Khan, Chairman of the Board of Directors of the Company.
6. SPECIAL BUSINESS: Special Notice:—To consider and if thought fit, to pass the Special Resolution regarding the payment of an honorarium of Rs. 150 per mensem to Shri K. Shamsuddin Khan, Chairman of the Board of Directors of the Company.
7. SPECIAL BUSINESS: Special Notice:—To consider and if thought fit, to pass the Ordinary Resolution fixing the hours of inspection of Company's Registers and documents by the persons entitled thereto under the provisions of the Companies Act, 1956.
8. SPECIAL BUSINESS: Special Notice:—To consider and if thought fit, to pass the Special Resolution amending the Articles of Association of the Company.

(Full details about the Special and Ordinary Resolutions noted above and explanatory statement under Section 173 of the Indian Companies Act, 1956, have been furnished in the Notice sent to all the Shareholders of the Company).

By Order of the Board,

R. SURYANARAYANA RAO,
Manager.

CHANNAPATNA, 24*th August* 1956.

Note.—1. The Share Transfer Books of the Company will be closed from 15th September 1956 to 29th September 1956 (both days inclusive).

2. Every Member entitled to attend and vote is entitled to appoint a proxy or proxies to attend and vote instead of himself and *a proxy need not be a member.*

3. Shareholders are requested to communicate the change of address if any for record in the registers.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE

THE PREFERENCE SHARE REGISTERS OF the Company will be closed from the 21st September 1956 to the 1st October 1956, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.,
Secretaries.

CALCUTTA, 4*th September* 1956.

THE KAILAS RUBBER COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 13th Annual General Meeting of the Company will be held at Ancheril Bank Buildings, Kottayam, T.-C. State, at 11 a.m., on Saturday, 29th September 1956, to transact the usual business and some items of special business mentioned in the notice sent to the Shareholders individually.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

The Share Transfer Books will be closed from 18th to 29th September 1956, both days inclusive.

The 30 per cent. dividend on the Ordinary Shares recommended by the Directors, when declared, will be paid on 29th October 1956, to the Shareholders, who are in the register on 29th September 1956.

By Order of the Board,

For THE KAILAS RUBBER CO., LTD.,
For A. V. GEORGE & CO., LTD.,
A. J. MATHEW,
Secretary,
Managing Agents.

KOTTAYAM, 23*rd August* 1956.

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 29th September 1956, at 10-30 a.m., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the year ended 29th February 1956, declaring the Dividends recommended by the Directors, electing a Director and appointing Auditors.

The Share Transfer Registers of the Company will be closed from the 15th to the 29th September 1956, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 30*th August* 1956.

Note.—(1) A member entitled to attend and vote at this meeting is entitled to appoint a Proxy to attend or vote in his stead. Such Proxy need not be a member of the Company.

(2) The Dividend, if sanctioned, will be paid on or after 6th October 1956, to those shareholders so entitled whose names appear in the Company's books on 29th September 1956, or to their mandatees. No application for Dividend Warrants will be necessary.

THE KARANPURA COLLIERIES LIMITED

AT A MEETING OF THE BOARD OF DIRECtors held on 30th August 1956, the following Dividends were recommended to be paid for the year ended 29th February 1956.

On Cumulative Preference Shares (After deduction of Income-tax payable by the Company) at 5½ per cent. per annum.

On Ordinary Shares (without deduction for Income-tax payable by the Company) at 5 per cent. per annum.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

NEW PUBLICATIONS

Structure of Indian Industries. By Dr. M. M. Mehta. Published by: Popular Book Depot, Bombay-7. Pages: 340. Price: Rs. 22-8.

IT has been an established practice among the economists, at least of this country, to explain the economic trends by reference to theoretical generalisations; seldom is any attempt made to test the theories themselves in the light of new data. Deductive reasoning has dominated inductive evidence. This state of affairs is not very helpful either to economic theory or economic policy. Dr. M. M. Mehta's attempt in this book at an inductive and exploratory inquiry into Indian industries is, therefore, a welcome one.

Dr. Mehta divides the book for purposes of study into three parts. In the first part, a study of the size of industries is made in all its aspects. The second part deals with the question of localisation. Both the problems of size and localisation are tackled with reference to their relationship with profits and costs of production. The third part deals with a question which has usually provided material for slogans and demagogy in this country—financial and administrative integration of industrial units.

An inconclusive discussion on the appropriate unit for measuring the size obliges the author to take technical equipment as the least objectionable. An examination of the cotton textile industry reveals that units of different sizes exist in the industry at different centres and at different periods. Thus, in Bombay, there has been a secular trend towards the increase in the number of mills having 45,000 to 50,000 spindles. In the case of composite mills, the ratio of 40 spindles to one loom is more and more pronounced. The Ahmedabad industry presents different figures, though the tendency on the part of small individual units to grow into bigger ones has been common to both Bombay and Ahmedabad. The author then proceeds to similar examination of other industries though the data he has used for the study do not belong to the same year. The broad conclusions that emerge from his study are that there has been, in recent years, a tendency on the part of industrial units to grow into larger sizes, that the mortality rate is higher among the smaller units, and that, during each period and in each industry, one or more than one "typical" size units existed along with units of widely varying sizes.

After demonstrating how the discovery of the existence and extent of the relationship between size and ratio of profit is beset with many difficulties, Dr. Mehta nevertheless points out that, except in the cotton textile industry, there is a high degree of correlation between size and rate of return on the equity capital. There is no inevitable or perfect positive correlation between the two as the rate of profit is determined by many factors besides the size. A study of the relationship between the size and the cost of production confirms the traditional view that there is a negative correlationship between the two, the degree of such relationship, however, depending upon various circumstances.

Dr. Mehta's discussion of the location yields the interesting conclusion that the market-localised industries offer the greatest scope for dispersal and decentralisation. This fact is of great significance to a policy of regional planning. All the seven industries selected for study are highly localised industries—jute and paper in Bengal, sugar in U.P. and cotton textile in Bombay, iron and steel and coal in Bihar and Bengal and cement in Madhya Pradesh. Though the recent trends are towards wider dispersal of productive activity, there is no uniformity in the trends of different industries—consumer industries showing a greater tendency for dispersal.

According to Dr. Mehta, the "most striking feature of India's industrial development has been the concentration of ownership and control in fewer hands and in fewer establishments." He argues that the managing agency system has led to this centralisation of commercial activities and complains that the concentration has grown mainly through expansion and not through amalgamation or absorption. He has given figures to illustrate how few directors and managing agents control large number of undertakings. The question whether, under the prevalent conditions in India, development could have taken place on other lines is, of course, outside the scope of the book.

The sources of Dr. Mehta's massive data are mainly the published balance-sheets and profit and loss accounts of the companies, year-books for investors and reports of manufacturers' associations. There has been no attempt to study the industry at close quarters. Such an attempt would have furnished highly interesting and significant information. A study of the structure of industry should be deemed inadequate without reference to such aspects as the nature of block capital and the capital-output ratios.

In a study of this kind, it is inevitable that the author should slip into an occasional logical or statistical error. He blames the A.C.C. for avoiding all competition between factories under their management, thus failing to see the basic reason for the birth of A.C.C. He says none of the cement factories outside the A.C.C. and Dalmia group has a capacity of more than 70,000 tons (p. 63)—Andhra Cement has a capacity of over 90,000 tons, India Cements of 1,00,000 tons, and Shree Digvijaya of two lakh tons. His reference to National Radio and Engineering Co. Ltd. and Pickers Ltd., as the subsidiaries of Investment Corporation of India makes one suspect that his sources are out of date by at least six years.

In spite of these blemishes, the book can claim to be a scholarly study. Dr. Mehta's treatment of the subject in this book is more lucid than in his earlier book on the cotton textile industry. However, there is likely to be an opinion other than that of the publishers on the price of the book.

Problems in Business Administration. By Thomas Cicchino Raymond. Published by: MacGraw-Hill Book Company, New York. Pages: 372. Price: $5.50.

In any social science, the importance of theory can hardly be exaggerated. A study of theory helps to discipline one's mind and to build up an attitude which enables one to see things in their proper perspective. It is a method by which one can work out the implications of a given situation or action. But it is possible for theory to degenerate too easily into fanciful imagination. A corrective to this tendency is to be found in what is called "case method," since laboratory experiments are denied to social sciences. The study of "precedents" in law is one example of the "case method."

Prof. Raymond, in the book under review, has attempted at analysis, by the case method, of problems in business administration, where in fact this method is of the greatest utility. After introductory remarks explaining the significance and importance of the case method, Prof. Raymond shows the working of the case method—how the facts of the problem are to be shifted and sorted, how to pin-point the central issue and then how to use the relevant data for arriving at the solution.

The task appears fairly easy, essentially a function of the commonsense. That is the impression the author himself helps to create by the simple cases given by him at the beginning. As the reader is, however, led from the simple to the complex cases, he is made to realise the exacting nature of the problems and the necessity of rigorous application of the case method. The cases themselves have been organised in four increasingly complex groups which both test and strengthen the analytical ability of the reader. To the students of business administration, this book, which is in a sense the product of Harvard Business School, is invaluable. They will find in it a useful aid in developing "a way of thinking logically and meaningfully in a given situation," which is the function of the case method.

Indian Non-ferrous Metals, Directory and Handbook, 1956. Edited by Mr. C. G. Chandrasekhar. Published by: Indian Non-ferrous Metals Manufacturers' Association, India Exchange, Calcutta, 1. Price: Rs. 10.

This Directory is undoubtedly a valuable contribution to the literature on non-ferrous metal industry in India. The role of non-ferrous metals in the development of any nation is so significant that it needs hardly any elaborate description. Suffice it to say that these metals are in extensive use in the electric, machine tools, bicycle, diesel engines, power driven pumps, textile machinery, hurricane lanterns, grinding wheel, paints and varnishes, glass, metal box and a host of other industries. In India, the use of these metals on a large-scale is only of recent origin, their main development having taken place during and since the Second World War. In the smelting, rolling, alloying, extruding and drawing sections, the non-ferrous metals industry is estimated to account for a capital investment of about Rs. 20 to Rs. 25 crores, excluding the capital employed in some important fabricating sections. It employs directly about 25,000 persons who receive by way of wages and allowances about Rs. 3 crores.

In spite of the notable contribution, the industry's importance has not gained the recognition that is due to it. This is possibly due to two reasons, namely, the comparatively recent origin of the industry in India and lack of adequate data on the industry. The latter lacuna may be said to have been made up to a considerable extent by the publication of the Directory under review.

The chief merit of the Directory lies in the series of articles, it contains on the various aspects of the non-ferrous metal industry written by men who, by reason of their close association with the use of various metals, can speak with authority. Dr. M. S. Krishnan writes on Appraisal of Resources on Metallic Ores. Mr. G. C. Mitter has contributed an article on the role of this industry in the Second Plan. A number of officers connected with the State-owned industries have described how far their respective factories are utilising the varous metals.

The section devoted to statistics relating to production, consumption and trade has enhanced the usefulness of the volume. Besides, the publication contains a list of metal associations in India and abroad. The chapter "Who is who" in non-ferrous metallurgical industry in India introduces the men who have made a mark in the field.

Investors' Encyclopaedia 1955-56. Compiled by Messrs. Kothari and Sons, Share, Stock and Exchange Brokers, Madras. Pages: 1,725. Price: Rs. 20. Postage Rs. 3 extra.

The task of compiling a useful reference book giving information about almost all leading joint stock companies all over India is an arduous one and the firm of Messrs. Kothari & Sons has well and truly earned the gratitude of investors throughout the country by publishing an authentic and complete reference work consistently every year for over two decades now. What is more gratifying is the fact that no effort is being spared to enhance the utility of the publication year after year by adding more companies and including additional information relating to companies.

The latest edition of the above publication is the nineteenth one of its series and has proved true to the name encyclopaedia. It runs to about 1,800 pages, as against just over 1,400 pages in the previous edition and less than 200 pages in the first edition in 1936. The enlargement of the volume over these years gives also an idea of the growth of the investment market in India. Besides retaining all the useful features of the previous editions, the latest one contains several new ones. The general review of economic conditions during 1955, given at the beginning of the book, provides details about the draft second Five-year Plan, a brief history of Company Law in India and a synopsis of the Companies Act 1956. The chapter on State enterprises run on commercial lines, which was introduced in the previous edition, has been revised and made more comprehensive. The introduction to each section giving a review of industries has been brought more up-to-date. Some charts and graphs relating to main economic indicators, index of industrial production of leading industries, foreign trade and money supply have also been included in the latest edition.

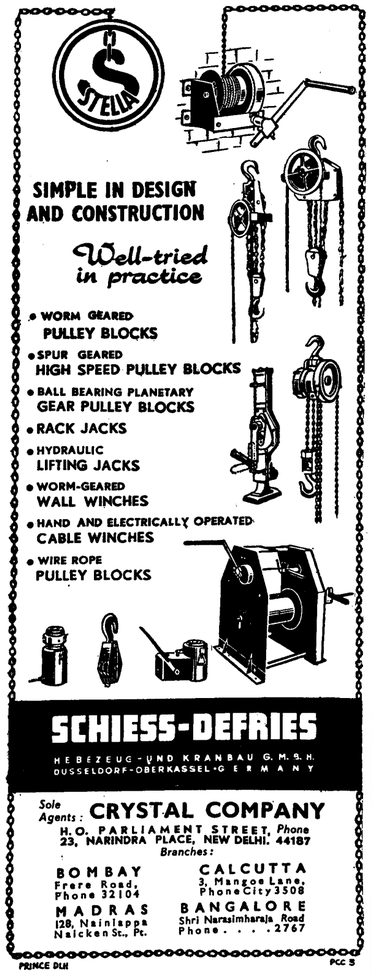
PLANTING

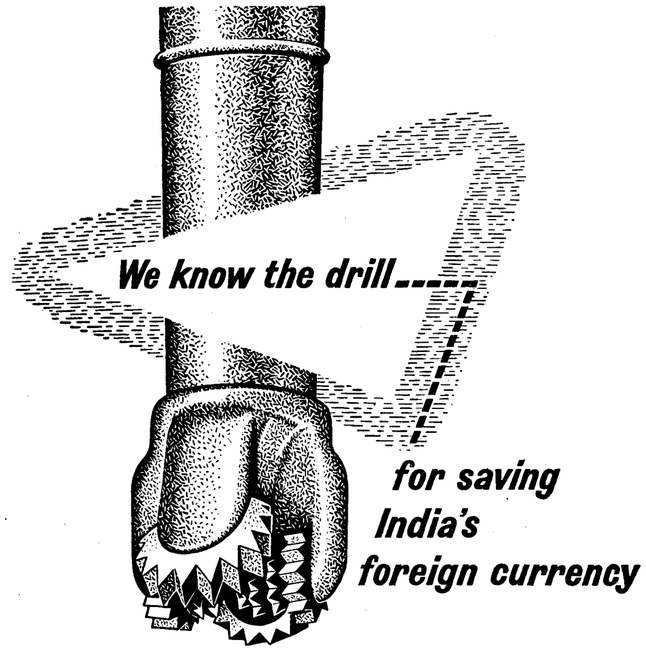
(*Concluded from page* 458)

quate return if he was to be encouraged to grow more. The question was whether they should achieve this through manipulation of imports and duty or by price support. As regards the former, there were both immediate and long-term issues. He would, however, assure the House that he would look into it immediately. The question of price support raised a number of complicated issues. The Government had occasionally given some price support for agricultural commodities, but he would confess, not on any national scale.

TEA EXPORT

The Government of India has fixed a ceiling of 160 million lbs. of tea out of the 1956-57 North Indian crop for export abroad for the purpose of auction. The Government does not, however, propose, for the time being, to prescribe a ceiling for the South Indian tea, an adequately high proportion of which is already being sold at the Cochin auctions.





Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

INDO-BURMESE TRADE

SOME RECENT TRENDS AND PROSPECTS

FOR many decades, indeed till the Japanese occupation of Burma during the Second World War, Burma had been the traditional exporter of rice to India. It is not far from the truth to say that, to a great extent, the economies of India and Burma had been complementary to each other—not only because of certain historical circumstances, but also of their geographical position. Burma exported to India before the war about half of its export surplus of as much as 3 million to 3.5 million tons of rice annually, besides a number of products such as mineral oils, teak, lead, zinc, tin, silver and wolfram. India, on its part, exported a number of manufactured goods, spices and vegetable oils. After 1947, when the political conditions in both India and Burma became favourable, trade between the two neighbours increased. In the year 1949, for instance, Burmese exports to India were as high as Rs. 35 crores and its imports from India were of the order of about Rs. 10 crores as against Rs. 25.9 crores and Rs. 10.3 crores, respectively, in 1938. The complementary character of these two economies is no less significant today than it was a decade or so ago. On the contrary, the advance that is being made in India industrially and technologically will enable it to meet the demands of Asia, in general, and Burma, in particular, for both manufactured goods and technical know-how to an increasing degree in the years ahead. In course of time, India will even be able to supply plant and machinery to its neighbours. Besides, the capacity of Burma, as the nearest neighbour excepting Pakistan, to export many materials India is in need of, places that country in a distinct category by itself. India's need for adequate reserves of foodgrains when it is embarking on an ambitious programme of industrialisation involving large investments and deficit financing cannot be overemphasised. Only a few days ago, the World Bank Mission pointed out the importance of having sufficient foodgrain reserves at the disposal of the Government in order to offset any increase in their prices in the country. Burma is also capable of supplying non-ferrous metals and timber which Indian engineering industries will require when they expand. There is thus great scope for co-operation between Burma and India in the economic field to their mutual benefit. This is all the more easy to achieve because of the great similarity in the policies that are being pursued by them in the sphere of international politics.

Declining Trend

In the context of the growing need for economic co-operation between Burma and India, the declining trend witnessed in recent years in the trade between them is a matter for great concern. The following table illustrates clearly the trend of trade between the two countries from 1950-51 to 1955-56:

(In crores of rupees)

	Exports to Burma	Imports from Burma
1950-51	22.00	18.80
1951-52	19.55	23.48
1952-53	22.16	26.44
1953-54	20.81	17.49
1954-55	16.06	57.32
1955-56	12.39	9.55

As will be seen from the table, the value of exports to Burma declined from Rs. 22.16 crores in 1952-53 to as low as Rs. 12.39 crores in 1955-56. At the same time, the value of imports from Burma also fell, except in the year 1954-55, from a high level of Rs. 26.44 crores in 1952-53 to a none-too-impressive figure of Rs. 9.55 crores in 1955-56. The causes for this marked decline are many. First, the policy of food self-sufficiency adopted by India in March 1949 resulted in a drastic cut in imports of foodgrains generally. Secondly, the high price of rice obtaining in Burma during the early fifties acted as a damper. Nevertheless, the Government of India was able to conclude a deal only after prolonged negotiations with the Burmese Government. The deal provided for export by India to Burma of cotton textiles, Jute manufactures, iron and steel products, hosiery, rayon and leather goods, coal, paper and fish, and import by India of rice, pulses, lead and teak. Both these factors, namely, India's restrictive import policy and the high level of prices prevailing in Burma, compelled Burma to seek markets for its surplus produce elsewhere, chiefly in Japan and the communist countries, which generally insisted on barter deals. As a result, Burma's trade with them staged a remarkable expansion during the last few years. The trade arrangement concluded between Burma and Japan in December 1953 provided for long-term purchases of rice by Japan from Burma. Japan, accordingly, imported 300,000 tons of Burmese rice in 1954, 240,000 tons in 1955 and 263,600 tons in 1956. Moreover, since resumption of trade between them after the war, both exports and imports have staged a remarkable expansion as can be gathered from the following table:

(In million £s)

	Japan's exports to Burma	Japan's imports from Burma
1950	4.9	7.1
1951	6.2	8.1
1952	6.9	7.9
1953	11.6	17.3
1954	16.7	20.2
1955	11.5	13.2
1956 (Jan.-April) ..	3.9	0.8

Thus, while Japanese exports rose in value from £4.9 million in 1950 to £16.7 million in 1954—an increase of as much as 3.4 times—its imports also went up by 2.8 times from £7.1 million in 1950 to £20.2 million in 1954. In 1955, however, there was a slight fall in the value of trade, because of the application of import restrictions and suspension of the O.G.L. system by the Government of Burma—which, incidentally, was another contributory factor for the fall in the trade between Burma and India in recent months—following the deterioration in its international balance of payments position, consequent on the world-wide increase in rice production in 1953 and 1954.

Japanese Competition

This brings us to two more causes for the decline of trade between India and Burma: the emergence of Japan as a competitor to India, and the improvement witnessed in the production of foodgrains in India itself in 1953 and 1954 as a result of the policies adopted under the First Five-year Plan. Of the three countries that principally trade with Burma, Japan constitutes the more powerful competitor to India both because of its highly developed industrial economy and of its readiness to purchase Burmese rice in exchange for her own goods supplied at very competitive rates. Japan's leading export items to Burma are, thus, textile products, which account for more than 50 per cent. of the total value of its exports. Other Japanese exports such as metal products, machinery, canned fish, etc., do not, however, affect, at any rate in the present circumstances, India's trade with Burma to any appreciable extent. India's position *vis-a-vis* Japan in the sphere of textile trade with Burma can be more clearly seen from the fact that, while India could export no more than 14.41 million yards of cotton cloth in 1955, as against 40 million yards in 1954 and 89.66 million yards in 1953, Japan succeeded in exporting as much as 68.12 million yards in 1954. Furthermore, while India's export to Burma during the first quarter of this year, despite the purchases made by the Burmese Mission early this year of 6.9 million yards of Indian cloth, were only 7.2 million yards, Japan's exports amounted during the same period to no less than 15.8 million yards.

Above all, India's attainment of the targets, fixed for the First Plan for foodgrains, much ahead of the schedule obviated the necessity of large-scale imports of foodgrains after 1953. Thus, while the imports of foodgrains were of the order of 4.7 million tons in 1950, they were less than a million tons during the past two years. In respect of rice alone, there was an improvement of as much as 4.5 million tons in India's production over the Plan period.

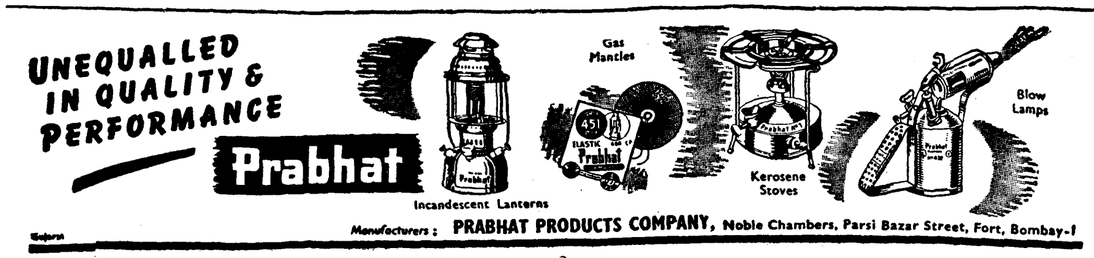
This does not mean that there is no scope for imports of foodgrains in the future. Far from it. The impact of the unpredictable natural forces such as the monsoon and the floods on the execution of the Plan cannot be underestimated. In view of the heavy expenditure to the tune of as much as Rs. 7,000 crores, by the public and the private sectors together, as envisaged in the Second Plan, commonsense dictates that adequate reserves of foodgrains should be built up to offset any unfavourable price trends resulting from widespread failure of or damage to crops, in order to ensure the success of the Plan programmes. In this context, the agreements signed last week between the Governments of the U.S.A. and India for the supply by the latter of 3.7 million tons of foodgrains is a matter of great relief. So also is the deal between Burma and India concluded in May last, according to which Burma will export to India during the Second Plan period 2 million tons of rice.

New Trade Agreement

At the time this deal was signed, it was agreed between the two countries that a fresh, comprehensive trade agreement designed to step up the volume of trade between them "to as high a level as practicable" should be concluded. In order to fulfil this understanding, the Burmese Deputy Prime Minister, Mr. Sao Hkunhkie, has arrived in New Delhi. When this agreement is concluded, it will open out new opportunities for the expansion of trade between the two countries. It is expected that the new pact, the draft of which is very nearly complete at the time of writing, will be valid, as the earlier one, for five years. At the same time, it is stated, an attempt will be made to achieve balance of trade. This means that Burma will have to import more goods from India, estimated at Rs. 18 crores annually, to pay for its exports of rice. India, on its part, should explore the possibilities of stepping up its exports to Burma. It is considered likely that the Government of India may make a major concession to Burma by agreeing to sell iron and steel products, although they are in short supply in India itself. The greatest scope, however, is for expanding exports of textiles and other manufactured goods, jute manufactures, oils, spices, shoes, hardware, that is, things which Burma needs. What is of paramount importance, in this context, is the removal of trade restrictions in the direction of which Burma has already made some headway after the improvement it has witnessed in its balance of payments position since Autumn 1955. The loan of Rs. 20 crores given by India in October last coupled with that of $19.35 million given by the World Bank must have already improved the foreign exchange position of Burma to an appreciable extent.

Certain Handicaps

The Indian businessmen have been experiencing some difficulties in carrying on their trade with Burma. These should be removed as another step towards expansion of trade. It is stated that a great difficulty confronting Indians intending to visit Burma is the one relating to issue of fresh visas on the strength of the time-barred re-entry visas. Absence of direct sailing facilities from Madras to Rangoon is also stated to have been responsible for much inconvenience to businessmen. It is further complained that repatriation of money is the most important problem facing them. Sometimes remittances of current earnings were not allowed, although import licences were given by the Government of Burma. A few days ago, coir exporters in Alleppey brought to the notice of Mr. Mehrotra, the Indian Ambassador-Designate to Burma, that the steamship companies refused to lift their cargo for Rangoon for the reason that the cargo occupies more space in relation to its weight. This grievance incidentally reminds us that the biggest of all the handicaps to Indo-Burma trade is inadequacy of shipping. If India is to compete effectively in Burma with such advanced maritime nations as Japan and the U.K., it must expand, without any delay whatever, its mercantile marine. The time has come when India should not depend upon foreign shipping for adjacent trades. Be that as it may, Mr. Lalji Mehrotra, the Ambassador-Designate to Burma, has done well to assure the business community in India of his fullest co-operation in their efforts to expand trade with Burma, in his speeches delivered a few days ago at the Southern India Chamber of Commerce and elsewhere. As he rightly pointed out, Indian businessmen should, instead of merely sending samples and literature about their goods to Burma, must pay frequent visits to the country and examine the problem there itself. It is to be hoped that the new trade agreement between India and Burma, now on the anvil, will usher in a new era of trade for both the parties. It is needless to add that India's economic prosperity depends not only on its own economic stability but on that of its neighbours as well. It is in this light that the new trade agreement should be regarded as a further step towards closer economic co-operation between the two countries.



WORLD INDUSTRIAL PRODUCTION UP

The industrial production of the world excluding the U.S.S.R., China Mainland and Eastern Europe in the first quarter of 1956 was 6 per cent. to 7 per cent. higher than in the corresponding quarter of 1955, according to the United Nations *Monthly Bulletin of Statistics* for July. The index number of industrial production for the period under review stood at 114, the base year being 1953. This level, however, represents a slight decline, as compared with the levels in the last three quarters of 1955. Further, the rate at which output expanded in 1955 slackened somewhat during the period under review and indications are not lacking to show that this trend must have continued during the second quarter of 1956 also.

Turning to raw materials, the *Bulletin* says that, except for tin and rubber, the production of basic industrial raw materials increased over that of the first quarter of 1955. Principal among these raw materials were coal, crude petroleum, cement, pig iron, copper, zinc, aluminium and electricity. The greatest increases were witnessed in pig iron and steel, the quarterly tonnage production figures being 41 million and 59 million, respectively. This represents an increase of 12 per cent. for steel and 13 per cent. for pig iron over the corresponding quarter of 1955. In the United States alone, the output of pig iron and steel rose by as much as 17 per cent. and 19 per cent. respectively, whereas, in the rest of the world, they rose by 10 per cent. and 9 per cent. Copper production at 726 thousand metric tons, also exceeded that of any other quarter.

Aluminium production continued to rise during the period under review, with the output being 11 per cent. higher than that the corresponding period in 1955. It was, however, slightly lower than the record level reached in the third quarter of 1955. A significant feature was that the gains in the production in the U.S. were sufficient to offset the seasonal drop in Western Europe.

In regard to coal and petroleum, the *Bulletin* points out that the production of both during the quarter under review as compared with the first quarter of 1955 increased in the same proportion. In the U.S. however, proportion of the increase was higher in respect of coal. In the case of petroleum, the reverse was true, owing to the accelerated production in countries other than the United States.

SCOPE FOR STRAWBOARD IN BOMBAY

The Government of Bombay has announced that applications from prospecting industrialists interested in establishing strawboard factories in West Khandesh District will be received by the Chief Conservator of Forests, Bombay State, Poona, till the end of December 1956.

As a result of investigations conducted by the Forests Department of the State Government, it is found that Nawapur and Sangvi in West Khandesh command very favourable conditions for locating the factories. In the first place, the adjoining grass lands and forests of West Khandesh District offer an adequate potential supply of coarse grasses of suitable varieties for the operation of strawboard factories of a capacity of as much as 16 tons per day.

It is further found that other raw materials required for the industry will also be available easily. A reconnaissance survey of the area within a radius of 20 to 25 miles surrounding Nawapur and Sangvi revealed that about 10,000 tons of dry grass would be available annually for a factory at Nawapur, and as much as 7,000 tons per annum for the one at Sangvi.

Another very important advantage offered by the aforesaid two places is that they are centrally situated within the regions providing the supply of raw materials. Nawapur is served by the Tapti Valley Railway and is connected by roads to Ahwa (Dangs Division) and Sadado (Vyara Division). Similarly, Sangvi is situated on the main Bombay-Agra Road connected with Nardava railhead at a distance of about 33 miles. Furthermore, the proximity of the places to the sources of water supply—Nawapur to Bhangawali and Sangvi to Arunavati—ensures adequate supplies of water. There is a possibility of producing electricity, too, at moderate rates.

The Government of Bombay is prepared to consider the question of granting concession to parties willing to establish strawboard factories. They should, however, inspect the areas and satisfy themselves about the conditions, such as the supply of raw materials and skilled labour, before submitting their proposals. The applications, it is stated, should also include a complete scheme explaining the location of the factory, financial and technical ability to complete the undertaking, and the concessions needed by the party for the right of collection of grass from the Government-owned areas. The Government, it is further stated, proposes to call regular tenders if sufficient response is forthcoming from interested parties.

METRIC SYSTEM OF WEIGHTS

The Standards of Weights and Measures Bill, 1956, has been referred to a Select Committee of both the Houses of Parliament as a result of the recommendation of the Lok Sabha already agreed to by the Rajya Sabha. Mr. Kanungo, Minister for Commerce and Industry, moving the motion for reference, pointed out that the Bill would bring about the introduction of uniform system of weights and measures based on the metric system all over the country. At present different units of weights and measures prevailed in different parts of the country. Absence of uniformity gave rise to the exploitation of the masses and hampered trade. Besides, the system had already been adopted by 70 countries in the world. He further recommend that the system, together with the decimalisation of coinage, would be in the best interests of trade and industry of the country, especially in view of the programme of industrialisation taken in hand by the country. He further stated that the transition to the metric system would be gradual. A maximum period of ten years had been provided for the complete adoption of this system.

TRADE PACT WITH INDONESIA EXTENDED

The trade agreement which was concluded between the Government of India and Indonesia on 30th January 1953, and was extended later to 30th June 1956 has been further extended for another six months, that is, up to the end of December 1956.

The agreement envisaged the export to Indonesia mainly of jute goods, cotton textiles, non-essential oils, chemicals, light machinery and engineering goods, and imports from that country, mainly of coconut and palm oils, spices, tin, rubber and timber.

Indian exports to Indonesia increased in value from Rs. 6.6 crores in 1953-54 to Rs. 11.6 crores in 1955-56. Imports have slightly declined from Rs. 1.51 crores in 1953-54 to Rs. 1.46 crores in 1955-56. In 1954-55 they amounted to only Rs. 81 lakhs.

It is, however, felt that the prospects for Indian exports to Indonesia are not as bright as they have been before for the reason that further exchange restrictions are likely to follow as a result of the deterioration in the Indonesian balance of payments position in recent months. It may be recalled that, about a year ago, the Indonesian Government had adopted a policy of encouraging heavy imports with a view to bringing down domestic prices.

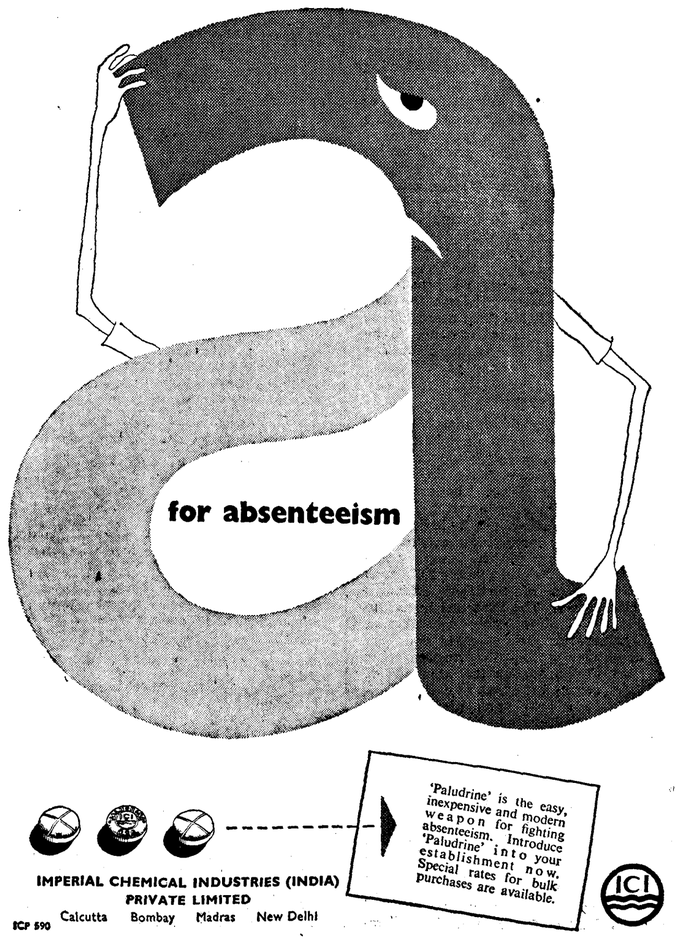
TRADE BALANCE ADVERSE

The visible adverse trade balance of India for the first quarter of 1956 was Rs. 60.78 crores, as against Rs. 21.42 crores for the corresponding period of 1955. It represents an increase of as much as Rs. 39.36 crores.

The rise in adverse trade balance was mainly due to the increase in merchandise imports which were valued at Rs. 192.3 crores during the quarter ended June 1956 as compared with Rs. 153.9 crores in the corresponding quarter of last year.

Fall in exports also contributed to some extent in raising the adverse balance of trade. Total exports during the quarter under review were valued at Rs. 131.6 crores, as against Rs. 132.5 crores in the same quarter of the previous year.

Imports of gold and silver were placed at Rs. 500,000 as compared with Rs. 200,000 in the second quarter of last year.



F.A.C.T. EARNS MORE BUT NO DIVIDEND YET

NEW EXPANSION PROGRAMME UNDERTAKEN

AN impressive rise in production, particularly of the main products, thanks to the uninterrupted and requisite supply of electric power even during the summer months, is the outstanding feature of the working of the Fertilisers and Chemicals, Travancore Ltd., Alwaye [Managing Agents: Messrs. Seshasayee Brothers (Travancore), Ltd., Alwaye] during the year ended 31st December 1955. Consequent upon higher production, the gross profit for the year has gone up substantially from Rs. 26.70 lakhs for 1954 to Rs. 42.04 lakhs for the year. After setting aside Rs. 1.55 lakhs for managing agents' remuneration and Rs. 26.51 lakhs for depreciation as against Rs. 26.40 lakhs in the previous year, the net profit stands at Rs. 13.97 lakhs, against the previous year's meagre sum of Rs. 30,258. The Directors have thought it prudent to pass over the dividend once again, in order to consolidate the resources of the Company. Accordingly, the entire net profit of Rs. 13.97 lakhs has been utilised to reduce the previous year's losses aggregating Rs. 44.67 lakhs to the present figure of Rs. 30.69 lakhs. It looks, therefore, that the shareholders can look forward to more heartening news only after the entire losses are wiped out. But they can have the satisfaction that the Company has turned the corner.

The table shown hereunder will give an insight into the Company's working during the past four years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	188.26	203.49	89.68	97.86
Manufacturing cost of goods sold	137.04	167.95	73.23	78.96
Other expenses	10.07	9.64	9.18	8.43
Gross profit	42.04	26.70	8.03	12.35
Managing Agents' remuneration	1.55			
Depreciation	26.51	26.40	27.08	28.16
Net profit (+) or loss (—) ..	+13.97	+0.30	—19.05	—15.82
Carry forward	—30.69	—44.67	—44.97	—25.92

During the year under review, the production of ammonia at 12,660 tons, besides setting a new record, was also 860 tons in excess of the rated capacity of the plant. The major portion of this chemical was used in the manufacture of 42,757 tons of ammonium sulphate, which is also the highest to be produced so far. The balance of ammonia, left over after direct sales, was utilised to produce 1,622 tons of ammonium chloride, a new addition to the Company's list of products. The production of 40,977 tons of sulphuric acid during the year, as against 34,375 tons produced in the previous year, also constituted a fresh record for the Company. The production of superphosphate, however, fell from the 1954 figure of 15,340 tons to 10,716 tons; nevertheless, the Directors consider this performance to be quite satisfactory, in the light of the prevailing market conditions during the past year.

Development

The Directors feel confident that a regular offtake is assured for ammonium sulphate, since the trend of Government's policy appears to be to continue the Central Fertiliser Pool of the Food and Agricultural Ministry. The lower production in superphosphate by about 5,000 tons was due to poor offtake occasioned by lower foodgrain prices and fairly large stocks carried forward from the previous years. The Company was also able to manufacture and market 2,596 tons of different varieties of fertiliser mixtures against specific orders. The Directors intend to develop this field of activity, by offering balanced fertilisers for different food and cash crops, with suitable technical advice on their use. They are of the opinion that this line of business offers scope for expanding the Company's activity on firm foundations, as it will enable the agriculturists to use fertilisers on a scientific basis and with a full knowledge of its value. The Company justly feels proud that it is the only manufacturer in India for ammonium chloride which is used largely in the manufacture of dry cells and also in the galvanising industry. The world-famous Imperial Chemical Industries (Indian) Ltd. has been appointed as the selling agents for the Company's products. The Travancore-Cochin Chemicals (Private) Ltd., in which this Company holds shares to the tune of Rs. 25 lakhs, also recorded satisfactory progress and declared a dividend of 5 per cent. This Company is now producing to rated capacity and its profits are likely to increase in future years.

The F.A.C.T. has a scheme for expanding its activities. Commenting on this scheme, the Directors say:

"The scheme for expansion of our ammonia plant for doubling existing capacity and for the utilisation of the additional ammonia for producing increased quantities of ammonium sulphate and another new product, namely, ammonium phosphate, has already been sanctioned by the Government of India. Out of the total estimated expenditure of Rs. 256 lakhs, the Government of India has arranged through the Industrial Finance Corporation of India to advance us a loan of Rs. 206 lakhs. The Directors are confident of making up the balance from the Company's own resources. Global tenders have been called for the supply of plant and machinery. As on date, we have placed orders for four items of plant, totalling in value about Rs. 42 lakhs. Orders for the rest of the items will also be placed shortly. From the deliveries promised by the various suppliers, we feel confident of bringing the schemes of expansion into fruition by the middle of 1958."

Financial Position

The Company is engaged in the manufacture of basic chemicals, as opposed to consumer goods industry. This is an industry the establishment of which is a very difficult task for an underdeveloped country like India. It will take several years for an industry of this type to be firmly and soundly established. A company engaged in such an industry is, therefore, bound to go through several years of adverse financial results before beginning to make both ends meet, pay dividends and build up reserves. It is against this background that one should view the balance-sheet of the F.A.C.T. as at the end of 31st December 1955. It faithfully reflects the hard days experienced by the Company in its initial years. The Company has a paid-up capital of about Rs. 345.98 lakhs, all in ordinary shares of Rs. 10 each. It has no reserves at all, barring a small sum of Rs. 35,566 representing forfeited shares and plant maintenance reserve. Its liabilities aggregate Rs. 99.39 lakhs. There is a net accumulated loss of Rs. 30.69 lakhs yet to be wiped out. Its block account has been written down from Rs. 422.53 lakhs to Rs. 229.81 lakhs. There is yet an expenditure of Rs. 92,775 by way of commission on shares to be wiped out, while development expenses remaining to be capitalised is Rs. 30,226. Current assets aggregate Rs. 183.99 lakhs of which Rs. 25 lakhs are in shares of Travancore Chemicals and Rs. 13.29 lakhs in cash. In short, the picture presented by the balance sheet is that of a company still in its early stages of growth.

From the foregoing account, the reader, however, should not jump to the conclusion that the Company's financial position is unsound. It is engaged in an industry which holds forth promises of getting increased attention both from the Government as well as the people in the years to come. With the implementation of the expansion schemes that the Directors have in mind, the Company is sure to make commendable progress in the years ahead and show better financial results. That several investors share this view is borne out by the fact that, in recent weeks, the value of the Company's shares, which are regularly quoted on the Madras Stock Exchange, has tended to attain a considerable degree of stability in the neighbourhood of Rs. 7-4, as against Rs. 6-8 a year ago.

SEN-RALEIGH FARES BETTER

The working results of Sen-Raleigh Industries of India Ltd., for the year ended 30th September 1955, as disclosed by its report and accounts for that year, make encouraging reading. They show that the Company must have made remarkable progress during the year. Sales were higher and so also profit. The financial results were so handsome that it was possible for the Company to pay a modest maiden dividend of 6 per cent. on ordinary shares, as also to commence building up reserves.

Owing to a change in the format of the profit and loss account—the one in the report under review is more informative than its predecessor—it is not possible to make our customary comparative study of the results. But, from such information as is available, it is clear that the Company's performance in 1954-55 was excellent. The net profit has gone up by Rs. 6.52 lakhs to Rs. 11.07 lakhs, as compared with 1953-54. It is noteworthy that this striking increase has been achieved after setting aside a considerably larger sum—Rs. 5.68 lakhs, as against Rs. 3.76 lakhs in 1953-54—for depreciation.

After writing off all previous losses amounting to Rs. 6.03 lakhs and maintaining the preference dividends at 5 per cent., a maiden dividend of 6 per cent., free of tax, on the ordinary shares has been declared. This absorbs Rs. 3.18 lakhs. A general reserve with an initial appropriation of Rs. 50,000 has been created, leaving a balance of Rs. 20,690 to be carried forward to the next year. As the profits of the Company are still not taxable, no provision has been made for taxation.

Sales during 1954-55 increased by Rs. 24.75 lakhs, that is from Rs. 88.20 lakhs to Rs. 112.95 lakhs. The Company is very optimistic about the future for the cycle industry in India, in general, and about its own part and performance, in particular. This has been quite confidently expressed by the Chairman, Mr. Sudhir Kumar Sen, in his address to the shareholders at their sixth ordinary general meeting held in Calcutta on 28th August 1956, thus:

"A welcome feature of the bicycle trade in 1955 appeared to be the acceptance by the Indian market of Indian bicycles as a mainstay of the trade. This reorientation of thought amongst the Indian traders was a necessary corollary for further expansion and consolidation of the Indian bicycle industry.

"Your Company closed the year with record orders on its books for both bicycles and components. All products recorded increased sales, and orders, as usual, were in excess of production capacity in all lines, except in the case of bicycle chains. It is admitted that our chains stand supreme for quality, endurance and value."

The Company has an ambitious scheme of expansion during the second Five-year Plan to cope with the rapidly growing increase in the demand for this vital and cheap form of transport which has been rightly described as a poor man's vehicle. Referring to this aspect, the Chairman observes:

"Your Company expects to play a prominent part in the fulfilment of the second Plan as it has done in the first. To this end, applications have been made some time back to the Government of India for increases in capacity to be allowed to your Company to raise production in the bicycle wing to 200,000 bicycles, and the component wing to half a million sets of components. Plans for such expansion are already under active preparation at associate factories in the U.K. and the Continent at the instance of your Directors."

As for the funds required to finance the expansion, the Chairman revealed that a part would be met by borrowing Rs. 15 lakhs from the Industrial Finance Corporation and the balance by issuing the remaining part of the unissued capital.

The paid-up capital of the Company as on 30th September last, stands at Rs. 79.27 lakhs, the issued capital being Rs. 100 lakhs. There is a nucleus of reserves at Rs. 70,690. Fixed assets of the gross value of Rs. 121.59 lakhs have been reduced to Rs. 100.71 lakhs by providing a depreciation of Rs. 20.88 lakhs. Assets in course of erection stand at Rs. 4.44 lakhs. Current assets, excluding investments at Rs. 13.87 lakhs, amount to Rs. 81.05 lakhs. The Company has supplemented its capital by secured loans of the order of Rs. 70.26 lakhs, of which Rs. 38 lakhs are loans from the I.F.C., the balance being from a commercial bank. Its current liabilities aggregate Rs. 50.16 lakhs.

A notable event benefiting the shareholders is that the shares of their company are at present listed on the Bombay Stock Exchange. The Rs. 10 paid-up ordinary shares are currently quoting in the neighbourhood of Rs. 15, at which rate, and on the basis of a dividend of 6 per cent., the yield on them works out to 4 per cent. per annum. This low yield on scrip belonging to a new industry reflects the investors' confidence in the outlook for the Company and their hopes of higher dividend in the years to come.

COMPANY LAW AT WORK IN 1955-56

The year ended 31st March 1956 is a significant one in the history of Indian Company Law for more than one reason. It represents the final year of the first Five-year Plan and the final one in which the old Companies Act of 1913 was at work. The statistics relating to joint-stock companies for the year should, therefore, serve as a useful indicator of the progress of private enterprise during this year as well as in the first Five-year Plan period. During the year under review, as many as 1,448 new companies were formed, but with a total paid-up capital of only Rs. 3.14 crores. The number of companies formed compares favourably with 1,203 in 1954-55, 1,193 in 1953-54 and 1,333 in 1952-53. The new registrations formed in 1955-56 are the largest on record since 1951-52 during which year 1,866 new companies were floated.

The paid-up capital of the newly registered companies during 1955-56 is, however, very small at Rs. 3.14 crores and is less than a third of that of those which went into liquidation. It may be noted here that as many as 846 companies with a paid-up capital of Rs. 10.69 crores went into liquidation during the year. The existing companies (excluding the new incorporations) reported an increase of Rs. 43.72 crores in their capital. It is not clear as to how much of this increase is due to issue of bonus shares by capitalisation of reserves and how much issue of new capital by way of preference and ordinary shares.

The total number of joint-stock companies at work at the end of the fiscal year 1955-56 was 30,381, with a paid-up capital of Rs. 1,019 crores. This number is, however, likely to be still less, as some of the companies that have gone into liquidation have not been reported by the Registrars in the subsequent months. The total paid-up capital of companies at work, namely, Rs. 1,019 crores, may also show a change as a result of late reports in respect of liquidation cases and change in capital position of companies.

During the first Five-year Plan period, there has been a net increase of over 1,800 companies in the total number of companies at work and of Rs. 244 crores in their paid-up capital.

The total number of newly registered private companies is several times larger than that of public companies registered during the year. Thus, as against 186 public companies, as many 1,262 private ones were registered during 1955-56, the corresponding figures for the previous year being 219 and 984, respectively. This shows that the proportion of public companies in the private sector to the total is tending to go down.

Of the new registrations during 1955-56, those in the combined "processing and manufacturing" divisions accounted for 536 and those in the "commerce" (trade and finance) division for 528, with a total authorised capital of Rs. 109.17 crores and Rs. 29.06 crores, respectively. These groups together accounted for 73 per cent. of the total number and 88 per cent. of the total authorised capital of all the new incorporations. State-wise distribution of these registrations was as follows:

West Bengal 533	Bombay 252
Madras 192	Delhi 139
Travancore-Cochin 61	U.P. 40
Madhya Pradesh 39	Punjab 30

It will be noted that the first four States themselves account for about 77 per cent. of the newly registered companies. Of the new companies registered in 1955-56, 25 companies, all private, were managing agency ones, two of these with an authorised capital of Rs. 25 lakhs each, and one with an authorised capital of Rs. 15 lakhs. The authorised capitals of 19 of them range between Rs. 1 lakh and Rs. 5 lakhs; the remaining three have an authorised capital of less than Rs. 1 lakh. It is noteworthy that, of the 1,448 newly registered companies, only 31 were promoted by managing agents. The distribution of the companies registered in 1955-56 according to the size of their capital is as follows:

Authorised capital	*No. of companies*
Rs. 1 crore and above	16
Rs. 50 lakhs-Rs. 1 crore	12
Rs. 25 lakhs-Rs. 50 lakhs	28
Rs. 10 lakhs-Rs. 25 lakhs	76
Rs. 5 lakhs-Rs. 10 lakhs	69
Rs. 1 lakh-Rs. 5 lakhs	558
Up to Rs. 1 lakh	689
Total ...	1,448

It has been observed that the new companies tend to concentrate in two size strata particularly, that is, Rs. 50,000-Rs. 1 lakh and Rs. 4 lakhs-Rs. 5 lakhs, the number of companies in the two size groups being 386 and 376, respectively.

The number of giant floatations with an authorised capital of Rs. 1 crore and above for the year was only 26, as against 42 in the preceding year. The more notable among them were: Nangal Fertilisers and Chemicals (with an authorised capital of Rs. 30 crores), Indian Viscose Corporation (with an authorised capital of Rs. 10 crores), Hindustan Vehicles, Dalmia Iron and Steel, Sahaya Properties and Investment, Atic Industries and Sahu Glass Companies (all with an authorised capital of Rs. 5 crores each).

Of the 846 companies which ceased to work during 1955-56, 555 were private and 291 public companies, their total paid-up capital being Rs. 4.11 crores and Rs. 6.58 crores, respectively. The largest number of liquidations during the year was recorded in the industrial group "commerce (trade and finance)", the exact number being 384 companies, with a paid-up capital of Rs. 2.70 crores. Liquidations in the combined industrial groups, "processing and manufacturing" amounted to 266 with a total paid-up capital of Rs. 3.45 crores. In terms of number, these two groups accounted for 77 per cent. and in terms of the paid-up capital 58 per cent. of the total. The largest number of liquidations reported was in Bombay with 154, followed by Delhi with 131. In U.P., 99 companies ceased to work during the year, in West Bengal 71 and in the Punjab 69.

LOANS TO DIRECTORS

The Ministry of Finance (Department of Company Law Administration) has been receiving applications from companies seeking approval of the Government under sections 295 and 372-373 of the Companies Act, 1956, respectively, to their granting loans to their Directors etc. and to their investments in other companies belonging to the same group. The applications do not always contain all the information required by Government and consequently their disposal is often delayed. The Companies are accordingly advised, in their own interest, to ensure that their applications are accompanied by as full information as possible, on the lines broadly indicated below.

In respect of a loan which attracts the disabilities specified in sub-section (1) of section 295 of the Act, the lending company should furnish full details as to the purpose for which the loan was or is to be granted, the terms of the loan, including agreements relating thereto, if any specifying the rate of interest chargeable on the loan, the period within which it is to be recovered and the security on the basis of which the loan was granted, the balance-sheets and profit and loss accounts of the lending and the borrowing companies for the latest three financial years together with the Memoranda and the Articles of Association of the Companies, and any other information having a bearing on the loan transaction. The applicant company should also indicate whether the transaction attracts the provisions of section 370 of the Act, and if it does, a certified copy of the special resolution of the lending company authorising the grant of the loan should invariably accompany the application. A statement to the effect that all the remaining requirements of the Act in so far as they have a bearing on the loan transaction have been complied with, should also be furnished.

Applications for fresh investments under section 372 or for the continuance of investments under section 373 of the Act should furnish information regarding the subscribed capital of the investing company and the subscribed capital of the company in shares of which the investments have been, or are to be, made. The nominal value of all investments made in the other companies and in the companies belonging to the same group should also be clearly stated. In the case of appli-

(Continued on page 478)

Points From The Chair

Export of Soaps to Foreign Countries

"IT is a matter of pride to the Company that, as a result of recent visit paid by senior sales executives both to the Middle East and the Far East countries, our products are slowly finding their way to far flung places extending from the Fiji Islands to Accra in the Gold Coast and Lagos in Nigeria. I may add that, while the volume of foreign business is still quite small, the prospects for marketing Indian toilet soap and hydrogenated oils in foreign markets are promising and rapid progress can be made, if consumer goods like soap, perfumery products and vanaspati are included in several trade agreements which the Government of India annually enter into with the governments of various foreign countries. One of the most important events of the past year for the Company was the acquisition of a soap factory at Calcutta. This unit, which is expected to go into production shortly, will provide a valuable addition to our productive capacity at a time when we may confidently expect the demand for soap in the country to rise from year to year. Apart from the opportunity to increase production, the possibility of making despatches to markets in West Bengal, Assam and Bihar from a factory located in Calcutta will result in substantial economies in freight charges and will help in promoting further sales through speedier deliveries."

J. R. D. TATA,
Tata Oil Mills Co., Ltd.

Private Sector's Performance

"We are told that, in India, capitalism has failed to deliver the goods, that it has shown no initiative and that it cannot, in an economically backward country like ours, produce the dynamic results obtained in the highly developed economies of the West. So, it is argued, it must be replaced by socialism which, alone, can produce results. This view seems to overlook a number of facts such as that the Private Sector has fulfilled and in some cases exceeded its production quotas under the first Five-year Plan; that private enterprise in India has not up to now had the freedom of action and the incentives it enjoys in the countries where it has proved so strikingly successful; and that there is enough evidence available that the introduction of socialism of the kind, and by the means, contemplated in India has not proved an unqualified success in other countries. Still, even if we accept the premise that the magnitude and urgency of the task in India render its performance beyond the capacity of free enterprise alone, the correct solution, which until not so long ago seemed to have been accepted by Government, lies in a mixed economy in which both free enterprise and State Enterprise are harnessed to the country's needs."

J. R. D. TATA,
Tata Iron and Steel Co., Ltd.

Cycle Consumption Rising

"The demand for bicycle in this country has grown continuously over the past few years, and the year 1955 was not only a record production year for your Company but also for the Indian industry. With a production of about 550,000 cycles, and an import of 150,000 bicycles, the consumption of bicycles this year constitutes an all-India record. All indications are that India will take its place amongst the premier bicycle manufacturing and consuming countries in the World, and I am glad to say that bicycles have been given reasonable prominence in the second Five-year Plan by the Indian Government. The Development Council for Bicycles, a body formed some years ago by the Government of India, representing industry, trade and consumers to advise on the Indian bicycle industry to the Commerce and Industries Ministry, had been asked to submit to the Indian Government its views on what targets should be framed for the bicycle industry in the second Five-year Plan, and a target of 1.25 million bicycles to be made in India by 1961 was advocated by the Council and accepted by the Planning Commission. Your Company expects to play a prominent part in the fulfilment of the Second Plan as it has done in the First. To this end, applications have been made some time back to the Government of India for increases in capacity to be allowed to your Company to raise production in the bicycle wing to 200,000 bicycles, and the component wing to half a million sets of components. Plans for such expansion are already under active preparation at associate factories in the U.K. and the continent at the instance of your Directors."

S. K. SEN,
Sen-Raleigh Industries of India Ltd.

Plea for Revision of Cement Price

"Representations have already been made to the Government for a suitable revision of the retention price for cement ex-factory, as determined on the basis of the Tariff Commission in 1954, in view of the substantial increase in the items of costs, particularly for coal, wages and railway freight as also the threatened increase in the price of gypsum since the examination of the costing by the Commission two years ago. Should our representations succeed, and there is no reason why they should not be found reasonable, the future of cement industry generally and of your Company in particular will be doubly assured."

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Interim dividend of Rs. 10 per ordinary share, for the year ending 31st December 1956.

KAILAS RUBBER CO., LTD. Dividend of As. 9-3/5 (30 per cent.) per ordinary share, for the year ended 28th February 1956. Transfer books will remain closed from 18th to 29th September 1956, both days inclusive.

UNITED NILGIRI TEA ESTATES CO., LTD. Final dividend of 10 per cent. on the increased capital (making a total of 26 per cent. on the old capital for the year) for the year ended 31st March 1956. Transfer books will remain closed from 17th September to 9th October 1956, both days inclusive.

BANARHAT TEA CO., LTD. Dividend of Rs. 25 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 13th to 28th September 1956, both days inclusive.

BISRA STONE LIME CO., LTD. Dividend of As. 14 per share for the half-year ended 30th September 1955.

ORISSA MINERALS DEVELOPMENT CO., LTD. Dividend of Re. 1 per share, for the half-year ended 31st December 1955.

NATIONAL CO., LTD. Dividend of As. 6 per ordinary share, for the half-year ended 30th April 1956.

PROFIT OF FORT WILLIAM JUTE LOWER

MYSORE CHEMICALS MAINTAIN DIVIDEND

Fort William Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

The net result after providing for the sum of Rs. 1,60,143 (Rs. 2,26,470) for depreciation reveals a profit of Rs. 4,35,579 (Rs. 6.14.178) and adding to it the previous balance of Rs. 1,16,743 (Rs. 71,285) there remains a credit of Rs. 5,52,322 (Rs. 6,85,463).

The directors recommend disbursement of this sum as detailed hereunder:—

Transfer to general reserve account Rs. 2,25,000 (Rs. 4,00,000), dividend on 10,000 7 per cent. cumulative preference shares for the half-year ended 31st March 1956. at Rs. 3-8 (Rs. 3-8) per share Rs. 35,000 (Rs. 35,000), dividend on 2,10,000 (14,000), ordinary shares of Rs. 10 (Rs. 100) each for the half-year ended 31st March 1956, at As. 12 (Rs. 10) per share Rs. 1,57,500 (Rs. 1,45,000) and carrying forward Rs. 1,34,822 (Rs. 1,10,463).

Jute stocks are shown at cost. Sold stock of goods have been calculated at contract price and the remaining have been valued at market rates.

In accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed upto the close of December 1955, and thereafter 2½ per cent. of the looms were unsealed on 9th January 1956, and another 5 per cent. were allowed to be unsealed on 20th February 1956, leaving thereby 5 per cent. of the total looms sealed. Again, due to the heavy accumulation of manufactured goods 2½ per cent. of the looms were re-sealed with effect from 16th July 1956.

Due to the damage of crops on account of heavy rains and also due to an increase in the demand of raw jute following the unsealing of looms, the prices of raw material remained at a proportionately higher level. It was therefore not possible to transact business to secure simultaneously a fair margin of profit in finished goods. The unsealing of looms also caused overseas buyers of manufactured goods to reduce their purchases as they expected a fall in prices due to increase in production. The Award given by the Third Labour Tribunal also affected the position of the Industry adversely.

Accounts in brief were as under:—

Mysore Chemicals and Fertilisers, Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. K. Narayanaswamy, Bangalore) submit the audited accounts of the Company for the year ended 31st March 1956.

The directors regret to state that due to the fusing out of the heater assembly in the Ammonia Plant, there was a shut-down for a continuous period of about 2½ months between May and July 1955. This handicap was keenly felt as the production of ammonia and consequently ammonium sulphate suffered a fall in production. The other units at the Factory worked satisfactorily during the year.

The products of the Company had to face keen competition in the market and it was found necessary to make a reduction in selling prices in line with the market rates. But for this, the results of the working of the Company would have been far more satisfactory. Nevertheless, the loss in production was made up, as far as possible, to meet the continued demand for the Company's products especially ammonia and superphosphate. The stock position in respect of essential raw materials and important spare parts continued to be satisfactory.

The erection of the new motor generator set has been completed and trial runs will commence shortly. Erection of the new cell plant has also progressed satisfactorily.

The financial result of the Company for the year ended 31st March, 1956 has resulted in a net profit of Rs. 1.15.666 (Rs. 1,36,639), after making provision for depreciation and for payment of income and super-tax amounting to Rs. 1,81.814 (Rs. 2,38,270). It is considered that the provision for income-tax and super-tax now made in the accounts will be sufficient to meet the liability. Along with a sum of Rs. 13.880 (Rs. 1,302) brought forward from the accounts of the previous year, the total sum available for distribution is Rs. 1.29,546 (Rs. 1,37,941). Of this the directors recommend the following appropriation:—

To declare a dividend of 5 (5) per cent. free of income-tax for the year ended 31st March, 1956 absorbing Rs. 1.24,061 (Rs. 1,24,061) and to carry forward a sum of Rs. 5,485 (Rs. 13,880).

Accounts in brief are as under:—

Madras Safe Deposit Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kothari & Sons, Madras) submit the audited accounts of the Company for the year ended 30th June 1956.

The result of the Company's working for the year ended 30th June 1956 is a profit of Rs. 26.369 (Rs. 9,355) after adding the amount brought forward from last year of Rs. 572 (Rs. 1,704) there is a total sum of Rs. 26,941 (Rs. 11.059). The directors have made the following appropriations:—

To provision made for depreciation Rs. 5,358 (nil), to provision for taxes Rs. 8.737 (Rs. 2.000) and to deferred revenue expenditure written off Rs. 3,987 (preliminary expenses written of Rs. 2,061) there is an available balance of Rs. 8.859 (Rs. 6,998) the directors recommend the payment of a dividend of Rs. 3-4 (Rs. 3-4) per share (4-1/16) per cent. on the paid-up capital of the Company, absorbing Rs. 6.426 (Rs. 6,426) leaving a balance of Rs. 2,433 (Rs. 572) to be carried forward to next year.

Rs.	2,33,303	Rs.	2,33,303

Pussimbing Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Private, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

General:—Severe hail early in April, 1955, destroyed a substantial part of the early, quality teas and loss of crop was assessed at 28,880 pounds, the total crop for the year being 1,27,541 (1,58,740) pounds.

The total net average sale price, including value of export rights sold, was As. 42.51 (As. 58.67) and the total working cost per pound of tea produced was As. 47.28 (As. 35.98).

Working costs were enhanced by the short crop made and by the increase of 1½ annas in the daily wages of labourers agreed to by the Industry from the 1st April and the further increase of 2 annas per day imposed by Government Notification from the 1st July. These increases cost some 2.6 annas per pound of tea produced during the year and will cost some 3.4 annas per pound in a full year. In addition early in 1956, in consultation with Government and the Labour Unions, the Industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954, in respect of which the directors have provided Rs. 21,382 in the accounts under review, equal to 2.68 annas per pound of tea.

The gross profit for the year is Rs. 21,490 (Rs. 2,16,234) and after reserving for staff expenses, income-tax adjustments and depreciation of assets, and allowing for the bonus to labour referred to above and the other adjustments shown, there is a net loss of Rs. 17.201 (net profit of Rs. 1,42,391 after provision for taxation, reserves, etc.) and a final credit balance on this account of Rs. 14,068 (Rs. 1,09,169 from which the directors paid preference dividends up to 1954 and a dividend of 10 per cent. on ordinary shares, leaving a carry forward of Rs. 31,269) which the directors propose to carry forward to 1956.

Estimates for 1956 have been based on a crop of 2,000 maunds at a total revenue cost of Rs. 4,05,339, equal to 40.53 annas per pound inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound. Since these estimates were prepared the estate has again suffered heavy hail damage amounting to 26,038 pounds of tea and a large proportion of the second flush teas has again been destroyed. Production costs have now reached such a high level that the Company can hope to pave its way only if the estate can produce a reasonable crop of teas of a high quality.

Accounts in brief are as under:—

Jaybirpara (Dooars) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 3,50,000 out of the amount standing to the credit of general reserve, referred to in the directors' last report, was granted in September 1955, and the issued and subscribed capital of the Company has been increased by the addition of 35,000 new shares of Rs. 10 each, issued as fully paid up to shareholders at the rate of one new share for every share held by them on 16th November 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act. 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 accounts.

After providing Rs. 36.892 (Rs. 38,943) for depreciation. Rs. 99,604 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a loss of Rs. 2,13,207 (profit of Rs. 7,17,491). After bringing in the balance of Rs. 1.02,323 (Rs. 42,331) from last year, there remains a balance of Rs. 1,10.884 (credit of Rs. 1.02,323 after paying dividend at Rs. 6-8 per share absorbing Rs. 2,27,500) at the debit of profit and loss account. The directors recommend that no dividend be declared and that the debit balance in the profit and loss account be carried forward.

In February, 1955, after agreement between labour and employer's representatives on the West Bengal Minimum Wages Advisory Committee for tea garden labour in the Dooars and Terai, labour and staff wages were increased with retrospective effect to 1st January 1953.

The planted area suffered from serious flooding a few years ago. the full effects of which have only recently been felt. Steps have been taken to counteract the damage caused and it is hoped that this action will result in better crops. In addition, essential flood protection work has been undertaken.

A crop of 5,780 maunds was secured and sold at an average price of Re. 1-12-6 per lb. This compares with a crop of 6,080 maunds manufactured in 1954, which sold at an average price of Rs. 3-6-3 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1955 crop in comparison with the prices realised the previous season.

Estimates for the current season have been framed for a crop of 7,000 maunds to cost Rs. 9,31,726. Crop to the 14th of July, 1956, amounted to 2,332 maunds compared with 1,383 maunds secured to the same date last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act. 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 accounts.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year. Provision has also been made in these accounts for the estimated amount of labour bonus due to be paid in respect of the year ended 31st December, 1955.

After providing Rs. 9.816 (Rs. 11,390) for depreciation, Rs. 26,193 for the 1953 and 1954 labour bonus, and making sundry adjustments, the year's results show a profit of Rs. 65,269 (Rs. 2.10.365). After bringing in the balance of Rs. 38,037 (Rs. 17.272) from last year, providing Rs. 17.000 (Rs. 66 000) for taxation and transferring Rs. 40,000 (Rs. 60,000) to general reserve, there remains a balance of Rs. 46,306 (Rs. 1.01,637) at the credit of profit and loss account. From this the directors recommend the payment of a dividend of Rs. 15 (Rs. 40) per share, absorbing Rs. 23,850 (Rs. 63,600) and leaving a balance of Rs. 22.456 (Rs. 38,037) to be carried forward.

The dividend equalisation and hail insurance reserves have been transferred to general reserve.

During the year labour wages were twice increased with retrospective effect, and this is reflected in the accounts.

A crop of 2,068 maunds was secured, which has been sold at an average price of Rs. 3-2-6 per lb. This compares with a crop of 2.276 maunds manufactured in season 1954, which sold at an average price of Rs. 3-14-4 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1955 crop, in comparison with the prices realised the previous season.

Estimates for the current season have been framed for a crop of 2,300 maunds to cost Rs. 4,53.725 and, provided normal weather conditions prevail, it is hoped that this crop will be secured. Crop to the 14th July, 1956, amounted to 1,299 maunds compared with 1,262 maunds to the same date the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,59 000	Block ...	2.06.770
Reserves ...	3,50,239	Stock-in-trade	1,86,615

		Cash ...	1.17,435
Rs.	6.96,232	Rs.	6.96,232

Mysore Lamp Works Ltd.

The Controller of the above Company (Mr. J. L. D'Sa, Bangalore) submit the audited accounts of the Company for the year ended 31st March 1956.

The accounts show a net profit of Rs. 53,420 after providing for depreciation, income and super-taxes. This with the carry over of Rs. 1,082 from previous year and an appropriation of Rs. 15,000 from the dividend equalisation fund, will amount to a sum of Rs. 69,502 available for distribution, and this will be disposed of as under:—

To payment of dividend on preference shares at 4 per cent. per annum for the year ended 31st March 1956, free of income-tax Rs. 10,000, to payment of dividend on ordinary shares at 9 (7½) per cent. for the year ended 31st March 1956 Rs. 59,063 and to carry forward to next year Rs. 440.

During the year under report the production was a little lower than last year, as there was some delay in getting some raw materials due to transport and wagon difficulties from Calcutta, especially during the last three months. The sales were much more than the production. There was reduction of stocks on hand. The result of working during the year has been satisfactory.

Adequate stocks of raw materials have been built up importing them well in advance for maintaining the future production programme.

The Controller informs that the Government of Mysore have been pleased to order to re-vest the management of the Company with the Board of Directors.

Good progress made by the Company in all directions after it was vested with the Controller appointed by the State Government. When the management of the Company re-vests with the Board of Directors, it will certainly be in a very sound position.

The railway carriage lamps and general service lamps have passed the tests at Government test house, Alipore, and the Company is now on the Government of India Rate Contract and supplying lamps to several State and Government departments.

The Company has also taken up manufacture of high wattage lamps upto 1,500 watt and also coiled coil lamps which have been well received by the market. The Company proposes to take up the manufacture of fluorescent lamps as a measure of expansion. Necessary steps to implement the expansion is being taken.

The advisory board has recommended the utilisation of the "Premium on Shares" for issue of bonus shares in the proportion of one share for every three ordinary shares. This matter has also been taken up with the concerned Governments for sanction.

Accounts in brief are as under:—

QUESTION HOUR IN PARLIAMENT

Uranium

URANIUM has been found as a minor constituent of the mineral monazite in the river bed sands of the Arra river in Bundu area in Ranchi district.

* * * *

Swimming Pool Reactor

The cost of the swimming pool reactor which recently went into operation in Bombay is estimated at Rs. 26 lakhs. The cost does not include the cost of fuel elements which have been obtained on hire from the U.K. Atomic Energy Commission.

—*Jawaharlal Nehru*

Sterling Balances

The Government of India has been informed officially by the U.K. Government of the restrictions placed by them on Egyptian holdings of sterling. Britain's blocking of these sterling balances should have no direct effect on Indo-Egyptian trade, but, if *any difficulties* arise, the Government will take such steps as it considers necessary to maintain the flow of trade between the two countries. Under the arrangement arrived at to implement the trade agreement between India and Egypt, all payments in respect of exports from Egypt to India are to be made in Indian rupees. Forty per cent. of such rupees have to be spent on purchases in India, while the remaining 60 per cent. may, if Egypt so desires, be converted into sterling. As the entire trade between Egypt and India is thus financed in rupee, the restrictions placed by the U.K. Government on Egypt's holdings of sterling should have no direct effect on Indo-Egyptian trade.

—B. R. Bhagat

Smuggling from Goa

Smuggling of goods from Goa into India and *vice versa* has considerably decreased after the sealing of the Indo-Goa border by the Government of India. Up to 30th June, 1,680 persons were detected while smuggling. They were departmentally dealt with and no prosecution was launched. The goods smuggled generally from India to Goa are tea, tobacco and spices, while those smuggled into India are liquor, gold and luxury articles.

Coffee Growing

By the end of the year, two Government of India experts who have been deputed to investigate the possibilities of growing coffee in the Andamans and Nicobar Islands will finish their labours.

* * * *

Rubber Production

The second Five-year Plan envisages an extensive programme of improving and extending natural rubber production. But it is very difficult to produce natural rubber in large quantities needed for the country's requirements during such a short period. Hence the importance of synthetic rubber. The country's requirements of rubber in 1960 are expected to rise to between 30,000 to 35,000 tons of natural rubber and some 20,000 tons of synthetic rubber.

* * * *

Synthetic Rubber Plant

A proposal to set up a synthetic rubber factory in India is at present being seriously considered by the Government. A team of foreign experts is at present in the country for preparing a project report. While synthetic rubber cannot be made from sugar molasses, power alcohol produced from the molasses can be one of the alternative raw materials for the manufacture of butadiene, which, on copolymerization with styrene, would yield synthetic rubber. The question of manufacture of synthetic rubber, based on possible resources in India for butadiene and styrene, is under examination. A general survey of production capacity of power alcohol in the country has revealed that Uttar Pradesh produces about 80 per cent. of the total of 17 million galions. The establishment of the proposed plant may cost about Rs. 12.5 crores. Synthetic rubber so produced, it is estimated, will cost three annas per lb. less than natural rubber.

—*M. M. Shah*

Cycle Tyre Prices

In the next few weeks, the prices of cycle tyres in the country will begin to come down. A foreign firm has been given a licence to import cycle tyres, because the tyres to be imported by this firm are the cheapest available in such quantities. The imports have been arranged to bring down the prices of tyres in the country.

—*Nityanand Kanungo*

Manufacture of Marine Engines

A scheme for setting up a factory for the manufacture of engines for ships during the second Plan period is now being considered by the Government. In addition to marine engines, the factory will also manufacture certain types of diesel engines.

* * * *

Fertiliser Factory in Bombay

The feasibility of setting up a fertiliser factory in Bombay as a State project is under the Government's examination.

—*K. C. Reddy*

Labour and Railway Administration

The railways are now considering the question of associating labour with management through the formation of management councils. The Planning Commission has recommended widening the scope of the association of employees with the management by providing for their participation in the management through management councils. Questions as to the precise scope and manner of such participation are now being considered.

* * * *

Payment of Wages

Whenever possible, the Government is trying to adopt the piece-rate system in regard to payments of wages. This system has been introduced in the Bombay Port. Experience shows that workers get more under this system and, in certain cases, they got more than twice the wages they were getting previously. The adoption of the principle of wages according to work is not restricted to any particular industry. It is possible to work a piece-rate system, while, in certain others, wage payments have to be made on time-rate basis. The principle of piece-rates has been adopted in varying degrees in a number of industries like cotton textiles, potteries, printing presses, paper and sugar.

Second Shipping Corporation

The second shipping corporation, known as the Western Shipping Corporation (Private) Ltd., which was registered in Bombay on 22nd June, is expected to acquire some 12 vessels during the second P'an period for running regular shipping services in the India-Persian Gulf, India-Red Sea and India-Poland routes. The authorised capital of the Corporation is Rs. 10 crores, but the paid-up capital will be Rs. 3.5 crores for the time being. The Government will undertake to bear the losses of the new Corporation for the first five years, as it does in the case of the Eastern Shipping Corporation. Each ship to be acquired by the Corporation will cost about Rs. 1 crore and the tonnage will be from 8.000 to 10,000.

* * * *

Import of Rail Cars

The Railway Ministry has placed orders for the import of 24 rail cars from Australia against 1956-57 rolling stock programme under the Colombo Plan. No orders for the import of such cars were placed either in 1954-55 or 1955-56. We are importing these cars because we had no arrangement to manufacture them in India, although we would very much like to manufacture them here. These cars introduced as an experimental measure are intended to reduce overcrowding in trains.

* * * *

Indian Shipping

India at present carries only five to six per cent. of its overseas trade in its own ships and the aim is to increase this to 10 or 12 per cent. by the end of the second Plan period. The ultimate aim is that the country should carry 50 per cent. of its overseas trade in its own vessels. The figure may be approximately correct. Coastal shipping companies are given permission to charter vessels under certain conditions when the need arises. The total quantity of steel, cement, machinery and foodgrains to be imported into India by ships in the next two or three years is not expected to exceed 4 million tons a year. All the available Indian ships are expected to find full employment during the second Plan period.

* * * *

Incentive Bonus for Railway Staff

The Government is considering the suggestion of the Estimates Committee that the system of incentives and bonuses prevalent in the Russian railways should be introduced in the Indian railways. The incentive bonus scheme in the Chittaranjan Locomotive Factory is working satisfactorily. The Railway Ministry wants to extend the scheme to other railway workshops and a special officer is going into this question. There is no intention to apply the scheme to the running staff of the railways.

—*O. V. Alagesan*

Sulphur Extraction

The Government is encouraging and will continue to encourage the private sector to extract sulphur from pyrites. There are no sulphur deposits in Shahabad district in Bihar. However, there are deposits of iron pyrites in this district in which sulphur combines with iron existed. The areas in this district in which such deposits exist are mostly held by private lessees.

—*K. D. Malaviya*

Linking up of India's River Systems

The Central Water and Power Commission is studying the possible linking of Indian river systems for development of waterways. Proposals for the linking of some of the east-flowing and west-flowing rivers have been studied and an estimate has been prepared for preliminary investigations of these schemes. The investigations will take about three years.

Notices

THE JAY SHREE TEA GARDENS LIMITED

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

CIRCULAR TO SHAREHOLDERS

Re: Issue of 29,285 Redeemable Cumulative Preference Shares of Rs. 100 each.

Dear Sir (s)/Madam,

THE DIRECTORS OF YOUR COMPANY have decided to issue 29,285 Preference Shares of Rs. 100 each forming a part of the unissued capital of the Company on the following terms and conditions.

1. That the Preference Shares shall be issued at par.
2. That the Preference Shares shall carry a fixed Cumulative Preferential Dividend at 6 per cent. per annum free of Income-tax payable on the capital for the time being paid up thereon and shall rank for dividend and return of capital in priority to the Ordinary Shares.
3. That the Preference Shares shall be redeemable at par definitely on the 31st December 1968.

The Shareholders of the Company whose names shall appear on the Share Register on the 1st October 1956 will be entitled to one such Preference Share for every 20 Ordinary Shares held by them ignoring the fractions if any. The Shareholders may also apply for additional Shares which will be allotted if available at the discretion of the Directors.

The amount payable on Application has been fixed at Rs. 25 per share which must be paid with the Application. Another sum of Rs. 25 shall be payable on allotment. The balance amount of Rs. 50 shall be payable only after 30th June 1957 for which a prior notice of one month will be given by the Company.

As the Shareholders of ..... Ordinary Shares in the Company you are entitled to the claim an allotment of ..... Preference Shares of Rs. 100 each and your claim must be made to the Company by the 15th November 1956.

Annexed to this circular is a form of application coloured Green, which should be filled in for the number of shares you are entitled to or less and sent to the above address.

Further, should you desire to transfer your rights, either wholly or in part you must sign the "Form of Renunciation" (Coloured Pink) attached herewith and your nominee/s, who must be of full age, must (instead of you) sign the Application Form 'B' (Coloured Pink) and forward the same to the above address.

Should you desire an allotment of shares in excess of the number you are entitled to claim, you should fill in and send the form of Application, (Coloured Yellow) for additional shares, which is also annexed hereto. The necessary payment must accompany the forms.

According to the provisions of the Companies Act, 1956, shares out of the above issue not taken up by the Shareholders will be disposed off by the Directors as they may consider more beneficial to the Company.

All applications by you or your nominees for shares along with the requisite remittance in accordance with the above offer must be received at the above address of the Company by 15th November 1956. The Directors can, if they so desire, extend this date. Applications received after the aforesaid date will not be entertained.

Yours faithfully,

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 31*st August* 1956.

Note.—1. The allotment of the shares under this offer to non-resident Shareholders is subject to prior approval of the Reserve Bank of India.

2. Shareholders holding less than 20 ordinary shares may also apply in the form of Application coloured Yellow.

Note.—(*a*) A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

(*b*) Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 28th day of September 1956, or to their Mandatees. No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

COMPANY AFFAIRS

(*Concluded from page* 474)

cations for the continuance of investments made after 1st April 1952 and prior to 1st April 1956 particulars of **the investments made before** 1st April 1952 and those made after that date should be separately furnished showing the exact date on which each such investment was made. A certified copy of the resolution of the investing company authorising the investment, the balance-sheets and the profit and loss accounts for the latest three financial years of each of the companies concerned including **the investing company, their** Memoranda and Articles of Association and the rates at which the shares were acquired should also be furnished stating **whether the shares are quoted on the Stock Exchange.**

It should be noted that under the provisions of sub-section (3) of section 295 of the Act, approval of the Central Government to all the loans outstanding at the commencement of the Act is to be obtained by 30th September 1956; otherwise, recovery of the loans will have to be enforced within the stipulated period. Approval to the continuance of investments under section 373 of the Act has also to be obtained by 30th September 1956 at the latest, failing which the investing company will have to dispose of such investments before 1st April 1958.

The Companies are, therefore, advised to take stock of their position urgently. If the facts warrant their applying for Government's approval to the loans granted by them or the investments made by them, they should send up their applications, without delay, addressing them to the Secretary to the Government of India, Ministry of Finance, Department of Company Law Administration, New Delhi.

COMPANIES REFUSAL OR FAILURE TO REGISTER TRANSFER OF SHARES

The procedure to be adopted in preferring appeals to Government against refusal by a public company or a private company which is a subsidiary of a public company to register a transfer or transmission of shares or failure on its part to send notice of such refusal within the period stipulated in Section 111 of the Companies Act, has been laid down. Every such appeal should be stamped with a Court fee stamp of Rs. 2 and should be addressed to the Secretary to the Government of India, Ministry of Finance, Department of Company Law Administration, New Delhi. The appeal need not be in any special form, but it should set out the material facts clearly and should show the exact grievance of the appellant. If the appeal is against the failure of the company to send the notice of refusal of transfer within two months from the date of transmission of the application, the exact date on which the application for transfer was delivered to the company should be mentioned. In the case of an appeal against refusal to register a transfer or transmission, the appeal should show the date on which the company refused to register the transfer or transmissions and it should also state whether the share certificates, together with the transfer deed duly executed by the transferor as well as the transferee, were lodged with the company. The appellant should set out the grounds on which he challenges the decision of the company and specify the reliefs which he claims. The appeal should invariably be supported by an affidavit, supporting all the allegations of fact. Once an appeal has been disposed of by the Central Government, there is no further right of appeal or representation.

STRINGENCY IN MONEY

(*From Our Own Correspondent*)

BOMBAY, 5*th September*

The fairly comfortable conditions noted in the short-term money market last week proved to be a short-lived affair. With the entry of as many as 13 States into the capital market with their large borrowing programmes aggregating Rs. 64 crores, all available surplus funds with institutional lenders were drained off. The result was that an acute shortage of money was felt. Banks were not able to get their day-to-day call money requirements and had to get the requisite funds from either the Reserve Bank or the State Bank of India. Inter-bank call money was keenly bid at 3½ per cent. among all sections of banks. House money at call was placed at 3½ per cent. and short-term deposits at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

The Reserve Bank's statement for the week ended 31st August 1956 shows a shrinkage of Rs. 7.10 crores in notes in circulation, bringing the aggregate fall during three consecutive weeks to Rs. 27.27 crores. Notes held in the Banking Department are higher by Rs. 8.59 crores, so that the rise in total notes issued is Rs. 1.48 crores. This is covered by a corresponding increase in the rupee coin. In the Banking Department, deposits of the Central Government have gone up by Rs. 4.18 crores, while those of other Governments have declined by Rs. 2.80 crores. Deposits of banks are also higher by Rs. 1.12 crores. On the assets side, there has been a decline of Rs. 3.85 crores in balances held abroad. Loans and advances to Governments show a rise of only Rs. 42 lakhs. Other loans and advances have, on the other hand, declined by Rs. 2.82 crores. Of these loans, outstanding advances to Scheduled banks against usance bills account for a drop of Rs. 6.12 crores.

The Scheduled banks' statement for the week ended 24th August 1956 shows an increase of Rs. 8.60 crores in demand deposits and of Rs. 2.04 crores in time deposits. Inter-bank borrowings are also higher by Rs. 96 lakhs, while borrowings from the Reserve Bank have declined by Rs. 6.24 crores, of which those against usance bills account for Rs. 2.64 crores. On the assets side, advances continue to show a downward trend with a further drop of Rs. 2.85 crores. Bills purchased and discounted have, on the other hand, gone up by Rs. 2.42 crores. Investments are also higher by Rs. 80 lakhs. Cash balances show only small variation, but money at call and short notice show a rise of Rs. 2 crores.

The outstanding development of the week under review in the Gilt-edged market was, of course, the opening on the 3rd inst. of the list for 13 State loans for an aggregate sum of Rs. 64 crores. Of these, the lists for six issues have been closed at the time of writing. The relevant particulars relating to these are:

(In crores of rupees)

State	Amount Invited	Amount Offered
Madras	12.50	16.01
Bombay	7.50	7.50
Travancore-Cochin	2.00	Over 2.00
Madhya Bharat	1.00	Over 1.00
Rajasthan	3.00	3.11
Saurashtra	2.50	3.65

Of these loans, the Madras issue was the most outstanding success, having been over-subscribed to the tune of about Rs. 3.50 crores or 28 per cent. on the opening day itself. The State Government has decided to retain 10 per cent. more than the amount called for. In other words, it will retain up to Rs. 13.75 crores and return the balance to the subscribers, full allotments being made for subscriptions of Rs. 10,000 and less. Subscribers to the Rajasthan loan will receive full allotment. Applications up to and including Rs. 10,000 to the Saurashtra loan will receive full allotment and subscribers for amounts over Rs. 10,000 will receive allotment at approximately 75 per cent., subject to a minimum allotment of Rs. 10,000.

The Gilt-edged market was devoid of any interest and business was almost at a standstill. Most of the issues were on offer and prices tended to sag all-round, the only exception being the 3 per cent. 1986 Conversion loan, which, on some support, gained As. 4 to Rs. 75-6. 3 per cent. 1957 and 1958 held their own at Rs. 99-12 and Rs. 99-9, respectively, which were the Reserve Bank's support level. But 3 per cent. 1959-61 was on offer at Rs. 98. 3 per cent. 1963-65 sagged by As. 2 to Rs. 94-12 and even at that price did not attract support. 3 per cent. 1964 also declined by As. 2 to Rs. 94-13. 3 per cent. 1966-68 had sellers at Rs. 93-4, 3 per cent. 1970-75 an anna lower at Rs. 90. 3½ per cent. 1962 was quiet at Rs. 98 and 3½ per cent. 1961 dropped an anna to Rs. 99-5. Among the 3½ per cent. loans, 1964 was quoted at Rs. 98-11, 1965 at Rs. 98-8 and 1967 at Rs. 98-7. The new 3½ per cent. 1974 had some buyers at Rs. 98-7. Among the State loans, 4 per cent. 1967 Madras and U.P. shed As. 2 each to Rs. 99-8 and Rs. 99-9, respectively.

HIDES FIRM

(*From Our Own Correspondent*)

KANPUR, 2*nd September*

Firm conditions prevailed in the hides and skins market during the week under review. New arrivals were less, thanks to bottleneck of transport. The Madrasi dealers were a shade lukewarm in their demand on lighter variety of cow and goat. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow, 1st grade Rs. 345 and 2nd grade Rs. 250 per score; wet salted buff, 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 200 and 2nd grade Rs. 140 per 100 pieces; sheep, 1st grade Rs. 200 and 2nd grade Rs. 165 per 100 pieces.

SILVER FIRM

(*From Our Own Correspondent*)

BOMBAY, 5*th September*

Trading in the bullion market was interrupted twice during the week under review, once on the 1st inst. on account of *Khordad Sal* and again today on account of a Jain festival. During this short week, after an initial dull, but quiet, trend, there was a flare-up in silver, lifting it to the highest level since the middle of May last. Gold also ruled better in sympathy with silver. The fair-sized demand in the ready section, too, helped the yellow metal to remain buoyant.

Earlier in the week, silver ruled quiet and prices drifted lower in continuation of the previous week's recession. On Monday this week, however, strong rumours from Calcutta to the effect that the Tibetan authorities proposed to restrict the export of silver coins to India allowing it only on a strictly barter basis against cloth and commodities, caused a strident advance. Though the lack of official confirmation of these rumours led to some profit-taking, the absence of any denial from official sources was itself interpreted bullishly and prices in the local market were rigged up.

Silver for forward delivery (22nd September) dipped from Rs. 172-6 to Rs. 171-5 earlier in the week, before gaining strength yesterday to Rs. 174-11, the highest point to be touched since 16th May last. The closing yesterday was, however, a shade lower at Rs. 174-6.

Ready silver (.996 Mint) moved down from Rs. 172-2 to Rs. 171-1 before gaining to Rs. 174-3 yesterday. The closing was done lower at Rs. 173-14.

The floating stocks are estimated at 2,200 bars. The daily average offtake was 25 bars.

Gold forward (21st September) fluctuated within a narrow range between Rs. 103-8 and Rs. 102-5, but closed on balance better at Rs. 103-6, as against Rs. 102-10 last week.

Ready gold was on par with the forward. Thus, it closed at Rs. 103-6, as compared with Rs. 102-10 a week ago.

The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,500 tolas. The daily average offtake was also of the same order.

In New York, silver was unchanged at 90¾c. In London, too, silver prices held their own at 78¾d. for both spot and forward. Gold moved within a narrow groove, but, on balance, there was no change at 251s. 5½d.

The following comparative table shows the trend of market during the week under review:

	4-9-56	Highest	Lowest	28-8-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	103 6	103 8	102 5	102 10

STRONG DEMAND FOR TEAS

(*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*)

COCHIN, 31*st August*

Due to the transition to fortnightly sales and the U.P.A.S.I. meetings in Coonoor, there have been no auctions in Cochin this week. The market continues firm and very little tea remains unsold. Quantities for coming auctions are as follows:—

Sale No. 25 ... ... 1,250,000 lbs.
Dust Sale R ... ... 550,000 lbs.

London Market.—*Sale of 27th August* 1956:—Best Assams in strong demand between 9*s.* and 12*s.* Market for plain tea weaker.

Sale of 28th August 1956.—Following last sale trend.

Colombo Market.—*Sale of 27th August* 1956:—Better liquoring sorts dearer. Powdery dusts and stalky broken mixeds easier.

Sale of 28th August 1956:—Active demand. Much dearer rates. High and medium grown, particularly Dimbula B.O.Ps. low-growns generally ten cents dearer. Orange pekoes active.

Calcutta Market.—*Export*:—With the exception of commonest sorts and Middle East types, market irregularly easier, especially for best liquoring, which showed marked decline.

Internal:—17,500 packages dust. Good general demand. Middle East strongest feature. Other types opened dearer closed anna easier. Best C.T.Cs. four annas easier medium C.T.Cs. about steady. 864 leaf. General demand at irregular rates generally easier.

Export Quota:—The market has been much quieter and the present quotation is 25 pies nominal with very little business done.

Forthcoming Auctions:—Sale No. 25 will be held on Tuesday, 4th September. Dust Sale 'R' on Tuesday, 11th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 25:—1,250,000 lbs. Strong general demand. Commons low medium brokens As. 1 to As. 2 dearer. Fannings, particularly Middle East, considerably dearer. Best liquoring irregular, following quality. Whole leaf dearer."

COTTON FUTURES EASY

(*From Our Own Correspondent*)

BOMBAY, 5*th September*

A distinctly bearish trend was noted in the futures market during the major part of the week under review. This trend is attributed to three factors, namely, the conclusion of the Indo-U.S. agreement (signed on the 29th of August) which provides for the import of about six lakh bales of American cotton as economic aid, the upward revision of the excise duty on cloth and encouraging weather reports from most of the producing areas which indicate the prospects of a good crop for the new season. The cumulative effect of these factors has been a sharp break in values of both the futures contracts in cotton. Towards the close of the week, however, there was a slight improvement, mainly due to short-covering.

Under the impact of the Indo-U.S. agreement, the Jarilla contract opened the week ten points lower at 682½ and ruled more or less easy on the same and the following day, with the rates fluctuating within a very narrow limit. The announcement regarding the enhancement of the excise duty was made on 31st August but its impact on the market was felt only on the 3rd inst., since the market was closed on the 1st and 2nd inst. On 3*rd inst.* when the market opened, the Jarilla contract was initially quoted at Rs. 679 and slumped still further to Rs. 676½ towards the close of the day's session. The Vijay contract which stood at Rs. 820½ on 30th August receded to Rs. 810½ on 3rd inst. It is felt that the break in values would have been more marked but for the fact that, for some time now, trade circles were expecting a downward revision of the duty, though a doubling of the duty on medium cloth came as a surprise. Moreover, the market has developed a "wait and watch" attitude, pending a clearer picture of the impact of new excise duty. To a certain extent, this has prevented the market from deteriorating further. A recovery in values was, however, evident towards the close of the week. The demoralising effect of the new excise duties has been partially checked thanks to encouraging reports from the spot section and the cloth market. The Jarilla contract after having fallen to Rs. 675 on the 3rd inst. improved to Rs. 684 the next day before closing today at Rs. 681¾. The Vijay contract which had touched a low of Rs. 809½ on 3rd inst. improved to Rs. 816½ on 4th inst. though it finished the week slightly lower at Rs. 815.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	5-9-36	*Highest*	*Lowest*	22-8-56
Jarilla (March) ...	681¾	684	675	685½
Vijay (April) ...	815	822	809½	815

In the spot market at Sewri, prices of domestic styles ruled steady. There was good spinner demand for local stocks of Surtis, Jayadhar, 320F and Khandesh 197/3. There was also greater interest in new crop styles. Reports from upcountry centres indicate that earlier fears of damage to the crop in many areas on account of heavy rains are largely exaggerated. It is, however, held that the marketing season may be delayed by about three weeks in some areas and the quality might suffer in a few others.

In the foreign section, East African varieties continue to evoke good buying demand and consequently their prices have gone up. Some transactions are reported to have been made in Gezira Sudans and Pima Grade I 1-9/16" for September-October shipment. Some small business, it is stated, was also put through in Elpaso styles. There has been only limited interest in Egyptians, but some mills are reported to have been buying Americans. A section of the trade believes that the Government will make available adequate licences for U.S. cotton shortly. The latest available prices—in rupees per candy of 784 lbs.—from the spot market at Sewri are given below:

Bengal *Deshi* 720; Berar Jarilla 780; Khandesh 790; Vijay 965; Oomra *Deshi* 750; Moglai 740. *Delivery contracts*: Khandesh 197/3 December 118, Berar 107 and Moglai 37 on Jarilla 320F December 73, 216F 98 and Vijay 13/16" February-March 69 on Vijay.

The Joint Chief Controller of Imports has invited applications for licences on the usual lines for U.S. cotton stapling 1.1/16" and above under the Indo-Burma-U.S.A. Tripartite agreement. The issue of permits will be in the order of priority of shipment months than on priority in the dates of recent applications. The shipment months will depend on the period specified in the purchase authorisation to be issued by the United States. This programme stipulates that raw cotton from the U.S.A. will not be imported into India until cotton textiles and/or yarn of equivalent value have been shipped from India to Burma. The issue of permits will, therefore, be governed by the credits opened for cotton textiles by the Burmese importers of textiles. In this programme the importer is required to open a rupee letter of credit with the State Bank of India calculated at the parity rate of exchange prevailing when the rupee letter of credit is actually opened. Much anxiety has been caused to importers by this clause, which does not give any protection against a serious exchange risk in the event of a rupee devaluation between the period when the sale is made and the credit opened. It is hoped that Government will take this risk on themselves for cotton as they have done for steel.

The Karachi cotton market put on a somewhat cheerful appearance, in contrast to the bearish trend noted last week. This was due to the abatement of the selling pressure which followed after the upward revision of export duty on *deshi* cotton. The reduction of Rs. 20 to Rs. 115 in the duty on staple cotton, though it failed to provide any immediate improvement in prices, appears to have influenced the sentiment of operators who lent support to the market. Enquiries from abroad were,

however, limited and local mill demand also was slack. N.T. R.G. January delivery improved by As. 7 to Rs. 75-5 whilst March delivery advanced by As. 5 to Rs. 74-6. In the spot section, the *deshi* styles have improved slightly. The following are the latest available spot rates—in rupees per 82 lbs. —for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 97-8; Punjab *Deshi* 88-8; 4F Punjab Roller 77-12; S.G. 79-8; L.S.S. Punjab Roller 78-8; S.G. 80-12; N.T. R.G. 78; S.G. 79-8; 289F Punjab Roller 82-4; S.G. 87-8.

The firm trend noted in the Alexandria cotton futures last week continued unabated during the week under review also. The chief helpful factors have been the easing of the payments position in respect of cotton exports to India and expectation of a lower crop for the current season due to reduced acreage. Traders continue to show keen interest in purchases of cotton from farmers. But appreciation in price has been more marked in the case of long staple contracts. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below, the figures in brackets being the last week-end rates:

Karnak: November 104.4 (102.03); January 101.50 (99.38); March 100.8 (98.38). *Ashmouni*: October 73.1 (73.33); December 73.2 (73.03); February 73.75.

Some small improvement was recorded by the Liverpool cotton market. Support from commission houses and mill-fixing were the chief factors which influenced the steady trend. Sudan contract was firm on small trade buying and hedging. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton 1" staple contract: October-November 25.05; December-January 24.75; March-April 24.55; May-June 24.45; July-August 24.40. *American cotton mixed growth contract*: October-November 25.15; December-January 24.80; March-April 24.60; May-June 24.45; July-August 24.35. *Egyptian Karnak contract*: November-December 55.70; January-February 55.65; March-April 55.65. Sudan cotton contract: September-October 48.25; November-December 48.0; January-February 47.80.

Steady conditions were witnessed in the New York cotton market during the week under review. Short-covering and trade demand seemed to maintain the steady trend which had commenced last week. It would appear that private estimates place the current season's crop at a level lower than the official estimate. Thus, traders estimate the 1956-57 season's crop at 13,092,000 *bales* as against the last official estimate of 13,552,000 bales.

The following are the latest available quotations from New York, as compared with those eight days and fourteen days before:

(In cents per lb.)

	4-9-56	27-8-56	21-8-56
Spot	34.45	34.45	34.35
October	33.75	33.70	33.55
December	33.85	33.76	33.49
March	33.81	33.64	33.25

COTTON YARN STEADY

(From Our Own Correspondent)

BOMBAY, 5th *September*

The local cotton yarn market remained steady. The enhancement of the excise duty on mill cloth was, of course, a bullish factor for the market. But the operators noted that the cotton prices had declined. Further, the operators preferred to await the precise reaction of the yarn consuming centres to the changes in the excise duty. The rayon section of the market was dull, turnover being limited. The staple fibre section ruled quiet, thanks to lack of sustained improvement in demand.

Rayon Yarn (120 dull cones) for October delivery, which had hardened to Rs. 798 last week, receded to Rs. 796. In the spot section, National Rayons 120 Bt. cones 1st grade was slightly lower at Rs. 3-13-3 while 150 Bt. cones 1st grade was maintained at Rs. 3-6-6.

Among staple fibre yarns, Citys receded by 6 pies to Rs. 3-6-9. Kohinoors lost a similar amount to Rs. 3-8-3. New Greats and Centurys were also somewhat easier at Rs. 3-7 and Rs. 3-7-9 respectively. Foreign yarns were also quoted lower. Paramount declined from Rs. 6-6-6 to Rs. 6-4 and Fujis from Rs. 6-4-6 to Rs. 6-4. Staple fibre yarn (40 x 2) October delivery declined by Rs. 7 to Rs. 668.

In the cotton yarn section, among 60s, Moderns declined by As. 2 to Rs. 62-12 and Finlays also lost a similar amount Rs. 62-4. Among 80s, Mahindras were firm at Rs. 72. 20s, Hind were better at Rs. 19-10. Among 30s, Maduras advanced by As. 2 to Rs. 24-14. Minaxis 40s were somewhat lower at Rs. 29.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those on 28th August and 22nd August:

	5-9-1956	28-8-1956	22-8-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia October ..	796 0	798 0	794 0
120 Japan (per lb.)	3 12½	3 13	3 13
150 Japan (per lb.)	4 1½	4 2	4 2½
120 Italy (per lb.)	3 14	3 15	3 14½
150 Italy (per lb.)	4 0½	4 1½	4 1½
Staple fibre yarn (per case of 200 lbs.)—			
40 × 2 October	668 0	675 0	676 0
40 × 2 New Great (per lb.) ..	3 7	3 8	3 8½
40 × 2 Century (per lb.) ..	3 7½	3 8	3 8½
40 × 2 City (per lb.)	3 6½	3 7½	3 8½
Cotton yarn (per bundle of 10 lbs.)—			
10s Podar	14 12	14 14	14 14

40s Minaxi	29 0	29 4	28 14
60s Raghuvamshi	58 4	58 0	58 8
80s Mahendra	72 0	72 0	73 4

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 5th *September*

The oilseeds market reflected an easy trend during the week under review. The market which ruled steady on 30th August, the first day of the week, on profit-taking at lower rates, reacted during the succeeding two sessions as a result of persistent offerings from upcountry operators caused by beneficial rains in oilseeds producing areas. Further, the Union Agriculture Minister's statement in Lok Sabha that prices of foodgrains would be reduced in two week's time has further affected the sentiment of the operators. The market, however, put on a slightly cheerful note on the 4th inst., on bear-covering. The market, nevertheless, lost further ground today under the leadership of groundnut as a result of selling pressure from upcountry operators.

Groundnut February contract, having finished the previous week at Rs. 133-12, started the week under review, on a cheerful note, and touched a high level of Rs. 134-12 on 30th August. On slow but persistent selling pressure, it went down to Rs. 129-0 on the 3rd instant, but rose again on 4th instant to Rs. 130-12, before falling further down to Rs. 126-9 at the close. It thus lost over the week as much as Rs. 7-3. In the spot section, however, Bold and August-September, reflected a slight improvement on demand from crushers, but Bold December-January and Khandesh quality lost As. 13 and Rs. 6 respectively at Rs. 26-2 and Rs. 34-0, Groundnut oil ex-mill was quoted at Rs. 18-12.

In castorseed futures, September contract closed the week at Rs. 138-6 as against Rs. 143-6 last week, losing over the week no less than Rs. 5. The May 1957 contract, too, followed a similar trend, having lost over the week as much as Rs. 3-4 at at Rs. 121-8. In the spot section Bold Ready shed Re. 1 at Rs. 27-10 and Ready Madras Re. 1-2 at Rs. 27-10. Oil B. S. S. and Oil Commercial were done respectively at Rs. 16-8 and Rs. 15-8.

Linseed May 1957 kept on a sympathetic movement with the groundnut futures. It lost over the week Rs. 2 at Rs. 25-0. In the spot section, on the other hand, Bold declined by Re. 1-4 at Rs. 30-6 and August-September went down by Re. 1-2 at Rs. 30-6. February-March, too, fell by Re. 1 to Rs. 27-2. Linseed oil Ready was quoted at Rs. 17-4.

Among others, *Kardi* seed Bold Ready and August-September shed As. 8 each at Rs. 17-14. *Niger* seed Ready was quoted at Rs. 27-12, and Madras at Rs. 28, that is, As. 4 lower, or As. 8 lower than a week ago.

Replying to a question in the Lok Sabha, the Minister for Commerce and Industry, Mr. Nityanand Kanungo stated that the excise duty imposed on edible oils in the last budget had not been passed to the consumers. He further stated that the production of edible oils in the country was 4.6 million tons short of the requirements at 6 million tons. In reply to another question, he said that the quantum for the export of controlled varieties of oils would be determined after a review of the crop position, internal requirements and price trends.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	5-9-1956	28-8-1956	22-8-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	126 9	133 12	139 10

SUGAR WEAK

(From Our Own Correspondent)

BOMBAY, 5th *September*

The sugar market continued its downward march under sustained selling pressure and satisfactory arrivals during the week under review. Manufacturers were keen on disposing of their released stocks, as the commencement of the new crushing season is not very far off. Accordingly, ex-mill quotations dipped by a couple of rupees in the Bombay-Deccan and by about As. 4 to As. 6 per maund in the North.

Arrivals of indigenous sugar during the week under review amounted to 16,200 bags. The prices for small, medium and large grain sizes at the time of writing are: Rs. 88, Rs. 89-Rs. 91 and Rs. 92-Rs. 100 per bag, respectively, including sales tax. British refined sugar finds buyers in small lots at Rs. 91 per bag, excluding sales tax.

In the forward section, *Asho* delivery contract for C grade sugar improved at one time from Rs. 91 to Rs. 91-6 but receded to Rs. 91-2 and remains neglected today at this price.

The undertone of the market in all sections is perceptibly weak.

SUGAR DRIFTS LOWER

(From Our Own Correspondent)

HAPUR, 3rd *September*

Despite better offtake to consuming areas, mill delivery prices of sugar drifted lower. The decline in prices reflected easy supply position and anxiety of mills to part with their stocks, following a further release of 160,000 tons of sugar for sale in the free market by the Government. The latest heavy rains in west U.P., which is a prominent cane-producing area, and the reported increase of 16 per cent. in sugarcane acreage over last year were the two factors which were expected to help increase sugarcane production in the coming season. The mill delivery prices of sugar as on Monday were:

Jaswant Rs. 28-7; Simbhauli Rs. 28-12; Mawana Rs. 28-4 to Rs. 29-4; Daurala Rs. 29-4 to Rs. 30-4; Amroha Rs. 28-2; Bijnore Rs. 28-2; Mansoorpur Rs. 28-6 to Rs. 29-8; Rampur Rs. 31; retail Rs. 30-10.

The *khandsari* market continued to rule dull and depressed, thanks to good stocks and poor buying enquiry. Prices varied between Rs. 23 to Rs. 27 per maund, according to quality.

Ready *gur* also drifted lower. Dry quality was quoted at Rs. 12 per maund, wet *kotha* quality at Rs. 10-12. The fall in prices was due chiefly to appreciable fall in future prices on continued bear pressure, influenced by good crop prospects. Local stock was fast going down and was estimated at 22,000 maunds, mostly of the *kotha* quality.

Gur fagun delivery declined and was quoted today at Rs. 9-14-6, as against the week's opening of Rs. 10-1-9 and the lowest rate of Rs. 9-11-6. The small recovery towards the week-end was due to profit realisations at lowest levels.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 3rd *September*

Quietly easy conditions prevailed in the foodgrains market during the week. Mr. A. P. Jain, Union Food Minister, announced in the Rajya Sabha that the Government was in a position to meet any contingency that might arise not only during the year but also in future. This was on the basis of stocks with the Government and the arrangements for heavy imports. The Government's decision to distribute imported wheat and rice through retailers in order to prevent profiteering through diversion of stocks also acted as a bearish factor. The Government has already opened over 5,000 fair price shops and more will be opened in needy areas. The Government has further decided to supply wheat to millers directly on conditions that it would sell flour at Rs. 16 per maund in retail.

Wheat prices slided down to Rs. 14-10 per maund for average quality and farm quality was quoted at Rs. 16 per maund. Unnerved by the Union Food Minister's warning that the Government had now arrived at a stage when it could beat down the trade which had been playing foul, stockists began to release supplies to the market, with the result that wheat arrivals went up to 250 maunds. Outside buying enquiry was slack and wheat stock position was unchanged at 81 *khaties*. All over the flood and drought affected areas of U.P. and deficit areas of hill districts and five big KAVAL towns of the State, a large number of fair price shops have already been opened. Rice prices also recorded modest fall during the week and new crop which was reported progressing satisfactorily is now in need of rains.

Gram prices receded by As. 12 per maund to Rs. 11-4 for *desi* quality and to Rs. 12-4 for Punjabi quality, with heavy stocks at 136 *khaties*. With the beginning of the arrivals of new maize crop, prices of all coarse grains recorded decline during the week. Barley was done at Rs. 11-12, *bejhar* at Rs. 11-4, maize new at Rs. 12-4, *bajra* as Rs. 12 and *guwar* at Rs. 10 per maund.

Pulses also recorded a fall in prices for want of buying enquiry at prevailing rates. Peas *dara* green was quoted at Rs. 11-4 and white quality at Rs. 12-6 per maund. Stocks were unchanged at 58 *khaties*. *Arhar* was quoted As. 8 lower at Rs. 12 per maund, with heavy stocks at 130 *khaties*. Prices of other pulses also eased slightly during the week.

Pulses futures recorded an appreciable fall during the week in line with prices in the ready section and on active bear pressure from Punjab and Bombay. The latest quotations as on Monday were very near the lowest of the week; peas *bhadon* Rs. 10-15-6 and *mangsir* Rs. 11-1; peas white *bhadon* Rs. 11, *mangsir* Rs. 11-7; *arhar bhadon* Rs. 11-11-6, *mangsir* Rs. 12-3; *guwar maha* Rs. 8-12 and *urd maha* Rs. 14-11.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 3rd *September*

There was no change in the tempo of U.K. kip buying. Importers were said to be unable to follow Madras asking prices which were 2d. dearer. It is not unlikely that offers will be available shortly at a penny less than last week. And it is to be seen if the U.K. dressers will be interested in these levels. There was less demand for low grade cow hides for inland trade. The market for cow calf, buff calf and buff hides was unchanged.

In the local market, arrivals of tanned skins were moderate and clearances good. There was fair demand for superior tannages in goat skins and price increases were paid for shipment business during the week under review.

In the London August auctions, prices of goat skins mostly realised July levels but rejections were cleared at low prices. The sale of tanned sheep skins were expected to be taken up this week.

WET HARVEST

RECORD UNTIMELY RAINS

From Our Own Correspondent

LONDON, 1st *September*

THE British Association for the Advancement of Science, the coming Trade Union Congress and the weather have competed for interest this week—but the coldness and wetness of this summer, even in a country used to cold and wet summers, has been so exceptional that, perhaps, it should be given pride of place as a topic. This August, it has rained every day and in quantities which have put most of the records for fifty years back to shame! There have been storms of exceptional severity, especially in the second half of the month, and temperatures have even dropped below freezing point at night. All this as spelt severe losses for the English farmers. The county of Kent, which has succeeded in creating an all-time meteorological record with snow falls in the middle of summer, has suffered with severe hail storms which threshed the *standing* grain in the fields. A more usual trouble throughout the Southern and Eastern Counties (which are the principal grain growing areas in this country) has been a flattening of the corn by wind and rain. It is the practice in agriculture nowadays to sow green crops such as clover for cattle with the corn, these crops maturing after the corn has been cut, but, in a summer such as this, the flattened corn is often submerged beneath the growing green crop and even the best of combine-harvesters will have difficulty in saving it.

LONDON LETTER

The lack of sunshine has, of course, set the whole harvest back and that in itself creates difficulties and expense for farmers. The whole story will not have been told even when the last of this unfortunate grain harvest has been gathered in, for much hay wanted as food for cattle in the winter has been lost and the full seriousness of this will not appear for many months.

Fortunately, since the war, a wet harvest does not mean as much grain loss as it would have done in previous years for tremendous strides have been made in the drying of grain. Moreover, the Government during and after the war put up a number of drying plants and built a group of large silos holding up to 5,000 tons each which can save the most moisture sodden grain and hold it for a market. The Government, however, committed to the quest for "freedom" sought latterly to disband its silo organisation and sold to the flour millers such of the drying plants and silos as they were able to find buyers for. But only where these plants offered a particular attraction to the flour millers were they bought and the majority were closed down by the Government.

This illustrates the anomaly of the grain trade in this country, for soft English wheat is not liked by the flour millers for more than between 10 per cent. and 20 per cent. of their mix, the rest being harder imported wheat. During and after the war, the millers were often obliged to use 40 per cent. and more of English wheat, though they reckoned that the keeping qualities of the loaf were somewhat reduced as a result. Now even though marginal grain costs dollars in this country, the millers have been allowed to have their way and reduce their consumption of English wheat. With their supplies assured one way or the other, they have no need to maintain plants to rescue the English harvest, while, for the farmers, there is no profit in running drying and storing plants. The answer is, of course, co-operative ownership of these plants or their operation by a central authority, losses being made good by a levy which could be borne by the millers. The economic justification for this is of course the dollar saving but nothing, in fact, has been done and this year the Government have had to open up their drying plants and silos at their own expense to avoid the scandal of a wasted harvest. What they will do another year remains to be seen, as it is their firm intention to get out of any form of business enterprise, but, perhaps, this harvest will serve as a useful reminder of how bad conditions can be for agriculture in this country and how it behoves all interested in its future to take steps to deal with the worst of conditions.—*All Rights Reserved.*

The Tennessee Valley Authority of the U.S.A. has placed an order with the English Electric Company for two British-made transformers for the Johnsonville Steam Plant in Tennessee. The order follows a previous contract placed with the British company and the two together is valued at one million dollars.

FINANCIAL HELP TO U.S. SMALL BUSINESS

ROLE OF LOCAL INSTITUTIONS

SMALL business in the United States often receives financial help from two typically American organisations. Both of these financial institutions the development credit corporation and the community industrial foundation, arose out of the American economic ferment as spontaneous creations of civic-minded citizens. These people foresaw the need for such financial corporations, on behalf of the state, on the one hand, and of the local community, on the other. Neither organisation in its origin, was Government inspired. Both are non-profit organisations.

The state-wide institutions, known as development credit corporations, were first established in the six New England States during the post-war period, but have now spread to other states. The specific function of these corporations is to pool loan funds advanced to them by financial institutions and to grant intermediate and long-term loans to small businesses which are considered good risks, but which have been unable to obtain money from other sources. A basic principle of the state development corporations is that they do not compete with commercial banking institutions, but rather supplement the latter's activities. From the point of view of the small businessman who is a prospective borrower, an important feature of credit corporations is that, unlike most commercial lending institutions, they do not always require collateral security in the form of some kind of capital. Also, the fact that the credit corporation will provide financing to new and expanding small businesses tends to make venture capital available to these enterprises from other sources as well. Frequently, a loan applicant who is assured of financial aid by a credit corporation finds that banking facilities and other lending sources are then willing to supply part of his requirements.

Although the various state credit corporations made it clear to prospective investors that the corporations would use any profits for operating purposes—especially as a reserve to cover losses—the corporations' stock found a ready market. Apparently, investors purchased the stock in view of the overall prosperity of the state, which would be of indirect benefit to all the citizens, rather than with a view to making a direct personal profit. The Federal Government Agency, the Small Business Administration, co-operates with both state-wide and local development corporations and makes loans in participation with them.

The second of these remarkable financial institutions is the *community* industrial foundation. These local industrial foundations have been in existence in various parts of the country for many years. They co-operate, rather than compete, with the state development credit corporations. A community industrial foundation is an organisation of civic-minded persons—businessmen, bankers, lawyers, and others—who are interested in solving the economic and industrial problems of their community. These foundations have proved effective in dealing both with an immediate crisis growing out of the closing or removal of a plant or mill which provided employment for many persons in a community, or a need for long-range industrial development and growth of a community, especially in regard to increased industrial diversification.

The *average* foundation is a non-profit organisation, with the stockholders benefiting indirectly through increased business activity in the community due to the expansion of payrolls. Most foundations do not have paid staffs, relying instead on services contributed by staff members of the local Chamber of Commerce or by officers of the foundation.

Since small business is an integral factor in the U.S. economy, these two financial institutions, in furthering the growth and expansion of industry on a state-wide and local level, have at the same time furthered the growth and expansion of small business.

The Brazilian Government oil company, Petrobras, has announced a big new oil drilling programme aimed at cutting the need for imports of petroleum. According to Col. Januario Nunez, head of Petrobras, 1,454 new wells would be drilled in the next four years at a cost of $420 million. Petrobras would itself be able to finance about half of this amount through its share of import duties and taxes on foreign oil and the tax on automobile licence plates, while the rest would have to come from the Federal Government.

In recent years approximately 6,00,00,000 square feet of Shalimar Tar roofing materials, made in India, from Indian materials by Indian labour, have been used by Public Authorities, Industry and individual house owners, on the roofs of their properties—The demand increases yearly.

Shalimar Tar have built and are now operating the only high speed continuous machine for manufacturing roofing felt in India.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly P=Company has Preference shares. T=Company has Debentures N=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, "A shares and "B" shares—these are indicated by the same letters "A and "B" under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the month of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

B—Managed by the board of directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10/- on bonus shares, for the year, 1955. * Including bonus. (k) Investments.

(l) Making up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s For seven months ended 31st March 1956.

† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

GADGETS TO SPUR SAVINGS

(*Concluded from page 449*)

Though some of these schemes may serve as expedients while confidence is restored in money, none of them has been spectacularly successful. Under reasonably ordered conditions people will respond to the opportunity to realise better interest rates and tax exemptions. They can enjoy dreams of winning lottery prizes.

But, when inflation is rampant, the value of any promise to pay in the future becomes suspect. Formula bonds, such as those linked to price indexes, cannot fully overcome the repulsion people feel toward distant claims for money of shrinking value. Many a potential buyer—even if he has the talent for arithmetic—will not take the trouble to figure out how the gadget works and how it may fail him. He may well doubt whether the borrower will have the means and the will to perform upon an obligation of unknown magnitude. He may suspect the integrity of the Government statisticians whose elaborate calcul

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2376 BOMBAY, 15th SEPTEMBER 1956 PRICE Rs. 1/8

TARGETS FOR FOODGRAINS

THE recent rise in foodgrain prices has served to focus much public attention on the question of increased food production. The Government is understandably uneasy over the prospect of higher prices for foodgrains which would rob the people of much of their enthusiasm for the second Plan. The first Plan evoked considerable support from the public, because its progress brought with it freedom from a wide range of controls. Surely, the average citizen would like to see this trend continue through the period of the second Plan. In any case, should shortages in foodgrains develop and thereby necessitate larger imports of food, it would render the already difficult foreign exchange position more difficult. These considerations have lent to the problem of raising food output a new sense of urgency which contrasts with the sense of virtual complacency which prevailed a few months ago, when the Government even toyed with the idea of earning an additional Rs. 400 crores of foreign exchange through exports of foodgrains.

The Planning Commission feels that the target of 75 million tons for foodgrains to be reached by 1960-61, which represents a 15 per cent. increase over the 1955-56 level of 65.0 million tons, is an underestimate of the country's ability and that the target should be at least 40 per cent. over the current levels of output. At the last conference of State Food Ministers, held at Mussoorie, the question was thoroughly discussed. But the consensus of opinion was that, though food output could be increased by 25 per cent., it was difficult to accomplish a 40 per cent. increase without additional financial resources which the Planning Commission was generally unwilling to give. Now, Mr. Nehru revealed in the Lok Sabha a few days ago that he had written to the Chief Ministers of the States suggesting that they were not likely to receive additional allotment of funds but that they must strive to increase food output. He stated that the Government's aim was that food production should be increased by 30 to 35 per cent.

Mr. Nehru explained the Government's stand on the question of food output in the course of the debate on the Plan in the Rajya Sabha this week. He averred that agriculture was of "very vital importance" and that "our basic prosperity depends on agriculture." He wondered why the average yields in this country, which were comparatively very low, could not go up by 30 to 35 per cent. After emphasising the importance of intensive cultivation and the wider use of natural manures, he revealed that the Government had proposed to divert the attention of the Community Projects and National Extension Services, which would soon cover some 1,470 blocks (as against 1,160 blocks at present) or 110 million people in the villages, to intensified agriculture. He declared: "It is my firm conviction that we can make very considerable progress on the food front, without additional money but with a little more expenditure of brain-power and muscle-power."

In considering the issue of increased food output, one should not overlook the basic character of India's agricultural economy, namely, its dependence on monsoon. Despite all the major and minor irrigation works constructed in recent years, the fact remains that the irrigated area forms only 20 per cent. of the total cultivated area, though, during the period of the second Plan, this proportion is expected to rise to 30 per cent. When a large part of the land is thus exposed to the vagaries of the monsoon, the burden of the responsibility for increasing food production will necessarily fall on irrigated land. Indeed, this land may have to carry a heavier burden, if monsoon should fail in any year or in any consecutive years. In the short-run, the solution to the problem of raising output should be sought through intensified use of irrigated land and extension of minor irrigation facilities to cover as large an area as possible.

Judging from past experience, there is no reason why the increase in food production could not go beyond the 15 per cent. level now envisaged in the second Plan. In 1950-51, the irrigated area at 51 million acres formed 17.5 per cent. of the total cultivated area and the output of food in the country was some 54 million tons. By 1955-56, the country could increase its output by 11 million tons over the 1950-51 level, an increase of about 20 per cent; between these two years, the irrigated area moved up by about 32 per cent. During the period of the second Plan, the irrigated area is expected to go up to 88 million acres which would form about 30 per cent. of the total cultivated area. This represents an increase of about 31 per cent. in irrigated area over the existing land under irrigation. Such a large addition to irrigated area ought to result in a better increase in food output than what is now envisaged.

Much progress could and should be done within the existing allocation of Rs. 341 crores to agriculture. Nevertheless, it may be wondered whether a 40 per cent. increase in food output could be achieved without further expenditure or allotment. In the absence of fresh allotment of resources, the problem of the most efficient utilisation of available financial resources assumes a new significance. For one thing, efforts must be made to re-draw the pattern of expenditure on agriculture, so that money is diverted primarily to those sectors which could most readily show results through increased production of foodgrains. The allotment of Rs. 341 crores to agriculture is made up of Rs. 170 crores for agricultural programmes, Rs. 56 crores for animal husbandry, Rs. 47 crores for forests, Rs. 12 crores for fisheries, Rs. 47 crores for co-operation and Rs. 9 crores for miscellaneous expenditure. It is this pattern that must be reorganised, with a view to devoting larger resources to productive agricultural programmes.

Again, food output can be more easily and more rapidly augmented through the adoption of better agricultural practices, including the use of improved varieties of seeds, fertilisers and farmyard manure and more efficient implements. It is to this aspect of the food problem that greater attention and resources should be diverted. Above all, minor irrigation projects should receive far more attention than in the past. It is not clear whether the Government has collected fresh data about the census of wells in the country. A few years ago, it was computed that there were 3.5 million wells in India. May be, the number is larger now than what it was then. In any case, many of them would need improvement. Perhaps, it is not as widely realised as it should be that an improved well means an addition of 2 acres to irrigated area; about five acres, served by a well, could give an additional ton of foodgrains. Efforts should also be made to tap small surface streams. The fact that the supply of power will increase from 3.4 million kw. to 6.9 million kw. during the period of the second Plan indicates that there is great scope for installing electrically-operated water-lifting appliances.

A point that cannot be entirely ignored is that the adoption of improved agricultural practices by the farmers implies additional expenditure for the farmer. Unless sufficient incentives are provided, the farmer is unlikely to incur this additional expenditure. Mr. Nehru cited the instance of community projects where yields had increased by 25 per cent. These projects have absorbed large dozes of capital. How could the rest of the

and they have gone up since he raised the excise duties—he would step up the duties further. The higher the price of cloth, the greater the excise duties and *vice versa* is his policy. In other words, he wants the cloth prices to go down and says, in the same breath, that people should not consume more cloth. Surely, if cloth prices fall, the demand for cloth will increase, other things remaining equal. There is thus a fundamental contradiction in the Government's policy.

A little more elucidation is, perhaps, necessary for the benefit of those to whom this contradiction is not clear. Elsewhere in this issue, the Government's account of the background to the increase in excise duties is published. It will be seen therefrom that, despite the rise in the prices of cloth in recent months, the *per capita* consumption of cloth has tended to rise over 16 yards and that the pace of expansion in *per capita* consumption so far in the current year has been rather swift. The Government's contention is that the country cannot afford this rate of expansion in consumption, as enough cloth is not being produced and as the country cannot afford to divert any sizable amount of its savings to encourage an increase in the capacity of mills to produce more cloth for domestic consumption. Apparently, the Government would even welcome a reduction in the present *per capita* consumption of cloth, so that more cloth would be available for export. If this objective is to be secured, the price of cloth should go higher and not come down, or the prices of other essentials, such as food, should go up, so that less money would be available for buying cloth. Inasmuch as the Government is reluctant to resort to production and distribution controls for inhibiting consumption and is doing everything possible to deflate foodgrain prices, the other alternative is to push up the prices of cloth to such levels as would automatically achieve this objective. Why then talk of measures for bringing down prices of cloth? Why blame the millowners and the dealers if they transfer the incidence of enhanced excise duties to consumers?

The trouble with the Government is that it wants to have the cake and eat it at the same time. It does not want people to buy more cloth and yet it wants them to feel happy over the situation. In order to see that people do not buy more cloth, it wants to tax consumption through higher excise duties, but objects to manufacturers and dealers transferring the burden to consumers. How can a policy with such a fundamental contradiction work? If cloth consumption is to be restrained without adopting rationing, the only way of achieving it is to keep the consumer prices of cloth high. It will then be necessary to ensure that the sacrifice which the consumer is asked to make in the form of high prices does not go to swell the income of mill workers, cotton growers, millowners and distributors of finished goods. This will call for not only high excise duties but also a high rate of direct tax on millowners and the dealers, in other words, an excess profit tax. In effect, the Government ought to be able to make more money than it is now doing.

In highlighting the contradiction in the Government's approach and suggesting a remedy, we do not mean that the Government's main textile policy is right. That policy, as we have pointed out ere now, is basically wrong. It is cruel to load such a heavy percentage of tax as the Government is now doing on an essential article like cloth. It is no use telling the public that the Government has been forced to do so by circumstances. None except the Government is responsible for the present circumstances. The scarcity of cloth which threatens to become severe in the months to come is its creation. It has underestimated people's propensity for cloth consumption and overestimated the capacity of handlooms to deliver the goods. Its assumption that, by restricting mill production of cloth, more avenues of employment for the unemployed can be found has not been proved by events. This is not surprising, because hand weaving is not a profession to which all and sundry will take. Only a weaver's son will probably prefer to be a weaver. Neither a carpenter's son, nor that of a cobbler, nor that of a teacher, or of a railway or any factory worker will take to it. This is true of *Ambar Charka* as well. But they will all not mind joining a mill either as a spinner or a weaver or any other modern means of production. It has been proved time and again that the vast amount that is being spent for sustaining and fostering handloom weaving and spinning would provide more employment opportunities if it were expended on other occupations such as housing, transport and consumer goods industries. The present textile policy is thus inflicting a severe two-fold loss on the people. First, valuable financial resources are being utilised in channels which do not fetch adequate return in terms of gainful employment. Secondly, the people have to lower their living standards needlessly.

In saying all this, we do not suggest that adequate assistance of a suitable type should not be given to handloom industry or that hand spinning should not be encouraged in areas and in circumstances where no other gainful occupation can be found. But what is being done for this limited purpose is more than necessary and detrimental to the masses as a whole. The interests of these cottage industries can be adequately safeguarded without placing a restriction on mill spinning and mill weaving. There is no salvation for the people of this country, unless the Government realises the aforesaid stark economic facts and gives encouragement to cotton mill industry to expand its capacity and production. It is just a delusion to think that a sum of Rs. 30 or Rs. 40 crores that will be required to expand mill production will stand in the way of implementing the projects for heavy industries. On the contrary, such an investment will help the country to spend more on heavy industries. Assuming, for instance, the Government had allowed the mill industry to expand its capacity by 1,000 to 1,500 million yards in the first Five-year Plan, one can easily imagine the comfortable position in which the country would find itself today. In such an event, there would be a *per capita* availability of 18 yards, besides 1,200 to 1,500 million yards available for export, that is, the country would have enough cloth not only for meeting the rising level of domestic consumption but also for ensuring maximum exports. It would have permitted the country to implement a bigger second Plan than the present one. The question of resources would have presented no difficulty, for, as against an investment of Rs. 2,356 crores envisaged in the first Plan, only Rs. 2,000 crores could be spent. The authors of the second Plan claim it to be dynamic. If this claim is true, then they should learn from their past mistake and allow the mill industry to expand on the lines recommended by its spokesmen after considerable deliberation.

A NOTABLE AGREEMENT

NO subject figures more prominently in industrial disputes in this country than the claim for bonus by the workers. Nor does any other subject arouse keener controversy. Indeed, bonus disputes have so far vitiated the atmosphere of industrial relations that it looks as though the workers could be sooner persuaded to abandon their right to better wages than give up the claim for bonus. Some of the recent attempts at settling this issue—those made by the Millowners' Associations at Bombay and Ahmedabad, for instance—are designed only to reach some amicable agreement on the question of bonus over a period of years rather than to relate these additional earnings to productivity as such. From this point of view, the second five-year agreement reached between the Indian Aluminium Co., Ltd., Calcutta, and its workers, represented by the Indian Aluminium Belur Works Employees' Union, deserves special notice, for it contains, besides the no-strike guarantee given by the workers, an unequivocal declaration of the essential unsoundness of the principle of relating bonus to profits.

Since the agreement breaks new ground in industrial relations, and thus marks a welcome departure from the beaten track, it seems necessary to quote the relevant section—Section 38 of Article VII—in the agreement between the Company and the Union. It states:

> "The payment of bonus on Company's earnings or profit is not considered a sound or satisfactory principle by either party. It is felt by both the parties that relating bonus to production which is directly linked up with workers' effort is a better and more satisfactory principle. In consideration of the above, it is agreed that bonus will not be related to Company's profits or earnings but will only be related to and paid on plant efficiency and output."

The foregoing extract states a valid case against relating bonus to profits. The case, as is well known, rests on the ground that profits are not necessarily made through the efficiency of the workers alone but are dependent on a multitude of factors, such as the efficiency of the plant, organising ability of the management, fiscal policy of the State and the ever-changing market conditions. Nor are the losses suffered by an industrial unit necessarily due to the inefficiency of labour, for even the best managements can do nothing in the face of a declining market or an unfavourable fiscal climate. Further, some managements are so chronically inefficient or the machinery of some industrial units are so old and worn out that they will be unable to produce profitable results even with the best of labour force. And yet, neither managements nor workers have on the whole been able or willing to give up the unwholesome war-time legacy of relating bonus to profits. Even labour tribunals have, by and large, been compelled to recognise profits as the only basis for the determination of bonus. Thus, this evil practice, blessed by the industrial tribunals, recognised by the managements and demanded by the workers, continues to foul the atmosphere of industrial relations. The Indian Aluminium Company and the union of the workers in this enterprise, therefore, deserve to be congratulated on their abandoning the principle of bonus based on profit and adopting, instead, the principle of bonus based on production.

The two schemes incorporated in the agreement are the monthly production bonus scheme and the annual productivity bonus scheme. The first of these is based on every month's overall plant efficiency and recovery. Briefly, certain norms have been laid down for determining such efficiency. A 10 per cent. improvement above this efficiency line will entitle the workers to an additional 1½ per cent. of their total earnings, a 15 per cent. extra efficiency to 2 per cent. of total earnings for each 1 per cent. extra efficiency, and a 15-25 per cent. extra efficiency for 2½ per cent. of total earnings for each 1 per cent. extra efficiency. In addition to this monthly production bonus, the workers will receive an annual productivity bonus. The quantum of the annual bonus will depend upon the overall output. The Company's works at Belur now produces about 6,000 tons of aluminium. At this level, the workers will be entitled to an annual bonus of 8.33 per cent. of their annual earnings. This bonus will rise, in accordance with a graph which forms part of the agreement, to 16.67 per cent. of the earnings at an output of 9,000 tons. Thus, the annual bonus will vary from year to year in proportion to the total annual output.

It should be obvious that a bonus scheme of this kind cannot work in the absence of mutually agreed norms of efficiency and standards of performance. Such norms and standards have been set in the Company's works at all machine centres through a process of job evaluation in which the workers were actively associated with the management. Indeed, it is on the basis of a scientific system of job evaluation that the wage structure in the Company has been formulated. Besides, the agreement has recorded not only the mutually agreed schedule of wages but also a wide range of other benefits. Such benefits include the supply of subsidised canteen food (As. 5 per meal), subsidised grain benefits and free tea and, to the workers on night shift, free tiffin. The Company has already instituted a system of contributory Provident Fund (6¼ per cent. either way) and has agreed to institute a system of gratuity at the rate of half a month's salary for every completed year of service. This gratuity is payable at the retirement age of fifty-five.

There is a provision in the agreement for mutual consultation at several levels. There are no less than five committees—the joint personnel relations committee, the joint production committee, the joint job evaluation committee, the joint standards committee and the [illegible] committee—on each of which the [illegible] and the union are equally represent[illegible] also an elaborate grievance procedu[illegible] ance will first be handled by the su[illegible] by the foreman, next by the super[illegible] finally by the personnel superinter[illegible] worker is not satisfied with the decision given at any of these levels, he will be heard by the joint personnel relations committee. As a last resort, he may, of course, exercise his legal right to take the matter to the State Labour Directorate.

It is small wonder, then, that the Union, which has secured an agreement so favourable to it, should have acknowledged the management's responsibility to maintain discipline and efficiency in the plant and its right (subject to grievance procedure) to hire, discipline and discharge employees for a just cause. It is also not surprising that the Union has agreed that it will not initiate or support any strike or slow-down of work. The working of this agreement, which is a significant experiment in a dynamic and pragmatic philosophy of industrial relations, will be watched with considerable interest in the country.

DOWNWARD TREND IN MARKETS CEASES

CLOTH PRICES—GERMAN BANK RATE—HOTEL INDUSTRY—MEXICAN COFFEE

THURSDAY, 5 P.M.

MARKET GOSSIP

ALL the markets have recovered from the initial shock of the increase in the excise duties on cloth and of the various frightening pronouncements made by the new Finance Minister and the Food Minister on the upward trend in price levels throughout the country. In the share markets, though the trend is still hesitant and bulls have liquidated a good part of their holdings, today's closing rates are well above the lowest levels touched a couple of days ago. Even the textiles, which are vitally affected by the excise duty decision, are at a respectable distance from the bottom. A good part of this modest rally towards the close is probably due to bear covering, for there is yet no sign of bulls having regained their confidence. At the same time, it must be said that there does not appear to have been much liquidation on investors' account. Sooner or later, there may be some buying by the Life Insurance Corporation which had reserved its resources in the past two months for investment in Central and State Government loans. These issues are now out of its way.

While it is true that the technical position of the market has a great say in determining the immediate prospects for equities and while this position may not be quite healthy in respect of some leading speculative counters such as Tata Steels, Indian Irons, Bombay Dyeings and Bombay Burmahs, the Government's decision on cloth excise duties affects only the mill industry and not the rest of the industries. There has been no change in the circumstances which influence the prospects for iron and steel, engineering, chemical, cement, sugar, rubber and plantation industries. All these are doing pretty well. Jute and coal industries are no worse off. If anything, they are in a slightly better position today. True, conditions in the ports are, once again, becoming difficult, owing to unrest among dock labour. But that is about all, so far as the debit side is concerned.

The new Finance Minister, T.T.K., has made several speeches on economic policies during the past one week. Shorn of the verbiage, which abound in these speeches, they point to no fundamental departure in the policies so far pursued. The Government is anxious to keep off rigid controls on production and distribution. Its hands are already full with many administrative problems and management of the industrial and financial undertakings it owns. There is likely to be no change in taxation before the next budget. Likewise, in the monetary sphere, there is little prospect of the Bank rate being put up as an anti-inflationary device, while selective credit controls aimed at preventing hoarding of manufactures and raw materials are possible. But even in introducing such controls care would be taken to see that industrial production is not adversely affected.

A great drive is being launched to increase food production and to keep prices of essentials under control. The signing of a $350-million loan-aid agreement with the U.S. two weeks before is a guarantee against any runaway increase in prices and cost of living. This means that the chances of attaining higher levels of production with a considerable amount of stability in price levels are better now than they were a month ago. The fissiperous tendencies within the country unleashed by the States Reorganisation Scheme have been brought under control. And, what is more encouraging, the authorities have learned a lesson from the recent linguistic disturbances, as witness the reported shelving of the highly controversial report of the Language Commission and the welcome stress by Mr. Nehru on the importance of English. There seems to be a determination at least in the Centre that nothing should be allowed to detract the attention of the people and the Administration from the urgent necessity of implementing the programmes for economic development. Given peace at the international level, there is no doubt that India will make swift strides on the economic front in the next five or six years. There is thus no cause for investors to lose their heart. Even if taxes were increased, as they might be, the net effect in a growing economy would be for the better.

* * * *

Despite the threats held out by the Food Minister and his forecast that foodgrain markets would crash, steady to firm trend prevails in grains and pulses. Among the commodities, oilseeds have made a remarkable recovery from the low levels to which they had dipped last week. And today's closing rates for groundnuts and castorseeds are well above those a fortnight ago. The same is the case with the futures section of the cotton market, too. After going down from Rs. 705 to Rs. 675 during the past two weeks, Jarilla (March) finished today at Rs. 691. In the ready cotton section, it was not difficult to sell at best rates even when the futures swiftly retreated. Its undertone now is fully firm. It will thus be seen that even the sharp increase in excise duty has not had any sustained bearish effect on cotton. This is an indication of the sound statistical position of Indian cotton. It is quite possible that values in the futures section in cotton would have moved up still higher but for the marked fall in equities on the stock exchange. It is a well-known fact that a speculator dabbles simultaneously in more than one market.

The Government of India has decided to resort to a novel method for bringing down cloth prices. It proposes to publish fair prices for certain chosen popular and representative varieties of cloth and give wide publicity to them, with an appeal to the public not to pay more than these prices. But this is an experiment in price control the practical value of which is dubious. In India, cloth is being produced in hundreds of varieties and fixation of fair prices for a few varieties is not going to provide much assistance to the public. Further, it will be next to impossible to convey the fair prices to every nook and corner of this vast country. Again, in a sellers' market, those who are in need of cloth cannot dictate their prices. On such festival occasions as *Pooja*, *Divali* and *Sankaranthi*, when most people replenish their wardrobe, cloth is bound to be brought at whatever prices it is available.

Although the list of fair prices will not be of much help to the public, it will become very handy to the politicians, labour leaders and propagandists for giving a bad name to millowners and trade, indeed, to the whole business community. They will, once again, be accused of profiteering at the expense of poor people. Thus, a new stick has been produced with which the private sector will be beaten and branded in public.

In their own interest, the millowners will do well to revive the practice of marking on every piece of cloth, if not on every yard, the amount of excise duty paid per yard. We made a mistake last week in assuming that this practice was being continued. It was abandoned soon after price control was withdrawn. It is now printing the excise duty only on the bales and not on every piece. By marking the excise duty and cess on the face of every piece of cloth, the industry will enable the public to know how much it is paying by way of these taxes to the Central Government alone. The revival of this practice may cost the industry a little more but it is worthwhile incurring that charge.

* * * *

In a world of rising Bank rates it is an event of no small importance that W. Germany should have thought it necessary to reduce its Bank rate. Most countries have had to face the threat of inflation and to raise their bank rates, in order to stem the boom. W. Germany's Central Bank Council, however, announced last week its decision to reduce the discount rate from 5½ per cent. to 5 per cent. and the rate for advances from 6½ per cent. to 6 per cent.

At first sight, it might look as though West Germany is somewhat concerned over the prospect of a recession in economic activity. A closer look at the country's economy will, however, reveal that its economy continues to be strong and buoyant as ever. Indeed, the country's currency is one of the strongest in the world today. Most of the industries are reported to be doing very well. The output of automobiles is 19 per cent. higher than last year, steel output 9.5 per cent. higher and mechanical engineering goods production about 20 per cent. higher. These trends are not indicative of a recession which needs to be fought with a lowering of the Bank rate.

Why, then, has W. Germany reduced the Bank rate? It would appear that the authorities have noted with some concern the recent slight decline in building activity. Even here, it is not so much the actual decline as the threat of a decline that has worried the authorities. Thus, the number of houses under construction is reported to be the same as last year but contracts on hand are less, so that it is feared that building activity might slow down next year. It is this fear of a slackening in building trade—although all other sectors of the economy are in good shape—that has induced the authorities to take a decision in favour of a lower Bank rate.

Incidentally, this decision shows what great importance the authorities in that country attach to the maintenance of building activity on a high level. Be that as it may, the primary reason why building trade shows signs of recession is that it finds it difficult to raise money on its 5½ per cent. debentures in a market where industrial debentures carry as high a rate as 8 per cent. Clearly, W. Germany is still a land of high money rates, the recent reduction in Bank rate notwithstanding.

Further, it must be noted that the Bank rate was raised twice during the course of the current calendar year—once, from 3½ per cent. to 4½ per cent. in March and then from 4½ per cent. to 5½ per cent. in May. Thus, the ½ per cent. reduction, now effected only partially annuls the increase in Bank rate that has taken place this year. At its latest rate, namely, 5 per cent. it is still 1½ per cent. above the rate early in the year.

India has often been described as a paradise for tourism, but not until recent years has any concerted effort been made to attract tourists and provide amenities for them. Besides being a centre of attraction for tourists, India has in recent years been attracting many foreign visitors. This is due to many reasons. In the first instance, politically, India's stature among the nations of the world has risen considerably and many nations are looking to India for guidance. This naturally induces political leaders from many countries to pay frequent visits to India. Secondly, on the economic front also our country has made and is still making vast strides. It is on the threshold of launching a large number of modern heavy industries for which it is seeking the assistance of developed countries. India's trade with foreign countries is, therefore, steadily rising. Expansion of economic activity thus naturally attracts a number of foreign industrialists, traders, financiers, technicians, etc. Exchange of cultural missions and visits of educationalists and sportsmen have also grown in recent years. All these mean the promotion of tourism. It is a happy augury that the Government of India itself has taken steps to encourage tourism as a valuable means of earning foreign exchange and initiated several measures to make it a success.

In the expansion of tourism, the hotel industry has an important role to play. New Delhi, as the capital of India and as a city of international reputation, and Srinagar, as a first class holiday resort, offer great attraction for developing this industry. As it is, the hotel accommodation in New Delhi and Srinagar is very limited and the pressure on such accommodation is bound to grow in the years to come. The present accommodation in hotels in Delhi is only 900 rooms and, in the estimate of the Union Ministry of Transport, at least another 1,100 rooms are required. There is, therefore, considerable scope for developing hotel industry in the capital alone. In order, however, to attract foreign tourists and make them as comfortable as they are in their own countries, the amenities to be provided in the hotels must be most modern. Thus, there is a large scope for new ventures in this field and it is to fit into this situation that the East India Hotels Ltd., a public limited company, formed in 1949, under the managing agency of Oberoi Hotels (India) Private Ltd., Calcutta, has drawn out proposals for expanding its activity.

The Company will have a new hotel project at New Delhi and will also purchase the Oberoi Palace Hotel at Srinagar. The hotel project at New Delhi will be a small town in itself and is expected to have 200 rooms with 375 beds equipped with all modern amenities. The Oberoi Palace Hotel started functioning in June 1955 and has the reputation of being one of the finest resort hotels in the world. In order to finance these two projects, the Company will come out, in a few days, with a public issue of capital.

The authorised capital of the Company is Rs. 2 crores, made up of 100,000 6 per cent. (tax-free) cumulative preference shares of Rs. 100 each and 1,000,000 ordinary shares of Rs. 10 each. Of this, 100,756 ordinary shares of Rs. 10 each have so far been issued. It is now proposed to issue 30,000 6 per cent. tax-free cumulative preference shares of Rs. 100 each and 599,244 ordinary shares of Rs. 10 each. This will bring the issued capital to Rs. 1 crore, made up of 30,000 preference shares of Rs. 100 each and 700,000 ordinary shares of Rs. 10 each. Of the present issue, the promoter of the Company, Mr. M. S. Oberoi, and his friends will take up 99,244 ordinary shares of Rs. 10 each and 150,000 ordinary shares will be allotted to the owners of the Oberoi Palace Hotel as part of the purchase price of Rs. 15,10,655—the small balance being payable in cash. Accordingly, only the remaining 350,000 ordinary shares of Rs. 10 each and 30,000 preference shares of Rs. 100 each are available for public subscription. A sum of Rs. 25 per preference share and Rs. 2-8 per ordinary share are payable on application and like sums on first call, the balance being callable in two equal instalments. The Company is likely to raise a debenture capital of Rs. 25 lakhs later on.

In view of the vast scope and good prospects, the Directors expect to earn a gross profit of about Rs. 34 lakhs even in the first year after the completion of its project, which, after providing for depreciation and taxation and setting aside Rs. 6.50 lakhs to the reserve fund and sinking fund, will be sufficient to pay the preference dividend and declare a dividend of 15 per cent. on ordinary shares. The profit estimate has been made on the basis of 60 per cent. average occupancy of the hotel and taking into account depreciation relief. In the course of the next five years, the average occupancy is expected to grow to 90 per cent. and the corresponding increase in earnings, it is expected, will more than compensate the incidence of higher tax from the sixth year onwards and thus enable the Company to maintain the dividend, if not raise it.

* * * *

The Forward Markets Commission has had discussions with the representatives of sugar trade in Bombay for regulating forward trading in this commodity. The Commission's task here does not seem to be an easy one, because the Bombay sugar traders are not a united lot. For some years now, there have been two associations, namely, the Bombay Sugar Merchants' Association and the Shakar Vyapari Mandal Ltd. Although these Associations are supposed to represent only the trade, they are dominated by a handful of individuals who have a dual role as both producers and dealers. Since no amicable understanding could be reached among them, it may be necessary for the Forward Markets Commission to impose its decision on the trade. It is a pity that, even when faced with the prospect of control by the State, the sugar traders are unable to sink their differences and forge themselves into one body to safeguard their interests and clear the deck for clean forward trading which will raise them in the estimation of the public sector.

Lack of unity among the Bombay sugar traders is also responsible for their not getting representation on the Development Council for Sugar industry which was recently reconstituted. In fact, the first meeting of the reconstituted Council was held some weeks ago. The Government's reported decision not to give this seat to one who plays the dual role of a producer and a dealer is highly commendable, and it is to be hoped that it will not change its mind due to any pressure tactics. If it was thought necessary to give separate representation for sugar trade on the Development Council, it would not be in keeping with that decision to fill that place by selecting a person who is both a sugar millowner and a merchant, for such a person will view a given problem more from the angle of a producer than that of a trader. It is true that a merchant is [illegible]

EQUITIES RULE EASY

HEAVY DROP IN TEXTILES

(From Our Own Correspondents)

BOMBAY, 13*th September*

FOR the third week in succession the share market was easy, with an all-round setback in values, under the leadership of textile shares. The general economic outlook for the country on which the operators had pinned their faith and rigged up equity prices three weeks back did not undergo any change for the worse during this period; in fact, the overall conditions continue to be promising with better opportunities for various domestic industries, particularly steel, cement, capital equipment, etc. Nevertheless, there were no signs during the week under review of restoration of the confidence of the operators which had been badly shaken in the previous two weeks.

There was a heavy shake-out in the earlier half of the week on account of cut-loss liquidation by leading operators and end-of-account considerations. The new account did not show any change for the better in sentiment. On the other hand, there was a further setback on Monday this week, following the Finance Minister's statement in Parliament on Saturday last to the effect that price controls on cloth would be reimposed, if the upward trend in prices continued. He also announced that the Government would publish within a few days fair prices for cloth and hoped that the public would refuse to pay more. Although many of the millowners in Ahmedabad and Bombay announced, in the meantime, their decision to bear the additional excise duties themselves without passing them on to the consumers, it did not serve to improve matters, as it would mean a cut in their profit-margin. The heavy selling pressure in textile counters affected sentiment in other sections also. Yesterday, however, there was a slight recovery on abatement of selling and scattered replacement buying. This improvement was more than wiped out in many counters today and the undertone at the close was quiet.

In the steel section, Tata Ordinaries gave way from Rs. 199-12 to Rs. 192-12. After a recovery to Rs. 197-4, they retreated to Rs. 195-8 at the close. Indian Irons dipped from Rs. 36-5½ to Rs. 35, but closed at Rs. 35-6½.

Among textiles, Bombay Dyeings slumped from Rs. 653-12 to Rs. 626-4 before gaining to Rs. 642-8. The closing was, however, lower at Rs. 635. Century retreated from Rs. 566-8 to Rs. 547, but finished at Rs. 553-8. Kohinoors were marked down from Rs. 365-8 to Rs. 350-8, but the loss was very nearly recouped when they closed today at Rs. 364-8. Central Indias were lower by Re. 1 at Rs. 152-8. Colabas shed Rs. 7 to Rs. 94-8, Dawns Rs. 18-2 to Rs. 165-10 and Edward Textiles Rs. 15 to Rs. 350. Finlays declined by Rs. 2 to Rs. 353-8, Gokaks by Re. 1-8 to Rs. 242-8 and Indu Ordinaries by As. 8½ to Rs. 12-7. Indore Malwas provided one of the exceptions with a rise of Rs. 1-14 to Rs. 151-12, as also Khataus with a gain of Rs. 2-8 to Rs. 258-12. Lakshmis shed Rs. 27-8 to Rs. 725, Minervas Rs. 4 to Rs. 98-8, Models Rs. 5 to Rs. 178-12 and Mysore Spinnings Rs. 13-12 to Rs. 120. New Greats moved down by Rs. 2 to Rs. 250, New Kaiser-I-Hinds by Rs. 17-8 to Rs. 127-8 and Podars by Rs. 3-12 to Rs. 172-8. Shree Niwas lost Rs. 6-4 to Rs. 225. Simplex Rs. 3-8 to Rs. 206, while Standards gained Rs. 18-12 to Rs. 481-4. Svadeshis were marked down by Rs. 5-8 to Rs. 248, while Swans gathered Rs. 2-8 to Rs. 452-8.

Bank shares were also quiet. Barodas lost Re. 1-8 to Rs. 99-8 and Centrals Re. 1-8 to Rs. 51-8. Despite the announcement of the bonus issue, Bank of Indias did not attract support and were dull at Rs. 172. Punjab Nationals dropped Rs. 3 to Rs. 57-8. United Commercials were quiet at Rs. 57-8.

Insurance shares attracted some selling and prices were on the low side. New Indias eased by Re. 1-8 to Rs. 46-8. Empire of Indias shed Rs. 25 to Rs. 350 and Vulcans were done Re. 1 lower at Rs. 16. British India Generals were unchanged at Rs. 14.

Electricity shares displayed a weak tone. Ahmedabad Electrics were down by As. 15 at Rs. 98-2. Bombay Suburbans were done Re. 1-14 lower at Rs. 108-7. Surat Electrics lost As. 10 to Rs. 118-12. Tata Hydros shed Re. 1 to Rs. 127. Tata Powers Rs. 12-8 to Rs. 1.285 and Andhra Valleys Rs. 10 to Rs. 1,232-8.

Miscellaneous section moved in sympathy with the general trend. In the sugar group, Belapurs shed Re. 1-8 to Rs. 247-8 and Phaltans Re. 1 to Rs. 162, while Walchandnagars showed no change on balance at Rs. 270. Among cements, A.C.C., after receding from Rs. 205-8 to Rs. 198-4, recouped to Rs. 202 at the close. Digvijays were a fraction better at Rs. 200-12. Dalmias were As. 2 lower at Rs. 13-2. In the engineering and mining group, Alcocks moved down by Rs. 5 to Rs. 341-4 and Tata Locomotives by Rs. 3-8 to Rs. 170-8. Premier Constructions, however, provided a feature with a rise of Rs. 4 to Rs. 219. Shivrajpur Syndicates also were in the limelight with a gain of Rs. 2 to Rs. 86. Indian Coppers were steady at Rs. 7-5 and B.B. Petrols at Rs. 3-13½.

In the shipping and transport group, Scindias were better by As. 2½ at Rs. 19 and Great Easterns by As. 12 at Rs. 20-4. Premier Automobiles declined by Re. 1 to Rs. 106-8, while Hindustan Motors were fairly steady at Rs. 10. Among miscellaneous industrials, Bombay Burmahs (old) slumped from Rs. 750 to Rs. 718-12 before recovering to Rs. 734-6 at the close. National Rayons were lower by only Rs. 2 at Rs. 261, although they touched at one time a low of Rs. 249. B.I.Cs, were quiet at Rs. 10-4. Dhrangadhra Chemicals gathered Rs. 2-8 to Rs. 142, while Tata Chemicals were done As. 5 lower at Rs. 19-6. Tata Oils gained Re. 1 to Rs. 56.

* * * *

Calcutta Stock Exchange

CALCUTTA, 12*th September*

Trading on the Calcutta Stock Exchange during the week under review was devoid of cheer and, in the resultant lethargy, prices declined. In view of the proximity of the long spell of *Pooja* holidays, operators desired to lessen commitments. The general trend affected even jute shares which, notwithstanding report of a substantial decline in stocks of finished goods with mills and moderate gains in prices of jute goods, gave way to lower levels. Ordinarily, the higher trend in commodity markets should have imparted cheer to trading on the Stock Exchange, but the continuance of the upward trend in prices of essential commodities and the steep rise in cloth prices, following the enhancement of excise duties, caused caution, thanks to fears that these rises might give rise to labour demands and industrial costs might go up. Another factor for the caution was the higher carry-forward charges.

A further decline in prices in textile shares was recorded. Kesorams gave way from Rs. 18-14 to Rs. 18-1, while Jayshrees at Rs. 7-8 were fully steady. Elgin Mills, after weakening to Rs. 27-6 from Rs. 27-10, recovered yesterday to Rs. 27-14. Bengal-Nagpurs moved down by As. 6 to Rs. 9-6. Dunbars were hammered down to Rs. 277, as against Rs. 302 previously.

Among coals, Burrakurs were the centre of attraction and, in the several transactions that followed, the price picked up to Rs. 16-6 from Rs. 14-12 but closed higher at Rs. 15-12. At Rs. 9-12, South Karanpuras were better for some time, but, subsequently, declined to Rs. 9-9. Khatras Jherriahs encountered good support and rose by Re. 1-8 to Rs. 62. Central Indias remained steady at Rs. 7-9. On the other hand, Equitables declined by As. 4 to Rs. 30-6. Standards lost a like amount to Rs. 23-4.

Judging from the encouraging reports in the jute goods market, activity in jutes was poor. But one solid cause why operators did not rush in to accept offers of jutes at the existing lower levels was their belief that the present higher prices for jute goods would not be maintained. As a result, they desired to wait before increasing their commitments, and the forthcoming holidays added rhyme to reason. Howrahs declined by As. 8 to Rs. 23-12, following the publication of a not-too-encouraging working report. However, on subsequent covering demand, the rate recovered to Rs. 24-11. Champadanys changed hands at Rs. 159, as against Rs. 165. Indias were enquired at Rs. 143-8, as against Rs. 141 previously, and Kinnisons at Rs. 179-8, as against Rs. 178. Northbrooks were shown interest and at Rs. 27-8 held a firm ground. New Centrals hovered around Rs. 16-7, after being earlier at Rs. 16-13.

In consonance with the general trend, engineering scrips eased. Jessop and Cos. were for most part of the week quiet at Rs. 33-12 before recovering to Rs. 34-2 yesterday. Braithwaites were done lower by As. 12 at Rs. 30-4. National Irons, however, were an exceptionally striking feature and rose from Rs. 7-12 to Rs. 8-11. Indian Irons opened at Rs. 36-7 and, following heavy selling, gave way to Rs. 35-1. There was some amount of bear-covering at this stage, but, in the general weakness, the rate could not recover beyond Rs. 35-7.

Excepting for some selected features, miscellaneous industrials were quiet. Indian Aluminiums gathered further strength at Rs. 25 and Aluminium Corporations were maintained at Rs. 12-11. Dunlop Rubbers were steady at Rs. 29-10, as were Sone Valley Cements at Rs. 8-11. National Carbons were bought at rates from Rs. 29 to Rs. 29-6, with British Burma Petroleums being fractionally better at Rs. 4 for a time before closing at Rs. 3-12. Assam Saws were unchanged at Rs. 4-10. India Steamships continued to be steady at Rs. 9-12. India Pulps eased by As. 2 to Rs. 25-4. Titaghur Papers dropped As. 14 to Rs. 40-2. From Rs. 40-2, Orient Papers fell to Rs. 39-10. Calcutta Tramways, however, continued to meet with demand and changed hands at Rs. 19-1 before sagging to Rs. 18-10. From Rs. 23-13, Martin Burns were pushed up to Rs. 24-7, and Indian Coppers continued to demand attention at Rs. 6-13.

* * * *

Madras Stock Exchange

MADRAS, 11*th September*

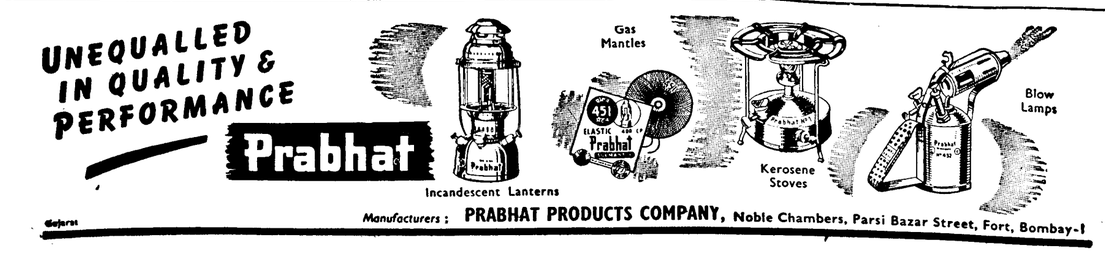
The Madras Stock Exchange ruled distinctly easy during the week under review also and there was a further drop in values. Selling was very much pronounced in the textile section, the chief bearish influences being enhanced excise duty on mill cloth and fears of re-imposition of controls. Tea, rubber and coffee shares were subjected to continued pressure of offerings, induced by the Plantation Enquiry Commission's recommendation to limit dividends, as well as to permit repatriation of profits only after ensuring necessary financial provision for replanting. Lack of support accounted for a dull tone in sugars. In sympathy with the general trend, miscellaneous industrials lost ground.

Values of most textile shares staged a setback. Ranga Vilas were the worst sufferer, their quotation tumbling down by Rs. 7 to Rs. 99 *ex-div.* Coimbatore Spinnings fell by Rs. 5 to Rs. 113 *cum-div.* Metturs dropped a like amount to Rs. 485. Rajapalayams and Vasantas receded by Rs. 4 each to Rs. 166 and Rs. 341, respectively. Venkateses decreased by Rs. 3 to Rs. 180. Bangalore Woollens, Coimbatore Cottons and Loyals lost Rs. 2-8 each to Rs. 580, Rs. 390 and Rs. 55, respectively. Janardhanas and Krishnarajendras finished each Rs. 2 lower, the former at Rs. 122 and the latter at Rs. 127. Lakshmis declined by a rupee to Rs. 249. Buckinghams were done at Rs. 201, Kotharis at Rs. 19-6, Maduras at Rs. 51-8, Pankajas at Rs. 94, Premiers at Rs. 253-8, Vijayakumars at Rs. 148 and Virudhunagars at Rs. 40; all these rates were As. 8 lower as compared with the last week-end rates.

There was a wave of selling in tea company shares. Mlamallays slipped by Re. 1-12 to Rs. 64. Udayagiris were hammered down by Re. 1-2 to Rs. 17-12. Talayar Teas slumped from Rs. 13-10 to Rs. 13-5-6 *cum-div.* (final), reflecting operators keen disappointment over dividend. The directors of the Talayar Tea Co., Ltd. have recommended a final dividend of 6¼ per cent. for the year ended 31st March 1956, making a total of 12½ per cent., as compared with 16¼ per cent. for the previous year. Peermades receded by As. 12 to Rs. 35-12. Stanes Amalgamateds and Twyfords declined by As. 8 each to Rs. 26 and Rs. 21-8, respectively. Among rubber shares, Travancore Rubbers dropped As. 12 to Rs. 25-8. Rajagiris recorded a loss of As. 6 to Rs. 26-2. Vaikundams gave way from Rs. 35 to Rs. 34-12. Thirumbadis were a shade easy at Rs. 2-6 Malankaras were done at Rs. 36-4 *cum-div.*, as against Rs. 35. The directors of the Malankara Rubber and Produce Co., Ltd. have declared a dividend of 32½ per cent. on ordinary shares for the year ended March 1956, which compares favourably with 22½ per cent. for the previous year. Coffee shares were generally neglected. Consolidateds declined by As. 2 to Rs. 21-8. Amalgamateds were quiet at Rs. 12-10, as also Coffee Lands at Rs. 26-10. Kadurs at Rs. 2-12 *ex-div.* and Mysores at Rs. 3-3-6.

Sugar shares succumbed to the general weakness. E.I.D.'s receded by As. 6 to Rs. 31-2. Travancores lost As. 3 to Rs. 14-6. Deccans eased by As. 2 to Rs. 12-12. Jeypores were dull at Rs. 14, K.C.P.'s at Rs. 127-8 and Vizags at Rs. 7-2. United Breweries, however, evoked special [illegible] and advanced by Rs. 5 to Rs. 200.

In the miscellaneous section, [illegible] neglected, the quotation sliding dow[illegible] Rs. 6-2. Aluminium Industries and Da[illegible] shed As. 4 each to Rs. 22-8 *cum-d*[illegible] Rs. 15-8, respectively. Mysore Golds[illegible] on offer As. 3 lower at Rs. 2-6. Andhr[illegible] lost As. 2 to Rs. 15-12. F.A.C.Ts eased by an anna to Rs. 7-0-6. A. V. Thomas (Allep.) gave way from Rs. 16-14 to Rs. 16-4 *cum-div.* The directors of the Company have announced a dividend of 10 per cent. for the year 1955, same as that paid last year.



NEWS IN BRIEF

THE Railway Board has decided to send two railway officers to Japan for a six-month training in steel casting under the technical co-operation scheme of the Colombo Plan.

The Soviet Government has offered to send a team of experts to discuss and examine in detail India's requirements of optical glasses. Some Russian experts, who are already working on a preliminary project report, are of the opinion that an economic plant for optical and opthalmic glass should be of a minimum capacity of 250 tons.

The Chittaranjan Locomotive Works, which recently turned out the 400th locomotive, touched a new production peak by completing 14 locomotives during August 1956. The output at Chittaranjan has increased rapidly from 6 locomotives per month in the early part of 1954 to ten per month during January to June 1955. Thereafter, production increased to 11 locomotives per month and subsequently 12 per month.

The Government of India has sanctioned a new housing scheme for coal miners, under which 30,000 two-roomed houses will be built within the next five or six years. The entire cost of the construction will be met out of the Coal Mines Labour Welfare Fund. The land for the construction of houses will be provided by colliery-owners who will also be responsible for the maintenance of the building while the workers will be charged a rent of Re. 2 per mensem.

A new trading body, an amalgamation of Delhi's three exchanges, namely, the Punjab Exchange, the Uttar Bharat Exchange and the Vishnu Exchange has been registered under the name of Rajdhani Grains and Jaggery Exchange Ltd. The capital of the new exchange is proposed at Rs. 5 lakhs divided into 1,000 shares of Rs. 500 each. It is learnt that no shareholder will hold more than five shares in the trading body. The security for trading members and brokers will be Rs. 5,000 and Rs. 500, respectively.

The expert committee on the synthetic oil project has submitted its report. The Committee is believed to have recommended a project for the production of about 800,000 tons of soft coke and 121,500 tons of synthetic petrol per annum—about 15 per cent. of the estimated requirements of motor petrol of the country at a cost of Rs. 20 crores which includes the capital requirements for coal production and a miners' colony. The use of about 1.2 million tons of non-coking coal per annum, from the Jambad seam has also been suggested.

Four more wagon building firms have been licensed by the Railway Board in addition to the three already sanctioned to the private sector. The firms will set up plants in Madras, Bharatpur, Kanpur and Bareilly. Each of these plants will be capable of manufacturing 1,000 wagons a year and the capacity will be progressively increased after three years. These firms are expected to manufacture all the components of freight wagons, excepting steel castings, and help the railways reach self-sufficiency in the matter of wagons in the next three years.

A private limited company, entirely owned by the Government of India, has been registered at Gwalior to take over the control and management of Government's heavy electrical equipment project. The Company, to be known as the Heavy Electricals (Private) Ltd., will have an authorised capital of Rs. 30 crores. The factory, to be located at Bhopal, is being designed to manufacture hydraulic turbines and generators, transformers, static capacitors, switchboards and control desks, traction motors, industrial motors of 200 h.p. and above and other items.

The Union Government has deputed Mr. M. S. Venkataraman, Cochin Port Administrative Officer, to study the working methods in the major ports of the U.K. and the Continent. During his stay there, Mr. Venkataraman will study, among other things, the loading and unloading of cargo like iron and steel, heavy lifts and the like, so that the techniques employed for their quick clearance could be adopted in India's major ports to expedite the turnround of ships so as to cope with the heavy transport movement expected in the second Plan period.

According to Dr. Homi J. Bhabha, Chairman of the Atomic Energy Commission, the possibility of manufacturing heavy water, used as moderator in atomic reactors, at Sindri has been investigated and a decision on the project is expected to be taken soon. He said that the fact that much of India's large requirements of ammonium sulphate or nitrate was to be manufactured in State-owned fertiliser plants would make it possible for the country to produce very considerable quantities of heavy water as a by-product in due course. Production of heavy water at the Nangal fertiliser plant, now under construction, is expected to begin by 1960.

The Government of India has decided to construct and maintain consumer price index numbers for agricultural labourers as required under the Minimum Wages Act. It is felt that the fixation of minimum wage in the agricultural sector should bear a relation to the rural cost of living. The working class consumer price index numbers, which are at present being issued, relate only to industrial workers. The Directorate of National Sample Survey has been entrusted with the collection of weekly retail prices for 76 selected commodities from 3,600 villages, the latter being the number of villages to be sampled in a year at the rate of 300 villages every month.

A 28-member Purchase Advisory Council has been set up by the Government of India, with Sardar Swaran Singh, Minister for Supply as Chairman, in co-operation with the industrial and trading community. The Council has the same status as the import and export advisory councils and will channelise governmental purchases from the manufacturing industries, including cottage and village industries. The Council will have five representatives of the Federation of Indian Chambers of Commerce and Industry and three from the Associated Chambers of Commerce and Industry, in addition to representatives of the Union Ministries of Commerce and Industry, Defence, Production, Railways, Communications and Finance.

Investigations of the Neiveli lignite field have revealed a concentration of 200 million tons of lignite in an area where conditions are favourable for mining. The technical consultants Messrs. Powel Duffryn have estimated that the deposits in this area will last 57 years at anannual rate of production of 3.5 million tons. The investigations have also proved the feasibility of economic mining. The cost of mining the lignite is placed at Rs. 5 to Rs. 5-8 per ton *plus* a pumping cost of Rs. 1-9 per ton. The estimate is within the limits prescribed by the Fertiliser Production Committee for ensuring the economic manufacture of fertilisers at Neiveli. It is felt that the cost of production can be lowered by about a rupee per ton if the output is stepped up.

The Assam Oil Company has announced that Well No. 15 in Tengakhat, Hugrijan prospecting licence area, has been completed without striking oil. Since mid-1953 eighteen wells have been completed in the alluvial areas of the Brahmaputra Valley of Upper Assam. Among these four wells, including the Tengakhat well, failed to find oil. The effect of this disappointing result is that the extent of the oil-bearing area to the north-west of the original discovery well at Nahorkatiya is less than was expected. Meanwhile, Well No. 19, situated on the North of the discovery well, is drilling ahead. Work on other new locations is also in progress. Arrangements to test Well No. 1 at Moran, a tea area between Sibsagar and Lakhimpur Sub-divisions, are in hand. This is the deepest well drilled in this sub-continent, being 13,739 feet (nearly 2½ miles) deep.

* * * *

From Abroad

The Egyptian Commerce Minister has announced that the Government has banned all imports from Britain.

The United States Steel Corporation has filed applications for tax assistance for a $94.4 million expansion programme of its Fairless Works at Morris Ville.

A record 66,752,000 persons held jobs in the U.S. during August, 1956. The number of unemployed aggregated 2,195,000 in mid-August, as compared with 2,833,000 in July.

Ceylon's House of Representatives has passed a Government Bill seeking to set up a 15-member Planning Council, with the Prime Minister as Chairman, to direct the Island's economic activities. The Bill now goes to the Senate.

During the period January to July 1956, Ceylon had a favourable trade balance of the order of Rs. 8.86 crores, due mainly to heavy shipments of rubber to China and the general rise in export of rubber and tea.

Two major Ceylon tea workers' unions have threatened a nation-wide strike, unless their demands for gratuities are met. Already 2,200 tea workers are striking at Matugama for a gratuity at the rate of one month's pay for every year of service.

The amount of Norwegian merchant tonnage increased by 188,000 gross tons in the second quarter of this year. In the first quarter, it increased by 142,000 tons. By the end of June, the merchant fleet numbered 6,182 vessels of 8,097,000 gross tons.

An impressive increase in United States Synthetic Rubber stocks from about 170,000 tons at the end of June to about 188,000 tons at the end of July is reported by the Natural Rubber Bureau. This compares with a stock of only 102,000 tons of natural rubber.

Ceylon, Japan and Egypt may enter into a trilateral trade agreement to enable Egypt to overcome sterling difficulties preventing it from buying tea from Ceylon. The arrangement contemplated will enable Egypt to buy tea from Ceylon and repay with credits which it has earned in Japan through cotton sales.

A Norwegian trade and industrial delegation, under the chairmanship of the Trade Minister, Arne Skaug, has left Oslo for Moscow. The delegation which had been invited by the Soviet Union will spend a fortnight there, visiting Kharkov, Stalingrad, Gorki and Leningrad and Moscow.

According to the Ministry of Labour, total unemployed persons in Britain on 13th August last was 267,000, an increase of 28,000 over the mid-July total. Those unemployed represented 1.2 per cent. of the estimated number employed, compared with 0.9 per cent. in August 1955. The total working population of Britain was estimated at the end of July at 24 million.

Contracts worth more than £2,000,000 have been awarded to British firms for work in connection with the Zambezi hydro-electric project at Kariba, in the Federation of Rhodesia and Nyasaland. One British company has received a contract for the supply and installation of switchgear at Kariba and various sub-stations to the value of £2.1 million.

President Eisenhower has formed a citizens' committee to "review United States foreign aid programmes and to make recommendations as to the future policy of the government." The group will be headed by Mr. Benjamin Fairless, a former president of the U.S. Steel Corporation, and other members are to be named later.

PERSONAL

MR. C. Ramasubban, Member, Tariff Commission, whose term of office is due to expire on 15th November 1956, has been re-appointed as Member for a further term of three years.

Dr. Nagendra Singh, Director-General of Shipping, who is the leader of the tripartite Indian delegation to the forthcoming Preparatory Maritime Conference of the I.L.O. in London, left for the U.K. on Sunday last.

Mr. T. Swaminathan, Minister for Economic Affairs, Office of the Indian High Commissioner in London, has arrived in India on a month's visit for routine consultations.

Mr. K. F. Harding, General Manager and Secretary of the Prince Rupert Fisherman's Co-operative, Prince Rupert, British Columbia, Canada, has been appointed by the Food and Agricultural Organisation, Rome, as a fish marketing economist in India.

Mr. K. D. Malaviya, Union Minister for Natural Resources, is leading a delegation of geologists and geophysicists to Canada, United States, France, Holland and the U.K. The delegation will study the working of the petroleum industry and petroleum laws in these countries.

Dr. Sudhir Sen, formerly Secretary of the Damodar Valley Corporation and later General Manager of the Great Eastern Shipping Co., Ltd., has been appointed Director of the Programme Division of Technical Assistance Board, United Nations. Dr. Sen left for New York last week to take up the appointment.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 12*th September*

Jute Mills

In accordance with an agreement entered into by all the jute mills in Bengal, excepting one or two small establishments, the working hours of the mills were reduced from 60 to 54 hours a week with effect from June 30, 1930, with one week off per month until the end of December 1930. From April 1 to June 29, 1930, multiple shift mills worked 4 days of 12½ hours, and 4 days of 13½ hours and one day of 12 hours in alternate weeks and single-shift mills worked either 5 days of 11 hours and one of 5 hours per week, or 6 days of 10 hours. From June 30, 1930 to March 1, 1931, multiple shift mills worked 4 days of 13½ hours, while single shift mills worked either 4 days of 11 hours and one day of 10 hours or 5 days of 10 hours each per week, and from March 22 to March 31, 1931, multiple shift mills worked 2 days of 13½ hours and one day of 13 hours per week and single shift mills worked 4 days of 10 hours per week. From July 28, 1930 to February 28, 1931, all the mills were, entirely closed down for eight weeks spread evenly over that period. With effect from March 2, 1931, 15 per cent. of the looms in the membership of the Indian Jute Mills' Association were sealed. The number of looms at work in jute mills in the membership of the Association on January 1, 1931, was 57,357, as against 50,297 on January 1, 1930. The supply of labour in jute mills was plentiful throughout the year; but the value of jute mills machinery imported fell from Rs. 142.55 lakhs to Rs. 81.28 lakhs.

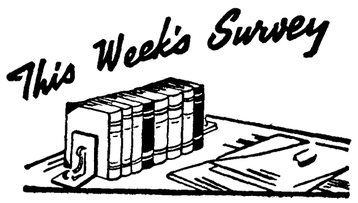
The U.S. Export-Import Bank has announced that it will consider loans for overseas buyers of agricultural surpluses in situations where credit is not readily available from customary commercial sources. Such loans would be for six months to one year, with longer terms permitted under special circumstances. The new financing is available for export of fifteen commodities including cotton, rice and wheat.

The West African Lines Shipping Conference, which serves shipping routes between the U.K., Europe and the West Coast of Africa, has decided, in spite of rising cost, to stabilise the general level of freight rates till 31st March 1957. An announcement by the Conference pointed out that, since September 1955, the Conference lines have maintained a standstill on the general level of freight rates.

The Thai Government is planning to build two oil refineries at an estimated total cost of 23 million ticals. Crude oil resources have been discovered in some areas of Thailand which, according to Government experts, are of high grade and would yield 20 per cent. benzine and 30 per cent. of lubricating oil. A Japanese company has expressed interest in this venture and has offered to build the refineries and to supply the necessary technical know-how.

Two major tea blenders in Britain, Brooke Bond and J. Lyons and Co., have announced increases in the retail prices of their top-trade teas as a result of the rise in the London auction prices of the highest quality teas. Brooke Bond is to put up the price of two of its teas by 4*d.* a pound in the middle of this month and Lyons and Co. is increasing the price of its orange label tea by 4*d.* a pound as soon as stocks at the present price run out.

According to a F.A.O. report, circulated to the members of the 22-nation F.A.O. Council, world agricultural output rose by about three per cent. in 1955-56, as compared with the previous year; but the main increases were in the areas most troubled by surpluses. Output rose considerably in North America for the past three years, despite acreage limitations in the United States. In the rest of the world, increases were smaller, though the Far East registered its largest gain for some years. "Production developments in 1955-56 thus," observes the report "did nothing to reduce the long-standing inequalities between the well-fed and under-fed regions."



EQUIPMENT FOR RIVER PROJECTS

THE spate of criticism about the working of river-valley projects, which has emanated from Public Accounts and Estimates Committees and Audit Reports, has generally centred round nugatory or wasteful expenditure, and irregularities in the maintenance of stores records. Yet another criticism is that much of the equipment used on the projects is imported from abroad and that no serious attempt has been made to manufacture them in the country. In this context, the report of the Rates and Costs Committee (Chairman: Mr. P. C. Agarwal, Retired Chief Engineer, Uttar Pradesh) will be welcomed, for it makes several suggestions designed to place the execution of the projects on a more regular and economical basis.

The Committee, which was appointed two years ago, was asked to recommend a schedule of rates which could be used as a basis for all projects with such modifications as *might* be necessary, having regard to local conditions; to draw up a standard analysis of rates of main items of work, to examine the causes which made for differences in rates and to suggest a uniform cost control organisation for adoption on river valley projects. It was also asked to draft account rules and forms for the maintenance of stores, special tools and plant and machinery. The Committee, which has covered all this ground in its report, is said to have made an on-the-spot study of several projects including the Bhakra Nangal, Mayurakshi, Hirakud, D.V.C., Gangapur, Mata Tila Dam and Tungabhadra. Indeed, the Committee has examined the working of at least one project in each of the States in which important projects are located. Both the Government and the Comptroller and Auditor-General are now engaged in examining the Committee's recommendations.

The advisability of standardising the principal items of construction equipment for river valley project and starting their manufacture either in the public or private sector, or through the co-operation of both has been stressed by the Committee. There are, according to the Committee, large possibilities of developing the manufacture of such equipment within the country. This is a notable recommendation, for few countries can boast of such a large number of river valley projects as India. And it would certainly add to the industrial potential within the country if some of the equipment used on these projects could be manufactured domestically. It might even be possible to find a market for surplus plant and machinery in other neighbouring countries which also have included many irrigation and power projects in their plans. Obviously, before any such manufacture is undertaken, it is necessary to standardise the equipment used in the projects.

An attempt at evolving some standards for the use of equipment has been made by the Committee. Thus, it has worked out figures for the standard output of principal machines, such as shovels, draglines, tractor dozers and motorised scrapers, and the use-rates of different types of machinery per hour. The practices in vogue in the U.S., Canada, France, the U.K., Australia, New Zealand, Denmark and Israel for measuring the life of a construction equipment and methods of charging expenditure have been compared. Appropriately enough, the Committee has stressed the necessity for carrying out detailed investigations before a project is taken up and for proper planning and estimating before a project is sanctioned. It has laid down a typical organisation for a large project and a list of points to be borne in mind in selecting contractors and drafting documents.

A notable suggestion of the Committee which deserves early adoption is that manuals on costing and stores should be drawn up and its recommendations codified, so that a uniform pattern may be adopted on all projects. The Committee has also recommended the preparation of a perpetual inventory of stores, the standardisation of allowances for major repairs and overhauls of equipment and the reduction of provision for contingencies for work. It also feels that a central clearing house should be established soon for expeditious disposal of surplus equipment and stores.

It is noteworthy that the Committee has emphasised that incentive to workers on all projects should be provided through payment of over-time, bonus and recognition of merit. It has also stressed the need for better housing facilities for labour at sites of work, for that would lead to greater efficiency. This object, it is stated, could be achieved by effecting economy in the provision for accommodation for officers which, in its opinion, is rather on the high side. There is no doubt that this recommendation of the Committee deserves the attention of the project authorities in the country. It might, however, be difficult to adopt the suggestion in its entirety, in view of the fact that, whereas thousands of workers are employed in a project during the period of its construction, only a few of them would be needed after the work is completed. This might conceivably lead to considerable wastage of resources spent on housing. Perhaps, this could be minimised through construction of low-cost tenements for labour or the use of prefabricated houses which can be shifted from place to place.

SALES TAX

The long-drawn-out controversy over sales tax in Uttar Pradesh seems to have ended, thanks to the sense of realism displayed by Hafiz Mohammed Ibrahim, the State's Finance Minister. The Sales Tax (Third *Amendment*) Bill, passed by the U.P. Assembly on Saturday last, seeks to do away with sales tax on foodgrains with effect from 1st October next. It, however, provides for the levy of an exemption fee, to be collected from dealers. The levy will be on a graded scale, ranging from a minimum of Rs. 150 in the case of dealers with a gross annual turnover of up to Rs. 25,000 to a maximum of Rs. 8,000 in respect of dealers with a turnover of over Rs. 4 lakhs. The burden of exemption fee, it is claimed, is negligible being in no case more than three pies per rupee. In addition to the withdrawal of sales tax on foodgrains, the Finance Minister of Uttar Pradesh has announced reduction in sales tax on *atta, suji* and *maida* from six pies per rupee at multi-point to three pies at single-point. The State Government had already allowed a rebate of 50 per cent. on sales tax on cloth imported from other States and reduced the licence fees charged from dealers.

The aforesaid move of the U.P.'s Finance Minister is commendable, inasmuch as it indicates his recognition of the handicaps to which the State's industrial and business community had been subject through the original proposals. It was on 1st April 1956, it will be recalled, that the U.P. Government enhanced the sales tax at the instance of the Government of India and the Planning Commission. This step evoked widespread protest from the mercantile community which took recourse to *hartals* and demonstrations. A series of representations—as many as 1,200—was made to the Government and more than 100 deputations, representing different sections of the public, met the Government. The Sales Tax Inquiry Committee set up by the State Government also considered the question in detail. These developments induced the Government to announce the following concessions:

Exemption from payment of sales tax on articles such as salt, books, exercise books, newsprint, groundnut oil, sand'e oil, inorganic manures, bran, fodder, *chuni, sali* and coarse grains like *jowar*;

reduction in rates of tax on agricultural implements, bicycles, tricycles, perambulators, paper, non-ferrous metal, medicines and jute goods; and

upward revision in the taxable limit from Rs. 10,000 to Rs. 12,000, the dealers with sales ranging from Rs. 12 000 to Rs. 15,000 being given the option to compound the sale.

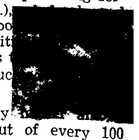
Despite these concessions, the traders continued the agitation and urged the authorities to withdraw sales tax on foodgrains and raw materials. A similar agitation was launched in several other States too. Even in Parliament, members expressed "grave concern" about the levy of sales tax on essential goods during the debate on the Bill to amend the Constitution. Some members urged the Centre to retain the powers it now has with regard to sales tax on goods essential for the life of the community, particularly foodgrains, salt, milk, fodder and coarse cloth. It was contended that sales tax on such goods amounted to taxing the very poorest in the land. In view of the widespread anxiety felt in both Houses of Parliament, Mr. Jawaharlal Nehru, in his capacity as Finance Minister, addressed a semi-official letter to the State Chief Ministers, impressing upon the latter the desirability of placing the least possible burden on the poor in respect of the levy of sales tax on the necessaries of life. "I have no doubt," Mr. Nehru said, "that the State Governments having the interests of common man very much at heart, will themselves be desirous of placing the least possible burden on the poor in respect of the necessaries of life and will, therefore, ensure that their sales tax legislation reflects this objective."

Presumably, the U.P. Government's decision has been influenced by this letter. And it remains to be seen what action other State Governments are prepared to take as a result of Mr. Nehru's advice. The need for a realistic attitude, designed to keep the burden of sales tax on the consumer to the minimum, cannot be over-emphasised. The working of the sales tax administration in the States is far from satisfactory. In several cases, the assessment according to the judgment of Sales Tax Officers is reported to be causing "havoc" on commercial classes. What is wanted is a proper enunciation of principles for the levy and administration of sales tax or purchase tax. The power to formulate the principles, as the Federation of the Indian Chambers of Commerce and Industry points out in a brochure just published, must vest in Parliament. The Federation has also rightly urged that no sales or purchase tax should be levied on transactions in the course of export outside or import into the country and on inter-State transactions between registered dealers. If, however, it is decided that essential articles and raw materials of importance in the course of inter-State trade should be taxed, the Central control to regulate the tax, it is suggested, may be so exercised as to merge this tax with some other levy.

URBAN LIVING

There is a common belief in India that the urban population is in very affluent circumstances. The belief is not only unfounded but also incorrect. A clear evidence of this is provided by the socio-economic survey of the city of Calcutta, conducted by the Departments of Economics in co-operation with the Statistics Department of the Calcutta University at the request of the Planning Commission's Research Programmes Committee. The findings of the Survey, which covered 4,923 households containing 14,664 persons, reveal that as much as 36 per cent. of the population belonging to the lower income groups lives below the poverty line, the average *per capita* income being less than Rs. 30 per month. Not more than about 38.7 per cent. of the population consists of earners and each earner has to support, on an average, 3.7 dependents. One out of every ten persons in the age group 15-59 is unemployed, excluding the voluntarily unemployed. No further evidence is required to prove that the opportunities of employment which induced large-scale migration of population from rural to urban areas have shrunk. In fact, there is, as this journal pointed out on an *earlier* occasion, a new proletariat in cities, hungry for houses, dissatisfied with their incomes and eager for jobs.

Be that as it may, the Calcutta survey shows that about 66 per cent. of the households earns incomes up to a maximum of only Rs. 100 per month, while the percentage of persons enjoying a monthly income of Rs. 750 or above is a bare 2.2. Among the earners, wage or salary earners account for 70 per cent. and self-employed persons for 25 per cent., a characteristic feature of all urban areas. A little less than 30 per cent. of earners is engaged in manufacturing operations, the rest being employed in providing services of all kinds (32 per cent.), retail trade (22 per cent.), transpo and construction and public utilit The occupational pattern shows a definite preference of the educ the "white collar" jobs.



Unemployment is generally women than among men. Out of every 100 women seeking jobs, only 14 have been able to find one and out of every 100 persons in the age-group 15-24 seeking jobs, 63 are unemployed.

Again, housing conditions are said to be extremely deplorable. The average room-space per head comes to only 30 sq. ft. for more than 42 per cent. of households and to 30-80 sq. ft. for 31 per cent. of households. The single-member households have on an average about one-eighth of a room to live in. Among households containing two or more members, about 61 per cent. has no separate kitchen, 50 per cent. no bathroom, 28 per cent. no water tap and 6 per cent. no latrine.

Of the total number of people above 14 years, married men and women account for 69 per cent. and 84 per cent., respectively. A mother has on an average 3.79 children. When the monthly income of the father is at least Rs. 300 or

the higher the income, the smaller is the size of the family. The trend is just the opposite in the case of the income levels below Rs. 300.

ROLE OF ENGLISH

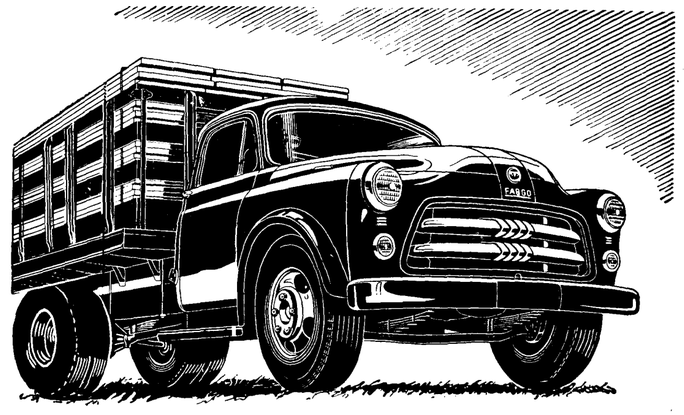
It is not as widely realised as it should be that any hasty abolition of English in the schools and colleges with no thought being given to the problem of its effective replacement would create an educational vacuum, fraught with grave dangers to academic and technological standards. There is a wide-spread feeling that the recent changes in the educational sphere, which were all designed to reduce the importance formerly given to the study of English, have already led to considerable lowering of standards of educational attainment. Further, the exaggerated emphasis, placed on regional languages, it is to be feared, lies at the root of much of the heightened sense of regional loyalties among students today. Nobody, of course, suggests that English language should hold the field for ever or that it should continue indefinitely as the medium of instruction in all educational institutions. Only, its replacement must be gradual, every stage being carefully planned. Further, the whole issue must be tackled on an all-India basis, so that the country could have a truly national system of education. There is no use contending that even in countries like Japan, Russia and China, all education is given in mother-tongue. In the first place, those countries do not have the kind of multi-lingual problem which India is confronted with. Secondly, they have not had to face the problem of a change-over from one medium of instruction to another. Again, the development of the languages in those countries, particularly in Japan and Russia, took place along with the progress of science and technology, so that the literatures could develop in a natural manner without the problem of having to absorb a whole dictionary of technical words. India's educational problems are, in many ways, peculiar to itself. And it would be the height of folly to ignore them in any effort to solve them.

From this point of view, it is gratifying to note that the recent Conference of State Education Ministers, held at New Delhi, took very constructive and realistic decisions. Addressing the Conference, Mr. Nehru declared that technical training should continue to be given in English in the foreseeable future. If it were given in Hindi, he said, the trainees would be "inadequately trained." He added:

"It is patent to me that this manpower for industrial, scientific and agricultural purposes cannot be trained in any Indian language in the foreseeable future. It is absolutely clear to me that it is not an arguable matter that the scientific and technological training has to be given in English. I am talking about now and not about ten or 15 years hence. It does not, therefore, become a question of choice. It is an absolute necessity. You will not get through your plan, if you do not do it."

Proceeding, he pointed out that English was being taught to more and more people even in countries like the Soviet Union and China. Referring to his choice of English as the medium of instruction, he said: "We are naturally driven to English, principally because we know it a good deal, we have people who can teach it, and because it is the most important language in the world today." He recalled that English in India had served as unifying link in the past and added: "Now the question is if you push out English, does Hindi fully take its place? I hope it will. I am sure it will. But I wish to avoid the danger of one unifying factor being pushed out without another unifying factor fully taking its place. In that event, there will be a gap, a hiatus." The Union Minister for Education, Maulana Azad, also struck the same note. He regarded it as a challenge of the times that English should be kept as a compulsory subject and as the medium of instruction in the universities for some time more.

It is to be hoped that the State Governments will make such changes in their educational policies as will be in conformity with the sentiments expressed by Mr. Nehru and Mr. Azad and the broad principles approved by the Conference. It is well to recognise that in the next few years, every child in India has to grow up in a trilingual educational atmosphere—well-versed in regional language and with a reasonable mastery over Hindi and English. It is necessary to remind those who think that this would mean a very great strain on students that a similar training is not unknown in foreign countries and that, at any rate, a certain additional strain is inescapable in the context of the educational and political transition through which India is passing.



FARGO TRUCKS rate tops for Profits

Fargo trucks make more trips, therefore carry more loads. And their easy manoeuvrability makes quick turn-about possible. Their great strength means long life, even on rough roads. This, plus low maintenance and low operating costs spell real economy—resulting in more profits.

CONCERN EXPRESSED IN PARLIAMENT OVER RISE IN PRICES

INDIA'S FOREIGN EXCHANGE POSITION

From A Special Correspondent

NEW DELHI, 11*th September*

DELHI LETTER

DURING discussions on the second Five-year Plan in the Rajya Sabha the other day, most of the speakers emphasised one particular fact, namely, the dangers of deficit finance and the sharp rise in the price level in the country during the last few months. There was, however, a certain amount of lack of appreciation about the bright trends of the country's economy, particularly in the industrial field. Industrial production now stands nearly 50 per cent. higher than in the 1951-52 base period; as compared with the corresponding months of the last year, production is now reported to be about 10 to 15 per cent. higher in most industries. This progress is being made possible as a result of the increased inflow of machinery which now averages about Rs. 12.5 crores per month. Since there has been a progressive rise in machinery imports in recent months, it is expected that the total figure for 1956-57 would exceed Rs. 175 crores, as compared with Rs. 108 crores for the previous year. Generally speaking, engineering industry is reported to be doing very well, in view of the special pains taken by the present Finance Minister in his capacity as Minister for Commerce and Industry for the last few years to import as much steel from foreign countries as is practicable.

Only this week, the Minister for Heavy Industries, Mr. Shah revealed that the Government had already made arrangements to import 1.4 million tons of steel on Government account from the U.S.S.R., the U.K. Poland, China, Belgium, Japan and West Germany. How sharp the imports of steel from foreign countries will be, can be seen from the latest import figures available up to the end of June. For the first three months of 1956-57, steel imports were valued at Rs. 32.5 crores, as against Rs. 11.2 crores for the corresponding months in the previous year. In view of the heavy commitments that the Government has already made, it is possible that imports of steel for the current fiscal year will go up to a higher level of Rs. 150 crores.

Raw Materials

There has been a progressive rise in the imports of certain industrial raw materials, such as chemicals, drugs etc. Again, another indication of the increased industrial activity in the country may be found from the increased imports of non-ferrous metals, the imports of which for the first three months of the current fiscal year were valued at Rs. 8.4 crores as compared with Rs. 5.3 crores for the corresponding months of the preceding year. Similarly, there has been an increase in the imports of vehicles, the value of which has gone up from Rs. 11.3 crores to Rs. 15.7 crores for the first quarter of 1956-57. Incidentally, this shows that the Government has been extremely keen to augment the haulage capacity of the country in order to meet the heavy transport requirements under the Plan.

In the course of its discussions on the second Five-year Plan, the Upper House also brought forth a vigorous reply from Government's spokesmen, particularly from the Finance Minister. Even a cursory study of his speech on the occasion will reveal that Mr. T. T. Krishnamachari, has taken considerable pains to meet the arguments of his opponents by a cautious and persuasive reply rather than brush—as he sometimes would do in the past—by some sweeping and ironical observation. He explained the crux of the problems facing the country which are threefold: namely, the foreign exchange, the general price pattern and the question of finding adequate technical personnel for manning the various industries. He showed considerable awareness of the difficulties confronting the country generally. He wanted to impress upon the Members of Parliament and through them, the general public of the country, that his policy in future would be flexible and not a rigid one. He pointed out that the financial outlay of Rs. 4,800 crores for the second Plan would not be the last word on the subject and that this level of investment might be adjusted from time to time according to the needs and requirements facing the economy of the country as implementation of the second Plan proceeds.

The Finance Minister stated that what oppressed him most today was not so much the paucity of internal resources for the fulfilment of the Plan but rather other conditions which would hamper the progress of the Plan, particularly the question of foreign exchange and price pattern. Reading between the lines of this statement, it appears that Mr. Krishnamachari had in mind the capacity of the Government to augment its internal resources for financing the second Plan. Perhaps, he has largely been emboldened to take an optimistic view of internal resources as a result of the recent success of the borrowing programme of Central Government as also that of the States Governments. He appears to be of the view that the Government's capacity to mop up surplus purchasing power by way of higher taxation is considerable and that ultimately the revenue resources as well as the borrowing programmes will considerably diminish the volume of deficit finance in the coming months.

Estimates

There is already a belief that the Planning Commission, in working out the revenue estimates for the Plan, has purposely underestimated the possible revenue increases. Perhaps, this was done in accordance with the customary practice that has been obtaining in the Government of India's Finance Ministry which has been showing a propensity always to underestimate revenue and overestimate expenditure. Now that the new Finance Minister has already revealed that the Government would not hesitate to increase certain indirect taxation in order to inhibit consumption, it is possible that indirect taxation, particularly on consumer goods, will in the coming few months be stepped up.

Another indication provided by the Finance Minister is that the Government will also be imposing certain new taxes in order to supplement its income. The Finance Ministry, it is believed, is studying seriously Prof. Kaldor's recommendations, particularly in regard to his suggestion for the imposition of a general annual property tax. The approach of Mr. Krishnamachari is very pragmatic. He might reduce the present high direct taxes on personal incomes and try to compensate it by the levy of an annual property tax.

The Finance Minister's approach to the implementation of the second Five-year Plan will be allsided. Since flexibility has become almost the cardinal feature of the plan, the Government is now reconsidering the various expenditure schedules of the Plan, trying to give priority to such of those schemes as can be implemented with greater speed and as will be able to show solid results. Emphasis has again been placed on certain industries which have considerable potentialities to conserve foreign exchange resources. In this connection, mention may be made of the possibilities of setting up machine building plants and also the expansion of certain basic industries which would involve another Rs. 100 crores or so in the coming years.

Foreign Exchange

Another topic which the Finance Minister dealt with in his speech was that of foreign exchange. In recent months there has been a gradual but substantial decline in the Government's sterling balances. During the last three years, these balances were very steady around Rs. 730 crores. The latest figure of Rs. 631 crores is the lowest figure on record. A decline of nearly Rs. 100 crores in the sterling balances within the last three or four months is naturally bound to cause some anxiety in Government circles. However, there is a feeling that the Government's position would be considerably strengthened as a result of the latest Indo-American Wheat-Loan programme. At the same time, it is also possible that the Government might consider the question of filling up this gap through extra efforts which are still in an embryonic stage. It is possible that the Government of India might be able to secure more long-term loans from the U.S. by next year or so as a result of the easing of the international tension.

In another direction also, the Government has been taking pains to ensure the successful implementation of the Plan, that is, by stabilising the general price level in the country. No doubt, the general wholesale price index has gone up to a high level of 420. Ways and means as to how to achieve the objective of bringing down the level of prices are being studied at the highest level in the Government of India. The import of foodgrains from foreign countries and loan programmes have now become a recognised part of the Government's armoury. Another is the increase in the indirect taxes to inhibit consumption. A third possible measure would be an increase in the import duties of certain luxury goods. In order to co-ordinate all these policies of the Government it is now considered likely that the Planning Commission will be expanded appreciably with a view to making some of its new members devote greater attention to the maintenance of a stable price pattern in the country and to keeping a close watch on the progress of implementation of the Plan. The necessity for increasing the strength of the Planning Commission has been felt because of the growing awareness in official circles that smooth working of the Plan would require a balanced implementation of the projects envisaged therein and an achievement of this objective is much more difficult than was originally anticipated.

Indeed, for purposes of ensuring a harmonious development of the agricultural and industrial sectors of the country's economy, it is being increasingly realised that almost a day-to-day watch is imperative because of the inescapable inter-dependence of the two. The Prime Minister is reported to have urged that the strength of the Planning Commission be raised to nine members. When the full contingent is recruited, there will be five wholetime members of the Planning Commission. The other four, being Ministers of the Cabinet—Mr. Nehru, Mr. G. L. Nanda, Mr. T. T. Krishnamachari and Mr. V. K. Krishna Menon—cannot be expected to devote their full time and attention to the working of the Commission by virtue of their necessity to look after their respective ministries in the Government.

REVOLT AT BRIGHTON

ECONOMIC POLICY CONDEMNED

From Our Own Correspondent

LONDON, 8*th September*

LONDON LETTER

WHEN the Conservative Government came back to power in the early part of this decade, the Trade Unions adopted the policy of friendly working with the Government whatever its politics might be. That period has come to an end this week and the change of policy has been due to the change of leadership of the largest Union in this country—the Transport and General Workers Union. Ever since the war, that Union has been led by men often regarded as right-wingers. The new leader, on the other hand, is not only militant but commands respect inside and outside the Union movement. He has led his Union, followed by another great Union (that of the Railway men) to put up a critical motion on wage policy which was carried by the whole Trade Union Congress in their annual meeting at Brighton this week.

This motion in effect is a challenge to the Government policy on wage restraint. The Unions are committed instead to consider all applications for wage increases "prudently and sensibly" in the light of all the circumstances of the firms concerned and the general economic climate.

But clearly the balance of power within the Trade Union movement could not have shifted to lead them to make this drastic break with the past if Government policy had not also appeared to be veering away from making wage restraint practicable. The Trade Unions have now given notice they cannot accept a "free economy" in which prices, profits and dividends can rise without control, while only wages are subject to a firm policy which could be applied through the employers and the men's organisations. The Trade Union Congress has decided to condemn Government economic policy and to declare that the Unions cannot allow their members to be used to rescue it. Their alternative is a return to a controlled economy. A controlled or planned economy will, in the view of the Unions, divert investment into the most remunerative channels, lead to greater industrial efficiency and adequate emphasis on exports without imperilling wage structure. If restraint and control are to be applied in all sectors of the economy, then the Unions will admit that wages can be subject to equal control.

But the Unions have gone even a step further; they are not content to indicate the broad lines within which they think the country's economic policy should be framed. They are asking for a closer relationship with management. The recent disputes on redundancy caused by automation have given the lead: the Unions will now expect always to be properly consulted about automation; will always demand compensation for loss of employment and adequate notice to enable displaced men to find fresh jobs. Many managements in this country regard these demands as perfectly proper and, indeed, they already consult the Unions as a matter of course on such matters. The lack of sympathy with the British Motor Corporation over the redundancy situation is evidence that the Unions are not going to be hammering at a brick wall in this matter of consultation. Broad econo[illegible] will be another matter, for they wi[illegible] head-on conflict with the Governm[illegible] scarcely likely to be able to concede [illegible] control over prices, profits and divi[illegible] the Chancellor of the Exchequer like[illegible] pared to direct investment into "the places," for it is a cardinal principle of Tory policy that the "right places" must find themselves! Finally, the Chancellor, having just adopted the policy of exercising control over the nationalised industries because he can claim that that is part of the Government's normal function, is not likely to relinquish that control until it can be brought into line with a comparable control over all aspects of industry.

The Government will, of course, seek to keep out of industrial trouble in the coming wage battles, but will it be able to avoid the repercussions of rising wages on its avowed policy of economic freedom?—*All Rights Reserved.*

TRENDS IN INDIAN ECONOMY ENCOURAGING

RESERVE BANK DIRECTORS' SURVEY

THE latest annual report of the Central Board of Directors of the Reserve Bank of India, that for the year ended 30th June 1956, is of special significance for two reasons. First, the report covers a period which marked the close of the first Five-year Plan and gives a review of the progress in the implementation of the Plan not merely in the last year but also during the entire Plan period. Secondly, the report ventures to assess the prospects of success for the second Five-year Plan, with an emphasis on the need for effective "appropriate adjustments" in the pace and pattern of planned development and in the fiscal and monetary policies from time to time.

The Report views the developments in India's economy in a somewhat longer perspective. Basing itself on the principal economic indicators over the past five years, the Report broadly concludes that India has been able to combine, in a substantial measure, economic development with financial stability. Among the main features of this phase of economic growth, mention is made of the increasing outlays under the Plan, gains in industrial and agricultural production, stability in external balance of payments position as a whole, and better flow of savings which imparted strength to the capital market. Apart from all these, an important factor that contributed to the total satisfactory result was the adoption of judicious fiscal and monetary policies.

The aforesaid brief account of economic development, though heartening, should not by any means diminish, as the Report itself rightly warns, the need for "a careful and continuous assessment of the current economic situation, with a view to making appropriate adjustments in the pace and pattern of planned development and in the fiscal and monetary policies from time to time." It is precisely in this context that one has to examine the role of deficit financing. The second Plan provides for deficit financing of the order of Rs. 1,200 crores. This sum is considered by some economists to be very excessive and raises the risk of heavy inflation. Already, the rise in money supply has tended to outpace the rise in production levels and economic activity. The report no doubt frankly admits it, but observes that, if the 25 per cent. rise in foodgrains production contemplated in the Plan were to be attained, it would make a significant contribution to stability in the economy against the inflationary repercussions of deficit financing. Nevertheless, the Report warns that, in finding the additional resources for agriculture, the overall size of the Plan should not be further increased, inasmuch as that would impose an undue strain on the economy.

No Serious Threat

The Report is inclined to feel that there may not be a serious threat to the country's financial stability. This statement is, however, qualified by two 'ifs', namely, that the targets of additional taxation and borrowing are achieved and the volume of deficit financing (Rs. 1,200 crores) remains as the outside limit, as also by a proviso that agricultural and industrial production expands "at a satisfactory rate". In this connection, it lays strong emphasis on the importance of an adequate increase in the production of food and other essential articles like cloth. For it says:

"A big rise in development expenditure would be reflected in addition to large numbers of small incomes and hence in a considerable increase in the demand for, and pressure on prices of, articles of mass consumption like food and cloth. Such increase in demand might be directed in advanced industrialised communities to luxuries and semi-luxury articles, but, in an under-fed and ill-clothed country such as ours, there is likely to be a particularly heavy impact on the prices of essential commodities. These results are likely to occur even if there is a corresponding increase in taxation as new or additional incomes will accrue to parts of the population whose demand for elementary necessities is high, while taxation will, in the main, reduce consumption of less essential commodities. The additional demand for consumer goods arising out of development expenditure will be the larger, the bigger the gap between expenditure and tax and loan receipts, namely, deficit financing."

To revert to the review of developments in India's economy during the Plan period. According to the review, the national income of the country is estimated to have risen by 18 per cent. over the period 1951-56, thus showing a larger rate of increase than was originally anticipated. Much the greater part of the increase, however, occurred in the first three years of the Plan. It has been estimated that national income in real terms improved by only 1.3 per cent. in 1954-55, as against 6.0 per cent. in 1953-54. The setback to the pace of rise in national income must be attributed to the downward trend in agricultural production. The index of agricultural output (Base 1949-50=100), which went up from 95.6 in 1950-51 to a record high of 114.1 in 1953-54, declined to 113.9 in 1954-55. The revised index for 1954-55 is put at 116.4, and the provisional index for 1955-56 at 113.7.

Industrial production has been steadily on the upgrade in the last few years. During 1955-56, the average index of production (1951=100) recorded a rise of 8 per cent. The rise has been shared by almost all major groups of industries in the public as well as the private sectors. Commenting on the trend, the Report says: "The continuous rise in industrial production has been one of the heartening features of the Indian economy in recent years, and it may be expected that this process will be assisted forward, with the broadening of the industrial base under the second Five-year Plan."

Trend of Prices

The year 1955-56 witnessed an almost continuous upward trend in prices, in contrast to the sharp decline in the previous year. The general index of wholesale prices (August 1939 =100) at the end of June 1956 stood as high as 402, representing a rise of 16.7 per cent., as compared with the figure of 345 a year before. In 1954-55, it will be recalled, there was a net decline of 10 per cent. in prices. The average for 1955-56 was, of course, only 2.2 per cent. higher than that for 1954-55. The advance in prices has been reflected in living costs, the all-India working class consumer price index (1949=100) having risen from 93 in June 1955 to 103 in April 1956. The continued price advance is attributed mainly to the decline in agricultural output, especially of foodgrains, larger exports of certain industrial raw materials, and increase in the demand resulting from the large expansion in investment expenditure and a rise in incomes, not to speak of the speculative influences.

Judging the price situation from the point of view of long-term prospects, the Report takes into account two sets of considerations. On the one hand, the increase in developmental outlay, met in part by deficit financing, may be expected to exert an upward pressure on prices. On the other hand, there will be the important countervailing factor of increased agricultural and industrial production. A policy of maintaining buffer stocks, assisted by an extensive warehousing programme, should also help to moderate fluctuations in agricultural prices. Against the background of the recent rise in prices and with the prospect of deficit financing in the next few years, therefore, the attainment of a substantial increase in agricultural output, besides procurement of larger supplies of agricultural commodities from abroad, will, it is said, acquire added significance. As already stated, continued vigilance and appropriate flexibility in fiscal and monetary policies will also be called for.

Monetary and Credit Expansion

The monetary and credit expansion during the year under review was quite substantial. Money supply with the public (excluding State Governments' deposits with the Reserve Bank) went up by Rs. 214 crores—or by 10.8 per cent.—to a total of Rs. 2,191 crores. The net rise over the entire first five-year Plan period was Rs. 206 crores. This resulted from an initial phase of contraction to the extent of Rs. 214 crores in the first two years, followed by a progressive rise in the next three years by an aggregate of Rs. 420 crores. Of the increase in money supply during 1955-56, expansion in currency accounted for about four-fifths. The main expansionary factors were deficit financing by Government and the rise in bank credit, the balance of payments impact being slightly contractionist. Scheduled Bank credit during the year recorded a sharp rise of Rs. 149 crores to Rs. 759 crores, as compared with an increase of Rs. 60 crores in 1954-55, though the net deposit liabilities were higher by only Rs. 98 crores. The higher level of banking activity reflects largely the impact of growing economic activity under the Plan.

The Report refers next to the rising scale of investment outlays under the Plan and the increasing deficit financing of Government expenditure. Plan outlays rose moderately from Rs. 259 crores in 1951-52 to Rs. 273 crores in 1952-53 and Rs. 340 crores in 1953-54, or a total of Rs. 872 crores in the first three years. There was a substantial stepping up subsequently to about Rs. 475 crores in 1954-55 and Rs. 600 crores in 1955-56. The aggregate outlay thus comes to Rs. 1,947 crores. During the five years 1951-56, the combined deficit of the Central and State Governments, as measured by the actual net addition to the Treasury bill holdings of the Reserve Bank and the draft on Government cash balances, was a little less than Rs. 400 crores. The total tax revenue of the Central and the State Governments was Rs. 735 crores in 1955-56, as against Rs. 635 crores in 1950-51. The aggregate net market borrowings during the Plan period exceeded the target of Rs. 115 crores by Rs. 62 crores; they will still be higher at Rs. 250 crores, if the sales of securities effected from the cash balance investment accounts of Governments and by the Reserve Bank from its portfolios are taken account. Small savings collections amounted to Rs. 235 crores, Rs. 10 crores more than the target.

Alluding to the borrowing target fixed in the second Plan—Rs. 1,200 crores—the Report urges that a borrowing programme of this order requires a vigorous drive. It, of course, realises that the borrowing operations will doubtless be facilitated by the substantial measure of deficit financing that is contemplated. Nevertheless, it emphasises that, since all the Plan estimates are based on the assumption of constant (1955-56) prices, the borrowing programme, like the taxation programme, should be more appropriately considered, apart from the influence of budgetary deficits.

Flow of Capital

While precise and complete data regarding capital issues for the private sector are not available, the total of new issues amounting to Rs. 1 crore and over each was about Rs. 20 crores in 1955-56, as against Rs. 16 crores in the previous year. Alluding to this, the Report points out that the experience in regard to new issues and self-financing of new investment and replacements in recent years justifies a measure of confidence regarding the sources of financing fixed capital investment in industry during the second Plan period. In its opinion, the resources available to the private sector from new issues and self-financing will be augmented, to some extent, by assistance from the various financial institutions set up by the State in recent years. Even so, the Report considers that it will be necessary to continue to pay attention to stimulating the flow of capital—foreign and domestic—into industry and to distribution of profits, with due regard to the needs of the private sector for replacement, modernisation and expansion.

The Report expects that the overall balance of payments for the year as a whole (July 1955-June 1956) may show a deficit on current account of the order of Rs. 20 crores, after taking into account receipt of official grants, as against a surplus of Rs. 23 crores in the preceding year. The deficit during the year was the result of a surplus of Rs. 20 crores in the first nine months (July 1955-March 1956) for which data are available and an estimated deficit of about Rs. 40 crores in the last quarter (April-June 1956). The last quarter's deficit is partly due to seasonal factors.

On the objectives of the second Plan, the Report avers that, while, appropriately enough, there is accent on labour-intensive schemes in certain sectors, it is axiomatic that, in the longer run, the volume of employment can rise, and that of unemployment or under-employment diminish, only as a result of, and in broad relation to, economic development. According to it, if the second Plan has more and bigger problems to face, it has also started with the advantage of much experience being accumulated and many gains consolidated. Not the least important among the results achieved by the first Plan is said to be the overall economic and financial stability of the country since 1952. Indeed, the Report is of the view that the stage is well set for the very considerable effort represented by the second Plan. Nevertheless, the Report concludes on a note of caution by calling for measures which, without unduly affecting price stability, will help step up effectively both investment and savings, on the one hand, and output and employment, on the other.

DEVELOPMENTS IN BANKING WORLD

BASE FOR PROVIDING INSTITUTIONAL CREDIT WIDENED

THE Report of the Central Board of Directors of the Reserve Bank of India for the year ended 30th June 1956 brings out certain significant developments in the spheres of banking, industrial finance and co-operative credit. An important aspect of planned economic growth, says the Report, is the building up and strengthening of financial and credit institutions for mobilisation and channelling of resources. In this context, as the Report rightly observes, "a significant development which might well be regarded as opening a new chapter in the evolution of Indian banking was the establishment of the State Bank of India on 1st July 1955." Within four months of the acquisition of the bank, the payment of compensation to the shareholders of the Imperial Bank of India was substantially completed and the bulk of the share capital of the new institution now stands vested in the Reserve Bank. The immediate objective set before the State Bank is the vigorous expansion of branches—by as many as 400 over a period of five years. As a first step in this direction, as many as 32 new branches have been opened during the year under review. This compares with only 63 branches opened by the Imperial Bank, out of an approved list of 114 centres, in the four-year period beginning from 1st July 1951. A notable feature of this expansion programme is the provision made in the Statute governing the State Bank of India for the establishment of an Integrated Development Fund, in order to make specific provision for initial losses on unremunerative branches opened in the public interest. The dividends payable to the Reserve Bank of India on that part of its shareholding which is equal to 55 per cent. of the total issued capital of the State Bank are credited to this Fund. The amount so credited to the Fund amounted to as much as Rs. 24.75 lakhs during the year, being the proportionate profits for the half year.

The full significance of the State Bank to the country's economic development cannot be foreseen now, states the Report. Its establishment coincides with a crucial stage in the country's economic development. Its potentialities for growth and expansion, and the opportunities open for it for mobilising resources, are far beyond those at any time open to its predecessors. Besides, its role *vis-a-vis* the private sector will be one of "undiminished usefulness and importance." Moreover, in view of the special responsibilities cast upon it, "there cannot be the least doubt that the State Bank will not merely continue to be the foremost commercial banking institution of the country, but will grow in size, stature and significance." A striking aspect, furthermore, of the charter of the State Bank is that it reconciles, by making provision to cover the losses resulting from the uneconomic part of branch expansion, the seeming contradiction between sound business principles, on the one hand, and public interest, on the other. Stating that this is only one of many examples of how a reconciliation can in practice be effected between the two sets of considerations involved, the Report observes:

"With mutual understanding, commonness of purpose and co-ordination of action—in other words with the fullest co-operation—between the Government of India, the Reserve Bank and the State Bank, there is little doubt that such a synthesis can be achieved and that the State Bank, complementing the functions of the Reserve Bank in an essential sphere, can emerge as a powerful instrument of public policy, including that of planned development, while at the same time maintaining the highest standards of commercial banking."

Industrial Finance

Reviewing the developments in the sphere of industrial finance, the Report points out that the institutional machinery for fostering industrial growth is becoming increasingly effective. The Industrial Finance Corporation of India, for instance, sanctioned during the year loans aggregating Rs. 13.4 crores to 41 industrial concerns, as against Rs. 7.1 crores sanctioned to not more than 23 concerns in the preceding year. Moreover, State Financial Corporations established under the State Financial Corporations Act, 1951, have been established in two more States, namely, Andhra and Orissa, thus raising their total number to 13. A still more significant event was the second conference of the representatives of the State Financial Corporations held in November 1955 under the auspices of the Reserve Bank, at which were discussed the question of co-ordinating their activities with those institutions engaged in financing small-scale industries, and other matters which go to augment the usefulness of the corporations. An important outcome of the conference was the agreement reached to launch a few pilot schemes in selected centres, with a view to evolving a workable plan of co-ordination. The schemes are, accordingly, designed to pool the resources of the institutions and to eliminate the chances of diverse agencies lending to the same borrowing unit. Such pilot projects have already been started since then on the initiation of the State Bank of India in a number of places including Bombay, Surat, Coimbatore and Delhi.

Besides, the Industrial Credit and Investment Corporation of India gave considerable attention to underwriting capital, while the National Industrial Development Corporation Private Ltd., for the activities of which a provision of Rs. 55 crores is made in the second Plan, was engaged during the year in conducting detailed investigations into various projects. Moreover, the third corporation, namely, the National Small-Scale Industries Corporation Private Ltd., which was set up for financing small-scale industries, started functioning in September 1955, and has introduced a scheme of hire purchase for equipment needed by the small industries.

Rural Credit

In the sphere of agricultural finance, the notable development was the creation of two Funds, namely, the National Agricultural Credit (Long-term Operations) Fund, and the National Agricultural Credit (Stabilisation) Fund, as recommended by the All-India Rural Credit Survey Committee. It will be recalled that, in order to give effect to these recommendations, the Reserve Bank of India Act was amended in 1955. The former Fund was constituted on 3rd February 1956 with an initial sum of Rs. 10 crores, and the latter on 30th June 1956 with a contribution of Rs. 1 crore. The former Fund has also received the Bank's first annual contribution of Rs. 5 crores. Another landmark in the field of rural credit was the passing of the Agricultural Produce (Development and Warehousing) Corporations Act, 1956. Provision has also been made for the grant of loans and advances by the Reserve Bank to the Warehousing Corporations established under the Act.

The question of reorganisation of co-operative institutions, apex and central, in the context of the reorganisation of States has come to the forefront. Following the recommendations of the Standing Advisory Committee on Agricultural Credit, an informal conference of the representatives of the appropriate Governments was held in May 1956 by the Reserve Bank. The conference formulated a series of principles of reorganisation on an agreed basis and set up four *ad hoc* committees for different regions, in order to work out detailed schemes of reorganisation of the co-operative institutions.

A noteworthy feature during the year under review was the increase witnessed in the scale of assistance provided by the Reserve Bank to co-operative banks for seasonal agricultural operations and marketing of crops at the concessional rate of 2 per cent. below the Bank Rate. Thus, 19 apex banks received as much as Rs. 29.64 crores in 1955-56 as against Rs. 21.21 crores sanctioned to 15 banks during 1954-55. The outstandings of the Reserve Bank credit to State Co-operative Banks at the end of the year stood at Rs. 12.98 crores, as compared with Rs. 8.11 crores at the end of last year. Besides, 10 apex banks were also sanctioned medium-term loans amounting to Rs. 1.40 crores during the year. What, however, is a new feature of these loans is that not more than a quarter of such loans might be for more than five years, while the balance could be for three years only.

Inspection of co-operative banks, both apex and central, continued during the year. Of the 44 co-operative banks inspected, 34 were central banks and 10 were apex banks. No mention is made in the report about the results of these inspections, whether all of them were found to be working satisfactorily, whether there were any defects and, if so, their magnitude.

In the sphere of training of co-operative personnel, two new centres were established during the year, one at Indore and the other at Meerut, for the training of intermediate personnel. Besides, eight training centres are now functioning for the training of co-operative officers for the National Extension Service Blocks. Moreover, in order to meet the needs of the States for trained personnel in such specialised fields as marketing, in the context of the second Plan, *ad hoc* courses on co-operative marketing were organised at two regional training centres, namely, Poona and Meerut. A special course on land mortgage banking has also been started at Madras.

In the sphere of commercial banks, further progress was noted in the direction of strengthening the banking system through the enforcement of the provisions of the Banking Companies Act, 1949. Under Section 22 of this Act eleven banks were granted licences—chiefly because of the improvement in their position witnessed as a result of the supervision carried out by the Reserve Bank—to carry on banking business in India, making the total number of banks holding licences 47. In addition, there are three other State-associated banks and the State Bank of India to which the provisions of section 22 are not applicable. The total deposits of these 51 banks, it may be noted, account for nearly 90 per cent. of the total deposits of all the Scheduled and non-Scheduled banks in India. Of the banks—to the tune of 429—whose applications for licences are pending with the Reserve Bank, 402 are submitting their periodical reports to the Bank. It is pointed out that the delay in granting licences has been due to the Bank's desire to safeguard the interests of depositors.

The policy of systematic inspection of banks taken up in 1949 was carried still further during the year under review. As many as 30 Scheduled banks and 165 non-scheduled banks were inspected. Of them, 16 were inspected for the first time for ascertaining their eligibility for licences to carry on banking business and 175 were re-inspected. Besides, the inspection of three State-owned or—controlled banks was also carried out with a view to deciding their future set-up. The periodical inspection of the banks, the Report states, has enabled the Bank to find out the defects in their working, and suggest suitable remedies for improvement. A heartening feature was the co-operative attitude adopted by the banks. Barring a few exceptions, most of the banks, the report observes, have taken expeditious and effective steps to rectify the defects noted in their operations by the Reserve Bank's inspectors. These banks, according to the report, have come to realise that inspections help to promote their own stability and the interests of their depositors, and have therefore, offered an increasing measure of co-operation.

Certain exemptions, such as those relating to minimum capital requirements and maintenance of certain percentage of liquid assets, continued to be granted to certain banks, in order to mitigate their difficulties. These apart, there was also considerable progress in respect of transfer facilities provided to Scheduled banks and State Co-operative banks. As a first step towards implementing the recommendations of the Shroff Committee, arrangements were made to provide transfer facilities twice a week, instead of once, to all Scheduled banks and State Co-operative banks. For this purpose, the co-operation of the State Bank of India, the Hyderabad State Bank and the Bank of Mysore was sought and they have readily agreed. It may be noted that these banks are the agents of the Reserve Bank. Four non-Scheduled banks were also included in the approved list for the purpose of these facilities, while one non-Scheduled bank was excluded.

During the year under review, according to the Report, 23 banks—9 in Travancore-Cochin, 6 in Bombay, 2 in U.P. and one each in Punjab (D), Saurashtra, Hyderabad, Madras, Mysore and West Bengal—went into liquidation. Of these, 10 were ordered to be wound up by the Courts and the rest were wound up voluntarily. Two banks applied for inclusion in the Second Schedule to the Reserve Bank of India Act; these applications, as also four earlier ones, are under consideration. No bank was excluded from the Second Schedule during the year, nor was any bank inspected during the year specifically for determining its eligibility to be retained in the Schedule. 34 new offices were opened during the year at places which were not formerly served by commercial banks, raising the total number of offices of scheduled banks in the Indian Union to 2,909 as at the end of the year.

Finally, referring to the progress made by the Bankers Training College inaugurated in September 1954 to impart training in practical banking to the supervisory staff of commercial banks, the report observes that the College since its inception has completed nine courses of training, each of eight weeks' duration, and has so far trained 210 bank officials drawn from different parts of the country. Encouraged by the response which the College has evoked from banks, the Advisory Council of the College has recommended that the College should be placed on a permanent basis; the matter is under the consideration of the Bank.

"The Government of India has deferred for the present the question of integrating the Bank of Bikaner, the Bank of Jaipur and the Bank of Rajasthan with the State Bank of India, as it raises a number of difficult problems to w[illegible] will have to be sought before final [illegible] taken. The main determining factor [illegible] gration is the extension of rural credi[illegible] facilities in rural areas." Thus state[illegible] for Revenue and Defence Expenditu[illegible] Guha, in reply to a question in the [illegible] the integration of State Banks.

Another member asked what spec[illegible] tions weighed with the Government for taking over the State Bank of Hyderabad, while leaving other State Banks. Mr. Nehru, who was then acting as Finance Minister, said in reply: "The question of taking over these other banks is in a sense under consideration. Because of various factors—like the splitting up of the State, etc.—it had been thought fit to take over the Hyderabad State Bank just now. There are two other banks in Saurashtra and Patiala which are State Banks completely. The question arises whether these should be attached to the Reserve Bank or the State Bank of India; but for the moment the Government has decided not to take them over. I have no doubt, however, that steps will be taken about them later on."

A member asked as to what were the special difficulties encountered in taking over all these State Banks as recommended by the Rural Credit Survey Committee. Mr. Guha said that the main difficulty was for the Reserve Bank or the State Bank to find trained personnel to run these banks. There was a certain standard which the State Bank and the Reserve Bank had to keep up. These State Banks did not conform to these standards.

THE BANK OF INDIA LIMITED.

(Established 7th September, 1906)

1906—1956

FIFTY YEARS OF SERVICE

Capital Subscribed - Rs. 5,00,00,000
Capital Paid-up - Rs. 2,50,00,000
Reserve Fund - Rs. 3,52,00,000

Head Office:
Mahatma Gandhi Road, Fort
BOMBAY.

BRANCHES IN THE PRINCIPAL CITIES OF INDIA

Branches Outside India:
LONDON—17, Moorgate, London, E.C. 2.
ADEN - DAR-ES-SALAAM - JINJA - KAMPALA
KARACHI - MOMBASA - NAIROBI - OSAKA
SINGAPORE - TOKYO

Through its Branches in India, Pakistan, Malaya, Japan, Aden, East Africa and London and through correspondents in the principal countries of the world, the Bank is able to finance business of every description on favourable terms.

D. R. THOM,
General Manager.

INTERNATIONAL FINANCE CORPORATION

OPERATING POLICIES AND PROCEDURES

IT is widely recognised that one of the easiest and quickest ways of promoting economic development in the well developed free economics is to encourage and spread competitive private enterprises. In less developed areas, the task is not so easy. But development through private enterprise is to be preferred, in order to ensure that the future for democratic system is not endangered. Every effort should be made to encourage local *entrepreneurs* to undertake establishment of industries. The task of development will be easier if steps are taken to attract private capital and technology from the more developed countries. This will be advantageous to the developed countries also, in that it provides them with opportunities for "expansion of markets, creation of new sources of raw materials and profitable investment capital." It is with the object of furthering economic development by promoting private enterprise that the International Finance Corporation was formed in July this year.

There are so many institutions which have been rendering such service, but the International Finance Corporation (I.F.C.) is unique by itself, being a public international organisation supported by a large number of Governments, solely for aiding private enterprise. It is an affiliate of the International Bank for Reconstruction and Development, but it is a separate legal entity and its funds are entirely separate and distinct from those of the Bank. Membership in the I.F.C. is, however, open only to Governments which are members of the Bank. Its authorised capital amounts to U.S. $100 million, of which $78.4 million have so far (up to 10th August 1956) been subscribed by the Governments of 32 countries. A number of other countries, which are members of the World Bank, are in process of joining. India agreed to be a member of the I.F.C. long before many other countries and has subscribed $4.43 million to its capital stock. Some of the other important member-countries and their subscriptions to the capital stock are as follows:

(In 000's $)

Country	*Subscription*
United States	35,168
U.K.	14,400
France	5,815
Germany	3,655
Canada	3,600
Japan	2,769
Australia	2,215
Pakistan	1,108
Sweden	1,108

N.B.—The subscriptions of other countries which have so far joined are less than $1 million each.

Having thus got a substantial part of its capital subscribed, the I.F.C. is now ready to commence operations. It is, however, desirous of informing the world financial and industrial community about the types of investment which it is interested in making and about the information required from enterprises wishing to attract the investment of its (I.F.C.'s) funds. With this object in view, it has published a booklet outlining its operating policies and procedures for the guidance of persons who may like to apply to the I.F.C. for assistance in the establishment or expansion of productive private enterprises. The I.F.C. does not intend, the booklet explains, keeping its policies and procedures rigid, but will review and modify them, within the limits of its charter, from time to time as experience or changing circumstances suggest.

The I.F.C. proposes to attain its objective of furthering economic development by (1) investing in productive private enterprises, in association with private investors and without government guarantee of repayment, in cases where sufficient private capital is not available on reasonable terms; (2) serving as a clearing house to bring together investment opportunities, private capital (both foreign and domestic) and experienced management; and (3) helping to stimulate the productive investment of private capital, both domestic and foreign.

Describing the types of investment which are eligible for financing by the I.F.C., the booklet says that the I.F.C. will consider only such proposals as will contribute to the development of the economy of the country in which the enterprise is located. Enterprises financed by the I.F.C. must be located in a member country, including any dependent territories. The I.F.C. desires to concentrate in its early years on investments in less developed member countries and in dependent overseas territories of member countries. It will finance operations in association with private investors, that is, where private capital is being invested at or about the same time. In every case, it must be satisfied that private investors have contributed as large a share of the funds required as can reasonably be expected—ordinarily more than 50 per cent.—and that the balance is not available from other private sources on reasonable terms. It will invest in association with either local or foreign private investors or both. In fact, it will welcome proposals involving private investment from both local and foreign investors. The I.F.C. will normally entertain, in the initial stage of its operations and subject to review from time to time, investment proposals from an enterprise in which the total new investment is at least U.S. $500,000 or its equivalent and its own share of investment is at least U.S. $100,000 or its equivalent.

The enterprises eligible for financing from the I.F.C. are industrial, agricultural, financial, commercial and other private business, provided their operations are productive in character. The I.F.C. will, however, prefer, in its early years, to invest mostly in predominantly industrial enterprises. It will not normally invest in basic public utilities, such as electric power, transportation, irrigation, reclamation and drainage projects which are usually financed by the World Bank.

It will finance only private enterprises. It will not invest in undertakings which are government-owned and operated or in the management of which the Government participates to any significant extent. This does not mean that it will not finance enterprises in which public funds have been invested. Such enterprises are also eligible provided they are, despite the Government interest, essentially private in character. Whether any particular enterprise meets this test will depend upon the facts of the case.

The main criteria which will govern the choice of eligible enterprise for financing by the I.F.C. are: (i) the extent to which the I.F.C. participation would bring about the investment of private capital by other investors; (ii) the estimated profitability of the investment both to the I.F.C. and to its associates; and (iii) the prospective contribution of the investment to the I.F.C.'s objective of building up a reasonably diversified portfolio. Unlike the World Bank, I.F.C. when satisfied that the enterprise is productive in character, will customarily not investigate its developmental priority as against other possible investments in the same country.

Explaining the forms and methods of financing, the booklet says that the I.F.C. is authorised to invest in any form it deems appropriate, with the exception of capital stocks or shares. Thus, its investments will be in the form of loans, but not the conventional fixed interest loans. As it is expected to revolve its funds by sale of its investments, the I.F.C. will obtain securities or contractual rights of a character attractive to private investors. In other words, it will obtain the rights to subscribe to capital stock or shares or to convert the investment into stock or shares, which can easily be sold to private investors. By acquiring such rights, the I.F.C. will be in a position to realise capital profits by selling successful investments and thus to offset losses, build up reserves and enlarge its funds for investment in other enterprises. Thus, it can, without locking up its funds in one enterprise, go on rotating them and expand its activities. It will usually wish to provide at least a substantial part of its funds in any enterprise on a basis approximating venture capital and to obtain financial returns appropriate to that type of investment.

No policy of uniform interest rates for its loans will be followed, the rate of interest being determined in each case by the relevant factors, including the risks involved and the nature and extent of any rights to participation in profits and to conversion or subscription to stock. The usual period of maturity of its loans will be five to fifteen years. The loans will be disbursed with or without security. The amount of loan will be given in a lump sum or in agreed instalments.

WOOL—THE INTERNATIONAL FIBRE

ITS DEVELOPMENT IN INDIA AND ABROAD

SINCE the earliest days of history, wool has played an increasingly active part in the social and economic development of the world. Today, it is perhaps the most important single commodity in international commerce. Wool has no substitute. No other fibre is easier to spin and dye, and there is no comparison with the graceful comfort and all-weather protection of woollen clothing. The finest furnishing fabrics and carpets are of wool too. Indeed, the age-old pre-eminence of wool remains unchallenged, and this is partly due to the unceasing research in chemistry, physics, biology and engineering to improve the fibre's use and usefulness.

In India, hand spinning and weaving of wool has been carried on since time immemorial. Today, the handloom (woollen) industry is scattered all over the country, and, although the extent and structure of this industry cannot be assessed precisely, the Government of India's Fact Finding Committee has estimated that there are about 100,000 handlooms engaged on wool in the Republic. In addition, there are handlooms which produce carpets of complex designs and shades to meet the specific demands of internal and external markets. Seventy-five per cent. of the woollen handloom industry is concentrated in Northern India in the Provinces of U.P., East Punjab (specially Kulu Valley), Himachal Pradesh, Kalimpong, Kashmir and Rajasthan. The main reason for this is the demand for wool goods arising from the cold climate generally experienced during winter in Northern India.

This valuable industry caters for our clothing in winter by producing blankets, durries, carpets, druggets, tweeds, shawls, lohis, coatings, pattus, scarfs, etc. Some knitted goods, such as socks, pullovers, jerseys, etc., are also produced on a small scale. Apart from satisfying civilian needs, the industry is also invaluable for India's Defence requirements. During the last World War, for instance, the industry supplied thousands of barrack blankets and fabrics to clothe Indian forces fighting in many theatres of war. The industry also has its place in our export trade. The shawls and carpets of Srinagar, Amritsar and Mirzapur and the druggets of Mysore and Bellary are sent as far as the U.K. and the United States, thus earning valuable foreign exchange and enhancing India's reputation for quality goods.

It is the hereditary skill and craftsmanship displayed by India's artisans which enables this cottage industry to maintain its share in the export trade. Thousands of namdas (floor rugs) from Kashmir and druggets from Mysore are exported to the U.S.A., and England is one of the largest markets for Indian floor coverings. It is important, therefore, that the industry be helped, not only for the sake of the country's export trade but also for keeping the cottage workers fully employed.

Wool's importance in India's economy cannot be exaggerated. According to latest available statistics, there are no less than 38 million sheep in India, producing about 60 million lbs. of wool per annum. About 24 million lbs. of the indigenous raw wool is used in the country, the remainder being exported. Clothing types of wool are now imported to the extent of about 18 million lbs. per annum. No wonder that, in the second Five-year Plan, a sum of Rs. 1.5 crores has been provided for sheep and wool development in India. It is proposed to establish 396 sheep and wool extension centres and some sheep breeding farms in different regions.

Definition of Wool

What is wool? Wool is primarily the fibre of the coat of the sheep or lamb. In order to ensure that the public are not misled when buying wool yarns and fabrics, many countries have prepared standard definitions for wool goods, or their Governments have passed Labelling Acts making it compulsory to indicate the wool content of all textiles containing wool which are sold to the public. Thus, the British Standards Institution have established definitions stating that the terms "wool," "woollen" and "worsted" denotes cloths made *wholly* of the wool fibre, apart from an allowance of up to 7 per cent. for decorative threads such as are used in men's suitings. Countries like the United States, Australia, South Africa and New Zealand have Wool Labelling Acts which ensure that the wool fibre content is stated on all wool textiles sold. Prosecutions are undertaken in cases where the goods are falsely labelled and the "good name" and generally recognised value of the wool fibre is thereby preserved.

Wool fibres grow out of the tube-like depressions, known as follicles, in the skin of the sheep. At the base of the follicle, cells are continually being formed, and as they pass upwards through the follicle, they are hardened and consolidated into a fibre.

The raw fleece of the sheep contains a variety of impurities, such as wool wax, suint (or sweat derived from the sweat glands), vegetable matter (such as seeds or burrs), earthy matter (like sand and dung) and moisture. The amount of contamination present in greasy wool varies from sheep to sheep, and the accurate assessment of the yield of clean wool which may be expected from a given lot of greasy wool is only possible after years of training. Most wool is sold in the greasy state, but before manufacture it is cleaned by washing in a solution of soap and soda at a temperature which is just warm enough to melt the grease; the suint, which is water soluble, dissolves and the wool wax is emulsified by the soap during the scouring process, while the dirt falls away as soon as these sticky components are removed. Some of the vegetable matter remains in the scoured wool and this is removed when the wool is opened in the subsequent carding process; or, if burrs are present in large quantity, by carbonising before carding or in the woven cloth. Carbonising consists of immersing the wool in dilute sulphuric acid, followed by drying and baking. By this means, the burrs are reduced to powder, but the fibre is virtually undamaged.

Carpet Wools

Carpet wools, of which India produces a large amount, are treated somewhat differently. The greasy wool is often washed in plain water before selling. Carbonising is not usually employed for the burry wools, since it tends to reduce the "springiness" so essential to carpet wools. The burrs are separated by three methods considered most economical and successful: by cutting with hand scissors; by threshing the burr by lash beating on a stone plate, and by putting the burry wool into a deburring machine. The first method is more common and thought to be better than the other two.

The wool fibre is, as mentioned already, built up from the cells which are formed at the base of the follicle. The outer cells of the fibre are different from those within; they are flattened and overlap one another to form the imbricated scale layer (or cuticle, as it is called). The scale layer encloses the "cortex," which consists of elongated cells, each about one two-fiftieth of an inch long. These cells cannot easily be seen when the fibre is examined under microscope, but they have been isolated by treating wool with bacteria and enzymes which dissolve away the cementing substance between them. The fibre breaks down into its component cells, which can then be examined under the microscope. In coarse fibres, there is often a hollow tube running up the centre of the fibre which is called the "medulla." Although this is not particularly a disadvantage in carpet wools, in many types of clothing wool such fibres are objectionable and breeders usually attempt to eliminate them or reduce them in number.

The value of wool on the whole increases with its fineness, that is, with decreasing fibre diameter, because there is a direct connection between the fineness of fibres and the fineness of the yarn into which they can be spun. The natural wave or crimp in wool fibres is also important, especially in knitting yarns, since it keeps the fibres apart, thus giving a light and open texture to the knitted garment. Normally, the number of crimps per inch increases with increasing fineness of fibre. A wise wool grower, therefore, pays special attention to both fineness of fibre and regularity of crimp in selecting animals for breeding purposes.

When a wool fibre is stretched slowly in water, it can be taken to 30 per cent. extension without breaking, and when it is released, it will return to its original length. The high elasticity of wool plays an important part in wool clothing and wool carpets, giving good resistance to wear and ability to recover from creasing.

In the manufacture of blankets, the fabric is consolidated by milling before the surface is raised with teasles, or wire, to form a light, fluffy, cover. Now the warmth of a blanket, like that of any fabric, depends fundamentally on the air it contains. It is the air which acts as the insulator, but the air must be so sub-divided into tiny pockets that heat cannot be lost by the movement of large volumes of air (called "convection"). The milling and raising processes together build up a fabric of great thickness but which comprises a multitude of tiny pockets of air, and the degree of sub-divisions of the air is enhanced by the natural waviness of the fibres. It is because milling is only possible with animal fibres that all other fibres are difficult to convert into fabrics as warm as those composed of wool. For instance, even if a fabric of the same lightness and thickness as a wool blanket were made from cotton, and even if it could be arranged that the contained air were sub-divided into pockets in the same way as with wool, the warmth of the fabric would not survive washing, because cotton hairs do not have the high elasticity and strength of wool fibres in water. Hence the motto: "There is No Substitute For Wool."

Wool is warm in cold weather, mainly because the fabric thickness and the entrapped air provide an excellent insulator for the warmth of the body. On the other hand, wool is also cool when the fabric is made light and porous, so air can move freely around the body. Wool's absorbency helps in maintaining coolness and comfort in summer time. Technologists have urged discarding the myth of wool being only warm, on the ground that lightweight, porous, absorbent fabrics are being made of wool and these are cool and comfortable.

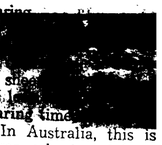
Wool Growing

Pasture and grazing management are important features of the woolgrower's operations. The woolgrower has, first of all, to establish his flock by breeding and selection and supply it with food and water, the raw material which the sheep converts into wool.

Maintenance of sheep is not an easy proposition. The animal must be protected from such natural enemies as the dingo (a wild dog), external parasites like the blowfly, and minute internal parasites and bacteria, which cause serious diseases in sheep. In modern, organised sheep-growing centres, these natural enemies are checked by such methods as the erection of dog-proof fencing and extermination by trapping, and treatment for diseases by vaccines. Even so, the way and form in which the raw material is supplied to the sheep affects their growth considerably.

To provide each sheep with economic sufficiency under natural conditions demands judgment of "carrying capacity" of the pasture. The carrying capacity of an area of land is the number of sheep which can be maintained continuously on the herbage produced under average seasonal conditions—largely as measured by rainfall. If this is overestimated, there will be losses from starvation in drought years; if underestimated, too much feed will go to waste in good years. It is a pity that such an important factor is ignored by Indian wool-growers. This is, however, largely due to the fact that sheep growing is not practised on a large-scale. In places like Australia, where wool growing is a big national industry, the greatest thought is bestowed on the question of carrying capacity. Having grown this sheep feed, every precaution is also taken to ensure that it is consumed by one's own sheep and not by others or by rabbits or other vermin.

Wool Shearing



After feeding, shearing [illegible] important phase of wo[illegible] management and running [illegible] property and flock of 5,000 sh[illegible] the full time services of at l[illegible] two other men, but, at shearing time[illegible] have further assistance. In Australia, this is provided by teams of shearers who travel from property to property, throughout the districts of the country as the season progresses.

As in India, Australia's climatic conditions also differ from place to place. But they have qualified contractors engaged for shearing, who have usually a team consisting of shearers, shed hands for picking up, skirting and rolling, piece pickers, pressers for baling the wool, a wool classer and machine expert, and a shearer's cook.

A shearing machine works on the same principle as the barber's clippers, and are power-driven through a flexible drive. As the fleece is shorn, it falls away from the sheep in one piece. This is picked up by a shed hand in a special way, is thrown with the outside upwards, on to a table where it is skirted. Skirting in-

CLOTH AND YARN MARKETS STAGNANT

TEXTILE TRENDS—USES OF MAN-MADE FIBRES

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, *4th September*

AFTER signs of a little more activity in the early part of last month conditions in the Manchester market for cotton yarn and cloth have relapsed into the inertia which has been so apparent for a long time past. To some extent this must be attributed to the unsettled foreign political situation, as export trade cannot be expected to flourish when world affairs are in such a state of chaos.

Unfortunately activity at home has not broadened on the lines anticipated when prices for American type yarns were reduced in line with the cheaper rates ruling for the supplies of United States cotton shortly due to arrive in this country. The initial impetus of the buying movement which took place some weeks ago has slackened and the continuation of the unseasonable weather has had its dampening effect on the offtake in textiles from the retail shops throughout the country.

Taking the all-round position, the price level for manufactured articles is certainly more attractive now than a little time ago. Buyers continue to display more interest in replacements of certain goods when prices and delivery terms are requested for fresh contracts. The volume of actual business, however, remains very patchy. The experience of individual producers varies substantially from firm to firm and from district to district.

A fair amount of comment has taken place in trade circles on the statement made by Mr. A. V. Symons, Chairman of Tootal Ltd., in relating to the unsatisfactory conditions prevailing within the industry. The vigour displayed in dealing with the situation has been generally admired and the action in reducing the number of employees is likely to be followed out in numerous other instances unless there is a sharp change in the current atmosphere of trading.

Some surprise has been expressed that the percentage of workers whose services have been dispensed with has been as much as one-fifth of the group's labour force but this example shows what can be done when ruthless pruning of expenditure and surplus manpower is carried out. Other firms may well take notice of this development when considering their own plans for consolidation.

Bonded Fabrics

Plans now being drawn up by a leading Lancashire textile group to produce fabrics which pass through neither loom nor spindle have not as yet caused any consternation locally among either employers or workers. An industry which has long been conditioned to warnings that the end is in sight, due to the forces of economics or "revolutionary" scientific advances, merely admits there "might be something" in a process which virtually by-passes the 1,500 spinning and weaving mills in the industry.

The conception of "non-woven fabrics," in which fibres are bonded or felted together by chemical or physical means, is not new but interest in the idea has been quickened by the practical steps towards production now being taken.

In Lancashire, only one company, Tootal Ltd., has publicly announced its intention to start producing non-woven fabrics but it is probable that its rivals are also closely examining the costs and possibilities in relation to conventional fabrics. The Tootal company is associated with the West Point Manufacturing Company of Georgia, U.S.A. in forming a new British company for producing non-woven fabrics by West Point's processes.

The Tootal technique is likely to be on similar lines to that planned by Bradford Dyers' Association at a new plant located on the other side of the Pennines at Halifax. In June it was announced that a new company had been formed for this purpose and "great developments in non-woven fabrics for a large variety of end-uses" were foreshadowed.

Despite this forecast the belief is that non-woven fabrics will compete in a limited field only, probably with medium and lower quality goods. There is no fear among the trade union leaders that Lancashire's 250,000 spinning and weaving operatives face widespread redundancy. The union view is summed up by Mr. Lewis Wright, General Secretary of the Amalgamated Weavers' Association, in the statement: "It is doubtful whether it could have any serious impact for many years." But the process was "technically feasible" and there was no doubt that this type of fabricated cloth—perhaps in the form of sheetings and soft furnishings—would displace conventional cloths in some directions.

Labour Losses

Conflicting ideas on the treatment which should be meted out to an industry which is compelled to relinquish its labour force by slow degrees in small numbers and one which dismisses thousands at a time have been freely debated since the recession in the industrial Midlands. Lancashire operatives who have suffered redundancy over the past year or two are justifiably aggrieved at the concessions made in other quarters.

Nor have their leaders been silent while the controversy has persisted. The tendency has been to blame the Government and its spokesmen rather that the employers, whose difficulties are understood by the trade unions.

Frequent estimates have been made as to the number of mills which have lately closed due to the slump. Mr. William Roberts, President of the United Textile Factory Workers' Association, has put the figure at 170 since the labour force stood at its post-war peak of 321,000.

"Now we are almost back to the number of operatives employed during the compulsory concentration during the war," he told members of the Bolton Cardroom Association, in his capacity as secretary. "But we are still Europe's largest textile industry, which has installed proportionately more modern equipment than any of our European competitors. We have a standard of efficiency to meet the demands of the home market and for a continuation of our substantial contribution to exports, provided the industry is not continually weakened by influences outside its control."

Attacking those who criticise the cotton industry as being "uninformed about its operation and its achievements," Mr. Roberts declared that modernisation, planned maintenance and modern productive methods had followed the rebuilding of the labour force. In the past, the trade had been accused of "shouting before it was hurt," but irreparable harm had been done to it by outside influences, leading to the loss of nearly 75,000 operatives.

For only the second time since February, the Lancashire spinning industry had a manpower gain of full-time workers in the week ended 4th August. Cotton Board returns showed a net gain of 41 full-time workers and 10 part-timers. This recruitment followed a non-stop sequence of losses during which the mills lost more than 3,000 workers. Yarn production in the first week in August aggregated 13,750,000 lbs. compared with 14,490,000 lbs. in the previous week. Output was affected by Wakes holidays at Preston, Accrington, Chorley, Blackburn and elsewhere.

World Cloth Supplies

A brief survey of available supplies of cotton and rayon cloth and the trend of consumption of Lancashire-made textiles was contained in this letter a week ago. It is now possible to compare the position of the main producers in other parts of the world. The following table is concerned only with cotton cloth and the figures for 1956 are estimated at an annual rate, based on the experience of the early months of the year.

(In million yards)

	Production	Imports	Exports	Balance

1956	1,673	320	474	1,519
United States—				
1953	10,203	61	621	9,643
1954	9,776	74	605	9,245
1955	10,100	133	542	9,691
1956	10,944	253	558	10,639
Japan—				
1953	2,709	..	917	1,792
1954	3,046	..	1,280	1,766
1955	2,814	..	1,139	1,675
1956	3,093	..	1,308	1,790
India—				
1953	4,878	4	654	4,228
1954	4,998	4	861	4,141
1955	5,094	7	749	4,352
1956	5,044	15	717	4,342

From the above figures it can be observed that Lancashire's one-time importance is dwindling as its export trade declines. Imports are very much larger than those of other countries although the growing arrivals of Japanese cloth in the United States present a problem for American manufacturers. In comparison with total output in the United States, however, imports are still minute.

But the variations in the experience of the two Western countries are in marked contrast to the steadiness of availability of supplies in the Eastern nations. Japan in particular has maintained its production over the years under review and exports have achieved a consistently high level. It is open to doubt whether India will continue its progress in the face of the lower world cotton prices now in operation but its opportunities of greater industrialisation are almost limitless.

Man-made Fibres

Even those directly concerned with textiles are not always fully aware of the wide application of the numerous fibres now at their disposal. The broad range of uses covers such an extensive field of products that the pioneers of textile manufacturing in this country would be astounded at the development of their ideas.

Original work in this direction was undertaken by the first processors of the natural fibres, but with the arrival of synthetics a vast new field of endeavour has been opened. Research has not only widened the opportunities for a multitude of fresh uses, but has been able on occasions to educate the ultimate consumer into thinking along the latest progressive lines.

Many of the uses to which these fibres are put follow experiments in finding out the best properties of each, so that they can be combined to give the most advantages finished product. But this continued application of the best methods of bringing top quality goods to the buyer—commendable as it is—is far from the end of the matter. More significant developments still are daily being investigated by those responsible for probing the possible extension of various fibre uses.

Certain types of timber and metal are in danger of being exhausted by the ever-increasing pace of the use of these products in industry. Adequate alternatives, rather than mere substitutes, must be found, particularly in the case of high-grade seasoned timber, where the shortage is already becoming acute. Mr. E. Butterworth, industrial uses officer in Courtaulds Use-Development Organisation, has lately disclosed that the use of a cellulosic material, with certain thermo-setting resins, gives products which can be worked like wood, have a strength equal to mild steel and are competitively priced.

In this case, the use of viscose rayon in its many forms has been found satisfactory while viscose staple fabrics and high tenacity viscose are giving extremely good results in providing alternatives to metal bearings. In some instances these fibre products have been found to outlast metal by three or four times, with lower co-efficients of friction, leading to considerable power savings. To the layman looking for the first time at such extensions of the textile world, the possibilities seem enormous. Handling such a solid substance, it is hard to believe that it sprang from the same basic fibre which offers dresswear and clothing in so many different guises.

Yet fabric bearings are light, cheap and non-corroding, qualities which should lead to a wide extension in their use. One metallurgist has indeed predicted that they will ultimately replace non-ferrous bearings in many applications. On such an assumption, and the clear progress being made in this direction, it is possible to join Mr. Butterworth in his claim that the textile industry is going to play its part more and more, not in clothing, but in the products of industry.—*All Rights Reserved.*

TEXTILE SALES

Wholesale textile sales in the U.K. recorded a steep seasonal fall in July 1956, but were at the same level as in July of last year and were higher than for any other July since 1951. Statistics prepared by the Wholesale Textile Association in collaboration with the Bank of England showed the sales index (1950=100) at 71 for July as against 83 for June. In women's and children's wear, the fall was from 80 to 70 but this was also the same as a year ago. Men's and boys' wear showed a steeper decline, from 91 to 75, although piecegoods recorded only a limited fall, from 57 to 53 which was 9.5 per cent. above a year ago. For the first seven months of this year total sales were 5.2 per cent. greater than in the same period of 1955. The only decline, 6.3 per cent. was in gloves. Sports and travel goods had the largest increase, 14.4 per cent. Following the seasonal pattern, stocks rose appreciably in July and were at their highest level since September 1954. Compared with a year ago they were up by 7.2 per cent., but in three sections—piecegoods furnishings and sports and travel—stocks were smaller than last year.

COTTON IN SECOND FIVE-YEAR PLAN

INDIAN CENTRAL COTTON COMMITTEE REVISES TARGET

FOR the second time in about a year, the target for cotton under the second Plan has been found to need revision. The Indian Central Cotton Committee, at its seventy-fourth meeting held last week, under the Chairmanship of Mr. M. S. Randhawa, I.C.S., Vice-President, Indian Council of Agricultural Research, and Additional Secretary to the Union Ministry of Food and Agriculture, has raised the target of cotton production in the second Plan from 5.86 million bales to 6.5 million bales. The considerations which influenced this upward revision of the target are the need for stepping up of the production of cotton textiles, the rising demand from overseas countries for certain qualities of Indian cotton, the growing extra factory consumption and the necessity for a comfortable carryover.

It may be recalled, in this connection, that the target for cotton production tentatively fixed by the secod Plan was 5.5 million bales. This is about 31 per cent. over the target fixed under the first Plan, namely, 4.23 million bales. The National Development Council had agreed that, while the targets for agricultural production in the draft Plan should stand for the time being, the various States should be consulted again, with a view to working out practical steps to achieve higher targets. It was felt that these higher targets were required to meet the domestic needs, to eliminate imports and to provide against the possibility of inflation arising from the investment outlay envisaged in the second Plan. At the Conference of the State Ministers of Agriculture at Mussoorie in June last, a working target of 5.86 million bales was accepted, with the recommendation that the States should make every effort to raise the target to 6.1 million bales. Taking into consideration the factors mentioned above, the Indian Central Cotton Committee has further raised the target to 6.5 million bales. Alluding to the methods to be followed for achieving this target, Mr. Randhawa, in the course of the Presidential address, observed that increased reliance should be placed on extension of irrigation, the use of improved seed and more fertilisers, and better agronomical practices.

Mr. Randhawa noted that the Committee's recommendation that all important cotton growing States should set up State Cotton Committees to review the progress of cotton extension schemes and problems had met with general approval. Referring to the problem of growing long-staple cotton, he pointed out that the demand for such cotton was steadily rising on account of the increasing demand for finer cloth following the improvement in the standard of living of the people. This, he said, indicated the need for paying greater attention to the production of long-staple varieties. Efforts made hitherto in this respect have met with considerable success, as is evident from the increasing proportion of long and medium-staple varieties in the country's total production. In 1955-56, according to official estimates, output of long-staple cotton was 1.5 million bales, of medium-staple 1.8 million bales and of short staple 0.7 million bales. As compared with the base year 1950-51, production of long-staple cotton increased by 123 per cent. and of medium-staple by 23 per cent. It is, however, true that the country is not yet in a position to do without imports of long-staple cotton. In 1954-55, 380,000 bales of staple length 1.1/16″ to 1⅛″ valued at Rs. 28.74 crores and 234,000 lakh bales of cotton of staple length 1.3/16″ and above valued at Rs. 24.64 crores were imported into the country. This highlights the need for accelerating cotton improvement work designed to evolve better strains of cotton. By intensive research work, it should be possible, as Mr. Randhawa observed, to raise cotton of staple length of 1.1/16″ to 1⅛″ which will bring a substantial saving of foreign exchange to the country. At the same time, Mr. Randhawa did well to recognise that short-staple cotton such as Bengal *Deshi* and Assam Comilla have their special importance for mixing of cotton and wool. The export demand for such cottons is also increasing, and as such they are valuable earners of foreign exchange. The cultivation of such cotton should, therefore, be encouraged, though not at the expense of long and medium-staple cottons. The Committee has recommended that the production of these should be stimulated in Assam, Tripura, Rajasthan, Andhra and the sub-montane areas of the Punjab.

Crop Estimation

Referring to the present system of crop estimation, Mr. Randhawa observed that it was far from satisfactory, because of the existence of a wide divergence between the official and trade estimates. For instance, while the official estimate of production of cotton in 1955-56 was 3.9 million bales, the trade estimate was 4.6 million bales. Though the technique of crop estimation by random sampling currently in use is the best available method at present, the unreliability of the revenue records in some States results in distortion of the ultimate results. While this calls for improvement of the revenue agency which collects statistics of cotton production and acreage at the village level, there is also the need for taking into consideration factors like road-borne transport of cotton, extra factory consumption, stocks in transit and stocks held by trade. There is need for a comprehensive scheme in which all the factors involved in the assessment of actual production should be considered. In this connection, Mr. Randhawa suggested the Constitution of a Sub-Committee consisting of the Agricultural Commissioner, Government of India, statistical adviser to the Indian Council of Agricultural Research, representatives of the National Sample Survey and the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture and the Secretary of the Central Cotton Committee. This suggestion was accepted at the meeting. The Sub-Committee, now set up, will review (1) the results of crop-estimating surveys by random sampling method now in operation, (2) the present methods of forecasting the crop, (3) study various factors involved in the estimation of the actual crop, and (4) suggest ways and means of effecting improvements in the accuracy of cotton statistics.

Reviewing the progress of research, Mr. Randhawa observed that a measure of success had been achieved in developing the idea of Regional Research Stations to deal with the problems of cotton and its rotation crops such as oilseeds and millets. A special Sub-committee, which had been asked to examine this question, has proposed 9 main stations and 8 sub-stations. A total expenditure of Rs. 72 lakhs is envisaged for a period of five years of which Rs. 60 lakhs would be recurring and 12 lakhs non-recurring. This expenditure would be shared between the Indian Central Cotton Committee, Indian Central Oilseeds Committee and the Indian Council of Agricultural Research in the ratio of 2:2:1. The Regional Research Stations will deal with the fundamental problems of cyto-genetics, physiology, plant pathology, entomology as well as agronomy. All schemes relating to these subjects would be incorporated in the working of the Regional Research Stations. When these Regional Research Stations are organised and start functioning, it will be an important landmark in agricultural research in the country.

The Committee, in the course of its deliberations, took note of an important finding of the Mysore Physiological Scheme, namely, that Egyptian cotton did not respond to the application of nitrogen and that better yields were obtained only when nitrogen was supplemented with either phosphate or potash or both. It was also found that enhanced yield would result when the crop was sprayed with a-naphthaleneacetic-acid. In the experiments conducted in the Punjab, an increased yield of 82 lbs. per acre was obtained at an initial cost of the chemical of Rs. 4. These results show that the methods deserve to be widely publicised among the cultivators to obtain increased yields. The Committee also reviewed the commendable work which had been done at Surat where two Indo-American Cottons, namely, 170-Co.2 and 134-Co.2M., which possess a staple of 1.1/16″ and above and which are comparable, to some extent, to imported American and East African Cottons were evolved. These have proved to be very popular with cultivators, with the result that the area under these particular varieties has increased from 79,000 acres in 1954-55 to 230,000 acres in 1955-56.

Pursuant to a suggestion made at the last meeting, the Committee collected some useful information regarding areas which have received irrigation under the projects which have been completed and the projects which are under construction and would be completed during the second Plan period. Under the projects which have been recently completed, 213,000 acres have been brought under irrigation and an area of 1,053,000 acres would be brought under irrigation in the projects which are under construction. The additional production of cotton that is likely to result from these areas is estimated at 600,000 bales. By the spread of irrigation, it is believed, cultivation of long-staple cotton would receive impetus, thus benefiting both the cultivator and the industry, the former by enhanced revenue and the latter by ready supply of suitable strains necessary for weaving finer cloth.

BACKGROUND FOR THE INCREASE IN CLOTH EXCISE DUTIES

GOVERNMENT'S EXPLANATION

THE following is the full text of the note circulated by the Finance Ministry, Government of India, to Members of Parliament, when it increased the excise duties on cloth with effect from 1st September 1956, in order to enable them to view the increases in their proper perspective:

"Consumption estimates of cloth, its availability, and its prices have been, for some time, matters of wide public interest. This Note seeks to give some figures in respect of these three matters. No attempt is being made to deal with future trends.

"The consumption figures indicate a sharp upward trend. In this connection, we have to take into account the increase in demand arising out of three seasonal factors, *Puja* demand, the *Diwali* demand and the *Sankranthi* demand (in South India). If the expectations on this account materialise, the average *per capita* consumption at the end of this year would rise further than what has been indicated in this Note, on the basis of January-July figures for 1956.

"The increase in the availability of cloth over these seven months has been indicated and these do not go forward at the same rate as the demand. Prices have an intimate relation to demand. This explains a steady increase in prices since the beginning of this year and a slowing down of this trend during the monsoon months when the demand for cloth slows down. An upward trend in the prices is more than probable if, as it is expected, the demand exceeds the supply.

Availability of Cloth "Per Capita"

"The table below gives an idea of the availability of cloth in relation to the population from the year 1939-40 onwards. This table takes into account the production of cloth by all the sectors of the textile industry—the mills, powerlooms and handlooms—and the availability has been calculated after deducting exports (and during the War years, the Defence requirements).

Year	Availability of cloth (in mill. yds.)	Population (in millions)	Availability *per capita* (in yards)
1939-40*	6,074	384	15.75
1940-41*	6,029	389	15.75
1941-42*	5,608	394	14.25
1942-43*	3,987	399	10.00
1943-44*	5,470	404	13.50
1944-45*	5,379	409	13.12
1945-46*	5,051	414	12.20
1946-47*	4,828	419	11.50
1947-48*	4,762	424	11.25
1948	5,279	342	15.1
1949	4,911	347	13.9
1950	3,478	352	9.7
1951	4,238	357	11.7
1952	5,275	362	14.4
1953	5,566	367	15.0
1954	5,586	372	15.0
1955	5,980	377	15.9

* Undivided India.

"It will be seen that there has been a steady increase in consumption of cloth from 1951 onwards. The effect of the various developmental schemes taken up under the first Five-year Plan and the general increase in the standard of living has led to an accelerated demand for cloth. In 1955, the *per capita* consumption worked out to nearly 15.9 yards. For the first seven months January-July 1956, the total availability of cloth after deduction exports was 3,710 million yards. This would give a *per capita* figure for the year at about 16.8 yards. The increase from the 1955 figure is as such as 0.9 yards per head.

Decline in Stocks

"Production of cloth has increased and mill production in the first seven months of the year was 3,056 million yards. The July figure was an all-time record of 478 million yards. But production has not kept pace with the increase in demand and there has been a continuous decline in stocks held with the mills as shown below:

(In bales)

Year	Average production of cloth per month	Stocks of cloth with the mills
December, 1952	255,000	278,580
,, 1953	271,000	336,377
,, 1954	278,000	302,022
,, 1955	283,000	171,689
,, 1956		
From January 1956, the fall in stocks have been specially marked as follows:—		
January, 1956	144,366	
February, 1956	113,154	
March, 1956	145,511	Average cloth production 291,000 bales a month.
April, 1956	126,857	
May, 1956	112,312	
June, 1956	132,460	
July, 1956	138,367	
August 18th, 1956	148,678	

"Production in July was 318,000 bales, whilst stocks at present are only 148,678 bales which relative to this figure, is less than two weeks' production. In normal times, the mills usually carry about five to six weeks' production.

Equal Demand for Handloom Cloth

"Production of cloth by the handloom industry has increased from 1,200 million yards in 1952 to 1,480 million yards in 1955. The figure for the first six months of 1956 is already 802 million yards and indicates an increasing rate of production. The total figures of production in the five Apex Co-operative Societies in Madras, Andhra, Hyderabad, U.P. and Bihar are as follows:

(In million yards)

Period	Production
July-September, 1955	36.3
October-December, 1955	41.8
January-March, 1956	55.2

"The demand for handloom cloth has kept pace with production and sales in these five Co-operatives increased over this perod from 34 million yards to 52 million yards.

Increase in Prices

"Cloth prices were finally decontrolled about the middle of 1953. The average price of cloth calculated in annas per lb. of yarn woven for the different periods have been as follows:

Year	Coarse	Medium	Fine	Superfine
August, 1953	37.4	39.74	80.00	143.07
January, 1954	39.6	48.38	69.89	128.98
January, 1955	37.95	43.32	65.60	127.05

"From January 1956, the rise in prices has been particularly steep:

(In annas per lb. of yarn woven)

——	Coarse	Medium	Fine	Superfine
January, 1956	39.60	46.13	65.60	142.37
April, 1956	45.50	58.88	75.67	158.50
August, 1956	47.06	66.95	83.00	166.00
Increase since January 1956	+7.46	+20.82	+17.4	+23.63

"The prices of cloth given in the 'Statement of Objects and Reasons' appended to the Central Excises and Salt (Amendment) Bill 1956 are actual wholesale prices in annas per pound of yarn woven. The cotton mix price is the price in annas of cotton required for producing the cloth. The difference between the two figures represents the manufacturing cost of cloth and the current profits of the mill and of the wholesaler. The figures are based on the wholesale prices ruling in the first week of each month. It will be observed that the difference has been steadily increasing and, as the manufacturing cost has remained more or less the same, it clearly indicates an increase in the profit of the mill and the wholesaler.

"For some representative varieties of cloth, the figures are as follows. It is emphasised that these represent the wholesale prices and not retail prices:

Description	Category	Wholesale price now ruling in the market		
		January, 1956	August, 1956	Increase
		Rs. a. p.	Rs. a. p.	Rs. a. p.
1. Drill, bleached	Coarse	0 13 3	0 14 3	+0 1 0
2. Drill, bleached and mercerised	,,	1 7 6	1 8 3	+0 0 9
3. Longcloth	Medium	1 1 0	1 2 6	+0 1 6
4. *Dhoti* (10 yds.)	,,	7 14 0	8 12 0	+0 14 0
5. *Saris* (10 yds.)	,,	7 0 0	8 0 0	+1 0 0
6. Longcloth	Fine	1 0 9	1 2 6	+0 1 9
7. *Dhotis*	Superfine	18 0 0	19 4 0	+1 4 0
8. Voiles	,,	1 4 6	1 7 6	+0 3 0

"The price of cloth is dependent on various factors of which the price of cotton is the biggest. When prices were controlled, the Tariff Board had worked out an appropriate formula under which the fair ex-mill price of cloth was calculated. This formula had taken into account the prices of cotton, the manufacturing cost, and a return of 6 per cent. on the Gross Block to the millowner. To this was added a margin of upto about 15 per cent. for retail sale. For certain areas like Assam involving higher cost of transport and freight, margin was allowed upto 20 per cent. The fair wholesaler's margin out of this was normally considered to be about 3 per cent. A comparison is given below as to what would be the wholesale price calculated on the Tariff Board formula, and the actual prevailing wholesale prices at present. This would show the extra profits now being made over and above what may be considered as fair selling prices:

Description	Category	Fair wholesale price on the basis of Tariff Board Formula	Wholesale price now ruling in the market (August, 1956)	Extra margin available to the industry and trade
		Rs. a. p.	Rs. a. p.	Rs. a. p.
1. Drill, bleached	Coarse	0 11 8	0 14 3	+0 2 7
2. Drill, bleached and mercerised	,,	1 1 5	1 8 3	+0 6 10
3. Longcloth	Medium	1 0 8	1 2 6	+0 1 10
4. *Dhoti* (10 yds.)	,,	8 0 10	8 12 0	+0 11 2
5. *Saris* (10 yds.)	,,	7 0 6	8 0 0	+0 15 6
6. Longcloth	Fine	1 0 2	1 2 6	+0 2 4
7. *Dhotis*	Superfine	16 2 0	19 4 0	+3 2 0
8. Voiles	,,	1 5 6	1 7 6	+0 2 0

"The result of the increased demand and the high profits being made by the industry and trade has been a diversion of cloth from exports to our internal markets. The actual exports of mill-made cloth in 1955 have declined by more than a 100 million yards as shown below with a consequent fall in foreign exchange earnings.

Year	Yards in million	Foreign exchange earned in rupees through exports
1954	810	66.9 Crores
1955	693	57.43 ,,

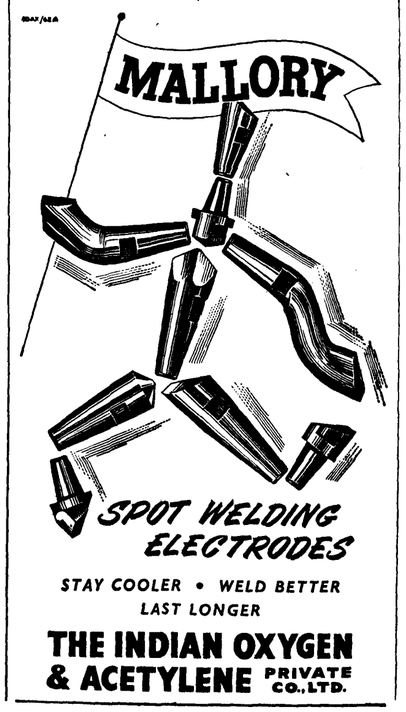
"The decline in exports has continued in 1956 is indicated below:

For the first six months of 1955 .. 362 million yards
For the first six months of 1956 .. 342 ,, ,,

"In the second Five-year Plan period, a target of 1,000 million yards have been envisaged, as this is an important item for earning Foreign Exchange resources for the Plan requirements."

An official review of the progress made in the implementation of the development programme for the handloom industry during the period September 1953-March 1956 reveals that a sum of Rs. 10.9 crores had been sanctioned by the Central Government to the State Governments for various schemes. The actual expenditure incurred, however, was less, being Rs. 9.65 crores, representing about 88.6 per cent. of the funds made available. A greater part of the amount spent was on the provision of working capital for the weavers' co-operative societies. The number of weavers brought into the co-operative fold increased from 682,000 in September 1953 to 1,027,000 in March 1956.

The Government of India has decided to give a substantial grant to weavers for the purchase of frame looms which will enable a higher rate of production. It has also decided to give financial assistance for rehabilitating and enlarging weavers' houses, especially, as it will be necessary in many cases to enable the installation of frame looms.



DEVELOPMENT OF SUGAR INDUSTRY IN BIHAR

A "MASTER PLAN" UNDER WAY

WHAT is described as a "Master Plan" for the development of sugar industry in Bihar is now being prepared by the State Government. This was disclosed by Mr. Mahesh Prasad Sinha, Industries Minister of Bihar, in the course of his address at a conference of the representatives of sugar millowners and cane growers held at Ranchi recently. The proposed "Master Plan," it is said, covers both the sectors of Bihar's sugar economy, namely, manufacture of white sugar and cultivation of sugarcane. The Plan is designed not only to expand and stabilise the sugar industry but also to ensure a fair price to the cane growers. In order to improve the working of sugar factories, the existing Sugar Factories Control Act of 1937 will be replaced by a new one. A Bill seeking to do this is expected to be introduced in the next session of the State Legislature.

The anxiety of the Bihar Government to improve the conditions obtaining in the sugar industry of the State is understandable. This industry is one of the major industries in the State. It earns for the exchequer a large amount of revenue every year by way of cess on cane crushed in mills and sales tax on sugar distributed for consumption. Moreover, to the extent the position of mills improves, the lot of the cane growers also will be better. The Government of Bihar, just as that of any other State, is only too eager to take any step for winning the favour of the cane growers, what with the next General Election drawing nearer. After all, it must be remembered that sugarcane is a commodity with plenty of votes to back it.

Political motives apart, the need for taking energetic measures for improving the conditions in the agricultural sector of the Bihar sugar industry cannot be overemphasised. Notwithstanding all the stress laid on cane development in the past few years, the fact remains that the progress actually made so far is none-too-encouraging. The average per acre yield of cane grown in the State has continued to be deplorably low, being 7.7 tons, as against the all-India average of 13.0 tons. The quality of cane is also very poor; during 1955-56, the average recovery per cent. of sugar in cane is estimated at 9.78, which compares unfavourably with 10.22 in the previous season and 10.32 in 1951-52. Incidentally, it may be noted that, in the 1955-56 season, about 379,000 acres were devoted to cane cultivation, the total output of cane being 2.92 million tons. The corresponding figures for the previous season were 327,000 acres and 2.48 million tons. It is the poor yield of sugar per acre that poses a serious problem in respect of the future development of sugar industry in Bihar. Dr. S. K. Sinha, the State's Chief Minister, who inaugurated the conference, did well, therefore, to draw attention to this aspect. Dr. Sinha urged that increased efforts were being made by all agencies, including the Government, to raise the yield of cane and improve the quality.

Intensifying Cultivation

How can the per acre yield of sugar be stepped up in Bihar? The answer to the question lies in schemes for intensifying cultivation of cane. These include provision of better and cheaper irrigation facilities, establishment of seed nurseries, distribution of disease-free and improved varieties of seed-cane, supply of manures and fertilisers, control of pests and diseases, organisation of demonstrations, and crop competitions. In this connection, the two specific suggestions put forward by the representatives of cane growers at the Ranchi conference deserve special mention. First, the State Government should reduce the present high water rates with a view to enabling the cane growers to make a larger use of water from tube-wells. The Bihata Sugar Factory, for instance, supplies water to growers at almost one-fourth of the Government rates. Mr. Shanti Prasad Jain, a leading sugar industrialist, even went to the extent of proposing that some of the sugar mills were prepared to take over the Government-sponsored tube-wells and supply water to cultivators at the rate at which the Bihata Factory was supplying from its own tube-wells. He added that the sugar factories were prepared to pay a reasonable amount of interest to the Government on the capital outlay over the tube-wells. Secondly, the State Government should constitute a fund out of which loans can be granted to small cane growers for the purchase of better seeds manure, etc., required for raising the yield per acre.

While the aforesaid schemes are of great value, they cannot be implemented with success, so long as the sugarcane growing areas are scattered and fragmented. In order to remove this drawback, the Bihar Government should enable the factories to purchase on leasehold basis the agricultural land in their neighbourhood and lease them back to the *ryots* in that area on the distinct understanding that the latter would grow sugarcane on the lines suggested by the factories and under their supervision. This arrangement, in our view, is a better alternative to farmers' co-operatives, in that it will ensure to the agriculturists the availability of modern means of growing sugarcane. It is also a form of co-operation, in that it constitutes concerted action by the crushers and growers of sugarcane. For the information of the interested parties in Bihar, we may add that this method is already being tried by a sugar company in South India where pressure on land is as high as in Bihar and as such large blocs of cultivable fresh land are not available for developing self-owned plantations on the lines of Bomaby-Deccan. It may be further mentioned in this connection that, in the second Five-year Plan, the Planning Commission has exempted sugarcane farms operated by sugar factories from ceilings on holdings that may be prescribed by the State Governments.

It is also necessary that the present defective policy of linking the price of sugarcane only to weight, instead of to both weight and quality, must be changed. Unless the prices paid for cane bear some relation to sugar recovery, neither the growers will have the requisite incentive to plant improved varieties of cane nor the sugar mills will have the encouragement necessary for expanding the industry to keep pace with the growing demand for sugar. Speaking on behalf of sugar millowners at the Ranchi conference, Mr. K. K. Birla rightly insisted that the price of cane must be fixed on the basis of quality. There are, of course, several practical difficulties to be overcome before the system can be successfully worked. To some of these, Mr. N. K. Narain, a representative of cane growers, alluded. These are small size of individual farms, large number of small cultivators, ignorance and illiteracy of growers, and suspicion in the minds of growers about the *bona fide* of sugar millowners. But these difficulties are not insurmountable.

In conclusion, a brief review of the latest position of sugar industry in Bihar may not be out of place. There are at present 30 mills in this State, with an aggregate annual capacity of 344,000 tons (calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent). Three sugar mills have been granted licences for an aggregate additional capacity of 12,000 tons. The number of factories which worked during the 1955-56 season was 28, the total quantity of sugar produced being 335,000 tons. The duration of crushing season was 138 days, that is, 44 days more than in 1954-55.

WORLD SUGAR

The setback which the world sugar markets suffered immediately after the International Sugar Council announced restoration of the remaining cut in member-countries' export tonnages and reallocation of the renounced quotas on 30th July last has gathered further momentum. Cuban raw sugar (f.o.b. Cuba) at New York now stands at 3.25 cents per lb.—the World Sugar Agreement minimum—as against 3.41 cents a month ago. The decline in prices reflects the availability of "too much sugar" in the world market. "Cuban houses," to quote a report, "appear to be trying to sell their increased allocations in a hurry, while the competition of those holding sugar against the various Cuban barter deals has accentuated the decline."

The world sugar trade circles expect that the downward trend in prices will be maintained for the time being. The future direction of the world market will, however, depend on the beet crop harvest. Alluding to this in their latest review, Messrs. J. V. Drake & Co., mention reports of the prospect of late beet crops and damage caused by the continued wet and unseasonably cold weather on the Continent. The Belgian crop is reported to be definitely poor. In Holland, the Government is already said to have taken over about 10,000 tons of imported raw beef sugar and cane sugar, originally bought for export, to be allocated against home trade requirements, as it is feared that the domestic crop will be very late. Western Germany also reports the prospect of a bad crop, some 100,000 tons under previous estimates.

UTILISATION OF COAL RESOURCES

TASK BEFORE NEW COUNCIL

THE inaugural meeting of the Coal Council was held in New Delhi on the 4th inst. under the Chairmanship of Mr. K. C. Reddy, Union Minister for Production. The Coal Council, it will be recalled, was formed, in accordance with the Government's resolution, to review the development, utilisation and conservation of the coal resources of the country. As the planning for coal production is inter-linked with many aspects of industrial planning, the Government came to the conclusion that a closely integrated action should be pursued, in order to achieve the most fruitful use of all available coal resources. This is sought to be achieved through the newly constituted Coal Council.

The Coal Council, of which the Union Minister for Production is Chairman, consists of the Deputy Minister for Production, Dr. J. C. Ghosh (Member of the Planning Commission), Secretaries of the Ministries of Production, Finance (Expenditure), Iron and Steel, Irrigation and Power and Natural Resources and Scientific Research, Director of Scientific and Industrial Research, Member, Railway Board (Transportation), the Coal Controller, the Chief Executive Officer of the Lignite Project, and three representatives of the private sector in the coal industry to begin with. The main function of the Council is to make reviews and studies of the programmes for the development, utilisation and conservation of the coal resources. The Council, in the words of Mr. K. C. Reddy, is "a sort of brains trust for the coal industry and will serve as a link between the policymakers and the consumers." It will study the problem of resources, demand, metallurgical requirements, transport and power needs, industrial and domestic requirements of coal, coal-based chemical industries and organisation in relation to the coal industry. The inauguration of the Coal Council will be followed by the establishment of a coal corporation to manage the State collieries. With the setting up of this corporation, the old proposal to have a National Coal Commission, as suggested by the Indian Coalfields Committee of 1946, which had the support of private colliery owners also, will be given up, because the future development of India's coal resources now rests mainly with the public sector.

The output of coal during 1955 amounted to 38 million tons, the bulk of which is from collieries in the private sector, the public sector accounting for only 4.5 million tons. Under the second Five-year Plan, the production is expected to be raised to 60 million tons in 1960-61. Of the proposed increase of 22 million tons, 12 million tons is expected to come from collieries in the public sector, either already existing or to be newly opened, and the balance is to be raised by the private sector.

Not Easy

Viewed against this background, the task before the new Coal Council is not an easy one. Referring to the onerous responsibility which lies ahead of it, Mr. K. C. Reddy said that the proposed increase in coal production under the second Five-year Plan was only a modest beginning for much larger increases during the subsequent period. According to one estimate, the production of coal in India might have to be raised to 150 million tons under the third Plan to meet the rapidly increasing requirements of industry.

An essential part of overa[illegible] creased production and uti[illegible] Reddy observed, an accurate [illegible] sources, that is, the quality [illegible] coking and non-coking coal av[illegible] production had to be brought [illegible] manner and, in the interest of the best exploitation and utilisation of the country's resources, it would be necessary greatly to extend the action in the direction of enforcing stowing and various other measures for conservation.

"It has already been decided, in principle, by the Government," the Minister proceeding observed "that all metallurgical coal should be washed and reserved for metallurgical and other uses for which non-coking coal cannot be used. This is, however, only a first step and it will be necessary to consider and tackle problems connected with the washing of non-coking coal also. Production of low grade coal has to be stepped up to prevent the use of metallurgical coal for non-metallurgical purposes."

Closely connected with the aforesaid problem of conservation is that of transport. The

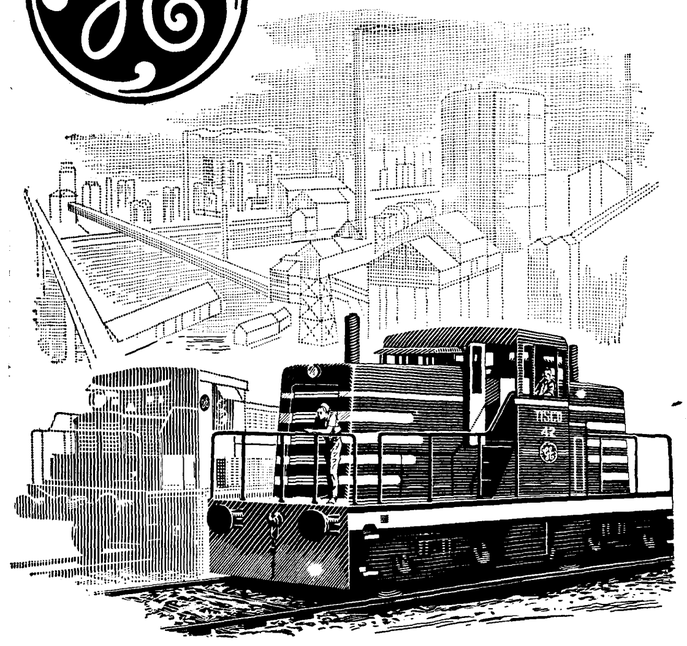
DIESEL-ELECTRIC LOCOS FOR TISCO



Whether it is pulling molten metal cars from furnace to furnace, transhipping iron ore from railway yards to works, or moving a mass of hot metal from the Blast Furnaces to the Duplex Plant, speedy haulage is an integral process in the continuous production of steel.

Tata Iron & Steel Co. Ltd. had the foresight to appreciate the operational advantage of the diesel-electric over the steam locomotive for this important operation, when in 1934 they ordered a 30-ton GE diesel-electric locomotive, first of its kind to have been shipped out of the U.S.A.

Usefulness has been proved in service. Tata's Steel experts have signified their confidence in General Electric by putting into service at Jamshedpur, last year, ten 80-ton, three 35-ton and four 25-ton new diesel electric locomotives. These provide motive power for increasing important haulage duty resulting from the programme for the expansion of the steel plant.

General Electric is proud of its research, engineering experience and equipment being utilised in the service of India's largest steel plant . . . to promote the country's industrial progress.

JUTE GOODS STOCKS DECLINE SIZABLY

SHOULD OUTPUT REMAIN RESTRICTED?

A SHARP fall of 15,800 tons in the stocks of manufactured goods with jute mills in India is disclosed by the usual monthly statistics as on 31st August 1956. The total stocks as on that day amount to 122,100 tons, having declined from 137,900 tons as on 31st July 1956. Thus, August has witnessed the reversal of the upward trend in stocks noted since 31st October 1955. The decline of stocks last month compares very favourably, from the point of view of the industry, with the rise of 10,900 tons noted at the close of July last and has served to wipe out, to a large extent, the accumulations that took place during the previous two months. Nevertheless, the latest month-end stocks are substantially higher than those a year ago, as will be seen from the following table:

Jute Goods Stock

(In tons)

	As on 31st Aug. 1956	As on 31st July 1956	As on 30th June 1956	As on 31st Aug., 1955
Hessian	28,500	38,500	37,500	41,600
Sacking	88,200	93,200	83,000	34,400
Others	5,400	6,200	6,500	3,200
Total ..	122,100	137,900	127,000	79,200

As will be seen from the above table, the decline in stocks has been shared by all the varieties of goods manufactured, although the bulk of it is accounted for by hessian, the stocks of which are lower by 10,000 tons. At 28,500 tons, the stocks of hessian represent the lowest level for the past three months. The stocks of sacking are lower by 5,000 tons and this shrinkage is due, to a large extent, to the upward revision of the July stock figures. It may be noted that the preliminary figures as on 31st July 1956 showed that the stocks of sacking amounted to 91,110 tons (on the basis of which the end-of-August stocks would have shown a decline of only 2,900 tons) and these stand revised to 93,200 tons. Notwithstanding this revision, the stocks of sacking at the end of August are higher than those at the close of June 1956. As compared with those a year ago, sackings disclose an increase of 53,800 tons and this is mainly responsible for the rise in stocks of all manufactured goods over the year.

As the figures of production for the month of August are not yet available, it is very difficult to say to what extent the decline in stocks is due to a shrinkage in output, following the re-sealing of 2½ per cent. of the looms with effect from 16th July last, the full effect of which was not felt in July. It will be noted that August was the first full month in which 2½ per cent. of the looms remained sealed, after the unsealing of 7½ per cent. of the looms in two successive stages—2½ per cent. with effect from 10th January last and further 5 per cent. from 20th February onwards. Be that as it may, a decline in production must have contributed to some extent to the fall in stocks. A satisfactory increase in offtake from overseas and higher internal consumption are also said to be main contributory factors. The rise in prices of gunnies following the re-sealing of 2½ per cent. in July and the announcement regarding the further re-sealing of 5 per cent. from 17th September, would appear to have speeded up the shipment of manufactured goods. No figures of despatches of goods for export and for internal consumption during the month of August are yet available, but the following statistics of shipments from the Port of Calcutta during the last three months disclose an encouraging trend:

(In tons)

	August	July	June
Hessian	42,521	33,924	33,931
Sacking	46,390	32,867	30,054

If the present encouraging trend of offtake of jute goods from Calcutta continues during the rest of the current month, stocks at the end of September will be down still further. The output of jute goods itself is likely to be less, for, apart from the fact that the number of looms working will be down by 5 per cent. from the 17th inst., the 2½ per cent. addition to the looms sealed, which was in force during the whole of August, is being continued.

Now that stocks have already shrunk by 15,800 tons and those of hessians, in particular, are standing at a very low level, the question arises whether the I.J.M.A. will reverse its earlier decision to put into cold storage another 5 per cent. of the looms from the 17th inst. There are no indications yet that it will. The industry seems to be of the view that even the stocks as at the close of last month are pretty high, though a section of the traders do not concur with that view. The latter argue that the present restrictive policy will only push up the price of jute goods and thereby encourage the overseas buyers, who had recently begun to renew their interest in Indian jute goods because of their relative cheapness, to turn their attention, once again, to jute goods of other countries and/or to substitute packing materials. While the I.J.M.A. may not concur with this view, it is possible that it may decide to switch over more looms to hessians.

Pakistan's Counteraction

While the prevailing circumstances might have justified the decision of the industry to cut its production, subsequent events have shown that the days when it can prop itself up in this manner are definitely over and that, by restricting its production, it will only be making a gift of its markets to its competitors. Much of the financial advantage which it hoped to reap has been lost, owing to a strategic move made by Pakistan. India still depends on Pakistan for a nearly a third of its requirements of jute. A few days after the I.J.M.A. decided to lower its production with a view to getting better prices for its goods, the Pakistan Government put up the export duties on some of the principal varieties of raw jute usually bought by India. Thus, the duty on cuttings and ropes was raised, with effect from 23rd August, from Rs. 5 to Rs. 10 per bale and that on habi-jabi from Rs. 5 to Rs. 20 per bale. The effect of this step is that not only the cost of Pakistan jute to Indian jute mills has increased but the price of Indian jute also has been ruling steady, instead of going down, as it would have done, had the decision to cut production of jute goods not been accompanied by Pakistan's counteraction. While it is true that the trend of raw jute prices will largely depend upon the size of the new jute crop, there is no doubt that the action taken by Pakistan has added to the handicaps of Indian jute mills. There is no short-cut to prosperity for the Indian jute industry. The only salvation for it lies in improving its efficiency and quoting rates which will compare favourably with those of its competitors.

THAI PRODUCTION OF JUTE BAGS

Production of gunny bags by the three factories in Thailand is reported to be of the order of 4 to 5 million bags annually, but the locally produced bags are not popular because of their poor quality and high price, reports *Jute Bulletin* of the Indian Central Jute Committee.

Imports of gunny bags into Thailand have been restricted by a Government notification compelling importers to buy at least one-third of their requirements from domestic sources. Thailand's requirements are mainly for gunny bags, estimated at between 18 million and 20 million per annum. These bags are used largely for packing rice for both export and domestic use. For the latter purpose even used bags are acceptable and imported in considerable quantities. Hitherto, the bags have been exclusively imported from India, either directly or through other buyers of rice from Singapore and Hong Kong. Gunnies are also used for packing brown sugar, soya beans, etc. A small quantity of imported hessian cloth is used for baling sheet rubber. Canvas and hemp bags are also imported but the quantity is negligible.

BELGIAN JUTE PRODUCTION DROPS

Decline in exports of the carpet type hessian to the United States during 1956 has been the main factor responsible for a progressive reduction in Belgian production of jute manufactures, reports *Jute Bulletin* of the Indian Central Jute Committee. Jute cloth output in May 1956 was about 3,000 tons, as compared with the last year's monthly average of 3,513 tons. Production of jute yarn in May dropped to 6,038 tons from 6,433 tons in April and 7,960 tons in March. The average monthly figure for 1955 was 6,546 tons. Raw jute imports during May aggregated 43,500 tons, which along with current stocks would be sufficient for about four months' production.

NETHERLANDS JUTE STATISTICS

The Netherlands imported 800,000 new bags in May 1956, as compared with 2.5 million in April. Used bags imported in May were 2.4 million, as against 1.5 million in the previous month. There was no export of new bags in May, but 1.8 million used bags were shipped. April exports amounted to 100,000 new and 1.6 million used bags. Total internal consumption of bags in May was of the order of 1.7 million, of which 500,000 were new and 1.2 million used, as compared with an aggregate of 5.5 million in April (3.5 million new and 2 million used).

RUBBER PRODUCTION

SCHEMES FOR EXPANSION

THE perceptible rise in consumption of rubber in India during the past few years is one of the indices of the industrial development in the country. The demand for rubber has grown to such an extent that domestic production is not able to meet it and the gap is being met by imports. In 1955, production amounted to 22,500 tons, while consumption was of the order of 27,550 tons. For the current year, production and consumption are estimated at about 24,000 tons and 30,000 tons, respectively. In view of the large-scale industrial development planned for the years to come, the demand for rubber will surely rise to a substantial extent. The consumption target envisaged in the second Five-year Plan is 40,000 tons.

This Plan did not, however, fix any production target for the rubber industry. A final decision on the development programme was left to be taken after the Plantation Enquiry Commission submitted its report. The Commission, even after two years of labour, has not submitted its report on rubber. Meanwhile, a scheme for replanting 70,000 acres of old rubber area in ten years (the present area under rubber cultivation is 207,240 acres) has been draw up by the Rubber Board, and has received the approval of the Government of India. The scheme provides for the grant of a subsidy at varying rates and is expected to be implemented in 1957. It is estimated that, when the scheme is implemented, production of rubber will go up to 36,600 tons by about 1974.

Under the scheme, small growers are defined as those whose estates do not exceed 50 acres in area and they will be given a subsidy ranging from Rs. 400 per acre for the first five acres to Rs. 325 per acre for over 15 acres. Large growers are defined as those whose estates exceed 50 acres in area. They will be given a subsidy ranging from Rs. 300 per acre for the first 20 acres to Rs. 250 per acre for over 50 acres. Various conditions have been imposed on the planters for the receipt of this subsidy. Permits containing instructions regarding replanting will be issued to those who are eligible for the subsidy. Rubber instructors will be appointed to advise permit-holders on all matters relating to replanting under the scheme.

Scheme Welcomed

Commenting on the replanting scheme, Mr. M. M. Varghese, Chairman of the Planting Committee, pointed out, in his address at the annual general meeting of the U.P.A.S.I. held recently at Coonoor: "Having regard to the fact that nearly 80 per cent. of the present area is under unselected, low yielding rubber, planted from 1902 onwards, and also to the fact that more than half the trees in this area have outlived their economic life, the replanting scheme, if implemented properly, will go a long way towards stabilising the raw rubber industry during the next 10 years."

The Rubber Board has also submitted a scheme for extension of the area under rubber by 100,000 acres, but the Government has not yet given its approval to this scheme. In the meantime, the Government, according to the *Programmes for Industrial Development*, published by the Planning Commission, proposes to bring, during the next five years, an additional 10,000 acres under cultivation of better yielding varieties of rubber, that is [redacted] acres per year. This schem[redacted] an additional production [redacted] tons of rubber by 1974. Thus, [redacted] of rubber will be available eight[redacted]

In effect, the programmes [redacted] of a long-term nature. They will not materially augment production of raw rubber in the immediate future. Their benefits are expected to accrue only from the third Plan period onwards. In other words, during the second Plan period, rubber production will not materially increase over the present level of 23,000 tons, while consumption, as already said, is envisaged to touch 40,000 tons in 1960-61.

There is also a suggestion for the cultivation of rubber in the Andamans and Nicobar Islands. The Rubber Board is said to have already decided upon deputing its Rubber Production Commissioner to visit these Islands and to make a report. Some rubber is already being grown in these Islands and it may well be proved that they can have a much larger acreage which will substantially contribute to attainment of self-sufficiency by India in this vital raw materials.

WORLD STEEL POSITION IN 1955

OUTPUT REACHES RECORD LEVEL

A REMARKABLE feature of the trends in post-war world economy is the rapid increase in the production and consumption of steel which serves as an indication of the rising tempo of industrialisation all the world over. The increase in steel output, it is noteworthy, was not confined to a country or two, for it was shared by nearly all the steel-producing countries of the world. The net effect of all this improvement, as an illuminating account of the world steel trends in the *Steel Review*, published by the British Iron and Steel Federation, shows, is that, in 1955, world steel output touched a record level of 265 million long tons, as against 220 million tons in the previous year and an annual average of a mere 121 million tons in the pre-war years 1937-38. Thus, the output in 1955 was 20.7 per cent. above the level in 1954 and as high as 120 per cent. above that in 1937-38.

The following table gives the world steel production in 1953, 1954 and 1955:

Estimated World Crude Steel Production
1953-55

(Million tons of 2,240 lbs.)

Producing country	1953*	1954	1955†

* Revised. † Provisional.

The sharp increase in steel output in 1955, which can be seen from the table above reflects the general pressure of demand associated with the world-wide boom. Of the total increase of 45.5 million tons over 1954, higher American output accounted for 25.7 million tons. But this phenomenal rise in the U.S. reflected the recovery from the sharp fall in output during the 1954 recession rather than a true increase in capacity. The U.S., however, accounted for nearly two-fifths of total world steel production last year. Commonwealth steel production (including Britain's) rose by 3.1 million tons, from 26.6 to 29.7 million tons. Two-thirds of the total was produced in Britain, where output at 19.8 millions was 1.3 million tons above the 1954 level.

In Western Europe (excluding Britain), the total output rose by 9.5 million tons over 1954, to 58.6 million tons. West Germany, with an output of 21.0 million tons, passed Britain to become the world's third largest steel maker, thus regaining its pre-war position. Steel production increased in the Soviet group also, but the increase was small. The output of this group rose from 53.6 million tons to 58.66 million tons. Russian output, which increased from 40.8 to 44.6 million tons, provided the bulk of this increase. No sizable advances were recorded by the other Eastern European steel producers.

In the rest of the world, Japanese output rose by 1.6 million tons to 9.3 million tons and Chinese output by 0.4 million to 2.6 million tons. Production in Latin America, which had more than doubled between 1948 and 1954, declined fractionally in 1955 due to setbacks in Brazil and Chile.

A comparison of the regional steel production in 1955 with that in the pre-war years shows some notable changes. The overall output, as stated already, increased by 120 per cent. in 1955, as compared with the 1937-38 average. The U.S.'s share in world steel output, which was 32.6 per cent. in pre-war years, rose to 39.3 per cent. in 1955. The Soviet group's share also increased from 18.2 per cent. to 22.1 per cent. On the other hand, the share of the Commonwealth fell from 12.7 per cent. to 11.2 per cent. despite the fact that its output rose from 15.35 million tons to 29.71 million tons. In the U.K. alone, production increased by 70 per cent. over this period, though its share in world production fell from 9.7 to 7.5 per cent. Commenting on the validity of this comparison between the role of the U.K. and that of the U.S. in world steel output, the journal points out that two points must be borne in mind. In the first place, the choice of the year 1937-38, it is stated, favours the U.S. American steel production in those years was still 30 per cent. below its 1929 level, whereas the U.K. production was 20 per cent. above, so that the U.S. started with a much greater reservoir of underemployed capacity which could be brought in to increase production. Secondly, the period 1937-38 to 1955 also favours the U.S. For a third of this period, there was a war-time ban on all development in the U.K. steel industry, while the U.S. capacity was being vigorously expanded with Government assistance, and recently the U.S. industry has received preferential treatment from the tax authorities.

The following table gives the region-wise steel production in 1937-38 (average) and in 1955:

Regional Steel Production

Region	Average 1937-38		1955		Increase 1937-38 —1955
	Million tons	%	Million tons	%	%
U.S.A.	39.46	32.6	104.50	39.3	165
Commonwealth (including U.K.)	15.35	12.7	29.71	11.2	94
W. Europe (excluding U.K.)	37.42	30.9	58.62	22.1	57
Soviet Group	22.04	18.2	58.66	22.1	166
Latin America	0.15	0.1	2.10	0.8	1,300
Other countries	6.58	5.5	11.89	4.5	82
Total World	121.00	100.0	265.48	100.0	120

A reasonably reliable index of the industrial progress of a country is generally furnished by the quantum of steel consumption per head. From this point of view, it is noteworthy that in 1954—the latest year for which information is to hand—the U.S. leads the world with the per *capita* consumption of 1,053 lbs., followed by 781 lbs. in Sweden and 732 lbs. in the U.K. The following table gives the consumption of steel per head in different countries in 1937-38 (average), 1952, 1953 and 1954:

Apparent Consumption of Steel Per Head
(In ingot lbs.)

Country	Average 1937-38	1952	1953	1954
U.S.A.	640	1,134	1,372	1,053
Sweden	532	777	704	781
U.K.	493	701	708	732
Germany	600	661	652	730
Canada	396	732	698	541
Australia	428	688	548	532
Belgium-Luxembourg	353	518	465	531
Netherlands	333	398	447	480
France	289	524	414	449
Italy	123	187	192	224
Japan	195	127	169	160

It will be seen from the table above that the level of *per capita* consumption in Germany in 1954, at 730 lbs., was close to the British consumption level. Consumption per head in European Coal and Steel Community as a whole was only 483 lbs. During the year 1955, the *per capita* consumption in the U.K. is reported to have risen to 801 lbs. Firm estimates are not available for other countries. But it is expected that similar or faster advances will have been achieved in the U.S. and in the European Coal and Steel Community.

ECONOMIC EFFECTS OF ELECTRICITY

Few urban-born citizens, who generally take electricity for granted, know with what great relief the villagers receive the extension of electricity to their region. To the rural people, electricity means not only improved lighting conditions but a valuable aid to agriculture itself. The economic effects of electricity have, however, not been studied as intensively as they should be. From this point of view, the survey of a village in the Punjab, carried out by the Board of Economic Inquiry, Punjab, makes interesting reading.

The village Reroo (near Jullundur City), which was chosen for survey, has a cultivated area of 408 acres, out of a total area of 463 acres and a population of 1,107 persons. The main source of irrigation is the electric-operated pumping sets which irrigates 263 acres, the rest of the land being irrigated by the Persian wheels. One effect of the advent of electricity is that the rental value of the land served by electric pumping sets goes up. Thus, in Reroo, the rental value of the land served by these pumping sets is Rs. 350-400 per acre, as against Rs. 200-250, the rental value of land under Persian wheels.

The authors of the Survey have drawn certain very interesting conclusions. In the first place, they observe that electric power is cheaper than bullock power. Secondly, the water output of a pumping set is more than double that of a bullock-drawn Persian wheel. The cultivators in the village have reported a 10 per cent. increase in crop as a result of increased water supply. Thirdly, since electric pumps can be worked for longer hours than bullocks, there is an indirect incentive for more intensive cultivation and crop rotation. Fourthly, the draught animals, for which the work on the Persian wheels is an exhausting occupation, are now in an improved physical condition. They are put to increased ploughing and carting work.

Among the non-economic effects of electricity, mention must be made of impetus to education in the village. It would appear that formerly parents were tempted to get work for their children for driving the bullocks on the Persian wheels. Now children are kept at schools. The village is, of course, well-lighted. This has led to elimination of cases of theft of ploughs and other farm implements.

ELECTRONIC VALVE

Small rods of tantalum metal only a fraction of an inch long immersed in liquid helium are the basic elements of a new simple-to-manufacture type of miniature of electronic valve. The new valve which is currently being developed in the U.S. will, like the transistor crystal valve, have a considerably smaller power consumption than conventional thermionic valves. Indeed, it is estimated that less than a watt of electrical power would be required to operate the mathematical elements of a large electronic digital computer (electronic brain) built with these tantalum and helium valves. Considerable quantities of ad[illegible] however, presumably be nee[illegible] the refrigeration units [illegible] order to keep the tant[illegible] a cold enough temperature to m[illegible] in a liquid state.

This problem will not, ho[illegible] signers of computers and other [illegible] utilising these new valves with any insuperable refrigeration problems since the size of the tantalum helium units is such that all the several thousands of valves contained in a large digital computer could, it is estimated, be contained within the space of a cubic foot. The operation of the tantalum rod valves which have been named "cryotrons" by their U.S. inventors, depends on the fact that the tantalum rods become electrically "superconductive" when they are placed in the liquid helium. Yet this superconductivity is eliminated when an electric current is passed through the single strand of wire which is wound round the single tantalum rod of each valve unit.

A British company has introduced a new mechanical apple-peeler and corer. The machine is claimed to be entirely automatic, and peels apples quickly and efficiently in one operation, leaving well-trimmed fruit ready for use. It is hand-operated, and as the peel it takes off is wafer-thin, there is a minimum waste of fruit. The firm has been manufacturing kitchen utensils, accessories, and fitments for the last 100 years.

NEW PRODUCTS AND PROCESSES

Fruit Toffees

PREPARATION of confectionery from fruits is one way of fruit preservation. Only semi-solid or pasty fruit confections such as jams, pastes and purees are, however, being prepared from fruits at present. A hardened fruit confection with a toffee texture is not known to be prepared in India or elsewhere from fruits. Investigations, carried out on the economic utilization of fruits by the Central Food Technological Research Institute, Mysore, have resulted in a process by which a high class new product can be prepared in the form of toffee from fruits such as banana, jack fruit, guava, papaya, mango, etc. The product possesses the nutrients, eating qualities and other essential characteristics of the non-fruit toffees available in the market. It also possesses the pleasant flavour and nutritive constituents of the fruits from which it is prepared. The process, the details of which are available from the National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi, 1, consists in treating the edible portion of the ripe fruit with a mild solution of potassium meta-bi-sulphite, making it into a fine pulp and concentrating the same by evaporation to the requisite consistency. Ingredients like sugar, milk powder and edible fat are then mixed with the pulp, and the mixture is heated to bring the mass to a calculated weight. The hot mass is then transferred to a smooth surface smeared with an edible oil. Any desired flavouring material is added at this stage. After rolling the mass to the desired thickness it is allowed to cool to the setting stage. The cut pieces are subsequently dried in a current of hot air so as to reduce the moisture content to 4-8 per cent. The pieces are then wrapped into suitable wrapping material and packed in air-tight containers. The types of fruits which can be used in the preparation of the product are grown extensively in India and sugar and milk are also readily available. The process has been tested on a laboratory pilot plant. The equipment required is simple and easily available.

Cadmium Plating Metal Alloys

A number of important developments in the application of cadmium platings to metal alloys have taken place recently in both the U.S. and the U.K. Thus a new process for plating aluminium and aluminium alloys, with cadmium has been developed in the U.S. In this process the aluminium part is cleaned and etched and then plated with zinc by an immersion process. It is then subsequently first electrolytically plated with either nickel, or copper, and then plated with cadmium in a cyanide bath. Finally, it is coated with chromate, bleached with an alkali and baked. The resulting cadmium plating is said to be "perfect" in the majority of cases, although some failures due to blistering occur. Cadmium plating gives aluminium alloys, steel alloys and a number of other materials which are important structural materials in the aircraft industry, exceptional resistance to corrosion at high temperatures. Indeed in the case of one steel alloy which is used in the manufacture of jet engine parts, satisfactory operation and resistance to corrosion at temperatures of up to 540 degrees Centigrade has been achieved by applying an electroplated coating of nickel and cadmium diffused at 330 degrees Centigrade.

Graphite Batteries

Electric batteries with an exceptionally long working life may be manufactured from electrically charged graphite within a few years if experiments now being carried out are successful. The electrically charged graphite which it is hoped to use for the manufacture of these batteries is a by-product of nuclear reactor furnace construction. It is, in fact, graphite which has been used as "moderator" material in a nuclear reactor, and thus exposed to radio-active radiation over a number of years, but which is, for one reason or another, no longer required. During its period of use inside the reactor furnace considerable quantities of energy are stored up in the graphite and it is this energy which the scientists who are working on the problem believe they can harness in a form suitable for powering torches, small electric motors, radio receivers and similar devices. Although most of the graphite used to build experimental reactor furnaces can be re-used (thirty tons of graphite blocks used by Enrico Fermi in the construction of the first nuclear furnace built in 1942 are now in use as moderator material for a new sub-critical reactor at the U.S. Argonne National Laboratory) it is expected that considerable quantities of this electrically charged graphite will become available within the next ten years.

Corrosion Resistant Filters

A range of new tetrafluorethylene plaster filter materials, designed for use in industrial filtration processes where especially severe corrosive operating conditions occur, has been developed by E.I. du Pont de Nemours, of the U.S. The new materials, which are at present being manufactured in a pilot plant in the U.S., can be used generally at temperatures of up to 400 degrees Fahrenheit and, under special conditions, at temperatures of up to 550 degrees Fahrenheit. Since they are built up from tetrafluorethylene fibres assembled in the form of felts, they are virtually inert to strong acids and bases and can, it is claimed, be boiled for long periods in such corrosive chemicals as fuming sulphuric acid, fuming nitric acid and aqua regia. They will not absorb water. They also have a low coefficient of friction and other materials will not adhere to them. The tetrafluorethylene felt filters can, therefore, be used under conditions where most other industrial materials would prove unsuitable or would have only a short operating life. They are also said to be exceptionally easy to clean. Moreover, when these felts are impregnated with "Teflon" resin they can, suggest experiments, be successfully used as gasket materials where gaskets capable of withstanding hot corrosive conditions are required.

Coal Coatings

Considerable increases in the rate of operation of industrial condensers may be achieved as the result of experiments on the development and use of durable coal coatings for condenser tubes. The coatings, which are being tested in the laboratories of the British Coal Utilisation Research Association, cause the steam flowing over them to condense in the form of drops instead of in the form of a thin film. The rate of condensation is governed by the rate of heat transfer at the surface of the condenser tubes and it is significant that in some of these experiments the rate at which the heat was transferred was increased by as much as 55 per cent. when the experimental coal coatings were applied. These coatings, which are made from extracts obtained with the aid of organic solvents, are strongly water repellent and have a longer working life than other condenser tube coatings designed to have a similar function which have so far been examined in the U.K. They are bonded on to the condenser tubes by means of a baking process similar to that used for enamels.

A New Process for Metal Extraction

Even the most difficult elements to extract can be obtained from ores and from other refractory materials by means of a process now being developed in a U.S. laboratory. The process, which depends on the use of high intensity electrical arcs, has already been used successfully in the laboratory to extract manganese from rhodonite at a very low cost. Although temperatures of the order of 18,000 degrees Fahrenheit are achieved during the extraction process, only very small amounts of electricity are consumed. These range from three kilowatt hours to six kilowatt hours per pound of material extracted. The very high temperatures, on whose occurrence the success of the extraction depends, are obtained by combining the ore with from 15 per cent. to 20 per cent. of carbon and then forming it into a consumable anode (positive electrode). When the electrical current is applied this anode made from the ore and carbon is vapourised and the rapidly dispersing vapour passes through a "superheated" area, which it itself helps to create, within which it is decomposed into its elemental form. The pure separated metal can then be collected. Full-scale experiments are now to be undertaken in which the process will be used to undertake the extraction of commercial quantities of a variety of metals which are difficult to obtain by conventional extraction processes.

Pick-up Head with Diamond Needle

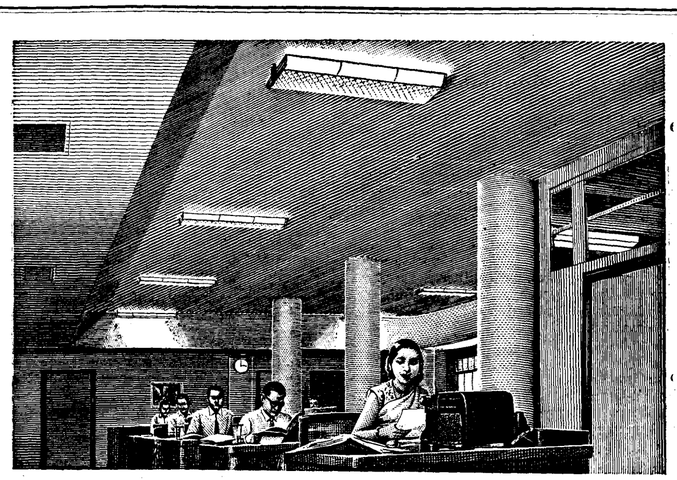
A factory, [Philips N.V., Eindhoven (Holland)], makes a pick-up head with a diamond needle, which fits with three contact points into any record player, record changer or radio gramophone manufactured by the concern. The diamond needle is ground in a special manner by the factory itself. The advantages of using this diamond needle are: a considerably longer life, especially of long-playing records, and pure sound reproduction. The diamond needle is suitable for a frequency range of up to 14,000 Hz. and is practically not subject to wear. The loose pick-up head with the diamond needle, protected with a plastic cap, is supplied in a metal case with a diamond motif.

Typewriter With a "Memory"

A tape-operated electric typewriter developed in the United States makes it possible to "store" information which later has to be retyped and to retype the information automatically when the time comes to do so. The machine is useful for such jobs as storing and retyping, when needed, the inside addressing of a letter and the same information for the envelope. Called the Flexowriter, the machine has a recorder unit which records typewritten messages by punching holes in a tape. There is also a reproducer unit which "reads" the punched tape and actuates the typewriter keyboard automatically, thus typing out whatever is recorded on the tape. The machine types information at the rate of 100 words a minute.

Automatic Helmsman

A Marconi Marine "Martinet" automatic helmsman has been installed in a new trawler, the *Strathallan*. Built by Livingstone and Co., Peterhead, for Mr. Norman Lyle, the vessel will be able to maintain a steady course without manual aid while under the control of the "Martinet" equipment. This equipment incorporates a magnetic north-seeking device able to detect the smallest deviation from a set course: information of any deviation is passed to a reversible motor chain-coupled to the steering wheel and the motor will automatically apply the correct amount of opposing helm to keep the vessel on course. The "Martinet" was among other equipment demonstrated by Marconi Marine at an exhibition at Lowestoft of electronic aids employed by modern fishing vessels. It is also to be installed in two seine net vessels being built at Buckie for Basil Parkes Esquire, of Hull.



Make your office many times brighter
— AND WATCH OUTPUT INCREASE!

A well lighted office means extra benefits for both staff and employer. Work improves, since good lighting reduces eye-fatigue. Further, output increases because efficient lighting eliminates the errors due to bad lighting.

That's one reason why Philips Fluorescent Lamps are revolutionizing office lighting everywhere. They give a kind light — never a harsh shadow! And they are economical; they give more than three times more light for the same electricity consumption as filament lamps: result — low electricity bills!

Install Philips Fluorescent Lamps and watch output go up—costs come down. Philips Fluorescent Lamps last on an average 7,500 burning hours!

PHILIPS
'TL' FLUORESCENT LAMPS & FITTINGS
— make light work for you!

Can we be of service to you? The Philips Lighting Service Bureau will be glad to advise you on any aspect of lighting designs and installations in your office—free of charge and without obligation. Please write to Philips Electrical Co. (India) Private Ltd.

DOCK LABOUR'S DEMANDS

STRIKE NOTICES SERVED IN BOMBAY AND CALCUTTA

ALL is not quiet on the dock front. In both Bombay and Calcutta, the workers are reported to have served notices on the authorities concerned, stating that work would be stopped with effect from 15th October 1956, if their demands were not conceded before 15th September. In Bombay, the notices have been served by the Bombay Port Trust General Workers' Union and the Transport Dock Workers' Union and in Calcutta, by the Port Shramik Union. The serving of the notices is in response to the call made by the All-India Port and Dock Workers' Federation. The Bombay unions' demands include gratuity, provident fund for the workers, revision of pay-scale and immediate payment of certain arrears claimed by the workers. The Calcutta Union's demands include, besides those made by the other units of the All-India Port and Dock Workers' Federation, the dropping of the Port Commissioner's Employees' Conduct Rules which, it alleges, is dictatorial.

In the context of the necessity for large imports of capital and consumer goods under the second Five-year Plan, a strike by the dock workers would cause considerable damage to the national economy. It is, therefore, of the utmost importance that they should explore all possible avenues of settlement. In this connection, it is well to recall what the Union Minister for Railways and Transport, Mr. Lal Bahadur Shastri had to say on the question of dock labour's demands at the recent meeting of the Indian National Steamship Owners' Association. Mr. Shastri said that any talk or threat of strike, at the present juncture, seemed "so incongruous." At the same time, he recognised that there were "problems relating to dock, stevedore and shore workers which have to be gone into." But he averred that these problems should be considered in a "systematic and rational" way. It is to be hoped that the labour leaders will agree and the stevedores and other interests will not deny such a "systematic and rational" consideration of the dock workers' demands. In any case, a strike should be avoided at all costs.

Mr. Shastri himself conceded that there were certain urgent demands which should be "tackled at the earliest." He referred particularly to lack of uniformity in pay scales, leave rules and provident fund benefits. He revealed that the Government had decided to appoint a team of two officers who would visit each port, collect material from the Port Trust authorities as well as from the Union representatives and make recommendations designed to introduce uniformity in these matters.

Demands

The list of demands which have been made by the All-India Port and Dock Workers' Federation, however, embraces a wide range of subjects. These demands include:

(1) The existing scale prescribed for unskilled workers by the Port authorities namely Rs. 30-35 should be revised to Rs. 40-2-60 and that all other grades of all other class III and class IV categories of workers should be revised in the light of the revision of the said basic scale for unskilled workers taking into consideration the nature of work and the responsibility of the different types of work. Dearness allowance should be adequately increased. Compensatory allowance should be considered as pay or wage for all porposes. All night work in the ports and docks of India should not be of more than six hours per shift. (2) Overtime work beyond normal scheduled duty hours and work on weekly offs and holidays should be compensated at double the ordinary rates of wages including all allowances. (3) The benefits of the provisions of the Minimum Wages Act, Workmen's Compensation Act, Payment of Wages Act and Industrial Employment (Standing Orders) Act should be extended to such of the port and dock workers as have not been covered by the same. (4) There should be uniform leave facilities for all the port and dock workers in all the ports, irrespective of length of service or the rate of pay. The suggested leave facilities are: (a) Earned leave 1/11th of duty, which should include weekly offs, holidays and authorised leave. (b) Twenty days' half wages leave per year of service. (c) Fifteen days' casual leave with full wages. (d) Injury leave for periods of absence from duty on account of injury during duty with full wages upto four months. (5) Adequate housing schemes should be undertaken and promptly executed to provide all port and dock workers with rent-free quarters. (6) Port and dock workers should be made eligible to contribute to the provident fund at 8-1/3 per cent. of gross total earnings in a month, the employers contributing a like amount. (7) Port and dock workers should be entitled to get one month's pay for every year of their service as gratuity irrespective of the cause of termination of employment and length of service. (8) The right of getting railway and/or steamer pass and P.T.O. facility to all port and dock workers should be restored; this facility should be extended to all other port and dock workers. (9) All port and dock workers whether monthly rated, daily rated, permanent, temporary or casual should be granted weekly off with wages.

Piece-rate System

The Federation also demands the removal of certain defects which are stated to have been detected in the working of the piece-rate system. This system, it may be recalled, was a sequel to the implementation of the award of the Labour Appellate Tribunal. By and large, this system has proved beneficial to the workers. The Union Deputy Minister for Transport, Mr. O. V. Alagesan, recently averred in the Lok Sabha that, since the time the system was enforced in Bombay, there was a "marked improvement" in the loading and unloading rates in Bombay port. In view of the success of this scheme, he announced that the Government had decided to extend the piece-rate system to the workers in the Calcutta and Madras ports. The Federation, however, alleges that, in actual practice, the working of the system has revealed certain defects. In order to remove these defects, it has suggested several measures which include the following:

(1) The piece-rated workers should be provided with piece-rate diaries wherein entries shall be made showing details of idle time, time-rate work, datum line, double hook work and the number of packages handled and the entries thus made shall be duly certified by the tally clerks concerned in the case of port trust shore gangs and crane drivers and by tally clerks, foremen and/or chargemen in the case of stevedore workers. (2) Multiple hook allowance should be paid to the piece-rated workers without any deductions. (3) Idle time allowance on account of opening and closing of hatches should be paid. (4) Piece-rated workers should not be shifted from one hatch to another or from one ship to another ship. (5) Idle time timings of stevedore workers should be equal to the idle time timings of the port trust workers. (6) Except in the case of shifting of cargo the time-rate timings of the stevedore workers should be equal to the port trust time-rate timings. (7) If import cargo of a sling placed on the wharf cannot be cleared by the port trust shore workers because of difficulties on account of tally, weighment, space in the transit shed or in the open, gear, hand carts, four-wheeled trucks, mobile crane, tractor or long carry, the time lost between the clearance of the last package of the sling in question and the landing of the next sling which should be landed on the wharf after the clearance of the last package of the first sling, should be treated as idle time both for the stevedore workers and the Port Trust workers. (8) Wage slips should be issued to the workers at work spot during working hours within 24 hours. (9) A comprehensive list showing items of time-rated cargo under the general head "Hazardous Cargo" and "Iron and Steel Cargo" should be issued to the workers in the languages understood by them. (10) Two tally clerks per hook should be employed on case cargo and iron and steel cargo.

There is no gainsaying the fact that piece-rate system has resulted in both improved output at the docks and higher earnings for the workers. If the Federation now alleges that certain defects have been noticed in its working, it is presumably due to a feeling among the workers that they do not receive what they think they ought to get. In other words, this seems to be a question of the confidence of the workers in the employers. From this point of view, the employers will do well to see that the workers not only get what they ought to get but realise at every stage that no injustice is being done to them. From this point of view, it may be desirable to accept the Federation's suggestion that a joint committee, providing for equal representation for the employers and the workers should be appointed in order to supervise effectively the working of the piece-rate system in all its details.

FIRE — MARINE — ACCIDENT

Mr. Shastri's Appeal

At the same time, the leaders of dock labour will do well to respond to the appeal made by Mr. Lal Bahadur Shastri, who said:

"I would like to appeal to the workers and their unions to adopt and pursue the course of mutual discussion and negotiation only and give up all talks of strife and discord. The shipping industry is passing through a critical period and, if it is not able to build itself up in the coming few years —which is not possible, unless the workers fully co-operate—our country will lag behind and its future will be jeopardised. We have to go ahead at a brisk space, if we want to catch up with others and, therefore, there is no room for any kind of go-slow methods or stoppage of work."

While we concede that the legitimate demands of workers should be met, we would urge their leaders to bear in mind certain general considerations when they put forward their demands. In the first place, even the bitterest critic of the Government's labour policy must admit that the lot of the dock worker has improved greatly in recent years, thanks to the series of measures already adopted by the Government. Secondly, the wages and other emoluments of dock labour, cannot be considered in isolation. They must bear some relation to the general level of incomes in the country. It cannot be seriously contended that the dock workers' wages make an unfavourable comparison with wages in other trades and industries. Thirdly, a dock strike is a far more serious matter than a strike in any other industry or service. It would hold up plans of national reconstruction. It would also strengthen the overseas shipping companies' case for an increase in freight rates and weaken the Government's hands in preventing such an increase. It was only the Government of India's intervention that prevented last year an increase in freight rates by the foreign lines. Finally, a dock strike would mean a further fillip to the present inflationary forces in the country, for it would result in a reduced supply of goods and imported raw materials. It would also hold up imports of foodgrains which are also urgently needed in order to reverse the rising trend in food prices. For these reasons, such a strike would win very little public sympathy and not even that of their confreres in other walks of life. Further, of what avail would it be to the dock workers if their action resulted in an all-round rise in prices?

NATIONAL COUNCIL

The Government of India, in consultation with the State Governments, has decided to set up a National Council for training in vocational trades. It will function as a Central agency advising the Government on the policy for training craftsmen and on co-ordinating vocational training of national importance throughout the country. It will bring about uniformity of standards in training, award certificates of proficiency and arrange for training on an all-India basis. The Council will work under the chairmanship of the Minister for Labour or the Deputy Labour Minister and will have among its members, representatives of the Ministries of the Central Government, one representative of each of the States and Union Territories which have their own departments of industries and technical education, five representatives each of employers' organisations, workers' organisations, professional and learned bodies, and one representative of the All-India Council for Technical Education. The Secretariat will be provided by the Directorate of Training, Directorate General of Resettlement and Employment, Ministry of Labour.

The Council is being set up as a result of the recommendations of the National Trades Certification Investigation Committee (of which Mr. M. Ananthasayanam Ayyangar, now Speaker of the Lok Sabha, was Chairman) and the Training and Employment Services Organisation Committee (otherwise known as the Shiva Rao Committee). The Ananthasayanam Ayyangar Committee, which was appointed in pursuance of a recommendation of the All-India Council for Technical Education, unanimously recommended that an All-India Trades Certification Board be set up as a central agency for co-ordinating craftsmen training programmes, bringing about uniformity of standards and awarding national certificates of proficiency. This step, it was considered, would be in the interests of both industry and the workers inasmuch as it would ensure that those who held the national certificates possessed a minimum recognised degree of skill and would, in addition, facilitate mobility of tradesmen and their employment. The Training and Employment Services Organisation Committee generally supported the earlier Committee's recommendation. With the Central Government's decision to transfer the administration of the Union Labour Ministry's Training Centres to the control of the State Governments concerned, the need for central co-ordination in regard to policy and standards has been accentuated. When the transfer is effected, the Central Government will retain for themselves only the functions of co-ordination of craftsmen training and laying down training policy. In consequence, there will be need for a central agency to advise both the Centre and the States in regard to their responsibilities relating to craftsmen training.

LABOUR IN MINERAL OIL INDUSTRY

India's mineral oil industry employed 7,997 workers during 1955. As compared with 1952, the number increased by 2.7 per cent. The increase in the supervisory and clerical staff was, however, 19 per cent. As against two units engaged in the production of mineral oil in the pre-partition area, India has only one now—Assam Oil Company in Digboi. The average number of workers employed through contractors was 1,574 in 1955, as compared with 1,440 in 1952 and 1,926 in 1950. Woman labour was conspicuous by its absence under the contract system.

Wages in the industry range between Rs. 5-8 per day with an annual increment of As. 4 for a gang headman to Re. 1-7 with an annual increment of one anna for an unskilled labourer. The rates of dearness allowance admissible to the employees of the Company are: Rs. 50 for daily rated workers drawing salary up to Rs. 49; Rs. 52-8 for workers drawing between Rs. 50 and Rs. 100, and thereafter in slab between Rs. 101 to Rs. 150—90 per cent. of basic salary.

For the monthly-rated workers, the rate of dearness allowance was Rs. 52-8 for salaries between Rs. 50 and Rs. 100; 90 per cent. of basic salary between Rs. 101 to Rs. 150; 45 per cent. of basic salary in the slab between Rs. 151 and Rs. 200, and thereafter, in slab 22½ per cent. of basic salary over Rs. 200.

In December 1955, there were different types of quarters built by the Company at Digboi and Tinsukia for its workers. The number of these quarters was 3,597 for Digboi and 233 for Tinsukia. The percentage of employees living in Company quarters was 57 at Digboi and 39 at Tinsukia. No rent is being charged by the Company for these quarters. The Company has been encouraging its employees to build their own houses on its land or in settlement area by giving advance from house allowance. In 1955, about 9 per cent. of the employees in Digboi and 12 per cent. in Tinsukia were living in houses which they had built for themselves with the aid of the Company.

The Company has two types of provident funds. The first, which is known as the "subsidiary provident fund," is meant for employees earning up to Rs. 200 a month. The rate of contribution to this fund is 8½ per cent. for both the employees and the Company. The other fund, called the "Provident and Insurance Fund," is for employees who earn more than Rs. 200 per month and are not of covenanted status. Both employers and employees contribute 5 per cent. of salary to this fund. As on 31st December, 1955, 898 monthly-rated and 6,059 daily-rated employees were members of the subsidiary provident fund scheme and 303 employees were members of the provident fund and insurance fund scheme.

EMPLOYEES' PROVIDENT FUND

The Government of India has decided to extend the Employees' Provident Funds Act, 1952, to cover another 54,000 workers in about 200 factories, from 30th September 1956. The Act, which came into force on 1st November 1952, now covers over 20 lakh workers employed in 3,600 factories all over the country. The four more industries, to which the Act has been extended, are: (1) heavy and fine chemicals, including fertilisers, turpentine, rosin, medical and pharmaceutical preparations, toilet preparations, soaps, inks, intermediates, dyes, colour lakes and toners and fatty acids; (2) indigo; (3) lac including shellac and (4) non-edible vegetable and animal oil and fats.

The Rajya Sabha rejected last week a private member's Bill to amend the Employees' Provident Fund Act with a view to enhancing the rate of contribution of both employees and employers to 8-1/3 per cent. and exempting employees receiving as wages Rs. 45 or less per month from making any contribution. The Deputy Labour Minister, Mr. Abid Ali, said that the Government's first concern was to bring all the workers under the Provident Fund Scheme. After that was accomplished they could think of increasing the rate of Provident Fund contribution. The Planning Commission had already taken note of this matter and they wanted to have a more detailed study. It was good that workers should get more but they should not have schemes or standards of Provident Fund which would compel industries to close. No real well-wisher of workers, he said, would like such a thing to happen.

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN, MR. J. F. E. d'A. WILLIS, EXPLAINS EXPANSION PROGRAMME

THE factors which had contributed to the record results achieved by the Indian Copper Corporation Ltd., during 1955 were explained by Mr. J. F. E. d'A. Willis, Chairman, in the course of his speech at the Thirty-second Annual General Meeting of the Corporation held at Calcutta on 12th September 1956. The Chairman also explained the expansion programme, which was being prepared by the Corporation. He said that the programme was aimed at increasing considerably the present output of the mines. While no immediate results could be anticipated from the programme, it would, according to him, contribute substantially towards making India less dependent on imports of this important metal, copper.

The following is the full text of Mr. d'A. Willis' speech:

"The results achieved, as you will observe from the profit and loss account, far exceed those for the previous year which have hitherto constituted a record in the annals of the Corporation and are directly attributable to the consistent rise in the world price of copper. The maintenance of a high production standard and satisfactory despatches also played an important part in achieving these results. Although these high world prices for copper continued into early 1956, there has since been a rapid decline to approximately two-thirds of the peak reached.

Accounts

"Before proceeding to a detailed survey of the accounts, I would draw your attention to a change which has been made this year in the grouping of the fixed assets in the balance-sheet. On this occasion those items which are allowed for statutory depreciation have been amalgamated, while mining rights and permanent works, on which depreciation is not allowed at present, continue to be shown separately.

"The profit for the year, before providing for taxation, depreciation and reserves amounted to £1,474,804, as compared with £898,382 in 1954. Provision for taxation, at £683,046, includes £47,424 for taxation on the dividend and bonus for the year 1954 paid in 1955, and on the interim dividend for 1955 paid in February 1956, together with a provision of £47,424 for taxation on the proposed final dividend and bonus for the year 1955.

"Full provision has been made for depreciation and £200,000 has been allocated to general reserve, as against £150,000 last year. Although the liquid resources of the Corporation are at present satisfactory, further heavy capital expenditure is anticipated during the next few years in order to develop the mine.

"After making these provisions there remains a sum of £416,758, to which has to be added £111,715 brought forward from last year, giving a total of £528,473. Out of this, your Directors are pleased to be able to recommend the payment of a final dividend of 10 per cent. and a bonus of 25 per cent. both free of income-tax which, together with the interim dividend of 10 per cent., absorbs £411,390, leaving £117,083 to be carried forward to next year.

"With the rapid decline in the world price of copper, the results for the current year, although so far satisfactory, are unlikely to approach those for 1955.

"In order that the issued capital of the Company might be brought more into line with the capital employed in the business, an application for the capitalisation of a portion of the reserves of the Company was submitted to the Government of India and Her Majesty's Treasury, United Kingdom. An issue of one unit of stock for each two units held has since been sanctioned.

Copper Leases and Operating Results

"A detailed review of the year's operations is given in your General Manager's report, which may be seen during office hours at the Company's Head Office. The production of refined copper at 7,281 long tons was a record in the Corporation's history. Despatches were good and operating costs satisfactory, although slightly higher than the previous year.

"*Development.*—Lateral development was again restricted, but development in depth continued satisfactorily.

"*Ore Reserves.*—Although the estimated reserves now stand at 3,330,090 short tons, as compared with 3,369,286 short tons at the end of the previous year, this is considered satisfactory in the circumstances of restricted lateral development. Good progress is being made with the development in depth, which should eventually provide extensive lateral development, resulting in a substantial increase in ore reserves.

Sales

"In spite of the high price of copper, the demand was good and prices increased accordingly. The demand for brass sheets, however, remained steady with a less spectacular rise in price. The average selling prices of the Company's products during the year, as compared to the previous year, were as follows:—

	1955	1954
	(per ton)	
Copper Ingots	£309	£233
Rolled Brass	£245	£230
Yellow Metal Circles	£266	£241
Rolled Copper	£357	£288

"The export of this ore continued to be unrestricted, which permitted larger despatches amounting to 19,234 tons, as compared to 12,012 tons in the previous year. The demand in world markets was satisfactory and the export price maintained at approximately £20 per ton f.o.b. Calcutta.

"The civil suit brought by the Bihar Government against the Corporation for alleged breaches and forfeiture of the lease, claiming Rs. 1 crore damages, together with the civil suit brought by the Company against the Bihar Government for specific performance to renew their lease which expired on 31st January 1955, were made analogous and came up for hearing in the Subordinate Judge's Court, Patna, during August 1955. The hearing of the case was completed in early February 1956 and judgment delivered in favour of the Company in both suits in early May 1956.

Labour

"The rivalry between the Unions at the mines and works continues and a number of lightning hartals with one strike of 24 hours at the mine took place. The Mosaboni Union submitted a strike notice in May, as a result of which their demands were, by agreement between the Corporation and the Union, submitted to adjudication, with the proviso that the award on such adjudication would be made binding on both parties for three years. Up to date the Tribunal proceedings have not taken place.

General

"In conformity with the underlying principles of the second Five-year Plan, an extensive programme of prospecting and development has been prepared and is already well advanced. This expansion programme is aimed at increasing considerably the present output of the mines and whilst no immediate results can be anticipated, it is hoped, provided the results of the present exploration are satisfactory, that by the end of the present Plan your Company will have substantially contributed towards making India less dependent on imports of this important metal.

"During the year under review considerable development in depth has been effected in the existing Mosaboni Mine, utilising the newly constructed circular shaft to which my predecessor referred in his address last year. Development in depth on the scale at present envisaged will permit of extensive lateral development, but only to the extent as will counteract the diminution of ore reserves at the adjoining Badia Mine whose life is limited. Any expansion in output, therefore, must be derived from other areas and it is with this in mind that prospecting on an extensive scale is in progress to the north of the present working area.

"With the Government of India's recent industrial policy announcement, it is satisfactory to note that existing industries in Schedule A, which includes copper, will be permitted to remain in the private sector and that this does not preclude their expansion.

Staff

"A very high standard of efficiency has again been maintained both at the mines and the works and our thanks are due to all members of the staff for the excellent service they have rendered to the Corporation."

When you have a journey to make, *think first of flying.* It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey—flying is so quick, convenient, and wonderfully comfortable.

SCHEME FOR IMPROVING COASTAL SHIPPING—III

PLAN FOR OPERATING "AMBAR JAHAJ"

By U. Shanker Rao

WE had so far discussed the technical and economic aspects of introducing a new type of cargo vessel—the *Ambar Jahaj*—with a view to improving traffic conditions in the sailing vessel industry, relieving pressure on the railways, and facilitating diversion of goods from the railways to coastal movement. Let us now work out a plan for operating the *Ambar Jahaj* scheme.

In November last year, the Transport Minister had appealed to Indian shipowners to plan for the purchase of 25 to 30 ships more, so as to fill the existing gap in our coastal shipping. As a result of rail-sea co-ordination, effects of industrialisation in the second Plan, together with the gap in our present requirements, the total tonnage needed to handle India's coastal and adjacent trades would be approximately 600,000 g.r.t. From the present position in the international situation, particularly since the Canal Dispute, it is doubtful if India would be able to get her badly needed ships in time to carry out the targets in the second Plan. In the circumstances, why not chalk out a programme to fill the present gap by building wooden coasters of the *Ambar Jahaj* type? This would help ease the situation in coastal transport and also relieve the better class of our present coastal tonnage to engage in adjacent trades or for any other purpose where bigger ships are needed.

The present emergency calls for a new outlook and the laying down of a national shipping policy where the value of small craft is fully recognised. Even as conditions are at present, the sailing vessel industry, in spite of its many inherent difficulties and economic handicaps, carries more than half of our total volume of coastal trade. In 1955, while coastal steamers had carried 28.5 lakh tons of cargo, the sailing vessels had transported 15.5 lakh tons. Working only on average freight of Rs. 15 a ton (where the freight ranges from Rs. 6 to Rs. 45 a ton) the total freight earned by the industry had been a little over Rs. 232.5 lakhs. Obviously, with more efficient vessels and a planned programme for its development, the industry could cope with the growing demands on coastal transportation and help fill the existing gap in our coastal requirements within a much shorter period and with far-reaching results in our national transport economy.

Need for Maritime Commission

A question that naturally comes to one's mind is whether, in the present economic conditions of the sailing vessel industry, languishing all along for want of capital resources, it could, on its own strength, be in a position to take the initiative and invest in new tonnage—the *Ambar Jahaj*. This would never be practicable in the present circumstances. What, then, is the answer? To follow the example of other maritime countries who had suffered from such initial handicaps and who had devised schemes for encouraging private enterprise to enter shipping.

Paradoxical as it may seem, though America had such vast resources and industrial wealth together with a democratic political system for her government, yet her shipping had never been a commercial success in her early days. Both her Pacific and Atlantic seaborne trade was largely carried by Japanese, Continental, and British ships and America's national shipping was only an apology. This fact was a constant reminder of what placid complacency could result in allowing others to monopolise the lucrative trade under the very nose of the Americans. In 1936, President Roosevelt set up an enquiry to investigate the state of affairs in the American mercantile marine and, as a result, the Merchant Marine Act of 1936 was passed by the Congress. This Act was the great Magna Carta of America's sea power and was the strategic backbone for the eventual success of the Second War.

One of the principal features of this Act was the formation of the U.S. Maritime Commission. The Commission laid down a basic policy of large-scale shipbuilding, introduced standardisation in construction, and above all provided a scheme for bare-boat chartering of State-owned ships for private operators. Here was a happy blending of both public and private sectors and channelised financial resources for the ultimate good of the country.

Indian shipping today suffers from similar difficulties and bear a parallel to what was prevalent in America before the passing of the Merchant Marine Act of 1936. As early as at the time of the Shipping Reconstruction Committee, where a target of 2 million was vaguely laid down, its major handicap had been lack of adequate tonnage—whether for overseas trade, coastal transport, or even in the matter of tugs and lighters for harbours. In the circumstances, an essential need is to set up an Indian Maritime Commission which would undertake large-scale construction programme of standardised cargo vessels and later hire out such vessels to private enterprise.

Large-scale building of bigger ships would obviously be well nigh impossible. The capacity of the Vizag Yard is hardly four to six ships a year and, although there is provision to increase this figure to 12 ships a year, yet it would hardly tackle the problem of filling the present gap in coastal tonnage. On the contrary, large-scale construction of small vessels of the *Ambar Jahaj* type is definitely possible. Modern methods of prefabrication, numbered plates, frames, and bulkheads, whether for wood or steel vessels, can be introduced and vessels of the *Ambar Jahaj* type assembled in the present yards where sailing vessels and country craft are being built. This would also help build up the foundations for a sound shipbuilding policy and encourage local talent and subsidiary marine industries. With cargoes waiting in every port, and rail bookings often restricted for want of wagons, every *Ambar Jahaj* has a commercial future and would bring in handsome dividends to its owner.

Bare-boat Chartering

In order to enable introduction and operation of the *Ambar Jahaj* in the sailing vessel industry, it would be necessary to follow the successful method adopted in the U.S.A. and other maritime countries. Popularly known as Bare-Boat Chartering, it made it possible for private enterprise, to own a first class type of carrier, on the possession of only the working capital. Thus, for example, it was possible to run a Liberty vessel worth $582,833 on a monthly charter rate of only $7,285. Bare-Boat chartering was adopted by Japan, Italy, and several other nations with commendable success. It proved to be the backbone for future development and expansion of national shipping.

The adoption of this system is strongly recommended for stabilising conditions in the sailing vessel industry in India. More than cheap, monetary loans or other kind of subsidy, what is necessary is to provide a reliable type of cargo carrier that could be operated in the present economy of the industry. This would help solve the problem of initial finance which has been one of the principal difficulties in the way of expansion. Bare-Boat chartering of an *Ambar Jahaj* would mean that an owner or a group of merchants or groups of seafarers already engaged in the industry could set up a small shipping company with a working capital of Rs. 25,000. Tindel-owners, who can raise a part of this capital or alternatively offer their present sailing vessel as mortgage, could also operate an *Ambar Jahaj* on a co-operative basis.

Operation of the "Ambar Jahaj" Scheme

The following suggestions are made for operating the *Ambar Jahaj* scheme:

1. Under the ægis of an Indian Maritime Commission, built 3 vessels in a recognised shipyard embodying all the features necessary for a modern cargo coaster. Wood, steel, and one of composite construction. These three would be the first prototypes of the proposed *Ambar Jahaj*.

2. Charter such vessels to private enterprise. Many organisations in the sailing vessel industry have become inactive for want of capital resources. The provision of new vessels, only on Bare-Boat charter rates would give a form of state aid or subsidy and such organisations can then operate them in their present sailing vessel economy.

3. The Maritime Commission should build, at a later stage, a fleet of 100 vessels of the *Ambar Jahaj* type. A two-year construction programme is suggested, with a target of 50 vessels per year, 100 vessels would meet a large part of coastal requirements and help to fill the present gap in tonnage.

4. In the second Plan, a total of Rs. 40 lakhs has been provided for the mechanisation of sailing vessels. New construction of sailing vessels has not been undertaken since the War. This would mean putting new engines in old vessels and although some of the present vessels could be suitably mechanised, yet such mechanisation would have doubtful results. It is suggested that a small part of this Rs. 40 lakh provision be earmarked for the *Ambar Jahaj* scheme, for the construction of the three prototypes, and for chartering such vessels to private operators.

5. Divide the coastal traffic into zones based on major terminal ports so as to enable rail-*cum*-sea movement. Rail traffic is already divided into seven zones. Coastal zones would help to supplement such rail division, co-ordinate rail-sail movement, and appreciably relieve wagon shortage. The railways would then be able to work out future programmes as coastal movement would be carried out by small vessels just as efficiently as a rail wagon and on a contract basis.

6. Undertake a survey of minor ports on the suggested basis of 10 ft. classification of minor ports.

7. Small improvements in navigational facilities are necessary in order to allow the regular use of shallow drafted vessels of the *Ambar Jahaj* type. Survey of the navigation channel, leading lines, and tide gauge would be needed, in order to ensure safe passage for powered vessels. Conservancy improvements in minor ports can be carried out without incurring heavy capital investment.

Scrapping of Old Sailing Vessels

There is today no organised scheme for scrapping old tonnage either of coastal steamers or sailing vessels. Out of 70 coastal steamers, 32 ships are over 20 years old. Old ships, whether steamers or sailing vessels, incur heavy maintenance expenses.

With a view to scrapping unseaworthy sailing vessels, it is suggested that a scheme may be evolved under the Maritime Commission which could offer facilities for replacing old sailing vessels with the new type of *Ambar Jahaj*. Terms and arrangements mutually suited to the commission and the industry could be worked after consultation with the trade and other interests. Scrapping old vessels would be of a voluntary nature, so that no serious disturbance in the economic structure of the industry may be experienced. Facilities for scrapping old tonnage were provided in Japan, Italy, and Germany soon after the War.

Role of Private Enterprise

Operation of the *Ambar Jahaj* offers a wide scope for private enterprise. It is a small-scale marine industry. The recent amendment in the State Financial Corporation Act is a welcome move and a step in the right direction. Regular coastal services, now absent, for the carriage of coal, oil, cement, ores, and other goods would offer scope for decentralisation of shipping making it possible to run small shipping companies. The following details will show how, with wagon shortage, an *Ambar Jahaj* could take its place in certain movements along the coast, and how private enterprise could venture out into new trades:

1. *Coastal Rail Out-Agency*: There are a number of routes where the railways could grant a coastal rail out-agency contract. This is a practice followed and now worked with road transport. It could similarly be done in coastal movement and the railways use vessels belonging to private parties for relieving wagon shortage. The *Ambar Jahaj*, owing to its small and handy nature, and having an equivalent efficiency as a rail wagon, would find it economical and encourage diversion of rail goods to sea movement. With a reliable type of carrier, the railways could have a contract and recognise such parties whose Bill of Ladi[illegible] same value as a Railway Recei[illegible]

Rail out-agency systems ha[illegible] torily in the Malabar Back [illegible] absence of a rail link betwee[illegible] Quilon was provided by a fleet [illegible] Similarly, in Assam, the Joint-S[illegible] work in co-ordination with the ra[illegible] may be established as such agencies would be exclusively for the carriage of rail goods. Coastal out-agencies are now not known in coastal shipping and its introduction would be a welcome step.

2. The State Trading Corporation would need feeder services. Private operators of the *Ambar Jahaj* could come to working arrangements for supplying transport. There is, today, considerable shortage of tugs and lighters in big ports like Calcutta, Madras, and Bombay. Some of the lighterage concerns are also in the hands of non-Indians. An *Ambar Jahaj* could also serve as a large lighter and enable "off loading" or "overside discharge" so as to provide direct service. Private parties could undertake this kind of work.

3. *Movement of coastal shipments of oil*: The petroleum industry is yet in its infancy in India. While much attention has now been paid for development of a tanker fleet, an aspect which hold out good prospects for private enterprise is in the movement of oil by small tankers of the *Ambar Jahaj* class. The following statement shows the scope for running new coastal services carrying oil direct from the refineries for distribution along the coast:

(In 1,000 gallons)

Place	1955 Quantity	How moved now
Bombay-Mangalore-Hassan.	20,000	From Trombay Refinery to Cochin by large tanker and then by rail in tank wagons.
Bombay-Cambay-Saurashtra ports.	8,000	By rail and country craft (in tins and drums—frequent leakage, jettisoning).
Bombay-Tuticorin ..	15,000	By large tanker to Cochin, later on by tank barges from Ernakulam to Quilon by backwaters and then by rail in tank wagons (metre-gauge).
Vizag-Coconada ..	6,000	By rail in tank wagons.
Vizag-Bezwada ..	6,000	By rail in tank wagons.
Vizag-Paradwip ..	8,000	By rail through Cuttack.
Bombay-Konkan ports..	5,000	By country craft in tins and drums.
Total number of tank wagons available in 1955		5,400 tank wagons.
Present requirements, even after taking into consideration the demands of the Second Plan		6,900 " "
Present shortage in tank wagons ..		1,500 tank wagons.
Estimated demand in the Second Plan..		10,000 " "

After the opening of the Naharkatiya (Assam) oil refinery, which has been estimated to have an annual production of 2 million tons, there would be further need to use small tankers for coastal shipments of oil, in Calcutta/Orissa areas, irrespective of where the refinery is finally installed. The oil companies would welcome distribution of their products by recognised concerns and could enter into long-term chartering of such fleets of vessels of the *Ambar Jahaj* class.

Coal by "Ambar Jahaj"

The following statistics relating to movement of coal from Bengal and Bihar coalfields by rail wagons to South India would show the scope for running vessels of the *Ambar Jahaj* type for carrying coastal shipments of coal:

(In tons)

Destination	Railways	Bunkers	Industries	Total
Madras	305,915	31,055	60,739	397,709
Cuddalore	166,399	..	5,888	172,287
Tuticorin	148,456	..	26,945	175,401
Cochin	216,867	8,799	8,275	233,941
Total ..	837,637	39,854	101,847	979,338

The total number of coal wagons sent to South Indian States for industrial consumption by all routes from West Bengal and Bihar coalfields is as follows:

Madras	8,671 wagons
Mysore	2,786 "
Travancore-Cochin	239 "
Total ..	11,696 wagons

The present approximate monthly demand of the South Indian States is as follows:

Madras	2,030 wagons
Mysore	420 "
Travancore-Cochin	50 "
Total ..	2,500 wagons
Annual demand for coal wagons ..	30,000 wagons
Present wagon supply	11,696 "
Gap in wagon supply ..	18,304 wagons

This means that roughly 18,000 wagons a year, or 1,500 wagons a month, or about 50 wagons a day are in short supply. This gap is expected to increase to about 72 wagons a day, out of which 15 wagons will be for the expansion of Mysore Iron and Steel Works, 4 wagons for the expansion of cement companies and the rest for other industries.

A difficulty experienced by consumers in South India is with regards to shipments of coal in small quantities from Calcutta. At present consumers have to rely for their small requirements on the railways. Coastal ships are at present big and carry only full loads of 6,500 to 8,000 tons of coal in one shipment. This does not meet the needs of consumers in South India who want in quantities ranging from 50 to 100 tons. The *Ambar Jahaj* could carry small quantities as the rail wagons do and offer direct shipments to any of the minor ports other than Madras or [illegible]

[illegible] following statement would [illegible] sition in transport require-

[illegible] ..	..	25 to 30 ships.
[illegible] wagons ..	..	18,304 wagons a year.
Gap in tank wagons ..	..	1,500 tank wagons.

In the final analysis, what would eventually fackle the target of coastal self-sufficiency is by our own construction in our own yards with our own material, a modern fleet of efficient vessels tailored to suit local needs, making minor ports a major asset, and assisting rail-sea co-ordination. State-aided shipping corporations have been covered for losses for the first five years of their inception. Many facilities have been given to shipowners. In order to introduce the *Ambar Jahaj* in our coastal transport, it may be necessary, in the initial stage, to have new legislation, so as to make it possible for operating the *Ambar Jahaj* on the basis of sailing vessel economy. This would facilitate interchange of crews, cut down operating costs, and enable working the vessel by marine co-operatives, a feature that needs development and encouragement in our shipping industry.—*All Rights Reserved.*

Notice

THE BANK OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 11th October, 1956, at 4 o'clock in the afternoon, to elect two Directors and to consider and if thought fit to pass with or without amendment the following resolutions, as Special or Ordinary, as specified below.

SPECIAL RESOLUTIONS

1. RESOLVED that Article 74 of the Company's Articles of Association be and it is hereby deleted and in its place and stead the following be and it is hereby substituted as Article 74:—

"74. (a) Upon a show of hands every member present in person or if a body corporate either through a representative appointed under the provisions of section 187 of the Companies Act, 1956, or by proxy, shall have one vote.

(b) Upon a poll the voting right of a member shall be in proportion to his or its share of the paid-up equity capital of the Company."

2. RESOLVED that Article 126 of the Company's Articles of Association be and it is hereby deleted and in its place and stead the following be and it is hereby substituted as Article 126:—

"126. Any general meeting declaring a dividend or bonus may direct payment of such dividend or bonus wholly or in part by the distribution of specific assets and in particular of paid-up shares, debentures or debenture stock of the Company or paid-up shares, debentures, or debenture stock of any other company or in any one or more of such ways and the Directors shall give effect to such resolution and, where any difficulty arises in regard to the distribution, they may settle the same as they think expedient and, in particular, may issue fractional certificates and may fix the value for distribution of such specific assets, or any part thereof, and may determine that cash payments shall be made to any member upon the footing of the value so fixed in order to adjust the rights of all parties and may vest any such specific assets in trustees upon such trusts for the persons entitled to the dividend or bonus as may seem expedient to the Directors."

3. RESOLVED that after Article 132 of the Company's Articles of Association the following be inserted as heading and Articles 132A and 132B respectively:—

CAPITALISATION OF PROFITS

"132A. The Company in general meeting may upon the recommendation of the Directors resolve that it is desirable to capitalise any part of the amount for the time being standing to the credit of any of the Company's reserve funds or accounts or to the credit of the profit and loss account or otherwise available for distribution and, accordingly, that such sum be set free for distribution amongst the members who would have been entitled thereto if distributed by way of dividend and in the same proportions on condition that the same be not paid in cash but be applied either in or towards paying up any amounts for the time being unpaid on any shares held by such members respectively or paying up in full either at par or at premium unissued shares or debentures of the Company to be allotted and distributed credited as fully paid-up to and amongst such members in the proportions aforesaid, or partly in the one way and partly in the other, and the Directors shall give effect to such resolution."

"132B. Whenever such a resolution as aforesaid shall have been passed the Directors shall make all appropriations and applications of the undivided profits resolved to be capitalised thereby and all allotments and issue of fully-paid shares or debentures, if any, and generally shall do all acts and things required to give effect thereto, with full power to the Directors to make such provision by the issue of fractional certificates or by payment in cash or otherwise as they think fit for the case of shares or debentures becoming distributable in fractions and to authorise any person to enter on behalf of all the members entitled thereto into an agreement with the Company providing for the allotment to them respectively, credited as fully paid-up, of any further shares or debentures to which they may be entitled upon such capitalisation or (as the case may require) for the payment up by the Company on their behalf, by the application thereto of their respective proportions of the profits resolved to be capitalised, of the amounts or any part of the amounts remaining unpaid on their existing shares and any agreement made under such authority shall be effective and binding on all such members."

4. RESOLVED that Article 87 of the Company's Articles of Association be and it is hereby deleted and in its place and stead the following be and it is hereby substituted as Article 87:—

Remuneration

"87. (a) The remuneration of the Directors shall be as fixed by a general meeting and may be by way of fees for meetings attended or monthly payments or otherwise as may be fixed by the general meeting. The remuneration of the Directors shall, in so far as it consists of a monthly payment, as may be fixed by the general meeting, be deemed to accrue from day to day;

(b) Until otherwise resolved by a general meeting:

(i) the Chairman of the Board of Directors shall be entitled to the sum of Rs. 200 and each of the other Directors shall be entitled to the sum of Rs. 150 for every meeting of the Board which he attends.

(ii) Each of the Directors (including the Chairman) shall be entitled to the sum of Rs. 75 for every meeting of any committee or sub-committee of Directors which he attends;

Payment of Expenses

(c) In addition to the remuneration payable to them in pursuance of the Act or these Articles, the Directors may be paid all travelling, hotel and other expenses properly incurred by them:

(i) in attending and returning from meetings of the Board of Directors or any committee or sub-committee thereof, or

(ii) in connection with the business of the Company."

ORDINARY RESOLUTIONS

5. RESOLVED that the capital of the Company be increased to Rs. 5,50,00,000/- (Rupees five crores and fifty lakhs) by the creation of 1,00,000 new shares of the face value of Rs. 50/- each.

6. RESOLVED that the said 1,00,000 new shares of the face value of Rs. 50/- each shall be subject to the Memorandum and Articles of Association of the Company and shall, subject thereto, rank for dividend on profits and in all other respects *pari passu* with the existing 5,00,000 shares of the Company of the face value of Rs. 100/- each, of which Rs. 50/- only are paid-up, save that the new shares shall not be entitled to participate in any dividend declared or to be declared for any period prior to the 1st January, 1957.

7. RESOLVED that it is desirable to convert into share capital Rs. 50,00,000/- (Rupees fifty lakhs) out of the sum of Rs. 2,00,00,000/- (Rupees two crores) which represents premiums on previous issues of shares and which forms parts of the Reserve Fund of Rs. 3,52,00,000/- and, accordingly, that a special capital bonus of Rs. 50,00,000/- be and is hereby declared AND that the said sum of Rs. 50,00,000/- be transferred from the Reserve Fund to share capital and that such bonus be applied on behalf of the persons who on the 8th day of November, 1956, were holders of the existing 5,00,000 shares of the Company (of the face value of Rs. 100/- each of which Rs. 50/- only are paid-up) in payment in full for the aforesaid 1,00,000 newly created shares of the Company (of the face value of Rs. 50/- each) and that such 1,00,000 shares credited as fully-paid be accordingly allotted to such persons respectively in the proportion of *One* such new share (of the face value of Rs. 50/- each) for every *Five* of the said existing shares (of the face value of Rs. 100/- each on which Rs. 50/- only are paid-up) then held by such persons respectively and that the shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income.

8. RESOLVED that no fractional certificates be issued to members but that the shares remaining after the allotment of one new share for five existing shares is made be allotted and issued as the Directors deem fit to any person or persons (including any one or more of themselves and/or any one or more of the employees of the Bank) for the purpose of being sold and the sale-proceeds, less expenses of sale, divided proportionately amongst the members who would otherwise have been entitled to a fraction or fractions of such new shares.

9. RESOLVED that any member entitled as aforesaid to the said new shares shall have the right either to accept all or any of the said new shares or to renounce (upon signing a renunciation in such form as shall be prescribed by the Directors) his right to all or any of the said new shares in favour of a nominee or nominees. Provided that such nominee or nominees shall be a member or members of the Company or be a person or persons approved of by the Directors of the Company and that such nominee or nominees shall sign an acceptance of the shares so renounced in such form as shall be prescribed by the Directors and that any such renunciation by a member and acceptance by a nominee shall be effective only if made upon forms to be supplied by the Company and lodged duly completed with the Company within the time prescribed by the Directors.

10. RESOLVED that the Directors shall have the right in their absolute discretion to reject any application for the new shares by a nominee or nominees not being a member of the Company and to refuse allotment to any such nominee or nominees not approved of by them without assigning any reason.

11. RESOLVED that for the purpose of giving effect to the foregoing resolutions Nos. 7 to 10 the Directors are authorised to give such directions as may be necessary and to settle any questions or difficulties that may arise in regard to the issue and distribution of the new shares as they think fit.

12. RESOLVED that the certificates for new shares to be allotted as aforesaid be issued within 9 months of the allotment thereof.

---

13. RESOLVED that:—

(a) The duly appointed Auditors of the Company, Messrs. A. F. Ferguson & Co., Chartered Accountants, and Messrs. S. B. Billimoria & Co., Chartered Accountants, be and they are hereby authorised to restrict their audit to the accounts of the Company at its Head Office and not to audit the accounts at the branches either within or outside India.

(b) Notwithstanding the authority aforesaid the Auditors shall be entitled at such times as may be agreed upon between themselves to visit for any one of them at least once in every financial year every branch in India for test inspection and that a report on such test inspection shall be submitted to the General Manager of the Bank and that for such work the Auditors shall be paid all out-of-pocket expenses that they may incur for travelling, board and lodging and otherwise and that such payment shall be in addition to the remuneration fixed for the said Auditors.

---

14. RESOLVED that pursuant to the provisions of section 293(1)(d) of the Companies Act, 1956, the Directors be and they are hereby authorised to borrow from time to time such sum or sums of money as they may in their absolute discretion think fit notwithstanding that the amounts borrowed may either by themselves or together with any other sum or sums already borrowed and outstanding be in excess of the Company's paid-up capital and free reserves, that is to say, reserves not set apart for any specific purpose.

---

15. RESOLVED that pursuant to the provisions in that behalf contained in section 281 and other relevant provisions of the Companies Act, 1956, Mr. Ambalal Sarabhai, who has attained the age of 66 years, be and he is hereby elected and appointed a Director of the Company AND it is hereby specifically declared that the age limit for Directors prescribed by section 280 of the said Act shall not apply to him.

16. RESOLVED that pursuant to the provisions in that behalf contained in section 281 and other relevant provisions of the Companies Act, 1956, Sir Vithal N. Chandavarkar, who has attained the age of 68 years, be and he is hereby elected and appointed a Director of the Company AND it is hereby specifically declared that the age limit for Directors prescribed by section 280 of the said Act shall not apply to him.

Dated at Bombay this 12th day of September 1956.

By Order of the Board of Directors,

T. R. LALWANI,
Acting General Manager,
THE BANK OF INDIA LIMITED.

Note:—(1) Resolutions 1 to 4 will be proposed as Special Resolutions. Resolutions 5 to 16 will be proposed as Ordinary Resolutions.

(2) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(3) The transfer books of the Company will remain closed from 30th October 1956, to 8th [redacted] days inclusive).

[redacted] under section 173 (2) of [redacted] 1956, in respect of the [redacted] Resolutions.

[redacted] NS Nos. 5 to 12:—

1. At the last annual general meeting held on the 8th day of March 1956, shareholders were informed that the Directors considered that the completion of fifty years of the Bank's life should be marked by the issue to the shareholders of one bonus share of Rs. 50 fully-paid for each five shares of the Bank and that it was proposed to make an application to the Central Government for the necessary consent. Such consent has been applied for and obtained and the Bank has now become entitled to convert into share capital a sum of Rs. 50,00,000 (Rupees fifty lakhs) out of that portion of the Reserve Fund which represents premiums received on previous issues of shares and to apply this sum of Rs. 50,00,000 to the issue to shareholders of 1,00,000 new shares of the face value of Rs. 50 each fully-paid in the ratio of one such new share for every five existing shares of the Bank.

2. The consent of the Central Government has been obtained to the said issue of bonus shares by an Order No. R 108-CCI/56-451 dated 10th July 1956, of which a complete copy is open for inspection by the members at the Head Office of the Company between 11 a.m. and 4 p.m. on all working days except Saturdays and between 11 a.m. and 1-30 p.m. on Saturdays. The Central Government has stated that it must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

3. The Directors are placing before the shareholders for their consideration resolutions required for carrying into effect the scheme for the issue of bonus shares as aforesaid. It will be necessary, for this purpose, to increase the capital of the Company from Rs. 5,00,00,000 (Rupees five crores) to Rs. 5,50,00,000 (Rupees five crores and fifty lakhs) and to create 1,00,000 new shares of the face value of Rs. 50 each which shall be deemed to be fully paid-up. These shares will, subject to the Memorandum and Articles of Association, be entitled to participate in dividend on profits and in all other respects *pari passu* with the existing 5,00,000 shares of the Company of the face value of Rs. 100 each, on which Rs. 50 have been paid, except that the new shares will not be entitled to participate in any dividend declared or to be declared for any period prior to 1st January 1957.

4. Having regard to the difficulties which would be experienced by the issue of fractional certificates, the Directors have proposed that no fractional certificates shall be issued to shareholders but that the shares remaining after the allotment of one new share for five existing shares shall be sold and the net sale proceeds divided proportionately amongst the members who would otherwise have been entitled to a fraction or fractions of such new shares.

5. Resolutions Nos. 5 to 12 (both inclusive) are recommended to be passed for the purpose of carrying out the scheme for the issue of bonus shares as aforesaid.

RE: RESOLUTIONS Nos. 1, 2 and 3

6. The Articles of Association of the Bank also require certain alterations for the purpose of enabling the aforesaid scheme to be put into effect. Therefore, the existing Article 126 is proposed to be amended by providing for distribution of assets also by way of a bonus and new Articles 132A and 132B are proposed to be added for the purpose of enabling capitalisation of profits. Article 74 relating to voting rights is proposed to be amended to bring it into line with section 87 of the Companies Act, 1956. This amendment is deemed necessary in view of the fact that the new shares will be fully paid-up shares of Rs. 50 each which is also their face value while the existing shares are of the face value of Rs. 100 each and have an uncalled liability of Rs. 50 per share.

7. Resolutions Nos. 1, 2 and 3 are recommended to be passed for amending the Articles in manner aforesaid.

RE: RESOLUTION No. 4

8. The Articles regarding the remuneration of the Directors are also recommended to be revised. The existing Articles 87 and 106 of the Bank's Articles of Association provide for remuneration of the Directors. Having regard to the considerable increase in the business of the Bank, the work of the Directors has correspondingly increased. The Directors' remuneration at present is Rs. 125 for the Chairman and Rs. 100 for every other Director for every meeting of the Board attended by him or them respectively. Each of the Directors, including the Chairman, is also entitled to a remuneration of Rs. 25 for every meeting of a committee of Directors attended by him. It is proposed that the remuneration presently paid to the Directors should be increased as mentioned in Resolution No. 4 and that they may be entitled to draw travelling expenses when they are called to attend meetings of the Board or of any committee or sub-committee thereof.

9. Section 310 of the Companies Act, 1956, provides for the approval of the Central Government being obtained in the case of any amendment of any provision in the Articles of Association which has the effect of increasing the remuneration of the Directors. It is suggested that the shareholders consider the amendments now proposed by Resolution No. 4 in the existing Article 87. An application is being made to the Central Government for approval to the proposed increase in the remuneration and the resolution for increase in the remuneration will be effective only upon such approval being obtained. Until such approval is obtained, the existing abovementioned remuneration will continue to be paid.

RE: RESOLUTION No. 13

10. Resolution No. 13 is proposed to meet the requirements of section 228 of the Companies Act, 1956.

RE: RESOLUTION No. 14

11. Resolution No. 14 is proposed to meet the requirements of section 293 (1) (d) of the Companies Act, 1956. The Bank may have occasion to borrow in excess of the limits prescribed by the said section and it is, therefore, desirable to give the necessary powers to the Board for that purpose.

RE: RESOLUTIONS Nos. 15 and 16

12. Mr. Ambalal Sarabhai has been a Director of your Bank since 1919 and has rendered meritorious services to the Bank. In particular, he has been responsible to a large degree for the development of the Bank's business at Ahmedabad. Because Mr. Ambalal Sarabhai and Mr. Madanmohan Mangaldas were members of the Bank's Local Committee at Ahmedabad and were entitled to receive a remuneration of Rs. 50 for each meeting of the said Local Committee, the Bank has been advised by Counsel that they may be deemed to have vacated their seats as Directors by virtue of the provisions of section 314 of the Companies Act, 1956. Mr. Madanmohan Mangaldas has been re-appointed a Director by the Board under their powers in this behalf. Because Mr. Ambalal Sarabhai has attained the age of 66 years, his appointment and election as a Director require the approval of the Company by a resolution passed in general meeting, specifically declaring that the age limit prescribed by section 280 of the Act shall not apply to him.

13. The Board also propose to invite Sir Vithal N. Chandavarkar to join the Board as a Director. Sir Vithal Chandavarkar is a well known industrialist whose association with the Bank should prove to be of considerable value. He has attained the age of 68 years and, therefore, in his case also, his appointment as a Director requires the approval of the Company by a resolution in general meeting, specifically declaring that the age limit prescribed by section 280 of the Act shall not apply to him.

14. Special notices of the resolutions proposing Mr. Ambalal Sarabhai and Sir Vithal N. Chandavarkar as required by the Act have been received.

---

15. The abovementioned Special and Ordinary Resolutions are commended to the shareholders for their consideration and if approved for being passed. The only interest of the Directors and of Mr. D. R. Thom, General Manager of the Bank, in the resolutions regarding bonus shares is that each of them is a shareholder and member of the Company and, as such, interested in the issue of bonus shares. The Directors are also interested in the resolution regarding amendment of the Articles to permit an increase in their remuneration.

Dated at Bombay this 12th day of September 1956.

By Order of the Board of Directors,

T. R. LALWANI,
Acting General Manager,
THE BANK OF INDIA LIMITED.

Notices

THE EQUITABLE COAL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 5th October 1956, at 3.00 p.m. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports, the Profit and Loss Account for the half-year ended 31st December 1955, and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. *As Special Business*:

   To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—

   (As an Ordinary Resolution).

   "RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 28th September to 5th October 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *7th September*, 1956.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

Item No. 5.—By the provisions of Section 293(1) (d) of the Companies Act, 1956, the Directors without the consent of the Company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

GILLANDERS ARBUTHNOT & COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Preference Share Register of Members of the Company will be closed from the 24th September to the 1st October 1956, both days inclusive, for payment on the latter date of an Interim Dividend on the Preference Shares of the Company at Rs. 2-8 per share, less Income-tax, on account of the year ending the 31st March 1957.

Dividend Warrants will be sent only to Registered Shareholders or to their Mandatees.

By Order of the Board,
J. F. E. d'A. WILLIS,
Managing Director.

   To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—

   (As an Ordinary Resolution).

   "RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 28th September to 5th October, 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *7th September*, 1956.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

Item No. 4.—By the provisions of Section 293(1) (d) of the Companies Act, 1956, the Directors without the consent of the Company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

THE CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, "Stephen House," fourth floor, No. 4, Dalhousie Square East, Calcutta, at 3 p.m. on Monday the 8th October 1956, for the purpose of receiving the Report of the Directors and the Managing Agents, passing the audited accounts for the half-year ended 31st December 1955, declaring the Dividend on Preference shares, electing a Director and appointing Auditors.

The Transfer Register of the Company will be closed from 28th September 1956 to 8th October 1956, both days inclusive.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"STEPHEN HOUSE," 4TH FLOOR,
4, DALHOUSIE SQUARE EAST,
CALCUTTA, *27th August* 1956.

Note.—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) The Dividend, if sanctioned, will be paid to those shareholders so entitled whose names appear in the Company's books on the 8th October 1956, or to their mandatees.

THE HURRILADIH COAL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 5th October, 1956, at 2.45 p.m. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports, the Profit and Loss Account for the half-year ended 31st December 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and to fix their remuneration.
5. *As Special Business*:
   To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—
   (As an Ordinary Resolution).
   "RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 28th September to 5th October, 1956, both days inclusive.

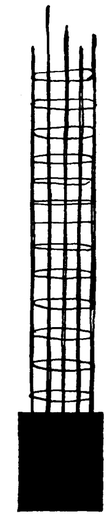
Mukand makes reinforced concrete...



It's perfectly true... even though we're not in the concrete business. For we manufacture and supply the rolled steel bars which reinforce concrete and make possible the construction of dams, factories, homes and offices all over the country.

Last year we produced over twenty thousand tons of rolled steel bars and this year our target is 40,000 tons to meet the increasing demand from the public and private sectors. By 1961, we are confident of producing 1,20,000 tons. In fact, our steel rolling mills—the largest in Western India—are working round the clock, putting the steel in concrete.

MONOPOLY CAPITALISM IN INDIA?

STUDY OF THE SITUATION REVEALS NO SIGN OF IT

AS a result of the programmes adopted under the first Five-year Plan, Indian industry has come to enjoy certain special advantages in the form of general stimulus to prices and restrictions on imports of consumer goods which have tended to reduce competition between industries within the country as well as competition from without. Consequently, certain boom conditions have come to prevail, making it easier for *entrepreneurs*, especially those who are already in the field, and who have command over resources, to make large profits. The general boom conditions have also given rise to certain socially undesirable consequences. In the first place, the incentive for improvement in efficiency has become weak. Secondly, prices, especially those of the essential articles have tended to rise. In these circumstances, it is sometimes suggested that the entire section of the organised industries has become the equivalent of "monopoly capitalism." In an illuminating article entitled "Some Structural Aspects of Industry," the *Tata Quarterly* of April-July 1956, has made a successful attempt at repudiating this suggestion with facts and figures.

The article sets out to consider whether any of the essential elements which constitute monopoly are present in the conditions obtaining in India today. One or more of the elements that go to make monopoly are: (i) An understanding among the rival producers in an industry for the establishment of monopoly power, (ii) deliberate attempts to bar entry to new comers in the field, (iii) organised effort to drive out, through unfair means, present or prospective competitors, and (iv) deliberate reduction of output with a view to securing abnormally high profits by raising prices.

Diversification of Industry

The first indication that no such monopolistic conditions prevails in India is evidenced by the diversification of industry which has come about in recent years. While, before World War II, industrial development was confined to fields such as cotton textiles, jute, iron and steel, cement and the like, under the impetus provided by the War, a host of other industries, including engineering and heavy chemicals, grew up. After an interval of a few years, following the post-war boom, the first Five-year Plan gave further fillip to the establishment of industries in new fields such as automobiles, radio receivers and the like. "All these new industries," the article points out, "may be said to be the product of investors reaction to war-time shortages, post-war quantitative restrictions on imports and Government's active interest in fostering the development of a diversified industry." Despite this diversification, the number of units remained small in various lines. It is so not because of any wilful design of some promoters. The development of the units depend on various factors such as the performance of the pioneering unit, and scope of development in the immediate future. In fact, the article says, the pace at which the number of units has multiplied in recent years should be a strong indication of the absence of monopolistic tendencies.

In the hurricane lantern industry, for instance, the number of units rose from six to eleven, while the capacity increased from one to 3.6 million between 1947-50. In the radio receivers industry, to take another example, the number of units increased from two to eleven during the same period. In diesel engines, again, the number rose eightfold between 1947 and 1953. It is often the existence of large idle capacity of the existing units that largely determines the expansion of the number of units in any line. According to the Planning Commission, the percentages of unused to total capacities in some principal new industries in 1953 were 34 in electric fans, 63 in radio receivers, 80 in automobiles, 37 in bicycles, and 72 in diesel engines. This excessive capacity—which was never brought into use—should, however, be distinguished from the capacity in disuse—deliberately kept in disuse by a monopolistic—prevalent under monopolistic conditions. This excessive capacity came into existence, not because of monopoly, but, on the contrary due to "individuals making their own expansion programmes optimistically and without consideration of what the similar plans of others might lead to." Another indication of the individualistic actions of the producers is provided by the following quotation quoted in the article from the Annual Report of the Ministry of Commerce and Industry:

> "One of the main weaknesses of the pattern of industrial development in the country has been the tendency on the part of each individual unit to set up the capacity needed for the entire range of its production. This meant that, even while idle capacity existed in the country for making particular components, fresh capacity of the same type was being created."

Production

In the realm of production, again, no monopolistic tendencies could be pointed out. In almost all the industries, old as well as new, the production at present is very much higher than what it was at the end of the war or at the beginning of the Plan. This fact brings out, as the article says, a fundamental point, namely, that production-trend has reacted in a normal fashion to the market conditions. Except for the decline in production witnessed in 1950 in 13 industries following the influx of imported goods, and in 1951 in certain others as a result of inadequate supply of raw materials, the production of all the industries continued to raise ever since the Government, with the co-operation of capital and labour, set out in 1947 to increase the production. The tempo gained further momentum during the first Plan, and the Plan expectations have been more than fulfilled.

It is necessary, furthermore, to examine whether Indian industry is free from monopoly practices. The article divides such practices into two broad divisions: Firstly, those that create conditions for monopoly to flourish, such as barring entry to newcomers, uneconomic price-cuts, etc., and, secondly those that exploit the situation so created, like restricting production, raising prices, etc. As for the restriction of newcomers, it is entirely the business of the Government which, under the provisions of the Industries (Development and Regulation) Act, 1951, regulates the expansion of old or establishment of new industries in conformity with the programmes of planned development. Besides, the scrutiny of the applications takes place according to well-defined principles, and the procedure of reviewing the decisions of the Licensing Committee, by a nine-member Sub-committee of the Central Advisory Council rules out any possibility of influencing the decisions of the Committee. During the last five years, for instance, applications were rejected if the Committee was satisfied that there was an excess capacity existing in the related industries. They were also rejected on the grounds such as of non-availability of transport facilities or raw materials. This is borne out by facts. Thus, in the three years ended 1955, of the 1,440 applications received by the Ministry of Commerce and Industry, only 1,142 applicants were granted licences. And, of the 298 rejected cases, 236 belonged to the group of industries called "restrictive group," that is, those which had adequate or more than adequate capacity at the commencement of the Plan, in the opinion of the Planning Commission. Thus, as the article points out, the licensing system might have been instrumental, in some measure, in suppressing competition, though the extent of such suppression cannot be indicated. But this does not mean that the Government was going out of its way to create monopolistic conditions. For the Planning Commission was ready to sanction all the schemes pertaining to fields in which it desired expansion.

Monopoly Practices

Turning to the other aspect of monopoly practices, the article points out that, of the prices of the three types of maufactured goods—namely, closely regulated key industries, young protected industries and old established ordinary industries —monopoly pricing has been clearly out of the question in the first category. The first category of industries which includes steel, cement, locomotives, etc., has never experienced the difficulty of disposing of its entire output. In the case of these industries, the Government not only fixes the prices, but also arranges for the distribution of their products. Further, they expanded their production during the last five years to the extent permitted by the Government. In respect of industries belonging to the second category, namely, protected industries, domestic prices are kept higher than they would otherwise be by a deliberate policy of the Government. Even if a manufacturer, following excessive demand for his products, takes "undue advantage" of protection by charging excessive prices, he cannot be deemed to be charging monopoly prices. For he is like any other manufacturer, who raises the prices simply because the demand has exceeded the supply. But, in actual practice, no industry charges such undue prices. "To take an overall view," the article says, "the continued existence of substantial unutilised capacity in the majority of the young protected industries suggests that protecton was not sufficiently effective for them or that the intended price margin was not accruing in actual practice."

The last category comprises old industries such as cotton, tea, jute, soap, etc. A characteristic feature of the price-trends in these industries is that the market forces of supply and demand largely determine the prices from time to time. Excepting for the sharp increases in the prices of sugar and cotton manufactures in 1949-50, which were largely due to the policy of control followed by the Government during and after the war, there is, the article claims, no instance in the history of price movements to indicate monopoly pricing among these industries. The collaboration among jute producers is limited to uniform sealing of a given proportion of looms with the Government approval only and in certain circumstances. This is true of tea and coffee industries also. Besides, the prices of jute textiles are set by international forces. So also, domestic markets determine the prices of the products of the other old established industries.

From the foregoing arguments so clearly presented by the *Tata Quarterly*, it can be seen that the charge of monopoly capitalism labelled against the entire sector of organised industry in India is unwarranted. The *Quarterly*, however, rightly concedes that, the implementation of development plans in India has undoubtedly some undesirable aspects which must be recognised as such and avoided as far as possible. The chief among these are the higher consumer prices and an improvement in the relative position of the entrepreneurial sections of the community. Nevertheless, it goes on to add, that the Government is not oblivious to these unfavourable features. It keeps a close watch over the prices of essential articles and, in some cases, levies sectional excise duties to take away what are called "unearned" increments to profits in particular industries. At the same time, the direct taxes also are aimed at counteracting the extraordinary accumulation of wealth. Besides, the Government also gives encouragement to outsiders to enter the field and forces an improvement in the competitive position of the newcomers. If, despite what is being done to counteract some of the inevitably undesirable effects of economic expansion on the Society, some of them lurk in the economy, it is neither fair nor unrealistic to attribute them to business men.

PRODUCTION UP IN E.C.A.F.E. REGION

The highlights of economic development in Asia in the half-year ended 21st March 1956 were moderate increases in industrial and agricultural production, reductions in trade deficits and improvements in gold and dollar reserves, according to the latest review of the Asian economic situation published by the E.C.A.F.E.

In the realm of prices, three different trends are noted by the review. In the first place, in certain countries, namely, Cambodia, Taiwan, Indonesia, South Korea Thailand and South Viet Nam, continued price increases were witnessed, chiefly due to military and other non-developmental Government expenditures financed by heavy budget deficits. Secondly, in certain other countries, principally Ceylon, Japan and the Philippines, prices remained stable, mainly because of the disinflationary policies pursued by them. Finally, in Burma, India, Malaya and Pakistan, a downward trend in prices was in evidence in 1955, but in the first quarter of 1956, they remained stable or moved slightly upwards.

In the sphere of agricultural production, an increase of as much as 2.1 per cent. was witnessed in the output of cereals. Generally, favourable weather conditions were greatly helpful to Governments in their efforts to stimulate food production. The production of rice alone (in the region excluding China) increased by 7 per cent. and was very near the record level of 1953-54. While in China and Japan bumper outputs were recorded, in Indonesia and Pakistan production was lower than in the previous year. In India, although the increase in the production of rice was as much as a million tons, it was more than offset by a decline of no less than 3 million tons in the output of other cereals, chiefly millets, sorghum and maize.

Consequently, India, Pakistan and Indonesia were obliged to import sizable quantities of foodgrains in order to keep in check the increases in domestic prices. In Burma, on the other hand, a surplus of two million tons of rice—70 per cent. of which, however, had already been committed by contracts by the end of 1955—was estimated for 1956. Thailand exported rice to the tune of 500,000 tons in the first five months of 1956, as against 604,000 tons in the corresponding period last year.

Turning to the developments in the sphere of export commodities, the review notes with satisfaction the increases recorded in 1955 and in the first quarter of 1956. The production of tea and rubber reached new levels. Jute production also rose to touch the record level witnessed in 1951-52. Copra and sugar production, too, increased but only moderately. Cotton, however, showed a decline. In China, on the contrary, cotton production was reported to have risen by 43 per cent.

Foreign exchange position of the countries exporting rubber greatly improved during the period under review, as a result of the high level of exports attained at favourable prices. Jute and sugar exports also helped the foreign exchange position, though to a lesser extent. Exports of tea, from India, Pakistan and Indonesia, declined, while those from Ceylon increased.

[redacted]velopments in the field of in-
[redacted]e review points out that pro-
[redacted] continued to increase at a
[redacted]e world rate, while in India,
[redacted] rate of expansion was nearly
[redacted] In India, the rate of increase
[redacted]on for the period 1951-55 was
[redacted] In Japan industrial expansion
was accentuated by the export demands. A noteworthy feature was that shipments by Japan increased at a higher rate than production.

Turning to trade, the review remarks that, during 1955, the trade of E.C.A.F.E. countries increased by 15.6 per cent. to $8,326 million in exports and by 5 per cent to $8,632 million in imports. A remarkable feature was that the trade deficit was reduced by 70.1 per cent. in 1955. As a result of the increasing imports during the first quarter of 1956, however, the deficit increased slightly again.

MINISTRY OF HEAVY INDUSTRIES

The broad division of responsibility between the Ministry of Heavy Industries and the Ministry of Commerce and Consumer Industries, which have been created in place of the Ministry of Commerce and Industry, is outlined below:

The Ministry of Heavy Industries will be generally responsible for industrial policy as a whole. The administration of the Industries (Development and Regulation) Act will remain with this Ministry and all applications under the Act, whether for substantial expansion or for setting up new undertakings, should be addressed to this Ministry. The Ministry of Heavy Industries will be responsible also for all producer goods industries including iron and steel and non-ferrous metals; chemicals and pharmaceuticals; machine building industries, including machine tools, engineering industries, cement and automobiles.

The Ministry of Commerce and Consumer Industries will deal with all subjects relating to foreign trade and commerce and import and export control.

Besides, this Ministry would be responsible for small-scale industries and handloom industry, all textile industries, production of consumer goods by light engineering industries like bicycles, sewing machines, cutlery, domestic electrical appliances, wood-screws, bolts and nuts, and for all other common consumer items like soaps and other toilet articles, matches, leather and rubber manufactures, glassware and crockery, paints and varnishes and plastic goods. It will also be in charge of the plantation industries, viz., tea, coffee and rubber.

Where there is any doubt about any particular item of industry, letters and correspondence may in the first place be sent to the Ministry of Heavy Industries.

INDO-BURMA TRADE AGREEMENT

The Indo-Burma Trade Agreement which was concluded on 5th September 1956, and has come into force from that day, will be welcomed by all business interests in both the countries. Apart from the normal feature that both the Governments should give all necessary facilities for export or import, as the case may be, of the items specifically stated (and also those not specifically stated) in the agreement, a noteworthy feature is that both the Governments, in view of the common problem of foreign exchange confronting them, have agreed to take necessary steps to achieve as near a balance in their trade as may be feasible. And in this connection, and also with a view to achieving expansion and diversification of trade between the two, each Government has agreed to give fullest consideration to the suggestions of the other. Suggestions by either of the parties offered in respect of export of commodities in short supply will also be given utmost consideration. Other terms include according of favourable treatment to each other's commerce, and exploring of ways and means for the most economical and convenient transportation of commodities between them, and promoting the development of and interest in shipping.

The agreement is to run for five years, subject to such modification as may be agreed upon between the two parties at the beginning of each calendar year.

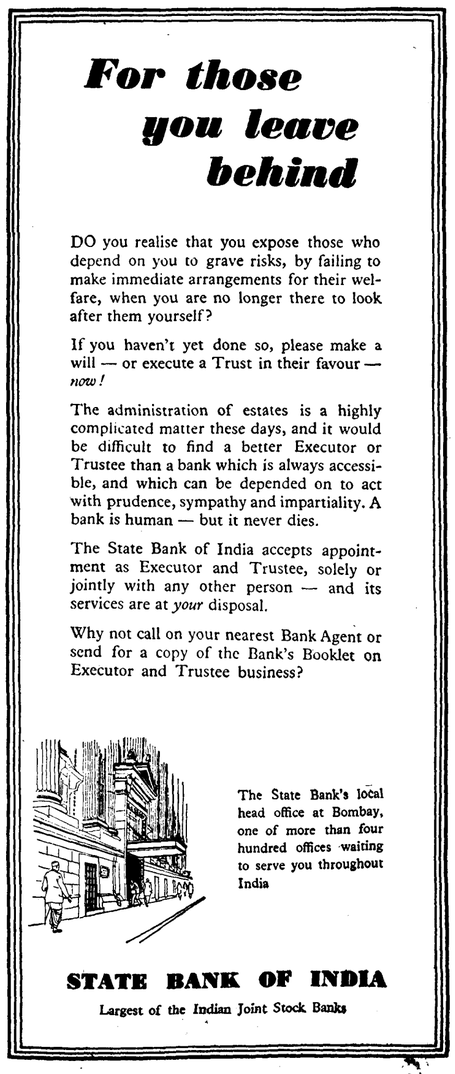
The groups of commodities for export from India include textiles, food, agricultural products, chemical products and soaps, engineering goods, electrical goods, household and building requirements, hardware, scientific instruments of all types, rubber manufactures, leather manufactures, handicrafts and cottage industry products, stationery and paper and other miscellaneous items.

Commodities for export from Burma to India include, chiefly, rice, beans and pulses, maize, teak, certain non-ferrous metals, precious and semi-precious stones and certain others.

INDO-AUSTRIAN TRADE PACT

The Indo-Austrian Trade Agreement which was originally signed on 9th December 1952, and which, as per the latest extension on 29th December 1955, was valid till 30th June 1956, has been extended up to 30th June 1957, according to a Press Note issued by the Ministry of Commerce and Industry. In terms of the exchange of letters between the two Governments, the Australian Federal Government has agreed to license freely import into Austria from India of tea, carpets, sports goods, hydrogenated oil, raw cotton, castor oil, coir, coir yarns, fibre for brushes and brooms, handicraft manufactures of ivory, brass, horn and brocade, iron ore, manganese ore, mica, shellac, linseed oil, myrobalans, spices, cashewnuts and tanned leather.

The Austrian Government has also agreed to license import of cotton fabrics, unbleached, to the extent of 20,000 lbs. from India.



TEXMACO'S PROGRESS EXCELLENT

PROFITS MORE THAN DOUBLED

IF the impressive rise in the market value of the ordinary shares of the Textile Machinery Corporation (Managing Agents: Messrs. Birla Brothers, Private Ltd., Calcutta) in the middle of 1955 to Rs. 19-10 *ex-div.* was any indication of the steady and rapid growth the Company was making, the rate of Rs. 23-8 *cum-div.* quoted at present (10th September) is a deserving testimony to the further steady onward march of the Company. The accounts of the Company for the year ended 31st December 1955 show that the gross profit for the year at Rs. 57.97 lakhs is more than double that for the previous year at Rs. 26.62 lakhs. Again, it will not be out of place to state, in this connection, that even the previous year's profit of Rs. 26.62 lakhs was more than double the gross profit of 1951 at Rs. 12.76 lakhs.

The Directors, however, have thought it prudent only to maintain the dividend at 10 per cent., the level for the previous year, instead of stepping it up by 2½ per cent. every year as used to be their practice since 1951. Another feature worthy of comment is that, while, in the past several years, the directors did not allocate anything to the reserves, they have made a handsome beginning in that direction this year. Thus, they have set apart Rs. 5 lakhs for plant rehabilitation, Rs. 7.23 lakhs for general reserve, Rs. 2.75 lakhs as provision for disputed claims, and Rs. 15,000 for contingencies, the aggregate sum conserved being Rs. 15.13 lakhs. The Directors have thus justified our hope, expressed in our review last year that, "having stepped up the dividend now to a very decent level, the Directors would follow a steady dividend policy and build up reserves." The transfers to reserves, it may be noted, have not been at the expense of essential provisions. On the contrary, the amounts earmarked for these purposes are actually higher. Thus, a sum of Rs. 20.0 lakhs has been credited to depreciation account as against Rs. 15.0 lakhs in the past year and Rs. 11.0 lakhs for taxation as against a meagre Rs. 0.13 lakh, provided out of the 1954 profit. Another notable feature that deserves to be recorded here is the voluntary sacrifice made by the managing agents to strengthen the Company's financial position by charging only 50 per cent. of the Commission on profits due to them for 1955.

The following comparative table, presenting the salient features of the Company's working during the past four years, gives a bird's eye-view of its progress:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952

Carry forward	1.23	1.43	0.36	0.15

* Net value.

† Provision for bad and doubtful debts.

During the year under review, a steady increase in production and sales was noticed in the textile machinery and in the boiler and heavy engineering divisions. The year also witnessed the approval by the Government of India of the terms of the Company's agreement with Messrs. Howa Machinery Ltd., Nagoya, for technical collaboration in the manufacture of the entire range of cotton spinning machinery. The starting of planning out production of carding engines marked the first step in the implementation of the expansion programme. A team of experts has been sent down by the Company's Japanese collaborators. Much progress has been made in production and the first batch of Texmaco-Howa Cards is expected to be put on the market within another 3-4 months. The Company has also received the Government's approval of the terms of the agreement with Messrs. Kanai Juyo Kogyo, Ltd., Japan, for technical collaboration in the manufacture of card clothing which is an important accessory of carding engines.

Building work for the manufacture of jute mill machinery is nearing completion. Plant and machinery ordered out from abroad are being received and installation work is in progress. For this purpose, an agreement for technical collaboration has been entered into with Messrs. Fairbairn Lawson Combe Barbour, Ltd. of Leeds, England. The work undertaken on the hydraulic dam projects at Rupar and Hirakud was satisfactorily completed. Similarly, work on the production of locomotive boilers during the year was satisfactory. Negotiations were finalised with such world-famous organisations as Messrs. Combustion Engineering Inc., New York, for establishing collaboration for the manufacture of water tube boilers and with Messrs. Stork-Werkspoor, Amsterdam, for producing sugar mills plant. Erection of the steel foundry plant was completed during the year and the plant was put into commission towards the end of the year.

The Company's balance-sheet as on 31st December 1955 when read in conjunction with its predecessor, reveals an increase in the capital structure consequent upon the funds required to finance the expansion schemes outlined above. Thus, the authorised capital has been increased from Rs. 1½ crores to Rs. 4 crores by the creation of 1,400,000 new shares of Rs. 10 each and 110,000 shares of Rs. 100 each. Out of this, shares of the face value of Rs. 90 lakhs were issued as ordinary shares of Rs. 10 each and these were fully subscribed. Consequently, the issued capital has gone up from Rs. 1,00,00,000 to Rs. 1,90,00,000. The paid-up capital, however, remains unchanged, evidently because at the close of the year the subscription money must have been just coming in. Evidence of this is available from the fact that the balance sheet contains an item, "share application money awaiting allotment" with Rs. 32,50,060 to its credit. Besides shareholders' capital, the Company has debentures to the tune of Rs. 40 lakhs carrying interest at the rate of 6 per cent. and redeemable on 31st December 1960 and making a prior charge to the tune of Rs. 2.40 lakhs on the profit by way of interest. The reserve for taxation stands at Rs. 11.0 lakhs. The reserves and surplus aggregate only Rs. 21.05 lakhs. The current liabilities total Rs. 117.11 lakhs. There has been an addition of Rs. 43.06 lakhs to the gross block during the year, bringing the total value of the block account to Rs. 198.53 lakhs. As against this, the provision for depreciation built up so far is Rs. 90.12 lakhs. The current assets amount to Rs. 213.29 lakhs, and exceed the current liabilities and the tax provision by a considerable margin.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 23-8 *cum-div.* on an *ex-div.* basis, and taking the dividend at 10 per cent., the yield on the shares works out to 4.4 per cent. per annum, free of tax. The all-round improvement in the Company's working from year to year and the energetic measures that have been taken by the management to expand its production, in collaboration with foreign specialists in the various lines in which the Company is interested, encourage one to entertain hopes of better results in the coming years. It may be noted, in this connection, that the Company is engaged in the field of heavy machinery industry the prospects for which are bright, in view of the large programme for industrialisation of the country envisaged in the second Five-year Plan.

NATIONAL CARBON COMPANY

On 23rd December 1955, the National Carbon Company (India) Ltd. (Managing Director: Mr. J. R. Galloway, Calcutta) was converted into a public limited company in order to afford an opportunity to the Indian public to participate in its progress and expansion. This was done by offering to the public a large part of the share capital that was being held by a few foreign investors. Since then, the shares of the Company have been an active counter on the Indian Stock Exchanges. The report and accounts of the Company for the year ended 25th December 1955, show that the Company has a very promising and bright future in the years ahead. There are indications that the Company will play a decisive part in the economic and industrial growth of the country when the schemes of expansion which the Directors have in mind are put through.

During the year, the Company's factories at both Calcutta and Madras achieved good production and the sales for the year amounted to Rs. 451.77 lakhs. The gross profit was Rs. 94.51 lakhs, out of which the Directors have provided Rs. 7.69 lakhs for depreciation and Rs. 36.66 lakhs for taxation. It may be mentioned, in this connection, that before the Company was converted on 23rd December 1955 into a public organisation, the Directors had declared an interim dividend at 20 per cent. and a

(*Continued on next page*)

MYSORE PAPER REPORTS GOOD PROGRESS

DIVIDEND RAISED

THE Mysore Paper Mills, Ltd. (Government Director and Chairman: Mr. T. Shamanna, Bangalore) has recorded substantial progress in its working during the year ended 31st March 1956. From Rs. 12.72 lakhs for the previous year, the gross profit has increased to Rs. 15.95 lakhs, that is, by Rs. 3.23 lakhs or 25.2 per cent. Commensurate with the increase in the gross profit, the net profit has also increased from Rs. 3.74 lakhs to Rs. 5.12 lakhs after providing for depreciation Rs. 10.84 lakhs as against Rs. 8.98 lakhs set apart in the previous year. This has enabled the Company to step up its dividend from 7½ per cent. given in the previous year to 10 per cent. for the year under review. It will be remembered that this enhanced rate of dividend was declared for the trading year 1953, after which it was lowered to 7½ per cent. for 1954 and 1955.

A feature of the appropriation of profit is that, as in the previous year, the Company has set apart a sizable sum of Rs. 2 lakhs to a reserve, entitled the Industrial Finance Corporation Loan Redemption Fund. The Company, it may be noted here, has taken a loan of Rs. 48.50 lakhs from this Corporation. Another feature is the establishment of a gratuity reserve with an initial credit of Rs. 50,000. For the second year in succession, no additions have been made to either general or other shareholders' reserves.

The following table provides a comparative study of the Company's working during the four years ended 31st March 1956:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953

Carry forward	0.47	0.35	0.49	0.57

D.—Dividend. B.—Bonus.

No provision has been made for taxation this year also as the Company has no assessable income, evidently because of the large development expenditure that is being incurred by it. During the year, the Company's production and sales made further improvement, the latter recording an increase from Rs. 68.51 lakhs in the previous year to Rs. 87.92 lakhs. The Directors, however, point out that, during the year under review also, there was a decline in selling prices and the frequent railway booking restrictions which were experienced in the previous year continued, making movement of paper difficult.

Commenting on the progress of the expansion scheme that is being implemented by the Company, the directors observe thus:

"The pace of progress in the implementation of the expansion scheme was maintained. Additional equipment of the value of Rs. 5.44 lakhs for stepping up pulp-production has been installed and taken to service and this has contributed to the increase in paper production by about 25 per cent. during the year. Further, auxiliary equipment which would secure greater efficiency is under erection and the work is nearing completion. With the commissioning to service of this equipment, it is expected that costs of production would be considerably reduced."

The balance sheet of the Company shows no change in the paid-up capital of Rs. 25 lakhs, all in ordinary shares of Rs. 10 each fully paid-up. Reserves and other funds total Rs. 20.59 lakhs. These resources are supplemented by a fixed loan of Rs. 48.50 lakhs from the I.F.C., thereby making sufficient funds available for financing the Company's expansion programme. As against a gross block of Rs. 1.43 crores, depreciation provided so far aggregates Rs. 67.08 lakhs, leaving a net block of Rs. 76.54 lakhs. The additions to the block during the year were of the order of Rs. 7.49 lakhs. The current assets aggregate Rs. 47.67 lakhs, while the current liabilities, excluding the I.F.C. loan, amount to Rs. 28.77 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 19-14 *cum-div.*, at which rate and on the basis of the latest dividend the yield works out to 5.3 per cent. per annum.

PERIA KARAMALAI TEA AND PRODUCE CO., LTD.

CHAIRMAN'S ADDRESS

ADDRESSING the shareholders of the Peria Karamalai Tea and Produce Co., Ltd., at their Forty-third Annual General Meeting held at Kozhikode, Malabar, on 3rd September 1956, Mr. W. W. Kilgour, Chairman of the Company, explained that the Directors were able to repeat the dividend for 1955-56 at the same rate as for the previous year, despite the sharp fall in profit, because of their confidence in the future of the Company. The prospects for the future he said, depended entirely on the weather. Given favourable weather, he was confident that a crop of 4.12 million lbs. was easily within the capacity of the Company's estates.

The following is the full text of Mr. Kilgour's speech:

"GENTLEMEN,

"The Directors' report and audited accounts for the year ended 31st March 1956, have been in your hands now for the requisite time and will, I am sure, commend themselves to you; but, if further information on any item is required, I shall do my best to supply it at the appropriate stage.

"We could hardly expect to repeat last year's wonderfully prosperous results, when tea prices were booming, but it is a matter for great satisfaction that your Directors are sufficiently confident in the future of the Company to recommend the same rate of dividend as last year, even though the profit available for distribution after providing for taxation is lower by Rs. 8,64,655 this year.

"The average price realised for our tea was 1.97 annas less than in 1954-55, but, in complete contrast with last season, the margin separating the values of the upper and lower grades of tea was very large, and, producing good quality tea as we do, we have found this discriminating market to our advantage.

"The estimated crop of 3,950,000 lbs., as I forecast in my address to you last year, was comfortably exceeded and a new record crop for the Company has been established. Nonetheless, the long spell of dry weather at the end of last season, undoubtedly, robbed us of achieving our goal of a 4 million pound crop. Our Visiting Agent, Mr. I. D. Edward, reports that the estates are all in splendid order and all works are up to date, and it is interesting to record his opinion that, with the successful application of the two cultural policies of blister blight control and early monsoon pruning, he anticipates enhanced crops, whenever the season is not adverse.

"Our cost of production is slightly higher than last season, due to the negotiated settlement of additional bonus to labour for the years 1952-53-54.

"In furtherance of the Board's plan of development, new clearings are being prepared for planting in tea and, together with the 50 acres planted up last season, we shall, by the end of next year, have extended our tea area by new clearings totalling 170 acres. Capital improvements, amounting to just under 8 lakhs during the year, have been largely used to the betterment of living conditions for our staff and labour, and the machinery in our factories is being kept up to date to deal with the very large crops that

[redacted] to the prospects for the current [redacted]nths to end July crop harvest is [redacted]evel with the estimate to date [redacted]The prospects for the future [redacted]pon the weather, particularly [redacted]North-East monsoon showers, but with favourable weather, I am confident that the estimated crop for the year of 4,120,000 lbs. is easily within the capacity of our estates to produce."

DHOLE & CO.
RINGWORM and ECZEMA OINTMENT
BARNAGORE · CALCUTTA

Points From The Chair

Ploughing Back in Shipping Industry

"THE very essence of liner shipping is to provide services to shippers on as stable a basis as circumstances permit. Clearly, those services must be related to costs, both as to capital and operational, but when increases in liner freight rates are unavoidable, they rarely become effective until long after the increased costs are painfully established facts. Increases in operating costs are demonstrable, but the actual increase in capital costs, and the consequential effects thereof, flow through the whole structure of shipping finance. The vital necessity is to retain, or plough back—to use a more popular phrase—sufficient of our net earnings to provide for the replacement of our wasting assets. But here again the bogy of taxation raises its head as any increase in earnings creates an increased liability for taxation as a first charge."

SIR ERNEST H. MURRANT,
Furness, Withy & Co., Ltd.

Automation in Industries

"So much nonsense has been talked and written on this subject that it may be worthwhile to state this Company's practical experience of it. The word 'automation' is used to cover methods whereby an article, in the course of its manufacture, is transferred automatically through a series of machines on which various processes are performed without manual intervention and often under the control of electronic devices. This definition accurately describes the method by which the great majority of our metallic containers are now being made. It isn't new! The method has been in use in our factories for more than 30 years and most of our cans are now made by it at speeds up to 400 a minute. We expect very soon to operate such machinery at much higher speeds. There remain many specialised items of production to which this method cannot be applied and which will require a large labour force. Over the period, and particularly during the last ten years, automation has led to a transformation of our industrial processes with results which we expected. In the first place, the market for our goods has enormously expanded and canned foods are now an every day necessity in every home. Secondly, the number of people employed in making the tin cans has increased greatly, and—I may add—not only in this country but throughout the world, . . . Automation, so far as we are concerned, has not only provided more work but also more highly skilled work which is correspondingly more satisfying to the individual and more remunerative to him. It may be that where automation has to be introduced on a large-scale, some dislocation is inevitable, but I am sure that it will be short lived. I am absolutely convinced that automation is something which should be welcomed by the working people of this country, not only in their capacity as producers, but also in their capacity as consumers. It is far too often forgotten that the people who make the goods are the people who buy or use them. It is in their real interest to press for every known mechanical aid to production."

SIR ROBERT BARLOW,
Metal Box Co., Ltd.

(*Concluded from previous page*)

second interim dividend at 12½ per cent. which, in effect, amounted to a final dividend and were paid to the then shareholders. The interim and final dividends together absorbed Rs. 40.25 lakhs. The balance of Rs. 9.92 lakhs along with the previous year's balance of Rs. 6.54 lakhs making a total of Rs. 16.46 lakhs is carried forward to the current year. The Directors' decision not to recommend any further dividend for the year ended 25th December 1955 is in accordance with the terms on which the shares of the Company were offered to the public.

It will be recalled that on conversion into a public company, an issue of 400,000 ordinary shares of Rs. 10 each was offered to the Indian public at Rs. 19-8-0 per share. This issue was heavily oversubscribed. In addition, shares were sold by the Union Carbide and Carbon Corporation, New York, U.S.A., and this sale together with the issue has resulted in 40 per cent. of the shares of the Company being held by the public in India.

On 1st March 1955, the battery products became subject, for the first time, to an excise duty of 10 per cent. of the sales value. The amount of excise duty paid to the Government by the Company alone in 1955 was of the order of Rs. 29.14 lakhs.

On the operations side, improvement was noticeable in the new and growing fields of industrial products and hearing-aid batteries. A new type of heavy duty radio battery, the X-825, designed to meet the needs of the Community Listening Scheme of All-India Radio was produced for the first time in quantity during the year.

The Company's expansion programme includes the establishment of a Zinc Rolling Mill, a flashlight case plant and a chemicals plant. Construction of the Zinc Rolling Mill, commenced in 1955 at Alipore, Calcutta, is making satisfactory progress. This will be operated as Metals and Ores Company, a division of N.C.I., and is expected to commence production during the latter part of 1956. Work on the flashlight case plant and the chemicals plant is in the design stages and negotiations for sites for these units are in progress.

The subscribed capital of the Company as on 25th December 1955, is Rs. 1.60 crores in 1,600,000 ordinary shares of Rs. 10 each. Reserve and surplus amount to Rs. 56.62 lakhs. The goodwill is shown at cost at Rs. 30 lakhs and the fixed assets valued at cost at Rs. 1.07 crores stand written down to Rs. 65.56 lakhs. The current assets aggregate Rs. 207.96 lakhs, while the current liabilities and the provision for taxation amount to Rs. 86.90 lakhs.

COMPANY MEETINGS AND DIVIDENDS

BASMATIA TEA CO., LTD. Annual General Meeting, Calcutta, 20th September 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 6th to 20th September 1956, both days inclusive.

NEW INDIA INVESTMENT CORPORATION LTD. Annual General Meeting, Calcutta, 24th September 1956. Dividend: Rs. 3-12 per share. Transfer books remain closed from 15th to 24th September 1956, both days inclusive.

TEXTILE MACHINERY CORPORATION LTD. Annual General Meeting, Belgharia, 24-Parganas, West Bengal, 24th September 1956. Dividend: Re. 1 per share. Transfer books remain closed from 11th to 24th September 1956, both days inclusive.

GIELLE TEA CO., LTD. Annual General Meeting, Calcutta, 26th September 1956. Dividend: *Nil.* Transfer books remain closed from 13th to 26th September 1956, both days inclusive.

HOOGRAJULI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 26th September 1956. Dividend: As. 8 per share. Transfer books will remain closed from 20th to 26th September 1956, both days inclusive.

EDWARD TEXTILES RAISES DIVIDEND

SHARP FALL IN PROFIT OF BANARHAT TEA

Edward Textiles, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Puranmal Bubna Sons, Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit for the year after making provision for the depreciation in the accounts amounts to Rs. 9,19,475 (Rs. 5,18.679). To this sum is added the balance brought forward from the last year's account of Rs. 30,168 (Rs. 16.489), making a total sum of Rs. 9,49,643 (Rs. 5,35,168). The following allocations have been made for the undermentioned purposes:—

To provision for taxation Rs. 3,60,000 (Rs. 2.50,000) and to dividend on 17,000 ordinary shares at Rs. 18 (Rs. 15) per share free of income-tax Rs. 3,06,000 (Rs. 2,55,000). leaving a balance to be carried forward of Rs. 2,83.643 (Rs. 30,168).

As per the Labour Appellate Tribunal Award a sum of Rs. 1.05,438 as bonus for the year 1952 being the shortfall to employees and a sum of Rs. 1,97,121 for further D.F.A. for the past years had to be paid during the year under report and to that extent the profits of the year have been affected.

An agreement was recently arrived at between the member mills of Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh regarding the payment of bonus to the employees for the years 1953 to 1957. As per formula adopted in the said agreement, the company which is a member of the said Association will have to pay bonus, and accordingly provisions have been made in the accounts for the year 1955.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,00,000	Block ...	20,53,484
Reserves ...	40.06,485	Stock-in-trade	37,55,096

Profit and loss appropriation account	2.83,643	Debts, deposits and advances ...	7.41,285
		Investments	17,66,148
		Cash ...	16.87.199
	Rs. 1,07.27.865		Rs. 1,07.27.865

Banarhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 12,00,000 out of the amount standing to the credit of general reserve. referred to in the last report, was granted in September 1955, and the issued and subscribed capital of the Company has been increased by the addition of 12,000 new ordinary shares of Rs. 100 each issued as fully paid to ordinary shareholders at the rate of four new ordinary shares for every five ordinary shares held by them on 9th November 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956. they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 accounts.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year. Provision has also been made in these account for the estimated amount of labour bonus due to be paid in respect of the year ended 31st December 1955. The auditors have commented on both these points in their report.

After providing Rs. 1,63,245 (Rs. 1,63,857) for depreciation. Rs. 3,15,768 for the 1953 and 1954 labour bonus and making sundry adjustments, the year's results show a profit of Rs. 11,23,882 (Rs. 51,07.307). After bringing in the balance of Rs. 6,86,721 (Rs. 3,55.415) carried forward from the previous year, providing Rs. 5,00,000 (Rs. 16.50,000) for taxation and transferring Rs. 2,00,000 (Rs. 13.00,000) to general reserve, there remains a balance of Rs. 11,10,603 (Rs. 25,12,722) at the credit of profit and loss account. From this the directors recommend the payment of a preference dividend of Rs. 6-8 (Rs. 6-8) per share, absorbing Rs. 26,000 (Rs. 26,000) and a dividend on the ordinary shares of Rs. 25 (Rs. 120) per share, absorbing Rs. 6,75,000 (Rs. 18,00,000). leaving a balance of Rs. 4.09,603 (Rs. 6,86,722) to be carried forward.

In February 1955, after agreement between labour and employers' representatives on the West Bengal Minimum Wages Advisory Committee for tea garden labour in the Dooars and Terai, labour and staff wages were increased with retrospective effect to 1st January 1955, and this reflected in the accounts.

A crop of 38,367 maunds was secured and sold at an average price of Re. 1-15-10 per lb. This compares with a crop of 38,521 maunds manufactured in 1954, which sold at an average price of Rs. 3-3-3 per lb. The tea market fell sharply during the course of the season and in consequence, there was a considerable reduction in the prices obtained for the 1955 crop, in comparison with the record prices realised the previous season.

Estimates for the current season have been framed for a crop of 41,500 maunds to cost Rs. 44,17,062. Crop to the 31st July 1956, amounted to 17,083 maunds compared with 14,073 maunds secured to the same date last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31.00,000	Block ...	19,11,197
Reserves ...	24,25,000	Stock-in-trade	28,05,328
Provision for taxation ...	10,54,397	Stores ...	6,98,249

Basmatia Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 1,70,000 out of the amount standing to the credit of general reserve, referred to in the last report, was granted in September 1955, and the issued and subscribed capital of the Company has been increased by the addition of 17,000 new shares of Rs. 10 each, issued as fully paid up to shareholders at the rate of one new share for every two shares held by them on 9th November 1955.

After providing Rs. 78.373 (Rs. 91,365) for depreciation, Rs. 85,161 for the 1953 and 1954 labour bonus, Rs. 3,277 (Rs. 12.404) for directors' commission and making sundry adjustments, the year's results show a profit of Rs. 2,15,202 (Rs. 8,14,519). After bringing in the balance of Rs. 93,033 (Rs. 70,514) from last year, providing a net amount of Rs. 1.03,000 (Rs. 3,20,000) for taxation and transferring Rs. 60,000 (Rs. 2.00,000) to general reserve, there remains a balance of Rs. 1.43.235 (Rs. 3,65,033) at the credit of profit and loss account. From this the directors recommend the payment of a dividend of Re. 1-8 (Rs. 8) per share, absorbing Rs. 76,500 (Rs. 2.72,000) and leaving a balance of Rs. 66,735 (Rs. 93,033) to be carried forward.

A record crop of 7,782 maunds was secured and sold at an average price of Rs. 2-2-3 per lb. This compares with a crop of 6,617 maunds manufactured in 1954, which sold at an average price of Rs. 3-3-2 per lb. The tea market fell sharply during the course of the season, as regards poorer quality teas, and under the circumstances, it is considered that the Company's teas sold at satisfactory prices. A satisfactory crop of tea seed was secured and sold.

Estimates for the current season have been framed for a crop of 8,000 maunds to cost Rs. 10.27.816. Weather conditions at the garden were not favourable at the beginning of the present season, and crop is likely to fall short of the estimated quantity by a small amount. Crop to the 7th August 1956, amounted to 2,822 maunds compared with 3.395 maunds secured to the same date last year.

Accounts in brief are as under:—

S. L. KOTHARI, *General Manager.*

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been commented upon by the auditors in their report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of this bonus has been included in the 1955 accounts.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year. Provision has also been made in these accounts for the estimated amount of labour bonus due to be paid in respect of the year ended 31st December 1955.

After providing Rs. 91,194 (Rs. 96.567) for depreciation, Rs. 1,85,559 for the 1953 and 1954 labour bonus, and making sundry adjustments, the year's results show a profit of Rs. 1,61,843 (Rs. 14,08,813). After bringing in the balance of Rs. 1.45,234 (Rs. 24,921) from last year, providing Rs. 98,000 (Rs. 5,60,000) for taxation, and transferring Rs. 70.000 (Rs. 2,50,000) to general reserve, there remains a balance of Rs. 1,39,077 (Rs. 623,734) at the credit of profit and loss account. From this the directors recommend the payment of a dividend of Rs. 7-8 (Rs. 55) per share, absorbing Rs. 65,250 (Rs. 4,78,500) and leaving a balance of Rs. 73,827 (Rs. 1.45,234) to be carried forward.

A crop of 13,327 maunds was secured, and sold at an average price of Rs. 2-5-6 per lb. This compares with a crop of 12,120 maunds manufactured in 1954. which sold at an average price of Rs. 3-6-6 per lb. The tea market fell sharply during the course of the season, as regards poorer quality teas, and in the circumstances it is considered that the Company's teas sold at satisfactory prices.

Estimates for the current season have been framed for a crop of 14,500 maunds to cost Rs. 20,20.544. Crop to the 21st July 1956, amounted to 4.290 maunds compared with 4,176 maunds secured to the same date last year. It is hoped that the estimated crop will be secured.

Kailas Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co. Ltd., Kottayam) submit the audited accounts of the Company for the year ended 29th February 1956.

Estates and acreage.—Kutikul Estate was purchased on 5th September 1955 for Rs. 14,00,000. The total acreage of the estates are 1.555.66 acres. All the estates are reported to be in good condition.

Crop and prices.—The rubber crop harvested during the year was 7,89,527 (5,00.871). lbs. at an estate cost of 56.42 (52.12) cents per pound. The crop estimated for 1956-57 is 10,05.000 lbs. at 67.95 cents per pound. The average price realised was 154.45 cents per pound. A portion of the Paalali Estate crop was sold as ammoniated latex and that of Kutikul Estate as crepe sole.

Capital.—To provide funds for the purchase of Kutikul Estate Rs. 11.85,500 was raised by the issue of debentures of the face value of Rs. 6.00.000 bearing interest at 6 per cent. per annum free of Indian income-tax and 2,92,750 ordinary shares of Rs. 2 each. Seven hundred shares were allotted since the closing of the accounts. Out of the 3 lakhs right shares offered, 7.250 shares of Rs. 2 each have not been subscribed for by shareholders. The cash balance of the Company has been utilised for the balance purchase price of the Kutikul Estate.

The net profit after providing for taxes, depreciation, managing agents' remuneration is Rs. 3,65.819 (Rs. 2,22,417). To this has to be added the balance from last year of Rs. 1,42,730 (Rs. 70,313) making a total of Rs. 5.08,549 (Rs. 2,92,730). From this amount the directors recommend the payment of a dividend of 30 (25) per cent. (the dividend for the new issue from the respective dates of allotment) absorbing Rs. 2,50,628 (Rs. 1,50,000) and transfer to debenture redemption fund Rs. 1,00.000 (*nil*) leaving a balance of Rs. 1.57,921 (Rs. 1,42,730) to be carried forward.

Accounts in brief are as under:—

	Rs. 34,15,247		Rs. 34,15,247

New India Investment Corporation Ltd.

The directors of the above Company (Secretaries: Messrs. Ramdutt Ramkissendas, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 5,44,149 to which is added Rs. 29,108 being the amount brought forward from the previous year making a total of Rs. 5.73.257. The directors propose to allocate as follows:—

To general reserve Rs. 1,60,000, to reserve for taxation Rs. 2.50,000, to pay a dividend at Rs. 3-12 per share free of tax Rs. 1,16,580 and to carry forward Rs. 46,677.

As was reported in last report for the year 1952 the Company had ceased to be recognised as an Investment Trust Company and consequently on the advice of the lawyers the profit realised from the sale of securities held by the Company is being shown as a separate item in the profit and loss account. The market value of the Company's investments exceeds the book value by Rs. 9.94,910. No progress could be made in the taxation position of the Company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23.32.100	Block ...	1,287
Reserves ...	7,52,391	Investments	32,85,933

Liabilities ...	9,02,702	Cash ...	59,803
Profit and loss account ...	46,677		
	Rs. 44.39,488		Rs. 44.39,488

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Private Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After making necessary adjustments for taxation and transferring Rs. 5,00.000 (*nil*) from general reserve, there is a balance of Rs. 2,52,202 (Rs. 3,63.973) at the credit of profit and loss account from which the directors recommend payment of a dividend on 10,000 preference shares at 7 per cent. per annum free of income-tax Rs. 35,000 (Rs. 35,000), payment of a dividend on 6,00,000 ordinary shares at 5 (7½) per cent. per annum free of income-tax Rs. 1,50,000 (Rs. 2,25.000) and to carry forward to next period Rs. 67,202 (Rs. 1,03,973).

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the looms sealed.

Owing to the disparity between the prices of raw jute and manufactured goods, trading conditions were extremely difficult throughout the period under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00.000	Block ...	48.35,462
Debentures ...	12.00,000	Capital expenditure in progress	95,356

Liabilities ...	20,65,362	Debts, deposits and advances ...	35,00,555
Profit and loss account ...	67,202	Investments	4,14,464
		Cash ...	31,20,452
	Rs. 1,61.64.479		Rs. 1,61,64,479

Sri Ranga Vilas Ginning, Spinning and Weaving Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. P. S. Govindaswamy Naidu and Sons, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1955.

The year's trading has resulted in a net profit of Rs. 4,60,941 (Rs. 3,85,932) after deducting all the working expenses including bonus and after providing normal and additional depreciation of Rs. 1,61,079 (Rs. 1,32,718). This with Rs. 982 (Rs. 5,099) brought forward from the previous year, amounts to Rs. 4,61,923 (Rs. 2,90,267) which the directors appropriated as under:—

To transfer to machinery replacement reserve Rs. 2,00,000 (nil), to pay a dividend at the rate of 16 (12) per cent. (free of income-tax) on ordinary share capital of the company Rs. 2,40,400 (Rs. 1,80,300) and balance to be carried forward to next year Rs. 21,523 (Rs. 982 after providing [illegible] on and Rs. 70,000 to general [illegible]ked for 307 days during the [illegible]rs. The present installed capa-[illegible]2 spindles of which only 2,968 the rest are old ones, and installed is 88. During the only 2,968 new spindles were erected and commissioned to work. The old machineries are being reconditioned. Due to the age and condition of the machineries the mills could not get better profits. In the circumstances, the profits earned should be considered satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

	Rs. 58.57,762		Rs. 58.57,762

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Industrial Finance Corporation

LOANS amounting to Rs. 6,91,50,000 were sanctioned by the Industrial Finance Corporation of India during the period 1st April 1955 to 27th August 1956. Of this amount, Rs. 1,39,98 521 have already been disbursed. The number of applications rejected is 4.

* * * *

Small Savings

The total number of authorised agents working at present in the country under the voluntary small savings schemes is 22,803.

—*A. C. Guha*

Life Insurance

Life insurance companies in India transacted Rs. 17 crores more of business during the first six months after nationalisation than they did in the corresponding period last year. The business actually obtained during the period 19th January to 30th June 1956 amounted to Rs. 95.13 crores, as compared with Rs. 78.3 crores a year before.

—*M. C. Shah*

Automatic Looms

The Government has no intention of having a phased programme for replacing existing mill looms by the latest automatic looms. A proposal has, however, been accepted for the introduction of 14.000 odd automatic looms, the cloth manufactured out of them being ear-marked for export purposes. If cloth produced on these looms is not exported and is allowed for internal sale, a levy of a duty of As. 2 per square yard will be levied. This penal duty should be high enough to discourage internal sale. The installation of automatic looms will lead not so much to higher production but to production of better quality cloth. Before the introduction of the looms, it should be certified that no displacement of labour will take place. (The question of introducing automatic looms everywhere requires a good deal of thinking. We believe higher techniques lead ultimately to higher employment. But taking a step of that type may, perhaps, lead to unemployment. All this has to be carefully thought out and staggered, because the human consideration is important.—Jawaharlal Nehru)

* * * *

Drug Team to Russia

The Government of India has decided to send to Soviet Russia a team of officials and non-officials to study the production techniques of drugs and allied industries. The team will also visit Italy, East and West Germany and Switzerland.

* * * *

Industrial Estates

The Government will give preference to backward areas while giving financial advance to set up industrial estates. The bulk of the Central assistance will be in the form of loans and a portion will be given as grant.

* * * *

Jute Mill Looms

Since May last year, 12½ per cent. of the total looms of jute mills had remained sealed. On 9th January 1956, 2½ per cent. of looms were unsealed and a further 5 per cent. on 20th February, leaving only 5 per cent. looms still out of use. The sealing off of 5 per cent. of the looms by Indian jute mills will result in lowering of production by about 5,000 tons per month but is not likely to affect the employment position of permanent workers in the jute mills. The main reasons advanced by the Indian Jute Mills' Association for the sealing off have been production of jute goods in excess of demand and steady accumulation of stocks resulting in a depression of prices to uneconomic level.

—*Nityanand Kanungo*

Import of Drugs

The approximate value of drugs, dyestuffs and chemicals imported into India every year is Rs. 15 crores, Rs. 15 crores and Rs. 20 crores, respectively.

* * * *

Glider and Helicopters

The Government of India has granted permission to a Calcutta firm for the manufacture of gliders. The same firm has also applied for permission to produce helicopters and radio-controlled target aircraft. The permission has not been granted.

—*M. M. Shah*

Spun Silk Mills

The Governments of Assam, West Bengal, Bihar and Jammu and Kashmir are contemplating the setting up of spun silk mills each of 3,000 spindles in their respective States during the second Five-year Plan period.

—*K. C. Reddy*

Methanol Plant

The Soviet experts who came to India in June last have reported that a methanol plant available in the country is on the whole in a fairly good condition and it can after repairs be installed at Sindri for the manufacture of methanol and ammonia.

* * *

Optical Glass Manufacture

The Government proposes to set up an optical glass plant with a capacity of 50 tons per annum. If possible, an ophthalmic glass plant of the capacity of about 250 tons will also be set up.

* * *

Government Collieries

Out of the eight Government collieries running at a loss during 1953-54, two have since started yielding profits. Again, out of the three collieries yielding profit in the same year, one has shown loss in subsequent years, because of the flooding of mines.

—*Satish Chandra*

Output of Lead and Zinc Ore

The daily output of zinc and lead ore in India is 300 tons at present. The Government has advised the Company working the mines at Zawar to increase it to 1,000 tons by 1960 or earlier.

* * * *

Ilmenite and Rutile Ores

India's reserves of ilmenite and rutile ores from which titanium is extracted are of the order of 300-350 million tons. Deposits of ilmenite sands are found mainly in Travancore-Cochin and Bombay. In Travancore-Cochin, six factories have been set up to exploit the sand deposits. In Bombay, the State Government has granted five mining leases and four prospecting licences for the development and working of the sand deposits.

* * * *

Gold in W. Bengal

Small particles and occasional tiny nuggets of gold were noticed in black sands in parts of Bankura district in West Bengal by the Geological Survey of India in the course of systematic geological mapping and preliminary mineral investigation. The specific areas where the sands are available are near the confluence of the Kasai river and the Kumari nadi, north of Ambikanagar in the Kasai river to the north-west of Simli, east of Chirkunkanali-Mahespur village, in an irrigation canal about half a mile south-west of Jorakend village, and near Keshra village. It is understood that local gold washers recover a small quantity of gold every year by panning the black sands at several places.

—*K. D. Malaviya*

Unloading Machines at Bombay Harbour

Opposition from labour interests has prevented the mechanical discharge plant installed at the Bombay harbour from being used till now for the expeditious unloading of imported foodgrains. The use of the plant would have meant throwing out of employment 90 workers per each shirt. The question of utilising the plant in some other port is being considered.

* * * *

Foodgrain Elevators

The Government of India has entered into an agreement with the U.S. Technical Co-operative Mission for the supply of two elevators for foodgrains. The capacity of each elevator will be 10,000 tons. The estimated erection cost of the two units is Rs. 10 lakhs. The cost of annual upkeep and maintenance is estimated at 2 per cent. of the capital cost.

—*Abid Ali*

Earnings from Tourism

Tourism brought about Rs. 10 crores of foreign exchange to India in 1955-56, according to an announcement by the Reserve Bank of India. The question of opening a training school in hoteliering (to enable provision of improved facilities to tourists) is under active consideration.

—*Dr. M. M. Das*

Educated Unemployed

The Study Group appointed by the Planning Commission estimated that the total number of educated unemployed in the country towards the end of 1955 was about 550.000. Among them. about 126,000 were graduates, 59,000 were undergraduates and the rest matriculates.

—*S. N. Mishra*

Railway Administration

The Government has initiated action on all the recommendations contained in the 33rd report of the Estimates Committee but has finalised in the case of only five items. The Efficiency Bureau of the railway administration has been asked to go into the recommendations of all the important committees on railways, with a view to implementing them as far as possible. It will not be possible for the railways to convert all the narrow gauge lines into broad gauge ones in the next few years. Some of the private companies who own narrow gauge lines are working at a loss. If they wind up their companies, the Government will consider whether to build new lines in these areas or to take them over.

* * * *

Shipping Target

India will be able to add "considerably" to its shipping tonnage in the next few years and it may even exceed the target (of 9,00.000 tons) at the end of the second Plan. The difficulties standing in the way of acquiring more shipping tonnage are non-availability of new ships for immediate delivery and high price of second-hand ships. (The Indian shipowners have acquired for the coastal trade five ships of about 19,000 G.R.T. and the Government of India has purchased one ship of 2,238 tons for the India-Andamans trade. This is since the appeal made by the Transport Minister in November last to Indian shipowners to purchase 25 to 30 ships within a short period to fill the existing gap in the Indian coastal shipping—Shah Nawaz Khan).

—*Lal Bahadur Shastri*

Grow-More-Food

A sum of Rs. 23.64 crores has been sanctioned by way of loans and grants to the various States in the current financial year for the Grow-more-food schemes. Andhra has been allotted the maximum amount, that is, Rs. 5.38 crores. Madras comes second with Rs. 3.72 crores and U.P. with Rs. 2.83 crores.

—*Ajit Prasad Jain*

Cotton Cultivation

If irrigation facilities are available, long staple cotton can be grown all over India. Wherever these facilities are available, we are taking steps to grow it. There are three schemes for breeding long-staple cotton, and schemes for multiplication and distribution of seeds of improved varieties of cotton in Punjab.

—*Dr. Punjabrao Deshmukh*

Notices

THE WEST JAMURIA COAL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 5th October, 1956, at 3.15 p.m. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports, the Profit and Loss Account for the half-year ended 31st December 1955, and the Balance Sheet as at that date.
2. To elect a Director.
3. To appoint Auditors and to fix their remuneration.
4. *As Special Business*:

   To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—

   (As an Ordinary Resolution).

   "RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 28th September to 5th October, 1956, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.,

A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *7th September*, 1956.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

Item No. 4.—By the provisions of Section 293(1) (d) of the Companies Act, 1956, the Directors without the consent of the Company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 30th September 1956. The Preference Share Registers will be closed from the 24th September to the 30th September 1956, both days inclusive. Payment will be made on or after 10th October 1956, to those Preference Shareholders whose names appear on the Company's Registers on the 30th September 1956, or in accordance with their instructions.

By Order of the Board,

L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW,
CALCUTTA,
10th September 1956.

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT INTEREST for the half-year ending 30th September 1956, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September 1956, or in accordance with their instructions.

L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW,
CALCUTTA,
10th September 1956.

THE JOONKTOLLEE TEA COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-second Annual Ordinary General Meeting of the Company will be held at the Registered Office, No. 21, Strand Road, Calcutta, on Friday the 28th September 1956, at 4-00 p.m. for the following purposes:—

(1) To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st December 1955.

(2) To declare a Dividend.

(3) To elect a Director; Mr. C. D. Wilson retires by rotation but, being eligible, offers himself for re-election.

(4) To elect Auditors for the current year and to fix their remuneration.

(5) To transact any other ordinary business of the Company.

(2) The dividend, if declared, will be paid on or after the 4th October 1956, to those shareholders so entitled, whose names appear in the Company's Books on the 4th October 1956, or to their mandatees.

GILT-EDGED DEPRESSED

(From Our Own Correspondent)

BOMBAY, *12th September*

The stringency in the short-term money market which set in last week, following subscriptions to the State loans, persisted during the week under review also. This state of affairs was due more to the paucity of floating funds, all available supplies having been drained off by the State loans, than to any notable expansion in trade demand for money. The result was that banks had to get their requirements from the Reserve Bank to meet whatever demand there was for accommodation. The interest rates, therefore, remained unchanged at self-same rates.

Inter-bank call money was bid at 3¼ per cent. among all sections of banks. House money at call was taken at 3¼ per cent. and short-term deposits at 3½ per cent. for one to three months and at 3¾ to 3⅞ per cent. for four to six months.

After a break of three weeks, there has again been a sharp rise of Rs. 15.67 crores in notes in circulation during the week ended 7th September 1956. Disclosing this, the Reserve Bank's statement for the week shows a drop of Rs. 16.38 crores in notes held in the Banking Department and of Rs. 71 lakhs in total notes issued. On the assets side, there has been a decline of Rs. 9.94 crores in foreign securities, a corresponding increase in rupee securities and a drop of Rs. 71 lakhs in rupee coin. In the Banking Department, a decline of Rs. 6.91 crores is noted in deposits of the Central Government. Reflective of the subscriptions to the State loans received during the week under review is the rise of Rs. 13.82 crores in deposits of other Governments. Deposits of banks are lower by only Rs. 40 lakhs. On the assets side, balances held abroad have gone up by Rs. 9.28 crores. Loans and advances to Governments are lower by Rs. 2.74 crores, while other loans and advances are higher by Rs. 22.35 crores. Of the latter, outstanding advances to Scheduled banks against usance bills account for a rise of Rs. 2.39 crores. Fresh advances to banks against these bills during the week amount to Rs. 6.39 crores, but repayments have been of the order of Rs. 4 crores. Investments have gone up by Rs. 1.69 crores and Government Treasury Bills purchased and discounted by Rs. 2.28 crores.

Small variations in deposits of Scheduled banks are disclosed by their statement for the week ended 31st August 1956. Demand deposits are higher by only Rs. 25 lakhs, while time deposits are lower by Rs. 49 lakhs. Borrowings from the Reserve Bank have gone down by Rs. 3.63 crores, while those from the State Bank show a rise of Rs. 91 lakhs. A further decline of Rs. 4.12 crores is noted in advances, while inland bills purchased and discounted have risen by Rs. 3.41 crores. A fractional decline is noted in foreign bills purchased and discounted. Investments are lower by Rs. 60 lakhs. Cash balances and balances with other banks have risen by Rs. 99 lakhs and Rs. 79 lakhs, respectively, while money at call and short notice have gone down by Rs. 1.26 crores.

The success of the State loans has taken the Gilt-edged market by surprise. The lists for six State loans were closed last week, while those for the other nine State loans were closed by Monday the 10th inst. Of the 15 loans, ten were over-subscribed. The full list of subscriptions (the amount invited and accepted being given in brackets) is as follows:

(In crores of rupees)

State	*Amount offered*
Andhra	7.52 (6.00)
Bihar	2.12 (2.00)
Bombay	8.06 (7.50)
Hyderabad	2.13 (2.00)
Madhya Bharat	1.39 (1.00)
Madhya Pradesh	1.58 (1.50)
Madras	16.81 (12.50)*
Mysore	4.10 (4.00)
Orissa	3.03 (3.00)
Punjab	2.11 (2.00)
Rajasthan	3.10 (3.00)
Saurashtra	3.65 (2.50)
Travancore-Cochin	2.24 (2.00)
Uttar Pradesh	9.10 (8.00)
West Bengal	7.12 (7.00)

* In the case of Madras, the amount accepted was Rs. 13.75 crores, as it exercised the option to retain 10 per cent. of subscriptions in excess of the amount invited.

[redacted] from the above that the aggre- [redacted] Rs. 74.06 crores, as against [redacted]. Thus, while the total loans [redacted] Centre and State Governments [redacted]ted to Rs. 214 crores, the [redacted] aggregated over Rs. 224 [redacted]. Despite the success of the new State loans, the Gilt-edged market ruled distinctly quiet due to the persistent offerings of the existing Central and State loans. Sellers predominated and losses were widespread, particularly in the medium and long-dated issues. There was very little business passing and even at the lower levels buyers were not readily forthcoming. The notable exceptions to the general trend were provided by the 3¾ per cent. 1974 Loan, which attracted some buyers at Rs. 98-7. 3 per cent. 1957 and 1958 were unchanged at the Reserve Bank's support level of Rs. 99-12 and Rs. 99-8, respectively. 3 per cent. 1959-61 was on offer at Rs. 98. 3 per cent. 1963-65 dropped As. 2 to Rs. 94-10 and 3 per cent. 1964 As. 3 to Rs. 94-10. 3 per cent. 1966-68 sagged by As. 2 to Rs. 93-2. 3 per cent. 1970-75 was the worst sufferer with a drop of As. 6 to Rs. 89-10 and had sellers even at that level. 3 per cent. 1986 Conversion Loan was on offer at Rs. 75-6. 3½ per cent. 1962 shed an anna to Rs. 97-15. 3½ per cent. 1961 As. 3 to Rs. 99-2. 3¾ per cent. 1964 As. 2 to Rs. 98-9, 3½ per cent. 1965 As. 2 to Rs. 98-6 and 3¾ per cent. 1967 an anna to Rs. 98-7. Among the new State loans, Madras, Andhra and U.P. issues were quoted As. 4 below the issue prices. Other loans were held at their issue prices.

SILVER REACTS

(From Our Own Correspondent)

BOMBAY, *12th September*

In distinct contrast to the firm trend noted in the previous week, the silver section of the bullion market ruled quiet during the week under review on revival of offerings. Gold, on the other hand, was fairly steady, with fluctuations confined to a narrow range.

Early in the week, silver displayed some strength on persistent bull support and the upward trend in prices noted in the previous week gathered momentum, the earlier reports that the export of silver from Tibet would be banned having proved correct. It was learned from the Indian Political Officer in Tibet that the Chinese authorities had banned the export of Chinese silver dollars from Tibet to India. This improvement, however, was not sustained for long, as two leading operators resumed heavy offerings on rumours that negotiations were going on with the Chinese authorities for the revival of imports of coins. There were also rumours that a large quantity of coins had already arrived in India, though they had not come into the market.

In the gold section also, there were heavy selling on what has now become a periodical rumour that the Reserve Bank might sell in the open market the smuggled gold seized by the authorities. But such selling pressure did not bring about a recession in prices, because the demand in the ready section was good and a leading bull operator had the courage to buy in forward, despite the above rumour.

Silver forward (22nd September settlement) advanced from Rs. 174-6 to Rs. 175-4 before receding today to a low of Rs. 172-3. The closing was, however, a shade better at Rs. 172-11. Business in the next settlement began on Friday last at Rs. 175 and, after moving up to Rs. 176, gave way to Rs. 173-1 and closed at Rs. 173-9.

Ready silver (.996 Mint) hardened from Rs. 173-14 to Rs. 175, before moving down to Rs. 172-10 at the close.

The floating stocks of silver are estimated at 2,400 bars. The daily average offtake was 20 bars.

Gold for forward delivery (21st September settlement) moved between Rs. 103-7 and Rs. 102-8, before winding up at Rs. 103. Business in the next settlement opened at Rs. 103-5 and, after declining to Rs. 102-2, it closed at Rs. 102-10.

Ready gold fluctuated between Rs. 103-6 and Rs. 102-8 and finished at Rs. 103-5.

The following stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 3,500 tolas on an average.

In New York, silver was unchanged at 90¾c. In London, too, silver prices held their own at 78¾d. for both spot and forward. Gold, on the other hand, hardened from 251s. 5d. to 251s. 7½d. before closing at 251s. 7d.

The following comparative table shows the trend of market during the week under review.

	12-9-56	Highest	Lowest	4-9-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, *11th September*

Arrivals of kips into the market have been more than usual and offtake moderate. Prices locally are weak but are higher than U.K. levels by one to two annas per lb. U.K. buyers are keeping out of the market, probably expecting that E.I. tanners will reduce their prices. This is not unlikely, as in the past this has happened. Whenever importers had desisted from buying, stock holders at this end gave way for financial reasons.

Prices of tanned goat and sheep skins for market qualities have remained weak, while those of superior tannages firm. In the London public sales, prices of prime sheep advanced by 2 to 3 shillings, middle class by one shilling and commons were unchanged on July levels.

HIDES FIRM

(From Our Own Correspondent)

KANPUR, *9th September*

During the week under review, the conditions of the hides and skins market were more or less similar to those prevailing last week. New arrivals were comparatively lower. Madras dealers were very active for the lighter variety of cow. The main purchasers, however, were the local tanners. The undertone of the market was firm.

The latest available quotations are: Wet salted cow 1st grade Rs. 280 and 2nd grade Rs. 200 to Rs. 240 per score; wet salted buff 1st grade 2 lb. 2 ozs. and 2nd grade 2 lb. 4 ozs. per rupee; goat 1st grade Rs. 170 and 2nd grade Rs. 140 to Rs. 135 per 100 pieces; sheep 1st grade Rs. 200 and 2nd grade Rs. 160 per 100 pieces.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, *12th September*

The cotton futures market had a short week for it remained closed on the 6th and 8th inst. they being public holidays. During this limited period steady conditions prevailed in the market with prices moving in a narrow groove. The market was still under the influence of the enhanced excise duty on cloth and encouraging weather reports. Prospect of a good crop in the current season bearishly affected the market. On the other hand, the Government of India's decision, announced on Friday, to licence freely for export such varieties as Assams, Comillas, Zoda cotton and the encouraging trend in cotton consumption by mills had a bullish effect. Under the impact of these two sets of influence, the market ruled steady.

The Jarilla contract opened the week two points higher at Rs. 683½ and after having fallen to Rs. 682½ advanced to Rs. 686¼ on renewed buying support. Under the influence of the Government of India's announcement relating to export of cotton, the contract moved up to Rs. 689 on the 10th inst. and finished the day after a sharp fall to Rs. 683. Again, the rates improved to Rs. 687 yesterday and after falling to Rs. 683½ today, advanced to close at Rs. 687.

The Vijay contract opened the week at Rs. 816½ and followed an irregular trend, with prices fluctuating between Rs. 815 and Rs. 820. Today, however, the contract slumped to Rs. 811½ on heavy selling before closing the day's session at Rs. 815.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	12-9-56	*Highest*	*Lowest*	5-9-56
Jarilla (March) ...	687	689	681	681½
Vijay (April) ...	815	820	811½	815

The spot market at Sewri continued to remain active. Attention was turned from the old to new crop cottons and mills were buying the latter on a fairly large scale following the news that the Government may ask mills to work three shifts to increase production of cloth. Vijay, Kala, Berar and Khandesh evoked inquiries. In the foreign section, East African cotton attracted the attention of some Ahmedabad mills. Spot lots of Sudanese cotton continued to evoke interest and its price ruled firm. The demand for Egyptian cotton was limited in view of the possibility of more American cotton coming into this country. The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 710; Berar Jarilla 780; Khandesh 790; Vijay 960; Oomra *Deshi* 750; Moglai 740. *Delivery Contracts*: Khandesh 197/3 December delivery 117, Berar 109 and Moglai 40 'on' Jarilla; 320F 70, 216F 92, and Vijay 13/16 Ferbuary-March 67 'on' Vijay.

The Government of India has decided to licence freely for export Assams and Comillas, Zoda cotton, cotton pickings and sweepings, yellow pickings and cotton linters, during the 1956-57 cotton season, to all permissible destinations other than the Portuguese possessions in India and Tibet. Licensing will be done by an endorsement on shipping bills which should be duly accompanied by an application in the prescribed form quoting a valid income-tax verification certificate—registration—exemption number and a Treasury challan in token of having paid the appropriate licence fee. In the case of exports of cotton linters, sweepings, pickings, and yellow pickings, it will be necessary for the exporters to produce a certification from the *ad hoc* committee that the variety of cotton sought to be exported represents the particular type of cotton. As regards export of Zoda cotton, exporters will have to produce a certificate from the *ad hoc* committee to the effect that the cotton sought to be exported is Zoda cotton. Export of Cocanada cotton will not be allowed for the present.

The Karachi cotton market ruled steady during the week under review. Though the market was adversely affected by the Government of India's decision to permit export of Assams and Comillas, this effect was more than counter balanced by the fair enquiry in new *deshi* crop which is believed to be on China account. Another bullish factor was the fear of damage caused to the crop by the recent floods in Sind and other low lying areas. N.T.R.G. January delivery put on As. 5 to Rs. 75-10 while March position improved from the last week's closing of Rs. 74-6 to Rs. 74-9. The spot section, however, was easy owing to lack of spinner demand. The following are the latest available spot rates—in Rs. per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 96; Punjab *Deshi* 88; 4F Punjab Roller 78-6; S.G. 79-6; L.S.S. Punjab Roller 78-6; S.G. 80-10; N.T.R.G. 78-2; S.G. 79-10; 289F Roller 82-2; S.G. 87-10.

In contrast to the firm trend noted last week Alexandria futures market ruled generally easy this week though values of medium staple Ashmouni were more or less steady. The chief bearish factors responsible for this downward drift in values were the prospect of a 1 200,000 bales (of 720 lbs.) crop in the current season as compared with only 1,011,796 bales in the season just ended. Further crop progress continues to be good due to favourable weather. In Upper Egypt picking is reported to be general and in Lower Egypt picking of Giza 30 has started. The general expectation is that a higher yield will result in both the regions. The estimated carryover as at the beginning of this season, which began on the 1st of this month, is placed at 167,039 bales. It is understood that of this quantity, some 37,000 bales have already been sold for export. Most of the balance is with the Egyptian Cotton Commission and is not available for sale whereas and some are earmarked for local consumption in September-October. The carryover stock, available for further export sales, are however neg-

ligible. The latest available rates—in tallaris per lb. —from the Alexandria futures market are given below:

Karnak: November 101.90; January 101.15; March 100.5. *Ashmouni*: October 73.40; December 73.45; February 74.20.

Sizable improvements were recorded by the Liverpool cotton market. Trade and commission house buying and mill fixation were responsible for this rally in prices. The bulk of the increased inquiry for both ready and shipment cotton has been for U.S. and Mexican descriptions. Brazilian Sao Paulo, Peruvian and Nigerian styles received some inquiries. Business in Indian and Pakistan styles consisted of a small trade in new crop *Oomra* and Punjab *Deshi*. Egyptian contract advanced on purchases by a prominent spot house.

Even though steady conditions were witnessed in the New York cotton market earlier in the week, due mainly to trade buying in current crop and commission house demand, values slipped back later on publication of the crop forecast on the 10th inst. which was not as low as was generally expected. The selling which followed eventually subsided and the market rallied on trade buying and short covering with the result that the lost ground was recovered.

The U.S. Department of Agriculture forecast, on the 10th inst., the current year's crop at 13,115 000 bales of 500 pounds gross weight on the basis of conditions as on 1st September. The estimate is 437,000 bales less than the 13,552,000 bales forecast a month ago. It compares with last year's production of 14,721,000 bales and the ten-year (1945-1954) average of 13,098.000 bales. The Department disclosed that the condition of the crop on 1st September averaged 75 per cent. of normal, as compared with 81 per cent. a year ago.

The Foreign Agricultural Service of the United States Department of Agriculture announced on the 30th of last month Procurement Authorisation No. 3308 favouring India for $3,850,000 to cover purchases of U.S. cotton. The Authorisation is issued under the U.S.-Indo-Burma Tripartite Agreement. India will export textiles to Burma of the value of the U.S. Authorisation and will get instead U.S. cotton of equivalent value. The contracting period under the Authorisation runs from 6th September to the 30th of March 1957 for shipments to be completed by the 30th April 1957.

A further quantity of 208,484 bales of surplus U.S. Government-owned cotton was sold for export against bids received on 4th September, bringing the total quantity sold by the Commodity Credit Corporation to 3.486 125 bales. The average price was 26.14 cents per lb., basis Middling 1" at average location, while the minimum price for midd. 15/16" remained unchanged at 25 cents.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	12-9-56	4-9-56	27-8-56
Spot	34.40	34.45	34.45
October	33.80	33.75	33.70
December	33.88	33.85	33.76
March	33.80	33.81	33.64

YARNS LOOK DOWN

(From Our Own Correspondent)

BOMBAY, 12*th September*

The yarn market presented a distinctly easy trend during the week under review. Offtake of all kinds of yarns by handlooms and powerlooms was low; it was expected that the offtake would be lower still, what with the Government's move to take steps to curb inflationary tendencies. Rayon yarns were particularly depressed, thanks to considerable slackness in demand. Even the reported rise of 2 pence per lb. in the prices of rayon yarns by the Continental manufacturers failed to have any effect. In sympathy, staple fibre yarns were also depressed. Turnover in cotton yarns was greatly restricted, with values tending to look down.

Snia rayon yarn (120 dull cones) for October delivery was subjected to sustained selling pressure and dropped Rs. 8 to Rs. 788. December delivery fell by Rs. 5 to Rs. 800 today. In the spot section, 120 deniers Japan declined by half an anna to Rs. 3-12. 150 Japan was neglected at Rs. 3-14, as also 120 Italy at Rs. 3-14. 150 Italy, however, was a shade better at Rs. 4-1. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade receded by 18 pies to Rs. 3-4-6. 120 Bt. cones 1st grade retreated from Rs. 3-13-3 to Rs. 3-12.

Foreign staple fibre yarns (80 x 2) prices suffered a setback, as the increased offerings found no ready buyers. Paramounts climbed down by As. 2-3 to Rs. 6-1-9. K'Suns and Fujis decreased by As. 2 each to Rs. 6-9 and Rs. 6-2, respectively. S'Sellos lost an anna to Rs. 6. Suicos were quiet at Rs. 7-2. Among indigenous yarns (40 x 2). Centurys eased by three pies to Rs. 3-7-6. New Greats were dull at Rs. 3-7 and Kohinoors at Rs. 3-8-3. Staple fibre yarn (40 x 2) for December delivery receded by Rs. 2 to Rs. 676 today. Over the week, October delivery were lower by a rupee at Rs. 667.

Forty counts cotton yarns came in for selling at reduced rates. Maduras were the worst sufferers, their quotation moving down by As. 12 to Rs. 28-8. Moderns slipped by As. 8 to Rs. 29. Minaxis fell by As. 6 to Rs. 28-10. Deals in 60s were put through at lower rates. Moderns. Raghuvamshis and Finlays losing As. 4 each to Rs. 62-8, Rs. 58, and Rs. 62. respectively. Among 10s. Elphinstones declined by As. 2 to Rs. 14-8. Podars eased by an anna to Rs. 14-10. Twenty counts Moderns retreated from Rs. 19-10 to Rs. 19-6. Hinds were done at Rs. 19-10, same as last week. Among 80s, Mahendras were unaltered at Rs. 72. Moderns, however, were somewhat favoured and the price rose by As. 8 to Rs. 70.

* * * *

Addressing the second annual general meeting of the Bombay Yarn Merchants' Association and Exchange Ltd., held on Tuesday this week, Mr. Kantilal Nahalchand, President of the Association, urged the need for allowing export of cotton yarn through established exporters. Otherwise, he warned that the overseas markets would be lost. Mr. Kantilal objected to the formation of the State Trading Corporation which, he declared, would lead to an "annihilation" of normal trade channels, thereby creating an economic crisis. He alluded to the failure of industries run by the Government and said: "The Government officials may be able enough for administrative work, but it is only the experienced industrialists and merchants who are the best personnel to handle the industries efficiently." In his opinion, the various restrictions imposed by the Government on limited companies and the managing agency system had hampered the progress of trade and commerce, which was also handicapped by heavy taxation. Incidentally, Mr. Kantilal sounded a note of warning against any heavy doze of deficit financing. If inflationary tendency were to persist during the second Plan period, it would become "impossible for the common man to get out of the vicious circle thus created."

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	12-9-1956	5-9-1956	28-8-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia October ..	788 0	796 0	798 0
120 Dull Cone Snia December	800 0	—	—
120 Japan (per lb.)	3 12	3 12½	3 13
150 Japan (per lb.)	4 1½	4 1½	4 2
120 Italy (per lb.)	3 14	3 14	3 15
150 Italy (per lb.)	4 1	4 0½	4 1½
Staple fibre yarn (per case of 200 lbs.)—			
40 × 2 October	667 0	668 0	675 0
40 × 2 December	676 0	—	—
40 × 2 New Great (per lb.) ..	3 7	3 7	3 8
40 × 2 Century (per lb.) ..	3 7½	3 7½	3 8
40 × 2 City (per lb.)	3 7	3 6½	3 7½
Cotton yarn (per bundle of 10 lbs.)—			
10s Podar	14 11	14 12	14 14
20s Hind	19 10	19 10	19 9
30s Apollo	22 13	22 12	23 0
40s Minaxi	28 10	29 0	29 4
60s Raghuvamshi	58 0	58 4	58 0
80s Mahendra	72 0	72 0	72 0

OILSEEDS CHEERFUL

(From Our Own Correspondent)

BOMBAY, 12*th September*

The oilseeds market reflected a cheerful tone during the week under review. The market was officially closed on 6th and 8th inst. on account of *Khordad Sal* and *Ganesh Chathurthi* respectively.

On the opening day of the week namely 7th instant, the conditions in the market were characterised by buoyant sentiments, thanks to the encouraging advices from the U.P. and the Punjab markets. Besides, the insurance of tenders to the tune of only 400 candies in the maturing castorseed September evoked large-scale bear covering in futures as well as in specific delivery contracts of all oilseeds. The support lent by crushers in the spot groundnut section also assisted the bullish sentiment. The market, however, received a nominal setback on 11th instant owing to uncertainty about the Government's measures to check the rising trend of food prices. Sentiment was also affected by the reports of beneficial weather conditions in the producing areas. But the setback was only short lived; and the market, excepting linseed, recovered partly in sympathy with the cotton futures and mainly owing to the tense international situation. The market closed today with a firm undertone.

In the groundnut section, the February (futures) contract opened the week under review at Rs. 129-8 and moved up gradually to Rs. 132-8 on Monday the 10th instant. Despite the slight setback on the following day for the reasons stated earlier, it climbed higher towards the close of the week and finished up at Rs. 133 today, gaining, thus, as much as Rs. 6-7 over the week. In the spot section, Bold F.A.Q. and August-September, both put on Re. 1 at Rs. 34-8. Coromandal and Kandesh quality were also up by Re. 1 each at Rs. 35. Groundnut oil ex-mill increased by As. 6 to Rs. 19-2 and Railway Receipt by As. 7 to Rs. 18-15.

Castorseed Sept. contract, on the other hand, spurted from its opening quotation of Rs. 138-4 to Rs. 143-8 on 10th instant. It, however, declined to Rs. 140-8 on next day before recovering again to Rs. 142 at the close today. It has thus gained Rs. 3-10 over the week. May 1957 contract, moreover, was done at Rs. 124-6 at the close today, which is Rs. 2-14 higher than the closing rate a week ago. In the spot section, Ready Madras was done As. 6 higher at Rs. 28, and Kanpur As. 4 higher at Rs. 26-12. Oil B.S.S. and Oil Commercial were fractionally higher at Rs. 16-10 and Rs. 15-12 respectively.

Linseed May 1957 contract, however, did not reflect much activity. Although it opened the week at Rs. 25-13, it went up to Rs. 26-14 towards the middle of the week in sympathy with groundnut and castorseed, and also as a result of demand from upcountry centres. Profit-taking at this level induced a weaker trend. It was quoted at Rs. 26-2 at the close of the market today. In the spot section, Bold Ready, moreover, was a shade higher, having improved from Rs. 30-6 to Rs. 30-10. October-November, too, put on As. 4 at Rs. 30-12. Linseed oil Ready was higher by As. 2 at Rs. 17-6.

Among other seeds, *kardi* seed, Bold Ready, was up by As. 6 at Rs. 18-4. So also August-September. *Niger* seed Ready and Madras improved by As. 8 and As. 4 respectively to Rs. 28-4.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	12-9-1956	5-9-1956	28-8-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	133 0	126 9	133 12
Khandesh Quality Ready (per cwt.)	35 0	34 0	34 8
Aug.-Sept.	34 8	33 4	33 2

Ready	17 6	17 4	17 0

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 12*th September*

The bearish trend noted in the sugar market in the last two weeks gathered further momentum during the week under review. Selling was quite sustained, thanks to reports of satisfactory stock position in consuming centres and terminal markets. There was, besides, a continued fall in ex-mill quotations for sugar, by a rupee per bag in the Deccan and by As. 4 in the north. The optimistic forecasts relating to sugar production in the ensuing season also acted as a damper.

In the forward section, *Asho* delivery contract for 'C' grade sugar receded from Rs. 91-2 to Rs. 90-10 per bag. There were sellers at this price today.

In the spot section, large grain indigenous sugar dropped Rs. 2 to Rs. 92-Rs. 98. Small grain was unchanged at Rs. 88. as also medium grain at Rs. 89-Rs. 91. British refined sugar was a shade easy at Rs. 91.

Arrivals of indigenous sugar into the market were larger than in the previous week. They amounted to 18,700 bags, as against 16,200 bags.

Offtake of sugar from mills last month was quite satisfactory. Consequently, the consuming centres and terminal markets are reported to have built up large stocks. In view of this and on expectation of a marked rise in sugar output in the coming season which is due to commence from 1st November, trade circles are greatly reluctant to enter into fresh commitments at the ruling ex-mill quotations. It is, therefore, pointed out that, barring unforeseen circumstances, there is no evidence to indicate any rise in the existing spot prices of sugar. On the contrary, an overall fall of about Re. 1-8 per bag in ex-mill quotations is expected.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

* * * *

The aggregate closing stocks of sugar with the factories as on 1st July 1956 amounted to 1,157,000 tons, as against 911,000 tons on the same day last year. The estimated demand for the period July-November 1956 is put at 800,000 tons. The total quantity of sugar despatched from the mills in Uttar Pradesh and Bihar during the eight months ended June 1956 was 779,000 tons, which represents a rise of 326,000 tons, as compared with the corresponding period of the previous season.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 12*th September*

We did not issue our weekly letter on pepper for the week ended 5th September, as the period was short because of intervening holidays and was shorn of any noteworthy activities.

Malabar black pepper during the fortnight ruled quiet, with prices drifting lower in view of paucity of inquiries from New York. Spot in New York is reported to be weak at $0.33, the highest being $0.37½, under pressure of heavy arrivals of about 1,800 tons from all sources during August. Shipments of unsold consignments from all the sources acted as one of the main depressing influences for the spot market.

Singapore, after touching Str.$85, went down to Str.$82 to improve to Str.$84 with small business in a quiet market. Lampong, however, was comparatively steady with prices moving between $0.29 and $0.29½.

In view of the smallness of buying inquiries by the exporters, growers at Alleppey reduced their price from Rs. 775 to Rs. 737½ to stimulate business but exporters did not evince much interest. Garbled at Cochin moved between Rs. 127½ and Rs. 130. Weakness in other commodities like rice and wheat, following the steps taken by the Indian Government to check the adverse effects of inflation also acted as a damper. Conflicting reports on Suez are responsible for the present uncertainty. Reports regarding the recent rain in Travancore-Cochin area are generally welcomed by the growers and it is believed that the crop may not be as small as was anticipated earlier. However, reports from North Malabar are still conflicting and traders are giving out their own estimates according to their book positions. As a matter of fact, crop estimate of pepper is always a guess work and one guess is as good as another.

The future of the market now hinges around the Suez question. Barring the Suez, there seems to be no other factor which can lift the prices of pepper as the present supply is considered sufficient, if not more, to cover world consumption, particularly when everybody is buying hand to mouth and nobody wants to accumulate stocks.

October-December changed hands from $0.28½ to $0.29¾ while delivery for September and October, after going down to Rs. 680 and 685, improved to Rs. 700 and Rs. 705 respectively under pressure of short-covering and some trade buying on the Suez news.

Today's nominal quotations are:— Ready delivery Rs. 101 per Bengal maund, September delivery Rs. 695-700 and October delivery Rs. 705-710 per candy of 5¼ cwts.

TEA PRICES ADVANCE

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 6*th September*

Approximately 1.250.000 lbs. were on offer in Sale No. 25 which was held on Tuesday, 4th September. Quality continued to show a slight improvement and there were some useful teas on offer from all districts. The sale opened to a strong general demand and plain and low medium brokens advanced by 1 to 2 annas per lb. Medium brokens were irregular, but were dearer with improved quality. All fannings grades, in particular, Middle East types, sold well. The latter must be quoted considerably dearer, advances of As. 8 to As. 10 being registered. Best liquoring teas sold well, but buyers followed quality closely. High grown fannings were again a strong feature and met with keen competition. Whole leaf teas were well supported at dearer rates. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	... 1 6 6
Low medium B.O.P.	... 1 12 0
	to 1 13 0
Medium B.O.P.	... 1 14 0
	to 1 15 0
Good B.O.P.	... 2 10 0
	to 2 12 0
Well made black leaf O.P.	... 2 12 0

London Market.—Sale of 3rd September 1956:—Dearer tendency all classes.

Sale of 4th September 1956:—Dearer tendency.

Colombo Market.—Sale of 3rd September 1956:—Strong demand. Rather dearer rates, particularly better qualities.

Sale of 4th September 1956:—Strong demand. Dearer rates high and medium grown but best dimbulas irregular. Middle East declined ten cents.

Calcutta Market.—Export:—49 844 packages. Good general demand at generally lower rates.

Internal:—14,900 dust. Good general demand. Strongest feature Middle East types. Commons and mediums generally half to one anna dearer. C.T.Cs. weakest feature As. 2 to As. 4 easier. 1,000 leaf. Good general demand at about last rates.

Export Quota:—There has been a further decline in the market and with weak support the quotation stands at 21 pies.

Forthcoming Auctions:—Sale No. 26 will be held on Tuesday, 18th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Dust sale R*:—550,000 lbs. Strong and excited demand. Market irregularly As. 2 to As. 4 dearer all round. Middle East types advanced with strong support."

JUTE GOODS LOOK UP

(From Our Own Correspondent)

CALCUTTA, 11*th September*

Jute goods recorded two distinct trends during the week under review. Earlier, on heavy speculative selling, prices gave way; subsequently, however, the decline was not only made good but prices closed at the highest levels for the week. This was the result of the announcement of the stock position of goods on Thursday last. On the other hand, raw jute prices continued to decline throughout the week, following reports of an improvement in arrivals in most agencies. The decline in stocks of goods with mills as at the end of August did not come as a surprise. For it had been anticipated. The month of August evidenced considerable activity by shippers and the decision of mills to curtail production to bring down stocks to a more manageable figure resulted in a wave of buying by overseas interests. The stocks of hessian declined by 10.000 tons, or 26 per cent. to 28,500 tons, sacking by 5 000 tons, or 5 per cent. to 88,200 tons, and miscellaneous corrections by 800 tons, or 13 per cent. to 5,400 tons, the decline thus amounted to 15,800 tons. With a rapid fall has, indeed, been and it is expected that, with tinuing in the export market, it before stocks are reduced con- in production is to commence and the output figure would be onth onwards.

A redeeming feature of this week was the decline in raw jute prices. However, whether prices would be stabilised at lower levels is difficult to say. Usually, at the beginning of the season prices move down, and that is what is happening at the present time also. But a speciality during this season is the encouraging crop reports and the expectation of a substantial increase in fibre output.

The area under jute has increased to 1.634,000 acres from 1,425.000 acres in the past year. In terms of percentage, the addition to acreage comes to 14.7 which should be regarded as highly satisfactory. The report carrying this information stated that most of the increase has been in Bihar, with Tripura and Uttar Pradesh contributing small percentages. It is unfortunate that no increase in acreage has been reported in West Bengal, the home State of the jute industry and trade. For most of the jute grown in areas other than West Bengal is inferior in quality of which types there is no scarcity. With the difficulties now being experienced in the imports of good quality jute from East Pakistan, the future of jute industry in India can be ensured only when India can grow sufficient jute of the superior type fit for the production of hessian without mixing with the poor quality jute. It should be remembered that hessian is the dollar earner and the mainstay of the industry.

The jute goods market opened the week with speculators very active as sellers. Actual business, however, was naturally little. Prices gave way. Thus, ready 40"×10 oz. hessian declined to Rs. 42-1 from Rs. 42-4 and B. twills to Rs. 111-8 from Rs. 112-6. This was on Tuesday last. On the following day also, the quiet trend continued; however, whispers regarding the nature of the unannounced stock position went round and made speculators think twice before selling. This prevented prices from falling further. By Friday, the details of the stock position had become known, and prices began to recover. Shippers also showed interest, and, by the week-end, ready 40"×10 oz. hessian had scored to Rs. 42-14 and B. twills to Rs. 112 Covering business was done yesterday on a great scale, and shippers showed the keenest interest ever. Ready 40"×10 oz. hessian, therefore, rose to as high as Rs. 43-9 with ready B. twills reaching Rs. 113-6. Forward positions in B. twills continued to be quoted at premiums, the extent varying for each delivery. The premium on Oct.-Dec. goods varied from As. 12 to Re. 1, and that for Jan-March from As. 4 to As. 8, while delivery within one month was higher by As. 8. Excepting for September goods, forward goods in hessian were lower. Jan.-March was Re. 1 cheaper than the ready position, but one month delivery goods were higher by a few annas.

Raw jute prices eased. This followed the anxiety of sellers to enter into commitments and more arrivals in agencies. Most constructions had eased by Re. 1 a maund, but, with the subsequent rise in goods, raw jute recovered by As. 8. Upper Assam bottoms declined to Rs. 28 from Rs. 29 but later steadied up to Rs. 28-8. Local daissee bottoms were priced at Rs. 29-8, after falling to Rs. 29 from Rs. 30.

BASE METALS RULE FIRM

(From Our Own Correspondent)

CALCUTTA, 11*th September*

The stalemate over an agreed solution to the Suez Canal dispute, rising price trends in overseas markets, and the gathering momentum of industrial activity within the country—these were the factors which engendered steady conditions in the metal market during the week under review. Prices of base metals were fully firm. Reports of stoppage of work in the Rhodesian mines following labour troubles and the possibility of operations being suspended in the Garfield smelter in the United States contributed to moderate price gains in New York. The improvement was noted on the London Metal Exchange, too, and spot copper at £309 had at one time gained by £3½. Locally, there was good demand for electrolytic wire bars, and there was no difficulty for importers to dispose of new arrivals which were greater than earlier anticipations. Electrolytic copper was fully steady at Rs. 218. The scrap market was as usual lively. Fire-refined copper was no longer at par with the electrolytic material. Tin was in good demand, and the price gained to Rs. 528 from Rs. 524. For a time, electrolytic zinc was higher at Rs. 67 but, in view of the satisfactory supply position, returned to Rs. 66-8. Lead was unchanged at Rs. 83.

FAIR DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 11*th September*

Although demand during the export sale held yesterday was moderate, prices did not show any improvement. The Government of India's announcement, placing a ceiling for shipments of tea for auction in the Mincing Lane sales in London for 1956-57, has caused some surprise to gardens, traders and shippers alike. The ceiling is 160 million lbs., which has apparently been fixed judging from last season's direct shipments having totalled 162 million lbs. There is no ceiling for shipments of South Indian tea direct to London for auctions.

True, the Government's policy is to encourage the auctioning of as much indigenous tea as possible in Calcutta and Cochin. However, all producing countries participate in the London auctions, and buyers there can satisfy their requirements fully; as such there is no reason why they should turn more of their attention to Calcutta. In this view, it will be remembered that last season's ceiling, which was 140 million lbs. had to be withdrawn by New Delhi in February 1956 when it was found that stocks in Calcutta were increasing and warehousing was becoming a grave problem. It is clear that, in deciding to fix a ceiling again this season, the Government has been encouraged by the increase in the quantity of tea sold in Calcutta auctions during the last season. For the sales totalled 334,161.000 lbs., as against 299 671,000 lbs. in 1954-55, the increase in export sales being 75,336,000 lbs. to 250,332,000 lbs.

Another factor, which must have encouraged New Delhi should be the reports of lower output figures for most other producing countries and the substantial increase in North Indian production during this season. In this view, it is possible that London buyers may turn more attention to Calcutta auctions during this season. Moreover, the ceiling is more or less the same as the quantity that was shipped to Mincing Lane last year. Taking these factors into consideration, it is most unlikely that the Government would find it necessary to review its decision later in this season.

The freezing of Egyptian sterling by Great Britain has caused a serious problem for Ceylon, as the latter can no longer export tea to Egypt and receive payment. There being no payment problem between India and Egypt—for trade between the two countries is a two-way traffic—and Ceylon being unable to receive payment for its exports to Egypt in any currency other than sterling, it was expected that India could increase its tea exports to Egypt. However, this possibility is now receding to the background, as, during this week, there have been reports of Ceylon attempting to persuade Egypt to make payments in Japanese currency for Ceylonese tea.

The offerings during yesterday's export sales aggregated 47.500 packages. As stated earlier, there was fair demand. But prices for medium brokens declined by an anna to As. 2 and, in spite of good demand, B.O.Ps. and O.Fs. lost by As. 2 to As. 4. Keen competition was offered to the good C.T.C. Assams. The balance of the C.T.Cs consisted of ordinary rain descriptions and prices fell by As. 2 to As. 4. The strongest feature of the sale was clean black fannings, the prices of which improved by As. 2 to As. 4. Non-withers Dooars were also paid considerable attention and rose by several annas. The commonest teas, clean commons and low mediums, were all steady. Among Darjeelings on offer, the plainer teas were in good demand, but the flavoury lots were quiet. Whole leaf grades were also steady, but the stylish sorts received poor support and often declined. An irregular trend was in evidence in tippy teas. The quotations were: best C.T.C. Assam B.P. Rs. 3 to Rs. 3-4, medium Assam B.P. Re. 1-14 to Rs. 2, plain B.P. Re. 1 to Re. 1-9-6, and clean black pekoe Re. 1-14.

A mixed trend was in evidence during the internal sale held last week. Dusts offerings aggregated 14.900 chests, which met with a good general demand. Good support was given by Middle East buyers for the black teas on offer. Among C.T.Cs. there were a few lots possessing the second flush grainy character, and these realised prices higher by half anna to one anna. However, other C.T.Cs lost As. 2 to As. 4. On the other hand, medium and common teas advanced by ½ to 1 anna. Quotations were: best Assam C.T.C. Rs. 3-2 to Rs. 3-6, medium Assam C.T.C. Rs. 2-12, medium Assam grainy dust Re. 1-15 to Rs. 2, and medium Dooars Re. 1-12 to Re. 1-12-6.

Leaf offerings totalled 1,019 packages. Demand being good, prices were better. Green teas on offer were, however, hardly wanted.

COAL

(*Concluded from page* 508)

Minister was quite conscious of the immensity of the task when he said:

"Transport resources are already subject to strain and it will be an immense task for the railways to keep pace with the fast-increasing transport requirements. Coal constitutes a very substantial part of the total volume of goods moved by the railways and a good proportion of this is moved for the requirements of the railways themselves. Steps, by which the quantity of coal to be moved can be reduced, should be studied by the Council. There are various measures, which can be adopted, including measures to utilise coal, as far as possible, close to the site of its production, for thermal generation of electricity and to transmit such electrical energy to the point of consumption."

Coal and products of coal carbonisation, Mr. Reddy pointed, constituted the starting point for a whole host of chemical industries. It was, he added, a drawback in our present economy that, for various reasons, it had not been possible to establish as many coal-based chemical industries as we would like to have. In this connection, the Minister drew attention to the practice in West Germany where mining of coal was integrated with the chemical uses of coal.

It will be seen from the foregoing summary of Mr. Reddy's speech that the Government is not wanting in ambition. The appointment of the Council is evidence of its keenness to translate its plans into action. But the limiting factors are two: (1) the absence of technical and administrative personnel to draw up practicable plans and to implement them efficiently and thoroughly; and (2) inadequate supply of transport. The proposal to convert coal into electric power right at the site of coal production and then transfer the power to centres where it is needed may be a solution to the transport bottlenecks, but it is a moot point whether this method can be economically followed so far as the power needs of distant centres are concerned. It must, however, be conceded that, to the extent that this method results in a saving of transport utilised for carrying coal to the areas adjacent to coalfields more transport capacity will become available for long distance traffic.

It is too late in the day to question the wisdom of the Government's decision to assume responsibility for the bulk of the increase in the production of coal envisaged in the second Plan. Enough has been said on the capacity of the public sector to reach the goal which it has chosen for itself, despite well-meaning advice to the contrary. It will not be in the national interest to keep harping upon the weaknesses of the public sector. All that one should do now is to wait and see whether the public sector fulfils within the given time the commitments it has undertaken. It is, however, to be hoped that, if at any time in future, the Government finds that it is not making satisfactory progress in this direction, it will not allow prestige to stand in the way of reversing its policy and allowing the private sector to expand in this sphere.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly P=Company has Preference shares. T=Company has Debentures N=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, "A" shares and "B" shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, e and 12, for instance, indicate the end of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. ‡ Less income-tax. (a) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.

(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s For seven months ended 31st March 1954.

† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

MARKET GOSSIP

(*Concluded from page 495*)

completely divorced from the industry, but, when it comes to a question of deciding any particular issue, where the interests of the trade and the industry are not identical, his stress may be based on considerations different from those of a millowner.

It remains to be seen as to how long the Government is going to wait for both the associations to merge into one body and nominate a person to represent them on the Development Council. If these associations are unable to make up their minds, the Government will be justified in choosing a representative from the trade who, in its opinion, enjoys the confidence and support of the majority of merchants.

* * * *

Consumers of coffee in the world will heave a sigh of relief at the report that Mexico, one of the world's leading coffee producing countries proposes to expand its coffee output. In fact, one of the striking features of that country's post-war economy has been the steady expansion of coffee production. From 59,027 tons in 1949 its output has grown to a record of about 93,000 tons in 1955. It is now proposed to raise this crop still further. The Mexican domestic market absorbs 13 per cent. of the output and, of the balance, the greater part is being sold to the U.S. As many as 17 other countries buy Mexican coffee. In 1955, the total export amounted to over 1.1 million bags valued at $106 million and, during the current year, up to 26th August, they aggregated 842,651 bags valued at $87 million.

One reason why Mexico is planning to raise the output of coffee is the uncertainty about the outlook for its cotton export. Cotton is its main export commodity at present and coffee occupies the second place far behind. The Mexican authorities feel that the rise in production of coffee will make up for the possible loss from the declining exports of cotton. They are aware that the price of coffee will decline after August 1957, but they propose to meet the situation by improving the quality of their coffee. This is proposed to be achieved by several means. First, more scientific methods of production will be adopted. Secondly, increased credits will be provided for making technical improvements. Third

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2377 BOMBAY, 22nd SEPTEMBER 1956 PRICE Rs. 1/8

24 SEP 1956 GOKHALE INSTITUTE OF POLITICS & ECONOMICS

ONE PRICE FOR COAL—NOT A WISE MOVE

IT is heartening to find that the Government is keenly alive to the importance of developing those regions of India which have remained economically backward as compared with the more developed areas such as Bombay and Bengal. Its anxiety in this respect is born of growing pressure from the underdeveloped areas, many of which are heavily populated. It is very refreshing to note that these areas are not quite prepared to be satisfied with facilities for establishment of cottage or small-scale industries, but want heavy, as well as large-scale factory, industries. A significant feature of this agitation is that it is being made more and more by the political leaders of the regions concerned, especially those belonging to the party in power, than by the representatives of business community. That shows that the majority of people realise the advantages of modern industrialisation *vis-a-vis* those of the outmoded traditional cottage industries. It is a moot point whether the Central Government will have taken notice of the claims of the backward areas had they been urged only by chambers of commerce.

While the concern now being shown by the Central Government for reducing the disparities in levels of development between different regions and for bringing about decentralisation of industries is thus quite understandable and not altogether undesirable, there is reason to fear that it may induce them to follow economic policies of a dubious nature. One of the characteristic features of the Government's economic policies has been that of robbing the prosperous Peter to support the indigent Paul, irrespective of the consequences to Peter and the reasons for Paul's indigence. This feature is visible, for instance, in the policy relating to handlooms and cotton mills, as also to co-operative sugar factories and those owned by joint-stock companies. Such a policy is likely to be adopted for raising the economic standards of the underdeveloped regions also. Thus, the developed areas may be asked to meet directly a part of the cost of raising the backward areas to their level.

One of the means chosen for this purpose is equalisation of freight rates for essential commodities by pooling the rates on an all-India basis. This method seeks to eliminate natural or geographical handicaps of certain regions for establishing industries. The basic principle underlying this method is to subsidise long-distance movement of goods and commodities at the cost of shorter hauls; that is, industries which have been established in certain regions for reasons of geographical advantage from the point of view of easy availability of raw materials and fuel and as such enjoy the benefits conferred by nature should pay something towards the cost of establishing industries elsewhere not so richly endowed by nature. While the adoption of this method is justifiable in the case of strategic industries or for developing certain scarce resources not found in a more suitable place elsewhere in the country, it is not desirable to follow it merely for the purpose of creating employment opportunities.

The principle of fixing uniform prices for essential raw materials through a system of freight pool has already been applied to cement, steel, and pig iron, in the hope that it will facilitate establishment of industries in the Southern, South Eastern, Northern and North Western regions which are relatively backward industrially. To what extent this policy will help these regions to get over geographical handicaps for establishing certain types of industries remains to be seen. Similarly, whether the additional cost that is paid by consumers and industries which have benefited by locational advantages is worthwhile is a debatable point. When such is the case, Mr. K. C. Reddy, Production Minister, revealed last Saturday at a Press Conference in New Delhi, that his Ministry was working out a scheme for making coal and salt also available at uniform prices throughout the country. It will be unwise on the part of the Government to proceed with this scheme, before the success of the policy already adopted in respect of the other three aforesaid raw materials is fully established.

It is true that the principle of uniform prices is already in vogue in respect of many finished goods such as medicines, chemicals, toilet articles, tinned products, biscuits and sweets. But these goods are on a different footing, in that they occupy less transport space. Further, the object in fixing uniform prices is to stimulate consumption and expand the markets. The case of fertilisers, a finished bulk commodity, which is also being sold at a uniform price, is an exception. Here, the object is to stimulate agricultural production which has an important bearing on the country's economy. The application of a uniform price to bulk, essential raw materials is a different matter, because its effect on the overall cost structure of the economy will be profound and the disadvantages may more than outweigh the advantages.

The case seems to be particularly weak when applied to coal. In the case of cement, the dispersal of production is fairly widespread. In the case of steel, the situation was different from that of coal. The consumer prices for steel were being fixed on the basis of those prevailing in the ports, as, in the historical past, the domestic producers of steel had to compete with imported steel. Consequently, the consumer of steel in or near Jamshedpur, the home of Indian steel, had to pay a higher price than his counterpart in Bombay or Calcutta. Accordingly, the then prevailing price structure of steel placed even States like the Punjab and Uttar Pradesh at a disadvantage in regard to development of engineering industries, though conditions were favourable for it in other respects. In the case of coal, however, production is concentrated mostly in Bengal and Bihar and to some extent in Hyderabad. If and when new mines are opened up, Madhya Pradesh also will figure as an important producer of coal. Even then, the picture will not undergo any material change.

And the cost of subsidy which the consumers of coal situated near the collieries will have to bear for the sake of a uniform price all over this vast sub-continent will be fairly heavy. Coal is the most important source of fuel for a considerable section of India's major industries that are now situated in the coal-belt and that are planned to come into existence in this area in the near future. Iron and steel, fertilisers, cement, locomotives, and a number of products of heavy and light engineering industries would all go up in cost and this in turn would influence the cost of other goods in an upward direction, if the Production Ministry's scheme for uniform price for coal for the whole country were to be enforced. In fine, the danger of such a scheme aggravating the cost inflation would be real. It is needless to add that the underdeveloped parts of the country also would not be free from this danger.

This is not the first time that we hear about the Production Ministry's move to fix a uniform price for coal for the whole of India. The Ministry has been toying with the idea for quite some time. It has already been considered by some of the leading Chambers of Commerce and rejected by them on the ground that it is capable of doing more harm than good. The Federation of Indian Chambers of Commerce and Industry, for instance, has expressed its views on this subject thus:

> "... The freight pool system would violate one of the accepted tenets of railway rates policy, namely, that it is not the function of the railways to equalise the geographical advantages which are naturally enjoyed by certain industries. Further, even though it may be found necessary to subsidise long-distance traffic in essential commodities, those who move their raw materials over short distances should not be penalised and called upon to bear the cost of subsidy."

The qualification which the Federation has made at the end, it must be added here, is not a feasible proposition, inasmuch as the Government is not prepared to foot the subsidy bill from out of its revenue. Nor will it be a desirable thing to do, even if the Government is willing, as we shall presently show.

There is no certainty that the mere fact that the price of coal will be available throughout India at one price will stimulate industrialisation in the underdeveloped regions. For the high price of coal is only one of the several causes for a region being industrially backward. Nor is it the most formidable of the handicaps to which these regions are subject. Indeed, the severest handicap is lack of transport facilities. Among the other handicaps, mention may be made of lack of *entrepreneurs*, inadequate savings, scarcity of technical skill, and disadvantageous situation from the point of view of supply of other essential materials. So long as steps are not taken to remove these handicaps, fixation of a uniform price for coal will fail to serve the purpose. On the contrary, it will result in additional burden to other industries and consumers for nothing. The best way to bring about industrialisation of underdeveloped areas is to provide direct inducements to *entrepreneurs* to establish in these regions those industries for which conditions are favourable. Tax concessions, supply of power and water at favourable rates, procurement of land at economic cost, and prompt provision of transport facilities are some of the surest ways in which investment in these regions can be induced. It is an illusion to think that a mere readjustment of freight rates on the lines now contemplated will do the trick. In any case, now that a special committee, known as Railway Freight Structure Enquiry Committee, is examining the problem, the Production Ministry will do well to await the Committee's recommendations instead of going ahead with its scheme.

BACKWARD CLASSES

ALTHOUGH the Hindu civilisation has many achievements to its credit in the realm of abstract thinking, it must be admitted that the Hindu genius has woefully failed to prevent the fragmentation of social structure. The Hindu society has for long been divided and subdivided, so that many observers have wondered how it is held together at all. The caste system, based on ineluctable birth, continues to vitiate social and political life. Recognised as the most serious of India's social evils, the caste system has miraculously survived all the military and cultural invasions from abroad. Apart from the three main castes—the priests, the warrior-class and the trading caste, with their thousand-and-odd divisions—the great mass of the community is divided into innumerable castes. There is a caste for each profession or a profession for each caste—the washerman's caste, the barber's caste, the fisherman's caste and so on.

In the last few decades, it was, perhaps, inevitable that Indian leaders, absorbed as they were in the fight for political independence, should have allowed social reform to take a secondary place. With the advent of freedom, one expected a more energetic onslaught on the evil. But the unrest that followed the partition of the country delayed it. All that they did was to declare in the Constitution in the most unequivocal manner their faith in the *fundamental* equality of man. The country has no reason to regret, nor will it ever forget, that one of the chief architects of Indian Constitution was Dr. B. R. Ambedkar, a man from the most backward and the most suppressed of Indian castes. But constitutional guarantees cannot by themselves usher in an era of equality. Democracy is a way of life, not a mere political system. So long as democracy is not practised in social intercourse, India will continue to be a land of split personalities, of those who preach equality abroad and practise inequality at home.

Realising the importance of providing an impetus to the backward classes—in the Indian context, they are almost indistinguishable from certain castes—the Government of India, in its first Five-year Plan, set apart Rs. 39 crores. In the second Plan, the provision has been stepped up to Rs. 91 crores. To those who know the magnitude of the problem of backward classes it needs no reiteration that the outlay errs on the side of parsimony, rather than generosity. Neglecting for a moment the upper strata of the backward classes, the scheduled castes and tribes, the lowliest of the low, number some 74 millions —scheduled castes 51 millions, scheduled tribes 19 millions and the so-called "criminal" tribes four millions. It is against this background that one should examine the recommendations of the Backward Classes Commission (Chairman: Kaka Kalelkar) which was constituted three years ago by the Government to investigate, and report on the measures for improving, the conditions of backward classes. The Government has now announced its acceptance of nearly all the suggestions made in the Commission's report which was submitted early last year.

The Commission has correctly assessed the problem, in that it has throughout emphasised that the position of the backward classes, an essentially rural community, can be improved only through effecting an improvement in their economic status. A large part of the Commission's report is devoted to a description of the economic measures which the State must pursue in the interests of the backward classes. It is noteworthy that the Commission has stressed the need for communications in rural areas, price support for agricultural produce, cattle insurance and liberal supply of credit for farmers. But this section, giving a detailed account of what the Government should do, reads more like the report of the All-India Village and Khadi Industries Board. There is the same monotonous plea for village industries and handicrafts, for khadi and handloom, for restriction on the production of the mills, and, in short, all those cure-all economic remedies patented by the advocates of cottage industries.

Now, the question is whether the "cottage industry" approach is a genuine solution to the problem of the backward classes. Those who advocate it will do well to contrast the conditions of the backward classes in isolated villages with those which are to be found in the industrial townships. It will then be found that these townships provide a ground where the backward classes are able to lift themselves from their original backward state. This is true both of the large industrial centres, such as Jamshedpur or Sindri, and of the agro-industrial centres, like Walchandnagar. Here are facilities for larger community life, better amenities for all-round development of the individual. It is not, of course, suggested that urbanisation can or should be carried to the point of extinction of all rural life. But in a country where the *per capita* availability of cultivated land is as low as 84 cents and continues to shrink as a result of increase in population, there is a valid case for reducing the population dependent on the land. What is now required is that agriculture should be made a profitable occupation for a greatly reduced population of farmers and the rest of the backward classes should be urbanised through provision of fuller and better employment in gainful industries and services. In other words, the solution to the problem lies only in a more rapid industrialisation of the country on modern lines.

In the final analysis, it will be found that, while the so-called village industries will keep the community backward for all time to come, the large-scale mechanised industries will offer opportunities for a better and fuller life. The weaver caste will continue to remain the weaver caste so long as the handloom industry is maintained as a vested interest for that caste. The village *ghani* will perpetually keep the oilman's caste where it is today. And that abominable invention, the hand-made paper, will keep the backward classes literally illiterate. It is only the machine that will break the age-old tyranny of the caste system, release the backward classes from their bondage to meaningless traditions and open out a wider vista of life. In Europe, it may be noted, it was the industrial revolution that broke the medieval organisation of virtual slave labour, made better life possible for millions of men and women who were steeped till then in ignorance and poverty. Similarly, science and technology alone can bring emancipation to the backward classes in this country.

STATE ENTERPRISES

WHAT is the extent of the public accountability of the so-called "public" or State enterprises? How far do they conform to public interest? How much control does the public have over these enterprises? These questions are not of mere academic significance, for, in the context of the contemplated expansion of the public sector, they acquire a relevance of no mean order. Some of these State enterprises are giant organisations and whatever might be the ideological basis on which they rest, they ought certainly to function with an eye to public interest and in a way that would convince the public that they are accountable to it in the last resort. There is no use contending that Parliament or State Legislatures, as the case may be, has a final voice in the running of these enterprises, for a busy Parliament or State legislature cannot be expected to devote more than a few minutes of its legislative time to any one of these enterprises. Much, therefore, depends on the way they are set up and administered.

Against this background, it is worthwhile to refer to some of the basic and fundamental issues which Mr. C. H. Bhabha, a well-known business man and an ex-Minister for Commerce, Government of India, raised in the course of his speech on State enterprises at the Rotary Club, Bombay, this week. Mr. Bhabha subjected the working of these enterprises to a critical examination and pointed out how they were free from healthy restrictions, on the one hand, and suffered from unhealthy interference, on the other. Thus, many of these State enterprises, he said, were governed by Section 620 of the Indian Companies Act which empowered the Government to exempt them from several sections of this massive legislation. He asked whether it was not discrimination to exempt them from the Act and averred that such exemption was "not only unwarranted and unusual but also positively injurious to the interest of the nationals engaged in similar economic enterprises." Again, some of these ventures had claimed and secured protection from the strict adherence to legislative enactments like the labour laws. They were also free from rent control legislation and were, therefore, legally entitled to charge "any fantastic rentals for their properties."

Some of these State-owned enterprises are registered as private limited companies, despite the fact that it is public money that is involved in these units. They are thus free from the obligation to comply with the very vital and complicated sections of the Indian Companies Act which are applicable to the public limited companies. This makes it difficult, as Mr. Bhabha said, for the "average man to evaluate the working results of these ventures, since the profit and loss account need not be filed by them." He asked: "Can it then not be said that the right of the citizen is sought to be quietly taken away or negatived through this procedure?" He complained that even the audit, performed by the Government Audit Department, was too "perfunctory" to be of any use. In any case, even this examination now seems to be resented by the administrators of the State-owned enterprises and they can cite in their favour the criticism of the Government audit by Dr. Appleby.

There is also another feature of the working of these corporations which robs them of their "public" character still further. Many of them are treated merely as subordinate offices of the Government Secretariat, instead of as autonomous corporations, free from detailed controls by the Government. Mr. Bhabha pointed out that an "unparalleled threat facing these enterprises these days is the all-too-frequent interference in its normal functioning from the most unwanted and undesirable quarters." It is true that non-officials are sometimes represented on the boards of these enterprises. But, as Mr. Bhabha stated in effect, they have no effective say in the administration of these units. Again, political expediency is allowed to influence their commercial policies. Mr. Bhabha cited an instance where an "order for an important asset costing over a million pounds was placed with a source which did not have the necessary experience and background for that purpose and for a delivery of 2½ years hence, as against offers at round the same price from experienced sources which quoted a delivery of 1½ years from the date of placing the order." He pointed out how the provisions of the Indian Companies Act could be invoked against the directors of a public company if they were a party to a similar decision.

Mr. Bhabha rightly condemned the tendency on the part of the authorities to treat these State enterprises as a "refuge or dump heap of party men and relatives and others connected with the powers-that-be." In this connection, he cited the instance of a State enterprise which found that, before it could fill vacancies for three or four junior officers, for which over 3,000 applications had been received, it had to encounter "wire pulling, recommendatory letters and even semi-directives from no less than two dozen highly placed politicians and bureaucrats." He deplored that, in the running of these institutions, some of the "worst features of jobbery and nepotism occasionally noticeable in the Governmental machinery itself seem to be injected with a great vigour and at a very heavy cost to the nation."

From what has been said above, it should be clear that the so-called public enterprises are in no way conducive to social welfare. And yet, they are established on certain ideological grounds. How weak these grounds are will be evident from the following extract, which Mr. Bhabha quoted from Gandhiji's writings:

> "I look upon an increase in the power of the State with the greatest fear, because, while apparently doing good by minimising exploitation, it does the greatest harm to mankind by destroying individuality which lies at the root of all progress. The State represents violence in a concentrated and organised form. The individual has a soul, but, as the State is a soulless machine, it can never be weaned from violence to which it owes its very existence. It is my firm conviction that, if the State suppressed capitalism by violence, it will be caught in the coils of violence itself and fail to develop non-violence at any time. What I would personally prefer would be not a centralisation of power in the hands of the State but an extension of the sense of trusteeship, as in my opinion, the violence of private ownership is less injurious than the violence of the State. However, if it is unavoidable, I would support a minimum of State-ownership. What I disapprove of is an organisation based on force which a State is. Voluntary organisation there must be."

These views, it is significant, were expressed by Gandhiji not in the initial years of his struggle against the British Raj, but shortly before his tragic death, when the Congress Party was in full power. Apparently, he counted even communal fury, of which he was himself the victim, as a matter of less consequence than the violence that must result from an excessive increase in the power of the State. He obviously felt that the growth in the economic power of the State would destroy the soul of the nation. And yet, it is such a powerful State that is now sought to be created by his very followers.

SHARES FINISH BETTER AFTER MOVING IRREGULARLY

CLOTH PRICES—INSURANCE—SONE VALLEY

THURSDAY, 5 P.M.

THERE have been no new developments of note in the markets this week. The trend is fairly steady in shares, bullion and commodities. Day-to-day fluctuations in values there have certainly been, but within narrow limits, the net change over the week showing fractional gains. Among the shares, bargain hunting was a special feature of the week. This was confined mainly to small-priced scrips, belonging to miscellaneous industrial section. Notable among these were Larsen and Toubro, Indian Copper, Indian Aluminium, Mahindra-Mahindra, Tata Chemical, New Central Jute, Scindia Steam, India Steam and Mukund Irons. The support extended to these scrips reflects investors' confidence in the future. The trend of the active popular scrips also points to the same conclusion. Despite the heaviest increase in cloth excise duties, the vast majority of textile shares, speculative and non-speculative alike, in Bombay, as well as Madras, have managed to edge forward. The same is true of iron and steels, cement, and rayons. Even after bouts of selling and buying, Bombay Burmahs have made a strident recovery.

MARKET GOSSIP

In the light of what we wrote in these columns last week, this behaviour of the share market should not be a matter for surprise to readers. It may be noted that, after what we said last week, there have been a few developments which would have ordinarily scared the market but have failed to do so. There was the tightening of credit facilities for cloth, yarn, cereals and pulses. For a while some were afraid that the credit squeeze might be extended to include trading in shares also and that the Bank rate might be stepped up. But this fear soon vanished. Then, there was Mr. Krishnamachari's statement that further taxation must be imposed to find the money needed for financing the second Plan. This, too, has had only a passing effect on equities. The latest development is the deterioration in the Suez situation pointing to a deadlock and a trial of strength between the powers involved. Although this development is really disturbing, the market seems to be taking it in a bullish light.

In describing the position of the share market thus, we should not be misunderstood to mean that investors should blindly go into the market and buy any scrip they like. They have to exercise proper discretion and caution. They must not discard the well-recognised criterion of sound management, satisfactory financial position, good dividend record and a level of yield that offers a margin for any possible fall in values. The yield consideration should be relaxed only in regard to what are known as "growth shares," that is, scrips of companies which have just begun to grow and have plenty of scope for expansion or of those which are well-established and have taken on hand programmes for further growth.

* * * *

The Suez situation has, once again, worsened and requires to be carefully watched by operators. To view the latest developments in bullish light is not altogether right. The danger of a hot war over the Canal has, of course, receded far to the background, thanks to Britain's decision not to use force against Egypt and to abide by the verdict of the United Nations, if and when a reference of the dispute is made to that supreme world body. But, as was feared by us, an economic war against Egypt is in the offing. The U.S., the U.K. and France have proposed a solution—the Canal Users' Organisation —which is not acceptable to Egypt. No Government with any self-respect will accept a proposal which violates its rights of sovereignty. So, full-fledged economic sanctions against Egypt are being thought of. The first step in this direction will be the boycott of the Suez Canal, a weapon similar to the one which Gandhiji planned, perfected and wielded successfully against the British rule over India. Such a boycott by Western powers will adversely affect the Indian economy to a considerable extent. It will add to the cost of India's imports, while reducing foreign exchange receipts on its exports, because of the higher freight, insurance and interest charges payable on the shipments that will be sent through the longer Cape route. There may also be long delays in receiving the goods, because there will be a shortage of shipping. India's discomfort would increase, if the entire Arab world were to join hands with Egypt and retaliate by interfering with the flow of oil. All this means that the financial results of those industries which are dependent upon imported raw materials, stores, etc., and upon export markets for the sale of their production may be hit, especially if the economic war happens to be a prolonged affair. If India had its own ships in sufficient numbers, the position would have been different. But the Government did not pay adequate attention to development of overseas shipping, with the result that it is now at the mercy of the world maritime powers. It is to be hoped that at least now the Government realises the fatal mistake it has made in neglecting the mercantile marine.

If the economic war against Egypt is allowed to go on for a long time, there is a danger of its yielding place to a shooting war. The use of the weapon of economic boycott by a group of powers to settle an international dispute is more difficult than its use by a colonial country against its ruler. When Gandhiji used the boycott weapon and launched a movement of non-violence, he was always ready to withdraw them when he found that they threatened to end in bloody violence. Such a judicious application of the weapon of non-violence is something foreign to the Western powers. Considerations of prestige will stand in their way. Further, they may not know when to withdraw the weapon gracefully. Or it is possible that the Egyptian Government might get provoked and retaliate with violence when driven to a corner. This in turn might lead to a hot war. The situation is thus full of disturbing possibilities.

* * * *

The Government of India has already launched the publicity campaign against "profiteering" in cloth. Advertisements are appearing in Bengal papers carrying the Government's notional fair prices for 20 varieties of cloth. The millowners and cloth dealers contend that these prices are well below their costs. The dealers, in particular, argue that, if they were to sell their stocks on the basis of these prices, they would lose heavily. The Government's contention may be that the dealers must adjust their losses on these stocks against their previous profits.

The mill industry and the trade have made no vigorous protests against either the increase in excise duties or the publication of fair prices which have no relation to their respective costs. They know very well that what the Government has done is not quite correct and yet no formal protests in the public have been forthcoming. It is true that a dealer here or a millowner there has criticised the Government's action. But not a single millowners' association nor that of cloth merchants has issued a statement to the public so far, challenging the facts and figures given by the Government in Parliament. This silence on their part has been interpreted by a section of the Press and the public that the trade and the mills are guilty of profiteering.

While it is not our intention to hold brief for either the trade or the mills, we have come across certain evidence which shows that the Finance Ministry has badly bungled in estimating the profits that the trade or the industry were supposed to be making. Information collected from the Bombay cloth trade reveals that, in calculating the fair retail price, the Government has not made due allowance for all the taxes to which cloth is subjected. One of the fine *dhotis* included in the fair-price list, for instance, is priced at Rs. 9-8 per pair of 10 yards. The dealers point out that they have bought this *dhoti* from the mills at Rs. 7-6, without excise duty. Excise duty at the new rate on this pair of *dhoti* works out to Rs. 2-7-8¾. Sales tax at the rate of one anna per rupee, the rate prevalent in U.P., where this quality is popular, works out to As. 9-6. Railway freight and other handling charges amount to As. 4 per pair. Accordingly, the retail cost of the said pair of *dhoti*, without taking into account the profit-margin due to the wholesaler, semi-wholesaler in Kanpur and the retailer in that city, comes to Rs. 10-11-2¾, that is, Re. 1-3-2¾ more than the fair price announced by the Government. Even on the basis of the 14 per cent. margin of profit allowed to the trade during the control days, at least a rupee has to be added to the cost of Rs. 10-11-2¾ mentioned above. This shows the extent to which the trade would be hit, if it were to sell the cloth at the prices announced by the Government. Even if the mills were to bear the entire incidence of the additional excise duty, the dealers would be left with no profit.

Enquiries made with another mill, the long cloth of which is shown at Re. 1-3 per yard in the fair price list, reveal that the price gives no profit-margin at all even to the mill after adding the excise duty to the cost of production. Accordingly, if it is to sell at a price which will give a profit-margin of 14 per cent. to the trade and also enable the consumer to get the cloth at the fair price mentioned by the Government, then it will have to work at a serious loss.

The sum and substance of what has been stated above is that the Government is advising the public to expect cloth to be sold to it at prices which leave little or no margin of profit to the mills or the trade. It is, therefore, most unlikely that public will get cloth at such prices. The public is thus being given false expectations. Its disappointment will ultimately force the Government to reintroduce price controls.

* * * *

While justifying the increase in the excise duties, the Finance Minister said in the Lok Sabha thus:

> "On Saturday, we sent out somebody to make some purchases of those articles for which we have fair price figures. It is not that these things were arbitrarily chosen. We have some figures with us and I should like to give you some idea of the gap that exists today. The ex-mill price for Crown Mills *Samrat dhotis* is Rs. 7-4-0; the fair retail price in Delhi, taking into account the wholesaler's and retailer's profit, cost of transport, sales-tax, etc. would be Rs. 8-5-0 and the actual price in Delhi on Saturday was Rs. 10-8. Here, the difference between the fair price, which should normally be charged, and the price actually charged is more than Rs. 2. It may be that, in our working out the fair price, one anna more should have been added or the price should be one anna less, but there is a very big difference in prices on a cloth like the fine *dhotis*.
>
> "The same thing is there with regard to *saris*. The India United Mills 50×71 *saris*, medium, mill price is Rs. 8-13-3; fair price in Delhi would be about Rs. 7-13-3, but, actually, the price on Saturday was Rs. 9-0-0. Here, it is a question of more than Re. 1-2-0 being charged above the fair price."

CONFUSION OVER THE CANAL

From Our Own Correspondent

LONDON, *15th September*

LONDON LETTER

THE City is more disturbed over the Suez situation now than it was a fortnight ago; principally because the passage of time appears to be increasing instead of reducing the confusion over the trend of events, but it is significant that the general atmosphere is more cheerful whenever there is an impression that there will be no resort to force, and less cheerful when the prospect is one of strong action! The general temper of the City has not, of course, been helped by the rather worse trading returns shown for August and the decline in the gold reserves.

A study of the Press here shows divergences of views as wide as those revealed in Parliament. Broadly, of course, the two schools are the one that believes in bringing the case to the United Nations and abiding by its decision or lack of decision, and the other which believes that, if satisfaction cannot be obtained through the United Nations, it may have to be brought about "in other ways." But the adherents of the latter school appear by no means clear as to what those "other ways" should be, and it is significant that the Government itself is not prepared to commit itself to any precise statements. And yet it has become increasingly clear that the Prime Minister's personal fate depends upon a satisfactory outcome of the dispute—satisfactory in the sense that a solution would have to ensure over-riding security for the users of the Canal. Any solution which put the national Sovereignty of Egypt above security for the users would, in the eyes of the Government supporters, spell doom for the British Premier.

The other significant feature is that the *Times*, which a fortnight ago led the battalions of "a resort to force in the last instance," has gradually withdrawn from such an open position, advocates an appeal to United Nations as a necessary next step, even though it is doubtful of the result of such an appeal, and will say no more than that the decisions on what must be done after that stage cannot be anticipated. With the recall of Parliament, the *Times* has appreciated that the country is at the least evenly divided on what the ultimate sanctions might be. The *Daily Mirror*, the paper with the largest circulation in the country, found the best headline of the week in Sir Anthony Eden's family motto "si sit prudentia"—"if there be but prudence"!

It is only gradually becoming widely appreciated how important the activities of the "Users Association" may turn out to be. It is now reported that convoys are to be formed at each end of the Canal, manned by pilots of the "Users Association," ready to make a passage through the Canal in about a fortnight's time. Obviously, this will force a showdown, but it is nevertheless possible that the nature of the showdown is only to enable a precise case to be presented to the United Nations. Meanwhile, Lloyds Underwriters have increased the insurance on goods passing through the Canal from the normal 2/- per £100 to 5/- per £100, which, in all the circumstances, cannot be considered drastic. The final commentary on the affair is that the leader of the opposition can still affect to be unaware of the Government's ultimate intentions. Will they or will they not use force in the last resort *outside* the United Nations? The answer to that question is not known, but, if the past weeks have done nothing else, they have made it abundantly clear to the Government that the use of force other than in accordance with a decision of the United Nations, would divide the country profoundly.—*All Rights Reserved.*

We have since had these figures checked up with the trade. This was possible, because T. T. K. was good enough to give the names of cloth bought by his men. Our enquiry shows that the figure of Rs. 7-4 per pair *Samrat dhoti* mentioned by him as the ex-mill price is perfectly correct. But where he has gone wrong is the fact that this ex-mill price excludes the excise duty amounting to Re. 1-8-6 per pair (at the rate before the increase). The same is the case in regard to the India United Mills *sari*, on which the excise duty was of the order of As. 15 per *sari*. So, the big difference between the fair price assumed by him and the actual price paid by him will be practically wiped out if allowance is made, as it should have been made, to the excise duties mentioned here. It, therefore, looks as though T. T. K. has been misled by some official who forgot the fact that the ex-mill prices noted by him were exclusive of the excise duties. Indeed, a section of the cloth trade is amazed that the Finance Ministry should make such serious factual mistakes and levy taxes on the basis of such wrong data.

If all that has been stated above is correct, it seems to us that either the Government should reduce the rate of excise duties or the recent increases in them will have to be passed on to the consumers; if the mills and dealers are to make a fair profit. If neither becomes possible, the mills' profit will have to shrink appreciably.

* * * *

Contrary to the earlier decision by the Government, the Life Insurance Corporation itself has decided to undertake the life business in foreign countries. This was revealed by Mr. H. M. Patel, the Chairman of the Corporation, a few days ago. The Government, it may be recalled, had been told that the nationalisation of insurance would mean the virtual disappearance of the invisible income through the foreign life business of the Indian insurance companies. When it decided, in the face

EQUITIES HESITANT

TEXTILES MARKED UP

(From Our Own Correspondents)

BOMBAY, *20th September*

FOR the first time after nearly four weeks equities on the Stock Exchange were not subjected to heavy selling pressure during the week under review. Although there was no marked recovery, except in the case of selective counters, the absence of any depressing factors itself helped sentiment. Nevertheless, the undertone was hesitant and price fluctuations were narrow. The volume of business also was small, reflecting the operators' reluctance to enter into fresh commitments.

The encouraging note on the achievements of the first Five-year Plan contained in the annual report of the Reserve Bank of India and the international political situation in respect of the Suez Canal crisis provided the main bullish factors. But the effect of these developments was counteracted by the restrictions imposed by the Reserve Bank on bank advances against cloth and grain, the Finance Minister's hint of a direct tax on profits in addition to sales tax and excise duties, the possibility of increased taxation to meet the entire gap in the internal resources for the second Plan, as the "scope for taxation was by no means exhausted," and the prospect of introducing strategic controls at selective points coupled with restrictions on movement and some form of controlled distribution. Selective counters, such as Centurys, Kohinoors, National Rayons, Bombay Burmahs, Tata Locomotives, etc., however, encountered speculative support and they scored fair-sized gains over the week.

In the steel section, Tata Ordinaries after hardening from Rs. 195-8 to Rs. 197-4 gave way to Rs. 194-8 and closed at Rs. 195. Indian Irons came up from Rs. 35-6½ to Rs. 35-11½ before receding to close at Rs. 35-2.

Textiles, which were subjected to heavy selling in the previous four weeks, ruled steady on the cessation of pressure and bear covering. Some of them were even able to score some gains. Bombay Dyeings were rather erratic moving between Rs. 640-10 and Rs. 628-12 and closed at Rs. 634-6, as against Rs. 635 a week ago. Centurys received special attention on reports that the Company's rayon plant would go into production in a few weeks' time and, after an advance from Rs. 553-8 *cum-div.* to Rs. 556-8 *ex-div.* (div. Rs. 8 per share), wound up at Rs. 552 *ex-div.* Kohinoors edged forward from Rs. 364-8 to Rs. 371, but closed at Rs. 368-8. Central Indias were fairly steady at Rs. 152 and Finlays at Rs. 354, while Gokaks gained Rs. 2 to Rs. 244-8. Indu Ordinaries were well held at Rs. 12-8. Indore Malwas recorded a rise of Rs. 3-12 to Rs. 155-10, While Khataus shed Rs. 6-4 to Rs. 252-8. Models were done Rs. 3-12 better at Rs. 182-8, Mysore Spinnings Rs. 2-8 higher at Rs. 122-8 and New Kaiser-I-Hinds Rs. 5 better at Rs. 132-8. Podars changed hands Rs. 2-8 higher at Rs. 175. Sassoon Spinnings gathered Rs. 2 to Rs. 47 and Sholapoors Rs. 100 to Rs. 1,800. Shree Niwas were steady at Rs. 224-6 and Simplex at Rs. 205-8. Standards picked up Rs. 3-12 to Rs. 485 and Svadeshis Rs. 8-8 to Rs. 256-8. Tatas were a shade better at Rs. 57-8.

Business in bank shares was somewhat restricted and the trend was not uniform. Thus, Barodas *gained a fraction to Rs. 100 and* Centrals Re. 1 to Rs. 52-8, while Centrals *(new)* were unchanged at Rs. 56. Bank of Indias dropped As. 8 to Rs. 171-8 and United Commercials Re. 1-8 to Rs. 56.

Insurance shares also were listless and the undertone was quiet. New Indias declined further by Re. 1-8 to Rs. 45. British India Generals were done As. 2 lower at Rs. 13-14 and Jupiters As. 4 to Rs. 6. Vulcans had business at the self-same rate of Rs. 16.

Electricity shares displayed a better tone. Ahmedabad Electrics were done at Rs. 96-4 *ex-div.* (div. Rs. 2-8), as against Rs. 98-2 *cum-div.* last week. Bombay Suburbans gained As. 15 to Rs. 109-6, while Surats were well held at Rs. 118-12. Tata Hydros were unchanged at Rs. 127. Andhra Valleys shed Rs. 8-12 to Rs. 1,223-12, while Tata Powers gained Rs. 15 to Rs. 1,300.

In the miscellaneous *section, sugar shares were* featureless, though the undertone was steady. Belapurs moved between Rs. 245 and Rs. 248-8, before closing As. 8 lower at Rs. 247. Bhopals also were lower by As. 10 at Rs. 17-2. *Phaltans moved* up by Re. 1 to Rs. 163 and Walchandnagars by Re. 1-4 to Rs. 271-4. Little of note occurred in the cement group. Associated Cements rallied earlier in the week from Rs. 202 to Rs. 204-8, but shed most of the gain when they closed at Rs. 202-4. Digvijays finished at Rs. 200-8, as against Rs. 200-12. Dalmias were unchanged at Rs. 15-2 and Orissas at Rs. 13-10, while Ashokas were a shade better at Rs. 12-4. In the engineering and mining group, Alcocks, recovered to gain Rs. 3-12 to Rs. 345 and Tata Locomotives Rs. 2-8 to Rs. 173. Premier Constructions were, however, lower by Rs 2 at Rs. 217. Mahindra and Mahindras stood As. 4 higher at Rs. 16-2 and Larsen and Toubros rose by As. 12 to Rs. 19-12 on reports that the Company had decided to issue new ordinary shares at par to the existing shareholders in the ratio of one share for every eight held by them. Shivrajpurs were marked up further by Re. 1-8 to Rs. 87-8 and Indian Coppers by As. 2 to Rs. 7-7, while B.B. Petrols were just steady at Rs. 3-13½.

In the shipping and transport group, Scindias hardened from Rs. 19 to Rs. 19-6, but moved back to Rs. 19-2½ at the close. Great Easterns shed As. 2 to Rs. 20-2. Premier Automobiles were steady at Rs. 107, while Hindustan Motors were dull at Rs. 9-14. Among other miscellaneous scrips, Bombay Burmahs (old) provided a feature with a jump from Rs. 734-6 to Rs. 758-12, on rumours about capital reconstruction, but profit-taking erased a part of the gain when they closed at Rs. 745-10. National Rayons, on buying by knowledgable sources, appreciated from Rs. 261 to Rs. 268, but closed at Rs. 265-12. B.I.Cs were done a rupee higher at Rs. 11-4. Tata Chemicals received some support and gained As. 14 to Rs. 20-4 on rumours about maiden dividend. Tata Oils were steady at Rs. 55-12. Wimcos advanced by Re. 1-4 to Rs. 181-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, *19th September*

Although the volume of business put through on the Calcutta Stock Exchange during the week under review was not such as to call for the comment that conditions were better, it should be said that the lower levels attracted buying support and a note of recovery resulted. Nevertheless, there was no desire on the part of operators to extend commitments, in view of the forthcoming *Puja* holidays. The deepening of the Suez Canal crisis, the announcement in London by the Far Eastern Conference lines of the immediate introduction of a 15 per cent. surcharge on all commodity freight rates for possible delays in the passage of ships through the Canal, and the Prime Minister's concern over the difficulties that would come in India's way in the country's import and export trade (on which hangs like a Damocles' sword the success of the second Plan) should hostilities result over the Canal issue, were all factors that operators and investors took into account. Naturally, these dampened their enthusiasm.

The Prime Minister's and the Finance Minister's confidence in the country's ability to see the second Plan through was noted, but any change in sentiment that would have followed Mr. T. T. Krishnamachari's declared preference to check the rise in prices by appeal to people to consume less rather than by the re-introduction of the much-hated rationing system was prevented by the Finance Minister's reminder to the commercial community that the uncovered gap (Rs. 850 crores) would have to be found through additional taxation. New Delhi's apparent inclination to increase indirect taxation to mop up additional purchasing power that would be released by the gathering tempo of the Plan, it was feared, would lead to lower purchases and lower consumption and consequently to a glut in supplies of manufactured goods.

Although bulls could have put to good use the continuance of good demand for jute goods and the possibility of better working results for mills during the current accounting period, no abnormal interest was in evidence for jute shares. The discouraging results announced for the Bird-Heilgers group of mills and the Macneill and Barry mills for the half-year ended March last cooled down sentiment for a time, although subsequently a pick-up in selected counters was recorded. New Centrals had slumped to Rs. 16-10 before recovering to Rs. 17, while Anglo-Indias were better at Rs. 193. Nationals were unchanged at Rs. 25-12, but Bally were shown interest at Rs. 160, as against Rs. 156 previously. From Rs. 242 Gourepores recovered to Rs. 248. Indias, at Rs. 145, were better by one point.

Sentiment in coal shares was far from lively and the strike in as many as 24 of the 26 collieries in the Raneegunj area over the recent Tribunal Award, which had accorded substantial additions to the wages of workers, drove away what little buying support there was. Equitables were unchanged at Rs. 30-6, Central Indias being quiet at Rs. 7-7. Burrakurs receded from Rs. 15-12 to Rs. 15-5. However, East Indias recovered to Rs. 32-14 from Rs. 32-5.

A mixed trend was recorded in the textiles section. Thus, while Dunbars were raised to Rs. 279 from Rs. 275, Kesorams sagged to Rs. 17-9 from Rs. 18-2. Elgin Mills were fractionally lower at Rs. 27-6, but Cawnpores were fractionally better at Rs. 8-15.

Among minings, Indian Coppers met with unsatisfied demand and rose to Rs. 7-1 from Rs. 6-13. Burma Mines were steady at Rs. 3-3, although business was also recorded at Rs. 3-1. In the Chemicals group, Alkali and Chemicals were for a time fractionally better at Rs. 23. Cement shares were held firm at around previous levels, Sone Valley changing hands at Rs. 8-13 and Asokas at Rs. 12-4.

In common with the general behaviour of the market, engineerings also recorded a recovery. Indian Irons recovered to Rs. 35-13 from Rs. 35-7, but profit-taking soon erased the recovery. A strong current raised Indian Standard Wagons to as high as Rs. 212 from Rs. 205, and another feature was the improvement in Jessops which, on interested buying, gained to quote Rs. 37-3 from Rs. 34-8; at each stage of the rise the gains were fully consolidated. On moderate support, Richardson & Cruddas forged ahead to Rs. 26-8 from Rs. 25-9. National Irons, at Rs. 8-10, maintained the improvement recorded last week. Hooghly Dockings were dealt with at the unchanged rate of Rs. 140.

Teas were quiet, as the higher output figure for the month of August caused fears of a glut in supplies of the inferior varieties of tea. From Rs. 23-13, Hansquas were marked down to Rs. 23-8, and, at Rs. 20-2, Brooke Bonds lost nearly a point.

Among miscellaneous industrials, India Steamships were a star feature. The price rose to quote a high of Rs. 10-8 from Rs. 9-12, and at Rs. 36-9 Indian Cables added one point. B.I. Corporations were also equally a strong feature and improved to Rs. 11-1 from Rs. 10-6. F. & C. Oslers met with interested support to raise the quotation to Rs. 11-14 from Rs. 10-13. Following labour troubles and a subsequent lock-out National Rollings were on offer at Rs. 11-6. Bengal Flour Mills were buoyant and the rate steadily rose to Rs. 38-4 from Rs. 30-3. National Carbons continued to be steady at Rs. 29-8 and Aluminium Corporations has business at the firm rate of Rs. 12-10.

* * * *

Madras Stock Exchange

MADRAS, *18th September*

For the third week in succession, the Madras Stock Exchange depicted a bearish trend. The textile section was particularly weak, thanks to continued selling pressure induced by fears of reduced profits, following reports that the mills would be forced to bear the incidence of increased excise duty themselves. Tea shares lacked support in the absence of any encouraging development. Sugar shares were neglected on reports of heavy unsold stocks of sugar with the mills. Buyers in the miscellaneous section were scarce and several counters suffered a setback. Rubber and coffee shares, however, proved an exception, in that they elicited good enquiries which lifted up the prices. The general undertone of the market was distinctly easy.

Three companies announced their dividends for the year ended March 1956 during the week. These are: (1) Mysore Tobacco Co., Ltd. 15 per cent. (as against 10 per cent. for the previous year; (2) Kurchermala Plantations Ltd. 6¼ per cent. (7½ per cent.); (3) General Papers Ltd. 6¼ per cent. (6¼ per cent.). The Panchura Estates Ltd. has announced a dividend of 30 per cent. for the year ended June 1956, as against 40 per cent. for the previous year. The Singareni Collieries Ltd. has declared a dividend of 7½ per cent. for 1955, as against 7 per cent. for 1954. The Coimbatore Kamala Mills Ltd. and the Mysore Spun Silk Mills Ltd. have again passed over dividends for 1955 and the year ended March 1956, respectively.

Offerings of textile shares were quite large, while buyers were not enthusiastic about entering into fresh commitments, so that values staged a retreat. Coimbatore Pioneers and Metturs dropped Rs. 5 each to Rs. 330 and Rs. 480, respectively. Rayalaseemas fell by Rs. 4 to Rs. 156. Radhakrishna 'B's climbed down by Rs. 3 to Rs. 177. Coimbatore Spinnings, Janardhanas, Pankajas and Rajalakshmis receded by Rs. 2 each to Rs. 111 *cum-div.*, Rs. 120, Rs. 92 and Rs. 185, respectively. Ranga Frenchs shed a like amount to Rs. 115. Vasantas lost a rupee to Rs. 340. A similar loss was suffered by Venkatesas which were done at Rs. 34. Ashers, however, met with special buying support and rallied Rs. 7 to Rs. 232. Kaleeswars were also well favoured Rs. 2-8 higher at Rs. 335. Despite the passing over of dividend, Coimbatore Cottons firmed up by Rs. 2-8 to Rs. 392-8.

In the planting section, tea shares gave way. Mlamallays were subjected to selling and fell by a rupee to Rs. 63. Emerald Valleys declined by As. 6 to Rs. 8-6. Nonsuch Teas went down by As. 5 to Rs. 28-7. Peermades receded by As. 4 to Rs. 35-8. Nilgiri Teas suffered a loss of As. 3 to Rs. 12-6 *cum-div.* Rubber shares, as already stated, evoked enquiries and registered an improvement in prices. Kalasas advanced by As. 8 to Rs. 16-12 *cum-div.* Cochin Malabars put on As. 5 to Rs. 12-5. Rajagiris hardened by As. 4 to Rs. 26-6. Vaikundams and Thamarapallys both rose by a like amount to Rs. 35 and Rs. 31-8, respectively. Among coffee shares, Coffee Lands received good support and spurted As. 10 to Rs. 27-4. Rajendras were better by As. 4 at Rs. 11-7. Amalgamateds were firm at Rs. 12-10.

Sugar shares were depressed. Kirlampudis shed a rupee to Rs. 42. Deccans declined by As. 10 to Rs. 12-2. Mysores receded by As. 4 to Rs. 46-12. Indias and Travancores eased by an anna each, the former to Rs. 16-15 and the latter to Rs. 14-5. E.I.D.'s, however, were somewhat favoured, their quotation rising from Rs. 31-2 to Rs. 31-8.

Among miscellaneous industrials, Rallis came in for heavy selling and were marked down by Re. 1-8 to Rs. 41-8. Aluminium Industries were neglected at Rs. 21-12 *cum-div.*, as against Rs. 22-8 *cum-div.* Mysore Chromes slipped by As. 5 to Rs. 5-5. Mysore Lamps suffered a loss of As. 4 to Rs. 15. India Steel Rollings eased by As. 2 to Rs. 15-2. Binnys, on the other hand, had buyers Rs. 3 higher at Rs. 190. Indian Aluminiums rose by As. 15 to Rs. 25-9. India Cements improved by As. 15 to Rs. 34-4, Singarenis by As. 8 to Rs. 11-4 *cum-div.* and Standard Motors by As. 4 to Rs. 11-10 *ex-right.*

NEWS IN BRIEF

EXPORTS of pepper from India during August was about 1,500 tons raising the total for the first eight months of 1956 to 14,000 tons which is higher than the figure reached in any of the previous five years.

Benefits amounting to Rs. 4.95 lakhs were paid to the industrial workers in Greater Bombay under the Employees State Insurance Scheme, during July last. This sum brings the total amount paid since the inception of the scheme in October 1954 to Rs. 67.95 lakhs.

India and Ceylon signed an agreement on 10th September for the avoidance of double taxation on income. Under the agreement, the income arising in one country will be taxed by the Government of that country and relief or exemption from tax on such income will be given by the country in which the recipient is resident. In the case of certain transactions where the income arises in both countries, profits will be taxed at an agreed proportion.

The second Madras State Co-operative Housing Conference held on 15th September adopted resolutions urging the Government to refix the ratio of share capital and the loan of the members of housing societies at 1 : 9, instead of 1 : 4 and to enhance the Government loan limit to Rs. 12,000, as against Rs. 10,000 prevailing at present. It also urged the Government to charge interest on loans to housing societies at the same rate at which the Government borrows.

Three Regional Food Laboratories are being established in the State of Madhya Pradesh during the second Five-year Plan period. These laboratories, which will be located at Jabalpur, Raipur and Amaravati, will do analysis of all articles of food for which standards of purity have been prescribed under the prevention of Food Adulteration Act. The Central Government will share 75 per cent. of the non-recurring expenditure and 50 per cent. of the recurring expenditure.

The Government of India has recently constituted a Family Planning Board for formulating proposals to popularise the family planning programmes, to carry out research in that line, and to consider other measures in that regard. A provision of Rs. 65 lakhs has been made by the Ministry of Health for programmes of research in family planning. A centre has been opened in the Indian Cancer Research Centre, Bombay, for the testing of simple economical contraceptives suited to our country. It is proposed to establish 300 family planning clinics—one each for a population of 50,000—in all big cities and major towns. In small towns and rural areas, about 1,800 clinics will be opened gradually in association with the primary health centres. The establishment of a central training and clinical institute and a rural training unit near Bangalore is also under consideration.

Following negotiations lasting for three months, representatives of the Silk and Art Silk Mills Association and the Mill Mazdoor Sabha—the representative workers' union of the silk textile industry in Bombay—have arrived at a settlement over the payment of bonus for the year 1955, 1956 and 1957. The three-year agreement provides for a minimum of ten days' basic wages as bonus for every worker in the silk textile industry, and has put a ceiling of three months' basic wages on the bonus to be paid to workers of profit-making mills. Under the terms of another agreement, even those mills whose disputes with their employees on the issue of bonus for 1954 are pending before the Conciliator will have to pay the workers bonus for that year equivalent to ten days' minimum of the basic wages drawn during the year and a maximum of three months' basic wages. Both the parties have agreed to appoint an umpire to whom any dispute relating to payment of bonus to workers will be referred.

From Abroad

Russia will give Indonesia aid amounting to $100 under an agreement signed on the 15th inst.

It is now estimated that there are about 35,000 prospective car buyers in Norway hoping to obtain a new car. Of these, about 25,000 have submitted requests for a licence to buy a new private car, and about 10,000 want a commercial vehicle.

According to Pakistani Ministry of Finance, Pakistan's balance of payments for the period January to June 1956 shows a surplus of Rs. 17.11 crores. Total receipts during the period were Rs. 110.99 crores and total payments amounted to Rs. 93.88 crores.

Anglo-Japanese talks for the conclusion of a new trade and payments agreement between Japan and Britain will open in London early next month. Japan had asked for the postponement of the talks until mid-October, but the British Government replied that it preferred an earlier date.

The Far Eastern Conference lines announced on 17th September the immediate introduction of a 15 per cent. surcharge on all commodity freight rates "because of the delays which will occur" in passing through the Suez Canal. The surcharge will be imposed on freighters from British and North Continental Ports.

The Norwegian shipowners, the firms of Peder Melsom and Wilh. Wilhelmsen, have ordered two 33,000-ton tankers to be delivered in 1960 and 1961. The hulls will be built at the Stord Wharf near Haugesund on the west coast of Norway, a new wharf which has been considerably extended since the war, and the engines will be built and installed at Akers Mek. Verksted, Oslo.

According to Pittsburgh Consolidated Coal Company, the laying of 110 miles of pipe for the first coal carrying pipeline in the U.S. has been completed. The line, scheduled to go into operation early next year, will deliver coal from the mines to the power station of the Cleveland Electric Illuminating Company at the rate of 150 tons per hour. Three pumping stations along the route will push a mixture of half fine coal and half water through the line.

The Barton (Manchester) factory of Platt Brothers, which is part of the Textile Machinery Makers group, is to be closed down by the end of the year. About 1,750 men are employed at the Barton works, which was taken over by Platt Brothers shortly after the war for the production of carding machines. The decision to close the plant was taken by the group's central joint production committee at a meeting last week. Production will be transferred to factories at Oldham, Accrington, and Bolton.

A contract to spray 50,000 acres of cotton in the Sudan has been awarded to a British aviation firm, Crop Culture (Aerial), by the Sudan Gezira Board. The Board is the body controlling the Sudan Republic's national cotton growing scheme and has pioneered the aerial application of chemicals to control cotton pests in the Sudan, where some of the world's highest quality cotton is grown. Crop Culture (Aerial) also has additional contracts for a further 18,000 acres from private cotton-growing organisations.

The Krupp-owned Weser shipyard has decided to go over to a five-day week as a result of the introduction of the 45-hour week in the whole engineering industry of Germany as from 1st October 1956, except in Bavaria where it will operate from 1st January 1957. This will be done in five nine-hour shifts. An agreement in principle has been reached between management and workers in the coal industry for reducing the working-time from 45 to 42 hours per week, by making every second Saturday a free day.

The U.S. Department of Agriculture has issued to India an authorisation to finance the purchase of $56,380,000 worth of American wheat or wheat flour. The wheat authorisation stems from the agreement signed between India and the United States on 29th August which provides for the sale for Indian currency of more than $300 million worth of U.S. agricultural commodities.

PERSONAL

DR. Aaro Pakaslathi has been appointed Envoy Extraordinary and Minister Plenipotentiary of Finland to India.

Mr. B. N. Kaul, Principal Private Secretary to the Prime Minister, has been appointed Ambassador of India to Belgium and concurrently India's Minister to Luxemburg.

Mr. N. M. Choksey, General Manager of the Bank of Baroda Ltd., left for the U.K. on a business tour of the U.K., the Continent and the Middle East, including the Sudan.

Mr. B. N. Chakravarty, at present Indian High Commissioner in Ceylon, will soon relinquish that post to take up office as Special Secretary in the Ministry of External Affairs.

Mr. E. Parker, who is the Bombay Director of Imperial Chemical Industries (India) Private Limited, has been elected Vice-President of the Bombay Chamber of Commerce and Industry. He will hold office until the next Annual General Meeting of the Chamber.

Mr. S. K. Dey, Administrator of Community Projects Administration, has been appointed Minister for Community Development, following the constitution of the Administration into a separate Ministry. He will hold the rank of a Cabinet Minister while not being a member of the Cabinet.

Dr. A. T. A. Learmonth, lecturer in geography at Liverpool University, will assist the Indian Statistical Institute, particularly in the Institute's geographical field surveys, required by the Government of India in connection with national planning. Dr. Learmonth's services have been availed of under the Technical Co-operation Scheme of the Colombo Plan.

Mr. B. Rama Rau, Governor of the Reserve Bank of India and leader of the Indian delegation to the meeting of the International Monetary Fund and the World Bank, has left for London *en route* to Washington. The other members of the delegation include Mr. B. K. Nehru, Joint Secretary, Union Finance Ministry, Mr. B. Venkatappiah, Deputy Governor of the Reserve Bank and Mr. P. P. Shrivastava.

'ENGLISH ELECTRIC'

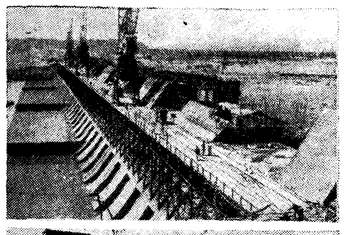
Plays a Vital Role in India's Development

The English Electric Company's plant plays an important part in the generation of electricity from water power in India. Francis reaction, impulse and vertical feathering-propeller water-turbines and alternators have been installed at many of the major Hydro-electric stations such as Bhira Power Station, Bombay, Mettur Power Station, Madras, Khatima Power Station, U. P. etc.

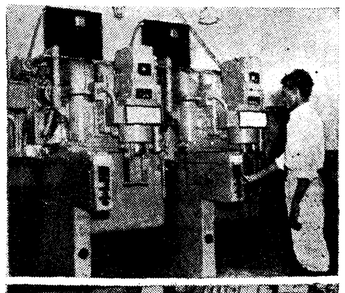
Many steam turbo-alternator sets have also been supplied for a wide variety of installations, including power stations, chemical works, textile mills, railways and collieries.

Several million KVA of transformers have been supplied for operation in India and all the recent substations of the Calcutta Electric Supply Corporation are equipped with 'English Electric' Units.

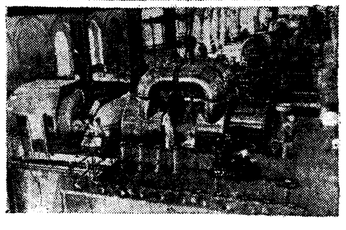
Eleven substations of the Bhakra-Nangal Grid are being completely equipped with 'English Electric' Transformers and associated switchgear.



HIRAKUD DAM PROJECT, ORISSA: For this Project the English Electric Company is supplying two generating units, each unit consisting of a 52,000 H.P. Vertical Shaft Feathering Propeller Turbine coupled to a 37,500 kW semi-umbrella type generator.



OIL REFINERY, TROMBAY, BOMBAY: All the transformers totalling over 20,000 KVA capacity together with the associated high and low tension switchgear were supplied by the English Electric Company to the Standard-Vacuum Refinery at Trombay. The illustration shows two of the 5-panels 22 kV 500 MVA Switchgear installed at the Refinery.



RIVERSIDE POWER HOUSE, KANPUR: 'English Electric' Steam Turbo-Alternator Sets are installed at this Power House. The associated Transformers and Switchgear are also supplied by 'English Electric'.

THE ENGLISH ELECTRIC COMPANY LIMITED

(Incorporated in England. Liability of Members Limited.)

BUSINESS CYCLES AND U.S. ECONOMY

THE view that the development of improved monetary policy, which had taken place in the U.S. today, made a repetition of the "great depression" of 'thirties unlikely, though fluctuations in the nation's economy might continue, was expressed by Prof. McCracken, Michigan University's chief expert on business conditions, in the course of an address delivered about two weeks ago before the American Statistical Association. There is, as the economic history of the free world since the last great depression testifies, much force in this view. Great success has rightly been claimed for the automatic stabilisers in the monetary world which are largely based on the "unorthodox" concepts of Keynes and other economists of his school of thought. But the need remains for newer and ever newer "stabilisers" to control the fluctuation in the modern economies which are characterised by their dynamism and ever-growing complexities. For, as the learned Professor pointed out, the introduction of automatic stabilisers in the economy had not removed the human element in fluctuations. It is this element, characterised by a behaviour conforming to a pattern of "conditioned reflexes," that sets at naught all prior calculations and the efficacy of the stabilisers. Unless methods are evolved to control the human element, built-in stabilisers alone will not be sufficient to bring about or safeguard the stability of the economy. There is, thus, a growing necessity not only for fuller and timely use of the automatic stabilisers but also for going beyond them, if economic stability is to be ensured in the era of automation and "atomism." Another limitation to reliance on automatic features of fiscal operations, as the erudite Professor has pointed out, is that, beyond a certain point, "what is done to make fiscal policy more automatically effective is inconsistent with what should, be done to foster and encourage economic growth."

In this connection, Mr. McCracken said that there was no escape from substantial reliance on changes in private and Government policy which required specific *ad hoc* decisions which would have an important bearing on the national economy. He further added: "It is because we cannot rely entirely on automatic stabilisers that discretionary decisions and actions must remain an important part of any stabilisation programme." The present tight monetary policy of the Federal Reserve Board, according to Mr. McCracken, kept the steel prices more moderate than they might have been. But he warned that if credit remained too tight for too long a business recession and unemployment might result. At the same time, he recognised that a passive policy by the Board in applying credit restraint now would encourage further inflation. The steel strike and the wage increase that followed it have already led to price increases. Prices of steel were increased by 6.25 per cent. A number of industries has also announced increases in the prices of their products. The General Electric Company, for instance, increased factory prices by two to six per cent. on five of its television set models. Other allied industries such as R.C.A., Emerson and Philco have already marked up their prices. Other industries, which have effected price increases for their products include those manufacturing refrigerators, wringer washers, laundry appliances, cement, liquid chlorine, industrial rubber, chemicals and dyes. As a columnist in the *New York Times* put it, the upward price surge has swept across the economy as a whole and is affecting commodities and products of every type. What, however, is of grave concern is the admission by the officials that the end of the rise is not in sight. Moreover, a slow erosion of the value of dollar has been taking place. While the dollar lost a third of its value between 1929 and 1956, in the year to date, alone, it is said to have lost 3 per cent.

The spiral is thus gaining momentum despite the fact that the Federal Reserve Board has increased its discount rate to the highest level since 1933, and the banks have lifted their rates to near-record highs. It remains to be seen how far the automatic stabilisers to which Prof. McCracken referred, can succeed in arresting inflation. One school of thought is said to be optimistic about the efficacy of the monetary measures. Another school, however, is reported to hold a contrary view. This school holds that, because of high taxes, the Government itself pays "a little more than half the interest charge, and a 6 per cent. rate really costs a business man only 3 per cent." Moreover, if borrowed money is to become so expensive that it might by itself slow down inflation, this school says, the "prime rate would have to go up to 12 per cent. or higher." But such a development is unthinkable in the U.S.

The question of inflation in the U.S. needs special examination, for an inflationary spiral in that country may well set in motion similar spirals round the world. In this connection, the factors listed by Prof. McCracken as contributing to economic stability deserve attention. He called for a better execution of credit and fiscal policy, better budgeting by business, and confidence in the growth of the economy—all contributing to a more stable pattern of capital outlay. Again, he stressed the need for curbing consumption. He also suggested increased market research by private business, tending to reduce waste of productive resources. Finally, he emphasised the organisation of a comprehensive scheme of statistical and economic intelligence which could show weak spots in business before they reach crisis proportions.

URBANISATION IN ASIA

The deliberations of the United Nations Seminar on Urbanisation in Asia held at Bangkok recently serve to indicate clearly the magnitude of the problem of population drift from villages to towns. Urbanisation—the increase in the number of towns and the density of urban population—is fairly widespread in nearly all the countries of Asia. Since the second World War, it has been so rapid that it is said to have outpaced the rate of economic development; this has caused a considerable degree of what is called "over-urbanisation," which, in turn, has brought with it a multitude of social and physical problems. The symptoms of the malady caused by over-urbanisation are inadequate housing, the almost complete absence of mass sanitary facilities, and presence of filth, squalor, repugnant odours, disease and high mortality. It is, however, not so much these symptoms as the fact that the drift of population from villages to towns will increase on an unprecedented scale as industrialisation gathers momentum. This drift invests the Governments of Asian countries with a special responsibility for taking energetic steps to ameliorate the conditions of social and economic hardship resulting from urbanisation.

The data on urbanisation in Asia furnished at the Bangkok Seminar reveal that the number of large cities and the size of city population in Asia is greater than either in Europe or North America. Although the process of urbanisation began much later in Asia than in Europe, it is noteworthy that the number of cities with 100,000 or more inhabitants in Asia is 289, as against 116 in North America and 261 in Europe. Of the world's city dwellers, one-third live in Asia, one-fourth in Europe and one-seventh in North America. The proportion of city dwellers to total population is, however, smaller in Asia than in any other Continent, except Africa. Thus, while in the world as a whole, 21 per cent. of the population resides in cities of 20,000 persons or more, the percentage figure for Asia is only 15, as against 21 in Central America and the Caribbean area, 26 in South America, 31 in the U.S.S.R., 35 in Europe (excluding the U.S.S.R.), 42 in North America and 47 in Oceania. The exodus of population from villages to cities in the West has been due largely to industrialisation and attractions of cities, whereas, in Asia, the exodus has been caused mainly by overcrowding of country-sides, low living standards in villages, and sometimes conditions of physical insecurity (wars, civil disturbances, political partition and refugee movements).

In drawing attention to the problem of urbanisation, the U.N. Seminar at Bangkok did not, however, overlook the consideration that the growth of population in urban and industrial centres is inevitable, because it goes hand in hand with economic development. On the contrary, the Seminar fully recognised it, as witness its following remarks:

"If Governments are bent on economic development, as they are, they must also be prepared to face the consequences and attempt to mitigate the effects resulting from an increased flow of village populations into towns. Urbanisation produces a new way of life. As traditional patterns of belief and behaviour tend to be broken down, the accelerated social change is usually accompanied by social disorganisation. But it is also followed by advances in culture and civilisation."

There is considerable force in the aforesaid observations. The participants of the Seminar—mostly social scientists, economists and administrators from 15 countries and various non-Governmental organisations—did well to recommend international co-ordination of research in urbanisation and to urge the establishment of a world financial agency, such as the S.U.N.F.E.D., for providing long-term loans to tackle the problems of urbanisation. Special stress was laid on proposals for dissemination of accurate information about urban living and working conditions among villagers, expansion of vocational training, extension of employment services, and provision of better and more ample housing. The last-mentioned item is of utmost importance, considering that housing situation in the countries of Asia is worse than anywhere else in the world. It is true that the Governments are assuming increasing responsibility for the planning and execution of housing and community improvement programmes. But much more remains to be done in this sphere. Incidentally, housing is, as the Bangkok Seminar rightly stated, only another aspect of the problem of saving and investment, for it is the ambition of almost every individual to own a house. From this point of view, fiscal and other incentives, apart from increasing the supply of housing materials, have a definite role to play in any scheme designed to solve the housing problem in cities.

EXPORT TRADE

There is no exaggeration whatever in the claim made by Mr. Purshottamdas R. Ashar, President of the All-India Exporters' Association, at the six-monthly meeting of the Association held in Bombay on Wednesday last, that the private sector can handle the country's export business much more efficiently than any Governmental agency can ever do. This statement requires to be specially emphasised in the present context of the direct incursion of this State into the trading activity through the State Trading Corporation, with its scope extending, besides the trade with communist countries, to exports of such items as iron and manganese ores which are mostly with non-communist countries. The experience of State trading during the war years is none-too-encouraging and the Government's decision to revert to it now only tantamounts to partial nationalisation of the trading function of the business community which forms a vital link in the nation's economic chain. If, therefore, the Government does not restrict the activities of the Corporation to certain well-defined spheres only and leave the rest of the field free for the private sector to operate, the whole commercial fabric of our society will, as Mr. Ashar aptly pointed out, be upset and some 15,000-20,000 export-import business houses operating in the country will be dislocated.

After all, where is the need for the State to rush in to do export business? Is the existing trade mechanism inadequate for the job? The posers were impressively answered by Mr. Ashar. He said: "In spite of the various handicaps, the private sector in the export trade has given a very good account of itself. The exporters of their own accord have explored new fields and new countries, and, thanks to their pioneering efforts, various Indian goods and products find their place in the world markets today."

The Exporters' Association President drew particular attention to the disquieting situation on the cotton textile export front and averred that "our first and foremost problem today is to prevent the dwindling exports." Otherwise, he warned, there would be a further setback to foreign exchange earnings which would adversely affect the task of national reconstruction. In the considered opinion of Mr. Ashar, the solution is production and more production through all the channels available. He rightly said that the production must be increased "to keep pace with the increased demand at home and to maintain the export markets." He approvingly quoted the Prime Minister who has said that "it is a wrong policy to prevent mills from producing more, just to help handloom industry" and that, "when the whole world is following the most efficient and up-to-date techniques of production, India cannot lag behind." The result of restricting mill production is creation of a shortage of cloth for domestic consumption as well as for export purposes.

Mr. Ashar was afraid that the increase in excise duty would ultimately pass on to the voiceless consumer. He, therefore, called for quick "remedial and equitable measures." One such measure would, in his view, be to permit more mills to start third shift, with the condition that the extra production should be reserved for export only. According to our information, however, the scope for third-shift working is greatly limited, owing to the fact that the plant and machinery of a large number of mills are so old that they cannot stand the extra strain involved. Indeed, the trading conditions in the cloth market for the past several months have been so attractive that many mills have already taken to third-shift working of their own accord. If, despite these conditions, others have not resorted to third-shift, it must be because they are unable to do so. In these circumstances, the additional condition, namely, "for export only," will not work. On the contrary, it will create fresh problems.

AUSTRALIA'S IMPORT POLICY

Since the imposition of restrictions on imports by the Australian Government in 1952, India's exports to this country have been at a low ebb. The aggregate value of goods and commodities shipped from India to Australia during 1955-56 was Rs. 24.81 crores, as against Rs. 46.63 crores in 1951-52, representing a drop of as much as 47 per cent. India is not the only country adversely affected by the Australia's restrictive import policy; several others are also said to have been similarly affected. Evidence of this is provided by the statement of the Australian Tariff Board—made in the latest annual report—that the intensification of import restriction is gradually stripping Australia of its prestige as a stable member of a group of countries to which freedom of international trade is important. The Board has refuted the idea that the nation should make itself less dependent on imports. For, in its opinion, Australia depends so much on exports that there has to be full recognition of the damage to export possibilities from the continued restriction on imports. Further, restrictions on imports create conditions which lead to inflation.

According to the Australian Tariff Board, two main tasks of major importance are now facing the country—(1) to arrest inflation and (2) to reach a position of international credit in fact, as also in principle. The Board does not find any sign yet of stability in economic foundations on which it may be possible—using long-term plans —to construct national solvency. It feels that the anti-inflationary measures taken by the Commonwealth Government have still to produce results. In this connection, the Board has put forward three specific measures for tackling inflation. First, there must be a national productivity drive, similar to the campaign that has been proceeding in the U.K. for the past eight years. Secondly, the pay-roll tax levied right at the base of the cost structure must be removed. Thirdly, generous depreciation allowances should be given to the domestic industries, with a view to enabling the latter to compete more effectively with their overseas confreres.

PAPER INDUSTRY

In a country of India's size and low percentage of literacy, there is certainly a vast scope for development of the paper industry. Recent trends in the industry show that production has continuously expanded. During the period of the first Plan, the output of paper and paper boards increased from 114,000 tons in 1950-51 to some 187,000 tons in 1955-56, though it was slightly below the target of 200,000 tons fixed in the Plan. Newsprint is now being produced by only one unit, the Nepa Mills. But its capacity at 30,000 tons—actual production in 1955-56 was far less, about 4,200 tons—is a fraction of the current demand estimated at about 75,000 tons. Installed capacity for strawboards and other boards is estimated at 59,380 tons and is well above the target of 52,600 tons set in the first Plan. Production, however, is now running at an annual rate of only 30,000 tons, thanks to absence of any significant increase in demand for strawboards. For paper and paper board, newsprint and strawboard, the second Plan envisages targets of 450,000 tons, 60,000 tons and 59,300 tons in terms of annual rated capacity and 350,000 tons, 60,000 tons and 35,000-40,000 tons in terms of production, respectively.

It will be seen from the data relating to targets that it is in respect of the paper and paper board section of the industry that the Planning Commission visualises a very large increase in production. The output of paper and paper board is thus to be raised from the present 187,000 tons to 350,000 tons by 1960-61. This would require a sizable increase in the supply of raw materials and in transport capacity for carrying raw materials and stores to centres of production and finished product to the consuming centres. Small wonder, then, that Mr. Gangaprasad Birla, President of the Indian Paper Mills Association, Calcutta, thought it fit to emphasise, in the course of his speech at the annual meeting of the Association, held this week, the importance of augmenting the supply of raw materials for the industry and search for alternative raw materials. Mr. Birla complained that "no significant headway seems to have been made in the direction of ensuring a continuous supply of raw materials at reasonable rates. He also stressed the need for pursuing research in the utilisation of alternative raw materials for the paper industry. In this connection, he hoped that the Government would facilitate the larger utilisation of bagasse for the manufacture of newsprint and paper.

Realising the importance of examining the raw material aspect of the paper industry, the Government has already set up a committee of officials to advise it on the preparation of a basic plan for the expansion of the industry from the point of view of raw material supply. This committee, it is stated, will suggest measures designed to stimulate the cultivation of fast-growing species of timber, such as eucalyptus, wattle, and paper-mulbery and of reeds like *eta* and *arundonex*. While welcoming the appointment of this Committee, Mr. Birla deplored that no representation had been given to the industry on it. If it is not too late for the Government to alter its plans, it will perhaps do well to accept Mr. Birla's suggestion so that the industry will have an opportunity to make available to the Committee its views on the raw material problems. After all, the industry knows where the raw material shoe pinches it most.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN,
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.
Head Office:
38, BISHOPSGATE, LONDON, E.C. 2.
Branch: 28 Charles II St., Haymarket, London S.W.1.
Manchester Branch: 52 Mosley Street,
Liverpool Branch: 27, Derby House, Exchange Buildings, Liverpool, 2.
Hamburg Agency: Borsenbrucke 2A Hamburg II.
New York Agency: 65 Broadway, New York, 6.
Bombay Branch:
23-25, Mahatma Gandhi Road, Bombay 1. W. MACKAY, Manager.

Dressed for the occasion
Each occasion demands a different and appropriate dress. Similarly, each particular painting 'job' should have a specialised and suitable paint. I.C.I., over many years, have developed specialised paints for specialised purposes—all Supreme Paints!
Manufactured by:
THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.
Sole Selling Agents:
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.
ICI
Calcutta, Bombay, Madras, Kanpur, New Delhi.
IXG-423
Duco
the car finish used by 9 out of 10 car manufacturers. Give your car complete 'Duco' protection by using the full 'Duco' refinishing system.
Dulux
the synthetic enamel with a world-wide reputation for outstanding durability. Used on all forms of transport; for decorative purposes, too.
Necol
a range of specialised products suitable for a wide variety of industrial uses; a product for every purpose.
Brushing Duco
the 'brushing' version of the famous 'Duco' finish. Used in and around the house for decorating and in the workshop for minor repair jobs.

WINDOW DRESSING FOR ELECTIONS?

RE-ARRANGEMENT OF PRIORITIES IN THE PLAN LIKELY

From A Special Correspondent

NEW DELHI, 18*th September*

DELHI LETTER

WITH the general elections drawing closer day by day, certain Ministries of the Government of India are trying to boost up their achievements and their plans for the purpose of convincing the general public with a creditable record in their office. A perceptible impact of this sort of development has already been felt in the course of the last few weeks, even in the proceedings of Parliament. Ministers of the Cabinet entrusted with developmental work particularly, have been trying to expand the targets in regard to the implementation of the Five-year Plan. For instance, the new Finance Minister, Mr. T. T. Krishnamachari, has already hinted that the total expenditure in the second Five-year Plan would not be restricted to the limit of Rs. 4,800 crores and that it would come very near to Rs. 5,600 crores as was originally contemplated in the Plan-frame. In the course of his speeches recently in Parliament, he pointed out that the target figure in regard to the steel plants would have to be increased further by about Rs. 60 crores on account of various modifications in the proposed plants and also as a result of the unforeseen rise in the prices of plant and machinery.

Another new item of expenditure which he proposed was about building up of the machine plant industry which would cost about Rs. 100 crores. Besides, he also visualised an extra expenditure of another Rs. 40 crores in respect of the petroleum industry and another Rs. 30 to Rs. 40 crores for the purpose of atomic energy development. In other words, for the said purposes alone the Finance Minister has visualised an extra expenditure of about Rs. 250 crores over the targeted figure.

This tendency was in evidence even during the first Plan period itself. It would be remembered that when the first Plan was finally framed, the total financial outlay was put at about Rs. 1,800 crores. Thereafter, this targeted expenditure was gradually raised to about Rs. 2,300 crores. Now that the total expenditure in the first Plan is calculated at about Rs. 2,000 crores, the achievement of the first Plan must be considered greater than originally conceived. There has been a rise of nearly 14 per cent. from the originally targeted expenditure of about Rs. 1,800 crores.

Bigger Expenditure

Similarly, the same tendency is now growing in other sections also. And the Ministers concerned are trying to speak in terms of bigger expenditure. This feeling is evident from the recent speeches made by at least two other Ministers in charge of developmental activities. The other day, Mr. M. M. Shah, Minister for Heavy Industries speaking about the development of heavy chemical industries chalked out certain ambitious targets and said that he would like to expand the targets laid down for this purpose in the second Plan. With a view to achieving self-sufficiency in most of the basic chemicals by the end of the second Plan period, Mr. Shah said: "We hope that, with the co-operation of the industries, the Government and the consuming public, we will be able to outstrip all these targets, if possible within the first two or three years of the Plan, in most cases. Heavy chemical and engineering industries are the key to the industrialisation of the country." He also enumerated some of the targets of production fixed in respect of ammonium sulphate, superphosphate, sulphuric acid, soda ash, caustic soda, ammonium chloride, D.D.T., calcium carbide, sodium bicarbonate and several other basic chemicals. His point was that, in any backward economy, "the emphasis has rightly to be placed on industries, particularly heavy engineering industries, heavy chemical industries, on manufacture of capital goods, manufacture of industrial raw materials and on products essential for the manufacture of consumer goods."

Mr. K. C. Reddy, Production Minister, too, has not been found lacking in this respect of enhancing his programmes of developmental projects. There has been a feeling that the achievements of the Production Ministry have not been very spectacular, despite the fact that the Sindri Fertiliser Factory has been pronounced to be a signal success, particularly from the Government's point of view. It is, perhaps with a view to dispelling some of these misgivings entertained by a section of the public that Mr. Reddy came out with a press conference on Saturday last, pointing out the basic requirements of the country in respect of fertilisers, coal, machine tools, shipbuilding, heavy electrical industry, etc.

Fertilisers

In regard to fertilisers, he stated that the targets laid down in the second Plan have to be substantially increased if India were to forge ahead with its plan of increasing the internal foodgrains output by 30 to 40 per cent. He, therefore, urged that two more additional fertiliser plants over and above the three proposed in the second Plan might be necessary to meet the country's requirements of nitrogenous fertilisers. Of late, India is annually importing about 200,000 tons of nitrogenous fertilisers, the cost of which was much more than that produced in the country. He also detailed how the Nangal Fertiliser Factory would produce 200,000 tons of nitrogenous fertilisers per year, particularly ammonium nitrate, and how the Sindri Factory's present capacity would be raised by 60 per cent.; and how the factory proposed to be set up at Rourkela would produce 80,000 tons of nitrogenous fertilisers.

He also pointed out that, with an additional capital cost of about Rs. 5 lakhs, the output of the Hindustan Machine Tools, Bangalore, would be stepped up two and a half times—from 400 to 1,000 lathes or diversified equivalent machine tools per annum, the factory working three shifts instead of two to achieve this target.

Shipbuilding

In respect of shipbuilding, Mr. Reddy said that the second shipbuilding yard might be set up in the country in the next two or three years and a nucleus of 500 to 600 technical personnel required for the purpose would be trained in the Hindustan Shipyard. Negotiations were also afoot, he said, with a foreign firm of technical consultants for the manufacture of marine diesel engines in the country. He was also hopeful of the building of a dry dock at Visakhapatnam which would save the country a lot of expenditure now being incurred on sending ships to Calcutta or Colombo for dry docking which roughly works out to Rs. 40,000 per ship.

The Government is also working on a scheme to equalise freight incidence on coal and salt, with a view to making these two commodities available all over the country at more or less uniform prices. This scheme might require a subsidy to consumers in far off regions and the Government is already thinking in terms of collecting this amount by way of a surcharge on nearby consumers. Although it would not be possible to have a complete or perfect equalisation, the Government's decision on this matter is almost imminent. The Railways, the largest consumers of coal, would not be much affected by the equalisation, because what they would lose in some places would be made up in others. In the case of other consumers like the Sindri Fertiliser Factory, because the industry is not spread out, equalisation in coal freight would make an appreciable difference, with the result that the cost of fertilisers might go up, meaning a higher price for the agriculturist in respect of his fertiliser requirements.

From the foregoing it will be seen that Ministers at the Centre do not seem to think with any sense of finality about the plan. Their idea still appears to be to change things according to circumstances and conveniences and not to follow a particular pattern.

T. T. K. on the Plan

Some of the statements of the Finance Minister in the recent debate on the second Five-year Plan in Parliament, if read between the lines, would indicate the policy which the Government is likely to follow in the coming months. The Finance Minister stated, for instance, that the main task in implementing the plan as a whole was to reduce to the minimum non-developmental outlays, cut down expenditures in certain others for the purpose of raising resources required and in general increase the effectiveness of the large investments that were being made both in the public and the private sectors so as to increase the output all along the line. In another context, the Finance Minister stated that "there should be regulation on the rate of increase in consumption, primarily, and restriction, incidentally, for short periods as a compromise which we seek to achieve, having regard to the needs of consumption, availability of capital, cost of building up necessary transport facilities and possibilities of acquiring and multiplying the know-how required. The essence of progress is increase in production and increased productivity per unit of resources."

Generally, therefore, it appears that the idea of the Government is to concentrate on the development of such industries and such projects as would fructify during the period of the second Plan itself and to augment the resources of the Government as far as practicable. At the same time, it is indicated in the Prime Minister's speech that Government would like to take up such industries as would conserve exchange resources. It is likely, therefore, that the Russian report regarding the establishment of machine-building industries would be given a very high priority in the coming months, so as to enable the Government to manufacture as much machinery as practicable in the country itself. In other words, the Government is anxious that, as soon as higher production of steel becomes possible from the newly established Government steel factories as well as from the private industries, the country should be in a position to absorb without difficulty the higher steel output. In order to achieve this, the Government would be taking all steps possible in this regard.

Mr. Nehru's Regret

The Prime Minister also regretted in the course of his speech that the Government did not give sufficient attention during the first Plan period and even before it to the development of the steel industry in the private sector. In other words, he implied that the Government now feels that, if Tatas and Indian Iron and Steel industry had been given proper encouragement towards development after 1947 or 1948, many of the problems which were facing the Government now, would not have been felt. The Government does not like to commit the same mistake, once again, and therefore it is anxious that the country should build up many of the important machine building industries which would lessen India's dependence on foreign countries.

From the Finance Minister's speech another thing that is evident is this: that there would be a shift in the emphasis of Government's policy in regard to priorities of development. Now that the Government is thinking of devoting greater attention on the development of essential industries, it is not likely to pay as much attention and care for the development or expansion of social services in the coming years as it as planned to do. Although the Government has stated that it would be providing loans for building houses, particularly for the low income group in a number of cities, it is likely to slow down this expenditure in the coming months by various devices. In view of the shortage of steel and cement in the country, the Government is not anxious that this sector should also compete with it in the available quantity of steel and cement. Similarly, the educational side of expenditure outlined in the Plan might also receive a short shift as had been the case in the first Plan. Many of the country's health schemes might also in a like manner be relegated to the background comparatively.

Side by side, the Government will be giving considerable encouragement to some of the consumer industries in the private sector. There is already a talk in Government circles that the target of production in regard to cotton textiles was grossly underestimated and that every effort should be made to increase the output of cloth by another 1,000 million yards or so. In this, it is the mill industry which will have the lion's share, inasmuch as it is the only industry that is capable of giving concrete results as quickly as possible. Similarly, it is possible that many other consumer industries such as bicycles, sewing machines, electric fans, etc., will all receive further inducement from the Government in order to augment their output, so that higher production would enable the Government to fight inflationary tendencies in the country.

EXCISE DUTIES AND TEXTILE POLICY

URGENT NEED FOR RE-THINKING

By An Economist

THE passage of the textile excise duties bill through Parliament last week marks only the first in a series of evil consequences that are likely to flow from the so-called Common Production Programme in the field of cotton textiles. The new Finance Minister, who, in piloting his first money bill through Parliament, met with strong criticism even from his own party men was, in real sense, made the scapegoat of the ill-conceived and untenable textile policy of the Government of India which has given rise to difficult situation and an unpalatable solution. The Finance Minister's bill was by itself the best remedy in a bad situation. But the fundamental point remains that since the forces which have made the situation bad will continue to operate and gather momentum, an increasingly serious shape of things will emerge in future, calling for even more drastic remedies than the present measure. When that is so, even the best conceivable solution must prove only a temporary palliative. The real cure lies in finding out an alternative to the present textile policy which, while bringing about a better balance between demand and supply, would be consistent with the need for providing larger employment opportunities in the textile industry as a whole.

The raising of excise duties, in a situation characterised by high demand pressures against inadequate supply, is like a tactical retreat on the battlefield, whereby an army, instead of falling swiftly before the advancing enemy, voluntarily withdraws in order to build up a strong defence line. The excise duties are only to slow down the onslaught of inflation till the defences in the form of improved supplies are ready. But, if the present textile policy continues to be there as a hindrance to the expansion of supplies, then the excise duties only serve the purpose of an 'orderly withdrawal' and cannot bring the advance of inflation to an end.

The policy of raising excise duties on mill cloth was recommended by the Karve Committee on Small Industries. The philosophy behind their suggestion was that, since the policy of non-expansion in the mill sector would lead to restriction of competition and larger profits accruing to the existing units, additional excise duties should be levied on mill production to net in a part of these extra profits. If that were to be the sole purpose of raising excise duties, a better solution would have been, as was pointed out by some in Parliament during the discussion on the bill, the levy of a high excess profits tax. But the more significant function of the excise duties is to slow down the pace of inflation in the textile economy. Excess profits tax cannot be a substitute for the excise duties, when the object is partial containment of the rising price spiral.

Russian Experiment

The method of raising excise duties in consequence or anticipation of a rise in prices is a time-honoured device, which was used for the first time in, probably, Soviet Russia about two decades ago. To meet a situation of shortage of consumer goods in a period of high-pitched development, they had taken to rationing. Since rationing gave rise to what later went by the name of black-marketing and various forms of corruption, a sort of strong repressed inflation became prevalent. This repressed inflation was considered to be worse in many ways than the open inflation which rationing had intended to check. The evil produced by rationing was considered to be worse than the evil rationing tried to combat. That was one of the reasons which led the Soviet authorities to abolish rationing and instead to maintain a balance between demand and supply by making necessary changes in the rates of commodity taxation. Those in India who suggest that Government should resort to price and distribution should realise that this is not going to solve the problem of shortage. It created new problems, even in a regimented economy like that of Russia.

The claim that by raising excise duties inflation can at least partly be held at bay looks, on a superficial examination, ridiculous to many. We are familiar with alteration of tariff duties as a device of insulating internal market against foreign influences and giving stability to the domestic level of prices. But excise duties have never been used in India with the specific purpose of containing internal inflation. The common man knows that, when duties are raised, the whole array of prices goes up. In this sense, increase in excise duties is associated with price inflation. To make a claim that these duties check inflation appears, *prima facie*, a travesty of truth. But actually this is not so.

Trade Demand and Consumer Demand

It is common knowledge that prices in the modern economic world are formed not so much by the consumer demand and the producer's supply but by the expectations of the intermediary merchants and dealers. Inflationary anticipations of the huge development expenditure under the second Plan based on a large share of deficit financing, coupled with the Government policy to freeze mill production at the present level of production, are enough to generate a strong expectation among the mercantile community that the next few years are going to be a period of continuously rising textile prices. The handsome profits envisaged in such a situation induce the existing dealers to hold larger inventories of stocks, and also new dealers are attracted towards the textile trade. The result is that the trade demand gets greatly inflated. The greater the unanimity of opinion in the market about the future rise in prices, the greater is the increase in the trade demand.

In a situation that confronts the textile market now, the increase in trade demand appears to be more important than the increase in consumer demand. Since the increase in trade demand is born of profit expectations, any fiscal measure aimed at reducing the possibility of profits of trade is bound to check the increase in inventory demand and thus succeed in the partial containment of inflationary tendencies. If direct controls on prices and distribution are ruled out, there is no way of moderating the trade profits, except by increasing the excise duties *in anticipation of* a rise in prices. Rise in prices is inevitable, given the present textile policy. But when the rise in prices is Government-sponsored, resulting in additional revenue to Government instead of additional profits for the trade, there is restriction of not only the consumer demand but also the trader demand for larger inventory stocks. When, on the other hand, the rise in prices is not Government-sponsored but trade-manipulated, there is restriction of consumer demand but at the same time expansion of trade demand. Thus, the Government-sponsored inflation is a restraint on further inflation; the trade-manipulated inflation lays the seed for further inflation, and ultimately results in 'runaway' inflation.

This 'controlled' inflation that results from higher excise duties, although hitting hard the poorer sections of the population, does not otherwise impede in any serious manner the growth of the economy. But the free or runaway inflation apart from inflicting much larger suffering on the people, threatens to throw the economy out of gear.

Another Advantage

Another way in which the levy of higher excise duties in a situation of high pressure on limited supplies reduces the intensity of inflation is through the reduction of money supply with the public. By substituting Government revenues for trade profits, these duties reduce the money in circulation among the public, and curtail the ability of the traders to increase their working stocks.

The effect of excise duties through this route is, however, not likely to be significant. When the offtake of mill cloth by consumer is increasingly brisk and supply is frozen at the existing level of production, the rise in traders' inventories takes the form of not physical stocks but more forward contracts with the mills. Therefore, those in Parliament who suggested that control on bank credit to cloth dealers would have a wholesome effect would realise that this measure is not going to be of much avail. Moreover, restriction of bank credit would mean that these dealers would try to meet their financial requirements from the public against inducement of a higher rate of interest two or three times that offered by the Government. This would affect the borrowing programme of the Government. The basic factor is that the profit possibilities of the traders should be reduced. This can be done only by the levy of anticipatory excise duties. When the profits of traders are reduced, the profits of the millowners are automatically reduced, because producers derive their profits from the traders.

Stimulus to Exports

Excise duties have also the advantage of keeping up the stimulus to export trade. The high profitability of internal trade has of late served as a disincentive to export and has jeopardised the foreign trade in cotton textiles. The reduced profitability that will follow higher excise duties will help in restoring the high tempo of textile export drive.

Thus, on an overall view, excise duties appear to be the best weapon for tackling a situation of high demand and inadequate supplies. Price and distribution control, excess profits tax, selective credit control are all inferior recipes. They are either ineffective, or lead to problems of their own. Even the excise duties, which are the best remedy, can only mitigate the evil; they do not eliminate the evil. In the face of these difficulties of finding a satisfactory solution to the problem created by the present textile policy, one is driven to re-examine the justification for that policy itself.

It has been consistently pointed out, ever since the Kanungo Committee made its report, that the freezing of mill production, which commands the first preference of the consumers, and leaving the entire new demand to be met by the handloom cloth, which is only the second choice and often not even that, would make mill cloth a highly scarce product in relation to the demand for it. The Government has not paid heed to this logic till now. Even now that the first manifestations of this scarcity have appeared, the Government is trying to remedy the situation by the palliative of the anticipatory excise duties. Like a pigeon, who on sight of a cat closes his eyes and exposes itself to the cat's attack, Government is not facing the realities and has exposed the economy to the onslaught of inflation in a sphere which represents the most vital necessity of life next only to food.

Veritable Famine Ahead

It can easily be foreseen that, if the "common production programme" continues in its present form in the next five years, there will be a veritable famine of mill cloth. It will be sold well ahead of being produced; people would wait for next arrivals of mill cloth but would not go in for the handloom cloth. Although cloth is a necessity, yet it is bought not merely with the object of covering one's body but for gaining distinction among fellow beings. For that reason, mill produce, by virtue of better quality, appearance and finish, will always be the coveted cloth of the people, in spite of a substantial price disadvantage as compared with the handloom cloth.

Apart from the quality factor, the very knowledge that mill cloth is scarce has the psychological effect of creating a strong bias in favour of it. The incidence of higher income levels of the people is likely to fall largely on mill cloth. If in the face of this, the production of mill cloth for internal consumption remains frozen, it is not difficult to see that, in a period of five years, the Finance Minister may be called upon to increase excise duties at least half a dozen times. Thus, excise duties, which appear to be the best of all available solutions, and promise to cope with the situation in the short-run, may not prove a satisfactory answer to the problem on a more extended view of things.

Inflation of cloth prices, even though of the controlled type in the sense explained above, will force the Government to curtail its expenditure on heavy and basic industry and also on some employment-giving projects. That would mean the negation of the very two purposes for which the "common production programme" has been formulated—namely, larger employment and larger expansion of basic industries. On the one hand, the Government is anxious to minimise the inflationary potential of the investment programme; on the other hand, it adopts policies which, as is clear now, are bound to lead to serious inflation. This contradiction between objectives and policies will have to be removed, if not now two years hence.

Employment Consideration

The greatest justification of the "common production programme" in its present form is derived from the consideration of employment. The employment potential of mill production is smaller, as compared with that in the handloom sector for two main reasons:

(i) For a given volume of output, the wage fund (i.e., total disbursement of wages) is smaller in the mill sector, because a part of the value of the final product goes towards the remuneration of capital. In the handloom sector, the share of capital in the total value of the

PAKISTAN'S BALANCE OF PAYMENTS POSITION BETTER

BANK RATE NOT TO BE RAISED

AN interesting and informative account of the economic trends in Pakistan was presented by Mr. Abdul Qadir, Governor, State Bank of Pakistan, in his speech at the eighth annual general meeting of the Bank held at Karachi on 7th September 1956. After briefly surveying the general economic situation, he discussed the banking and monetary problems at some considerable length. His observations reveal that, following devaluation in August 1955, Pakistan's economy has attained a considerable amount of stability, though inflation and scarcity of food still remain to be conquered. They further reveal that Pakistan is markedly underbanked, though the quality of commercial banking has improved, owing to weeding out of badly managed banks, that the State Bank of Pakistan is taking energetic measures to expand commercial banking and widen the monetised sector of the economy and that plans are afoot to set up separate credit institutions to take care of the financial needs of agriculture and industry. A noteworthy feature of Pakistan's monetary management is the absence of slavish imitation of the fiscal and monetary policies and programmes adopted by the rest of the free world. Thus, realising full well that its economy is predominantly agricultural, and that too not thoroughly organised, and that implementation of development plans requires low interest rates, the central banking authority has steadfastly stuck to a Bank rate of 3 per cent., even though the fashion in the rest of the free world has been to resort to monetary discipline and higher bank rate for bringing inflation under control. The Governor of the State Bank of Pakistan gave a satisfactory explanation in his speech for not raising the Bank rate. The best solution to inflation in Pakistan lies in increased supply of consumer goods, preferably through domestic production, reduction in the unproductive military expenditure, development of irrigation and power facilities for increasing agricultural, particularly food, production, removal of transport bottlenecks and above all, the establishment of a stable administration. Although Mr. Qadir did not prescribe this solution in such a clear-cut manner, it is quite evident from the qualifications with which he phrased his description of Pakistan's economy and its problems.

Tempo of Development

Mr. Qadir's survey discloses a marked improvement in several directions in the economy of Pakistan during 1955-56. The tempo of development gathered momentum, the index of industrial production having risen from 285 in 1954 to 350 in 1955. Self-sufficiency was achieved in respect of several consumer goods and a substantial export capacity was developed in cotton textiles and jute manufactures. Internal prices of cotton and jute, the most important cash crop and export merchandise of Pakistan, remained substantially higher than in recent years. The balance of payments position underwent a substantial change for the better. These favourable features were, however, offset to some extent by an acute scarcity of foodgrains brought about by floods that damaged the crops severely. This led to higher prices and inflicted considerable hardship on the masses.

The banking and monetary trends broadly reflected the expansion in industrial activity and foreign trade. Bank credit recorded an increase of Rs. 3.15 crores over the year. Chiefly owing to the higher rupee value of foreign trade transactions, the bank credit increased by Rs. 39.74 crores during the 1955-56 busy season. The bulk of this increase was offset in the subsequent slack season. Bank deposits reached a record level of about Rs. 200 crores, reflecting an increase of as much as Rs. 20.54 crores over the year. The increase in money supply was of the order of Rs. 61.03 crores, as against Rs. 25.34 crores during the preceding year.

The most impressive of all the developments took place in the sphere of balance of payments. The resources of "gold, dollar and sterling" increased by $82.5 million during 1955-56 to $292.9 million at the close of June 1956. As against this, the level of these resources in September 1954, that is, a year before devaluation in August 1955, was only $169.4 million. The current account surplus at $70.5 million during the year under review was the highest for any year since 1950-51 and represented an improvement of $69.4 million over the previous year. This improvement, the Governor pointed out was the more noteworthy because it had been brought about mainly by foreign exchange earnings.

Foreign Exchange

The foreign exchange position was strengthened, as already mentioned, by the marked expansion in the exports of jute, jute manufactures, and cotton manufactures and other products facilitated by the devaluation of the currency and other export promotion measures. The Governor, however, warned that the uncertainty in the international cotton market and the large-scale imports of foodgrains, involving substantial foreign exchange expenditure, were factors to be reckoned with and call for caution.

Turning to the impact of devaluation on the economy of the country, Mr. Abdul Qadir stated that, though devaluation was a long-term measure, there were indications that the change in the par value of the Pakistan rupee had had favourable effect on the commodity markets and the balance of payments position. The devaluation decision, he said, helped the markets chiefly jute and cotton, to recover from the spell of the depressive influences, and had thereby benefited the agriculturist.

The most notable effect of devaluation was on the export trade. "The immediate effect of devaluation, the Governor said, was to lower the prices of our export commodities in terms of foreign currencies. Though the rupee prices tended to go up and export duties on major commodities were also increased, the rise in most cases was not proportionate to the change in the exchange rate. As a result, all our major export commodities became cheaper in the foreign markets. Even in the case of jute despite the continuance of minimum export prices, the average export price during 1955-56, was, in terms of foreign currencies, 12 per cent. lower than in the preceding year. The decline in cotton export prices was even sharper and they came down by 17 per cent. during the year. The foreign demand for these commodities reacted favourably to the reduction in their prices. Jute exports which had varied between 51 and 52 lakh bales in the last few years increased to 57 lakh bales during 1955-56. It was signficant that almost the entire exportable surplus had been disposed of by the end of the year. The movement of cotton exports was similarly facilitated as a larger supply this year was sold without any difficulty."

Turning to the trends in money supply, the Governor pointed out that it had registered a net increase of Rs. 61.03 crores during 1955-56 as against only Rs. 25.34 crores in the previous year. The large increase was attributed, chiefly, to the expansionist influence exerted by devaluation, the surplus in the balance of payments, and the deficit financing by the State. All this, Mr. Abdul Qadir stressed, definitely implied a substantial expansion in money demand, and, in the absence of a commensurate increase in the supply of consumer goods, the price level had come under pressure. The deterioration in food position gave further fillip to the rise in the prices of foodgrains. He emphasised, in this connection, the necessity to hold the price level in check if the living standards were to be protected and development was to proceed smoothly.

Self-sufficiency

The first step towards getting a grip over the upward trend in prices was the expansion of food production. "Unless self-sufficiency is achieved in foodgrains," Mr. Qadir emphasised, "the progress in other sectors of the economy will of necessity be seriously handicapped. Another step was the expansion of the supply of consumer goods. Although this could be done in two ways, namely, either through expansion of domestic production or more liberal imports, the application of the latter course was limited by the availability of foreign exchange resources. He, therefore, stressed that the country should concentrate on stepping up the domestic output of consumer goods. It was at the same time necessary to make the goods available to the consumer at reasonable prices. This would be possible only if steps were taken to rationalise the cost-structure of the domestic industry.

While conceding that it would also be necessary to take other measures for curbing effective demand in order to check the rise in prices, Mr. Qadir felt that raising the Bank Rate was not an appropriate measure, in the present stage of Pakistan's economy. On a balancing of advantages and disadvantages of a higher Bank rate, it was found that it would be better to keep the Bank rate unchanged for the present. In his view the increase in the level of activity in Pakistan was not the result of excessive credit creation, but of other factors such as favourable balance of payments position and large Governmental outlay. Besides, the efficacy of the Bank rate weapon was limited (even if it could curb expansion in bank credit) by the absence of developed short-term money market and a network of commercial banks spread all over the country. That was not all. Its application might even operate against the objective of achieving a rapid increase in the national income, for a higher Bank Rate would restrict investment in the private sector. "In fact", continued Mr. Qadir, "the State Bank feels that, instead of restricting credit to the private sector, the present situation demands increase in credit facilities for productive purposes." The State Bank had, therefore, been following a policy of expanding credit facilities cautiously.

In view of the limited scope for monetary measures, the Governor of the State Bank pointed out, the role of the fiscal measures assumed added significance. It was also very essential, according to him, that spending should be curtailed. If this was not possible in the public sector, then the public had no alternative but to tighten its belt, reduce consumption and increase savings.

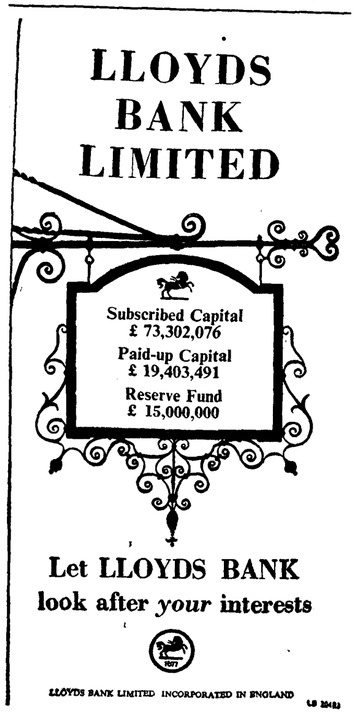
Extension of Banking Facilities

Dealing with the issue of extending banking and credit facilities, the Governor observed:

"The country has now entered the phase of planned economic development and to achieve fruitful results, it is necessary to ensure that the growth of banking is in line with the overall national requirements. Though the development of banking and credit institutions does not by itself guarantee economic development, the adequacy and efficiency with which they perform their task have an important bearing upon the development process. If properly developed, they can assist significantly in increasing domestic production and in transferring resources from consumption to investment."

A gratifying feature in the sphere of commercial banking was the quantitative expansion by the well-established sound Pakistan banks, on the one hand, and the weeding out of certain unsound banks, on the other. The banking system, he pointed out, had adjusted itself to the changing conditions of the economy. But further extension of branch banking, especially into the interior of the country—which was not generally preferred by the banks now—was badly needed, in order to spread banking habit and credit facilities to the rural and semi-urban areas. In this direction, the speaker claimed that the State Bank was trying to do whatever it could. He said that steps had been taken to train young men in the theory and practice of banking. Moreover, a list of important district centres and *mandis* which had no banking facilities, had been drawn up, in order to give

(*Continued on page 585*)



CAPITAL ISSUES IN PRIVATE SECTOR SINCE 1948

ORDINARY SHARES PREDOMINATE

THE period 1948-56 is a notable one in the industrial development of India, for the growth of industries in the intervening years was mainly governed by the first industrial policy of the Government of India, before it was revised in April 1956. Prior to the enunciation of the first industrial policy, in the years following war and the Partition, the capital market was in a state of suspended animation due to apprehension caused among businessmen and industrialists by threats of nationalisation. The industrial policy resolution, however, subdued these fears to some extent and there was again a revival of activity in the capital market. A fairly large number of capital issues was successfully made thereafter, though the amount of capital raised was much less than in the latter part of war and early post-war years.

An idea of the extent to which the private sector in industry has made its own contribution to the economic development during the years 1948-56, governed by the terms of the industrial policy and within the framework of the first Five-year Plan, can be had from a valuable study of capital issues undertaken by the Division of Monetary Research of the Department of Research and Statistics and published in an article in the latest issue of the *Reserve Bank of India Bulletin*.

The above study of capital issues is based on the data published by the Controller of Capital Issues, the statistics of joint-stock companies published by the Government of India, various year-books and periodical reviews published by stock and share brokers, financial journals, etc. Nevertheless, the study is not exhaustive on account of several limitations, but it brings out a fair idea of the trend of new issues during the period under study. According to the data published by the Controller of Capital Issues (which do not cover capital issues of Rs. 5 lakhs and below during a year, as there is no control on them since December 1946), the total number of applications for capital issues during the eight years 1948-55 was 2,836 for an aggregate sum of Rs. 904 crores, of which 2,302 were sanctioned for a total of Rs. 680 crores or 75 per cent. of the amount applied for. Of these, sanctions for industrial issues accounted for 1,320 applications for Rs. 512.1 crores, while those for non-industrial issues amounted to Rs. 168.2 crores covering 982 applications. Sanctions for initial issues of new companies accounted for Rs. 260 crores or 38.2 per cent. of the total and those for further issues by existing companies for Rs. 420 crores (including bonus issues amounting to Rs. 92 crores) or 61.8 per cent. The data published by the Controller of Capital Issues do not, however, give the amounts of capital offered to the public and actually raised.

The statistics of joint-stock companies published by the Government (which relate to the financial year) reveal an increase in the number of companies (private and public limited) from 22,675 at the end of March 1948 to 30,381 (estimated) at the close of 1955-56. Their paid-up capital (excluding debenture and other miscellaneous issue) has risen from Rs. 570 crores to Rs. 1,019 crores, the increase during the first Five-year Plan period alone amounting to Rs. 244 crores. The figures relating to capital have been arrived at after deducting the capital of companies which went into liquidation, their total amounting to Rs. 83 crores. These figures include fresh issues, as well as bonus issues. Separate data relating to public and private limited companies are available only from 1950-51 onwards. These disclose that the number of public companies has declined from 12,568 at the end of 1950-51 to 9,954 on 31st March 1956, while their paid-up capital has risen from Rs. 567 crores to Rs. 684 crores. The number of private companies has gone up from 15,964 to 20,427 and their paid-up capital from Rs. 209 crores to Rs. 335 crores.

The study of actual issues from data available from other sources is also subject to several limitations. In the first instance, the data relating to private companies are not available. Secondly, issues below Rs. 5 lakhs are not included. Thirdly, some of the issues might not have been fully called up on the date of compilation of data. Fourthly, the premiums collected on capital issues are often credited to reserves. Subject to these limitations, the study covers about 600 issues for an aggregate sum of about Rs. 188 crores from January 1948 to June 1956, of which bonus issues amounted to Rs. 53 crores and fresh capital raised from the market Rs. 134.6 crores. Of the latter, ordinary capital accounted for Rs. 67.7 crores, preference for Rs. 26.5 crores and debenture for Rs. 40.4 crores. Thus, it will be noted that the issue of ordinary capital predominated. The year-by-year analysis of the issues does not, however, show a uniform trend, this being accounted for by the conditions obtaining then.

The period under review witnessed two distinct phases in respect of capital issues. From the years 1948 to 1952, there was a decline in issues, the amount of fresh capital raised having fallen from Rs. 21.9 crores in 1948 to Rs. 4.7 crores in 1952. Thereafter, there was a marked revival, activity gathering momentum in the years 1954 and 1955 and in the first half of 1956. As compared with Rs. 4.7 crores in 1952, the amount issued in 1954 aggregated Rs. 21.7 crores, in 1955 Rs. 19.4 crores and in the first half of the current year Rs. 16.5 crores. The flare-up of activity during the last three years is mainly due to the "intensification of the national endeavour to accelerate economic development under the Five-year Plans, providing for substantial outlay in the public sector, partly deficit-financed." It is also partly due to the "improvement in current profits and dividends of companies." The various measures initiated by the Government, such as the grant of development rate, the setting up of institutions for providing industrial finance, the permission given to the State Bank of India for investing its funds in approved debentures of joint-stock companies, etc., were also responsible for the general improvement in the capital market since 1953.

An industry-wise distribution of fresh capital from January 1948 to June 1956 makes an interesting study, as will be seen from the table at foot of column 1. It will be noted from the said table that engineering and iron and steel industries accounted for the largest capital, followed by electricity, oil and textiles. An industry-wise breakdown of the new issues into ordinary preference and debenture capital on a year-to-year basis reveals that almost all the major industries raised capital through ordinary shares, electricity and cement industries showing a marked preference for equity capital. Shipping and oil industries raised it more by way of debentures and engineering industries more by way of preference issues. The rate of interest on debentures varied from 4 per cent. to 5½ per cent. (taxable). Most of the preference issues were tax-free, cumulative and redeemable, the rate of interest ranging from 5 to 6 per cent.

As already indicated, bonus issues formed a significant portion of the total capital issued during the period, such amounting to Rs. 53 crores or 28 per cent. This brings out clearly the relatively important role played by retained profits in financing the private industrial investment. This conclusion is also borne out by the statistics of new industrial issues during the first Five-year Plan period given in the report on *Second Five-year Plan*, and the studies conducted by the Taxation Enquiry Commission, as well as the Reserve Bank of India. During the first Five-year Plan period, new industrial issues by industries covered in the Plan (excluding bonus issues) amounted to Rs. 40 crores, as against Rs. 150 crores of internal resources. The Tax Commission's study related to 492 companies with an aggregate paid-up capital of Rs. 252 crores in 1951-52. This revealed that, during the years 1946-51, the fresh capital (excluding capitalisation of reserves) raised by these companies amounted to Rs. 53 crores, while internal finance (retained profits) aggregated Rs. 69 crores. The Reserve Bank's study covering 771 companies with paid-up capital amounting to Rs. 376 crores in 1953 disclosed that during 1951-53, fresh capital issues accounted for Rs. 26 crores and internal finance for Rs. 42 crores.

The above statistics are convincing and provide an answer to the critics of the private sector that the resources of this sector are being frittered away by distributing huge dividends, instead of being conserved and used for the development of industries.

Industry-wise Distribution of Fresh Capital, 1948—June 1956

(In crores of rupees)

Industry-group	Ordinary	Preference	Debenture	Total
Engineering and Iron and Steel	10.7	11.1	4.4	26.2
Electricity	13.5	1.1	6.0	20.6

BANK OF MYSORE LTD.

The working of the Bank of Mysore, Ltd. (General Manager: Mr. B. V. Narayana Reddy, Bangalore) during the half-year ended 30th June 1956 has resulted in a slightly higher profit than that for the corresponding periods of the previous two years, but the rise in profit is not commensurate with the expansion in turn-over and the increase in gross income. This is due to the mount-

RAYON AND STAPLE FIBRE INDUSTRY IN SECOND PLAN

APPRECIABLE EXPANSION ENVISAGED

THE programme for development of rayon and staple fibre industry included in the second Five-year Plan envisages an appreciable expansion in the capacity of the industry. Thus, the capacity target fixed for rayon filament to be attained in 1960-61, is 68.3 million lbs., which represents a rise of as much as 206 per cent. as compared with the capacity of 22.3 million lbs. in 1955-56. Similarly, the capacity target fixed for staple fibre is high, being 32 million lbs., as against 16 million lbs. What is more, practically the entire capacity is expected to be utilised. In other words, by 1960-61, India will be producing at the rate of 68 million lbs. of rayon filament and 32 million lbs. of staple fibre; the actual production of these during 1955-56 was only 15.7 million lbs. and 13.2 million lbs., respectively. The development programme also includes a specific scheme for manufacturing chemical pulp, a principal raw material for the viscose process rayon production. The targets for capacity and production of pulp are both fixed at 30,000 tons per annum. The expansion required to achieve the targets is estimated to involve an investment outlay of about Rs. 24 crores and to provide direct employment to 4,500-5,000 additional persons.

Capacity

The capacity of 68.3 million lbs. of rayon filament has been determined on the basis of schemes which have already been approved and consists of 60 million lbs. of viscose rayon and 8 million lbs. of acetate variety. This figure falls short of the target suggested by the Development Council by 12 million lbs. Explaining why it is not in favour of a bigger target, the Planning Commission observes, in the report entitled *Programmes of Industrial Development*, as follows:

"In considering any further expansion in this industry, due account has to be taken of such factors as the dependence of the industry on imported raw materials, the capital-intensive character of the industry and the comparatively low priority it enjoys in the schemes of development envisaged during the second Plan. While in the case of essential industries, development can be envisaged to the point of self-sufficiency, in the case of the rayon industry, which primarily caters to the requirements of a limited section of the population, it is doubtful whether a high priority can be attached to further expansion during the second Plan and diversion thereto permitted of resources which might be better employed elsewhere. *Prima facie* such a course might be justified, if it gave a stimulus to ancillary industrial development and the exploitation of raw materials available within the country, but not if it accentuates the strain on foreign exchange by requiring the import of raw materials.

"In the light of these considerations, it would seem that further expansion of capacity in the manufacture of rayon filament should be in terms of cellulose acetate filament, since the two primary raw materials, namely, cotton linters and alcohol, are available within the country and its manufacture would give a stimulus to their production. Cellulose acetate filament production would also give an opportunity for a better dispersal of the rayon industry. In this connection, it is important that a study be made of the various factors which would contribute to the consumption of cellulose acetate filament on a substantial scale in the coming years. If, on a further study of this aspect by the Development Council for the Art Silk Industry, it is found impracticable to step up the consumption of cellulose acetate filament to a level of more than 8.0 million lbs. proposed to be developed by the Sirsilk, it might become necessary to allow further organisation of capacity for viscose rayon. The advantage of such a step has to be balanced against the strain on foreign exchange on account of imports of sulphur and chemical pulp that would be caused by it. The location of chemical pulp plant would have some influence on the location of viscose rayon plant, particularly if the latter is in proximity to consumption centres for rayon filament and it would, therefore, be desirable to defer consideration of schemes for further expansion of the rayon industry until the studies initiated by the N.I.D.C. lead to some positive conclusions on this subject.

"In view of the several major issues pending consideration, the development programme envisages for the present a target of 68 million lbs. of rayon filament by 1960-61. It is, however, recommended that proposals for expansion of capacity of cellulose acetate filament should be considered on merits on account of the several advantages which its production secures to the national economy.

"If the Development Council's estimate of the expansion of demand for art silk cloth during the next five years is correct, then, according to the programme envisaged above, it will not be possible to meet the entire requirements of rayon from indigenous sources. The extent to which imports of rayon could be permitted would depend on the exact level of demand and the foreign exchange resources available from time to time."

The proposed increase of 46 million lbs. in the capacity of rayon producing sector during the second Plan period will be achieved mostly by the establishment of new units, which together account for 33.6 million lbs. The proposed new units, the figures in brackets giving capacity in million lbs. are: Century Rayons, Bombay (9.6); M. J. Vaidya (8.0); Kesoram Cotton Mills, Calcutta (8.0); Sahu Jain, Calcutta (4.0); and J. K. Commercial Corporation, Kanpur (4.0). The balance of 13.4 million lbs. of the rise in capacity is to be achieved through the expansion of the existing units, namely, the National Rayon Corporation, Bombay, to 19.5 million lbs., Sirsilk, Hyderabad, to 8.0 million lbs. and Travancore Rayons to 7.2 million lbs. Excepting Sirsilk, all the aforesaid units—existing and proposed—are intended to produce the viscose type of rayon, while Sirsilk will manufacture acetate type of yarn. As regards staple fibre, the only programme for increased production is the expansion scheme of the Gwalior Rayon Manufacturing (Weaving) Company. With improved operation, its present capacity is reckoned at about 16.0 million lbs. which will be doubled in the next five years.

Raw Materials

The requirements of raw materials for the production of 60 million lbs. of viscose rayon, 8 million lbs. of acetate rayon and 32 million lbs. of staple fibre are: Rayon grade pulp 47,200 tons, cotton linters 3,200 tons, alcohol, 1.6 million gallons, caustic soda 42,000 tons, sulphur 34,000 tons. The entire requirements of pulp are at present met by imports. It is envisaged that one or two units for the manufacture of chemical pulp will be set up during the Plan period under the auspices of the National Industrial Development Corporation. This will, to some extent, reduce the dependence of the industry on imports. The programme for cotton seed crushing takes into account the requirements of cotton linters by the rayon industry. With regard to caustic soda which has to be of special grade, the entire requirements are expected to be met from indigenous sources. Alcohol will also be available from domestic sources. Sulphur, however, will have to be imported.

The bulk of the demand for rayon comes from the weaving industry. The industry consumes mostly yarn ranging from 75 to 200 deniers, the consumption of higher deniers being limited. The requirements of rubber tyre industry are for the higher deniers. The present production of rayon in India is confined within the range of 100 to 150 deniers. Since the existing capacity is far short of the requirements, there has been no special difficulty in the offtake of indigenous product, although its range is narrow. The requirements for finer as well as coarser varieties are met by imports. Within the overall capacity target fixed in the Plan, attention, it is said, has to be paid for diversifying production, in order to meet the demand for types not hitherto produced. The tyre industry needs special types of rayon which are entirely being imported. The demand for rayon from this industry is expected to rise from 3.5-4 million lbs. to 5 million lbs. by 1960-61. The possibility of developing suitable types of rayon acceptable to the tyre industry must be explored.

Weaving

The development programme for rayon textiles does not, however, envisage any further expansion in the weaving capacity for art silk. For the Planning Commission considers that the existing capacity is far in excess of the anticipated requirements of art silk cloth. "The industry," to quote it, "is now in a position to meet all the varieties of art silk cloth expected to be in demand during the second Plan period." The total capacity of the art silk weaving industry, including that of the handloom sector reckoned at 150,000 looms, is estimated at 465 million yards, on the basis of operation on a single shift and 300 days a year, the average capacity of a powerloom being about 20 yards of cloth per shift. As against this quantity, the estimated consumption requirements by 1960-61 amount to 360 million yards, made up of domestic consumption 350 million yards and exports 10 million yards. Incidentally, it may be noted that the actual number of powerlooms weaving art silk registered with the Textile Commissioner's Office on 1st January 1955 was 35,965. Licences have been issued for the installation of over 3,500 powerlooms, which will increase the total number of looms to about 40,000. In addition, there are several handlooms—estimated at 150,000—producing art silk fabrics, mainly mixed fabrics. On an average, four handlooms are considered as equivalent to one powerloom for purposes of assessing capacity.

The actual production of art silk fabrics has been much below the estimated capacity of 466 million yards. The average annual rate of production in the last three years was 245 million yards, inclusive of the output of handloom sector, reckoned on an average of 6 million yards. Allowing for the defaulting units which are not reported and taking into account the production from the handloom sector, the current level of art silk fabrics output is estimated at 275 million yards per annum, the quantity of yarn consumed being about 55 million lbs.

The Development Council for the Art Silk Industry has suggested a target of 350 million yards of art silk cloth to be achieved by 1960-61. The target amounts to an increase of about 20 per cent. in the present *per capita* consumption of art silk fabrics. Commenting on the demand for art silk cloth, the Planning Commission points out that such is generally confined to the middle class in urban areas, but it is conceivable that, in the absence of any restrictions, demand would show an upward trend of the magnitude envisaged by the Council. On the other hand, art silk fabrics can be regarded as luxury or semi-luxury articles and it is questionable, says the Planning Commission, whether full provision should necessarily be made for a vast expansion of their consumption.

CONCERN AGAIN EXPRESSED OVER IMPORTS OF CLOTH

TRAINING SCHEME FOR MILL OFFICERS

From A Special Correspondent

MANCHESTER, 11*th September*

THE Lancashire textile industry will be reduced to "a mere fraction of its present mutilated size" unless action is taken to remedy the present situation regarding large duty-free imports of cotton cloth from India, the Executive Council of the Operative Spinners' Amalgamation has stated in its latest report.

MANCHESTER LETTER

Contrasting the duty-free imports into this country with the imposition of a duty of 25 to 30 per cent. on Lancashire exports to India, the report said: "The present situation which gives all the advantages to one party cannot, in common fairness, be allowed to continue indefinitely."

Since the attention of the President of the Board of Trade was first called to the position in August 1954, Lancashire mills had lost 38,200 workers. "There must surely be a stage when a halt must be called, but judged by the attitude of the Government the time for this has evidently not arrived," commented the report.

Referring to the suggestion made by the Prime Minister, Sir Anthony Eden, that joint discussions should take place between the textile industries of the two countries, the report said there appeared to be no reason to doubt that these would be held as soon as details had been agreed but first observations from India indicated that Lancashire's representations might have a very cool reception.

The latest available figures of cloth imports from India, covering the first seven months of this year, show arrivals of more than 85,000,000 yards.

"Cotton's New Look"

Arrangements have now been published for this year's conference of textile executives and trade union officials organised by the Cotton Board which is again to be held in Harrogate in mid-October. From a preliminary glance at the plans the accent is to be on the future, the authorities clearly recognising the fact that Lancashire needs to keep in constant touch with new developments in order to keep ahead of their rivals in the fiercely competitive field of textile manufacture and distribution.

This year's theme is to be "Cotton's New Look." Distinguished speakers will deal with up-to-date facilities for training and education as well as the application of science and trade promotion. In view of recent developments leading to greater consolidation within the trade the contribution by Mr. W. T. Shackleton on the structure of the industry should provide the basis for an important discussion. Also full of interest is likely to be the paper on the challenge to management under the conditions now prevailing to be given by Mr. Fred Wood, president of the Master Spinners' Federation.

Although opinions in Lancashire differ as to the gains arising from the series of conferences held from year to year by the Cotton Board, those who attend always testify to their efficient organisation. They provide a platform for intelligent debate on vital problems affecting the industry's future. The numbers visiting Harrogate this year may be smaller than in the past due to the contraction of the trade but the views expressed are likely to be just as lively as in previous gatherings of the same kind.

Productivity Plans

Tired of hiding its light under a bushel, the Productivity Centre of the Cotton Board is determined to make the industry aware of its efforts. A series of research experiments to provide a new form of operative training technique has been carried out and a new course for training mill officers is to open early next month. This concerns the spinning section of the industry, following the successful experiments carried out in weaving on the same lines.

Among the benefits of this training are that the time used in bringing the efforts of trainees to a pitch comparable with experienced workers has been reduced—in some cases as much as halved. Also curtailed in the amount of spoiled work, as waste is normally concentrated into the initial learning period of up to ten days. Many individual training methods accept as inevitable a certain amount of sub-standard work but in prevailing market conditions the importance of minimising this factor can be appreciated.

A well organised training scheme has the additional advantage of enabling higher earnings to be obtained by "green" labour in a relatively short-time, so stimulating recruitment. The Cotton Board is now engaged on experiments to see how far specialised operative training can help to improve the performance and equality of younger existing operatives. Their work has been found on occasions to be below average but the initial results of these attempts to improve their work by re-training are encouraging.

Spending on Clothes

Evidence confirming the frequently asserted view that textiles are losing ground in the battle to attract the British customer at home from other goods is contained in official statistics recently published. Last year, for example, it is estimated that expenditure on women's, girls' and infants' wear reached an all-time record of over £700,000,000 against £644,000,000 in the previous year and only £246,000,000 in 1938. But despite this large rise in the value of goods sold the proportion of expenditure on apparel spent by the individual consumer has not altered substantially compared with before the war.

Whereas in 1938 consumers were spending 13.44*d.* of each £1 of their income on clothing of this kind, last year the figure had fallen to 13.16*d.* Clothes rationing in 1946 had reduced the corresponding amount to 11.8*d.* but the post-war spending boom followed, bringing the proportion to 14.7*d.* per £ in 1949.

As indication of the scope still available for textile manufacturers and distributors the volume of clothing sold in 1955 was the highest yet recorded. The index figure reached 126, as compared with the basic level of 100 in 1948.

Another aspect of the situation which should influence the consumer is that clothing remains relatively cheaper than any other basic commodity. From the 100-point index number in 1948 prices rose to 120 in 1951 but had receded to 117 by last year. The promotional campaign shortly to be launched on behalf of the cotton trade might do well to bring home to the public the fact that apparel goods offer better value for money than almost all other products in this inflationary era.

Lowest Yarn Return

Cotton and rayon yarn production, curtailed by holiday stoppages in Lancashire mill towns, touched its lowest level this year in the third week of August.

Cotton Board figures showed production of 10,950,000 lb., a drop of more than 3,000,000 lb. on the previous week but only 310,000 lb. lower than a year ago. Operatives in Ashton, Royton, Rochdale, Shaw and Stockport were on holiday during the week.

The drift of labour from the mills caused a loss of a further 163 full-time spinning operatives, bringing the manpower fall since the beginning of the year to more than 3,500.

Synthetics

Guidance for the housewife, to assist her in selecting the most suitable of the new synthetic fabrics for her purpose, is the theme of a conference of 200 textile men meeting in Gothenburg, Sweden, on 1st October 1956. The discussion will centre on the better labelling of these fabrics. Twenty-two papers will be presented by experts from eleven countries, including Britain, the United States, Japan and several European nations.

"Although the shopper has now far more variety to choose from compared with the days of her mother and grandmother, life is much more complicated for her," said a spokesman of the International Rayon and Synthetic Fibre Committee, which is organising the conference. "This is due to the rapid advance of new fibres, new finishes and improved techniques in fabric structure."

The conference plans a scientific approach to the whole policy of marketing the new textiles to enable the public, the shopkeeper, laundries and dry-cleaners to make the best of the numerous developments provided by science and technology.—*All Rights Reserved.*

INDIA'S INTERNATIONAL TRADE IN COTTON

EXPORTS TOUCH NEW PEAK

ALTHOUGH India's international trade in cotton forms only a small proportion of the total cotton produced and consumed in this country, it is, nevertheless, important in two respects. First, though attempts at producing long-staple cotton necessary for the manufacture of finer cloth are progressing satisfactorily, it cannot be said that India has as yet attained a stage in which it can do without imports of foreign cotton. Secondly, cotton exports are an important source of foreign exchange for this country. This aspect, especially in the context of the second Plan involving a large expenditure of foreign exchange, assumes a special significance.

Viewed against this background, it is highly encouraging to find that cotton exports from India during the 1955-56 season which ended on 31st August last recorded an all-time high since the Partition. Total exports during the period, according to statistics now available, aggregate about 600,000 bales, as compared with 330,000 bales in the previous season. This expansion in exports is mainly due to a liberal policy followed by the Government in issuing export licences after reviewing, from time to time, the statistical position of cotton. In this connection, it may be observed that, as early as in the middle of the season, Mr. T. T. Krishnamachari, the then Minister for Commerce and Industry, had predicted that India was well on the way to becoming a net exporter of raw cotton. The current season's export figures fully bear out the Minister's prediction. The following table gives the country-wise exports of cotton during the season under review, as compared with the 1954-55 season:

(In bales of 400 lbs.)

	1955-56	1954-55
Japan	223,484	143,541
Continent	81,927	76,390
U.K.	58,095	46,821
China	57,484	14,979
Hong Kong	30,094	25,239
U.S.A.	3,755	18,960
Others	2,514	2,762
	457,353	328,692
Zoda, yellow pickings, etc., for which destinational figures are not available	121,000	†
Total ..	578,353	328,692

† Included in the total above.

An analysis of the figures relating to country-wise offtake reveals some interesting facts. Out of the total offtake of 578,353 bales in the season under review, Japan accounted for 223,484 bales as compared with only 143,541 bales in the previous season. China will probably become one of India's leading customers for cotton. Its purchase of Indian cotton, which stood at 14,979 bales in the 1954-55 season, shot up to 57,484 bales. The U.K. bought 58,095 bales, as compared with 46,821 bales in the 1954-55 season. A significant point to note is that the only individual country to show a decline in the offtake was the United States.

In marked contrast to the improvement in exports, there has been a slight decline in imports. To a large extent, this reflects the trend towards increased consumption of Indian cotton on the part of the mills owing to its relative cheapness. Imports of cotton in the 1955-56 season aggregated 598,030 bales, as against 625,672 bales in the previous season. Though quantitatively the decline is not much, it shows a welcome trend, in that the dependence of mills in India on foreign growths is being reduced. Further, a reduction in imports, whether it is in respect of cotton or any other commodity, is greatly welcome as it reduces the strain on the country's payments position. The following table gives the main sources of India's imports of cotton in the 1955-56 season, along with those in the previous season:

(In bales of 400 lbs.)

	1955-56	1954-55
East African	223,037	287,442
Egyptian	219,273	152,397
Sudan	132,798	81,764
Pakistan	117	255
U.S.A.	14,783	102,267
Others	8,022	1,557
Total ..	598,030	625,672

As is evident from the table above, East African styles continued to dominate India's imports, even though the share of Egyptian cotton showed a remarkable improvement. Now that India has contracted to import 600,000 bales of American cotton over a period of three years, as part of the Indo-American aid agreement, the imports of cotton from the U.S. may show a substantial increase in the current season. It remains to be seen to what extent this will adversely affect the imports of East African or other varieties of cotton. Again, if the Suez Canal crisis is prolonged and gets worse, there is also the danger that it may affect India's imports of Egyptian cotton.

A factor which may have a considerable effect on the future course of India's foreign trade in cotton is the recent revision of the target for cotton in the second Plan. The Indian Central Cotton Committee, as we pointed out last week, has recommended that the target for cotton output should be raised to 6.5 million bales, as against the 5.5 million bales originally contemplated and 4.23 million bales fixed in the first Plan. If the new target were attained—and there is no reason why it should prove difficult of attainment—it would enable India to step up its exports of cotton. Further, if during the next few years, the quality of the crop in terms of staple length were also improved, it would enable the country to reduce its dependence on foreign cotton.

TRIANGULAR DEAL IN COTTON

It is common knowledge now that the mounting stocks of surplus cotton with the Commodity Credit Corporation has forced the United States Department of Agriculture to devise new methods of disposal which would, at the same time, cause minimum disturbance to world markets. One such method is the conclusion of triangular deals which would enable the United States to supply raw cotton to needy countries which, in turn, would exchange it against cotton textiles and/or yarn with some other countries. Such deals have already been concluded with India and Burma, Britain and Indonesia, Japan and Burma and Britain and Pakistan.

The latest triangular deal is the one between U.S., Britain and Pakistan and it is supplementary to the United Kingdom-Pakistan Agreement of 29th April 1955. Under the latter agreement, $5 million worth of cotton textiles were supplied by the U.K. to Pakistan in return for raw cotton to an equivalent value made available by the United States as part of its economic aid programme. Under the supplementary arrangement further quantities of cotton yarn and woven goods, up to a maximum value of $1.32 million, will be supplied by the United Kingdom to Pakistan with payment, as before, in United States raw cotton.

The agreement stipulates that both the textiles and the raw cotton must be shipped not later than 30th September. Business will be conducted broadly on lines similar to those under the original agreement, but the U.K. exporters participating in it will, under this agreement as with future deals, be required to give an undertaking to the British Government for arranging that the raw cotton to balance the value of their exports will be imported within the time allowed.

EGYPTIAN COTTON

Quite in keeping with the general trend noticed in many of the major producing countries, the area under cotton in Egypt is expected to register a decline in the current season. Thus, the first acreage estimate of the Egyptian Government places the area under the crop in 1956-57 at 1,652,877 feddans, as compared with 1,815,697 feddans in the previous season. A notable feature of this season's crop, it may be observed, is the substantial increase in the area under Menoufi at the expense of Karnak. Thus, whereas the area under the latter has declined from 786,328 feddans to 607,862 feddans, Menoufi has registered a three-fold increase from 53,177 feddans to 156,696 feddans. The area under Giza 30, Giza 47 and Giza 31 (Rendere) has increased from 326,698 feddans, 1,169 feddans and 3,749 feddans to 333,212 feddans, 1,302 feddans and 16,084 feddans, respectively, in the current season, whereas in respect of Ashmouni it has declined from 644,234 feddans to 536,966 feddans.

It is, however, significant that, though there is a substantial shrinkage in the area under cotton, the outturn of the crop is expected to exceed the 1955-56 production. The new crop is estimated around 1,200,000 bales (of 720 lbs.), as against only 994,000 bales in the previous season. Favourable weather conditions and satisfactory crop progress, noted hitherto, point to a substantial increase in the yield, per acre resulting in higher aggregate output. The quality-wise breakdown of the new crop estimate is indicated below:—

(In bales of 720 lbs.)	Bales
Karnak	375,000
Menoufi	135,000
Giza 30	200,000
Ashmouni	480,000
Dandara and others	15,000

Despite the anticipated increase in outturn, the supply position is not expected to show any marked improvement. This is because of the very low carry over estimated at 49,500 bales, as compared with 280,000 bales a year before.

AFGHAN COTTON

The possibility of further trade in cotton between Afghanistan and Germany is indicated by the increased transport facilities *via* Russia that has now become available. Germany used to buy from Afghanistan sizable quantities of cotton which in 1954 aggregated 2,400 tons. But the principal obstacle in the way of smooth trade between the two countries has been transport difficulties. German freight ships have to unload the cargoes either in a port at Baltic Sea or at a port in Black Sea from where they are transported by rail to Afghanistan and *vice versa* in the case of goods which are exported from Afghanistan. This involves not only much delay in transport but also higher freight charges. Export of cotton to Germany which stood at a record of 2,400 tons in 1954 declined to 900 tons in 1955. This may be attributed in part to difficulties of transport and partly to the high price which prevailed in Afghanistan during the period.

Now that transport through Russia has become possible, at least one principal obstacle has been removed and there is every possibility of a spurt in cotton trade between the two nations. The latest Afghan export statistics show that half of its cotton production, currently placed at 90,000 bales (of 500 lbs. each) is exported.

CHEMBRA PEAK ESTATES LIMITED

PROCEEDINGS OF THE TWENTY-FOURTH ANNUAL GENERAL MEETING

MR. W. W. KILGOUR LOOKS FORWARD TO THE CURRENT SEASON WITH CONFIDENCE

THE Twenty-fourth Annual General Meeting of the shareholders of the Chembra Peak Estates Ltd. was held at the Registered Office of the Company in Kozhikode at 2 p.m. on Monday, 3rd September 1956.

Mr. W. W. Kilgour presided.

The notice convening the meeting was taken as read.

The representative of the Managing Agents and Secretaries having read the report of the auditors, the Chairman addressed the meeting as follows:—

"GENTLEMEN,

"The Directors' report and audited accounts for the year ended 31st March 1956 have been in your hands for the requisite time and, with your permission, I propose to take these as read, but I shall be glad to answer any queries later on.

"In a year when the Company has been fortunate enough to harvest such excellent crops under favourable weather conditions, the profit resulting from the year's working is less than half that of the previous year when crops of both tea and coffee were considerably lower. The reason, as you will already have seen from the Directors' report, is that the average price realised for our tea was As. 8.69 per lb. *less* than in 1954-55. The year has thus been remarkable for this exemplification of the steep fluctuations of fortune to which all plantation industries are prone—not the least, the tea industry which, I sometimes think, as one legislative burden after another comes to be heaped upon it, is too often regarded as a sponge with infinite capacity to absorb whatever fresh impost is squeezed into it.

"When I addressed you last year I reminded you of the crisis through which the Company passed in 1952-53 because of the slump in tea prices and adverse weather conditions resulting in a very poor tea crop indeed and it is undoubtedly low elevation teas which are the most sensitive of all to market sentiment.

Economies in Working

"Our cost of production last year was As. 3 per lb. lower than the previous year. You will have read what the tea visiting Agent had said about the response to the kindly treatment of the past 2 or 3 years and we cannot contemplate any reduction in the cost of our sound cultivation programme, as this will only depress crops and hasten disaster. We are, nevertheless, constantly on the watch to make economies in working wherever possible consistent with efficient working, but taxation and the provisions of amenities on an ever increasing scale to meet the requirements expected of us by Government rules are a heavy burden upon our resources. We are still unable to achieve our aim to accumulate cash investments as a portion of Company's reserve and the cash position for day to day working is not very easy.

"However, the steady development of the estate, which has taken place despite these difficulties, has continued and will be pressed on so that at least so far as cropping capacity is concerned the Company may be placed on a firm footing. The complete electrification of the factory now being finalised will result in far greater efficiency in working in that department and it is our steady policy to improve the living conditions of our staff and labour to the standard required of us.

Prospects

"Now to turn to the prospects for the current year, in the four months to end July, we have harvested a satisfactory crop of 532,544 lbs., which is 72,544 lbs. ahead of estimate to date. The prospects for the remaining monsoon months are good and the blister blight control measures now adopted as a routine measure over the whole estate ensure that there is no crop lost from this disease. The coffee crop prospects are excellent and there is every indication at present that the estimated crop of 200 tons will be harvested.

"I consider that we can look forward to 1956-57 with some confidence.

"In conclusion, I would like to record our thanks to all the employees of the Company for the hard work put in during the year and, in particular, our thanks to the General Manager, Mr. I. D. Edward, for his good work and for the encouraging results which are now resulting from his skilful handling of the estate, the staff and labour."

The Directors' report and accounts for the year ended 31st March 1956, were approved and adopted, and a dividend of 10 per cent. was declared.

The retiring Director, Mr. K. N. Narayana Iyer, was re-elected to the Board.

Messrs. Fraser and Ross were reappointed auditors.

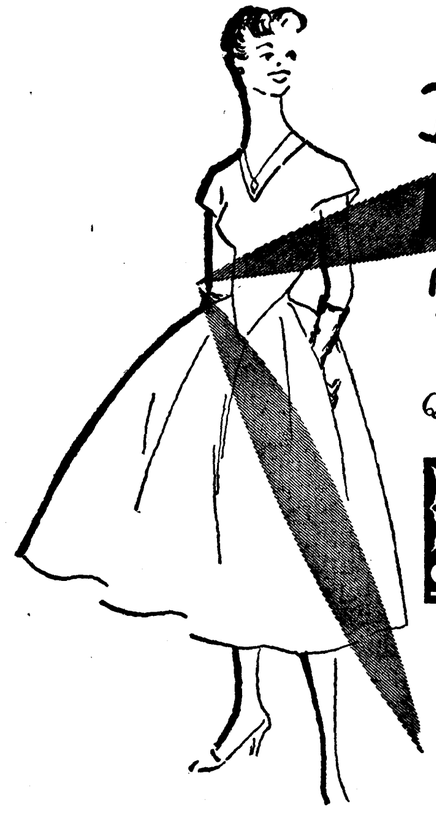
The meeting terminated with a vote of thanks to the Chair.

CEYLON'S TEA INDUSTRY

Ceylon's tea acreage fell by 10,000 acres in the year ended 31st March 1956, according to the annual report of the Ceylon Tea Controller. At that time, the area under cultivation was 565,500 acres. The decline followed the closing of a number of uneconomic estates.

Total tea production for the year was 360.9 million lbs. as compared with 377.5 million lbs. during 1954-55. Average yield per acre was 638 lbs. as compared with 656 lbs. in the previous year. The decline is attributed to severe frosts in the highlands and drought in lower regions.

Exports amounted to 365 million lbs. (including stocks carried over from the previous year), as compared with 350 million lbs. Shipments to the London tea market were 90.42 million lbs.



SUGAR INDUSTRY IN UTTAR PRADESH

FACT FINDING COMMITTEE'S SUGGESTIONS FOR IMPROVEMENT

SEVERAL recommendations of far-reaching importance to the sugar economy of Uttar Pradesh have been made by the Fact Finding Committee for Industrial Expansion in the U.P. in its report submitted to the State Government recently. The Committee, it will be recalled, was appointed some time in February last to consider the ways and means of helping the development of industries in the State. It was headed by that the well-known industrial magnate, Mr. B. M. Birla, and consisted, among others, of Mr. Padampat Singhania, Mr. Mangturam Jaipuria, Mr. K. K. Birla and Lala Ram Ratan Gupta. The Committee was asked by the U.P. Government to bear in mind, in particular, the need for reducing the pressure of population on land, ensuring steady industrialisation of the State, and liquidating unemployment and poverty.

The Press version of the U.P. Fact Finding Committee's report reveals that special attention has been paid to the problems of sugar industry. This is only as it should be, considering the vital role which this industry plays in the economic set-up of Uttar Pradesh. There are in this State 73 sugar mills, providing direct employment to as many as 90,000 persons, not to speak of the indirect employment of a large number of people engaged in the sugar trade, subsidiary industries, transport, and in industries supplying stores and other materials. The aggregate revenue derived by the State Government in the form of cane cess alone is of the order of Rs. 3.50 crores (revised estimate for 1955-56). The industry produces every year sugar worth more than Rs. 72 crores. The total amount paid for cane by the factories to cultivators comes to about Rs. 36 crores and that paid as salary wages, etc., to workers to approximately Rs. 8 crores.

No Justification

Viewed thus, the Birla Committee has, indeed, done well to recognise the sugar industry as a leading industry in Uttar Pradesh and to stress the necessity for energetic measures for stabilising the conditions obtaining in it. But the Committee is not right in urging for an expansion in the capacity of the sugar industry by another 500,000 tons. As it is, the industry is heavily concentrated in Uttar Pradesh, although the sub-tropical climate of the State is not so suitable for cane development as the tropical climate of South India. Even now, this State accounts for more than 51 per cent. of India's total rated capacity of 1,743,000 tons, the actual capacity being estimated at 893,000 tons. The State has already been allowed to expand its capacity by 175,000 tons through the setting up of two new mills and the expansion of 22 existing units.

The state of sugarcane cultivation in the U.P. is very backward and does not justify any addition to the capacity of sugar industry. Not only is the yield of cane per acre very low but the sucrose-content of cane is also considerably less than that in several areas in the Deccan and South India. On an average, one acre of land devoted to cane cultivation in the U.P. gives an yield of only 12 tons, as against the all-India average of 14 tons and of 28 tons in Bombay, 27 tons in Andhra, 26 tons in Madras and 22 tons in Hyderabad. Likewise, the recovery per cent. of sugar in cane is low, the average being 9.89, which is below the all-India average figure of 9.95 and compares even more unfavourably with 11.68 for Bombay and 10.21 for Hyderabad. In fact, the sugarcane economy is so backward that there are several factories in the U.P., especially in the eastern region, which have not been able to crush for a reasonable period, thanks to the lack of regular and adequate supplies of cane at an economic price. If, therefore, the capacity of the sugar industry in the State were to be augmented further, there would be a more intensified competition for securing cane supplies, and this in turn lead to a further rise in prices.

The Birla Committee has, however, done well to urge for a gradual reduction in the cess on sugarcane crushed by mills, so that only a small charge is retained for purposes of cane development work. This recommendation, though it is addressed to the U.P. Government, applies with equal force to other States as well. Nowhere in the world is cane subjected to such a heavy cess —as much as 15 per cent.—as in India. The imposition of cess on cane tantamounts to taxing a raw material which, as the former Tariff Board (1950) rightly pointed out, is wrong in principle and is particularly objectionable when levied on the raw material of an industry like sugar with which the consumers all over the country are concerned. Since, however, the cess has become a part of the structure of State taxation, all that one can expect is a downward revision in the rate, consistent with the requirements of cane development programme. Incidentally, the Committee has suggested the realisation of cane cess at the time of lifting sugar from the factory premises and not when cane enters the factory gates as at present. The implementation of this suggestion will help the sugar mills considerably, as the mills in the U.P. have to carry forward a major portion of the total sugar stocks in the country.

Two Other Proposals

The Birla Committee has put forward two more notable proposals. First, freight charges on sugarcane must be lowered to an equitable level. This is considered necessary, for the sugar mills in Uttar Pradesh purchase cane mainly from small growers; factory-owned farm cane constitutes only a minor part of the total cane crushed by the factories. Secondly, the rural areas where the sugar mills are situated should be provided with metalled roads. The implementation of this proposal will help not only the mills but also the agriculturists who will be able to transport their cane crop to the mills more easily and quickly.

The U.P. Fact Finding Committee has paid special attention to the uneconomic working of some sugar factories, particularly in the eastern region. According to the Committee, ten or twelve of these factories require to be shifted to better sites in the western region. For this purpose, facilities in the form of exemption of cane cess for two years and a short-term loan of Rs. 10 lakhs, with a maximum of Rs. 20 lakhs in deserving cases, should be provided. In future, no factory must be allowed within a radius of 50 miles of any existing unit, so that cane supplies are assured to all of them. With regard to the idle factories in the U.P., it is stated that the measures suggested for shifting the uneconomic units should be able to solve the problem to some extent. It has, therefore, been recommended that, in case idle factories desire to shift to better sites, assistance as is made available to the uneconomic factories should be given to them.

COIMBATORE CANES IN CULTIVATION

In the present context of a new era in the expansion of sugar industry, cane development assumes special importance. But cane development work is somewhat handicapped by the highly decentralised and scattered nature of cultivation. There are thousands and thousands of farmers cultivating cane in tiny bits of land scattered throughout the country. If, therefore, cane development work is to be intensified, it is imperative that research workers and agriculturists are supplied with descriptive information relating to the varieties of cane, so that they may be correctly identified in the field and the seed material kept pure. This need is amply met by the second revised and enlarged edition of the publication *Coimbatore Canes in Cultivation*, brought out by the Indian Central Sugar Committee, 20, Rohtak, New Delhi. (Authors: Mr. N. L. Dutt and Dr. J. Thuljaram Rao. Price Rs. 25 net.)

The publication includes descriptions, agricultural characteristics and illustrations of the improved Coimbatore canes in cultivation in India, besides a few important varieties bred at other stations. These descriptions, etc., will enable the cultivator to choose the right type of cane which will best respond to the local conditions of soil and climate. A brief account of the stem epidermal pattern of varieties, including a separate key covering the epidermal pattern, is also given. A revised map sharing the area under cane varieties during the year 1952-53 is attached. In view of the useful nature of the publication, it would, as the Union Food and Agriculture Minister has aptly said in his foreword to the publication, be worthwhile translating this book in the various regional languages, so that the information contained therein may reach the cultivator in the language which he knows.

The U.P. Government has appointed a committee to determine the bonus payable by the vacuum pan sugar factories in the State for the season 1955-56. The committee has been asked to submit its recommendations within two months. Besides determining bonus, the committee will also enquire into payment of retaining allowance to their workmen by the factories, for the off-season 1956. It will also explore the possibility of an agreement with regard to bonus for the season 1954-55, retaining allowance for the off-season 1955 and for arrears of previous years, if any, and grant of leave to their workmen by factories, indicating the types and scales of leave to be given to the workers and the terms and conditions on which it should be given.

NEIVELI LIGNITE PROJECT

PRELIMINARY INVESTIGATIONS SUCCESSFUL

ONE of the main reasons for South India lagging behind the other parts of the country in regard to industrial development is acute fuel shortage. The discovery of lignite deposits at Neiveli in South Arcot has, however, held out hopes of removing this obstacle and of opening up new vistas of opportunities for economic development of the Southern region. For the Neiveli lignite project is a multi-purpose one; besides providing adequate lignite for development of electric power, it promises to yield industrial and domestic fuel, and also serve as a source of numerous by-products which can be developed as industries of their own. It will also release a large amount of underground water that can be used for purposes of irrigation.

In view of the immense possibilities the lignite project holds out, a high priority has been accorded to it in the second Five-year Plan. A notable feature of this project is that nowhere in the world does lignite occur over strata containing water under as high a pressure as in Neiveli. It is, therefore, necessary to control the water pressure, lest the water should heave the lignite up, break through and flood the mine. The Government of India, accordingly, wanted to conduct preliminary investigations regarding the feasibility of controlling the water pressure and making the project a commercial proposition. The preliminary investigations, according to an announcement by the Ministry of Production last week, have been successfully concluded and these have shown that it is possible economically to reduce the water level below the lignite bed sufficiently by pumping it out to permit the safe mining of lignite. Having thus satisfied itself that it is possible to make the project a successful commercial proposition, the Government of India has now formally decided to implement the multi-purpose project.

Orders for Machinery

The Government will begin implementation of the mining part of the project immediately. Plans for the mining of lignite have been finalised in consultation with the technical consultants for the project, Messrs. Powell Duffryn Technical Services Ltd., a British firm, whose services were originally obtained under the Colombo Plan for the preparation of a preliminary project report. The firm was later on appointed technical consultants. Orders worth Rs. 1.5 crores have been placed with firms in the U.S. and the U.K. for equipment, including dumpers, shovels and trucks. Further orders worth Rs. 2 crores will be placed with a West German firm for the supply of specialised mining equipment, including excavators and spreaders.

The mining of lignite on a commercial scale will begin early in 1960 and the generation of power will also start at about the same time. For this purpose, work has been started on the designing of a power plant to be based on the Neiveli lignite. The power generated will be supplied to the Madras electric grid. The production of fertilisers is expected to start six months after the mining of lignite and generation of power and the production of lignite briquettes will start thereafter.

Total Deposits

The project, it may be recalled, envisages the extraction of 3.5 million tons of lignite per annum, which will be used for (1) generation of power in a station of 211,000 kw. capacity, (2) production of about 380,000 tons of carbonised briquettes per annum (which will be utilised as industrial and domestic fuel) and production of 70,000 tons of fertilisers per annum in the form of urea and/or sulphate nitrate of a fixed nitrogen. The Technical Consultants have estimated the lignite deposits in the Neiveli area to last for 57 years at an annual rate of production of 3.5 million tons.

The project, when completed, is estimated to cost Rs. 68.85 crores, as against which a provision of Rs. 52 crores has already been made in the second Plan. The additional resources may be provided in the light of the actual requirements and the progress achieved in the implementation of the projects. The cost of mining lignite is estimated at Rs. 5 to Rs. 5-8 per ton, besides a pumping cost of Re. 1-9 per ton. It is felt that the cost of production can be lowered by about a rupee per ton if the quantum of production is stepped up.

NORTH INDIAN TEA CROP RISES SHARPLY

SUGGESTIONS TO RESTRICT PRODUCTION

TEA circles in Calcutta seem to be somewhat perturbed by the announcement of a larger North Indian tea crop for the month of August, although it has not so far had any serious effect on tea prices. The output of tea in North India during August amounted to 99.7 million lbs., which is 12.25 million lbs. more than that in the corresponding month of last year. This brings the crop for the current season so far (April to August) to 305.3 million lbs., an increase of 22.75 million lbs. over that at the end of August 1955. It is also 29.75 million lbs. more than the average for the last three seasons. The South Indian tea crop for August is estimated at 8.91 million lbs., as compared with the actual output of 11.30 million lbs. in the corresponding month of 1955, bringing the total (estimated) crop for the period January-August 1956 to 81.58 million lbs., a decline of 5.49 million lbs. from that (actual) for the corresponding period of last year.

At the end of July last the total production of the five major tea producing countries was only 6.3 million lbs. more (at 573.3 million lbs.) than that (567 million lbs.) a year before. The North Indian crop for August has now raised the excess to 18.5 million lbs. If, however, the South Indian estimate for August turns out to be correct, then the excess would be 13 million lbs. How far the output figures of the other producing countries would affect either way this excess is difficult to say at present. For, assuming that the present trend of production of all the countries continues for the rest of the season, a sizable surplus production can be anticipated, unless weather conditions deteriorate and come to the rescue of tea producers.

In the meantime, the anxiety of producers over the increasing output is understandable, particularly in the context of the irregular price trend during the current season so far. No doubt, better quality teas are in good demand and are sold well, but common and poor quality teas, which account for the bulk of the output, have not been fetching remunerative prices. It is stated that as the sales so far of the North Indian tea aggregate only 20 per cent. of the year's total crop, the remaining crop is likely to have a depressing effect on prices in the coming months.

Another factor which has darkened the gloom further is the recent restriction on the shipment of North Indian tea for auction at London to 160 million lbs. because this will mean a heavy strain on the already limited warehousing capacity in Calcutta, particularly when the crop happens to be bigger than expected. The third factor which has increased the industry's anxiety is the latest situation in respect of the Suez Canal crisis. If, for any reason, the traffic through the Suez Canal is adversely affected, it is feared that the prices in India will drop substantially on account of accumulation of stocks, even though there may be a corresponding spurt in London due to scarcity. How far this prospect will induce an increased demand in the next few weeks for stockpiling purposes remains to be seen.

Restriction on Crop

It is rumoured that, in the circumstances, referred to above, certain quarters in Calcutta favour restrictions on the size of the crop. One of the suggestions for this purpose is that plucking should be stopped at the end of November. Another suggestion is that the producers should come to an agreement under which each garden would destroy 2 per cent. of the remaining North Indian crop on the gardens. The suggestion to destroy the tea that is already grown or produced is, to say the least, a misguided and reprehensible one. It is in no way different from the policy of destruction of surplus coffee and wheat followed by certain American countries in the Great Depression of the 'thirties, a policy which was roundly condemned by many countries in the world. It is to be hoped that no responsible section of tea industry would countenance such a retrograde solution, which, if adopted, would bring down India in the estimation of the rest of the world and injure the goodwill of the Indian people to plantation industry. In fact it would inflict a slur on the private sector as a whole.

It is true that the sale of residual teas will have a depressing effect on the general level of prices and consumers will not have a good brew of tea. But the object can be effectively served by careful plucking. A poor country like India cannot afford to destroy the crop already grown and produced. The reaction of the tea producers to this suggestion is not yet known, but we are convinced that at least section of them, though they belong to the South, is one with us in opposing the artificial process of restricting the crop.

Speaking at the recent annual meeting of the U.P.A.S.I., Mr. M. M. Varghese, Chairman of the Planting Committee, referred to the subject of voluntary crop regulation and explained the stand of South Indian tea producers against it. He said:

"The somewhat rapid and alarming decline in tea prices since the beginning of 1955 set the industry thinking as to what should be done to arrest the recession. There was evidence to show that the recession was in part due to an excess of world supplies over world demand which had occurred through the year. Once again, the industry's thoughts went back to the measures which were adopted to cope with similar situations in the past, and particularly to a scheme to restrict crop production. North Indian associations were especially keen to adopt some form of crop regulation as that was, in their view, the most practical and effective method of dealing with the problem. This could not be taken up, however, because it was known that Government would not accept any proposals for quantitative restrictions, unless they were related to positive measures for the improvement in quality. The remedy of crop regulation has been tried in South India during the slump of the thirties, but under present circumstances, it can hardly be regarded as suitable or desirable. Today, voluntary regulation can bring no cure, unless it is tried on an international level. There is at present no international agreement, nor even a gentlemen's agreement by which the producing countries could co-operate in a scheme of this sort. That being so, there is no point in India trying to adopt a voluntary crop regulation scheme unilaterally, and yielding ground to other countries which do not believe in such a scheme.

"The stand taken by South India was that voluntary regulation was really not necessary. We believed that quantitative restriction should be caused not by an artificial process of cutting down the crop on a percentage basis, but rather by a natural process of reducing the production of inferior quality teas which could not be sold for a profit. It is with this view that we have decided upon finer plucking, as a means to sustain the quality of our teas."

It can be inferred from the speech of Mr. Varghese, that the South Indian producers will not subscribe to the proposal of destroying the crop when they are clearly opposed even to any form of artificial crop regulation. It may be said that the South Indian producers are not faced with a larger output of tea as the North Indian producers, but it may be pointed out that the excess production in the North will have its repercussions on South Indian tea prices as well and, as such, they will also be equally affected by a larger tea crop.

COBALARC 1-A

1 lb. of chromium carbide deposit in 8 minutes at only 250 amps.

THE INDIAN OXYGEN & ACETYLENE CO., PRIVATE LTD.

OUTPUT OF JUTE GOODS IN AUGUST

LOWEST SINCE JANUARY LAST

MONDAY this week (17th September) witnessed the implementation of the Indian Jute Mills Association's earlier decision to re-seal an additional 5 per cent. of the looms of its member-mills, just two months after the re-sealing of 2½ per cent. of the looms with effect from 16th July last. This has brought the total number of idle looms to 12½ per cent. of the total. Thus, the I.J.M.A. has not modified its decision, despite the notable improvement in the trading conditions during the past few weeks. Evidently, it wants to consolidate the position of its member-mills in the light of these conditions. Also, the revival of overseas buyers' interest in Indian jute goods, despite the higher prices quoted for them as compared with those of Pakistan goods, seems to have convinced the mills that the availability of supplies in Pakistan must have considerably diminished and that it is no use adding to world stocks of jute goods by India again expanding its production. To do so at the present juncture would only mean placing the producers of goods at the mercy of buyers. It is stated that, for some days past, the overseas buyers, who had formerly been reluctant to buy Indian goods on account of their higher prices, have been particularly active in Indian markets and that Indian mills have booked fairly heavy orders for forward shipment at higher levels. The sudden burst of activity by foreign buyers is also accounted for by unconfirmed rumours that the Pakistan Government has instructed the country's mills that the bulk of their sacking production is required for internal consumption and permission for exports will be given only after the internal needs are satisfied.

The past month, namely, August 1956, was the first full month with 2½ per cent. of the looms sealed. The effect of this is, as is naturally to be expected, a drop in production. Thus, the total production in August 1956 amounted to 89,600 tons, as compared with 94,100 tons in the previous month and 98,900 tons in June 1956. This is the third month in succession when the output has shrunk, having fallen from 101,700 tons in May 1956. It may be noted here that the fall in output during August, at 4,500 tons, as less than that in the previous month, whereas it should be more, because the idle capacity of the mills during August was greater than in July. This is presumably due to the fact that number of hours worked during the month was somewhat higher at 203.5, as compared with 200.5 in July.

The production in August is the lowest since January this year, when it amounted to 89,600 tons, but is still 8,200 tons more than that in the corresponding month of 1955, as will be seen from the following comparative table:

(In tons)

	August, 1956	July, 1956	June, 1956	August, 1955
Hessian	35,400	34,300	35,000	33,200
Sackings	48,200	52,900	57,300	43,700
Others	6,000	6,900	6,600	4,500
Total	89,600	94,100	98,900	81,400

The decline in production is mainly accounted for by sackings, the output of which in August represents the lowest since October 1955. It is, however, higher than that in the corresponding month of 1955 by 4,500 tons. It may be recalled that the fall in stocks of sackings at the end of August was only of the order of 5,000 tons, which shows that the decline in stocks in this variety was mostly due to lower production. In the case of hessians, however, it is significant to note that the production for the month under review was actually higher by 1,100 tons over the previous month, notwithstanding the fact that 2½ per cent. of the total looms remained idle during the whole month, while they were so for only half the month in July. The decline in sackings and the rise in hessians as noted above suggest that the jute mills must have devoted more looms to hessians at the expense of sackings in which the stocks have been heavy.

Now that the I.J.M.A. has implemented its decision to re-seal 5 per cent. more of the looms from Monday last, the production for the current month should show a more substantial fall than has been the case last month. If, at the same time, the present improved offtake also continues, there is no reason to doubt that the stocks of jute goods with the mills would dwindle rapidly. In some quarters, it is expected that, by the end of November, the stocks will be equal to about only three weeks' production, a level considered as the normal.

PROGRESS OF SHIPBUILDING

MOVE TO ESTABLISH A SECOND YARD

MUCH commendable progress has been made by India in the sphere of construction of ships, thanks to the far-sightedness of the private sector which first visualised the need as well as the importance of building ships in India and established the first shipbuilding yard, at Visakhapatnam. Although it has been taken over by the Government, it now remains the only large shipbuilding yard in the country. More recently, however, both the Government and Parliamentary opinion have been reported to be keen on establishing at an early date a second shipbuilding yard—that is, in addition to the one at Visakhapatnam. If this move materialises, India will have added significantly to its shipbuilding capacity.

The Hindusthan Shipyard, Visakhapatnam, is the only shipbuilding unit in the country which went into the public sector with effect from March, 1952, when the Government of India acquired a major controlling interest in it and formed a new company, entitled the Hindusthan Shipyard Ltd. At the beginning of the first Plan, the Shipyard had only two building berths, equipped to construct ships of 5,500-15,000 tons deadweight capacity. This capacity was far below an economic size. The first Plan envisaged the building of ships of the total tonnage of 150 000 dw.t. (equivalent to 100,000 G.R.T.) and the expansion of the capacity of the shipyard to 50,000 dw.t. The original programme was, however, modified on the advice of the French shipbuilding firm, A.C.L. The modified Rs. 1.96-crore programme aimed at increasing the capacity from 2½ ships of 8,000 dw.t. each year to 6 ships of the same capacity. This programme is being implemented. By April, 1956, the Shipyard had completed and delivered nine vessels with a total tonnage of 70,000 dw.t.

The production programme of the Shipyard in the second Plan has necessarily to be related to the offtake of ships in the next five years. The target for total shipping tonnage at the end of the Plan is set at 901,707 tons—coastal and adjacent trade 412,200 tons, overseas 405,507 tons, tramps 60,000 tons, tankers 23,000 tons and salvage tug 1,000 tons. Now, it is estimated that, during the second Plan, the expenditure on the Shipyard will amount to Rs. 9.02 crores, inclusive of a construction subsidy of Rs. 5 crores on ships built at the Shipyard and Rs. one crore for further expansion of the shipyard to build 8 to 12 ships per year.

Two Phases

It is, however, provided that actual expansion will be undertaken in two phases. The completion of the first phase will enable the shipyard to deliver per year six ships of the old type or 4 of the modern type; in terms of tonnage, it will amount to 75,000-90,000 G.R.T. for the five years of the second Plan. The second phase will raise the production target to 8 to 12 ships per year. The actual implementation of this programme to raise the capacity to 8 to 12 ships per year, it is stated, will be taken up after undertaking a review of the position in 1957.

The Government examined the question of further augmenting the capacity for building ships. Such expansion, it was felt, could be secured (*a*) through further increasing the capacity of the shipyard, and (*b*) through the establishment of a second shipyard. Referring to this aspect of the problem, the Planning Commission, in its report, *Programmes of Industrial Development*, stated:

"The establishment of a second shipyard would be justified if the offtake of ships is likely to be sufficiently high. It is envisaged that conditions of offtake will be favourable under the third Plan for the following reasons:

(*a*) The provision for expansion of shipping in the public sector as well as the private sector will have to be substantially higher in the third Plan, and

(*b*) The cost of ships can be expected to come down with supplies of steel at reasonably low prices arising from the increased availability of domestic steel as well as the availability of plates for the required specification.

"In view of the desirability of establishing a second shipyard under the third Plan, it is necessary to initiate sufficiently in advance the steps for the training of personnel and for the preparatory work including selection of an appropriate site for the yard. A token provision of Rs. 75 lakhs has been made in the second Plan for this purpose in addition to Rs. 902.8 lakhs referred to earlier."

Obviously, it is now felt by the authorities that the establishment of the second shipyard cannot be delayed until the period of the third Plan. The Government has presumably been influenced in its decision to add a second string to its shipbuilding bow by the continuing difficulties in the matter of obtaining ships in overseas countries and the urgency of the need to augment India's shipping tonnage. As one spokesman of shipowners, Mr. Vasant J. Sheth, put it, at the recent annual meeting of the Indian National Shipowners' Association, the "shipbuilding berths practically all the world over have been booked for our second Five-year Plan period and we cannot purchase second-hand ships at very prohibitive prices."

Mr. Reddy's Statement

It would appear that the Union Minister for Production, Mr. K. C. Reddy told a joint meeting of the standing committees of the Congress Parliamentary Party, held on 30th August, at New Delhi that the second yard, which is estimated to cost Rs. 2 crores, will be established in the next two or three years. Among the three claimant-centres for location of the shipyard, namely, Karwar, Cochin and Calcutta, the first is regarded as the most eligible one by virtue of its being the best natural port on the West Coast. During the period of the second Plan, according to Mr. Reddy's revelation, in the course of a Press Conference, held at New Delhi last week, all preparatory work necessary for the establishment of a second shipyard will be carried out. A nucleus of about 500 to 600 technicians, he said, will be trained at the Visakhapatnam yard. At the same time, the Government will select technical consultants for the second yard. Leading shipbuilding firms are already being approached for this purpose. He further stated that negotiations to select a firm of technical consultants for the manufacture of marine diesel engines had also been started.

It is believed that Mr. Reddy informed the meeting of the Congress Parliamentary Party, referred to above, that the Government was also contemplating the establishment of yet another yard at Cochin for building small ships of 3,000 to 4,000 tons. In this connection, it is noteworthy that a press report from Trivandrum averred that a Rs. 2½-crore scheme for starting a shipbuilding yard, at Cochin for manufacture of vessels of the capacity of 3,000 to 4,000 tons has been put forward from the private sector to the Travancore-Cochin Government. If this report is correct, it is not clear whether the Government has examined the scheme put forward by the private sector. Although shipbuilding is included in the State-sector under the Government's industrial policy, there is no reason why the private sector should not be allowed to make smaller ships and be given the same subsidy and other facilities made available to the Government-sponsored shipyards. Further, the Government will do well to examine what steps it could take to encourage the construction of small coastal vessels of the kind envisaged by the author of a series of articles on "Ambar Jahaj" which have appeared in this journal in its past few issues.

TRANSPORT OF OIL

ALTERNATIVES TO SUEZ

THE importance of the Suez Canal as the largest man-made international waterway carrying a variety of merchandise from raw materials to finished goods from and to Europe, Asia and the Far East cannot be over-emphasised. While the character of the goods passing through the Canal covers a diversity of items, by far the largest proportion of cargoes shipped through this waterway consists of oil and oil products. Some idea of the magnitude of the flow of this important commodity can be obtained when it is realised that, in 1955, the share of oil alone was 65 per cent. of the total volume of traffic through the Canal.

In the context of the present critical world situation occasioned by the recent Suez Canal crisis, the problem of finding alternative routes for the transport of oil from the Middle East has become the subject of much discussion and speculation in the West. Even if there were no dispute over the Suez Canal, it would still be better to think of developing alternative routes, because the world trade is expanding so fast that the quantum of traffic would be beyond the capacity of the Canal. It would be so even after making allowance for the Canal's expansion. To take the oil alone, for example. It is estimated that Europe may need 200 million tons of Middle East oil a year by the late nineteen sixties and the U.S., about 70 million tons, that is, two and a half times as much as in 1955. Even if the most ambitious plans for enlarging the Suez were carried out, it might be capable of handling only about 130 million tons of oil in 10 or 12 years' time.

There are now three methods by which this difficulty can be surmounted. The first is the replacement of the present tankers of 20,000 tons or slightly over that by "super-tankers" of thrice or four times the present capacity and to operate these super-tankers via the Cape of Good Hope. When present tanker orders are completed, 30 per cent. of the world's total tanker tonnage will consist of super-tankers of over 30,000 tons. The largest tanker in service today is one of 85,000 tons. One of 100,000 tons is on the stocks, and several more tankers of 60,000 tons or over, have been ordered. For the movement of oil over long distances, sea transport, by far, appears to be cheaper than transport by pipeline. Even though the cost of transporting oil by tanker is constantly changing, it has been found from experience that the higher the tonnage, the lesser the cost of transportation. But this solution is also not without its difficulties. Thus, there are not many shipyards in the world which can build tankers of more than 70,000 tons. The next difficulty is that of unloading and berthing of super-tankers. Even so, the building and operating economies of a super-tanker, it is stated, are very attractive and is a much cheaper way of carrying oil round the Cape of Good Hope over long distances to West America and the ports of northern Europe. In fact, the economies in operating very large tankers are so attractive that it is already cheaper per ton of oil to send a big tanker round the Cape to the U.S. fully loaded than to send a medium-sized tanker through the Canal.

The second alternative for carrying this vital commodity lies in adding to or increasing the existing pipeline capacity. The present capacity of the pipelines from Iraq and Saudi Arabia to the Mediterranean is about 40 million tons. The capacity of the Trans-Arabian pipeline is now being raised to 20 million tons and could be increased to 25 million tons. The Iraq Petroleum Company has plans to add 9 million tons to its pipeline to Tripoli by partly looping the line and has also considered the possibility of gaining another 7½ million tons by diverting its Haifa pipeline to Sidon. If all these schemes were completed, it would raise the total throughput of the Mediterranean pipeline terminals to about 66 million tons. It must, however, be noted that even on the most favourable interpretation of the potentialities of existing schemes, the Canal and the present pipeline system together would not handle as much as 200 million tons as compared with a projected demand of 270 million tons.

Another scheme, which has been suggested, is the construction of a pipeline from the Persian Gulf to the Mediterranean. Such a pipeline, it is stated, might go some way towards meeting the oil requirements which might develop by 1960. This pipeline would link the oilfields of Kuwait, Southern Iraq, and possibly Persia with the Turkish port of Iskenderun. The

NEW PRODUCTS AND PROCESSES

Fruit Juice Powder

A PROCESS for the production of fruit juice powders from mangoes, oranges and papayas has been developed at the Central Food Technological Research Institute, Mysore. The process consists in concentrating the pretreated juice, mixing with powdered sugar, fortifying where necessary with vitamins, mineral salts, colours, flavours, fruit acids, etc. and subjecting the pasty mass to obtain shreds, flakes or pellets. Drying could be done in an ordinary cabinet drier or in vacuum driers. The dried material is powdered and suitably packed. The method has been found to be equally useful for orange juice and fruit pulps like those of mango, papayas, jack fruit and guava. The process has been successfully worked out on a semi-pilot plant scale. Further details about the process are available from the National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

New Electronic Banking System

A new electronic banking system which is to be introduced at the Union Dimes Savings Bank, New York, will, it is claimed, not only greatly increase the efficiency of book-keeping and reduce the amount of labour required for this and other banking operations, but will also occupy far less space than that currently occupied by the conventional semi-automatic equipment now in use. The new equipment, which will be completely automatic, will carry the register of accounts and other data necessary for the complete automation of the book-keeping and accounting system in a series of magnetic "memories." The entire system, which has been installed by the U.S. Tele-register Corporation [which is also responsible for the operation of the automatic electronic seat reservation system used at La Guardia airport, New York], will occupy a space of only 700 square feet of floor space as against the 3,000 square feet of floor space occupied by the present equipment.

Lighting Device

Electronic devices which will react to the level of daylight and will switch on the lights when darkness falls have been developed for use in blocks of flats and private houses. Mounted on an outside wall they will switch on the lights as soon as it is dark enough to cause eyestrain. As soon as it becomes lighter they switch the lights off. The switches are to be shown by The General Electric Company (Magnet House, Kingsway, London, W.C.2) at the Fuel Efficiency Exhibition which opens at Olympia, London, on 2nd October. Incorporated in the new switch is an antimony photocell and variations in the amount of light falling on it cause it to emit a signal. This signal is amplified by a triode valve to operate a relay which switches the lighting on or off. The sensitivity of the photocell can be varied so that the relays will operate at any required degree of daylight.

Prefabricated Concrete

The growing use of pre-fabricated concrete structural elements in building has led to the development of a number of processes for speeding up the production cycle of these units. One method, developed in a variety of different forms in different countries, depends on the use of steam curing techniques which are specially adapted so as to fit production schedules. Thus in Poland a system has been evolved in which the steam curing cycle is split into three separate operations, each of which is carried out at a different station. At the same time the timing of the individual operations is arranged so that they do not last more than eight hours. The process, which involves the addition of 2 per cent. by weight of calcium chloride to the concrete mixture and which is suitable for use with Portland cements of brand numbers 250 and 350, is said to lead to a considerable quickening of the curing operation and a comparable increase in output. The elimination of the low pressure chamber stage of the curing process (which normally lasts 12 hours) is, it is claimed, only one of the several useful features of the process.

Visible Tape Recordings

A simple process by means of which the magnetic recordings on used recording tapes can be made visible for examination, has been developed by scientists at the Pennsylvania State university. The process, which can be used to obtain either temporary of permanent images, and which was described in a recent issue of the scientific journal "Nature," depends on the drawing of the used tape through a thin layer of ferro-magnetic powder spread over some smooth paper. This ferro-magnetic powder clings firmly to those areas of the tape which have been magnetically orientated [that is to say, the areas of the tape bearing the record of the sounds recorded] and when the loose powder has been blown away or shaken off, a clearly visible image of the recording remains. This visible image can then be either photographed or, alternatively, it can be removed from the tape and transferred to the surface of a strip of transparent adhesive tape simply by applying the magnetic tape bearing the ferro-magnetic powder record to the sticky surface of the tape. Visible recordings made in this manner can be read easily in much the same way as oscillograms since the spacing of the dark bands on the tape caused by the presence of the ferro-magnetic powder is directly related to the frequency and temporal distribution of the sound and sound pulses and to the intensity of the sound.

People the world over have certain basic things in common. For instance the need for food. A good harvest is reason for rejoicing everywhere.

As in agriculture, so in many fields of human endeavour, a good harvest is the result of joint effort. In India today, man and machine are harnessed to produce bountiful harvests in every field.

A constant supply of our petroleum products to such endeavours is fundamental to progress.

READY REFERENCER ON THE INDIAN COMPANIES ACT, 1956
BY JOHN & ROW, *ADVOCATES*, MADRAS.
Price Rs. 25/-

The following is an extract from Mr. Tennetti Viswanatham's letter, which will speak to the merits of the book as well as the authors of the same.

"The Ready Referencer published by John and Row is indeed a very valuable book. It is a clear analysis of the provisions of the new Act. It brings together the changes in their logical sequences so that the Directors and Managing Agents can immediately lay their finger on the required provisions whenever they are in doubt as to what is to be done or what the Law on the subject is. Besides, the Referencer is of even greater value to the Lawyer, as one can expect it to be, coming as it does from John and Row, who have been distinguished specialists on Company Law. Likewise the Bench should find it invaluable."

(Sd.) TENNETTI VISWANATHAM,
Chairman, Advisory Commission
(Company Law Administration).

RATIONALISING PAY SCALES OF INSURANCE STAFF

UNION LEADERS' DISSATISFACTION

THE integration of the pay and service conditions of the 27,000 full-time employees of the formerly private-owned 250 units of life insurance offices has, as was only to be expected, proved to be a difficult task for the Government. Ever since nationalisation of life insurance was decided upon, official spokesmen have repeatedly given the assurance that the staff had nothing to fear from nationalisation of life insurance and exhorted the workers to give their loyalty and devoted work to the new set-up. Against this background, it is somewhat deplorable that the Government has been unable to carry conviction to the representatives of the staff in so far as the new pay-scales are concerned.

The new pay-scales and service conditions, applicable to the employees of Life Insurance Corporation, are:

(1) *Superintendents*: Rs. 200-20-500.

(2) *Section heads and head clerks*: Same as assistants with an additional special pay, namely, Rs. 25 p.m. during first five years of service as section head or head clerk Rs. 30 p.m. during the next five years of such service, and Rs. 35 p.m. thereafter. Section heads would be in Central, Zonal and Divisional Offices and head clerks in branch offices. Head cashiers would be in the superintendent's grade.

(3) *Stenographers*: Same as assistants with an additional special pay for persons selected for work with senior officers. Such special pay will be: Stenographer to Chairman Rs. 50 p.m.; Stenographer to Directors Rs. 40 p.m.; and Stenographer to Zonal Manager, Deputy Zonal Manager and Senior Officers at Central Office Rs. 30 p.m. Stenographers should have a minimum speed of 120 per minute in shorthand.

(4) *Assistants*: Rs. 90-10-210-E.B.-15-300.

(5) *Clerks*: Rs. 55-5-80-6-104-E.B.-7-160-E.B.-10-220. Typists and Steno-typists would be in this grade but steno-typists having a speed of not less than 80 words per minute in shorthand would get an additional special pay of Rs. 25 per month. Wherever an efficiency bar is indicated in the pay scale, further increments will accrue only when the E.B. is removed which will be done if the employee holds prescribed qualifications or on his successfully completing prescribed tests.

Subordinate Staff

(6) *Drivers*: Rs. 60-3-90.

(7) *Daftries*: Rs. 40-3-70.

(8) *Head peons and liftman*: Same as Sepoys, Chaprasis and Hamals with an additional special pay of Rs. 5 p.m.

(9) *Sepoys, chaprasis and hamals*: Rs. 30-2-60.

(10) *Sweepers*: Rs. 26-2-60.

Dearness Allowance

(Applicable to employees in all grades)
B.S.=Basic Salary; D.A.=Dearness Allowance.

B.S. less than Rs. 51—D.A. Rs. 40; B.S. Rs. 51 to Rs. 100—D.A. Rs. 50; B.S. Rs. 101 to Rs. 150—D.A. Rs. 55; B.S. Rs. 151 to Rs. 200—D.A. Rs. 60; B.S. Rs. 201 to Rs. 250—D.A. Rs. 65; B.S. Rs. 251 to Rs. 300—D.A. Rs. 70; B.S. Rs. 301 to Rs. 400—D.A. Rs. 75; B.S. Rs. 401 to Rs. 500—D.A. Rs. 80.

City Compensatory Allowances

In addition to the pay and special pay as above, employees working in certain cities will receive city compensatory allowances on the following scale:

	At Delhi, Kanpur, Calcutta, Madras and Bombay	At other cities with a population of more than 3 lakhs as per 1951 census
Superintendents ..	Rs. 30	Rs. 20
Assistants and clerks	Rs. 20	Rs. 10
Subordinate staff ...	Rs. 5	Rs. 5

City compensatory allowances are not applicable to present employees whose total emoluments (salary, dearness allowance and other allowances) exceed the minimum pay, special pay, dearness allowances and city allowances applicable to them according to their scales.

Other Conditions

Working hours: The normal hours of work for all employees other than subordinate staff at all the offices of the Corporation shall be 6¼ hours on week days and 3½ hours on Saturdays. The hours of work for the subordinate staff shall be 7¼ hours on week days and 4½ hours on Saturdays. The actual hours for each Office in each Zone will be fixed by the Zonal Manager according to local conditions.

Leave: (i) *Casual leave*: 15 days in a calendar year but not more than five days at a time and to be availed after sanction by the appropriate authority; (ii) *Privilege leave*: 1/11th of active service—maximum accumulation 120 days including accrued privilege leave on the Appointed Day. Maximum three months in any period of 12 months; (iii) *Sick leave*: 15 days for each year of service subject to a maximum of three months with full pay and six months with half pay throughout the full period of service. Period of service and sick leave taken with the insurer in whose service the employee was on the Appointed Day will also be taken into account. Sick leave will be granted only on medical certificates from Doctors appointed by the Corporation for the purpose.

Provident Fund: All confirmed employees will contribute to a Provident Fund at 8-1/3 per cent. of their salary with an equal contribution by the Corporation. A separate Trust will be established.

Retirement: *Normal Age of Retirement*: 55 extensible on continued fitness by one year at a time upto age 60.

Gratuity: One month's terminal basic pay for each year of service subject to a maximum of 15 months' payable on normal retirement or retirement on grounds of health after ten years of service or on death whilst in service. Service with the insurer in whose service the employee was on the Appointed Day shall count towards the qualifying period.

Existing Scales

The intention of the authorities is to fit the pay-scales of the employees into the above scales. A notable feature of the Government's decision is that, if the maximum pay of the scale applicable to an employee prior to the Appointed Day (the date of the inauguration of the Corporation) happens to be more favourable to him than the maximum now allowed, he will be allowed to retain the benefit of the original scale. In other words, the original maximum, if it is favourable to the employees, will be fully protected. Another notable feature is the provision of only one grade for fitting in all existing employees including those who are now in the low grades, known as record clerks or filing clerks. There is, it is stated, a large number of employees—about 2,000 to 2,500 or one-sixth of the total number of the employees in the lower cadres—whose salaries will have to be upgraded in order to bring their emoluments to the minimum in the new cadre now announced. Again, provident fund and retirement benefits are now being made applicable to all employees, including a large number of employees who did not so far enjoy these benefits. Although the normal age of retirement is fixed at 55, the Government's intention, it is stated, is that all those who are fit to carry on their work will have their service extended from year to year until they complete 60 years of age. Finally, all the employees have been assured of a definite grade which not all of them possessed formerly. In any case, employees are allowed to supplement as before, their income, if they choose, by canvassing life business. Indeed, many of the employees have so far been adding to their income in this manner. It is also noteworthy that though integration of life offices ought to result in—and perhaps, has resulted in—surplus staff, the authorities have not sought to retrench any employee.

Nevertheless, the two important unions, namely, the All-India Insurance Employees' Association and the All-India Life Insurance Employees' Association have expressed their disappointment over the new pay scale. An abortive attempt was made by some members of Parliament to move an adjournment motion in the Lok Sabha. The Union Finance Minister, Mr. T. T. Krishnamachari, stated that he and the Secretary to the Ministry had gone into the whole scheme of pay-scales and found that they had "rather done well to the insurance employees." Nevertheless, mass rallies and demonstrations have been held in different centres. Presumably, this arises from the fact that the salary scales, as one spokesman for staff is said to have put it, are "much below the expectations of the employees." This is not a valid criticism, for all pay-scales all the world over are always, and have always been, below "expectations" of the employees. The question is whether they meet the reasonable demands of the workers.

In trying to find an answer to what constitutes the "reasonable" demand for insurance staff, a few broad considerations have to be borne in mind. In the first place, nationalisation of an industry is bound to lead to integration of pay-scales and all such integration, however, wisely conceived, will certainly occasion some painful process of readjustment. It is, however, necessary to keep the inconvenience and hardship inevitable in rationalisation to a minimum. Secondly, no pay-scale can be regarded in isolation. All pay-scales have to be considered in relation to one another. From this point of view, the new pay-scales do not compare unfavourably with many of the scales in Central and State Government services.

The employees, however, contend that they must be given the pay-scales which are applicable to the Reserve Bank employees. This demand stems from the consideration that both the Reserve Bank and the Life Insurance Corporation are nationalised financial institutions. But it is overlooked that the Reserve Bank was a compact unit before it was nationalised whereas nationalisation of insurance has meant the integration of no less than 250 units. Further, the standards of recruitment to the Reserve Bank service have always been higher than in life offices. It has been computed that, among the insurance staff, non-matriculates form as much as 20 per cent. of the total staff. Again, the Reserve Bank's work is less "commercial" than that of the Insurance Corporation. In any case, the Bank does not have to deal with any class of persons comparable to the policy-holders in life insurance. In one sense, the insurance employees are better placed than the employees of the Reserve Bank, in that the former have an opportunity to augment their regular salary by canvassing life business.

Bonus

Nevertheless, the authorities will do well to consider the genuine grievances of the employees and see how best they could be redressed. It is quite likely that there are employees who have been connected with insurance for many long years and who were not employed by any insurance office immediately preceding the date of nationalisation. The authorities must collect data about such employees, examine their experience and see whether they cannot be fitted into the work of the Corporation. Many of the employees are naturally sore over the point that they will hereafter miss the bonus. But it is part of the Government's policy not to grant bonus to the employees of nationalised institutions. But the authorities, it is stated, have recognised that most employees had come to look upon bonus as a definite part of their remuneration and that the sudden stoppage of the bonus will find many employees in a difficult position. Their intention is that the amount which was being paid as bonus should still be made available to the employees in some form or other and they have decided to set up a Staff Amenities Fund. They have also announced their decision to make an *ad hoc ex gratia* bonus of 75 per cent. of the average bonus for the last three years. They should now announce what amounts will be credited to the Fund and how it will be administered. Moreover, in fitting the emolument of the employees to the new pay-scale, the authorities seek to protect any excess above the pay to which an employee will be entitled by treating such excess as his personal pay. But it should be clear that this method will adversely affect the provident fund, gratuity

REPORT OF THE DIRECTORS OF THE BANK OF MYSORE, LTD. FOR THE HALF-YEAR ENDED 30TH JUNE 1956

The Directors have pleasure in submitting to the Shareholders an interim Balance Sheet and Profit and Loss Statement as at 30th June, 1956. The Auditors' Report is also annexed.

The result of the Bank's working for the half-year is a surplus of Rs. 8,87,290-13-9, which sum added to the balance brought forward from 31st December, 1955, viz., Rs. 1,81,937-2-1, amounts to Rs. 10,69,227-15-10 as the sum available for distribution, which the Directors have disposed of as follows :—

	Rs.	a.	p.
In payment of an interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 4 per cent. per annum free of Income-tax	4,00,000	0	0
Transferred to Reserve for Income-tax and Super-tax	2,50,000	0	0
Carried forward to next account	4,19,227	15	10
Total .. Rs.	10,69,227	15	10

The Directors hope that the result of the working for the half-year will be considered satisfactory.

The interim Dividend will be payable on and after 4th September, 1956.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

(Continued on page)

PRODUCTION IN ASIA EXPANDS

PRICE LEVELS TEND TO RISE

[A brief reference to economic conditions in Asia and Far East was made in our last issue. Since then, further information has become available, and this has enabled us to publish on this page a more detailed summary of economic trends in the E.C.A.F.E. region of which India is a part.—ED.*]*

A SLIGHT increase in agricultural and industrial production, reduced trade deficits, and improvements in the gold and foreign assets position were the main features marking economic development in Asian countries in the half-year period up to 31st March 1956, according to the latest review of the Asian economic situation, published by the secretariat of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.). Although economic conditions continued to improve on the whole, the economic development was uneven from country to country and within the various fields of economic activities. Cereal and rice production reportedly reached new records in 1955-56 in mainland China and Japan; and significant production increases were achieved in rubber, raw cotton, raw jute and tea, while production of sugar and copra rose only moderately.

Industrial production in early 1956 continued to increase at about the same pace as in previous years in India, Pakistan and the Philippines. The tempo also appears to have increased in mainland China (after a slowing down in 1955) and in Japan.

Exports from Asian countries (excluding Afghanistan, mainland China, south Korea and Nepal for which detailed trade statistics are not available) showed a greater expansion than in imports, mainly due to larger deliveries of rubber, and of manufactured goods—particularly capital goods—from Japan. The trade deficits of most countries of the region tended to decline in 1955, but were moving upward again in early 1956, due both to a rise in imports and a fall in exports. Japan and India between them accounted for 88 per cent. of the net trade deficit in the first quarter of 1956.

Price Trends

Trend of price levels was uneven from country to country. In 1955, there were continued price increases in Cambodia, China: Taiwan, Indonesia, south Korea, Thailand, and south Viet-Nam (mainly due to military and other non-developmental Government expenditures financed by heavy budget deficits, and in the case of Thailand due to improved exports and some tightening of consumer goods imports). Prices remained stable in Ceylon, Japan and the Philippines (mainly because of deflationary policies), and in mainland China (mainly due to the rationing of essential consumer goods, made necessary by the high rate of capital formation). Burma, India, Malaya and Pakistan experienced a downward price trend in 1955, but in 1956 prices tended to remain stable, or move slightly up.

Favourable weather conditions and various Government efforts to stimulate food production resulted in 1955-56 in an increase by 2.1 per cent. in the cereal production in the E.C.A.F.E. region (excluding mainland China). Production of rice, the main staple food in the region, increased by 7 per cent. and closely approached the record output of 1953-54. but the situation varied considerably in different countries. Mainland China reported a bumper harvest, and so did Japan. In Indonesia and Pakistan, harvests were lower than in the previous year, and in Indonesia reduction in the rice crop was aggravated by a sharp decline in maize production. In India, the increase of about 1 million tons in rice production was more than offset by the decline of about 3 million tons in the production of millets, sorghum and maize. According to official figures, the total production of foodgrains (including root crops) increased in mainland China in 1955 by 9 per cent. to 184 million tons, while paddy production is said to have increased by 5 million tons.

Cereals

The shortfalls in cereal production in India, Indonesia and Pakistan and the consequent sharp increase in domestic prices in these countries made necessary sizable imports to meet current consumption needs, thus focussing attention on the need for building up reserve stocks.

Rice supplies available for export in the surplus countries of the region are expected to come up to the level of the previous year. Burma estimates a rice surplus of about 2 million tons for 1956, with about 70 per cent. of the surplus already committed by contracts by end of 1955. Thai rice exports in the first five months of 1956 are estimated at about 500,000 tons, as against 604,000 tons in the same period last year. Although the 1955-56 crop was good, some supply difficulties were experienced, probably because of transport bottlenecks and hoarding by middlemen. The export premium was reduced from Baht 935 per ton to Baht 600. The increase in the rice production in mainland China by 5 million tons was attributed to satisfactory weather conditions and to various Government measures, including improvements in rice cultures, better irrigation facilities and the increase in the number of co-operatives (said to total 1.09 million agricultural producers co-operatives covering 90 per cent. of the peasants by end of March 1956).

Cereal production in the E.C.A.F.E. region (excluding mainland China) during the last years is shown below:

(Quantity in thousand tons)

	1934-35 to 1938-39 average	1948-49 to 1952-53 average	1953-54	1954-55	1955-56 (provisional)
Rice—					
Milled equivalent	64,080	65,757	75,214	70,342	75,124
Wheat	12,129	13,353	11,497	13,511	13,578
Other cereals	26,444	24,037	31,171	32,424	29,995
Total	102,653	101,147	117,882	116,277	118,697

Source: FAO except for the 1955-56 figures in respect of India which are from national sources.

Most of the export commodities showed increases in production and exports during 1955 and the first quarter of 1956. Tea and rubber production attained new heights, and jute production was probably about the same as during the record year of 1951-52. Copra and sugar production also increased, albeit moderately. Cotton alone showed a decline, except in mainland China (where the 1955 production was reported to be 1,518,000 tons, an increase of 43 per cent. over the previous year).

Even more important than increases in production were the sharp increases in export. Rubber exports approached closely the 1951 peak and, helped by higher prices, brought in considerably larger foreign exchange earnings. Increases in the exports of cotton, jute and sugar also assisted foreign exchange earnings, despite relatively lower prices. Tea exports from India, Indonesia and Pakistan were lower, but Ceylon succeeded in increasing both the volume and value of her tea exports. In early 1956, exports remained at about the same level but the general market situation appeared to have weakened.

Industrial Production

Industrial production in Pakistan continued to increase at a rate in excess of the increase in world industrial production, while the rate of increase in China, India, Japan and the Philippines approximated the world level. In China, industrial production on the mainland rose by only 8 per cent. in 1955, as compared with an increase of 17 per cent. in 1954. This decline in the pace of increase in industrial production was mainly due to short supply of raw materials, particularly raw cotton, tobacco and jute (caused by the great flood of 1954). The total increase in industrial production in India is put at 35 per cent. for the period 1951-55; a still greater expansion is planned for the second Five-year Plan beginning April 1956.

Industrial production in Japan continued and slightly accentuated its upward trend, mainly because of larger export demands. It is noteworthy that producers' shipments increased more sharply than production, so that manufacturing industries could reduce their stocks of finished goods.

The rapid expansion in both industrial capacity and production continued in Pakistan in 1955. The country has become self-sufficient in a number of consumer goods, for instance, cotton textiles, footwear, matches, low-grade papers and soap.

Trade and Payments

In 1955, trade of the E.C.A.F.E. countries showed an increase by 15.6 per cent. to $8,326 million in exports and by 5 per cent. to 8,622 million for imports in 1955. The trade deficit was reduced by 70.1 per cent. Almost two-thirds of the increase in export earnings was accounted for by Japan (iron and steel products, machinery and chemicals) and Malaya (rubber). The increase in Japanese exports can be explained largely by the competitive prices resulting from the Governments deflationary policy, while the rise in rubber earnings was due to a higher demand in the United States and other indus-

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED.

We have audited the Balance Sheet as at 30th June, 1956, and Profit and Loss Account for the half-year ended that date of The Bank of Mysore, Ltd., with the accounts maintained by the Bank and report that :

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit.
(b) Such information and explanations have been found to be satisfactory.
(c) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.
(d) The returns received from the Branches have been found adequate for the purposes of our audit.
(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the Books of account and returns.
(f) In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 30th June, 1956, and the Profit and Loss Account gives a true and fair view of the Profit for the half-year ended 30th June, 1956.
(g) We are of the opinion that proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books.

A copy of this Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956 has been filed with the Registrar of Companies, West Bengal.

An application will be made to the Stock Exchange at Bombay, for permission to deal in the shares now being offered and in due course for an official quotation.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that, in giving this consent, the Government of India do not take any responsibility for financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

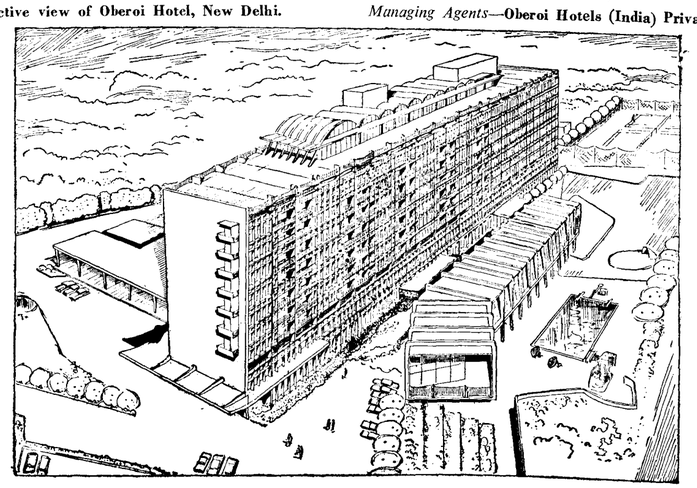
The subscription list will open at 10-30 a.m. on the 24th day of September, 1956, and will remain open until the 8th day of October, 1956, unless closed earlier at the discretion of the Directors, but not before the 3rd day of October, 1956.

PROSPECTUS OF

THE EAST INDIA HOTELS LTD.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT VII OF 1913.)

Perspective view of Oberoi Hotel, New Delhi. *Managing Agents*—**Oberoi Hotels (India) Private Ltd.**



AUTHORISED CAPITAL	**Rs. 2,00,00,000**
Divided into :	
(1) 1,00,000 6 per cent. tax-free Cumulative Preference Shares of Rs. 100 each	Rs. 1,00,00,000
(2) 10,00,000 Ordinary Shares of Rs. 10 each	Rs. 1,00,00,000
	Rs. 2,00,00,000
ISSUED	
1,00,756 Ordinary Shares of Rs. 10 each (Paid-up Shares Rs. 55,128)	Rs. 10,07,560
NOW BEING ISSUED	
30,000 6 per cent. tax-free Cumulative Preference Shares of Rs. 100 each at par	Rs. 30,00,000
and	
5,99,244 Ordinary Shares of Rs. 10 each at par	Rs. 59,92,440
	Rs. 1,00,00,000

Of this, it is agreed that Rai Bahadur M. S. Oberoi and his friends will take up 99,244 Ordinary Shares of Rs. 10 each *at par* by subscription in cash.

Further, it is agreed that with regard to the purchase of the immovable and movable assets of the Vendor Company appertaining to its hotel known as Oberoi Palace Hotel at Srinagar at their cost price for a total consideration of Rs. 15,10,654-14-3, Rs. 15,00,000 will be paid and satisfied by allotment of 1,50,000 Ordinary Shares of Rs. 10 each at par and the balance, i.e., Rs. 10,654-14-3 will be payable in cash to the Vendor Company.

PRESENT ISSUE

The remaining 3,50,000 Ordinary Shares of Rs. 10 each and 30,000 6 per cent. (free of Income-tax) Cumulative Preference Shares of Rs. 100 each are offered for public subscription.

The amount payable in respect of the Preference and Ordinary Shares is as follows :

Rs. 25-0-0 per Preference Share on application, and

Rs. 25-0-0 per Preference Share on first call and the balance in two equal instalments provided that there shall be intervals of not less than two months each between calls and between application and first call.

Rs. 2-8-0 per Ordinary Share on application, and

Rs. 2-8-0 per Ordinary Share on first call and the balance in two equal instalments provided that there shall be intervals of not less than two months each between calls and between application and the first call.

Applications must be for a minimum of 5 Preference Shares or multiples thereof and 10 Ordinary Shares or multiples thereof.

Prospectuses and application forms will be available from the Brokers to this issue and from the following Banks and their Branch Offices and the Registered Office of the Company :—

DIVIDEND, CAPITAL AND VOTING RIGHTS.

The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company and of the limitations upon borrowings and the creation of further shares.

Dividends : The profits which the Company may determine to distribute in respect of any financial year or any other period shall be applied, first, in paying the holders of the Preference Shares a fixed cumulative preferential dividend at the rate of 6 per cent. per annum (free of Income-tax) on the capital for the time being paid up thereon and the balance of the said profits shall be distributed amongst the holders of the Ordinary Shares in proportion to the amounts paid up on the Ordinary Shares held by them respectively.

Capital : The assets available for distribution to members whether on a liquidation or not shall be applied, first in repaying the shareholders of the Preference Shares the amounts paid up on such Preference Shares together with a sum equal to any arrears or deficiency of the fixed dividend thereon whether declared or not, upto the commencement of the winding up. The Preference Shares do not confer on the holders any further right to participate in the assets or profits of the Company. The balance of the assets shall be distributed amongst the holders of the Ordinary Shares in proportion to the amount paid up on the Ordinary Shares held by them respectively.

Voting : The Preference Shares entitle the holders to receive notices of any General Meeting, but do not entitle them to vote thereat unless

(1) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting, or

(2) the business of the meeting includes the consideration of a resolution which directly affects the rights attached to the Preference Shares. (A resolution for winding up the Company or for the repayment or reduction of its share capital will be deemed directly to affect the rights attached to the Preference Shares.)

On a show of hands every member entitled to vote who (being an individual) is present in person, or by proxy, or (being a corporation) is present by a representative, or by proxy shall have one vote. On a poll, the voting rights in respect of the Ordinary and Preference Shares will be as specified in Section 87 of the Companies Act, 1956. No member will be entitled to be present or vote either personally or by proxy at any meeting in respect of the shares registered in his name on which any calls or other sums presently payable have not been paid or in regard to which the Company has and has exercised any right or lien.

Variation of Rights : The special rights attached to any class of shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a special resolution passed at a separate meeting of the holders of the shares of the class but not otherwise.

Restrictions on Transfer of Shares : There are no restrictions on the transfer of fully paid shares, but the Directors may decline to register any transfer of partly paid shares to a person of whom they do not approve and may also refuse to register any transfer of shares on which the Company has a lien.

Borrowings : Subject to the restriction imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital or any part thereof and to issue debentures and other securities.

PROSPECTUS

Objects : The East India Hotels Limited was incorporated on the 26th May 1949, for the object set out in the Memorandum of Association generally and in particular to run the business of Hotels and Restaurants and their allied trades.

The Hotel Project at New Delhi : The hotel project at New Delhi will include public rooms, such as Lounge, Grill Room, Dining Room, Banquet Room, Conference Room, Swimming Pool, Shops, Restaurants, Nightclubs, etc. The hotel will be fully airconditioned and centrally heated and will be built and equipped on the most modern western lines. There will be ancillary establishments such as bakery, confectionery, laundry, ice and mineral water factories, etc. This hotel will be a small town in itself, and is expected to have 200 rooms with 375 beds and will be one of the best anywhere. Apart from this, the project will provide employment for a large number of persons. It is thought that the project itself will contribute a relatively fair percentage to the country's earnings of foreign exchange. A plot of land well situated on Mathura Road, in New Delhi has been allotted to the Company by the Government of India. This land has been acquired for the construction of this modern 9 storeyed hotel building with a height of 109 feet. The terms of the contract will be found under the heading "Contracts Relating to Properties" of the Prospectus.

Oberoi Palace Hotel, Srinagar : The plans include the purchase from Hotels (1938) Pvt. Ltd., of the immovable and movable assets comprised in Oberoi Palace Hotel at Srinagar, Kashmir. Negotiations for the purpose have been completed with the Vendor Company. The Vendor Company has agreed to permit the Company to use the name "OBEROI PALACE HOTEL" in connection with the latter's hotel at Srinagar, without charging anything for the same. The Oberoi Palace Hotel started functioning from the middle of June 1955 and has been accepted as one of the finest resort hotels in the world. Important persons in the international travel market and international personalities such as Marshal Bulganin and Mr. Nikolai Khrushchev of the Soviet Union, who recently stayed at this hotel have spoken highly of it. The Oberoi Palace Hotel is housed in the former Palace of Maharaja Hari Singh, and is situated on the Dal Lake and is spread over 50 acres of land with accommodation for 150 beds. It is luxuriously furnished and has a commanding view of the Lake and mountains. It is today fulfilling the needs of a first class hotel in Kashmir. Its initial success is indicative of how areas develop with improved facilities. During the period since its inception, the hotel has been full most of the time. Rai Bahadur Oberoi has secured a ten years' lease with two options of renewal for ten years each to operate the Oberoi Palace Hotel in the former Palace which has been altered, renovated, and improved for the purpose of operating as a hotel. The following is the summary of the capital expenditure incurred in this respect :

	Rs.	a.	p.
Furniture, Fittings, Cutlery, Crockery, Linen, etc.	6,22,563	12	9
Machinery and Boilers, etc. ..	42,927	6	6
Electric Installation	85,377	11	3
Sanitary Installation	2,81,823	13	0
New Wing Construction	4,73,962	2	9
Expenses for lease of Palace and Orchard	4,000	0	0

Auditors Certificate : This is to certify that the above assets appear in the books of Hotels (1938) Private Ltd. at values noted against each item.

PROSPECTS :

Scope for more Hotels : There is a growing need for hotels in both New Delhi and Srinagar. The present hotel accommodation in these two cities is quite inadequate to serve the increasing number of tourists and visitors. The existing hotels are consistently full and invariably there is difficulty in securing accommodation.

This is particularly so in New Delhi which is now ranked as one of the great political capitals of the world. This shortage of accommodation in the city, for instance, was acutely felt during the rush connected with the Indian Industries Fair in December last. **The present accommodation in hotels in Delhi is 900 rooms. In the opinion of the Ministry of Transport, Tourist Division, Government of India, another 1,100 rooms are required. With the completion of our new hotel and another which is in the process of construction in New Delhi, only 50 per cent. of this demand will be met. Therefore, there is scope for 500 more rooms to meet the total demand.**

In the coming years the strain on hotel accommodation, especially both at Delhi and Srinagar, is likely to grow worse. On account of developments which are taking place, in the political, economic and cultural spheres, the number of visitors, travellers and tourists from abroad is expected to increase considerably.

Political Missions : Politically, India's stature among the nations of the world has grown immensely. In Asia, India has come to occupy a dominant position. Nations of both the East and the West are looking to Delhi for giving a lead to establish world peace. Consequently, the country is being frequently visited by distinguished statesmen of the world. Visits of foreign Ambassadors and representatives of U.N. bodies, such as the Economic Co-operation for Asia and the Far East, the World Health Organisation, the International Monetary Fund, the International Bank for Reconstruction and Development and the International Labour Organisation, to India and its capital have been on the increase year after year. It is also well known that last year, a large number of distinguished state guests travelled through India, including Marshal Tito, the King of Saudi Arabia, the King and Queen of Nepal, the heads of the U.S.S.R. Government, the Shah and Queen of Iran, Mr. John Foster Dulles, the U.S. Secretary of State, and Lord and Lady Mountbatten.

Trade Missions : Economically India has made large strides. Her agriculture, industry, trade, banking and insurance have recorded notable progress. The country is just on the threshold of launching further huge development schemes under the Second Five-year Plan. This has attracted foreign businessmen, financiers, technicians, trade missions, etc., to visit the country for establishing business contacts and securing orders for their home products. The visits particularly of trade delegations in recent years to India have resulted in creating an atmosphere which augurs well for laying the foundations for expansion of not only trade with outside countries but also tourism. In this expansion, the hotel industry has scope for playing an important role in future. Locally, too, the growth of industry has led to the establishment of innumerable sales organisations, whose representatives have become a lucrative source of rich clientele for first class hotels.

Cultural Missions : Exchange of cultural missions, visits of foreign scientists and educationists and the number of tourists have all grown. Not only have these exerted pressure on hotel accommodation in important business centres, but have increased the number of banquets, luncheons, dinners, receptions, etc., to be catered for by hotels. Luxury hotels, properly furnished and fully equipped to satisfy even the most fastidious and discriminating guests who attend these functions are few and far between in the country, and this offers wide scope for entry into this field as proposed by The East India Hotels Limited.

Foreign Market : The enormous expansion in airline traffic during the past decade also clearly indicates that the people of the world have become travel conscious. Thus, in 1945, the world airlines carried 9.3 million passengers over 375 million miles. By 1955, the figure increased to 69 million passengers and 1,40? million miles respectively. A major contributory factor to this expansion in tourism has been the enormous rise in family incomes especially in America. In the U.S. alone there are 14 million families with incomes sufficient to finance a round-the-world tour once during their adult life. This is mainly responsible for the growth in the number of U.S. tourists to different parts of the world as stated below:—

TURKEY	In 1951, Turkish Customs recorded 370 North Americans as entering the country. By 1955, this number increased to 13,000.
EGYPT	In 1951, the records indicated 3,700 North Americans as entering the country. By 1955, this number had increased to 23,000.
JAPAN	In 1951, 700 North Americans visited Japan. In 1954, the number was 44,300.
AUSTRIA	61,800 North Americans visited Austria in 1951. By 1955, the number had increased to 1,19,000.
ITALY	In 1952, 3,94,000 North Americans visited Italy, and in 1953 the figure was 5,54,000.

Statistics relating to earnings of foreign exchange from tourist traffic by these countries are not available. An idea as to such potentialities of tourism may, however, be had from the earnings of Japan. In 1952, dollar receipts from tourism in that country amounted to $8.2 million. This figure rose to $33.00 million in 1953 and $39.00 million in 1954.

Pleasure and business travel has become one of the world's largest businesses and also one of the most lucrative. The satisfying of the basic needs, interests, and desires of tourists provides the key to unlock the barriers impounding tourist traffic and increase foreign exchange earnings.

International Airlines from the U.K. and U.S.A. have placed orders for a very big number of jet airliners for delivery in 1958. Each of these aircraft will be capable of, it is stated, carrying annually the same number of Trans-Atlantic passengers as the s.s. *Queen Mary*. This provides an indication as to the prospects of expansion of tourism in future.

India, too, is sure to benefit by this expansion in the volume of international traffic. It is expected that there will be an increase of 200 per cent. in such traffic in Delhi by 1960. The hotel industry in Delhi will have to equip itself to meet this demand by increasing the hotel accommodation to a corresponding extent.

Government's Interest in Tourism : The Government of India has recognised the importance of making tourists comfortable. It has initiated several measures in this direction. It has sought to encourage establishment of up-to-date hotels and has striven to make travel comfortable by improving air and rail transport facilities and freeing the travellers from vexatious restrictions and cumbersome formalities. The Government has opened a number of tourist centres both in India and abroad for assisting travellers.

The Kashmir Government, too, is taking keen interest in encouraging tourism as it has proved an important source of earning foreign exchange. According to the Director of the Tourists Department of the State, 55,000 tourists visited Kashmir in 1955. During the current year 1,00,000 tourists are expected. The State Government is making adequate accommodation and transport arrangements for tourists. Ropeways are being built to link Tanmarg and Gulmarg. At Srinagar, a tourist centre, one of the biggest in the world, will soon be opened. The State Government proposes to open yacht clubs in various places in co-operation with foreign clubs, and arrangements are being made to revive winter sports on the pre-1947 scale. The State Government has earmarked Rs. 105 lakhs in the second Five-year Plan for providing facilities to tourists.

In short, the growing volume of tourism, the shortage of hotel accommodation, the dearth of luxurious hotels, and the Government's desire to extend assistance to the hotel industry, today offer a large scope for new ventures and it is to fit into this situation that the East India Hotels Ltd. has been formed.

Promoters : The promoter of the Company is Rai Bahadur M. S. Oberoi. He is not receiving any profit or remuneration for his services as such. Rai

Bahadur Oberoi has paid on behalf of the Company a sum of Rs. 7.77.000 to meet certain payments in advance to the Government, Building Contractor and Architects. He will be entitled to be reimbursed these amounts by the Company and to be indemnified by the Company against all liabilities in respect of contracts entered into on behalf of the Company.

Backing of Oberoi Group: The two hotels will have the backing of the Oberoi Hotel Chain having an international reputation and contacts, particularly with travel agents in Europe and U.S.A. It is very difficult for a single hotel to attain success on its own efforts, whereas a combine, with all the advantages of group management, will bring success and security to the investors. The East India Hotels Ltd., will have the full benefit of this international combine. The management of the two hotels of The East India Hotels Ltd., will be entrusted to the Managing Agents subject to the provisions of the Companies Act, 1956. The Managing Agents will not charge any remuneration for the first year of its operation.

OBEROI HOTELS

INDIA

1. Hotel Imperial, New Delhi.
2. Hotel Cecil, Simla.
3. Maiden's Hotel, Delhi.
4. Swiss Hotel, Delhi.
5. Hotel Mount View, Chandigarh.
6. Grand Hotel, Calcutta.
7. Hotel Mount Everest, Darjeeling.
8. Palm Beach Hotel, Gopalpur-on-sea.
9. Oberoi Palace Hotel, Srinagar, Kashmir.
10. Clarke's Hotel, Simla.

PAKISTAN

11. Faletti's Hotel, Lahore.
12. Flashman's Hotel, Rawalpindi.
13. Dean's Hotel, Peshawar.
14. Cecil Hotel, Murree.

Comprising the largest chain of 14 luxurious hotels in the East, the Oberoi Group has, by offering every facility for convenience and comfort, come to be recognised as the home for international travellers. It is known for its personalised service, cordial hospitality, and friendliness throughout the globe. And Mr. Oberoi as the Chief Executive of the Management of these hotels brings with him to The East India Hotels Ltd., a rich and varied experience acquired over a period of years. Under his supervision and management, the promotion of this Company should prove to be a successful venture from the very inception of its operation. It will also have the benefit of experience of some of the staff now under the employ of Mr. Oberoi to look after the interest of the Company in the initial stages. In order to keep in line with the policy of Indianisation, there is also a scheme under consideration to send young people for training to hotel schools abroad, so that the Company may have experienced and trained personnel on its staff.

Co-operation of Inter-Continental Hotels Corporation (U.S.A.): Inter-Continental Hotels Corporation, which is a wholly-owned subsidiary Company of Pan American World Airways, was formed some years ago at the instance of the American Government, particularly to provide technical assistance in connection with planning, construction, financing and operation of new hotels abroad. Pursuant to the policy of the U.S. Government of furthering the economic development of friendly foreign nations, The International Co-operation Administration had commissioned Pan American World Airways to conduct technical assistance programmes with several countries.

Pan American World Airways is the only airline at present operating a complete round-the-world service. India, and particularly New Delhi, are a highlight of a round-the-world trip. Pan American makes 5 round-the-world flights each week in each direction serving 84 countries and providing 80 per cent. of the total requirements of American tourists in this respect. It has established modern first class hotels in many parts of the world to meet the comfort and requirements of its passengers.

Pan American World Airways will be operating new jet aircraft on their round-the-world services from 1958. Other airline companies will also be operating similar aircraft. Each of these aircraft has a carrying capacity of 120 passengers, which is a 100 per cent. increase on the carrying capacity of the existing aircraft. A preliminary survey indicates that a 200 per cent. increase in tourist traffic may be anticipated as compared to 1955. Pan American World Airways is anxious to obtain first class hotel accommodation in India, operated to American standards. This Company will be in a position to provide such accommodation for the use of airline passengers and their crews.

The promoters are at present negotiating with Inter-Continental Hotels Corporation with the object of securing its patronage for the hotels under the management of Oberoi Hotels (India) Private Ltd. in New Delhi and also with the object of getting the benefit of their latest technical know-how. These arrangements will materially assist the new Company by ensuring a regular flow of visitors to the hotels. The arrangements will also provide for training of Indian operational personnel in the U.S.A. and Inter-Continental Hotels will loan their technical staff if required during the initial period of operation. The Company may be provided with facilities to use the tele-type system of reservation throughout the 400 offices of Pan American World Airways.

SPECIAL PRIVILEGES FOR SUBSCRIBERS: Every subscriber to Preference and Ordinary Shares will be issued with the Oberoi Gold Card on request. The holders of the Gold Card will be entitled to all the amenities and particularly to a discount of 10 per cent. on room charges at the Company's hotels at New Delhi, Srinagar, and at other places where hotels may be built or acquired in the future. Moreover, the holder of an Oberoi Gold Card will be entitled to the same discount, i.e., 10 per cent. on room charges at all the other hotels in the Oberoi Group, throughout India and Pakistan. Besides, the discount of 10 per cent. on room charges, and other facilities and amenities, Gold Card holders will be assured of receiving exceptional personal service and attention at the Company's hotels and all the other hotels in the Oberoi Group in India and Pakistan. This unique service will indeed give the holder of a Gold Card a proprietory interest when staying at any of these hotels. A Gold Card will be valid for 5 years from the date of issue. In the case of companies, they will be required to nominate one person who will be entitled to the use and privileges of the Gold Card. In the case of individuals or others holding shares in joint names, only the first named holder will be entitled to the use of the privileges of the Gold Card.

PROCEEDS OF ISSUE

The entire project in Delhi and Kashmir will cost Rs. 1.25.00.000 when fully developed with all ancillary establishments. The immediate requirements are Rs. 1.00.00.000 but it must be emphasised that within this outlay the project is a completely finished entity and will in no way be handicapped in its operation without the ancillaries which will be added at a later stage but which will undoubtedly enhance the efficiency and earnings of the project. This total capitalisation cost will be provided as under:

(A) **By Share Capital**

30,000 6 per cent. tax free Cumulative Preference Shares of Rs. 100 each ...	Rs.	30,00.000
7,00.000 Ordinary Shares of Rs. 10 each	Rs.	70.00,000
	Rs.	1,00,00,000

(B) It is proposed to raise Rs. 25 lakhs or thereabouts by the issue of debentures or by borrowing from the Company's Bankers or other sources on the security of its assets as may be decided by the Directors of the Company. The Directors expect that such a loan can be obtained at a rate not exceeding 6 per cent. per annum depending on the market conditions. The present intention is to raise the loan at a later date when the project is completed or is nearing completion and is operating at nearly full capacity, so that its earnings are sufficient not only to ensure payment of interest on the amount borrowed but also to set apart a sum of Rs. 2½ lakhs per annum towards the repayment of the loan.

(C) The working capital which is estimated at about Rs. 4.40.000 will be provided partly from the profit of the Company in running the hotel at Srinagar and partly lend by the Managing Agents free of interest.

The proceeds of the funds are proposed to be expended in the following manner:

		Rs.
(a)	Construction of Hotel in New Delhi—	
	Land and Building	54,81,210
	Electrical and Sanitary Installations, Lifts, Air-conditioning (estimated).	33,00,000
	Furniture, Crockery, Cutlery, Glassware, Carpets, Kitchen Utensils, Linen, Cooking Ranges, Laundry Plant, etc., (estimated)	19,68,790
(b)	Assets of OBEROI PALACE HOTEL, SRINAGAR	15,10,655
(c)	Expenses to this Issue	3,00,000
(d)	Working Capital (estimated) ..	4,39,345
		1,30,00,000

ESTIMATES OF PROFITS

A general idea of profits, which a representative unit in the hotel industry can earn, can be had from the results of the working of the Hotel Imperial, New Delhi, of the Oberoi Hotel Group. An abstract of income and expenditure of this hotel for the years 1952-53, 1953-54, 1954-55 and 1955-56 is given in the table below. The figures are taken from the books maintained by Associated Hotels of India Ltd. which owns the hotel.

HOTEL IMPERIAL, NEW DELHI

Total Number of Beds: 150 Average Occupancy: 92%

(Rupees in lakhs)

	1952-53	1953-54	1954-55	1955-56
Income:				
Board and Lodging, etc...	21.17	21.85	24.03	26.53
Rental and Miscellaneous Receipts etc.	1.94	1.79	2.68	3.09
Sale of Liquor ..	6.11	6.06	6.55	7.33
	29.22	29.70	33.26	36.95
Expenses:				
Food, Establishment, Rent, Taxes, Insurance and Miscellaneous	20.28	20.34	23.23	20.27
	8.94	9.36	10.03	16.68

Profit:

It will be seen from the above table that the percentage of expenses to income was 69.3 in 1952-53, 68.4 in 1953-54, 69.8 in 1954-55 and 54.8 in 1955-56 leaving thereof a profit margin of about 30 per cent. in the 3 years, 1952-53, 1953-54 and 1954-55 and about 45 per cent. in 1955-56.

The proposed New Delhi hotel will contain 200 rooms with 375 beds. The average number of residents is estimated at 230 per day in the year.

In the Oberoi Palace Hotel, Srinagar, there are 90 rooms with a provision of 150 beds. The average number of residents works out to 80 per day for a period of 8½ months.

The estimated profits calculated on the basis on the average occupancy in both the hotels are shown in the proforma income and expenditure statement below, for the first year after the completion of the project.

(Rupees in lakhs)

	New Delhi Hotel	*Palace Hotel Srinagar*	*Total*
Total Accommodation ..	375 Beds	150 Beds	
Average Occupancy ..	60%	55%	
Income:			
Board and Lodging ..	41.00	5.75	46.75
Food sale, Rental, Laundry and Miscellaneous Receipts	13.10	0.85	13.95
Sale of Liquor	Nil	1.00	1.00
	54.10	7.60	61.70
Expenditure:			
Food, Establishment, Rent, Taxes, Insurance and Miscellaneous	22.48	5.85	28.33
Gross Profit	31.62	1.75	33.37

If the loan of Rs. 25 lakhs is raised by the Company, the position of Profit and Loss will be as follows:—

Gross Profit		33.37
Less Appropriations:		
Overhead Expenses of Head Office	0.61	
Interest on Loan	1.50	
Depreciation	5.00	7.11
		26.26
Less Tax payable @ 43% of the assessable profits	5.56	
Tax on Dividend in excess of 6%	1.06	6.62
Net Profit		19.64
Sinking Fund for Loan		2.50
		17.14
Preference Share Dividend at 6%	1.80	
Ordinary Share Dividend at 15%	10.50	12.30
		4.84
Reserve Fund		4.00
Carried over		0.84

It will be seen from the above statement that the Company can expect to earn an income of Rs. 61.70 lakhs in the first year after the completion of the project, as against the expenditure of Rs. 28.33 lakhs, leaving a gross profit of Rs. 33.37 lakhs. Of the latter, a sum of Rs. 13.73 lakhs is appropriated for interest on loan, depreciation, taxation at the present rate, and overheads. The estimated net profit available for distribution to shareholders would be Rs. 19.64 lakhs.

Preference Dividend Cover: On the basis of an estimated net profit of Rs. 19.64 lakhs, the dividend on the 6 per cent. Tax-free Cumulative Preference Shares will be covered over 7¼ times by earnings.

After deducting from the estimated net profit of Rs. 19.64 lakhs, the sum required for payment of dividend on Preference Share Capital, the balance of profit represents a return of 25.5 per cent. on the amount of the issued Ordinary Share Capital. After providing a reserve of Rs. 4 lakhs and a sinking fund of Rs. 2,50.000 every year, the Company according to the above Profit and Loss account will be in a position to **declare a dividend of 15 per cent. Free of Tax to the Ordinary Shareholders.**

The above estimate for the first year is made at 60 per cent., average occupancy and taking into account the depreciation relief for the first five years. In the course of the next five years, the average occupancy is expected to rise to 80 to 90 per cent. which means an increase in the income by nearly 40 to 50 per cent. The consequent increase in earnings will more than compensate the Company for the higher incidence of tax from the sixth year, owing to the discontinuance of the development rebate thus enabling it to maintain, or perhaps even raise the dividend.

WINE PROFITS: The above profit, it may be noted, does not include profits on liquor sales in the New Delhi Hotel in view of the possibility of enforcement of prohibition there. Even if prohibition is introduced, the Company is likely to continue its sales of liquor to residents, permit holders and foreigners. If this additional income is taken into account, the earnings would be higher and will enable the Company to pay still higher dividends.

STATUTORY AND GENERAL INFORMATION

Minimum Subscription: The minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs. 30,00.000.

1.	Purchase Price of Property..Rs. 11,78,000 Paid .. „ 6,17,000	Rs. 5,61,000

Contracts Relating to Property: 1. The Government has allotted to the Company a plot of land measuring 6.32 acres in New Delhi for the construction of a new hotel building on international standards.

The plot is situated near the Delhi-Mathura Road and Wellesley Road crossing in the north east corner adjoining the Golf Club.

The terms and conditions under which this plot of land is being leased to the Company are specified by the Land and Development Officer, New Delhi in his letter No. O-L dated 17th December 1955, addressed to the Company. The Lease will be completed in due course. This includes the following:—

(a) The Company is required to pay for the land as under:—
  (i) For the area measuring about 5.46 acres at Rs. 2,00,000 per acre which comes to Rs. 10,92,000 plus Rs. 27,300 as annual ground rent at 2½ per cent. of the premium.
  (ii) For the area measuring about 0.86 acres at Rs. 1,00,000 per acre which comes to Rs. 86,000 plus Rs. 2,150 as annual ground rent at 2½ per cent. of the premium.

(b) Only one-third of the area measuring 5.46 acres will be built over and the remaining area shall be left for gardens, roads, car parks, etc. An area of about 0.86 acres will be converted into a lake and adjoining garden.

The construction of the building has already been taken in hand. A part of the building is intended to be completed by October and the entire project by mid-1957.

2. Agreement for Sale dated the 31st August 1956, and made between Hotels (1938) Private Ltd., of the first part and Rai Bahadur M. S. Oberoi of the second part and the Company of the third part.

This agreement provides for the purchase by the Company from Hotels (1938) Private Ltd. of the assets comprised in the latter's hotel at Srinagar at a price of Rs. 15,10,654-14-3 which will be paid and satisfied by the Company by the issue of and allotment of Rs. 15 lakhs in its 1,50,000 Ordinary Shares of Rs. 10 each at par credited as fully paid up and the balance, i.e., Rs. 10,654-14-3 will be payable in cash. The sale is subject to the consent of Yuvaraj Karan Singh the landlord to the assignment of the properties, comprised in two leases, dated 17th June 1954, and the 12th November 1954, in favour of the Company. As these leases stand in the name of Rai Bahadur M. S. Oberoi, he has been made a party to the Agreement. Rai Bahadur M. S. Oberoi and T. R. Oberoi who are the Directors of the Company are also Directors of the Vendor Company.

Expenses to this Issue: The estimated amount of the preliminary expenses including brokerage and commission is Rs. 3,00,000.

Directors' Qualification and Remuneration: The qualification of a Director shall be the holding in his own name or jointly with any other person of shares in the Company of the nominal value of Rs. 5,000. Each Director will be paid out of the Company's funds by way of remuneration a fee of Rs. 64 for attending each Board Meeting. The Directors will be entitled to be paid their reasonable travelling, hotel and incidental expenses of attending to and returning from the meetings of the Board on Committees of the Board and otherwise in the execution of their duties as Directors. All other remunerations, if any, will be determined in accordance with the Company's Articles and the Companies Act. A Director who performs extra service or goes or resides away from Calcutta for any purpose of the Company may subject to Sections 198, 309 and 310 of the Act be paid such extra remuneration as the Board of Directors may determine. The Managing Agents can subject to Section 255 of the Act appoint two ex-officio Directors where the number of Directors exceeds five and one ex-officio Director where the number does not exceed five.

Managing Directors: The Board may subject to Sections 316 and 317 of the Act appoint one or more Managing Directors of the Company. Such Managing Director will, subject to Section 255 of the Act, not be liable to retire by rotation but will cease to be a Managing Director if he ceases to be a Director. He will, subject to Sections 309, 310 and 311 of the Act, receive such remuneration as the Company may determine in general meeting. The Company will not appoint Managing Directors as long as it has Managing Agents.

Managing Agents: Oberoi Hotels (India) Private Ltd. are the Managing Agents of the Company by virtue of the Agreement dated 26th May 1949. They receive by way of remuneration for their services a commission of 10 per cent. on the nett profits and are entitled to be reimbursed all expenses incurred on behalf of the Company. Such remuneration is subject to the provisions of the Companies Act. The subscribed capital of the Managing Agents is Rupees Four Thousand divided into Four Hundred Ordinary Shares of Rupees Ten each.

Interest of Directors: Sir U. N. Sen and Mr. M. L. Khaitan are Directors of Associated Hotels of India Ltd., of which Hotels (1938) Pvt. Ltd. (the vendor in respect of assets comprised in its hotel at Srinagar) is a subsidiary. Rai Bahadur M. S. Oberoi is a Director of Oberoi Hotels (India) Pvt. Ltd., the Managing Agents of the Company and of Associated Hotels of India Ltd., and Hotels (1938) Pvt. Ltd. Mr. T. R. Oberoi is a Director of Oberoi Hotels (India) Pvt. Ltd., Associated Hotels of India Ltd., and Hotels (1938) Pvt. Ltd.

Consent: The consent in writing of the Auditors, Bankers, Brokers and Legal Advisers to the Company to act in their respective capacities have been obtained. The Auditors, Messrs. G. Basu & Co., have given and have not withdrawn their consent to the inclusion of their report and certificate in this Prospectus in the context in which they appear.

The foregoing written consents and copies of the contracts mentioned below have been attached to the copy of the Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

Contracts: The following Contracts (apart from contracts entered into in the ordinary course of business) have been entered into by or on behalf of the Company and are or may be material.

(a) Agreement for the same dated the 31st August 1956 and appearing under the heading "Contracts relating to Property" of this Prospectus.

(b) Letter dated 17th December 1955, from the Land and Development Officer, New Delhi, setting out terms and conditions of the lease of the land in New Delhi.

(c) Correspondence with Messrs. Uttam Singh Duggal and Co., Ltd., Delhi, Building Contractors for the construction of the hotel building.

(d) Correspondence between Rai Bahadur M. S. Oberoi and Inter-Continental Hotels Corporation.

(e) Managing Agency Agreement dated the 26th May, 1949 between The East India Hotels Ltd. and Oberoi Hotels (India) Private Limited, regarding the Managing Agency terms, remuneration, etc.

Brokers: Brokerage at the rate of As. 4 per Ordinary Share of Rs. 10 each and Re. 1 per Preference Share of Rs. 100 each will be paid to recognised brokers on allotments made in respect of applications bearing their stamps.

Messrs. Merwanjee Bomanjee Dalal and Messrs. Harbans Singh Mehta & Co., are the Managing Brokers to this issue and will be in addition entitled to a commission of one anna per Ordinary Share and eight annas per Preference Share on all shares subscribed by the public.

AUDITORS' REPORT

We have examined the accounts of East India Hotels Ltd., for the five years ended 31st March 1956, and in accordance with the provisions of clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows:

Notices

THE GOUREPORE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 9th October 1956, at 11.00 a.m., for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March 1956 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. *As Special Business*:
   (i) To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a Special Resolution:—
   "RESOLVED that the Articles of Association of the Company be altered in manner following:—
   (*a*) In the first line of Article 82 the word "twice" shall be deleted and the word "once" be substituted therefor.
   (*b*) In the first line of Article 181 the word "twice" shall be deleted and the word "once" be substituted therefor."
   (ii) To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—
   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies, already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 30th September to 9th October 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *6th September* 1956.

Note.—A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(1) *Item No.* 5 (i).—Articles 82 and 181 of the Articles of Association of the Company provide that twice in every year, the books shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by Auditors, and that the same shall be laid before General Meetings which shall be held twice in every calendar year. In accordance with these requirements of the Articles, the accounts have been closed half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th September and the 31st March in each year and the Balance Sheet at each date has been laid before the Company in General Meeting. Under the provisions of the Companies Act, 1956, each such half-yearly period will be a financial year and as a result the usual half-yearly General Meetings will each be deemed to be an "annual general meeting" within the meaning of the Act. In consequence (*inter alia*) the Directors liable to retire by rotation and the Auditors will retire half-yearly. Your Directors, having carefully considered the matter and the difficulties attending the preparation of the accounts in conformity with the provisions of the Act, the additional work and expense which will be involved in adding an Annual General Meeting in each half-year, recommend that the accounts be closed once only on the 31st March to be laid before the Company at an Annual General Meeting in each calendar year, and that the Articles be amended to give effect to such recommendation.

Neither the Directors nor the Managing Agents will derive any benefit in respect of their remuneration by reason of this change and interim dividends may, subject to trading results, be declared by your Directors under Article 162.

(2) *Item No.* 5 (ii).—By the provisions of Section 293(i) (d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of this statutory limit being the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for the Directors to borrow for the purposes of the Company in excess of this statutory limit but subject always to Article 65 of the Articles of Association of the Company. The presently proposed resolution will, in effect, restore the position which prevailed prior to the 1st April 1956.

THE GANGES MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT A general meeting of the Members of the above Company, being an Annual General Meeting within the meaning of the Companies Act, 1956, will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 9th October 1956, at 10.30 a.m., for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March 1956 and the Balance Sheet as at that date.
2. To elect Directors.
3. To appoint Auditors and fix their remuneration.
4. *As Special Business*:
   To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—
   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 30th September to 9th October 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA. *6th September* 1956.

Note.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 4.—By the provisions of Section 293(1) (d) of the Companies Act, 1956, the Directors without the consent of the Company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

THE NUDDEA MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 9th October 1956, at 11.30 a.m., for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March 1956 and the Balance Sheet as at that date.

SELF-SUFFICIENCY IN BASIC CHEMICALS

INTEGRATED APPROACH STRESSED

"HEAVY engineering and chemical industries are the key to industrialisation of any country." Thus observed Mr. Manubhai Shaw, Minister for Heavy Industries, Government of India, addressing the sixth meeting of the Development Council for Heavy Chemicals (Alkalis) held at Calcutta in the second week of this month. Indeed, the importance of the heavy chemicals, such as fertilisers, sulphuric acid, soda ash, caustic soda and a host of others, in the context of the huge plans of agricultural and industrial expansion contemplated, cannot be overemphasised. For the programmes for agricultural development formulated for the second Plan period envisage that increased use of manures and fertilisers alone should account for a quarter of the additional production planned. Moreover, adequate supply of heavy chemicals is a *sine qua non* for the establishment and expansion of such industries as iron and steel, ferro manganese, paper and paperboard, newsprint, rayon, petroleum, glass and others. Besides, production of heavy chemicals indigenously would also obviate the necessity of their imports, thus giving scope for utilisation of the limited foreign exchange resources for other essential things.

The development of heavy chemical industries, as a result of the impetus given by the present Government during recent years, has been encouraging. Protective duties were in force, for instance, on imports of caustic soda till the emergence of Korean war boom in 1951 and, in pursuance of the recommendations of the Tariff Commission in 1954, protection was once again granted till 1958. Soda ash industry to take another example, has been enjoying protection since 1953. In addition to tariff protection, these industries were sheltered against foreign competition through a severe restriction and regulation of imports. The efforts of the Governments, Central and the States, to raise the production of nitrogenous and phosphatic fertilisers through the establishment of the Sindri Fertiliser Factory and the F.A.C.T. are common knowledge. Consequently, the production of heavy chemicals between 1946 and 1955 has substantially increased as the following figures indicate:

	1946 Tons	1955 Tons
Sulphuric Acid	60,000	165,000
Ammonium Sulphate	22,460	393,100
Superphosphate	4,500	74,165
Caustic Soda	2,900	34,250
Soda Ash	12,000	77,270
Liquid Chlorine	2,900	14,580

Reviewing this progress, Mr. Manubhai Shaw rightly pointed out: "This progress is particularly gratifying, because, unless development of production of such basic chemicals essential for the production of diverse producer goods moves faster than in the other spheres of industry, it will not be possible for our economy to accelerate the tempo of industrialisation."

Estimated Requirements

In view of the programmes of development taken in hand in various sectors, the requirements of the heavy chemicals are expected to increase fast—in some cases, by as many as four to five times the present requirements—by 1960-61. The following table gives the estimated requirements of a few chemicals for 1960-61 as compared with those for 1955-56:

	1955-56 Tons	1960-61 Tons
Ammonium Sulphate	610,000	1,600,000
Superphosphate	120,000	720,000
Sulphuric Acid	160,000	470,000
Soda Ash	120,600	230,000
Caustic Soda	83,700	141,000

The targets for 1960-61 have been fixed largely with a view to making India self-sufficient in most of the heavy chemicals. The following targets for 1961, as compared with those for 1955 and for 1951, of some industries, clearly reflect the magnitude of the development programme in heavy chemicals during the second Plan:

(In tons)

	1951	1955	*Targets for 1961*
Ammonium Sulphate	52,804	393,095	1,600,000
Superphosphate	61,020	74,165	720,000
Sulphuric Acid	106,932	164,842	470,000
Soda Ash	47,532	77,272	230,000
Caustic Soda	14,724	34,253	135,400
Liquid Chlorine	5,268	11,577	17,000
Bleaching Powder	3,588	2,693	15,000
Bichromates	3,271	2,929	6,000
Sodium Bicarbonate	1,630	4,125	5,000
Potassium Chlorate	1,593	2,135	3,800
Calcium Carbide	*Nil*	3,110	24,000

Drawing the attention of the Development Council to the need for self-sufficiency in basic chemicals in the course of his address, Mr. Manubhai Shaw emphasised that the targets were only tentative and that they represented the minima and not the maxima. "We hope," he went on to add, "that with the co-operation of the industries and the Government and the consuming public, we will be able to outstrip all these targets, if possible within the first two or three years of the Plan in most cases." The importance of reaching these targets is all the more heightened because of the high targets fixed for some of the engineering and other industries which use the heavy chemicals. The following table provides a glimpse into the pace of expansion envisaged in some such industries:

		1955-56	1960-61
Steel	Tons	1,380,000	4,300,000
Pig Iron	,,	380,000	760,000
Ferro Manganese	,,	23,000	180,000
Aluminium	,,	7,500	25,000 to 30,000
Paper and Paperboard	,,	200,000	450,000
Newsprint	,,	4,200	60,000
Rayon	Million lbs.	15	68
Staple Fibre	,,	16.2	32
Chemical Pulp	,,	..	30,000
Petroleum	Million tons	3.6	4.3
Penicillin	Mill. Mega units	6.6	40
Sulpha Drugs	Kgs.	*N.A.*	450,000
P.A.S.	,,	*N.A.*	113,300
Synthetic Moulding Powder	Tons	725	11,400
Vanaspati	,,	270,700	400,000
Soap	,,	200,000	300,000

Against this background may be viewed some of the developments in recent years—reviewed by Mr. Shaw in the course of his address—in some of the heavy chemical industries.

Ammonium Sulphate

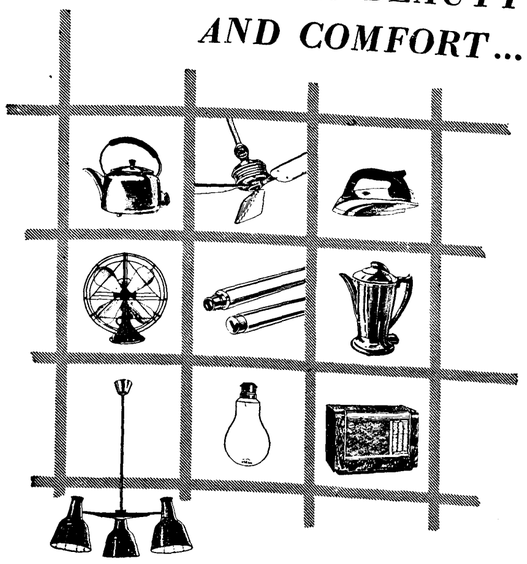
A development of great importance in the ammonium sulphate industry was the establishment of the Sindri Fertiliser factory, with a production capacity of 1,000 tons of ammonium sulphate per day. Apart from helping conservation of much needed foreign exchange, the production at home of ammonium sulphate has also helped to increase agricultural production considerably. "From a technological angle," the Minister further pointed out, "it has created confidence in the success of State enterprises and of big technological projects in the country."

Steps that have been taken to expand the production of fertilisers include increasing the capacity of and initiation of the production of new varieties such as urea, ammonium nitrate, ammonium phosphate, etc., in the two large factories, namely, the Sindri Fertilisers and the Travancore Fertilisers, popularly known as the F.A.C.T. Besides, it is proposed to start another fertiliser factory in Bhakra-Nangal, where hydrogen for ammonia synthesis will be manufactured by the electrolytic process in cells specially designed which will facilitate simultaneous production of heavy water intended to be used as a moderator in atomic reactors. The nitrogen requirements will be met from a liquid air plant. A noteworthy feature of the proposed factory at Rourkela is that the large quantities of coke-oven gas rendered surplus as a result of the adoption of L.D. process of steel making by the proposed steel factory can be used for the production of nitrogenous fertilisers at low cost. In addition, nitrogen will be available at practically no cost from the liquid air plant which will be installed for meeting the oxygen requirements of the steel plant. Another source of chemical fertiliser will be the lignite project at Neiveli. This project is so modelled as to produce synthesis gas for the production of ammonia.

Superphosphate

Turning to the production of superphosphate, Mr. Shaw remarked that it had not been satisfactory for sometime, chiefly because of the high cost of sulphuric acid. The Government has, however, succeeded in bringing down prices of the acid to some extent with the co-operation of the manufacturers. Following the reduction in prices, the Government's efforts to issue licences to new units have borne fruit. Consequently, as against 14 units with an overall capacity of 47,000 (P_2O_5) tons of superphosphate existing in 1955, new licences for an additional capacity of as much as 60,000 (P_2O_5) tons to seven factories, including the expansions under the Industries (Development and Regulation) Act, have been issued. Thus, the gap that remains to be covered to achieve the target is only of the order of 3,000 (P_2O_5) tons.

G.E.C. means BEAUTY AND COMFORT...



...IN EVERY HOME

G.E.C. can supply the most comprehensive range of electrical products required for your home. Well-known for their reliability, G.E.C. electrical products make your home easy to run, easy to care for... add beauty and comfort to every room.

THE GENERAL ELECTRIC COMPANY OF INDIA PRIVATE LIMITED

Representing: THE GENERAL ELECTRIC CO. LTD. OF ENGLAND

GEC765R

In respect of sulphuric acid, licences have been issued to as many as 14 units—some of them being for the expansion of the existing units—for an additional capacity of 240,000 tons, as against the present 37 units of the capacity of 245,000 tons per annum, leaving a gap of only 15,000 tons per annum. The raising of the size of the unit to 50 tons per day, is designed to bring down the cost of production. Besides, the prices of sulphuric acid are also regulated by linking them with imported sulphur. In order to reduce the country's dependence on imports, the Government is also considering the question of producing sulphur from such indigenous raw materials as pyrites, gypsum and sodium sulphate.

Soda Ash

In addition to the two soda ash factories of an annual capacity of 90,000 tons existing today, it is proposed to establish shortly two more factories. One of them will be at Porbundar with a capacity of 200 tons—subsequently to be stepped up to 400 tons—per day. This project will be implemented by Jiyajeerao Cotton Mills Ltd., belonging to the House of Birlas. The Tata Chemicals Ltd., also is taking steps to expand its existing capacity to 200 tons per day at the first instance and to 400 tons per day subsequently. A third unit for the production of soda ash through modified Solvay process has also been licensed. This will be established by Sahu Chemicals Ltd., Dalmianagar. In addition to these, the Dhrangadhra Chemical Co., Ltd., has been given a licence to put up a factory at Tuticorin in South India with an annual capacity of 36,000 tons. Although the production thus contemplated may be enough to meet the expected demand, the Minister for Heavy Industries warned that it was necessary to watch closely the consumption trends and be in readiness to expand production further in case the demand tended to outstrip production.

Another important item is caustic soc While the present capacity in the 12 units is only 45,000 tons, licences for an additional production of as much as 113,000 tons—some of which will come from the expansion of the existing units—have been issued.

Turning to chlorine, the Minister remarked that there was no proper utilisation of it. Though the demand for chlorine, in view of the expansion envisaged in a number of industries such as paper, chlorine based chemicals, textiles, rare earth chlorides, D.D.T., drugs, dyestuffs and plastics, there would still be unutilised chlorine. He, therefore, called upon the Development Council to give adequate attention to the problem of developing industries for utilising the surplus chlorine. He further pointed out that, in regard to other chemicals such as dyestuffs, drugs and pharmaceuticals, it was the desire of the Government to manufacture the required quantities in the country itself. It may be recalled in this connection that a general survey of the potentialities of the country has already been made by a team of experts from England, Germany, Italy and the U.S.S.R.

State Trading

Dwelling upon imports worth as much as Rs. 200 lakhs in the case of soda ash and of Rs. 350 lakhs in the case of caustic soda, the Minister observed that the Government had recently brought these two items within the scope of State Trading Corporation, with a view to procuring them at the lowest possible rates in the world markets and passing on the benefit of lower prices to a large number of consuming industries. An important feature of the distribution of these commodities is that imports are being arranged at Government level. Besides, the quantities that are being imported will be sufficient to constitute buffer stocks for six months in the country. Moreover, the distribution will be so broad-based as to cause no difficulty for any manufacturing unit in obtaining its requirements of soda at a reasonable price. This step is expected to stimulate consumption. The Minister, however, pointed out that a close check on the demand and prices of these commodities and a periodical review of the demand position was necessary and would be maintained.

Turning to the price aspect of certain products the manufacturers of which are enjoying protection, Mr. Shaw admitted that their production costs were higher than those in other countries and that production of these chemicals, as compared with that in other advanced countries was negligible. One of the esssential steps to achieve a gradual reduction in prices which alone would stimulate consumption and demand for these products was to expand the size of the units and to locate them at the most favourable areas, particularly with reference to raw materials, power, etc. Besides, it would also be necessary, he added, to develop integrated manufacture of miscellaneous chemicals with a view to utilising every by-product and all the waste products available in these industries. He promised to see that the Government gave every possible encouragement for the development of the units in that direction. He further felt that units of economic size ancillary to some of the chemical industries, as, for instance, rayon, pulp, newsprint, etc., should also be allowed to manufacture some of the chemicals which they needed, so that they might derive the benefits of low cost production of an integrated unit.

Dispersal of Units

The Minister alluded to transport difficulties experienced by the heavy chemical industries. In this connection, he remarked that it would be very wise to consider dispersal of the manufacturing units in various regions, having regard to considerations such as proximity to consuming centres and raw materials, so as to avoid cross movement of products. He called upon the Council to bear these aspects in mind in planning for heavy chemical industries. As regards technical personnel, the Minister pointed out that, in view of the increasing need for them, it was necessary that the industries themselves should come forward to train in their factories artisans, apprentices, operators, supervisors, etc. He made the specific suggestion that the industries could train a minimum percentage, say, five, of the normal strength of the personnel. He further called upon the experienced technicians of the industries to devote a few hours every week to helping the authorities concerned for drawing up industrial projects for the districts in which they were working. By doing so, they would be helping the country to go a long way towards surveying the actual potentialities in various districts and regions. This suggestion merits the attention of the scientists and engineers spread all over the country.

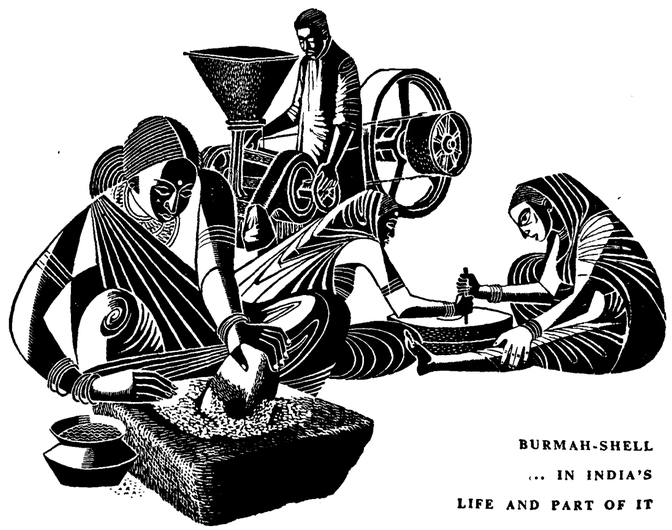
CHEMICAL FERTILISERS

On the basis of the latest information available on performance keeping and other qualities of the different nitrogenous fertilisers, the types and the quantities of fertilisers to be manufactured in the different factories are being reconsidered and the import programme is adjusted by the Government of India, with a view to popularising the utilisation of the new fertilisers which are to be produced in the country. The new fertilisers—urea, ammonium sulphate, nitrate, calcium, ammonium nitrate—are more economical in that the cost per unit of nitrogen in these is less than in ammonium sulphate. Urea and ammonium sulphate nitrate being more concentrated, cost less in transport and handling. Agronomic experiments have shown that these new fertilisers generally behave as sources of nitrogen as well as ammonium sulphate.

The Power to do work

Energy means the power to do work, and India needs all the energy she can get if the targets of the Second Five Year Plan are to be fulfilled. The proportion of *commercial* energy—that is to say, coal, electricity and oil—to the whole energy system is still extremely low in India. Nevertheless, it is beginning to have its impact on traditional methods and ways of life, even in remote rural areas.

The contribution made by oil in the commercial energy pattern in India has increased by 100% since 1948. Oil is the most flexible source of energy available... it is, in fact, 'packaged power' in an easily handled form. It is our job to maintain and extend a distribution organization which will ensure that *energy from oil* flows to all parts of the country cheaply, efficiently and in sufficient quantities.



BURMAH-SHELL

... IN INDIA'S LIFE AND PART OF IT

PROFIT OF ALUMINIUM INDUSTRIES SHRINKS

OUTLOOK, HOWEVER, PROMISING

A SUBSTANTIAL drop of Rs. 10.13 lakhs in gross profit to Rs. 16.96 lakhs is disclosed by the audited accounts of the Aluminium Industries Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Kundara, Travancore-Cochin State) for the year ended 31st March 1956. This decline, which not only more than offsets the increase of Rs. 9.32 lakhs recorded in the previous year but also reverses the upward trend that began in 1953-54, is due to extraneous factors beyond the control of the management, as we shall presently explain. It has, no doubt, affected the allocations to the reserves so very essential in view of the projects for expansion taken up on hand, but it has not affected the distribution to the shareholders. In fact, the dividend is maintained on a higher capital.

The net profit for the year under review amounts to Rs. 7.39 lakhs, as compared with Rs. 12.64 lakhs for the previous year. Consequently, the Directors have reduced the allocation to the general reserve from Rs. 5 lakhs to Rs. 2.50 lakhs and that to the deferred taxation reserve from Rs. 4.25 lakhs to Rs. 0.50 lakh, while maintaining the transfer to the dividend equalisation fund at Rs. 0.75 lakh. The dividend is, however, maintained at 12½ per cent. per annum for the sixth year in succession. The latest dividend has again been on a higher capital, raised in 1955 by the issue of 150,000 shares of Rs. 10 each. It must, however, be noted that the new issue ranks for dividend only from 1st December 1955. The maintenance of dividend on a higher capital may seem inconsistent with the shrinkage in profit, but this can be justified on good grounds. In the first place, the drop in profit is due to a temporary factor. Secondly, the outlook for the current year is good. Thirdly, the profit, though smaller than in 1954-55, is sufficiently large to cover the proposed dividend by an ample margin. And finally, as the Company has embarked upon a large expansion project and is in need of further large finances, it has to offer at least a decent return to attract sufficient capital from the existing shareholders, as well as from new ones.

The trend of progress of the Company during the past three years is duly reflected in the following table giving the salient features of its working results:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	208.52	185.67	130.56	111.43
Manufacturing and selling expenses	184.01	153.00	108.99	99.31
Other expenses	7.04	5.65	3.80	2.99
Gross profit	16.96	27.00	17.77	9.21
Managing Agents' remuneration	1.33	2.71	1.81	0.85
Depreciation	5.74	5.44	3.51	2.45
Taxation	2.50	6.30	4.99	1.70
Net profit	7.39	12.64	7.45	4.21
To reserves	3.75	10.00	5.00	2.50
Dividend	3.75	2.71	2.50	1.95
	(12½%)	(12½%)	(12½%)	(12½%)
Carry forward	0.65	0.76	0.82	0.87

How the money was spent (percentage of earnings)

Raw materials	78.03	72.54	73.74	77.02
Repairs and maintenance	5.07	5.12	3.29	3.76
Selling expenses	1.81	1.33	2.75	1.85
Administration	0.93	1.73	1.84	1.15
Interest and bank charges	2.13	1.41	1.54	1.51
Employees	3.86	4.19	3.65	3.33
Depreciation	2.75	2.94	2.69	2.20
Government	1.88	3.93	4.11	4.41
Retained in business	1.74	5.35	4.48	3.02
Dividend	1.80	1.46	1.91	1.75

The rise in sale proceeds is in consonance with the increase in production, but it is very much less than that noted in the previous year. The production of aluminium cables during the year (besides a full range of cable accessories) amounted to 17,460 miles, as compared with 13,812 miles in 1954-55 and 6,515 miles in 1953-54. Thus, the pace of the output slackened somewhat in 1955-56. This was due to the world shortage of aluminium consequent upon loss of production in Canada occasioned by unfavourable weather. The short supply in aluminium was extreme in the latter half of the year under review and led to a sharp rise in prices. This is duly reflected in the increase of Rs. 31.01 lakhs in manufacturing and selling expenses. Of the rise of about Rs. 2 lakhs in other expenses, interest and bank charges alone account for Rs. 1.82 lakhs.

Giving an account of the present supply position in respect of aluminium and of the progress of the manufacturing project on hand, as also of the new scheme to be taken up, the Directors observe in their latest report as follows:

"Your Directors are happy to record that, at the time of writing, the supply position is easing and the prices are stabilising. The full installed capacity and facilities at Kundara can, therefore, be fully utilised hereafter. The Company's order book is full and the entire output will be easily absorbed against the urgent requirements of our country.

"The insulated aluminium cable project is progressing according to schedule. Most of the plant and machinery has arrived at Kundara and production is expected to commence by January 1957. The Government of India have granted us a licence to manufacture a special type of insulated aluminium cable also which was not included in the original licence and the manufacture of this new product is expected to commence by May 1957. The additional share capital of Rs. 15 lakhs raised in 1955 was utilised for financing these projects and for working capital requirements.

"Your Directors are happy to announce that our scheme for establishing a rod rolling mill at Hirakud in Orissa State has been approved and licensed by the Government of India. The Orissa activities will be located close to the 10,000-ton aluminium smelter now being constructed at Hirakud by the Indian Aluminium Company, Ltd., in order to ensure easy raw material availability. With the completion of these new manufacturing facilities in Orissa, your Company will be in an even better position to cater to the aluminium cable markets in Central India. The anticipated time of completion of this project is approximately two years. The matter of financing this venture is now engaging the attention of your Directors and their proposals will be intimated to you shortly."

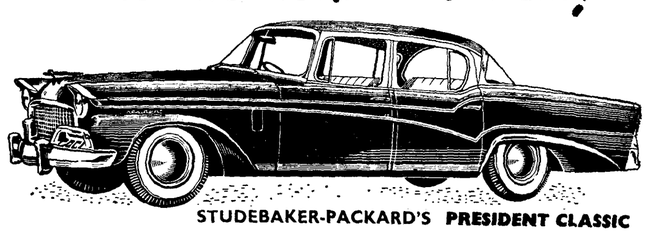
From the above quotation, it will be noted that the prospects for the Company are encouraging.

As a first step towards issuing fresh shares for financing the rod rolling mill project at Hirakud, the Directors have considered it necessary to double the authorised capital from the present level of Rs. 50 lakhs to Rs. 1 crore.

The latest balance-sheet of the Company shows that the reserves and surplus amount to Rs. 28.89 lakhs, supplementing a paid-up capital of Rs. 40 lakhs. The gross block of the value of Rs. 56.26 lakhs, including an addition of Rs. 7.79 lakhs during the year, stands written down to Rs. 34.70 lakhs. The current assets aggregate Rs. 138.25 lakhs, as against which current liabilities amount to only Rs. 104.06 lakhs.

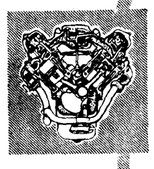
Incomparable

IS THE WORD FOR THEM!



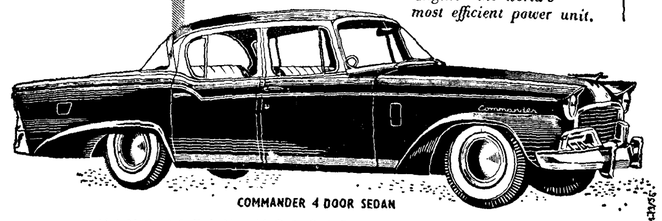
STUDEBAKER-PACKARD'S PRESIDENT CLASSIC

In any setting—in the midst of a traffic stream or parked anywhere—these are the cars that eclipse all others for elegant styling and performance. They are literally *incomparable*. Several unique Studebaker-Packard features, such as, new Pyramid-Design low-level ride, Safety-Action brakes, Safe-Lock doors, 'Cyclops-Eye' speedometer and many others impart exclusive superiority to these cars in the matter of riding comfort and driving safety.



For extra luxury and comfort these cars can now be fitted with an airconditioning unit — at a small extra cost...a new feature in Indian motoring.

The only big cars now available in India that are fitted with the latest Studebaker V8 (Overhead Valve) Engine—the world's most efficient power unit.



COMMANDER 4 DOOR SEDAN

HINDUSTAN MOTORS LTD CALCUTTA

DEALERS:

Agra ; Ajmer ; Ahmedabad ; Allahabad ; Baroda ; Bangalore ; Bombay ; Bareilly ; Banaras ; Calcutta ; Cuttack ; Coimbatore ; Dibrugarh ; Dehra Dun ; Dhanbad ; Indore ; Jaipur ; Jodhpur ; Jalgaon ; Jorhat ; Jamshedpur ; Jullundur City ; Jammu ; Kanpur ; Kolhapur ; Lucknow ; Madras ; Madura ; Mangalore; Nasik ; Nagpur ; New Delhi ; Nepal ; Patna ; Poona ; Rajkot ; Ranchi ; Sambalpur ; Shillong ; Secunderabad ; Silchar ; Srinagar ; Tezpur ; Tiruchirapalli ; Trivandrum ; Vijayawada ; Vizianagram.

Considering the fact that the Company is of a post-war origin and that it commenced production only in 1950 (when it amounted to 174 miles of cable), the progress which it has so far made is commendable and inspires confidence in its capacity to fare well in the coming years.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 22 *cum-div.* (final div. As. 10 per share). On an *ex-div.* basis, the dividend for the year under review offers a yield of 5.8 per cent. per annum, free of income-tax.

The management of the Company deserves to be complimented for the informative and interesting manner in which it continues to present the report and statement of accounts. The charts and the statistical tables accompanying the report will enable the shareholders easily to follow the Company's progress. Now that the private sector in industry is being criticised, as though it is a monopoly of few persons possessing huge financial resources, information given by the companies about the number of shareholders and the extent of their holdings is particularly valuable. Such information, if properly brought to the notice of the public, will serve to remove much of the misunderstanding about the composition of the private sector in industry that is being sedulously created by a section of politicians. In the case of the Aluminium Industries Ltd., its paid-up capital of Rs. 40 lakhs, as at the end of March last, is being held by as many as 1,338 persons (as against 1,191 a year before). Of these, 829 persons hold shares worth less than Rs. 1,000, 395 persons hold shares worth between Rs. 1,001 and Rs. 5,000, 64 persons between Rs. 5,001 and Rs. 10,000, 26 persons between Rs. 10,001 to Rs. 20,000 and 24 persons above Rs. 20,001. Now that the Company has been firmly established and is participating in an industry with promising future, we have no doubt that more and more investors will evince an interest in its shares and thereby swell the number of persons owning it.

DEHRI-ROHTAS' PROFITS UP

The working of the Dehri-Rohtas Light Railway Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar) during the year ended 31st March 1956 discloses a steady improvement. The gross profit, which amounted to Rs. 9.34 lakhs for 1953-54 and rose to Rs. 10.23 lakhs for 1954-55, has made a further modest increase to Rs. 10.41 lakhs for the year under review. Commensurate with this improvement, the net profit which had increased from Rs. 2.48 lakhs for 1953-54 to Rs. 2.86 lakhs for 1954-55 has risen to Rs. 3.43 lakhs for 1955-56. This sum has been arrived at after providing for managing agents' commission at Rs. 0.80 lakh (Rs. 0.63 lakh), depreciation at Rs. 3.18 lakhs (Rs. 4.47 lakhs) and taxation at Rs. 3.00 lakhs (Rs. 2.25 lakhs). In conformity with the rise in profit, the rate of dividend also has been progressively raised year after year. The dividend, which was stepped up to 10 per cent. for 1954-55 from 7½ per cent. for 1953-54 has been enhanced again to 12½ per cent. for 1955-56. This, however, has not been done at the expense of any allocation to the reserves which has been maintained at the previous year's level of Rs. 50,000. The dividend of 12½ per cent. or Re. 1-4 per share absorbs Rs. 2.81 lakhs, as against Rs. 2.25 lakhs, leaving a balance of Rs. 37,914 to be carried forward, as against Rs. 26,753 brought in.

The Company's progress in the manufacture of wagons has been quite encouraging. During the year under review, 30 four wheeler open wagons were manufactured and put on line. Construction of 90 more wagons is being done. The two ZB locomotives on order are expected to be received shortly. Out of the 18 miles private siding under construction, 10 miles siding has been completed and the balance is expected to be done before the end of the current financial year. The Directors hope that the larger volume of traffic flowing from cement factories in the region served by the Company would be reflected in the Company's earnings during the current year. Accordingly, they anticipate a bright future for the Company.

The balance sheet of the Company as at 31st March 1956 shows the capital unchanged at Rs. 22.53 lakhs. Besides shareholders' capital, the Company has also 5½ per cent. debentures to the tune of Rs. 15.0 lakhs secured by land, buildings, plant, machinery, rolling stock and permanent way of the Company. The Company has also secured loans from the Bihar Government of the order of Rs. 5 lakhs. These resources are supplemented by reserves and surplus aggregating Rs. 13.88 lakhs. The gross block, with additions during the year of the value of Rs. 1.55 lakhs, stands at Rs. 62.21 lakhs. Against this, the provision for depreciation aggregates Rs. 26.18 lakhs. The current assets amount to Rs. 30.72 lakhs, exceeding the current liabilities and provision for taxation of the order of Rs. 10.34 lakhs, by as much as Rs. 20.38 lakhs.

(Concluded from next column)

Rs. 164.07 lakhs and cover the current liabilities and provision for taxation by a fair margin.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 10-12 *cum-div.* On an *ex-div.* basis, and taking the dividend at 7½ per cent., the yield on the shares works out to 7½ per cent. per annum, free of tax.

SINGARENI COLLIERIES' BUMPER PROFIT

DIVIDEND RAISED FURTHER

A FURTHER record output of coal far in excess of the previous year's raisings, which were themselves a record, without a proportionate increase in overall costs as witnessed in the previous year, and an adequate wagon supply for the movement of coal were the factors responsible for the pleasing results of the Singareni Collieries Co. Ltd. (Secretaries: Industrial Trust Fund, Government of Hyderabad) for the year ended 31st December 1955. The Company's fresh record profit outstripping the previous year's record has not only enabled it to wipe out completely the remnants of loss carried over from 1953 but has also made it possible to raise the dividend further to 7½ per cent. from 7 per cent. declared for 1954. It might be remembered that even the previous 7 per cent. rate was something which the Company had not paid during the past nearly quarter of a century of its history. With the present increase, the dividend has now almost reached the highest rate of 8 per cent. per annum declared for 1929.

The gross profit has made a strident advance from Rs. 42.23 lakhs in 1954 to Rs. 53.40 lakhs during the year under review. After providing a higher provision for depreciation at Rs. 32.12 lakhs as against Rs. 25.53 lakhs and Rs. 7.50 lakhs for taxation as against Rs. 7.70 lakhs in the previous year, the net profit stands at the distinctly impressive figure of Rs. 13.78 lakhs, that is Rs. 4.78 lakhs above the 1954 profit of Rs. 9 lakhs. The provision for payment of bonus to staff other than workers has been raised from Rs. 1.50 lakhs to Rs. 1.75 lakhs, while the transfer to workmen's compensation fund has been maintained at Rs. 1 lakh. Besides, the dividend equalisation fund has also been enriched with Rs. 1.75 lakhs. After wiping out the last vestige of loss at Rs. 4.47 lakhs, a small sum of Rs. 7,000 is being carried over.

The following comparative table brings out the essential features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	311.50	293.22	253.20	283.08

	(7½%)	(7%)		(5%)
Carry forward	0.07	—4.47	—0.49	+0.66

The Company's output of coal during the year amounted to 15.26 lakh tons, having risen from 12.72 lakh tons in 1953 and 14.58 lakh tons in 1954. This was due to the cordial labour relations that existed throughout the year in two of the mines. An illegal strike for about 1½ months in the third mine, however, curtailed production by about 70,000 tons. The year's output is higher than the 1954 output, which had exceeded the previous highest production of 13.75 lakh tons in 1952. However, the working expenses have only increased from Rs. 253.78 lakhs to Rs. 264.94 lakhs. The original expansion scheme to raise the output to 2 million tons per year by 1958 has been revised to produce 3 million tons per year by 1961-62. This portion of the scheme has been accepted by the Government of India under the public sector in the second Five-year Plan and is estimated to cost Rs. 9 crores.

Despatches of coal during the year amounted to 14.62 lakh tons, as compared with 13.57 lakh tons in 1954 and 11.69 lakh tons in 1953.

The reserves and surplus of the Company as at the close of 1955 amount to Rs. 23.84 lakhs, as against a paid-up capital of Rs. 63.21 lakhs. These reserves include a capital reserve of Rs. 1.36 lakhs representing the subsidy received from the Government towards the construction of pithead baths and workmen's quarters. The entire debenture liability of Rs. 10.79 lakhs has been liquidated. The provision for taxation stands at Rs. 18.48 lakhs. The current liabilities (excluding employees' provident fund contributions amounting to Rs. 35.45 lakhs) aggregate Rs. 188.77 lakhs of which Rs. 121.86 lakhs represent loans from the Hyderabad Government. The gross block of the value of Rs. 472.98 lakhs has been provided with a depreciation fund of Rs. 317.80 lakhs. The current assets aggregate

COMPANY MEETINGS AND DIVIDENDS

A. V. THOMAS AND CO., LTD. Annual General Meeting, Alleppey, 28th September 1956. Dividend: Re. 1 per share. Transfer books remains closed from 22nd to 28th September 1956, both days inclusive.

MIRZAPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 28th September 1956. Dividend: As. 8 per share. Transfer books remain closed from 21st to 28th September 1956, both days inclusive.

MOTHOLA CO., LTD. Annual General Meeting, Calcutta, 28th September 1956. Dividend: Rs. 50 per share. Transfer books remain closed from 15th to 28th September 1956, both days inclusive.

CHITTARANJAN COTTON MILLS LTD. Annual General Meeting, Calcutta, 29th September 1956. Dividend: Nil. Transfer books remain closed from 15th to 29th September 1956, both days inclusive.

MYSORE SPUN SILK MILLS LTD. Annual General Meeting, Channapatna, 29th September 1956. Dividend: Nil. Transfer books remain closed from 15th to 29th September 1956, both days inclusive.

NILAMBUR RUBBER CO., LTD. Annual General Meeting, Tamaracherry, Pudupadi, 29th September 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 22nd to 29th September 1956, both days inclusive.

RUNGLEE RUNGLIOT TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1956. Transfer books remain closed from 20th to 29th September 1956, both days inclusive.

KARIKODE RUBBERS (1945) LTD. Annual General Meeting, Palai, 29th September 1956. Dividend: Re. 1 1/5 per share. Transfer books remain closed from 22nd to 29th September 1956, both days inclusive.

KARANPURA COLLIERIES LTD. Annual General Meeting, Calcutta, 29th September 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 15th to 29th September 1956, both days inclusive.

RUNGAMATEE TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1956. Dividend: Rs. 10 per share. Transfer books remain closed from 20th to 29th September 1956, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1956. Dividend: Nil. Transfer books remain closed from 20th to 29th September 1956, both days inclusive.

NAGAISUREE TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 20th to 29th September 1956, both days inclusive.

RAMESHWARA JUTE MILLS LTD. Annual General Meeting, Muktapur, P.O. Samastipur (Dharbhanga), 1st October 1956. Dividend: Nil. Transfer books remain closed from 17th September to 1st October 1956, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Half-yearly General Meeting, Calcutta, 4th October 1956. Dividend: Re. 1 per share. Transfer books remain closed from 20th September to 4th October 1956, both days inclusive.

BISRA STONE LIME CO., LTD. Half-yearly General Meeting, Calcutta, 4th October 1956. Dividend: As. 14 per share. Transfer books remain closed from 20th September to 4th October 1956, both days inclusive.

CHAMPDANY JUTE CO., LTD. Annual General Meeting, Calcutta, 4th October 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 19th September to 4th October 1956, both days inclusive.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 5th October 1956. Transfer books will remain closed from 28th September to 5th October 1956, both days inclusive.

LAWRENCE JUTE CO., LTD. Annual General Meeting, Calcutta, 5th October, 1956. Dividend: Nil. Transfer books remain closed from 21st September to 5th October 1956, both days inclusive.

NILGIRI TEA ESTATES LTD. Annual General Meeting, Nilgiris, 15th October 1956. Dividend: As. 10 per ordinary share. Transfer books will remain closed from 5th to 15th October 1956, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Dividend of Rs. 10 per ordinary share, free of income-tax, for the year ended 30th June 1956, payable on 29th October 1956. Transfer books will remain closed from 8th to 26th October 1956, both days inclusive.

COMPANY REGISTRATIONS

RADHAKRISHNA RAMNARAIN PRIVATE LTD. (First Director: Mr. R. Ramnarayan Ruia.) Business: Dealers in real estates and lands. Authorised capital: Rs. 20,00,000. Private company. Address: State Bank of India Building Annexe, Bank Street, Fort, Bombay.

ENGINEERING RAW MATERIALS CONSUMERS' CORPN. PRIVATE LTD. (First Director: Mr. B. Gulabchand.) Business: To protect and promote interests of producers and consumers in iron, steel and other materials. Authorised capital: Rs. 10,00,000. Private company. Address: Brabourne Stadium 87, Veerariman Road, Bombay.

EASTERN CIRCUIT PRIVATE LTD. (First Director: Mr. K. K. Kapur.) Business: Motion picture production. Authorised capital: Rs. 5,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

OVER PRODUCTION AND LACK OF DEMAND AFFECT LAWRENCE JUTE

PROFIT OF ORISSA MINERALS HIGHER

Lawrence Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

After providing Rs. 48,912 (Rs. 47,598) for depreciation, the profit and loss account shows a loss of Rs. 1,33,361 (profit of Rs. 2,76,742). This loss is reduced by the amount brought forward from previous half-year of Rs. 2,154 (Rs. 12,683), transfer from equalisation of dividends reserve Rs. 1,20,000 (*nil*) and transfer from general reserve Rs. 60,000 (*nil*) leaving an available balance of Rs. 48,793 (Rs. 1,99,425 after transferring Rs. 65,000 to plant renovation reserve, Rs. 25,000 to jute stock reserve and adding Rs. 12,683 brought forward from the previous half-year). The directors propose to dispose of this amount as follows:—

In paying a dividend on the "A" preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 17,500 (Rs. 17,500), in paying a dividend on the "B" preference shares at the rate of 5½ per cent. per annum, without any deduction for income-tax paid by the Company Rs. 27,500 (Rs. 27,500) and in carrying forward Rs. 3,793 (Rs. 14,440 after paying ordinary dividend at Rs. 5 per share absorbing Rs. 1,39,985).

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

The labour situation throughout the period remained quiet and the complement at the mill was maintained at full strength.

The directors have to advise that subscriptions to the 5½ per cent. debenture loan to finance the electrification and modernisation scheme amount to Rs. 19,29,000 at the time of this report.

With regard to the scheme for electrification and partial modernisation of the mill, orders have been placed and completion of the scheme is expected by the middle of 1957.

There is no progress regarding the claim for sales tax referred to in the last report. The representations made by the I.J.M.A. are under the consideration of the Central Government and a final decision is expected at an early date. During the period under review, demands have been received from the West Bengal sales tax authorities for interest totalling Rs. 49,687 on original sales tax accounts. The demands have been rejected, as the directors do not consider the Company is liable to pay such interest in view of the fact that Government have admitted liability for sales tax itself.

Disbursements for sick leave payments under the State Insurance Scheme continued to be substantial and in December 1955, reached a peak of Rs. 16,000 for the month. Thereafter an improvement was apparent and by the end of the half-year figures had been brought within reasonable limits. The directors add that the liability of employers of mills in Calcutta and Howrah districts to pay sick leave benefit and also maternity benefit ceased as from 12th May 1956.

A particularly serious situation faces the Indian jute industry since the cost of raw jute is completely out of line with the prices obtainable for finished goods. This is due to over production and lack of demand, particularly in heavy goods. The situation is aggravated by the increasing production in Pakistan whose mills are in a strong competitive position due to cheaper raw materials, lower wages and an internal market in which high profits are obtainable. Production is also increasing in other countries mainly in the Middle East and Asia, whose policy is to produce as far as possible their own requirements.

While supplies of raw jute were sufficient, for the needs of the industry during the period under review, prices were high in relation to goods and this position has been made worse in recent months, due mainly to the unsealing of looms mentioned above. It is clear there is a shortage of jute which will not be relieved while production continues at such a high level.

Up to the end of 1955 stocks of finished goods in the Indian industry continued to decline, but thereafter each month brought a substantial increase and by the end of the period under review, combined stocks of hessian and sacking had risen to 95,200 tons and by the end of July, 1956 to 135,800 tons. This is a further proof, if proof were needed, that the world is suffering from the production of jute goods which are in excess of demand.

When looms were unsealed in January and February, 1956, there were indications that Russia would come into the market with substantial orders for jute goods, but the quantity bought so far has not come up to expectations and has not justified the increase in productive capacity.

The Argentine has been pursuing a policy of reducing stocks and has not made any considerable purchase. The United States have been buying sparingly and exploiting to the full the discount on goods in the near position. Overseas buyers generally have been unwilling to buy forward in the expectation that cheaper goods can be had by waiting.

It is satisfactory to record that the internal consumption of jute goods has risen to 190,000 tons during the year ending the 30th June 1956, though this represents only approximately 17 per cent. of the total production of the industry.

Towards the end of May it was announced that Government had under consideration the fixation of minimum prices for jute goods both with a view to increasing earnings of foreign exchange and to ensuring economic prices to manufacturers. For a variety of reasons the idea was abandoned.

The directors are pleased to report, however, that action to correct the situation has been taken which involves the re-sealing of looms and restores the position to that of the 7th January 1956. 2½ per cent. of the looms of member mills of the I.J.M.A. were sealed from the 16th July 1956 and a further 5 per cent. will be sealed from the 17th September 1956.

Estimates of the quantity of new crop jute available in India and Pakistan are not such as give expectation of any substantial surplus, and it is hoped that the cut in production which will be achieved by sealing looms, will have the result of reducing raw jute prices and simultaneously raising the price of goods, so that profitable trading will once more be possible.

During the period under review the directors purchased from Bird & Co. (Private), Ltd. 646 shares in Becker Gray & Co. (1930) (Private), Ltd. The Company is an old established exporter of jute goods with valuable world-wide contacts and is a regular purchaser from the Company. The directors consider that the mill should be in much closer touch with consuming markets than in the past in view of the increased competition from Pakistan and other countries, and Becker Gray & Co. (1930) (Private), Ltd. is a convenient vehicle for this purpose.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Orissa Minerals Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

Iron ore.—Raisings were 1,91,184 (3,03,531) tons compared with 2,20,283 tons in the previous half-year. Despatches amounted to 2,14,729 (3,10,459) tons, showing a slight fall in comparison with 2,24,788 tons in the previous half year. Raisings and despatches continued to be low because of labour trouble at the mines. The steel works' order was maintained in the Company's books at 40,000 tons per month, during this period.

Shipments to Japan fell to 20,745 (19,002) tons as compared with 48,811 tons for the previous period, this decrease was due partly to lower raisings and partly to shortage of railway transport.

Manganese ore.—Raisings fell from 38,720 (22,948) tons in the previous period to 29,146 tons. Sales, however, recorded an increase from 16,959 tons to 22,107 (27,388) tons and were only restricted by the shortage of wagons.

Manganese dioxide.—Raisings fell still further to 800 (1,649) tons from the figure of 1,068 tons during the previous half-year. Sales, however, increased to 1,711 (1,074) tons as compared to 1,547 tons in the previous half-year. Proving still continues by trial pitting.

Market.—The market continued to improve and the prices at which the various grades could be sold during the period under review were satisfactory. Unfortunately, full advantage could not be taken of this due to the shortage of wagons.

Transport.—As is usual, transport showed a seasonal improvement during this half-year in comparison with the previous half-year but, as stated above, is still far from satisfactory.

Labour.—As stated above, troubled relations with labour affected output during the period under review. This culminated in all illegal strike on the 20th April 1956, and the Company accordingly declared a lock-out which was lifted on the 25th June 1956. The situation is still by no means normal and it will be some time before the usual output figures will be reached.

State Trading Corporation.—The formation of this venture of Government into the normal trading fields of the so-called private sector is bound to have a deleterious effect on the Company's future. When the State Trading Corporation was originally set up, Government announced that the intention was to conduct trading on a Government to Government basis and mainly with the Iron Curtain countries and thus break new ground. This intention was soon abandoned however and the State Trading Corporation having been allotted 33⅓ of the total export quota of ores for the six months ending 31st December 1956, is now engaging in ordinary trading and exporting. Apart from the effect on the Company, reports from abroad indicate the unsettling effect, this incursion has had on buyers and in the long run appears detrimental to the interests of the country as a whole.

Bolani area.—The managing agents have been in discussion with the Government of India as to the best method of exploiting the large deposits of ore in the Bolani area with particular reference to the increasing demand which will arise from the new Steel Works now in course of construction or sanctioned. Agreement has been reached in principle on the formation of a new Company in conjunction with Government in which the Company will have a substantial interest, and of which the managing agents will act as secretaries and treasurers. It is hoped that the necessary formalities will be completed shortly and that the details can be released early to shareholders.

During the half-year the share of profit from the Eastern Shipping Syndicate amounts to Rs. 50,209 (Rs. 40,920) and this has been included in the accounts.

The profit and loss account, after making provisions on account of depreciation Rs. 88,323 (Rs. 85,447), taxation Rs. 1,00,000 (Rs. 70,000), staff and workmen's accidents and compensation Rs. 15,112 (Rs. 21,863) tax contingency Rs. 44,600 (Rs. 38,815) and development rebate Rs. 6,540 (Rs. 18,064) shows a profit of Rs. 2,73,782 (Rs. 1,53,415). To this is added, the amount brought forward from the previous half-year of Rs. 1,05,053 (Rs. 1,39,969) making a total of Rs. 3,78,835 (Rs. 2,91,384). After deducting from this, the amount transferred to mechanisation reserve of Rs. 60,000 (*nil*) there is an available balance of Rs. 3,18,835 (Rs. 2,91,384). The directors propose to dispose of this as follows:—

In paying a dividend on 200,000 ordinary shares at the rate of 20 (20) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,00,000 (Rs. 2,00,000) and in carrying forward Rs. 1,18,835 (Rs. 91,384).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	22,45,037
Reserves ...	35,64,097	Capital work-in-progress	92,459
Provision for taxation ...	8,88,182	Stock-in-trade	12,12,592
Liabilities ...	25,52,517	Stores and spare gear	6,63,819
Profit and loss account ...	1,18,835	Debts, deposits and advances ...	16,57,107
		Investments	30,36,926
		Cash ...	2,15,691
Rs.	91,23,631	Rs.	91,23,631

Bisra Stone Lime Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Raisings of limestone during the period amounted to 4,15,913 (4,28,081) tons, a slight decrease over the raisings of 4,28,051 tons during the previous half-year. Sales amounted to 4,19,797 (3,99,642) tons, as against 4,02,222 tons previously. The wagon supply position showed an improvement, but is still irregular and supplies are frequently below our requirements.

Production of dolomite was maintained at the same rate as in the previous half-year and a total of 15,978 (19,281) tons was raised. Sales, however, increased considerably, the tonnage sold being 18,502 (20,712), as against 13,978 tons previously.

Output of lime decreased slightly by 51,593 mds. to 6,29,390 (6,16,358) mds. Sales, however, increased from 4,64,419 mds. to 5,64,899 (5,71,474) mds. Sales and output are still controlled by the supply of wagons. The directors are pleased to report a considerable improvement.

In the half-year ended 31st March 1952, the net proceeds Rs. 2,25,803 arising from sub-lease of the Lanjiberna properties were credited to capital reserve account. On the advice of the Company's auditors, Rs. 1,12,243 has been transferred from capital reserve account to the credit of profit and loss account and a corresponding amount has been taken to provision for taxation, being income-tax and super-tax thereon paid by the Company and against which the Company has lodged an appeal.

The profit and loss account, after making provisions on account of depreciation Rs. 41,405 (Rs. 49,019), taxation Rs. 3,82,243 (Rs. 1,40,000), quarry overhang Rs. 51,989 (Rs. 53,510) staff and workmen's accidents and compensation Rs. 13,497 (Rs. 13,980) and tax contingency Rs. 16,000 (Rs. 17,000) shows a profit of Rs. 2,15,804 (Rs. 1,83,499). To this amount is added the amount brought forward from previous half-year of Rs. 9,142 (Rs. 8,804) and amount transferred from capital reserve Rs. 1,12,243 (*nil*), making a total of Rs. 3,37,189 (Rs. 1,92,303). From this amount the directors have transferred to water supply reserve Rs. 50,000 (*nil*) and to mechanisation reserve Rs. 1,75,000 (Rs. 75,000) leaving an available balance of Rs. 1,12,189 (Rs. 1,17,303). The directors propose to dispose of this amount as follows:

By payment of a dividend of As. 14 (As. 14) per share (without deduction for income-tax paid by the Company) absorbing Rs. 87,500 (Rs. 87,500) and by carrying forward Rs. 24,689 (Rs. 29,803).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	24,13,755
Reserves ...	26,53,750	Capital work-in-progress	99,521
Provision for taxation ...	4,67,801	Stock of limestone and dolomite	2,05,556
Liabilities ...	13,00,828	Stores and spare gear	6,33,471
Profit and loss account ...	24,689	Stores-in-transit ...	28,966
		Debts and advances ...	15,85,079
		Investments ...	3,004
		Cash ...	4,77,716

Kumardhubi Fireclay and Silica Works, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit and loss account after allowing for sundry charges, providing for depreciation, taxation, placing Rs. 41,500 (Rs. 35,000) to the reserve for tax contingency, Rs. 50,000 (Rs. 50,000) to the reserve for plant renovation, Rs. 1,30,000 (Rs. 1,20,000) to general reserve, Rs. 3,500 Rs. 50,000 (*nil*) to debenture redemption reserve and including the sum of Rs. 41,767 (Rs. 20,480) including the sum of Rs. 41,767 (Rs. 20,480) brought forward from the previous year shows a credit balance of Rs. 3,04,629 (Rs. 2,21,992), which the directors propose to dispose of as follows:—

In paying a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 14,000 (Rs. 14,000), in paying a dividend on the redeemable preference shares at the rate of 5½ per cent. per annum, after deduction of income-tax paid by the Company Rs. 16,225 (Rs. 16,225), in paying a dividend on the ordinary shares at the rate of Re. 1-8 (Re. 1-8) per share, without any deduction for income-tax paid by the Company Rs. 2,25,000 (Rs. 1,50,000) and in carrying forward Rs. 49,404 (Rs. 41,767).

The ordinary dividend at Re. 1-8 per share for the year ended 31st December 1955, absorbing Rs. 2,25,000 is on the increased capital of Rs. 15,00,000. Last year the ordinary capital was only Rs. 10,00,000.

The combined output of firebricks and silica bricks exceeded the record established in the previous year. The expansion of the firebrick section is now well advanced and the first new tunnel kiln is expected to be in operation at the end of this year. This will mark the completion of Stage I expansion programme.

The position of the order book is most satisfactory and the directors are now obliged to quote for distant deliveries. With three new steel plants to go up in the country, the drectors expect demand to exceed supply during the second Five-year Plan period.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	70,89,200
Debentures	20,00,000	Capital works in progress	6,60,549
Reserves ...	72,13,923	Stock-in-trade	12,22,282
Provision for taxation ...	2,45,987	Stores and spare gear	13,45,197
Liabilities ...	25,16,012	Debts, deposits and advances ...	35,95,771
Profit and loss account ...	49,404	Investments	34,391
		Cash ...	1,79,936
Rs.	1,41,27,326	Rs.	1,41,27,326

Rungamattee Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a profit of Rs. 2,69,794 (Rs. 7,02,954). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 2,19,322 (Rs. 4,49,247) of which the directors have transferred Rs. 50,000 (Rs. 1,25,000) to revenue reserve and Rs. 30,000 (Rs. 1,00,000) to buildings and machinery reserve. The directors recommend that a dividend of 20 (35) per cent. be declared at the annual general meeting, leaving Rs. 34,322 (Rs. 40,497) to be carried forward.

Crop amounted to 9,075 maunds as compared with 8,460 maunds in 1954. The average selling price realised was Re. 1-13-3 per lb. as against Rs. 2-9-11 per lb. in the previous year. The planted area remains at 688.45 acres.

Estimates for 1956 provide for a crop of 7,500 maunds at an outlay of Rs. 8,77,832, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Block ...	8,87,291
Reserves ...	10,42,956	Stock-in-trade	8,05,353

Liabilities ...	3,63,620	Debts, deposits and advances ...	1,64,992
Profit and loss account ...	34,322	Investments	4,14,458
		Cash ...	23,299
Rs.	23,16,207	Rs.	23,16,207

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE GANGES ROPE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 9th October 1956, at 12.00 noon for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March 1956 and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.
5. *As Special Business:*

   To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 30th September to 9th October 1956, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.,

A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA, *6th September* 1956.

Note.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5.—By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with several requests the Board of Directors have extended the date of closing of Share Transfer Books. The Share Transfer Books of the Company will now remain closed from 5th October to 15th October 1956, both days inclusive (instead of from 21st September to 30th September 1956) and the interim dividend of Annas -/12/- per Ordinary Share will be payable to the registered shareholders as on the 5th October 1956.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, *12th September* 1956.

THE COCHIN STATE POWER AND LIGHT CORPORATION, LTD.

(Incorporated in Travancore-Cochin)

Registered Office:
"Cable House," 70, Feet Road, ERNAKULAM.

Branch Office:
20, Second Line Beach, MADRAS-1.

Notice of the Twentieth Annual General Meeting of Shareholders

NOTICE IS HEREBY GIVEN THAT THE TWENTIETH ANNUAL GENERAL MEETING of the Shareholders of the Cochin State Power and Light Corporation, Ltd., will be held at the Registered Office of the Company at "Cable House," 70 Feet Road, Ernakulam, on Monday the 15th October 1956, at 1 o'clock in the afternoon to consider the following:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1956.
2. To declare a Dividend.
3. To elect:

   (i) a Director in the place of Mr. G. A. Krishnamurti retiring by rotation;

   (ii) a Director in the place of Mr. S. S. Koder retiring by rotation; and

   (iii) to appoint Sri S. S. Thiyagaraja Mudaliar as a Director of the Company pursuant to Section 261 of the Companies Act, 1956 and if thought fit to pass the following resolution which will be proposed as a special resolution, in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative explanatory note concerning which is set out below:—

   "RESOLVED that Sri S. S. Thiyagaraja Mudaliar, who is a Director and member of Messrs. Chandrie & Co. (Private) Ltd., and is retiring under Section 261 of the Companies Act, be and is hereby re-elected as a Director of the Company."
4. To appoint Auditors for the official year 1956-57 and to fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 6th October 1956 to 15th October 1956, both days inclusive.

By Order of the Board,

For CHANDRIE & Co. (PRIVATE) LTD.,

S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, 27*th August* 1956.

Note.—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself, and that a proxy need not be a member.

(*b*) Sri S. S. Thiyagaraja Mudaliar is a Director and member of Messrs. Chandrie & Co. (Private) Ltd., who are the Managing Agents of the Company. The Managing Agents are entitled to appoint two persons as the Directors of the Company. Mr. S. Viswanatha Mudaliar has been so appointed and if the loan with the Travancore-Cochin Financial Corporation, is put through, the Managing Agents will appoint a nominee of that Corporation as a Director of the Company. There is already a Government Director on the Board and a nominee of the Financial Corporation will also be an independent Director though he will be nominated by the Managing Agents.

Sri S. S. Thiyagaraja Mudaliar was elected as a Director of the Company at its Annual General Meeting held on 1st September 1955, and will not vacate his office this year but for the provisions of Section 261 (4) of the Companies Act. The Directors feel that his services to the Company as a Director will be highly beneficial to the Company and hence, recommend his appointment as required under Section 261 of the Act.

(*c*) The Dividend Warrants will be posted on or after 20th October 1956, to the Members whose names stand on the Register of Members on the 5th October 1956, if the dividend is sanctioned at the General Meeting.

QUESTION HOUR IN PARLIAMENT

Rise in Prices

THE Government has not seen any clear indication yet that creation of additional money is acting as an incentive for raising prices. The main contributory factors for the rise in prices are a fall (though small) in the production of foodgrains, particularly of coarse grains; increased incomes and purchasing power resulting from the increased tempo of developmental expenditure; and speculative hoarding of stocks of foodgrains. The State Governments are watching the situation. If we find that hoarding is generally practised, the obvious course is to freeze the hoarders' stocks.

* * * *

Foreign Exchange Reserves

The Government is going into the question of why the pace of reduction in its foreign exchange reserves has been more rapid in recent months than was anticipated. During the first Five-year Plan period, the net fall in the country's foreign exchange resources was Rs. 73.12 crores. During the second Plan, the figure is expected to be of the order of Rs. 200 crores. At the end of the first Plan, the country's foreign exchange resources stood at Rs. 761.74 crores. During the first two months since the second Plan period began, that is, April and May 1956, the reserves fell by Rs. 26.06 crores. Figures of fall in foreign exchange reserves as a whole are not available for subsequent months, but sterling balances—which constitute the major part of these reserves—fell by Rs. 53.71 crores during the months of June and July 1956. This pace of reduction is more than what had been anticipated and Government is looking into the matter. The latest sterling balances reserves are of the order of Rs. 600-odd crores.

* * * *

Indo-U.S. Agricultural Pact

The purpose of the Indo-U.S. agricultural commodity agreement is to enable the Government of India to build up adequate stocks of foodgrains so that they will be in a position to take effective steps to counter any undue rise in prices of foodgrains in India. In releasing stocks of these imported grains, the Government will take care to ensure that agricultural prices do not fall to uneconomic levels. India has entered into the agreement on the basis that the utilisation of the amount will be for purposes which are beneficial to this country and which are mutually agreed upon. In the event of failure of the two Governments to reach such agreement, the United States Government may use it for purposes authorised by Section 104 of the United States Agricultural Trade Development and Assistance Act.

—*T. T. Krishnamachari*

Indo-Egypt Trade Agreement

No agreement has been entered into between India and Egypt, under which trade payments between the two countries shall now cease to be made in sterling.

* * * *

Insurance Field Workers

Any stipulation that appointment of insurance field staff will be terminated or salaries revised, if the business procured is less than a specified figure, will not offend the Code of Conduct laid down for big insurers. Where, however, the salary is really in the nature of commission for business procured, it is not in conformity with the code.

—*B. R. Bhagat*

Dearness Allowance

The Government does not propose to enhance the rate of dearness allowance admissible to Central Government employees.

—*M. C. Shah*

Japanese Competition in Trade

As regards Japan, discussions have taken place with a view to reaching an understanding for safeguarding Indian industries and Indian exports against unfair competition. Pending such an understanding, the Government of India has refrained from assuming any obligations in respect to Japanese trade either under the general agreement on tariffs and trade or under any other agreement. The officials of the Governments of India and Japan have arranged to meet in Tokyo periodically to consider the difficulties in the assessment of compensation claims of Indian residents in Japan who have suffered damages to property during the last war. Meanwhile, negotiations for the settlement of broader issues of a more general nature are proceeding at diplomatic level.

—*Sardar Swaran Singh*

Irrigation and Power Projects

Out of 201 major and medium irrigation projects included in the second Five-year Plan, project reports for 80 schemes have so far been received for scrutiny in the Central Water and Power Commission, which has examined 57 schemes. Of these, 20 schemes have been found to be lacking in detailed technical investigations and financial assessment. The total number of power projects included in the second Plan is 184, out of which project reports for 128 projects have been received by the C.W. and P.C. None of the projects received in the Commission is found to be lacking in detailed technical investigations and economic assessment. Investigations are being carried out by the respective State Governments and it is not possible to give any definite information as to when they will be completed.

Bhakra-Nangal Project

The Bhakra-Nangal project, originally estimated to cost Rs. 75 crores in 1946, is now estimated to cost Rs. 173.54 crores, according to revised estimates which, however, are not yet final. The increase in the revised estimate is due to the widening of the scope of the project and the additional items now provided such as (1) installation of an additional unit at each of the two power houses at Ganguwal and Kotla, (2) installation of additional four units at Bhakra, (3) additional civil works required at the right bank power house, and (4) additional provision for various power transmission lines.

—*Jaisukhlal Hathi*

India's Trade Through Suez

Over two-thirds of India's total foreign trade in 1955-56 valued at about Rs. 1,240 crores passed through the Suez Canal. If the total Indian imports in 1955-56 valued at Rs. 650 crores (c.i.f.), imports which passed through the Suez Canal are estimated to be worth Rs. 462 crores. Of the total exports during the same year valued at Rs. 591 crores (f.o.b.), the exports which passed through the Canal are estimated at Rs. 393 crores. The total ocean freight paid on Indian trade passing through the Canal amounted to Rs. 36.9 to Rs. 39 crores. On Indian exports through the Canal, the freight bill was estimated at Rs. 31.4 to Rs. 33.4 crores. India's overseas trade has not been hampered by the nationalisation of Suez Canal. There was the possibility of trade being hampered if the United Kingdom blocked Egypt's sterling balance. But a loan of Rs. 5 crores was given to Egypt from the Reserve Bank of India and this enabled India to maintain its trade.

* * * *

British Textiles

The Government is watching the trend of British textile imports into India during the last twelve months. After the import duty on cotton textiles was reduced in May 1956, there has been a rise in the imports of cotton textiles from the U.K. A delegation representing the U.K. cotton textile industry is likely to visit India in the near future to have discussions in this respect.

* * * *

Textile Exports

The Indian textile exports have been adversely affected in foreign textile markets as a result of Japanese competition. Japanese competition is felt in all Asian, West African and Australian markets. The countries are Burma, Ceylon, Hong Kong, Indonesia, Iraq, Iran, Malaya, Pakistan, the Philippines, Syria, British West Africa, Canada, Australia and Thailand.

—*D. P. Karmarkar*

Man-Power Directorate

The Government of India is considering a proposal to set up a Man-power Directorate, but no decision has yet been reached.

—*M. M. Shah*

Automatic Looms

By 15th August 1956, 112 textile mills in different States had applied for permission to install a total of 28,094 automatic looms for manufacture of cloth for export. The applications are under consideration. Mills from Madras have asked for 11,255 looms, from Bombay 5,773 looms, from the Punjab and P.E.P.S.U. 2,588 looms and from Uttar Pradesh 2,156 looms. Applications have also been received from West Bengal, Andhra, Travancore-Cochin, Rajasthan, Madhya Pradesh, Saurashtra, Mysore, Orissa, Madhya Bharat and Bhopal.

—*Nityanand Kanungo*

Railway Wagons

It is hoped that it will be possible to meet the country's requirements of railway wagons from indigenous production by the end of the second Five-year Plan period.

—*Lal Bahadur Shastri*

Indian Shipping

The Government cargo available for Indian ships at some foreign ports is of such dimensions that they are finding it difficult to lift all of them. Indian shipping companies have been asked to increase their present tonnage, in order to be able to lift this cargo. Twenty-seven Indian ships are at present engaged in the Indo-U.K. trade and there is no difficulty for them in getting adequate cargo.

—*Shah Nawaz Khan*

Foodgrain Imports

The proposed purchase of foodgrains from the U.S. will not affect India's programme of foodgrain imports from other countries.

* * * *

Grow-more-Food Campaign

A total expenditure of Rs. 112.63 crores was incurred on the Grow-more-Food Campaign during 1950-51 to 1955-56, and a total quantity of 52.28 lakhs tons of additional foodgrains was achieved through it. About Rs. 1,773.34 lakhs had been sanctioned to the State of Punjab from 1947-48 to 1955-56 by way of loans and grants for Grow-more-Food schemes including tube-well schemes, out of which Rs. 1,209.77 lakhs was utilised by the State Government during the same period. He also stated that an amount of Rs. 59.76 lakhs had already been sanctioned during the year 1956-57 and a further amount of Rs. 61.79 lakhs is likely to be sanctioned.

—*Ajit Prasad Jain*

Notices

THE COIMBATORE SPINNING AND WEAVING COMPANY, LIMITED

POST BOX No. 24, COIMBATORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 68th Annual General Meeting of the Shareholders of the Company will be held at its Registered Office, at Palmgrove Road, Coimbatore, on Saturday the 29th September 1956, at 3 p.m., for the purpose of transacting the usual business, viz.:

(i) To receive and adopt the Directors' and Auditors' Reports, the Audited Balance Sheet as at 31st December 1955, the Profit and Loss Account and the Profit and Loss Appropriation Account for the year ending 31st December 1955.

(ii) To declare a Dividend.

(iii) To appoint an Auditor or Auditors for the current year viz., 1956, and to fix his or their remuneration.

(iv) To elect Directors

and for the purpose of passing certain special and ordinary resolutions required under the Companies Act, 1956, in respect of which the necessary notice has been given in the agenda sent to the Shareholders.

Note.—(1) A member entitled to attend and vote at the meeting is entitled to appoint a Proxy. The Proxy need not be a member under the Companies Act, 1956.

(2) The Share Transfer Book of the Company will be closed from 19th September 1956 to 29th September 1956, both days inclusive.

By Order of the Board,
For THE COIMBATORE SPINNING & WEAVING Co., LTD.,
For R. G. S. NAIDU & Co.,
(Sd.) V. GOPAL NAIDU,
Partner,
Agents and Secretaries.

COIMBATORE, *3rd September* 1956.

DEPUTY DIRECTOR, WORKS, RAILWAY BOARD

TENDER NOTICE

TENDERS ARE INVITED FROM ESTABLISHED foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad Gauge, to be supplied by 30th May 1957.

2. Approximately 75,000 tons of imported pig iron will be available for allotment up to 75 per cent. of the quantity ordered on firms who will be expected to make up the remaining raw materials and melting losses by obtaining scrap or other materials available in the market. No such materials will ordinarily be supplied by Railways, but should the Railway find any such scrap available with them they will have the option to ask the suppliers to take over the scrap with suitable adjustment in prices if required.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 19th September 1956, onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 19th October 1956, and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

P. R. CHOPRA,
Deputy Director, Works,
Railway Board.

NEW DELHI, *12th September* 1956.

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT PAYMENT of the Half-yearly Interest on the 5 per cent. Debenture Stock 1966-71 of the Company will be made on 1st October 1956 to those Stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA-1, *12th September* 1956.

STRINGENCY IN MONEY PERSISTS

(*From Our Own Correspondent*)

BOMBAY, *19th September*

Activity in the short-term money market during the week under review remained restricted, due to scarcity of floating funds. The half-yearly payment of interest on some of the Central and State loans which fell due during the week did not seem to have eased the situation, because the effect of this supply was more than offset by the demand for money for income-tax payment. Consequently, the stringency continued to persist and interest rates held their levels.

Inter-bank call money was stationary at 3½ per cent. among all sections of banks. House money at call also was maintained at 3½ per cent. and short-term deposits at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

A contraction of Rs. 7.74 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 14th September 1956. This is in contrast to the expansion of Rs. 15.67 crores noted in the previous week. Notes held in the Banking Department are higher by Rs. 8.79 crores. Total notes have, consequently, risen by Rs. 1.05 crores, which is covered by a similar increase in the rupee coin. In the Banking Department, deposits of the Central Government show a sharp rise of Rs. 14.55 crores and those of the other Governments a further increase of Rs. 2.82 crores. Deposits of banks, on the other hand, have declined by Rs. 2.44 crores and those of others by Rs. 3.62 crores. A fall of Rs. 1.08 crores is noted in balances held abroad. Loans and advances other than to Governments are higher by Rs. 2.22 crores, following the rise of Rs. 6.50 crores in outstanding advances to Scheduled banks against usance bills. Fresh advances to banks against these bills during the week amount to Rs. 9.73 crores, while repayments are of the order of only Rs. 3.23 crores.

The Scheduled banks' statement for the week ended 7th September 1956, disclose a sharp fall of Rs. 8.04 crores in demand deposits and of Rs. 1.68 crores in time deposits. Inter-bank borrowings are also lower by Rs. 7.91 crores, while borrowings from the Reserve Bank and the State Bank have gone up by Rs. 21.25 crores and Rs. 5.44 crores, respectively. The shrinkage in deposits and the rise in borrowings from the Reserve Bank and the State Bank are duly reflected, on the assets side, in the sharp rise of Rs. 29.03 crores in advances. Bills purchased and discounted have, however, declined by Rs. 5.70 crores. Investments have been strengthened by Rs. 4.96 crores. Cash balances are lower by Rs. 49 lakhs, balances with other banks in current account by Rs. 1.50 crores and money at call and short notice by Rs. 9.79 crores.

Quiet conditions continued to prevail in the Gilt-edged market during the week under review also, with most of the issues attracting sellers and some of them sagging further. 3 per cent. 1986 Conversion Loan was on offer at Rs. 75-3 after payment of interest, while a week ago it was steady at Rs. 75-6 *cum*-voucher. 3 per cent. 1959-61 had sellers an anna lower at Rs. 97-15. 3 per cent. 1963-65 dropped As. 2 to Rs. 94-8, but the lower level did not attract buyers. 3 per cent. 1964 had sellers at Rs. 94-10, while 3 per cent. 1966-68 was sought for at Rs. 93-2. 3 per cent. 1970-75 shed an anna to Rs. 89-9. 3½ 1962 was on offer at Rs. 97-15, 3½ per cent. 1961 at Rs. 99-2 and 3½ per cent. 1964 at Rs. 98-9. 3½ per cent. 1965 had buyers a shade better at Rs. 98-6½. 3½ per cent. 1967 and 3½ per cent. 1974 were on offer at Rs. 98-7. Among the State loans, 4 per cent. 1970 shed an anna to Rs. 99-15, Madras 1968 declined further by As. 4 to Rs. 99-4 and Andhra 1968 by a similar extent to Rs. 99.

In the foreign exchange section, the rupee ruled steady in terms of the U.S. dollar, in consonance with the trend of the sterling in London. The selling rate of ready dollars was maintained at Rs. 481½ per $100, while the buying rate moved between Rs. 477 and Rs. 477½ per $100. In London, spot sterling moved between $2.78-5/16-2.78-7/16 and $2.78-3/16-2.78-5/16. Three months' forward declined a little from $2.76-11/16-2.76-13/16 to $2.76-9/16-2.76-11/16, while transferable sterling gained from 275.10-275.20 cents to 275.25-273.35 cents.

KIPS GIVE WAY

(*From Our Own Correspondent*)

MADRAS, *17th September*

Trading for shipment with the U.K. in kips was selective and emphasis was on medium and heavy weights. Light weights in F.A.Q. marks were dull. Prices in the local market were a shade weaker as compared with last week. There was moderate clearance of cow hides and good offtake of buff hides. Tanned cow calf and buff calf market was unchanged, as arrivals were of poor quality and selection. Towards the close of the week, markets looked firm.

It is reported that U.K. Government has released some of its stocks to the trade at prices lower than the current asking levels at origin and further details are awaited with interest. It looks as though prices will not be allowed to be pushed higher without justification.

In the tanned skins section, prices ruled quiet, and might ease slightly, as the markets have remained in very firm tension for several weeks.

The shipping position causes great concern to exporters, as the merchants find that several steamers receive berthing orders only after waiting in the roads for over a week, due to congestion in the sheds.

BULLION STEADY

(*From Our Own Correspondent*)

BOMBAY, *19th September*

Narrow, but irregular, movements in prices characterised trading in the bullion market during the week under review. The undertone was, however, fairly steady. The trend in silver early in the week was mainly influenced by absence of any confirmation of the rumours that negotiations were going on with Chinese authorities for import of silver coins. Subsequently, however, in the absence of fresh support and small offerings, prices backed away a little. Towards the close again, there was a modest recovery. Gold ruled fairly steady during the major part of the week, with a fractional marking up in values, but, at the close, there was a slight setback on renewed rumours about sale of gold by the Reserve Bank from stocks made up of seized contraband metal.

Silver for forward delivery (22nd September settlement) gained from Rs. 172-11 to Rs. 173 early in the week, before reacting to Rs. 171-15 on Monday. Today, however, it gathered strength to Rs. 172-14 and closed at Rs. 172-10. The next settlement moved between Rs. 173-12 and Rs. 172-12, before closing at Rs. 173-7.

Ready silver (.996 Mint) was unchanged on balance at Rs. 172-10, the highest and the lowest levels touched being Rs. 173-0 and Rs. 171-15. The floating stocks of silver are reported to be 2,400 bars. The daily average offtake was 25 bars.

Forward gold (21st September), hardened from Rs. 103 to Rs. 103-5, but gave way to Rs. 102-12 at the close. The next settlement advanced from Rs. 102-10 to Rs. 103-5, but retreated to Rs. 102-13 at the close. It may be noted that the carry forward charges, which were in favour of bulls at As. 6 at the close of the previous week, narrowed down to *nil* this morning, before turning against them to an anna at the close.

Ready gold moved between Rs. 103-8 and Rs. 102-13 before closing As. 5 lower on balance at Rs. 103. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was of the order of 2,000 tolas on an average.

In New York, silver held its ground at 90⅜c. In line with this, London prices also were unchanged at 78⅜d. for both spot and forward. London gold shaded off from 251s. 7¾d. to 251s. 6¾d. early in the week, but gained back to 251s. 7¾d. yesterday.

The following comparative table shows the trend of market during the week under review:

	19-9-56	Highest	Lowest	12-9-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

BEST LIQUORING DUST TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *13th September*

Almost 550,000 lbs. were on offer in Dust Sale 'R' which was held on Tuesday, 11th September. From the outset there was a strong and excited demand which eased slightly towards the close. With spirited bidding, prices were irregularly As. 2 to As. 4 dearer for all types. Best liquoring dusts were well supported and advanced in price. Middle East buyers were active and these types must be quoted dearer.

London Market—Sale of 10th September 1956.—Much dearer tendency as sale progressed.

Sale of 11th September 1956.—Market dearer tendency.

Colombo Market—Sale of 10th September 1956.—Dusts and good liquoring fannings dearer. Others unchanged.

Sale of 11th September 1956.—Strong demand. Medium and light liquoring highgrown B.O.P.s easier, but others dearer, particularly fannings.

Calcutta Market —Export.—Inspite increased crop figure 23 million for August, good general demand. Commons steady. Mediums As. 1 to As. 2 easier. Better liquoring As. 2 to As. 4 lower.

Internal.—17,790 packages dust. Good general demand. Middle East types strongest feature. C.T.Cs As. 2 to As. 4 easier. Other descriptions fully firm to dearer. 843 packages leaf. Good demand at irregular rates.

Export Quota.—The market remains quiet and the quotation is unchanged at 21 pies (nominal).

Forthcoming Auctions.—Dust Sale 'S' will be held on Tuesday, 25th September.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale* 26.—1,400,000 lbs. Very strong general demand for everything, particularly good tea. Low medium and medium As. 2 to As. 4 dearer. Best liquoring up to a rupee over valuation. Whole leaf very strong and dearer Middle East types good enquiry at rather lower rates."

COTTON FUTURES FIRM

(*From Our Own Correspondent*)

BOMBAY, *19th September*

A firm trend was in evidence in the cotton futures market during the week under review, although there was a slight reaction at the close today. The firmness was aided chiefly by expectation of a rise in prices of cotton based on fears of deterioration in the Suez situation. There were reports of mills being eager to stock the available lots of good quality cotton at prevailing prices and to cover new crop cotton, too. Buying support ensued as a consequence and cotton futures prices moved upward. Increased rates, of course, evoked scattered speculative long liquidation. Nevertheless, today's closing rates stood higher than those at the end of last week.

M. G. Jarilla (March 1957) Contract opened the week firm at Rs. 688-8, as against Rs. 687 last weekend. The Contract came in for continuous short-covering induced by good demand in ready cotton and advanced to Rs. 694-8 on Saturday. The rise in prices attracted realising pressure which, however, was well absorbed by professional support. Today, the Contract stood firm at Rs. 692-8 following the Government of India's decision to revalidate shipment of half the quantity remaining unshipped against export licences issued last season, but receded to Rs. 691-8 at the close due to profit-taking. The net gain over the week was Rs. 4-8. M. G. Vijay (April 1957) Contract opened Rs. 4 higher at Rs. 819 and climbed up to Rs. 824-8 before closing at Rs. 818-8. The net gain over the week was Rs. 3-8.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	19-9-56	High	Low	12-9-56
Jarilla (March) ...	691½	694½	687	687
Vijay (April) ...	818½	824½	815	815

Activity in the spot market at Sewri was quite brisk, with keen buying of new crop cotton by both mills and shippers. Berar, Khandesh and Vijay were specially sought. A fairly large quantity of Punjab 320F was reported to have been purchased by mills. Delivery contracts encountered good enquiries, and staple transactions were put through in Bengal, Vijay and Khandesh. Exportable styles met with enlarged demand, thanks to Government's announcement regarding the unshipped quantity of cotton licensed for export in the previous season. Shippers' attention was mainly on Bengal *Deshi* and C.P. I, II, and *Deshi*. In the import section, some enquiries were noted for Egyptian cotton, but actual business done was not known.

The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 705; Berar Jarilla 780; Khandesh 790; Vijay 955; Oomra *Deshi* 760; *Moglai* 745. Delivery contracts. Khandesh 197/3; December delivery 121; Berar 111 and Moglai 40 'on' Jarilla; 320F 71, 216F 100 and Vijay 13/16" February-March 80 'on' Vijay.

Yesterday, the Joint Chief Controller of Exports, Bombay, issued a notification regarding export of raw cotton. According to the notification, applications for the revalidation of shipment of half the quantity remaining unshipped against export licences for Indian cotton issued during the previous cotton season will be entertained in respect of two types of cases up to the end of next month. First, applications enclosing documentary evidence to show that firm commitments with foreign buyers have been entered into prior to 31st August 1956 for shipment of half the quantity remaining unshipped. Secondly, applications enclosing documentary evidence to show that firm commitments with foreign buyers have been entered into for September-October 1956 shipments in respect of half the quantity remaining unshipped.

On the advice of the Forward Markets Commission, the Government of India has granted recognition to the Central India Cotton Association Ltd., Indore, for conducting forward trading in cotton (and cottonseed) for a period of three years. The Association will provide hedging facilities for cotton (and cottonseed) produced in Madhya Pradesh, Madhya Bharat and the adjacent districts of Rajasthan. The Association will conduct forward trading in cotton through two rings, one at Indore and the other at Ujjain (and in cottonseed through the ring at Ujjain). The desirability of continuing trading through two rings will be reviewed by the Commission at the end of one year, in the light of such data as might then become available. Trading will begin as soon as necessary arrangements are completed.

Conditions in the Karachi cotton market were distinctly bearish during the week. Poor offtake and fears of American competition were the chief depressing factors. There was also the fear of the possibility of increased competition from Indian Assams and Comillas, the permission for the export of which was announced by the Government of India last week. The latest announcement of revalidating export of unutilised licences granted last season also imparted weakness. All these factors led to selling and cotton prices drifted lower. N.T.R.G. January delivery dropped As. 11 to Rs. 74-15. March position receded by As. 10 to Rs. 73-15. The spot prices of Pakistan cotton staged a retreat. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties prevailing at Karachi:

Sind *Deshi* 96; Punjab *Deshi* 88; 4F Roller 77-12; S.G. 79-4; Punjab Roller 78-4; S.G. 80-4; 289F N.T. Roller 78-4; S.G. 78-12; 289F Punjab Roller 82-4; S.G. 86-4.

The Alexandria cotton futures market continued to rule easy. Local mill and trade buying was slack. Overseas enquiries were also small. The Egyptian Misr Bank has announced that it will finance the Egyptian cotton crop during the ensuing season

(which is due to commence on 1st October next), instead of foreign banks "which might refuse" to do so. The following are the latest available rates —in tallaris per lb.—from the Alexandria cotton futures market, the figures in brackets giving last week's rates:

Karnak: November 100.85 (101.90); January 100.40 (101.15); March 99.80 (100.5). Ashmouni: October 72.30 (73.40); December 72.30 (73.45); February 72.85 (74.20).

The offtake of Sudan cotton at the recent auctions of the Gezira Board was moderate. Liverpool spinners were reported to have evinced active interest in Sudans; large sales were made to them by private holders. There has been no further change in the Board's reserve prices for cotton.

The Liverpool cotton futures market put on a quiet appearance. Trading was restricted by the Suez situation to occasional hedging and inter-month switching. The quotations for 1" staple American cotton contracts and mixed growth contracts tended to look down. The Sudan contract, however, rose sharply on trade buying which absorbed hedge selling. The Egyptian contract also recorded a rise in prices, following renewed bidding by a local spot house which found no sellers. The following are a few latest available rates—in pence per lb.—from the Liverpool cotton futures market:

American contract (1" staple): October-November 24.95; December-January 24.85; March-April 24.85; Sudan September-October 49.85.

After exhibiting an easy trend on the first two days of the week, the New York cotton futures market staged a recovery on the 14th inst. which gathered momentum on Tuesday. The initial easiness was due to scattered liquidation, hedge selling in near-months and profit-taking in later deliveries. The market, however, picked up some strength subsequently, as commission house buying and short covering and uncovering of stoploss orders found contracts scarce. Demand was attributed partly to the possibility of a Democratic Congress next year.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	18-9-56	11-9-56	4-9-56
Spot	34.45	34.40	34.45
October	33.79	33.80	33.75
December	33.79	33.88	33.85
March	33.72	33.80	33.81

STAPLE FIBRE YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 19*th September*

There was a sharp fall in prices in the staple fibre yarn section during the week under review. The decline followed a wave of selling which was brought about by disquieting advices from various consuming centres. Stocks of staple fibre yarn in these centres were reported to have considerably increased, leading to limited offtake. In fact, there were reports that many stockists were trying to unload their holdings. The forward rayon yarn section also ruled distinctly easy, notwithstanding the possibility of enhanced prices for imported yarns on account of the Suez situation. The spot section, however, exhibited a somewhat steady trend, thanks to depletion of ready stocks. Cotton yarns were irregular, with business passing limited and prices moving narrowly.

Staple fibre yarn (40×2) for October delivery was subjected to sustained selling pressure and dropped Rs. 8 to Rs. 659. December delivery fell by a like amount to Rs. 668. In the spot section, foreign yarns (80×2) staged a retreat. Fujis slipped by 18 pies to Rs. 6-0-6. K'Suns receded by an anna to Rs. 6-8. Paramounts lost nine pies to Rs. 6-0-6. Among indigenous yarns (40×2), Citys eased by three pies to Rs. 3-6-9. New Greats were dull at Rs. 3-7 and Centurys at Rs. 3-7-6. Kohinoors were transacted at Rs. 3-8-6.

Snia rayon yarn (120 dull cones) for December delivery gave way from Rs. 800 to Rs. 797. October position declined by a rupee to Rs. 787. Spot yarns, however, registered an improvement in prices, owing to buying support in the wake of limited offerings. 120 Italys advanced by an anna to Rs. 3-15. 120 Japan rose by nine pies to Rs. 3-12-9. 150 Japan gathered three pies to Rs. 4-1-6. 150 Italy was firm at Rs. 4-1. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade increased by nine pies to Rs. 3-12-9. 150 Bt. cones 1st grade put on half an anna to Rs. 3-5.

Ten counts cotton yarns came in for selling and suffered a setback. Moderns and Elphinstones fell by As. 2 each to Rs. 15 and Rs. 14-10, respectively. Podars shed an anna to Rs. 14-10. Thirty counts also tended to move down. Maduras decreased by As. 2 to Rs. 24-12. Apollos lost an anna to Rs. 22-12. Sixty counts, on the other hand, elicited enquiries at higher rates. Maduras spurted by a rupee to Rs. 29-8. Moderns gained As. 4 to Rs. 29-4. Among 80s, Moderns improved by a rupee to Rs. 71. Mahendras were firm at Rs. 72. Sixty counts Raghuvamshis scored a rise of As. 8 to Rs. 58-8. Moderns were fully maintained at Rs. 62-8 and Finlays at Rs. 62. Among 20s, Hinds were unchanged at Rs. 19-10, as also Apollos at Rs. 19-6.

Imports of art silk yarn into Bombay port during the month of August 1956 were larger than in the previous month. They aggregated 3,631,761 lbs., as against 3,531,342 lbs. Imports of staple fibre yarn were also larger, being 62,873 lbs., as compared with 54,104 lbs. There was, however, a marked fall in the imports of staple fibre, from 2,817,306 lbs. in July to 2,384,428 lbs. in August. During the month under review, 1,271,920 lbs. of woollen yarn and 63,199 lbs. of cotton yarn were imported, the corresponding figures for the previous month being 1,545,129 lbs. and 86,576 lbs.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	19-9-1956	12-9-1956	5-9-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia October ..	787 0	788 0	796 0
120 Dull Cone Snia December	797 0	800 0	—
120 Japan (per lb.)	3 12½	3 12	3 12½
150 Japan (per lb.)	4 1½	4 1½	4 1½
120 Italy (per lb.)	3 15	3 14	3 14
150 Italy (per lb.)	4 1	4 1	4 0½
Staple fibre yarn (per case of 200 lbs.)—			
40×2 October	659 0	667 0	668 0
40×2 December	668 0	676 0	—
40×2 New Great (per lb.) ..	3 7	3 7	3 7
40×2 Century (per lb.) ..	3 7½	3 7½	3 7½
40×2 *City* (per lb.)	3 6½	3 7	3 6½

10s Podar	14 10	14 11	14 12
20s Hind	19 10	19 10	19 10
30s Apollo	22 12	22 13	22 12
40s Minaxi	28 8	28 10	29 0
60s Raghuvamshi	58 8	58 0	58 4
80s Mahendra	72 0	72 0	72 0

GROUNDNUT EASY

(From Our Own Correspondent)

BOMBAY, 19*th September*

Irregular movements were witnessed in the oilseeds market during the week under review. It was cheerful during the first three sessions of the week as a result of speculative buying. The international situation also gave its own quota of spur to the market. But, under the leadership of groundnut, the market reacted following reports of beneficial rains in Saurashtra and other producing centres, and long liquidation. While groundnut lost sizably, castorseed was only sympathetically lower. Today, however, castorseed recovered on bear covering while groundnut continued to maintain an easy trend on further reports of favourable weather in the producing areas.

In the groundnut futures section, February contract opened the week at Rs. 134-8 and spurted to Rs. 135-6 on 15th inst. On the following days, however, it receded to Rs. 132-4, thus losing over the week as much as Rs. 2. In the spot section, too, Bold F.A.Q. shed As. 4 at Rs. 34-4 and Coromandal As. 4 at Rs. 34-8. Groundnut oil ex-mill was a shade lower at Rs. 18-14, while Railway Receipt lost As. 5 at Rs. 18-10.

The September contract, in the castorseed section, having opened the week at Rs. 143, finished up today at Rs. 146-12 after narrow fluctuations, thus gaining over the week Rs. 4-12. May 1957 contract, too, put on over the week as much as Rs. 2-6 at Rs. 126-12. In the spot section, Ready Madras rose by As. 12 at Rs. 28-12, and Kanpur by a similar amount. Oil B.S.S. increased by As. 7 to Rs. 17-1 and Oil Commercial by As. 5 to Rs. 16-1.

In the linseed section, May 1957 contract opened the week at Rs. 26-13 and rose to Rs. 28-12 on the following day. Subsequently, however, it reacted and closed today almost at the same level, namely, Rs. 26-12. In the spot section, however, Bold Ready advanced by As. 10 to Rs. 26-12 and October-November by As. 2 to Rs. 30-10. Linseed oil Ready was quoted at Rs. 17, i.e., As. 6 lower than last week.

Among other seeds, *kardi* seed showed no change at Rs. 18-6 while *niger* seed Madras improved by As. 4 at Rs. 28-8.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	19-9-1956	12-9-1956	5-9-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.

SUGAR QUIET

(From Our Own Correspondent)

BOMBAY, 19*th September*

The sugar market was thick with rumours of a possible upward revision in the excise duty on sugar. The rumours were based on the Finance Minister's statement in Parliament stressing the need for raising more funds and his justification for raising the excise duty on mill cloth. Induced by these rumours, the bull operators lent sustained support to *Asho* delivery contract for 'C' grade sugar which spurted by As. 6 to Rs. 91. The improvement was, however, short-lived and, following consistent bear-hammering, the quotation fell to Rs. 90-7. The bears refused to give credence to reports of an increase excise duty on sugar, as they felt that sugar was already a heavily taxed item of food. They would appear to feel that, if the rumours of higher excise duty were to prove wrong, *Asho* delivery contract would move down to below Rs. 90 per bag before the month was out.

The spot sugar section ruled quiet. Small grain sugar was unchanged at Rs. 88, as also medium grain at Rs. 89-Rs. 91 and large grain at Rs. 92-Rs. 98. British refined sugar was neglected at Rs. 91 per bag of 2 cwts.

Arrivals of indigenous sugar into the market during the week were larger than in the preceding two weeks. They amounted to 20,700 bags, as against 18,700 bags a week before and 16,200 bags a fortnight before.

Movement of sugar is considered to be quite satisfactory, thanks to availability of wagons without much difficulty. The terminal markets and distributing centres have adequate stocks of sugar to meet the post-monsoon and festive demands. The mills are also having still an unsold stock of over 700,000 tons of sugar; they have now become keen sellers, with a view to clearing their godowns before the next crushing season commences. Incidentally, the usual monthly release of sugar for sale in free market is expected to be announced early next week.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

DECLINE IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 19*th September*

During the earlier part of the week under review, following the news of some deterioration in the Suez situation, there was a revival of activity in Malabar black pepper. Prices showed improvement in sympathy with New York the price for the spot rose from $0.33½ to $0.35. The news of the sale of 130 tons to East Germany and Czechoslovakia by the Indian pepper delegation, which is on tour in Eastern Europe, proved a supporting factor. China is also reported to have bought about 300 tons.

Prices in Alleppey went up to Rs. 781½ and in Cochin to Rs. 136½ under pressure of covering by exporters. In the later part of the week, however, prices again dropped on the withdrawal of buyers, coupled with the news of an increase of 15 per cent. in the freight rate to Europe. There are chances of similar increase in the freight to U.S.A. also.

Until recently, India depended for its marketing of pepper mainly upon the U.S.A. The Indian Government, in order to encourage diversification of the export of Malabar black pepper and cashew nuts, has sent a trade delegation to East European countries with a view to popularising and assessing the possibility of trade with them. Since last two years, Russia and China are India's regular buyers and, if other Communist countries are also persuaded to take interest in Malabar pepper, India will be less dependent upon America in future. However, it should be noted that the competition from Sarawak in Europe is very keen and the prices for Malabar black are dearer by about Rs. 20 per cwt. Unless the prices of Indian pepper are slashed down in line with Sarawak, Indian export to Europe might not improve appreciably. The Indian Government should, therefore, try to encourage the planters to increase the production of pepper. The output has so far failed to improve in spite of very high prices in the recent years.

In A.S.T.A. section September delivery, after improving to $0.31½ receded to $0.30. October-December declined from $0.30½ to $0.29. In delivery section, prices for October and December, after touching Rs. 730 and Rs. 705, came down to Rs. 690 and Rs. 675 respectively.

Following are today's nominal quotations:—Ready delivery Rs. 100 per Bengal maund; October Rs. 690-700, and December Rs. 675.85 per candy of 5¼ cwts.

JUTES FIRM

(From Our Own Correspondent)

CALCUTTA, 18*th September*

Fully steady conditions were in evidence in both the jute goods and raw jute markets during the week under review. Good business at hardening rates was done in goods for export. Bear-covering was on a large-scale, while bulls also were keen buyers. Indeed, there was profit-taking but the strong buying spree arrested the down-trend and prices closed higher on balance. Close on the heels of the publication of the stock figures last week, which aided the bullish trend, the output figure for the month of August was available during this week. The latter only added to the strength of the market. August being the first full month following the re-sealing of 2½ per cent. of the looms as from the middle of July, the combined output at 89,600 tons was naturally lower by 4,500 tons as compared with July. However, hessian was higher by 1,100 tons at 35,400 tons but sacking declined to 48,200 tons from 52,900 tons. The increase in hessian was naturally due to the transfer of some sacking looms to the production of hessian. However, such transfer of looms cannot be continued for long, since the demand for sacking also has of late considerably improved. During recent months, foreign buyers of sacking goods had turned their attention to mills in Pakistan whose prices were lower than those quoted for the Indian goods. But Pakistani mills have now been told by the Government that their production of sacking would be required to meet internal needs and that only after full satisfaction of domestic requirements applications for export licenses would be considered. This has naturally brought back to Calcutta foreign buyers from Dacca.

By all means, the month of August witnessed considerable activity in the jute goods market. Foreign buyers, who had been waiting in the fond hope that prices would give way, had to place orders after orders in a rising market. During this week also, good business for export was done. Foreign business is expected to increase, and prices are expected to steady at higher levels. Moreover, the Suez Canal crisis and the determination of Western Powers to force down the hands of Egypt to agree to international control of the Canal add strength to the market. Including the production of 89,600 tons, the total availability of goods during the month

of August was 227,500 tons of all constructions. Deducting from this the August-end stock of 122,100 tons, demand during the month was of the order of 105,400 tons, which, it should be noted, was more than the production by 15,800 tons. August was, therefore, the first month after an interval of several months when demand exceeded production. From this month, production is expected to be much lower by virtue of the re-sealing of 5 per cent. of the looms as from yesterday; at the same time, the demand is expected to improve further. So by about the end of this year, it is expected that stocks would have been brought down to equal to about a month's production.

Ready 40"×10 oz. hessian opened at Rs. 43-9 at which rate a good amount of covering business took place. Speculators indulged in profit-taking. Heavy goods were not in demand, but prices were steady in sympathy with hessian. Ready B. twills were priced at Rs. 113-6 which was brought down to Rs. 113-4 on profit-taking. On Wednesday, mills showed a keen desire to sell and speculators continued to take profits. Both these circumstances prevented the prices from moving up, but the good genuine demand had taken the ready rate for 40"×10 oz. hessian to Rs. 43-11, with B. twills being maintained at Rs. 113-6. The rates remained unchanged on Thursday, but picked up on Friday following heavy speculative buying. Ready B. twills spurted to Rs. 114-12 and hessian 40"×10 oz. to Rs. 43-14. The week-end saw a fractional recession from the highest levels touched on Friday, as ready 40"×10 oz. closed at Rs. 43-13 and ready B. twills at Rs. 114-10. During yesterday, there was considerable activity in the market and ready B. twills spurted to Rs. 115-6 and hessian 40"×10 oz. to Rs. 44. The higher levels encouraged mills to enter into commitments in the forward positions, and, for this reason, B. twills January-March, for the first time in the past few weeks, were quoted a few annas lower than the ready. However, October-December positions continued to be quoted at a premium, this being six annas throughout the week.

Moderate support was accorded to raw jute by Mills. Prices improved by Re. 1 to Rs. 2. Latest quotations are given below:

TEA STRONG

(From Our Own Correspondent)

CALCUTTA, 18*th September*

All teas received strong support during the export auctions held yesterday. Higher prices earned at the auctions held in London for the week ended 14th September were a factor for the rise in prices yesterday. Bids were made both for shipment and for internal consumption. Despite the immediate introduction of a 15 per cent. surcharge on all commodity freight rates by the Far Eastern Lines to compensate for the possible delay for passage of ships through the Suez Canal, shipments of tea to Great Britain are expected to increase. For stocks there are low, and, when the Canal continues to be free from hostilities, British stockists would naturally desire to add to their inventories, for, in the event of an emergency, prices in London were bound to move up.

In the meantime, however, the publication of the August output figure of North Indian tea gardens has caused a certain amount of thinking in market and industry circles, and the fear that, before the year is out, the tea industry would be in the grip of a crisis similar to the one of recent memory is expressed in certain quarters. Output in August was 99.7 million lbs. which has brought the production so far for this year to 305.3 million lbs. which is 22.9 million lbs. higher than the figure for the corresponding period of last year. Adding the North Indian production, world output has been pushed up by 18.5 million lbs. Up to the end of July, the increase was by 6 million lbs. only and the noticeable difference now has been due to the remarkable increase in the August output of North Indian gardens.

Some in the market hold that a crisis is inevitable, unless a world war comes to the rescue. However, the possibility of a war is remote, as from London reports it is clear that the present intention of the British and French Governments is to force Egypt only through measures other than the much dreaded war. That being so, the sober elements in the market have already begun putting forward suggestions before the industry with a view to preventing the feared crisis. It has been suggested that gardens should destroy 2 per cent. of the output, so that the supply of residue type teas would be more or less equal to demand. In addition to this, gardens should once again self-impose on themselves restrictions on production. In this connection, the desirability of gardens discontinuing production from November for the rest of the year is also mentioned. These suggestions are well worth the consideration of the Indian Tea Association when it is remembered that so far only one-fifth of the North Indian tea output has been disposed of and that the price trend for common and inferior teas in the auctions has not so far been to the advantage of the gardens. The poor quality types form the majority of production, and a glut in their supplies would certainly push down prices further, so that gardens would feel the pinch.

Offerings yesterday aggregated 55,500 packages. Early in the sale, demand gave signs of falling, but, as the sale progressed, buyers displayed considerable interest and prices were pushed up as a result. Medium fannings were fully firm, and the prices of the lots possessing black colour and useful liquors advanced. There was more demand for medium brokens, and prices for Assam B.O.Ps. and O.Ps. of normal manufacture gained. Commonest teas rose by one to two annas, and low medium brokens gained by one anna. The poorer fibrous teas rose by several annas, but the best C.T.C. Assams were often quiet. Stylish B.P.Ss. advanced by 2 annas, and a higher trend was noticeable in the poorer whole leaf grades. On the other hand, leaf teas were easy by As. 2. Darjeelings declined by As. 2 to As. 4 but tippy teas enjoyed good support. The quotations per lb. were: best C.T.C. Assam B.P. Rs. 3 to Rs. 3-4, medium Assam B.P. Re. 1-14 to Rs. 2, plain B.P. Re. 1-9 to Re. 1-9-6, and clean black pekoe Re. 1-13 to Re. 1-14.

Export quota was offered at 24 pies. Some rights changed hands at the beginning but towards the close buyers were difficult to be found.

The star feature during the internal sale held last week, when dusts offered totalled 17,790 packages, was clean black leafy teas on strong support by buyers on behalf of the Middle East. Keen competition was offered to the best C.T.Cs. on offer, but C.T.C. teas which did not come under the "best" were quiet, and lost As. 2 to As. 4. There was good demand at firm rates for all other types on offer. The rates per lb. were: best Assam C.T.C. Rs. 3 to Rs. 3-4, medium Assam C.T.C. Rs. 2-10, medium Assam grainy dust Rs. 2, and medium Dooars Re. 1-12-6.

LINSEED BETTER

(Messrs. A. Bradley and Co.)

CALCUTTA, 17*th September*

Slightly better conditions were noted in the linseed market towards the close of the week and prices displayed a small rise. Arrivals from producing centres were very scarce and were likely to remain so for some time, owing to heavy rains up-country. Sellers were rather reserved and, with buyers unwilling to pay high prices owing to very poor demand for linseed oil, very little business was reported during the week. The oil market remained inactive and offtake was very poor. There were few enquiries at lower prices.

The latest available quotation for September-October is Rs. 23-8 per maund.

PRODUCTION IN ASIA EXPANDS

(Concluded from page 569)

trialised countries. However, the trade deficit rose again during the first quarter of 1956, mainly because of rising imports (Hong Kong, India, Indonesia, Japan, Malaya and Pakistan) and falling exports (Ceylon, Indonesia, Japan, North Borneo, Thailand and Viet-Nam).

The total value of imports and exports in E.C.A.F.E. countries* is shown below:

(Million dollars)

	Imports	Exports	Balance of Trade
1951	9,440	9,737	+ 297
1952	9,294	7,654	— 1,640
1953	8,467	6,898	— 1,569
1954	8,219	7,206	— 1,010
1955	8,922	8,326	— 596
January-March	2,088	1,975	— 113

* Comprising Burma, Cambodia, Ceylon, China, Taiwan, Hong Kong, India, Indonesia, Japan, Laos, Malaya and British Borneo, Pakistan, the Philippines, Thailand and Viet-Nam (South).

† Figures for Burma, Cambodia, Laos and Sarawak are estimates based on the last quarter of 1955. For Burma exports relate to estimates based on the returns of first two months.

Preliminary statistics report that the value of trade between mainland China and the U.S.S.R. and countries of Eastern Europe increased in 1955 by nearly 30 per cent. and with the rest of the world by over 25 per cent. Over 90 per cent. of China's 1955 imports were taken up by factory equipment, machine tools, agricultural machines and other means of production. A loan of 2.5 billion roubles was given by the U.S.S.R. to mainland China in April 1956 for the import of capital equipment and supplies for 55 new industrial enterprises.

BANKING

(Concluded from page 554)

priority to the opening of branches of banks in these places. In addition, remittance facilities to member banks had been liberalised by the Bank.

Referring to agricultural credit, the Governor pointed out that the co-operative banks had been allowed to borrow from the State Bank on liberal terms. Besides, the limits sanctioned to various co-operative banks had also been increased. In order to give further fillip to the co-operatives, the State Bank had decided to charge a concessional rate of interest at 1½ per cent. against agricultural paper, on the condition that the benefit was passed on to the ultimate borrower. Another noteworthy development was the socio-economic surveys started in the rural areas by the Dacca and the Punjab Universities with the assistance of the State Bank and the Asia foundation. The survey is expected to bring out important data relating to rural indebtedness, credit conditions, land tenure, etc., which would be of much value to formulating rural credit policies. A still more important step in this field was the scheme sponsored by the State Bank for the creation of an Agricultural Bank. A Bill for bringing this body into existence is expected to go before the next session of the National Assembly.

Special steps were being taken to provide industrial finance also by establishing an Industrial Bank. A World Bank Mission visited Pakistan in April this year to examine the scheme. On its recommendation, a Steering Committee has been set up to draft the constitution of the proposed institution and to make preliminary arrangements for its incorporation.

The Bank's income during the year amounted to Rs. 376.03 lakhs and expenditure to Rs. 162.50 lakhs, leaving a net profit of Rs. 213.53 lakhs. The profit was the highest earned by the Bank for any year so far, and, consequently, it declared a higher dividend of 4½ per cent., as against the previous fixed rate of 4 per cent.

(Concluded from page 555)

ing level of expenses, which is not a peculiar feature of the Bank of Mysore alone but common to all banks. The profit (before providing for taxation) amounts to Rs. 8.87 lakhs, as compared with Rs. 8.69 lakhs for the first half of 1955 and Rs. 8.67 lakhs for the corresponding six months of 1954. It is, however, lower than that (Rs. 9.08 lakhs) for the half-year ended June 1953.

From Rs. 13.23 crores on 30th June 1955, the Bank's balance-sheet total has gone up to Rs. 13.93 crores. The gross income also has gone up from Rs. 29.49 lakhs to Rs. 32.12 lakhs. This rise in income is mainly accounted for by interest and discount earned, such having increased from Rs. 24.61 lakhs to Rs. 27.32 lakhs. Commission and exchange are, however, a shade lower at Rs. 4.52 lakhs, as compared with Rs. 4.78 lakhs for the half-year ended June 1955. Interest paid is Rs. 1.02 lakhs more at Rs. 10.24 lakhs, and expenses have gone up by Rs. 1.19 lakhs to Rs. 12.37 lakhs.

Out of the profit of Rs. 8.87 lakhs the Directors have set aside Rs. 2.50 lakhs to the reserve for income-tax and super-tax, as against Rs. 3.50 lakhs provided a year ago. No provision for contingencies has been made, while a year ago a sum of Rs. 1 lakh had been allocated for this purpose. The distribution to the shareholders is, however, unchanged at 16 per cent. per annum, made up of a dividend of 12 per cent. and a bonus of 4 per cent., a rate which is being maintained with effect from the half-year ended 31st December 1946, when it was stepped up from 14 per cent. per annum, by raising the bonus part of the distribution from 2 per cent. to 4 per cent. per annum. A point that needs to be noted here is that, in the intervening years, the paid-up capital was raised from Rs. 40 lakhs to Rs. 50 lakhs. The distribution to the shareholders absorbs Rs. 4 lakhs, leaving a surplus of Rs. 4.19 lakhs to be carried forward to the current half-year, as against Rs. 2.61 lakhs brought in.

The following comparative table, presenting the synopses of the balance-sheets as at the close of the last four half-years, brings out the progress in the financial position of the Bank in recent years:

(In lakhs of rupees)

	As on			
—	30-6-56	31-12-55	30-6-55	31-12-54
Capital	50.00	50.00	50.00	50.00
Reserves	84.00	84.00	84.00	84.00
Deposits—				
Fixed	377.71	400.49	409.07	344.65
Thrift and savings	237.26	223.23	214.65	200.99
Current, contingency, etc. ..	471.96	431.65	428.16	453.32
Advances (including money at call)	786.70	752.33	721.47	710.19
Investments	366.11	383.83	335.35	299.85
Cash balances	103.17	91.24	160.97	172.53
Acceptances, endorsements, etc. (contra)	33.91	14.09	24.24	25.57
Bills for collection (contra) ..	62.09	9.75	50.03	61.48
Balance-sheet total	1,393.53	1,345.75	1,323.57	1,305.08
Ratio to deposits of—	%	%	%	%
Advances	72.4	71.3	68.6	71.1
Investments	33.7	36.7	31.9	30.0
Cash	9.5	8.6	15.3	17.3

The total deposits of the Bank have risen by Rs. 31.57 lakhs over the six months under review, thus maintaining the upward trend since 31st December 1953. The pace of increase is, however, slower than that in the corresponding half-year of 1955, when the rise was as much as Rs. 53.02 lakhs. It is significant that the rise is mainly accounted for by the current and contingency accounts, which are higher by Rs. 40.31 lakhs and thrift and savings deposits which have gone up by Rs. 14.03 lakhs. Fixed deposits, on the other hand, have declined by Rs. 22.78 lakhs, in distinct contrast to a rise of Rs. 64.52 lakhs noted a year before and to the general trend of bank deposits. The expansion in deposit resources has been utilised to increase the main revenue-yielding asset, namely, advances. The market value of the investments is lower by Rs. 6 lakhs than the book value, but this is more than amply covered by provision for depreciation on investments to the tune of Rs. 9.33 lakhs.
